

Dear William Marlier,

I am reaching out to request the prioritization and implementation of the **2023 Biennial Report on Solid Waste** reported January 16th, 2023,

Authorizing law #: **1987 Act 78**

Section #: codified at 10 V.S.A. §6604(b)

Additionally, I would like to convey my support as well as advocacy for the current bills in the House Committee including **H. 48, H.130, and H.548.**

These bills are vital to all citizens in Vermont. For both our health as well as the health of the environment, waste management recovery, together with prevention must be prioritized. Especially during the reforming of the Farm Bill 2024-2025. The passing of these bills will increase the positive reformation of our overall wasted food and resource infrastructure.

Reduction along with the prevention of wasted food and resources is a key point in solving the main issues within our society as well as the environment. Waste is an inevitable part of life and it's seen in every organism as well as ecosystems. The fact that we don't prioritize our waste infrastructure to be the most sustainable and efficient will be our downfall.

Best,

Marina Wilson
