

VERMONT

Since 2019 we have turned-up 51 new macro cell sites in VT ...Among the new sites are sites that we also committed to the state of Vermont for FirstNet Opt-In. A majority of these committed sites involved raw land candidates in areas of the state with little or no prior experience with communications towers or good coverage; plus were also areas with well-known reputations for opposing development. These raw land candidates presented challenges due to topography, terrain, conservation restrictions for adjoining parcels, natural resource sensitivities, and zoning mandates. By partnering with the state and working with local jurisdictions, we proposed sites that worked from a zoning and constructability manner to secure approval in areas where other carriers and tower developers were unsuccessful.

In addition to these 51 new macro sites and by completing 657 network jobs across the state since 2019; we have also added capacity throughout the network, added small cell sites, and added Band 14 to sites.

★ New Sites **Completed** Since 2019
