# Fresh Produce Needs Across Vermont Results from the Fresh Produce Survey 

Theresa Snow, Salvation Farms
Elana Dean, Isgood Community Research, LLC

In Spring 2016, Salvation Farms administered the Fresh Produce Survey to hundreds of organizations and institutions across Vermont that serve or provide food as part of their social missions. The main goal was to understand these sites' needs and preferences for fresh produce. In total, 210 sites completed the survey, from across all 14 Vermont counties. The majority were either food shelves (42\%) or public schools (28\%). Other sites that responded included prisons, Meals on Wheels, and housing sites, among others.

Overall, sites have a high demand for fresh produce and want to increase the amount that they are currently providing. The average Vermont site is able to use around 620 pounds of fresh produce a week. Across all of Vermont's food shelves and schools, the annual need for fresh produce is estimated to be 14 million pounds.

Key findings from the survey also highlight sites' preferences for fresh produce. Overall, sites prefer using a wide variety of fresh produce and are not narrowly interested in a few items. In addition, sites prefer fresh produce that is grown in Vermont and fresh produce that has no blemishes, or is considered "good-looking". Many sites are
also interested in receiving preserved foods, including frozen, canned, dried, and dehydrated produce.

While it is clear that sites want a large volume of fresh produce, there are current challenges to fulfilling these needs. First, many sites are currently unable to acquire the amount of fresh produce that they want either because they lack adequate connections to donors or sufficient budgets for purchasing. Second, over one third of sites currently lack the capacity to manage the amount of fresh produce they want at their sites. Specifically, they need better infrastructure and more staff time. Even if sites were connected with all of the fresh produce they currently need, a sizable portion of sites would not be able to properly manage it.

Below, we explore each of these key findings in more detail. We end with a discussion of how sites' need for fresh produce can potentially be met.

## High Demand

Sites around the state have a clear need for fresh produce: $90 \%$ of sites said that they

have a "very high" or "somewhat high" demand for fresh fruit and vegetables. On average, the sites that responded to the Fresh Produce Survey are able to use 620 pounds of fresh produce per week. This amounts to over 6.7 million pounds of fresh produce annually for the 210 respondent sites.

[^0]Since $58 \%$ of Vermont's 152 food shelves ${ }^{1}$ and $20 \%$ of Vermont's 298 public schools ${ }^{2}$ responded to the Fresh Produce Survey, we also generated an estimate of the annual statewide need for both types of sites. In total, Vermont schools can use 7.7 million pounds of fresh produce, and Vermont's food shelves can use 6.5 million pounds of fresh produce each year. Taking into account the other organizations and institutions that serve or provide food as part of their social missions in Vermont, the total amount of fresh produce needed annually across the state is much larger.

## Produce Preferences

In the Fresh Produce Survey, sites not only relayed how much fresh produce they would like to use, but also what kinds of fresh produce they would like to use. In this section we highlight a few key preferences that were shared by sites across Vermont.

## Variety

Sites around the state have a strong interest in using a wide variety of fresh produce. More than $75 \%$ of sites said that they would like to serve or make available at their sites the following: apples, cucumbers, tomatoes, broccoli, melons, berries, onions, potatoes, and carrots. There is a broad appeal for most other types of vegetables, too.

[^1]
## Vermont-Grown Produce

The majority of sites have a preference for using Vermont-grown fresh produce, with almost half of sites expressing a strong preference. Currently, sites obtain their fresh produce from a number of sources including the Vermont Foodbank, gardens, farms, grocery stores, gleaning/food rescue organizations, and wholesale distributors. The produce obtained from the Vermont Foodbank, grocery stores, and wholesale distributors, however, may come from outside of the state. We can only be sure that the produce sites obtain from gardens, farms, and gleaning/food rescue organizations is $100 \%$ Vermont-grown. We see, however, that despite sites' preference for Vermont-grown produce, only a small
number reported purchasing fresh produce directly from farms or gardens. In addition, fewer than half of sites received donations from farms or gardens, and fewer than a quarter of sites received donations from gleaning/food rescue organizations. Therefore, while most sites have a preference for Vermont-grown produce, only a small portion are receiving it.

## Preserved Produce

Most sites expressed interest in receiving fresh produce that has been frozen. Almost half of sites are also interested in using fresh produce that has been canned, dried, or dehydrated. Since these sites have a year round need for fresh produce, and yet Vermont's growing season is so short,

WHERE SITES OBTAINED FRESH PRODUCE IN 2015
$\square$ Received donations from $\quad$ Purchased from at discounted rates $\quad$ Purchased from at market rates

having access to preserved fresh produce would enable them to have wholesome, Vermont-grown produce, all year long. A key challenge for Vermont's food system, however, is finding the labor, equipment, and other resources needed to preserve fresh produce.

## "Good-Looking" Produce

Most sites reported a preference for fresh produce with no blemishes - i.e. that "look good." While this "ugly produce" may look different in terms of size, shape, or color, it is as wholesome as traditionally marketed produce. In addition, ugly produce is often sold at discounted prices. Since many sites, however, have expressed a preference for unblemished produce, providing client and site education on the benefits of ugly produce could be explored. Through normalizing its usage, sites may be more amenable to using it. Alternatively, since sites are interested in using preserved produce, the ugly product could instead be minimally processed and frozen, canned, dehydrated, or dried. By minimally processing ugly produce - such as taking undesirable corn and freezing the kernels sites would be able to satisfy their preference for a good-looking product and preserved produce at once.

## Challenges to Growth

Sites across Vermont have a clear need for fresh produce. There are two main challenges that sites face, however, in

meeting their needs: being able to actually acquire the amount of fresh produce they would use, and being able to adequately manage that amount at their sites. Therefore, while $84 \%$ of sites report wanting to increase the amount of fresh produce that they serve or make available, the challenges preventing sites from doing so now need to be addressed.

## Limitations to Acquiring the Fresh Produce

Sites are often unable to acquire the amount of fresh produce that they want, either because they lack adequate connections to donors or sufficient budgets for purchasing fresh produce.

In 2015, one-third of sites did not receive fresh produce donations. A full $60 \%$ of these sites said this was due to no one having offered to donate fresh produce to them. Sites unanimously note, however, their own interest and their clients' interest in using donated fresh produce. It is therefore a lack of connections - not a lack of interest - that leads sites to miss out on fresh produce donations.

In terms of purchasing fresh produce, the reality is that most sites have tight budgets, and few have access to markets that sell fresh produce at discounted prices. Indeed, only $27 \%$ of sites purchased any amount of fresh produce at discounted prices in 2015. To attempt to meet their need, these sites were reliant on donations and/or purchasing fresh produce at full price. As a result, they often did not have as much fresh produce as they would like to serve and make available at their sites.

Sites either need access to more donations and/or to markets where their limited budgets can be stretched to purchase the most amount of fresh produce. In these ways, sites can acquire the amount of fresh produce that they need.

## Limitations to Managing the Fresh Produce

Even if sites were able to acquire the amount of fresh produce needed, almost half of sites currently lack the capacity to adequately manage it. The main reasons include infrastructure and staffing constraints.

Indeed, a full one-third of sites report needing refrigerators or coolers, and onefifth of sites report needing bigger spaces or facilities. An additional third said that they needed more staff or volunteer time in order to absorb additional fresh produce. Relatedly, while sites did not cite transportation as a limitation per se in receiving more produce, they did express a strong preference for produce to be cleaned and delivered to their location. Both of these steps also necessitate additional labor and
resources. In order for sites to be able to absorb the amount of fresh produce they would like, sites need more staff and better infrastructure.

## Planting a Future

Housing sites, prisons, Meals on Wheels, food shelves, schools, and other organizations and institutions around Vermont have a very high demand for fresh produce. Schools and food shelves alone could use approximately 14 million pounds each year. This figure is particularly interesting in light of the estimated 14.3 million pounds of vegetables and berries that are lost in Vermont each year ${ }^{3}$. This similar volume, however coincidental, serves to highlight the question of whether sites' fresh produce needs can be met by accessing this food loss. In addition to its volume, Vermont's food loss fulfills many of sites' other preferences for fresh produce. For example, food loss encompasses a wide variety of produce, and is food that is grown in Vermont. A substantive portion of food
loss, however, is considered "ugly", which sites generally are not interested in using. Through freezing, canning, and otherwise preserving this ugly produce, though, sites may be more amenable to using it. Alternatively, sites and their clients may also become more inclined to use ugly produce after receiving outreach education on its benefits and uses.

Further research is needed to determine how producers and suppliers would be able to make Vermont's food loss available to sites. In particular, research is needed to determine the prices at which producers and suppliers would be willing to sell their food loss, and whether schools, food shelves, and others would be willing to purchase it at those prices. The costs of preserving and delivering foods also need to be included in any analysis.

There is much to do to meet sites' fresh produce needs. Exploring ways in which Vermont's food loss can help do so is a promising area moving forward.

| Neither unimportant nor important | 34 | $19 \%$ |
| Somewhat important | 67 | $37 \%$ |
| Very important | 30 | $16 \%$ |
| Total | 183 | $100 \%$ |

Table 29. Importance of being able to choose the amount of fresh produce donated each week

|  | Number of <br> Respondents | Percent of <br> Respondents |
| :--- | :---: | :---: |
| Very unimportant | 16 | $9 \%$ |
| Somewhat unimportant | 25 | $14 \%$ |
| Neither unimportant nor important | 19 | $10 \%$ |
| Somewhat important | 68 | $38 \%$ |
| Very important | 53 | $29 \%$ |
| Total | 181 | $100 \%$ |

Table 30. Interest in receiving processed fresh produce

|  | Number of <br> Respondents | Percent of <br> Respondents |
| :--- | :---: | :---: |
| Fresh produce that has been frozen | 151 | $72 \%$ |
| Fresh produce that has been canned | 105 | $50 \%$ |
| Fresh produce that has been dried | 94 | $45 \%$ |
| Fresh produce that has been dehydrated | 85 | $40 \%$ |

Table 31. Preference of where fresh produce is coming from

|  | Specific Farm <br> that Know | County | Vermont | Gleaning or <br> Food Rescue <br> Initiative |
| :--- | :---: | :---: | :---: | :---: |
| Do not prefer | 91 | 91 | 46 | 64 |
| Prefer slightly | 24 | 29 | 20 | 28 |
| Prefer a moderate amount | 25 | 22 | 29 | 33 |
| Prefer a lot | 19 | 14 | 43 | 22 |
| Prefer a great deal | 15 | 10 | 38 | 21 |
| Total | 174 | 166 | 176 | 168 |

Table 32. Preference of where fresh produce is coming from

|  | Specific Farm <br> that Know | County | Vermont | Gleaning or <br> Food Rescue <br> Initiative |
| :--- | :---: | :---: | :---: | :---: |
| Do not prefer | $52 \%$ | $55 \%$ | $26 \%$ | $38 \%$ |
| Prefer slightly | $14 \%$ | $17 \%$ | $11 \%$ | $17 \%$ |
| Prefer a moderate amount | $14 \%$ | $13 \%$ | $16 \%$ | $20 \%$ |
| Prefer a lot | $11 \%$ | $8 \%$ | $24 \%$ | $13 \%$ |
| Prefer a great deal | $9 \%$ | $6 \%$ | $22 \%$ | $13 \%$ |
| Total | $100 \%$ | $100 \%$ | $100 \%$ | $100 \%$ |

Table 33. Preference for fresh produce that have no blemishes (i.e. that "look good")

|  | Number of <br> Respondents | Percent of <br> Respondents |
| :--- | :---: | :---: |
| Do not prefer | 10 | $6 \%$ |
| Prefer slightly | 48 | $27 \%$ |
| Prefer a moderate amount | 71 | $39 \%$ |
| Prefer a lot | 31 | $17 \%$ |
| Prefer a great deal | 21 | $12 \%$ |
| Total | 181 | $100 \%$ |

Table 34. Pounds of donated fresh produce received in 2015

|  | Number of <br> Respondents | Mean | Std. Dev. | Min | Max |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Pounds of Donated Fresh Produce Received | 73 | 2194.10 | 1767.30 | 51 | 5000 |

Table 35. Market value of donated fresh produce received in 2015

|  | Number of <br> Respondents | Mean | Std. <br> Dev. | Min | Max |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Dollar Amount of Donated Fresh Produce <br> Received | 36 | $\$ 12,543$ | $\$ 14,685$ | $\$-$ | $\$ 50,000$ |

Table 36. Items purchased with savings from having received donated fresh produce in 2015

|  | Number of <br> Respondents | Percent of <br> Respondents |
| :--- | :---: | :---: |
| More local fresh produce | 19 | $13 \%$ |
| Other local farm-produced products (i.e. cheese, milk, etc.) | 27 | $18 \%$ |
| Unsure | 41 | $27 \%$ |
| Nothing | 23 | $15 \%$ |
| Other | 42 | $28 \%$ |
| Total | 152 | $100 \%$ |

## Appendix A. Annual Donated Fresh Produce Poundage Estimates for Schools and Food Shelves in Vermont

Table 1. Summary Statistics of Weekly Donated Fresh Produce Poundage Needs

|  | Observations | Mean | Std. Dev. | Min | Max |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Schools | 34 | 501.2 | 617.3 | 29 | 2340 |
| Food Shelves | 46 | 826.9457 | 1436.564 | 40 | 7000 |

Table 2. Confidence Intervals, Weekly Donated Fresh Produce Poundage Needs

| Margin of error | Lower Bound of <br> Confidence <br> Interval | Mean Farmer <br> Estimate | Upper Bound <br> of Confidence <br> Interval |  |
| :--- | ---: | ---: | ---: | ---: |
| Schools | 207.5 | 293.7 | 501.2 | 708.7 |
| Food Shelves | 415.1 | 411.8 | 826.9 | 1242.1 |

Based on there being 152 food shelves in Vermont: http://www.foodpantries.org/st/vermont
Based on there being 298 public schools in Vermont: http://www.vermont.gov/portal/education/index.php?id=199

| Table 3. Annual Donated Fresh Produce Poundage Need Estimates |  |  |  |
| :--- | ---: | ---: | ---: |
|  | Low Estimate <br> of Annual Lbs | Mean Estimate of <br> Annual Lbs | High Estimate of <br> Annual Lbs |
| Schools | $4,550,823$ | $7,766,231$ | $10,981,639$ |
| Food Shelves | $3,254,855$ | $6,536,179$ | $9,817,502$ |
| Total | $7,805,678$ | $14,302,410$ | $20,799,141$ |
