Adverse Childhood Experiences

Adverse childhood experiences (ACEs) are a significant risk factor for substance use disorders and can impact prevention efforts.

Adverse childhood experiences (ACEs) are stressful or traumatic events, including abuse and neglect. They may also include household dysfunction such as witnessing domestic violence or growing up with family members who have substance use disorders. ACEs are strongly related to the development and prevalence of a wide range of health problems throughout a person's

Healthy Brain

Abused Brain

The brain of a normal child shows regions of high (red) and low (blue and balck) activity. At birth, only primitive structures such as the brain stem (center) are fully functional: in regions like the tompral lobes (top) early childhood experiences wire the circuits.

The brain of a Romanian orphan, who was institutionalized shortly after birth, shows the effect of extreme deprivationin infancy. The temporal lobes (top), which regulate emotions andreceive input from the senses, are nearly quiescent. Such children suffer emotional and cognitive problems

THE COSTS IN VERMONT ARE YET TO BE COMPLIED, AND...

Key findings:iv

The estimated average lifetime cost per victim of nonfatal child maltreatment includes:

\$32,648 in childhood health care costs

- \$7,728 in child welfare costs
- \$7,999 in special education costs

\$48,375 Total Childhood Costs of Maltreatment

What Are The Recent Child Abuse Numbers in Alaska?

First-Time Child Abuse Victims in Alaska ^v
Average Annual Number 2009 - 2013
1705

Applying the \$48,375 cost estimate for childhood expenses to the average number of Alaskan children who had a substantiated report of harm over the past several years (1,705) the financial liability anticipated is large each year. It can be estimated that Alaska takes on the burden of approximately \$82 million in current and projected costs each year on average.

Why Are Adverse Childhood Experiences So Important to Alaska? The Intersection of Economics and Childhood Development

The fields of economics and business have discovered that child development has a

What can Be Done About ACES?

These wide-ranging health and social consequences underscore the importance of preventing ACEs before they happen. **Safe, stable, and nurturing relationships and environments** (SSNREs) can have a positive impact on a broad range of health problems and on the development of skills that will help children reach their full potential. Strategies that address the needs of children and their families include:

Voluntary home visiting programs can help families by strengthening maternal parenting practices, the quality of the child's home environment, and children's development. Example: Nurse-Family Partnership

Home visiting to pregnant women and families with newborns

Parenting training programs

Intimate partner violence prevention

Social support for parents

Parent support programs for teens and teen pregnancy prevention programs

Mental illness and substance abuse treatment

High quality child care

Sufficient Income support for lower income families

ACES Connection

A Community-of-Practice Social Network

Join the movement to prevent ACEs, heal trauma & build resilience.
