## Thirtieth Report on the Status of the Petroleum Cleanup Fund

10 VSA § 1941

### January 2018

This report includes a review of Petroleum Cleanup Fund receipts and disbursements for the fiscal year 2017, an evaluation of the financial stability of the fund and its effectiveness in meeting its legislative intent, as required by 10 V.S.A. §§ 1941(e), 1942(a), and 1942(b). This report also includes an evaluation of assistance related to underground farm and residential heating fuel storage tanks and aboveground storage tanks, and the need for continuing assistance, and includes recommendations.

Prepared by: The Petroleum Cleanup Fund Advisory Committee

#### PETROLEUM CLEANUP FUND ADVISORY COMMITTEE MEMBERS

Julie Moore: Secretary, Agency of Natural Resources

Chuck Schwer: Designated representative of the Commissioner,

Department of Environmental Conservation (DEC)

Kevin Gaffney: Designated representative of the Commissioner,

Department of Financial Regulation

Joe Choquette: Vermont Petroleum Association

Senator: Mark MacDonald

Representative: Mike Marcotte

Scott Bigger: Designated representative of Lowell T. Spillane,

Retail gasoline dealer

Dick Browne: Champlain Oil Co., a licensed gasoline distributer

Matt Cota: Vermont Fuel Dealers Association

Peter Bourne: Bourne's Energy, a licensed fuel dealer

Peter Tucker: A licensed real estate broker

#### Cover photo collage:

- 1) Corrosion of an unprotected copper fuel line on a residential aboveground storage tank (AST) releases 120 gallons of fuel oil in a basement in Holland.
- 2) An AST that leaked at a greenhouse in Essex due to hose clamps used on fuel line.
- 3) Innovative injection of carbon slurry to halt contaminant migration at an active gas station in Jericho.
- 4) A more than 500-gallon kerosene release from a corroded AST with a visible hole in it at a residence in Topsham.
- 5) A single-walled, waste oil underground storage tank (UST) being removed from a service station in Rutland

### **Executive Summary**

This is the 30th annual report of the Petroleum Cleanup Fund (PCF) Advisory Committee. This report will provide a review of receipts and disbursements for fiscal year 2017, in accordance with 10 V.S.A. § 1941 and will evaluate the effectiveness of the PCF in meeting its legislative intent. This report will also highlight financial challenges within the fund and will provide recommendations.

In fiscal year 2017 the PCF continued to be the primary financial responsibility mechanism for Vermont underground storage tank owners, which is required by state and federal law. The PCF also provided financial resources necessary to remediate petroleum contamination at schools, homes, businesses, farms, churches, public works facilities and many other locations. The PCF provides a means to remediate releases that threaten public health and the environment. Since the inception of the fund, petroleum releases have been discovered at more than 4,000 properties, with contamination discovered in drinking water wells, in the indoor air of homes and businesses, seeping into surface water and at dangerous levels in public utility lines. Without the PCF many Vermont businesses, homeowners and public entities would struggle to pay for expensive cleanups. Critical site cleanup work remains at thousands of properties contaminated by releases from petroleum underground storage tanks (USTs) and aboveground storage tanks (ASTs). The continued success of the PCF depends upon the continued solvency of the fund.

The PCF is due to sunset in 2019 with fees collected until 2021. The committee evaluated the availability of affordable private insurance to replace the PCF and concluded that private insurance remains either unavailable or unaffordable for most Vermonters. The committee recommends extending the sunset dates by ten years.

The heating oil account continues to be under significant financial pressure. To reduce long-term demand on the PCF, and to improve environmental outcomes, the Legislature adopted legislation in 2016 that emphasizes prevention of releases. In response to Act 76, the AST rules were revised and went into effect August 15, 2017. The rules now require inspections of all ASTs every three years to help prevent future failure. This new requirement has created a surge in demand for limited financial assistance to replace or upgrade tanks, as many of the aging tanks are owned by those with lower household income. After August 2020, the deadline for all initial AST inspections, we anticipate significantly fewer costly AST releases.

The motor fuel account has remaining financial risk associated with the Jan. 1, 2018 deadline for the removal or replacement of most single-wall USTs. In 2017, a total of 100 unlined single-wall tanks were removed versus 37 in 2016. The remaining 42 unlined single-wall tanks were taken permanently out-of-service by the end of 2017. By rule, these tanks require removal within one year of having been taken out-of-service, i.e., by Dec. 31, 2018 at the latest. Fortunately, fewer releases from the remaining single-wall tank systems are being discovered than prior experience suggested. Additionally, demand for tank closure and replacement loans is lower than expected, as many business owners are deciding not to replace their tanks. Under 10 V.S.A. §1941, up to one-half of motor fuel licensing fees may be used to capitalize the loan program. This translates to approximately \$1,900,000 available for loans each year. In 2017, there were seven loan disbursements, totaling \$901,853; six were for facility tank replacements and one for a facility tank removal without replacement. In 2018, the PCF could provide replacement loans at up to 12 of the remaining 33 facilities; loans are capped at \$150,000 per facility. Doing so is no longer believed to put at risk the \$1 million minimum fund balance federal requirement for providing financial assurance for motor fuel tank owners, as cleanup costs related to these tanks is proving to be lower than anticipated. This allows us to reprioritize the motor fuel account funding to address the remaining backlog of over 500 open motor fuel UST sites.

#### **Description and Purpose**

This is the 30th annual report on the status of the PCF. This report will look at the effectiveness of the fund in meeting its intended purpose, review the status of cleanups from motor fuel and heating oil releases from both aboveground and underground heating oil storage tanks, review the farm and residential UST and AST financial assistance programs and provide future PCF projections and recommendations, if needed.

In 1985, the General Assembly enacted Vermont's first law to regulate the construction, maintenance and operation of underground steel tanks used for the storage of petroleum products. Act 66 of the 1985 session established standards for new construction, and set a deadline of June 30, 1998, later amended to Dec. 22, 1998, for the removal or replacement of unprotected USTs.

In 1988 the legislature created the PCF, and appointed this advisory committee to oversee the financing, effectiveness and conduct of the program. The primary purpose of the PCF is to protect public health and the environment by paying for cleanup and restoration of contaminated soil and groundwater caused by releases from underground petroleum storage tanks, and to compensate third parties for property damage and bodily injury. Many changes have been made since 1988, such as the inclusion of pollution coverage for ASTs and farm and residential USTs (1998) and the addition of the AST financial assistance program (2004). The Fund also provides loans to motor fuel tank owners for tank removal, replacement, and upgrade of equipment. The current deadline for filing a claim against the fund is July 1, 2019.

The PCF provides financial assurance to UST owners, who are required by state and federal law to provide coverage for up to \$1 million for cleanup and \$1 million for third party liability. Since such affordable comprehensive insurance coverage continues to be difficult or impossible to find for tank owners, the PCF enables tank owners to meet their financial responsibility (FR) requirements. By law, the U.S. EPA must approve the operation and viability of a state fund before it may serve as a financial responsibility mechanism for UST owners. EPA accepted Vermont's fund as a financial assurance mechanism in 1990, with the requirement that a minimum balance of \$1 million be maintained.

In 2004, the Legislature extended coverage to homeowner heating oil tanks and enacted a fee on heating fuel to create a revenue source for the heating oil related activities covered by the PCF. The PCF was also divided into two separate accounts: a motor fuel account and a heating oil account, with both revenue and expenditures to be managed within each account. In 2010, the fee on heating oil and kerosene was increased from a half cent per gallon to a full cent.

Revenue for the motor fuel account comes from an annual assessment fee of up to \$100 per tank on most underground tanks, (\$250 for combination systems where the single-walled tank is lined and \$500 for unlined combination single-walled tank systems) and a "distributor licensing fee" of one cent per gallon of motor fuel sold in the state. Additional revenue comes from the repayment of loans, recovery of some costs from responsible parties and interest accruing upon any cash balance in the fund. The sunset date for collection of the motor fuel and heating fuel fees is April 1, 2021.

Expenditures include the cost of cleanup, third party payments, loans to tank owners, financial assistance to homeowners to assist in the removal of heating oil USTs and replacement or upgrade of ASTs, and administrative expenses. Each uninsured cleanup undertaken in the state becomes eligible for fund assistance after the party responsible for the tank meets a certain "deductible," a co-insurance payment based on the circumstances of ownership. For commercial entities, the deductible is set at

\$10,000 per occurrence, although single-walled tank owners pay a higher deductible, and commercial heating oil USTs less than 1,100 gallons pay a \$250 deductible. For homeowners, a deductible of \$250 must be met. Owners of commercial heating oil ASTs meet a \$1,000 deductible.

#### **Risks to Fund Solvency**

Motor Fuel Account and Single-Walled Combination Tanks. Single-walled motor-fuel underground storage tank (UST) systems are the most significant risk to the solvency of the motor fuel account. To help offset that risk, beginning on July 1, 2014, owners of single-walled tanks began paying a higher annual tank assessment fee and were subject to a higher deductible in the event of a release. Additionally, all unlined tanks were required to be permanently taken out-of-service or removed by Jan. 1, 2018. Any tanks taken out-of-service must be removed within one year of having been taken out-ofservice. Over the past year, the number of single-walled USTs (including both lined and unlined tanks) has been significantly reduced from 182 to 78 (as of 12/12/17). Single wall systems comprise approximately four percent of the current tank population. Of the 78 single-walled tanks, 42 are unlined tanks at 22 facilities. The remaining 36 lined systems are located at 11 facilities. A total of 100 unlined tanks were closed in 2017, and the remaining 42 tanks are being permanently taken out-of-service to comply with the Jan. 1, 2018 deadline, and will require removal sometime in 2018. Due to lined tanks having an added level of protection, they do not require removal until Jan. 1, 2018, or within ten years of the date the tank was lined, whichever is later. The last tanks to be lined were in 2013, therefore we expect the last lined tanks to be closed by the end of 2023; this date could be extended since lined tanks may have their life extended by 5 years if they pass an inspection at the end of the ten years. See graph below of the decreasing single-wall tank population.

These single-wall systems pose a greater risk of an undetected leak due to the lack of secondary containment, and can cause considerable harm in the environment. In 2017, we anticipated that a larger number of releases would be found during the closure of 104 unlined tanks, but only five new releases were discovered. The severity of claims from the remaining single-wall tanks has a probability of being in the range of \$400,000 to \$800,000, though a single larger release could easily skew this projection given the \$1.24 million coverage cap per site. There are currently 78 remaining single-wall tanks, and the above claim estimate assumes approximately five to 10 percent of the tank population resulting in four to eight new sites. Our 2016 actuarial study shows that the average severity of claims for *all* UST

releases over the past decade is approximately \$70,000 and, as past reports have discussed, releases from single-wall systems can easily be at least 40 percent costlier (or \$100,000 per claim). This is because undetected releases from these systems can be substantially larger than at systems with secondary containment. An additional cost related to single-wall tanks is loan assistance provided to tank owners who desire to replace these tanks with double-walled ones. In 2018 we may be requested to fund up to the statutory limit of approximately \$1.9M in loans, which could assist up to 12 facilities in upgrading their tanks based on the tank replacement loans being capped at \$150,000 per facility. In 2017, the fund provided \$901,853 in loans that were requested at seven facilities. Though it is perhaps too early to declare it, if trends continue the PCF will fare far better than expected against the added costs of the remaining single-walled motor fuel UST systems. This is due to both fewer releases being discovered and fewer tank replacement loans being requested. The important result is that we can refocus our efforts on cleaning up the large number of properties that are still contaminated and eligible for reimbursement.

Active Site Backlog. The large number of contaminated properties that are eligible for reimbursement is another significant risk to the solvency of the PCF. These include motor fuel USTs, heating oil USTs, and heating oil ASTs. There are currently 2,637 properties where the PCF has made disbursements. In 2017, petroleum releases were discovered at another 121 properties that are PCF eligible. Of these, 66 releases were from above ground storage tanks (ASTs), which is four fewer than 2016 and 20 fewer than 2015; 64 were from heating fuel, one was from diesel, and one was from hydraulic oil. Of the 64 heating fuel AST releases, 24 were from outdoor kerosene tanks and 40 were indoor tanks, predominantly in basements. The other 55 releases were from UST releases: eight were from permitted motor fuel tanks and the other 47 were from heating oil tanks. This large number of contaminated properties will result in continued disbursements from the PCF. Many older sites remain that require remediation and hence future PCF disbursements. These older sites tend to be the most expensive sites to clean up in part due to the size and complexity of the release. The USEPA Office of Underground Storage Tanks has made addressing the site backlog a priority. Of the approximately 950 sites remaining in an active status where PCF eligible work needs to be completed, 621 are leaking motor fuel UST sites. Attachment 2 provides a detailed list of properties that have received reimbursements from the PCF for motor fuel releases.

Heating Oil Account and the Aging Residential AST Population. The heating oil account has been under significant financial strain since its creation on July 1, 2004, when it inauspiciously began by running a deficit. The revenue was not nearly sufficient for demand, requiring transfers from the motor fuel account (i.e., \$750,000 in fiscal year 2006, fiscal year 2007, fiscal year 2009, \$500,000 in fiscal year 2008, \$400,000 in fiscal year 2010, and \$200,000 in fiscal year 2005) to keep the account solvent. Even after raising the distributer licensing fee from a half cent per gallon of heating fuel to a full cent in 2010, the account still periodically required the influx of additional monies. For example, in fiscal year 2011, \$300,000 was transferred from the General Fund, and after Tropical Storm Irene caused a record number of AST releases, the legislature transferred another \$750,000 in fiscal year 2012 from the General Fund. From fiscal year 2013 to the present, the annual account balance has been in the negative each year except for FY14. In 2017, \$120,000 was transferred from the motor fuel account to the heating oil account, allowing the account to end the fiscal year with a positive balance. In fall 2015, the committee resolved that the best course of action was to strengthen prevention efforts, particularly for ASTs as many of the releases were preventable. Independently, Rep. Dan Conner approached the committee about legislation he was proposing for strengthening prevention requirements in the AST Rules, which was supported and became Act 76 in the spring of 2016.

For this report, the committee added another chart (Figure 2.) to assist with better communicating AST release dynamics. Figure 2 shows annual AST cleanup expenditures irrespective of the release

year, as well graph lines showing the new releases each year, the number of those releases that have resulted in claims to date, and the current number of open releases. Expenditures for most years are primarily comprised of cleanup costs related to the releases from the prior two years.

For example, 2012 and 2013 were milder winters with fewer than 40 claims each year (grey line), which resulted in lower total expenditures in both 2013 and 2014. Notably, 2014 was a colder winter and had a 47 percent increase in spills with claims, but those expenditures were not significantly felt until 2015. That colder winter had translated into increased fuel deliveries, spills, claims and cleanup costs from 2014 releases. Figure 3 presents data in a very different way, showing cumulative expenditures related solely to the releases from that same year. For example, the expenditures listed in 2014 on Figure 3 are only for releases that happened that year; many of those costs were not reimbursed until 2015 and 2016 as shown in Figure 2. A closer analysis showed that for most years approximately 80 percent of costs for a release were claimed and paid in the following two years. In 2014, the cold winter also resulted in increased revenue that helped keep the account balance positive (as discussed earlier) when coupled with fewer claims from the prior two winters, but claims for those 2014 releases began putting significant strain on the account balance in 2015 and 2016. Another example is Tropical Storm Irene. Most of those spills were cleaned up on an emergency basis and so a large portion of claims were paid in 2011, though in Figure 2 the expenditure carryover into 2012 is evident, particularly since 2012 had few new claims, i.e., 37.

Another item worth highlighting is the orange trend line in Figure 2 for new releases. The trend appears to be starting to show a reduction in the number of new releases. This is a trend the committee believes should significantly accelerate after the three-year inspection phase in. The other two lines in Figure 2 are more dynamic, as data for each year changes with time. The grey line showing cumulative releases resulting in claims will continue to increase until plateauing about two years after the release year. The number of new claims for 2017 releases is expected to grow in 2018 and beyond. Conversely, the yellow line showing open releases will continue to decrease over time as spill sites are cleaned up and closed.

For 2017, reimbursement claims had ceased on 2013 releases, and reimbursements for both 2014 and 2015 releases were less than \$25,000. However, for 2016 releases the amount of claim sites and

claim amounts both roughly doubled in 2017, with approximately \$150,000 in new cleanup expenditures paid. For new releases in 2017, the data is nowhere near final since releases are still occurring and claims have not been made yet for many of the releases. For example, we had 66 AST releases in 2017, but only 18 claims have been made to date (see Figure 2). Still, we are hopeful that overall 2016 and 2017 claims will be in line with 2012 and 2013 given the milder winters.

Looking to the future, we anticipate a decrease in both cost and number of releases given our efforts at prevention through the residential and farm AST financial assistance program and the addition of the tank inspection requirements to the AST rules that went into effect Aug. 15, 2017. Inspections will be phased in over a period of three years. As more and more tanks are upgraded to the current standards, fewer and fewer new tank releases should occur, allowing us to repay the motor fuel account for transfers and perhaps eventually lowering the licensing fee.

Figure 3 below highlights another aspect to the vulnerability of the fund. In 2011, Tropical Storm Irene alone caused more than 90 AST releases costing the PCF more than \$800,000 in cleanup expenses. The legislature provided \$750,000 in funds to cover these costs. Without this additional income, the fund could not have absorbed these higher costs. Notably, 2017 was a record year for hurricanes and tropical storms and some models predict an increased risk of another Irene type even in Vermont. One measure taken to address this risk is that the revised AST Rules require all new indoor ASTs in flood hazard areas to meet requirements to prevent tanks floating and spilling their contents during a flood. Similar steps are recommended but not required for outdoor tanks in flood prone areas.

The PCF has provided cleanup funds for heating oil contamination at schools, homes, businesses, farms, churches, public works facilities and many other locations. Attachment 3 provides a detailed list of properties that have received reimbursements from the PCF for heating fuel releases. The farm and residential financial assistance program for heating fuel tanks continues to remain very successful, as hundreds of tanks are removed or upgraded each year.

*High Priority Sites.* The PCF's most important priority is to protect human health and the environment from exposure to petroleum from tank releases. This was highlighted at a Barre site where explosive gasoline vapors were discovered in the fall of 2012 in the town's sewer system and in homes

causing unhealthy exposure to the residents. In addition, hundreds of people were at risk of injury and death had there been an explosion in the sewer system. Immediate corrective action eliminated this significant risk to public health.

Of the more than 4,000 properties where petroleum contamination has been discovered, many of these have affected drinking water wells, contaminated indoor air of homes and businesses, have migrated into surface water bodies and have been found at dangerous levels in public utility lines. For example, more than 200 sites have been discovered where nearly 1,000 public or private drinking water wells have been contaminated. Attachment 4 provides a list of the number of sites discovered each year that have had a direct effect on a sensitive receptor. To address human health and environmental exposures to releases the fund has authorized proactive measures which include rapid initial response to releases, providing bottled water and point-of-entry treatment for contaminated drinking water, aggressively recovering free product, protecting surface water bodies, indoor air remediation and mitigation of dangerous petroleum vapors.

Sites that have a direct effect on public health and the environment are the program's most critical priority and demand the greatest level of effort. These same sites also present the greatest risk to fund solvency. Over the history of the program, the sites that have affected public water supplies or sensitive environmental areas have required extensive remediation at a high cost to the PCF. A site discovered in Killington had more than 80 private wells that were contaminated with a gasoline additive, MTBE. One home even had to endure significant disruption to the use of its well, as the well was so contaminated that at one point it was used as a remediation well. It is important to maintain a sufficient balance in the PCF, in excess of the required \$1 million federally mandated reserve, to ensure there are adequate funds to provide an immediate and effective response where public health is at risk.

*Projected Liability Funding Gap.* PCF Income and Expenses for both the motor fuel and heating oil accounts are tabulated in Attachment 6, which captures each calendar year from 1988 through 2015, and then transitions to fiscal year reporting in 2016. The table showing expenses highlights the shortfalls in the heating oil account from 2005 until the present, as years 2005 -2009 required a transfer of \$3,400,000 from the motor fuel account, another \$750,000 was legislatively transferred from the General Fund to help with Tropical Storm Irene, and another transfer from the motor fuel account was needed at the end of fiscal year 2017 to avoid a negative balance. This table also displays other transfers of funds, including those out of the fund by the legislature since the fund was established in 1989.

Actuarial studies completed in 2005 and 2016 each found that the fund was "technically insolvent" since "projected liabilities exceeded assets of the fund" through 2015 and 2026, respectively. A notable difference between these two studies is that the gap between projected assets and liabilities has significantly grown over time. The actuarial study in 2005 was completed only one year after the legislature enacted a fee on heating oil, so there was very limited data to help project how these new risks would play out. There is now an additional decade of data under this new funding and expenditure framework, which in part is why the PCF Advisory Committee requested ANR moving forward with a second actuarial study in 2016. Technical insolvency involves evaluating whether all outstanding claims can be met by assets and income. Given past data, we have a very good understanding of the average cost to clean up our various types of open sites, e.g., motor fuel UST, heating oil UST, heating AST, etc., so given our existing open site backlog the actuary is able to assess existing liabilities to the fund. In 2005, the actuary projected that PCF would have a \$10.5 million deficit on Dec. 31, 2005. By comparison, the latest study projected a deficit of \$26.2 million on June 30, 2016. Legislative transfer of funds is an additional risk to fund solvency. In fiscal year 2009, \$2.8 million was transferred out of the PCF, expanding the gap between projected liabilities and fund assets. This transfer also resulted in some cleanups being delayed. Maintaining a healthy cash balance above the federally mandated \$1 million

reserve is important to the long-term success of the fund and ensures that motor fuel tank owners can clean up a catastrophic release.

#### Review of Receipts to the Fund

A review of fund receipts for fiscal year 2017 is summarized in Attachment 1. In fiscal year 2017, total fund receipts for the motor fuel account were \$4,314,793. This represents a decrease in revenue of \$290,983 as compared to fiscal year 2016, and is mostly attributable to a large cost recovery action the prior year. The distributor licensing fee, a one cent per gallon assessment of all motor fuels sold in the state, contributed \$3,818,310, a decrease of \$46,074 over the prior year. Owners of "Category One" storage tanks paid \$204,850 in tank assessment fees, a decrease of \$17,275 over fiscal year 2016. Overall tank assessment revenue peaked in fiscal year 2015, when higher tank fees began being assessed on tank systems that are not fully double walled to incent their removal. This revenue is expected to continue decreasing through fiscal year 2018, as tanks with higher assessment fees require removal (or being taken permanently out-of-service) by Jan. 1, 2018; additionally, the overall tank population is beginning to trend down. Repayment of motor fuel UST loan income increased significantly again, totaling \$354,381. This is an increase of \$66,692 over fiscal year 2016, and over \$114,670 since fiscal year 2015. This reflects increasing outstanding loan balance that is from increased loan demands to help tank owners meet the single-wall tank system closure deadline. Loan interest totaled \$17,929, an increase of \$6,348 from fiscal year 2016. The state successfully recovered funds totaling \$21,399 in fiscal year 2017, a significant decrease from the \$212,556 recovered in fiscal year 2016, though another larger insurance recovery is expected in fiscal year 2018. Interest paid on the PCF account was \$17,923, an increase of \$10,159 from the prior year.

In fiscal year 2017, total fund receipts for the heating fuel account were \$1,361,478, an increase of \$102,221 compared to fiscal year 2016. This increase was expected given the milder winter. The Vermont Fuel Assistance Program also supports our prevention efforts and continued providing \$75,000 in fiscal year 2017 to supplement the residential tank removal assistance program.

#### **Review of Disbursements from the Fund**

A review of fund disbursements for fiscal year 2017 is summarized in Attachments 1, 2, and 3. In FY17, motor fuel account disbursements totaled \$4,163,931 an increase of \$76,476 over fiscal year 2016, of which \$901,853 was for loan disbursements for single-wall tank closures and replacements. Heating fuel disbursements totaled \$1,396,236 a slight decrease of \$15,703 over fiscal year 2016. Notably, at the end of fiscal year 2017, the PCF Advisory Committee voted to transfer \$120,000 from the motor fuel account to the heating oil account to maintain a positive balance. The intention is to transfer that money back once the three-year phase in period for AST inspection requirement is completed, as high demand for AST assistance for tank upgrades and replacements is expected until that time.

Expenditures from the motor fuel account included \$2,447,924 for remedial action at UST motor fuel sites, \$901,853 for the UST replacement loan program, \$376,849 for third party claims, and \$171,505 for bulk storage remedial action. The most significant change was the UST loan program expenditure increasing by \$209,868 over fiscal year 2016, though the loan demand was less than anticipated. Disbursements from the heating oil account included \$335,815 for remedial action for UST heating fuel sites (a decrease of \$105,668 from fiscal year 2016), \$79,144 for the residential UST removal program (an increase of \$31,831 from fiscal year 2016), \$574,234 for remedial action for AST

heating fuel sites (a decrease of \$42,778 from fiscal year 2016), and \$400,664 for the residential AST replacement grant program (an increase of \$96,375 from fiscal year 2016). Overall cleanup expenditures decreased by \$148,446, while assistance spending increased by \$128,206. Essential spill program response spending was tightened as demand began to spike in relation to the passage of Act 76 in spring 2016, and the anticipated inspection requirements; this is discussed in more detail below under "Investing in Prevention."

Third party claims continue to represent a small portion of overall disbursements (less than five percent historically). As of the end of fiscal year 2017 the PCF has paid \$6,025,848 for all third-party claims, with \$376,849 paid out in fiscal year 2017 (this was seven percent of total fiscal year 2017 PCF expenditures).

Since the inception of the PCF in 1988, the Fund has disbursed money across a total of 2,933 properties (Attachment 2 & 3), which includes sites where remediation occurred in prior years. Figure 4 below provides a breakdown of the sources of PCF reimbursement sites. These sites are located throughout Vermont in 232 towns. Attachment 5 shows the distribution of these sites throughout the state.

In Figure 5 below, expenditures on contaminated sites in 2017 are broken out by task type. A total of 39 percent of expenditures were cleanup related, of which five percent was for emergency response, 31 percent for site corrective action, and three percent for contaminated soil management. Ongoing monitoring costs comprised 39 percent of costs. In the future, monitoring will be broken out to differentiate between monitoring to help determine the cleanup remedy, and "monitored natural attenuation," which is an actual remedy when biodegradation, dilution, dispersion and other natural processes are adequate for bringing a site to closure. The other major expenditure type was "site investigation," which accounted for 20 percent of expenditures. A total of two percent of expenditures were for bottled water and drinking water treatment.

#### **Investing in Prevention Activities**

The heating fuel account revenue has not met demand and at the end of fiscal year 2017 required a transfer of \$120,000 from the motor fuel account to maintain a positive balance. Most cleanup costs are from preventable AST releases emanating from older tank systems that do not meet standards. It was evident that either more revenue was needed or more action was needed to prevent releases. Act 76 was passed in FY16, which led to new rules being promulgated on Aug. 15, 2017 that require routine AST inspections, inspector training and training certification. With the lack of sustainability in the heating fuel account, these new rules are critical to reduce the number and severity of annual AST spills. The new rules require that all tanks be inspected by Aug. 15, 2020, a three-year phase in period.

ANR created and maintains an online list of red-tagged tanks, which records tanks that should not receive deliveries due to high risk of a release. Inspectors are required to not only physically tag a non-compliant tank, but also utilize ANR's online "red tag" form to add tanks to the red-tag list. Expanded usage of this red-tagged tank list has occurred starting in fiscal year 2018 as anticipated once routine inspections were required by the new rules. For August through October 2017, there were 416 reported red-tagged tanks with the peak happening in August (165 tagged). Prior to the new rules, fewer than a dozen thanks were tagged each month. Many of the tagged tanks have been replaced or repaired/upgraded and placed back into service. Still, there are over 100,000 ASTs in Vermont, many are several decades old and will drive a great deal of repairs and replacements over the remaining 2.5 years of the initial inspection phase-in period. However, we are optimistic that the number and severity of AST releases will significantly be reduced after 2020.

There has also been a great deal of outreach and coordination to assist with the implementation of the new rules. Direct communications with homeowners by fuel dealers and outreach to the media including television interviews and public service announcements have been used to educate the public on the state's AST regulations. This outreach has occurred without taxpayer expense, thanks to the partnerships with businesses and non-profits such as VFDA, VPA and the VT Association of Realtors. These partnerships will continue to be used for outreach and education of new regulations. The latest outreach involved discouraging routine inspections during the heating season to minimize any heating emergencies. To that end, ANR developed guidance sent out to all fuel dealers and inspectors via

VFDA. In addition, a press release was issued to provide general guidance inspection timing, and where to get assistance on any required repairs or replacements. This past fall, ANR collaborated with the Vermont Department of Children and Families (DCF) Weatherization program, including meeting with their community action partners and assisting with development of their internal guidance for administering \$100,000 in heating assistance funds that they allocated for responding to "heating emergency" situations that may result from red-tagged tanks this winter. This guidance will also be helpful for them in responding to AST related calls from their clientele. They have an additional \$750,000 available for other types of heating emergencies, e.g., heating appliance repairs. ANR also developed our own policies for responding to any heating emergencies, which included establishing criteria for waiving competitive bids to expedite necessary tank upgrades or replacements.

In parallel with this effort, important prevention efforts for commercial USTs has intensified as we approach the Jan. 1, 2018 removal deadline for the remaining unlined single-walled tanks. Demand for interest free loans has increased as detailed further below.

Though prevention efforts are currently peaking due to deadlines for AST inspections and single-walled commercial UST removals, leak-prevention activities have been funded by the PCF for over a decade and have helped to mitigate risks and reduce future costs. These include providing financial assistance awards to farm and residential properties to remove and replace aging aboveground and underground heating oil tanks, and providing interest free loans to upgrade underground storage tanks. AST regulations were first adopted in October 2011, which *recommended* routine inspection of old tanks. This initially increased demand for the AST replacement grant, and that demand spiked significantly beginning in fiscal year 2017 after passage of Act 76 *requiring* inspections and red-tagging of non-compliant tanks. The AST requirements have also increased the cost of new tank installation. This includes installing a concrete pad and a roof for outside tanks that are not under the gable end of a building.

Financial assistance was implemented for removal of home heating oil USTs (in 1998) and replacement or upgrade of ASTs (in 2004) to encourage the repair or removal and replacement of non-compliant tanks before leaks and releases occur. The average cleanup cost for home heating USTs has been approximately \$15,000 and AST cleanup costs have averaged approximately \$11,000. The committee believes this assistance has been an excellent investment, as millions of dollars on cleanup costs have been avoided by removing or repairing tank systems before they leak.

*Grants for Residential Heating Oil USTs (Removal).* A total of 22 assistance awards were approved in fiscal year 2017 for the closure of residential heating oil USTs; the average award was \$2,600, with only one award at the maximum of \$4,000. A total of 22 tanks were removed, with 16 replaced by new ASTs. Four UST owners already had ASTs and just removed their USTs, the remaining two UST owners switched fuels – one to natural gas and the other to propane. Total reimbursement in FY17 for UST assistance was \$71,470 which brings the total amount awarded for USTs since the program began to \$1,166,848.

Grants for Residential Heating Fuel ASTs (Replacement or Upgrade). A total of 249 assistance awards were paid in fiscal year 2017 for the replacement or upgrade of residential heating fuel (kerosene or heating oil) ASTs using PCF monies. An additional 46 awards were paid using DCF assistance monies. Total reimbursement in fiscal year 2017 for AST financial assistance was \$400,664, which brings the total amount awarded since the program began to \$2,738,517 in AST assistance funding. In addition to these funds, the Vermont Fuel Assistance program provided an additional \$75,000 to be used for AST replacement at residential properties with low income homeowners. Demand starting in fiscal year 2017 has spiked dramatically given the new AST inspection requirements effective Aug. 15, 2017.

Meeting that demand has been helped by the legislatively increased annual spending caps from \$350,000 to \$400,000. See 2016 Act 66 §1, coupled with additional non-PCF assistance from DCF's Heating Fuel Assistance program. So far in fiscal year 2018, DCF has allocated \$350,000 to help with tank replacement and upgrades. Since demand has outstripped funding starting in fiscal year 2017, awards in fiscal year 2018 are now prioritized by leaking tanks and those that are red-tagged. In addition, at the start of fiscal year 2018 we lowered the annual household income eligibility cap from \$74,000 to \$65,000, and changed the award sliding scale to better assist a greater number of tank owners.

Total Grants for Residential Heating Fuel (USTs and ASTs). In total the PCF UST and AST financial assistance program has funded the removal, replacement and/or upgrade of 3,214 aging petroleum storage tanks; of this 2,525 ASTs have been replaced or upgraded with compliant tanks and 689 USTs have been removed. Figure 6 below depicts the annual fiscal year number of tanks removed and funds awarded from 2008-2017.

Loans for Commercial Motor Fuel USTs (Removal or Replacement). In fiscal year 2017, disbursement for UST motor fuel loans were made on seven sites in the total amount of \$901,853; an increase of \$309,868 from fiscal year 2016. This included \$4,000 for the agency to contract for services with a certified accountant to review tank owner's financials for determination of ability to repay and suggested collateral for each loan. For each facility performing a tank replacement, we cap loans at \$150,000, whereas performing removals only are fully funded at an average of \$50,000 per facility. We anticipated a sharper increase in loan program applications in FY17 to assist tank owners comply with the Jan. 1, 2018 deadline to remove single-wall combination tank systems, with or without a replacement system. As of June 30, 2017, the amount of \$2,503,448 was the outstanding loan balance due to the fund, which is an increase of \$584,138 over last year and \$1,183,030 over two years ago.

**Loans for Non-Residential Heating Oil USTs (Replacement).** The UST Program has received inquiries from owners of commercial buildings, churches and schools (public and private) who are seeking funding sources for the replacement of their large on-premises heating oil tanks. To date one school district (paid), one private school (paid), one town library, and two residences have received interest–free loans. The outstanding loan balance at the end of fiscal year 2017 was \$11,536.

#### **Effectiveness of the Fund in Meeting Its Purpose**

The fund was effectively able to meet its purpose of funding cleanups and providing required financial assurance for permitted UST owners in Vermont in fiscal year 2017. Throughout the year there was an adequate balance in the motor fuel account. Notably, a few motor fuel UST contaminated sites have approved corrective action plans that were on hold due to perceived limited resources in the motor fuel account - a significant number of new releases from motor fuel USTs were anticipated in fiscal year 2017 as owners of single-wall tank systems removed these systems to meet the Jan. 1, 2018 closure deadline, and a significantly higher demand for replacement UST loans was anticipated from owners of those tanks systems. Since these conservative projections did not play out, starting in mid-fiscal year 2018 motor fuel cleanups will start to be pursued more aggressively.

However, the heating fuel account would have ended fiscal year 2017 with an overall negative balance of \$62,016 (Fiscal year 2017 started with a negative balance of \$32,726, and fiscal year 2017 added an additional deficit of \$29,290), but the PCF Advisory Committee transferred \$120,000 from the motor fuel account so that the heating oil account ended fiscal year 2017 with a balance of \$57,984. This transfer was made with the requirement that the money be transferred back once the three-year AST inspection phase-in period is completed in August 2020. The annual statutory tank assistance cap of \$400,000 was exceeded in fiscal year 2017 by \$79,808, and therefore in fiscal year 2018 we are spending a maximum of \$320,192 (a reduction of \$79,808) in assistance to correct this. Given the increased demand for assistance, this correction is only made possible by DCF's Fuel Assistance Program increasing its support of prevention efforts by boosting funding assistance from \$75,000 in fiscal year 2017 to \$350,000 in fiscal year 2018 (\$100,000 of this is being managed by the DCF's Weatherization program).

#### Reasonableness of the Cost of Cleanup

In past years, the committee has reviewed the written policies and procedures of the DEC related to UST replacement, eligible costs and reimbursement procedures. In assessing the reasonableness of the cost of cleanup, the committee has reviewed national averages and comparative data from other states. The PCF Advisory Committee has concluded that agency staff responsible for this program has exercised prudent cost containment measures. A review of the latest annual survey (2016) conducted by the Association of State Underground Storage Tank Cleanup Funds shows that Vermont's average cost of cleaning up contaminated sites is below almost all other states, including the lowest in New England. The continued efforts of Agency staff have helped to maintain reasonable cleanup costs in Vermont.

#### **Recommended Statutory Changes to Chapter 59**

The PCF Advisory Committee recommends extending from the year 2021 until the year 2031 the repeal of the licensing fees on motor fuel and heating oil, kerosene, or other dyed diesel fuel that are deposited in the PCF, as well as extending from the year 2019 to the year 2029 the repeal of the assessment of underground storage tanks that is deposited into the PCF. The proposed legislative language is included in Attachment 7.

For each site with an affected receptor the number of actual Vermonters exposed to contamination can vary. The actual users for public water supplies can be as low as 25 people per system to as high as many thousands of users. For sites with affected private water supplies, the number of contaminated wells depends on the specific conditions of the site. On average there are approximately three contaminated wells discovered per site, with an average of 3 users per household. However, one of the 161 sites listed above involved contamination to over 80 wells affecting approximately 240 users, and a site discovered in 2002 involves contamination to over 30 wells, including a public water supply, affecting hundreds of users. Surface water impacts can affect both public health and the environment. High concentrations of petroleum in a stream can cause detrimental affects to biota, and lead to an increased exposure to stream users. Lastly, sites with indoor air impacts can lead to the greatest risk to public health. Petroleum vapors entering a home can be at levels that are explosive. More often petroleum vapors reach levels that pose a serious health risk. Of the 141 sites with indoor air impacts, the number of exposed individuals varied from site to site. An average site involves three homes affected with approximately three persons per home.

#### Attachment 7

#### Sec. 1. 10 V.S.A. § 1941(b) is amended to read:

#### § 1942. PETROLEUM CLEANUP FUND

(b) The Secretary may authorize disbursements from the Fund for the purpose of the cleanup and restoration of contaminated soil and groundwater caused by releases of petroleum from underground storage tanks and aboveground storage tanks, including air emissions for remedial actions, and for compensation of third parties for injury and damage caused by a release. This Fund shall be used for no other governmental purposes, nor shall any portion of the Fund ever be available to borrow from by any branch of government; it being the intent of the General Assembly that this Fund and its increments shall remain intact and inviolate for the purposes set out in this chapter. Disbursements under this section may be made only for uninsured costs incurred after January 1, 1987 and for which a claim is made prior to July 1, 2019 2029 and judged to be in conformance with prevailing industry rates. This includes:

\* \* \*

#### Sec. 2. 10 V.S.A. § 1942 is amended to read:

#### § 1942. PETROLEUM DISTRIBUTOR LICENSING FEE

- (a) There is hereby established a licensing fee of one cent per gallon of motor fuel sold by a distributor or dealer or used by a user in this State, which that will be assessed against every distributor, dealer, or user as defined in 23 V.S.A. chapters 27 and 28, and which that will be deposited into the Petroleum Cleanup Fund established pursuant to subsection 1941(a) of this title. The Secretary, in consultation with the Petroleum Cleanup Fund Advisory Committee established pursuant to subsection 1941(e) of this title, shall annually report to the General Assembly on the balance of the Motor Fuel Account and shall make recommendations, if any, for changes to the program. The Secretary shall also determine the unencumbered balance of the Motor Fuel Account as of May 15 of each year, and if the balance is equal to or greater than \$7,000,000.00, then the licensing fee shall not be assessed in the upcoming fiscal year. The Secretary shall promptly notify all sellers assessing this fee of the status of the fee for the upcoming fiscal year. This fee will shall be paid in the same manner, at the same time, and subject to the same restrictions or limitations as the tax on motor fuels. The fee will shall be collected by the Commissioner of Motor Vehicles and deposited into the Petroleum Cleanup Fund. This fee requirement shall terminate on April 1, 2021 2031.
- (b) There is assessed a licensing fee of one cent per gallon for the bulk retail sale of heating oil, kerosene, or other dyed diesel fuel sold in this State. This fee shall be subject to the collection, administration, and enforcement provisions of 32 V.S.A. chapter 233, and the fees collected under this subsection by the Commissioner of Taxes shall be deposited into the Petroleum Cleanup Fund established pursuant to subsection 1941(a) of this title. The Secretary, in consultation with the Petroleum Cleanup Fund Advisory Committee established pursuant to subsection 1941(e) of this title, shall annually report to the General Assembly on the balance of the Heating Fuel Account and shall make recommendations, if any, for changes to the program. The Secretary shall also determine the

unencumbered balance of the Heating Fuel Account as of May 15 of each year, and if the balance is equal to or greater than \$3,000,000.00, then the licensing fee shall not be assessed in the upcoming fiscal year. The Secretary shall promptly notify all sellers assessing this fee of the status of the fee for the upcoming fiscal year. This fee provision shall terminate on April 1, 2021 2031.

\* \* \*

#### Sec. 3. 10 V.S.A. § 1943(c) is amended to read:

#### § 1943. PETROLEUM TANK ASSESSMENT

(c) This tank assessment shall terminate on July 1, 2019 2029.

Sec. 4. EFFECTIVE DATE

This act shall take effect on July 1, 2018.
