

Act No. 184 (S.202). Public service; energy

An act relating to the energy efficiency charge

This act authorizes the Public Service Board to allow the use of funds raised through an energy efficiency charge on electric ratepayers to reduce the use of fossil fuels for space heating through electric technologies such as heat pumps if, after investigation, it is able to make certain findings, including that deployment of the technology will be beneficial to electric ratepayers as a whole and will be part of a comprehensive energy efficiency program that addresses the energy performance of the buildings in which the technology will be installed.

Effective Date: July 1, 2014
