

Efficiency Vermont - EEU policy draft comments
Senate Committee on Finance, 2/4/14

Suggested modification of the definition of “load management”:

Page 2, line 6

“Load management” means strategies and practices that promote system optimization and stability on an electric or natural gas delivery system and provide customer and societal benefits. These strategies and practices may include, but are not limited to, reducing the maximum demand and modifying the coincident peak demand of one or more classes of service to meet the system’s capability for a given period.
