Stephanie Winters
swinters@vtmd.org | (802) 223-7898

Dear House Health Care Committee Member:

Vaccines save lives and are a vital part of Vermont's public health system. Decreasing immunization rates represent a step backward for our state's health, and could potentially lead to an increase in deadly and debilitating diseases.

I believe in the importance and effectiveness of vaccines, and ask that our state's policy makers support sensible, science-based public health policies that encourage Vermonters to protect their health, and the health of others, by becoming vaccinated.

Dear House Health Care Committee Member:

Vaccines save lives and are a vital part of Vermont's public health system. Decreasing immunization rates represent a step backward for our state's health, and could potentially lead to an increase in deadly and debilitating diseases.

I believe in the importance and effectiveness of vaccines, and ask that our state's policy makers support sensible, science-based public health policies that encourage Vermonters to protect their health, and the health of others, by becoming vaccinated.

Dear House Health Care Committee Member:

Vaccines save lives and are a vital part of Vermont's public health system. Decreasing immunization rates represent a step backward for our state's health, and could potentially lead to an increase in deadly and debilitating diseases.

I believe in the importance and effectiveness of vaccines, and ask that our state's policy makers support sensible, science-based public health policies that encourage Vermonters to protect their health, and the health of others, by becoming vaccinated.

Dear House Health Care Committee Member:

Vaccines save lives and are a vital part of Vermont's public health system. Decreasing immunization rates represent a step backward for our state's health, and could potentially lead to an increase in deadly and debilitating diseases.

I believe in the importance and effectiveness of vaccines, and ask that our state's policy makers support sensible, science-based public health policies that encourage Vermonters to protect their health, and the health of others, by becoming vaccinated.
