

**10 V.S.A. § 6086(a)(9)**

§ 6086. ISSUANCE OF PERMIT; CONDITIONS AND CRITERIA

(a) Before granting a permit, the district commission shall find that the subdivision or development:

\* \* \*

(9) Is in conformance with a duly adopted capability and development plan, and land use plan when adopted. However, the legislative findings of subdivisions 7(a)(1) through (19) of Act 85 of 1973 shall not be used as criteria in the consideration of applications by a district commission.

(A) Impact of growth. In considering an application, the district commission shall take into consideration the growth in population experienced by the town and region in question and whether or not the proposed development would significantly affect their existing and potential financial capacity to reasonably accommodate both the total growth and the rate of growth otherwise expected for the town and region and the total growth and rate of growth which would result from the development if approved. After considering anticipated costs for education, highway access and maintenance, sewage disposal, water supply, police and fire services, and other factors relating to the public health, safety and welfare, the district commission shall impose conditions which prevent undue burden upon the town and region in accommodating growth caused by the proposed development or subdivision. Notwithstanding section 6088 of this title the burden of proof that proposed development will significantly affect existing or potential financial capacity of

the town and region to accommodate such growth is upon any party opposing an application, excepting however, where the town has a duly adopted capital improvement program the burden shall be on the applicant.

(B) Primary agricultural soils. A permit will be granted for the development or subdivision of primary agricultural soils only when it is demonstrated by the applicant that, in addition to all other applicable criteria, either, the subdivision or development will not result in any reduction in the agricultural potential of the primary agricultural soils; or:

(i) the development or subdivision will not significantly interfere with or jeopardize the continuation of agriculture or forestry on adjoining lands or reduce their agricultural or forestry potential; and

(ii) except in the case of an application for a project located in a designated growth center, there are no lands other than primary agricultural soils owned or controlled by the applicant which are reasonably suited to the purpose of the development or subdivision; and

(iii) except in the case of an application for a project located in a designated growth center, the subdivision or development has been planned to minimize the reduction of agricultural potential of the primary agricultural soils through innovative land use design resulting in compact development patterns, so that the remaining primary agricultural soils on the project tract are capable of supporting or contributing to an economic or commercial agricultural operation; and

(iv) suitable mitigation will be provided for any reduction in the agricultural potential of the primary agricultural soils caused by the development or subdivision, in accordance with section 6093 of this title and rules adopted by the Natural Resources Board.

(C) Productive forest soils. A permit will be granted for the development or subdivision of productive forest soils only when it is demonstrated by the applicant that, in addition to all other applicable criteria, either, the subdivision or development will not result in any reduction in the potential of those soils for commercial forestry; or:

(i) the development or subdivision will not significantly interfere with or jeopardize the continuation of agriculture or forestry on adjoining lands or reduce their agricultural or forestry potential; and

(ii) except in the case of an application for a project located in a designated growth center, there are no lands other than productive forest soils owned or controlled by the applicant which are reasonably suited to the purpose of the development or subdivision; and

(iii) except in the case of an application for a project located in a designated growth center, the subdivision or development has been planned to minimize the reduction of the potential of those productive forest soils through innovative land use design resulting in compact development patterns, so that the remaining forest soils on the project tract may contribute to a commercial forestry operation.

(D) Earth resources. A permit will be granted whenever it is demonstrated by the applicant, in addition to all other applicable criteria, that the development or subdivision of lands with high potential for extraction of mineral or earth resources, will not prevent or significantly interfere with the subsequent extraction or processing of the mineral or earth resources.

(E) Extraction of earth resources. A permit will be granted for the extraction or processing of mineral and earth resources, including fissionable source material:

(i) when it is demonstrated by the applicant that, in addition to all other applicable criteria, the extraction or processing operation and the disposal of waste will not have an unduly harmful impact upon the environment or surrounding land uses and development; and

(ii) upon approval by the district commission of a site rehabilitation plan which insures that upon completion of the extracting or processing operation the site will be left by the applicant in a condition suited for an approved alternative use or development. A permit will not be granted for the recovery or extraction of mineral or earth resources from beneath natural water bodies or impoundments within the State, except that gravel, silt, and sediment may be removed pursuant to the rules of the Agency of Natural Resources, and natural gas and oil may be removed pursuant to the rules of the Natural Gas and Oil Resources Board.

(F) Energy conservation. A permit will be granted when it has been demonstrated by the applicant that, in addition to all other applicable criteria,

the planning and design of the subdivision or development reflect the principles of energy conservation, including reduction of greenhouse gas emissions from the use of energy, and incorporate the best available technology for efficient use or recovery of energy. An applicant seeking an affirmative finding under this criterion shall provide evidence that the subdivision or development complies with the applicable building energy standards under 30 V.S.A. § 51 or 53.

(G) Private utility services. A permit will be granted for a development or subdivision which relies on privately owned utility services or facilities, including central sewage or water facilities and roads, whenever it is demonstrated by the applicant that, in addition to all other applicable criteria, the privately owned utility services or facilities are in conformity with a capital program or plan of the municipality involved, or adequate surety is provided to the municipality and conditioned to protect the municipality in the event that the municipality is required to assume the responsibility for the services or facilities.

(H) Costs of scattered development. The district commission will grant a permit for a development or subdivision which is not physically contiguous to an existing settlement whenever it is demonstrated that, in addition to all other applicable criteria, the additional costs of public services and facilities caused directly or indirectly by the proposed development or subdivision do not outweigh the tax revenue and other public benefits of the development or subdivision such as increased employment opportunities or the

provision of needed and balanced housing accessible to existing or planned employment centers.

(J) Public utility services. A permit will be granted for a development or subdivision whenever it is demonstrated that, in addition to all other applicable criteria, necessary supportive governmental and public utility facilities and services are available or will be available when the development is completed under a duly adopted capital program or plan, an excessive or uneconomic demand will not be placed on such facilities and services, and the provision of such facilities and services has been planned on the basis of a projection of reasonable population increase and economic growth.

(K) Development affecting public investments. A permit will be granted for the development or subdivision of lands adjacent to governmental and public utility facilities, services, and lands, including, but not limited to, highways, airports, waste disposal facilities, office and maintenance buildings, fire and police stations, universities, schools, hospitals, prisons, jails, electric generating and transmission facilities, oil and gas pipe lines, parks, hiking trails and forest and game lands, when it is demonstrated that, in addition to all other applicable criteria, the development or subdivision will not unnecessarily or unreasonably endanger the public or quasi-public investment in the facility, service, or lands, or materially jeopardize or interfere with the function, efficiency, or safety of, or the public's use or enjoyment of or access to the facility, service, or lands.

(L) Rural growth areas. A permit will be granted for the development or subdivision of rural growth areas when it is demonstrated by the applicant that in addition to all other applicable criteria provision will be made in accordance with subdivisions (9)(A) "impact of growth," (G) "private utility service," (H) "costs of scattered development" and (J) "public utility services" of subsection (a) of this section for reasonable population densities, reasonable rates of growth, and the use of cluster planning and new community planning designed to economize on the cost of roads, utilities and land usage.
