

**S.202 - House Committee on Natural Resources and Energy
April 23, 2014**

Efficiency Vermont supports passage of S.202, with two recommended amendments.

1. Clarify that the legislation applies to space heating, not water heating, by making the following clarifying edit on page 3, line 16: "for space heating.."
2. Clarify that the potential technologies subject to the legislation are not solely limited to air source heat pumps, with the following edit on page 3, line 17: "such as air source or geothermal heat pumps.."
This edit is not a substantive change, it simply makes clear to the marketplace that this legislation could apply to other technologies in addition to air source heat pumps.

Thank you for your consideration.

Scudder Parker, Policy Director
