

Representative Grad

I am a one of the founders of Vermont Homegrown, we are a loose knit group of Vermonters who have been advocating for personal cultivation. We for have have been following the progress and regress of this bill for over a year. The original bill was one that we could support but in its present form we can no longer support it. I have attended most of the hearings with regard to this in the Senate. I would like very much have to be able to be testify before your committee.

Enclosed you will find an interview I did with Vermont Business Magazine and a letter that I co-authored to the senators. I hope find these of some interest and will allow me to testify before your committee.
