**Annual Point-in-Time Count of Homelessness Shows Modest Gains**  
*State Homeless Service Providers Release New Report*

**MONTPELIER, VT** – On a single night in January, 1,523 Vermonters were identified as homeless. The 2015 Point-In-Time Count, released today by the Vermont Coalition to End Homelessness and the Chittenden County Homeless Alliance, showed a small overall decrease in homelessness by 2.3% compared to the 2014 Point-in-Time Count. However, while Chittenden County saw a substantial decrease by 11.5%, the remainder of the state saw a small increase in homelessness by 2.4%. Of the households counted statewide, 199 had children, or 18.6% of total households counted.

Statewide, significant decreases were seen in chronic homelessness. Under the Department of Housing and Urban Development's definition, a chronically homeless individual is someone who has experienced homelessness for a year or longer, or who has experienced at least four episodes of homelessness in the last three years and has a disability. The chronically homeless are an extremely vulnerable population. Over the past year there have been many efforts to end chronic homelessness in Vermont such as the 100,000 Homes Campaign and an increase of Permanent Supportive Housing.

Vermont Coalition to End Homelessness Co-Chair Sara Kobylenski of the Upper Valley Haven in White River Junction credits state investments over the last several years in programs to alleviate and prevent homelessness as having helped to keep the increase outside Chittenden relatively small compared to previous years. "The Vermont Rental Subsidy, Emergency Solutions, Family Supportive Housing, and Community Housing programs among others are showing positive results," Kobylenski affirmed.

The report comes from data collected for the Annual Point-in-Time (PIT) Count, an unduplicated count of persons experiencing homelessness on the night of January 27, 2015. The Count and its findings were supported by Vermont's two "Continuums of Care," the Chittenden County and Balance of State Continuums. These networks are composed of homeless and human service organizations, housing agencies, and other partners that strive to eliminate homelessness throughout Vermont, and include the Agency of Human Services, the City of Burlington, the Vermont State Housing Authority, and United Ways of Vermont as well.

The Point-In-Time findings come on the heels of the release of the *Out of Reach* Report. In Vermont, the Fair Market Rent (FMR) for a two-bedroom apartment is \$1,075. In order to afford this level of rent and utilities — without paying more than 30% of income on housing — a household must earn \$3,585 monthly or \$43,017 annually. Assuming a 40-hour work week, 52 weeks per year, this level of income translates into an hourly Housing Wage of \$20.68 per hour. A large percentage of renters in Vermont do not earn enough to afford a two-bedroom unit at the average statewide Fair Market Rent. High rents and vacancy rates as low as 1% both continue to be barriers for finding and retaining housing.

"While Chittenden County has seen success in housing the most vulnerable people experiencing chronic homelessness through the community-based 100,000 Homes campaign begun last fall, we need to recognize (as did the remarkably successful effort in Utah) that we need to create more rental

housing stock to truly bend the curve in the right direction – especially with a vacancy rate persistently below 1%. We also need to focus on domestic violence as a leading cause of family homelessness,” said Margaret Bozik, Co-Chair of the Chittenden County Homeless Alliance and Associate Director of Asset Management & Program Development at Champlain Housing Trust.

**Key Notes:**

- Total found homeless on one night decreased by 2.31% from the 2014 count.
- 166 persons identified as chronically homeless. Chronic homelessness decreased within Chittenden County by 33% and within the Balance of State CoC by 49% from the 2014 count.
- 199 households had children, or 18.6% of total households counted.
- 119 persons identified as veterans, almost equal to last year’s total of 120 persons.
- The number of unsheltered persons, those living outdoors or taking shelter in a place unfit for human habitation, was 159 persons. This is a slight decrease of 2.5% from last year.
- 256 persons reported as victims of domestic violence; that count does NOT include children impacted.
- 561 persons identified as being homeless for the first time, or 36.8% of total persons counted.
- 474 persons identified as having a serious mental illness, or 31.1% of the total persons counted.
- 422 persons identified as having a substance abuse disorder, or 27.7% of the total persons counted.
- 336 persons identified as having a physical disability and 94 persons identified as having a developmental disability, or 22% and 6.2% of the total persons counted respectively.

Every year, the Point-in-Time Count provides a snapshot of how many people are homeless on a single night. The PIT Count allows local communities and state policy makers to understand current problems of homelessness, target limited funding to appropriate housing and services, and track progress.

*The Vermont Coalition to End Homelessness (VCEH), acts as the primary decision-making body of the Vermont Balance of State Continuum of Care, with the mission to end homelessness in Vermont through sharing information, developing resources, and providing a forum for decision making and to promote decent, safe, fair, affordable housing for all.*

*The Chittenden County Homeless Alliance is a coalition of individuals, organizations, and government who support our vision of a safe, decent, affordable, stable home for every person and family in Chittenden County. Our mission is to end homelessness in Chittenden County by being a forum for gathering information, building consensus, coordinating efforts, and advocating the end of homelessness through prevention, early intervention, and remediation.*

# 2015 Vermont Point-in-Time Annual Statewide Count of the Homeless

Vermont Coalition to End Homelessness and  
Chittenden County Homeless Alliance

## Summary:

The Annual Point-in-Time (PIT) Count is an unduplicated count of persons experiencing homelessness on the night of January 27, 2015. The total number of homeless Vermonters counted on that single night was 1,523.

The total count showed homelessness decreased by 2.31% compared to the 2014 Point-in-Time Count. However, this is largely due to the decrease of homelessness in Chittenden County by 11.47%, while the Balance of State saw an increase of homelessness by 2.38%.

This year's statewide count and its findings were supported by the Chittenden County Homeless Alliance (Chittenden County Continuum of Care) and the Vermont Coalition to End Homelessness (the Balance of State Continuum of Care). The Continuums of Care are composed of homeless and human service organizations as well as housing agencies and other partners that strive to eliminate homelessness throughout Vermont. These efforts were also supported by the Agency of Human Services, the City of Burlington, the Vermont State Housing Authority, United Ways of Vermont, and the Vermont Affordable Housing Coalition.

The 2015 count identified 1,523 people in Vermont who were unsheltered, in emergency shelter, or in transitional housing, on the night of January 27, 2015. Below is the number of persons counted in each region and the percentage distribution (both Grand Isle and Essex counties reported 0 homeless individuals):

Weather conditions, local volunteer and stakeholder participation should be taken into account when evaluating the data. Also, during extremely cold weather, family and friends are more likely to provide homeless individuals and families a temporary place to stay, especially when children are involved. The Point-in-Time offers a snapshot of how many people are homeless on a single night, and uses HUD's definition of homelessness. The Point-in-Time count did not collect information on those precariously housed, doubled up with friends and family, or couch surfing. Below is a breakdown of where individuals stayed on the night of January 27<sup>th</sup> and how many households there were both with and without children in each area:

**Statewide Total – Place of Inhabitation on the Night of January 27th**

**Total Households With and Without Children**

## Key Notes:

- Total found homeless on one night decreased by 2.31% from the 2014 count.
- 166 persons identified as chronically homeless. Chronic homelessness decreased within Chittenden County by 33% and within the Balance of State CoC by 49% from the 2014 count.
- 199 households had children, or 18.6% of total households counted.
- 119 persons identified as veterans, almost equal to last year's total of 120 persons.
- The number of unsheltered persons, those living outdoors or taking shelter in a place unfit for human habitation, was 159 persons. This is a slight decrease of 2.5% from last year.
- 256 persons reported as a victim of domestic violence, that count does NOT include children impacted.
- 561 persons identified as being homeless for the first time, or 36.8% of total persons counted.
- 474 persons identified as having a serious mental illness, or 31.1% of the total persons counted.
- 422 persons identified as having a substance abuse disorder, or 27.7% of the total persons counted.
- 336 persons identified as having a physical disability and 94 persons identified as having a developmental disability, or 22% and 6.2% of the total persons counted respectively.

Below is a chart of the statewide subpopulation data. These are self-identified and individuals may be counted in more than one subpopulation category:

## Point-In-Time Background:

A point-in-time count is a one-night, unduplicated count of people experiencing homelessness in a Continuum of Care (CoC). The U.S. Department of Housing and Urban Development (HUD) requires that CoCs count their sheltered homeless population every year. They require that CoCs count their unsheltered homeless population every other year, on odd numbered calendar years. Despite not being required, the majority of CoCs nationwide conduct unsheltered counts in both even and odd years.

Point-in-time counts allows local communities and state policy makers to understand current problems of homelessness, target limited funding to appropriate housing and services, and track progress.

In addition to counting persons in transitional and emergency housing, the point-in-time also counts those in unsheltered locations. The counts can miss people, as do most censuses. Given the difficulty with obtaining a complete count of everyone who is homeless on a given night, the actual number of people who were homeless in Vermont on January 27th is likely higher than the number documented.

## Challenges:

In Vermont, the Fair Market Rent (FMR) for a two-bedroom apartment is **\$1,075**. In order to afford this level of rent and utilities — without paying more than 30% of income on housing — a household must earn **\$3,585** monthly or **\$43,017** annually. Assuming a 40-hour work week, 52 weeks per year, this level of income translates into an hourly Housing Wage of \$20.68 per hour. A large percentage of renters in Vermont do not earn enough to afford a two-bedroom unit at the average statewide Fair Market Rent. High rents and vacancy rates as low as 1% both continue to be barriers for finding housing.

## Local Continuums of Care

Each region of Vermont has its own continuum of care. Ideally, a continuum is a partnership of:

- Local service and resource providers (Community Action Agencies, Mental Health Providers, homeless shelters, private health care providers, etc.),
- State of Vermont District Offices (Economic Services, Family Services, Reach Up, Vocational Rehab),
- Non-profit and for-profit housing managers,
- Housing Developers,
- People who are or were homeless,
- Any other key players in the homelessness or low-income service or housing systems.

Together, this collection of partners meets regularly to monitor the needs in their region and works to streamline services and housing.
