Practice Profile: Alder Brook Family Health

Period: Jan. 2014 - Dec. 2014 **Practice HSA:** Burlington **Profile Type:** Adults (18+ Years)

Welcome to the *Blueprint Practice Profile* from the Blueprint for Health, a state-led initiative transforming the way that health care and overall health services are delivered in Vermont. The Blueprint is leading a transition to an environment where all Vermonters have access to a continuum of seamless, effective, and preventive health services.

Blueprint Practice Profiles are based on data from Vermont's all-payer claims database, the Vermont Health Care Uniform Reporting and Evaluation System (VHCURES). Data include all covered commercial, Full Medicaid, and Medicare members attributed to Blueprint practices starting on or before December 31, 2014.

Practice Profiles for the adult population cover members ages 18 years and older; pediatric profiles cover members between the ages of 1 and 17 years.

Utilization and expenditure rates presented in these profiles have been risk adjusted for demographic and health status differences among the reported populations.

This reporting includes only members with a visit to a primary care physician, as identified in VHCURES claims data, during the current reporting year or the year prior.

Demographics & Health Status

	Practice	HSA	Statewide
Average Members	2,087	82,140	261,283
Average Age	52.1	49.0	50.2
% Female	67.0	54.4	54.9
% Medicaid	5.7	14.7	18.8
% Medicare	23.9	22.2	26.3
% Maternity	2.1	1.8	1.6
% with Selected Chronic Conditions	43.6	39.9	43.1
Health Status (CRG)			
% Healthy	36.3	43.0	42.2
% Acute or Minor Chronic	22.6	20.6	19.9
% Moderate Chronic	25.6	23.2	24.1
% Significant Chronic	14.1	11.8	12.4
% Cancer or Catastrophic	1.4	1.4	1.4

Table 1: *This table provides comparative information on the demographics and health status of your practice, all Blueprint practices in your Hospital Service Area (HSA), and the state as a whole. Included measures reflect the types of information used to generate adjusted rates: age, gender, maternity status, and health status.*

Average Members serves as this table's denominator and adjusts for partial lengths of enrollment during the year. In addition, special attention has been given to adjusting for Medicaid and Medicare: This includes adjustment for each member's enrollment in Medicaid or Medicare, the member's practice's percentage of membership that is Medicaid or Medicare, Medicare disability or end-stage renal disease status, and the degree to which the member required special Medicaid services that are not found in commercial populations (e.g., day treatment, residential treatment, case management, school-based services, and transportation).

The Selected Chronic Conditions measure indicates the proportion of members identified through the claims data as having one or more of seven selected chronic conditions: asthma, chronic obstructive pulmonary disease, congestive heart failure, coronary heart disease, hypertension, diabetes, and depression.

The Health Status measure aggregates 3M™ Clinical Risk Grouper (CRG) classifications for the year for the purpose of generating adjusted rates. Aggregated risk classification groups include: Healthy, Acute (e.g., ear, nose, throat infection) or Minor Chronic (e.g., minor chronic joint pain), Moderate Chronic (e.g., diabetes), Significant Chronic (e.g., diabetes and congestive heart failure), and Cancer (e.g., breast cancer, colorectal cancer) or Catastrophic (e.g., HIV, muscular dystrophy, cystic fibrosis).

Average Members	456	2,727	73,610
Average Age	8.9	10.3	9.1
% Female	48.2	47.5	48.8
% Medicaid	48.6	65.1	53.8
% with Selected Chronic Conditions	13.9	21.2	20.0
Health Status (CRG)			
% Healthy	78.3	70.8	74.2
% Acute or Minor Chronic	12.9	16.8	15.8
% Moderate Chronic	7.8	11.0	8.7
% Significant Chronic	1.0	1.3	1.1
% Cancer or Catastrophic	0.0	0.1	0.2

Table 1: This table provides comparative information on the demographics and health status of your practice, all Blueprint practices in your Hospital Service Area (HSA), and the state as a whole. Included measures reflect the types of information used to generate adjusted rates: age, gender, Medicaid enrollment, and health status.

Average Members serves as this table's denominator and adjusts for partial lengths of enrollment during the year. In addition, special attention has been given to adjusting for Medicaid: This includes adjustment for each member's enrollment in Medicaid, the member's practice's percentage of membership that is Medicaid, and the degree to which the member required special Medicaid services that are not found in commercial populations (e.g., day treatment, residential treatment, case management, school-based services, and transportation).

The *Selected Chronic Conditions* measure indicates the proportion of members identified through the claims data as having one or more of eight selected chronic conditions: asthma, chronic obstructive pulmonary disease, congestive heart failure, coronary heart disease, hypertension, diabetes, depression, and attention deficit disorder.

The *Health Status* measure aggregates 3M™ Clinical Risk Grouper (CRG) classifications for the year for the purpose of generating adjusted rates. Aggregated risk classification groups include: Healthy, Acute *(e.g., ear, nose, throat infection)* or Minor Chronic *(e.g., minor chronic joint pain)*, Moderate Chronic *(e.g., diabetes)*, Significant Chronic *(e.g., diabetes and congestive heart failure)*, and Cancer *(e.g., breast cancer, colorectal cancer)* or Catastrophic *(e.g., HIV, muscular dystrophy, cystic fibrosis)*.

Practice Profile: Hagan and Rinehart Pediatrics

Period: Jan. 2014 - Dec. 2014 **Practice HSA:** Burlington **Profile Type:** Pediatric (1-17 Years)

Welcome to the *Blueprint Practice Profile* from the Blueprint for Health, a state-led initiative transforming the way that health care and overall health services are delivered in Vermont. The Blueprint is leading a transition to an environment where all Vermonters have access to a continuum of seamless, effective, and preventive health services.

Blueprint Practice Profiles are based on data from Vermont's all-payer claims database, the Vermont Health Care Uniform Reporting and Evaluation System (VHCURES). Pediatric data include all covered commercial and Full Medicaid members attributed to Blueprint practices starting on or before December 31, 2014.

Practice Profiles for the adult population cover members ages 18 years and older; pediatric profiles cover members between the ages of 1 and 17 years.

Utilization and expenditure rates presented in these profiles have been risk adjusted for demographic and health status differences among the reported populations.

This reporting includes only members with a visit to a primary care physician, as identified in VHCURES claims data, during the current reporting year or the prior year.

% Cancer or Catastrophic	0.3	0.2	0.2

Table 1: *This table provides comparative information on the demographics and health status of your practice, all Blueprint practices in your Hospital Service Area (HSA), and the state as a whole. Included measures reflect the types of information used to generate adjusted rates: age, gender, Medicaid enrollment, and health status.*

Average Members serves as this table's denominator and adjusts for partial lengths of enrollment during the year. In addition, special attention has been given to adjusting for Medicaid: This includes adjustment for each member's enrollment in Medicaid, the member's practice's percentage of membership that is Medicaid, and the degree to which the member required special Medicaid services that are not found in commercial populations (e.g., day treatment, residential treatment, case management, school-based services, and transportation).

The Selected Chronic Conditions measure indicates the proportion of members identified through the claims data as having one or more of eight selected chronic conditions: asthma, chronic obstructive pulmonary disease, congestive heart failure, coronary heart disease, hypertension, diabetes, depression, and attention deficit disorder.

The Health Status measure aggregates 3M™ Clinical Risk Grouper (CRG) classifications for the year for the purpose of generating adjusted rates. Aggregated risk classification groups include: Healthy, Acute (e.g., ear, nose, throat infection) or Minor Chronic (e.g., minor chronic joint pain), Moderate Chronic (e.g., diabetes), Significant Chronic (e.g., diabetes and congestive heart failure), and Cancer (e.g., breast cancer, colorectal cancer) or Catastrophic (e.g., HIV, muscular dystrophy, cystic fibrosis).

Blueprint for Health
Smart choices. Powerful tools.

Welcome to the *Blueprint Practice Profile* from the Blueprint for Health, a state-led initiative transforming the way that health care and overall health services are delivered in Vermont. The Blueprint is leading a transition to an environment where all Vermonters have access to a continuum of seamless, effective, and preventive health services.

Blueprint Practice Profiles are based on data from Vermont's all-payer claims database, the Vermont Health Care Uniform Reporting and Evaluation System (VHCURES). Data include all covered commercial, Full Medicaid, and Medicare members attributed to Blueprint practices starting on or before December 31, 2014.

Practice Profiles for the adult population cover members ages 18 years and older; pediatric profiles cover members between the ages of 1 and 17 years.

Utilization and expenditure rates presented in these profiles have been risk adjusted for demographic and health status differences among the reported populations.

This reporting includes only members with a visit to a primary care physician, as identified in VHCURES claims data, during the current reporting year or the year prior.

Demographics & Health Status

	Practice	HSA	Statewide
Average Members	3,097	82,140	261,283
