

# ***FY2017 American Cancer Society Budget Priorities***

April 5, 2016

---

*Jill Sudhoff-Guerin, ACS CAN Director of Government Relations*

# Vermont's Cancer Burden

---

- Cancer is now the leading cause of death in Vermont
- 4,050 Vermonters will be diagnosed with cancer this year
- Cancer will kill 1,390 Vermont residents this year
- 38,000 adults in Vermont are living with a current or previous diagnosis of cancer
- Almost two-thirds of cancer deaths in the United States can be linked to unhealthy behaviors like **tobacco use, adult diet, obesity** and **lack of exercise**

# We Spend Roughly 88% of our Health Care Dollars on Treating the Sick and Only 4% on Healthy Prevention

What **Makes** Us Healthy

What We **Spend** On Being Healthy

# Vermont Health Care Spending

---

- Currently, Vermont spends approximately \$5 billion on health care annually.
- If we want to bend this cost arc, Vermont must invest more in evidence-based chronic disease prevention.
- According to the Joint Fiscal Office healthcare consultant, Kenneth Thorpe:
  1. 80% of total health care spending is linked to chronically ill patients
  2. Rise in “treated disease prevalence” accounts for nearly two-thirds of the growth in health care spending

# FY2017 Budget Priorities

---

## **Tobacco Prevention and Control – The Governor’s FY17 Budget proposes cutting the VTERB Budget by \$67,500**

### **What we know:**

- 390 Vermonters will be diagnosed with lung cancer this year
- Through Vermont’s tobacco control program youth smoking rates went from 33% in 1999 to 13% in 2012
- Every dollar spent on tobacco control nets at least \$5.00 in health care savings and we netted \$1.4 billion in savings from investing \$72 million

# FY2017 Budget Priorities

---

## **The Tobacco Problem is not fixed in Vermont:**

- According to 2015 YRBS data 30% of high school students in Vermont have tried e-cigarettes and 15% of students are current users
- 77% of e-cigarette users use traditional cigarettes as well
- The overall smoking rate for Vermont adults is 18%, whereas the smoking rate for adults with less than a high school diploma is 42%, and for those living at less than 250% below FPL or with a depressive disorder it is 29%

# FY2017 Budget Priorities

---

## **Obesity Prevention –**

- Approximately 10,000 Vermonters currently live with an obesity-related cancer diagnosis.
- 60% of Vermont's population is considered obese or overweight and one-third of cancer deaths are a result of physical inactivity, poor diet and obesity.
- The rise in obesity in US accounted for 27% of the growth in health spending over the past 20 years.  
*(Kenneth Thorpe)*

# FY2017 Budget Priorities

---

## **Access to healthy food and physical activity opportunities is unequal in VT:**

- From the 2015 Inventory of Community Resources we learned 41% or two out of 5 towns in Vermont have NO sports fields
- 16% of Vermont towns have NO food access in their towns
- Only 4% of towns 4% have a policy for protected bike lanes and only 4% have a policy for bike paths

The **Coordinated Healthy Activity, Motivation, and Prevention Programs** were enacted in 2006 as part of the Blueprint Community Health Teams.

CHAMPPS grants supported the implementation of policies on the community level. These small dollar investments were aimed at community-based solutions to gaps in access to healthy food and physical activity in Vermont towns where there is a demonstrated need.

Grand Isle is a community that highlights the needs for efforts such as this. Grand Isle adolescents have significantly higher obesity prevalence at 23% than the state average of 13%. Without policy changes aimed at reversing these trends, Vermont children will live much shorter, less healthy lives.

Please reinstate the \$300,000 in CHAMPPS obesity prevention community grants that were cut in the FY16 Budget

# Thank You!!!!
