

Hi Shap, and Katie Pickens,

About yesterday's Tu 3/24/15 " Renewable Energy Siting, Public Hearing, Senate and House Natural Resources and Energy Committees, Room 11, State House " ...

As I said in my paper <http://tasmaniantimes.com/index.php?/weblog/article/to-save-our-planet-people-power/> ...

" Unless we "Slow Climate Change" ... Nothing else we do ... No matter how wonderful ... Matters. "

That overrules anything anyone said in the above Hearing !

Place Solar Panels {PV and/or Thermal Energy} in places where people will not object ... e.g. Next to Transformer substations ... other places.

Wind Turbines on ridges ? ... Because I am a believer in Alternative Energy ... sometimes I think they are beautiful and inspiring ... Other times I am shocked, that they overpower the natural beauty ...

Therefore, as Germany does ... place them on flat farmland ... paying rent to farmers.

- E.G. - Route 105, about halfway from St. Albans to Enosburg - This looks OK ! - Strong winds there !
- E.G. - South of Interstate 89, just south of Burlington - Phone company - 2 Wind Turbines there - This looks OK ! - Not strong winds there :-{
