

# Children in poverty

## What the data show

Children in poverty is the percentage of children under 18 who live in families with incomes below 100 percent of the U.S. poverty threshold, as issued each year by the U.S. Census Bureau. In 2017 a family of two adults and two children fell into the “poverty” category if their annual income was below \$24,858.<sup>3</sup>

The official poverty rate is a long-standing and commonly used indicator of how many do not have the income they need. This measure has shortfalls—in reality, unmet need extends to those with incomes far above the official poverty line as well, and this is certainly the case in Vermont. The 2017 Basic Needs Budget for a two adult, two child household in rural Vermont places the annual income necessary to meet basic needs at nearly \$85,000.<sup>4</sup>

The poverty line can be used to begin to examine the problem. We can be sure that those below the official poverty line are facing significant hardship. But we also know that families at various income levels above this line often struggle to make ends meet.

## What would it take...

...to get to #1 for this indicator? We would need to reduce this rate to 10%. This means lifting about 4,500 kids above the poverty line.<sup>2</sup> As a measure of income from employment, effecting change to this indicator is hard—it tends to track with the overall state of the national economy. But, we can work to mitigate the effects of poverty and help change this number by maintaining a strong social safety net and progressive tax policies, while supporting secure employment with adequate wages, two-generation approaches that address the needs of whole families together, and continuing to invest in the education of children and youth of all ages.

5. U.S. Census, American Community Survey 1-year estimates, 2008-2017 data, derived from American FactFinder table C17024: Age by ratio of income to poverty level in the past 12 months.

### Percent of children in poverty in Vermont, by county<sup>6</sup>

### Number of children in poverty in Vermont, by county<sup>6</sup>

Disaggregated, these data also reveal that **poverty in young children is the highest**. Between 2012-2016, **17.2% of Vermont children under 5** were below poverty, compared to **14.4% of kids age 5 and over**.<sup>7</sup> Large racial/ethnic disparities are also a consistent trend throughout the United States. **Nationally, poverty rates for Black, Hispanic/Latino and American Indian children are 33 percent, 26 percent, and 33 percent, respectively; for non-Hispanic white kids the rate is only 11 percent.** In many states, this disparity is even larger.<sup>8</sup>
