d. *INT 04-05: Clarification of SSAP No. 5 Guidance on When a Judgment is Deemed Rendered* (INT 04-05) – The consensus reached under INT 04-05 incorporated guidance within SSAP No. 5 that a judgment is considered "rendered" when a court enters a verdict, notwithstanding the entity's ability to file post trial motions and to appeal.

19. The Form A summary of this issue also identified *INT 01-03: Assets Pledged as Collateral or Restricted for the Benefit of a Related Party* (INT 01-03) as a possible interpretation that may be affected with FIN 45. The consensus under INT 01-03 indicates that if an asset of an insurance entity is pledged or otherwise restricted by a related party, the assets are not under the exclusive control of the insurance entity, and should not be recognized ion the balance sheet. As this interpretation specifically addresses the treatment of the pledged asset, and not the recording or disclosure of a guarantee, it is anticipated that no revisions will be necessary to this interpretation with the adoption of this Issue Paper.

Generally Accepted Accounting Principles

20. This issue paper adopts, with modifications, guidance included within FIN 45, as modified by FSP FIN 45-3. (Guidance from FSP FAS 133-1 and FIN 45-4 has previously been adopted for statutory accounting. However, the current version of FIN 45, including the revisions from FSP FAS 133-1 and FIN 45-4 are reflected below.)

FIN 45, as Modified by FSP FIN 45-3 and FSP FIN 45-4:

INTRODUCTION

1. The Board observed differences in interpretation about the disclosures required of issuers of guarantees and about the need for an issuer of a guarantee to recognize an initial liability for its obligations under the guarantee. This Interpretation clarifies the requirements for a guarantor's accounting for and disclosures of certain guarantees issued and outstanding. This Interpretation also incorporates without reconsideration the guidance in FASB Interpretation No. 34, Disclosure of Indirect Guarantees of Indebtedness of Others, which is being superseded.

SCOPE

2. This Interpretation addresses the disclosures to be made by a guarantor in its interim and annual financial statements about its obligations under guarantees. This Interpretation also clarifies the requirements related to the recognition of a liability by a guarantor at the inception of a guarantee for the obligations the guarantor has undertaken in issuing that guarantee. As discussed in paragraph 12, this Interpretation does not specify the subsequent measurement of the guarantor's recognized liability for either the noncontingent aspect of the guarantee or the contingent aspect of the guarantee. The accounting for the contingent aspect of the guarantee, if it is not accounted for as a derivative under FASB Statement No. 133, Accounting for Derivative Instruments and Hedging Activities, is covered by FASB Statement No. 5, Accounting for Contingencies. The provisions in Statement 5 about disclosure of a loss that is reasonably possible are not affected by this Interpretation.

3. Except as provided in paragraphs 6 and 7, the provisions of this Interpretation apply to guarantee contracts that have any of the following characteristics:

a. Contracts that contingently require the guarantor to make payments (either in cash, financial instruments, other assets, shares of its stock, 1 or provision of services) to the guaranteed party based on changes in an underlying 2 that is related to an asset, a liability, or an equity security of the guaranteed party. Thus, for example, the provisions apply to the following:

(1) A financial standby letter of credit, which is an irrevocable undertaking (typically by a financial institution) to guarantee payment of a specified financial obligation

(2) A market value guarantee on either a financial asset (such as a security) or a nonfinancial asset owned by the guaranteed party

(3) A guarantee of the market price of the common stock of the guaranteed party

(4) A guarantee of the collection of the scheduled contractual cash flows from individual financial assets held by a special-purpose entity (SPE)

(5) A guarantee granted to a business or its owner(s) that the revenue of the business (or a specific portion of the business) for a specified period of time will be at least a specified amount.

b. Contracts that contingently require the guarantor to make payments (either in cash, financial instruments, other assets, shares of its stock, or provision of services) to the guaranteed party based on another entity's failure to perform under an obligating agreement (performance guarantees). Thus, for example, the provisions apply to a performance standby letter of credit, which is an irrevocable undertaking by a guarantor to make payments in the event a specified third party fails to perform under a nonfinancial contractual obligation.

c. Indemnification agreements (contracts) that contingently require the indemnifying party (guarantor) to make payments to the indemnified party (guaranteed party) based on changes in an underlying that is related to an asset, a liability, or an equity security of the indemnified party, such as an adverse judgment in a lawsuit or the imposition of additional taxes due to either a change in the tax law or an adverse interpretation of the tax law.

d. Indirect guarantees of the indebtedness of others, as that phrase is used in paragraphs 17 and 18 (and originally in Interpretation 34), even though the payment to the guaranteed party may not be based on changes in an underlying that is related to an asset, a liability, or an equity security of the guaranteed party.

4. Commercial letters of credit and other loan commitments, which are commonly thought of as guarantees of funding, are not included in the scope of this Interpretation because those arrangements do not meet any of the four characteristics identified in paragraph 3 above. Similarly, the scope of this Interpretation does not encompass indemnifications or guarantees of an entity's own future performance (for example, a guarantee that the guarantor will not take a certain future action). It does not include a noncontingent forward contract for which the net settlement can flow from either party to the other party; however, a contingent forward contract may meet one of the characteristics in paragraph 3 and be included in the scope of this Interpretation.

5. Some securitizations and other arrangements involve the subordination of the rights of some investors (or creditors) to the rights of others, in which case, for example, the investors in one (subordinated) class or tranche of an entity's securities might not receive any cash flows until the investors in another (priority) class or tranche are fully paid. Because that type of subordination provides credit protection by the subordinated

investors, those subordination arrangements are commonly thought of as guarantees issued by the subordinated investors. Such subordination arrangements do not meet the characteristic-based scope provisions in paragraph 3 and, thus, are not included in the scope of this Interpretation.

Scope Exceptions from the Entire Interpretation

6. Notwithstanding the characteristic-based scope provisions in paragraph 3, this Interpretation does not apply to the following guarantee contracts:

   a. A guarantee or an indemnification that is excluded from the scope of Statement 5 under paragraph 7 of that Statement.

   b. A lessee's guarantee of the residual value of the leased property at the expiration of the lease term, if the lessee (guarantor) accounts for the lease as a capital lease under FASB Statement No. 13, Accounting for Leases.

   c. A contract that meets the characteristics in paragraph 3.a. but is accounted for as contingent rent under Statement 13.

   d. A guarantee (or an indemnification) that is issued by either an insurance company or a reinsurance company and accounted for under FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises, No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments, No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts, or No. 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts (including guarantees embedded in either insurance contracts or investment contracts).

   e. A contract that meets the characteristics in paragraph 3.a. but provides for payments that constitute a vendor rebate (by the guarantor) based on either the sales revenues of, or the number of units sold by, the guaranteed party. (Vendor rebates based on the volume of purchases by the buyer would not meet the characteristics in paragraph 3.a. because the underlying relates to an asset of the seller, not the buyer who receives the rebates.)

   f. A guarantee (or an indemnification) whose existence prevents the guarantor from being able to either account for a transaction as the sale of an asset that is related to the guarantee's underlying or recognize in earnings the profit from that sale transaction.

   g. A registration payment arrangement within the scope of FSP EITF 00-19-2, "Accounting for Registration Payment Arrangements."

   h. A guarantee that is accounted for as a credit derivative instrument at fair value under Statement 133, as described in paragraph 44DD of Statement 133.

Scope Exceptions from Only the Initial Recognition and Initial Measurement Provisions

7. The following types of guarantees are not subject to the initial recognition and initial measurement provisions of this Interpretation but are subject to its disclosure requirements:

   a. A guarantee, other than a credit derivative as described in paragraph 44DD of Statement 133, that is accounted for as a derivative instrument at fair value under Statement 133.

b. A guarantee for which the underlying is related to the performance (regarding function, not price) of nonfinancial assets that are owned by the guaranteed party. Thus, the initial recognition and initial measurement provisions of this Interpretation do not apply to product warranties issued by the guarantor, regardless of whether the guarantor is required to make payment in services or cash, including separately priced extended warranty or product maintenance contracts that are addressed in FASB Technical Bulletin No. 90-1, Accounting for Separately Priced Extended Warranty and Product Maintenance Contracts.

c. A guarantee issued in a business combination that represents contingent consideration (as addressed in FASB Statement No. 141, Business Combinations).

d. A guarantee for which the guarantor's obligation would be reported as an equity item (rather than a liability) under generally accepted accounting principles (GAAP).

e. A guarantee by an original lessee that has become secondarily liable under a new lease that relieved the original lessee from being the primary obligor (that is, principal debtor) under the original lease, as discussed in paragraph 38 of Statement 13, as amended by FASB Statement No. 145, Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections. This exception shall not be applied by analogy to secondary obligations that are not accounted for under paragraph 38 of Statement 13. (The disclosure requirements of this Interpretation do apply to the original lessee that has become secondarily liable for the lease payments.)

f. A guarantee issued either between parents and their subsidiaries or between corporations under common control.

g. A parent's guarantee of its subsidiary's debt to a third party (whether the parent is a corporation or an individual).

h. A subsidiary's guarantee of the debt owed to a third party by either its parent or another subsidiary of that parent.

INTERPRETATION

Initial Recognition and Initial Measurement of the Liability for a Guarantor's Obligations

8. The issuance of a guarantee obligates the guarantor (the issuer) in two respects: (a) the guarantor undertakes an obligation to stand ready to perform over the term of the guarantee in the event that the specified triggering events or conditions occur (the noncontingent aspect) and (b) the guarantor undertakes a contingent obligation to make future payments if those triggering events or conditions occur (the contingent aspect).

9. Because the issuance of a guarantee imposes a noncontingent obligation to stand ready to perform in the event that the specified triggering events or conditions occur, the provisions of paragraphs 8-12 of Statement 5 regarding the guarantor's contingent obligation under a guarantee should not be interpreted as prohibiting the guarantor from initially recognizing a liability for that guarantee even though it is not probable that payments will be required under that guarantee. At the inception of a guarantee, the guarantor shall recognize in its statement of financial position a liability for that guarantee. Except as indicated in paragraph 10, the objective of the initial measurement of the liability is the fair value of the guarantee at its inception.

a. When a guarantee is issued in a standalone arm's-length transaction with an unrelated party, the liability recognized at the inception of the guarantee should be the premium received or receivable by the guarantor as a practical expedient.

b. When a guarantee is issued as part of a transaction with multiple elements with an unrelated party (such as in conjunction with selling an asset or entering into an operating lease), the liability recognized at the inception of the guarantee should be an estimate of the guarantee's fair value. In that circumstance, guarantors should consider what premium would be required by the guarantor to issue the same guarantee in a standalone arm's-length transaction with an unrelated party as a practical expedient.

c. When a guarantee is issued as a contribution to an unrelated party, the liability recognized at the inception of the guarantee should be measured at its fair value, consistent with the requirement to measure the contribution made at fair value, as prescribed in paragraph 18 of FASB Statement No. 116, Accounting for Contributions Received and Contributions Made. For example, a community foundation may have a loan guarantee program to assist not-for-profit organizations in obtaining bank financing at a reasonable cost. Under that program, the community foundation may issue a guarantee of a not-for-profit organization's bank debt. Upon the issuance of the guarantee, the community foundation would recognize a liability for the fair value of that guarantee. The issuance of that guarantee would not be considered merely a conditional promise to give under paragraph 22 of Statement 116 because, upon the issuance of the guarantee, the not-for-profit organization will have received the gift of the community foundation's credit support, which enables the not-for-profit organization to obtain a lower interest rate on its borrowing.

10. In the event that, at the inception of the guarantee, the guarantor is required to recognize a liability under Statement 5 for the related contingent loss, the liability to be initially recognized for that guarantee shall be the greater of (a) the amount that satisfies the fair value objective as discussed in paragraph 9 or (b) the contingent liability amount required to be recognized at inception of the guarantee by paragraph 8 of Statement 5. For many guarantors, it would be unusual for the contingent liability amount under (b) above to exceed the amount that satisfies the fair value objective under (a) above at the inception of the guarantee.

11. This Interpretation does not prescribe a specific account for the guarantor's offsetting entry when it recognizes the liability at the inception of a guarantee. That offsetting entry depends on the circumstances in which the guarantee was issued, as illustrated by the following examples:

a. If the guarantee were issued in a standalone transaction for a premium, the offsetting entry would be consideration received (such as cash or a receivable).

b. If the guarantee were issued in conjunction with the sale of assets, a product, or a business, the overall proceeds (such as the cash received or receivable) would be allocated between the consideration being remitted to the guarantor for issuing the guarantee and the proceeds from the sale. That allocation would affect the calculation of the gain or loss on the sale transaction.

c. If the guarantee were issued in conjunction with the formation of a partially owned business or a venture accounted for under the equity method, the recognition of the liability for the guarantee would result in an increase to the carrying amount of the investment.

d. If a residual value guarantee were provided by a lessee-guarantor when entering into an operating lease, the offsetting entry (representing a payment in kind made by the lessee when entering into the operating lease) would be reflected as prepaid rent, which would be accounted for under paragraph 15 of Statement 13.

e. If a guarantee were issued to an unrelated party for no consideration on a standalone basis (that is, not in conjunction with any other transaction or ownership relationship), the offsetting entry would be to expense.

12. This Interpretation does not describe in detail how the guarantor's liability for its obligations under the guarantee would be measured subsequent to its initial recognition. The liability that the guarantor initially recognized under paragraph 9 consistent with the fair value objective discussed in that paragraph would typically be reduced (by a credit to earnings) as the guarantor is released from risk under the guarantee. Depending on the nature of the guarantee, the guarantor's release from risk has typically been recognized over the term of the guarantee (a) only upon either expiration or settlement of the guarantee, (b) by a systematic and rational amortization method, or (c) as the fair value of the guarantee changes (as is done, for example, for guarantees accounted for as derivatives). The discussion in this paragraph about how the guarantor typically reduces the liability that it initially recognized does not encompass the recognition and subsequent adjustment of the contingent liability recognized under Statement 5 related to the contingent loss for the guarantee.

Disclosures about a Guarantor's Obligations under Guarantees

13. A guarantor shall disclose the following information about each guarantee, or each group of similar guarantees, even if the likelihood of the guarantor's having to make any payments under the guarantee is remote, except as provided in paragraph 14 with respect to the disclosure specified in paragraph 13.b.:

a. The nature of the guarantee, including the approximate term of the guarantee, how the guarantee arose, the events or circumstances that would require the guarantor to perform under the guarantee and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the guarantee. For example, the current status of the payment/performance risk of a credit-risk-related guarantee could be based on either recently issued external credit ratings or current internal groupings used by the guarantor to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.

b. The maximum potential amount of future payments (undiscounted) the guarantor could be required to make under the guarantee. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the guarantee (which are addressed under (d) below). If the terms of the guarantee provide for no limitation to the maximum potential future payments under the guarantee, that fact shall be disclosed. If the guarantor is unable to develop an estimate of the maximum potential amount of future payments under its guarantee, the guarantor shall disclose the reasons why it cannot estimate the maximum potential amount. (Refer to the following paragraph for an exception to the requirements of this subparagraph.)

c. The current carrying amount of the liability, if any, for the guarantor's obligations under the guarantee (including the amount, if any, recognized under paragraph 8 of Statement 5), regardless of whether the guarantee is freestanding or embedded in another contract.

d. The nature of (1) any recourse provisions that would enable the guarantor to recover from third parties any of the amounts paid under the guarantee and (2) any assets held either as collateral or by third parties that, upon the occurrence of any triggering event or condition under the guarantee, the guarantor can obtain and liquidate to recover all or a portion of the amounts paid under the guarantee. The guarantor shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the guarantee.

14. For product warranties and other guarantee contracts that are excluded from the initial recognition and initial measurement requirements of this Interpretation pursuant to paragraph 7.b. (collectively referred to as product warranties), a guarantor is not required to disclose the maximum potential amount of future payments specified in paragraph 13.b. above. Instead, the guarantor is required to disclose for those product warranties the following information:

    a. The guarantor’s accounting policy and methodology used in determining its liability for product warranties (including any liability [such as deferred revenue] associated with extended warranties).

    b. A tabular reconciliation of the changes in the guarantor’s aggregate product warranty liability for the reporting period. That reconciliation should present the beginning balance of the aggregate product warranty liability, the aggregate reductions in that liability for payments made (in cash or in kind) under the warranty, the aggregate changes in the liability for accruals related to product warranties issued during the reporting period, the aggregate changes in the liability for accruals related to preexisting warranties (including adjustments related to changes in estimates), and the ending balance of the aggregate product warranty liability.

15. The disclosures required by this Interpretation do not eliminate or affect the requirement in FASB Statement No. 107, Disclosures about Fair Value of Financial Instruments, as amended by FASB Statement No. 126, Exemption from Certain Required Disclosures about Financial Instruments for Certain Nonpublic Entities, that certain entities disclose the fair value of their financial guarantees issued.

16. Some guarantees are issued to benefit entities that meet the definition of a related party in paragraph 24.f. of FASB Statement No. 57, Related Party Disclosures, such as joint ventures, equity method investees, and certain entities for which the controlling financial interest cannot be assessed by analyzing voting interests. In those cases, the disclosures required by this Interpretation are incremental to the disclosures required by Statement 57.

Indirect Guarantees of Indebtedness of Others Encompassed by Paragraph 12 of Statement 5

17. An indirect guarantee of the indebtedness of another arises under an agreement that obligates one entity to transfer funds to a second entity upon the occurrence of specified events, under conditions whereby (a) the funds become legally available to creditors of the second entity and (b) those creditors may enforce the second entity’s claims against the first entity under the agreement. Examples of indirect guarantees include agreements to advance funds if a second entity’s net income, coverage of fixed charges, or working capital falls below a specified minimum.

18. The term guarantees of indebtedness of others in paragraph 12 of Statement 5 includes indirect guarantees of indebtedness of others as described in paragraph 17 of this Interpretation.

RESCISSION OF INTERPRETATION 34

19. Interpretation 34 is superseded by this Interpretation.

EFFECTIVE DATE AND TRANSITION

20. The initial recognition and initial measurement provisions in paragraphs 9 and 10 shall be applied only on a prospective basis to guarantees issued or modified after December 31, 2002, irrespective of the guarantor's fiscal year-end. The guarantor's previous accounting for guarantees issued prior to the date of this Interpretation's initial application shall not be revised or restated to reflect the effect of the recognition and measurement provisions of the Interpretation.

21. The disclosure requirements in paragraphs 13-16 are effective for financial statements of interim or annual periods ending after December 15, 2002. The guidance on indirect guarantees of the indebtedness of others in paragraph 18 continues to apply to financial statements for fiscal years ending after June 15, 1981.

21. FIN 45 supersedes FASB Interpretation No. 34, Disclosure of Indirect Guarantees of Indebtedness of Others, An Interpretation of FASB Statement No. 5 (FIN 34). FIN 34 had previously been adopted within SSAP No. 5 and resulted with disclosure requirements for guarantees, even if the possibility of payment under the guarantee was remote. The guidance in FIN 45 has incorporated more conservative accounting and disclosure requirements for guarantees than FIN 34.

22. The NAIC Statutory Accounting Principles Working Group previously considered *FSP FAS 133-1 and FIN 45-4: Disclosures about Credit Derivatives and Certain Guarantees: An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45; and Clarification of the Effective Date of FASB Statement No. 161* (FSP FAS 133-1 and FIN 45-4), and adopted revisions to SSAP No. 5 to incorporate the revised disclosures within paragraph 13.a. of FIN 45 as modified by FSP FAS 133-1 and FIN 45-4. (The revisions to FIN 45 from FSP FAS 133-1 and FIN 45-4 are reflected within the FIN 45 guidance included in paragraph 20 of this Issue paper.)

Appendix A: Substantive Revisions to SSAP No. 5 Adopting, with Modification, FIN 45

SCOPE OF STATEMENT

1. This statement defines and establishes statutory accounting principles for liabilities, contingencies and impairments of assets.

SUMMARY CONCLUSION

Liabilities

2. A liability is defined as certain or probable[1] future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable1 future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

Loss Contingencies or Impairments of Assets

5. For purposes of implementing the statutory accounting principles of loss contingency or impairment of an asset described below, the following additional definitions shall apply:

   a. Probable—The future event or events are likely to occur;

   b. Reasonably Possible—The chance of the future event or events occurring is more than remote but less than probable;

   c. Remote—The chance of the future event or events occurring is slight.

6. A loss contingency or impairment of an asset is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible loss to an enterprise that will ultimately be resolved when one or more future event(s) occur or fail to occur (e.g., collection of receivables).

[1] FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states:

> Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

7. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

   a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

   b. The amount of loss can be reasonably estimated.

8. This accounting shall be followed even though the application of other prescribed statutory accounting principles or valuation criteria may not require, or does not address, the recording of a particular liability or impairment of an asset (e.g., a known impairment of a bond even though the VOS manual has not recognized the impairment).

9. Additionally, in instances where a judgment, assessment or fine has been rendered against a reporting entity, there is a presumption that the criteria in paragraph 7.a. and 7.b. have been met. The amount of the liability shall include the anticipated settlement amount, legal costs, insurance recoveries and other related amounts and shall take into account factors such as the nature of the litigation, progress of the case, opinions of legal counsel, and management's intended response to the litigation, claim, or assessment.

10. When condition 7 a. above is met with respect to a particular loss contingency, and the reasonable estimate of the loss is a range, which meets condition 7 b. above, an amount shall be accrued for the loss. When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be accrued. When, in management's opinion, no amount within management's estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management's estimate in the range shall be accrued. For purposes of this paragraph, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be used.

11. The use of the midpoint in a range will be applicable only in the rare instance where there is a continuous range of possible values, and no amount within that range is any more probable than any other. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine their best estimate of the liability.

Gain Contingencies

12. A gain is defined as an increase in surplus which results from peripheral or incidental transactions of a reporting entity and from all other transactions and other events and circumstances affecting the reporting entity except those that result from revenues or investments by owners. If, on or before the balance sheet date, (a) the transaction or event has been fully completed, and (b) the amount of the gain is determinable, then the transaction or event is considered a gain, and is recognized in the financial statements. The definition of a gain excludes increases in surplus that result from activities that constitute a reporting entity's ongoing major or central operations or activities. Because investment activities are central to an insurer's operations, increases in surplus that result from such investment activities are excluded from the definition of gains. Revenues are inflows or other enhancements of assets of a reporting entity or settlements of its liabilities (or a combination of both) from providing products, rendering services, or other activities that constitute the reporting entity's ongoing major or central operations. Investments by owners include any type of capital infused into the surplus of the reporting entity.

13. A gain contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (as defined in the preceding paragraph) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur (e.g., a plaintiff has filed suit for damages associated with an event occurring prior to the balance sheet, but the outcome of the suit is not known as of the balance sheet date). Gain contingencies shall not be recognized in a reporting entity's financial statements. However, if subsequent to the balance sheet date but prior to the issuance of the financial statements, the gain contingency is realized, the gain shall be disclosed in the notes to financial statements and the unissued financial statements should not be adjusted to record the gain. A gain is generally considered realizable when noncash resources or rights are readily convertible to known amounts of cash or claims to cash.

Guarantees

14. A guarantee contract is a contract that contingently requires the guarantor to make payments (either in cash, financial instruments, other assets, shares of its stock, or provision of services) to the guaranteed party based on changes in the underlying that is related to an asset, a liability, or an equity security of the guaranteed party. Commercial letters of credit and loan commitments, by definition, are not considered guarantee contracts. Also excluded from the definition are indemnifications or guarantees of an entity's own performance, subordination arrangements or a noncontingent forward contract. This definition could include contingent forward contracts if the characteristics of this paragraph are met.

15. The following guarantee contracts are not subject to the guidance in paragraphs 18-23 and paragraphs 26-29:

a. Guarantees already excluded from the scope of SSAP No. 5R;

b. Guarantee contracts accounted for as contingent rent;

c. Insurance contract guarantees, including guarantees embedded in deposit-type contracts;

d. Contracts that provide for payments that constitute a vender rebate by the guarantor based on either the sales revenue or the number of units sold by the guaranteed party;

e. A guarantee or indemnification whose existence prevents the guarantor from being able to either account for a transaction as the sale of an asset that is related to the guarantee's underlying or recognize in earnings the profit from that sale transaction;

f. Registration payment arrangements; and

g. A guarantee that is accounted for as a credit derivative instrument at fair value under SSAP No. 86, as described in paragraph 53.e. of SSAP No. 86.

16. The following types of guarantees are exempted from the initial liability recognition in paragraphs 18-23, but are subject to the to the disclosure requirements in paragraphs 26-29:

a. Guarantee that is accounted for as a derivative instrument, other than credit derivatives within SSAP No. 86;

b. Guarantee for which the underlying is related to the performance of nonfinancial assets that are owned by the guaranteed party, including product warranties;

c. Guarantee issued in a business combination that represents contingent consideration;

d. Guarantee in which the guarantor's obligation would be reported as an equity item;

e. Guarantee by an original lessee that has become secondarily liable under a new lease that relieved the original lessee from being the primary obligator; and

f. Guarantees (as defined in paragraph 14) made to/or on behalf of a wholly-owned subsidiary.

g. Intercompany and related party guarantees that are considered "unlimited" (e.g., typically in response to a rating agency's requirement to provide a commitment to support).

17. With the exception of the provision for guarantees made to/or on behalf of a wholly-owned subsidiaries in paragraph 16.f. and "unlimited" guarantees in 16.g, this guidance does not exclude guarantees issued as intercompany transactions or between related parties from the initial liability recognition requirement. Thus, unless the guarantee is provided on behalf of a wholly-owned subsidiary or considered "unlimited," guarantees issued between the following parties are subject to the initial recognition and disclosure requirements:

a. Guarantee issued either between parents and their subsidiaries or between corporations under common control;

b. A parent's guarantee of its subsidiary's debt to a third party; and

c. A subsidiary's guarantee of the debt owed to a third party by either its parent or another subsidiary of that parent.

18. At the inception of a guarantee, the guarantor shall recognize in its statement of financial position a liability for that guarantee. Except as indicated in paragraph 20, the objective of the initial measurement of the liability is the fair value[2] of the guarantee at its inception.

19. The issuance of a guarantee obligates the guarantor (the issuer) in two respects: (a) the guarantor undertakes an obligation to stand ready to perform over the term of the guarantee in the event that the specified triggering events or conditions occur (the noncontingent aspect) and (b) the guarantor undertakes a contingent obligation to make future payments if those triggering events or conditions occur (the contingent aspect). Because the issuance of a guarantee imposes a noncontingent obligation to stand ready to perform in the event that the specified triggering event occurs, the provisions of paragraph 7 should not be interpreted as prohibiting the guarantor from initially recognizing a liability for that guarantee even though it is not probable that payments will be required under that guarantee.

20. In the event that, at the inception of the guarantee, the guarantor is required to recognize a liability under paragraph 7 for the related contingent loss, the liability to be initially recognized for that guarantee shall be the greater of (a) the amount the satisfies the fair value objective as discussed in paragraph 18 or (b) the contingent liability amount

[2] As practical expedients, when a guarantee is issued in a standalone arm's-length transaction, the liability recognized at the inception of the guarantee should be the premium received or receivable by the guarantor. When a guarantee is issued as part of a transaction with multiple elements, the liability recognized at the inception of the guarantee should be an estimate of the guarantee's fair value. In that circumstance, guarantors should consider what premium would be required by the guarantor to issue the same guarantee in a standalone arm's-length transaction.

required to be recognized at inception of the guarantee by paragraph 7. For many guarantors, it would be unusual for the contingent liability under (b) above to exceed the amount that satisfies the fair value objective at the inception of the guarantee.

21. The offsetting entry pursuant to the liability recognition at the inception of the guarantee depends on the circumstances in which the guarantee was issued. Examples include:

a. If the guarantee was issued in a standalone transaction for a premium, the offsetting entry would the consideration received.

b. If the guarantee was issued in conjunction with the sale of assets, a product, or a business, the overall proceeds would be allocated between the consideration being remitted to the guarantor for issuing the guarantee and the proceeds from that sale. That allocation would affect the calculation of the gain or loss on the sale transaction.

c. If a residual value guarantee were provided by a lessee-guarantor when entering into an operating lease, the offsetting entry would be reflected as prepaid rent, which would nonadmitted under SSAP No. 29.

d. If a guarantee were issued to an unrelated or related party for no consideration on a standalone basis, the offsetting entry would be to expense.

22. Except for the measurement and recognition of continued guarantee obligations after the settlement of a contingent guarantee liability described in paragraph 23, this standard does not describe in detail how the guarantor's liability for its obligations under the guarantee would be measured subsequent to initial recognition. The liability that the guarantor initially recognized in accordance with paragraph 18 would typically be reduced (as a credit to income) as the guarantor is released from risk under the guarantee. Depending on the nature of the guarantee, the guarantor's release from risk has typically been recognized over the term of the guarantee (a) only upon either expiration or settlement of the guarantee, (b) by a systematic and rational amortization method, or (c) as the fair value of the guarantee changes (for example, guarantees accounted for as derivatives). The reduction of liability does not encompass the recognition and subsequent adjustment of the contingent liability recognized under paragraph 7 related to the contingent loss for the guarantee. If the guarantor is required to subsequently recognize a contingent liability for the guarantee, the guarantor shall eliminate any remaining noncontingent liability for that guarantee and recognize a contingent liability in accordance with paragraph 7.

23. After recognition and settlement of a contingent guarantee liability in accordance with paragraph 7, a guarantor shall assess whether remaining potential obligations exist under the guarantee agreement. If the guarantor still has potential obligations under the guarantee contract, the guarantor shall recognize the remaining noncontingent guarantee that represents the current fair value of the potential obligation remaining under the guarantee agreement. This noncontingent guarantee liability shall be released in accordance with paragraph 22.

Disclosures

~~14~~24. If a loss contingency or impairment of an asset is not recorded because only one of the conditions 7 a. or 7 b. is met, or if exposure to a loss exists in excess of the amount accrued pursuant to the provisions described above, disclosure of the loss contingency or impairment of the asset shall be made in the financial statements when there is at least a reasonable possibility that a loss or an additional loss may have been incurred. The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made.

~~15~~25. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

~~16.~~26. Certain loss contingencies, the common characteristic of each being a guarantee, shall be disclosed in financial statements even though the possibility of loss may be remote. Examples include (a) guarantees of indebtedness of others, and (b) guarantees to repurchase receivables (or, in some cases, to repurchase related properties) that have been sold or otherwise assigned. The disclosure of those loss contingencies, and others that in substance have the same characteristics, shall be applied to statutory financial statements. The disclosure shall include the nature and amount of the guarantee. Consideration shall be given to disclosing, if estimable, the value of any recovery that could be expected to result, such as from the guarantor's right to proceed against an outside party.

~~a. For guarantees on indebtedness of others, disclosure shall include the nature of the guarantee, including the approximate term of the guarantee, how the guarantee arose, the events and circumstances that would require the guarantor to perform under the guarantee, and the current status as of the reporting date of the payment/performance risk of the guarantee. For example, the current status of the payment/performance risk of a credit-risk related guarantee could be based on either recently issued external credit ratings or current internal groupings used by the guarantor to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.~~

27. A guarantor shall disclose the following information about each guarantee, or each group or similar guarantees (except product warranties addressed in paragraph 29), even if the likelihood of the guarantor's having to make any payments under the guarantee is remote. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed:

a. The nature of the guarantee, including the approximate term of the guarantee, how the guarantee arose, and the events and circumstances that would require the guarantor to perform under the guarantee, the ultimate impact to the financial statements (specific financial statement line item) after the settlement of the contract guarantee if action under the guarantee was required (e.g., increase to the investment, dividends to stockholder, etc) and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the guarantee. For example, the current status of the payment/performance risk of a credit-risk-related guarantee could be based on either recently issued external credit ratings or current internal groupings used by the guarantor to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.

b. The potential amount of future payments (undiscounted) the guarantor could be required to make under the guarantee. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the guarantee (which are addressed under (d) below). If the terms of the guarantee provide for no limitation to the maximum potential future payments under the guarantee, that fact shall be disclosed. If the guarantor is unable to develop an estimate of the maximum potential amount of future payments under its guarantee, the guarantor shall disclose the reasons why it cannot estimate the maximum potential amount.

c. The current carrying amount of the liability, if any, for the guarantor's obligations under the guarantee (including the amount, if any, recognized under paragraph 7), regardless of whether the guarantee is freestanding or embedded in another contract.

d. The nature of (1) any recourse provisions that would enable the guarantor to recover from third parties any of the amounts paid under the guarantee and (2) any assets held either as collateral or by third parties that, upon the occurrence of any triggering event or condition under the guarantee, the guarantor can obtain and liquidate to recover all or a portion of the amounts paid under the guarantee. The guarantor shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the guarantee.

28. An aggregate compilation of guarantee obligations shall include the maximum potential of future payments of all guarantees (undiscounted), the current liability (contingent and noncontingent) reported in the financial statements, and the ultimate financial statement impact based on maximum potential payments (undiscounted) if performance under those guarantees had been triggered.

29. As product warranties are excluded from the initial recognition and initial measurement requirements for guarantees, a guarantor is not required to disclose the maximum potential amount of future payments. Instead the guarantor is required to disclose for product warranties the following information:

a. The guarantor's accounting policy and methodology used in determining its liability for product warranties (Including any liability associated with extended warranties).

b. A tabular reconciliation of the changes in the guarantor's aggregate product warranty liability for the reporting period. That reconciliation should present the beginning balance of the aggregate product warranty liability, the aggregate reductions in that liability for payments made (in cash or in kind) under the warranty, the aggregate changes in the liability for accruals related to product warranties issued during the reporting period, the aggregate changes in the liability for accruals related to preexisting warranties (including adjustments related to changes in estimates), and the ending balance of the aggregate product warranty liability.

~~17.~~30. The financial statements shall contain adequate disclosure about the nature of any gain contingency. However, care should be exercised to avoid misleading implications as to the likelihood of realization.

~~18~~31. Refer to the preamble for further discussion regarding disclosure requirements.

SSAP No. 5R – Appendix A – Disclosure Illustrations

Example illustration for paragraph 27.a, including the potential maximum guarantee from paragraph 27.b:

Nature and circumstances of guarantee and key attributes, including date and duration of agreement	Liability recognition of guarantee. (Include amount recognized at inception. If no initial recognition, document exception allowed under SSAP No. 5R)	Ultimate financial statement impact if action under the guarantee is required	Maximum potential amount of future payments (undiscounted) the guarantor could be required to make under the guarantee. If unable to develop an estimate, this should be specifically noted	Current status of payment or performance risk of guarantee. Also provide additional discussion as warranted

Example Illustration – Paragraph 28:

1. Aggregate Maximum Potential of Future Payments of All Guarantees (undiscounted) the guarantor could be required to make under guarantees. (This amount should agree to the total amount reported for all guarantees within paragraph 27.b (illustrated above), thus it excludes guarantees for which estimates of potential future payment cannot be made.)	$
2. Current Liability Recognized in F/S:	
a. Noncontingent Liabilities	$
b. Contingent Liabilities	$
3. Ultimate Financial Statement Impact if action under the guarantee is required. (This should equal the total reported in line 1 reflected in the applicable financial statement line items.)	
a. Investments in SCA	$
b. Joint Venture	$
c. Dividends to Stockholders (capital contribution)	$
d. Expense	$
e. Other	$

Appendix B: Nonsubstantive Revisions to paragraph 18.e of SSAP No. 25

18. The financial statements shall include disclosures of all material related party transactions. In some cases, aggregation of similar transactions may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm's-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

e. Any guarantees or undertakings, written or otherwise, shall be disclosed in accordance with the requirements of SSAP No. 5R.~~for the benefit of an affiliate or related party which result in a material contingent exposure of the reporting entity's or any related party's assets or liabilities~~;

Statutory Issue Paper No. 137

Transfer of Property and Casualty Reinsurance Agreements in Run-Off

STATUS
Finalized September 21, 2009

Original SSAP and Current Authoritative Guidance: SSAP No. 62R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance relating to property and casualty reinsurance agreements is found in *SSAP No. 62—Property and Casualty Reinsurance* (SSAP No. 62). SSAP No. 62 currently requires that property and casualty reinsurance agreements which transfer insurance risk, but cover liabilities which occurred prior to the effective date of the agreement receive retroactive accounting treatment unless specified exceptions are met.

2. SSAP No. 62 currently allows four specified exceptions to retroactive reinsurance accounting including: structured settlements; novations; termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business; or intercompany reinsurance agreements, provided there is no gain in surplus as a result of the transaction.

3. The purpose of this issue paper is to amend SSAP No. 62 to expand the exceptions to retroactive accounting treatment to include property and casualty reinsurance run-off agreements which meet specified criteria. Reinsurance agreements and retrocession agreements which meet insurance risk transfer requirements and meet the specified criteria will receive specified accounting treatment.

SUMMARY CONCLUSION

4. This issue paper shall amend SSAP No. 62 to insert the following subparagraph e into paragraph 31:

> 31. The accounting principles for retroactive reinsurance agreements in paragraph 29 shall not apply to the following types of agreements (which shall be accounted for as prospective reinsurance agreements unless otherwise provided in this statement):
>
> a. Structured settlement annuities for individual claims purchased to implement settlements of policy obligations;
>
> b. Novations, (i.e., (i) transactions in which the original direct insurer's obligations are completely extinguished, resulting in no further exposure to loss arising on the business novated or (ii) transactions in which the original assuming entity's obligations are completely extinguished) resulting in no further exposure to loss arising on the business novated, provided that (1) the parties to the transaction are not affiliates (or if affiliates, that the transaction has the prior approval of the domiciliary regulators of the parties) and (2) the accounting for the original reinsurance agreement will not be altered from retroactive to prospective;
>
> c. The termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business;

d. Intercompany reinsurance agreements and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction; or

e. Reinsurance and or retrocession agreements that meet the criteria of property and casualty run-off agreements described in paragraphs 68-71.

5. This issue paper shall amend SSAP No. 62 to insert and renumber the remaining paragraphs of the statement:

Accounting for the Transfer of Property and Casualty Run-off Agreements

68. Property and casualty run-off agreements are reinsurance or retrocession agreements that are intended to transfer essentially all of the risks and benefits of a specific line of business or market segment that is no longer actively marketed by the transferring insurer or reinsurer. A property and casualty run-off agreement is not a novation as the transferring insurer or reinsurer remains primarily liable to the policyholder or ceding entity under the original contracts of insurance or reinsurance. Reinsurance agreements between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) are not eligible for the exception for property and casualty run-off agreements in subparagraph 31.e. of SSAP No. 62.

Criteria

69. The accounting treatment for property and casualty run-off agreements must be approved by the domiciliary regulators of the transferring entity (either the original direct insurer in the case of a reinsurance agreement or the original assuming reinsurer in the case of a retrocession agreement) and the assuming entity. If the transferring entity and assuming entity are domiciled in the same state, then the regulator of the state where the majority of the transferred liabilities is located shall be asked to approve the accounting treatment. In determining whether to approve an agreement for this accounting treatment, the regulators shall require the following:

a. Assuming Entity Properly Licensed – The entity assuming the run-off agreement must have the appropriate authority or license to write the business being assumed.

b. Limits and Coverages – the reinsurance or retrocession agreement shall provide the same limits and coverages that were afforded in the original insurance or reinsurance agreement.

c. Non-recourse – The reinsurance or retrocession agreement shall not contain any adjustable features or profit share or retrospective rating, and there shall be no recourse (other than normal representations and warranties that would be associated with a purchase and sale agreement) directly or indirectly against the transferring entity.

d. Risk Transfer – the reinsurance or retrocession agreement must meet the requirements of risk transfer as described in this statement.

e. Financial Strength of Reinsurer – the assuming reinsurer shall have a financial strength rating from at least two independent rating agencies (from NAIC acceptable rating agencies) which is equal to or greater than the current ratings of the transferring entity. The lowest financial strength rating received from an NAIC acceptable rating organization rating agency will be used to compare the financial strength ratings of the transferring and assuming entities.

f. Assessments – the assuming reinsurer or retrocessionaire (if required in the original reinsurance contract) shall be financially responsible for any and all assessments, including guaranty fund assessments, that are assessed against the transferring entity related to the insurance business being assumed.

g. Applicable Only to “Run-off” Business – the reinsurance or retrocession agreement shall only cover liabilities relating to a line(s) of business or specific market segments no longer actively marketed by the transferring entity.

h. Non-cancelable Reinsurance – the reinsurance or retrocession agreement shall provide that the reinsurance or retrocessional coverage provided by the proposed agreement cannot be cancelable by either party for any reason. (However, this provision will not override standard contract law and principles and will not prevent any remedies, including rescission or termination that might be available for breach, misrepresentation, etc.)

Statutory Schedules and Exhibits

70. At the inception of the transaction, the transferring entity shall record the consideration paid to the assuming entity as a paid loss. If the consideration paid by the transferring entity is less than the loss reserves transferred, the difference shall be recorded by the ceding entity as a decrease in losses incurred. The assuming entity shall record the consideration received as a negative paid loss. In addition, the transferring entity shall record an increase to ceded reinsurance recoverable for the amount of the transferred reserve. Journal entries illustrating these transactions, including situations in which the transaction includes an unearned premium reserve, are included in Exhibit B of this Statement.

71. The assuming entity will report the business in the same line of business as reported by the original insurer or reinsurer. The assuming entity will report the business at the same level of detail using the appropriate statutory schedules and exhibits.

Disclosures

6. This issue paper amends the disclosures section of SSAP No. 62 to add new paragraph 86 requiring additional disclosures and renumbering subsequent paragraphs:

86. Disclosures for the Transfer of Property and Casualty Run-off Agreements

a. Disclose if the reporting entity has entered into any agreements which have been approved by their domiciliary regulator and have qualified pursuant to SSAP No. 62, subparagraph 31.e., Accounting for the Transfer of Property and Casualty Run-off Agreements.

b. If affirmative, provide a description of the agreement and the amount of consideration paid and liabilities transferred.

Effective Date and Transition

7. After adoption of this issue paper, the NAIC will release an amended Statement of Statutory Accounting Principle (SSAP) for comment. The initial draft of the amended SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will be effective for reporting periods beginning on or after January 1, 2010.

DISCUSSION

8. This issue paper will expand the exceptions to retroactive reinsurance to more easily allow property and casualty reinsurers to transfer existing blocks of business that the company is no longer actively writing and marketing. Although paragraph 28 of SSAP No. 62 notes that reinsurance of existing liabilities is subject to abuse, the Statutory Accounting Principles Working Group determined that the requirements in this statement were sufficient to mitigate the concerns which would otherwise require retroactive accounting treatment.

9. It is contemplated that insurers and reinsurers would primarily use this option to exit unprofitable lines or products or as a way to cede off business the company is no longer writing. As it is possible that circumstances that might have made the product unattractive can change, this guidance is not intended to permanently prevent a company from reentering a line that was previously ceded in run-off. If questioned, the reporting entity shall be able to explain to the satisfaction of the affected states the change in circumstances regarding why a product that was previously considered a run-off product is now actively marketed.

10. Reinsurance between affiliates can result in abuse that retroactive reinsurance accounting is designed to prevent. The subparagraph 31.e. exception for property and casualty run-off agreements is not intended to be applied to agreements between affiliated reinsurers or reinsurers under common control. There is a currently existing exception to retroactive reinsurance accounting for intercompany reinsurance agreements and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction in subparagraph 31.d. This issue paper does not affect or modify that guidance.

11. Retroactive reinsurance agreements between affiliates that result in surplus gain to the ceding entity, receive an accounting penalty under SSAP No. 62, paragraph 32. This issue paper does not affect or modify that guidance.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

12. As noted above existing property and casualty reinsurance accounting guidance is in SSAP No. 62. Tracked changes to SSAP No. 62 proposed by this statement are shown in appendix A. The exceptions to retroactive reinsurance accounting are a statutory accounting concept.

RELEVANT LITERATURE

Statutory Accounting

- *SSAP No. 62—Property and Casualty Reinsurance*
- *Issue Paper No. 75—Property and Casualty Reinsurance*

Generally Accepted Accounting Principles

- *FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113) with modification and *FASB Emerging Issues Task Force No. 93-6, Accounting for Multiple-Year Retrospectively Rated Contracts by Ceding and Assuming Enterprises* is adopted with modification in SSAP No. 62 and discussed in Issue Paper No. 75. This issue paper does not change the previous review of GAAP statements.

State Regulations

- No additional guidance obtained from state statutes or regulations.

Initial Transaction
Paid Loss or Ceded Premium?

Illustration of the rationale for treating the initial transaction as a paid loss by the Cedent/Transferor and a negative paid loss by the Reinsurer/Transferee.

Rationale:

1. This is a transfer of an existing block of business in which typically all premiums have been earned. The cedent is essentially transferring the reserves on an existing block of runoff business for a final negotiated premium.
2. Treating the initial transaction as ceded premium would distort the income statement and standard ratios of the cedent.
3. Additionally, Schedule P for the Cedent/Transferor would be distorted since existing loss reserves would never be paid, resulting in favorable reserve development in Schedule P.
4. Treating the initial transaction as a paid loss is consistent with similar transactions like assumption reinsurance and LPTs (when there is no surplus gain) and better presents the true economics of the transaction.
5. Treating the initial transaction as a paid loss preserves the logical data flow in all of the underwriting and investment exhibits, Schedule P and Schedule F.

Illustration: Assume $110,000 of earned premiums and the transfer of a runoff block of business representing $50,000 in reserves for $50,000 cash

Cedent I/S	Before Transaction	Recorded As Paid Loss	Recorded As Ceded Premium
Premiums Earned	110,000	110,000	**60,000**
Losses Incurred	85,000	85,000	**35,000**
Other U/W Expenses	30,000	30,000	30,000
Net U/W Gain (Loss)	(5,000)	(5,000)	(5,000)
Investment Income	7,000	7,000	7,000
Other Income	1,000	1,000	1,000
Net income	3,000	3,000	3,000
Loss Ratio	77%	77%	**58%**
Expense Ratio	27%	27%	**50%**
Combined Ratio	104%	104%	**108%**

Cedent B/S	Before Transaction	Recorded As Paid Loss	Recorded As Ceded Premium
Cash & Invested Assets	445,000	**395,000**	**395,000**
Reinsurance Recoverable on Unpaid Losses	45,000	45,000	45,000
EDP Equipment	1,000	1,000	1,000
Other Assets	9,000	9,000	9,000
Total Assets	500,000	450,000	450,000
Unpaid Losses and LAE	175,000	**125,000**	**125,000**

Total Liabilities	225,000	175,000	175,000
Common Stock	10,000	10,000	10,000
PIC	90,000	90,000	90,000
Unassigned Surplus	175,000	175,000	175,000
Total Capital & Surplus	275,000	275,000	275,000
Total Liab., Capital & Surplus	500,000	450,000	450,000

Conclusion:

1. If you report the consideration paid by the Cedent/Transferor as a Paid Loss, there is no net effect on the balance sheet or income statement or key underwriting ratios.
2. If you report the consideration paid by the Cedent/Transferor as a Ceded Premium, the effect on the income statement and underwriting ratios is dramatic.
3. Additionally, Schedule P for the Cedent/Transferor would be distorted since existing loss reserves would never be paid, resulting in favorable reserve development in Schedule P.

EXHIBIT A: Illustration of Marked Changes to Amended SSAP No. 62R

The following depicts the amendments from this issue paper as "marked changes" (new text underlined):

Property and Casualty Reinsurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for property and casualty reinsurance. A wide range of methods for structuring reinsurance arrangements can be employed depending on the requirements of individual companies. This statement deals with the more commonly employed methods.

SUMMARY CONCLUSION

General

2. Reinsurance is the assumption by an insurer of all or part of a risk undertaken originally by another insurer. The transaction whereby a reinsurer cedes all or part of the reinsurance it has assumed to another reinsurer is known as a retrocession.

3. Reinsurance has many beneficial purposes. Among them are that it enables an insurance entity to (a) expand its capacity, (b) share large risks with other insurers, (c) spread the risk of potential catastrophes and stabilize its underwriting results, (d) finance expanding volume by sharing the financial burden of reserves, (e) withdraw from a line or class of business, and (f) reduce its net liability to amounts appropriate to its financial resources.

4. Reinsurance agreements are generally classified as treaty or facultative. Treaty reinsurance refers to an arrangement involving a class or type of business written, while facultative reinsurance involves individual risks offered and accepted.

5. Reinsurance coverage can be pro rata (i.e., proportional reinsurance) where the reinsurer shares a pro rata portion of the losses and premium of the ceding entity or excess of loss (i.e., non-proportional) where the reinsurer, subject to a specified limit, indemnifies the ceding entity against the amount of loss in excess of a specified retention. Most reinsurance agreements fall into one of the following categories:

I. Treaty Reinsurance Contracts—Pro Rata:

A. Quota Share Reinsurance—The ceding entity is indemnified against a fixed percentage of loss on each risk covered in the agreement;

B. Surplus Share Reinsurance—The ceding entity establishes a retention or "line" on the risks to be covered and cedes a fraction or a multiple of that line on each policy subject to a specified maximum cession;

II. Treaty Reinsurance Contracts—Excess of Loss:

A. Excess Per Risk Reinsurance—The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to each risk covered by a treaty;

B. Aggregate Excess of Loss Reinsurance—The ceding entity is indemnified against the amount by which the ceding entity's net retained losses incurred during a specific period exceed either a predetermined dollar amount or a percentage of the entity's subject premiums for the specific period subject to a specified limit;

III. Treaty Reinsurance Contracts—Catastrophe: The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to an accumulation of losses resulting from a catastrophic event or series of events;

IV. Facultative Reinsurance Contracts—Pro Rata: The ceding entity is indemnified for a specified percentage of losses and loss expenses arising under a specific insurance policy in exchange for that percentage of the policy's premium;

V. Facultative Reinsurance Contracts—Excess of Loss: The ceding entity is indemnified, subject to a specified limit, for losses in excess of its retention with respect to a particular risk.

Characteristics of Reinsurance Agreements

6. Common contract provisions that may affect accounting practices include:

a. Reporting responsibility of the ceding entity—Details required and time schedules shall be established;

b. Payment terms—Time schedules, currencies intended, and the rights of the parties to withhold funds shall be established;

c. Payment of premium taxes—Customarily the responsibility of the ceding entity, a recital of nonliability of the reinsurer may be found;

d. Termination—May be on a cut-off or run-off basis. A cut-off provision stipulates that the reinsurer shall not be liable for loss as a result of occurrences taking place after the date of termination. A run-off provision stipulates that the reinsurer shall remain liable for loss under reinsured policies in force at the date of termination as a result of occurrences taking place after the date of termination until such time as the policies expire or are canceled; and

e. Insolvency clause—Provides for the survival of the reinsurer's obligations in the event of insolvency of the ceding entity, without diminution because of the insolvency.

7. Reinsurance contracts shall not permit entry of an order of rehabilitation or liquidation to constitute an anticipatory breach by the reporting entity, nor grounds for retroactive revocation or retroactive cancellation of any contracts of the reporting entity.

Required Terms for Reinsurance Agreements

8. In addition to credit for reinsurance requirements applicable to reinsurance transactions generally, no credit or deduction from liabilities shall be allowed by the ceding entity for reinsurance recoverable where the agreement was entered into after the effective date of these requirements (see paragraphs ~~86~~ 90 and ~~87~~91) unless each of the following conditions is satisfied:

a. The agreement must contain an acceptable insolvency clause;

b. Recoveries due the ceding entity must be available without delay for payment of losses and claim obligations incurred under the agreement, in a manner consistent with orderly payment of incurred policy obligations by the ceding entity;

c. The agreement shall constitute the entire contract between the parties and must provide no guarantee of profit, directly or indirectly, from the reinsurer to the ceding entity or from the ceding entity to the reinsurer;

d. The agreement must provide for reports of premiums and losses, and payment of losses, no less frequently than on a quarterly basis, unless there is no activity during the period. The report of premiums and losses shall set forth the ceding entity's total loss and loss expense reserves on the policy obligations subject to the agreement, so that the respective obligations of the ceding entity and reinsurer will be recorded and reported on a basis consistent with this statement; and

e. With respect to retroactive reinsurance agreements, the following additional conditions apply:

i. The consideration to be paid by the ceding entity for the retroactive reinsurance must be a sum certain stated in the agreement;

ii. Direct or indirect compensation to the ceding entity or reinsurer is prohibited;

iii. Any provision for subsequent adjustment on the basis of actual experience in regard to policy obligations transferred, or on the basis of any other formula, is prohibited in connection with a retroactive reinsurance transaction, except that provision may be made for the ceding entity's participation in the reinsurer's ultimate profit, if any, under the agreement;

iv. A retroactive reinsurance agreement shall not be canceled or rescinded without the approval of the commissioner of the domiciliary state of the ceding entity.

Reinsurance Agreements with Multiple Cedents

9. Reinsurance agreements with multiple cedents require allocation agreements. The allocation agreement can be part of the reinsurance agreement or a separate agreement. If the agreement has multiple cedents:

a. The allocation must be in writing and

b. The terms of the allocation agreement must be fair and equitable.

Reinsurance Contracts Must Include Transfer of Risk

10. The essential ingredient of a reinsurance contract is the transfer of risk. The essential element of every true reinsurance agreement is the undertaking by the reinsurer to indemnify the ceding entity, i.e., reinsured entity, not only in form but in fact, against loss or liability by reason of the original insurance. Unless the agreement contains this essential element of risk transfer, no credit shall be recorded.

11. Insurance risk involves uncertainties about both (a) the ultimate amount of net cash flows from premiums, commissions, claims, and claims settlement expenses (underwriting risk) and (b) the timing of the receipt and payment of those cash flows (timing risk). Actual or imputed investment returns are not an element of insurance risk. Insurance risk is fortuitous—the possibility of adverse events occurring is outside the control of the insured.

12. Determining whether an agreement with a reinsurer provides indemnification against loss or liability (transfer of risk) relating to insurance risk requires a complete understanding of that contract and other contracts or agreements between the ceding entity and related reinsurers. A complete understanding includes an evaluation of all contractual features that (a) limit the amount of insurance risk to which the reinsurer is subject (e.g., experience refunds, cancellation provisions, adjustable features, or additions of profitable lines of business to the reinsurance

contract) or (b) delay the timely reimbursement of claims by the reinsurer (e.g., payment schedules or accumulating retentions from multiple years).

13. Indemnification of the ceding entity against loss or liability relating to insurance risk in reinsurance requires both of the following:

a. The reinsurer assumes significant insurance risk under the reinsured portions of the underlying insurance agreements; and

b. It is reasonably possible that the reinsurer may realize a significant loss from the transaction.

14. A reinsurer shall not have assumed significant insurance risk under the reinsured contracts if the probability of a significant variation in either the amount or timing of payments by the reinsurer is remote. Implicit in this condition is the requirement that both the amount and timing of the reinsurer's payments depend on and directly vary with the amount and timing of claims settled by the ceding entity. Contractual provisions that delay timely reimbursement to the ceding entity prevent this condition from being met.

15. The ceding entity's evaluation of whether it is reasonably possible for a reinsurer to realize a significant loss from the transaction shall be based on the present value of all cash flows between the ceding and assuming companies under reasonably possible outcomes, without regard to how the individual cash flows are described or characterized. An outcome is reasonably possible if its probability is more than remote. The same interest rate shall be used to compute the present value of cash flows for each reasonably possible outcome tested. A constant interest rate shall be used in determining those present values because the possibility of investment income varying from expectations is not an element of insurance risk. Judgment is required to identify a reasonable and appropriate interest rate.

16. Significance of loss shall be evaluated by comparing the present value of all cash flows, determined as described in paragraph 15, with the present value of the amounts paid or deemed to have been paid to the reinsurer. If, based on this comparison, the reinsurer is not exposed to the reasonable possibility of significant loss, the ceding entity shall be considered indemnified against loss or liability relating to insurance risk only if substantially all of the insurance risk relating to the reinsured portions of the underlying insurance agreements has been assumed by the reinsurer. In this narrow circumstance, the reinsurer's economic position is virtually equivalent to having written the insurance contract directly. This condition is met only if insignificant insurance risk is retained by the ceding entity on the retained portions of the underlying insurance contracts, so that the reinsurer's exposure to loss is essentially the same as the reporting entity's.

17. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payment to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Therefore, any feature that may affect the timing of the reinsurer's reimbursement to the ceding entity shall be closely scrutinized.

Accounting for Reinsurance

18. Reinsurance recoverables shall be recognized in a manner consistent with the liabilities (including estimated amounts for claims incurred but not reported) relating to the underlying reinsured contracts. Assumptions used in estimating reinsurance recoverables shall be consistent with those used in estimating the related liabilities. Certain assets and liabilities are created by entities when they engage in reinsurance contracts. Reinsurance assets meet the definition of assets as defined by *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted to the extent they conform to the requirements of this statement.

19. Accounting for members of a reinsurance pool shall follow the accounting for the pool member which issued the underlying policy. Specific accounting rules for underwriting pools and associations are addressed in SSAP No. 63—Underwriting Pools and Associations Including Intercompany Pools.

20. Reinsurance recoverable on loss payments is an admitted asset. Notwithstanding the fact that reinsurance recoverables on paid losses may meet the criteria for offsetting under the provisions of SSAP No. 64—Offsetting and Netting of Assets and Liabilities (SSAP No. 64), reinsurance recoverables on paid losses shall be reported as an asset without any available offset. Unauthorized reinsurance is included in this asset and reflected separately as a liability to the extent required. Penalty for overdue authorized reinsurance shall be reflected as a liability.

21. Funds held or deposited with reinsured companies, whether premiums withheld as security for unearned premium and outstanding loss reserves or advances for loss payments, are admitted assets provided they do not exceed the liabilities they secure and provided the reinsured is solvent. Those funds which are in excess of the liabilities, and any funds held by an insolvent reinsured shall be nonadmitted.

22. Prospective reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for losses that may be incurred as a result of future insurable events covered under contracts subject to the reinsurance. Retroactive reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance. A reinsurance agreement may include both prospective and retroactive reinsurance provisions.

23. The distinction between prospective and retroactive reinsurance agreements is based on whether the agreement reinsures future or past insured events covered by the underlying insurance policies. For example, in occurrence-based insurance, the insured event is the occurrence of a loss covered by the insurance contract. In claims-made insurance, the insured event is the reporting to the insurer, within the period specified by the policy, of a claim for a loss covered by the insurance agreement. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance agreement is a retroactive agreement. (However, a reinsurance agreement that reinsures claims reported to an insurer that are covered under currently effective claims-made insurance policies is a prospective reinsurance agreement.)

24. It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the agreement is substantively prospective shall be determined based on the facts and circumstances. However, except as respects business assumed by a U.S. reinsurer from ceding companies domiciled outside the U.S. and not affiliated with such reinsurer, or business assumed by a U.S. reinsurer where either the lead reinsurer or a majority of the capacity on the agreement is domiciled outside the U.S. and is not affiliated with such reinsurer, if an agreement entered into, renewed or amended on or after January 1, 1994 has not been finalized, reduced to a written form and signed by the parties within nine months after the commencement of the policy period covered by the reinsurance arrangement, then the arrangement is presumed to be retroactive and shall be accounted for as a retroactive reinsurance agreement. This presumption shall not apply to: (a) facultative reinsurance contracts, nor to (b) reinsurance agreements with more than one reinsurer which are signed by the lead reinsurer (i.e., the reinsurer setting the terms of the agreement for the reinsurers) within nine months after the commencement of the policy period covered by the reinsurance agreement, nor to (c) reinsurance agreements with more than one reinsurer (whether signed by the lead reinsurer or not) which were entered into, renewed or amended on or before December 31, 1996, (and which were not renewed or amended after that date) if reinsurers representing more than 50% of the capacity on the agreement have signed cover notes, placement slips or similar documents describing the essential terms of coverage and exclusions within nine months after the commencement of the policy period covered by the reinsurance arrangement. Also exempt from this presumption are reinsurance agreements where one of the parties is in conservation, rehabilitation, receivership or liquidation proceedings.

25. Prospective and retroactive provisions included within a single agreement shall be accounted for separately. If separate accounting for prospective and retroactive provisions included within a single agreement is impracticable, the agreement shall be accounted for as a retroactive agreement provided the conditions for reinsurance accounting are met.

Accounting for Prospective Reinsurance Agreements

26. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of written and earned premiums by the ceding entity and shall be earned over the remaining contract period in proportion to the amount of reinsurance protection provided or, if applicable, until the reinsurer's maximum liability under the agreement has been exhausted. If the amounts paid are subject to adjustment and can be reasonably estimated, the basis for amortization shall be the estimated ultimate amount to be paid. Reinstatement premium, if any, shall be earned over the period from the reinstatement of the limit to the expiration of the agreement.

27. Changes in amounts of estimated reinsurance recoverables shall be recognized as a reduction of gross losses and loss expenses incurred in the current period statement of income. Reinsurance recoverables on paid losses shall be reported as an asset, reinsurance recoverables on loss and loss adjustment expense payments, in the balance sheet. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be netted against the liability for gross losses and loss adjustment expenses.

Accounting for Retroactive Reinsurance Agreements

28. Certain reinsurance agreements which transfer both components of insurance risk cover liabilities which occurred prior to the effective date of the agreement. Due to potential abuses involving the creation of surplus to policyholders and the distortion of underwriting results, special accounting treatment for these agreements is warranted.

29. All retroactive reinsurance agreements entered into, renewed or amended on or after January 1, 1994 (including subsequent development of such transactions) shall be accounted for and reported in the following manner:

a. The ceding entity shall record, without recognition of the retroactive reinsurance, loss and loss expense reserves on a gross basis on the balance sheet and in all schedules and exhibits;

b. The assuming entity shall exclude the retroactive reinsurance from loss and loss expense reserves and from all schedules and exhibits;

c. The ceding entity and the assuming entity shall report by write-in item on the balance sheet, the total amount of all retroactive reinsurance, identified as retroactive reinsurance reserve ceded or assumed, recorded as a contra-liability by the ceding entity and as a liability by the assuming entity;

d. The ceding entity shall, by write-in item on the balance sheet, restrict surplus resulting from any retroactive reinsurance as a special surplus fund, designated as special surplus from retroactive reinsurance account;

e. The surplus gain from any retroactive reinsurance shall not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid;

f. The special surplus from retroactive reinsurance account for each respective retroactive reinsurance agreement shall be reduced at the time the ceding entity begins to recover funds from the assuming entity in amounts exceeding the consideration paid by the ceding entity under such agreement, or adjusted as provided in subparagraph 29.j.;

g. For each agreement, the reduction in the special surplus from retroactive reinsurance account shall be limited to the lesser of (i) the actual amount recovered in excess of consideration paid or (ii) the initial surplus gain resulting from the respective retroactive reinsurance agreement. Any remaining balance in the special surplus from retroactive reinsurance account derived from any such agreement shall be returned to unassigned funds (surplus) upon elimination of all policy obligations subject to the retroactive reinsurance agreement;

h. The ceding entity shall report the initial gain arising from a retroactive reinsurance transaction (i.e., the difference between the consideration paid to the reinsurer and the total reserves ceded to the reinsurer) as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Gain and included under Other Income;

i. The assuming entity shall report the initial loss arising from a retroactive reinsurance transaction, as defined in the preceding subparagraph 29.g., as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Loss and included under Other Income;

j. Any subsequent increase or reduction in the total reserves ceded under a retroactive reinsurance agreement shall be reported in the manner described in the preceding subparagraphs 29.h. and 29.i., in order to recognize the gain or loss arising from such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry on the balance sheet shall be adjusted, upward or downward, to reflect such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry shall be equal to or less than the total ceded reserves under all retroactive reinsurance agreements in-force as of the date of the financial statement. Special surplus arising from a retroactive reinsurance transaction shall be considered to be earned surplus (i.e., transferred to unassigned funds (surplus)) only when cash recoveries from the assuming entity exceed the consideration paid by the ceding entity as respects such retroactive reinsurance transaction; and

k. The consideration paid for a retroactive reinsurance agreement shall be reported as a decrease in ledger assets by the ceding entity and as an increase in ledger assets by the assuming entity.

(For an illustration of ceding entity accounting entries see Question 33 in Exhibit A.)

30. Portfolio reinsurance is the transfer of an insurer's entire liability for in force policies or outstanding losses, or both, of a segment of the insurer's business. Loss portfolio transactions are to be accounted for as retroactive reinsurance.

31. The accounting principles for retroactive reinsurance agreements in paragraph 29 shall not apply to the following types of agreements (which shall be accounted for as prospective reinsurance agreements unless otherwise provided in this statement):

a. Structured settlement annuities for individual claims purchased to implement settlements of policy obligations;

b. Novations, (i.e., (i) transactions in which the original direct insurer's obligations are completely extinguished, resulting in no further exposure to loss arising on the business novated or (ii) transactions in which the original assuming entity's obligations are completely extinguished) resulting in no further exposure to loss arising on the business novated, provided that (1) the parties to the transaction are not affiliates (or if affiliates, that the transaction has the prior approval of the domiciliary regulators of the parties) and (2) the accounting for the original reinsurance agreement will not be altered from retroactive to prospective;

c. The termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business;~~ or~~

d. Intercompany reinsurance agreements, and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction~~.~~; or

e. Reinsurance/retrocession agreements that meet the criteria of property/casualty run-off agreements described in paragraphs 68-71.

32. Retroactive reinsurance agreements resulting in surplus gain to the ceding entity (with or without risk transfer) entered into between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) shall be reported as follows:

a. The consideration paid by the ceding entity shall be recorded as a deposit and reported as a nonadmitted asset; and

b. No deduction shall be made from loss and loss adjustment expense reserves on the ceding entity's balance sheet, schedules, and exhibits.

33. The accounting and reporting provisions applicable to retroactive reinsurance apply to all transactions transferring liabilities in connection with a court-ordered rehabilitation, liquidation, or receivership. The requirement to include stipulated contract provisions in the reinsurance agreements shall not apply to these transactions, with written approval of the ceding entity's domiciliary commissioner.

34. Novations meeting the requirements of subparagraph 31.b. shall be accounted for as prospective reinsurance agreements. The original direct insurer, or the original assuming insurer, shall report amounts paid as a reduction of written and earned premiums, and unearned premiums to the extent that premiums have not been earned. Novated balances (e.g., loss and loss adjustment expense reserves) shall be written off through the accounts, exhibits, and schedules in which they were originally recorded. The assuming insurer shall report amounts received as written and earned premiums, and obligations assumed as incurred losses in the statement of income.

Deposit Accounting

35. To the extent that a reinsurance agreement does not, despite its form, transfer both components of insurance risk, all or part of the agreement shall be accounted for and reported as deposits in the following manner:

a. At the outset of the reinsurance agreement the net consideration paid by the ceding entity (premiums less commissions or other allowances) shall be recorded as a deposit by the ceding entity and as a liability by the assuming entity. The deposit shall be reported as an admitted asset by the ceding entity if (i) the assuming entity is licensed, accredited or otherwise qualified in the ceding entity's state of domicile as described in Appendix A-785 or (ii) there are funds held by or on behalf of the ceding entity as described in Appendix A-785;

b. Throughout the life of the agreement, receipts and disbursements shall be recorded through the deposit/liability accounts;

c. When individual case reserves are the basis for the deposit and the assuming entity pays in excess of the amount transferred by the ceding entity, the amount paid in excess of the deposit received shall be recognized as a loss by the assuming entity and as a gain by the ceding entity as Other Income in the statement of income;

d. When the agreement is completed, or when there is a loss payment in excess of the deposit, any difference between consideration and recoveries shall be recorded in the Other Income or Loss account as a loss to the reinsurer and as a gain in the Other Income or Loss account by the reinsured;

e. With regard to bulk reserves,(i.e., IBNR) it shall be assumed that any cash transactions for the settlement of losses will reduce the asset/liability accounts by the amount of the cash transferred. When the remaining losses are revalued upward, an increase in the liability shall be recorded as a loss recognized by the assuming entity. Conversely, the ceding entity shall increase its deposit (asset) and outstanding loss liability;

f. No deduction shall be made from the loss and loss adjustment expense reserves on the ceding entity's balance sheet, schedules, and exhibits; and

g. The assuming entity shall record net consideration to be returned to the ceding entity as liabilities.

Assumed Reinsurance

36. Reinsurance premiums receivable at the end of the accounting period are combined with direct business receivables and reported as agents' balances or uncollected premiums. Where the ceding entity withholds premium funds pursuant to the terms of the reinsurance agreement, such assets shall be shown by the assuming entity as funds held by or deposited with reinsured companies. Reporting entities shall record any interest earned or receivable on the funds withheld as a component of aggregate write-ins for miscellaneous income.

37. If the assuming entity receives reinsurance premium prior to the effective date of the reinsurance contract, consistent with *SSAP No. 53—Property Casualty Contracts-Premiums*, paragraph 14, advance premiums shall be reported as a liability in the statutory financial statement and not considered income until the effective date of the coverage. Such amounts are not included in written premium or the unearned premium reserve. If the assuming entity receives reinsurance premium after the effective date of the reinsurance contract but prior to the due date, the amount received shall be reported as a reduction of the asset for deferred but not yet due (earned but unbilled premiums).

38. Reinsurance premiums more than 90 days overdue shall be nonadmitted except (a) to the extent the assuming entity maintains unearned premium and loss reserves as to the ceding entity, under principles of offset accounting as discussed in SSAP No. 64, or (b) where the ceding entity is licensed and in good standing in assuming entity's state of domicile. Reinsurance premiums are due pursuant to the original contract terms (as the agreement stood on the date of execution). In the absence of a specific contract date, reinsurance premiums will be deemed due thirty (30) days after the date on which (i) notice or demand of premium due is provided to the ceding entity or (ii) the assuming entity books the premium (see SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers).

39. A lag will develop between the time of the entry of the underlying policy transaction on the books of the ceding entity and the transmittal of information and entry on the books of the assuming entity. Assuming companies shall estimate unreported premiums and related costs to the extent necessary to prevent material distortions in the loss development contained in the assuming entity's annual statement schedules where calendar year premiums are compared to accident year losses.

40. Proportional reinsurance (i.e., first dollar pro rata reinsurance) premiums shall be allocated to the appropriate annual statement lines of business in the Underwriting and Investment exhibits. Non-proportional assumed reinsurance premiums shall be classified as reinsurance under the appropriate subcategories.

41. Assumed retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in subparagraph 29.k.

42. Amounts payable by reinsurers on losses shall be classified as unpaid losses. Assumed reinsurance payable on paid losses shall be classified as a separate liability item on the balance sheet. IBNR losses on assumed reinsurance business shall be netted with ceded losses on the balance sheet and listed separately by annual statement line of business in the Underwriting and Investment exhibits.

Ceded Reinsurance

43. Ceded reinsurance premiums payable (net of ceding commission) shall be classified as a liability. Consistent with SSAP No. 64, ceded reinsurance premiums payable may be deducted from amounts due from the reinsurer, such as amounts due on assumed reinsurance, when a legal right of offset exists.

44. With regard to reinsurance premium paid prior to the effective date of the contract, the ceding entity shall reflect the prepaid item as a write-in admitted asset and it should not be recognized in the income statement until the effective date of the coverage. Such amounts are not included in ceded written premiums or ceded unearned premium but should be subject to impairment analysis. With regard to reinsurance premium paid by ceding entity after the reinsurance contract is in effect but prior to the due date, the ceding entity shall treat this item as a reduction to the liability for ceded reinsurance premiums payable. That liability reflects not only premiums unpaid but also amounts booked but deferred and not yet due.

45. Amounts withheld by the ceding entity that would otherwise be payable under the reinsurance agreement shall be reported as funds held by entity under reinsurance treaties. Reporting entities shall record any interest due or payable on the amounts withheld as a component of aggregate write-ins for miscellaneous income.

46. Ceded reinsurance transactions shall be classified in the annual statement line of business which relates to the direct or assumed transactions creating the cession or retrocession.

47. Ceded retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in subparagraph 29.k.

Adjustable Features/Retrospective Rating

48. Reinsurance treaties may provide for adjustment of commission, premium, or amount of coverage, based on loss experience. The accounting for common examples is outlined in the following paragraphs:

Commission Adjustments

49. An accrual shall be maintained for the following adjustable features based upon the experience recorded for the accounting period:

a. Contingent or Straight Profit—The reinsurer returns to the ceding entity a stipulated percentage of the profit produced by the business assumed from the ceding entity. Profit may be calculated for any specified period of time, but the calculation is often based on an average over a period of years; and

b. Sliding Scale—A provisional rate of commission is paid over the course of the agreement, with a final adjustment based on the experience of the business ceded under the agreement.

Premium Adjustments

50. If the reinsurance agreement incorporates an obligation on the part of the ceding entity to pay additional premium to the assuming entity based upon loss experience under the agreement, a liability in the amount of such additional premium shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to pay such additional premium occur(s). The assuming entity shall recognize an asset in a consistent manner. If the reinsurance agreement incorporates an obligation on the part of the assuming entity to refund to the ceding entity any portion of the consideration received by the assuming entity based upon loss experience under the agreement, an asset in the amount of any such refund shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to make such refund occur(s). The initial provisional or deposit premium is recalculated retrospectively, based on loss experience under the agreement during a specified period of time; the calculation is often based on an average over a period of years. The assuming entity shall recognize a liability in a consistent manner.

Adjustments in the Amount of Coverage

51. The amount of coverage available for future periods is adjusted, upward or downward, based on loss experience under the agreement during a specified period of time. If the reinsurance agreement incorporates a provision under which the reinsurance coverage afforded to the ceding entity may be increased or reduced based upon loss experience under the agreement, an asset or a liability shall be recognized by the ceding entity in an amount equal to that percentage of the consideration received by the assuming entity which the increase or reduction in coverage represents of the amount of coverage originally afforded. The asset or liability shall be recognized during the accounting period in which the loss event(s) (or absence thereof) giving rise to the increase or decrease in reinsurance coverage occur(s), and shall be amortized over all accounting periods for which the increased or reduced coverage is applicable. The term “consideration” shall mean, for this purpose, the annualized deposit premium for the period used as the basis for calculating the adjustment in the amount of coverage to be afforded thereafter under the agreement.

Impairment

52. Include as a nonadmitted asset, amounts accrued for premium adjustments on retrospectively rated reinsurance agreements with respect to which all uncollected balances due from the ceding company have been classified as nonadmitted.

Commissions

53. Commissions payable on reinsurance assumed business shall be included as an offset to Agents’ Balances or Uncollected Premiums. Commissions receivable on reinsurance ceded business shall be included as an offset to Ceded Reinsurance Balances Payable.

54. If the ceding commission paid under a reinsurance agreement exceeds the anticipated acquisition cost of the business ceded, the ceding entity shall establish a liability, equal to the difference between the anticipated acquisition cost and the reinsurance commissions received, to be amortized pro rata over the effective period of the reinsurance agreement in proportion to the amount of coverage provided under the reinsurance contract.

Provision for Reinsurance

55. The NAIC Annual Statement Instructions for Property and Casualty Companies for Schedule F—Provision for Overdue Reinsurance, provide for a minimum reserve for uncollectible reinsurance with an additional reserve required if an entity’s experience indicates that a higher amount should be provided. The minimum reserve Provision for Reinsurance is recorded as a liability and the change between years is recorded as a gain or loss directly to unassigned funds (surplus). Any reserve over the minimum amount shall be recorded on the statement of income by reversing the accounts previously utilized to establish the reinsurance recoverable.

56. The provision for reinsurance is calculated separately for unauthorized and authorized companies. An authorized reinsurer is licensed, accredited or approved by the ceding entity's state of domicile; an unauthorized reinsurer is not so licensed, accredited or approved.

Disputed Items

57. Occasionally a reinsurer will question whether an individual claim is covered under a reinsurance agreement or may even attempt to nullify an entire agreement. A ceding entity, depending upon the individual facts, may or may not choose to continue to take credit for such disputed balances. A ceding entity shall take no credit whatsoever for reinsurance recoverables in dispute with an affiliate.

58. Items in dispute are those claims with respect to which the ceding entity has received formal written communication from the reinsurer denying the validity of coverage.

Uncollectible Reinsurance

59. Uncollectible reinsurance balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

Commutations

60. A commutation of a reinsurance agreement, or any portion thereof, is a transaction which results in the complete and final settlement and discharge of all, or the commuted portion thereof, present and future obligations between the parties arising out of the reinsurance agreement.

61. In commutation agreements, an agreed upon amount determined by the parties is paid by the reinsurer to the ceding entity. The ceding entity immediately eliminates the reinsurance recoverable recorded against the ultimate loss reserve and records the cash received as a negative paid loss. Any net gain or loss shall be reported in underwriting income in the statement of income.

62. The reinsurer eliminates a loss reserve carried at ultimate cost for a cash payout calculated at present value. Any net gain or loss shall be reported in underwriting income in the statement of income.

63. Commuted balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

National Flood Insurance Program

64. The National Flood Insurance Program was created by the Federal Emergency Management Agency (FEMA) and is designed to involve private insurers in a write-your-own (WYO) flood insurance program financially backed by FEMA at no risk to the insurer. To become a participating WYO entity, the entity signs a document with the Federal Insurance Administration (FIA) of the Federal Emergency Management Agency known as the Financial Assistance/Subsidy Arrangement.

65. Premium rates are set by FEMA. The WYO participating companies write the flood insurance coverage qualifying for the program on their own policies, perform their own underwriting, premium collections, claim payments, administration, and premium tax payments for policies written under the program.

66. Monthly accountings are made to FIA and participants draw upon FEMA letters of credit for deficiencies of losses, loss expenses, and administrative expenses in excess of premiums, subject to certain percentage limitations on expenses.

67. Balances due from or to FEMA shall be reported as ceded reinsurance balances receivable or payable.

Accounting for the Transfer of Property and Casualty Run-off Agreements

68. Property and casualty run-off agreements are reinsurance or retrocession agreements that are intended to transfer essentially all of the risks and benefits of a specific line of business or market segment that is no longer actively marketed by the transferring insurer or reinsurer. A property and casualty run-off agreement is not a novation as the transferring insurer or reinsurer remains primarily liable to the policyholder or ceding entity under the original contracts of insurance or reinsurance. Reinsurance agreements between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) are not eligible for the exception for property and casualty run-off agreements in subparagraph 31.e. of SSAP No. 62R.

Criteria

69. The accounting treatment for property and casualty run-off agreements must be approved by the domiciliary regulators of the transferring entity (either the original direct insurer in the case of a reinsurance agreement or the original assuming reinsurer in the case of a retrocession agreement) and the assuming entity. If the transferring entity and assuming entity are domiciled in the same state, then the regulator of the state where the majority of the transferred liabilities is located shall be asked to approve the accounting treatment. In determining whether to approve an agreement for this accounting treatment, the regulators shall require the following:

a. Assuming Entity Properly Licensed – The entity assuming the run-off agreement must have the appropriate authority or license to write the business being assumed.

b. Limits and Coverages – the reinsurance or retrocession agreement shall provide the same limits and coverages that were afforded in the original insurance or reinsurance agreement.

c. Non-recourse – The reinsurance or retrocession agreement shall not contain any adjustable features or profit share or retrospective rating, and there shall be no recourse (other than normal representations and warranties that would be associated with a purchase and sale agreement) directly or indirectly against the transferring entity.

d. Risk Transfer – the reinsurance or retrocession agreement must meet the requirements of risk transfer as described in this statement.

e. Financial Strength of Reinsurer – the assuming reinsurer shall have a financial strength rating from at least two independent rating agencies (from NAIC acceptable rating agencies) which is equal to or greater than the current ratings of the transferring entity. The lowest financial strength rating received from an NAIC acceptable rating organization rating agency will be used to compare the financial strength ratings of the transferring and assuming entities.

f. Assessments – the assuming reinsurer or retrocessionaire (if required in the original reinsurance contract) shall be financially responsible for any and all assessments, including guaranty fund assessments, that are assessed against the transferring entity related to the insurance business being assumed.

g. Applicable Only to “Run-off” Business – the reinsurance or retrocession agreement shall only cover liabilities relating to a line(s) of business or specific market segments no longer actively marketed by the transferring entity.

h. Non-cancelable Reinsurance – the reinsurance or retrocession agreement shall provide that the reinsurance or retrocessional coverage provided by the proposed agreement cannot be cancelable by either party for any reason. (However, this provision will not override standard contracts law and principles and will not prevent any remedies, including rescission or termination that might be available for breach, misrepresentation, etc.)

Statutory Schedules and Exhibits

70. At the inception of the transaction, the transferring entity shall record the consideration paid to the assuming entity as a paid loss. If the consideration paid by the transferring entity is less than the loss reserves transferred, the difference shall be recorded by the ceding entity as a decrease in losses incurred. The assuming entity shall record the consideration received as a negative paid loss. In addition, the transferring entity shall record an increase to ceded reinsurance recoverable for the amount of the transferred reserve. Journal entries illustrating these transactions, including situations in which the transaction includes an unearned premium reserve, are included in Exhibit B of this Statement.

71. The assuming entity will report the business in the same line of business as reported by the original insurer or reinsurer. The assuming entity will report the business at the same level of detail using the appropriate statutory schedules and exhibits.

Disclosures

~~68.~~72. Unsecured Reinsurance Recoverables:

a. If the entity has with any individual reinsurers, authorized or unauthorized, an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium, that exceeds 3% of the entity’s policyholder surplus, list each individual reinsurer and the unsecured aggregate recoverable pertaining to that reinsurer; and

b. If the individual reinsurer is part of a group, list the individual reinsurers, each of its related group members having reinsurance with the reporting entity, and the total unsecured aggregate recoverables for the entire group.

~~69.~~73. Reinsurance Recoverables in Dispute—Reinsurance recoverable on paid and unpaid (including IBNR) losses in dispute by reason of notification, arbitration or litigation shall be identified if the amounts in dispute from any entity (and/or affiliate) exceed 5% of the ceding entity’s policyholders surplus or if the aggregate of all disputed items exceeds 10% of the ceding entity’s policyholders surplus. Notification means a formal written communication from a reinsurer denying the validity of coverage.

~~70.~~74. Uncollectible Reinsurance—Describe uncollectible reinsurance written off during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):

a. Losses incurred;

b. Loss adjustment expenses incurred;

c. Premiums earned; and

d. Other.

~~71.~~75. Commutation of Ceded Reinsurance—Describe commutation of ceded reinsurance during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):

a. Losses incurred;

b. Loss adjustment expenses incurred;

c. Premiums earned; and

d. Other.

~~72.~~76. Retroactive Reinsurance—The table illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under Retroactive Reinsurance in the Notes to Financial Statements section shall be completed for all retroactive reinsurance agreements that transfer liabilities for losses that have already occurred and that will generate special surplus transactions. The insurer (assuming or ceding) shall assign a unique number to each retroactive reinsurance agreement and shall utilize this number for as long as the agreement exists. Transactions utilizing deposit accounting shall not be reported in this note.

~~73.~~77. Reinsurance Assumed and Ceded—The tables illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under "Reinsurance Assumed and Ceded in the Notes to Financial Statements" section shall be completed as follows:

a. The financial statements shall disclose the maximum amount of return commission which would have been due reinsurers if all reinsurance were canceled with the return of the unearned premium reserve; and

b. The financial statements shall disclose the accrual of additional or return commission, predicated on loss experience or on any other form of profit sharing arrangements as a result of existing contractual arrangements.

~~74.~~78. A specific interrogatory requires information on reinsurance of risk accompanied by an agreement to release the reinsurer from liability, in whole or in part, from any loss that may occur on the risk or portion thereof.

~~75.~~79. Disclosures for paragraphs ~~76-81~~ 80-85 represent annual statement interrogatories, which are required to be included with the annual audit report beginning with audit reports on financial statements as of and for the period ended December 31, 2006. The disclosures required within paragraphs ~~76-81~~80-85 shall be included in accompanying supplemental schedules of the annual audit report beginning in year-end 2006. These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1994. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the reinsurance summary supplemental filing.

~~76.~~80. Disclose if any risks are reinsured under a quota share reinsurance contract with any other entity that includes a provision that would limit the reinsurer's losses below the stated quota share percentage (e.g. a deductible, a loss ratio corridor, a loss cap, an aggregate limit or any similar provisions)? If yes, indicate the number of reinsurance contracts containing such provisions and if the amount of reinsurance credit taken reflects the reduction in quota share coverage caused by any applicable limiting provision(s).

~~77.~~81. Disclose if the reporting entity ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement: (i) it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; (ii) it accounted for that contract as reinsurance and not as a deposit; and (iii) the contract(s) contain one or more of the following features or other features that would have similar results:

a. A contract term longer than two years and the contract is noncancellable by the reporting entity during the contract term;

b. A limited or conditional cancellation provision under which cancellation triggers an obligation by the reporting entity, or an affiliate of the reporting entity, to enter into a new reinsurance contract with the reinsurer, or an affiliate of the reinsurer;

c. Aggregate stop loss reinsurance coverage;

d. A unilateral right by either party (or both parties) to commute the reinsurance contract, whether conditional or not, except for such provisions which are only triggered by a decline in the credit status of the other party;

e. A provision permitting reporting of losses, or payment of losses, less frequently than on a quarterly basis (unless there is no activity during the period); or

f. Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.

~~78.~~82. Disclose if the reporting entity during the period covered by the statement ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; excluding cessions to approved pooling arrangements or to captive insurance companies that are directly or indirectly controlling, controlled by, or under common control with (i) one or more unaffiliated policyholders of the reporting entity, or (ii) an association of which one or more unaffiliated policyholders of the reporting entity is a member, where:

a. The written premium ceded to the reinsurer by the reporting entity or its affiliates represents fifty percent (50%) or more of the entire direct and assumed premium written by the reinsurer based on its most recently available financial statement; or

b. Twenty–five percent (25%) or more of the written premium ceded to the reinsurer has been retroceded back to the reporting entity or its affiliates in separate reinsurance contract.

~~79.~~83. If affirmative disclosure is required for paragraph ~~77~~ 81 or ~~78~~82, provide the following information:

a. A summary of the reinsurance contract terms and indicate whether it applies to the contracts meeting paragraph ~~77~~ 81 or ~~78~~82;

b. A brief discussion of management's principal objectives in entering into the reinsurance contract including the economic purpose to be achieved; and

c. The aggregate financial statement impact gross of all such ceded reinsurance contracts on the balance sheet and statement of income.

~~80.~~84. Except for transactions meeting the requirements of paragraph 31 of *SSAP No. 62R—Property and Casualty Reinsurance*, disclose if the reporting entity ceded any risk under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:

a. Accounted for that contract as reinsurance (either prospective or retroactive) under statutory accounting principles (SAP) and as a deposit under generally accepted accounting principles (GAAP); or

b. Accounted for that contract as reinsurance under GAAP and as a deposit under SAP.

~~81.~~85. If affirmative disclosure is required for paragraph ~~80~~84, explain in a supplemental filing why the contract(s) is treated differently for GAAP and SAP.

86. Disclosures for the Transfer of Property and Casualty Run-off Agreements

a. Disclose if the reporting entity has entered into any agreements which have been approved by their domiciliary regulator and have qualified pursuant to SSAP No. 62R, subparagraph 31.e., Accounting for the Transfer of Property and Casualty Run-off Agreements.

b. If affirmative, provide a description of the agreement and the amount of consideration paid and liabilities transferred.

~~82.~~87. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

~~83.~~88. This statement adopts *FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113) with modification and FASB *Emerging Issues Task Force No. 93-6, Accounting for Multiple-Year Retrospectively Rated Contracts by Ceding and Assuming Enterprises* with modification for the following:

a. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be reported as a contra-liability netted against the liability for gross losses and loss adjustment expenses;

b. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of unearned premiums;

c. The gain created by a retroactive reinsurance agreement because the amount paid to the reinsurer is less than the gross liabilities for losses and loss adjustment expenses ceded to the reinsurer is reported in the statement of income as a write-in gain in other income by the ceding entity and a write-in loss by the assuming entity. The gain created by a retroactive reinsurance agreement is restricted as a special surplus account until the actual retroactive reinsurance recovered is in excess of the consideration paid;

d. This statement requires that a liability be established through a provision reducing unassigned funds (surplus) for unsecured reinsurance recoverables from unauthorized reinsurers and for certain overdue balances due from authorized reinsurers;

e. Some reinsurance agreements contain adjustable features that provide for adjustment of commission, premium or amount of coverage, based on loss experience. This statement requires that the asset or liability arising from the adjustable feature be computed based on experience to date under the agreement, and the impact of early termination may only be considered at the time the agreement has actually been terminated;

f. Structured settlements are addressed in *SSAP No. 65—Property and Casualty Contracts*. Statutory accounting and FAS 113 are consistent in accounting for structured settlement annuities where the reporting entity is the owner and payee and where the claimant is the payee and the reporting entity has been released from its obligation. FAS 113 distinguishes structured settlement annuities where the claimant is the payee and a legally enforceable release from the reporting entity's liability is obtained from those where the claimant is the payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the reporting entity has not been released from its obligation; and

g. This statement requires that reinsurance recoverables on unpaid losses and loss adjustment expenses be presented as a contra-liability. Requirements for offsetting and netting are addressed in SSAP No. 64.

~~84.~~89. This statement rejects AICPA *Statement of Position No. 92-5, Accounting for Foreign Property and Liability Reinsurance*. This statement incorporates Appendix A-785 as applicable.

Effective Date and Transition

~~85.~~90. This statement shall apply to:

a. Reinsurance agreements entered into, renewed, or amended on or after January 1, 1994. An amendment is any revision or adjustment of contractual terms. The payment of premiums or reimbursement of losses recoverable under the agreement shall not constitute an amendment; and

b. Reinsurance agreements in force on January 1, 1995, which cover losses occurring or claims made on or after that date on policies reinsured under such agreements.

~~86.~~91. The guidance shall not apply to:

a. Reinsurance agreements which cover only losses occurring or claims made before January 1, 1994, and which were entered into before January 1, 1994, and were not subsequently renewed or amended; and

b. Reinsurance agreements that expired before and were not renewed or amended after January 1, 1995.

~~87.~~92. The guidance in paragraphs 48 through 52 shall be effective for all accounting periods beginning on or after January 1, 1996, and shall apply to reinsurance agreements entered into, renewed or amended on or after January 1, 1994.

93. ~~88~~This statement is effective for years beginning January 1, 2001. Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Revisions to subparagraph 31.e., related paragraphs 68-71, and new disclosures in paragraph 86 documented in *Issue Paper No. 137—Transfer of Property and Casualty Reinsurance Run-off Agreements* are effective for contracts entered on or after January 1, 2010.

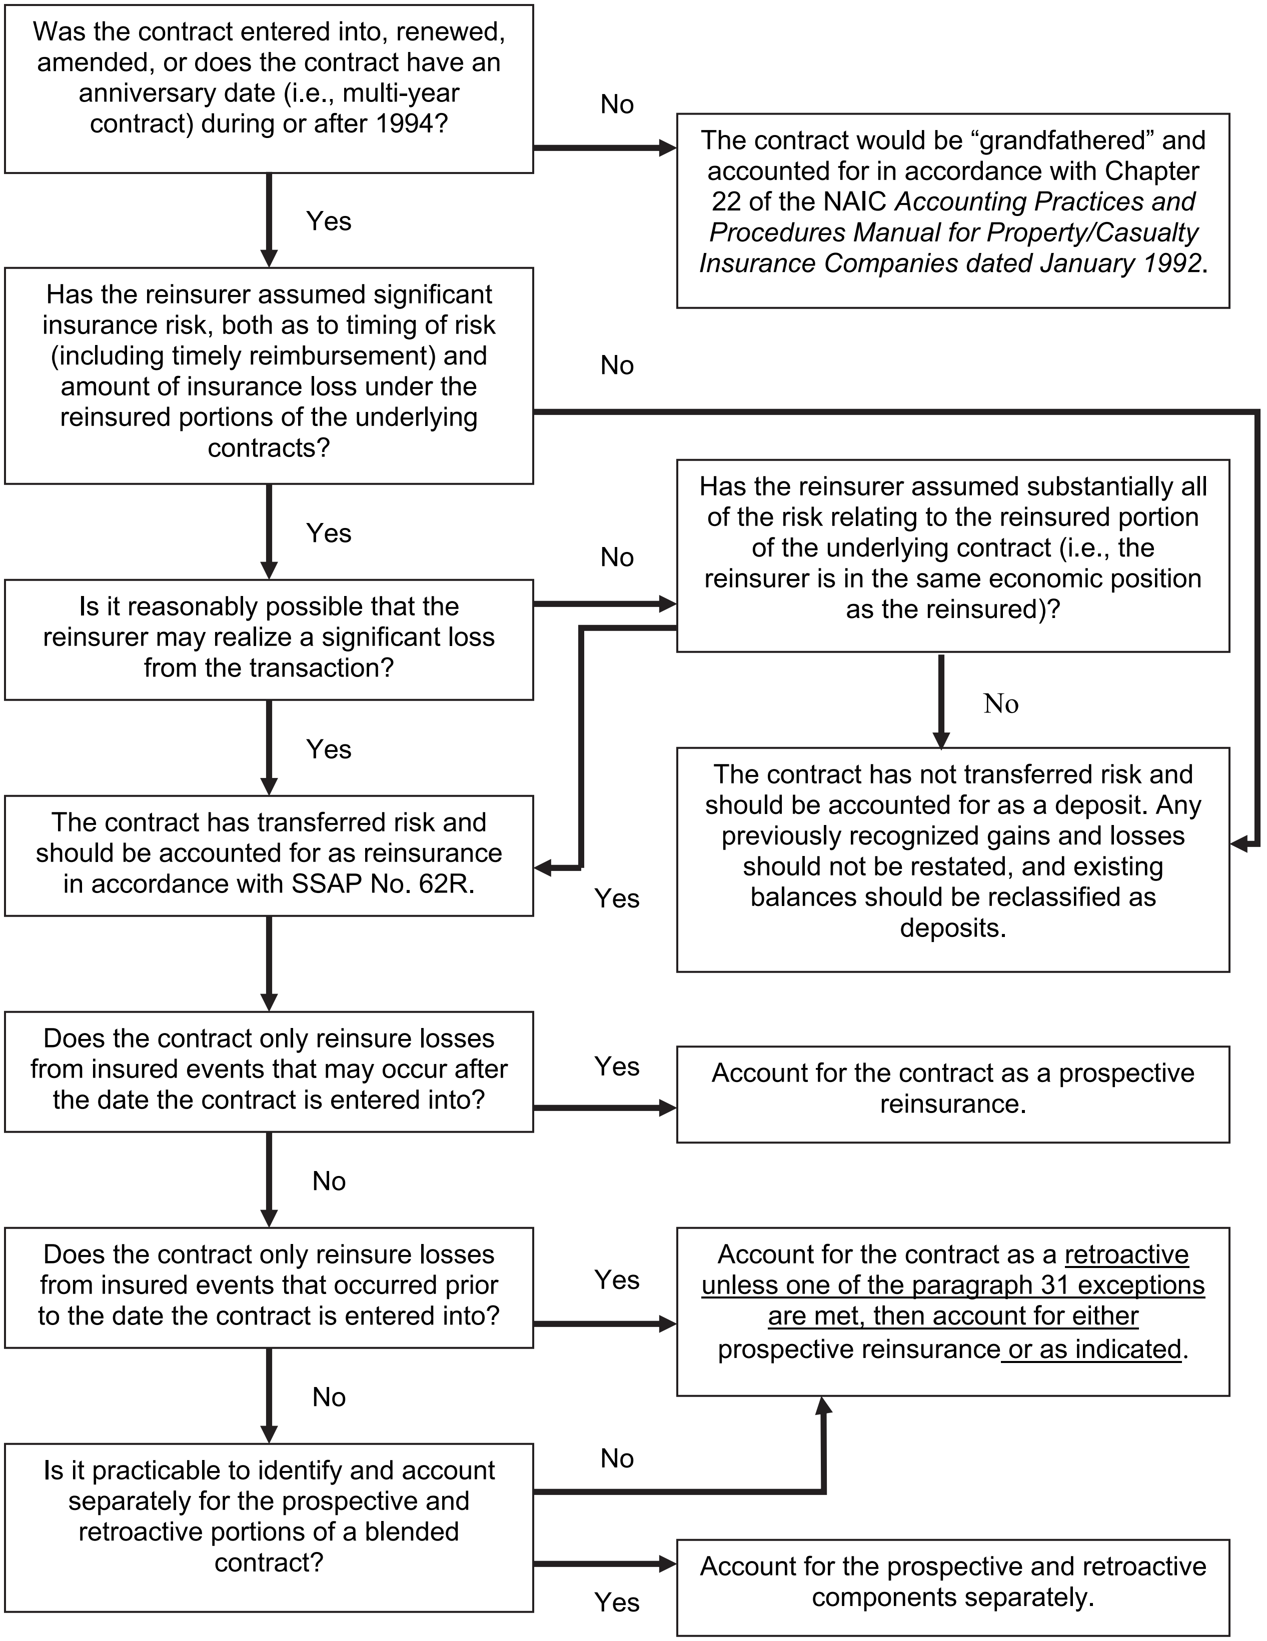
CLASSIFYING REINSURANCE CONTRACTS



Was the contract entered into, renewed, amended, or does the contract have an anniversary date (i.e., multi-year contract) during or after 1994?
No
The contract would be "grandfathered" and accounted for in accordance with Chapter 22 of the NAIC *Accounting Practices and Procedures Manual for Property/Casualty Insurance Companies dated January 1992*.
Yes
Has the reinsurer assumed significant insurance risk, both as to timing of risk (including timely reimbursement) and amount of insurance loss under the reinsured portions of the underlying contracts?
No
Yes
Has the reinsurer assumed substantially all of the risk relating to the reinsured portion of the underlying contract (i.e., the reinsurer is in the same economic position as the reinsured)?
No
Is it reasonably possible that the reinsurer may realize a significant loss from the transaction?
No
Yes
The contract has not transferred risk and should be accounted for as a deposit. Any previously recognized gains and losses should not be restated, and existing balances should be reclassified as deposits.
The contract has transferred risk and should be accounted for as reinsurance in accordance with SSAP No. 62R.
Yes
Does the contract only reinsure losses from insured events that may occur after the date the contract is entered into?
Yes
Account for the contract as a prospective reinsurance.
No
Does the contract only reinsure losses from insured events that occurred prior to the date the contract is entered into?
Yes
Account for the contract as a retroactive unless one of the paragraph 31 exceptions are met, then account for either prospective reinsurance or as indicated.
No
Is it practicable to identify and account separately for the prospective and retroactive portions of a blended contract?
No
Yes
Account for the prospective and retroactive components separately.

SSAP NO. 62R—EXHIBIT A

Implementation Questions and Answers

Applicability

1. Q: The accounting practices in SSAP No. 62R specify the accounting and reporting for reinsurance contracts. What contracts are considered reinsurance contracts for purposes of applying these accounting practices?

   A: Any transaction that indemnifies an insurer against loss or liability relating to insurance risk shall be accounted for in accordance with the accounting practices included in SSAP No. 62R. Therefore, all contracts, including contracts that may not be structured or described as reinsurance, shall be accounted for as reinsurance when those conditions are met.

2. Q: The provisions of this statement will apply to (a) reinsurance contracts entered into, renewed or amended on or after January 1, 1994, and (b) any other reinsurance contracts that are in force on January 1, 1995 and cover insurable events on the underlying insurance policies that occur on or after that date. What contracts would be exempt from the new accounting rules included in SSAP No. ~~62~~62R?

   A: The only exempt contracts are:

   1) Purely retroactive reinsurance contracts that cover only insured events occurring before January 1, 1994, provided those contracts were entered into before that date and are not subsequently amended and

   2) Contracts that expired before January 1, 1995 and are not amended after that date.

3. Q: This statement is to be applied to contracts which are amended on or after January 1, 1994. What if the change in terms is not significant, or the terms changed have no financial effect on the contract?

   A: In general, the term amendment should be viewed broadly to include all but the most trivial changes. Examples of amendments include, but are not limited to, replacing one assuming entity with another (including an affiliated entity), or modifying the contract's limit, coverage, premiums, commissions, or experience-related adjustable features. No distinction is made between financial and non-financial terms.

4. Q: Must the accounting provisions of SSAP No. ~~62~~62R be applied to an *otherwise exempt* contract if the ceding entity pays additional premiums under the contract on or after January 1, 1994?

   A: The answer depends on why the additional premiums are paid. If the additional premiums are the result of a renegotiation, adjustment, or extension of terms, the contract is subject to the accounting provisions of SSAP No. ~~62~~62R. However, additional premiums paid without renegotiation, adjustment, or extension of terms would not make an otherwise exempt contract subject to those provisions.

5. Q: Prospective and retroactive portions of a reinsurance contract are allowed to be accounted for separately, if practicable. Can the retroactive portion of an existing contract be segregated and, therefore, exempted with other retroactive contracts covering insured events occurring prior to January 1, 1994?

   A: No. The transition provisions apply to an entire contract, which is either subject to or exempt from the revised provisions of SSAP No. ~~62~~62R. A ceding entity may bifurcate a contract already subject to the new accounting rules in SSAP No. ~~62~~62R and then account for both the prospective and retroactive portions in accordance with the new accounting standard.

Risk Transfer

6. Q: Do the new risk transfer provisions apply to existing contracts?

A: Yes, the new risk transfer provisions apply to some existing contracts. SSAP No. ~~62~~62R applies in its entirety only to existing contracts which were renewed or amended on or after January 1, 1994, or which cover losses occurring or claims made after that date. Therefore, those contracts must be evaluated to determine whether they transfer risk and qualify for reinsurance accounting. For accounting periods commencing on or after January 1, 1995, balances relating to such contracts which do not transfer insurance risk shall be reclassified as deposits and shall be accounted for and reported in the manner described under the caption Reinsurance Contracts Must Include Transfer of Risk.

SSAP No. ~~62~~62R does not apply to existing contracts which were entered into before, and were not renewed or amended on or after, January 1, 1994, and which cover only losses occurring or claims made before that date, nor to contracts which expired before, and were not renewed or amended on or after, January 1, 1995. Those contracts will continue to be accounted for in the manner provided by SSAP No. ~~62~~62R before these revisions.

7. Q: How does the effective date affect the assessment of whether a significant loss to the reinsurer was reasonably possible?

A: The risk transfer assessment is made at contract inception, based on facts and circumstances known at the time. Because that point in time has passed for existing contracts, some have suggested that the risk transfer provisions be applied as of the effective date. However, that approach to the risk transfer assessment would violate the requirement to consider all cash flows from the contract. Therefore, the test must be applied from contract inception, considering the effect of any subsequent contract amendments. Careful evaluation and considered judgment will be required to determine whether a significant loss to the reinsurer was reasonably possible at inception.

8. Q: Should risk transfer be reassessed if contractual terms are subsequently amended?

A: Yes. When contractual terms are amended, risk transfer should be reassessed. For example, a contract that upon inception met the conditions for reinsurance accounting could later be amended so that it no longer meets those conditions. The contract should then be reclassified and accounted for as a deposit.

9. Q: How should the risk transfer assessment be made when a contract has been amended?

A: No particular method is prescribed for assessing risk transfer in light of a contract amendment. Whether an amended contract in substance transfers risk must be determined considering all of the facts and circumstances in light of the risk transfer requirements. Judgment also will be required to determine whether an amendment in effect creates a new contract.

10. Q: For purposes of evaluating whether a contract with a reinsurer transfers risk, what constitutes a contract?

A: A contract is not defined, but is essentially a question of substance. It may be difficult in some circumstances to determine the boundaries of a contract. For example, the profit-sharing provisions of one contract may refer to experience on other contracts and, therefore, raise the question of whether, in substance, one contract rather than several contracts exist.

The inconsistency that could result from varying interpretations of the term *contract* is limited by requiring that features of the contract or other contracts or agreements that directly or indirectly compensate the reinsurer or related reinsurers for losses be considered in evaluating whether a particular contract transfers risk. Therefore, if agreements with the reinsurer or related reinsurers, in the aggregate, do not transfer risk, the individual contracts that make up those agreements also would not be considered to transfer risk, regardless of how they are structured.

11. Q: If the assessment of risk transfer changes after the initial assessment at contract inception, how should the ceding entity account for the change?

A: The status of a contract should be determinable at inception and, absent amendment, subsequent changes should be very rare. If the risk of significant loss was not deemed reasonably possible at inception, and a significant loss subsequently occurred, the initial assessment was not necessarily wrong, because remote events do occur. Likewise, once a reasonable possibility of significant loss has been established, such loss need not occur in order to maintain the contract's status as reinsurance.

12. Q: SSAP No. ~~62~~62R requires that reasonably possible outcomes be evaluated to determine the reinsurer's exposure to significant loss. What factors should be considered in determining whether a scenario being evaluated is reasonably possible?

A: The term *reasonably possible* means that the probability is more than remote. The test is applied to a particular scenario, not to the individual assumptions used in the scenario. Therefore, a scenario is not reasonably possible unless the likelihood of the entire set of assumptions used in the scenario occurring together is reasonably possible.

13. Q: In determining the amount of the reinsurer's loss under reasonably possible outcomes, may cash flows directly related to the contract other than those between the ceding and assuming companies, such as taxes and operating expenses of the reinsurer, be considered in the calculation?

A: No. The evaluation is based on the present value of all cash flows *between the ceding and assuming enterprises* under reasonably possible outcomes and, therefore, precludes considering other expenses of the reinsurer in the calculation.

14. Q: In evaluating the significance of a reasonably possible loss, should the reasonably possible loss be compared to gross or net premiums?

A: Gross premiums should be used.

15. Q: How does a commutation clause affect the period of time over which cash flows are evaluated for reasonable possibility of significant loss to the reinsurer?

A: All cash flows are to be assessed under reasonably possible outcomes. Therefore, unless commutation is expected in the scenario being evaluated, it should not be assumed in the calculation. Further, the assumptions used in a scenario must be internally consistent and economically rational in order for that scenario's outcome to be considered reasonably possible.

16. Q: What interest rate should be used in each evaluated scenario to make the present value calculation?

A: A reasonable and appropriate rate is required, which generally would reflect the expected timing of payments to the reinsurer and the duration over which those cash flows are expected to be invested by the reinsurer.

17. Q: SSAP No. ~~62~~62R refers to payment schedules and accumulating retentions from multiple years as features that delay timely reimbursement of claims. Does the presence of those

features generally prevent a contract from meeting the conditions for reinsurance accounting?

A: Yes. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payments to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Therefore, any feature that may affect the timing of the reinsurer's reimbursement to the ceding entity should be closely scrutinized.

18. Q: What if a contract contains a feature such as a payment schedule or accumulating retention but could still result in the reasonable possibility of significant loss to the reinsurer?

A: Both of the following conditions are required for reinsurance accounting:

a. Transfer of significant risk arising from uncertainties about both (i) the ultimate amount of net cash flows from premiums, commission, claims, and claim settlement expenses paid under a contract (underwriting risk) and (ii) the timing of the receipt and payment of those cash flows (timing risk); and

b. Reasonable possibility of significant loss to the reinsurer.

Because both condition (a) and condition (b) must be met, failure to transfer significant timing and underwriting risk is not overcome by the possibility of significant loss to the reinsurer.

19. Q: Is it permissible to evaluate timely reimbursement on a present value basis?

A: No. The word timely is used in the ordinary temporal sense to refer to the length of time between payment of the underlying reinsured claims and reimbursement by the reinsurer.

While the test for reasonable possibility of significant loss to the reinsurer provides for a present value-based assessment of the economic characteristics of the reinsurance contract, the concept of timely reimbursement relates to the transfer of insurance risk (condition a above), not the reasonable possibility of significant loss (condition b above). Accordingly, timely reimbursement should be evaluated based solely on the length of time between payment of the underlying reinsured losses and reimbursement by the reinsurer.

20. Q: Are there any circumstances under which the conditions for risk transfer need not be met?

A: Yes. An extremely narrow and limited exemption is provided for contracts that reinsure either an individual risk or an underlying book of business that is inherently profitable. When substantially all of the insurance risk relating to the reinsured portions of the underlying insurance contracts has been assumed by the reinsurer, the contract meets the conditions for reinsurance accounting. To qualify under this exception, no more than trivial insurance risk on the reinsured portions of the underlying insurance contracts may be retained by the ceding entity. The reinsurer's economic position must be virtually equivalent to having written the relevant portions of the reinsured contracts directly.

21. Q: In determining whether a reinsurance contract qualifies under the exception referred to in the preceding question, how should the economic position of the reinsurer be assessed in relation to that of the ceding entity?

A: The assessment should be made by comparing the net cash flows of the reinsurer under the reinsurance contract with the net cash flows of ceding entity on the reinsured portions of the underlying insurance contracts. This may be relatively easy for reinsurance of individual risks or for unlimited-risk quota-share reinsurance, because the premiums and losses on these types of reinsurance generally are the same as the premiums and losses on the reinsured portions of the underlying insurance policies.

In other types of reinsurance, determining the reinsurer's net cash flows relative to the insurer is likely to be substantially more difficult. For example, it generally would be difficult to demonstrate that the ceding entity's premiums and losses for a particular layer of insurance are the same as the reinsurer's premiums and losses related to that layer. If the economic position of the reinsurer relative to the insurer cannot be determined, the contract would not qualify under the exception.

Accounting Provisions

22. Q: An existing contract that was accounted for as reinsurance no longer qualifies for reinsurance accounting under the new accounting rules included in SSAP No. ~~62~~62R. How should the ceding and assuming companies account for the contract in future periods?

A: Because the statement of income cannot be restated, previously recognized gains and losses are not revised. If the contract was entered into before, and not renewed or amended on or after, January 1, 1994 and covers only losses occurring or claims made before that date, or the contract expired before January 1, 1995 and was not renewed or amended on or after that date, it would continue to be accounted for in the manner provided before these revisions.

For accounting periods commencing on or after January 1, 1995, existing balances relating to contracts which do not transfer insurance risk and which were entered into on or after January 1, 1994 (covering losses occurring or claims made after that date) would be reclassified as deposits.

Premium payments to a reinsurer would be recorded as deposits. Likewise, losses recoverable from a reinsurer would not be recognized as receivables. Rather, any reimbursement for losses would be accounted for upon receipt as a refund of a deposit.

23. Q: What is the definition of past insurable events that governs whether reinsurance coverage is prospective or retroactive? For example, could a reinsurance contract that covers losses from asbestos and pollution claims on occurrence-based insurance policies effective during previous periods be considered prospective if the reinsurance coverage is triggered by a court interpretation that a loss is covered within the terms of the underlying insurance policies?

A: The distinction between prospective and retroactive reinsurance is based on whether a contract reinsures future or past insured events covered by the underlying reinsurance contracts. In the example above, the insured event is the occurrence of loss within the coverage of the underlying insurance contracts, not the finding of a court. Therefore, the fact that the asbestos exposure or pollution is covered under insurance policies effective during prior periods makes the reinsurance coverage in this example retroactive.

24. Q: Would the answer to the above question change if the reinsurance were written on a claims-made basis?

A: No. The form of the reinsurance—whether claims-made or occurrence-based—does not determine whether the reinsurance is prospective or retroactive. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance contract is a retroactive contract.

25. Q: What is the effect of adjustments to future premiums or coverage in determining whether reinsurance is prospective or retroactive?

A: Adjustments to future premiums or coverage may affect the accounting for a reinsurance contract. Whenever an adjustment results in a reinsurer providing new or additional coverage for past insurable events, that coverage is retroactive. For example, if subsequent years' premiums under a multiple accident year contract create additional coverage for previous accident years, the additional coverage is retroactive, even if the original coverage provided in the contract for those accident years was prospective. Likewise, if current losses under a multiple-year contract eliminate coverage in future periods, some or all of the premiums to be paid in those future periods should be charged to the current period.

26. Q: A reinsurance contract is entered into after the contract's effective date. Is the coverage between the contract's effective date and the date the contract was entered into prospective or retroactive?

A: The portion of the contract related to the period of time between the effective date of the contract and the date the contract was entered into is retroactive because it covers insured events that occurred prior to entering into the reinsurance contract.

27. Q: How is the date the reinsurance contract was entered into determined?

A: It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the contract is substantively prospective must be determined based on the facts and circumstances. For example, a contract may be considered to have been substantively entered into even though regulatory approval of that contract has not taken place.

The absence of agreement on significant terms, or the intention to establish or amend those terms at a later date based on experience or other factors, generally indicates that the parties to the contract have not entered into a reinsurance contact, but rather have agreed to enter into a reinsurance contract at a future date. If contractual provisions under a contract substantively entered into at a future date covered insurable events prior to that date, that coverage is retroactive.

In any event, SSAP No. ~~62~~62R provides that if a contract (except facultative contracts and contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date, it is presumed to be retroactive.

28. Q: Are contracts to reinsure calendar-year incurred losses considered blended contracts that have both prospective and retroactive elements?

A: Yes. Most reinsurance contracts covering calendar-year incurred losses combine coverage for insured events that occurred prior to entering into the reinsurance contract with coverage for future insured events and, therefore, include both prospective and retroactive elements.

In any event, SSAP No. ~~62~~62R provides that if a contract (except facultative contracts, contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date it is presumed retroactive.

29. Q: When the prospective and retroactive portions of a contract are being accounted for separately, how should premiums be allocated to each portion of the contract?

A: No specific method for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of a contract is required. However, separate accounting for the prospective and retroactive portions of a contract may take place only when an allocation is practicable.

Practicability requires a reasonable basis for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of the contract, considering all amounts paid or deemed to have been paid regardless of the timing of payment. If a reasonable basis for allocating the premiums between the prospective and retroactive coverage does not exist, the entire contract must be accounted for as a retroactive contract.

30. Q: A retroactive reinsurance contract contains a cut-through provision that provides the ceding entity's policyholders and claimants with the right to recover their claims directly from the reinsurer. May the ceding entity immediately recognize earned surplus associated with this type of contract?

A: No. SSAP No. ~~62~~62R states that earned surplus may not be recognized "until the actual retroactive reinsurance recovered exceeds the consideration paid."

31. Q: A ceding entity enters into a retroactive reinsurance agreement that gives rise to segregated surplus. If the reinsurer prepays its obligation under the contract, may the ceding entity recognize earned surplus at the time the prepayment is received?

A: Segregated surplus arising from retroactive reinsurance transactions is earned as actual liabilities that have been transferred are recovered or terminated. Therefore, earned surplus is based on when the reinsurer settles its obligations to the ceding entity, and it may be appropriate to recognize earned surplus at the time the prepayment is received.

However, all of the facts and circumstances must be considered to determine whether the ceding entity has substantively recovered the liabilities transferred to the reinsurer. For example, if the ceding entity agrees to compensate the reinsurer for the prepayment, such as by crediting the reinsurer with investment income on prepaid amounts or balances held, the ceding entity has not, in substance, recovered its transferred liabilities but rather has received a deposit from the reinsurer that should be accounted for accordingly.

32. Q: If the ceding entity does not expect to receive any recoveries because the reinsurer has agreed to reimburse claimants under the reinsured contracts directly, would the ceding entity be considered to have recovered or terminated its transferred liabilities?

A: No. In the example given, the reinsurer is substantively acting as disbursing agent for the ceding entity. Therefore, the ceding entity cannot be said to have recovered amounts due from the reinsurer before payment is made to the claimant.

33. Q: What accounting entries would a ceding entity make to report a retroactive reinsurance contract?

A: Accounting Entries for a Ceding Entity to Report a Retroactive Reinsurance Contract:

Entry 1

Retroactive Reinsurance Reserves		
Ceded or Assumed (B/S)	10,000	
Retroactive Reinsurance Gain (I/S)		2,000
Cash		8,000

To record initial portfolio transfer see items #3 and #8. The ceding entity must establish the segregated surplus per item #4.

Entry 1A

Retro. Reins. Gain	2,000	
Profit/Loss Account		2,000

To close gain from retroactive transaction.

Entry 1B

Profit/Loss Account	2,000	
Special Surplus from Retro. Reins.		2,000

To close profit from retroactive reinsurance to special surplus.

Entry 2

Cash	2,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		2,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $8,000, and special surplus from retroactive reinsurance account equals $2,000; therefore, segregated surplus account is not changed per item #10.

Entry 3

Retroactive Reinsurance Reserves Ceded or Assumed (B/S)	3,000	
Retroactive Reinsurance Gain (I/S)		3,000

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is increased to $5,000 as a result of this upward development.

Entry 3A

Retro. Reinsurance Gain	3,000	
Profit/Loss Account		3,000

To close profit from retroactive reinsurance.

Entry 3B

Profit/Loss (I/S)	3,000	
Special Surplus from Retro. Reins.		3,000

To close profit and loss account to special surplus. (Retroactive reinsurance reserves ceded or assumed account balance equals $11,000. Special Surplus from retroactive reinsurance balance equals $5,000.)

Entry 4

Cash	4,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		4,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $7,000, therefore segregated surplus account is not changed per item #10.

Entry 5

Cash	3,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		3,000

To record recovery of paid losses from reinsurer. Outstanding ceded reserves after recovery equals $4,000, therefore the following entry is needed per items #6 and #10.

Entry 5A

Special Surplus—Retro. Reins.	1,000	
Unassigned Funds		1,000

Retroactive Reinsurance reserves ceded or assumed after this entry equals $4,000.

Entry 6

Retroactive Reinsurance Loss (I/S)	1,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		1,000

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is decreased as a result of this downward development to $3,000. The following entry is needed per items #6 and #10.

Entry 6A

Profit/Loss Account	1,000	
Retro. Reins. Loss		1,000

To close loss to profit and loss account.

Entry 6B

Special Surplus from Retro. Reins.	1,000	
Profit/Loss Account		1,000

To close profit and loss account to special surplus. (Remaining balance of retroactive reinsurance reserve ceded or assumed account equals $3,000.) (Special surplus from retro. reins. account balance equals $3,000.)

Entry 7

Cash	2,500	
Retroactive Reinsurance Gain (I/S)	500	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		3,000

Entry 7A

Profit and Loss Account	500	
Retro. Reins. Gain		500

To close other income to profit and loss account.

Entry 7B

Special Surplus from Retro. Reins.	500	
Profit/Loss Account		500

To close profit and loss account to special surplus. (Remaining balance of special surplus from retro. reins. account equals $2,500.) (Remaining balance of retroactive reinsurance reserve ceded or assumed account -0-.)

Entry 7C

Special Surplus from Retro. Reins.	2,500	
Unassigned Funds		2,500

To close remaining special surplus account to unassigned surplus.

34. Q: How should the parties account for an adverse loss development reinsurance contract where, as of the statement date, the attachment level of the contract exceeds the ceding company's current case and IBNR reserves for the covered accident years (i.e. no surplus gain and no reinsurance recoverable as of the statement date), and the ceding company transferred cash to the reinsurer at the inception of the contract?

A: An adverse loss development reinsurance contract covering prior accident years meets the definition of "retroactive reinsurance" set forth in paragraph 22 of SSAP No. ~~62~~62R:

> ….reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance….

Subparagraph 29.k. of SSAP No. ~~62~~62R specifically provides that the consideration paid for a retroactive reinsurance contract is to be recorded as a decrease in ledger assets by the ceding entity and an increase in ledger assets by the assuming entity.

Question 33 illustrates the accounting entries for retroactive reinsurance contracts.

If the retroactive reinsurance contract transfers both components of insurance risk then, pursuant to paragraph 29 of SSAP No. ~~62~~62R, the ceding company would record the consideration paid as a decrease in ledger assets, recognize an expense for the reinsurance ceded through Other Income or Loss accounts as a write-in item identified as "Retroactive Reinsurance Ceded", and record the recoverable from the reinsurer as a contra liability.

No contra liability is established until and unless (and then only to the extent that) the ceding company establishes reserves which exceed the attachment point.

For the contract described, at inception no contra liability is recorded to offset current liability for the business ceded, since the ceded retroactive reinsurance premium relates to coverage in excess of the current liabilities recorded by the ceding company.

Once the ceding company's recorded liabilities exceed the attachment point of the adverse loss development reinsurance contract and triggers reinsurance recoverable from the reinsurer, a contra liability is established by the ceding company for the amount of the reinsurance recoverable. Any surplus resulting from the retroactive reinsurance is carried as a write-in item on the balance sheet designated as "Special Surplus from Retroactive Reinsurance Account." The surplus gain may not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid.

If any portion of a retroactive reinsurance contract does not transfer insurance risk, then the portion which does not transfer risk is accounted for as a deposit pursuant to paragraph 35 of SSAP No. ~~62~~62R. The deposit is reported as an admitted asset of the ceding company if the reinsurer is licensed, accredited or otherwise qualified in the ceding company's state of domicile as described in Appendix A-785, or if there are funds held by or on behalf of the ceding company as described in that appendix. Receipts and disbursements under the contract are recorded through the deposit/liability accounts. Amounts received in excess of the deposit made are recognized as a gain in the Other Income or Loss account.

Accounting entries for a ceding entity to report a retroactive reinsurance contract at the inception of which the cedent's reserves are lower than the attachment point of the reinsurance coverage:

Assume the company pays $16m to purchase adverse development coverage of $50m, above an attachment point.

Entry 1: Payment of Retrospective Reinsurance Premium

Retrospective Reinsurance Expense*	$16m	
Cash		$16m

The company pays $16m premium for the retrospective reinsurance contract.
*This is an Other Expense item, it does not flow through Schedule F or Schedule P.

Entry 2: Adverse Development Reaches the Attachment Point

Losses Incurred	$25m	
Gross Loss Reserve		$25m
Recoverable on Retro Reinsurance Contract**	$25m	
Other Income*		$9m
Contra – Retro Reinsurance Expense*		$16m
Surplus***	$9m	
Segregated Surplus***		$9m

The company incurs $25m development on reserves related to the contract.
*These are Other Income/Expense items do not flow through Schedule F or Schedule P.
**A contra-liability write-in item, not netted against loss reserves.
***Surplus is segregated in the amount of [$25m - $16m = $9m] recoverables less consideration paid.

Entry 3: Cash is Recovered on Paid Losses

Cash	$20m	
Recoverable on Retrospective Reinsurance Contract		$20m
Segregated Surplus	$4m	
Surplus		$4m

The company recovers $20m cash from reinsurer on this retro contract. Segregated Surplus decreases in the amount of [$20m - $16m = $4m] (decreases for amount recovered in excess of consideration paid).

35. Q: How should a ceding company account for payment of the premium for a retroactive reinsurance contract by the ceding company's parent company or some other person not a party to the reinsurance contract (for example, adverse loss development reinsurance contracts purchased by the parent company in the context of the purchase or sale of the ceding company)?

A: If the reinsurance premium is not paid directly by the ceding company but is instead paid on behalf of the ceding company by the ceding company's parent company or some other entity not a party to the reinsurance contract, then the ceding company should (1) record an increase in gross paid in and contributed surplus in the amount of the reinsurance premium to reflect the contribution to surplus by the parent or third party payor, and (2) record an expense in the amount of the reinsurance premium and account for the contract as provided in Questions 33 and 34.

SSAP NO. 62R—EXHIBIT B

P&C Runoff Reinsurance Transactions

The following provides illustrative journal entries for P&C Runoff Reinsurance Transactions.

Example 1: Transfer of existing block of runoff business with no residual UPR on books of Transferor

Cedent/Transferor		**DR**	**CR**
Day 1 - Cedent transfers 50,000 in reserves for 50,000			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	50,000	
Cash	Asset ↓		50,000
Losses Paid (U/W Part 2 & Sch. P)	I/S ↓	50,000	
Change in Reserves - Incurred Losses (U&I Part 2~~.~~)	I/S ↑		50,000
Unlike novation –gross reserves stay on books of transferor			
Day 360 - Negative Development on Transferred Business - 3,000~~:~~			
Reinsurance Recoverable on Unpaid Losses (Sch~~e~~. F)	Contra Liab ↑	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserve			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	53,000	
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↓		53,000
Reinsurer/Transferee			
Day 1 - Cedent transfers 50,000 in reserves for 50,000			
Cash	Asset ↑	50,000	
Reported Losses on Reins. Assumed (U&I Part 2A & Sch. P)	Liab ↑		50,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S ↓	50,000	
Losses Paid or Incurred (negative) (U&I Part 2 &Sch. P)	I/S ↑		50,000
Day 360 - Negative Development on Transferred Business - 3,000:			
Change in Reserves – Incurred Losses (U&I Part 2)	I/S↓	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	53,000	
Cash	Asset ↓		53,000

Comments:
Since the Transferor is ceding incurred losses neither party should have premium impacted. To do that would distort many financial ratios.

Example 2: Transfer of existing block of runoff business with some residual UPR of 10,000 on books of Transferor (this should be less common).

Cedent/Transferor		**DR**	**CR**
Day 1 - Cedent transfers 50k in reserves & 10k UPR for 60,000			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	50,000	
Unearned Premium Reserve (U&I Part 1& 1A)	Liab ↓	10,000	
Cash	Asset ↓		60,000
Ceded Premium Written (U&I Part 1B)	I/S ↓	10,000	
Losses Paid (U&I Part 2 & Sch. P)	I/S ↓	50,000	
Change in Reserves - Incurred Losses (U&I Part 2~~.~~)	I/S ↑		50,000
Change in UPR (U&I Part 1& 1A)	I/S ↑		10,000
Unlike novation –gross reserves stay on books of transferor			
Day 180 – Premium is Fully Earned (Assumes 80% Loss Ratio)			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	8,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		8,000
To mirror the increase in unpaid losses by the transferee			
Day 360 - Negative Development on Transferred Business -3,000:			
Reinsurance Recoverable on Unpaid Losses (Sch. F)	Contra Liab ↑	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserves (50+8+3)			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	61,000	
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↓		61,000

Reinsurer/ Transferee			
Day 1 - Cedent transfers 50k in reserves & 10k UPR for 60,000			
Cash	Asset ↑	60,000	
Reported Losses on Reins. Assumed (U&I Part 2A & Sch. P)	Liab ↑		50,000
Unearned Premium Reserve (U&I Part 1& 1A)	Liab ↑		10,000
Assumed Premium Written (U&I Part 1B)	I/S ↑		10,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S ↓	50,000	
Change in UPR (U&I Part 1& 1A)	I/S ↓	10,000	
Losses Paid or Incurred (negative) (U&I Part 2 &Sch. P)	I/S ↑		50,000
Day 180 – Premium is Fully Earned (Assumes 80% Loss Ratio)			
Unearned Premium Reserve (U&I Part 1& 1A)	Liab ↓	10,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		8,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S↓	8,000	
Change in UPR (U&I Part 1& 1A)	I/S ↑		10,000
To record the increase in unpaid losses by the transferee			
Day 360 - Negative Development on Transferred Business -3,000:			
Change In Reserves – Incurred Losses (U&I Part 2)	I/S↓	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserves (50+8+3)			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	61,000	
Cash	Asset ↓		61,000

Comments:

In this second example, the portion of the runoff business that has an UPR associated with it is essentially booked as prospective reinsurance. Other elements of the example are the same except that we assumed an 80% loss ratio on the unearned portion of the business.

This page intentionally left blank.

Statutory Issue Paper No. 138

Fair Value Measurements

STATUS
Finalized September 21, 2009

Original SSAP and Current Authoritative Guidance: SSAP No. 100

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. In September 2006, the Financial Accounting Standards Board (FASB) issued *FAS 157, Fair Value Measurements* (FAS 157) to define fair value, establish a framework for measuring fair value in generally accepted accounting principles (GAAP) and to expand disclosures about fair value measurements. Since the issuance of FAS 157, the FASB has issued four FASB staff positions (FSPs) and one EITF to provide clarification of the guidance under FAS 157.

a. *FSP FAS 157-1: Application of FASB Statement No. 157 to FASB Statement No. 13 and Other Accounting Pronouncements That Address Fair Value Measurements for Purposes of Lease Classification or Measurement under Statement 13* (FSP FAS 157-1). This FSP revised FAS 157 to exclude accounting pronouncements that address lease accounting. This FSP identifies that the term fair value will be used differently under *FAS 13, Accounting for Leases*, (FAS 13) than under FAS 157.

b. *FSP FAS 157-2: Effective Date of FASB Statement No. 157* (FSP FAS 157-2). This FSP defers the effective date of FAS 157 for nonfinancial assets and nonfinancial liabilities to fiscal years beginning after November 15, 2008.

c. *FSP FAS 157-3: Determining the Fair Value of a Financial Asset When the Market for That Asset is Not Active* (FSP FAS 157-3). This FSP initially clarified the application of FAS 157 for a market that is not active and provided an illustration in determining the fair value of a financial asset when the market for that financial asset is not active. With the issuance of FSP FAS 157-4, FSP FAS 157-3 was superseded, thus all of the amendments to FAS 157 from this FSP were deleted or amended.

d. *FSP FAS 157-4: Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transaction That Are Not Orderly* (FSP FAS 157-4). This FSP provides guidance for estimating fair value in accordance with FAS 157 when the volume and level of activity for the asset and liability have significantly decreased. This FSP also includes guidance on identifying circumstances that indicate a transaction is not orderly.

e. *EITF Issue No. 08-5, Issuer's Accounting for Liabilities Measured at Fair Value with a Third-Party Credit Enhancement* (EITF 08-5). This EITF provides guidance in determining an issuer's unit of accounting for a liability issued with an inseparable third-party credit enhancement when it is measured or disclosed at fair value on a recurring basis. As noted within this EITF, the issuer of a liability with a third-party credit enhancement that is inseparable from the liability shall not include the effect of the credit enhancement in the fair value measurement of the liability. For example, in determining the fair value of debt with a third-party guarantee, the issuer would consider its own credit standing and not that of the third-party guarantor. The issuer should disclose the existence of the third-party credit enhancement.

2. This issue paper proposes adoption, with modification, of FAS 157, FSP FAS 157-1 and FSP FAS 157-4. As components of FSP FAS 157-4 have been incorporated within INT 09-04, with the issuance of a final SSAP on fair value measurements INT 09-04 will be nullified. Guidance within FSP FAS 157-2 on the effective date for nonfinancial assets and nonfinancial liabilities is not considered applicable for statutory accounting, as the effective date of a new SSAP on fair value measurements will be after the effective date established by FSP FAS 157-2. FSP FAS 157-3 is considered rejected for statutory accounting purposes as the modifications made to FAS 157 from the issuance of that FSP have been amended or deleted with the issuance of FSP FAS 157-4. EITF 08-5 is considered rejected for statutory accounting purposes as the concept of considering non-performance risk (own credit risk) is inconsistent with the statutory accounting concept of conservatism and the assessment of financial solvency for insurers. Liabilities reported at fair value shall reflect the guidance adopted within FAS 157, as provided within this issue paper, without consideration of own-performance risk and without reflection of any third-party guarantee.

3. Current statutory accounting guidance for the definition of ‘fair value’ is primarily located within the Glossary to the Accounting Practices and Procedures Manual. There are instances throughout the Statements of Statutory Principles (SSAPs) in which guidance on the definition of fair value is located within a specific SSAP. It is intended that all statutory references to “fair value” will be defined in accordance with the provisions established within this issue paper, except where specifically excluded.

Summary Conclusion

4. This issue paper defines fair value, establishes a framework for measuring fair value in statutory accounting principles, and expands disclosures about fair value measurements. This issue paper applies under other accounting pronouncements that require or permit fair value measurements, but this issue paper does not require any new fair value amendments. However, the application of this issue paper may change current practice. This issue paper does not eliminate the practicability exceptions to fair value measurements in accounting pronouncements within the scope of this issue paper.

Scope

5. This issue paper applies under other statutory accounting pronouncements that require or permit fair value measurements, except as follows

a. This issue paper does not eliminate the practicality exceptions to fair value measurements in accounting pronouncements within the scope of this issue paper.

b. This issue paper does not apply under *SSAP No. 22—Leases* (SSAP No. 22) and other accounting pronouncements that address fair value measurements for purposes of lease classification to measurement under SSAP No. 22. This scope exception does not apply to assets acquired or liabilities assumed in a business combination that are required to be measured at fair value under *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68), regardless of whether those assets and liabilities are related to leases.

Definition of Fair Value

6. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Components of the Fair Value Definition

7. *Asset/Liability* - A fair value measurement is for a particular asset or liability. Therefore, the measurement should consider attributes specific to the asset or liability, for example, the condition and/or location of the asset or liability and restrictions, if any, on the sale or use of the asset at the measurement date. The asset or liability might be a standalone asset or liability (for example, a financial instrument or an operating asset) or a group of assets and/or liabilities (for example, an asset group, a reporting unit, or a business).

8. *Price* - A fair value measurement assumes that the asset or liability is exchanged in an orderly transaction between market participants to sell the asset or transfer the liability at the measurement date. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities; it is not a forced transaction (for example, a forced liquidation or distress sale). The transaction to sell the asset or transfer the liability is a hypothetical transaction at the measurement date, considered from the perspective of a market participant that holds the asset or owes the liability. Therefore, the objective of a fair value measurement is to determine the price that would be received to sell the asset or paid to transfer the liability at the measurement date (an exit price).

9. *Principal (or Most Advantageous) Market* - A fair value measurement assumes that the transaction to sell the asset or transfer the liability occurs in the principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability. The principal market is the market in which the reporting entity would sell the asset or transfer the liability with the greatest volume and level of activity for the asset or liability. The most advantageous market is the market in which the reporting entity would sell the asset or transfer the liability with the price that maximizes the amount that would be received for the asset or minimizes the amount that would be paid to transfer the liability, considering transaction costs in the respective market(s). In either case, the principal (or most advantageous) market (and thus, market participants) should be considered from the perspective of the reporting entity, thereby allowing for differences between and among entities with different activities. If there is a principal market for the asset or liability, the fair value measurement shall represent the price in that market (whether that price is directly observable or otherwise determined using a valuation technique), even if the price in a different market is potentially more advantageous at the measurement date.

10. The price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall not be adjusted for transaction costs. Transaction costs represent the incremental direct costs to sell the asset or transfer the liability in the principal (or most advantageous) market for the asset or liability. Transaction costs are not an attribute of the asset or liability; rather, they are specific to the transaction and will differ depending on how the reporting entity transacts. However, transaction costs do not include the costs that would be incurred to transport the asset or liability to (or from) its principal (or most advantageous) market. If location is an attribute of the asset or liability (as might be the case for a commodity), the price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall be adjusted for the costs, if any, that would be incurred to transport the asset or liability to (or from) its principal (or most advantageous) market.

11. *Market Participants* - Market participants are buyers and sellers in the principal (or most advantageous) market for the asset or liability that are:

a. Independent of the reporting entity; that is, they are not related parties;

b. Knowledgeable, having a reasonable understanding about the asset or liability and the transaction based on all available information, including information that might be obtained through due diligence efforts that are usual and customary;

c. Able to transact for the asset or liability; and

d. Willing to transact for the asset or liability; that is, they are motivated but not forced or otherwise compelled to do so.

12. The fair value of the asset or liability shall be determined based on the assumptions that market participants would use in pricing the asset or liability. In developing those assumptions, the reporting entity need not identify specific market participants. Rather, the reporting entity should identify characteristics that distinguish market participants generally, considering factors specific to (a) the asset or liability, (b) the principal (or most advantageous) market for the asset or liability, and (c) market participants with whom the reporting entity would transact in that market.

13. *Application to Assets* - A fair value measurement assumes the highest and best use of the asset by market participants, considering the use of the asset that is physically possible, legally permissible, and financially feasible at the measurement date. In broad terms, highest and best use refers to the use of an asset by market participants that would maximize the value of the asset or the group of assets within which the asset would be used. Highest and best use is determined based on the use of the asset by market participants, even if the intended use of the asset by the reporting entity is different.

14. The highest and best use of the asset establishes the valuation premise used to measure the fair value of the asset. Specifically:

a. In-use - The highest and best use of the asset is in-use if the asset would provide maximum value to market participants principally through its use in combination with other assets as a group (as installed or otherwise configured for use). For example, that might be the case for certain nonfinancial assets. If the highest and best use of the asset is in-use, the fair value of the asset shall be measured using an in-use valuation premise. When using an in-use valuation premise, the fair value of the asset is determined based on the price that would be received in a current transaction to sell the asset assuming that the asset would be used with other assets as a group and that those assets would be available to market participants. Generally, assumptions about the highest and best use of the asset should be consistent for all of the assets of the group within which it would be used.

b. In-exchange - The highest and best use of the asset is in-exchange if the asset would provide maximum value to market participants principally on a standalone basis. For example, that might be the case for a financial asset. If the highest and best use of the asset is in-exchange, the fair value of the asset shall be measured using an in-exchange valuation premise. When using an in-exchange valuation premise, the fair value of the asset is determined based on the price that would be received in a current transaction to sell the asset standalone.

15. Because the highest and best use of the asset is determined based on its use by market participants, the fair value measurement considers the assumptions that market participants would use in pricing the asset, whether using an in-use or an in-exchange valuation premise.

16. *Application to Liabilities* - Consideration of non-performance risk (own credit-risk) should not be reflected in the fair value calculation for liabilities (including derivative liabilities) at subsequent measurement. At initial recognition, it is perceived that the consideration of own-credit risk may be inherent in the contractual negotiations resulting in the liability. The consideration of non-performance risk for subsequent measurement is inconsistent with the conservatism and recognition concepts as well as the assessment of financial solvency for insurers, as a decrease in credit standing would effectively

decrease reported liabilities and thus seemingly increase the appearance of solvency. Furthermore, liabilities reported or disclosed at "fair value" shall not reflect any third-party credit guarantee of debt.

Fair Value at Initial Recognition

17. When an asset is acquired or a liability is assumed in an exchange transaction for that asset or liability, the transaction price represents the price paid to acquire the asset or received to assume the liability (an entry price). In contrast, the fair value of the asset or liability represents the price that would be received to sell the asset or paid to transfer the liability (an exit price). Conceptually, entry prices and exit prices are different. Entities do not necessarily sell assets at the prices paid to acquire them. Similarly, entities do not necessarily transfer liabilities at the prices received to assume them.

18. In many cases, the transaction price will equal the exit price and, therefore, represent the fair value of the asset or liability at initial recognition. In determining whether a transaction price represents the fair value of the asset or liability at initial recognition, the reporting entity shall consider factors specific to the transaction and the asset or liability. For example, a transaction price might not represent the fair value of an asset or liability at initial recognition if:

a. The transaction is between related parties.

b. The transaction occurs under duress or the seller is forced to accept the price in the transaction. For example, that might be the case if the seller is experiencing financial difficulty.

c. The market in which the transaction occurs is different from the market in which the reporting entity would sell the asset or transfer the liability, that is, the principal or most advantageous market. For example, those markets might be different if the reporting entity is a securities dealer that transacts in different markets, depending on whether the counterparty is a retail customer (retail market) or another securities dealer (inter-dealer market).

d. For liabilities, differences may exist as non-performance risk (own credit risk) is not reflected in the fair value (i.e., exit price) determination of all liabilities (including derivatives).

Valuation Techniques

19. Valuation techniques consistent with the market approach, income approach, and/or cost approach shall be used to measure fair value. Key aspects of those approaches are summarized below:

a. Market approach. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities (including a business). For example, valuation techniques consistent with the market approach often use market multiples derived from a set of comparables. Multiples might lie in ranges with a different multiple for each comparable. The selection of where within the range the appropriate multiple falls requires judgment, considering factors specific to the measurement (qualitative and quantitative). Valuation techniques consistent with the market approach include matrix pricing. Matrix pricing is a mathematical technique used principally to value debt securities without relying exclusively on quoted prices for the specific securities, but rather by relying on the securities' relationship to other benchmark quoted securities.

b. Income approach. The income approach uses valuation techniques to convert future amounts (for example, cash flows or earnings) to a single present amount (discounted). The measurement is based on the value indicated by current market expectations about those future amounts. Those valuation techniques include present value techniques; option-pricing models, such as the Black-Scholes-Merton formula (a closed-form model) and a binomial model (a lattice model), which incorporate present value techniques; and the multiperiod excess earnings method, which is used to measure the fair value of certain intangible assets.

c. Cost approach. The cost approach is based on the amount that currently would be required to replace the service capacity of an asset (often referred to as current replacement cost). From the perspective of a market participant (seller), the price that would be received for the asset is determined based on the cost to a market participant (buyer) to acquire or construct a substitute asset of comparable utility, adjusted for obsolescence. Obsolescence encompasses physical deterioration, functional (technological) obsolescence, and economic (external) obsolescence and is broader than depreciation for financial reporting purposes (an allocation of historical cost) or tax purposes (based on specified service lives).

20. Valuation techniques that are appropriate in the circumstances and for which sufficient data are available shall be used to measure fair value. In some cases, a single valuation technique will be appropriate (for example, when valuing an asset or liability using quoted prices in an active market for identical assets or liabilities). In other cases, multiple valuation techniques will be appropriate (for example, as might be the case when valuing a reporting unit). If multiple valuation techniques are used to measure fair value, the results (respective indications of fair value) shall be evaluated and weighted, as appropriate, considering the reasonableness of the range indicated by those results. A fair value measurement is the point within that range that is most representative of fair value in the circumstances.

21. Valuation techniques used to measure fair value shall be consistently applied. However, a change in a valuation technique or its application (for example, a change in its weighting when multiple valuation techniques are used) is appropriate if the change results in a measurement that is equally or more representative of fair value in the circumstances. That might be the case if, for example, new markets develop, new information becomes available, information previously used is no longer available, or valuation techniques improve. Revisions resulting from a change in the valuation technique or its application shall be accounted for as a change in accounting estimate pursuant to SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3). The disclosure provisions of SSAP No. 3 for a change in accounting estimate are not required for revisions resulting from a change in a valuation technique or its application.

Inputs to Valuation Techniques

22. In this issue paper, inputs refer broadly to the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk, for example, the risk inherent in a particular valuation technique used to measure fair value (such as a pricing model) and/or the risk inherent in the inputs to the valuation technique. Inputs may be observable or unobservable:

a. Observable inputs are inputs that reflect the assumptions market participants would use in pricing the asset or liability developed based on market data obtained from sources independent of the reporting entity.

b. Unobservable inputs are inputs that reflect the reporting entity's own assumptions about the assumptions market participants would use in pricing the asset or liability developed based on the best information available in the circumstances.

Valuation techniques used to measure fair value shall maximize the use of observable inputs and minimize the use of unobservable inputs.

Fair Value Hierarchy

23. To increase consistency and comparability in fair value measurements and related disclosures, the fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels. The fair value hierarchy gives the highest priority to quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest level input that is significant to the fair value measurement in its entirety. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, considering factors specific to the asset or liability.

24. The availability of inputs relevant to the asset or liability and the relative reliability of the inputs might affect the selection of appropriate valuation techniques. However, the fair value hierarchy prioritizes the inputs to valuation techniques, not the valuation techniques. For example, a fair value measurement using a present value technique might fall within Level 2 or Level 3, depending on the inputs that are significant to the measurement in its entirety and the level in the fair value hierarchy within which those inputs fall.

Level 1 Inputs

25. Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis. A quoted price in an active market provides the most reliable evidence of fair value and shall be used to measure fair value whenever available, except as discussed in paragraphs 26 and 27.

26. If the reporting entity holds a large number of similar assets or liabilities (for example, debt securities) that are required to be measured at fair value, a quoted price in an active market might be available but not readily accessible for each of those assets or liabilities individually. In that case, fair value may be measured using an alternative pricing method that does not rely exclusively on quoted prices (for example, matrix pricing) as a practical expedient. However, the use of an alternative pricing method renders the fair value measurement a lower level measurement.

27. In some situations, a quoted price in an active market might not represent fair value at the measurement date. That might be the case if, for example, significant events (principal-to-principal transactions, brokered trades, or announcements) occur after the close of a market but before the measurement date. The reporting entity should establish and consistently apply a policy for identifying those events that might affect fair value measurements. However, if the quoted price is adjusted for new information, the adjustment renders the fair value measurement a lower level measurement.

28. If the reporting entity holds a position in a single financial instrument (including a block) and the instrument is traded in an active market, the fair value of the position shall be measured within Level 1 as the product of the quoted price for the individual instrument times the quantity held. The quoted price shall not be adjusted because of the size of the position relative to trading volume (blockage factor). The use of a blockage factor is prohibited, even if a market's normal daily trading volume is not sufficient to absorb the quantity held and placing orders to sell the position in a single transaction might affect the quoted price.

Level 2 Inputs

29. Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly. If the asset or liability has a specified (contractual) term, a Level 2 input must be observable for substantially the full term of the asset or liability. Level 2 inputs include the following:

a. Quoted prices for similar assets or liabilities in active markets

b. Quoted prices for identical or similar assets or liabilities in markets that are not active, that is, markets in which there are few transactions for the asset or liability, the prices are not current, or price quotations vary substantially either over time or among market makers (for example, some brokered markets), or in which little information is released publicly (for example, a principal-to-principal market)

c. Inputs other than quoted prices that are observable for the asset or liability (for example, interest rates and yield curves observable at commonly quoted intervals, volatilities, prepayment speeds, loss severities, credit risks, and default rates)

d. Inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

30. Adjustments to Level 2 inputs will vary depending on factors specific to the asset or liability. Those factors include the condition and/or location of the asset or liability, the extent to which the inputs relate to items that are comparable to the asset or liability, and the volume and level of activity in the markets within which the inputs are observed. An adjustment that is significant to the fair value measurement in its entirety might render the measurement a Level 3 measurement, depending on the level in the fair value hierarchy within which the inputs used to determine the adjustment fall.

31. The reporting entity should evaluate the following factors to determine whether there has been a significant decrease in the volume and level of activity for the asset or liability when compared with normal market activity for the asset or liability (or similar assets or liabilities). The factors include, but are not limited to:

a. There are few recent transactions.

b. Price quotations are not based on current information.

c. Price quotations vary substantially either over time or among market makers (for example, some brokered markets).

d. Indexes that previously were highly correlated with the fair values of the asset or liability are demonstrably uncorrelated with recent indications of fair value for that asset or liability.

e. There is a significant increase in implied liquidity risk premiums, yields, or performance indicators (such as delinquency rates or loss severities) for observed transactions or quoted prices when compared with the reporting entity’s estimate of expected cash flows, considering all available market data about credit and other nonperformance risk for the asset or liability.

f. There is a wide bid-ask spread or significant increase in the bid-ask spread.

g. There is a significant decline or absence of a market for new issuances (that is, a primary market) for the asset or liability or similar assets or liabilities.

h. Little information is released publicly (for example, a principal-to-principal market).

The reporting entity shall evaluate the significance and relevance of the factors to determine whether, based on the weight of the evidence, there has been a significant decrease in the volume and level of activity for the asset or liability.

32. If the reporting entity concludes there has been a significant decrease in the volume and level of activity for the asset or liability in relation to normal market activity for the asset or liability (or similar assets or liabilities), transactions or quoted prices may not be determinative of fair value (for example, there may be increased instances of transactions that are not orderly). Further analysis of the transactions or quoted prices is needed, and a significant adjustment to the transactions or quoted prices may be necessary to estimate fair value in accordance with this issue paper. Significant adjustments also may be necessary in other circumstances (for example, when a price for a similar asset requires significant adjustment to make it more comparable to the asset being measured or when the price is stale).

33. This issue paper does not prescribe a methodology for making significant adjustments to transactions or quoted prices when estimating fair value. Paragraphs 19-21 discuss the use of valuation techniques in estimating fair value. If there has been a significant decrease in the volume and level of activity for the asset or liability, a change in valuation technique or the use of multiple valuation techniques may be appropriate (for example, the use of a market approach and a present value technique). When weighting indications of fair value resulting from the use of multiple valuation techniques, the reporting entity shall consider the reasonableness of the range of fair value estimates. The objective is to determine the point within that range that is most representative of fair value under current market conditions. A wide range of fair value estimates may be an indication that further analysis is needed.

34. Even in circumstances where there has been a significant decrease in the volume and level of activity for the asset or liability and regardless of the valuation technique(s) used, the objective of a fair value measurement remains the same. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions. Determining the price at which willing market participants would transact at the measurement date under current market conditions if there has been a significant decrease in the volume and level of activity for the asset or liability depends on the facts and circumstances and requires the use of significant judgment. However, the reporting entity's intention to hold the asset or liability is not relevant in estimating fair value. Fair value is a market-based measurement, not an entity-specific measurement.

35. Even if there has been a significant decrease in the volume and level of activity for the asset or liability, it is not appropriate to conclude that all transactions are not orderly (that is, distressed or forced). Circumstances that may indicate that a transaction is not orderly include, but are not limited to:

a. There was not adequate exposure to the market for a period before the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities under current market conditions.

b. There was a usual and customary marketing period, but the seller marketed the asset or liability to a single market participant.

c. The seller is in or near bankruptcy or receivership (that is, distressed), or the seller was required to sell to meet regulatory or legal requirements (that is, forced).

d. The transaction price is an outlier when compared with other recent transactions for the same or similar asset or liability.

The reporting entity shall evaluate the circumstances to determine whether the transaction is orderly based on the weight of the evidence.

36. The determination of whether a transaction is orderly (or not orderly) is more difficult if there has been a significant decrease in the volume and level of activity for the asset or liability. Accordingly, the reporting entity shall consider the following guidance:

a. If the weight of the evidence indicates the transaction is not orderly, the reporting entity shall place little, if any, weight (compared with other indications of fair value) on that transaction price when estimating fair value or market risk premiums.

b. If the weight of the evidence indicates the transaction is orderly, the reporting entity shall consider that transaction price when estimating fair value or market risk premiums. The amount of weight placed on that transaction price when compared with other indications of fair value will depend on the facts and circumstances such as the volume of the transaction, the comparability of the transaction to the asset or liability being measured at fair value, and the proximity of the transaction to the measurement date.

c. If the reporting entity does not have sufficient information to conclude that the transaction is orderly or that the transaction is not orderly, it shall consider that transaction price when estimating fair value or market risk premiums. However, that transaction price may not be determinative of fair value (that is, that transaction price may not be the sole or primary basis for estimating fair value or market risk premiums). The reporting entity shall place less weight on transactions on which the reporting entity does not have sufficient information to conclude whether the transaction is orderly when compared with other transactions that are known to be orderly.

In its determinations, the reporting entity need not undertake all possible efforts, but shall not ignore information that is available without undue cost and effort. The reporting entity would be expected to have sufficient information to conclude whether a transaction is orderly when it is party to the transaction.

37. Regardless of the valuation technique(s) used, the reporting entity shall include appropriate risk adjustments. Risk-averse market participants generally seek compensation for bearing the uncertainty inherent in the cash flows of an asset or liability (risk premium). A fair value measurement should include a risk premium reflecting the amount market participants would demand because of the risk (uncertainty) in the cash flows. Otherwise, the measurement would not faithfully represent fair value. In some cases, determining the appropriate risk premium might be difficult. However, the degree of difficulty alone is not a sufficient basis on which to exclude a risk adjustment. Risk premiums should be reflective of an orderly transaction (that is, not a forced or distressed sale) between market participants at the measurement date under current market conditions.

38. When estimating fair value, this issue paper does not preclude the use of quoted prices provided by third parties, such as pricing services or brokers, when the reporting entity has determined that the quoted prices provided by those parties are determined in accordance with this issue paper. However, when there has been a significant decrease in the Volume or level of activity for the asset or liability, the reporting entity should evaluate whether those quoted prices are based on current information that reflects orderly transactions or a valuation technique that reflects market participant assumptions (including assumptions about risks). In weighting a quoted price as an input to a fair value measurement, the reporting entity should place less weight (when compared with other indications of fair value that are based on transactions) on quotes that do not reflect the result of transactions. Furthermore, the nature of

the quote (for example, whether the quote is an indicative price or a binding offer) should be considered when weighting the available evidence, with more weight given to quotes based on binding offers.

Level 3 Inputs

39. Level 3 inputs are unobservable inputs for the asset or liability. Unobservable inputs shall be used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. However, the fair value measurement objective remains the same, that is, an exit price from the perspective of a market participant that holds the asset or owes the liability. Therefore, unobservable inputs shall reflect the reporting entity's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). Unobservable inputs shall be developed based on the best information available in the circumstances, which might include the reporting entity's own data. In developing unobservable inputs, the reporting entity need not undertake all possible efforts to obtain information about market participant assumptions. However, the reporting entity shall not ignore information about market participant assumptions that is reasonably available without undue cost and effort. Therefore, the reporting entity's own data used to develop unobservable inputs shall be adjusted if information is reasonably available without undue cost and effort that indicates that market participants would use different assumptions.

Inputs Based on Bid and Ask Prices

40. If an input used to measure fair value is based on bid and ask prices (for example, in a dealer market), the price within the bid-ask spread that is most representative of fair value in the circumstances shall be used to measure fair value, regardless of where in the fair value hierarchy the input falls (Level 1, 2, or 3). This issue paper does not preclude the use of mid-market pricing or other pricing conventions as a practical expedient for fair value measurements within a bid-ask spread.

Disclosures

41. For assets and liabilities that are measured at fair value on a recurring basis in periods subsequent to initial recognition (for example, common stock), the reporting entity shall disclose information that enables users of its financial statements to assess the inputs used to develop those measurements and for recurring fair value measurements using significant unobservable inputs (Level 3), the effect of the measurements on earnings (or changes in net assets) for the period. To meet that objective, the reporting entity shall disclose the following information for each interim and annual period separately for each major category of assets and liabilities (for equity and debt securities), major category shall be defined as major security type:

a. The fair value measurements at the reporting date and the source of the fair value measurement. (Source of fair value measurement is only required in annual audited reporting periods.)

b. The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

c. For fair value measurements using significant unobservable inputs (Level 3), a reconciliation of the beginning and ending balances, separately presenting changes during the period attributable to the following:

(1) Total gains or losses for the period (realized and unrealized), segregating those gains or losses included in earnings (or changes in net assets), and a description of where those gains or losses included in earnings (or changes in net assets) are reported in the statement of income (or activities)

(2) Purchases, sales, issuances, and settlements (net)

(3) Transfers in and/or out of Level 3 (for example, transfers due to changes in the observability of significant inputs)

d. The amount of the total gains or losses for the period in subparagraph (c) (1) above included in earnings (or changes in net assets) that are attributable to the change in unrealized gains or losses relating to those assets and liabilities still held at the reporting date and a description of where those unrealized gains or losses are reported in the statement of income (or activities)

e. The inputs and valuation technique(s) used to measure fair value and a discussion of changes in valuation techniques and related inputs, if any, during the period.

42. For assets and liabilities that are measured at fair value on a nonrecurring basis in periods subsequent to initial recognition (for example, impaired assets), the reporting entity shall disclose information that enables users of its financial statements to assess the inputs used to develop those measurements. To meet that objective, the reporting entity shall disclose the following information for each interim and annual period separately for each major category of assets and liabilities (for equity and debt securities major category shall be defined as major security type):

a. The fair value measurements recorded during the period and the reasons for the measurements

b. The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

c. For fair value measurements using significant unobservable inputs (Level 3), a description of the inputs and the information used to develop the inputs

d. The inputs and valuation technique(s) used to measure fair value and a discussion of changes, if any, in the valuation technique(s) and related inputs used to measure similar assets and/or liabilities in prior periods.

43. The quantitative disclosures required by this issue paper shall be presented using a tabular format. (See Exhibit A.)

44. The reporting entity is encouraged, but not required, to combine the fair value information disclosed under this issue paper with the fair value information disclosed under other accounting pronouncements (for example, disclosures about fair value of financial instruments) in the periods in which those disclosures are required, if practicable. The reporting entity also is encouraged, but not required, to disclose information about other similar measurements, if practicable.

Disclosures about Fair Value of Financial Instruments ***(Copied from SSAP No. 27 and modified to reflect adoption of FSP FAS 107-1 and APB 28-1. This modification would require disclosures for annual and quarter financial statements.)***

45. A reporting entity shall disclose in the notes to the financial statements, as of each date for which a statement of financial position is presented in the quarterly or annual financial statements, the aggregate fair value of all financial instruments, summarized by type of financial instrument, for which it is practicable to estimate fair value, except for certain financial instruments identified in paragraph 46. Fair value disclosed in the notes shall be presented together with the related admitted values in a form that makes it clear whether the fair values and admitted values represent assets or liabilities and to which line items in the Statement of Assets, Liabilities, Surplus and Other Funds they relate. Unless specified otherwise in another SSAP, the disclosures may be made net of encumbrances, if the asset or liability is so reported. A reporting entity shall also disclose the method(s) and significant assumptions used to estimate the fair value of financial instruments.

46. The disclosures about fair value prescribed in paragraph 45 are not required for the following:

a. Employers' and plans' obligations for pension benefits, other postretirement benefits including health care and life insurance benefits, postemployment benefits, employee stock option and stock purchase plans, and other forms of deferred compensation arrangements, as defined in *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12), *Stock Options and Stock Purchase Plans* (SSAP No. 13), *SSAP No. 14—Postretirement Benefits Other Than Pensions* (SSAP No. 14), and *SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8* (SSAP No. 89).)

b. Substantively extinguished debt subject to the disclosure requirements of *SSAP No. 91R—Accounting for Transfer and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 91R).

c. Insurance contracts, other than financial guarantees and deposit-type contracts

d. Lease contracts as defined in *SSAP No. 22—Leases* (SSAP No. 22).

e. Warranty obligations and rights.

f. Investments accounted for under the equity method.

g. Equity instruments issued by the entity.

47. If it is not practicable for an entity to estimate the fair value of a financial instrument or a class of financial instruments, the following shall be disclosed:

a. Information pertinent to estimating the fair value of that financial instrument or class of financial instruments, such as the carrying amount, effective interest rate, and maturity; and

b. The reasons why it is not practicable to estimate fair value.

48. In the context of this issue paper, practicable means that an estimate of fair value can be made without incurring excessive costs. It is a dynamic concept: what is practicable for one entity might not be for another; what is not practicable in one year might be in another. For example, it might not be practicable for an entity to estimate the fair value of a class of financial instruments for which a quoted market price is not available because it has not yet obtained or developed the valuation model necessary

to make the estimate, and the cost of obtaining an independent valuation appears excessive considering the materiality of the instruments to the entity. Practicability, that is, cost considerations, also may affect the required precision of the estimate; for example, while in many cases it might seem impracticable to estimate fair value on an individual instrument basis, it may be practicable for a class of financial instruments in a portfolio or on a portfolio basis. In those cases, the fair value of that class or of the portfolio should be disclosed. Finally, it might be practicable for an entity to estimate the fair value only of a subset of a class of financial instruments; the fair value of that subset should be disclosed.

Relevant Literature

49. This issue paper adopts with modification *FAS 157, Fair Value Measurements*; (FAS 157) *FSP FAS 157-1, Application of FASB Statement No. 157 to FASB Statement No. 13 and Other Accounting Pronouncements That Address Fair Value Measurements for Purposes of Lease Classification or Measurement Under Statement 13*, (FSP FAS 157-1) and *FSP FAS 157-4, Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly* (FSP FAS 157-4). Modifications from FAS 157, FSP FAS 157-1 and FSP FAS 157-4 include:

a. This issue paper does not adopt the scope exclusion within paragraph 2.a. of FAS 157 regarding share-based payment transactions. *FASB Statement No. 123, Share-Based Payment*, and its related interpretive accounting pronouncements that address share-based payment transactions are still being considered for statutory accounting. If these GAAP standards are adopted for statutory accounting, consideration will be given to incorporating an exclusion for determining fair value in accordance with the guidance under this issue paper. This issue paper is considered applicable under *SSAP No. 13—Stock Options and Stock Purchase Plans* (SSAP No. 13)

b. This issue paper does not adopt the scope exclusions within paragraph 3 of FAS 157 for accounting pronouncements that require or permit measurements that are similar to fair value but that are not intended to measure fair value, including (a) accounting pronouncements that permit measurements that are based on, or otherwise use, vendor-specific objective evidence of fair value and (b) inventory pricing. These items are excluded as they are not prevalent within statutory accounting.

c. This issue paper does not adopt guidance from FAS 157 regarding the consideration of non-performance risk (own credit risk) in determining the fair value measurement of liabilities. The consideration of own credit-risk in the measurement of fair value liabilities is inconsistent with the statutory accounting concept of conservatism and the assessment of financial solvency for insurers. The fair value determination for liabilities should follow the guidance adopted from FAS 157, with the exception of the consideration of own-performance risk.

d. This issue paper includes revisions to reference statutory standards or terms instead of GAAP standards or terms.

e. This issue paper incorporates the guidance from SSAP No. 27 regarding disclosures about fair value of financial instruments. This incorporated SSAP No. 27 guidance was adopted from *FAS 107, Disclosures about Fair Value of Financial Instruments* (FAS 107) and was revised to adopt *FSP FAS 107-1 and APB-1, Interim Disclosures about Fair Value of Financial Instruments* (FSP FAS 107-1 and APB-1). For statutory purposes, the incorporation of this guidance within one standard results in having one comprehensive standard addressing fair value measurements and disclosures.

50. Paragraphs 42-44 adopt FAS 107 as amended by *FASB Statement No. 119, Disclosure about Derivative Financial Instruments and Fair Value of Financial Instruments* (FAS 119), except that paragraph 15.c. of FAS 119 relating to disclosure of financial instruments held or issued for trading is rejected and *FASB Emerging Issues Task Force No. 85-20, Recognition of Fees for Guaranteeing a Loan*. Financial instruments named within paragraph 8 of FAS 107 that are exempt from disclosure are adopted to the extent applicable for statutory accounting and are reflected in paragraph 46. This issue paper also adopts revisions to FAS 107 reflected in *FSP FAS 107-1 and APB-1, Interim Disclosures about Fair Value of Financial Instruments* (FSP FAS 107-1 and APB-1), and thus requires disclosure in both annual and quarterly financial statements. In addition, this issue paper rejects FASB Statement No. 126, Exemptions from Certain Required Disclosures about Financial Instruments for Certain Nonpublic Entities, an amendment of FAS 107. FAS 119 is addressed in SSAP No. 31.

Effective Date and Transition

51. This issue paper shall be effective for December 31, 2010 annual financial statements, with interim and annual financial statement reporting thereafter. Early adoption is permitted for December 31, 2009 annual financial statements, with interim and annual reporting thereafter.

DISCUSSION:

55. In considering FAS 157 for statutory accounting, the Statutory Accounting Principles Working Group agreed that a consistent definition of fair value should be established to address inconsistencies that may exist on the definition and application of fair value within individual statements of statutory accounting principles. Furthermore, the Working Group agreed that the statutory definition and application of fair value should be similar to the GAAP definition of fair value to minimize situations in which "fair value" is calculated differently between GAAP and SAP. By having similar fair value definitions, it is presumed that assets reported at fair value will not vary between GAAP and SAP financial statements. As illustrated within this issue paper, for determining the fair value of liabilities, the concept of considering own credit risk has been rejected for statutory accounting. Thus, it is presumed that in some instances fair value measurements under GAAP and SAP for liabilities will differ.

Modifications to Generally Accepted Accounting Principles

56. This issue paper does not incorporate the GAAP concept of "unit of account". This GAAP concept reflects the application of the fair value measurement guidance to assets or liabilities that are based in groups or lots. Statutory accounting has not previously endorsed the concept of "unit of account" as the statutory measurement of financial instruments is calculated in accordance with single securities. Thus, this term has not been reflected within the statutory accounting fair value measurement guidance.

57. This issue paper does not adopt the scope exclusion within paragraph 2.a. of FAS 157 regarding share-based payment transactions. *FASB Statement No. 123R, Share-Based Payment*, and its related interpretive accounting pronouncements that address share-based payment transactions are still being considered for statutory accounting. If these GAAP standards are adopted for statutory accounting, consideration will be given to incorporating an exclusion for determining fair value in accordance with the guidance under this issue paper. This issue paper is considered applicable under *SSAP No. 13—Stock Options and Stock Purchase Plans* (SSAP No. 13).

58. This issue paper does not adopt the scope exclusions within paragraph 3 of FAS 157 for accounting pronouncements that require or permit measurements that are similar to fair value but that are not intended to measure fair value, including (a) accounting pronouncements that permit measurements that are based on, or otherwise use, vendor-specific objective evidence of fair value and (b) inventory pricing. These items are excluded as they are not prevalent within statutory accounting.

59. This issue paper does not adopt guidance from FAS 157 regarding the consideration of non-performance risk (own credit risk) in determining the fair value measurement of liabilities. The consideration of own credit-risk in the measurement of fair value liabilities is inconsistent with the statutory accounting concept of conservatism and the assessment of financial solvency for insurers. The fair value determination for liabilities should follow the guidance adopted from FAS 157, with the exception of the consideration of own-performance risk. This issue paper also rejects guidance within

EITF 08-05, Issuer's Accounting for Liabilities Measured at Fair Value with a Third-Party Credit Enhancement (EITF 08-05). Thus, under statutory accounting, liabilities measured at fair value shall not include the issuer's own credit risk, or reflect any third-party guarantee of debt. The consideration of non-performance risk is considered inconsistent with the recognition concept as protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. If statutory liabilities reflected the reporting entity's non-performance risk, the balance sheet would ineffectively illustrate the financial condition of the insurer.

60. This issue paper includes revisions to reference statutory standards or terms instead of GAAP standards or terms.

61. This issue paper incorporates the guidance from SSAP No. 27 regarding disclosures about fair value of financial instruments. This incorporated SSAP No. 27 guidance was adopted from *FAS 107, Disclosures about Fair Value of Financial Instruments* (FAS 107) and was revised to adopt *FSP FAS 107-1 and APB-1, Interim Disclosures about Fair Value of Financial Instruments* (FSP FAS 107-1 and APB-1). For statutory purposes, the incorporation of this guidance within one standard results in having one comprehensive standard addressing fair value measurements and disclosures.

Modifications to Statutory Accounting Principles

62. This issue paper proposes the establishment of a singular standard to define fair value, establish a framework for measuring fair value and to address disclosures about fair value measurements. In order to implement a single standard for fair value guidance, with the adoption of the final standard the following corresponding modifications will be incorporated within existing statutory accounting guidance: (Appendix A illustrates these statutory accounting modifications.)

a. *SSAP No. 2—Cash, Drafts, and Short-Term Investments* (SSAP No. 2) – Reference to SSAP No. 27 in paragraph 13.a. will be deleted, and replaced with reference to the SSAP on fair value measurements.

b. *SSAP No. 13—Stock Options and Stock Purchase Plans* (SSAP No. 13) – Paragraph 8 will be deleted with the issuance of the fair value measurements SSAP. (FAS 157 does not apply under any pronouncements that address share-based payment transactions. Thus deleting paragraph 8 may be considered inconsistent with GAAP as references to fair value in this standard would inherently follow the guidance in the new SSAP. However, the determination of fair value currently included within paragraph 8 of SSAP No. 13 does not appear to contradict with the fair value definition proposed within this issue paper.) Reference to market price in paragraphs 3.d., 6 and 14 will be revised to reflect fair value.

c. *SSAP No. 26—Bonds, Excluding Loan-Backed and Structured Securities* (SSAP No. 26) - Reference to SSAP No. 27 in paragraph 17.a. will be replaced with reference to the new SSAP on fair value measurements. Paragraph 4 will be revised to remove the phrase "which cannot exceed the fair value at the date of acquisition". Retention of this phrase would result with a difference between GAAP and SAP if FAS 157 is adopted, as proposed within this issue paper, for statutory accounting.

d. *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments* (SSAP No. 27) – Paragraphs 8-10 and 13-14 will be deleted with the issuance of the fair value measurements standard. Furthermore, all references to fair value disclosures included throughout the standard (including the title) and the reference to adopted FAS 107 GAAP guidance will be deleted. All fair value disclosure requirements, including financial instruments disclosures, and references to adopted GAAP guidance pertaining to fair value will be incorporated within the new SSAP on fair value measurements. (SSAP No. 27 will be retained for the other items addressed within this standard.) The modification proposed is a variation from GAAP as FAS 107 still includes fair value disclosure requirements for financial instruments. However, this issue paper concludes that the paragraphs currently included within SSAP No. 27 for statutory financial instrument disclosures would be more appropriately placed, and improve the ease of application, if included in the new SSAP on fair value measurements.

e. *SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled or affiliated entities)* (SSAP No. 30) – Reference to SSAP No. 27 in paragraphs 13.d. and 13.f. will be revised to reference the new SSAP on fair value measurements. Paragraph 5 will be revised to remove the sentence “Cost shall not exceed fair value.” Retention of this sentence would result with a difference between GAAP and SAP if FAS 157 is adopted, as proposed within this issue paper, for statutory accounting. In accordance with FAS 157, transaction costs would be initially included in ‘cost’ at acquisition. For subsequent reporting, unrealized gains/losses would be reflected to illustrate the difference between the acquisition cost and fair value. If the existing SSAP No. 30, paragraph 5 guidance was retained for statutory accounting, the initial recognition of the asset would have an immediate unrecognized loss (assumed to represent transaction costs if purchased at fair value). As at subsequent reporting, the GAAP and SAP valuation of the asset would both reflect fair value, and as transaction costs are typically immaterial, the existing variation from GAAP seems to generate an operational difference between GAAP and SAP that would not provide a significant impact to capital and surplus for statutory purposes.

f. *SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled or affiliated entities)* (SSAP No. 32) - Reference to SSAP No. 27 in paragraphs 29.a. and 29.f. will be revised to reference the new SSAP on fair value measurements. Paragraph 10 will be revised to remove the sentence “Cost shall not exceed fair value.” Retention of this sentence would result with a difference between GAAP and SAP if FAS 157 is adopted, as proposed within this issue paper, for statutory accounting. In accordance with FAS 157, transaction costs would be initially included in ‘cost’ at acquisition. For subsequent reporting, unrealized gains/losses would be reflected to illustrate the difference between the acquisition cost and fair value. If the existing SSAP No. 32, paragraph 10 guidance was retained for statutory accounting, the initial recognition of the asset would have an immediate unrecognized loss (assumed to represent transaction costs if purchased at fair value). As at subsequent reporting, the GAAP and SAP valuation of the asset would both reflect fair value, and as transaction costs are typically immaterial, the existing variation from GAAP seems to generate an operational difference between GAAP and SAP that would not provide a significant impact to capital and surplus for statutory purposes.

g. *SSAP No. 36—Troubled Debt Restructuring* (SSAP No. 36) – Revisions are incorporated to paragraphs 10 and 11 to clarify the determination of fair value in accordance with the new SSAP on fair value measurements.

h. *SSAP No. 37—Mortgage Loans* (SSAP No. 37) - Reference to SSAP No. 27 in paragraph 20.a. will be revised to reference the new SSAP on fair value measurements.

i. *SSAP No. 40—Real Estate Investments* (SSAP No. 40) – Guidance in paragraph 11 for the regarding the definition of fair value will be deleted, but the requirement to obtain an appraisal if market quotes are unavailable will be retained. Reference to "market value" in paragraphs 19, 20 and 24.b. will be deleted and replaced with the term "fair value".

j. *SSAP No. 43R—Loan-Backed and Structured Securities*-*Revised* (SSAP No. 43R) – Reference to SSAP No. 27 in paragraph 48 will be revised to reference the new SSAP on fair value measurements. Paragraph 7 will be revised to remove the sentence "Cost shall not exceed fair value." Retention of this sentence would result with a difference between GAAP and SAP if FAS 157 is adopted, as proposed within this issue paper, for statutory accounting. In accordance with FAS 157, transaction costs would be initially included in 'cost' at acquisition. For subsequent reporting, unrealized gains/losses would be reflected to illustrate the difference between the acquisition cost and fair value. If the existing SSAP No. 43, paragraph 6 guidance was retained for statutory accounting, the initial recognition of the asset would have an immediate unrecognized loss (assumed to represent transaction costs if purchased at fair value). As at subsequent reporting, the GAAP and SAP valuation of the asset would both reflect fair value, and as transaction costs are typically immaterial, the existing variation from GAAP seems to generate an operational difference between GAAP and SAP that would not provide a significant impact to capital and surplus for statutory purposes.

k. *SSAP No. 51—Life Contracts* (SSAP No. 51) – The term "market value" included within paragraphs 38.a.iii. and 38.a.iv. will be revised to refer to "fair value".

l. *SSAP No. 52—Deposit-Type Contracts* (SSAP No. 52) – The term "market value" included within paragraphs 17.a.iii. and 17.a.iv. will be revised to refer to "fair value".

m. *SSAP No. 56—Separate Accounts* (SSAP No. 56) – The term "market value" included within paragraphs 17, 18, 18.a., 20, 22, 26, 31.b., 32 and 41 will be revised to refer to "fair value". The use of the term "market value adjusted contracted" as illustrated in paragraphs 20 and 29.c. will be retained.

n. *SSAP No. 61—Life, Deposit-Type and Accident and Health Reinsurance* (SSAP No. 61) – The term "market value" included within paragraphs 55, 59.a.iii. and 59.a.iv. will be revised to refer to "fair value". The term "market-value adjustments" included within paragraph 59.a. will be retained.

o. *SSAP No. 73—Health Care Delivery Assets – Supplies, Pharmaceuticals and Surgical Supplies, Durable Medical Equipment, Furniture, Medical Equipment and Fixtures, and Leasehold Improvement in Health Care Facilities* (SSAP No. 73) - The reference to "market" in paragraph 5 will be revised to refer to "fair value".

p. *SSAP No. 74—Accounting for the Issuance of Insurance-Linked Securities Issued by a Property and Casualty Insurer Through a Protected Cell* (SSAP No. 74) – In the glossary to this statement, the term "fair value" will be redefined to reference the new SSAP on fair value measurements.

q. *SSAP No. 86—Accounting for Derivatives, Instruments and Hedging Activities* (SSAP No. 86) – Reference to SSAP No. 27 in paragraph 14 will be revised to reflect the new SSAP No. 27 title (as modified pursuant to the inclusion of all fair value disclosures within the new SSAP on fair value measurements). Throughout SSAP No. 86, Exhibit C, the term "marked-to-market" will be deleted.

r. *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments* (SSAP No. 90) – Reference to the definition of fair value included within the Glossary to the AP&P manual in paragraphs 16 and 41.d. will be revised to refer to the new SSAP on fair value measurements. Additionally, the term "market price" in paragraph 5.a. will be replaced with the term "fair value".

s. *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 91R) – Paragraph 7.e. will be revised to eliminate the reference to the glossary and instead reference the new SSAP on fair value measurements. Paragraphs 8 and 12 will be revised to remove the parenthetical definition of fair value "presumably, the price paid". Paragraphs 95.f.i. and 95.g.i. will be revised to remove the parenthetical instruction on determining fair value and be revised to reference the new SSAP on fair value measurements. The Glossary to SSAP No. 91R will revise the definition of "Derivative Financial Instrument" to update the title of SSAP No. 27 pursuant to the revisions adopted by the new SSAP on fair value measurements.

t. *SSAP No. 93—Accounting for Low Income Housing Tax Credit Property Investments* (SSAP No. 93) – References to "market value" in paragraphs 1.c., 1.d., 5 and 20.b. will be revised to refer to "fair value"

u. *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95) – Revisions will be incorporated to paragraph 14 to define fair value in accordance with the new SSAP on fair value measurements. (No revisions will be incorporated to paragraph 7, as the 'fair value' is based on the measurement method used for each type of asset pursuant to SSAP that provides guidance for that asset type. If the SSAP was to prescribe a fair value measurement, then the new SSAP on fair value measurements would be utilized.)

v. *SSAP No. 97—Insurance in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88* (SSAP No. 97) – Reference to "market " in 31a will be revised to refer to "fair value". Reference to "quoted market price" in 31b, will be revised to refer to "quoted price".

w. *Glossary to the Statements of the Statutory Accounting Principles* (Glossary) – The definition of fair value will be revised to refer to the new SSAP on fair value measurements.

x. *INT 99-17: EITF 97-12: Accounting for Increased Share Authorizations in an IRS Section 423 Employee Stock Purchase Plan Under APB Opinion No. 25* (INT 99-17) – Consistent with the proposed revisions to SSAP No. 13, the term "market" in paragraph 2 will be revised to reflect "fair value."

y. *INT 99-29*: *Classification of Step-Up Preferred Stock* (INT 99-29) – The reference to "market" in paragraph 4 will be revised to reflect "fair value"

z. *INT 01-14: EITF 00-16: Recognition and Measurement of Employer Payroll Taxes on Employee Stock-Based Compensation* (INT 01-14) – The reference to "market value" in paragraph 1 will be revised to reflect "fair value". (The reference to "market sectors" within that paragraph will be retained.)

aa. *INT 01-31: Assets Pledged as Collateral* (INT 01-31) – The reference to "market value" in paragraph 6 will be revised to reflect "fair value".

bb. *INT 02-05: Accounting for Zero Coupon Convertible Bonds* (INT 02-05) – The reference to "marked to market" within paragraph 3 will be revised to reflect "fair value". Also in paragraph 3, the term “market” in the last paragraph will be revised to reflect “fair value”. In paragraph 4, the statement “Mark AFS and Trading to market” will be revised to read “Mark AFS and Trading to fair value”.

cc. *INT 03-03: Admissibility of Investments Recorded Based on the Audited GAAP Equity of the Investee when a Qualified Opinion is Provided* (INT 03-03) – Reference to “market value” in paragraph 2 will be revised to reflect “fair value”.

dd. *INT 04-07: EITF 02-15: Determining Whether Certain Conversations of Convertible Debt to Equity Securities Are Within the Scope of FASB Statement No. 84* (INT 04-07) – The term “fair market value” throughout paragraph 4 will be revised to reflect “fair value”.

ee. *INT 06-07: Definition of Phrase “Other Than Temporary”* (INT 06-07) – The reference to the definition of fair value within the Glossary will be revised to reflect the new SSAP on fair value measurements.

ff. *INT 09-04, Application of the Fair Value Definition* (INT 09-04) – This interpretation will be nullified with the issuance of this standard. (As this item will be completely nullified, this item has not been included within Appendix A.)

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

63. Statutory accounting guidance for the definition of fair value is primarily included within the Glossary to Statutory Accounting Principles. In limited situations the definition of fair value is further defined within individual SSAPs, but the guidance within the Glossary is the underlying guidance for the previous definition of fair value within statutory accounting statements:

> Fair Value - The fair value of an asset (or liability) is the amount at which that asset (or liability) could be bought (or incurred) or sold (or settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If a quoted market price is available, the fair value is the product of the number of trading units times market price.
>
> If quoted market prices are not available, the estimate of fair value shall be based on the best information available. The estimate of fair value shall consider prices for similar assets and liabilities and the results of valuation techniques to the extent available in the circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis. Valuation techniques for measuring financial assets and liabilities and servicing assets and liabilities shall be consistent with the objective of measuring fair value. Those techniques shall incorporate assumptions that market participants would use in their estimates of values, future revenues, and future expenses, including assumptions about interest rates, default, prepayment, and volatility. In measuring financial liabilities and servicing liabilities at fair value by discounting estimated future cash flows, an objective is to use discount rates at which those liabilities could be settled in an arm's-length transaction.
>
> Estimates of expected future cash flows, if used to estimate fair value, shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence shall be considered in developing estimates of expected future cash flows. The weight given to the evidence shall be commensurate with the extent to which the evidence can be verified

> objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.

64. The guidance incorporated within the Glossary was previously established from GAAP guidance in paragraph 13 of *FAS 15, Accounting for Debtors* (FAS 15). (This guidance has been superseded by FAS 157):

> 13 …The fair value of the assets transferred is the amount that the debtor could reasonably expect to receive for them in a current sale between a willing buyer and a willing seller, that is, other than in a forced or liquidation sale. Fair value of assets shall be measured by their market value if an active market for them exists. If no active market exists for the assets transferred but exists for similar assets, the selling prices in that market may be helpful in estimating the fair value of the assets transferred. If no market price is available, a forecast of expected cash flows may aid in estimating the fair value of assets transferred, provided the expected cash flows are discounted at a rate commensurate with the risk involved.

65. The adoption of a new SSAP, that adopts, with modification, FAS 157 to define fair value, establish a framework for measuring fair value in generally accepted accounting principles (GAAP) and to expand disclosures about fair value measurements will result with continued fair value measurements that are essentially identical for statutory and GAAP purposes. Furthermore, developing a specific statement to address fair value will address the need to have consistent and comparable guidance throughout the SSAPs.

66. The adoption, with modification, of FAS 157 will change the statutory approach to determining fair value. With the guidance proposed under this issue paper, the transaction to sell an asset or liability, and determine fair value, is a hypothetical transaction at the measurement date considered from the perspective of a market participant that holds the asset or owes the liability. Thus, the definition focuses on the price that would be received to sell the asset or paid to transfer the liability (an exit price), not the price that would be paid to acquire the asset or received to assume the liability (an entry price).

67. By adopting, with modification, FAS 157, statutory accounting principles will incorporate the following key aspects of FAS 157:

a. Fair value is a market-based measurement, not an entity-specific measurement. Thus, fair value measurements shall be determined based on the assumptions that market participants would use in pricing the asset or liability.

b. The fair value hierarchy distinguishes between (1) market participant assumptions developed based on market data obtained from sources independent of the reporting entity (observable inputs) and (2) the reporting entity's own assumptions about market participant assumptions based on the best information available in the circumstances (unobservable inputs).

c. Market participant assumptions include assumptions about risk. A fair value measurement should include an adjustment for risk if market participants would include one in pricing the related asset or liability, even if the adjustment is difficult to determine. Therefore, a measurement that does not include an adjustment for risk would not represent a fair value measurement if market participants would include one in pricing the related asset or liability.

Generally Accepted Accounting Principles

68. The GAAP guidance for the fair value measurements is included within FAS 157, as modified by FSP FAS 157-1, FSP FAS 157-2 and FSP FAS 157-4: (Note: FSP FAS 157-3 is not reflected in the amended FAS 157, as the modifications included within FSP FAS 157-4 deleted all revisions originally incorporated by FSP FAS 157-3.)

> 1. This Statement defines fair value, establishes a framework for measuring fair value, and expands disclosures about fair value measurements. Where applicable, this Statement simplifies and codifies related guidance within generally accepted accounting principles (GAAP).
>
> Scope
> 2. This Statement applies under other accounting pronouncements 1 that require or permit fair value measurements, except as follows:
>
> a. This Statement does not apply under accounting pronouncements that address share-based payment transactions: *FASB Statement No. 123 (revised 2004), Share-Based Payment*, and its related interpretive accounting pronouncements that address share-based payment transactions.
>
> b. This Statement does not eliminate the practicability exceptions to fair value measurements in accounting pronouncements within the scope of this Statement.
>
> c. This Statement does not apply under *FASB Statement No. 13, Accounting for Leases*, and other accounting pronouncements that address fair value measurements for purposes of lease classification or measurement under Statement 13. This scope exception does not apply to assets acquired and liabilities assumed in a business combination that are required to be measured at fair value under Statement 141 or Statement 141(R), regardless of whether those assets and liabilities are related to leases.
>
> 3. This Statement does not apply under accounting pronouncements that require or permit measurements that are similar to fair value but that are not intended to measure fair value, including the following:
>
> a. Accounting pronouncements that permit measurements that are based on, or otherwise use, vendor-specific objective evidence of fair value
>
> b. ARB No. 43, Chapter 4, "Inventory Pricing."
>
> 4. Appendix D lists pronouncements of the Accounting Principles Board (APB) and the FASB existing at the date of this Statement that are within the scope of this Statement. Appendix E lists those APB and FASB pronouncements that are amended by this Statement.

> Measurement
>
> *Definition* of *Fair Value*
> 5. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The Asset or Liability

6. A fair value measurement is for a particular asset or liability. 4 Therefore, the measurement should consider attributes specific to the asset or liability, for example, the condition and/or location of the asset or liability and restrictions, if any, on the sale or use of the asset at the measurement date. The asset or liability might be a standalone asset or liability (for example, a financial instrument or an operating asset) or a group of assets and/or liabilities (for example, an asset group, a reporting unit, or a business). Whether the asset or liability is a standalone asset or liability or a group of assets and/or liabilities depends on its unit of account. The unit of account determines what is being measured by reference to the level at which the asset or liability is aggregated (or disaggregated) for purposes of applying other accounting pronouncements. The unit of account for the asset or liability should be determined in accordance with the provisions of other accounting pronouncements, except as provided in paragraph 27.

The Price

7. A fair value measurement assumes that the asset or liability is exchanged in an orderly transaction between market participants to sell the asset or transfer the liability at the measurement date. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities; it is not a forced transaction (for example, a forced liquidation or distress sale). The transaction to sell the asset or transfer the liability is a hypothetical transaction at the measurement date, considered from the perspective of a market participant that holds the asset or owes the liability. Therefore, the objective of a fair value measurement is to determine the price that would be received to sell the asset or paid to transfer the liability at the measurement date (an exit price).

The Principal (or Most Advantageous) Market

8. A fair value measurement assumes that the transaction to sell the asset or transfer the liability occurs in the principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability. The principal market is the market in which the reporting entity would sell the asset or transfer the liability with the greatest volume and level of activity for the asset or liability. The most advantageous market is the market in which the reporting entity would sell the asset or transfer the liability with the price that maximizes the amount that would be received for the asset or minimizes the amount that would be paid to transfer the liability, considering transaction costs in the respective market(s). In either case, the principal (or most advantageous) market (and thus, market participants) should be considered from the perspective of the reporting entity, thereby allowing for differences between and among entities with different activities. If there is a principal market for the asset or liability, the fair value measurement shall represent the price in that market (whether that price is directly observable or otherwise determined using a valuation technique), even if the price in a different market is potentially more advantageous at the measurement date.

9. The price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall not be adjusted for transaction costs. 5 Transaction costs represent the incremental direct costs to sell the asset or transfer the liability in the principal (or most advantageous) market for the asset or liability. 6 Transaction costs are not an attribute of the asset or liability; rather, they are specific to the transaction and will differ depending on how the reporting entity transacts. However, transaction costs do not include the costs that would be incurred to transport the asset or liability to (or from) its principal (or most advantageous) market. If location is an attribute of the asset or liability (as might be the case for a commodity), the price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall be adjusted for the costs, if any, that would be incurred to transport the asset or liability to (or from) its principal (or most advantageous) market.

Market Participants

10. Market participants are buyers and sellers in the principal (or most advantageous) market for the asset or liability that are:

a. Independent of the reporting entity; that is, they are not related parties

b. Knowledgeable, having a reasonable understanding about the asset or liability and the transaction based on all available information, including information that might be obtained through due diligence efforts that are usual and customary

c. Able to transact for the asset or liability

d. Willing to transact for the asset or liability; that is, they are motivated but not forced or otherwise compelled to do so.

11. The fair value of the asset or liability shall be determined based on the assumptions that market participants would use in pricing the asset or liability. In developing those assumptions, the reporting entity need not identify specific market participants. Rather, the reporting entity should identify characteristics that distinguish market participants generally, considering factors specific to (a) the asset or liability, (b) the principal (or most advantageous) market for the asset or liability, and (c) market participants with whom the reporting entity would transact in that market.

Application to Assets

12. A fair value measurement assumes the highest and best use of the asset by market participants, considering the use of the asset that is physically possible, legally permissible, and financially feasible at the measurement date. In broad terms, highest and best use refers to the use of an asset by market participants that would maximize the value of the asset or the group of assets within which the asset would be used. Highest and best use is determined based on the use of the asset by market participants, even if the intended use of the asset by the reporting entity is different.

13. The highest and best use of the asset establishes the valuation premise used to measure the fair value of the asset. Specifically:

a. In-use. The highest and best use of the asset is in-use if the asset would provide maximum value to market participants principally through its use in combination with other assets as a group (as installed or otherwise configured for use). For example, that might be the case for certain nonfinancial assets. If the highest and best use of the asset is in-use, the fair value of the asset shall be measured using an in-use valuation premise. When using an in-use valuation premise, the fair value of the asset is determined based on the price that would be received in a current transaction to sell the asset assuming that the asset would be used with other assets as a group and that those assets would be available to market participants. Generally, assumptions about the highest and best use of the asset should be consistent for all of the assets of the group within which it would be used.

b. In-exchange. The highest and best use of the asset is in-exchange if the asset would provide maximum value to market participants principally on a standalone basis. For example, that might be the case for a financial asset. If the highest and best use of the asset is in-exchange, the fair value of the asset shall be measured using an in-exchange valuation premise. When using an in-exchange valuation premise, the fair value of the asset is determined based on the price that would be received in a current transaction to sell the asset standalone.

14. Because the highest and best use of the asset is determined based on its use by market participants, the fair value measurement considers the assumptions that market participants would use in pricing the asset, whether using an in-use or an in-exchange valuation premise.

Application to Liabilities

15. A fair value measurement assumes that the liability is transferred to a market participant at the measurement date (the liability to the counterparty continues; it is not settled) and that the nonperformance risk relating to that liability is the same before and after its transfer. Nonperformance risk refers to the risk that the obligation will not be fulfilled and affects the value at which the liability is transferred. Therefore, the fair value of the liability shall reflect the nonperformance risk relating to that liability. Nonperformance risk includes but may not be limited to the reporting entity's own credit risk. The reporting entity shall consider the effect of its credit risk (credit standing) on the fair value of the liability in all periods in which the liability is measured at fair value. That effect may differ depending on the liability, for example, whether the liability is an obligation to deliver cash (a financial liability) or an obligation to deliver goods or services (a nonfinancial liability), and the terms of credit enhancements related to the liability, if any.

Fair Value at Initial Recognition

16. When an asset is acquired or a liability is assumed in an exchange transaction for that asset or liability, the transaction price represents the price paid to acquire the asset or received to assume the liability (an entry price). In contrast, the fair value of the asset or liability represents the price that would be received to sell the asset or paid to transfer the liability (an exit price). Conceptually, entry prices and exit prices are different. Entities do not necessarily sell assets at the prices paid to acquire them. Similarly, entities do not necessarily transfer liabilities at the prices received to assume them.

17. In many cases, the transaction price will equal the exit price and, therefore, represent the fair value of the asset or liability at initial recognition. In determining whether a transaction price represents the fair value of the asset or liability at initial recognition, the reporting entity shall consider factors specific to the transaction and the asset or liability. For example, a transaction price might not represent the fair value of an asset or liability at initial recognition if:

a. The transaction is between related parties.

b. The transaction occurs under duress or the seller is forced to accept the price in the transaction. For example, that might be the case if the seller is experiencing financial difficulty.

c. The unit of account represented by the transaction price is different from the unit of account for the asset or liability measured at fair value. For example, that might be the case if the asset or liability measured at fair value is only one of the elements in the transaction, the transaction includes unstated rights and privileges that should be separately measured, or the transaction price includes transaction costs.

d. The market in which the transaction occurs is different from the market in which the reporting entity would sell the asset or transfer the liability, that is, the principal or most advantageous market. For example, those markets might be different if the reporting entity is a securities dealer that transacts in different markets, depending on whether the counterparty is a retail customer (retail market) or another securities dealer (inter-dealer market).

Valuation Techniques

18. Valuation techniques consistent with the market approach, income approach, and/or cost approach shall be used to measure fair value. Key aspects of those approaches are summarized below:

a. Market approach. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities (including a business). For example, valuation techniques consistent with the market approach often use market multiples derived from a set of comparables. Multiples might lie in ranges with a different multiple for each comparable. The selection of where within the range the appropriate multiple falls requires judgment, considering factors specific to the measurement (qualitative and quantitative). Valuation techniques consistent with the market approach include matrix pricing. Matrix pricing is a mathematical technique used principally to value debt securities without relying exclusively on quoted prices for the specific securities, but rather by relying on the securities' relationship to other benchmark quoted securities.

b. Income approach. The income approach uses valuation techniques to convert future amounts (for example, cash flows or earnings) to a single present amount (discounted). The measurement is based on the value indicated by current market expectations about those future amounts. Those valuation techniques include present value techniques; option-pricing models, such as the Black-Scholes-Merton formula (a closed-form model) and a binomial model (a lattice model), which incorporate present value techniques; 9 and the multiperiod excess earnings method, which is used to measure the fair value of certain intangible assets.

c. Cost approach. The cost approach is based on the amount that currently would be required to replace the service capacity of an asset (often referred to as current replacement cost). From the perspective of a market participant (seller), the price that would be received for the asset is determined based on the cost to a market participant (buyer) to acquire or construct a substitute asset of comparable utility, adjusted for obsolescence. Obsolescence encompasses physical deterioration, functional (technological) obsolescence, and economic (external) obsolescence and is broader than depreciation for financial reporting purposes (an allocation of historical cost) or tax purposes (based on specified service lives).

19. Valuation techniques that are appropriate in the circumstances and for which sufficient data are available shall be used to measure fair value. In some cases, a single valuation technique will be appropriate (for example, when valuing an asset or liability using quoted prices in an active market for identical assets or liabilities). In other cases, multiple valuation techniques will be appropriate (for example, as might be the case when valuing a reporting unit). If multiple valuation techniques are used to measure fair value, the results (respective indications of fair value) shall be evaluated and weighted, as appropriate, considering the reasonableness of the range indicated by those results. A fair value measurement is the point within that range that is most representative of fair value in the circumstances.

20. Valuation techniques used to measure fair value shall be consistently applied. However, a change in a valuation technique or its application (for example, a change in its weighting when multiple valuation techniques are used) is appropriate if the change results in a measurement that is equally or more representative of fair value in the circumstances. That might be the case if, for example, new markets develop, new information becomes available, information previously used is no longer available, or valuation techniques improve. Revisions resulting from a change in the valuation technique or its application shall be accounted for as a change in accounting estimate (FASB Statement No. 154, Accounting Changes and Error Corrections, paragraph 19). The disclosure provisions of Statement 154 for a change in accounting estimate are not required for revisions resulting from a change in a valuation technique or its application.

Inputs to Valuation Techniques

21. In this Statement, inputs refer broadly to the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk, for example, the risk inherent in a particular valuation technique used to measure fair value (such as a pricing model) and/or the risk inherent in the inputs to the valuation technique. Inputs may be observable or unobservable:

a. Observable inputs are inputs that reflect the assumptions market participants would use in pricing the asset or liability developed based on market data obtained from sources independent of the reporting entity.

b. Unobservable inputs are inputs that reflect the reporting entity's own assumptions about the assumptions market participants would use in pricing the asset or liability developed based on the best information available in the circumstances.

Valuation techniques used to measure fair value shall maximize the use of relevant observable inputs (that is Level 1 and Level 2 inputs that do not require significant adjustment) and minimize the use of unobservable inputs.

Fair Value Hierarchy

22. To increase consistency and comparability in fair value measurements and related disclosures, the fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels. The fair value hierarchy gives the highest priority to quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest level input that is significant to the fair value measurement in its entirety. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, considering factors specific to the asset or liability.

23. The availability of inputs relevant to the asset or liability and the relative reliability of the inputs might affect the selection of appropriate valuation techniques. However, the fair value hierarchy prioritizes the inputs to valuation techniques, not the valuation techniques. For example, a fair value measurement using a present value technique might fall within Level 2 or Level 3, depending on the inputs that are significant to the measurement in its entirety and the level in the fair value hierarchy within which those inputs fall.

Level 1 Inputs

24. Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis. A quoted price in an active market provides the most reliable evidence of fair value and shall be used to measure fair value whenever available, except as discussed in paragraphs 25 and 26.

25. If the reporting entity holds a large number of similar assets or liabilities (for example, debt securities) that are required to be measured at fair value, a quoted price in an active market might be available but not readily accessible for each of those assets or liabilities individually. In that case, fair value may be measured using an alternative pricing method that does not rely exclusively on quoted prices (for example, matrix pricing) as a practical expedient. However, the use of an alternative pricing method renders the fair value measurement a lower level measurement.

26. In some situations, a quoted price in an active market might not represent fair value at the measurement date. That might be the case if, for example, significant events (principal-to-principal transactions, brokered trades, or announcements) occur after the close of a market but before the measurement date. The reporting entity should establish and consistently apply a policy for identifying those events that might affect fair value measurements. However, if the quoted price is adjusted for new information, the adjustment renders the fair value measurement a lower level measurement.

27. If the reporting entity holds a position in a single financial instrument (including a block) and the instrument is traded in an active market, the fair value of the position shall be measured within Level 1 as the product of the quoted price for the individual instrument times the quantity held. The quoted price shall not be adjusted because of the size of the position relative to trading volume (blockage factor). The use of a blockage factor is prohibited, even if a market's normal

daily trading volume is not sufficient to absorb the quantity held and placing orders to sell the position in a single transaction might affect the quoted price.

Level 2 Inputs

28. Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly. If the asset or liability has a specified (contractual) term, a Level 2 input must be observable for substantially the full term of the asset or liability. Level 2 inputs include the following:

a. Quoted prices for similar assets or liabilities in active markets

b. Quoted prices for identical or similar assets or liabilities in markets that are not active. (Paragraph 29A includes example factors that may indicate that a market is not active or that there has been a significant decrease in the volume and level of activity for the asset or liability when compared to normal market activity for the asset or liability (or similar assets or liabilities), depending on the degree to which the factors exist.)

c. Inputs other than quoted prices that are observable for the asset or liability (for example, interest rates and yield curves observable at commonly quoted intervals, volatilities, prepayment speeds, loss severities, credit risks, and default rates)

d. Inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

29. Adjustments to Level 2 inputs will vary depending on factors specific to the asset or liability. Those factors include the condition and/or location of the asset or liability, the extent to which the inputs relate to items that are comparable to the asset or liability, and the volume and level of activity in the markets within which the inputs are observed. An adjustment that is significant to the fair value measurement in its entirety might render the measurement a Level 3 measurement, depending on the level in the fair value hierarchy within which the inputs used to determine the adjustment fall.

29A. The reporting entity should evaluate the following factors to determine whether there has been a significant decrease in the volume and level of activity for the asset or liability when compared with normal market activity for the asset or liability (or similar assets or liabilities). The factors include, but are not limited to:

a. There are few recent transactions.

b. Price quotations are not based on current information.

c. Price quotations vary substantially either over time or among market makers (for example, some brokered markets).

d. Indexes that previously were highly correlated with the fair values of the asset or liability are demonstrably uncorrelated with recent indications of fair value for that asset or liability.

e. There is a significant increase in implied liquidity risk premiums, yields, or performance indicators (such as delinquency rates or loss severities) for observed transactions or quoted prices when compared with the reporting entity’s estimate of expected cash flows, considering all available market data about credit and other nonperformance risk for the asset or liability.

f. There is a wide bid-ask spread or significant increase in the bid-ask spread.

g. There is a significant decline or absence of a market for new issuances (that is, a primary market) for the asset or liability or similar assets or liabilities.

h. Little information is released publicly (for example, a principal-to-principal market).

The reporting entity shall evaluate the significance and relevance of the factors to determine whether, based on the weight of the evidence, there has been a significant decrease in the volume and level of activity for the asset or liability.

29B. If the reporting entity concludes there has been a significant decrease in the volume and level of activity for the asset or liability in relation to normal market activity for the asset or liability (or similar assets or liabilities), transactions or quoted prices may not be determinative of fair value (for example, there may be increased instances of transactions that are not orderly). Further analysis of the transactions or quoted prices is needed, and a significant adjustment to the transactions or quoted prices may be necessary to estimate fair value in accordance with this Statement. Significant adjustments also may be necessary in other circumstances (for example, when a price for a similar asset requires significant adjustment to make it more comparable to the asset being measured or when the price is stale).

29C. This Statement does not prescribe a methodology for making significant adjustments to transactions or quoted prices when estimating fair value. Paragraphs 18-20 discuss the use of valuation techniques in estimating fair value. If there has been a significant decrease in the volume and level of activity for the asset or liability, a change in valuation technique or the use of multiple valuation techniques may be appropriate (for example, the use of a market approach and a present value technique). When weighting indications of fair value resulting from the use of multiple valuation techniques, the reporting entity shall consider the reasonableness of the range of fair value estimates. The objective is to determine the point within that range that is most representative of fair value under current market conditions. A wide range of fair value estimates may be an indication that further analysis is needed.

29D. Even in circumstances where there has been a significant decrease in the volume and level of activity for the asset or liability and regardless of the valuation technique(s) used, the objective of a fair value measurement remains the same. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions. Determining the price at which willing market participants would transact at the measurement date under current market conditions if there has been a significant decrease in the volume and level of activity for the asset or liability depends on the facts and circumstances and requires the use of significant judgment. However, the reporting entity's intention to hold the asset or liability is not relevant in estimating fair value. Fair value is a market-based measurement, not an entity-specific measurement.

29E. Even if there has been a significant decrease in the volume and level of activity for the asset or liability, it is not appropriate to conclude that all transactions are not orderly (that is, distressed or forced). Circumstances that may indicate that a transaction is not orderly include, but are not limited to:

a. There was not adequate exposure to the market for a period before the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities under current market conditions.

b. There was a usual and customary marketing period, but the seller marketed the asset or liability to a single market participant.

c. The seller is in or near bankruptcy or receivership (that is, distressed), or the seller was required to sell to meet regulatory or legal requirements (that is, forced).

d. The transaction price is an outlier when compared with other recent transactions for the same or similar asset or liability.

The reporting entity shall evaluate the circumstances to determine whether the transaction is orderly based on the weight of the evidence.

29F. The determination of whether a transaction is orderly (or not orderly) is more difficult if there has been a significant decrease in the volume and level of activity for the asset or liability. Accordingly, the reporting entity shall consider the following guidance:

a. If the weight of the evidence indicates the transaction is not orderly, the reporting entity shall place little, if any, weight (compared with other indications of fair value) on that transaction price when estimating fair value or market risk premiums.

b. If the weight of the evidence indicates the transaction is orderly, the reporting entity shall consider that transaction price when estimating fair value or market risk premiums. The amount of weight placed on that transaction price when compared with other indications of fair value will depend on the facts and circumstances such as the volume of the transaction, the comparability of the transaction to the asset or liability being measured at fair value, and the proximity of the transaction to the measurement date.

c. If the reporting entity does not have sufficient information to conclude that the transaction is orderly or that the transaction is not orderly, it shall consider that transaction price when estimating fair value or market risk premiums. However, that transaction price may not be determinative of fair value (that is, that transaction price may not be the sole or primary basis for estimating fair value or market risk premiums). The reporting entity shall place less weight on transactions on which the reporting entity does not have sufficient information to conclude whether the transaction is orderly when compared with other transactions that are known to be orderly.

In its determinations, the reporting entity need not undertake all possible efforts, but shall not ignore information that is available without undue cost and effort. The reporting entity would be expected to have sufficient information to conclude whether a transaction is orderly when it is party to the transaction.

29G. Regardless of the valuation technique(s) used, the reporting entity shall include appropriate risk adjustments. Paragraph B5 of this Statement indicates that “risk-averse market participants generally seek compensation for bearing the uncertainty inherent in the cash flows of an asset or liability (risk premium). A fair value measurement should include a risk premium reflecting the amount market participants would demand because of the risk (uncertainty) in the cash flows. Otherwise, the measurement would not faithfully represent fair value. In some cases, determining the appropriate risk premium might be difficult. However, the degree of difficulty alone is not a sufficient basis on which to exclude a risk adjustment.” Risk premiums should be reflective of an orderly transaction (that is, not a forced or distressed sale) between market participants at the measurement date under current market conditions.

29H. When estimating fair value, this Statement does not preclude the use of quoted prices provided by third parties, such as pricing services or brokers, when the reporting entity has determined that the quoted prices provided by those parties are determined in accordance with this Statement. However, when there has been a significant decrease in the Volume or level of activity for the asset or liability, the reporting entity should evaluate whether those quoted prices are based on current information that reflects orderly transactions or a valuation technique that reflects market participant assumptions (including assumptions about risks). In weighting a quoted price as an input to a fair value measurement, the reporting entity should place less weight (when compared with other indications of fair value that are based on transactions) on quotes that do not reflect the result of transactions. Furthermore, the nature of the quote (for example, whether the quote is an indicative price or a binding offer) should be considered when weighting the available evidence, with more weight given to quotes based on binding offers.

Level 3 Inputs

30. Level 3 inputs are unobservable inputs for the asset or liability. Unobservable inputs shall be used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. However, the fair value measurement objective remains the same, that is, an exit price from the perspective of a market participant that holds the asset or owes the liability. Therefore, unobservable inputs shall reflect the reporting entity's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). Unobservable inputs shall be developed based on the best information available in the circumstances, which might include the reporting entity's own data. In developing unobservable inputs, the reporting entity need not undertake all possible efforts to obtain information about market participant assumptions. However, the reporting entity shall not ignore information about market participant assumptions that is reasonably available without undue cost and effort. Therefore, the reporting entity's own data used to develop unobservable inputs shall be adjusted if information is reasonably available without undue cost and effort that indicates that market participants would use different assumptions.

Inputs Based on Bid and Ask Prices

31. If an input used to measure fair value is based on bid and ask prices (for example, in a dealer market), the price within the bid-ask spread that is most representative of fair value in the circumstances shall be used to measure fair value, regardless of where in the fair value hierarchy the input falls (Level 1, 2, or 3). This Statement does not preclude the use of mid-market pricing or other pricing conventions as a practical expedient for fair value measurements within a bid-ask spread.

Disclosures

32. For assets and liabilities that are measured at fair value on a recurring basis in periods subsequent to initial recognition (for example, trading securities), the reporting entity shall disclose information that enables users of its financial statements to assess the inputs used to develop those measurements and for recurring fair value measurements using significant unobservable inputs (Level 3), the effect of the measurements on earnings (or changes in net assets) for the period. To meet that objective, the reporting entity shall disclose the following information for each interim and annual period separately for each major category of assets and liabilities (for equity and debt securities *major category* shall be defined as *major category type* as described in paragraph 19 of *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities* even if the equity securities or debt securities are not within the scope of Statement 115):

a. The fair value measurements at the reporting date

b. The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

c. For fair value measurements using significant unobservable inputs (Level 3), a reconciliation of the beginning and ending balances, separately presenting changes during the period attributable to the following:

(1) Total gains or losses for the period (realized and unrealized), segregating those gains or losses included in earnings (or

changes in net assets), and a description of where those gains or losses included in earnings (or changes in net assets) are reported in the statement of income (or activities)

(2) Purchases, sales, issuances, and settlements (net)

(3) Transfers in and/or out of Level 3 (for example, transfers due to changes in the observability of significant inputs)

d. The amount of the total gains or losses for the period in subparagraph (c)(1) above included in earnings (or changes in net assets) that are attributable to the change in unrealized gains or losses relating to those assets and liabilities still held at the reporting date and a description of where those unrealized gains or losses are reported in the statement of income (or activities)

e. The inputs and valuation technique(s) used to measure fair value and a discussion of changes in valuation techniques and related inputs, if any, during the period.

33. For assets and liabilities that are measured at fair value on a nonrecurring basis in periods subsequent to initial recognition (for example, impaired assets), the reporting entity shall disclose information that enables users of its financial statements to assess the inputs used to develop those measurements. To meet that objective, the reporting entity shall disclose the following information for each interim and annual period separately for each major category of assets and liabilities (for equity and debt securities *major category* shall be defined as *major category type* as described in paragraph 19 of Statement 115 even if the equity securities or debt securities are not within the scope of Statement 115):

a. The fair value measurements recorded during the period and the reasons for the measurements

b. The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

c. For fair value measurements using significant unobservable inputs (Level 3), a description of the inputs and the information used to develop the inputs

d. The inputs and valuation technique(s) used to measure fair value and a discussion of changes, if any, in the valuation technique(s) and related inputs used to measure similar assets and/or liabilities in prior periods.

34. The quantitative disclosures required by this Statement shall be presented using a tabular format.

35. The reporting entity is encouraged, but not required, to combine the fair value information disclosed under this Statement with the fair value information disclosed under other accounting pronouncements (for example, *FASB Statement No. 107, Disclosures about Fair Value of Financial Instruments*) in the periods in which those disclosures are required, if practicable. The reporting entity also is encouraged, but not required, to disclose information about other similar measurements (for example, inventories measured at market value under ARB 43, Chapter 4), if practicable.

Effective Date and Transition

36. Except as provided in subparagraphs 36.a. and 36.b. below, this Statement shall be effective for financial statements issued for fiscal years beginning after November 15, 2007, and

interim periods within those fiscal years. Earlier application is encouraged, provided that the reporting entity has not yet issued financial statements for that fiscal year, including any financial statements for an interim period within that fiscal year.

a. Delayed application of this Statement is permitted for nonfinancial assets and nonfinancial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually), until fiscal years beginning after November 15, 2008, and interim periods within those fiscal years.

b. An entity that has issued interim or annual financial statements reflecting the application of the measurement and disclosure provisions of this Statement prior to the issuance of *FSP FAS 157-2, Effective Date of FASB Statement No. 157*, must continue to apply all of the provisions of this Statement.

37. This Statement shall be applied prospectively as of the beginning of the fiscal year in which this Statement is initially applied, except as follows. This Statement shall be applied retrospectively to the following financial instruments as of the beginning of the fiscal year in which this Statement is initially applied (a limited form of retrospective application):

a. A position in a financial instrument that trades in an active market held by a broker-dealer or investment company within the scope of the AICPA Audit and Accounting Guides for those industries that was measured at fair value using a blockage factor prior to initial application of this Statement

b. A financial instrument that was measured at fair value at initial recognition under Statement 133 using the transaction price in accordance with the guidance in footnote 3 of EITF Issue No. 02-3, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities," prior to initial application of this Statement

c. A hybrid financial instrument that was measured at fair value at initial recognition under Statement 133 using the transaction price in accordance with the guidance in Statement 133 (added by FASB Statement No. 155, Accounting for Certain Hybrid Financial Instruments) prior to initial application of this Statement.

38. At the date this Statement is initially applied to the financial instruments in paragraph 37.a.-37.c., a difference between the carrying amounts and the fair values of those instruments shall be recognized as a cumulative-effect adjustment to the opening balance of retained earnings (or other appropriate components of equity or net assets in the statement of financial position) for that fiscal year, presented separately. The disclosure requirements of Statement 154 for a change in accounting principle do not apply.

39. The disclosure requirements of this Statement (paragraphs 32-35), including those disclosures that are required in annual periods only, shall be applied in the first interim period of the fiscal year in which this Statement is initially applied. The disclosure requirements of this Statement need not be applied for financial statements for periods presented prior to initial application of this Statement.

Appendix A - Illustrations of Modifications to Statutory Accounting Guidance:

SSAP No. 2—Cash, Drafts and Short-Term Investments:

13. The following disclosures shall be made for short-term investments in the financial statements:

a. Fair values in accordance with *SSAP No. 100—Fair Value Measurements* ~~*SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments* (SSAP No. 27~~);

SSAP No. 13—Stock Options and Stock Purchase Plans:

3. A reporting entity recognizes no compensation expense for services received in return for stock issued through noncompensatory plans. The following four characteristics are essential in a noncompensatory plan:

d. The discount from the ~~market price~~fair value of the stock is no greater than would be reasonable in an offer of stock to stockholders or others.

6. The measurement date for determining compensation cost in stock option, purchase, and award plans is the first date on which are known both (a) the number of shares that an individual employee is entitled to receive and (b) the option or purchase price, if any. That date for many or most plans is the date an option or purchase right is granted or stock is awarded to an individual employee. However, the measurement date may be later than the date of grant or award in plans with variable terms that depend on events after the date of grant or award. Thus, a reporting entity recognizes compensation cost for stock issued through compensatory plans unless the employee pays an amount that is at least equal to the quoted ~~market price~~fair value of the stock at the measurement date.

~~8. Quoted market prices in active markets are the best evidence of fair value and shall be used as fair value, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information available in the circumstances.~~

14. Compensation expense related to stock appreciation rights and other variable stock option or award plans shall be measured at the end of each period as the amount by which the quoted ~~market price~~fair value ~~or value~~ of the shares of the enterprise's stock covered by a grant exceeds the option price or value specified under the plan and should be accrued as a charge to expense over the periods the employee performs the related services. Changes in the quoted ~~market price or value~~fair value should be reflected as an adjustment of accrued compensation and compensation expense in the periods in which the changes occur until the date the number of shares and purchase price, if any, are both known.

SSAP No. 26—Bonds, Excluding Loan-Backed and Structured Securities:

4. A bond acquisition or disposal shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement bonds which shall be recorded on the funding date. At acquisition, bonds shall be reported at their cost, including brokerage and other related fees~~, which cannot exceed the fair value at the date of acquisition~~.

17. The financial statements shall include the following disclosures:

a. Fair value~~s~~ disclosures in accordance with *SSAP No, 100—Fair Value Measurements* ~~*SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments* (SSAP No. 27);~~

SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments

~~8. A reporting entity shall disclose in the notes to the financial statements the aggregate fair value of all financial instruments, summarized by type of financial instrument, for which it is practicable to estimate fair value, except for certain financial instruments named in paragraph 8 of *FASB Statement No. 107, Disclosures about Fair Value of Financial Instruments* (FAS 107). Fair value disclosed in the notes shall be presented together with the related admitted values in a form that makes it clear whether the fair values and admitted values represent assets or liabilities and to which line items in the Statement of Assets, Liabilities, Surplus and Other Funds they relate. Separate disclosure of this information in the notes is required even if such information is presented elsewhere in the financial statements. Unless specified otherwise in another SSAP, the disclosures may be made net of encumbrances, if the asset or liability is so reported. A reporting entity shall also disclose the method(s) and significant assumptions used to estimate the fair value of financial instruments.~~

~~9. For purposes of this statement, the fair value of a financial instrument is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. If quoted market prices are not available, management's best estimate of fair value shall be based on the quoted market price of a financial instrument with similar characteristics, or on industry recognized valuation techniques (for example, the present value of estimated future cash flows using a discount rate commensurate with the risks involved).~~

~~10. If it is not practicable for an entity to estimate the fair value of a financial instrument or a class of financial instruments, the following shall be disclosed:~~

~~a. Information pertinent to estimating the fair value of that financial instrument or class of financial instruments, such as the carrying amount, effective interest rate, and maturity; and~~
~~b. The reasons why it is not practicable to estimate fair value.~~

~~13. This statement adopts FAS 107 as amended by *FASB Statement No. 119, Disclosure about Derivative Financial Instruments and Fair Value of Financial Instruments* (FAS 119), except that paragraph 15(c) of FAS 119 relating to disclosure of financial instruments held or issued for trading is rejected and *FASB Emerging Issues Task Force No. 85-20, Recognition of Fees for Guaranteeing a Loan*. In addition, this statement rejects *FASB Statement No. 126, Exemptions from Certain Required Disclosures about Financial Instruments for Certain Nonpublic Entities, an amendment of FAS 107*. FAS 119 is addressed in SSAP No. 31.~~

~~14. Paragraph 8 of FAS 107 discusses financial instruments which are exempt from fair value disclosure. Included as exempt instruments are insurance contracts, except for financial guaranty contracts.~~

SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)

5. At acquisition, common stocks shall be reported at their cost, including brokerage and other related fees. ~~Cost shall not exceed fair value.~~ Common stock acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.

13. The following disclosures regarding common stocks shall be made in the financial statements:

d. The disclosures in (i) and (ii) above should be segregated by those common stocks that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with~~ SSAP No. 27~~*SSAP No. 100—Fair Value Measurements*.

f. When it is not practicable to estimate fair value~~ in accordance with SSAP No. 27~~, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities)

10. At acquisition, preferred stock shall be reported at cost, including brokerage and other related fees. ~~Cost shall not exceed fair value.~~ PIK stock received as dividends shall be recorded at fair value. Acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.

29. The following disclosures regarding preferred stocks shall be made in the financial statements:

a. *Fair values* in accordance with *SSAP No. 100—Fair Value Measurements* ~~*SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments* (SSAP No. 27)~~;

f. The disclosures in (i) and (ii) above should be segregated by those preferred stocks that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with ~~SSAP No. 27~~*SSAP No. 100—Fair Value Measurements*.

h. When it is not practicable to estimate fair value~~ in accordance with SSAP No. 27~~, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

i. The aggregate carrying value of the investments not evaluated for impairment, and

ii. The circumstances that may have a significant adverse effect on the fair value.

SSAP No. 36—Troubled Debt Restructuring

10. A creditor shall account for a troubled debt restructuring according to the type of the restructuring (receipt of assets in full satisfaction, modification of terms, combination of types). Generally, troubled debt restructuring involving the transfer of assets shall be accounted for at the fair value of the assets received. Troubled debt restructuring involving modification of terms shall be accounted for at fair value (as determined by acceptable appraisal methodologies~~ or, if applicable, the value determined in accordance with the *NAIC Purposes and Procedures of the Securities Valuation Office* (SVO Purposes and Procedures)~~) in accordance ~~.~~ with *SSAP No. 100—Fair Value Measurements*. If the restructured loan is collateral dependent, fair value shall be the fair value of the collateral. If the restructured loan is not collateral dependent, fair value shall be determined in accordance ~~with the SVO Purposes and Procedures, if applicable, or at the present value of expected future cash flows~~with SSAP No. 100 (reference new SSAP). If the

determined fair value of the loan is less than the recorded investment in the loan (including accrued interest, net deferred loan fees or costs, and unamortized premium or discount), a new cost basis shall be established at the fair value with the difference being recorded as a realized loss in the statement of operations. After the troubled debt restructuring, a creditor shall account for the assets consistent with the statutory guidance for such assets.

11. A creditor shall account for assets, including foreclosed property and equity interests in corporations, joint ventures, or partnerships, received in satisfaction of the loan at their fair value (as determined by acceptable appraisal methodologies~~ or, if applicable, the value determined in accordance with the SVO Purposes and Procedures~~) at the time of restructuring or at the book value of the loan if lower. If the fair value is less than the book value, the required writedown shall be recognized as a realized capital loss. The creditor shall reclassify the asset from loans to the appropriate asset account, such as real estate or other invested assets, at the time that the creditor obtains clear title to the asset except for mortgage loans which shall be reclassified at the beginning of the redemption period unless it is probable that the mortgage loan will be redeemed. After the troubled debt restructuring, a creditor shall account for the assets received in satisfaction of the loan consistent with the statutory guidance for similar assets.

SSAP No. 37—Mortgage Loans

20. The following disclosures shall be made in the financial statements:

a. Fair values in accordance with *SSAP No. 100—Fair Value Measurement*~~ *SSAP No. 27—Disclosure of Information About Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments* (SSAP No. 27)~~;

SSAP No. 40—Real Estate Investments

11. The current fair value of real estate shall be determined on a property by property basis (i.e., increases in the fair value of one property shall not be used to offset declines in fair value of another)~~ and shall be defined as the price that a property would bring in a competitive and open market under all conditions requisite to a fair sale (i.e., the buyer and seller acting prudently and knowledgeably with the price not affected by any undue stimulus)~~. If market quotes are unavailable, estimates of fair value shall be determined by an appraisal (internal or third party), which is based upon an evaluation of all relevant data about the market, considering the following:

a. A physical inspection of the premises;

b. The present value of future cash flows generated by the property (Discounted Cash Flows), or capitalization of stabilized net operating income (Direct Capitalization);

c. Current sales prices of similar properties with adjustments for differences in the properties (Sales Comparison Approach);

d. Costs to sell the property if the reporting entity does not have the intent or ability to hold the real estate as an investment; and

e. Replacement costs of the improvements, less depreciation, plus the value of the land (Cost Approach).

19. A participating mortgage loan is established when the lender is entitled to participate in appreciation of the ~~market value~~fair value of mortgaged real estate, the results of operations of the mortgaged real estate project, or in both. Mortgage loan participation features should be recorded at fair value at inception of the loan. The borrower should recognize a participation liability for the determined fair valued amount, with a corresponding debit to a debt discount

account. The debt discount should be amortized by the interest method, using the effective interest rate. After inception, adjustment of the participation liability should occur at each reporting date to current fair value. The corresponding debit or credit should be to the related debt discount account. The revised debt discount should be amortized prospectively, using the effective interest rate method.

20. The real estate investment with the participating mortgage loan should be reported in accordance with paragraph 4, with no adjustment for appreciation of ~~market value~~fair value.

24. An entity that holds real estate investments with participating mortgage loan features should disclose:

a. Aggregate amount of participating mortgage obligations at the balance-sheet date, with separate disclosure of the aggregate participation liabilities and related debt discounts.

b. Terms of participations by the lender in either the appreciation in the ~~market value~~fair value of the mortgaged real estate project or the results of operations of the mortgaged real estate project, or both.

SSAP No. 43R—Loan-Backed and Structured Securities - Revised

6. At acquisition, loan-backed securities, except for loan-backed or structured securities that are beneficial interests that are not of high credit quality or can contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded amount[1] (see paragraphs 20-24), shall be reported at cost, including brokerage and related fees.~~ Cost shall not exceed fair value~~. Acquisitions and dispositions shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement loan-backed securities which shall be recorded on the funding date. For securities where all information is not known as of the trade date (e.g., actual payment factors and specific pools), a reporting entity shall make its best estimate based on known facts.

48. In addition to the disclosures required for invested assets in general, the following disclosures regarding loan-backed securities shall be made in the financial statements:.

a. Fair values in accordance with *SSAP No. 100—Fair Value Measurements*.~~ *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments* (SSAP No. 27~~);

i. The disclosures in (i) and (ii) above should be segregated by those securities that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with ~~SSAP No. 27~~SSAP No. 100.~~.~~

k. When it is not practicable to estimate fair value~~ in accordance with SSAP No. 27~~, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

i. The aggregate carrying value of the investments not evaluated for impairment, and

[1] As referenced in the Relevant Literature section, this Statement adopts EITF 99-20, including the scope requirements of that guidance.

ii. The circumstances that may have a significant adverse effect on the fair value.

SSAP No. 51—Life Contracts

38. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:

a. Subject to discretionary withdrawal:

iii. At ~~market~~ fair value, where the withdrawal of funds is payable at current ~~market value~~fair value of the assets supporting the liabilities, the assets are stated at current ~~market~~ fair value, and the liabilities are stated at the current ~~market~~ fair value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at ~~market~~ fair value;

SSAP No. 52—Deposit-Type Contracts

17. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:

a. Subject to discretionary withdrawal:

iii. At ~~market~~ fair value, where the withdrawal of funds is payable at current ~~market~~ fair value of the assets supporting the liabilities, the assets are stated at current ~~market~~ fair value, and the liabilities are stated at the current ~~market~~ fair value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at ~~market~~ fair value;

SSAP No. 56—Separate Accounts

17. Assets supporting fund accumulation contracts (GICs), which do not participate in underlying portfolio experience, with a fixed interest rate guarantee, purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer, will be recorded as if the assets were held in the general account. Assets supporting all other contractual benefits shall be recorded at ~~market~~ fair value on the date of valuation, or if there is no readily available market, then in accordance with the valuation procedures in the applicable contract.

18. An AVR is generally required for separate accounts when the insurer, rather than the policyholder/contractholder, suffers the loss in the event of asset default or ~~market~~ fair value loss. An AVR is required unless:

a. The asset default or ~~market~~ fair value risk is borne directly by the policyholders; or

20. Assets supporting typical modified guaranteed contracts, market value adjusted contracts, and contracts with book value guarantees similar to contracts generally found in the general account do require an AVR because the insurer is responsible for credit related asset or ~~market~~ fair value loss.

22. An IMR is required for separate accounts with assets recorded at book value, but is not required for separate accounts with assets recorded at ~~market~~ fair value. For example, separate accounts for traditional variable annuities or variable life insurance do not require an IMR because assets and liabilities are valued at ~~market~~ fair value.

26. Where separate account contracts have guaranteed elements, the basis for determining the value of the liability shall be consistent with the basis used for asset values (i.e., valuation interest rates as defined in Appendix A-820 shall be used when assets are recorded as if held in the general account and current interest rates based on market rates shall be used when assets are recorded at ~~market~~fair value). Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

31. For each risk-based capital grouping (as detailed in paragraph 32), the following shall be disclosed:

a. Premiums, considerations or deposits received during the year;

b. Reserves by the valuation basis of the investments supporting the reserves at the financial statement date. List reserves for separate accounts whose assets are carried at ~~market~~ fair value separately from those whose assets are carried at amortized cost/book value;

c. Reserves by withdrawal characteristics, i.e., whether or not the separate account is subject to discretionary withdrawal or market value adjustment, or to withdrawal at book value with or without surrender charge;

32. For the disclosures required in paragraph 31, separate accounts shall be addressed in the following groupings (which are the same as those used for risk-based capital):

b. Nonguaranteed Separate Accounts-Variable separate accounts, where the benefit is determined by the performance and/or ~~market~~ fair value of the investments held in the separate account. Include variable accounts with incidental risks, nominal expense, and minimum death benefit guarantees.

41. This statement is effective for years beginning January 1, 2001. Contracts with assets held in a Separate Account that were issued in accordance with applicable state laws and regulations and issued prior to that effective date, for which assets and liabilities have been recorded using a consistent basis since issue, i.e., both assets and liabilities are recorded either as if in the general account ("book value") or as at ~~market~~ fair value (current interest rates based on market rates shall be used for liabilities when assets are recorded at ~~market~~ fair value), shall continue to be recorded using such basis until such time as the applicable contract terms or provisions are substantially changed, such as by a contract amendment modifying interest rate or withdrawal provisions. State laws and regulations shall be understood to include anything considered authoritative by the domiciliary state under the individual state's statutory authority and due process procedures. Changes that do not require change in the basis of recording would include: address changes, continued deposits, and other non-substantive changes such as these. For example, additional funds received after January 1, 2001 under contracts issued prior to January 1, 2001 may continue to be recorded using the basis in effect prior to January 1, 2001 until such time as a triggering change is made. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

SSAP No. 61—Life, Deposit-Type and Accident and Health Reinsurance

55. The assuming entity is to value the assets acquired at the date of acquisition at their ~~market~~ fair values, and the reserves are to be established according to statutory requirements based on the benefits in the individual policies reinsured. If the liabilities exceed the assets, the difference represents goodwill that must be amortized into operations using the interest method

over the life of the policies, but for a period not to exceed 10 years. Goodwill resulting from assumption reinsurance transactions shall be included in the total goodwill of an entity when calculating the amount of goodwill that is a nonadmitted asset pursuant to SSAP No. 68—Business Combinations and Goodwill. If the assets exceed the liabilities, the assuming entity shall record a deferred liability and amortize the amount into operations using the interest method over the expected life of the business but not to exceed ten years.

59. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:

a. Subject to discretionary withdrawal:

iii. At ~~market~~ fair value, where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current ~~market~~ fair value, and the liabilities are stated at the current ~~market~~ fair value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at ~~market~~ fair value;

SSAP No. 73—Health Care Delivery Assets – Supplies, Pharmaceuticals and Surgical Supplies, Durable Medical Equipment, Furniture, Medical Equipment and Fixtures, and Leasehold Improvements in Health Care Facilities

5. The reporting entity shall maintain a control system that provides for identification of quantities on hand and appropriate valuation (lower of cost or ~~market~~fair value) of supplies, pharmaceuticals and surgical supplies, and durable medical equipment.

SSAP No. 74—Accounting for Issuance of Insurance-Linked Securities Issued by a Property and Casualty Insurer through a Protected Cell

Glossary:

Fair value - See ~~GLOSSARY to the Statements of Statutory Accounting *Principles*~~*SSAP No. 100—Fair Value Measurements*.

SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions (Note – 106 hits of 'fair' and 15 hits of 'market')

14. Derivative instruments represent rights or obligations that meet the definitions of assets (SSAP No. 4—Assets and Nonadmitted Assets) or liabilities (SSAP No. 5) and shall be reported in financial statements. In addition, derivative instruments also meet the definition of financial instruments as defined in SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and~~,~~ Financial Instruments with Concentrations of Credit Risk. ~~and Disclosures about Fair Value of Financial Instruments~~ (SSAP No. 27). Should the cost basis of the derivative instrument be undefined (i.e., no premium is paid), the instrument shall be disclosed in accordance with paragraphs 8-10 of SSAP No. 27. Derivative instruments are admitted assets to the extent they conform to the requirements of this statement.

Exhibit C – SSAP No. 86

1.b.i.(e) - If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or the designated portion of the derivative shall be valued at its current fair value ~~(marked to market)~~ with gains and losses recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.

1.b.ii(a) - Options, warrants, caps, or floors purchased or written shall be valued at current fair value ~~(marked to market)~~ with changes in fair value recognized currently consistent with the hedged item; this will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus).

1.b.iii. - Open derivatives hedging items recorded at fair value, where gains and losses on the hedged item are recognized currently in earnings: options, warrants, caps, or floors purchased or written shall be valued at current fair value ~~(marked to market)~~ with changes in fair value recognized currently in earnings together with the gains and losses on the hedged item.

1.b.iii.(b) - If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, recognition of changes in fair value through earnings ceases. The derivative or the designated portion of the derivative shall continue to be valued at its current fair value ~~(marked to market)~~, but thereafter gains or losses shall be recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.

2.b.i.(5) - If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or a designated portion of the derivative shall be valued at its current fair value ~~(marked to market)~~ with gains and losses recorded in unrealized gains or unrealized losses to the extent that it ceased to be an effective hedge. Upon redesignation into an effective hedging relationship, the derivative's mark to fair value through unrealized gain or loss shall be reversed.

2.b.ii(a) - Swaps, collars, or forwards shall be valued at current fair value ~~(marked to market)~~ with changes in fair value recognized currently consistent with the hedged item; this will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus);

2.b.iv. - Open derivatives hedging items recorded at fair value, where gains and losses on the hedged item are recognized currently in earnings: swaps, collars and forwards shall be valued at current fair value ~~(marked to market)~~ with changes in fair value recognized currently in earnings together with the gains and losses on the hedged item.

(a) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, recognition of changes in fair value through earnings ceases. The derivative shall continue to be valued at its current fair value ~~(marked to market)~~, but thereafter gains or losses shall be recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.

iv. Open futures hedging items recorded at fair value, where gains and losses on the hedging item are recognized currently in earnings shall be valued at current fair value ~~(marked to market)~~ with changes in fair value recognized currently in earnings.

SSAP No. 90—Accounting for the Impairment of Disposal of Real Estate Investments

5. A long-lived asset shall be tested for recoverability whenever events or changes in circumstances indicate that its carrying amount may not be recoverable. The following are examples of such events or changes in circumstances:

a. A significant decrease in the ~~market price~~fair value of a long-lived asset

Fair Value

16. A discussion of fair value is contained in ~~the Glossary to the Statements of Statutory Accounting *Principles*~~*SSAP No. 100—Fair Value Measurement*. This statement requires properties occupied by the company, that are determined to be subject to recoverability testing as discussed in paragraphs 6 and 7, to follow the guidance in SSAP No. 40, paragraph 11.

41. The modifications to FAS 144 were made in order to maintain consistency with current statutory accounting principles and the Statement of Concepts:

d. Paragraphs 22-24 which discuss fair value, are rejected. The definition of fair value is in *SSAP No. 100—Fair Value Measurements*. ~~the glossary to the Statement of Statutory Accounting Principles. In addition, this statement allows a modification to use for determining the fair value of properties occupied by company.~~

SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

7. Upon completion of a transfer of assets that satisfies the conditions to be accounted for as a sale (see paragraph 5), the transferor (seller) shall:

e. Initially measure such additional assets obtained and liabilities incurred in the sale at fair value (see ~~Glossary to the Statements of Statutory Accounting *Principles*~~*SSAP No. 100—Fair Value Measurements*), or if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraph 49); and

8. The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value ~~(in aggregate, presumptively the price paid)~~.

12. If distinct servicing rights exist in accordance with the above guidelines, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations in other income. Servicing assets and servicing liabilities shall be measured initially at fair value~~, presumptively the price paid~~. Servicing assets or liabilities shall be measured subsequently at fair value at each reporting date with fluctuations in fair value reported as unrealized gains and losses. Declines in fair value which are determined to be other than temporary shall be recorded as realized losses. shall be amortized into income in proportion to, and over the period of estimated servicing income

95. A reporting entity shall disclose the following:

f. If the entity has securitized financial assets during any period presented and accounts for that transfer as a sale, for each major asset type (for example, mortgage loans):

i. Its accounting policies for initially measuring the interests that continue to be held by a transferor, if any, ~~including the methodology (whether quoted market price, prices based on sales of similar assets and liabilities, or prices based on valuation techniques)~~ used in determining their fair value. (Fair value shall be determined in accordance with *SSAP No. 100—Fair Value Measurements*) ~~(Glossary to the Statements of Statutory Accounting Principles)~~; and

g. If the entity has interests that continue to be held by a transferor in securitized financial assets at the date of the latest statement of financial position presented, for each major asset type (for example, mortgage loans):

i. Its accounting policies for subsequently measuring those interests that continue to be held by a transferor, including the methodology (~~whether quoted market price, prices based on sales of similar assets and liabilities, or prices based on valuation techniques)~~ used in determining their fair value. (Fair value shall be determined in accordance with *SSAP No. 100—Fair Value Measurements* ~~(Glossary to the Statements of Statutory Accounting Principles~~);

Glossary: Derivative financial instrument - A derivative instrument (as defined in *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions*) that is a financial instrument (refer to *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk~~,~~ and Financial Instruments with Concentrations of Credit ~~Risk and Disclosures about Fair Value of Financial Instruments~~*, paragraph 2).

SSAP No. 93—Accounting for Low Income Housing Tax Credit Property Investments

1. This statement establishes statutory accounting principles for investments in federal and certain state sponsored Low Income Housing Tax Credit (LIHTC) properties. State sponsored LIHTC programs that have the following characteristics are within the scope of and shall be accounted for in accordance with this statement:

c. Resale value of the investment is not based upon the ~~market value~~fair value of the underlying real estate.

d. ~~Market value~~Fair value of the investment is directly tied to the remaining stream of tax credits and deductible losses

5. Resale valuation of these investments is based on the present value of the future stream of tax credits and deductible losses, and not the ~~market value~~fair value of the underlying real estate.

20. The significance of an investment to the reporting entity's financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investment in a LIHTC. If in the aggregate the LIHTC investments exceed 10% of the total admitted assets of the reporting entity the following disclosures shall be made:

b. For partnerships, and limited liability companies for which a quoted ~~market price~~fair value is available, the aggregate value of each partnership, or limited liability company investment based on the quoted ~~market price~~fair value; and

SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions

14. Fair value of a nonmonetary asset transferred to or from a reporting entity in a nonmonetary transaction should be determined in accordance with *SSAP No. 100—Fair Value Measurements*. ~~by referring to estimated realizable values in cash transactions of the same or similar assets, quoted market prices, independent appraisals, estimated fair values of assets or services received in exchange, and other available evidence.~~ If one of the parties in a nonmonetary transaction could have elected to receive cash instead of the nonmonetary asset, the amount of cash that could have been received may be evidence of the fair value of the nonmonetary assets exchanged.

SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88

31. The significance of an investment to the reporting entity's financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investee. The following disclosures shall be made for all investments in SCA entities that exceed 10% of the total admitted assets of the reporting entity:

a. Financial statements of a reporting entity shall disclose (i) the name of each SCA entity and percentage of ownership of common stock, (ii) the accounting policies of the reporting entity with respect to investments in SCA entities, and (iii) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., goodwill, other nonadmitted assets, ~~market~~ fair value or discounted ~~market~~ fair value adjustments) and the accounting treatment of the difference;

b. For those SCA entities for which a quoted market price is available, the aggregate value of each SCA investment based on the quoted ~~market price~~ price and the difference, if any, between the amount at which the investment is carried and the quoted ~~market price~~ price shall be disclosed;

Glossary to the Statements of Statutory Accounting Principles

Fair Value ~~-~~— Fair value is defined in *SSAP No. 100—Fair Value Measurements*.~~The fair value of an asset (or liability) is the amount at which that asset (or liability) could be bought (or incurred) or sold (or settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If a quoted market price is available, the fair value is the product of the number of trading units times market price.~~

~~If quoted market prices are not available, the estimate of fair value shall be based on the best information available. The estimate of fair value shall consider prices for similar assets and liabilities and the results of valuation techniques to the extent available in the circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis. Valuation techniques for measuring financial assets and liabilities and servicing assets and liabilities shall be consistent with the objective of measuring fair value. Those techniques shall incorporate assumptions that market participants would use in their estimates of values, future revenues, and future expenses, including assumptions about interest rates, default, prepayment, and volatility. In measuring financial liabilities and servicing liabilities at fair value by discounting estimated future cash flows, an objective is to use discount rates at which those liabilities could be settled in an arm's-length transaction.~~

~~Estimates of expected future cash flows, if used to estimate fair value, shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence shall be considered in developing estimates of expected future cash flows. The weight given to the evidence shall be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.~~

~~Market Value - Market value is equivalent to fair value.~~

INT 99-17: EITF 97-12: Accounting for Increased Share Authorizations in an IRS Section 423 Employee Stock Purchase Plan under APB Opinion No. 25.

2. The working group reached a consensus that EITF 97-12 should be adopted to require that additional shares granted in a stock purchase plan be classified as compensatory or noncompensatory at the grant date of the additional shares. If the discount at that date does not meet the ~~market~~ fair value discount criterion in paragraph 3.d. of SSAP No. 13, then the new grant would be treated as a compensatory award under SSAP No. 13, which would result in compensation cost.

INT 99-29: Classification of Step-up Preferred Stock

4. A strict reading of the perpetual preferred stock definition further complicates the issue in that step-ups do not have redemption features: thus, they meet the definition of perpetual preferred stock. The valuation of step-up preferred stock would not be consistent with the economic substance of the security if it were valued at ~~market~~fair value.

INT 01-14: EITF 00-16: Recognition and Measurement of Employer Payroll Taxes on Employee Stock-Based Compensation

1. *Topic No. D-83, Accounting for Payroll Taxes Associated with Stock Option Exercises* requires that payroll taxes incurred in connection with stock-based compensation be recognized as an expense, but it does not address the timing of that expense recognition. Costs incurred by companies for employer payroll taxes on employee stock-based compensation have become more significant for U.S. companies as a result of the increased use of options as a form of employee compensation and the rapid growth in the ~~market~~ fair value of underlying stocks in certain market sectors. Consequently, the predominant current practice of recognizing those costs when the event that triggers payment to the taxing authority occurs (for an option, that event is employee exercise), has been called into question.

INT 01-31: Assets Pledged as Collateral

6. The working group reached a consensus that if the collateral had not been pledged in the examples described above, it is assumed the underlying asset would be recorded as an admitted asset under SSAP No. 4 (e.g. they are readily marketable assets available to meet both current and future policyholder obligations). In addition, it is assumed that the asset would not be considered impaired under SSAP No. 5 due to a default,~~-~~ ~~market~~fair value decline, or other loss contingency.

INT 02-05: Accounting for Zero Coupon Convertible Bonds

3. A convertible bond really consists of a bond and an embedded derivative in the form of a warrant. Under GAAP, the holder accounts for the two components separately. The bond and warrants are fair valued at date of purchase. The bond is typically classified as available for sell (AFS) or held to maturity (HTM) and the scientific method of amortization is used on any premium or discount. This amortization of the premium or discount produces a market yield when combined with the coupon rate. In addition, the available for sale is ~~marked to market~~recorded at fair value with the unrealized gains and losses recorded as a component of equity in other comprehensive income. The warrant is fair valued at each reporting date and classified as trading with ~~the~~ adjustments to ~~market~~ fair value recorded through the income statement, as it is considered a derivative (no hedge).

4. For GAAP, assuming a purchase price was $900,000 at 1/1/x1 and the fair value of the warrants was $150,000 at 1/1/x1, the following entries would be recorded during the year:

At 1/1/X1:		
Purchase Price		$900,000
Bond Fair Value		$750,000
Yield	8.87%	
Warrant Fair Value	$150,000	
At 12/31/X1:		
Bond Fair Value		$780,000
Warrant Fair Value	$200,000	

Entries 1/1/X1:

Bonds-AFS	$750,000	
Warrants-Trading	$150,000	
Cash		($900,000)

Entries 12/31/X1:

Cash (coupon rate)	$50,000	
Bonds-AFS (amortization)	$16,554	
Investment income		($66,554)

Record discount accretion and cash from coupon rate

Bonds-AFS	13,446	
Warrants-Trading	50,000	
Unrealized gains-OCI		(13,446)
Realized gains		(50,000)

Mark AFS and Trading to ~~market~~fair value

INT 03-03: Admissibility of Investments Recorded Based on the Audited GAAP Equity of the Investee When a Qualified Opinion is Provided

2. Certain situations may exist in which a qualified opinion is provided due to a GAAP departure, while information is available to determine the appropriate balances under a GAAP basis of accounting. For example, a qualified opinion would be given if a cost sharing agreement requires the cost basis of accounting to be used to value investments in a limited partnership in which the reporting entity owned more than a 5% interest, as GAAP requires such investments to be recorded based upon the GAAP equity method. Since the notes to the financial statements disclose the ~~market~~ fair value of investments held by the limited partnership, information is readily available to allocate the unrealized appreciation on investments to determine what the appropriate GAAP equity balance would be. A qualified opinion could also result if the unrealized appreciation on investments is not allocated in accordance with a partnership agreement. Another example occurs when a qualified opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles.

INT 04-07: EITF 02-15: Determining Whether Certain Conversions of Convertible Debt to Equity Securities Are Within the Scope of FASB Statement No. 84

3. The following is excerpted from EITF 02-15:

> 3. Statement 84 was issued to amend Opinion 26, to exclude from its scope convertible debt that is converted to equity securities of the debtor pursuant to conversion privileges different from those included in the terms of the debt at issuance, and the change in conversion privileges is effective for a limited period of time, involves additional consideration, and is made to induce conversion. That Statement applies only to conversions that both (a) occur pursuant to changed conversion privileges that are exercisable only for a limited period of time and (b) include the issuance of all of the equity securities issuable pursuant to conversion privileges included in the terms of the debt at issuance for each debt instrument that is converted. When convertible debt is converted to equity securities of the debtor pursuant to an inducement offer (described above), the debtor shall recognize an expense equal to the excess of the fair value of all securities and other consideration transferred in the transaction over the fair value of securities issuable pursuant to the original conversion terms.
>
> 4. A question has arisen as to whether Statement 84 applies to conversions of convertible debt when the "offer" for consideration in excess of the original conversion terms was made by the debt holder rather than the debtor. In certain circumstances, for

example, a bondholder may be a third party that purchased the bonds in the open market (often at a significant discount from face value) and approached the debtor to increase the conversion terms of the notes. In many of those circumstances, the offer to induce conversion is not extended to all debt holders; rather, the conversion involves only the specific debt holder that approached the debtor. The following example is provided:

Company A issued publicly traded convertible bonds (the Bonds) during a prior period. Currently, the Bonds are trading at a price that is significantly less than the carrying value (possibly due to a decline in Company A's stock price or credit rating or both). The original conversion price of the Bonds is $50 (20 shares of common stock per bond), and Company A's common stock is currently trading at $25 per share. On an individual basis, bondholders approach Company A with an offer for Company A to purchase the Bonds by providing consideration in excess of the conversion terms. Assume that on the date of the exchange, each Bond has the following values:

Company A's carrying value of the Bonds	$1,000
Current fair ~~market~~ value of the Bonds	$ 750

A bondholder approaches Company A with the following two independent offers that are exercisable by Company A for a limited period of time:

1. Company A may purchase the Bonds in exchange for the Bonds' original conversion of 20 shares of Company A common stock ($500 fair ~~market~~ value) and $300 cash.

2. Company A may purchase the Bonds in exchange for 32 shares of Company A common stock ($800 fair ~~market~~ value).

INT 06-07: Definition of Phrase "Other Than Temporary"

2. The decision for determining when an investment is considered impaired is dictated by the applicable SSAP and the respective impairment indicators included in each of the SSAPs. If an impairment indicator is present, the determination of an impairment shall be assessed at the individual security or investment level as reported in the annual statement and supporting schedules. For those SSAPs that require the reporting entity to use the fair value to determine if an impairment has occurred, the determination of that value shall be consistent with how the term fair value is defined within ~~the Glossary of the Accounting Practices and Procedures Manual~~*SSAP No. 100—Fair Value Measurements*. Once a reporting entity has determined that an impairment indicator is present, the reporting entity shall continue to evaluate whether the investment is impaired each subsequent reporting period until either (a) the investment experiences a recovery of the fair value up to (or beyond) its carrying value or (b) the investor recognizes an other-than-temporary impairment loss.

Statutory Issue Paper No. 140

Substantive Revisions to SSAP No. 43—Loan-Backed and Structured Securities

STATUS
Adopted December 5, 2009

Original SSAP and Current Authoritative Guidance: SSAP No. 43R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The purpose of this issue paper is to retain for historical purposes the statutory guidance superseded with the issuance of *SSAP No. 43R—Loan-Backed and Structured Securities – Revised* (SSAP No. 43R):

   a. *SSAP No. 43—Loan-Backed and Structured Securities* (SSAP No. 43);

   b. *SSAP No. 98—Treatment of Cash Flows When Quantifying Changes in Valuation and Impairments, an Amendment of SSAP No. 43—Loan-Backed and Structured Securities* (SSAP No. 98);

   c. Paragraph 13 of *SSAP No. 99—Accounting for Certain Securities to an Other-Than-Temporary Impairment* (SSAP No. 99)

2. This Issue Paper also details SSAP No. 43R as initially adopted in September 2009. The substantive revisions adopted within SSAP No. 43R include accounting guidance for securities acquired in a transfer, beneficial interests, recognition of impairment and disclosures.

3. SSAP No. 43R supersedes SSAP No. 98 (impairment to fair value) and revises valuation and impairment requirements based on the cash flows expected to be collected for the securities, rather than fair value. Since the impairment requirements are based upon expected cash flows, most impairment charges recognized will be based upon cash flows that the reporting entity does NOT expect to collect (credit related). Reporting entities would only impair to fair value if there is intent to sell the security, or the reporting entity cannot assert that they have the intent and ability to retain the investment for a period of time sufficient to recover the amortized cost basis. No. 43R provides differences in impairment recognition for situations when: 1) there is an intent to sell; 2) the entity does not have the intent and ability to hold the security; and 3) there is a non-interest related decline, when there is no intent to sell and when the entity has the intent and ability to hold the security.

4. For historical record, the guidance within SSAP No. 43, SSAP No. 98, and paragraph 13 of SSAP No. 99, which has been superseded by SSAP No. 43R, has been included as the 'Relevant Statutory Accounting' guidance within paragraphs 7, 8 and 9.

5. The adopted guidance within SSAP No. 43R has been included below:

> 1. This statement establishes statutory accounting principles for investments in loan-backed securities and structured securities. In accordance with *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 91R), retained

beneficial interests from the sale of loan-backed securities and structured securities are accounted for in accordance with this statement. In this statement loan-backed securities and structured securities are collectively referred to as loan-backed securities.

SUMMARY CONCLUSION

2. Loan-backed securities are defined as pass-through certificates, collateralized mortgage obligations (CMOs), and other securitized loans not included in structured securities, as defined below, for which the payment of interest and/or principal is directly proportional to the interest and/or principal received by the issuer from the mortgage pool or other underlying securities.

3. Structured securities are defined as loan-backed securities which have been divided into two or more classes for which the payment of interest and/or principal of any class of securities has been allocated in a manner which is not proportional to interest and/or principal received by the issuer from the mortgage pool or other underlying securities.

4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring parent organization. Mortgage loans or other securities securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer's obligation has been fully satisfied. The investor can look only to the issuer's assets (primarily the trusteed assets or third parties such as insurers or guarantors) for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying mortgage loans or other securities. Some sponsors do guarantee the performance of the underlying loans.

5. Loan-backed securities meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.

6. The scope of this statement encompasses all types of loan-backed and structured securities, including, but not limited to, the following:

a. Loan-backed and structured securities acquired at origination,

b. Loan-backed and structured securities acquired subsequent to origination for which it is probable, at acquisition, that the reporting entity will be **able** to collect all contractually required payments receivable, and are accounted for at acquisition under SSAP No. 91R,

c. Loan-backed and structured securities for which it is probable, either known at acquisition or identified during the holding period[1], that the reporting entity will be **unable** to collect all contractually required payments receivable, and

d. Beneficial interests that continue to be held by a reporting entity (transferor) in securitization transactions that are accounted for as sales under SSAP No. 91R and purchased beneficial interests in securitized financial assets[2].

7. At acquisition, loan-backed securities, except for loan-backed or structured securities that are beneficial interests that are not of high credit quality or can contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its

[1] Securities classified within the type of paragraph 6.a. or 6.b. may be required to change classification to type 6.c. when it becomes probable that the reporting entity will be unable to collect all contractually required payments receivable.

[2] The accounting requirements related to these type of securities included in paragraphs 20-24 shall be determined at acquisition or initial transfer.

recorded amount[3] (see paragraphs 20-24), shall be reported at cost, including brokerage and related fees. Cost shall not exceed fair value. Acquisitions and dispositions shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement loan-backed securities which shall be recorded on the funding date. For securities where all information is not known as of the trade date (e.g., actual payment factors and specific pools), a reporting entity shall make its best estimate based on known facts.

8. Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method and shall be recorded as an adjustment to investment income. The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the loan-backed securities is expected to occur, not the stated maturity period.

9. Interest shall be accrued using the effective-yield method using the redemption prices and redemption dates used for amortizing premiums and discounts. Interest income consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of loan-backed securities, and the addition of discount accrual. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

10. For reporting entities required to maintain an IMR, the accounting for realized capital gains and losses on sales of loan-backed securities shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized gains and losses on sales of loan-backed securities shall be recorded on the trade date and shall be reported as net realized capital gains or losses in the Statement of Income.

11. A loan-backed security may provide for a prepayment penalty or acceleration fee in the event the investment is liquidated prior to its scheduled termination date. These fees shall be reported as investment income when received.

Collection of All Contractual Cashflows is Probable

12. The following guidance applies to loan-backed and structured securities for which it is probable that the investor will be able to collect all contractually required payments receivable. (Paragraphs 17-19 provide guidance for securities in which collection of all contractual cash flows is not probable and paragraphs 20-24 provide guidance for beneficial interests.) Prepayments are a significant variable element in the cash flow of loan-backed securities because they affect the yield and determine the expected maturity against which the yield is evaluated. Falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created by rising interest rates which slow repayment and can significantly lengthen the duration of the security. Differences in cash flows can also result from other changes in the cash flows from the underlying assets. If assets are delinquent or otherwise not generating cash flow, which should be reflected in the cash flow analysis through diminishing security cash flows, even if assets have not been liquidated and gain/losses have not been booked.

13. Changes in currently estimated cash flows, including the effect of prepayment assumptions, on loan-backed securities shall be reviewed periodically, at least quarterly. The prepayment rates of the underlying loans shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled

[3] As referenced in the Relevant Literature section, this Statement adopts EITF 99-20, including the scope requirements of that guidance.

affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.

14. Loan-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions, using either the prospective or retrospective adjustment methodologies, consistently applied by type of securities. However, if at anytime during the holding period, the reporting entity determines it is no longer probable that they will collect all contractual cashflows, the reporting entity shall apply the accounting requirements in paragraphs 17-19.

15. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the security is determined to be other than temporarily impaired.

16. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

Collection of All Contractual Cashflows is Not Probable

17. The following guidance applies to loan-backed and structured securities with evidence of deterioration of credit quality since origination for which it is probable, either known at acquisition or identified during the holding period, that the investor will be unable to collect all contractually required payments receivable, except for those beneficial interests that are not of high credit quality or can contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded amount determined at acquisition (see paragraphs 20-24).

18. The reporting entity shall recognize the excess of all cash flows expected at acquisition over the investor's initial investment in the loan-backed or structured security as interest income on an effective-yield basis over the life of the loan-backed or structured security (accretable yield).[4] Any excess of contractually required cash flows over the cash flows expected to be collected is the nonaccretable difference. Expected prepayments shall be treated consistently for determining cash flows expected to be collected and projections of contractual cash flows such that the nonaccretable difference is not affected. Similarly, the difference between actual prepayments and expected prepayments shall not affect the nonaccretable difference.

19. An investor shall continue to estimate cash flows expected to be collected over the life of the loan-backed or structured security. If, upon subsequent evaluation:

a. The fair value of the loan-backed or structured security has declined below its amortized cost basis, an entity shall determine whether the decline is other than temporary. For example, if, based on current information and events, there is a

[4] A loan-backed or structured security may be acquired at a discount because of a change in credit quality or rate or both. When a loan-backed or structured security is acquired at a discount that relates, at least in part, to the security's credit quality, the effective interest rate is the discount rate that equates the present value of the investor's estimate of the security's future cash flows with the purchase price of the loan-backed or structured security.

decrease in cash flows expected to be collected (that is, the investor is unable to collect all cash flows expected at acquisition plus any additional cash flows expected to be collected arising from changes in estimate after acquisition (in accordance with paragraph 19.b.), an other-than-temporary impairment shall be considered to have occurred. The investor shall consider both the timing and amount of cash flows expected to be collected in making a determination about whether there has been a decrease in cash flows expected to be collected.

b. Based on current information and events, if there is a significant increase in cash flows previously expected to be collected or if actual cash flows are significantly greater than cash flows previously expected, the investor shall recalculate the amount of accretable yield for the loan-backed or structured security as the excess of the revised cash flows expected to be collected over the sum of (1) the initial investment less (2) cash collected less (3) other-than-temporary impairments plus (4) amount of yield accreted to date. The investor shall adjust the amount of accretable yield by reclassification from nonaccretable difference. The adjustment shall be accounted for as a change in estimate in conformity with SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3), with the amount of periodic accretion adjusted over the remaining life of the loan-backed or structured security (prospective method).

Beneficial Interests

20. The following paragraphs provide statutory accounting guidance for interest income and impairment for a reporting entity that continues to hold an interest in securitized financial assets accounted for as sales under SSAP No. 91R, or that purchases a beneficial interest in securitized financial assets that are not of high credit quality or can contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded amount, determined at acquisition or the date of transfer[5]. Beneficial interests that are of high credit quality and cannot contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded investment, shall be accounted for in accordance with paragraphs 12-16.

21. The reporting entity shall recognize the excess of all cash flows attributable to the beneficial interest estimated at the acquisition/transaction date (referred to herein as the transaction date) over the initial investment (the accretable yield) as interest income over the life of the beneficial interest using the effective yield method. If the holder of the beneficial interest is the reporting entity that transferred the financial assets for securitization, the initial investment would be the allocated carrying amount after application of the relative fair value allocation method required by SSAP No. 91R. The amount of accretable yield shall not be displayed in the balance sheet.

22. The reporting entity that holds a beneficial interest shall continue to update the estimate of cash flows over the life of the beneficial interest. If upon evaluation:

a. Based on current information and events it is probable that there is a favorable (or an adverse) change in estimated cash flows from the cash flows previously projected, then the investor shall recalculate the amount of accretable yield for the beneficial interest on the date of evaluation as the excess of estimated cash flows over the beneficial interest's reference amount (the reference amount is equal to (1) the initial investment less (2) cash received to date less (3) other-than-temporary impairments recognized to date [as described in paragraph 22.b.] plus (4) the yield accreted to date. The adjustment shall be accounted for prospectively as a change in estimate in conformity with SSAP No. 3, with the amount of periodic accretion adjusted over the remaining life of the beneficial

[5] The accounting requirements related to these type of securities included in paragraphs 20-24 shall be determined at acquisition or initial transfer. As referenced in the Relevant Literature section, this Statement adopts EITF 99-20, including the scope requirements of that guidance.

interest. Based on estimated cash flows, interest income may be recognized on a beneficial interest even if the net investment in the beneficial interest is accreted to an amount greater than the amount at which the beneficial interest could be settled if prepaid immediately in its entirety.

b. The fair value of the beneficial interest has declined below its reference amount; a reporting entity shall determine whether the decline is other-than-temporary. If, based on current information and events it is probable that there has been an adverse change in estimated cash flows (in accordance with paragraph 22.a. above), then (1) an other-than-temporary impairment shall be considered to have occurred and (2) the beneficial interest shall be written down to the current estimate of cash flows at the financial reporting date discounted at a rate equal to the current yield used to accrete the beneficial interest with the resulting change being recognized as a realized loss. Determining whether there has been a favorable (or an adverse) change in estimated cash flows from the cash flows previously projected (taking into consideration both the timing and amount of the estimated cash flows) involves comparing the present value of the remaining cash flows as estimated at the initial transaction date (or at the last date previously revised) against the present value of the cash flows estimated at the current financial reporting date. The cash flows shall be discounted at a rate equal to the current yield used to accrete the beneficial interest. If the present value of the original cash flows estimated at the initial transaction date (or the last date previously revised) is less than the present value of the current estimate of cash flows expected to be collected, the change is considered favorable (that is, an other-than-temporary impairment shall be considered to have not occurred). If the present value of the original cash flows estimated at the initial transaction date (or the last date previously revised) is greater than the present value of the current estimated cash flows, the change is considered adverse (that is, an other-than-temporary impairment shall be considered to have occurred). However, absent any other factors that indicate an other-than-temporary impairment has occurred, changes in the interest rate of a "plain-vanilla," variable-rate beneficial interest generally shall not result in the recognition of an other-than-temporary impairment[6] (a plain-vanilla, variable-rate beneficial interest does not include those variable-rate beneficial interests with interest rate reset formulas that involve either leverage or an inverse floater).

23. All cash flows estimated at the transaction date are defined as the holder's estimate of the amount and timing of estimated future principal and interest cash flows used in determining the purchase price or the holder's fair value determination for purposes of determining a gain or loss under SSAP No. 91R. Subsequent to the transaction date, estimated cash flows are defined as the holder's estimate of the amount and timing of estimated principal and interest cash flows based on the holder's best estimate of current information and events. A change in estimated cash flows is considered in the context of both timing and amount of the estimated cash flows.

24. In situations in which it is not practicable for a transferor to estimate the fair value of the beneficial interest at the initial transfer date, interest income shall not be recognized using the interest method. For these beneficial interests (that is, those beneficial interests that continue to be held by a transferor that are recorded at $0 pursuant to SSAP No. 91R), the transferor shall use the cash basis for recognizing interest income because the beneficial interest will have an allocated carrying amount of zero.

[6] Changes in the interest rate of a "plain-vanilla," variable-rate beneficial interest (a plain-vanilla, variable-rate beneficial interest does not include those variable-rate beneficial interests with interest rate reset formulas that involve either leverage or an inverse floater) generally should not result in the recognition of an other-than-temporary impairment. For plain-vanilla, variable-rate beneficial interests, the yield is changed to reflect the revised interest rate based on the contractual interest rate reset formula. For example, if a beneficial interest pays interest quarterly at a rate equal to LIBOR plus 2 percent, the yield of that beneficial interest is changed prospectively to reflect changes in LIBOR. However, changes in the fair value of a plain-vanilla, variable-rate beneficial interest due to credit events should be considered when evaluating whether there has been an other-than-temporary impairment.

Reporting and Impairment Guidance for All Loan-Backed and Structured Securities

25. Loan-backed securities shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, and the designation assigned in the NAIC Valuations of Securities product prepared by the NAIC Securities Valuation Office. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed securities shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, loan-backed securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; loan-backed securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

26. For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be in accordance *with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

27. The application of this reporting requirement resulting from NAIC designation (i.e., lower of cost or fair value) is not a substitute for other-than-temporary impairment recognition (paragraphs 32-36). For securities reported at fair value where an other-than-temporary impairment has been determined to have occurred, the realized loss recognized from the other-than-temporary impairment shall first be applied towards the realization of any unrealized losses previously recorded as a result of fluctuations in the security's fair value due to the reporting requirements. After the recognition of the other-than-temporary impairment, the security shall continue to report unrealized gains and losses as a result of fluctuations in fair value.

28. If the fair value of a loan-backed or structured security is less than its amortized cost basis at the balance sheet date, an entity shall assess whether the impairment is other than temporary. Amortized cost basis includes adjustments made to the cost of an investment for accretion, amortization, collection of cash, previous other-than-temporary impairments recognized as a realized loss (including any cumulative-effect adjustments recognized in accordance with paragraphs 55-57 of this Statement).

29. If an entity intends to sell the loan-backed or structured security (that is, it has decided to sell the security), an other-than-temporary impairment shall be considered to have occurred.

30. If an entity does not intend to sell the loan-backed or structured security, the entity shall assess whether it has the intent and ability[7] to retain the investment in the security for a period of time sufficient to recover the amortized cost basis. If the entity does not have the intent and ability to retain the investment for the time sufficient to recover the amortized cost basis, an other-than-temporary impairment shall be considered to have occurred.

31. If the entity does not expect to recover the entire amortized cost basis of the security, the entity would be unable to assert that it will recover its amortized cost basis even if it does not intend to sell the security and the entity has the intent and ability to hold. Therefore, in those situations, an other-than temporary impairment shall be considered to have occurred. In assessing whether the entire amortized cost basis of the security will be recovered, an entity shall compare the present value of cash flows expected to be collected from the security with the amortized cost basis of the security. If present value of cash flows expected to be collected is less than the amortized cost basis of the security, the entire amortized cost basis of the security will

[7] This assessment shall be considered a high standard due to the accounting measurement method established for the securities within the scope of this Statement (amortized cost).

not be recovered (that is, a non-interest related decline[8] exists), and an other-than-temporary impairment shall be considered to have occurred. A decrease in cashflows expected to be collected on a loaned-backed or structured security that results from an increase in prepayments on the underlying assets shall be considered in the estimate of the present value of cashflows expected to be collected.

32. In determining whether a non-interest related decline exists, an entity shall calculate the present value of cash flows expected to be collected based on an estimate of the expected future cash flows of the impaired loan-backed or structured security, discounted at the security's effective interest rate.

a. For securities accounted for under paragraphs 12-16 – the effective interest rate of the loan-backed or structured security is the rate of return implicit in the security (that is, the contractual interest rate adjusted for any net deferred fees or costs, premium, or discount existing at the origination or acquisition of the security).[9]

b. For securities accounted for under paragraphs 17-19 – the effective interest rate is the rate implicit immediately prior to the recognition of the other-than-temporary impairment.

c. For securities accounted for under paragraphs 20-24 – the reporting entity shall apply the guidance in paragraph 22.b.

33. When an other-than-temporary impairment has occurred because the entity intends to sell the security or has assessed that that they do not have the intent and ability to retain the investments in the security for a period of time sufficient to recover the amortized cost basis, the amount of the other-than-temporary impairment recognized in earnings as a realized loss shall equal the entire difference between the investment's amortized cost basis and its fair value at the balance sheet date. (This guidance includes loan-backed securities previously held at lower of cost or market. For these securities, upon recognition of an other-than-temporary impairment, unrealized losses would be considered realized.)

34. When an other-than-temporary impairment has occurred because the entity does not expect to recover the entire amortized cost basis of the security even if the entity has no intent to sell and the entity has the intent and ability to hold, the amount of the other-than-temporary impairment recognized as a realized loss shall equal the difference between the investment's amortized cost basis and the present value of cash flows expected to be collected, discounted at the loan-backed or structured security's effective interest rate in accordance with paragraph 32. (This guidance includes loan-backed securities previously held at lower of cost or market. For these securities, upon recognition of an other-than-temporary impairment, unrealized losses would be considered realized for the non-interest related decline. Hence, unrealized losses could continue to be reflected for these securities due to the reporting requirements.)

35. For reporting entities required to maintain an AVR or IMR, the accounting for the other-than-temporary impairment shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. Non-interest related other-than-temporary impairment losses shall be recorded through the AVR. If the reporting entity wrote the security down to fair value due to the intent to sell or does not have the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, the non-interest related portion of the other-than-temporary impairment losses shall be recorded through the AVR; the interest related other-than-temporary impairment losses shall be recorded through the IMR.

[8] A non-interest related decline is a decline in value due to fundamental credit problems of the issuer. Fundamental credit problems exist with the issuer when there is evidence of financial difficulty that may result in the issuer being unable to pay principal or interest when due. An interest related decline in value may be due to both increases in the risk-free interest rate and general credit spread widening.

[9] See Footnote 1.

36. For situations where an other-than-temporary impairment is recognized pursuant to paragraphs 33 and 34 of this Statement, the previous amortized cost basis less the other-than-temporary impairment recognized as a realized loss shall become the new amortized cost basis of the investment. That new amortized cost basis shall not be adjusted for subsequent recoveries in fair value. Therefore, the prospective adjustment method shall be used for periods subsequent to loss recognition.
37. In periods subsequent to the recognition of an other than temporary impairment loss for a loan-backed or structured security, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment at an amortized cost basis equal to the previous amortized cost basis less the other-than-temporary impairment recognized as a realized loss. The difference between the new amortized cost basis and the cash flows expected to be collected shall be accreted as interest income. A reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the loan-backed or structured security.

a. For securities accounted for under paragraphs 12-19, if upon subsequent evaluation, there is a significant increase in the cash flows expected to be collected or if actual cash flows are significantly greater than cash flows previously expected, such changes shall be accounted for as a prospective adjustment to the accretable yield in accordance with paragraphs 17-19. The security shall continue to be subject to impairment analysis for each subsequent reporting period. The new amortized cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

b. For beneficial interests accounted for under paragraphs 20-24, a reporting entity shall apply the guidance in paragraphs 21-22 to account for changes in cash flows expected to be collected.

38. It is inappropriate to automatically conclude that a security is not other-than-temporarily impaired because all of the scheduled payments to date have been received. However, it also is inappropriate to automatically conclude that every decline in fair value represents an other-than-temporary impairment. Further analysis and judgment are required to assess whether a decline in fair value indicates that it is probable that the holder will not collect all of the contractual or estimated cash flows from the security. In addition, the length of time and extent to which the fair value has been less than cost can indicate a decline is other than temporary. The longer and/or the more severe the decline in fair value, the more persuasive the evidence that is needed to overcome the premise that it is probable that the holder will not collect all of the contractual or estimated cash flows from the issuer of the security.

39. In making its other-than-temporary impairment assessment, the holder shall consider all available information relevant to the collectibility of the security, including information about past events, current conditions, and reasonable and supportable forecasts, when developing the estimate of future cash flows. Such information generally shall include the remaining payment terms of the security, prepayment speeds, the financial condition of the issuer(s), expected defaults, and the value of any underlying collateral. To achieve that objective, the holder shall consider, for example, industry analyst reports and forecasts, sector credit ratings, and other market data that are relevant to the collectibility of the security. The holder also shall consider how other credit enhancements affect the expected performance of the security, including consideration of the current financial condition of the guarantor of a security (if the guarantee is not a separate contract) and/or whether any subordinated interests are capable of absorbing estimated losses on the loans underlying the security. The remaining payment terms of the security could be significantly different from the payment terms in prior periods (such as for some securities backed by "nontraditional loans"[10]). Thus, the holder shall consider whether a security

[10] A nontraditional loan may have features such as (a) terms that permit principal payment deferral or payments smaller than interest accruals (negative amortization), (b) a high loan-to-value ratio, (c) multiple loans on the same collateral that when combined result in a high loan-to value ratio, (d) option adjustable-rate mortgages (option ARMs) or similar products that may expose the borrower to

backed by currently performing loans will continue to perform when required payments increase in the future (including “balloon” payments). The holder also shall consider how the value of any collateral would affect the expected performance of the security. If the fair value of the collateral has declined, the holder needs to assess the effect of that decline on the ability of the holder to collect the balloon payment.

Origination Fees

40. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the loan-backed security consistent with paragraph 8 of this statement. Other origination fees shall be recorded as income upon receipt.

Origination, Acquisition, and Commitment Costs

41. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the loan-backed security, consistent with paragraph 7 of this statement. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase, or commitment to purchase loan-backed securities, shall be charged to expense when incurred.

Commitment Fees

42. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the loan-backed security is issued. If the loan-backed security is not issued, then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

43. A fee paid to the reporting entity to obtain a commitment to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 8 of this statement over the life of the loan-backed security as an adjustment to the investment income on the loan-backed security. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Giantization/Megatization of FHLMC or FNMA Mortgage Backed Securities

44. Giantization/megatization of mortgage backed securities is defined as existing pools of FHLMC or FNMA mortgage-backed securities (MBS) with like coupon and prefix which are repooled together by the issuing agency creating a new larger security. The new Fannie Mae “Mega” or Freddie Mac “Giant” is a guaranteed MBS pass-through representing an undivided interest in the underlying pools of loans.

45. The benefits derived from giantization/megatization include:

a. Increased liquidity: Smaller MBS pools (particularly those with current face of less than $1 million) are less liquid than mortgage pools with current faces

future increases in repayments in excess of increases that result solely from increases in the market interest rate (for example, once negative amortization results in the loan reaching a maximum principal accrual limit), (e) an initial interest rate that is below the market interest rate for the initial period of the loan term and that may increase significantly when that period ends, and (f) interest-only loans that should be considered in developing an estimate of future cash flows.

exceeding $5 million. Repooling smaller MBS pools into one larger pool improves the marketability for the aggregate package;

b. Geographic diversity: Regrouping of multiple pools generally will create greater geographic pool loan diversity resulting in less prepayment variation due to regional economic factors;

c. Reduced administrative expenses: The reduced number of pools lowers bank custodial fees, pricing/factor service fees, and increases efficiency for the accounting and investment departments.

46. Repooled FHLMC and FNMA securities meet the definition of substantially the same as defined in *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. The transaction shall not be considered a sale/purchase and no gain or loss shall be recognized. To properly document the repooling, the transaction shall be reported through Schedule D of the Annual Statement as a disposition and an acquisition.

47. Transaction fees charged by the issuing agencies shall be capitalized and amortized over the life of the repooled security.

Disclosures

48. In addition to the disclosures required for invested assets in general, the following disclosures regarding loan-backed securities shall be made in the financial statements. Regardless of the allowances within paragraph 59 of the Preamble, the disclosures in paragraph 48.f., 48.g. and 48.h. are required in separate, distinct notes to the financial statements:

a. Fair values in accordance with *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments* (SSAP No. 27);

b. Concentrations of credit risk in accordance with SSAP No. 27;

c. Basis at which the loan-backed securities are stated;

d. The adjustment methodology used for each type of security (prospective or retrospective);

e. Descriptions of sources used to determine prepayment assumptions.

f. All securities within the scope of this statement with a recognized other-than-temporary impairment, disclosed in the aggregate, classified on the basis for the other-than-temporary impairment: (1) intent to sell, (2) inability or lack of intent to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, or (3) present value of cash flows expected to be collected is less than the amortized cost basis of the security.

g. For each security with a recognized other-than-temporary impairment, currently held by the reporting entity, as the present value of cash flows expected to be collected is less than the amortized cost basis of the securities:

i. The amortized cost basis, prior to any current-period other-than-temporary impairment.

ii. The other-than-temporary impairment recognized in earnings as a realized loss.

iii. The fair value of the security.

iv. The amortized cost basis after the current-period other-than-temporary impairment.

h. All impaired securities (fair value is less than cost or amortized cost) for which an other-than-temporary impairment has not been recognized in earnings as a realized loss (including securities with a recognized other-than-temporary impairment for non-interest related declines when a non-recognized interest related impairment remains):

i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and

ii. The aggregate related fair value of securities with unrealized losses.

i. The disclosures in (i) and (ii) above should be segregated by those securities that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with SSAP No. 27.

j. Additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.

k. When it is not practicable to estimate fair value in accordance with SSAP No. 27, the investor should disclose the following additional information, if applicable:

i. The aggregate carrying value of the investments not evaluated for impairment, and

ii. The circumstances that may have a significant adverse effect on the fair value.

49. Refer to the preamble for further discussion regarding disclosure requirements. All disclosures within this Statement shall be included within the interim and annual statutory financial statements.

Relevant Literature

50. This statement adopts *FASB Emerging Issues Task Force No. 99-20*, *Exchange of Interest-Only and Principal-Only Securities for a Mortgage-Backed Security and FASB Staff Position EITF 99-20-1, Amendments to the Impairment Guidance of EITF Issue No. 99-20.* This statement adopts paragraphs 5, 7 and 9 of AICPA *Statement of Position 03-03, Accounting for Certain Loans or Debt Securities Acquired in a Transfer* (SOP 03-03) for loan-backed and structured securities only. With the exception of this specific adoption, consideration of SOP 03-03 is still pending consideration for statutory accounting.

51. This statement rejects *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities* and *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*.

52. This statement also rejects *FASB Emerging Issues Task Force No. 89-4, Accounting for a Purchased Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate, FASB Emerging Issues Task Force No. 90-2, Exchange of Interest-Only and Principal-Only Securities for a Mortgage-Backed Security, FASB Emerging Issues Task Force No. 93-18, Recognition of Impairment for an Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate*, and *FASB Emerging Issues Task Force No. 96-12, Recognition of Interest Income and Balance Sheet Classification of Structured Notes*.

Effective Date and Transition

53. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

54. For securities purchased prior to January 1, 1994, where historical cash flows are not readily available for applying the retrospective method, the reporting entity may use January 1, 1994 as the acquisition date and the then book value as the cost for purposes of determining yield adjustments in future periods.

55. This revised statement supersedes SSAP No. 98 and paragraph 13 of SSAP No. 99 effective September 30, 2009. For reporting entities that either early adopted the requirements of SSAP No. 98 or previously adopted a statutory accounting policy that was in accord with the prescriptions of SSAP No. 98, for which an other-than-temporary impairment was previously recognized, and if such reporting entities do not intend to sell the security, and have the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, those reporting entities shall recognize the cumulative effect of reversing the impact of the adoption of SSAP No. 98, or an equivalent statutory accounting policy, and paragraph 13 of SSAP No. 99 as an adjustment to the opening balance of unassigned funds (surplus) as of July 1, 2009, with a corresponding adjustment to applicable financial statement elements.

56. The accounting and reporting requirements of this revised statement shall be applied to existing and new investments held by a reporting entity on or after September 30, 2009. For loan-backed and structured securities held at the beginning of the interim period of adoption (July 1, 2009) and continue to be held as of September 30, 2009, for which an other-than-temporary impairment was previously recognized under SSAP No. 43, if a reporting entity does not intend to sell the security, and has the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, the reporting entity shall recognize the cumulative effect of initially applying this revised statement as an adjustment to the opening balance of unassigned funds (surplus) as of July 1, 2009, with a corresponding adjustment to applicable financial statement elements. The cumulative effect on unassigned funds (surplus) shall be calculated by comparing the present value of the cash flows expected to be collected determined in accordance with the methodology in paragraph 32, as applicable, with the amortized cost basis of the loan-backed and structured security as of the beginning of the interim period in which this revised statement is adopted (July 1, 2009). The cumulative-effect adjustment shall include related tax effects. The discount rate used to calculate the present value of the cash flows expected to be collected shall be the rate in effect before recognizing any other-than-temporary impairments and not a rate that has been adjusted to reflect those impairments.

57. The amortized cost basis of a security for which an other-than-temporary impairment was previously recognized shall be adjusted by the amount of the cumulative-effect adjustment before taxes. The difference between the new amortized cost basis and the cash flows expected to be collected shall be accreted as interest income (see paragraph 37).

58. In the period of adoption, an entity shall provide the disclosures required by SSAP No. 3 for changes in accounting principles.

DISCUSSION

6. This Issue Paper is intended to provide a historical reference of SSAP No. 43, SSAP No. 98 and SSAP No. 99 prior to the adoption of SSAP No. 43R. SSAP No. 43R was adopted in September 2009 with an effective date of September 30, 2009.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

7. Statutory accounting principles for loan-backed and structured securities was included within *SSAP No. 43—Loan-Backed and Structured Securities* (SSAP No. 43). This guidance has been superseded by SSAP No. 43R:

> SCOPE OF STATEMENT
>
> 1. This statement establishes statutory accounting principles for investments in loan-backed securities and structured securities. In accordance with SSAP No. 91R, retained beneficial interests from the sale of loan-backed securities and structured securities are accounted for in accordance with this statement. In this statement loan-backed securities and structured securities are collectively referred to as loan-backed securities.
>
> SUMMARY CONCLUSION
>
> 2. Loan-backed securities are defined as pass-through certificates, collateralized mortgage obligations (CMOs), and other securitized loans not included in structured securities, as defined below, for which the payment of interest and/or principal is directly proportional to the interest and/or principal received by the issuer from the mortgage pool or other underlying securities.
>
> 3. Structured securities are defined as loan-backed securities which have been divided into two or more classes for which the payment of interest and/or principal of any class of securities has been allocated in a manner which is not proportional to interest and/or principal received by the issuer from the mortgage pool or other underlying securities.
>
> 4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring parent organization. Mortgage loans or other securities securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer's obligation has been fully satisfied. The investor can look only to the issuer's assets (primarily the trusteed assets or third parties such as insurers or guarantors) for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying mortgage loans. Some sponsors do guarantee the performance of the underlying loans.
>
> 5. Loan-backed securities meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

Acquisitions and Sales

6. At acquisition, loan-backed securities shall be reported at cost, including brokerage and related fees. Cost shall not exceed fair value. Acquisitions and dispositions shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement loan-backed securities which shall be recorded on the funding date. For securities where all information is not known as of the trade date (e.g., actual payment factors and specific pools), a reporting entity shall make its best estimate based on known facts.

Amortization

7. Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method and shall be recorded as an adjustment to investment income. The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the loan-backed securities is expected to occur, not the stated maturity period.

Balance Sheet Amount

8. Loan-backed securities shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, and the designation assigned in the NAIC *Valuations of Securities* product prepared by the NAIC Securities Valuation Office. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed securities shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, loan-backed securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; loan-backed securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

9. For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

Changes in Valuation

10. Prepayments are a significant variable element in the cash flow of loan-backed securities because they affect the yield and determine the expected maturity against which the yield is evaluated. Falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created by rising interest rates which slow repayment and can significantly lengthen the duration of the security. Differences in cash flows can also result from other changes in the cash flows from the underlying assets. If assets are delinquent or otherwise not generating cash flow, that should be reflected in the cash flow analysis through diminishing security cash flows, even if assets have not been liquidated and gain/losses have not been booked.

11. Changes in currently estimated cash flows, including the effect of prepayment assumptions, on loan-backed securities shall be reviewed periodically. For securities that have the potential for loss of a portion of the original investment, the review shall be performed at least quarterly. For other securities, the review shall be performed at least annually. In addition to assets that are delinquent or otherwise not generating cash flows, other examples of securities that have the potential for loss of a portion of the original investment include CMO residuals and mortgage-backed interest-only certificates. For these securities, an effective yield or internal rate

of return is calculated at acquisition based on the purchase price and anticipated future cash flows.

12. The prepayment rates of the underlying loans shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.

13. Loan-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions, using either the prospective or retrospective adjustment methodologies, consistently applied by type of securities.

14. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the undiscounted anticipated cash flow is less than the carrying amount of the investment.

15. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

Impairment

16. Regardless of whether a reporting entity is using a prospective or retrospective method, if the revaluation based on new currently estimated cash flows results in a negative yield (i.e., undiscounted estimated future cash flows are less than the current book value), an other than temporary impairment shall be considered to have occurred. If it is determined an other than temporary impairment has occurred, the cost basis of the security shall be written down to the undiscounted estimated future cash flows and the amount of the write down shall be accounted for as a realized loss. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore, the prospective adjustment method must be utilized for periods subsequent to the loss recognition.

17. NOTE: This paragraph is added by *SSAP No. 99—Accounting for Certain Securities Subsequent to an Other-Than-Temporary Impairment.* Remaining paragraphs are renumbered.

In periods subsequent to the recognition of an other than temporary impairment loss for a loan-backed or structured security, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment. The fair value of the security on the measurement date shall become the new cost basis. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized in the prospective manner over the remaining period in which repayment of principal is expected to occur. The security shall continue to be subject to impairment analysis for each subsequent reporting period. The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore, the prospective adjustment method must be utilized for periods subsequent to the impairment loss recognition. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

Income

18. Interest shall be accrued using the interest method using the redemption prices and redemption dates used for amortizing premiums and discounts. Interest income consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of loan-backed securities, and the addition of discount accrual. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

19. For reporting entities required to maintain an IMR, the accounting for realized capital gains and losses on sales of loan-backed securities shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized gains and losses on sales of loan-backed securities shall be recorded on the trade date and shall be reported as net realized capital gains or losses in the Statement of Income.

20. A loan-backed security may provide for a prepayment penalty or acceleration fee in the event the investment is liquidated prior to its scheduled termination date. These fees shall be reported as investment income when received.

Beneficial Interests

21. A holder of a beneficial interest in securitized financial assets should recognize the excess of all cash flows attributable to the beneficial interest estimated at the acquisition/transaction date over the initial investment as interest income over the life of the beneficial interest using the effective yield method.

22. The holder of a beneficial interest should continue to update the estimate of cash flows over the life of the beneficial interest. Based on current information and events, if a favorable or adverse change in estimated cash flows is projected, the holder should recalculate the amount of interest income for the beneficial interest on the date of evaluation. The recalculated yield should be used to recognize interest income as a prospective change over the remaining life of the beneficial interest. Impairment for beneficial interests shall be determined in accordance with paragraph 16.

Origination Fees

23. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the loan-backed security consistent with paragraph 7 of this statement. Other origination fees shall be recorded as income upon receipt.

Origination, Acquisition, and Commitment Costs

24. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the loan-backed security, consistent with paragraph 6 of this statement. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase, or commitment to purchase loan-backed securities, shall be charged to expense when incurred.

Commitment Fees

25. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the loan-backed security is issued. If the loan-backed security is not issued, then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

26. A fee paid to the reporting entity to obtain a commitment to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 7 of this statement over the life of the loan-backed security as an adjustment to the investment income on the loan-backed security. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Giantization/Megatization of FHLMC or FNMA Mortgage Backed Securities

27. Giantization/megatization of mortgage backed securities is defined as existing pools of FHLMC or FNMA mortgage-backed securities (MBS) with like coupon and prefix which are repooled together by the issuing agency creating a new larger security. The new Fannie Mae "Mega" or Freddie Mac "Giant" is a guaranteed MBS pass-through representing an undivided interest in the underlying pools of loans.

28. The benefits derived from giantization/megatization include:

a. Increased liquidity: Smaller MBS pools (particularly those with current face of less than $1 million) are less liquid than mortgage pools with current faces exceeding $5 million. Repooling smaller MBS pools into one larger pool improves the marketability for the aggregate package;

b. Geographic diversity: Regrouping of multiple pools generally will create greater geographic pool loan diversity resulting in less prepayment variation due to regional economic factors;

c. Reduced administrative expenses: The reduced number of pools lowers bank custodial fees, pricing/factor service fees, and increases efficiency for the accounting and investment departments.

29. Repooled FHLMC and FNMA securities meet the definition of substantially the same as defined in *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. The transaction shall not be considered a sale/purchase and no gain or loss shall be recognized. To properly document the repooling, the transaction shall be reported through Schedule D of the Annual Statement as a disposition and an acquisition.

30. Transaction fees charged by the issuing agencies shall be capitalized and amortized over the life of the repooled security.

Disclosures

31. In addition to the disclosures required for invested assets in general, the following disclosures regarding loan-backed securities shall be made in the financial statements:

a. Fair values in accordance with SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments (SSAP No. 27);

b. Concentrations of credit risk in accordance with SSAP No. 27;

c. Basis at which the loan-backed securities are stated;

d. The adjustment methodology used for each type of security (prospective or retrospective);

e. Changes from the retrospective to the prospective adjustment methodology due to negative yield on specific securities;

f. If, for applying the retrospective method, the reporting entity has elected to use book value as of January 1, 1994 as the cost for securities purchased prior to January 1, 1994 where historical cash flows are not readily available; and

g. Descriptions of sources used to determine prepayment assumptions.

h. For each balance sheet presented, all securities in an unrealized loss position for which other-than-temporary declines in value have not been recognized

  i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and

  ii. The aggregate related fair value of securities with unrealized losses.

i. The disclosures in (i) and (ii) above should be segregated by those securities that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with SSAP No. 27.

j. As of the date of the most recent balance sheet presented, additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.

k. When it is not practicable to estimate fair value in accordance with SSAP No. 27, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

  i. The aggregate carrying value of the investments not evaluated for impairment, and

  ii. The circumstances that may have a significant adverse effect on the fair value.

32. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraphs 31.a., 31.b., 31.h., 31.i., 31.j., and 31.k. above shall be included in the annual audited statutory financial reports only.

Relevant Literature

33. This statement rejects *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities* and *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*.

34. This statement also rejects FASB Emerging Issues Task Force No. 89-4, *Accounting for a Purchased Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate,* FASB Emerging Issues Task Force No. 90-2, *Exchange of Interest-Only and Principal-Only Securities for a Mortgage-Backed Security,* FASB Emerging

Issues Task Force No. 93-18, *Recognition of Impairment for an Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate, and FASB Emerging Issues Task Force No. 96-12, Recognition of Interest Income and Balance Sheet Classification of Structured Notes, and FASB Emerging Issues Task Force No. 99-20, Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets.*

Effective Date and Transition

35. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

36. For securities purchased prior to January 1, 1994, where historical cash flows are not readily available for applying the retrospective method, the reporting entity may use January 1, 1994 as the acquisition date and the then book value as the cost for purposes of determining yield adjustments in future periods.

8. *SSAP No. 98—Treatment of Cash Flows When Quantifying Changes in Valuation and Impairments, an Amendment of SSAP No. 43—Loan-Backed and Structured Securities* (SSAP No. 98) amended paragraphs 14-16 of SSAP No. 43. This guidance was superseded with the issuance of SSAP No. 43R:

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for impairment analysis and subsequent valuation of loan-backed and structured securities.

SUMMARY CONCLUSION

2. This statement amends paragraphs 14-16 of SSAP No. 43—*Loan-Backed and Structured Securities* to the following:

14. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the security is determined to be other than temporarily impaired.

15. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

Impairment

16. If it is determined that the decline in fair value of the security is other than temporary, then the cost basis of the security shall be written down to fair value. The amount of the write down shall be accounted for as a realized loss. An interest related decline in value shall be considered other than temporary only when a reporting entity has the intent to sell the investment, at the reporting date, before recovery of the cost of

> the investment. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. Credit related other than temporary impairment losses shall be recorded through the AVR; interest related other than temporary impairment losses shall be recorded through the IMR. The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore, the prospective adjustment method must be utilized for periods subsequent to the loss recognition.

> **Disclosures**
>
> 3. This statement requires no additional disclosures.
>
> **Effective Date and Transition**
>
> 4. This statement is effective for quarterly and annual reporting periods beginning on or after January 1, 2009, with early adoption permitted and encouraged. A change resulting from the adoption of this statement shall be accounted for prospectively. No cumulative effect adjustments or application of the new guidance to prior events or periods are required, similar to a change in accounting estimate.

9. *SSAP No. 99—Accounting for Certain Securities Subsequent to an Other-Than-Temporary Impairment* (SSAP No. 99) establishes statutory accounting principles for the treatment of premium or discount applicable to certain securities subsequent to the recognition of an other-than-temporary impairment. Paragraph 13 of SSAP No. 99 inserted a new paragraph into SSAP No. 43. Consistent with the superseding of SSAP No. 43 by SSAP No. 43R, paragraph 13 of SSAP No. 99 (and the new paragraph inserted within SSAP No. 43) have also been superseded:

> **Loan-Backed and Structured Securities**
>
> 13. This statement shall insert the following new paragraph 17 into SSAP No. 43, with subsequent paragraphs of SSAP No. 43 to be renumbered accordingly:
>
> > 17. In periods subsequent to the recognition of an other than temporary impairment loss for a loan-backed or structured security, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment. The fair value of the security on the measurement date shall become the new cost basis. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized in the prospective manner over the remaining period in which repayment of principal is expected to occur. The security shall continue to be subject to impairment analysis for each subsequent reporting period. The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore, the prospective adjustment method must be utilized for periods subsequent to the impairment loss recognition. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

Statutory Issue Paper No. 141

Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

STATUS:
Finalized August 31, 2011

Original SSAP and Current Authoritative Guidance: SSAP No. 103

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. In June 2009, the Financial Accounting Standards Board (FASB) issued *FAS 166, Accounting for Transfers of Financial Assets* (FAS 166) to improve the relevance, representational faithfulness and comparability of the information that a reporting entity provides in its financial reports about a transfer of financial assets; the effects of a transfer on its financial position, financial performance, and cash flows; and a transferor's continuing involvement in transferred financial assets. FAS 166 is effective as of the beginning of each reporting entity's first annual reporting period that begins after November 15, 2009, for interim periods within the first annual reporting period and for interim and annual reporting periods thereafter. Earlier application is prohibited.

2. The issuance of FAS 166 amended *FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140) as follows:

   a. Removes the concept of a qualifying special-purpose entity and removes the exception that requires consolidation from applying *FASB Interpretation No. 46–Revised, Consolidation of Variable Interest Entities* (FIN 46R), to variable interest entities that are qualifying special-purpose entities.

   b. Modifies the financial-components approach used in FAS 140 and limits the circumstances in which a transferor derecognizes a portion or component of a financial asset when the transferor has not transferred the original financial asset to an entity that is not consolidated with the transferor in the financial statements being presented and/or when the transferor has continuing involvement with the financial asset.

   c. Establishes the following conditions for reporting a transfer of a portion (or portions) of a financial asset as a sale:

      i. The transferred portion (or portions) and any portion that continues to be held by the transferor must be participating interests.

      ii. The transfer of the participating interest (or participating interests) must meet the conditions for surrender of control.

   If the transfer does not meet these conditions, sale accounting can be achieved only by transferring an entire financial asset or group of entire financial assets in a transaction that meets the sale accounting conditions.

   d. Defines a participating interest as a portion of a financial asset that:

i. Conveys proportionate ownership rights with equal priority to each participating interest holder.

ii. Involves no recourse (other than standard representations and warranties) to, or subordination by, any participating interest holder.

iii. Does not entitle any participating interest holder to receive cash before any other participating interest holder.

e. Clarifies that an entity must consider all arrangements, or agreements made contemporaneously with, or in contemplation of, a transfer, even if not entered into at the time of the transfer, when applying the condition for sale accounting. In addition, it explicitly clarifies that the application of the conditions for sale accounting must consider the transferor's continuing involvement with the transferred financial assets.

f. Clarifies the isolation analysis to ensure that the financial asset has been put beyond the reach of the transferor, any of its consolidated affiliates (that are not entities designed to make remote the possibility that they would enter bankruptcy or other receivership) included in the financial statements being presented, and its creditors.

g. Removes the exception for sale accounting for transfers to qualifying special-purpose entities. It requires that a transferor, in a transfer to an entity whose sole purpose is to engage in securitization or asset-backed financing activities, determine whether each third-party holder of a beneficial interest in that entity has the right to pledge or exchange its beneficial interest and that no condition both:

i. Constrains the third-party beneficial interest holder from taking advantage of its right to pledge or exchange; and

ii. Provides more than a trivial-benefit to the transferor.

h. Clarifies the principle for sale accounting that the transferor must evaluate whether it, its consolidated affiliates included in the financial statements being presented, or its agents effectively control the transferred financial asset directly or indirectly.

i. Requires that a transferor recognize and initially measure at fair value all assets obtained (including a transferor's beneficial interest) and liabilities incurred as a result of a transfer of an entire financial asset or a group of financial assets accounted for as a sale.

j. Removes the special provisions in FAS 140 and FASB Statement No. 65, Accounting for Certain Mortgage Banking Activities (FAS 65), for guaranteed mortgage securitizations to require them to be treated the same, as any other transfer of financial assets within the scope of FAS 140. If such a transfer does not meet the conditions for sale accounting, the securitized mortgage loans shall continue to be classified as loans.

k. Removes the fair value practicability exception from measuring the proceeds received by a transferor in a transfer that meets the conditions for sale accounting at fair value.

l. Requires enhanced disclosures to provide financial statement users with greater transparency about transfers of financial assets and a transferor's continuing involvement with transfers of financial assets accounted for as sales.

3. In addition to the modifications to FAS 140, the issuance of FAS 166 also incorporated revisions to the following GAAP guidance:

a. Superseded *FSP FAS 140-2, Clarification of the Application of Paragraphs 40(b) and 40(c) of FASB Statement No. 140* (FSP FAS 140-2) and *FSP FAS 140-4 and FIN 46(R)-8, Disclosures by Public Entities (Enterprises) about Transfers of Financial Assets and Interests in Variable Interest Entities* (FSP FAS 140-4 and FIN 46(R)-8). Neither of these GAAP statements were previously adopted for statutory accounting.

b. Amended *FAS No. 65, Accounting for Certain Mortgage Banking Activities* (FAS 65). This GAAP statement was previously deemed not applicable for statutory accounting.

c. Amended *FAS 155, Accounting for Certain Hybrid Financial Instruments* (FAS 155). This GAAP statement is still pending review for statutory accounting.

d. Amended *FAS 156, Accounting for Servicing of Financial Assets* (FAS 156). This GAAP statement was previously adopted, with modification, for statutory accounting. In accordance with the previous adoption, with modification of FAS 156, for statutory accounting, subsequent measurement of servicing assets and servicing liabilities shall be at fair value.

e. Removed reference to FAS 140 from *FAS No. 157, Fair Value Measurements* (FAS 157).

f. Amended *FASB Interpretation No. 46 Revised, Consolidation of Variable Interest Entities* (FIN 46R). This GAAP statement is still review pending for statutory accounting.

g. Amended *FASB Technical Bulletin, Accounting for Mortgage Servicing Fees and Rights* (TB 87-3). This GAAP statement was previously deemed not applicable for statutory accounting.

h. Amended *Statement 133 Implementation Issues No. D1, Application of Statement 133 to Beneficial Interests in Securitized Financial Assets* (FAS 133 Issue No. D1) and *Issue No. F8, Hedging Mortgage Service Right Assets Using Preset Hedge Coverage Ratios* (FAS 133 Issue No. F8). Pursuant to previous decisions of the Statutory Accounting Principles (E) Working Group, FAS 133 Implementation Issues are not reviewed for statutory accounting unless considered significant or relevant to statutory accounting and specifically requested for review as part of the maintenance process, or in accordance with future projects in which review of a specific FAS 133 Implementation Issue would be considered beneficial.

4. This issue paper proposes adoption, with modification, of FAS 166 and the corresponding amendments to FAS 140 and FAS 156, including the revised FAS 140 glossary and illustrations. Statutory modifications from the adoption of amendments to FAS 140 and FAS 156 reflected in FAS 166 include:

a. Rejects the GAAP consideration for "consolidated affiliates" as the concept of consolidation has not been adopted for statutory accounting.

b. Rejects reference to GAAP standards and GAAP methods not adopted for statutory as well as concepts that are not pertinent for insurers. For example, references to investments "held-to-maturity", "available for sale" or "trading" and reference to FASB standards were removed and replaced with statutory terms and references to statutory standards.

c. Rejects GAAP reference and guidance regarding "Revolving-Period Securitizations" as this GAAP guidance is not applicable to statutory accounting. This concept was also deemed not applicable to statutory accounting under SSAP No. 91R.

d. Rejects GAAP guidance for "Sale-Type and Direct-Financing Lease Receivables" as leases shall be accounted for in accordance with *SSAP No. 22—Leases* (SSAP No. 22). This conclusion is consistent with SSAP No. 91R.

e. Rejects GAAP guidance for "Banker's Acceptances and Risk Participations in Them," as not applicable for statutory accounting. This GAAP guidance was also deemed not applicable to statutory accounting under SSAP No. 91R.

f. Rejects GAAP guidance for "Removal of Account Provisions" that allows recognition of sale accounting. For statutory, transfers that would empower the transferor to reclaim assets under certain conditions (considered "removal-of-accounts provisions") are precluded from being accounted for as sales. This conclusion is consistent with SSAP No. 91R.

g. Rejects GAAP guidance for "Transfers of Receivables with Recourse" that allows transfers of receivables in their entirety with recourse to be accounted for as sales. For statutory, a transfer of receivables with recourse shall be accounted for as a secured borrowing. This conclusion is consistent with SSAP No. 91R.

h. Rejects illustrations for transactions involving transfers of lease financing receivables with residual values and banker's acceptances with a risk participation as the GAAP guidance in FAS 166 related to these topics has been rejected for statutory accounting.

i. Incorporates additional disclosure requirements for collateral requirements when the reporting entity is not permitted by contract or custom to sell or repledge.

j. Incorporates guidance previously included in SSAP No. 91R specific to insurance entities, and guidance that was adopted from GAAP guidance not revised through the issuance of FAS 166. Items incorporated include:

    i. Clarification that transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40—Real Estate Investments*.

    ii. Clarification that transactions between related parties or affiliates are accounted for in accordance with *SSAP No. 25—Accounting For and Disclosures About Transactions with Affiliates and Other Related Parties*.

    iii. Clarification that the guidance does not address the securitization of mortality or morbidity risk.

    iv. Guidance on the accounting of sale transactions for entities required to maintain an interest maintenance reserve (IMR).

    v. Clarification of when servicing assets and servicing liabilities shall be recognized as well as measurement of these items. This guidance continues the adoption, with modification, of FAS 156, including the requirement to subsequently measure servicing assets and servicing liabilities at fair value. Furthermore, continues the prior decision that servicing assets shall be nonadmitted.

    vi. Guidance on the accounting for transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract.

vii. Disclosures on loaned securities; securities underlying repurchase and reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements; receivables with recourse; and wash sales.

viii. Guidance on the sales of future revenues.

ix. Guidance on collateral requirements for securities lending transactions that requires collateral of 102 percent (105 percent for foreign securities) of the fair value of the loaned securities. Guidance recently adopted by the Statutory Accounting Principles (E) Working Group related to collateral received for securities lending transactions has been reflected within the proposed issue paper.

x. Disclosures on securities lending transactions specific to aggregate open positions and aggregate positions under 30-day, 60-day and 90-day terms, disclosures for collateral that extend beyond one year from the reporting date, and detail of loaned securities within the separate account and if the policies and procedures differ from the general account.

xi. Clarification that repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this guidance.

xii. Guidance on Repurchase Agreements. This guidance retains recent revisions to SSAP No. 91R that ensured the proper terms are being utilized for the proper scenario. This guidance retains the recently adopted guidance from *FSP FAS 140-3, Accounting for Transfers of Financial Assets and Repurchase Financing Transactions* (FSP FAS 140-3). This GAAP guidance was not revised with the issuance of FAS 166.

xiii. Guidance on Reverse Repurchase Agreements. This guidance retains recent revisions to SSAP No. 91R that ensured the proper terms are being utilized for the proper scenario.

xiv. Guidance on Collateral for Reverse and Repurchase Agreements. This guidance retains recent revisions to SSAP No. 91R that ensured the proper terms are being utilized for the proper scenario.

xv. Guidance on Dollar Repurchase Agreements. This guidance retains recent revisions to SSAP No. 91R that ensured the proper terms are being utilized for the proper scenario.

xvi. Guidance for Separate Transactions.

xvii. Guidance for Offsetting.

xviii. Guidance for Transfers of Receivables with Recourse.

5. With the exception of INT 99-07, INT 99-08, INT 99-14 and INT 99-21, as discussed below, this issue paper will be interpreted by the statutory interpretations to SSAP No. 91R:

a. *INT 99-07: EITF 97-3: Accounting for Fees and Costs Associated with Loan Syndications and Loan Participations after the Issuance of FASB Statement No. 125* (INT 99-07) – As this interpretation rejected EITF 97-3 for statutory accounting, there is no impact to this interpretation from adoption of FAS 166. As this interpretation is now included in *INT 99-00—Compilation of Rejected EITFs* (INT 99-00), the reference to INT 99-00, and not INT 99-07, will be referenced in the new SSAP to supersede SSAP No. 91R.

b. *INT 99-08: EITF 97-6: Application of Issue No. 96-20 to Qualifying Special-Purpose Entities Received Transferred Financial Assets Prior to the Effective Date of FASB Statement No. 125* (INT 99-08) – As this interpretation rejected EITF 96-20 for statutory accounting, there is no impact to this interpretation from adoption of FAS 166. As this interpretation is now included in *INT 99-00—Compilation of Rejected EITFs* (INT 99-00), the reference to INT 99-00, and not INT 99-07, will be referenced in the new SSAP to supersede SSAP No. 91R.

c. *INT 99-14: EITF 96-19: Debtor's Accounting for a Modification or Exchange of Debt Instruments* (INT 99-14) – This interpretation adopted EITF 99-14 for statutory accounting. As such, an exchange of debt instruments with substantially different terms is considered a debt extinguishment. This guidance also clarifies that if the cash flows under the terms of the new debt instrument is at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument, then the exchange of debt instruments are considered substantially different. The GAAP status of EITF 96-19 was updated to identify that FAS 166 amended FAS 140 without reconsideration. As such, there is no impact to the statutory interpretation from the adoption of FAS 166. However, pursuant to a project to incorporate guidance from statutory INTs into the related SSAPs, the guidance from this INT is proposed to be included within SSAP No. 91R, as well as the proposed SSAP to supersede SSAP No. 91R. This guidance has been included in paragraph 126 of this issue paper.

d. *INT 99-21: EITF 98-7: Accounting for Exchanges of Similar Equity Method Investments* (INT 99-21) – This interpretation was nullified with the issuance of *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95). With the issuance of a new SSAP, there will be no future reference to this interpretation.

e. *INT 99-22: EITF 98-8: Accounting for Transfers of Investments That Are in Substance Real Estate* (INT 99-22) – This interpretation adopted EITF 98-8 indicating that transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40—Real Estate Investments* (SSAP No. 40). The GAAP status of EITF 96-19 was updated to delete the effective date reference and identify that FAS 166 amended FAS 140 without reconsideration. As such, there is no impact to the statutory interpretation from the adoption of FAS 166. However, pursuant to a project to incorporate guidance from statutory INTs into the related SSAPs, the guidance from this INT is proposed to be included within SSAP No. 91R as well as the proposed SSAP to supersede SSAP No. 91R. This guidance has been included in paragraph 6 of this issue paper.

f. *INT 00-11: EITF 98-15: Structured Notes Acquired for a Specified Investment Strategy* (INT 00-11) – This interpretation rejected the consensus position in EITF 98-15 pursuant to a recommendation from the Invested Assets (E) Working Group. It was noted that any attempt on the part of the Emerging Accounting Issues (E) Working Group to promulgate EITF 95-18 into accounting guidance (bonds accounted for at fair value rather than amortized cost) will require the Valuation of Securities (E) Task Force to change the mission of the Securities Valuation Office. The issuance of FAS 166 incorporated guidance to EITF 98-15 to identify that paragraph 11 of FAS 166 (accounting for transfers of entire financial assets or groups of entire financial assets that qualify as sales) shall be applied to each structured note upon transfer. This update is proposed for inclusion within INT 00-11, but as there is no proposed change to the previous statutory conclusion, there will be no impact to this interpretation as a result of adopting FAS 166.

g. *INT 01-31: Assets Pledged as Collateral* (INT 01-31) – This interpretation provides guidance on whether assets pledged as collateral shall be considered admitted assets. There is no impact to this interpretation conclusion from the adoption of FAS 166. (References to SSAP No. 91R will be replaced with references to the new SSAP.)

h. *INT 03-05: EITF 01-7: Creditor's Accounting for a Modification or Exchange of Debt Instruments* (INT 03-05) – This interpretation adopts the consensus position of EITF 01-7. This EITF clarifies that a debt instrument modification should be considered more than minor if the present value of the cash flows under the terms of the new debt instrument is at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument. This EITF also concludes that the guidance in EITF 96-19 (adopted within INT 99-14) should be used to calculate the present value of cash flows for purposes of applying the 10 percent test. There is no impact to this interpretation from the adoption of FAS 166.

i. *INT 04-21: EITF 02-9: Accounting for Changes that Result in a Transferor Regaining Control of Financial Assets Sold* (INT 04-21) – This interpretation adopts EITF 02-9 with modification for statutory terms and references. Pursuant to this adoption, a transferred asset that has been accounted for as sold is to be accounted for as "re-purchased" if the basis for that sale accounting subsequently becomes invalid. With the issuance of FAS 166, guidance in EITF 02-9 was updated to reflect the revised terminology in FAS 166 as well as delete the issue and conclusion pertaining to qualified special purpose entities as the concept of a QSPE is no longer captured within FAS 166. Although there is no impact to the statutory conclusion to adopt this EITF with modifications for statutory references, the guidance in INT 04-21 will be revised to reflect the revisions adopted from FAS 166.

j. *INT 09-08: Accounting for Loans Received under the Federal TALF Program* (INT 99-08). This interpretation provides statutory guidance on whether TALF loans received and the corresponding collateral provided by the reporting entity shall be reported net within the statutory financial statements. With the exception of updating references from SSAP No. 91R to the new SSAP, there is no anticipated change proposed to this interpretation.

SCOPE OF STATEMENT

5A. Transfers of financial assets take many forms. Accounting for transfers in which the transferor has no continuing involvement with the transferred financial assets or with the transferee are generally straightforward. However, transfers of financial assets often occur in which the transferor has some continuing involvement either with the assets transferred or with the transferee. Examples of continuing involvement include, but are not limited to, servicing arrangements, recourse or guarantee arrangements, agreements to purchase or redeem transferred financial assets, options written or held, derivative financial instruments that are entered into contemporaneously with, or in contemplation of the transfer, arrangements to provide financial support, pledges of collateral, and the transferor's beneficial interests in the transferred financial assets. Transfers of financial assets with continuing involvement raise issues about the circumstances under which the transfers should be considered as sales of all or part of the assets or as secured borrowings. An objective in accounting for transfers of financial assets is for each reporting entity that is a party to the transaction to recognize only assets it controls and liabilities it has incurred, to **derecognize** assets only when control has been surrendered, and to derecognize liabilities only when they have been extinguished. Sales and other transfers may frequently result in a disaggregation of financial assets and liabilities into components, which become separate assets and liabilities.

6. This issue paper focuses on the issues of accounting for **transfers**[1] and servicing of **financial assets** and extinguishments of liabilities. This issue paper establishes statutory accounting principles for transfers and servicing of financial assets, including asset **securitizations** and securitizations of policy acquisition costs, extinguishments of liabilities, repurchase agreements, repurchase financing and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This statement discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement. Securitizations of nonfinancial assets are outside the scope of this statement. Transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40—Real Estate Investments*. Additionally, retained beneficial interests from the sale of loan-backed or structured securities are to be accounted for in accordance with *SSAP No. 43R—Loan-Backed and Structured Securities, Revised.*

7. *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25) shall be followed for accounting and disclosure requirements for all related party transactions.

8. *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 91R) has been superseded by this statement.

9. This issue paper does not address the securitization of mortality or morbidity risk. The National Association of Insurance Commissioners' (NAIC's) Insurance Securitization Working Group of the Financial Condition (E) Committee is charged with the development of model laws, model regulations and proposed accounting guidance for the securitization of mortality and morbidity risk. When such proposed accounting guidance is finalized the development of an issue paper will be considered.

SUMMARY CONCLUSION

Accounting for Transfers and Servicing of Financial Assets

10. The objective of paragraph 12 and related implementation guidance is to determine whether a **transferor** has surrendered control over transferred financial assets. This determination must consider the transferor's **continuing involvement** in the transferred financial assets and requires the use of judgment that must consider all arrangements or agreements made contemporaneously with, or in contemplation of, the transfer, even if they were not entered into at the time of the transfer.

11. The requirements of paragraph 12 apply to transfers of an entire financial asset, transfers of a group of entire financial assets, and transfers of a **participating interest** in an entire financial asset (all of which are referred to collectively in this issue paper as transferred financial assets). A participating interest has all of the following characteristics:

a. From the date of the transfer, it represents a proportionate (pro rata) ownership interest in an entire financial asset. The percentage of ownership interests held by the transferor in the entire financial asset may vary over time, while the entire financial asset remains outstanding as long as the resulting portions held by the transferor (including any participating interest retained by the transferor or its **agents**) and the **transferee**(s) meet the other characteristics of a participating interest. For example, if the transferor's interest in an entire financial asset changes because it subsequently sells another interest in the entire financial asset, the interest held initially and subsequently by the transferor must meet the definition of a participating interest.

[1] Terms defined in the glossary to this issue paper are set in boldface type the first time they appear.

b. From the date of the transfer, all cash flows received from the entire financial asset are divided proportionately among the participating interest holders in an amount equal to their share of ownership. Cash flows allocated as compensation for services performed, if any, shall not be included in that determination provided those cash flows are not subordinate to the proportionate cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider, should one be required, which includes the profit that would be demanded in the marketplace. In addition, any cash flows received by the transferor as **proceeds** of the transfer of the participating interest shall be excluded from the determination of proportionate cash flows provided that the transfer does not result in the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows.

c. The rights of each participating interest holder (including the transferor in its role as a participating interest holder) have the same priority, and no participating interest holder's interest is subordinated to the interest of another participating interest holder. That priority does not change in the event of bankruptcy or other receivership of the transferor, the original debtor, or any other participating interest holder. Participating interest holders have no **recourse** to the transferor, its agents or to each other, other than **standard representations and warranties,** ongoing contractual obligations to service the entire financial asset and administer the transfer contract, and contractual obligations to share in any set-off benefits received by any participating interest holder. That is, no participating interest holder is entitled to receive cash before any other participating interest holder under its contractual rights as a participating interest holder. For example, if a participating interest holder also is the servicer of the entire financial asset and receives cash in its role as servicer, that arrangement would not violate this requirement.

d. No party has the right to pledge or exchange the entire financial asset unless all participating interest holders agree to pledge or exchange the entire financial asset.

If a transfer of a portion of an entire financial asset meets the definition of a participating interest, the transferor shall apply the guidance in paragraph 12. If a transfer of a portion of a financial asset does not meet the definition of a participating interest, the transferor and transferee shall account for the transfer in accordance with the guidance in paragraph 18 as a secured borrowing. However, if the transferor transfers an entire financial asset in portions that do not individually meet the participating interest definition, paragraph 12 shall be applied to the entire financial asset once all portions have been transferred.

12. A transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset in which the transferor surrenders control over those financial assets shall be accounted for as a sale if, and only if, all of the following conditions are met:

a. The transferred financial assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership. Transferred financial assets are isolated in bankruptcy or other receivership only if the transferred financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor.

b. Each transferee (or, if the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing activities and that entity is constrained from pledging or exchanging the assets it receives, each third-party holder of its **beneficial interests**) has the right to pledge or exchange the assets (or beneficial interests) it received, and no condition both constrains the transferee (or third-party holder of its beneficial interests) from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor (paragraphs 46-49).

c. The transferor or its agents do not maintain effective control over the transferred financial assets or third-party beneficial interests related to those transferred assets (paragraph 53). Examples of a transferor's effective control over the transferred financial assets include, but are not limited to (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 54-56), (2) an agreement that provides the transferor with both the **unilateral ability** to cause the holder to return specific financial assets and a more-than-trivial benefit attributable to that ability, other than through a **cleanup call** (paragraphs 57-61), or (3) an agreement that permits the transferee to require the transferor to repurchase the transferred financial assets at a price that is so favorable to the transferee that it is probable that the transferee will require the transferor to repurchase them (paragraph 62).

Accounting for Transfers of Participating Interests

13. Upon completion of a transfer of a participating interest that satisfies the conditions to be accounted for as a sale (paragraph 12), the transferor (**seller**) shall:

a. Allocate the previous carrying amount of the entire financial asset between the participating interests sold and the participating interest that continues to be held by the transferor on the basis of their relative fair values at the date of the transfer (paragraph 65).

b. **Derecognize** the participating interest(s) sold.

c. Recognize and initially measure at fair value **servicing assets**, **servicing liabilities**, and any other assets obtained and liabilities incurred in the sale (such as cash) (paragraphs 66-70).

d. Recognize in earnings any gain or loss on the sale.

e. Report any participating interest or interests that continue to be held by the transferor as the difference between the previous carrying amount of the entire financial asset and the amount derecognized.

The transferee shall recognize the participating interest(s) obtained, other assets obtained, and any liabilities incurred and initially measure them at fair value.

14. Upon completion of a transfer of participating interests that does not satisfy the conditions to be accounted for as a sale, the guidance in paragraph 18 shall be applied.

Accounting for Transfers of an Entire Financial Asset or Group of Entire Financial Assets

15. Upon completion of a transfer of an entire financial assets or a group of entire financial assets that satisfies the conditions to be accounted for as a sale (see paragraph 12), the transferor (seller) shall:

a. Derecognize the transferred financial assets;

b. Recognize and initially measure at fair value servicing assets, servicing liabilities, and any other assets obtained (including a transferor's beneficial interest in the transferred financial assets) and liabilities incurred[2] in the sale (paragraphs 64 and 66-70).

[2] Some assets that might be obtained and liabilities that might be incurred include cash, put or call options that are held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional

c. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized and unrealized capital gains and losses shall be determined per the guidance in the SSAP for the specific type of investment (e.g., SSAP No. 43R for loan-backed and structured securities), or if not specifically stated in the related SSAP, in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized capital gains and losses shall be reported as net realized capital gains or losses in the statement of income, and unrealized capital gains and losses shall be reported as net unrealized gains and losses in unassigned funds (surplus).

The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value.

16. Repurchase agreements, reverse repurchase agreements, repurchase financing, **collateral** requirements and dollar repurchase agreements are described in paragraphs 97-113. When an asset is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales and shall be accounted for as sales as discussed in paragraphs 91-96 and disclosed as required by paragraph 31. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred financial assets.

17. Upon completion of a transfer of an entire financial asset or a group of entire financial assets that does not satisfy the conditions to be accounted for as a sale in its entirety, the guidance in paragraph 18 shall be applied.

Secured Borrowing

18. If a transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset does not meet the conditions for a sale in paragraph 12, or if a transfer of a portion of an entire financial asset does not meet the definition of a participating interest (paragraph 11), the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (paragraph 23). The transferor shall continue to report the transferred financial assets in its statement of financial position with no change in their measurement (that is, basis of accounting).

Recognition and Measurement of Servicing Assets and Liabilities

19. An entity shall recognize and initially measure at fair value, a servicing asset or servicing liability each time it undertakes an obligation to service a financial asset by entering into a servicing contract in either of the following situations:

a. A servicer's transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset that meets the requirements for sale accounting; or

b. An acquisition or assumption of a servicing obligation that does not relate to financial assets of the servicer.

An entity that transfers its financial assets to an entity in a transfer that qualifies as a sale in which the transferor obtains the resulting securities and classifies them as debt securities shall separately recognize its servicing assets or servicing liabilities.

receivables during the revolving periods of some securitizations) and swaps (for example, provisions that convert interest rates from fixed to variable).

20. A servicer that transfers or securitizes financial assets in a transaction that does not meet the requirements for sale accounting and is accounted for as a secured borrowing with the underlying assets remaining on the transferor's balance sheet shall not be recognized as a servicing asset or servicing liability.

21. If distinct servicing rights exist in accordance with the above guidelines, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations in other income. Servicing assets or liabilities shall be measured subsequently at fair value at each reporting date with fluctuations in fair value reported as unrealized gains and losses. Declines in fair value which are determined to be other than temporary shall be recorded as realized losses.

Financial Assets Subject to Prepayment

22. Financial assets, except for instruments that are within the scope of SSAP No. 86, that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment shall be subsequently measured like investments in debt securities and loan-backed and structured securities in accordance with SSAP No. 43R. Examples of such financial assets include, but are not limited to, **interest-only strips**, other beneficial interests, loans, or other receivables.

Secured Borrowings and Collateral

23. A debtor may grant a **security interest** in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (paragraph 18 secured borrowing). The accounting for noncash[3] collateral by the debtor (or obligor) and the secured party depends on whether the secured party or its agent has the right to sell or repledge the collateral and on whether the debtor has defaulted.

a. If the secured party (transferee) or its agent has the right by contract or custom to sell or repledge the collateral, then the debtor (transferor) shall report that asset in its balance sheet.

b. If the secured party (transferee) sells collateral pledged to it, it shall recognize the proceeds from the sale and its obligation to return the collateral. The sale of the collateral is a transfer subject to the provisions of this issue paper.

c. If the debtor (transferor) defaults under the terms of the secured contract and is no longer entitled to redeem the pledged asset, it shall derecognize the pledged asset, and the secured party (transferee) shall recognize the collateral as its asset initially measured at fair value or, if it has already sold the collateral, derecognize its obligation to return the collateral.

[3] Cash "collateral," sometimes used, for example, in securities lending transactions, shall be derecognized by the payer and recognized by the recipient, not as collateral, but rather as proceeds of either a sale or a borrowing.

d. Except as provided in paragraph 23.c., the debtor (transferor) shall continue to carry the collateral as its asset, and the secured party (transferee) shall not recognize the pledged asset.

24. Reporting entities may enter into certain transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract. If the assets pledged are recorded as admitted assets under *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) and are not impaired under the provisions of *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5), the pledging entity records the collateral as an admitted asset until committing a contract default that has not been cured in accordance with the contract provisions. At the time of an uncured default, the provisions of paragraph 23 above shall be used to determine the appropriate accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of the liability owed by the pledging entity as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset shall be removed from the balance sheet since that obligation has been satisfied through the secured party's utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer shall only record an admitted asset for the amount of collateral that it can redeem.

Extinguishments of Liabilities

25. A debtor shall derecognize a liability if and only if it has been extinguished (see *SSAP No. 15—Debt and Holding Company Obligations* (SSAP No. 15)). A liability has been extinguished if either of the following conditions is met:

a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities whether the securities are canceled or held as so-called treasury bonds; or

b. The debtor is legally released[4] from being the primary obligor under the liability, either judicially or by the creditor.

Disclosures

26. The principal objectives of the disclosures required by this issue paper are to provide users of the financial statements with an understanding of all of the following:

a. A transferor's continuing involvement (as defined in the glossary of this issue paper), if any, with transferred financial assets.

b. The nature of any restrictions on assets reported by an entity in its statement of financial position that relate to a transferred financial asset, including the carrying amounts of those assets.

c. How servicing assets and servicing liabilities are reported under this issue paper.

d. For transfers accounted for as sales when a transferor has continuing involvement with the transferred financial assets and for transfers of financial assets accounted for as

[4] If nonrecourse debt (such as certain mortgage loans) is assumed by a third party in conjunction with the sale of an asset that serves as sole collateral for that debt, the sale and related assumption effectively accomplish a legal release of the seller-debtor for purposes of applying this statement.

secured borrowings, how the transfer of financial assets affects a transferor's financial position, financial performance, and cash flows.

Those objectives apply regardless of whether this issue paper requires specific disclosures. The specific disclosures required by this issue paper are minimum requirements and an entity may need to supplement the required disclosures specified in paragraph 31 depending on the facts and circumstances of a transfer, the nature of an entity's continuing involvement with the transferred financial assets, and the effect of an entity's continuing involvement on the transferor's financial position, financial performance, and cash flows. Disclosures required by other Statement of Statutory Accounting Principles (SSAPs) for a particular form of continuing involvement shall be considered when determining whether the disclosure objectives of this issue paper have been met.

27. Disclosures required by this issue paper may be reported in the aggregate for similar transfers if separate reporting of each transfer would not provide more useful information to financial statement users. A transferor shall disclose how similar transfers are aggregated. A transferor shall distinguish transfers that are accounted for as sales from transfers that are accounted for as secured borrowings. In determining whether to aggregate the disclosures for multiple transfers, the reporting entity shall consider quantitative and qualitative information about the characteristics of the transferred financial assets. For example, consideration should be given, but not limited, to the following:

a. The nature of the transferor's continuing involvement.

b. The types of financial assets transferred.

c. Risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the change in the transferor's risk profile as a result of the transfer.

28. The disclosures shall be presented in a manner that clearly and fully explains to financial statement users the transferor's risk exposure related to the transferred financial assets and any restrictions on the assets of the entity. An entity shall determine, in light of the facts and circumstances, how much detail it must provide to satisfy the disclosure requirements of this issue paper and how it aggregates information for assets with different risk characteristics. The entity must strike a balance between obscuring important information as a result of too much aggregation and excessive detail that may not assist financial statement users to understand the entity's financial position. For example, an entity shall not obscure important information by including it with a large amount of insignificant detail. Similarly, an entity shall not disclose information that is so aggregated that it obscures important differences between the different types of involvement or associated risks.

29. The disclosures in paragraph 31.f. of this issue paper apply to transfers accounted for as sales when the transferor has continuing involvement with transferred financial assets as a result of a securitization, asset-backed financing arrangement, or a similar transfer. If specific disclosures are required for a particular form of the transferor's continuing involvement by other SSAPs, the transferor shall provide the information required in paragraphs 31.f.i.(a) and 31.f.ii.(a) of this issue paper with a cross-reference to the separate notes to financial statements so a financial statement user can understand the risks retained in the transfer. The entity need not provide each specific disclosure required in paragraphs 31.f.i.(b), 31.f.ii.(a)(1)–(4), and 31.f.ii.(b)–(e) if the disclosure is not required by other SSAPs and the objectives of paragraph 26 are met. For example, if the transferor's only form of continuing involvement is a derivative, the entity shall provide the disclosures required in paragraphs 31.f.i.(a) and 31.f.ii.(a) of this issue paper and the disclosures about derivatives required by applicable SSAPs. In addition, the entity would evaluate whether the other disclosures in paragraph 31.f. are necessary for the entity to meet the objectives in paragraph 26.

30. To apply the disclosures in paragraph 31, an entity shall consider all involvements by the transferor or its agents to be involvements by the transferor.

31. A reporting entity shall disclose the following:

a. For collateral:

i. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security and the fair value of the loaned security;

ii. If the entity has pledged any of its assets as collateral that are not reclassified and separately reported in the statement of financial position pursuant to paragraph 23. a, the carrying amounts and classifications of both those assets and associated liabilities as of the date of the latest statement of financial position presented, including qualitative information about the relationship(s) between those assets and associated liabilities. For example, if assets are restricted solely to satisfy a specific obligation, the carrying amounts of those assets and associated liabilities, including a description of the nature of restrictions placed on the assets, shall be disclosed.

iii. If the entity or its agent has accepted collateral that it is permitted by contract or custom to sell or repledge, the fair value as of the date of each statement of financial position presented of that collateral and of the portion of that collateral that it has sold or repledged, and information about the sources and uses of that collateral. Additionally, the reporting entity shall disclose the aggregate amount of contractually obligated open collateral positions (aggregate amount of securities at current fair value or cash received for which the borrower may request the return of on demand) and the aggregate amount of contractually obligated collateral positions under 30-day, 60-day, 90-day, and greater than 90-day terms.

iv. If the entity has accepted collateral that it is not permitted by contract or custom to sell or repledge, provide detail on these transactions, including the terms of the contract, and the current fair value of the collateral.

v. For all securities lending transactions, disclose collateral for transactions that extend beyond one year from the reporting date; and

vi. For securities lending transactions administered by an affiliated agent in which "one-line" reporting (per paragraph 87.a.) of the reinvested collateral per paragraph 87.c. is optional, at the discretion of the reporting entity, disclose the aggregate value of the reinvested collateral which is "one line" reported and the aggregate value of items which are reported in the investment schedules (per paragraph 87.b.). Identify the rational between the items which are one line reported and those that are investment schedule reported and if the treatment has changed from the prior period and

vii. For securities lending transactions, include separately, the amount of any loaned securities within the separate account and if the policy and procedures for the separate account differ from the general account.

b. The reporting entity shall provide the following information by type of program (repurchase agreement, securities lending or dollar repurchase agreement) with respect to the reinvestment of the cash collateral and any securities which it or its agent receives as collateral that can be sold or repledged.

i. The aggregate amount of the reinvested cash collateral (amortized cost and fair value). Reinvested cash collateral shall be broken down by the maturity date of the invested asset – under 30-day, 60-day, 90-day, 120-day, 180-day, less than 1year, 1-2 years, 2-3 years and greater than 3 years.

ii. To the extent that the maturity dates of the liability (collateral to be returned) does not match the invested assets, the reporting entity shall explain the additional sources of liquidity to manage those mismatches.

c. For in-substance defeasance of debt

i. If debt was considered to be extinguished by in-substance defeasance, a general description of the transaction and the amount of debt that is considered extinguished at the end of each the period so long as that debt remains outstanding.

d. For all servicing assets and servicing liabilities:

i. A description of the risks inherent in servicing assets and servicing liabilities and, if applicable, the instruments used to mitigate the income statement effect of changes in fair value to the servicing assets and servicing liabilities. (Disclosure of quantitative information about the instruments used to manage the risks inherent in servicing assets and servicing liabilities is encouraged but not required.)

ii. The amount of contractually specified servicing fees, late fees and ancillary fees earned for each period for which results of operations are presented, including a description of where each amount is reported in the statement of income.

iii. Quantitative and qualitative information about the assumptions used to estimate the fair value (for example, discount rates, anticipated credit losses, and prepayment speeds). (An entity that provides quantitative information about the instruments used to manage the risks inherent in the servicing assets and servicing liabilities, as encouraged by paragraph 31.d.i., also is encouraged, but not required to disclose the quantitative and qualitative information about the assumptions used to estimate the fair value of those instruments.

e. When servicing assets and servicing liabilities are subsequently measured at fair value:

i. For each class of servicing assets and servicing liabilities, the activity in the balance of servicing assets and the activity in the balance of servicing liabilities (including a description of where changes in fair value are reported in the statement of income for each period for which results of operations are presented), including, but not limited to, the following:

(a) The beginning and ending balances

(b) Additions (through purchases of servicing assets, assumptions of servicing obligations, and recognition of servicing obligations that result from transfers of financial assets)

(c) Disposals

(d) Changes in fair value during the period resulting from (i) changes in valuation inputs or assumptions used in the valuation model and (ii) other changes in fair value and a description of those changes

(e) Other changes that affect the balance and a description of those changes.

f. For securitizations, asset-backed financing arrangements, and similar transfers accounted for as sales when the transferor has continuing involvement (as defined in the glossary) with the transferred financial assets:

i. For each income statement presented:

(a) The characteristics of the transfer (including a description of the transferor's continuing involvement with the transferred financial assets, the nature and initial fair value of the assets obtained as proceeds and the liabilities incurred in the transfer, and the gain or loss from sale of transferred financial assets. For initial fair value measurements of assets obtained and liabilities incurred in the transfer, the following information:

(1) The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

(2) The key inputs and assumptions[5] used in measuring the fair value of assets obtained and liabilities incurred as a result of the sale that relate to the transferor's continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable[6] financial assets, and anticipated credit losses, including expected static pool losses[7])[8]

(b) Cash flows between a transferor and transferee, including proceeds from new transfers, proceeds from collections reinvested in revolving-period transfers, purchases of previously transferred financial assets, servicing fees, and cash flows received from a transferor's beneficial interests.

[5] If an entity has aggregated multiple transfers during a period in accordance with paragraphs 27 and 28, it may disclose the range of assumptions.

[6] The weighted-average life of prepayable assets in periods (for example, months or years) can be calculated by multiplying the principal collections expected in each future period by the number of periods until that future period, summing those products, and dividing the sum by the initial principal balance.

[7] Expected static pool losses can be calculated by summing the actual and projected future credit losses and dividing the sum by the original balance of the pool of assets.

[8] The timing and amount of future cash flows for transferor's interests in transferred financial assets are commonly uncertain, especially if those interests are subordinate to more senior beneficial interests. Thus, estimates of future cash flows used for a fair value measurement depend heavily on assumptions about default and prepayment of all the financial assets transferred, because of the implicit credit or prepayment risk enhancement arising from the subordination.

ii. For each statement of financial position presented, regardless of when the transfer occurred:

(a) Qualitative and quantitative information about the transferor's continuing involvement with transferred financial assets that provides financial statement users with sufficient information to assess the reasons for the continuing involvement and the risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the extent that the transferor's risk profile has changed as a result of the transfer (including, but not limited to, credit risk, interest rate risk, and other risks), including:

(1) The total principal amount outstanding, the amount that has been derecognized, and the amount that continues to be recognized in the statement of financial position.

(2) The terms of any arrangements that could require the transferor to provide financial support (for example, liquidity arrangements and obligations to purchase assets) to the transferee or its beneficial interest holders, including a description of any events or circumstances that could expose the transferor to loss and the amount of the maximum exposure to loss.

(3) Whether the transferor has provided financial or other support during the periods presented that it was not previously contractually required to provide to the transferee or its beneficial interest holders, including when the transferor assisted the transferee or its beneficial interest holders in obtaining support, including:

(i.) The type and amount of support

(ii.) The primary reasons for providing the support

(4) Information is encouraged about any liquidity arrangements, guarantees, and/or other commitments provided by third parties related to the transferred financial assets that may affect the transferor's exposure to loss or risk of the related transferor's interest.

(b) The entity's accounting policies for subsequently measuring assets and liabilities that relate to the continuing involvement with the transferred financial assets;

(c) The key inputs and assumptions used in measuring the fair value of assets or liabilities that relate to the transferor's continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses);

(d) For the transferor's interests in the transferred financial assets, a sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests (including any servicing assets or servicing liabilities) of two or more unfavorable variations from the expected levels for each key assumption that is reported under paragraph 31.f.ii.(c) above independently from any change in another key assumption, and a description of the objectives, methodology, and limitations of the sensitivity analysis or stress test

(e) Information about the asset quality of transferred financial assets and any other assets that it manages together with them. This information shall be separated between assets that have been derecognized and assets that continue to be recognized in the statement of financial position. This information is intended to provide financial statement users with an understanding of the risks inherent in the transferred financial assets as well as in other assets and liabilities that it manages together with transferred financial assets. For example, information for receivables shall include, but is not limited to:

(i) Delinquencies at the end of the period; and

(ii) Credit losses, net of recoveries, during the period.

g. Disclosure requirements for transfers of financial assets accounted for as secured borrowing:

i. The carrying amounts and classifications of both assets and associated liabilities recognized in the transferor's statement of financial position at the end of each period presented, including qualitative information about the relationship(s) between those assets and associated liabilities. For example, if assets are restricted solely to satisfy a specific obligation, the carrying amounts of those assets and associated liabilities, including a description of the nature of restrictions placed on the assets.

h. Description of any loaned securities, including the amount, a description of, and the policy for, requiring collateral, and whether or not the collateral is restricted;

i. A description of the securities underlying repurchase and reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements, including book values and fair values, maturities, and weighted average interest rates for the following categories: (i) securities subject to reverse repurchase agreements; (ii) securities subject to repurchase agreements; (iii) securities subject to dollar repurchase agreements; and (iv) securities subject to dollar reverse repurchase agreements; and

j. A description of the terms of reverse repurchase agreements whose amounts are included in borrowed money.

k. Disclose any transfers of receivables with recourse.

l. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 16, involving transactions for securities with a NAIC designation of 3 or below, or unrated:

i. A description of the reporting entity's objectives regarding these transactions;

ii. An aggregation of transactions by NAIC designation 3 or below, or unrated;

iii. The number of transactions involved during the reporting period;

iv. The book value of securities sold;

v. The cost of securities repurchased; and

vi. The realized gains/losses associated with the securities involved.

32. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures required by paragraph 31 shall be made for the current quarter in the quarterly statement and for the year in the annual statement.

Appendix A – Implementation Guidance

33. This appendix describes certain provisions of this issue paper in more detail and describes how they apply to certain types of transactions. This appendix discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this issue paper. This appendix is an integral part of the standards provided in this issue paper.

34. Paragraph 10 of this issue paper states that the objective of paragraph 12 and related implementation guidance is to determine whether a transferor has surrendered control over transferred financial assets.

Unit of Account

35. Paragraph 11 establishes the unit of account to which the sale accounting conditions in paragraph 12 shall be applied. Paragraph 11 states that paragraph 12 shall be applied to transfers of an entire financial asset, transfers of a group of entire financial assets, and transfers of a participating interest in an entire financial asset. Inherent in that principle is that to be eligible for sale accounting an entire financial asset cannot be divided into components before a transfer unless all of the components meet the definition of a participating interest.

36. The legal form of the asset and what the asset conveys to its holders shall be considered in determining what constitutes an entire financial asset. The following examples illustrate the application of what constitutes an entire financial asset:

a. A loan to one borrower in accordance with a single contract that is transferred to a securitization entity before securitization shall be considered an entire financial asset. Similarly, a beneficial interest in securitized financial assets after the securitization process has been completed shall be considered an entire financial asset. In contrast, a transferred interest in an individual loan shall not be considered an entire financial asset; however, if the transferred interest meets the definition of a participating interest, the participating interest would be eligible for sale accounting.

b. In a transaction in which the transferor creates an interest-only strip from a loan and transfers the interest-only strip, the interest-only strip does not meet the definition of an entire financial asset (and an interest-only strip does not meet the definition of a participating interest; therefore, sale accounting would be precluded). In contrast, if an entire financial asset is transferred to a securitization entity and the transfer meets the conditions for sale accounting, the transferor may obtain an interest-only strip as proceeds from the sale. An interest-only strip received as proceeds of a sale is an entire financial asset for purposes of evaluating any future transfers that could then be eligible for sale accounting.

c. If multiple advances are made to one borrower in accordance with a single contract (such as a line of credit, credit card loan, or a construction loan), an advance on that contract would be a separate unit of account if the advance retains its identity, does not become part of a larger loan balance, and is transferred in its entirety. However, if the transferor transfers an advance in its entirety and the advance loses its identity and becomes part of a larger loan balance, the transfer would be eligible for sale accounting only if the transfer of the advance does not result in the transferor retaining any interest in the larger balance or if the transfer results in the transferor's interest in the larger balance meeting the definition of a participating interest. Similarly, if the transferor transfers an interest in an advance that has lost its identity, the interest must be a participating interest in the larger balance to be eligible for sale accounting.

Participating Interests in an Entire Financial Asset

37. Paragraph 11.b. requires that all cash flows received from the entire financial asset be divided among the participating interest holders (including any interest retained by the transferor or its agents) in proportion to their share of ownership. That is, the participating interest definition does not allow for the allocation of specified cash flows unless each cash flow is proportionately allocated to the participating interest holders. For example, in the case of an individual loan in which the borrower is required to make a contractual payment that consists of a principal amount and interest amount on the loan, the transferor and transferee shall share in the principal and interest payments on the basis of their proportionate ownership interest in the loan. In contrast, if the transferor is entitled to receive an amount that represents the principal payments and the transferee is entitled to receive an amount that represents the interest payments on the loan, that arrangement would not be consistent with the participating interest definition because the transferor and transferee do not share proportionately in the cash flows received from the loan. In other cases, a transferor may transfer a portion of an individual loan that represents either a senior interest or a junior interest in an individual loan. In both of those cases, the transferor would account for the transfer as a secured borrowing because the senior interest or junior interest in the loan do not meet the requirements to be participating interests (see paragraph 41).

38. Paragraph 11.b. states that cash flows allocated as compensation for services performed, if any, shall not be included in that determination provided that those cash flows are not subordinate to the proportionate cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider, should one be required, including any profit that would be demanded in the marketplace. Cash flows allocated as compensation for services performed that are significantly above an amount that would fairly compensate a substitute service provider would result in a disproportionate division of cash flows of the entire financial asset among the participating interest holders and, therefore, would preclude the portion of a transferred financial asset from meeting the definition of a participating interest. Examples of cash flows that are compensation for services performed include loan origination fees paid by the borrower to the transferor, fees necessary to arrange and complete the transfer paid by the transferee to the transferor, and fees for servicing the financial asset.

39. The transfer of a portion of an entire financial asset may result in a gain or loss on the transfer when the contractual interest rate on the entire financial asset differs from the market rate at the time of transfer. Paragraph 11.b. states that any cash flows received by the transferor as proceeds of a transfer of a participating interest shall be excluded from the determination of whether the cash flows of the participating interest are proportionate provided that the transfer does not result in the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows. For example, if the transferor transfers an interest in an entire financial asset and the transferee agrees to incorporate the excess interest (between the contractual interest rate on the financial asset and the market interest rate at the date of transfer) into the contractually specified servicing fee, the excess interest would likely result in the conveyance of an interest-only strip to the transferor from the transferee. An interest-only strip would result in a disproportionate division of cash flows of the financial asset among the

participating interest holders and would preclude the portion from meeting the definition of a participating interest.

40. Paragraph 11.c. requires that the rights of each participating interest holder (including the transferor in its role as participating interest holder) have the same priority and that no participating interest holder's interest is subordinated to the interest of another participating interest holder. In certain transfers, recourse is provided to the transferee that requires the transferor to reimburse any premium paid by the transferee if the underlying financial asset is prepaid within a defined timeframe of the transfer date. Such recourse would preclude the transferred portion from meeting the definition of a participating interest. However, once the recourse provision expires, the transferred portion shall be reevaluated to determine if it meets the participating interest definition.

41. Paragraph 11.c. also requires that participating interest holders have no recourse to the transferor (or its agents) or to each other, other than standard representations and warranties, ongoing contractual obligations to service the entire financial asset and administer the transfer contract, and contractual obligations to share in any set-off benefits. Recourse in the form of an independent third-party guarantee shall be excluded from the evaluation of whether the participating interest definition is met. Similarly, cash flows allocated to a third-party guarantor for the guarantee fee shall be excluded from the determination of whether the cash flows are divided proportionately among the participating interest holders.

Isolation Beyond the Reach of the Transferor and Its Creditors

42. The nature and extent of supporting evidence required for an assertion in financial statements that an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset (which are referred to collectively in this issue paper as transferred financial assets) have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered, including whether the contract or circumstances permit the transferor to revoke the transfer. It also may include consideration of the legal consequences of the transfer in the jurisdiction in which bankruptcy or other receivership would take place, whether a transfer of financial assets would likely be deemed a true sale at law (as described in paragraph 43) or otherwise isolated (as described in paragraph 44), whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred financial assets is appropriate only if the available evidence provides reasonable assurance that the transferred financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor and its creditors (paragraph 78.c.). Transactions between related parties or affiliates are accounted for in accordance with SSAP No. 25.

43. In the context of U.S. bankruptcy laws, a true sale opinion from an attorney is often required to support a conclusion that transferred financial assets are isolated from the transferor, and its creditors. In addition, a nonconsolidation opinion is often required if the transfer is to an affiliated entity. In the context of U.S. bankruptcy laws:

a. A true sale opinion is an attorney's conclusion that the transferred financial assets have been sold and are beyond the reach of the transferor's creditors and that a court would conclude that the transferred financial assets would not be included in the transferor's bankruptcy estate.

b. A nonconsolidation opinion is an attorney's conclusion that a court would recognize that an entity holding the transferred financial assets exists separately from the transferor. Additionally, a nonconsolidation opinion is an attorney's conclusion that a court would not order the substantive consolidation of the assets and liabilities of the entity holding the transferred financial assets and the assets and liabilities of the transferor in the event of the transferor's bankruptcy or receivership.

A legal opinion may not be required if a transferor has a reasonable basis to conclude that the appropriate legal opinion(s) would be given if requested. For example, the transferor might reach a conclusion without consulting an attorney if (1) the transfer is a routine transfer of financial assets that does not result in any continuing involvement by the transferor or (2) the transferor had experience with other transfers with similar facts and circumstances under the same applicable laws and regulations.

44. For insurers that are subject to conservatorship, or other receivership procedures, judgments about whether transferred financial assets have been isolated need to be made in relation to the powers of conservators or receivers in those jurisdictions.

45. Whether securitizations isolate transferred financial assets may depend on such factors as whether the securitization is accomplished in one step or multiple step transfers (paragraphs 75-80). Some common financial transactions, for example, typical repurchase agreements and securities lending transactions, may isolate transferred financial assets from the transferor, although they may not meet the other conditions for surrender of control (paragraph 12).

Conditions That Constrain a Transferee

46. Sale accounting is allowed under paragraph 12.b. only if each transferee (or, if the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing arrangements and that entity is constrained from pledging or exchanging the assets it receives, each third-party holder of its beneficial interests) has the right to pledge or exchange the assets or beneficial interests it received, and no condition both constrains the transferee (or third-party holder of its beneficial interests) from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor. Many transferor-imposed or other conditions on a transferee's right to pledge or exchange both constrain a transferee from pledging or exchanging and, through that constraint, provide more than a trivial benefit to the transferor. Judgment is required to assess whether a particular condition results in a constraint. Judgment also is required to assess whether a constraint provides a more-than-trivial benefit to the transferor. If the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing activities, that entity may be constrained from pledging or exchanging the transferred financial assets to protect the rights of beneficial interest holders in the financial assets of the entity. Paragraph 12.b. requires that the transferor look through the constrained entity to determine whether each third-party holder of its beneficial interests has the right to pledge or exchange the beneficial interests that it holds. The considerations in paragraphs 47-50 apply to the transferee or the third-party holders of its beneficial interests in an entity that is constrained from pledging or exchanging the assets it receives and whose sole purpose is to engage in securitization or asset-backed financing activities

47. Some conditions may constrain a transferee from pledging or exchanging the financial asset and may provide the transferor with more than a trivial benefit. For example, a provision that prohibits selling or pledging a transferred loan receivable not only constrains the transferee but also provides the transferor with the more-than-trivial benefit of knowing who holds the financial asset (a prerequisite to repurchasing the financial asset) and of being able to block the financial asset from being transferred to a competitor for the loan customer's business. Transferor-imposed contractual constraints that narrowly limit timing or terms, for example, allowing a transferee to pledge only on the day assets are obtained or only on terms agreed to with the transferor, also constrain the transferee and presumptively provide the transferor with more-than-trivial benefits. In some circumstances in which the transferor has no continuing involvement with the transferred financial assets, some conditions may constrain a transferee from pledging or exchanging the financial assets. If the transferor and its agents have no continuing involvement with the transferred financial assets, the condition under paragraph 12.b. is met. For example, if a transferor receives only cash in return for the transferred financial assets and the transferor and its agents have no continuing involvement with the transferred financial assets, sale accounting is allowed under paragraph

12.b. even if the transferee entity is significantly limited in its ability to pledge or exchange the transferred assets.

48. However, some conditions may not constrain a transferee from pledging or exchanging the transferred financial asset. For example, a transferor's right of first refusal on the occurrence of a bona fide offer to the transferee from a third party presumptively would not constrain a transferee. This is because the right in itself does not enable the transferor to compel the transferee to sell the financial asset and the transferee would be in a position to receive the sum offered by exchanging the financial asset, albeit possibly from the transferor rather than the third party. Further examples of conditions that presumptively would not constrain a transferee for purposes of this issue paper include (a) a requirement to obtain the transferor's permission to sell or pledge that is not to be unreasonably withheld, (b) a prohibition on sale to the transferor's competitor if other potential willing buyers exist, (c) a regulatory limitation such as on the number or nature of eligible transferees (as in the case of securities issued under Securities Act Rule 144A or debt placed privately), and (d) illiquidity, for example, the absence of an active market. However, judgment is required to assess the significance of some conditions. For example, a prohibition on sale to the transferor's competitor would be a constraint if that competitor were the only potential willing buyer other than the transferor.

49. A condition imposed by a transferor that constrains the transferee presumptively provides more than a trivial benefit to the transferor. A condition not imposed by the transferor that constrains the transferee may or may not provide more than a trivial benefit to the transferor. For example, if the transferor refrains from imposing its usual contractual constraint on a specific transfer because it knows an equivalent constraint is already imposed on the transferee by a third party, it presumptively benefits more than trivially from that constraint. However, the transferor cannot benefit from a constraint if it is unaware at the time of the transfer that the transferee is constrained.

Transferor's Rights or Obligations to Reacquire Transferred Assets or Beneficial Interests

50. Some rights or obligations to reacquire transferred financial assets or beneficial interests both constrain the transferee and provide more than a trivial benefit to the transferor, thus precluding sale accounting under paragraph 12.b.. A **freestanding call** option written by a transferee to the transferor may benefit the transferor and, if the transferred financial assets are not readily obtainable in the marketplace, is likely to constrain a transferee because the transferee might have to default if the call was exercised and the transferee had pledged or exchanged the financial assets. For example, if a transferor in a securitization transaction has a call option to repurchase third-party beneficial interests at the price paid plus a stated return, that arrangement conveys more than a trivial benefit to the transferor (paragraphs 57 and 58). If the third-party holders of its beneficial interests are constrained from pledging or exchanging their beneficial interests due to that call option, the transferor would be precluded from accounting for the transfer of financial assets to the securitization entity as a sale. Similarly, a freestanding forward purchase-sale contract between the transferor and the transferee on transferred financial assets not readily obtainable in the marketplace would benefit the transferor and is likely to constrain a transferee in much the same manner. Alternatively, freestanding rights to reacquire transferred assets that are readily obtainable presumptively do not constrain the transferee from pledging or exchanging them and thus do not preclude sale accounting under paragraph 12.b.

51. Other rights or obligations to reacquire transferred financial assets, regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred financial assets, as discussed in paragraphs 53-62, thus precluding sale accounting under paragraph 12.c. For example, an **attached call** in itself would not constrain a transferee who is able, by exchanging or pledging the asset subject to that call, to obtain substantially all of its economic benefits. However, an attached call could result in the transferor's maintaining effective control over the transferred asset(s) because the attached call gives the transferor the unilateral ability to cause whoever holds that specific asset to return it.

52. The concept of qualified special-purpose entities (QSPEs) was previously included within SSAP No. 91R. With the issuance of this issue paper, this concept is no longer included within statutory accounting guidance. Although this concept has been eliminated and is no longer a factor in determining whether a transfer of assets qualifies for sale accounting, reporting entities may continue to form, conduct transfers between, or have investments in trusts or other such legal vehicles that may have previously met the conditions to be considered a QSPE. Accounting for transfers of assets between the insurer and such trusts or other legal vehicles, including whether such transfers qualify for sale accounting, are subject to the provisions of this issue paper. As noted within paragraph 7, SSAP No. 25 shall be followed for accounting and disclosure requirements for all related party transactions.

Effective Control Over Transferred Financial Assets or Beneficial Interests

53. Judgment is required to assess whether the transferor maintains effective control over transferred financial assets or third-party beneficial interests. The transferor must evaluate whether a combination of multiple arrangements maintains effective control of transferred financial assets. When the transferee issues beneficial interests in the transferred financial assets, the evaluation of whether the transferor maintains effective control over the transferred financial assets also shall consider whether the transferor maintains effective control over the transferred financial assets through its control over the third-party beneficial interests. To assess whether the transferor maintains effective control over the transferred financial assets, all continuing involvement by the transferor or its agents shall be considered continuing involvement by the transferor. When assessing effective control, the transferor only considers the involvements of an agent when the agent acts for and on behalf of the transferor. In other words, if the transferor and transferee have the same agent, the agent's activities on behalf of the transferee would not be considered in the transferor's evaluation of whether it has effective control over a transferred financial asset. For example, an investment manager may act as a fiduciary (agent) for both the transferor and the transferee; therefore, the transferor need only consider the involvements of the investment manager when it is acting on its behalf.

Agreement to Repurchase or Redeem Transferred Financial Assets

54. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred financial assets from the transferee maintains the transferor's effective control over those assets as described in paragraph 12.c.(1) when all of the following conditions are met:

a. The financial assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 56).

b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 56).

c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price.

d. The agreement is entered into contemporaneously with, or in contemplation of, the transfer.

55. To be substantially the same, the financial asset that was transferred and the financial asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same);

b. Identical form and type so as to provide the same risks and rights;

c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities similar remaining weighted-average maturities that result in approximately the same market yield);

d. Identical contractual interest rates;

e. Similar assets as collateral; and

f. The same aggregate unpaid principal amount or principal amounts within accepted “good delivery" standards for the type of security involved.

56. To be able to repurchase or redeem financial assets on substantially all of the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement financial assets from others.

Unilateral Ability to Cause the Return of Specific Transferred Financial Assets

57. A transferor maintains effective control over transferred financial assets when the transferor has the unilateral ability to cause the holder to return specific financial assets and that ability provides more than a trivial benefit to the transferor. A cleanup call, however, is permitted as an exception to that general principle. A call on a transferred financial asset provides the transferor with effective control over that financial asset if, under its price and other terms, the call provides the transferor with the unilateral ability to reclaim the transferred financial asset and conveys more than a trivial benefit to the transferor. A call or other right conveys more than a trivial benefit if the price to be paid is fixed, determinable, or otherwise potentially advantageous, unless because that price is so far out of the money or for other reasons it is probable when the option is written that the transferor will not exercise it. A transferor’s unilateral ability to cause a securitization entity to return to the transferor or otherwise dispose of specific transferred financial assets, for example, in response to its decision to exit a market or a particular activity, would provide the transferor with effective control over the transferred financial assets if it provides more than a trivial benefit to the transferor. However, a call on readily obtainable assets at fair value may not provide the transferor with more than a trivial benefit. (Paragraph 60 provides an example in which, due to the combination of arrangements, the transferor would maintain effective control.).

58. Effective control over transferred financial assets can be present even if the right to reclaim is indirect. For example, if a call allows a transferor to buy back the beneficial interests at a fixed price, the transferor may maintain effective control of the financial assets underlying those beneficial interests. If the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing activities, that entity may be constrained from choosing to pledge or exchange the transferred financial assets. In that circumstance, any call held by the transferor on third-party beneficial interests is effectively an attached call on the transferred financial assets. Depending on the price and other terms of the call, the transferor may maintain effective control over the transferred financial assets.

59. An **embedded call** would not result in the transferor’s maintaining effective control because it is the issuer rather than the transferor who holds the call and the call does not provide more than a trivial benefit to the transferor. For example, a call embedded by the issuer of a callable bond or the borrower of a prepayable mortgage loan would not provide the transferor with effective control over the transferred financial asset.

60. A right to reclaim specific transferred financial assets by paying their fair value when reclaimed generally does not maintain effective control when it does not convey a more than trivial benefit to the transferor. However, a transferor has maintained effective control if it has such a right and also holds the residual interest in the transferred financial assets. For example, if a transferor holds the residual interest in securitized financial assets and can reclaim the transferred financial assets at termination of the

securitization entity by purchasing them in an auction, and thus at what might appear to be fair value, then sale accounting for the transfer of those financial assets it can reclaim would be precluded. Such circumstances provide the transferor with a more than trivial benefit and effective control over the financial assets, because it can pay any price it chooses in the auction and recover any excess paid over fair value through its residual interest in the transferred financial assets.

61. Removal-of-account provisions do not result in the transferor's maintaining effective control, and are thus precluded from being accounted for as sales under statutory accounting as discussed in paragraph 82.

Arrangements to Reacquire Transferred Financial Assets

62. A transferor maintains effective control over the transferred financial asset as described in paragraph 12.c.(3) through an agreement that permits the transferee to require the transferor to repurchase the transferred financial asset at a price that is so favorable to the transferee at the date of the transfer that it is probable that the transferee will require the transferor to repurchase the transferred financial asset. For example, a put option written to the transferee generally does not provide the transferor with effective control over the transferred financial asset. However, a put option that is sufficiently deep in the money when it is written would provide the transferor effective control over the transferred financial asset because it is probable that the transferee will exercise the option and the transferor will be required to repurchase the transferred financial asset. In contrast, a sufficiently out-of-the-money put option held by the transferee would not provide the transferor with effective control over the transferred financial asset if it is probable when the option is written that the option will not be exercised. Likewise, a put option held by the transferee at fair value would not provide the transferor with effective control over the transferred financial asset.

Changes That Result in the Transferor's Regaining Control of Financial Assets Sold

63. A change in law or other circumstance may result in a transferred portion of an entire financial asset no longer meeting the conditions of a participating interest (paragraph 11) or the transferor's regaining control of transferred financial assets after a transfer that was previously accounted for as a sale, because one or more of the conditions in paragraph 12 are no longer met. Such changes, unless they arise solely from the initial application of this issue paper or from a change in market prices (for example, an increase in price that moves into-the-money a freestanding call on a non-readily-obtainable transferred financial asset that was originally sufficiently out-of-the-money that it was judged not to constrain the transferee), are accounted for in the same manner as a purchase of the transferred financial assets from the former transferee(s) in exchange for liabilities assumed (paragraph 13 or 15). (This "re-purchase" premise is consistent with INT 04-21.) After that change, the transferor recognizes in its financial statements those transferred financial assets together with liabilities to the former transferee(s) or beneficial interest holders of the former transferee(s). The transferor initially measures those transferred financial assets and liabilities at fair value on the date of the change, as if the transferor purchased the transferred financial assets and assumed the liabilities on that date. The former transferee would derecognize the transferred financial assets on that date, as if it had sold the transferred financial assets in exchange for a receivable from the transferor.

Measurement of Interests Held after a Transfer of Financial Assets

Assets Obtained and Liabilities Incurred as Proceeds

64. The proceeds from a sale of financial assets consist of the cash and any other assets obtained, including beneficial interests and separately recognized servicing assets, in the transfer less any liabilities incurred, including separately recognized servicing liabilities. Any asset obtained is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred financial assets, is a reduction of the proceeds. Any **derivative financial instrument** entered into concurrently with a transfer of

financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value.

Participating Interests in Financial Assets That Continue to be Held by a Transferor

65. Participating interests in financial assets that continue to be held by a transferor are not part of the proceeds of the transfer, and the carrying amount of those participating interests shall be measured at the date of the transfer by allocating the previous carrying amount between the participating interests transferred and sold, and the participating interests that are not transferred and continue to be held by a transferor, based on their relative fair values.

Servicing Assets and Liabilities

66. Servicing of mortgage loans, credit card receivables, or other financial assets commonly includes, but is not limited to, collecting principal, interest, and escrow payments from borrowers; paying taxes and insurance from escrowed funds; monitoring delinquencies; executing foreclosure if necessary; temporarily investing funds pending distribution; remitting fees to guarantors, trustees, and others providing services; and accounting for and remitting principal and interest payments to the holders of beneficial interests or participating interests in the financial assets. Servicing is inherent in all financial assets; it becomes a distinct asset or liability for accounting purposes only in the circumstances described in paragraph 67. If a transferor sells a participating interest in an entire financial asset, it would recognize a servicing asset or a servicing liability only related to the participating interest sold.

67. An entity that undertakes a contract to service financial assets shall recognize either a servicing asset or a servicing liability, each time it undertakes an obligation to service a financial asset that (a) results from a servicer’s transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset that meets the requirements for sale accounting, or (b) is acquired or assumed and the servicing obligation does not relate to financial assets of the servicer. However, if the transferor transfers the assets to an entity in a transfer that qualifies as a sale in which the transferor obtains the resulting securities, and classifies them as debt securities, the servicing asset or servicing liability may be reported together with the asset being serviced and not recognized separately. A servicer of financial assets commonly receives the **benefits of servicing**—revenues from contractually specified servicing fees, a portion of the interest from the financial assets, late charges, and other ancillary sources, including “float,” all of which it is entitled to receive only if it performs the servicing—and incurs the costs of servicing the financial assets. Typically, the benefits of servicing are expected to be more than **adequate compensation** to a servicer for performing the servicing, and the contract results in a servicing asset. However, if the benefits of servicing are not expected to adequately compensate a servicer for performing the servicing, the contract results in a servicing liability. (A servicing asset may become a servicing liability, or vice versa, if circumstances change, and the initial measure for servicing may be zero if the benefits of servicing are just adequate to compensate the servicer for its servicing responsibilities.) A servicer would account for its servicing contract that qualifies for separate recognition as a servicing asset or a servicing liability initially measured at its fair value regardless of whether explicit consideration was exchanged.

68. A servicer that transfers or securitizes financial assets in a transaction that does not meet the requirements for sale accounting and is accounted for as a secured borrowing with the underlying financial assets remaining on the transferor’s balance sheet shall not recognize a servicing asset or a servicing liability.

69. A servicer that recognizes a servicing asset or servicing liability shall account for the contract to service financial assets separately from those financial assets, as follows:

a. Report servicing assets separately from servicing liabilities as a nonadmitted asset in the statement of financial position.

b. Initially measure servicing assets and servicing liabilities at fair value, (paragraph 19).

c. Account separately for rights to future interest income from the serviced assets that exceed contractually specified servicing fees. Those rights are not servicing assets; they are financial assets, effectively interest-only strips to be accounted for in accordance with paragraph 22 of this issue paper. (Interest-only strips preclude a portion of a financial asset from meeting the definition of a participating interest; see paragraph 39.)

d. Identify classes of servicing assets and servicing liabilities based on (1) the availability of market inputs used in determining the fair value of servicing assets and servicing liabilities, (2) an entity's method for managing the risks of its servicing assets and servicing liabilities, or (3) both.

e. Subsequently measure each class of separately recognized servicing assets and servicing liabilities at fair value. Changes in fair value should be reported as unrealized gains and losses (paragraph 21). Declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

70. As indicated above, transferors sometimes agree to take on servicing responsibilities when the future benefits of servicing are not expected to adequately compensate them for performing that servicing. In that circumstance, the result is a servicing liability rather than a servicing asset. For example, if in the transaction illustrated in Exhibit B – Illustration 3 the transferor had agreed to service the loans without explicit compensation and it estimated the fair value of that servicing obligation at $50, net proceeds would be reduced to $980, gain on sale would become a loss on sale of $20, and the transferor would report a servicing liability of $50.

Securitizations

71. Financial assets, such as mortgage loans, are commonly transferred in securitizations. Securitizations of mortgage loans may include pools of single-family residential mortgages or other types of real estate mortgage loans, for example, multifamily residential mortgages and commercial property mortgages. Both financial and nonfinancial assets can be securitized; life insurance policy loans, patent and copyright royalties, and even taxi medallions also have been securitized. But securitizations of nonfinancial assets are outside the scope of this issue paper.

72. An originator of a typical securitization (the transferor) transfers a portfolio of financial assets to a securitization entity, commonly a trust. In "pass-through" and "pay-through" securitizations, receivables are transferred to the entity at the inception of the securitization, and no further transfers are made; all cash collections are paid to the holders of beneficial interests in the entity.

73. Beneficial interests in the securitization entity are sold to investors and the proceeds are used to pay the transferor for the assets transferred financial assets. Those beneficial interests may comprise either a single class having equity characteristics or multiple classes of interests, some having debt characteristics and others having equity characteristics. The cash collected from the portfolio is distributed to the investors and others as specified by the legal documents that established the entity.

74. Pass-through and pay-through securitizations that meet the conditions in paragraph 12 qualify for sale accounting under this issue paper. All financial assets obtained and liabilities incurred by the transferor of a securitization that qualifies as a sale shall be recognized and measured as provided in paragraphs 13 and 15; that includes the implicit forward contract to sell additional financial assets during a revolving period, which may become valuable or onerous to the transferor as interest rates and other market conditions change.

Isolation of Transferred Financial Assets in Securitizations

75. A securitization carried out in one transfer or a series of transfers may or may not isolate the transferred financial assets beyond the reach of the transferor and its creditors. Whether it does depends on the structure of the securitization transaction taken as a whole, considering such factors as the type and extent of further involvement in arrangements to protect investors from credit, and interest rate, and other risks, the availability of other financial assets, and the powers of bankruptcy courts or other receivers. The discussion in paragraphs 76-78 relates only to the isolation condition in paragraph 12.a. The conditions in paragraphs 12.b. and 12.c. also must be considered to determine whether a transferor has surrendered control over the transferred financial assets.

76. In certain securitizations, a corporation that, if it failed, would be subject to the U.S. Bankruptcy Code transfers financial assets to a securitization entity exchange for cash. The entity raises that cash by issuing to investors beneficial interests that pass through all cash received from the financial assets, and the transferor has no further involvement with the trust or the transferred financial assets. The Board understands that those securitizations generally would be judged as having isolated the assets, because, in the absence of any continuing involvement, there would be reasonable assurance that the transfer would be found to be a true sale at law that places the assets beyond the reach of the transferor, and its creditors, even in bankruptcy or other receivership.

77. In other securitizations, a similar corporation transfers financial assets to a securitization entity in exchange for cash and beneficial interests in the transferred financial assets. That entity raises the cash by issuing to investors commercial paper that gives them a senior beneficial interest in cash received from the financial assets. The beneficial interests obtained by the transferring corporation represent a junior interest to be reduced by any credit losses on the financial assets in the entity. The senior beneficial interests (commercial paper) are highly rated by credit rating agencies only if both (a) the credit enhancement from the junior interest is sufficient and (b) the transferor is highly rated. Depending on facts and circumstances, the Board understands that those "single-step" securitizations often would be judged in the United States as not having isolated the financial assets, because the nature of the continuing involvement may make it difficult to obtain reasonable assurance that the transfer would be found to be a true sale at law that places the financial assets beyond the reach of the transferor and its creditors in U.S. bankruptcy (paragraph 43). If the transferor fell into bankruptcy and the transfer was found not to be a true sale at law, investors in the transferred financial assets might be subjected to an automatic stay that would delay payments due them, and they might have to share in bankruptcy expenses and suffer further losses if the transfer was recharacterized as a secured loan.

78. Still other securitizations use multiple transfers intended to isolate transferred financial assets beyond the reach of the transferor and its creditors, even in bankruptcy. For example, in "two-step" structures:

a. First, the corporation transfers a group of financial assets to a special-purpose corporation that, although wholly owned, is so designed that the possibility is remote that the transferor or its creditors could reclaim the financial assets. This first transfer is designed to be judged to be a true sale at law, in part because the transferor does not provide "excessive" credit or yield protection to the special-purpose corporation, and the Board understands that transferred financial assets are likely to be judged beyond the reach of the transferor or the transferor's creditors even in bankruptcy or other receivership.

b. Second, the special-purpose corporation transfers a group of financial assets to a trust or other legal vehicle with a sufficient increase in the credit or yield protection on the second transfer (provided by a transferor's junior beneficial interest or other means) to merit the high credit rating sought by third-party investors who buy senior beneficial interests in the trust. Because of that aspect of its design, that second transfer might not be judged to be a true sale at law and, thus, the transferred financial assets could at least in theory be reached by a bankruptcy trustee for the special-purpose corporation.

c. However, the special-purpose corporation is designed to make remote the possibility that it would enter bankruptcy. For example, its charter forbids it from undertaking any other business or incurring any liabilities, so that there can be no creditors to petition to place it in bankruptcy. Furthermore, its dedication to a single purpose is intended to make it extremely unlikely, even if it somehow entered bankruptcy, that a receiver under the U.S. Bankruptcy Code could reclaim the transferred financial assets because it has no other assets to substitute for the transferred financial assets.

79. The Board understands that the "two-step" securitizations described above, taken as a whole, generally would be judged under present U.S. law as having isolated the financial assets beyond the reach of the transferorand its creditors, even in bankruptcy or other receivership. However, each entity involved in a transfer must be evaluated under the applicable accounting guidance.

80. The powers of receivers vary considerably by state of domicile, and therefore some receivers may be able to reach financial assets transferred under a particular arrangement and others may not. A securitization may isolate transferred financial assets from a transferor subject to such a receiver and its creditors even though it is accomplished by only one transfer directly to a securitization entity that issues beneficial interests to investors and the transferor provides credit or yield protection.

Sales of Future Revenues

81. In addition to securitization of assets, some reporting entities have entered into transactions characterized as a sale of future revenues. These transactions are sometimes referred to as securitizations and are sometimes characterized as selling deferred acquisition costs. A sale of future revenues by a reporting entity shall not result in the immediate recognition of income or surplus. The proceeds of any such sale shall be established as a liability and shall be reduced as the proceeds are repaid.

Removal-of-Accounts Provisions

82. Many transfers of financial assets that involve transfers of a group of entire financial assets to an entity whose sole purpose is to engage in securitization or asset-backed financing activities empower the transferor to reclaim assets subject to certain restrictions. Such a power is sometimes called a removal-of-accounts provision (ROAP). Transfers of assets that include ROAP provisions are precluded from being accounted for as sales under statutory accounting and shall follow the guidance in paragraph 18 for secured borrowing.

Securities Lending Transactions

83. Securities lending transactions are generally initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver securities sold. Securities lending transactions typically extend less than one year. Transferees (borrowers) of securities generally are required to provide collateral to the transferor (lender) of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities borrowed. If the collateral is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or rebated to the transferee. If the collateral is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of collateral (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash collateral impose market and credit risks on the transferor.

84. If the criteria conditions in paragraph 12 are met, securities lending transactions shall be accounted for:

a. By the transferor as a sale of the "loaned" securities for proceeds consisting of the cash collateral"[9] and a forward repurchase commitment.

b. By the transferee as a purchase of the "borrowed" securities in exchange for the collateral and a forward resale commitment. During the term of that agreement, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the "collateral" and the forward repurchase commitment.

85. Many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred financial assets before their maturity under which the transferor maintains effective control over those financial assets (paragraphs 54-56 maintain effective control criteria). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder or its agent is permitted by contract or custom to sell or repledge) received as collateral is considered the amount borrowed, the securities loaned are considered pledged as collateral against the cash or securities borrowed and reclassified as set forth in paragraph 23.a., and any rebate paid to the transferee of securities is interest on the cash or securities the transferor is considered to have borrowed.

86. The transferor of securities being "loaned" accounts for cash received in the same way whether the transfer is accounted for as a sale or a secured borrowing. The cash received shall be recognized as the transferor's asset—as shall investments made with that cash, even if made by agents or in pools with other securities lenders—along with the obligation to return the cash. If securities that may be sold or repledged are received, the transferor of the securities being "loaned" accounts for those securities in the same way as it would account for cash received.

87. The transferor of securities being "loaned" accounts for collateral received in the same way whether the transfer is accounted for as a sale or a secured borrowing. The collateral received shall be recognized as the transferor's asset—as shall investments made with that collateral, even if made by agents or in pools with other securities lenders—along with the obligation to return the collateral. If securities that may be sold or repledged are received by the transferor or its agent, the transferor of the securities being "loaned" accounts for those securities in the same way as it would account for collateral received. Collateral which may be sold or repledged by the transferor or its agent is reflected on balance sheet, along with the obligation to return the asset[10]. Collateral received which may not be sold or repledged by the transferor or its agent is off balance sheet[11]. For collateral on the balance sheet, the reporting is determined by the administration of the program.

[9] If the "collateral" in a transaction that meets the criteria in paragraph 12 is a financial asset that the holder or its agent is permitted by contract or custom to sell or repledge, that financial asset is proceeds of the sale of the "loaned" securities. To the extent that the "collateral" consists of letters of credit or other financial instruments that the holder or its agent is not permitted by contract or custom to sell or repledge, a securities lending transaction does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee.

[10] If cash is received by the transferor or its agent and reinvested or repledged it is reported on balance sheet. It is explicitly intended that when the lender bears reinvestment risk, that collateral is on balance sheet.

[11] An example of collateral which is off balance sheet is securities are received by the transferor or its agent in which the collateral must be held and returned, without the ability to transfer or repledge the collateral. This would involve limited situations in which the transferor or agent is prohibited from reinvesting the collateral.

a. Securities lending programs where the collateral received by the reporting entity's unaffiliated agent that can be sold or repledged is reported on the balance sheet. The collateral received and reinvestment of that collateral by the reporting entity's unaffiliated agent shall be reflected as a one-line entry on the balance sheet (Securities Lending Collateral) and a detailed schedule will be required each quarter and at year-end to list the description of the collateral asset. This description shall include the NAIC rating, fair value; book adjusted carrying value and maturity date. A separate liability shall also be established to record the obligation to return the collateral (Collateral from Securities Lending Activities)

b. Securities lending programs where the collateral received by the reporting entity that can be sold or repledged is reported on the balance sheet. If the reporting entity is the administrator of the program, then, the collateral received and any reinvestment of that collateral is reported with the invested assets of the reporting entity based on the type of investment (i.e. bond, common stock, etc). A separate liability shall also be established to record the obligation to return the collateral (Collateral from Securities Lending Activities)

c. Securities lending programs where the collateral received by the reporting entity's affiliated agent can report using either one line reporting (paragraph 87. a. above) or investment schedule reporting (paragraph 87. b. above).

88. Reinvestment of the collateral by the reporting entity or its agent, shall follow the same impairment guidance as other similar invested assets reported on the balance sheet. Any fees received by the transferor for loaning the securities shall be recorded as miscellaneous investment income.

Securities Lending Transactions – Collateral Requirements

89. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 102 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 100 percent of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral by the end of the next business day, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals 102 percent of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

90. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to 105 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 102 percent of the fair value of the loaned securities, the reporting entity must obtain additional collateral by the end of the next business day, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals 105 percent of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

Repurchase Agreements and "Wash Sales"

91. Government securities dealers, banks, other financial institutions, and corporate investors commonly use repurchase agreements to obtain or use short-term funds. Under those agreements, the transferor ("repo party") transfers a security to a transferee ("repo counterparty" or "reverse party") in

exchange for cash[12] and concurrently agrees to reacquire that security at a future date for an amount equal to the cash exchanged plus a stipulated "interest" factor. Repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this issue paper.

92. Repurchase agreements can be affected in a variety of ways. Some repurchase agreements are similar to securities lending transactions in that the transferee or its agent has the right to sell or repledge the securities to a third party during the term of the repurchase agreement. In other repurchase agreements, the transferee does not have the right to sell or repledge the securities during the term of the repurchase agreement. For example, in a tri-party repurchase agreement, the transferor transfers securities to an independent third-party custodian that holds the securities during the term of the repurchase agreement. Also, many repurchase agreements are for short terms, often overnight, or have indefinite terms that allow either party to terminate the arrangement on short notice. However, other repurchase agreements are for longer terms, sometimes until the maturity of the transferred financial asset. Some repurchase agreements call for repurchase of securities that need not be identical to the securities transferred.

93. If the conditions in paragraph 12 are met, the transferor shall account for the repurchase agreement as a sale of financial assets and a forward repurchase commitment, and the transferee shall account for the agreement as a purchase of financial assets and a forward resale commitment. Other transfers that are accompanied by an agreement to repurchase the transferred financial assets that may be accounted for as sales include transfers with agreements to repurchase at maturity and transfers with repurchase agreements in which the [transferor] has not obtained collateral sufficient to fund substantially all of the cost of purchasing replacement financial assets. (Repurchase financing is addressed in paragraphs 100-105.)

94. Furthermore, "wash sales" that previously were not recognized if the same financial asset was purchased within 30 days before or after the sale shall be accounted for as sales under this issue paper. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred financial assets.

95. As with securities lending transactions, under many agreements to repurchase transferred financial assets before their maturity the transferor maintains effective control over those financial assets. Repurchase agreements that do not meet all the conditions in paragraph 12 shall be treated as secured borrowings. Fixed-coupon and dollar-roll repurchase agreements, and other contracts under which the securities to be repurchased need not be the same as the securities sold, qualify as borrowings if the return of substantially the same (paragraph 55) securities as those concurrently transferred is assured. Therefore, those transactions shall be accounted for as secured borrowings by both parties to the transfer.

96. If a transferor has transferred securities to an independent third-party custodian, or to a transferee, under conditions that preclude the transferee from selling or repledging the assets during the term of the repurchase agreement (as in most tri-party repurchase agreements), the transferor has not surrendered control over those assets.

Repurchase Agreements

97. Repurchase agreements are defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a

[12] Instead of cash, other securities or letters of credit sometimes are exchanged. Those transactions are accounted for in the same manner as securities lending transactions (paragraphs 83-89).

specified date. For securities to be substantially the same, the criteria defined in paragraph 55 (substantially the same criteria) must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

98. For repurchase agreements that are accounted for as collateralized borrowings in accordance with paragraph 95 of this issue paper, the underlying securities shall continue to be accounted for as an investment owned by the reporting entity. The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

99. Reporting entities generally take possession of the underlying collateral under repurchase agreements and in many cases may obtain additional collateral when the estimated fair value of such securities falls below their current contract value. However, to the extent that the current fair value of the collateral is less than the recorded amount, the shortfall shall reduce the admitted asset value of the repurchase agreement.

Repurchase Financing

100. Repurchase financing is a repurchase agreement that relates to a previously transferred financial asset between the same counterparties (or affiliates of either counterparty) that is entered into contemporaneously with, or in contemplation of, the initial transfer.

101. A repurchase financing involves the transfer of a previously transferred financial asset back to the initial transferor as collateral for a financing between the initial transferee (the borrower) and the initial transferor (the lendor). A repurchase financing also typically involves the initial transferor returning the transferred financial asset (or substantially the same asset) to the initial transferee when the financing is repaid on a state date. A repurchase financing is entered into in contemplation of the initial transfer if both transactions are considered together at the execution of the initial transfer.

102. When the transferor transfer a financial asset and also enters into a repurchase financing with the transferee, there are typically three transfers of the financial assets:

a. Initial transfer – An initial transferor transfers a financial asset to an initial transferee.

b. Repurchase financing – The initial transferee (the borrower) transfer the previously transferred financial asset back to the initial transferor (the lender) as collateral for a financing between the initial transferor and initial transferee.

c. Settlement – The initial transferor (the lender) returns the financial asset (or substantially the same asset) to the initial transferee (the borrower) upon receipt of payment from the initial transferee.

103. Repurchase financing that is entered into contemporaneously with, or in contemplation of, an initial transfer of financial asset between the same counterparties (or affiliates of either counterparty) shall not be separately accounted for as a transfer of a financial asset and a related repurchase financing unless (a) the two transactions have a valid and distinct business or economic purpose for being entered into separately and (b) the repurchase financing does not result in the initial transferor regaining control over the financial asset. Unless the provisions in paragraph 104 are met, the initial transfer and repurchase financing shall be evaluated as a linked transaction. The linked transaction shall be evaluated to determine whether it meets the requirements for sale accounting per paragraph 12, If the linked transaction does not meet the requirements for sale accounting, the linked transaction shall be accounted for based on the economies of the combined transactions, which generally represent a forward contract. *SSAP No. 86—*

Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions shall be used to evaluate whether the linked transaction shall be accounted for as a derivative.

104. An initial transfer of a financial asset and repurchase financing that are entered into contemporaneously with, or in contemplation of, one another shall be considered linked unless all of the following criteria are met at the inception of the transaction:

a. The initial transfer and the repurchase financing are not contractually contingent on one another. Even if no contractual relationship exists, the pricing and performance of either the initial transfer or the repurchase financing must not be dependent on the terms and execution of the other transaction.

b. The repurchase financing provides the initial transferor with recourse to the initial transferee upon default. That recourse must expose the initial transferor to the credit risk of the initial transferee, or its affiliates, and not solely to the market risk of the transferred financial asset. The initial transferee's agreement to repurchase the previously transferred financial asset (or substantially the same asset) for a fixed price and not fair value.

c. The financial asset subject to the initial transfer and repurchase financing is readily obtainable in the marketplace. In addition, the initial transfer of a financial asset and the repurchase financing are executed at market rates. This criterion may not be circumvented by embedding off-market terms in a separate transaction contemplated with the initial transfer or the repurchase financing.

d. The financial asset and repurchase agreement are not coterminous (the maturity of the repurchase financing must be before the maturity of the financial asset.)

105. In accordance with paragraph 103, an initial transfer of assets and a repurchase financing shall not be considered separate transactions unless the provisions of paragraph 104 are met. If the provisions of paragraph 104 are met, the initial transfer shall be evaluated to determine whether it meets the requirements for sale accounting without taking into consideration the repurchase financing. In such situations, the repurchase financing shall then be separately analyzed as a repurchase agreement.

Reverse Repurchase Agreements

106. Reverse repurchase agreements are defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 55 (substantially the same criteria) must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

107. For reverse repurchase agreements that are accounted for as collateralized lendings in accordance with paragraph 95 of this issue paper, the underlying securities shall not be accounted for as investments owned by the reporting entity. The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount paid and the amount at which the securities will be subsequently resold shall be reported as interest income, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

Collateral Requirements – Repurchase and Reverse Repurchase Agreements

108. The collateral requirements for repurchase and reverse repurchase agreements are as follows:

Repurchase Transaction

a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 95 percent of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at anytime the fair value of the collateral received from the counterparty is less than 95 percent of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral by the end of the next business day the fair value of which, together with the fair value of all collateral then held in connection with the transaction, at least equals 95 percent of the fair value of the transferred securities. If the collateral is less than 95 percent at the reporting date, the difference between the actual collateral and 95 percent will be nonadmitted.

Reverse Repurchase Transaction

b. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to 102 percent of the purchase price paid by the reporting entity for the securities. If at any time the fair value of the collateral is less than 100 percent of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals 102 percent of the purchase price.

Dollar Repurchase Agreements

109. Dollar repurchase and dollar reverse repurchase agreements are defined as repurchase and reverse repurchase agreements involving debt instruments that are pay-through securities collateralized with Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC) and Federal National Mortgage Association (FNMA) collateral, and pass-through certificates sponsored by GNMA, mortgage participation certificates issued by the FHLMC or similar securities issued by the FNMA. Dollar repurchase agreements are also commonly referred to as dollar roll transactions. To meet the definition of dollar repurchase and dollar reverse repurchase agreements, the securities underlying the agreements must meet the criteria defined in paragraph 55, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

110. For the seller in a dollar repurchase agreement accounted for as collateralized borrowing in accordance with paragraph 95 of this issue paper, a liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities sold.

111. When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased must be in good delivery form consistent with paragraph 55.

112. If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded.

113. For the purchaser in a dollar reverse repurchase agreement accounted for as collateralized lending in accordance with paragraph 95 of this issue paper, an asset is recorded for the amount of the purchase.

Upon completion of the reverse repurchase agreement, cash is received in exchange for a "substantially the same" security. The difference between the purchase and reselling price represents interest income for the lending of short-term funds.

Separate Transactions

114. Agreements to repurchase and resell securities that do not meet the definitions in paragraphs 83-96 of this issue paper shall be accounted for as two separate transactions, that is, as a sale and purchase or as a purchase and sale, in accordance with the relevant statutory accounting guidance. For example, sales of bonds would result in recognition of realized gains or losses.

Offsetting

115. Reporting entities may operate on both sides of the repurchase agreement market resulting in recording of liabilities and assets representing repurchase and reverse repurchase agreements, respectively.

116. Reporting entities shall offset such liabilities and assets only to the extent that one of the following occurs:

a. A legal right of offset exists as defined in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64); or

b. The securities have the same settlement date, are executed with the same counterparty in accordance with a master netting arrangement, involve securities that exist in "book entry" form, and settle on securities transfer systems that have the same key elements and operating characteristics as the Fedwire Securities Transfer System.

117. Otherwise, separate assets and liabilities shall be recognized.

Loan Syndications

118. Borrowers often borrow amounts greater than any one lender is willing to lend. Therefore, it is common for groups of lenders to jointly fund those loans. That may be accomplished by a syndication under which several lenders share in lending to a single borrower, but each lender loans a specific amount to the borrower and has the right to repayment from the borrower.

119. A loan syndication is not a transfer of financial assets. Each lender in the syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender who then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is also functioning as a servicer and, therefore, shall only recognize its portion of the loan as a financial asset.

Loan Participations

120. Groups of banks or other entities also may jointly fund large borrowings through loan participations in which a single lender makes a large loan to a borrower and subsequently transfers interests in the loan to other entities.

121. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the transferor (originating lender) continues to service the loan. The transferee (participating entity) may or may not have the right to sell or transfer its participation during the term of the loan, depending upon the terms of the participation agreement.

122. If the loan participation agreement transfers a participating interest in an entire financial asset (as described in paragraph 11 of this issue paper) and the conditions in paragraph 12 are met, the transfer shall be accounted for by the transferor as a sale of a participating interest. A transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor is a limitation on the transferee's rights but presumptively does not constrain a transferee from exercising its right to pledge or exchange. However, if the loan participation agreement constrains the transferees from pledging or exchanging its participating interest and that constraint provides a more-than-trivial benefit to the transferor, the transferor has not relinquished control and shall account for the transfer as a secured borrowing.

Factoring Arrangements

123. Factoring arrangements are a means of discounting accounts receivable on a nonrecourse, notification basis. Accounts receivable in their entireties are sold outright, usually to a transferee (the factor) that assumes the full risk of collection, without recourse to the transferor in the event of a loss. Debtors are directed to send payments to the transferee. Factoring arrangements that meet the conditions in paragraph 12 shall be accounted for as sales of financial assets because the transferor surrenders control over the receivables to the factor.

Transfers of Receivables with Recourse

124. In a transfer of an entire receivable, a group of entire receivables, or a portion of an entire receivable with recourse, the transferor provides the transferee with full or limited recourse. The transferor is obligated under the terms of the recourse provision to make payments to the transferee or to repurchase receivables sold under certain circumstances, typically for defaults up to a specified percentage. A transfer of receivables with recourse shall not be recognized as a sale, but rather as secured borrowing. (This provision is applied regardless if the transfer was comprised of the entire receivable, a group of the entire receivable, or a portion of the entire receivable.) A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received. Sales of premium receivables are addressed in *SSAP No. 42—Sale of Premium Receivables*.

Extinguishments of Liabilities

125. If a creditor releases a debtor from primary obligation on the condition that a third party assumes the obligation and that the original debtor becomes secondarily liable, that release extinguishes the original debtor's liability. However, in those circumstances, whether or not explicit consideration was paid for that guarantee, the original debtor becomes a guarantor. As a guarantor, it shall recognize a guarantee obligation in the same manner as would a guarantor that had never been primarily liable to that creditor, with due regard for the likelihood that the third party will carry out its obligations. The guarantee obligation shall be initially measured at fair value, and that amount reduces the gain or increases the loss recognized on extinguishment.

126. An exchange of debt instruments or debt instrument modifications are considered extinguishments if the exchange or modification results with substantially different terms or is considered more than minor. If the cash flows under the terms of the new debt instrument are at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument, then the exchange of, or modification to, debt instruments is consider substantially different and/or more than minor.

Effective Date and Transition

127. After adoption of this issue paper, it is expected that the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The initial draft of the SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will be effective as of Jan 1, 20XX. The provisions within the adopted SSAP shall be reflected in the interim periods within that first annual reporting period, and for interim and annual reporting periods thereafter. Earlier application is prohibited. The recognition and measurement provisions of the adopted standard shall be applied to transfers that occur on or after the effective date. The disclosure provisions shall be applied to transfers that occurred both before and after the effective date of the adopted standard.

EXHIBIT A – GLOSSARY

Adequate Compensation

The amount of benefits of servicing that would fairly compensate a substitute servicer should one be required, which includes the profit that would be demanded in the marketplace.

Agent

A party that acts for and on behalf of another party. For example, a third-party intermediary is an agent of the transferor if it acts on behalf of the transferor.

Attached Call

A call option held by the transferor of a financial asset that becomes part of and is traded with the underlying instrument. Rather than being an obligation of the transferee, an attached call is traded with and diminishes the value of the underlying instrument transferred subject to that call.

Beneficial Interests

Rights to receive all or portions of specified cash inflows to received by a trust or other entity, including, but not limited to, senior and subordinated shares of interest, principal, or other cash inflows to be "passed-through" or "paid-through," premiums due to guarantors, commercial paper obligations, and residual interests, whether in the form of debt or equity.

Benefits of Servicing

Revenues from contractually specified servicing fees, late charges, and other ancillary sources, including "float."

Cleanup Call

An option held by the servicer or its affiliate, which may be the transferor, to purchase the remaining transferred financial assets, or the remaining beneficial interests not held by the transferor, its affiliates, or its agents in an entity (or in a series of beneficial interests in transferred financial assets within an entity), if the amount of outstanding financial assets or beneficial interests falls to a level at which the cost of servicing those assets or beneficial interests becomes burdensome in relation to the benefits of servicing.

Collateral

Personal or real property in which a security interest has been given.

Continuing Involvement

Any involvement with the transferred financial assets that permits the transferor to receive cash flows or other benefits that arise from the transferred financial assets or that obligates the transferor to provide additional cash flows or other assets to any party related to the transfer. All available evidence shall be considered, including, but not limited to, explicit written arrangements, communications between the transferor and the transferee or its beneficial interest holders, and unwritten arrangements customary to similar transfers. Examples of continuing involvement with the transferred financial assets include, but are not limited to, servicing arrangements, recourse or guarantee arrangements, agreements to purchase or redeem transferred financial assets, options written or held, derivative financial instruments that are entered into contemporaneously with, or in contemplation of, the transfer, arrangements to provide financial support, pledges of collateral, and the transferor's beneficial interests in the transferred financial assets.

Contractually Specified Servicing Fees

All amounts that, per contract, are due to the servicer in exchange for servicing the financial asset and would no longer be received by a servicer if the beneficial owners of the serviced assets (or their trustees or agents) were to exercise their actual or potential authority under the contract to shift the servicing to another servicer. Depending on the servicing contract, those fees may include some or all of the difference between the interest rate collectible on the financial asset being serviced and the rate to be paid to the beneficial owners of those financial assets.

Derecognize

Remove previously recognized assets or liabilities from the statement of financial position.

Derivative Financial Instrument

A derivative instrument (as defined in *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions*) that is a financial instrument (refer to *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-*Balance-*Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments*, paragraph 2).

Embedded Call

A call option held by the issuer of a financial instrument that is part of and trades with the underlying instrument. For example, a bond may allow the issuer to call it by posting a public notice well before its stated maturity that asks the current holder to submit it for early redemption and provides that interest ceases to accrue on the bond after the early redemption date. Rather than being an obligation of the initial purchaser of the bond, an embedded call trades with and diminishes the value of the underlying bond.

Financial Asset

Cash, evidence of an ownership interest in an entity, or a contract that conveys to a one entity a right (a) to receive cash or another financial instrument from a second entity or (b) to exchange other financial instruments on potentially favorable terms with the second entity.

Financial Liability

A contract that imposes on one entity an obligation (a) to deliver cash or another financial instrument to a second entity or (b) to exchange other financial instruments on potentially unfavorable terms with the second entity.

Freestanding Call

A call that is neither embedded in nor attached to an asset subject to that call.

Interest-Only Strip

A contractual right to receive some or all of the interest due on a bond, mortgage loan, collateralized mortgage obligation, or other interest-bearing financial asset.

Participating Interest

A participating interest has the following characteristics:

a. From the date of the transfer, it represents a proportionate (pro rata) ownership interest in an entire financial asset. The percentage of ownership interests held by the transferor in the entire financial asset may vary over time, while the entire financial asset remains outstanding as long as the resulting portions held by the transferor or its agents) and the transferee(s) meet the other characteristics of a participating interest. For example, if the transferor's interest in an entire financial asset changes because it subsequently sells another interest in the entire financial asset, the interest held initially and subsequently by the transferor must meet the definition of a participating interest.

b. From the date of the transfer, all cash flows received from the entire financial asset are divided proportionately among the participating interest holders in an amount equal to their share of ownership. Cash flows allocated as compensation for services performed, if any, shall not be included in that determination provided those cash flows are not subordinate to the proportionate cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider, should one be required, which includes the profit that would be demanded in the marketplace. In addition, any cash flows received by the transferor as proceeds of the transfer of the participating interest shall be excluded from the determination of proportionate cash flows provided that the transfer does not result in the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows.

c. The rights of each participating interest holder (including the transferor in its role as a participating interest holder) have the same priority, and no participating interest holder's interest is subordinated to the interest of another participating interest holder. That priority does not change in the event of bankruptcy or other receivership of the transferor, the original debtor, or any other participating interest holder. Participating interest holders have no recourse to the transferor, its agents or to each other, other than standard representations and warranties, ongoing contractual obligations to service the entire financial asset and administer the transfer contract, and contractual obligations to share in any set-off benefits received by any participating interest holder. That is, no participating interest holder is entitled to receive cash before any other participating interest holder under its contractual rights as a participating interest holder. For example, if a participating interest holder also is the servicer of the entire financial asset and receives cash in its role as servicer, that arrangement would not violate this requirement.

d. No party has the right to pledge or exchange the entire financial asset unless all participating interest holders agree to pledge or exchange the entire financial asset.

Proceeds

Cash, beneficial interests, servicing assets, derivatives, or other assets that are obtained in a transfer of financial assets, less any liabilities incurred.

Recourse

The right of a transferee of receivables to receive payment from the transferor of those receivables for (a) failure of debtors to pay when due, (b) the effects of prepayments, or (c) adjustments resulting from defects in the eligibility of the transferred receivables.

Securitization

The process by which financial assets are transformed into securities.

Security Interest

A form of interest in property that provides that upon default of the obligation for which the security interest is given, the property may be sold in order to satisfy that obligation.

Seller

A transferor that relinquishes control over financial assets by transferring them to a transferee in exchange for consideration.

Servicing Asset

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are expected to more than adequately compensate the servicer for performing the servicing. A servicing contract is either (a) undertaken in conjunction with selling or securitizing the financial assets being serviced or (b) purchased or assumed separately.

Servicing Liability

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are not expected to adequately compensate the servicer for performing the servicing.

Standard Representations and Warranties

Representations and warranties that assert the financial asset being transferred is what it is purported to be at the transfer date. Examples include representations and warranties about (a) the characteristics, nature, and quality of the underlying financial asset, including characteristics of the underlying borrower and the type and nature of the collateral securing the underlying financial asset, (b) the quality, accuracy, and delivery of documentation relating to the transfer and the underlying financial asset, and (c) the accuracy of the transferor's representations in relation to the underlying financial asset.

Transfer

The conveyance of a noncash financial asset by and to someone other than the issuer of that financial asset. Thus, a transfer includes selling a receivable, putting it into a securitization trust, or posting it as collateral but excludes the origination of that receivable, the settlement of that receivable, or the restructuring of that receivable into a security in a troubled debt restructuring.

Transferee

An entity that receives a financial asset, an interest in a financial asset, or a group of financial assets from a transferor.

Transferor

An entity that transfers a financial asset, an interest in a financial asset, or a group of financial assets that it controls to another entity.

Unilateral Ability (See paragraphs 57 and 58)

A capacity for action not dependent on the actions (or failure to act) of any other party.

EXHIBIT B – ILLUSTRATIONS

Illustration—Recording Transfers with Proceeds of Cash, Derivatives, and Other Liabilities

1. Company A transfers entire loans with a carrying amount of $1,000 to a subsidiary and receives proceeds with a fair value of $1,030 and the transfer is accounted for as a sale. Company A undertakes no servicing responsibilities and assumes a limited recourse obligation to repurchase delinquent loans.

Company A agrees to provide the transferee a return at a floating rate of interest even though the contractual terms of the loan are fixed rate in nature (that provision is effectively an interest rate swap).

Fair Values	
Cash proceeds	$1,050
Interest rate swap asset	40
Recourse obligation	60

Net Proceeds	
Cash received	$1,050
Plus: Interest rate swap asset	40
Less: Recourse obligation	(60)
Net proceeds	$1,030

Gain on Sale	$1,030
Net proceeds	1,000
Carrying amount of loans sold	$ 30
Gain on sale	

Journal Entry		
Cash	1,050	
Interest rate swap asset	40	
Loans		1,000
Recourse obligation		60
Gain on sale		30
To record transfer		

Illustration—Recording Transfers of Participating Interests

2. Company B transfers a nine-tenths participating interest in a loan with a fair value of $1,100 and a carrying amount of $1,000, and the transfer is accounted for as a sale. The servicing contract has a fair value of zero because Company B estimates that the benefits of servicing are just adequate to compensate it for its servicing responsibilities.

Fair Values	
Cash proceeds for nine-tenths sold ($1,100 x 9/10)	$990
One-tenth interest continued to be held by the transferor ($1,100 x 1/10)	110

Allocated Carrying Amount Based on Relative Fair Values

	Fair Value	**Percentage Of Total Fair Value**	**Allocated Carrying Amount**
Nine-tenths participating interest sold ($1,100 x 9/10)	$990	90	$900
One-tenth participating interest continued to be held by the transferor ($1,100 x 1/10)	110	10	100
Total	$ 1,100	100	$1,000

Gain on Sale	
Net proceeds	$ 990
Less: Carrying amount of loans sold	(900)
Gain on sale	$90

Journal Entry		
Cash	990	
Loans		900
Gain on sale		90
To record transfer		

Illustration—Sale of Receivables with Servicing Obtained

3. Company C originates $1,000 of loans that yield 10 percent interest income for their estimated lives of 9 years. Company C transfers the entire loans to an entity and the transfer is accounted for as a sale. Company C receives as proceeds $1,000 cash, a beneficial interest to receive 1 percent on the contractual interest on the loans (an interest-only strip receivable), and an additional 1 percent of the contractual interest as compensation for servicing the loans. The fair values of the servicing asset and the interest-only strip receivable are $40 and $60, respectively.

Fair Values	
Cash proceeds	$1,000
Servicing asset	40
Interest-only strip receivable	60

Net Proceeds		
Cash proceeds		$1,000
Servicing asset		40
Interest-only strip receivable		60
	Net Proceeds	$1,100

Gain on Sale	
Net proceeds	$1,100
Less: Carrying amount of loans sold	(1,000)
Gain on sale	$ 100

Journal Entries		
Cash	1,000	
Interest-only strip receivable	60	
Servicing asset	40	
Loans		1,000
Gain on sale		100
To record transfer and to recognize interest-only strip receivable and servicing asset		

Illustration—Securities Lending Transaction Treated as a Secured Borrowing

4. The following example illustrates the accounting for a securities lending transaction treated as a secured borrowing, in which the securities borrower sells the securities upon receipt and later buys similar securities to return to the securities lender:

Facts

Transferor's carrying amount and fair value of security loaned	$1,000
Cash "collateral"	1,020
Transferor's return from investing cash collateral at a 5 percent annual rate	5
Transferor's rebate to the securities borrower at a 4 percent annual rate	4

For simplicity, the fair value of the security is assumed not to change during the 35-day term of the transaction.

Journal Entries for the Transferor

At inception:		
Cash	1,020	
Payable under securities loan agreements		1,020
To record the receipt of cash collateral		
Securities pledged to creditors	1,000	
Securities		1,000
To reclassify loaned securities that the secured party has the right to sell or repledge		
Money market instrument	1,020	
Cash		1,020
To record investment of cash collateral		
At conclusion:		
Cash	1,025	
Interest		5
Money market instrument		1,020
To record results of investment		
Securities	1,000	
Securities pledged to creditors		1,000
To record return of security		
Payable under securities loan agreements	1,020	
Interest ("rebate")	4	
Cash		1,024
To record repayment of cash collateral plus interest		

Journal Entries for the Transferee

At inception:		
Receivable under securities loan agreements	1,020	
Cash		1,020
To record transfer of cash collateral		

Cash	1,000	
Obligation to return borrowed securities		1,000

To record sale of borrowed securities to a third party and the resulting obligation to return securities that it no longer holds

At conclusion:

Obligation to return borrowed securities	1,000	
Cash		1,000

To record the repurchase of securities borrowed

Cash	1,024	
Receivable under securities loan agreements		1,020
Interest revenue ("rebate")		4

To record the receipt of cash collateral and rebate interest

DISCUSSION

Overview

128. The accounting guidance in this issue paper is consistent with the GAAP guidance for the accounting for transfers and servicing of financial assets and extinguishments of liabilities as reflected in FAS 166 with modifications deemed appropriate for statutory accounting. Previous statutory guidance within SSAP No. 91R adopted, with modification, the guidance within *FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140).

129. Revising statutory accounting by superseding SSAP No. 91R, to adopt, with modification, *FAS 166, Accounting for transfers of financial assets, an amendment to FASB Statement No. 140* (FAS 166) is considered necessary to ensure the consistent and proper application of accounting guidance for transfers of financial assets. Furthermore, the elimination of qualifying special-purpose entities, as well as the incorporation of enhanced criteria for when a transfer qualifies as a "sale" will result with statutory financial statements that are more transparent and more reflective of the reporting entity's financial position. The need for timely revisions is further supported by the following FASB conclusions and actions:

a. In establishing the effective date for FAS 166, the FASB identified that there is an urgent need to improve transparency related to certain entities that are off-balance sheet and certain transactions that are currently reported as sales. It was also noted that there is significant diversity and frequent application questions regarding the application of FAS 140.

b. It is also noted that FAS 166 does not fully converge with International Financial Reporting Standards. Although the IASB and FASB have a long-term project to work on a converged standard for derecognition of financial assets, the FASB believed that the urgent need to eliminate the QSPE concept overrode the need for a convergent standard. The issuance of FAS 166 does improve convergence as the concept of a QSPE does not exist in International Financial Reporting Standards.

Sale Accounting

130. In the prior GAAP guidance, and in SSAP No. 91R, a "financial-components approach" for sale accounting had been incorporated. This approach analyzed a transfer of financial assets by examining the component assets and liabilities that existed after a transfer. Each party to the transfer recognized the assets that it controlled and the liabilities that it assumed as a result of the transfer and no longer recognized the assets and liabilities that were surrendered or extinguished in the transfer. A key component of this approach was that a transferor should no longer recognize a transferred financial asset if it had surrendered control. Although guidance was provided on when control is considered surrendered, no explicit guidance had been provided on what constitutes a portion or a component of a financial asset.

131. In accordance with the application of the FAS 140, concerns were raised about certain transfers of portions of financial assets that were being accounted for as sales. In particular, concerns were raised about sales of undivided interests in pools of financial assets because of credit support provided by affiliates of the transferor. Also, it was noted that in some cases, transferred financial assets appeared to remain under the control of the transferor while being reported as sales. This was noted with highly-structured transactions in which the transferor continued to control the transferred financial assets, as they were in the custody of the transferor and/or affiliates and the transferor had significant continuing involvements through its interests in the underlying financial assets. As noted by the FASB, it is difficult to determine whether a transferor has surrendered control over a component of a financial asset or a component of a group of financial assets if the transferor continues to maintain custody of the original asset.

132. Pursuant to the statutory accounting concept of conservatism, in assessing FAS 166, there is no identified insurance-specific rationale that would support deviation from the enhanced GAAP requirements in determining "sale" accounting, and the treatment of participating interests and beneficial interests retained or obtained from the transfers of financial assets, in a manner that would result in less-conservative, or less-restrictive, guidelines for statutory accounting. Thus, this issue paper adopts the following GAAP provisions for statutory accounting:

a. Sale accounting is only met in a transfer of an entire financial asset, a transfer of a group of entire financial assets, or if a transfer meets all of the participating interests conditions, including the surrender of control. This guidance indicates that an entity must consider all arrangements made in contemplation of, or contemporaneously with, the transfer, consider the continuing involvement of the transferred assets, as well as consider whether the financial assets have been put beyond the reach of the transferor or creditors if the reporting entity was to enter receivership.

b. Upon a transfer that qualifies for sale accounting, the transferor recognizes and initially measures at fair value all servicing assets, servicing liabilities, any other asset obtained, including beneficial interests, and liabilities incurred at fair value. This measurement is considered appropriate as a clear exchange has occurred which warrants initial measurement at fair value.

c. Participating interests in financial assets that continue to be held by a transferor are not part of the proceeds of a transfer, and the carrying amount of those participating interests shall be measured at the date of the transfer by allocating the previous carrying amount between the participating interests transferred and sold, and the participating interests that are not transferred and continued to be held by a transferor, based on their relative fair values. This measurement is considered appropriate, as the retained participating interests were not part of the transfer, and there has been no surrendering of control.

133. Mirroring the FASB conclusion, inherent in the sale accounting principle that requires transfer of an entire asset, in order to be eligible for sale accounting, an entire financial asset cannot be divided into components before the transfer unless those components meet the definition of a participating interest. Pursuant to this position, circumstances for sale accounting are limited as the conditions for surrender of control can be applied only to a transfer of an entire financial asset, a group of entire financial assets, or a participating interest in the entire financial asset.

134. In determining the participating interest criteria, the statutory accounting guidance proposes to adopt the requirements incorporated within FAS 166. In adopting the GAAP participating interest conditions, an interest-only strip received as proceeds would not meet the definition of a participating interest. The concept of a participating interest is consistently applied only when a premium, if any, is not dependent on the cash flows received from the transferred participating interest. A transferor cannot receive an interest-only strip as proceeds from a transfer of a participating interest because the future cash flows would not be proportionately shared by all participating interest holders.

135. Key aspects of the FAS 166 participating interest characteristics adopted for statutory:

a. From the date of transfer, it represents a proportionate (pro rata) ownership interest in an entire financial asset.

b. From the date of transfer, all cash flows received from the entire financial asset are divided proportionately among the participating interest holders in an amount equal to their share of ownership. Cash flows compensating for services are not included in this determination if those cash flows are not subordinate to the proportionate cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider. Cash flows received by the transferor as proceeds of the transfer are excluded from the determination of proportionate cash flows provided that the transfer does not result with the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows.

c. The rights of each participating interest hold (including the transferor) have the same priority, and no holder's interest is subordinated to the interest of another interest holder. This priority cannot change in the event of bankruptcy or other receivership of the transferor, the original debtor, or any other participating interest holder. Participating interest holders have no recourse to the transferor other than standard representations and warranties. No participating interest holder can be entitled to receive cash before any other holder. Thus, if a participating interest holder is also the servicer of the financial asset and receives cash for the role as servicer, the transfer would not meet the definition of a participating interest.

d. No party has the right to pledge or exchange the entire financial asset unless all participating interest holder agree to pledge or exchange the entire financial asset.

136. This issue paper, through the adoption of FAS 166, retains the concept from SSAP No. 91R that a transferor shall recognize assets obtained and liabilities incurred in a transfer of financial assets accounted for as a sale. As such, a transferor is allowed to obtain a beneficial interest in the transferred financial asset as proceeds from the transfer, but only if it has surrendered control over the original financial asset, thus meeting all of the conditions for sale accounting. It is noted that the "obtained" beneficial interest resulting from the transfer may be very similar to a "component" of the actual transferred asset.

137. In accordance with the continued recognition of obtained beneficial interests from a sale of financial assets, it is noted that similar assets resulting from different transactions will be accounted for differently depending on whether the transaction involves a securitization entity. This was also noted by the FASB, and can be evidenced by comparing a sale of a participating interest directly to a third party and a sale of the whole loan to an entity in which entity was to "obtain" the same participating interest as part of the proceeds from the transfer.

a. For a sale of a participating interest directly to a third party, the retained participating interest would not be remeasured at fair value, rather its carrying value would be allocated on the basis of the relative fair value of the portion sold and portion retained.

b. For a sale of a whole loan to an entity in which the entity was to take-back the same participating interest, the beneficial interest "obtained" as part of the sale would be measured at fair value, with a gain or loss effectively recognized on the portion retained.

Although the asset ultimately held by the entity would be the same in both these scenarios, the measurement is driven in accordance with the transaction that occurred. To address such situations, the FASB decided to add disclosures about assets obtained and liabilities incurred as a result of a transfer accounted for as a sale. Similar disclosures are proposed for statutory accounting. The inclusion of these enhanced disclosures should provide adequate information to the users of the financial statements.

138. If the sale accounting criteria is not met, the adoption of FAS 166 would retain the "secured borrowing" concept within SSAP No. 91R. It is perceived that with the more restrictive sale accounting guidelines, transactions will either be restructured accordingly to meet the enhanced sale criteria, or an increased amount of transactions will be accounted for as secured borrowings. Pursuant to the guidance for secured borrowings, the transferred financial assets will continued to be reported in the financial statements, with no change in measurement, and accordingly, no gain or loss on the result of the transfer.

139. In considering the application of the FAS 166 guidance for Re-REMIC transactions:

a. If the entire financial asset is transferred in a sale transaction, satisfying the surrender of control, then any beneficial interests "obtained" or "taken back" as part of the proceeds of the sale would be accounted for at fair value.

b. If a "participating interest" was transferred in a sale transaction, satisfying the surrender of control, remaining "participating interests" retained (not part of the sale transfer), would be held at an amount representing the difference between the carrying amount of the entire financial asset, and the amount derecognized — previous carrying value allocated between the participating interests sold and retained based on relative fair values at the date of the transfer. If an aspect of the transferred participating interest was "taken back" as proceeds from the transfer, it would then be accounted for at fair value.

c. Transfers that do not meet the sale criteria would be considered secured borrowings. In such instances, the transferor would continue to report the transferred financial assets in the financial statements with no change in measurement. With secured borrowings, there is no derecognition of the transferred asset at the time of transfer.

d. Transfers conducted among trusts or legal vehicles previously captured within the QSPE concept, are not exempt from being considered affiliated or related party transactions. Consideration must be given to the guidance within *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* on all transfers within the confines of this issue paper. If concluded that the transaction is a related party or affiliated transaction, then the valuation methods identified within SSAP No. 25 shall be utilized:

i. Economic transactions shall be reported at fair value at the date of the transaction. To the extent that the related parties are affiliates under common control, the controlling reporting entity shall defer the effects of such transactions that result in gains or increases in surplus.

ii. Non-economic transactions shall be recorded at the lower of existing book values or fair values at the date of the transactions.

iii. Non-economic transactions between a reporting entity and an entity that has no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit of the reporting entity or its affiliates, shall be recorded at the fair value at the date of the transaction; however, to the extent that the transaction results in a gain, that gain shall be deferred until such time as permanence can be verified.

iv. Transactions designed to avoid statutory practices shall be reported as if the reporting entity continued to own the asset or to be obligated for a liability directly.

Qualifying Special Purpose Entities (QSPE)

140. Previous GAAP and statutory accounting guidance in SSAP No. 91R provided that if there was a transfer of financial assets to a qualifying special-purpose entity (QSPE) that cannot pledge or exchange the transferred financial assets, the transferor should nevertheless generally be permitted to derecognize the transferred financial assets if (a) the holders of interests issued by that entity could pledge or exchange their interests and (b) the transfer met the other conditions for sale accounting. In the development of this guidance, it was perceived that the QSPE entity would be so passive that control would not be an issue. Accordingly, under GAAP, such entities were excluded from consolidation because (1) the entity's primary purpose was limited to passively holding financial assets on behalf of its beneficial interest holders, and (2) the understanding that no individual party would have the ability to control such an entity.

141. As noted by the FASB, in practice, the conditions specified in FAS 140, adopted within SSAP No. 91R, paragraph 25, that require a QSPE activities to be "significantly limited" and "entirely specified" were being applied more broadly than originally intended in many securitizations that were reported as sales. The practice of rollovers of beneficial interests, servicer discretion, and the inability of QSPEs to maintain their qualifying status when responding to unexpected events (i.e., modify loans to reduce risk of default), raised questions on whether the passivity conditions required for QSPEs were being met and enforced in practice. As a result of the broad QSPE application, FASB decided to remove the concept of QSPEs entirely from FAS 166.

QSPEs – Rollovers of Beneficial Interests

142. The FASB origination of the FAS 166 project began to address whether a QSPE (or its designee or agent) is permitted to establish the terms of replacement beneficial interests issued after inception of the QSPE. Also, the FASB questioned whether the existing QSPE (or its designee or agent) that

determines the beneficial interests issued after the inception of the QSPE satisfies the passivity requirements.

143. The FASB learned that QSPEs often finance long-term financial assets by issuing short-term beneficial interests in the form of commercial paper or other debt instruments that, in the aggregate, do not receive all the cash inflows from the pool of assets. When those beneficial interests mature, they are paid off from the proceeds from issuing new beneficial interest, rather than from the cash inflows from the pool of financial assets. Frequently, such entities are supported by liquidity commitments from the transferor or other parties to ensure that the obligations of the entity to redeem beneficial interests are met on a timely basis.

144. The roll-over of beneficial interests, and the combination of an entity's ability to make decisions about future refinancing and the involvement of a liquidity provider causes FASB concern with whether the limitations on QSPE activities to be "significantly limited" and "entirely specified" are being met.

QSPEs – Servicer Discretion

145. The FASB identified that questions have also been raised about the amount of discretion a servicer is permitted in servicing the financial assets of a QSPE. Requests had been made for clarification of the requirement that the activities of a QSPE be "significantly limited" and "entirely specified" in the legal documents that establish the QSPE or that create the beneficial interests in the transferred financial asset.

146. After meeting with constituents, the FASB concluded that in practice, many QSPEs hold financial assets that do not appear to be passive in nature. In addition, many entities require a servicer to exercise a level of decision making that does not appear to have been entirely pre-specified if unforeseen events occur or to engage in activities that reach beyond the requirement that the activities of a QSPE be "significantly limited".

147. In considering this situation, it was noted that the long-term nature of many QSPE transactions makes it impractical to predict all of the possible events that may occur during the life of the transferred financial asset. In addition, it is impractical to predict all of the potential responses a servicer might be required to make to protect the interests of the beneficial interest holders. As such, the FASB concluded that it would not be feasible or fruitful to define at inception the parameters required by the definition of a QSPE for many types of financial assets, most notably, financial assets with longer terms.

QSPEs – Loan Modification

148. In light of a statement from the federal financial institutions' regulatory agencies encouraging financial institutions to work constructively with residential borrowers who were unable to make their contractual payments on their home loans, consideration was given to how loan modifications, for loans not in default, but for which default would be imminent, would impact a QSPE. It was noted that the prior GAAP guidance and interpretations were ambiguous about when an entity could modify a loan without effecting the QSPE status, because the interpretative guidance stated only that the servicer is permitted to work out a loan if it become delinquent or is in default. This guidance also required that the discretion inherent in the decision be "significantly limited" and its parameters be "entirely specified" in the QSPE's legal documents.

QSPE – Conclusion

149. Due to the range of financial assets being securitized and the complexity of securitization structures and arrangements, the applicabtion of the conditions for a QSPE have been extended beyond the scope of their original intent, thus rendering the conditions no longer operational in practice. Although the FASB considered an approach that would have strengthened the passivity requirement of the

permitted assets of a QSPE, the FASB concluded that few classes of financial assets are truly passive as envisioned in the QSPE concept. As such, the concept of a QSPE has been removed from FAS 140. The removal of this concept from FAS 140, resulted with a need to remove the scope exception for such entities from consolidation requirements and complete another project (FAS 167) to reconsider the guidance in Interpretation 46R.

150. The elimination of the concept of "qualified special purpose entities" (QSPE) for statutory accounting, similar to the FASB rationale, is necessary to address concerns that the application of entities classified as QPSEs has been applied more broadly then intended. Pursuant to the FASB conclusions, it was noted that in practice, QSPEs hold financial assets that do not appear to be passive in nature. Also, with the range of financial assets being securitized and the complexity of securitization structures and arrangements, the application of the conditions for a qualifying QSPE have been extended in some cases beyond the intent of the original guidance.

151. For statutory accounting, it is presumed that insurers will continue to form, conduct transfers of assets between, and hold investments in trusts or legal vehicles that would have met the prior conditions to be considered a QSPE. The accounting for transfers between the insurer and these trusts and other legal vehicles, including whether sale accounting should be applied, will be determined in accordance with the provisions of this issue paper. Furthermore, without retaining the concept of a "QSPE", transactions completed with entities previously captured within this term must be assessed in accordance with *SSAP No. 25—Accounting for and Disclosure about Transactions with Affiliates and Other Related Parties* (SSAP No. 25). As previously noted, if concluded that the transaction is a related party or affiliated transaction, then the valuation methods identified within SSAP No. 25 shall be utilized.

Isolation of Transferred Assets

Legal Opinions

152. This issue paper proposes adoption of the FAS 166 guidance regarding the "isolation" of transferred assets from the transferor in order to qualify for sale accounting. This guidance indicates that all evidence that supports an assertion for isolation should be considered, which includes consideration of the legal consequences of the transfer in the jurisdiction in which receivership would take place. This issue paper, similar to FAS 166, indicates that derecognition of transferred financial assets is appropriate only if the available evidence provides reasonable assurance that the transferred financial assets would be beyond the reach of the bankruptcy trustee or receiver for the transferor.

153. This issue paper incorporates information regarding legal opinions ("true sale opinions" and "nonconsolidation opinions") to identify aspects that should be considered in reviewing evidence to support isolation assertions. The guidance identifies that a legal opinion may not be required if the transferor has a reasonable basis to conclude that the appropriate legal opinion would be given if requested. Although the legal opinion is not necessary to support an assertion in all instances, similar to GAAP, the inclusion of this guidance, is intended to reduce practice issues and provide a sense of consistency in assessing whether isolation has occurred.

Transferability

154. This issue paper concurs with the FASB conclusion that the ability of a transferee to use the financial asset it receives is an important indication that a transferor has surrendered control over the transferred financial asset. Similar to the GAAP conclusion, for instances of transfers in which beneficial interests are created and distributed, this assessment may require consideration as to whether the third-party beneficial interest holders have the ability to pledge or exchange their beneficial interests:

a. Certain transferees issue beneficial interests of various types (debt, participations, residual interests or otherwise) as required by the transfer agreements. To issue beneficial

> interests, the transferee is typically restricted from pledging or exchanging the assets it holds because it is effectively distributing ownership rights in those assets to the beneficial interest holders. This transaction is effectuated by establishing a separate legal entity that merges the contractual rights in the transferred financial assets and allocates ownership interests in them (beneficial interests). As such, a third-party holder's right to pledge or exchange beneficial interests is the counterpart of a transferee's right to pledge or exchange the transferred assets themselves. Thus, a constraint on the transferee that issues beneficial interests would not necessarily indicate that the transferor has retained control over the transferred financial assets. In considering this conclusion for cases in which (a) a financial asset is transferred to an entity whose sole purpose is to facilitate a securitization or asset-backed financing and (b) the transferee entity is constrained from pledging to exchanging the asset it receives, the transferor should evaluate whether the third-party beneficial holders have the ability to pledge or exchange their beneficial interests.

Effective Control

155. This issue paper concurs with the FASB conclusion that the transferor cannot maintain effective control over the transferred financial assets. In considering whether control exists, the transferor must consider any direct continuing involvement with the transferred financial assets as well as consider any indirect continuing involvement that could enable it to maintain effective control through an arrangement made with beneficial interest holders of the transferred financial assets.

156. This issue paper also adopts the FASB conclusion that to account for a transfer of financial assets as a sale, the transferor must surrender control over the entire financial asset, except for limited circumstances in which the transferred portion meets the definition of a participating interest. Under this guidance, it is not possible to account for a transferred financial asset partially as a sale and partially as secured borrowing in situations in which the effective control is only maintained on a portion of the transferred assets. Such transactions, unless involving participating interests, would not meet the sale criteria and would be accounted for as secured borrowings — until all of the portions have been transferred in a manner that meet the sale criteria. This is further supported by the guidance that indicates any assets obtained from the sale of an entire financial asset are to be considered proceeds from the sale. If the transferor maintained effective control over a portion of the asset it has transferred, it would be inappropriate for that portion to be considered proceeds from the sale.

Securities Lendings

157. This issue paper also proposes adoption of the FAS 166 securities lending guidance. The statutory accounting guidance for securities lending transactions previously included within SSAP No. 91R established different guidelines from GAAP for when securities lending transactions, and related collateral, should be reported within the balance sheet. This prior guidance utilized the terms "restricted" and "unrestricted" and defined those terms in accordance with whether the collateral pledged by the transferee was or was not available for "general use of the transferor".

158. In 2008, the Statutory Accounting Principles (E) Working Group identified that various reporting entities had interpreted the security lending definitions differently, resulting with inconsistency in application and instances in which the guidance for "off-balance sheet" reporting was being applied in a broader manner than intended. It was identified that some entities had concluded the collateral requirement for "general use of the transferor" to mean that the collateral was to be considered "restricted" if the reporting entity had been prohibited from using the collateral in any form. However, although use of the collateral may have been limited in some manner, perhaps unavailable for policyholder claims, the reporting entity may still have been permitted to reinvest the collateral. The ability to reinvest the collateral, coupled with off-balance sheet reporting caused concern for regulators

due to the lack of information and transparency on the transactions that occurred, as well as the potential financial risk if the reinvested collateral was to significantly decrease in value.

159. By adopting the GAAP guidance for securities lending transactions, the collateral received in such transactions will be assessed in accordance with "sale" criteria. Thus, if the holder is permitted by contract or custom to sell or repledge, the collateral is considered proceeds of the sale of the "loaned" securities. If the collateral received is in a form that is not permitted by contract or custom to sell or repledge, the securities lending transaction would not satisfy the sale criteria and would be accounted for as a loan of securities by the transferor to the transferee.

Statutory-Specific Revisions

160. This issue paper proposes adoption, with modification to the FAS 166 guidance to further restrict sale accounting treatment for statutory accounting in specific instances in which GAAP would permit sale recognition. These revisions are proposed in accordance with the conservatism principle, as in the noted instances, the potential continuing involvement is considered significant to preclude sale accounting under statutory accounting principles. Specifically, these modifications are included for transactions with removal-of-account provisions and transfers of receivables with recourse. Modifications have also been proposed to incorporate guidance previously included in SSAP No. 91R specific to insurance entities, as well as to include guidance that was previously adopted from GAAP, and not revised through the issuance of FAS 166.

161. This issue paper proposes adoption, with modification, of FAS 166 and the corresponding amendments to FAS 140 and FAS 156, including the revised FAS 140 glossary and illustrations. Statutory modifications from the adoption of amendments to FAS 140 and FAS 156 reflected in FAS 166 include:

a. Rejects the GAAP consideration for "consolidated affiliates" as the concept of consolidation has not been adopted for statutory accounting.

b. Rejects reference to GAAP standards and GAAP methods not adopted for statutory as well as concepts that are not pertinent for insurers. For example references to investments 'held-to-maturity', 'available for sale' or 'trading' and reference to FASB standards were removed and replaced with statutory terms and references to statutory standards.

c. Rejects GAAP reference and guidance regarding "Revolving-Period Securitizations" as this GAAP guidance is not applicable to statutory accounting. This concept was also deemed not applicable to statutory accounting under SSAP No. 91R.

d. Rejects GAAP guidance for "Sale-Type and Direct-Financing Lease Receivables" as leases shall be accounted for in accordance with *SSAP No. 22—Leases* (SSAP No. 22). This conclusion is consistent with SSAP No. 91R.

e. Rejects GAAP guidance for "Banker's Acceptances and Risk Participations in Them" as not applicable for statutory accounting. This GAAP guidance was also deemed not applicable to statutory accounting under SSAP No. 91R.

f. Rejects GAAP guidance for "Removal of Account Provisions" that allows recognition of sale accounting. For statutory, transfers that would empower the transferor to reclaim assets under certain conditions (considered 'removal-of-accounts provisions') are precluded from being accounted for as sales. This conclusion is consistent with SSAP No. 91R.

g. Rejects GAAP guidance for "Transfers of Receivables with Recourse" that allows transfers of receivables in their entirety with recourse to be accounted for as sales. For statutory, a transfer of receivables with recourse shall be accounted for as a secured borrowing. This conclusion is consistent with SSAP No. 91R.

h. Rejects illustrations for transactions involving transfers of lease financing receivables with residual values and banker's acceptances with a risk participation as the GAAP guidance in FAS 166 related to these topics has been rejected for statutory accounting.

i. Incorporates additional disclosure requirements for collateral requirements when the reporting entity is not permitted by contract or custom to sell or repledge.

j. Incorporates guidance previously included in SSAP No. 91R specific to insurance entities, and guidance that was adopted from GAAP guidance not revised through the issuance of FAS 166. Items incorporated include:

   i. Clarification that transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40—Real Estate* Investments.

   ii. Clarification that transactions between related parties or affiliates are accounted for in accordance with *SSAP No. 25—Accounting For and Disclosures About Transactions with Affiliates and Other Related Parties*.

   iii. Clarification that the guidance does not address the securitization of mortality or morbidity risk.

   iv. Guidance on the accounting of sale transactions for entities required to maintain an interest maintenance reserve (IMR).

   v. Clarification of when servicing assets and servicing liabilities shall be recognized as well as measurement of these items. This guidance continues the adoption, with modification, of FAS 156, including the requirement to subsequently measure servicing assets and servicing liabilities at fair value. Furthermore, continues the prior decision that servicing assets shall be nonadmitted.

   vi. Guidance on the accounting for transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract.

   vii. Disclosures on loaned securities; securities underlying repurchase and reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements; receivables with recourse; and wash sales.

   viii. Guidance on the sales of future revenues.

   ix. Guidance on collateral requirements for securities lending transactions that requires collateral of 102 percent (105 percent for foreign securities) of the fair value of the loaned securities. Guidance recently adopted by the Statutory Accounting Principles (E) Working Group related to collateral received for securities lending transactions has been reflected within the proposed issue paper.

   x. Disclosures on securities lending transactions specific to aggregate open positions and aggregate positions under 30-day, 60-day and 90-day terms, disclosures for collateral that extend beyond one year from the reporting date, and detail of loaned securities within the separate account and if the policies and procedures differ from the general account.

xi. Clarification that repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this guidance.

xii. Guidance on Repurchase Agreements. This guidance retains recent revisions to SSAP No. 91R that ensured the proper terms are being utilized for the proper scenario. This guidance retains the recently adopted guidance from FSP FAS 140-3, Accounting for Transfers of Financial Assets and Repurchase Financing Transactions (FSP FAS 140-3). This GAAP guidance was not revised with the issuance of FAS 166.

xiii. Guidance on Reverse Repurchase Agreements. This guidance retains recent revisions to SSAP No. 91R that ensured the proper terms are being utilized for the proper scenario.

xiv. Guidance on Collateral for Reverse and Repurchase Agreements. This guidance retains recent revisions to SSAP No. 91R that ensured the proper terms are being utilized for the proper scenario..

xv. Guidance on Dollar Repurchase Agreements. This guidance retains recent revisions to SSAP No. 91R that ensured the proper terms are being utilized for the proper scenario.

xvi. Guidance for Separate Transactions.

xvii. Guidance for Offsetting.

xviii. Guidance for Transfers of Receivables with Recourse.

162. With the exception of INT 99-21, as discussed below, this issue paper will be interpreted by the statutory interpretations to SSAP No. 91R:

a. *INT 99-07: EITF 97-3: Accounting for Fees and Costs Associated with Loan Syndications and Loan Participations after the Issuance of FASB Statement No. 125* (INT 99-07) – As this interpretation rejected EITF 97-3 for statutory accounting, there is no impact to this interpretation from adoption of FAS 166.

b. *INT 99-08: EITF 97-6: Application of Issue No. 96-20 to Qualifying Special-Purpose Entities Received Transferred Financial Assets Prior to the Effective Date of FASB Statement No. 125* (INT 99-08) – As this interpretation rejected EITF 96-20 for statutory accounting, there is no impact to this interpretation from adoption of FAS 166.

c. *INT 99-14: EITF 96-19: Debtor's Accounting for a Modification or Exchange of Debt Instruments* (INT 99-14) – This interpretation adopted EITF 99-14 for statutory accounting. As such, an exchange of debt instruments with substantially different terms is considered a debt extinguishment. This guidance also clarifies that if the cash flows under the terms of the new debt instrument is at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument, then the exchange of debt instruments are considered substantially different. There is no impact to this interpretation from the adoption of FAS 166.

d. *INT 99-21: EITF 98-7: Accounting for Exchanges of Similar Equity Method Investments* (INT 99-21) – This interpretation was nullified with the issuance of *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary*

Transactions (SSAP No. 95). With the issuance of a new SSAP, there will be no future reference to this interpretation.

e. *INT 99-22: EITF 98-8: Accounting for Transfers of Investments That Are in Substance Real Estate* (INT 99-22) – This interpretation adopted EITF 98-8 indicating that transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40—Real Estate Investments* (SSAP No. 40). There is no impact to this interpretation from the adoption of FAS 166.

f. *INT 00-11: EITF 98-15: Structured Notes Acquired for a Specified Investment Strategy* (INT 00-11) – This interpretation rejected the consensus position in EITF 98-15 pursuant to a recommendation from the Invested Assets (E) Working Group. It was noted that any attempt on the part of the Emerging Accounting Issues (E) Working Group to promulgate EITF 95-18 into accounting guidance will require the Valuation of Securities (E) Task Force to change the mission of the Securities Valuation Office. As such, there will be no impact to this interpretation as a result of adopting FAS 166.

g. *INT 01-31: Assets Pledged as Collateral* (INT 01-31) – This interpretation provides guidance on whether assets pledged as collateral shall be considered admitted assets. There is no impact to this interpretation from the adoption of FAS 166.

h. *INT 03-05: EITF 01-7: Creditor's Accounting for a Modification or Exchange of Debt Instruments* (INT 03-05) – This interpretation adopts the consensus position of EITF 01-7. This EITF clarifies that a debt instrument modification should be considered more than minor if the present value of the cash flows under the terms of the new debt instrument is at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument. This EITF also concludes that the guidance in EITF 96-19 (adopted within INT 99-14) should be used to calculate the present value of cash flows for purposes of applying the 10 percent test. There is no impact to this interpretation from the adoption of FAS 166.

i. *INT 04-21: EITF 02-9: Accounting for Changes that Result in a Transferor Regaining Control of Financial Assets Sold* (INT 04-21) – This interpretation adopts EITF 02-9 with modification for statutory terms and references. Pursuant to this adoption, a transferred asset that has been accounted for as sold is to be accounted for as "re-purchased" if the basis for that sale accounting subsequently becomes invalid. There is no impact to this interpretation from the adoption of FAS 166.

Drafting Notes/Comments

163. None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

164. SSAP No. 91R provides the following guidance: **(This has been updated to include the SSAP No. 91R revisions adopted in May 2010 for securities lending transactions.)**

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for transfers and servicing of financial assets, including asset securitizations and securitizations of policy acquisition costs, extinguishments of liabilities, repurchase agreements and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements that

are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This statement discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement. Securitizations of nonfinancial assets are outside the scope of this statement.

SUMMARY CONCLUSION

2. See *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25) for additional accounting and disclosure guidance concerning related party transactions. In addition the guidance for the following topics have been addressed in Interpretations of the Emerging Accounting Issues (E) Working Group (INT):

   a. Transfers of ownership interest that are in substance sales of real estate - INT 99-22 resolved this conflict between application of *SSAP No. 40—Real Estate* (SSAP No. 40) and *SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 18).

   b. Exchanges of equity method investments for similar productive assets - INT 99-21 resolved this conflict between application of *SSAP No. 28—Nonmonetary Transactions* (SSAP No. 28) and SSAP No. 18.

3. SSAP No. 18, *SSAP No. 33—Securitization* (SSAP No. 33) and *SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements* (SSAP No. 45) are superseded by the conclusions outlined in this statement.

4. This statement does not address the securitization of mortality or morbidity risk. The National Association of Insurance Commissioners' (NAIC's) Insurance Securitization Working Group of the Financial Condition (E) Committee is charged with the development of model laws, model regulations and proposed accounting guidance for the securitization of mortality and morbidity risk. When such proposed accounting guidance is finalized, the development of a statement will be considered.

5. Except as discussed in paragraphs 56 and 97, a transfer of a group of financial assets, or a portion of a financial asset in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if, and only if, all of the following conditions are met:

   a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (see paragraphs 17 and 18);

   b. Either (i) each transferee obtains the right, free of conditions that constrain it from taking advantage of that right (see paragraphs 19-23), to pledge or exchange the transferred assets or (ii) the transferee is a qualifying special-purpose entity as defined in paragraph 25 and the holders of beneficial interests in that entity have the right, free of conditions that constrain them from taking advantage of that right (see paragraph 24), to pledge or exchange those interests and no condition both constrains the transferee (or holder) from taking advantage of its right to pledge or exchange and provide more than a trivial benefit to the transferor; and

   c. The transferor does not maintain effective control over the transferred assets through (i) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (see paragraphs 38-40) or (ii) the ability to unilaterally cause the holder to return specific assets, other than through a cleanup call (see paragraphs 22-23 and 41-45).

6. Upon completion of any transfer of financial assets, the transferor shall:

   a. Initially recognize and measure at fair value, if practicable, servicing assets and servicing liabilities assumed under a separate contractual obligation to service financial assets (see paragraphs 11 and 50);

   b. Allocate the previous carrying amount between the assets sold, if any, and the interests that continue to be held by a transferor, if any, based on their relative fair values at the date of transfer (see paragraphs 48 and 49); and

   c. Continue to carry in its balance sheet any interest it continues to hold in the transferred assets, including, if applicable, beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization, and undivided interests continued to be held by the transferor (see paragraphs 7c., 48 and 49).

7. Upon completion of a transfer of financial assets that satisfies the conditions to be accounted for as a sale (see paragraph 5), the transferor (seller) shall:

   a. Eliminate the transferred assets from the balance sheet;

   b. Allocate the previous carrying amount of the transferred assets to the securities representing beneficial interests continued to be held by the reporting entity, if any, and the securities representing beneficial interests not continued to be held, if any, based on the relative fair values of the transferred assets at the date of transfer;

   c. Record in its balance sheet, the allocated carrying value of the securities representing beneficial interests continued to be held in the assets (e.g., loan-backed securities). Subsequent to the transfer of assets:

      i. Retained residuals are to be carried at fair value with the difference between fair value and the allocated cost basis recognized as an unrealized gain or loss;

      ii. Beneficial interests continued to be held shall be accounted for in accordance with the statutory accounting principles for the specific asset type (e.g., bonds shall be accounted for in accordance with *SSAP No. 26—Bonds, excluding Loan–backed and Structured Securities*, loan-backed securities shall be accounted for in accordance with *SSAP No. 43R—Loan-backed and Structured Securities* (SSAP No. 43R), preferred stock in accordance with *SSAP No. 32—Investments in Preferred Stock (excluding investments in preferred stock of subsidiary, controlled, or affiliated entities)* (SSAP No. 32).

   d. Recognize all additional assets obtained (i.e., other than the securities representing beneficial interests continued to be held which are recorded in accordance with 7 c.) and liabilities incurred in consideration as proceeds of the sale;

   e. Initially measure such additional assets obtained and liabilities incurred in the sale at fair value (see *SSAP No. 100—Fair Value Measurements*), or if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraph 50); and

f. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized and unrealized capital gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized capital gains and losses shall be reported as net realized capital gains or losses in the statement of income, and unrealized capital gains and losses shall be reported as net unrealized gains and losses in unassigned funds (surplus).

8. The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value.

9. Repurchase agreements, reverse repurchase agreements, collateral requirements, and dollar repurchase agreements are described in paragraphs 64-86. When an asset is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales and shall be accounted for as sales as discussed in paragraphs 67-69 and disclosed as required by paragraph 100. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

10. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) (a) does not meet the criteria for a sale in paragraph 5, or (b) is a sale of receivables with recourse (see paragraph 97); the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (see paragraph 13).

Recognition and Measurement of Servicing Assets and Liabilities

11. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained, or separate purchase or assumption of the servicing. Servicing rights become a distinct asset or liability of the reporting entity pursuant to:

a. A transfer of the servicer's financial assets that meets the requirements for sale accounting;

b. A transfer of financial assets to a qualifying SPE in a guaranteed mortgage obligation in which the transferor retains all of the resulting securities; or

c. An acquisition or assumption of a servicing obligation that does not relate to financial assets of the servicer.

A servicer that transfers or securitizes financial assets in a transaction that does not meet the requirements for sale accounting and is accounted for as a secured borrowing with the underlying assets remaining on the transferor's balance sheet shall not be recognized as a servicing asset or servicing liability.

12. If distinct servicing rights exist in accordance with the above guidelines, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations in other income. Servicing assets and servicing liabilities shall be measured initially at fair value. Servicing assets or liabilities shall be measured subsequently at fair value at each reporting date with fluctuations in fair value reported as unrealized gains and losses. Declines in fair value which are determined to be other than temporary shall be recorded as realized losses.

Secured Borrowings and Collateral

13. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (see paragraph 10). The accounting for noncash[1] collateral by the debtor (or obligor) and the secured party depends on whether the secured party or its agent has the right to sell or repledge the collateral and on whether the debtor has defaulted.

Footnote 1: Cash "collateral," sometimes used, for example, in securities lending transactions, shall be derecognized by the payer and recognized by the recipient, not as collateral, but rather as proceeds of either a sale or a borrowing.

a. If the secured party (transferee) or its agent has the right by contract or custom to sell or repledge the collateral, then the debtor (transferor) shall report that asset in its balance sheet.

b. If the secured party (transferee) sells collateral pledged to it, it shall recognize the proceeds from the sale and its obligation to return the collateral. The sale of the collateral is a transfer subject to the provisions of this statement.

c. If the debtor (transferor) defaults under the terms of the secured contract and is no longer entitled to redeem the pledged asset, it shall derecognize the pledged asset, and the secured party (transferee) shall recognize the collateral as its asset initially measured at fair value or, if it has already sold the collateral, derecognize its obligation to return the collateral.

d. Except as provided in paragraph 13 (c above), the debtor (transferor) shall continue to carry the collateral as its asset, and the secured party (transferee) shall not recognize the pledged asset.

14. Reporting entities may enter into certain transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract. If the assets pledged are recorded as admitted assets under *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) and are not impaired under the provisions of *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5), the pledging entity records the collateral as an admitted asset until committing a contract default that has not been cured in accordance with the contract provisions. At the time of an uncured default, the provisions of paragraph 13 above shall be used to determine the appropriate accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of the liability owed by the pledging entity as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset shall be removed from the balance sheet since that obligation has been satisfied through the secured party's utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer shall only record an admitted asset for the amount of collateral that it can redeem.

Extinguishments of Liabilities

15. A debtor shall derecognize a liability if, and only if, it has been extinguished (see *SSAP No. 15—Debt and Holding Company Obligations* (SSAP No. 15)). A liability has been extinguished if either of the following conditions is met:

    a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities whether the securities are canceled or held as so-called treasury bonds; or

    b. The debtor is legally released from being the primary obligor under the liability, either judicially or by the creditor.

16. If a creditor releases a debtor from primary obligation on the condition that a third party assumes the obligation and that the original debtor becomes secondarily liable, that release extinguishes the original debtor's liability. However, in those circumstances, whether or not explicit consideration was paid for that guarantee, the original debtor becomes a guarantor. As a guarantor, it shall recognize a guarantee obligation in the same manner as would a guarantor that had never been primarily liable to that creditor, with due regard for the likelihood that the third party will carry out its obligations. The guarantee obligation shall be initially measured at fair value, and that amount reduces the gain or increases the loss recognized on extinguishment.

Isolation Beyond the Reach of the Transferor and Its Creditors

17. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depends on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor. Transactions between related parties or affiliates are accounted for in accordance with SSAP No. 25.

18. Many common financial transactions, for example, typical repurchase agreements and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

19. Sale accounting is allowed under paragraph 5 only if each transferee has the right to pledge, or the right to exchange, the transferred assets or beneficial interests it received, but constraints on that right also matter. Many transferor-imposed or other conditions on a transferee's right to pledge or exchange a transferred asset both constrain a transferee from pledging or exchanging the transferred assets and, through that constraint, provide more than a trivial benefit to the transferor. For example, a provision in the transfer contract that prohibits selling or pledging a transferred loan receivable not only constrains the transferee but also provides the transferor with the more-than-trivial benefits of knowing who has the asset, a prerequisite to repurchasing the asset, and of being able to block the asset from finding its way into the hands of a competitor for the loan customer's business or someone that the loan customer might consider an undesirable creditor.

Transferor-imposed contractual constraints that narrowly limit timing or terms, for example, allowing a transferee to pledge only on the day assets are obtained or only on terms agreed with the transferor, also constrain the transferee and presumptively provide the transferor with more-than-trivial benefits.

20. However, some conditions do not constrain a transferee from pledging or exchanging the asset and therefore do not preclude a transfer subject to such a condition from being accounted for as a sale. For example, a transferor's right of first refusal on the occurrence of a bona fide offer to the transferee from a third party presumptively would not constrain a transferee, because that right in itself does not enable the transferor to compel the transferee to sell the assets and the transferee would be in a position to receive the sum offered by exchanging the asset, albeit possibly from the transferor rather than the third party. Further examples of conditions that presumptively would not constrain a transferee include (a) a requirement to obtain the transferor's permission to sell or pledge that is not to be unreasonably withheld, (b) a prohibition on sale to the transferor's competitor if other potential willing buyers exist, (c) a regulatory limitation such as on the number or nature of eligible transferees (as in the case of securities issued under Securities Act Rule 144A or debt placed privately), and (d) illiquidity, for example, the absence of an active market. Judgment is required to assess the significance of some conditions. For example, a prohibition on sale to the transferor's competitor would be a significant constraint if that competitor were the only potential willing buyer other than the transferor.

21. A condition imposed by a transferor that constrains the transferee presumptively provides more than a trivial benefit to the transferor. A condition not imposed by the transferor that constrains the transferee may or may not provide more than a trivial benefit to the transferor. For example, if the transferor refrains from imposing its usual contractual constraint on a specific transfer because it knows an equivalent constraint is already imposed on the transferee by a third party, it presumptively benefits more than trivially from that constraint. However, the transferor cannot benefit from a constraint if it is unaware at the time of the transfer that the transferee is constrained.

Transferor's Rights or Obligations to Reacquire Transferred Assets

22. Some rights or obligations to reacquire transferred assets both constrain the transferee and provide more than a trivial benefit to the transferor, thus precluding sale accounting under paragraph 5. For example, a freestanding call option written by a transferee to the transferor benefits the transferor and, if the transferred assets are not readily obtainable in the marketplace, is likely to constrain a transferee because it might have to default if the call was exercised and it had exchanged or pledged the assets. A freestanding forward purchase-sale contract between the transferor and the transferee on transferred assets not readily obtainable in the marketplace would benefit the transferor and is likely to constrain a transferee in much the same manner. Judgment is necessary to assess constraint and benefit. For example, put options written to the transferee generally do not constrain it, but a put option on a not-readily-obtainable asset may benefit the transferor and effectively constrain the transferee if the option is sufficiently deep-in-the-money when it is written that it is probable that the transferee will exercise it and the transferor will reacquire the transferred asset. In contrast, a sufficiently out-of-the-money call option held by the transferor may not constrain a transferee if it is probable when the option is written that it will not be exercised. Freestanding rights to reacquire transferred assets that are readily obtainable presumptively do not constrain the transferee from exchanging or pledging them and thus do not preclude sale accounting under paragraph 5.

23. Other rights or obligations to reacquire transferred assets, regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred assets, as discussed in paragraphs 38-45, thus precluding sale accounting under paragraph 5.

Conditions That Constrain a Holder of Beneficial Interests in a Qualifying SPE

24. The considerations in paragraphs 19-23, about conditions that may or may not constrain a transferee that is not a qualifying SPE from pledging or exchanging the transferred assets, also extend to conditions that may or may not constrain a beneficial interest holder (BIH) from pledging or exchanging its beneficial interests in assets transferred to a qualifying SPE. For example, if BIHs agree to sell their beneficial interests in a qualifying SPE back to the transferor upon request at the price paid plus a stated return, that arrangement clearly conveys more than a trivial benefit to the transferor; sale accounting for the transfer to the qualifying SPE would be precluded if that agreement constrained a BIH from exchanging or pledging its beneficial interest.

Qualifying SPE

25. A qualifying SPE is a trust or other legal vehicle that meets all of the following conditions:

    a. It is demonstrably distinct from the transferor (paragraphs 26 and 27);

    b. Its permitted activities:

        i. Are significantly limited;

        ii. Were entirely specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds; and

        iii. May be significantly changed only with the approval of the holders of at least a majority of the beneficial interests held by entities other than any transferor, its affiliates, and its agents (paragraphs 28 and 29).

    c. It shall hold only:

        i. Financial assets transferred to it that are passive in nature (paragraph 30);

        ii. Passive derivative financial instruments that pertain to beneficial interests (other than another derivative financial instrument) issued or sold to parties other than the transferor, its affiliates, or its agents (paragraphs 30 and 31);

        iii. Financial assets (for example, guarantees or rights to collateral) that would reimburse it if others were to fail to adequately service financial assets transferred to it or to timely pay obligations due to it and that it entered into when it was established, when assets were transferred to it, or when beneficial interests (other than derivative financial instruments) were issued by the SPE;

        iv. Servicing rights related to financial assets that it holds;

        v. Temporarily, nonfinancial assets obtained in connection with the collection of financial assets that it holds (paragraph 32);

        vi. Cash collected from assets that it holds and investments purchased with that cash pending distribution to holders of beneficial interests that are appropriate for that purpose (that is, money-market or other relatively risk-free instruments without options and with maturities no later than the expected distribution date).

d. If it can sell or otherwise dispose of noncash financial assets, it can do so only in automatic response to one of the following conditions:

i. Occurrence of an event or circumstance that:

(a) Is specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds;

(b) Is outside the control of the transferor, its affiliates, or its agents; and

(c) Causes, or is expected at the date of transfer to cause, the fair value of those financial assets to decline by a specified degree below the fair value of those assets when the SPE obtained them (paragraphs 33 and 34.)

ii. Exercise by a BIH (other than the transferor, its affiliates, or its agents) of a right to put that holder's beneficial interest back to the SPE (paragraph 35);

iii. Exercise by the transferor of a call specified in the legal documents that established the SPE, transferred assets to the SPE, or created the beneficial interests in the transferred assets that it holds (paragraphs 41-45);

iv. Termination of the SPE or maturity of the beneficial interests in those financial assets on a fixed or determinable date that is specified at inception (paragraph 36).

Need to Be Demonstrably Distinct from the Transferor

26. A qualifying SPE is demonstrably distinct from the transferor only if it cannot be unilaterally dissolved by any transferor, its affiliates, or its agents and either:

a. At least 10 percent of the fair value of its beneficial interests is held by parties other than any transferor, its affiliates, or its agents; or

b. The transfer is a guaranteed mortgage securitization.

27. An ability to unilaterally dissolve an SPE can take many forms, including but not limited to holding sufficient beneficial interests to demand that the trustee dissolve the SPE, the right to call all the assets transferred to the SPE, and a right to call or a prepayment privilege on the beneficial interests held by other parties.

Limits on Permitted Activities

28. The powers of the SPE must be limited to those activities allowed by paragraph 25 for it to be a qualifying SPE. Many kinds of entities are not so limited. For example, any bank, insurance company, pension plan, or investment company has powers that cannot be sufficiently limited for it to be a qualifying SPE.

29. The BIHs other than any transferor, its affiliates, or its agents may have the ability to change the powers of a qualifying SPE. If the powers of a previously qualifying SPE are changed so that the SPE is no longer qualifying, unless the conditions in paragraph 5b. are then met by the SPE itself and the conditions in paragraphs 5a. and 5c. continue to be met, that change would bring the transferred assets held in the SPE back under the control of the transferor (paragraph 46).

Limits on What a Qualifying SPE May Hold

30. A financial asset or derivative financial instrument is passive only if holding the asset or instrument does not involve its holder in making decisions other than the decisions inherent in servicing. An equity instrument is not passive if the qualifying SPE can exercise the voting rights and is permitted to choose how to vote. Investments are not passive if through them, either in themselves or in combination with other investments or rights, the SPE or any related entity, such as the transferor, its affiliates, or its agents, is able to exercise control, as defined in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No.* 88 (SSAP No. 97) over the investee. A derivative financial instrument is not passive if, for example, it includes an option allowing the SPE to choose to call or put other financial instruments that would allow it and its related entities to control 10% of more of the financial instruments issuer; but other derivative financial instruments can be passive, for example, interest rate caps and swaps and forward contracts. Derivative financial instruments that result in liabilities, like other liabilities of a qualifying SPE, are a kind of beneficial interest in the qualifying SPE's assets.

31. A derivative financial instrument pertains to beneficial interests (other than another derivative financial instrument) issued only if it:

    a. Is entered into:

        i. When the beneficial interests are issued by the qualifying SPE to parties other than the transferor, its affiliates, or its agents or sold to such other parties after being issued by the qualifying SPE to the transferor, its affiliates, or its agents; or

        ii. When a passive derivative financial instrument needs to be replaced upon occurrence of an event or circumstance (specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds) outside the control of the transferor, its affiliates, or its agents, for example, when the counterparty to the derivative defaults or is downgraded below a specified threshold.

    b. Has a notional amount that does not initially exceed the amount of those beneficial interests and is not expected to exceed them subsequently;

    c. Has characteristics that relate to, and partly or fully but not excessively counteract, some risk associated with those beneficial interests or the related transferred assets.

32. A qualifying SPE may hold nonfinancial assets other than servicing rights only temporarily and only if those nonfinancial assets result from collecting the transferred financial assets. For example, a qualifying SPE could be permitted to temporarily hold foreclosed nonfinancial collateral. In contrast, an entity cannot be a qualifying SPE if, for example, it receives from a transferor significant secured financial assets likely to default with the expectation that it will foreclose on and profitably manage the securing nonfinancial assets.

Limits on Sales or Other Dispositions of Assets

33. Examples of requirements to sell, exchange, put, or distribute (hereinafter referred to collectively as dispose of) noncash financial assets that are permitted activities of a qualifying SPE—because they respond automatically to the occurrence of an event or circumstance that:

    a. Is specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds;

b. Is outside the control of the transferor, its affiliates, or its agents; and

c. Causes, or is expected to cause, the fair value of those assets to decline by a specified degree below the fair value of those assets when the qualifying SPE obtained them include requirements to dispose of transferred assets in response to:

   i. A failure to properly service transferred assets that could result in the loss of a substantial third-party credit guarantee;

   ii. A default by the obligor;

   iii. A downgrade by a major rating agency of the transferred assets or of the underlying obligor to a rating below a specified minimum rating;

   iv. The involuntary insolvency of the transferor; or

   v. A decline in the fair value of the transferred assets to a specified value less than their fair value at the time they were transferred to the SPE.

34. The following are examples of powers or requirements to dispose of noncash financial assets that are not permitted activities of a qualifying SPE, because they do not respond automatically to the occurrence of a specified event or circumstance outside the control of the transferor, its affiliates, or its agents that causes, or is expected to cause, the fair value of those transferred assets to decline by a specified degree below the fair value of those assets when the SPE obtained them:

a. A power that allows an SPE to choose to either dispose of transferred assets or hold them in response to a default, a downgrade, a decline in fair value, or a servicing failure;

b. A requirement to dispose of marketable equity securities upon a specified decline from their “highest fair value” if that power could result in disposing of the asset in exchange for an amount that is more than the fair value of those assets at the time they were transferred to the SPE;

c. A requirement to dispose of transferred assets in response to the violation of a nonsubstantive contractual provision (that is, a provision for which there is not a sufficiently large disincentive to ensure performance).

35. A qualifying SPE may dispose of transferred assets automatically to the extent necessary to comply with the exercise by a BIH (other than the transferor, its affiliates, or its agents) of its right to put beneficial interests back to the SPE in exchange for:

a. A full or partial distribution of those assets;

b. Cash (which may require that the SPE dispose of those assets or issue beneficial interests to generate cash to fund settlement of the put);

c. New beneficial interests in those assets.

36. A qualifying SPE may have the power to dispose of assets to a party other than the transferor, its affiliate, or its agent on termination of the SPE or maturity of the beneficial interests, but only automatically on fixed or determinable dates that are specified at inception. For example, if an SPE is required to dispose of long-term mortgage loans and terminate itself at the earlier of (a) the specified maturity of beneficial interests in those mortgage loans or (b) the date of prepayment of a specified amount of the transferred mortgage loans, the termination date is a fixed or determinable date that was specified at inception. In contrast, if that SPE has the power to dispose of transferred assets on two

specified dates and the SPE can decide which transferred assets to sell on each date, the termination date is not a fixed or determinable date that was specified at inception.

Investments in Special-Purpose Entities

37. Reporting entities that have qualifying special-purpose entities as affiliates shall carry their investment in such entity at its underlying statutory book value in accordance with *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88* (SSAP No. 97). Additionally, transactions entered involving affiliated qualifying special-purpose entities are subject to the provisions of SSAP No. 25.

Agreements That Maintain Effective Control Over Transferred Assets

38. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor's effective control over those assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

    a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 39);

    b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 40);

    c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price; and

    d. The agreement is entered into concurrently with the transfer.

39. To be substantially the same, the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

    a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same);

    b. Identical form and type so as to provide the same risks and rights;

    c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield);

    d. Identical contractual interest rates;

    e. Similar assets as collateral; and

    f. The same aggregate unpaid principal amount or principal amounts within accepted good delivery standards for the type of security involved.

40. To be able to repurchase or redeem assets on substantially all of the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

Ability to Unilaterally Cause the Return of Specific Transferred Assets

41. Some rights to reacquire transferred assets (or to acquire beneficial interests in transferred assets held by a qualifying SPE), regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred

assets through the unilateral ability to cause the return of specific transferred assets. Such rights preclude sale accounting under paragraph 5. For example, an attached call in itself would not constrain a transferee who is able, by exchanging or pledging the asset subject to that call, to obtain substantially all of its economic benefits. An attached call could result, however, in the transferor's maintaining effective control over the transferred asset(s) because the attached call gives the transferor the ability to unilaterally cause whoever holds that specific asset to return it. In contrast, transfers of financial assets subject to calls embedded by the issuers of the financial instruments, for example, callable bonds or prepayable mortgage loans, do not preclude sale accounting. Such an embedded call does not result in the transferor's maintaining effective control, because it is the issuer rather than the transferor who holds the call.

42. If the transferee is a qualifying SPE, it has met the conditions in paragraph 25 and therefore must be constrained from choosing to exchange or pledge the transferred assets. In that circumstance, any call held by the transferor is effectively attached to the assets and could—depending on the price and other terms of the call—maintain the transferor's effective control over transferred assets through the ability to unilaterally cause the transferee to return specific assets. For example, a transferor's unilateral ability to cause a qualifying SPE to return to the transferor or otherwise dispose of specific transferred assets at will or, for example, in response to its decision to exit a market or a particular activity, could provide the transferor with effective control over the transferred assets.

43. A call that is attached to transferred assets maintains the transferor's effective control over those assets if, under its price and other terms, the call conveys more than a trivial benefit to the transferor. Similarly, any unilateral right to reclaim specific assets transferred to a qualifying SPE maintains the transferor's effective control over those assets if the right conveys more than a trivial benefit to the transferor. A call or other right conveys more than a trivial benefit if the price to be paid is fixed, determinable, or otherwise potentially advantageous, unless because that price is so far out of the money or for other reasons it is probable when the option is written that the transferor will not exercise it. Thus, for example, a call on specific assets transferred to a qualifying SPE at a price fixed at their principal amount maintains the transferor's effective control over the assets subject to that call. Effective control over transferred assets can be present even if the right to reclaim is indirect. For example, if an embedded call allows a transferor to buy back the beneficial interests of a qualifying SPE at a fixed price, then the transferor remains in effective control of the assets underlying those beneficial interests. A cleanup call, however, is permitted as an exception to that general principle.

44. A right to reclaim specific transferred assets by paying their fair value when reclaimed generally does not maintain effective control, because it does not convey a more than trivial benefit to the transferor. However, a transferor has maintained effective control if it has such a right and also holds the residual interest in the transferred assets. For example, if a transferor can reclaim such assets at termination of the qualifying SPE by purchasing them in an auction, and thus at what might appear to be fair value, then sale accounting for the assets it can reclaim would be precluded. Such circumstances provide the transferor with a more than trivial benefit and effective control over the assets; because it can pay any price it chooses in the auction and recover any excess paid over fair value through its residual interest.

45. A transferor that has a right to reacquire transferred assets from a qualifying SPE does not maintain effective control if the reclaimed assets would be randomly selected and the amount of the assets reacquired is sufficiently limited because that would not be a right to reacquire specific assets. Nor does a transferor maintain effective control through an obligation to reacquire transferred assets from a qualifying SPE if the transfer could occur only after a specified failure of the servicer to properly service the transferred assets that could result in the loss of a third-party guarantee (paragraph 33.c.i.) or only after a BIH other than the transferor, its affiliate, or its agent requires a qualifying SPE to repurchase

that beneficial interest (paragraph 35.b.), because the transferor could not cause that reacquisition unilaterally.

Changes That Result in the Transferor's Regaining Control of Assets Sold

46. A change in law, status of the transferee as a qualifying SPE, or other circumstance may result in the transferor's regaining control of assets previously accounted for appropriately as having been sold, because one or more of the conditions in paragraph 5 are no longer met. Such a change, unless it arises solely from either the initial application of this statement or a change in market prices (for example, an increase in price that moves into-the-money a freestanding call that was originally sufficiently out-of-the-money that it was judged not to constrain the transferee), is accounted for in the same manner as a purchase of the assets from the former transferee(s) in exchange for liabilities assumed (paragraph 7). After that change, the transferor recognizes in its financial statements those assets together with liabilities to the former transferee(s) or BIHs in those assets (paragraph 29). The transferor initially measures those assets and liabilities at fair value on the date of the change, as if the transferor purchased the assets and assumed the liabilities on that date. The former transferee would derecognize the assets on that date, as if it had sold the assets in exchange for a receivable from the transferor. Subsequent to that date, the reporting entity shall follow statutory accounting for the assets and liabilities in accordance with the guidance in the SSAPs.

Assets Obtained and Liabilities Incurred as Proceeds

47. The proceeds from a sale of financial assets consist of the cash and any other assets obtained, including separately recognized servicing assets, in the transfer less any liabilities incurred, including separately recognized servicing liabilities. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value.

Interests That Continue to be Held by a Transferor

48. Other interests in transferred assets, those that are not part of the proceeds of the transfer, are interests that continue to be held by a transferor over which the transferor has not relinquished control. They shall be measured at the date of the transfer by allocating the previous carrying amount between the assets sold, if any, and the interests that continue to be held by a transferor, based on their relative fair values. That procedure shall be applied to all transfers in which interests continue to be held by the transferor, even those that do not qualify as sales. Examples of interests that continue to be held by a transferor include securities backed by the transferred assets, undivided interests, and cash reserve accounts and residual interests in securitization trusts. If a transferor cannot determine whether an asset is an interest continued to be held or proceeds from the sale, the asset shall be treated as proceeds from the sale and accounted for in accordance with paragraph 47.

49. If the interests that continue to be held by a transferor are subordinated to more senior interests held by others, that subordination may concentrate into the interests that continue to be held by a transferor most of the risks inherent in the transferred assets and shall be taken into consideration in estimating the fair value of the interests that continue to be held by a transferor. For example, if the amount of the gain recognized, after allocation, on a securitization with a subordinated interest continued to be held is greater than the gain would have been had the entire asset been sold, the transferor needs to be able to identify why that can occur. Otherwise, it is likely that the impact of the interest continued to be held being subordinate to a senior interest has not been

adequately considered in the determination of the fair value of the subordinated interest continued to be held.

If It Is Not Practicable to Estimate Fair Values

50. If it is not practicable to estimate the fair values of assets, the transferor shall record those assets at an allocated cost basis of zero. If it is not practicable to estimate the fair values of liabilities, the transferor shall recognize no gain on the transaction and shall record those liabilities at the greater of:

    a. The excess, if any, of (i) the fair values of assets obtained less the fair values of other liabilities incurred, over (ii) the sum of the carrying values of the assets transferred;

    b. The amount that would be recognized in accordance with SSAP No. 5.

Securitizations

51. Financial assets such as mortgage loans are assets commonly transferred in securitizations. Securitizations of mortgage loans may include pools of single-family residential mortgages or other types of real estate mortgage loans, for example, multifamily residential mortgages and commercial property mortgages. Both financial and nonfinancial assets can be securitized; life insurance policy loans, patent and copyright royalties also have been securitized. Securitizations of nonfinancial assets are outside the scope of this statement.

52. An originator of a typical securitization (the transferor) transfers a portfolio of financial assets to an SPE, commonly a trust. In "pass-through" and "pay-through" securitizations, receivables are transferred to the SPE at the inception of the securitization, and no further transfers are made; all cash collections are paid to the holders of beneficial interests in the SPE. In "revolving-period" securitizations, receivables are transferred at the inception and also periodically (daily or monthly) thereafter for a defined period (commonly three to eight years), referred to as the revolving period. During the revolving period, the SPE uses most of the cash collections to purchase additional receivables from the transferor on prearranged terms.

53. Beneficial interests in the SPE are sold to investors and the proceeds are used to pay the transferor for the assets transferred. Those beneficial interests may comprise either a single class having equity characteristics or multiple classes of interests, some having debt characteristics and others having equity characteristics. The cash collected from the portfolio is distributed to the investors and others as specified by the legal documents that established the SPE.

54. Pass-through, pay-through, and revolving-period securitizations that meet the criteria in paragraph 5 qualify for sale accounting under this statement. All financial assets obtained or continued to be held and liabilities incurred by the originator of a securitization that qualifies as a sale shall be recognized and measured as provided in paragraph 7; that includes the implicit forward contract to sell new receivables during a revolving period, which may become valuable or onerous to the transferor as interest rates and other market conditions change.

Sales of Future Revenues

55. In addition to securitization of assets, some reporting entities have entered into transactions characterized as a sale of future revenues. These transactions are sometimes referred to as securitizations and are sometimes characterized as selling deferred acquisition costs. A sale of future revenues by a reporting entity shall not result in the immediate recognition of income or surplus. The proceeds of any such sale shall be established as a liability and shall be reduced as the proceeds are repaid.

Removal-of-Accounts Provisions

56. Many transfers of financial assets in securitizations empower the transferor to reclaim assets subject to certain restrictions. Such a power is sometimes called a removal-of-accounts provision (ROAP). If there is a ROAP, the transfer of assets shall not be accounted for as a sale.

Securities Lending Transactions

57. Securities lending transactions are generally initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver securities sold. Securities lending transactions typically extend less than one year. Transferees (borrowers) of securities generally are required to provide collateral to the transferor (lender) of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities borrowed. If the collateral is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or rebated to the transferee. If the collateral is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of collateral (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash collateral impose market and credit risks on the transferor.

58. Many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred assets before their maturity under which the transferor maintains effective control over those assets (paragraphs 38-40 maintain effective control criteria). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder or its agent is permitted by contract or custom to sell or repledge) received as collateral is considered the amount borrowed, the securities loaned are considered pledged as collateral against the cash or securities borrowed, and any rebate paid to the transferee of securities is interest on the cash or securities the transferor is considered to have borrowed.

59. If the criteria conditions in paragraph 5 are met, securities lending transactions shall be accounted for:

    a. By the transferor as a sale of the "loaned" securities, for proceeds consisting of the collateral[2] and a forward repurchase commitment; and

    b. By the transferee as a purchase of the "borrowed" securities in exchange for the collateral and a forward resale commitment. During the term of that agreement, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the "collateral" and the forward repurchase commitment.

[2] If the "collateral" in a transaction that meets the criteria in paragraph 5 is a financial asset that the holder or its agent is permitted by contract or custom to sell or repledge, that financial asset is proceeds of the sale of the "loaned" securities. To the extent that the "collateral" consists of letters of credit or other financial instruments that the holder or its agent is not permitted by contract or custom to sell or repledge, a securities lending transaction does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee.

60. The transferor of securities being "loaned" accounts for collateral received in the same way whether the transfer is accounted for as a sale or a secured borrowing. The collateral received shall be recognized as the transferor's asset—as shall investments made with that collateral, even if made by agents or in pools with other securities lenders—along with the obligation to return the collateral. If securities that may be sold or repledged are received by the transferor or its agent, the transferor of the securities being "loaned" accounts for those securities in the same way as it would account for collateral received. Collateral which may be sold or repledged by the transferor or its agent is reflected on balance sheet, along with the obligation to return the asset[3]. Collateral received which may not be sold or repledged by the transferor or its agent is off balance sheet[4]. For collateral on the balance sheet, the reporting is determined by the administration of the program.

a. Securities lending programs where the collateral received by the reporting entity's unaffiliated agent that can be sold or repledged is reported on the balance sheet. The collateral received and reinvestment of that collateral by the reporting entity's unaffiliated agent shall be reflected as a one-line entry on the balance sheet (Securities Lending Collateral) and a detailed schedule will be required each quarter and at year-end to list the description of the collateral asset. This description shall include the NAIC rating, fair value; book adjusted carrying value and maturity date. A separate liability shall also be established to record the obligation to return the collateral (Collateral from Securities Lending Activities)

b. Securities lending programs where the collateral received by the reporting entity that can be sold or repledged is reported on the balance sheet. If the reporting entity is the administrator of the program, then, the collateral received and any reinvestment of that collateral is reported with the invested assets of the reporting entity based on the type of investment (i.e. bond, common stock, etc). A separate liability shall also be established to record the obligation to return the collateral (Collateral from Securities Lending Activities)

c. Securities lending programs where the collateral received by the reporting entity's affiliated agent can report using either one line reporting (paragraph 60 a. above) or investment schedule reporting (paragraph 60 b. above).

61. Reinvestment of the collateral by the reporting entity or its agent, shall follow the same impairment guidance as other similar invested assets reported on the balance sheet. Any fees received by the transferor for loaning the securities shall be recorded as miscellaneous investment income.

Securities Lending Transactions – Collateral Requirements

62. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 102 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 100 percent of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral by the end of the next business day, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals 102 percent of the fair value of the loaned securities. If the collateral

[3] If cash is received by the transferor or its agent and reinvested or repledged it is reported on balance sheet. It is explicitly intended that when the lender bears reinvestment risk, that collateral is on balance sheet.

[4] An example of collateral which is off balance sheet is securities are received by the transferor or its agent in which the collateral must be held and returned, without the ability to transfer or repledge the collateral. This would involve limited situations in which the transferor or agent is prohibited from reinvesting the collateral.

received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

63. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to 105 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 102 percent of the fair value of the loaned securities, the reporting entity must obtain additional collateral by the end of the next business day, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals 105 percent of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

Repurchase Agreements and "Wash Sales"

64. Government securities dealers, banks, other financial institutions, and corporate investors commonly use repurchase agreements to obtain or use short-term funds. Under those agreements, the transferor ("repo party") transfers a security to a transferee ("repo counterparty" or "reverse party") in exchange for cash[5] and concurrently agrees to reacquire that security at a future date for an amount equal to the cash exchanged plus a stipulated "interest" factor. Repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

65. Repurchase agreements can be affected in a variety of ways. Some repurchase agreements are similar to securities lending transactions in that the transferee or its agent has the right to sell or repledge the securities to a third party during the term of the repurchase agreement. In other repurchase agreements, the transferee does not have the right to sell or repledge the securities during the term of the repurchase agreement. For example, in a tri-party repurchase agreement, the transferor transfers securities to an independent third-party custodian that holds the securities during the term of the repurchase agreement. Also, many repurchase agreements are for short terms, often overnight, or have indefinite terms that allow either party to terminate the arrangement on short notice. However, other repurchase agreements are for longer terms, sometimes until the maturity of the transferred asset. Some repurchase agreements call for repurchase of securities that need not be identical to the securities transferred.

66. If the conditions in paragraph 5 are met, including the criterion in paragraph 5c., the transferor shall account for the repurchase agreement as a sale of financial assets and a forward repurchase commitment, and the transferee shall account for the agreement as a purchase of financial assets and a forward resale commitment. Other transfers that are accompanied by an agreement to repurchase the transferred assets that shall be accounted for as sales include transfers with agreements to repurchase at maturity and transfers with repurchase agreements in which the transferee has not obtained collateral sufficient to fund substantially all of the cost of purchasing replacement assets. (Repurchase financing is addressed in paragraphs 73-78.)

67. Furthermore, "wash sales" that previously were not recognized if the same financial asset was purchased within 30 days before or after the sale shall be accounted for as sales

[5] Instead of cash, other securities or letters of credit sometimes are exchanged. Those transactions are accounted for in the same manner as securities lending transactions (paragraphs 82-87).

under this statement. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

68. As with securities lending transactions, under many agreements to repurchase transferred assets before their maturity the transferor maintains effective control over those assets. Repurchase agreements that do not meet all the criteria in paragraph 5 shall be treated as secured borrowings. Fixed-coupon and dollar-roll repurchase agreements, and other contracts under which the securities to be repurchased need not be the same as the securities sold, qualify as borrowings if the return of substantially the same (paragraph 39 substantially the same criteria) securities as those concurrently transferred is assured. Therefore, those transactions shall be accounted for as secured borrowings by both parties to the transfer.

69. If a transferor has transferred securities to an independent third-party custodian, or to a transferee, under conditions that preclude the transferee from selling or repledging the assets during the term of the repurchase agreement (as in most tri-party repurchase agreements), the transferor has not surrendered control over those assets.

Repurchase Agreements

70. Repurchase agreements are defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 39 (substantially the same criteria) must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

71. For repurchase agreements that are accounted for as collateralized borrowings in accordance with paragraph 68 of this statement, the underlying securities shall continue to be accounted for as an investment owned by the reporting entity. The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

72. Reporting entities generally take possession of the underlying collateral under repurchase agreements and in many cases may obtain additional collateral when the estimated fair value of such securities falls below their current contract value. However, to the extent that the current fair value of the collateral is less than the recorded amount, the shortfall shall reduce the admitted asset value of the repurchase agreement.

Repurchase Financing

73. Repurchase financing is a repurchase agreement that relates to a previously transferred financial asset between the same counterparties (or affiliates of either counterparty) that is entered into contemporaneously with, or in contemplation of, the initial transfer.

74. A repurchase financing involves the transfer of a previously transferred financial asset back to the initial transferor as collateral for a financing between the initial transferee (the borrower) and the initial transferor (the lendor). A repurchase financing also typically involves the initial transferor returning the transferred financial asset (or substantially the same asset) to the initial transferee when the financing is repaid on a state date. A repurchase financing is entered into in contemplation of the initial transfer if both transactions are considered together at the execution of the initial transfer.

75. When the transferor transfers a financial asset and also enters into a repurchase financing with the transferee, there are typically three transfers of the financial assets:

a. Initial transfer – An initial transferor transfers a financial asset to an initial transferee.

b. Repurchase financing – The initial transferee (the borrower) transfer the previously transferred financial asset back to the initial transferor (the lender) as collateral for a financing between the initial transferor and initial transferee.

c. Settlement – The initial transferor (the lender) returns the financial asset (or substantially the same asset) to the initial transferee (the borrower) upon receipt of payment from the initial transferee.

76. Repurchase financing that is entered into contemporaneously with, or in contemplation of, an initial transfer of a financial asset between the same counterparties (or affiliates of either counterparty) shall not be separately accounted for as a transfer of a financial asset and a related repurchase financing unless (a) the two transactions have a valid and distinct business or economic purpose for being entered into separately and (b) the repurchase financing does not result in the initial transferor regaining control over the financial asset. Unless the provisions in paragraphs 77 are met, the initial transfer and repurchase financing shall be evaluated as a linked transaction. The linked transaction shall be evaluated to determine whether it meets the requirements for sale accounting per paragraph 5 including paragraph 5.c. If the linked transaction does not meet the requirements for sale accounting, the linked transaction shall be accounted for based on the economies of the combined transactions, which generally represent a forward contract. *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions* shall be used to evaluate whether the linked transaction shall be accounted for as a derivative.

77. An initial transfer of a financial asset and repurchase financing that are entered into contemporaneously with, or in contemplation of, one another shall be considered linked unless all of the following criteria are met at the inception of the transaction:

a. The initial transfer and the repurchase financing are not contractually contingent on one another. Even if no contractual relationship exists, the pricing and performance of either the initial transfer or the repurchase financing must not be dependent on the terms and execution of the other transaction.

b. The repurchase financing provides the initial transferor with recourse to the initial transferee upon default. That recourse must expose the initial transferor to the credit risk of the initial transferee, or its affiliates, and not solely to the market risk of the transferred financial asset. The initial transferee's agreement to repurchase the previously transferred financial asset (or substantially the same asset) for a fixed price and not fair value.

c. The financial asset subject to the initial transfer and repurchase financing is readily obtainable in the marketplace. In addition, the initial transfer of a financial asset and the repurchase financing are executed at market rates. This criterion may not be circumvented by embedding off-market terms in a separate transaction contemplated with the initial transfer or the repurchase financing.

d. The financial asset and repurchase agreement are not coterminous (the maturity of the repurchase financing must be before the maturity of the financial asset.)

78. In accordance with paragraph 77, an initial transfer of assets and a repurchase financing shall not be considered separate transactions unless the provisions of paragraph 78, are met. If the provisions of paragraph 77 are met, the initial transfer shall be evaluated to determine whether it meets the requirements for sale accounting without taking into consideration the repurchase financing. In such situations, the repurchase financing shall then be separately analyzed as a repurchase agreement.

Reverse Repurchase Agreements

79. Reverse repurchase agreements are defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 39 (substantially the same criteria) must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

80. For reverse repurchase agreements that are accounted for as collateralized lendings in accordance with paragraph 68 of this statement, the underlying securities shall not be accounted for as investments owned by the reporting entity. The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount paid and the amount at which the securities will be subsequently resold shall be reported as interest income, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

Collateral Requirements

81. The collateral requirements for repurchase and reverse repurchase agreements are as follows:

Repurchase Transaction

a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 95 percent of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at anytime the fair value of the collateral received from the counterparty is less than 95 percent of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral by the end of the next business day the fair value of which, together with the fair value of all collateral then held in connection with the transaction, at least equals 95 percent of the fair value of the transferred securities. If the collateral is less than 95 percent at the reporting date, the difference between the actual collateral and 95 percent will be nonadmitted.

Reverse Repurchase Transaction

b. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to 102 percent of the purchase price paid by the reporting entity for the securities. If at any time the fair value of the collateral is less than 100 percent of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals 102 percent of the purchase price. Dollar Repurchase Agreements

82. Dollar repurchase and dollar reverse repurchase agreements are defined as repurchase and reverse repurchase agreements involving debt instruments that are pay-through securities collateralized with Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC) and Federal National Mortgage Association (FNMA) collateral, and pass-through certificates sponsored by GNMA, mortgage participation certificates issued by the FHLMC or similar securities issued by the FNMA. Dollar repurchase agreements are also commonly referred to as dollar roll transactions. To meet the definition of dollar repurchase and dollar reverse repurchase agreements, the securities underlying the agreements must meet the criteria defined in paragraph 39, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

83. For the seller in a dollar reverse repurchase agreement accounted for as collateralized borrowing in accordance with paragraph 68 of this statement, a liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities sold.

84. When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased must be in good delivery form consistent with paragraph 39.

85. If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded.

86. For the purchaser in a dollar repurchase agreement accounted for as collateralized lending in accordance with paragraph 68 of this statement, an asset is recorded for the amount of the purchase. Upon completion of the reverse repurchase agreement, cash is received in exchange for a "substantially the same" security. The difference between the purchase and reselling price represents interest income for the lending of short-term funds.

Separate Transactions

87. Agreements to repurchase and resell securities that do not meet the definitions in paragraphs 58 and 64 of this statement shall be accounted for as two separate transactions, that is, as a sale and purchase or as a purchase and sale, in accordance with the relevant statutory accounting guidance. For example, sales of bonds would result in recognition of realized gains or losses.

Offsetting

88. Reporting entities may operate on both sides of the repurchase agreement market resulting in recording of liabilities and assets representing repurchase and reverse repurchase agreements, respectively.

89. Reporting entities shall offset such liabilities and assets only to the extent that one of the following occurs:

a. A legal right of offset exists as defined in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities*; or

b. The securities have the same settlement date, are executed with the same counterparty in accordance with a master netting arrangement, involve securities that exist in "book entry" form, and settle on securities transfer systems that have the same key elements and operating characteristics as the Fedwire Securities Transfer System.

90. Otherwise, separate assets and liabilities shall be recognized.

Loan Syndications

91. Borrowers often borrow amounts greater than any one lender is willing to lend. Therefore, it is common for groups of lenders to jointly fund those loans. That may be accomplished by a syndication under which several lenders share in lending to a single borrower, but each lender loans a specific amount to the borrower and has the right to repayment from the borrower.

92. A loan syndication is not a transfer of financial assets. Each lender in the syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender who then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is also functioning as a servicer and, therefore, shall only recognize its portion of the loan as an asset.

Loan Participations

93. Groups of banks or other entities also may jointly fund large borrowings through loan participations in which a single lender makes a large loan to a borrower and subsequently transfers undivided interests in the loan to other entities.

94. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the transferor (originating lender) continues to service the loan. The transferee (participating entity) may or may not have the right to sell or transfer its participation during the term of the loan, depending upon the terms of the participation agreement.

95. If the loan participation agreement gives the transferee the right to pledge or exchange those participations and the other criteria in paragraph 5 are met, the transfers to the transferee shall be accounted for by the transferor as sales of financial assets. A transferor’s right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor’s permission that shall not be unreasonably withheld, or a prohibition on sale to the transferor’s competitor is a limitation on the transferee’s rights but presumptively does not constrain a transferee from exercising its right to pledge or exchange. However, if the loan participation agreement constrains the transferees from pledging or exchanging their participations, the transferor has not relinquished control over the loan and shall account for the transfers as secured borrowings.

Factoring Arrangements

96. Factoring arrangements are a means of discounting accounts receivable on a nonrecourse, notification basis. Accounts receivable are sold outright, usually to a transferee (the factor) that assumes the full risk of collection, without recourse to the transferor in the event of a loss. Debtors are directed to send payments to the transferee. Factoring arrangements that meet the criteria in paragraph 5 shall be accounted for as sales of financial assets because the transferor surrenders control over the receivables to the factor.

Transfers of Receivables with Recourse

97. In a transfer of receivables with recourse, the transferor is obligated under the terms of the recourse provision to make payments to the transferee or to repurchase receivables sold under certain circumstances, typically for defaults up to a specified percentage. A transfer of receivables with recourse shall not be recognized as a sale but rather, as a financing. A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received. Sales of premium receivables are addressed in *SSAP No. 42—Sale of Premium Receivables*.

Disclosures

98. A reporting entity shall disclose the following:

a. For collateral:

i. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security and the fair value of the loaned security. This would also apply to separate accounts;

ii. If the entity has pledged any of its assets as collateral, the carrying amount and classification of those assets as of the date of the latest statement of financial position presented;

iii. If the entity or its agent has accepted collateral that it is permitted by contract or custom to sell or repledge it shall be recorded on the balance sheet. Regardless of whether the transaction is considered "on-balance sheet" or "off-balance sheet", the reporting entity shall provide the following information by type of program (repurchase agreement securities lending or dollar repurchase agreement) as of the date of each statement of financial position: (1) the aggregate amount of contractually obligated open collateral positions (aggregate amount of securities at current fair value or cash received for which the borrower may request the return of on demand) and the aggregate amount of contractually obligated collateral positions under 30-day, 60-day, 90-day, and greater than 90-day terms, (2) the aggregate fair value of all securities acquired from the sale, trade and use of the accepted collateral (reinvested collateral), and (3) information about the sources and uses of that collateral;

iv. For securities lending transactions, disclose collateral for transactions that extend beyond one year from the reporting date;

v. For securities lending transactions administered by an affiliated agent in which "one-line" reporting (per paragraph 60.a) of the reinvested collateral per paragraph 60.c. is optional, at the discretion of the reporting entity, disclose the aggregate value of the reinvested collateral which is "one line" reported and the aggregate value of items which are reported in the investment schedules (per paragraph 60.b). Identify the rational between the items which are one line reported and those that are investment schedule reported and if the treatment has changed from the prior period and

vi. Include separately, the amount of any loaned securities within the separate account and if the policy and procedures for the separate account differ from the general account.

b. The reporting entity shall provide the following information by type of program (repurchase agreement, securities lending or dollar repurchase agreement) with respect to the reinvestment of the cash collateral and any securities which it or its agent receives as collateral that can be sold or repledged.

i. The aggregate amount of the reinvested cash collateral (amortized cost and fair value). Reinvested cash collateral shall be broken down by the maturity date of the invested asset – under 30-day, 60-day, 90-day, 120-day, 180-day, less than 1 year, 1-2 years, 2-3 years and greater than 3 years.

ii. To the extent that the maturity dates of the liability (collateral to be returned) does not match the invested assets, the reporting entity shall explain the additional sources of liquidity to manage those mismatches.

c. If debt was considered to be extinguished by in-substance defeasance, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period so long as that debt remains outstanding;

d. If assets are set aside solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets;

e. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value;

f. For all servicing assets and servicing liabilities:

i. A description of the valuation techniques or other models, including significant assumptions within models, used to estimate the fair value of servicing assets and servicing liabilities; and

ii. Changes in fair value resulting from changes in valuation inputs or assumptions used in models and descriptions of other changes in fair value.

g. If the entity has securitized financial assets during any period presented and accounts for that transfer as a sale, for each major asset type (for example, mortgage loans):

i. Its accounting policies for initially measuring the interests that continue to be held by a transferor, if any, used in determining their fair value. (Fair value shall be determined in accordance with *SSAP No. 100—Fair Value Measurements*.); and

ii. The characteristics of securitizations (a description of the transferor’s continuing involvement with the transferred assets, including, but not limited to, servicing, recourse, and restrictions on interests that continue to be held by a transferor) and the gain or loss from sale of financial assets in securitizations;

iii. The key assumptions used in measuring the fair value of interests that continue to be held by a transferor at the time of securitization (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, if applicable); and

iv. Cash flows between the securitization SPE and the transferor (including proceeds from new securitizations, purchases of delinquent or foreclosed loans, servicing fees, and cash flows received on interests continued to be held.)

h. If the entity has interests that continue to be held by a transferor in securitized financial assets at the date of the latest statement of financial position presented, for each major asset type (for example, mortgage loans):

i. Its accounting policies for subsequently measuring those interests that continue to be held by a transferor, including the methodology used in determining their fair value. (Fair value shall be determined in accordance with *SSAP No. 100—Fair Value Measurements*.);

ii. The key assumptions used in subsequently measuring the fair value of those interests (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses, if applicable);

iii. A sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests of two or more unfavorable variations from the expected levels for each key assumption that is reported under ii. above independently from any change in another key assumption, and a description of the objectives, methodology, and limitations of the sensitivity analysis or stress test; and

iv. For the securitized assets and any other financial assets that the entity manages together with the interests that continue to be held by the transferor[6]:

(a) The total principal amount outstanding, the portion that has been derecognized, and the portion that continues to be recognized in each category reported in the statement of financial position, at the end of the period;

(b) Delinquencies at the end of the period; and

(c) Credit losses, net of recoveries, during the period.

v. Disclosure of average balances during the period is encouraged, but not required.

i. Description of any loaned securities, including the amount, a description of, and the policy for, requiring collateral, and whether or not the collateral is restricted;

j. A description of the securities underlying repurchase and reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements, including book values and fair values, maturities, and weighted average interest rates for the following categories: (i) securities subject to reverse repurchase agreements; (ii) securities subject to repurchase agreements; (iii) securities subject to dollar repurchase agreements; and (iv) securities subject to dollar reverse repurchase agreements; and

k. A description of the terms of reverse repurchase agreements whose amounts are included in borrowed money.

99. Disclose any transfers of receivables with recourse.

100. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 9 above, involving transactions for securities with a NAIC designation of 3 or below, or unrated:

a. A description of the reporting entity’s objectives regarding these transactions;

b. An aggregation of transactions by NAIC designation 3 or below, or unrated;

[6] Excluding securitized assets that an entity continues to service but with which it has no other continuing involvement.

c. The number of transactions involved during the reporting period;

d. The book value of securities sold;

e. The cost of securities repurchased; and

f. The realized gains/losses associated with the securities involved.

101. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures required by paragraph 100 above (wash sales) shall be made for the current quarter in the quarterly statement and for the year in the annual statement.

Relevant Literature

102. The accounting guidance in this statement is consistent with the guidance included in SSAP No. 18, SSAP No. 33 and SSAP No. 45, and is expanded to include issues addressed in *FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140).

103. This statement adopts FAS 140 with the following modifications:

a. Servicing rights assets are nonadmitted;

b. Sales treatment is not permitted for transactions including recourse provisions or removal-of-accounts provisions on the transferred assets whereas GAAP would permit the recognition of the transfer as a sale under some circumstances;

c. As statutory financial statements are prepared on a legal entity basis, special purpose entities shall not be consolidated in a reporting entity's statutory financial statements;

d. Leases shall be accounted for in accordance with *SSAP No. 22—Leases*;

e. Reporting entities required to maintain an IMR shall account for realized and unrealized capital gains and losses in accordance with SSAP No. 7; and

f. The concepts of revolving-period securitizations, banker's acceptances and risk participations in banker's acceptances are not applicable for statutory accounting purposes.

g. This statement does not adopt the accounting for collateral as outlined in FAS 140.

104. This statement adopts with modification *FASB Statement No. 156: Accounting for Servicing of Financial Assets, an amendment of FASB Statement No. 140* (FAS 156). Specific items adopted or rejected are identified below. Items within FAS 156 not specifically noted as adopted shall be considered rejected:

a. This statement adopts FAS 156 guidance indicating that all servicing assets and servicing liabilities should initially be measured at fair value.

b. This statement adopts FAS 156 guidance requiring the inclusion of separately recognized servicing assets and servicing liabilities in the calculation of proceeds from the sale of assets.

c. This statement rejects the optionality provided within FAS 156 for subsequent measurement of servicing assets and servicing liabilities using either fair value or an amortization method. This statement requires application of a fair value method for subsequent measurement.

d. This statement adopts guidance in FAS 156 confirming adoption of guidance previously adopted from FAS 140 regarding servicing assets and servicing liabilities established from the transfer of financial assets to a qualifying SPE in a guaranteed mortgage securitization in which the transferor retains all of the resulting securities.

e. This statement adopts revisions in FAS 156 replacing the term 'retained interests' with 'interests that continue to be held by the transferor' with amendments to the definition to exclude servicing assets and servicing liabilities from this definition.

105. This statement adopts *FASB Staff Position 140-3, Accounting for Transfers of Financial Assets and Repurchase Financing Transactions* (FSP FAS 140-3) and *AICPA Statement of Position 90-3*, *Definition of the Term Substantially the Same for Holders of Debt Instruments, as used In Certain Audit Guides and a Statement of Position*. This statement adopts *FASB Emerging Issues Task Force (EITF) No. 87-34, Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB EITF No. 88-11, Allocation of Recorded Investment When a Loan as Part of a Loan is Sold, FASB EITF No. 88-18, Sales of Future Revenues, FASB EITF No. 88-22, Securitization of Credit Card and Other Receivable Portfolios, FASB EITF No. 90-21, Balance Sheet Treatment of a Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB EITF No. 95-5, Determination of What Risks and Rewards, If Any, Can Be Retained and Whether Any Unresolved Contingencies May Exist in a Sale of Mortgage Loan Servicing Rights* and *FASB EITF No. 96-19, Debtor's Accounting for a Modification or Exchange of Debt Instruments*.

106. This statement rejects *FASB EITF No. 84-5, Sale of Marketable Securities with a Put Option*, and *FASB EITF No. 92-2, Measuring Loss Accruals by Transferors of Receivables with Recourse* and *FTB 01-1: Effective Date for Certain Financial Institutions of Certain Provisions of Statement 140 related to Isolation of Transferred Financial Assets*.

Effective Date and Transition

107. This statement is effective for years beginning on and after January 1, 2005 and shall be applied prospectively. Substantive revisions in paragraphs 6, 11-12, 98f, 104 and Exhibit B illustrations are effective January 1, 2009. Substantive revisions in paragraphs 13, 14, 57-81, 98-101 regarding securities lending transactions and repurchase agreements and additional disclosures were adopted in May 2010 and are effective December 31, 2010. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

108. For each servicing contract in existence before January 1, 2005, previously recognized or nonadmitted servicing rights and excess servicing receivables shall be combined, net of any previously recognized servicing obligations under that contract, as a servicing asset (nonadmitted) or liability. Thereafter, the subsequent measurement provisions of this statement shall be applied to the servicing assets (nonadmitted) or liabilities for those servicing contracts.

EXHIBIT A - GLOSSARY

Asset Securitization

An asset securitization is the process of converting assets which would normally serve as collateral for a loan into securities. The largest category of securitized assets is real estate mortgage loans, which serve as collateral for mortgage-backed securities.

Beneficial Interests

Rights to receive all or portions of specified cash inflows to a trust or other entity, including senior and subordinated shares of interest, principal, or other cash inflows to be passed-through or paid-through, premiums due to guarantors, commercial paper obligations and residual interests, whether in the form of debt or equity.

Beneficial Interest Holder ("BIH")

Holder of beneficial interests

Cleanup Call

An option held by the servicer, which may be the transferor, to purchase transferred financial assets, or the remaining beneficial interests not held by the transferor, its affiliates, or its agents in a qualifying SPE (or in a series of beneficial interests in transferred assets within a qualifying SPE), when the amount of outstanding assets falls to a level at which the cost of servicing those assets becomes burdensome in relation to the benefits or servicing.

Collateral

Personal or real property in which a security interest has been given.

Derecognize

Remove previously recognized assets or liabilities from the balance sheet.

Derivative Financial Instrument

A derivative instrument (as defined in *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions*) that is a financial instrument (refer to *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk*, paragraph 2).

Embedded Call (See paragraphs 41 and 43)

A call option held by the issuer of a financial instrument that is part of and trades with the underlying instrument. For example, a bond may allow the issuer to call it by posting a public notice well before its stated maturity that asks the current holder to submit it for early redemption and provides that interest ceases to accrue on the bond after the early redemption date. Rather than being an obligation of the initial purchaser of the bond, an embedded call trades with and diminishes the value of the underlying bond.

Financial Asset

Cash, evidence of an ownership interest in an entity, or a contract that conveys to a second entity a contractual right (a) to receive cash or another financial instrument from a first entity or (b) to exchange other financial instruments on potentially favorable terms with the first entity.

Financial Liability

A contract that imposes on one entity a contractual obligation (a) to deliver cash or another financial instrument to a second entity or (b) to exchange other financial instruments on potentially unfavorable terms with the second entity.

Guaranteed Mortgage Securitization

A securitization of mortgage loans which includes a substantive guarantee by a third party.

Interests that Continue to be Held by a Transferor

Other interests in transferred assets, those that are not part of the proceeds of the transfer, over which the transferor has not relinquished control. Includes securities backed by the transferred assets, undivided interests, and cash reserve accounts and residual interests in securitization trusts.

Proceeds

Cash, derivatives, or other assets that are obtained in a transfer of financial assets, less any liabilities incurred.

Recourse

The right of a transferee of receivables to receive payment from the transferor of those receivables for (a) failure of debtors to pay when due, (b) the effects of prepayments, or (c) adjustments resulting from defects in the eligibility of the transferred receivables.

Residual

Residuals are a class of purchased beneficial interests or interests that continue to be held by the transferor that have rights to the last cash flows from the pool of securitized assets and are not rated by a Nationally Recognized Statistical Rating Organization (NRSRO). Residuals are to be carried at fair value with the difference between fair value and the allocated cost basis recognized as an unrealized gain or loss;

Securitization

The process by which financial assets are transformed into securities.

Security Interest

A form of interest in property that provides that upon default of the obligation for which the security interest is given, the property may be sold in order to satisfy that obligation.

Seller

A transferor that relinquishes control over financial assets by transferring them to a transferee in exchange for consideration.

Servicing Asset

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are expected to more than adequately compensate the servicer for performing the servicing. A servicing contract is either (a) undertaken in conjunction with selling or securitizing the financial assets being serviced or (b) purchased or assumed separately.

Servicing Liability

A contract to service financial assets under which the estimated future revenues from stated servicing fees, late charges, and other ancillary revenues are not expected to adequately compensate the servicer for performing the servicing.

Transfer

The conveyance of a noncash financial asset by and to someone other than the issuer of that financial asset. Thus, a transfer includes selling a receivable, putting it into a securitization trust, or posting it as collateral but excludes the origination of that receivable, the settlement of that receivable, or the restructuring of that receivable into a security in a troubled debt restructuring.

Transferee

An entity that receives a financial asset, a portion of a financial asset, or a group of financial assets from a transferor.

Transferor

An entity that transfers a financial asset, a portion of a financial asset, or a group of financial assets that it controls to another entity.

Undivided Interest

Partial legal or beneficial ownership of an asset as a tenant in common with others. The proportion owned may be pro rata, for example, the right to receive 50 percent of all cash flows from a security, or non-pro rata, for example, the right to receive the interest from a security while another has the right to the principal.

Unilateral Ability (See paragraphs 41 and 42)

A capacity for action not dependent on the actions (or failure to act) of any other party.

EXHIBIT B – ILLUSTRATIONS

Illustration—Recording Transfers with Proceeds of Cash, Derivatives, and Other Liabilities

1. Company A sells loans with a fair value of $1,100 and a carrying amount of $1,000. Company A retains no servicing responsibilities but obtains an option to purchase from the transferee loans similar to the loans sold (which are readily obtainable in the marketplace) and assumes a limited recourse obligation to repurchase delinquent loans.

   Company A agrees to provide the transferee a return at a floating rate of interest even though the contractual terms of the loan are fixed rate in nature (that provision is effectively an interest rate swap).

Fair Values	
Cash proceeds	$1,050
Interest rate swap	40
Call option	70
Recourse obligation	60

Illustration—Recording Transfers of Partial Interests

2. Company B sells a pro rata nine-tenths interest in loans with a fair value of $1,100 and a carrying amount of $1,000. There is no servicing asset or liability, because Company B estimates that the benefits of servicing are just adequate to compensate it for its servicing responsibilities.

Fair values	
Cash proceeds for nine-tenths sold	$99
One-tenth interest continued to be held by the transferor [($990 ÷9/10)×1/10]	110

3. Company C originates $1,000 of loans that yield 10 percent interest income for their estimated lives of 9 years. Company C sells the $1,000 principal plus the right to receive interest income of 8 percent to another entity for $1,000. Company C will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the right to receive half of the interest income not sold. The remaining half of the interest income not sold is considered an interest-only strip receivable. At the date of the transfer, the fair value of the loans is $1,100. The fair values of the servicing asset and the interest-only strip receivable are $40 and $60, respectively.

Fair Values

Cash proceeds	$1,000
Servicing asset	40
Interest-only strip receivable	60

Net Proceeds

Cash proceeds		$1,000
Servicing asset		40

Illustration—Recording Transfers of Partial Interests with Proceeds of Cash, Derivatives, Other Liabilities, and Servicing

4. Company D originates $1,000 of prepayable loans that yield 10 percent interest income for their 9-year expected lives. Company D sells nine-tenths of the principal plus interest of 8 percent to another entity. Company D will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the 2 percent of the interest income not sold. Company D obtains an option to purchase from the transferee loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse obligation to repurchase delinquent loans. At the date of transfer, the fair value of the loans is $1,100.

Fair Values	
Cash proceeds	$900

Illustration—Recording Transfers If It Is Not Practicable to Estimate a Fair Value

5. Company E sells loans with a carrying amount of $1,000 to another entity for cash proceeds of $1,050 plus a call option to purchase loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse obligation to repurchase any delinquent loans. Company E undertakes an obligation to service the transferred assets for the other entity. In Case 1, Company E finds it impracticable to estimate the fair value of the servicing contract, although it is confident that servicing revenues will be more than adequate compensation for performing the servicing. In Case 2, Company E finds it impracticable to estimate the fair value of the recourse obligation.

Fair Values	Case	Case 2
Cash proceeds	$1,050	$1,050
Servicing asset	XX*	40
Call option	70	70
Recourse obligation	60	XX*
Fair value of loans transferred	1,100	1,100

Gain on sale	$ 60	$ 0

Journal Entries	Case 1		Case 2	
Cash	1,050		1,050	
Servicing asset	0*		40	
Call option	70		70	
Loans		1,000		1,000
Recourse obligation		60		160†
Gain on sale		60		0
To record transfer				

* Assets shall be recorded at zero if an estimate of the fair value of the assets is not practicable.

† The amount recorded as a liability in this example equals the sum of the known assets less the fair value of the known liabilities, that is, the amount that results in no gain or loss.

Illustration—Secured Borrowing

6. The following example illustrates the accounting for a securities lending transaction treated as a secured borrowing, in which the securities borrower sells the securities upon receipt and later buys similar securities to return to the securities lender:

Facts

Transferor's carrying amount and fair value of security loaned	$1,000
Cash "collateral"	1,020
Transferor's return from investing cash collateral at a 5 percent annual rate	5
Transferor's rebate to the securities borrower at a 4 percent annual rate	4

For simplicity, the fair value of the security is assumed not to change during the 35-day term of the transaction.

Receivable under securities loan agreements	1,020	
Cash		1,020

To record transfer of cash collateral

Cash	1,000	
Obligation to return borrowed securities		1,000

To record sale of borrowed securities to a third party and the resulting obligation to return securities that it no longer holds

At conclusion:

Obligation to return borrowed securities	1,000	
Cash		1,000
To record the repurchase of securities borrowed		
Cash	1,024	
Receivable under securities loan agreements		1,020
Interest revenue ("rebate")		4
To record the receipt of cash collateral and rebate interest		

Illustration—Initial Transfer and Repurchase Financing

7. The following diagram is an example of an initial transfer of a financial asset and a subsequent repurchase financing, as described in paragraphs 73 and 74, which should be analyzed using the provisions in paragraphs 75-78. The purpose of this example is to illustrate the characteristics of the transaction and to prevent an inappropriate analogy to other financing transactions that are outside the scope of this SSAP.

APPENDIX A – ILLUSTRATION OF REVISIONS TO INTS

NOTE: THIS APPENDIX WAS INCLUDED IN THE EXPOSED SSAP NO. 103 TO IDENTIFY REVISIONS TO INTS THAT WILL BE INCORPORATED ONCE THE SSAP IS ADOPTED.

SSAP NO. 103—ACCOUNTING FOR TRANSFERS AND SERVICING OF FINANCIAL ASSETS AND EXTINGUISHMENTS OF LIABILITIES WAS ADOPTED AT THE SPRING 2012 NATIONAL MEETING. UPON ADOPTION, THE WORKING GROUP DIRECTED FOR THIS APPENDIX TO BE INCLUDED IN ISSUE PAPER NO. 141 FOR HISTORICAL PURPOSES.

Issue Paper No. 141 identified the statutory INTs that will interpret this new SSAP, noting whether there would be a change from the previous conclusion noted in SSAP No. 91R. Although these original conclusions are considered accurate, it was noted that INT 00-11 (rejecting EITF 98-15) and INT 04-21(adopting with modification EITF 02-9) should reflect the GAAP revisions from FAS 166. Furthermore, since the development of the INT, initiatives have occurred to reference non-applicable INTs into INT 99-00, as well as to incorporate INT guidance in to specific SSAPs.

This Appendix proposes revisions to the related INT's to reflect the FAS 166 revisions. **It is recommended that these revisions be adopted into the related interpretations, but that this appendix not be retained within the adopted SSAP. This appendix will be incorporated within Issue Paper No. 141 for historical purposes**.

Proposed Revisions to Issue Paper No. 141, paragraph 5

5. With the exception of INT 99-07, INT 99-08, INT 99-14, and INT 99-21, as discussed below, this issue paper will be interpreted by the statutory interpretations to SSAP No. 91R:

a. *INT 99-07: EITF 97-3: Accounting for Fees and Costs Associated with Loan Syndications and Loan Participations after the Issuance of FASB Statement No. 125* (INT 99-07) – As this interpretation rejected EITF 97-3 for statutory accounting, there is no impact to this interpretation from adoption of FAS 166. As this interpretation is now included in *INT 99-00—Compilation of Rejected EITFs* (INT 99-00), the reference to INT 99-00, and not INT 99-07, will be referenced in the new SSAP to supersede SSAP No. 91R.

b. *INT 99-08: EITF 97-6: Application of Issue No. 96-20 to Qualifying Special-Purpose Entities Received Transferred Financial Assets Prior to the Effective Date of FASB Statement No. 125* (INT 99-08) – As this interpretation rejected EITF 96-20 for statutory accounting, there is no impact to this interpretation from adoption of FAS 166. As this interpretation is now included in *INT 99-00—Compilation of Rejected EITFs* (INT 99-00), the reference to INT 99-00, and not INT 99-08, will be referenced in the new SSAP to supersede SSAP No. 91R.

c. *INT 99-14: EITF 96-19: Debtor's Accounting for a Modification or Exchange of Debt Instruments* (INT 99-14) – This interpretation adopted EITF 99-14 for statutory accounting. As such, an exchange of debt instruments with substantially different terms is considered a debt extinguishment. This guidance also clarifies that if the cash flows under the terms of the new debt instrument are at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument, then the exchange of debt instruments are considered substantially different. The GAAP status of EITF 96-19 was updated to identify that FAS 166 amended FAS 140 without reconsideration. As such, ~~T~~there is no impact to ~~this ~~the statutory interpretation from the adoption of FAS 166. However, pursuant to a project to incorporate guidance from statutory INTs into the related SSAPs, the guidance from this INT is proposed to be included within SSAP No. 91R, as well as the proposed SSAP to supersede

SSAP No. 91R. This guidance has been included in paragraph 126 of this issue paper.

d. *INT 99-21: EITF 98-7: Accounting for Exchanges of Similar Equity Method Investments* (INT 99-21) – This interpretation was nullified with the issuance of *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95). With the issuance of a new SSAP, there will be no future reference to this interpretation.

Staff Note: EITF 98-7 was not revised in FAS 166.

e. *INT 99-22: EITF 98-8: Accounting for Transfers of Investments That Are in Substance Real Estate* (INT 99-22) – This interpretation adopted EITF 98-8 indicating that transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40—Real Estate Investments* (SSAP No. 40). The GAAP status of EITF 96-19 was updated to deleted the effective date reference and identify that FAS 166 amended FAS 140 without reconsideration. As such, ~~T~~there is no impact to the~~is~~ statutory interpretation from the adoption of FAS 166. However, pursuant to a project to incorporate guidance from statutory INTs into the related SSAPs, the guidance from this INT is proposed to be included within SSAP No. 91R, as well as the proposed SSAP to supersede SSAP No. 91R. This guidance has been included in paragraph 6 of this issue paper.

f. *INT 00-11: EITF 98-15: Structured Notes Acquired for a Specified Investment Strategy* (INT 00-11) – This interpretation rejected the consensus position in EITF 98-15 pursuant to a recommendation from the Invested Assets (E) Working Group. It was noted that any attempt on the part of the Emerging Accounting Issues (E) Working Group to promulgate EITF 95-18 into accounting guidance (bonds accounted for at fair value rather than amortized cost) will require the Valuation of Securities (E) Task Force to change the mission of the Securities Valuation Office. The issuance of FAS 166 incorporated guidance to EITF 98-15 to identify that paragraph 11 of FAS 166 (accounting for transfers of entire financial assets or groups of entire financial assets that qualify as sales) shall be applied to each structured note upon transfer. This update is proposed for inclusion within INT 00-11, but as there is no proposed change to the previous statutory conclusion, ~~As such,~~ there will be no impact to this interpretation as a result of adopting FAS 166.

g. *INT 01-31: Assets Pledged as Collateral* (INT 01-31) – This interpretation provides guidance on whether assets pledged as collateral shall be considered admitted assets. There is no impact to this interpretation conclusion from the adoption of FAS 166. (References to SSAP No. 91R will be replaced with references to the new SSAP.)

Staff Note: This INT does not relate to a GAAP EITF, therefore no changes from FAS 166.

h. *INT 03-05: EITF 01-7: Creditor's Accounting for a Modification or Exchange of Debt Instruments* (INT 03-05) – This interpretation adopts the consensus position of EITF 01-7. This EITF clarifies that a debt instrument modification should be considered more than minor if the present value of the cash flows under the terms of the new debt instrument is at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument. This EITF also concludes that the guidance in EITF 96-19 (adopted within INT 99-14) should be used to calculate the present value of cash flows for purposes of applying the 10 percent test. There is no impact to this interpretation from the adoption of FAS 166.

Staff Note: EITF 01-7 was not revised in FAS 166.

i. *INT 04-21: EITF 02-9: Accounting for Changes that Result in a Transferor Regaining Control of Financial Assets Sold* (INT 04-21) – This interpretation adopts EITF 02-9 with modification for statutory terms and references. Pursuant to this adoption, a transferred asset that has been accounted for as sold is to be accounted for as "re-purchased" if the basis for that sale accounting subsequently becomes invalid. With the issuance of FAS 166, guidance in EITF 02-9 was updated to reflect the revised terminology in FAS 166 as well as delete the issue and conclusion pertaining to qualified special purpose entities as the concept of a QSPE is no longer captured within FAS 166. Although there is no impact to the statutory conclusion to adopt this EITF with modifications for statutory references, the guidance in INT 04-21 will be revised to reflect the revisions adopted from FAS 166~~There is no impact to this interpretation from the adoption of FAS 166~~.

j. *INT 09-08: Accounting for Loans Received under the Federal TALF Program.* This interpretation provides statutory guidance on whether TALF loans received and the corresponding collateral provided by the reporting entity shall be reported net within the statutory financial statements. With the exception of updating references from SSAP No. 91R to the new SSAP, there is no anticipated change proposed to this interpretation.

Proposed Revisions to Interpretations: ***(To be included in an Exhibit to Issue Paper No. 141)***

This Exhibit identifies the revisions proposed to interpretations as a result of adopting, with modification, FAS 166 in a new SSAP to supersede SSAP No. 91R. (All interpretations identified in SSAP No. 91R are discussed below.)

1. *INT 99-07—EITF 97-3: Accounting for Fees and Costs Associated with Loan Syndications and Loan Participations after the Issuance of FASB Statement No. 125*

   Proposed Changes: No changes are proposed to this INT as it is no longer captured in the AP&P Manual, but is instead referenced as rejected in INT 99-00. A change will occur to INT 99-00 to reference the new SSAP instead of SSAP No. 91R.

2. *INT 99-08—EITF 97-6: Application of Issue No. 96-20 to Qualifying Special-Purpose Entities Received Transferred Financial Assets Prior to the Effective Date of FASB Statement No. 125*

   Proposed Changes: No changes are proposed to this INT as it is no longer captured in the AP&P Manual, but is instead referenced as rejected in INT 99-00. A change will occur to INT 99-00 to reference the new SSAP instead of SSAP No. 91R.

3. *INT 99-14—EITF 96-19: Debtor's Accounting for a Modification or Exchange of Debt Instruments*

   Proposed Changes: No changes are proposed to this INT as it is no longer captured within the authoritative guidance of the AP&P Manual. This INT has been nullified, with the guidance reflected in the underlying SSAP (SSAP No. 91R). These revisions are also reflected in the proposed SSAP to supersede SSAP No. 91R in paragraph 22.

4. *INT 99-21: EITF 98-7: Accounting for Exchanges of Similar Equity Method Investments*

   Proposed Changes: No changes are proposed to this INT as it was nullified with the issuance of *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95).

5. *INT 99-22—EITF 98-8: Accounting for Transfers of Investments That Are in Substance Real Estate*

Proposed Changes: No changes are proposed to this INT as it is no longer captured within the authoritative guidance of the AP&P Manual. This INT has been nullified, with the guidance reflected in the underlying SSAP (SSAP No. 91R). These revisions are also reflected in the proposed SSAP to supersede SSAP No. 91R in paragraph 2.

6. *INT 00-11—EITF 98-15: Structured Notes Acquired for a Specified Investment Strategy*

Proposed Changes: Revisions are proposed to update the reference and status section of this INT:

INT 00-11 References

SSAP No. 43R—Loan-Backed and Structured Securities (SSAP No. 43R)
SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements (SSAP No. 45)
SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 91R) (Add Shading)

SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (Add new SSAP reference)

SSAP No. 98—Treatment of Cash Flows When Quantifying Changes in Valuation and Impairments, an Amendment of SSAP No. 43—Loan-Backed and Structured Securities (SSAP No. 98)

INT 00-11 Status

4. In 2009, *FAS 166, Accounting for Transfers of Financial Assets, an Amendment of FAS 140*, was issued. In addition to amending FAS 140, it also amended FASB EITF 98-15 to clarify that paragraph 11 (Accounting for Transfers of an Entire Financial Asset or Group of Entire Financial Assets) of FAS 166 should be applied to each structured note upon transfer. This revision to EITF 98-15 does not impact the previous conclusion to reject this EITF for statutory accounting.

45. No further discussion is planned.

Note: The EAIWG project to incorporate guidance from INTs into SSAPs may impact this proposal

7. *INT 01-31—Assets Pledged as Collateral*

Proposed Changes: Revisions are proposed to update references and the status section of this INT:

INT 01-31 References

SSAP No. 4—Assets and Nonadmitted Assets (SSAP No. 4)

SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets (SSAP No. 5R)

SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 18)

SSAP No. 33—Securitization (SSAP No. 33)

SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements (SSAP No. 45)

SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 91R) (Added Shading)

SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (Add new SSAP reference)

INT 99-02: Accounting for Collateral in Excess of Debt Principal (INT 99-02)

7. Therefore, for the examples described above, the pledging insurer would record the collateral (including the overcollateralization amount) as an admitted asset until they have committed a contract default that has not been cured in accordance with the contract provisions. This accounting is in accordance with the provisions of ~~SSAP No. 91R~~ SSAP No. 103. This consensus of reporting collateral as an admitted asset is further supported by SSAP Nos. 4 and 5 since generally, the insurer can readily substitute pledged assets. Additionally, an insurer may typically unwind the transaction allowing the assets to be available to the pledging insurer to meet policyholder obligations. Furthermore, no event has occurred to indicate an impairment or potential loss contingency with respect to such pledged assets. The fact that some pledged assets may constitute an overcollaterlization amount does not change this analysis. Accordingly, all assets pledged in support of these type transactions should also be admitted.

8. At the time of an uncured default, the provisions of paragraph ~~14~~ 20 of ~~SSAP No. 91R~~ SSAP No. 103 shall be used to determine the appropriate accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of the liability owed by the pledging insurer as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset should be removed from the balance sheet since that obligation has been satisfied through the secured party's utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer should only record an admitted asset for the amount of collateral that it can redeem.

9. As of March 18, 2002, the consensus position of this interpretation is consistent with the position of the NAIC Invested Asset (E) Working Group. This interpretation will be reviewed by the FAS 140 Subgroup of the NAIC Statutory Accounting Principles (E) Working Group in conjunction of its consideration of incorporating GAAP pronouncement *FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, a replacement of FASB Statement 125* into the statutory accounting model. As such, this interpretation is subject to amendment pending disposition of the FAS 140 Subgroup's review of collateral and FAS 140 in its entirety.

10. On September 12, 2004, the Working Group noted that the review of FAS 140 was complete and INT 01-31 was listed as an interpretation of SSAP No. 91R. On March 3, 2012, the Working Group adopted, with modification, *FAS 166—Accounting for Transfers of Financial Assets, an Amendment of FAS 140* (FAS 166). With this adoption, there was no change to the consensus opinion within this interpretation, and this INT was listed as an interpretation of SSAP No. 103.

11. No further discussion is planned.

8. *INT 03-05—EITF 01-7: Creditor's Accounting for a Modification or Exchange of Debt Instruments*

Proposed Changes: There is no impact to this interpretation from the adoption, with modification of FAS 166. However, changes will occur to reference the new SSAP, rather than SSAP No. 91R:

INT 03-05 References

SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 18)

SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 91R) (Added Shading)

SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

9. *INT 04-07—EITF 02-15: Determining Whether Certain Conversions of Convertible Debt to Equity Securities Are Within the Scope of FAS Statement No. 84*

Proposed Changes: Revisions are proposed to update references in this INT:

2. EITF 02-15 utilizes guidance from several sources in the GAAP hierarchy. The statutory accounting status of these statements is listed below:

a. *FASB Statement No. 15*, *Accounting by Debtors and Creditors for Troubled Debt Restructurings*, which was adopted by *SSAP No. 36—Troubled Debt Restructuring.*

b. FAS 84, which was adopted by SSAP No. 15.

c. *FASB Statement No. 140*, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*, which was adopted with modification in *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* and refers back to SSAP No. 15 for guidance regarding any troubled debt restructuring. (FAS 166 amended FAS 140 and was adopted, with modification in SSAP No. 103. SSAP No. 103 superseded SSAP No. 91R, but continues to reference SSAP No. 15 for guidance regarding trouble debt restructuring.)

10. *INT 04-21—EITF 02-9: Accounting for Changes that Result in a Transferor Regaining Control of Financial Assets Sold*

Proposed Changes: With the issuance of FAS 166 guidance in EITF 02-9 was updated to reflect the revised terminology in FAS 166 as well as to delete the issue and conclusion pertaining to qualified special-purpose entities as the concept of a QSPE is no longer captured within FAS 166. Revisions are proposed to reflect the revised guidance from FAS 166:

INT 04-21 References

SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 91R) (Added Shading)
SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

1. EITF No. 02-9, *Accounting for Changes That Result in a Transferor Regaining Control of Financial Assets Sold* (EITF 02-9) expands on a key concept presented in FASB Statement No. 140, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140), paragraph 55. This key concept requires a transferred financial asset that has been accounted for as sold to be accounted for as "re-purchased" if the basis for that sale accounting subsequently becomes invalid.

2. The following is excerpted from EITF 02-9:

1. ~~Two~~ One circumstance~~s~~ that has~~have~~ raised questions about the application of paragraph 55 occurs when the provisions of paragraph 55 are triggered because ~~(a) a qualifying special-purpose entity (SPE) becomes nonqualifying and (b)~~ the transferor holds a contingent right such as a contingent call option on the transferred financial assets (for example, a removal of accounts provision or "ROAP") and the contingency has been met. This issue assumes that the transferee is not consolidated by the transferor.

2. ~~A qualifying SPE may become nonqualifying or "tainted" for several reasons, including a decision by the outside beneficial interest holders to grant the SPE decision-making powers that are prohibited for qualifying SPEs. Under the requirements of paragraph 55, the disqualification of a formerly qualifying SPE will generally result in the "re-purchase" by the transferor of all assets sold to and still held by the SPE because the transferee (the SPE that is no longer qualifying) is constrained from pledging or exchanging the financial assets and this condition provides more than a trivial benefit to the transferor (refer to paragraph 9(b) of Statement 140). This Issue considers the application of the guidance in paragraph 55 prior to any consideration of whether the transferee (for example, an SPE) should be consolidated and, therefore, prior to considering any eliminating entries that may result from consolidation.~~

3. Under Statement 140, rights held by the transferor (typically in the form of purchased options or forward purchase contracts) only preclude sale accounting under paragraph 9(c)(2) if they provide the transferor with (a) the unilateral right to cause the holder to return specific transferred financial assets and (b) more than a trivial benefit. One class of contingent rights (including certain ROAPs 1) does not preclude sale accounting because it does not include unilateral rights. The most common type of ROAP is a default ROAP, which gives the holder the right but not the obligation to purchase (call) a loan that is in default (the meaning of default typically is specifically defined in each transaction). Such rights are common in credit card securitizations and in securitizations sponsored by the Government National Mortgage Association (GNMA) 2 and other governmental or quasi-governmental agencies. Once the contingency is met (in this case, when a given loan goes into default), the call option on that asset (loan) is no longer contingent. At that point, the transfer fails the criterion in paragraph 9(c)(2) of Statement 140 because the transferor has the unilateral right to purchase a specific transferred financial asset and obtains more than a trivial benefit. Under the requirements of paragraph 55, when a contingency related to a transferor's contingent right has been met, the transferor generally must account for the "re-purchase" of a specific subset of the financial assets transferred to and held by the qualifying ~~SPE~~entity. The transferor must do so regardless of whether it intends to exercise its call option.

3. Per EITF 02-9, the issues are:

Issue 1—How the transferor should account for the transferor's ~~retained~~ beneficial interests when the underlying assets are re-recognized under the provisions of paragraph 55 because the transferor's contingent right (for example, a ROAP or other contingent call option on the transferred financial assets) becomes exercisable, including whether any gain or loss should be recognized by the transferor when paragraph 55 is applied.

~~Issue 2—How assets re-recognized by the transferor that were previously sold to an SPE that was formerly considered qualifying should be accounted for when the entire SPE becomes nonqualifying under the provisions of paragraph 55, including whether any gain or loss should be recognized by the transferor when paragraph 55 is applied.~~

Issue 3—Whether under any circumstances a loan loss allowance should initially be recorded for loans that do not meet the definition of a security when they are re-recognized under the provisions of paragraph 55

Issue 4—How re-recognition under paragraph 55 of assets sold affects the accounting for the related servicing asset.

Issue 5—After a paragraph 55 event, how the transferor should account for the transferor's ~~its retained~~ interests (other than the servicing asset).

4. EITF 02-9 consensus on each issue is as follows:

5. The Task Force reached a consensus on Issue 1 that upon application of paragraph 55, no gain or loss should be recognized in earnings with respect to any of the transferor's beneficial interests ~~retained by the transferor~~. Beneficial interests should be evaluated periodically for possible impairment, including at the time paragraph 55 is applied. A gain or loss may be recognized upon the exercise of a ROAP or similar contingent right with respect to the "re-purchased" ~~portion of the~~ transferred financial assets that were sold if the ROAP or similar contingent right held by the transferor is not accounted for as a derivative under Statement 133 and is not at-the-money, resulting in the fair value of those repurchased assets being greater or less than the related obligation to the transferee.

~~6. The Task Force reached a consensus on Issue 2 that in the event the entire SPE becomes nonqualifying upon application of paragraph 55, no gain or loss should be recognized with respect to the "re-purchase" by the transferor of the financial assets originally sold that remain outstanding in the SPE (or the portion thereof if the transferor retained a partial interest in those assets). The fair value of the re-recognized assets will equal the fair value of the liability assumed by the transferor because the transferor is contractually required to pass on 100 percent of the cash flows from the re-recognized assets to the SPE for distribution in accordance with the contractual documents governing the SPE. The process of determining the fair value of both the re-recognized assets and the assumed liability may require a careful analysis of all of the expected cash flows of the securitization vehicle, including cash flows of assets within the vehicle that are not subject to paragraph 55 (for example, proceeds that are temporarily reinvested by the SPE). In performing that analysis, the transferor would need to consider both the timing and the amounts of the expected cash flows and also which party has rights to such expected cash flows at the time of the paragraph 55 event.~~

6~~7~~. The Task Force reached a consensus on Issue 3 that under no circumstances should a loan loss allowance be initially recorded for loans that do not meet the definition of a security when they are re-recognized pursuant to paragraph 55.

7~~8~~. The Task Force reached a consensus on Issue 4 that when a paragraph 55 event occurs, the accounting for the servicing asset related to the previously sold financial assets does not change as a result of the application of paragraph 55. That is, even though the transferor has regained control over the previously sold assets, the cash flows from those assets will contractually be paid to the SPE, which will then distribute the proceeds to satisfy its contractual obligations (including obligations to the beneficial interest holders). Because the transferor, as servicer, is still contractually required to collect the asset's cash flows for the benefit of the SPE and otherwise service the assets, it should continue to recognize the servicing asset and assess the asset for impairment as required by Statement 140.

8~~9~~. The Task Force reached a consensus on Issue 5 that when a paragraph 55 event occurs, the transferor should continue to account for the transferor's ~~its retained~~ interests in those underlying financial assets apart from any re-recognized financial assets. That is, the transferor's ~~retained~~ interests should not be combined with and accounted for with the re-recognized financial assets. However, a subsequent event that results in the transferor reclaiming those financial assets from the transferee-for example, the exercise of a ROAP or the consolidation by the transferor of the ~~SPE~~ securitization entity in accordance with applicable generally accepted accounting principles, including

Interpretation 46R would result in a recombination of the transferor's ~~retained~~ interests with the underlying financial assets.

5. The Working Group reached a consensus to adopt EITF 02-9 as an interpretation of SSAP No. 91R, with modification as follows:

a. Change references to FAS 140 to ~~SSAP 91R~~SSAP No. 103 including paragraph specific references. Modify FAS 140, paragraph 55 references to refer to SSAP No. ~~91R~~103, paragraph 59~~46~~.

b. Change references to FASB Statement No. 133, *Accounting for Derivative Instruments and Hedging Activities* to SSAP No. 86 as an interpretation of SSAP No. 91R.

c. Remove reference to Interpretation 46 as FASB Interpretation No. 46R, *Consolidation of Variable Interest Entities,* is pending review for statutory accounting. (The prior GAAP guidance in FASB Interpretation FIN 46 was rejected for statutory accounting in *SSAP No. 3—Accounting Changes and Corrections of Errors*.)

d. Limit the applicability of EITF 02-9, Issue 3 to only valuation allowances applicable to statutory accounting for mortgage loans and real estate under development as provided in *SSAP No. 37—Mortgage Loans* and real estate under development as discussed in *SSAP No. 38—Acquisition, Development and Construction Arrangements*.

6. This interpretation was originally ~~is~~ effective for years beginning January 1, 2005 to be consistent with the original effective date of SSAP No. 91R. Revisions adopted to this interpretation on March 3, 2012 are in accordance with the adoption with modification of FAS 166 in a new SSAP to supersede SSAP No. 91R.

INT 04-21 STATUS

7. In 2009, *FAS 166, Accounting for Transfers of Financial Assets, an Amendment of FAS 140*, was issued. In addition to amending FAS 140, it also amended FASB EITF 02-9. FAS 166 was adopted for statutory accounting in SSAP No. 103 to supersede SSAP No. 91R. On March 3, 2012, corresponding revisions to INT 04-21 were also adopted to reflect the updated GAAP guidance adopted for statutory interpreting SSAP No. 103. These changes will not be tracked in subsequent editions of the Manual.

8~~7~~. No further discussion is planned.

11. *INT 09-08—Accounting for Loans Received under the Federal TALF Program*

Proposed Changes: Revisions are proposed to update references in this INT:

INT 09-08 References

SSAP No. 64—Offsetting and Netting of Assets and Liabilities

SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities – Revised (Added shading)

SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

9. In considering whether a provision should be incorporated within a specific statutory accounting principle to permit netting, although no valid right of setoff exists, it is noted that guidance for collateral is included within *SSAP No. ~~91R~~103—Accounting for Transfers and*

Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. ~~91R~~103). Pursuant to guidance within this SSAP, unless the transferor defaults on the secured contract, the transferor shall continue to carry the collateral as an asset. It is only after default that the reporting entity would remove the collateral as an asset, with a corresponding reduction to the liability. It is noted that a specific provision for TALF loans would be inconsistent with existing SSAP No. ~~91R~~ 103 guidance for the reporting of loans and collateral.

APPENDIX B – ILLUSTRATIONS OF REVISIONS TO SSAPS:

NOTE: THIS APPENDIX WAS INCLUDED IN THE EXPOSED SSAP NO. 103 TO IDENTIFY REVISIONS TO SSAPS THAT WILL BE INCORPORATED ONCE THE SSAP IS ADOPTED.

SSAP NO. 103—ACCOUNTING FOR TRANSFERS AND SERVICING OF FINANCIAL ASSETS AND EXTINGUISHMENTS OF LIABILITIES WAS ADOPTED AT THE SPRING 2012 NATIONAL MEETING. UPON ADOPTION, THE WORKING GROUP DIRECTED FOR THIS APPENDIX TO BE INCLUDED IN ISSUE PAPER NO. 141 FOR HISTORICAL PURPOSES.

This Appendix proposes revisions to the SSAPs to reflect revisions from the adoption, with modification, of FAS 166 in a new SSAP to supersede SSAP No. 91R. **It is recommended that these revisions be adopted into the related SSAPs, but that this appendix not be retained within the adopted SSAP. This appendix will be incorporated within Issue Paper No. 141 for historical purposes**.

1. *SSAP No. 40—Real Estate Investments*

Proposed Changes: Revisions are proposed to update references in this SSAP:

23. Extinguishment of participating mortgage loans prior to the due date should be determined in accordance with *SSAP No. ~~91R~~103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* ~~(SSAP No. 91R)~~. Gains or losses from early extinguishment should be determined in considering the difference between the recorded amount of debt (including unamortized debt discount and the participation liability) and the amount exchanged to extinguish the debt.

2. *SSAP No. 42—Sale of Premium Receivables*

Proposed Changes: Revisions are proposed to update references in this SSAP:

9. This statement rejects paragraph 83 of *FASB Statement No. 125*, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125) to the extent that it permits sales recognition for sales of receivables with recourse provisions. FAS 125 is addressed in its entirety in *SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*, which was superseded by *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets adopts, with modification, *FAS 166, Accounting for Transfers of Financial Assets—an amendment of FASB Statement No. 140* and supersedes SSAP No. 91R.

3. *SSAP No. 43R—Loan-Backed and Structured Securities*

Proposed Changes: Revisions are proposed:

1. This statement establishes statutory accounting principles for investments in loan-backed securities and structured securities. In accordance with *SSAP No. ~~91R~~103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. ~~91R~~103), retained beneficial interests from the sale of loan-backed securities and structured securities are accounted for in accordance with this statement. In this statement loan-backed securities and structured securities are collectively referred to as loan-backed securities.

6. The scope of this statement encompasses all types of loan-backed and structured securities, including, but not limited to, the following:

a. Loan-backed and structured securities acquired at origination,

b. Loan-backed and structured securities acquired subsequent to origination for which it is probable, at acquisition, that the reporting entity will be **able** to collect all contractually required payments receivable, and are accounted for at acquisition under SSAP No. ~~91R~~103,

c. Loan-backed and structured securities for which it is probable, either known at acquisition or identified during the holding period[1], that the reporting entity will be **unable** to collect all contractually required payments receivable, and

d. Transferor's ~~B~~beneficial interests ~~that continue to be held by a reporting entity (transferor)~~ in securitization transactions that are accounted for as sales under SSAP No. ~~91R~~ 103 and purchased beneficial interests in securitized financial assets.

Beneficial Interests

20. The following paragraphs provide statutory accounting guidance for interest income and impairment for a reporting entity that continues to hold an interest in securitized financial assets accounted for as sales under SSAP No. ~~91R~~103, or that purchases a beneficial interest in securitized financial assets that are not of high credit quality or can contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded amount, determined at acquisition or the date of transfer[5]. Beneficial interests that are of high credit quality and cannot contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded investment, shall be accounted for in accordance with paragraphs 12 through 16.

Footnote 5: The accounting requirements related to these types of securities included in paragraphs 20-24 shall be determined at acquisition or initial transfer. As referenced in the Relevant Literature section, this Statement adopts EITF 99-20 (as amended by FAS 166), including the scope requirements of that guidance.

21. The reporting entity shall recognize the excess of all cash flows attributable to the beneficial interest estimated at the acquisition/transaction date (referred to herein as the transaction date) over the initial investment (the accretable yield) as interest income over the life of the beneficial interest using the effective yield method. If the holder of the beneficial interest is the reporting entity that transferred the financial assets for securitization, the initial investment would be the ~~allocated carrying amount after application of the relative~~ fair value of the beneficial interest as of the date of transfer, ~~allocation method~~ as required by SSAP No. 103~~91R~~. The amount of accretable yield shall not be displayed in the balance sheet.

23. All cash flows estimated at the transaction date are defined as the holder's estimate of the amount and timing of estimated future principal and interest cash flows used in determining the purchase price or the holder's fair value determination for purposes of determining a gain or loss under SSAP No. 103~~91R~~. Subsequent to the transaction date, estimated cash flows are defined as the holder's estimate of the amount and timing of estimated principal and interest cash flows based on the holder's best estimate of current information and events. A change in estimated cash flows is considered in the context of both timing and amount of the estimated cash flows.

[1] Securities classified within the type of paragraph 6.a. or 6.b. may be required to change classification to type 6.c. when it becomes probable that the reporting entity will be unable to collect all contractually required payments receivable.

24. ~~In situations in which it is not practicable for a transferor to estimate the fair value of the beneficial interest at the initial transfer date, interest income shall not be recognized using the interest method. For these beneficial interests (that is, those beneficial interests that continue to be held by a transferor that are recorded at $0 pursuant to SSAP No. 91R), the transferor shall use the cash basis for recognizing interest income because the beneficial interest will have an allocated carrying amount of zero.~~

45. Repooled FHLMC and FNMA securities meet the definition of substantially the same as defined in *SSAP No. ~~91R~~103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. The transaction shall not be considered a sale/purchase and no gain or loss shall be recognized. To properly document the repooling, the transaction shall be reported through Schedule D of the Annual Statement as a disposition and an acquisition.

51. This statement adopts *FASB Emerging Issues Task Force No. 99-20*, *Exchange of Interest-Only and Principal-Only Securities for a Mortgage-Backed Security*, as amended by *FAS 166, Accounting for Transfers of Financial Assets, an Amendment of FAS 140,* *and FASB Staff Position EITF 99-20-1, Amendments to the Impairment Guidance of EITF Issue No. 99-20.* This statement adopts paragraphs 5, 7 and 9 of AICPA *Statement of Position 03-03, Accounting for Certain Loans or Debt Securities Acquired in a Transfer* (SOP 03-03) for loan-backed and structured securities only. With the exception of this specific adoption, consideration of SOP 03-03 is still pending consideration for statutory accounting.

4. *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28*

Proposed Changes: Reference revisions are proposed:

5. Nonmonetary transactions shall be accounted for in accordance with this statement, except as addressed by other statements or interpretations including but not limited to *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12), *SSAP No. 13—Stock Option and Stock Purchase Plans* (SSAP No. 13), *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25), *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68), *SSAP No. 72—Surplus and Quasi-reorganizations* (SSAP No. 72), *SSAP No. ~~91R~~103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. ~~91R~~103), *INT 00-12: EITF 99-4: Accounting for Stock Received from the Demutualization of a Mutual Insurance Company, INT 00-26: EITF 98-3: Determining Whether a Nonmonetary Transactions Involves Receipt of Productive Assets or of a Business* (INT 00-26), *INT 00-29: EITF 99-17: Accounting for Advertising Barter Transactions* (INT 00-29), *INT 02-19: EITF 01-1:Accounting for a Convertible Instrument Granted or Issued to a Nonemployee for Goods or Services or a Combination of Goods or Services and Cash* (INT 02-19) and *INT 03-16: Contribution of Stock* (INT 03-16).

21. Although not meant to be all inclusive, accounting for specific nonmonetary transactions and unique circumstances is addressed in the following statements of statutory accounting principles:

- *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12)
- *SSAP No. 13—Stock Options and Stock Purchase Plans* (SSAP No. 13)
- *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25)
- *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68)
- *SSAP No. 72—Surplus and Quasi-reorganizations* (SSAP No. 72)

- *SSAP No. ~~91R~~103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. ~~91R~~103)

- *INT 00-12: EITF 99-4: Accounting for Stock Received from the Demutualization of a Mutual Insurance Company* (INT 00-12)

- *INT 00-26: EITF 98-3: Determining Whether a Nonmonetary Transactions Involves Receipt of Productive Assets or of a Business* (INT 00-26)

- *INT 00-29: EITF 99-17: Accounting for Advertising Barter Transactions* (INT 00-29)

- *INT 03-16: Contribution of Stock* (INT 03-16)

6. *SSAP No. 100—Fair Value Measurements*

Proposed Changes: Reference revisions are proposed:

44. The disclosures about fair value prescribed in paragraph 43 are not required for the following:

a. Employers' and plans' obligations for pension benefits, other postretirement benefits including health care and life insurance benefits, postemployment benefits, employee stock option and stock purchase plans, and other forms of deferred compensation arrangements, as defined in *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12), *SSAP No. 13—Stock Options and Stock Purchase Plans* (SSAP No. 13), *SSAP No. 14—Postretirement Benefits Other Than Pensions* (SSAP No. 14), and *SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8* (SSAP No. 89)

b. Substantively extinguished debt subject to the disclosure requirements of *SSAP No. ~~91R~~103—Accounting for Transfer and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. ~~91R~~103)

c. Insurance contracts, other than financial guarantees and deposit-type contracts

d. Lease contracts as defined in *SSAP No. 22—Leases* (SSAP No. 22)

e. Warranty obligations and rights

f. Investments accounted for under the equity method

g. Equity instruments issued by the entity

APPENDIX C – IDENTIFICATION OF OTHER GAAP GUIDANCE IMPACTED BY FAS 166:

NOTE: THIS APPENDIX WAS INCLUDED IN THE EXPOSED SSAP NO. 103 TO IDENTIFY THE IMPACT TO OTHER GAAP GUIDANCE IMPACTED BY FAS 166.

SSAP NO. 103—ACCOUNTING FOR TRANSFERS AND SERVICING OF FINANCIAL ASSETS AND EXTINGUISHMENTS OF LIABILITIES WAS ADOPTED AT THE SPRING 2012 NATIONAL MEETING. UPON ADOPTION, THE WORKING GROUP DIRECTED FOR THIS APPENDIX TO BE INCLUDED IN ISSUE PAPER NO. 141 FOR HISTORICAL PURPOSES.

In addition to the GAAP EITFs adopted (or adopted through an INT) in SSAP No. 91R, the issuance of FAS 166 also revised other GAAP EITFs. This table identifies all GAAP EITFs (not including the EITF Appendix D Topics) and the revisions incorporated from FAS 166.

This Exhibit is not recommended to be retained within the adopted SSAP. This exhibit is for informational purposes only and will be incorporated within Issue Paper No. 141 for historical purposes.

(This does not include the identified revisions to the "Special Report on Statement 140" from the issuance of FAS 140 as it is a question and answer guidance not previously reviewed for statutory accounting.)

GAAP EITF	Summary of FAS 166 Revisions	SAP Status (Appendix D)	Recommendation
84-5	Updated to refer to FAS 166 examples of when the transferor maintains effective control over transferred financial assets (rather than the example regarding put options originally provided in the EITF), updated to refer that FAS 140 is amended by FAS 166, and updated to note that FAS 166 removed the practicability exception for the requirement to measure proceeds of a sale at fair value.	Rejected in SSAP No. 18 & 91R	No Change The statement includes specific statutory guidance for put options in paragraph 59.
84-20	Updated to note that FAS 140 was amended by FAS 166. No reconsideration of the GAAP issue.	Adopted in SSAP No. 45	No Change
85-25	Updated to refer to FAS 166 examples of when the transferor maintains effective control over transferred financial assets (rather than the examples for put options originally included). Also updated to refer that FAS 140 is amended by FAS 166.	Nullified by FAS 125, 133 & 140	No Change
85-40	Updated to refer to FAS 166 examples of when the transferor maintains effective control over transferred financial assets (rather than the example regarding put options originally provided in the EITF), updated to refer that FAS 140 is amended by FAS 166, and updated to note that FAS 166 removed the practicability exception for the requirement to measure proceeds of a	Nullified by FAS 125 and partially nullified by FAS 140	No Change

96-10	Updated to note that FAS 140 was amended by FAS 166. No reconsideration of the GAAP issues.	Rejected in SSAP No. 26	No Change
96-19	Updated to note that FAS 140 was amended by FAS 166. No reconsideration of the GAAP issue.	Adopted in SSAP No. 18, 91R and INT 99-14	No Change Guidance from INT 99-14 has been included in the SSAP to supersede SSAP No. 91R.
97-3	Updated to note that FAS 140 was amended by FAS 166. No reconsideration of the GAAP issue.	Reject in INT 99-00	No Change
98-8	Updated to note that FAS 140 was amended by FAS 166. No reconsideration of the GAAP issue.	Adopted in INT 99-22	No Change Guidance from INT 99-22 has been included in the

GAAP EITF	Summary of FAS 166 Revisions	SAP Status (Appendix D)	Recommendation
			SSAP to supersede SSAP No. 91R.
98-14	Updated to note that FAS 140 was amended by FAS 166. No reconsideration of the GAAP issue.	Reject in INT 00-10	No Change
98-15	Updated to note that FAS 140 was amended by FAS 166. Identifies that the guidance in paragraph 11 of FAS 166 shall be applied to each structured note upon transfer.	Reject INT 00-11	No Change
99-8	Updated to note that FAS 140 was amended by FAS 166. No reconsideration of the GAAP issue.	Adopt with modification in SSAP No. 86	No Change
99-20	Updated to note that FAS 140 was amended by FAS 166. Also includes the following changes:	Adopted in SSAP No. 43R	Consideration of the revisions from FAS 166 to EITF 99-20 should occur. Recommends separate project to review this updated EITF for SSAP No. 43R.
	1. Reference "beneficial interests obtained as proceeds" rather than "beneficial interests that continue to be held by a transferor".	The term "beneficial interests that continue to be held by a transferor" is used in SSAP No. 43R.	
	2. Revise guidance to use "fair value of the beneficial interest as of the date of transfer" rather than "the allocated carrying amount after application of the relative fair value allocation method" for paragraph 11 of EITF 99-20.	Guidance from paragraph 11 of EITF 99-20 is included in SSAP No. 43R, paragraph 21.	
	3. Deleted paragraph 14 of EITF 99-20. This guidance pertains to recognitions of unrealized gains or losses as interest income.	SSAP No. 43R provides guidance on recognition of interest income for beneficial interests.	
	4. Deleted paragraph 16 of EITF 99-20. This guidance provided guidance for situations when it was not practicable to estimate the fair value of the beneficial interest at the initial transfer date.	Guidance from paragraph 16 is duplicated in SSAP No. 43R, paragraph 24	
	5. Revised paragraphs 20 to discuss the removal of the concept of a QSPE.	Paragraph 6.d. of SSAP No. 43R	

GAAP EITF	Summary of FAS 166 Revisions	SAP Status (Appendix D)	Recommendation
	Also provides guidance from FAS 166 on the conditions that must be met for sale accounting. 6. Revised paragraph 21 to reference FAS 167 (variable interest entities and consolidation). 7. Revised paragraph 27 to delete the prior change to replace the term "retained interests" with "interests that continue to be held by a transferor"	addresses securitization transactions that are accounted for as sales under SSAP No. 91R. FAS 167 is still pending statutory accounting review. The phrase "interests that continue to be held by a transferor" is used in SSAP No. 43R.	
02-9	Updated to reflect the revised terminology in FAS 166 as well as delete the issue and conclusion pertaining to qualified special purpose entities as the concept of a QSPE is no longer captured within FAS 166.	Although there is no impact to the statutory conclusion to adopt this EITF with modifications to statutory references, proposes the guidance in INT 04-21 be revised to reflect the revisions adopted from FAS 166.	Update INT 04-21, but do not change conclusion.
02-12	Nullified by FAS 166	Listed as No EITF Consensus	Update Appendix D to identify as nullified.

Statutory Issue Paper No. 143

Prospective-Based Guaranty Fund Assessments

STATUS
Finalized October 18, 2010

Original SSAP and Current Authoritative Guidance: SSAP No. 35R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance on guaranty funds and assessments is provided within *SSAP No. 35—Guaranty Fund and Other Assessments* (SSAP No. 35). SSAP No. 35 rejected the GAAP guidance for recording guaranty fund and other assessments previously contained within AICPA *Statement of Position 97-3, Accounting by Insurance and Other Enterprises for Insurance-Related Assessments* (SOP 97-3) and currently included within the *Accounting Standards Codification 405-30, Insurance Related Assessments* (ASC 405-30).

2. As detailed within *Issue Paper No. 35, Accounting for Guaranty Fund and Other Assessments* (Issue Paper No. 35), SOP 97-3 defined the condition of obligation differently than Issue Paper No. 35. Issue Paper No. 35 identified that probability and obligation have been satisfied when insolvency has occurred, regardless of whether the assessment is based upon premiums or losses written, incurred or paid before or after the insolvency. Issue Paper No. 35 also identified that SOP 97-3 was rejected because it was inconsistent with the concepts of conservatism and recognition outlined in the Statement of Concepts, as well as the accounting principles set out in *Issue Paper No. 5, Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5). Issue Paper No. 35 identified that language from SOP 97-3 regarding the 'Ability to Reasonably Estimate the Liability' was incorporated into statutory accounting.

3. The purpose of this Issue Paper is to re-evaluate the previous conclusion within Issue Paper No. 35, and reflected within SSAP No. 35, regarding the adoption of SOP 97-3 (ASC 405-30) for statutory accounting.

SUMMARY CONCLUSION

4. Entities subject to assessments should recognize liabilities for insurance-related assessments when all of the following conditions are met:

a. An assessment has been imposed or information available prior to the issuance of the financial statements indicates it is probable that an assessment will be imposed.

b. The event obligating an entity to pay (underlying cause of) an imposed or probable assessment has occurred on or before the date of the financial statements.

c. The amount of the assessment can be reasonably estimated.

5. Premium-based guaranty-fund assessments, except those that are prefunded, are presumed probable when a formal determination of insolvency occurs, and presumed not probable prior to a formal determination of insolvency. Pre-funded guaranty fund assessments and premium-based administrative-type assessments are presumed probable when the premiums on which the assessments are expected to be

based are written. Loss-based administrative-type and second-injury fund assessments are presumed probable when the losses on which the assessments are expected to be based are incurred.

6. For premium-based assessments, the event that obligates the entity is generally writing the premiums or becoming obligated to write or renew (such as multiple-year, noncancelable policies) the premiums on which the assessments are expected to be based. Some states, through law or regulatory practice, provide that an insurance enterprise cannot avoid paying a particular assessment even if that insurance enterprise reduces its premium writing in the future. In such circumstances, the event that obligates the entity is a formal determination of insolvency or similar triggering event. Regulatory practice would be determined based on the stated intentions or prior history of the insurance regulators.

7. For loss-based assessments, the event that obligates the entity is an entity incurring the losses on which the assessments are expected to be based.

8. The following provides guidance on how guaranty-fund assessments and other insurance-related assessments should be applied:

a. *Retrospective-premium-based guaranty-fund assessments* – An assessment is probable of being imposed when a formal determination of insolvency occurs. At that time, the premium that obligates the entity for the assessment liability has already been written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment should recognize a liability for the entire amount of future assessments related to a particular insolvency when a formal determination of insolvency is rendered.

b. *Prospective-premium-based guaranty-fund assessments* – The event that obligates the entity for the assessment liability generally is the writing of, or becoming obligated to write or renew, the premiums on which the expected future assessments are to be based. Therefore, the event that obligates the entity generally will not have occurred at the time of the insolvency.

i. In states that, through law or regulatory practice, provide that an entity cannot avoid paying a particular assessment in the future (even if the entity reduces premium writings in the future), the event that obligates the entity is a formal determination of insolvency or a similar event. An entity that has the ability to reasonably estimate the amount of the assessment should recognize a liability for the entire amount of future assessments that cannot be avoided related to a particular insolvency when a formal determination of insolvency occurs.

ii. In states without such a law or regulator practice, the event that obligates the entity is the writing of, or becoming obligated to write, the premiums on which the expected future assessments are to be based. An entity that has the ability to reasonably estimate the amount of the assessments should recognize a liability when the related premiums are written or when the entity becomes obligated to write the premiums.

c. *Prefunded-premium-based guaranty fund assessments* – A liability for an assessment arises when premiums are written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment should recognize a liability as the related premiums are written.

d. *Other premium-based assessments* – Other premium-based assessments shall be accounted for in the same manner as prefunded-premium-based guaranty-fund assessments.

e. *Loss-based assessments* – An assessment is probable of being asserted when the loss occurs. The obligating event of the assessment also has occurred when the loss occurs. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment should recognize a liability as the related loss is incurred.

DISCUSSION

9. Current statutory accounting guidance within SSAP No. 35 rejected the provisions of SOP 97-3, and required assessments for guaranty fund obligations to be accrued at the time of the insolvency, regardless of whether an event that "obligates" the reporting entity (i.e., the writing of premiums) has occurred. This position was considered necessary to be consistent with the concepts of conservatism and recognition outlined in the Statement of Concepts.

10. Before codification (and SSAP No. 35), the statutory accounting practice was driven by the line of insurance written by the reporting entity. For life insurers, assessments were accrued at the time of the insolvency, as the guaranty fund obligations were based on premiums written prior to the insolvency. For property and casualty insurers, the practice varied to reflect when the premiums were written. For assessments based on premiums written after an insolvency, the assessment was accrued when the premiums were written, as this was considered the event that obligated the entity.

11. Interested parties have identified that after the adoption of SSAP No. 35, property and casualty insurers have been able to develop estimates of their respective market shares, but that these insurers have had difficulty in trying to estimate the ultimate loss expected from insolvencies. Although property and casualty insurers have worked with the National Conference of Insurance Guaranty Funds (NCIGF) and various State Guaranty Fund Associations in an attempt to obtain additional information related to the ultimate loss expected from insolvencies, the rate information provided by the NCIGF does not extend beyond one year. Additionally, the NCIGF information does not provide sufficient data to allow for the calculation of an ultimate expected assessment exposure, which is necessary to meet the SSAP No. 35 requirements.

12. Interested parties also identified that the range of outcomes among property and casualty insurers illustrates that there is a lack of consistency of estimates among these reporting entities. This lack of consistency creates concern as to the extent SSAP No. 35 can be applied reliably. Based on the request of interested parties, the Statutory Accounting Principles Working Group formed the Guaranty Fund Subgroup to review the current statutory requirements within SSAP No. 35 and reconsider the adoption of SOP 97-3 (ASC 405-30).

13. To complete an assessment, the Subgroup conducted state surveys and received information from the NCIGF. In considering the results of state surveys, several states noted that waiting to record prospective-based guaranty fund assessments until the obligating premium was written would not impact their assessment of the insurers. A few states indicated that waiting would actually improve their assessment of the insurer as the liability information would be more accurate. In contrast, two states specifically noted that insurers should not wait to record the liability on their financial statements, and thus favored the current SSAP No. 35 approach.

14. After considering the presentation by NCIGF, the Subgroup concluded that in addition to mirroring the GAAP requirements, adopting the approach within ACS 405-30 (SOP 97-3) would result with the recognition of liabilities that are better estimates, more consistently determined, and more verifiable than the existing statutory approach.

a. *Better Estimates* - Using the current approach, it has been communicated that insurers do not have adequate information to calculate ultimate expected assessment exposure as of the liquidation date. It has been communicated that relying on the last annual statement filed of the insolvent insurer would not be timely or provide the best estimate for assessments. This is due to limited filed financial statement information, if any, if rehabilitation or runoff has occurred prior to insolvency. Insurers have communicated that they can use the NCIGF "Assessment Liability Report" to estimate their assessment liabilities and that this report is accepted by auditors as support for determining assessment liabilities under ACS 405-30 (SOP 97-3).

b. *More Consistently Determined* – The guaranty associations determine annually how much to assess the insurance industry according to their funding needs. State laws establish the maximum assessment percentage that can be assessed by a guaranty association per year. Under the prospective assessment method, used by 54 of the 57 guaranty associations (as reported by the NCIGF), the assessment amount is a percentage of direct written premiums for the prior year for lines covered by the guaranty association. Assessments received by the guaranty association in a particular year are used to fund claims originating from all insolvencies, regardless of when those insolvencies occurred. Prospective-premium based assessments are assessments made on premiums written after an insolvency occurs; assessments in any year are generally limited to a percentage of premiums written the year before the assessment is made.

c. *More Verifiable* – It has been communicated that utilizing the GAAP method improves the auditability of property and casualty insurer estimates as the information is based on "real" data. As previously stated in this issue paper, it has been communicated that the information provided by the NCIGF, which is in accordance with the GAAP standards, is accepted as support for the insurance company's assessment liability.

15. The Subgroup also noted that the inconsistencies in reporting and the lack of verifiable information reduced the conservative benefits received under the existing guidance in SSAP No. 35. As the result of these findings, the Subgroup agreed to present an Issue Paper to the Working Group proposing substantive revisions to SSAP No. 35 to incorporate the ASC 405-30 (SOP 97-3) approach for guaranty fund liability recognition. Under this approach, accounting requirements for guaranty fund assessments would be determined in accordance with the type of guaranty-fund assessment imposed, and incorporate the concept of an 'obligating event' for prospective-based premium assessments in determining whether liability accrual should occur.

16. Exhibit A includes the proposed substantive revisions to reflect the adoption with modification of ASC 405-30 (SOP 97-3), in the form of *SSAP No. 35R—Guaranty Form and Other Assessments – Revised* (SSAP No. 35R). The substantive revisions are proposed to be initially effective for the reporting period beginning January 1, 2011.

17. Statutory accounting modifications from ASC 405-30 (SOP 97-3) are as follows:

a. The option to discount accrued liabilities (and reflect the time value of money of anticipated recoverables) is rejected for statutory accounting. Liabilities for guaranty funds or other assessments shall not be discounted.

b. The use of a valuation allowance for premium tax offsets and policy surcharges no longer probable for realization has been rejected for statutory accounting. Evaluation of assets shall be made in accordance with SSAP No. 5, and if it is probable that the asset is no longer realizable, the asset shall be written off and charged to income in the period the determination is made.

c. Guidance within ASC 405-30 pertaining to noninsurance entities has been rejected as not applicable for statutory accounting.

18. SSAP No. 35 has three statutory accounting interpretations (INTs). No revisions are considered necessary to these interpretations as a result of the substantive revisions proposed within SSAP No. 35R:

a. *INT 02-22: Accounting for the U.S. Terrorism Risk Insurance Program* (INT 02-22) – This interpretation indicates that there is a transfer of underwriting insurance risk under the Terrorism Insurance Program and accordingly, the recovery of such losses should be reported as reinsured losses. This interpretation also indicates that because the terrorism loss risk-spreading premium is imposed on policyholders as a surcharge, and that the Department of Treasury provides for insurers to collect the surcharge and "remit amounts collected to the Secretary", the surcharge generally meets the requirements of paragraph 10 of SSAP No. 35:

> 10. In certain circumstances, a reporting entity acts as an agent for certain state or federal agencies in the collection and remittance of fees or assessments. In these circumstances, the liability for the fees and assessments rests with the policyholder rather than with the reporting entity. The reporting entity's obligation is to collect and subsequently remit the fee or assessment. When both the following conditions are met, an assessment shall not be reported in the statement of operations of a reporting entity:
>
> a. The assessment is reflected as a separately identifiable item on the billing to the policyholder; and
>
> b. Remittance of the assessment by the reporting entity to the state or federal agency is contingent upon collection from the insured.

b. *INT 03-01: Application of SSAP No. 35 to the Florida Hurricane Catastrophe Fund* (INT 03-01) – This interpretation was nullified due to Florida Legislative Changes.

c. *INT 07-03: EITF 06-3: How Taxes Collected from Customers and Remitted to Governmental Authorities Should Be Presented in the Income Statement (That is, Gross versus Net Presentation)* (INT 07-03) – This interpretation discusses the correct accounting treatment of taxes charged to a customer by collected and remitted by a reporting entity. Similar to INT 02-22, this interpretation focuses on the application of paragraph 10 and how the collection of assessments or charges from policyholders shall impact the reporting entity's financial statements.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

19. SSAP No. 35 provides the following guidance:

> 1. This statement establishes statutory accounting principles for guaranty fund and other assessments.
>
> 2. Guaranty fund assessments represent a funding mechanism employed by states to provide funds to cover policyholder obligations of insolvent reporting entities. Most states have enacted legislation establishing guaranty funds for both life and health insurance and for property and casualty insurance to provide for covered claims or to meet other insurance obligations of insolvent reporting entities in the state. Guaranty funds generally make assessments after an insolvency based upon retrospective premium writings.
>
> 3. This statement addresses other assessments including but not limited to workers' compensation second injury funds and for funds that pay operating costs of an insurance department, a state guaranty fund, and/or the workers' compensation board. This statement also

addresses health related assessments including but not limited to state health insurance high-risk pools, health insurance small group and individual reinsurance pools, state health demographic or risk adjustment assessments.

SUMMARY CONCLUSION

4. This statement applies *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5) to guaranty fund and other assessments. SSAP No. 5 requires accrual of a liability when both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

b. The amount of loss can be reasonably estimated.

For the purposes of subparagraph 4 b., loss generally means assessment or assessment rate. Guaranty fund and other assessments shall be charged to expense (Taxes, Licenses and Fees) and a liability shall be accrued when the above criteria are met except for certain health related assessments which shall be reported as a part of claims. Health related assessments that are reported as a part of claims instead of taxes, licenses and fees are those assessments that are designed for the purpose of spreading the risk of severe claims or adverse enrollment selection among all participating entities, and where the funds collected via the assessment are re-distributed back to the participating entities based upon the cost of specific claims, enrollment demographics, or other criteria affecting health care expenses.

5. For refunded guaranty or other fund assessments and assessments used to fund state operating expenses, reporting entities shall credit the refund or charge the assessment to expense when notification of the refund or assessment is made.

6. For guaranty fund assessments, subparagraph 4 a. is met when the insolvency has occurred, regardless of whether the assessments are based on premiums written before or after the insolvency. For purposes of applying this guidance, the insolvency shall be considered to have occurred when a reporting entity meets a state's (ordinarily the state of domicile of the insolvent reporting entity) statutory definition of an insolvent reporting entity. In most states, the reporting entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation. Loss-based administrative-type and second injury fund assessments are presumed probable when the losses on which the assessments are expected to be based are incurred.

7. Subparagraph 4 b. requires that the amounts can be reasonably estimated. For guaranty fund assessments, a reporting entity's estimate of the liability shall reflect an estimate of its share of the ultimate loss expected from the insolvency. The reporting entity shall also estimate any applicable premium tax credits and policy surcharges. An entity need not be able to compute the exact amounts of the assessments or be formally notified of such assessments by a guaranty fund to make a reasonable estimate of its liability. Entities subject to assessments may have to make assumptions about future events, such as when the fund making the assessment will incur costs and pay claims to determine the amounts and the timing of assessments. The best available information about market share or premiums by state and premiums by line of business generally should be used to estimate the amount of future assessments. Estimates of loss-based assessments should be consistent with estimates of the underlying incurred losses and should be developed based upon enacted laws or regulations and expected assessment rates. Premium tax credits or policy surcharges may only be considered in the estimate if it is probable they will be realized. Changes in the amount of the liability (or asset) as a result of the passage of time and revisions to estimates in the amount or timing of the payments shall be recorded in taxes, licenses and fees.

8. In accordance with SSAP No. 5, when the reasonable estimate of the loss is a range, the amount in the range that is considered the best estimate shall be accrued. When, in management's opinion, no amount within management's estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management's estimate in the range shall be accrued. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued.

9. The liability for assessments shall be established gross of any probable and estimable recoveries from premium tax credits and premium surcharges. Because assessments are generally paid before premium tax credits are realized or policy surcharges are collected, an asset may result, which represents a receivable for premium tax credits that will be taken and policy surcharges which will be collected in the future. These amounts, to the extent it is probable they will be realized, meet the definition of assets, as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement. The asset shall be established and reported independent from the liability (not reported net).

10. In certain circumstances, a reporting entity acts as an agent for certain state or federal agencies in the collection and remittance of fees or assessments. In these circumstances, the liability for the fees and assessments rests with the policyholder rather than with the reporting entity. The reporting entity's obligation is to collect and subsequently remit the fee or assessment. When both the following conditions are met, an assessment shall not be reported in the statement of operations of a reporting entity:

a. The assessment is reflected as a separately identifiable item on the billing to the policyholder; and

b. Remittance of the assessment by the reporting entity to the state or federal agency is contingent upon collection from the insured.

Disclosures

11. Describe the nature of any assessments that could have a material financial effect and state the estimate of the liability or that an estimate cannot be made. To the extent assessments have been accrued disclose the amounts of the liabilities, any related asset for premium tax credits or policy surcharges, the periods over which the assessments are expected to be paid, and the period over which the recorded premium tax offsets or policy surcharges are expected to be realized.

12. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

13. This statement rejects GAAP guidance for recording guaranty fund and other assessments, which is contained in *AICPA Statement of Position 97-3, Accounting by Insurance and Other Enterprises for Insurance-Related Assessments*.

Generally Accepted Accounting Principles

14. *Accounting Standards Codification 405-30, Insurance-Related Assessments* (ASC 405-30) provides the following guidance:

405-30-05 Overview and Background

05-1 Insurance entities as well as noninsurance entities are subject to a variety of assessments related to insurance activities, including those by state guaranty funds and workers' compensation second-injury funds. Some entities may be subject to insurance-related assessments because they self-insure against loss or liability. This Subtopic provides guidance on accounting for insurance-related assessments.

State Guaranty Funds

05-2 States have enacted legislation establishing guaranty funds. The state guaranty funds assess entities licensed to sell insurance in the state to provide for the payment of covered claims or to meet other insurance obligations—subject to prescribed limits—of insolvent insurance entities. The assessments are generally based on premium volume for certain covered lines of business. Most state guaranty funds assess entities for costs related to a particular insolvency after the insolvency occurs. At least one state, however, assesses entities before insolvencies.

05-3 State guaranty funds use a variety of methods for assessing entities. This Subtopic identifies the following four primary methods of guaranty-fund assessments:

a. *Retrospective-premium-based assessments*. Guaranty funds covering benefit payments of insolvent life, annuity, and health insurance entities typically assess entities based on premiums written or received in one or more years before the year of insolvency. Assessments in any year are generally limited to an established percentage of an entity's average premiums for the three years preceding the insolvency. Assessments for a given insolvency may take place over several years.

b. *Prospective-premium-based assessments*. Guaranty funds covering claims of insolvent property and casualty insurance entities typically assess entities based on premiums written in one or more years after the insolvency. Assessments in any year are generally limited to an established percentage of an entity's premiums written or received for the year preceding the assessment. Assessments for a given insolvency may take place over several years.

c. *Prefunded-premium-based assessments*. At least one state uses this kind of assessment to cover claims of insolvent property and casualty insurance entities. This kind of assessment is intended to prefund the costs of future insolvencies. Assessments are imposed before any particular insolvency and are based on the current level of written premiums. Rates to be applied to future premiums are adjusted as necessary.

d. *Administrative-type assessments*. These assessments are typically a flat (annual) amount per entity to fund operations of the guaranty association, regardless of the existence of an insolvency.

05-4 State laws often allow for recoveries of guaranty-fund assessments by entities subject to assessments through such mechanisms as premium tax offsets, policy surcharges, and future premium rate structures. The policy surcharges referred to in this Subtopic are those surcharges that are intended to provide an opportunity for assessed entities to recover some or all of the amounts assessed over a period of time.

Other Insurance-Related Assessments

05-5 Entities are subject to a variety of other insurance-related assessments. Many states and a number of local governmental units have established other funds supported by assessments. The two most prevalent uses for such assessments are as follows:

a. To fund operating expenses of state insurance regulatory bodies (for example, the state insurance department or workers' compensation board)

b. To fund second-injury funds, which provide reimbursement to insurance carriers or employers for workers' compensation claims when the cost of a second injury combined with a prior accident or disability is greater than what the second accident alone would have produced. The employer of an injured or handicapped worker is responsible only for the workers' compensation benefit for the most recent injury; the second-injury fund would cover the cost of any additional benefits for aggravation of a prior condition or injury. The intent of the fund is to help insure that employers are not made to suffer a greater monetary loss or increased insurance costs because of hiring previously injured or handicapped employees.

05-6 The primary methods used to assess for these other insurance-related assessments are the following:

a. *Premium-based*. The assessing entity imposes the assessment based on the entity's written premiums. The assessing entity may be at the state, county, municipality, or other such level. The base year of premiums is generally either the current year or the year preceding the assessment.

b. *Loss-based*. The assessing entity imposes the assessment based on the entity's incurred losses or paid losses in relation to that amount for all entities subject to that assessment in the particular jurisdiction.

405-30-10 Objectives

10-1 The objective of this Subtopic is to establish consistent accounting and disclosures for guaranty-fund and other insurance-related assessments to improve comparability of reported information.

405-30-15 Scope and Scope Exceptions

Entities

15-1 The guidance in this Subtopic applies to all entities that are subject to guaranty-fund and other insurance-related assessments, including entities that are subject to insurance-related assessments because they self-insure against loss or liability. For example, one state specifies that self-insurers of workers' compensation should use as a base for assessment the amount of premium the self-insurer would have paid if it had insured its liability with an insurer for the previous calendar year.

Transactions

15-2 The guidance in this Subtopic applies to assessments mandated by statute or regulatory authority that are related directly or indirectly to underwriting activities (including self-insurance), except for income taxes and premium taxes.

15-3 The guidance in this Subtopic does not apply to the following transactions and activities:

a. Amounts payable or paid as a result of reinsurance contracts or arrangements that are in substance reinsurance, including assumed reinsurance activities and certain involuntary pools that are covered by Topic 944.

b. Assessments of depository institutions related to bank insurance and similar funds.

405-30-25 Recognition

Reporting Liabilities

25-1 Entities subject to assessments shall recognize liabilities for insurance-related assessments when all of the following conditions are met:

a. *Probability of assessment*. An assessment has been imposed or information available before the financial statements are issued or are available to be issued (as discussed in Section 855-10-25) indicates it is probable that an assessment will be imposed.

b. *Obligating event*. The event obligating an entity to pay (underlying cause of) an imposed or probable assessment has occurred on or before the date of the financial statements.

c. *Ability to reasonably estimate*. The amount of the assessment can be reasonably estimated.

See Examples 1 through 3 (paragraphs 405-30-55-1 through 55-15) for illustrations of the computation of assessment liabilities.

Probability of Assessment

25-2 Premium-based guaranty-fund assessments, except those that are prefunded, are presumed probable when a formal determination of insolvency occurs, and presumed not probable before a formal determination of insolvency. For purposes of this Subtopic, a formal determination of insolvency occurs when an entity meets a state's (ordinarily the state of domicile of the insolvent insurer) statutory definition of an insolvent insurer. In most states, the entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation.

25-3 Prefunded guaranty-fund assessments and premium-based administrative-type assessments, as defined in paragraph 405-30-05-3, are presumed probable when the premiums on which the assessments are expected to be based are written. Loss-based administrative-type and second-injury fund assessments are presumed probable when the losses on which the assessments are expected to be based are incurred.

Obligating Event

25-4 Because of the fundamental differences in how assessment mechanisms operate, the event that makes an assessment probable (for example, an insolvency) may not be the event that obligates an entity. The following defines the event that obligates an entity to pay an assessment for each kind of assessment identified in this Subtopic:

a. For premium-based assessments, the event that obligates the entity is generally writing the premiums or becoming obligated to write or renew (such as multiple-year, noncancelable policies) the premiums on which the assessments are expected to be based. Some states, through law or regulatory practice, provide that an insurance entity cannot avoid paying a particular assessment even if that insurance entity reduces its premium writing in the future. In such circumstances, the event that obligates the entity is a formal determination of insolvency or similar triggering event. For example, in certain states, an insurance entity may remain liable for assessments even though the insurance entity discontinues the writing of premiums. In this circumstance, the underlying cause of the liability is not the writing of the premium, but the insolvency. Regulatory practice would be determined based on the stated intentions or prior history of the insurance regulators.

b. For loss-based assessments, the event that obligates an entity is an entity's incurring the losses on which the assessments are expected to be based.

Ability to Reasonably Estimate

25-5 One of the conditions (see paragraph 450-20-25-2(b)) for recognition of a liability is that the amount can be reasonably estimated. Paragraph 450-20-25-5 provides that some amount of loss can be reasonably estimated when available information indicates that the estimated amount of the loss is within a range of amounts. Paragraph 450-20-30-1 explains that, if no amount within the range is a better estimate than any other amount, the minimum amount in the range should be accrued.

Applying the Recognition Criteria

25-6 Application of the recognition criteria in paragraphs 405-30-25-1 through 25-5 to the methods used to address guaranty-fund assessments and other insurance-related assessments, as described in paragraphs 405-30-05-3 through 05-6, is as follows:

a. *Retrospective-premium-based guaranty-fund assessments*. An assessment is probable of being imposed when a formal determination of insolvency occurs. At that time, the premium that obligates the entity for the assessment liability has already been written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability for the entire amount of future assessments related to a particular insolvency when a formal determination of insolvency is rendered.

b. *Prospective-premium-based guaranty-fund assessments*. The event that obligates the entity for the assessment liability generally is the writing of, or becoming obligated to write or renew, the premiums on which the expected future assessments are to be based (for example, multiple-year contracts under which an insurance entity has no discretion to avoid writing future premiums). Therefore, the event that obligates the entity generally will not have occurred at the time of the insolvency. Law or regulatory practice affects the event that obligates the entity in either of the following ways:

    1. In states that, through law or regulatory practice, provide that an entity cannot avoid paying a particular assessment in the future (even if the entity reduces premium writings in the future), the event that obligates the entity is a formal determination of insolvency or a similar event. An entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability for the entire amount of future assessments that cannot be avoided related to a particular insolvency when a formal determination of insolvency occurs.

    2. In states without such a law or regulatory practice, the event that obligates the entity is the writing of, or becoming obligated to write, the premiums on which the expected future assessments are to be based. An entity that has the ability to reasonably estimate the amount of the assessments shall recognize a liability when the related premiums are written or when the entity becomes obligated to write the premiums.

c. *Prefunded-premium-based guaranty-fund assessments*. A liability for an assessment arises when premiums are written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability as the related premiums are written.

d. *Other premium-based assessments*. Other premium-based assessments, as described in paragraph 405-30-05-5, would be accounted for in the same manner as prefunded-premium-based guaranty-fund assessments.

e. *Loss-based assessments*. An assessment is probable of being asserted when the loss occurs. The obligating event of the assessment also has occurred when the loss occurs. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability as the related loss is incurred.

25-7 Administrative-type assessments are generally expensed in the period assessed.

Asset for Premium Tax Offsets and Policy Surcharges

25-8 When it is probable that a paid or accrued assessment will result in an amount that is recoverable from premium tax offsets or policy surcharges, an asset shall be recognized for that recovery.

25-9 For retrospective-premium-based assessments, to the extent that it is probable that paid or accrued assessments will result in a recoverable amount in a future period from business currently in force considering appropriate persistency rates for long-duration contracts (see paragraph 405-30-30-11), an asset shall be recognized at the time the liability is recorded.

25-10 An asset shall not be established for paid or accrued assessments that are recoverable through future premium rate structures.

25-11 Policy surcharges that are required as a pass-through to the state or other regulatory bodies shall be accounted for in a manner such that amounts collected or receivable are not recorded as revenues and amounts due or paid are not expensed (meaning, similar to accounting for sales tax).

405-30-30 Initial Measurement

Estimating the Liability

30-1 Entities subject to assessments may be able to obtain information to assist in estimating the total guaranty-fund cost or the following years' assessments, as appropriate, for an insolvency from entities such as the state guaranty fund associations, the National Organization of Life and Health Insurance Guaranty Associations, and the National Conference of Insurance Guaranty Funds.

30-2 An entity need not be able to compute the exact amounts of the assessments or be formally notified of such assessments by a guaranty fund to make a reasonable estimate of its liability. Entities subject to assessments may have to make assumptions about future events, such as when the fund will incur costs and pay claims that will determine the amounts and the timing of assessments.

30-3 The best available information about market share or premiums by state and premiums by line of business shall be used to estimate the amount of an insurance entity's future assessments.

30-4 If a noninsurance entity's assessments are based on premiums, it may be necessary to consider the amount of premium the self-insurer would have paid if it had insured its liability with an insurer. If a noninsurance entity's assessments are based on losses, it shall consider the losses that have been incurred by the entity when determining the liability. Most often, assessments that have an impact on noninsurance entities that self-insure workers' compensation obligations are for second-injury funds. Second-injury funds generally assess insurance entities and self-insurers based on paid losses.

30-5 A noninsurance entity may develop an accrual for its second-injury liability based on any of the following:

a. The ratio of the entity's prior period paid workers' compensation claims to aggregate workers' compensation claims in the state that was used as a basis for previous assessments

b. Total fund assessments in prior periods

c. Known changes in the current period to either the number of employees self-insured by the entity or the number of workers who are the subject of recoveries from the second-injury fund that might alter total fund assessments and the entity's proportion of the total fund assessments.

30-6 Estimates of loss-based assessments shall be consistent with estimates of the underlying incurred losses and shall be developed based on enacted laws or regulations and expected assessment rates.

30-7 Estimates of some insurance-related assessment liabilities may be difficult to derive. The development or determination of estimates is particularly difficult for guaranty-fund assessments because of uncertainties about the cost of the insolvency to the guaranty fund and the portion that will be recovered through assessment. Examples of uncertainties include the following:

a. Limitations, as provided by statute, on the amount of individual contract liabilities that the guaranty fund will assume, that cause the guaranty fund associations' liability to be less than the amount by which the entity is insolvent

b. Contract provisions (for example, credited rates) that may be modified at the time of the insolvency or alternative payout options that may be offered to contract holders that affect the level and payout of the guaranty fund's liability

c. The extent and timing of available reinsurance recoveries, which may be subject to significant uncertainties

d. Alternative strategies for the liquidation of assets of the insolvent entity that affect the timing and level of assessments

e. Certain liabilities of the insolvent insurer that may be particularly difficult to estimate (for example, asbestos or environmental liabilities).

30-8 Because of the uncertainties surrounding some insurance-related assessments, the range of assessment liability may have to be reevaluated regularly during the assessment process. For some ranges, there may be amounts that appear to be better estimates than any other within the range. If this is the case, the liability recorded shall be based on the best estimate within the range. For ranges in which there is no such best estimate, the liability that should be recorded shall be based on the amount representing the minimum amount in the range.

Present Value Measurement of the Obligation

30-9 Current practice in the insurance industry is to allow, but not require (with limited exceptions, such as pensions and postretirement benefits), the discounting of liabilities to reflect the time value of money when the aggregate amount of the obligation and the amount and timing of the cash payments are fixed or reliably determinable for a particular liability.

30-10 Similarly, for assessments that meet those criteria, the liability may be recorded at its present value by discounting the estimated future cash flows at an appropriate interest rate.

Asset for Premium Tax Offsets and Policy Surcharges

30-11 The asset recognized under paragraph 405-30-25-8 shall be measured based on current laws and projections of future premium collections or policy surcharges from in-force policies. In determining the asset to be recorded, in-force policies do not include expected renewals of short-duration contracts but do include assumptions as to persistency rates for long-duration contracts.

30-12 The time value of money need not be considered in the determination of the recorded amount of a potential recovery if the liability is not discounted. In instances in which the recovery period for an asset is substantially longer than the payout period for the liability, it may be appropriate to record the asset on a discounted basis regardless of whether the liability is discounted.

30-13 The recognition of such assets related to prospective-premium-based assessments is limited to the amount of premium an entity has written or is obligated to write and to the amounts recoverable over the life of the in-force policies. The expected premium tax offset or policy surcharge asset related to the accrual of prospective-premium-based assessments shall be based on and limited to the amount recoverable as a result of premiums the insurer has written or is obligated to write.

405-30-35 Subsequent Measurement

Asset for Premium Tax Offsets and Policy Surcharges

35-1 The asset recorded under paragraph 405-30-25-8 for premium tax offsets and policy surcharges shall be subject to a valuation allowance to reflect any portion of the asset that is no longer probable of realization. Considering expected future premiums other than on in-force policies in evaluating the recoverability of premium tax offsets or policy surcharges is not appropriate.

405-30-50 Disclosure

50-1 Sections 275-10-50 and 450-20-55 address disclosures related to loss contingencies. That guidance is applicable to assessments covered by this Subtopic. Additionally, if amounts have been discounted, the entity shall disclose in the financial statements the undiscounted amounts of the liability and any related asset for premium tax offsets or policy surcharges as well as the discount rate used. If amounts have not been discounted, the entity shall disclose in the financial statements the amounts of the liability, any related asset for premium tax offsets or policy surcharges, the periods over which the assessments are expected to be paid, and the period over which the recorded premium tax offsets or policy surcharges are expected to be realized.

405-30-55 Implementation Guidance and Illustrations

Illustrations

Example 1: Prospective-Premium-Based Assessment

55-1 This Example illustrates application of the recognition and measurement guidance in this Subtopic to a prospective-premium-based assessment. This kind of assessment is considered prospective because the assessment relates to premium written after the insolvency. As a result of insolvencies in prior years, ABC Property & Liability Insurance Company (ABC) expects to be assessed in the future by the guaranty fund in a state where it writes premiums. Any such assessments will be limited to 2 percent of premium writings in the prior year and are recoverable through premium tax offsets on a ratable basis over the 5-year period following the year of each assessment.

55-2 Although it does not expect to do so, ABC is free to cease writing the lines of business that are subject to the guaranty-fund assessments.

55-3 As of December 31, 19X0, ABC has neither paid nor received a notice of an assessment related to the insolvencies. Based on communications from the state guaranty association, ABC expects to receive an assessment in 19X1, which is allocated among entities based on 19X0 market share, for at least 1 percent of 19X0 premiums that are subject to the assessment. A best estimate cannot be determined, and no amount within the range of estimates (meaning, from 1 to

2 percent of 19X0 premiums) is a better estimate than any other amount, therefore the minimum amount in the range shall be accrued.

55-4 As of December 31, 19X0, ABC should recognize a liability equal to 1 percent of the premiums written in 19X0 that are subject to the assessment. No additional liability should be recognized, and no asset related to the premium tax offset should be recognized. Disclosure of the loss contingency of up to an additional 1 percent of the subject premiums should be considered.

55-5 ABC would recognize a liability only for those future assessments it is obligated to pay as a result of the premiums written. Because ABC is not obligated to write any future premiums, its liability is limited to that related to premiums written in 19X0. Because no amount within the range of estimates is a better estimate than any other amount, the minimum amount in the range is accrued. Further, because the premium tax offset is realizable only on business that will be written in the future (that is, 19X2 and subsequent years), no asset or receivable is recognized as of December 31, 19X0.

Example 2: Retrospective-Premium-Based Assessment

55-6 This Example illustrates application of the recognition and measurement guidance in this Subtopic to a retrospective-premium-based assessment. As a result of an insolvency that occurred during 19X0, DEF Life and Health Insurance Company (DEF) expects to be assessed in the future by the guaranty fund in a state where it has written business. Any such assessment will be based on DEF's average market share, determined based on premiums that are subject to the assessment for the three years before the insolvency, and limited to 2 percent of the average annual subject premiums for the three years before the insolvency. Further, such assessments are recoverable through premium tax offsets over the five-year period following the year of payment for each assessment.

55-7 As of December 31, 19X0, DEF has not paid or received a notice of an assessment related to the insolvency. Based on initial input from the National Organization of Life and Health Insurance Guaranty Associations and experience with other insolvencies, DEF assumes that the first assessment will not be made until 19X3 and that it will take three to five annual assessments for the guaranty fund to be able to meet its obligations. Based on the estimated nationwide cost of the insolvency and the distribution of the insolvent entity's business, DEF estimates that its assessment will be at least 1 percent of the average annual premiums that are subject to the assessment. No amount within the range of estimates (meaning, from 1 to 2 percent of the average annual premiums for 3 to 5 years) is a better estimate than any other amount, therefore the minimum amount in the range shall be accrued.

55-8 As of December 31, 19X0, DEF should recognize a liability for 3 years of assessments at 1 percent of the average annual premiums that are subject to the assessment (that is, the assessments expected in 19X3, 19X4, and 19X5). Disclosure of the loss contingency for additional assessments (meaning, in 19X6 and 19X7) or assessment of greater than 1 percent of the average annual premiums that are subject to the assessment should be considered. An asset related to premium tax offsets that are available on accrued assessments would be recorded provided there were sufficient premium taxes based on business in force at December 31, 19X0 (with assumed levels of policy retention), to allow realization of the asset.

55-9 The resulting recognized liability and asset are as follows (shown on both a discounted and undiscounted basis, based on paragraphs 405-30-30-9 through 30-12, discounting is optional), assuming average annual subject premiums of $100,000 for the 3 years before the insolvency.

	Recorded at	Cash Payments									
Assessments	12/31/19X0	19X1	19X2	19X3	19X4	19X5	19X6	19X7	19X8	19X9	20X0
19X3 Assessment				1,000							
19X4 Assessment					1,000						
19X5 Assessment						1,000					
Total	3,000			1,000	1,000	1,000					
Premium tax offset											
19X3 Assessment (a)					200	200	200	200	200		
19X4 Assessment (a)						200	200	200	200	200	
19X5 Assessment (a)							200	200	200	200	200
Total	3,000				200	400	600	600	600	400	200
Present value of assessments At 12/31/19X0 (b)	2,470										
Present value of premium Tax offset at 12/31/19X0 (b)	2,139										

(a) Assumed that, based upon anticipated levels of policy retention from the business in force at December 31, 19X0, there will be sufficient premium to realize the premium tax offset.

(b) Discounted at 5 percent, assuming all assessments are paid and offsets realized at the end of each year.

55-10 DEF would record a liability for all future assessments related to the insolvency. Because no amount within the range of estimates (meaning, from 1 to 2 percent of the average annual premiums for 3 to 5 years) is a better estimate than any other amount, the minimum amount in the range (meaning, 1 percent per year for 3 years of assessments) is accrued.

55-11 Since it is assumed that based on the anticipated levels of policy retention from the business in force at December 31, 19X0, there will be sufficient premium to realize the premium tax offset, the premium tax offset is recorded.

Example 3: Loss-Based Assessment

55-12 This Example illustrates application of the recognition and measurement guidance in this Subtopic to a loss-based assessment. GHI Industrial Company (GHI) is self-insured for workers' compensation and therefore participates in the second injury fund in the state where it conducts operations. GHI is entitled to recover from the fund some or all of the indemnity claims for previously injured workers. GHI is also subject to annual assessments (maximum of 1 percent per year) on indemnity claims paid each year.

55-13 Assessment rates have been climbing steadily, from 0.6 percent 5 years previous to 0.75 percent in 19X0.

55-14 As of December 31, 19X0, GHI should have an assessment liability recognized for 0.75 percent of its liability for the payment of future indemnity claims, unless there was information to support the assessment rate being reduced or the assessments being eliminated in the future. Disclosure of the loss contingency of up to an additional 0.25 percent of the liability for the payment of future indemnity claims should be considered.

55-15 GHI would recognize a liability based on the current assessment rate, unless there was clear evidence that the rate would change. The liability would be based on the entire liability base that was subject to the assessment.

Exhibit A: ILLUSTRATION OF MARKED CHANGES TO AMENDED SSAP NO. 35R

The following depicts the amendments from this issue paper as “marked changes” (new text underlined):

Guaranty Fund and Other Assessments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for guaranty fund and other assessments.

2. Guaranty fund assessments represent a funding mechanism employed by states to provide funds to cover policyholder obligations of insolvent reporting entities. Most states have enacted legislation establishing guaranty funds for both life and health insurance and for property and casualty insurance to provide for covered claims or to meet other insurance obligations of insolvent reporting entities in the state. ~~Guaranty funds generally make assessments after an insolvency based upon retrospective premium writings.~~

3. This statement addresses other assessments including but not limited to workers’ compensation second injury funds and for funds that pay operating costs of an insurance department, a state guaranty fund, and/or the workers’ compensation board. This statement also addresses health related assessments including but not limited to state health insurance high-risk pools, health insurance small group and individual reinsurance pools, state health demographic or risk adjustment assessments.

SUMMARY CONCLUSION

4. This statement adopts with modification guidance from *Accounting Standard Codification 405-30, Insurance-Related Assessments* (ASC 405-30) as reflected within this SSAP. Consistent with ASC 405-30-25-1, entities subject to assessments shall recognize liabilities for insurance-related assessments when all of the following conditions are met (paragraph 13 provides guidance on applying the recognition criteria): ~~applies *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5) to guaranty fund and other assessments. SSAP No. 5 requires accrual of a liability when both of the following conditions are met:~~

a. An assessment has been imposed or information available ~~Information available~~ prior to issuance of the statutory financial statements indicates that it is probable that an assessment will be imposed. ~~an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and~~

b. The event obligating an entity to pay an imposed or probable assessment has occurred on or before the date of the financial statements.

~~b.~~c. The amount of ~~loss~~ the assessment can be reasonably estimated.

~~For the purposes of subparagraph 4 b., loss generally means assessment or assessment rate.~~ Guaranty fund and other assessments shall be charged to expense (Taxes, Licenses and Fees) and a liability shall be accrued when the above criteria are met except for certain health related assessments which shall be reported as a part of claims. Health related assessments that are reported as a part of claims instead of taxes, licenses and fees are those assessments that are designed for the purpose of spreading the risk of severe claims or adverse enrollment selection among all participating entities, and where the funds collected via the assessment are re-distributed back to the participating entities based upon the cost of specific claims, enrollment demographics, or other criteria affecting health care expenses. This standard does not permit liabilities for guaranty funds or other assessments to be discounted.

5. For refunded guaranty or other fund assessments and assessments used to fund state operating expenses, reporting entities shall credit the refund or charge the assessment to expense when notification of the refund or assessment is made.

6. For premium-based guaranty fund assessments, except those that are prefunded, subparagraph 4a. is met when the insolvency has occurred~~, regardless of whether the assessments are based on premiums written before or after the insolvency~~. For purposes of applying this guidance, the insolvency shall be considered to have occurred when a reporting entity meets a state's (ordinarily the state of domicile of the insolvent reporting entity) statutory definition of an insolvent reporting entity. In most states, the reporting entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation. Prefunded guaranty-fund assessments and premium-based administrative type assessment are presumed probable when the premiums on which the assessments are expected to be based are written. Loss-based administrative-type and second injury fund assessments are presumed probable when the losses on which the assessments are expected to be based are incurred.

7. Subparagraph 4b requires that the event obligating an entity to pay an imposed or probable assessment has occurred on or before the date of the financial statements. Based on the fundamental differences in how assessment mechanisms operate, the event that makes an assessment probable (for example, an insolvency) may not be the event that obligates an entity. The following defines the event that obligates an entity to pay an assessment:

a. For premium-based assessments, the event that obligates the entity is generally writing the premiums or becoming obligated to write or renew (such as multiple-year, noncancelable policies) the premiums on which the assessments are expected to be based. Some states, through law or regulatory practice, provide that an insurance entity cannot avoid paying a particular assessment even if that insurance entity reduces its premium writing in the future. In such circumstances, the event that obligates the entity is a formal determination of insolvency or similar triggering event. For example, in certain states, an insurance entity may remain liable for assessments even though the insurance entity discontinues the writing of premiums. In this circumstance, the underlying cause of the liability is not the writing of the premium, but the insolvency. Regulatory practice would be determined based on the stated intentions or prior history of the insurance regulators.

b. For loss-based assessments, the event that obligates an entity is an entity's incurring the losses on which the assessments are expected to be based.

~~7.~~8. Subparagraph 4 ~~b~~c. requires that the amounts can be reasonably estimated. For retrospective-premium-based guaranty fund assessments, a reporting entity's estimate of the liability shall reflect an estimate of its share of the ultimate loss expected from the insolvency. The reporting entity shall also estimate any applicable premium tax credits and policy surcharges. An entity need not be able to compute the exact amounts of the assessments or be formally notified of such assessments by a guaranty fund to make a reasonable estimate of its liability. Entities subject to assessments may have to make assumptions about future events, such as when the fund making the assessment will incur costs and pay claims to determine the amounts and the timing of assessments. The best available information about market share or premiums by state and premiums by line of business generally should be used to estimate the amount of future assessments. Estimates of loss-based assessments should be consistent with estimates of the underlying incurred losses and should be developed based upon enacted laws or regulations and expected assessment rates. Premium tax credits or policy surcharges may only be considered in the estimate if it is probable they will be realized. Because of the uncertainties surrounding some insurance-related assessments, the range of assessment liability may have to be re-evaluated regularly during the assessment process. Changes in the amount of the liability (or asset) as information becomes available over time~~a result of the passage of time~~ and revisions to estimates in the amount or timing of the payments shall be recorded in taxes, licenses and fees.

~~8.~~9. In accordance with SSAP No. 5, when the reasonable estimate of the loss is a range, the amount in the range that is considered the best estimate shall be accrued. When, in management's opinion, no amount within management's estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management's estimate in the range shall be accrued. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued.

Reporting Assets for Premium Tax Offsets and Policy Surcharges

10. The liability for accrued assessments shall be established gross of any probable and estimable recoveries from premium tax credits and premium surcharges. When it is probable that a paid or accrued assessment will result in an amount that is recoverable from premium tax offsets or policy surcharges, an asset shall be recognized for that recovery in an amount that is determined based on current laws, projections of future premium collections or policy surcharges from in-force policies, and as permitted in accordance with subparagraphs 10a, 10b and 10c. Any recognized asset from premium tax credits or policy surcharges shall be re-evaluated regularly to ensure recoverability. Upon expiration, tax credits no longer meet the definition of an asset and shall be written off.

a. For ~~Because~~ assessments ~~are generally~~ paid before premium tax credits are realized or policy surcharges are collected, an asset ~~may~~ results, which represents a receivable for premium tax credits that will be taken and policy surcharges which will be collected in the future. These ~~amounts~~receivables, to the extent it is probable they will be realized, meet the definition of assets, as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement. The asset shall be established and reported independent from the liability (not reported net).

~~a.~~b. Assets recognized from accrued liability assessments shall be determined in accordance with the type of guaranty fund assessment as detailed in the following subparagraphs. Assets recognized from accrued liability assessments meet the definition of an asset under SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement.

i. For retrospective-premium-based and loss-based assessments, to the extent that it is probable that accrued liability assessments will result in a recoverable amount in a future period from business currently in-force considering appropriate persistency rates for long-duration contracts, an asset shall be recognized at the time the liability is recorded. (In-force policies do not include expected renewals of short-term contracts.

ii. For prospective-premium-based assessments, the recognition of assets from accrued liability assessments is limited to the amount of premium an entity has written or is obligated to write and to the amounts recoverable over the life of the in-force policies. This SSAP requires reporting entities to recognize prospective-based-premium assessments as the premium is written or obligated to be written by the reporting entity. Accordingly, the expected premium tax offset or policy surcharge asset related to the accrual of prospective-premium-based assessments shall be based on and limited to the amount recoverable as a result of premiums the insurer has written or is obligated to write.

c. An asset shall not be established for paid or accrued assessments that are recoverable through future premium rate structures.

11. An evaluation of assets recognized under paragraph 10 shall be made in accordance with *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5) to determine if there is any impairment. If, in accordance with SSAP No. 5, it is probable that the asset is no longer realizable, the asset shall be written off to the extent it is not realizable and charged to income in the period the determination is made. Considering expected future premiums other than on in-force policies in evaluating recoverability of premium tax offsets or policy surcharges is not permitted.

Acting as an Agent for Collection and Remittance of Fees and Assessments

~~10.~~12. In certain circumstances, a reporting entity acts as an agent for certain state or federal agencies in the collection and remittance of fees or assessments. In these circumstances, the liability for the fees and assessments rests with the policyholder rather than with the reporting entity. The reporting entity's obligation is to collect and subsequently remit the fee or assessment. When both the following conditions are met, an assessment shall not be reported in the statement of operations of a reporting entity:

a. The assessment is reflected as a separately identifiable item on the billing to the policyholder; and

b. Remittance of the assessment by the reporting entity to the state or federal agency is contingent upon collection from the insured.

Applying the Recognition Criteria

13. Application of the recognition criteria in paragraph 4:

a. *Retrospective-premium-based guaranty-fund assessments* - An assessment is probable of being imposed when a formal determination of insolvency occurs[1]. At that time, the premium that obligates the entity for the assessment liability has already been written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability for the entire amount of future assessments related to a particular insolvency when a formal determination of insolvency is rendered.

b. *Prospective-premium-based guaranty-fund assessments* - The event that obligates the entity for the assessment liability generally is the writing of, or becoming obligated to write or renew, the premiums on which the expected future assessments are to be based (for example, multiple-year contracts under which an insurance entity has no discretion to avoid writing future premiums). Therefore, the event that obligates the entity generally will not have occurred at the time of the insolvency. Law or regulatory practice affects the event that obligates the entity in either of the following ways:

i. In states that, through law or regulatory practice, provide that an entity cannot avoid paying a particular assessment in the future (even if the entity reduces premium writings in the future), the event that obligates the entity is a formal determination of insolvency or a similar event. An entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability for the entire amount of future assessments that cannot be avoided related to a particular insolvency when a formal determination of insolvency occurs.

[1] As detailed within paragraph 6 for premium-based guaranty-fund assessments, an insolvency shall be considered to have occurred when a reporting entity meets a state's (ordinarily the state of domicile of the insolvent reporting entity) statutory definition of an insolvent reporting entity. In most states, the reporting entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation.

ii. In states without such a law or regulatory practice, the event that obligates the entity is the writing of, or becoming obligated to write, the premiums on which the expected future assessments are to be based. An entity that has the ability to reasonably estimate the amount of the assessments shall recognize a liability when the related premiums are written or when the entity becomes obligated to write the premiums.

c. *Prefunded-premium-based guaranty-fund assessments* - A liability for an assessment arises when premiums are written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability as the related premiums are written.

d. *Other premium-based assessments* - Other premium-based assessments shall be accounted for in the same manner as prefunded premium-based guaranty-fund assessments.

e. *Loss-based assessments* - An assessment is probable of being asserted when the loss occurs. The obligating event of the assessment also has occurred when the loss occurs. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability as the related loss is incurred.

f. *Administrative-type assessments* – As this assessment is typically an annual amount per entity assessed to fund operations of the guaranty association, regardless of the existence of an insolvency, such assessments are generally expensed in the period assessed.

Disclosures

~~11.~~14. A reporting entity shall disclose the following:

a. Describe the nature of any assessments that could have a material financial effect, by type of assessment, and state the estimate of the liability, identifying whether the corresponding liability has been recognized under paragraph 4, a liability has not been recognized as the obligating event has not yet occurred, or that an estimate cannot be made.

b. For ~~To the extent~~ assessments with liabilities recognized under paragraph 4, ~~have been accrued~~ disclose the amount~~s~~ of the recognized liabilities, any related asset for premium tax credits or policy surcharges, the periods over which the assessments are expected to be paid, and the period over which the recorded premium tax offsets or policy surcharges are expected to be realized.

c. Disclose assets recognized from paid and accrued premium tax offsets or policy surcharges, and include a reconciliation of assets recognized within the previous year's Annual Statement to the assets recognized in the current year's Annual Statement. The reconciliation shall reflect, in aggregate, each component of the increase and decrease in paid and accrued premium tax offsets and policy surcharges, including the amount charged off.

d. Disclosures shall be made in accordance with paragraph 14 of SSAP No. 5 when there is at least a reasonable possibility that the impairment of an asset from premium tax offsets or policy surcharges may have been incurred.

~~12.~~15. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

16. This statement ~~rejects~~ adopts GAAP guidance for recording guaranty fund and other assessments, which is contained in *Accounting Standards Codification 405-30, Insurance Related Assessments* (ASC 405-30) to the extent reflected in this SSAP.~~*AICPA Statement of Position 97-3, Accounting by Insurance and Other Enterprises for Insurance-Related Assessments*.~~ Statutory accounting modifications from ASC 405-30 are as follows:

a. The option to discount accrued liabilities (and reflect the time value of money in anticipated recoverables) is rejected for statutory accounting. Liabilities for guaranty funds or other assessments shall not be discounted.

b. The use of a valuation allowance for premium tax offsets and policy surcharges no longer probable for realization has been rejected for statutory accounting. Evaluation of assets shall be made in accordance with SSAP No. 5, and if it is probable that the asset is no longer realizable, the asset shall be written off and charged to income in the period the determination is made.

c. Guidance within ASC 405-30 pertaining to noninsurance entities has been rejected as not applicable for statutory accounting.

Effective Date and Transition

17. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Substantive revisions to paragraphs 4, 6, 7, 8, 10, 11, 13 and 14 are initially effective for the reporting period beginning January 1, 2011. The result of applying this revised Statement shall be considered a change in accounting principle in accordance with SSAP No. 3. Pursuant to SSAP No. 3, the cumulative effect of changes in accounting principles shall be reported as an adjustment to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect recognized through surplus from initial application of this Statement shall reflect the removal of liabilities established under SSAP No. 35, and the re-establishment of liabilities required under SSAP No. 35R. If there is no change in the liabilities recognized (for example, retrospective-premium based assessments), no cumulative effect adjustment shall occur. With regards to assets, the entity shall complete an assessment of the SSAP No. 35 asset reported as of the transition date. If it is determined that the reported asset exceeds what is allowed under SSAP No. 35R, then the excess asset shall be written-off, through unassigned funds, so the ultimate asset reflected corresponds with what is permitted under SSAP No. 35R. Although it is possible that the excess asset will be reinstated once the liability assessment is recognized (prospective-premium based assessments), it is inappropriate to continue to reflect an asset for assessments that are not reflected within the financial statements.

RELEVANT ISSUE PAPERS

- *Issue Paper No. 35—Accounting for Guaranty Fund and Other Assessments*
- *Issue Paper No. 143—Prospective-Based Guaranty Fund Assessments*

Exhibit A – Primary Methods of Guaranty Fund Assessments:

a. *Retrospective-premium-based assessments* - Guaranty funds covering benefit payments of insolvent life, annuity, and health insurance entities typically assess entities based on premiums written or received in one or more years before the year of insolvency. Assessments in any year are generally limited to an established percentage of an entity's average premiums for the three years preceding the insolvency. Assessments for a given insolvency may take place over several years.

b. *Prospective-premium-based assessments* - Guaranty funds covering claims of insolvent property and casualty insurance entities typically assess entities based on premiums written in one or more years after the insolvency. Assessments in any year are generally limited to an established percentage of an entity's premiums written or received for the year preceding the assessment. Assessments for a given insolvency may take place over several years.

c. *Prefunded-premium-based assessments* - This kind of assessment is intended to prefund the costs of future insolvencies. Assessments are imposed before any particular insolvency and are based on the current level of written premiums. Rates to be applied to future premiums are adjusted as necessary.

d. *Administrative-type assessments* - These assessments are typically a flat (annual) amount per entity to fund operations of the guaranty association, regardless of the existence of an insolvency.

d. *Other premium-based assessments* - Entities are subject to a variety of other insurance-related assessments. Many states and a number of local governmental units have established other funds supported by assessments. The most prevalent uses for such assessments are (*a*) to fund operating expenses of state insurance regulatory bodies (for example, the state insurance department or workers' compensation board) and (*b*) to fund second-injury funds.

    i. *Premium-based* - The assessing organization imposes the assessment based on the entity's written premiums. The base year of premiums is generally either the current year or the year preceding the assessment.

    ii. *Loss-based* - The assessing organization imposes the assessment based on the entity's incurred losses or paid losses in relation to that amount for all entities subject to that assessment in the particular jurisdiction.

Statutory Issue Paper No. 144

Substantive Revisions to SSAP No. 91R: Securities Lending

STATUS
Finalized November 29, 2010

Current Authoritative Guidance for Securities Lending: SSAP No. 103
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 91R

Type of Issue:

Common Area

SUMMARY OF ISSUE

1. The purpose of this issue paper is to document for the historical record the substantive changes to statutory accounting guidance adopted in May 2010 within *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities– Revised* (SSAP No. 91R).

2. This Issue Paper illustrates tracked changes adopted in SSAP No. 91R, with an effective date of December 31, 2010. The substantive revisions adopted within SSAP No. 91R include revised accounting guidance for securities lending, repurchase agreements, reverse repurchase agreements and disclosures.

3. For historical record, the adopted guidance reflected as tracked changes has been included as appendix A.

DISCUSSION

4. This Issue Paper is intended to provide as a historical reference tracked changes adopted within SSAP No. 91R. The substantive changes were proposed by the Securities Lending Subgroup of the Statutory Accounting Principles Working Group, which was composed of interested parties and regulators. The primary goal of the group was to clarify securities lending accounting, including rules on collateral.

5. The Working Group determined that changes were necessary, as the existing guidance for collateral for securities lending was inconsistently applied.

6. In addition, the repurchase and reverse repurchase agreement definitions were essentially reversed to be more consistent with the investment industry use of the terms.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

7. Prior statutory accounting guidance in SSAP No. 91R regarding securities lending is superseded by the updates to SSAP No. 91R adopted in May 2010.

Generally Accepted Accounting Principles

8. The substantive revisions adopted in SSAP No. 91R did not adopt or reject any new GAAP standards but it did incorporate guidance regarding the determination of whether collateral is on balance sheet or off balance sheet which is closer to the existing GAAP guidance. There are still modifications from GAAP in that the SSAP No. 91R guidance indicates that "if the reporting entity or its agent can sell or repledge the collateral, it shall be recorded on the balance sheet."

APPENDIX A – TRACKED CHANGES TO SSAP NO. 91R

Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for transfers and servicing of financial assets, including asset securitizations and securitizations of policy acquisition costs, extinguishments of liabilities, repurchase agreements and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This statement discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement. Securitizations of nonfinancial assets are outside the scope of this statement.

SUMMARY CONCLUSION

2. See *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25) for additional accounting and disclosure guidance concerning related party transactions. In addition the guidance for the following topics have been addressed in Interpretations of the Emerging Accounting Issues Working Group (INT):

a. Transfers of ownership interest that are in substance sales of real estate - INT 99-22 resolved this conflict between application of *SSAP No. 40—Real Estate* (SSAP No. 40) and *SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 18).

b. Exchanges of equity method investments for similar productive assets - INT 99-21 resolved this conflict between application of *SSAP No. 28—Nonmonetary Transactions* (SSAP No. 28) and SSAP No. 18.

3. SSAP No. 18, *SSAP No. 33—Securitization* (SSAP No. 33) and *SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements* (SSAP No. 45) are superseded by the conclusions outlined in this statement.

4. This statement does not address the securitization of mortality or morbidity risk. The National Association of Insurance Commissioners' (NAIC's) Insurance Securitization Working Group of the Financial Condition (E) Committee is charged with the development of model laws, model regulations and proposed accounting guidance for the securitization of mortality and morbidity risk. When such proposed accounting guidance is finalized, the development of a statement will be considered.

5. Except as discussed in paragraphs 56 and ~~94~~97, a transfer of a group of financial assets, or a portion of a financial asset in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if, and only if, all of the following conditions are met:

a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (see paragraphs 17 and 18);

b. Either (i) each transferee obtains the right, free of conditions that constrain it from taking advantage of that right (see paragraphs 19-23), to pledge or exchange the transferred assets or (ii) the transferee is a qualifying special-purpose entity as defined in paragraph 25 and the holders of beneficial interests in that entity have the right, free of conditions that constrain them from taking advantage of that right (see paragraph 24), to pledge or exchange those interests and no condition both constrains the transferee (or holder) from taking advantage of its right to pledge or exchange and provide more than a trivial benefit to the transferor; and

c. The transferor does not maintain effective control over the transferred assets through (i) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (see paragraphs 38-40) or (ii) the ability to unilaterally cause the holder to return specific assets, other than through a cleanup call (see paragraphs 22-23 and 41-45).

6. Upon completion of any transfer of financial assets, the transferor shall:

a. Initially recognize and measure at fair value, if practicable, servicing assets and servicing liabilities assumed under a separate contractual obligation to service financial assets (see paragraphs ~~51~~11 and 50);

b. Allocate the previous carrying amount between the assets sold, if any, and the interests that continue to be held by a transferor, if any, based on their relative fair values at the date of transfer (see paragraphs 48 and 49); and

c. Continue to carry in its balance sheet any interest it continues to hold in the transferred assets, including, if applicable, beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization, and undivided interests continued to be held by the transferor (see paragraphs 7.c., 48 and 49).

7. Upon completion of a transfer of financial assets that satisfies the conditions to be accounted for as a sale (see paragraph 5), the transferor (seller) shall:

a. Eliminate the transferred assets from the balance sheet;

b. Allocate the previous carrying amount of the transferred assets to the securities representing beneficial interests continued to be held by the reporting entity, if any, and the securities representing beneficial interests not continued to be held, if any, based on the relative fair values of the transferred assets at the date of transfer;

c. Record in its balance sheet, the allocated carrying value of the securities representing beneficial interests continued to be held in the assets (e.g., loan-backed securities). Subsequent to the transfer of assets:

i. Retained residuals are to be carried at fair value with the difference between fair value and the allocated cost basis recognized as an unrealized gain or loss;

ii. Beneficial interests continued to be held shall be accounted for in accordance with the statutory accounting principles for the specific asset type (e.g., bonds shall be accounted for in accordance with *SSAP No. 26—Bonds, Excluding Loan–Backed and Structured Securities*, loan-backed securities shall be accounted for in accordance with *SSAP No. 43R—Loan-Backed and Structured Securities* (SSAP No. 43R), preferred stock in accordance with *SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities)* (SSAP No. 32).

d. Recognize all additional assets obtained (i.e., other than the securities representing beneficial interests continued to be held which are recorded in accordance with 7 c.) and liabilities incurred in consideration as proceeds of the sale;

e. Initially measure such additional assets obtained and liabilities incurred in the sale at fair value (see *SSAP No. 100—Fair Value Measurements*), or if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraph 50); and

f. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized and unrealized capital gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized capital gains and losses shall be reported as net realized capital gains or losses in the statement of income, and unrealized capital gains and losses shall be reported as net unrealized gains and losses in unassigned funds (surplus).

8. The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value.

9. Repurchase agreements, reverse repurchase agreements, collateral requirements, and dollar repurchase agreements are described in paragraphs ~~61-83~~64-86. When an asset is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales and shall be accounted for as sales as discussed in paragraphs ~~64-66~~67-69 and disclosed as required by paragraph ~~97~~100. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

10. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) (a) does not meet the criteria for a sale in paragraph 5, or (b) is a sale of receivables with recourse (see paragraph ~~94~~97); the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (see paragraph 13).

Recognition and Measurement of Servicing Assets and Liabilities

11. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained, or separate purchase or assumption of the servicing. Servicing rights become a distinct asset or liability of the reporting entity pursuant to:

a. A transfer of the servicer's financial assets that meets the requirements for sale accounting;

b. A transfer of financial assets to a qualifying SPE in a guaranteed mortgage obligation in which the transferor retains all of the resulting securities; or

c. An acquisition or assumption of a servicing obligation that does not relate to financial assets of the servicer.

A servicer that transfers or securitizes financial assets in a transaction that does not meet the requirements for sale accounting and is accounted for as a secured borrowing with the underlying assets remaining on the transferor's balance sheet shall not be recognized as a servicing asset or servicing liability.

12. If distinct servicing rights exist in accordance with the above guidelines, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations in other income. Servicing assets and servicing liabilities shall be measured initially at fair value. Servicing assets or liabilities shall be measured subsequently at fair value at each reporting date with fluctuations in fair value reported

as unrealized gains and losses. Declines in fair value which are determined to be other than temporary shall be recorded as realized losses.

Secured Borrowings and Collateral

13. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (see paragraph 10). The accounting for noncash[1] collateral by the debtor (or obligor) and the secured party depends on whether the secured party or its agent has ~~taken control over the collateral, and on~~ the right~~s~~ to sell or repledge~~and obligations that result from~~ the collateral ~~arrangement:~~and on whether the debtor has defaulted.

a. If the secured party (transferee) or its agent has the right by contract ~~is permitted~~ or custom to sell or repledge the collateral, ~~and~~then the debtor (transferor) shall report that asset in its balance sheet. ~~does not have the right and ability to redeem the collateral on short notice, (e.g., by substituting other collateral or terminating the contract), then:~~

~~i.The debtor shall reclassify that asset and report that asset in its balance sheet separately (for example, as security pledged to creditors) from other assets not so encumbered;~~

~~ii.The secured party shall recognize that collateral as its asset, initially measure it at fair value, and also recognize its obligation to return it.~~

b. If the secured party (transferee) sells ~~or repledges~~ collateral pledged to it, ~~on terms that do not give it the right and ability to repurchase or redeem the collateral from the transferee on short notice, the secured party~~it shall recognize the proceeds from the sale ~~or the asset repledged~~ and its obligation to return the ~~asset to the extent that it has not already recognized them~~collateral. The sale ~~or repledging~~ of the collateral ~~asset~~ is a transfer subject to the provisions of this statement.

c. If the debtor (transferor) defaults under the terms of the secured contract and is no longer entitled to redeem the ~~collateral~~pledged asset, it shall derecognize the ~~collateral~~pledged asset, and~~. T~~ the secured party (transferee) shall recognize the collateral as its~~an~~ asset ~~(to the extent it has not already recognized it) and~~ initially measured ~~it~~ at fair value~~;~~ or, if it has already sold the collateral, derecognize its obligation to return the collateral.

d. Except as provided in paragraph 13.c., the debtor (transferor) shall continue to carry the collateral as its asset, and the secured party (transferee) shall not recognize the pledged asset.

14. ~~Insurers~~Reporting entities may enter into certain transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract. If the assets pledged are recorded as admitted assets under *SSAP No. 4—*

[1] Cash "collateral," sometimes used, for example, in securities lending transactions, shall be derecognized by the payer and recognized by the recipient, not as collateral, but rather as proceeds of either a sale or a borrowing.

Assets and Nonadmitted Assets (SSAP No. 4) and are not impaired under the provisions of *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5), the pledging ~~insurer~~entity records the collateral as an admitted asset until committing a contract default that has not been cured in accordance with the contract provisions. At the time of an uncured default, the provisions of paragraph 13 above shall be used to determine the appropriate accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of the liability owed by the pledging ~~insurer~~entity as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset shall be removed from the balance sheet since that obligation has been satisfied through the secured party's utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer shall only record an admitted asset for the amount of collateral that it can redeem.

Extinguishments of Liabilities

15. A debtor shall derecognize a liability if, and only if, it has been extinguished (see *SSAP No. 15—Debt and Holding Company Obligations* (SSAP No. 15)). A liability has been extinguished if either of the following conditions is met:

a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities whether the securities are canceled or held as so-called treasury bonds; or

b. The debtor is legally released from being the primary obligor under the liability, either judicially or by the creditor.

16. If a creditor releases a debtor from primary obligation on the condition that a third party assumes the obligation and that the original debtor becomes secondarily liable, that release extinguishes the original debtor's liability. However, in those circumstances, whether or not explicit consideration was paid for that guarantee, the original debtor becomes a guarantor. As a guarantor, it shall recognize a guarantee obligation in the same manner as would a guarantor that had never been primarily liable to that creditor, with due regard for the likelihood that the third party will carry out its obligations. The guarantee obligation shall be initially measured at fair value, and that amount reduces the gain or increases the loss recognized on extinguishment.

Isolation Beyond the Reach of the Transferor and Its Creditors

17. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depends on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor. Transactions between related parties or affiliates are accounted for in accordance with SSAP No. 25.

18. Many common financial transactions, for example, typical repurchase agreements and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

19. Sale accounting is allowed under paragraph 5 only if each transferee has the right to pledge, or the right to exchange, the transferred assets or beneficial interests it received, but constraints on that right also matter. Many transferor-imposed or other conditions on a transferee's right to pledge or exchange a transferred asset both constrain a transferee from pledging or exchanging the transferred assets and, through that constraint, provide more than a trivial benefit to the transferor. For example, a provision in the transfer contract that prohibits selling or pledging a transferred loan receivable not only constrains the transferee but also provides the transferor with the more-than-trivial benefits of knowing who has the asset, a prerequisite to repurchasing the asset, and of being able to block the asset from finding its way into the hands of a competitor for the loan customer's business or someone that the loan customer might consider an undesirable creditor. Transferor-imposed contractual constraints that narrowly limit timing or terms, for example, allowing a transferee to pledge only on the day assets are obtained or only on terms agreed with the transferor, also constrain the transferee and presumptively provide the transferor with more-than-trivial benefits.

20. However, some conditions do not constrain a transferee from pledging or exchanging the asset and therefore do not preclude a transfer subject to such a condition from being accounted for as a sale. For example, a transferor's right of first refusal on the occurrence of a bona fide offer to the transferee from a third party presumptively would not constrain a transferee, because that right in itself does not enable the transferor to compel the transferee to sell the assets and the transferee would be in a position to receive the sum offered by exchanging the asset, albeit possibly from the transferor rather than the third party. Further examples of conditions that presumptively would not constrain a transferee include (a) a requirement to obtain the transferor's permission to sell or pledge that is not to be unreasonably withheld, (b) a prohibition on sale to the transferor's competitor if other potential willing buyers exist, (c) a regulatory limitation such as on the number or nature of eligible transferees (as in the case of securities issued under Securities Act Rule 144A or debt placed privately), and (d) illiquidity, for example, the absence of an active market. Judgment is required to assess the significance of some conditions. For example, a prohibition on sale to the transferor's competitor would be a significant constraint if that competitor were the only potential willing buyer other than the transferor.

21. A condition imposed by a transferor that constrains the transferee presumptively provides more than a trivial benefit to the transferor. A condition not imposed by the transferor that constrains the transferee may or may not provide more than a trivial benefit to the transferor. For example, if the transferor refrains from imposing its usual contractual constraint on a specific transfer because it knows an equivalent constraint is already imposed on the transferee by a third party, it presumptively benefits more than trivially from that constraint. However, the transferor cannot benefit from a constraint if it is unaware at the time of the transfer that the transferee is constrained.

Transferor's Rights or Obligations to Reacquire Transferred Assets

22. Some rights or obligations to reacquire transferred assets both constrain the transferee and provide more than a trivial benefit to the transferor, thus precluding sale accounting under paragraph 5. For example, a freestanding call option written by a transferee to the transferor benefits the transferor and, if the transferred assets are not readily obtainable in the marketplace, is likely to constrain a transferee because it might have to default if the call was exercised and it had exchanged or pledged the assets. A freestanding forward purchase-sale contract between the transferor and the transferee on transferred assets not readily obtainable in the marketplace would benefit the transferor and is likely to constrain a transferee in much the same manner. Judgment is necessary to assess constraint and benefit. For example, put options written to the transferee generally do not constrain it, but a put option on a not-readily-obtainable asset may benefit the transferor and effectively constrain the transferee if the option is sufficiently deep-in-the-money when it is written that it is probable that the transferee will exercise it and the transferor will reacquire the transferred asset. In contrast, a sufficiently out-of-the-money call option held by the transferor may not constrain a transferee if it is probable when the option is written that it will not be exercised. Freestanding rights to reacquire transferred assets that are

readily obtainable presumptively do not constrain the transferee from exchanging or pledging them and thus do not preclude sale accounting under paragraph 5.

23. Other rights or obligations to reacquire transferred assets, regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred assets, as discussed in paragraphs 41-45, thus precluding sale accounting under paragraph 5.

Conditions That Constrain a Holder of Beneficial Interests in a Qualifying SPE

24. The considerations in paragraphs 19-23, about conditions that may or may not constrain a transferee that is not a qualifying SPE from pledging or exchanging the transferred assets, also extend to conditions that may or may not constrain a beneficial interest holder (BIH) from pledging or exchanging its beneficial interests in assets transferred to a qualifying SPE. For example, if BIHs agree to sell their beneficial interests in a qualifying SPE back to the transferor upon request at the price paid plus a stated return, that arrangement clearly conveys more than a trivial benefit to the transferor; sale accounting for the transfer to the qualifying SPE would be precluded if that agreement constrained a BIH from exchanging or pledging its beneficial interest.

Qualifying SPE

25. A qualifying SPE is a trust or other legal vehicle that meets all of the following conditions:

a. It is demonstrably distinct from the transferor (paragraphs 26 and 27);

b. Its permitted activities:

i. Are significantly limited;

ii. Were entirely specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds; and

iii. May be significantly changed only with the approval of the holders of at least a majority of the beneficial interests held by entities other than any transferor, its affiliates, and its agents (paragraphs 28 and 29).

c. It shall hold only:

i. Financial assets transferred to it that are passive in nature (paragraph 30);

ii. Passive derivative financial instruments that pertain to beneficial interests (other than another derivative financial instrument) issued or sold to parties other than the transferor, its affiliates, or its agents (paragraphs 30 and 31);

iii. Financial assets (for example, guarantees or rights to collateral) that would reimburse it if others were to fail to adequately service financial assets transferred to it or to timely pay obligations due to it and that it entered into when it was established, when assets were transferred to it, or when beneficial interests (other than derivative financial instruments) were issued by the SPE;

iv. Servicing rights related to financial assets that it holds;

v. Temporarily, nonfinancial assets obtained in connection with the collection of financial assets that it holds (paragraph 32);

vi. Cash collected from assets that it holds and investments purchased with that cash pending distribution to holders of beneficial interests that are appropriate for that purpose (that is, money-market or other relatively risk-free instruments without options and with maturities no later than the expected distribution date).

d. If it can sell or otherwise dispose of noncash financial assets, it can do so only in automatic response to one of the following conditions:

i. Occurrence of an event or circumstance that:

(a) Is specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds;

(b) Is outside the control of the transferor, its affiliates, or its agents; and

(c) Causes, or is expected at the date of transfer to cause, the fair value of those financial assets to decline by a specified degree below the fair value of those assets when the SPE obtained them (paragraphs 33 and 34.)

ii. Exercise by a BIH (other than the transferor, its affiliates, or its agents) of a right to put that holder's beneficial interest back to the SPE (paragraph 35);

iii. Exercise by the transferor of a call specified in the legal documents that established the SPE, transferred assets to the SPE, or created the beneficial interests in the transferred assets that it holds (paragraphs 41-45);

iv. Termination of the SPE or maturity of the beneficial interests in those financial assets on a fixed or determinable date that is specified at inception (paragraph 36).

Need to Be Demonstrably Distinct from the Transferor

26. A qualifying SPE is demonstrably distinct from the transferor only if it cannot be unilaterally dissolved by any transferor, its affiliates, or its agents and either:

a. At least 10 percent of the fair value of its beneficial interests is held by parties other than any transferor, its affiliates, or its agents; or

b. The transfer is a guaranteed mortgage securitization.

27. An ability to unilaterally dissolve an SPE can take many forms, including but not limited to holding sufficient beneficial interests to demand that the trustee dissolve the SPE, the right to call all the assets transferred to the SPE, and a right to call or a prepayment privilege on the beneficial interests held by other parties.

Limits on Permitted Activities

28. The powers of the SPE must be limited to those activities allowed by paragraph 25 for it to be a qualifying SPE. Many kinds of entities are not so limited. For example, any bank, insurance company, pension plan, or investment company has powers that cannot be sufficiently limited for it to be a qualifying SPE.

29. The BIHs other than any transferor, its affiliates, or its agents may have the ability to change the powers of a qualifying SPE. If the powers of a previously qualifying SPE are changed so that the SPE is no longer qualifying, unless the conditions in paragraph 5.b. are then met by the SPE itself and the conditions in paragraphs 5.a. and 5.c. continue to be met, that change would bring the transferred assets held in the SPE back under the control of the transferor (paragraph 46).

Limits on What a Qualifying SPE May Hold

30. A financial asset or derivative financial instrument is passive only if holding the asset or instrument does not involve its holder in making decisions other than the decisions inherent in servicing. An equity instrument is not passive if the qualifying SPE can exercise the voting rights and is permitted to choose how to vote. Investments are not passive if through them, either in themselves or in combination with other investments or rights, the SPE or any related entity, such as the transferor, its affiliates, or its agents, is able to exercise control, as defined in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No.* 88 (SSAP No. 97) over the investee. A derivative financial instrument is not passive if, for example, it includes an option allowing the SPE to choose to call or put other financial instruments that would allow it and its related entities to control 10% of more of the financial instruments issuer; but other derivative financial instruments can be passive, for example, interest rate caps and swaps and forward contracts. Derivative financial instruments that result in liabilities, like other liabilities of a qualifying SPE, are a kind of beneficial interest in the qualifying SPE's assets.

31. A derivative financial instrument pertains to beneficial interests (other than another derivative financial instrument) issued only if it:

a. Is entered into:

i. When the beneficial interests are issued by the qualifying SPE to parties other than the transferor, its affiliates, or its agents or sold to such other parties after being issued by the qualifying SPE to the transferor, its affiliates, or its agents; or

ii. When a passive derivative financial instrument needs to be replaced upon occurrence of an event or circumstance (specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds) outside the control of the transferor, its affiliates, or its agents, for example, when the counterparty to the derivative defaults or is downgraded below a specified threshold.

b. Has a notional amount that does not initially exceed the amount of those beneficial interests and is not expected to exceed them subsequently;

c. Has characteristics that relate to, and partly or fully but not excessively counteract, some risk associated with those beneficial interests or the related transferred assets.

32. A qualifying SPE may hold nonfinancial assets other than servicing rights only temporarily and only if those nonfinancial assets result from collecting the transferred financial assets. For example, a qualifying SPE could be permitted to temporarily hold foreclosed nonfinancial collateral. In contrast, an entity cannot be a qualifying SPE if, for example, it receives from a transferor significant secured financial assets likely to default with the expectation that it will foreclose on and profitably manage the securing nonfinancial assets.

Limits on Sales or Other Dispositions of Assets

33. Examples of requirements to sell, exchange, put, or distribute (hereinafter referred to collectively as dispose of) noncash financial assets that are permitted activities of a qualifying SPE—because they respond automatically to the occurrence of an event or circumstance that:

a. Is specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds;

b. Is outside the control of the transferor, its affiliates, or its agents; and

c. Causes, or is expected to cause, the fair value of those assets to decline by a specified degree below the fair value of those assets when the qualifying SPE obtained them include requirements to dispose of transferred assets in response to:

i. A failure to properly service transferred assets that could result in the loss of a substantial third-party credit guarantee;

ii. A default by the obligor;

iii. A downgrade by a major rating agency of the transferred assets or of the underlying obligor to a rating below a specified minimum rating;

iv. The involuntary insolvency of the transferor; or

v. A decline in the fair value of the transferred assets to a specified value less than their fair value at the time they were transferred to the SPE.

34. The following are examples of powers or requirements to dispose of noncash financial assets that are not permitted activities of a qualifying SPE, because they do not respond automatically to the occurrence of a specified event or circumstance outside the control of the transferor, its affiliates, or its agents that causes, or is expected to cause, the fair value of those transferred assets to decline by a specified degree below the fair value of those assets when the SPE obtained them:

a. A power that allows an SPE to choose to either dispose of transferred assets or hold them in response to a default, a downgrade, a decline in fair value, or a servicing failure;

b. A requirement to dispose of marketable equity securities upon a specified decline from their "highest fair value" if that power could result in disposing of the asset in exchange for an amount that is more than the fair value of those assets at the time they were transferred to the SPE;

c. A requirement to dispose of transferred assets in response to the violation of a nonsubstantive contractual provision (that is, a provision for which there is not a sufficiently large disincentive to ensure performance).

35. A qualifying SPE may dispose of transferred assets automatically to the extent necessary to comply with the exercise by a BIH (other than the transferor, its affiliates, or its agents) of its right to put beneficial interests back to the SPE in exchange for:

a. A full or partial distribution of those assets;

b. Cash (which may require that the SPE dispose of those assets or issue beneficial interests to generate cash to fund settlement of the put);

c. New beneficial interests in those assets.

36. A qualifying SPE may have the power to dispose of assets to a party other than the transferor, its affiliate, or its agent on termination of the SPE or maturity of the beneficial interests, but only automatically on fixed or determinable dates that are specified at inception. For example, if an SPE is required to dispose of long-term mortgage loans and terminate itself at the earlier of (a) the specified maturity of beneficial interests in those mortgage loans or (b) the date of

prepayment of a specified amount of the transferred mortgage loans, the termination date is a fixed or determinable date that was specified at inception. In contrast, if that SPE has the power to dispose of transferred assets on two specified dates and the SPE can decide which transferred assets to sell on each date, the termination date is not a fixed or determinable date that was specified at inception.

Investments in Special-Purpose Entities

37. Reporting entities that have qualifying special-purpose entities as affiliates shall carry their investment in such entity at its underlying statutory book value in accordance with *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88* (SSAP No. 97). Additionally, transactions entered involving affiliated qualifying special-purpose entities are subject to the provisions of SSAP No. 25.

Agreements That Maintain Effective Control Over Transferred Assets

38. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor's effective control over those assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 39);

b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 40);

c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price; and

d. The agreement is entered into concurrently with the transfer.

39. To be substantially the same, the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same);

b. Identical form and type so as to provide the same risks and rights;

c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield);

d. Identical contractual interest rates;

e. Similar assets as collateral; and

f. The same aggregate unpaid principal amount or principal amounts within accepted good delivery standards for the type of security involved.

40. To be able to repurchase or redeem assets on substantially all of the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

Ability to Unilaterally Cause the Return of Specific Transferred Assets

41. Some rights to reacquire transferred assets (or to acquire beneficial interests in transferred assets held by a qualifying SPE), regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred assets through the unilateral ability to cause the return of specific transferred assets. Such rights preclude sale accounting under paragraph 5. For example, an attached call in itself would not constrain a transferee who is able, by exchanging or pledging the asset subject to that call, to obtain substantially all of its economic benefits. An attached call could result, however, in the transferor's maintaining effective control over the transferred asset(s) because the attached call gives the transferor the ability to unilaterally cause whoever holds that specific asset to return it. In contrast, transfers of financial assets subject to calls embedded by the issuers of the financial instruments, for example, callable bonds or prepayable mortgage loans, do not preclude sale accounting. Such an embedded call does not result in the transferor's maintaining effective control, because it is the issuer rather than the transferor who holds the call.

42. If the transferee is a qualifying SPE, it has met the conditions in paragraph 25 and therefore must be constrained from choosing to exchange or pledge the transferred assets. In that circumstance, any call held by the transferor is effectively attached to the assets and could—depending on the price and other terms of the call—maintain the transferor's effective control over transferred assets through the ability to unilaterally cause the transferee to return specific assets. For example, a transferor's unilateral ability to cause a qualifying SPE to return to the transferor or otherwise dispose of specific transferred assets at will or, for example, in response to its decision to exit a market or a particular activity, could provide the transferor with effective control over the transferred assets.

43. A call that is attached to transferred assets maintains the transferor's effective control over those assets if, under its price and other terms, the call conveys more than a trivial benefit to the transferor. Similarly, any unilateral right to reclaim specific assets transferred to a qualifying SPE maintains the transferor's effective control over those assets if the right conveys more than a trivial benefit to the transferor. A call or other right conveys more than a trivial benefit if the price to be paid is fixed, determinable, or otherwise potentially advantageous, unless because that price is so far out of the money or for other reasons it is probable when the option is written that the transferor will not exercise it. Thus, for example, a call on specific assets transferred to a qualifying SPE at a price fixed at their principal amount maintains the transferor's effective control over the assets subject to that call. Effective control over transferred assets can be present even if the right to reclaim is indirect. For example, if an embedded call allows a transferor to buy back the beneficial interests of a qualifying SPE at a fixed price, then the transferor remains in effective control of the assets underlying those beneficial interests. A cleanup call, however, is permitted as an exception to that general principle.

44. A right to reclaim specific transferred assets by paying their fair value when reclaimed generally does not maintain effective control, because it does not convey a more than trivial benefit to the transferor. However, a transferor has maintained effective control if it has such a right and also holds the residual interest in the transferred assets. For example, if a transferor can reclaim such assets at termination of the qualifying SPE by purchasing them in an auction, and thus at what might appear to be fair value, then sale accounting for the assets it can reclaim would be precluded. Such circumstances provide the transferor with a more than trivial benefit and effective control over the assets; because it can pay any price it chooses in the auction and recover any excess paid over fair value through its residual interest.

45. A transferor that has a right to reacquire transferred assets from a qualifying SPE does not maintain effective control if the reclaimed assets would be randomly selected and the amount of the assets reacquired is sufficiently limited because that would not be a right to reacquire specific assets. Nor does a transferor maintain effective control through an obligation to reacquire transferred assets from a qualifying SPE if the transfer could occur only after a specified failure of the servicer to properly service the transferred assets that could result in the loss of a third-party guarantee (paragraph 33.c.i.) or only after a BIH other than the transferor, its affiliate, or its agent

requires a qualifying SPE to repurchase that beneficial interest (paragraph 35.b.), because the transferor could not cause that reacquisition unilaterally.

Changes That Result in the Transferor's Regaining Control of Assets Sold

46. A change in law, status of the transferee as a qualifying SPE, or other circumstance may result in the transferor's regaining control of assets previously accounted for appropriately as having been sold, because one or more of the conditions in paragraph 5 are no longer met. Such a change, unless it arises solely from either the initial application of this statement or a change in market prices (for example, an increase in price that moves into-the-money a freestanding call that was originally sufficiently out-of-the-money that it was judged not to constrain the transferee), is accounted for in the same manner as a purchase of the assets from the former transferee(s) in exchange for liabilities assumed (paragraph 7). After that change, the transferor recognizes in its financial statements those assets together with liabilities to the former transferee(s) or BIHs in those assets (paragraph 29). The transferor initially measures those assets and liabilities at fair value on the date of the change, as if the transferor purchased the assets and assumed the liabilities on that date. The former transferee would derecognize the assets on that date, as if it had sold the assets in exchange for a receivable from the transferor. Subsequent to that date, the reporting entity shall follow statutory accounting for the assets and liabilities in accordance with the guidance in the SSAPs.

Assets Obtained and Liabilities Incurred as Proceeds

47. The proceeds from a sale of financial assets consist of the cash and any other assets obtained, including separately recognized servicing assets, in the transfer less any liabilities incurred, including separately recognized servicing liabilities. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value.

Interests That Continue to be Held by a Transferor

48. Other interests in transferred assets, those that are not part of the proceeds of the transfer, are interests that continue to be held by a transferor over which the transferor has not relinquished control. They shall be measured at the date of the transfer by allocating the previous carrying amount between the assets sold, if any, and the interests that continue to be held by a transferor, based on their relative fair values. That procedure shall be applied to all transfers in which interests continue to be held by the transferor, even those that do not qualify as sales. Examples of interests that continue to be held by a transferor include securities backed by the transferred assets, undivided interests, and cash reserve accounts and residual interests in securitization trusts. If a transferor cannot determine whether an asset is an interest continued to be held or proceeds from the sale, the asset shall be treated as proceeds from the sale and accounted for in accordance with paragraph 47.

49. If the interests that continue to be held by a transferor are subordinated to more senior interests held by others, that subordination may concentrate into the interests that continue to be held by a transferor most of the risks inherent in the transferred assets and shall be taken into consideration in estimating the fair value of the interests that continue to be held by a transferor. For example, if the amount of the gain recognized, after allocation, on a securitization with a subordinated interest continued to be held is greater than the gain would have been had the entire asset been sold, the transferor needs to be able to identify why that can occur. Otherwise, it is likely that the impact of the interest continued to be held being subordinate to a senior interest has not been adequately considered in the determination of the fair value of the subordinated interest continued to be held.

If It Is Not Practicable to Estimate Fair Values

50. If it is not practicable to estimate the fair values of assets, the transferor shall record those assets at an allocated cost basis of zero. If it is not practicable to estimate the fair values of liabilities, the transferor shall recognize no gain on the transaction and shall record those liabilities at the greater of:

a. The excess, if any, of (i) the fair values of assets obtained less the fair values of other liabilities incurred, over (ii) the sum of the carrying values of the assets transferred;

b. The amount that would be recognized in accordance with SSAP No. 5.

Securitizations

51. Financial assets such as mortgage loans are assets commonly transferred in securitizations. Securitizations of mortgage loans may include pools of single-family residential mortgages or other types of real estate mortgage loans, for example, multifamily residential mortgages and commercial property mortgages. Both financial and nonfinancial assets can be securitized; life insurance policy loans, patent and copyright royalties also have been securitized. Securitizations of nonfinancial assets are outside the scope of this statement.

52. An originator of a typical securitization (the transferor) transfers a portfolio of financial assets to an SPE, commonly a trust. In "pass-through" and "pay-through" securitizations, receivables are transferred to the SPE at the inception of the securitization, and no further transfers are made; all cash collections are paid to the holders of beneficial interests in the SPE. In "revolving-period" securitizations, receivables are transferred at the inception and also periodically (daily or monthly) thereafter for a defined period (commonly three to eight years), referred to as the revolving period. During the revolving period, the SPE uses most of the cash collections to purchase additional receivables from the transferor on prearranged terms.

53. Beneficial interests in the SPE are sold to investors and the proceeds are used to pay the transferor for the assets transferred. Those beneficial interests may comprise either a single class having equity characteristics or multiple classes of interests, some having debt characteristics and others having equity characteristics. The cash collected from the portfolio is distributed to the investors and others as specified by the legal documents that established the SPE.

54. Pass-through, pay-through, and revolving-period securitizations that meet the criteria in paragraph 5 qualify for sale accounting under this statement. All financial assets obtained or continued to be held and liabilities incurred by the originator of a securitization that qualifies as a sale shall be recognized and measured as provided in paragraph 7; that includes the implicit forward contract to sell new receivables during a revolving period, which may become valuable or onerous to the transferor as interest rates and other market conditions change.

Sales of Future Revenues

55. In addition to securitization of assets, some reporting entities have entered into transactions characterized as a sale of future revenues. These transactions are sometimes referred to as securitizations and are sometimes characterized as selling deferred acquisition costs. A sale of future revenues by a reporting entity shall not result in the immediate recognition of income or surplus. The proceeds of any such sale shall be established as a liability and shall be reduced as the proceeds are repaid.

Removal-of-Accounts Provisions

56. Many transfers of financial assets in securitizations empower the transferor to reclaim assets subject to certain restrictions. Such a power is sometimes called a removal-of-accounts provision (ROAP). If there is a ROAP, the transfer of assets shall not be accounted for as a sale.

Securities Lending Transactions

~~57. When securities are loaned, they remain assets of the reporting entity and are not removed from the accounting records. Any fees received by the transferor for loaning the securities shall be recorded as miscellaneous income. During a securities lending transaction, collateral is pledged by the transferee to the transferor that has loaned the securities. If the collateral pledged by the transferee is not available for the general use of the transferor (restricted), then the transferor shall not reflect the collateral in the transferor's balance sheet as an asset, and the transferor shall not establish a liability for the return of the collateral. However, if the collateral pledged is available for the general use of the transferor (unrestricted), then the collateral shall be recorded as an asset on the transferor's balance sheet and a separate liability shall be established on the transferor's balance sheet to record the obligation to return the collateral. The failure by the transferor to maintain sufficient collateral for the loaned securities would result in nonadmission of the undercollateralized portion. The specific collateral requirements are as follows:~~

~~a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 102 percent of the fair value of the loaned securities at that date. If at any time the fair value collateral is less than 100 percent of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals 102 percent of the fair value of the loaned securities;~~

~~b. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to 105 percent of the fair value of the loaned securities at that date. If at any time the fair value is less than 102 percent of the fair value of the loaned securities, the reporting entity must obtain additional collateral, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals 105 percent of the fair value of the loaned securities.~~

~~58~~57. Securities lending transactions are generally initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver securities sold. Securities lending transactions typically extend less than one year. Transferees (borrowers) of securities generally are required to provide collateral to the transferor (lender) of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities borrowed. If the collateral is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or rebated to the transferee. If the collateral is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of collateral (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash collateral impose market and credit risks on the transferor.

~~59~~58. Many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred assets before their maturity under which the transferor maintains effective control over those assets (paragraphs 38-40). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder or its agent is permitted by contract or custom to sell or repledge) received as collateral is considered the amount borrowed, the securities loaned are considered pledged as collateral against the cash or securities borrowed, and any rebate paid to the transferee of securities is interest on the cash or securities the transferor is considered to have borrowed. ~~Collateral provided in securities lending transactions that are accounted for as secured~~

~~borrowings shall be reported and disclosed like other collateral, as set forth in paragraphs 13 and 57.~~

~~60~~59. ~~In some transactions, characterized as securities lending, all of~~If the conditions in paragraph 5 are met, securities lending transactions shall be accounted for:~~, including the effective control criterion in paragraph 5c., and consideration other than beneficial interests in the transferred assets is received. During the term of such agreements, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities, with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the collateral and the forward repurchase commitment. Those transactions shall be accounted for:~~

a. By the transferor as a sale of the "loaned" securities, for proceeds consisting of the collateral[2] and a forward repurchase commitment~~. (If the collateral is a financial asset that the holder is permitted to sell or repledge and the debtor does not have the right and ability to redeem the collateral on short notice, e.g., by substituting other collateral or terminating the contract, that financial asset is proceeds of the sale of the loaned securities. To the extent that the collateral consists of letters of credit or other financial instruments that the holder is not permitted to sell or pledge, a securities lending transaction does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee)~~; and

b. By the transferee as a purchase of the "borrowed" securities in exchange for the collateral and a forward resale commitment. During the term of that agreement, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the "collateral" and the forward repurchase commitment.

~~61~~60. The transferor of securities being "loaned" accounts for collateral received in the same way whether the transfer is accounted for as a sale or a secured borrowing. The collateral received shall be recognized as the transferor's asset—as shall investments made with that collateral, even if made by agents or in pools with other securities lenders—along with the obligation to return the collateral. If securities that may be sold or repledged are received by the transferor or its agent, the transferor of the securities being "loaned" accounts for those securities in the same way as it would account for collateral received. Collateral which may be sold or repledged by the transferor or its agent is reflected on balance sheet, along with the obligation to return the asset[3]. Collateral received which may not be sold or repledged by the transferor or its agent is off balance sheet[4]. For collateral on the balance sheet, the reporting is determined by the administration of the program.

a. Securities lending programs where the collateral received by the reporting entity's unaffiliated agent that can be sold or repledged is reported on the balance sheet. The collateral received and reinvestment of that collateral by the reporting entity's unaffiliated agent shall be reflected as a one-line entry on the

[2] If the "collateral" in a transaction that meets the criteria in paragraph 5 is a financial asset that the holder or its agent is permitted by contract or custom to sell or repledge, that financial asset is proceeds of the sale of the "loaned" securities. To the extent that the "collateral" consists of letters of credit or other financial instruments that the holder or its agent is not permitted by contract or custom to sell or repledge, a securities lending transaction does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee.

[3]If cash is received by the transferor or its agent and reinvested or repledged it is reported on balance sheet. It is explicitly intended that when the lender bears reinvestment risk, that collateral is on balance sheet.

[4] An example of collateral which is off balance sheet is securities are received by the transferor or its agent in which the collateral must be held and returned, without the ability to transfer or repledge the collateral. This would involve limited situations in which the transferor or agent is prohibited from reinvesting the collateral.

balance sheet (Securities Lending Collateral) and a detailed schedule will be required each quarter and at year-end to list the description of the collateral asset. This description shall include the NAIC rating, fair value; book adjusted carrying value and maturity date. A separate liability shall also be established to record the obligation to return the collateral (Collateral from Securities Lending Activities)

~~a.~~b. Securities lending programs where the collateral received by the reporting entity that can be sold or repledged is reported on the balance sheet. If the reporting entity is the administrator of the program, then, the collateral received and any reinvestment of that collateral is reported with the invested assets of the reporting entity based on the type of investment (i.e. bond, common stock, etc). A separate liability shall also be established to record the obligation to return the collateral (Collateral from Securities Lending Activities)

c. Securities lending programs where the collateral received by the reporting entity's affiliated agent can report using either one line reporting (paragraph 60 a.) or investment schedule reporting (paragraph 60.b.).

~~62~~61. Reinvestment of the collateral by the reporting entity or its agent, shall follow the same impairment guidance as other similar invested assets reported on the balance sheet. Any fees received by the transferor for loaning the securities shall be recorded as miscellaneous investment income.

Securities Lending Transactions – Collateral Requirements

~~63~~62. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 102 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 100 percent of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral by the end of the next business day, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals 102 percent of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

~~64~~63. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to 105 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 102 percent of the fair value of the loaned securities, the reporting entity must obtain additional collateral by the end of the next business day, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals 105 percent of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

Repurchase Agreements and "Wash Sales"

~~61.~~64. Government securities dealers, banks, other financial institutions, and corporate investors commonly use repurchase agreements to obtain or use short-term funds. Under those agreements, the transferor ("repo party") transfers a security to a transferee ("repo counterparty" or "reverse party") in exchange for cash[5] and concurrently agrees to reacquire that security at a future date for an amount equal to the cash exchanged plus a stipulated "interest" factor. Repurchase agreements, reverse repurchase agreements and dollar repurchase agreements

[5] Instead of cash, other securities or letters of credit sometimes are exchanged.

meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

~~62.~~65. Repurchase agreements can be affected in a variety of ways. Some repurchase agreements are similar to securities lending transactions in that the transferee or its agent has the right to sell or repledge the securities to a third party during the term of the repurchase agreement. In other repurchase agreements, the transferee does not have the right to sell or repledge the securities during the term of the repurchase agreement. For example, in a tri-party repurchase agreement, the transferor transfers securities to an independent third-party custodian that holds the securities during the term of the repurchase agreement. Also, many repurchase agreements are for short terms, often overnight, or have indefinite terms that allow either party to terminate the arrangement on short notice. However, other repurchase agreements are for longer terms, sometimes until the maturity of the transferred asset. Some repurchase agreements call for repurchase of securities that need not be identical to the securities transferred.

~~63.~~66. If the ~~criteria~~conditions in paragraph 5 are met, including the criterion in paragraph 5.c., the transferor shall account for the repurchase agreement as a sale of financial assets and a forward repurchase commitment, and the transferee shall account for the agreement as a purchase of financial assets and a forward resale commitment. Other transfers that are accompanied by an agreement to repurchase the transferred assets that shall be accounted for as sales include transfers with agreements to repurchase at maturity and transfers with repurchase agreements in which the transferee has not obtained collateral sufficient to fund substantially all of the cost of purchasing replacement assets. (Repurchase financing is addressed in paragraphs ~~70-75~~73-78.)

~~64.~~ 67. Furthermore, "wash sales" that previously were not recognized if the same financial asset was purchased within 30 days before or after the sale shall be accounted for as sales under this statement. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

~~65.~~68. As with securities lending transactions, under many agreements to repurchase transferred assets before their maturity the transferor maintains effective control over those assets. Repurchase agreements that do not meet all the criteria in paragraph 5 shall be treated as secured borrowings. Fixed-coupon and dollar-roll repurchase agreements, and other contracts under which the securities to be repurchased need not be the same as the securities sold, qualify as borrowings if the return of substantially the same (paragraph 39) securities as those concurrently transferred is assured. Therefore, those transactions shall be accounted for as secured borrowings by both parties to the transfer.

69~~66~~. If a transferor has transferred securities to an independent third-party custodian, or to a transferee, under conditions that preclude the transferee from selling or repledging the assets during the term of the repurchase agreement (as in most tri-party repurchase agreements), the transferor has not surrendered control over those assets.

Repurchase Agreements

~~67.~~70. Repurchase agreements are defined as agreements under which a reporting entity ~~purchases~~ sells securities and simultaneously agrees to repurchase ~~resell~~ the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 39 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

~~68.~~71. For repurchase agreements that are accounted for as collateralized borrowings~~lendings~~ in accordance with paragraph ~~65~~ 68 of this statement, the underlying securities shall ~~not~~ continue to be accounted for as an investment~~s~~ owned by the reporting entity. ~~The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount~~

~~paid and the amount at which the securities will be subsequently resold shall be reported as interest income,~~ The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

72~~69~~. Reporting entities generally take possession of the underlying collateral under repurchase agreements and in many cases may obtain additional collateral when the estimated fair value of such securities falls below their current contract value. However, to the extent that the current fair value of the collateral is less than the recorded amount, the shortfall shall reduce the admitted asset value of the repurchase agreement.

Repurchase Financing

73~~0~~. Repurchase financing is a repurchase agreement that relates to a previously transferred financial asset between the same counterparties (or affiliates of either counterparty) that is entered into contemporaneously with, or in contemplation of, the initial transfer.

74~~1~~. A repurchase financing involves the transfer of a previously transferred financial asset back to the initial transferor as collateral for a financing between the initial transferee (the borrower) and the initial transferor (the lender). A repurchase financing also typically involves the initial transferor returning the transferred financial asset (or substantially the same asset) to the initial transferee when the financing is repaid on a stated date. A repurchase financing is entered into in contemplation of the initial transfer if both transactions are considered together at the execution of the initial transfer.

75~~2~~. When the transferor transfers a financial asset and also enters into a repurchase financing with the transferee, there are typically three transfers of the financial assets:

a. Initial transfer – An initial transferor transfers a financial asset to an initial transferee.

b. Repurchase financing – The initial transferee (the borrower) transfer the previously transferred financial asset back to the initial transferor (the lender) as collateral for a financing between the initial transferor and initial transferee.

c. Settlement – The initial transferor (the lender) returns the financial asset (or substantially the same asset) to the initial transferee (the borrower) upon receipt of payment from the initial transferee.

76~~3~~. Repurchase financing that is entered into contemporaneously with, or in contemplation of, an initial transfer of a financial asset between the same counterparties (or affiliates of either counterparty) shall not be separately accounted for as a transfer of a financial asset and a related repurchase financing unless (a) the two transactions have a valid and distinct business or economic purpose for being entered into separately and (b) the repurchase financing does not result in the initial transferor regaining control over the financial asset. Unless the provisions in paragraphs ~~74~~77 rare met, the initial transfer and repurchase financing shall be evaluated as a linked transaction. The linked transaction shall be evaluated to determined whether it meets the requirements for sale accounting per paragraph 5, including paragraph 5.c. If the linked transaction does not meet the requirements for sale accounting, the linked transaction shall be accounted for based on the economies of the combined transactions, which generally represent a forward contract. *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions* shall be used to evaluate whether the linked transaction ~~should~~shall be accounted for as a derivative.

77~~4~~. An initial transfer of a financial asset and repurchase financing that are entered into contemporaneously with, or in contemplation of, one another shall be considered linked unless all of the following criteria are met at the inception of the transaction:

a. The initial transfer and the repurchase financing are not contractually contingent on one another. Even if no contractual relationship exists, the pricing and performance of either the initial transfer or the repurchase financing must not be dependent on the terms and execution of the other transaction.

b. The repurchase financing provides the initial transferor with recourse to the initial transferee upon default. That recourse must expose the initial transferor to the credit risk of the initial transferee, or its affiliates, and not solely to the market risk of the transferred financial asset. The initial transferee's agreement to repurchase the previously transferred financial asset (or substantially the same asset) for a fixed price and not fair value.

c. The financial asset subject to the initial transfer and repurchase financing is readily obtainable in the marketplace. In addition, the initial transfer of a financial asset and the repurchase financing are executed at market rates. This criterion may not be circumvented by embedding off-market terms in a separate transaction contemplated with the initial transfer or the repurchase financing.

d. The financial asset and repurchase agreement are not coterminous (the maturity of the repurchase financing must be before the maturity of the financial asset.)

78~~5~~. In accordance with paragraph 76~~3~~, an initial transfer of assets and a repurchase financing shall not be considered separate transactions unless the provisions of paragraph ~~74~~77 are met. If the provisions of paragraph ~~73~~ 77 are met, the initial transfer shall be evaluated to determine whether it meets the requirements for sale accounting without taking into consideration the repurchase financing. In such situations, the repurchase financing shall then be separately analyzed as a repurchase agreement.

Reverse Repurchase Agreements

~~76.~~79. Reverse repurchase agreements are defined as agreements under which a reporting entity ~~sells~~ purchases securities and simultaneously agrees to resell~~repurchase~~ the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 39 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

~~77~~80. For reverse repurchase agreements that are accounted for as collateralized lendings ~~borrowings~~ in accordance with paragraph ~~13~~ 68 of this statement, the underlying securities shall not be accounted for as investments owned by the reporting entity. The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount paid and the amount at which the securities will be subsequently resold shall be reported as interest income, ~~The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense,~~ calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

Collateral Requirements

81~~78~~. The collateral requirements for repurchase and reverse repurchase agreements are as follows:

Repurchase Transaction

a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 95 percent of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at anytime the fair value of the collateral received from the counterparty is less than 95 percent of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral by the end of the next business day the fair value of which, together with the fair value of all collateral then held in connection with the transaction, at least equals 95 percent of the fair value of the transferred securities. If the collateral is less than 95 percent at the reporting date, the difference between the actual collateral and 95 percent will be nonadmitted.

Reverse Repurchase Transaction

b. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to 102 percent of the purchase price paid by the reporting entity for the securities. If at anytime the fair value of the collateral is less than 100 percent of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals 102 percent of the purchase price.

~~a. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to 102 percent of the purchase price paid by the reporting entity for the securities. If at anytime the fair value of the collateral is less than 100 percent of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals 102 percent of the purchase price.~~

~~Reverse Repurchase Transaction~~

~~b. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 95 percent of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at anytime the fair value of the collateral is less than 95 percent of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral, the fair value of which, together with the fair value of all collateral then held in connection with the transaction, at least equals 95 percent of the fair value of the transferred securities.~~

Dollar Repurchase Agreements

82~~79~~. Dollar repurchase and dollar reverse repurchase agreements are defined as repurchase and reverse repurchase agreements involving debt instruments that are pay-through securities collateralized with Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC) and Federal National Mortgage Association (FNMA) collateral, and pass-through certificates sponsored by GNMA, mortgage participation certificates issued by the FHLMC or similar securities issued by the FNMA. Dollar repurchase agreements are also commonly referred to as dollar roll transactions. To meet the definition of dollar repurchase and dollar reverse repurchase agreements, the securities underlying the agreements must meet the criteria defined in paragraph 39, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

83~~80~~. For the seller in a dollar reverse repurchase agreement accounted for as collateralized borrowing in accordance with paragraph ~~65~~ 68 of this statement, a liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities sold.

~~81.~~84. When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased must be in good delivery form consistent with paragraph 39.

~~82~~85. If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded.

~~83.~~86. For the purchaser in a dollar repurchase agreement accounted for as collateralized lending in accordance with paragraph ~~65~~ 68 of this statement, an asset is recorded for the amount of the purchase. Upon completion of the reverse repurchase agreement, cash is received in exchange for a "substantially the same" security. The difference between the purchase and reselling price represents interest income for the lending of short-term funds.

Separate Transactions

~~84.~~87. Agreements to repurchase and resell securities that do not meet the definitions in paragraphs 58 and ~~64~~ 68 of this statement shall be accounted for as two separate transactions, that is, as a sale and purchase or as a purchase and sale, in accordance with the relevant statutory accounting guidance. For example, sales of bonds would result in recognition of realized gains or losses.

Offsetting

~~85.~~88. Reporting entities may operate on both sides of the repurchase agreement market resulting in recording of liabilities and assets representing repurchase and reverse repurchase agreements, respectively.

~~86.~~89. Reporting entities shall offset such liabilities and assets only to the extent that one of the following occurs:

a. A legal right of offset exists as defined in SSAP No. 64—Offsetting and Netting of Assets and Liabilities; or

b. The securities have the same settlement date, are executed with the same counterparty in accordance with a master netting arrangement, involve securities that exist in "book entry" form, and settle on securities transfer systems that have the same key elements and operating characteristics as the Fedwire Securities Transfer System.

~~87.~~90. Otherwise, separate assets and liabilities shall be recognized.

Loan Syndications

~~88.~~91. Borrowers often borrow amounts greater than any one lender is willing to lend. Therefore, it is common for groups of lenders to jointly fund those loans. That may be accomplished by a syndication under which several lenders share in lending to a single borrower, but each lender loans a specific amount to the borrower and has the right to repayment from the borrower.

~~89.~~92. A loan syndication is not a transfer of financial assets. Each lender in the syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender who then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is also functioning as a servicer and, therefore, shall only recognize its portion of the loan as an asset.

Loan Participations

~~90.~~93. Groups of banks or other entities also may jointly fund large borrowings through loan participations in which a single lender makes a large loan to a borrower and subsequently transfers undivided interests in the loan to other entities.

~~91.~~94. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the transferor (originating lender) continues to service the loan. The transferee (participating entity) may or may not have the right to sell or transfer its participation during the term of the loan, depending upon the terms of the participation agreement.

~~92.~~95. If the loan participation agreement gives the transferee the right to pledge or exchange those participations and the other criteria in paragraph 5 are met, the transfers to the transferee shall be accounted for by the transferor as sales of financial assets. A transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor is a limitation on the transferee's rights but presumptively does not constrain a transferee from exercising its right to pledge or exchange. However, if the loan participation agreement constrains the transferees from pledging or exchanging their participations, the transferor has not relinquished control over the loan and shall account for the transfers as secured borrowings.

Factoring Arrangements

~~93.~~96. Factoring arrangements are a means of discounting accounts receivable on a nonrecourse, notification basis. Accounts receivable are sold outright, usually to a transferee (the factor) that assumes the full risk of collection, without recourse to the transferor in the event of a loss. Debtors are directed to send payments to the transferee. Factoring arrangements that meet the criteria in paragraph 5 shall be accounted for as sales of financial assets because the transferor surrenders control over the receivables to the factor.

Transfers of Receivables with Recourse

~~94.~~97. In a transfer of receivables with recourse, the transferor is obligated under the terms of the recourse provision to make payments to the transferee or to repurchase receivables sold under certain circumstances, typically for defaults up to a specified percentage. A transfer of receivables with recourse shall not be recognized as a sale but rather, as a financing. A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received. Sales of premium receivables are addressed in SSAP No. 42—Sale of Premium Receivables.

Disclosures

~~95.~~98. A reporting entity shall disclose the following:

a. For collateral:

i. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security and the fair value of the loaned security. This would also apply to separate accounts;

ii. If the entity has pledged any of its assets as collateral, the carrying amount and classification of those assets as of the date of the latest statement of financial position presented;

iii. If the entity or its agent has accepted collateral that it is permitted by contract or custom to sell or repledge it shall be recorded on the balance sheet. ~~, r~~Regardless of whether the transaction is considered "on-balance sheet" or "off-balance sheet", the reporting entity shall provide the following information by type of program (repurchase agreement, securities lending, or dollar repurchase agreement) as of the date of each statement of financial position: (1) the aggregate amount of contractually obligated open collateral positions (aggregate amount of securities at current fair value or cash received for which the borrower may request the return of on demand) and the aggregate amount of contractually obligated collateral positions under 30-day, 60-day, 90-day, and greater than 90-day terms, (2) the aggregate fair value of all securities acquired from the sale, trade and use of the accepted collateral (reinvested collateral), and (3) information about the sources and uses of that collateral;

iv. For securities lending transactions, disclose collateral for transactions that extend beyond one year from the reporting date;~~ and~~

v. For securities lending transactions administered by an affiliated agent in which "one-line" reporting (per paragraph 60.a.) of the reinvested collateral per paragraph 60.c. is optional, at the discretion of the reporting entity, disclose the aggregate value of the reinvested collateral which is "one line" reported and the aggregate value of items which are reported in the investment schedules (per paragraph 60.b.). Identify the rational between the items which are one line reported and those that are investment schedule reported and if the treatment has changed from the prior period and

vi. Include separately, the amount of any loaned securities within the separate account and if the policy and procedures for the separate account differ from the general account.

b. The reporting entity shall provide the following information by type of program (repurchase agreement, securities lending or dollar repurchase agreement) with respect to the reinvestment of the cash collateral and any securities which it or its agent receives as collateral that can be sold or repledged.

i. The aggregate amount of the reinvested cash collateral (amortized cost and fair value). Reinvested cash collateral shall be broken down by the maturity date of the invested asset – under 30-day, 60-day, 90-day, 120-day, 180-day, less than 1 year, 1-2 years, 2-3 years and greater than 3 years.

ii. To the extent that the maturity dates of the liability (collateral to be returned) does not match the invested assets, the reporting entity shall explain the additional sources of liquidity to manage those mismatches.

c. If debt was considered to be extinguished by in-substance defeasance, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period so long as that debt remains outstanding;

d. If assets are set aside solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets;

e. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value;

f. For all servicing assets and servicing liabilities:

i. A description of the valuation techniques or other models, including significant assumptions within models, used to estimate the fair value of servicing assets and servicing liabilities; and

ii. Changes in fair value resulting from changes in valuation inputs or assumptions used in models and descriptions of other changes in fair value.

g. If the entity has securitized financial assets during any period presented and accounts for that transfer as a sale, for each major asset type (for example, mortgage loans):

i. Its accounting policies for initially measuring the interests that continue to be held by a transferor, if any, used in determining their fair value. (Fair value shall be determined in accordance with *SSAP No. 100—Fair Value Measurements*.); and

ii. The characteristics of securitizations (a description of the transferor's continuing involvement with the transferred assets, including, but not limited to, servicing, recourse, and restrictions on interests that continue to be held by a transferor) and the gain or loss from sale of financial assets in securitizations;

iii. The key assumptions used in measuring the fair value of interests that continue to be held by a transferor at the time of securitization (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, if applicable); and

iv. Cash flows between the securitization SPE and the transferor (including proceeds from new securitizations, purchases of delinquent or foreclosed loans, servicing fees, and cash flows received on interests continued to be held.)

h. If the entity has interests that continue to be held by a transferor in securitized financial assets at the date of the latest statement of financial position presented, for each major asset type (for example, mortgage loans):

i. Its accounting policies for subsequently measuring those interests that continue to be held by a transferor, including the methodology used in determining their fair value. (Fair value shall be determined in accordance with *SSAP No. 100—Fair Value Measurements*.);

ii. The key assumptions used in subsequently measuring the fair value of those interests (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses, if applicable);

iii. A sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests of two or more unfavorable variations from the expected levels for each key assumption that is reported under ii. above independently from any change in another key assumption, and a description of the objectives, methodology, and limitations of the sensitivity analysis or stress test; and

iv. For the securitized assets and any other financial assets that the entity manages together with the interests that continue to be held by the transferor[6]:

(a) The total principal amount outstanding, the portion that has been derecognized, and the portion that continues to be recognized in each category reported in the statement of financial position, at the end of the period;

(b) Delinquencies at the end of the period; and

(c) Credit losses, net of recoveries, during the period.

v. Disclosure of average balances during the period is encouraged, but not required.

i. Description of any loaned securities, including the amount, a description of, and the policy for, requiring collateral, and whether or not the collateral is restricted;

j. A description of the securities underlying repurchase and reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements, including book values and fair values, maturities, and weighted average interest rates for the following categories: (i) securities subject to reverse repurchase agreements; (ii) securities subject to repurchase agreements; (iii) securities subject to dollar repurchase agreements; and (iv) securities subject to dollar reverse repurchase agreements; and

k. A description of the terms of reverse repurchase agreements whose amounts are included in borrowed money.

~~96~~99. Disclose any transfers of receivables with recourse.

~~97~~100. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 9, involving transactions for securities with a NAIC designation of 3 or below, or unrated:

a. A description of the reporting entity's objectives regarding these transactions;

b. An aggregation of transactions by NAIC designation 3 or below, or unrated;

c. The number of transactions involved during the reporting period;

d. The book value of securities sold;

e. The cost of securities repurchased; and

f. The realized gains/losses associated with the securities involved.

~~98.~~101. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures required by paragraph ~~97~~100 shall be made for the current quarter in the quarterly statement and for the year in the annual statement.

[6] Excluding securitized assets that an entity continues to service but with which it has no other continuing involvement.

Relevant Literature

~~99.~~102.The accounting guidance in this statement is consistent with the guidance included in SSAP No. 18, SSAP No. 33 and SSAP No. 45, and is expanded to include issues addressed in *FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140).

~~100.~~103.This statement adopts FAS 140 with the following modifications:

a. Servicing rights assets are nonadmitted;

b. Sales treatment is not permitted for transactions including recourse provisions or removal-of-accounts provisions on the transferred assets whereas GAAP would permit the recognition of the transfer as a sale under some circumstances;

c. As statutory financial statements are prepared on a legal entity basis, special purpose entities shall not be consolidated in a reporting entity's statutory financial statements;

d. Leases shall be accounted for in accordance with *SSAP No. 22—Leases*;

e. Reporting entities required to maintain an IMR shall account for realized and unrealized capital gains and losses in accordance with SSAP No. 7; and

f. The concepts of revolving-period securitizations, banker's acceptances and risk participations in banker's acceptances are not applicable for statutory accounting purposes.

g. This statement does not adopt the accounting for collateral as outlined in FAS 140.

~~101.~~104. This statement adopts with modification *FASB Statement No. 156: Accounting for Servicing of Financial Assets, an amendment of FASB Statement No. 140* (FAS 156). Specific items adopted or rejected are identified below. Items within FAS 156 not specifically noted as adopted shall be considered rejected:

a. This statement adopts FAS 156 guidance indicating that all servicing assets and servicing liabilities should initially be measured at fair value.

b. This statement adopts FAS 156 guidance requiring the inclusion of separately recognized servicing assets and servicing liabilities in the calculation of proceeds from the sale of assets.

c. This statement rejects the optionality provided within FAS 156 for subsequent measurement of servicing assets and servicing liabilities using either fair value or an amortization method. This statement requires application of a fair value method for subsequent measurement.

d. This statement adopts guidance in FAS 156 confirming adoption of guidance previously adopted from FAS 140 regarding servicing assets and servicing liabilities established from the transfer of financial assets to a qualifying SPE in a guaranteed mortgage securitization in which the transferor retains all of the resulting securities.

e. This statement adopts revisions in FAS 156 replacing the term 'retained interests' with 'interests that continue to be held by the transferor' with amendments to the definition to exclude servicing assets and servicing liabilities from this definition.

~~102.~~105.This statement adopts *FASB Staff Position 140-3, Accounting for Transfers of Financial Assets and Repurchase Financing Transactions* (FSP FAS 140-3) and *AICPA Statement of Position 90-3*, *Definition of the Term Substantially the Same for Holders of Debt Instruments, as used In Certain Audit Guides and a Statement of Position*. This statement adopts *FASB Emerging Issues Task Force (EITF) No. 87-34, Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB EITF No. 88-11, Allocation of Recorded Investment When a Loan as Part of a Loan is Sold, FASB EITF No. 88-18, Sales of Future Revenues, FASB EITF No. 88-22, Securitization of Credit Card and Other Receivable Portfolios, FASB EITF No. 90-21, Balance Sheet Treatment of a Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB EITF No. 95-5, Determination of What Risks and Rewards, If Any, Can Be Retained and Whether Any Unresolved Contingencies May Exist in a Sale of Mortgage Loan Servicing Rights* and *FASB EITF No. 96-19, Debtor's Accounting for a Modification or Exchange of Debt Instruments*.

~~103.~~106. This statement rejects *FASB EITF No. 84-5, Sale of Marketable Securities with a Put Option*, and *FASB EITF No. 92-2, Measuring Loss Accruals by Transferors of Receivables with Recourse* and *FTB 01-1: Effective Date for Certain Financial Institutions of Certain Provisions of Statement 140 related to Isolation of Transferred Financial Assets*.

Effective Date and Transition

~~104.~~107. This statement is effective for years beginning on and after January 1, 2005 and shall be applied prospectively. Substantive revisions in paragraphs 6, 11-12, 98.f, 104 and Exhibit B illustrations are effective January 1, 2009. Substantive revisions in paragraphs 13, 59-63, 65, 71, 80, 81 and 98 regarding securities lending transactions and repurchase agreements and additional disclosures were adopted in May 2010 and are effective December 31, 2010. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

~~105.~~108. For each servicing contract in existence before January 1, 2005, previously recognized or nonadmitted servicing rights and excess servicing receivables shall be combined, net of any previously recognized servicing obligations under that contract, as a servicing asset (nonadmitted) or liability. Thereafter, the subsequent measurement provisions of this statement shall be applied to the servicing assets (nonadmitted) or liabilities for those servicing contracts.

EXHIBIT A - GLOSSARY

Asset Securitization

An asset securitization is the process of converting assets which would normally serve as collateral for a loan into securities. The largest category of securitized assets is real estate mortgage loans, which serve as collateral for mortgage-backed securities.

Beneficial Interests

Rights to receive all or portions of specified cash inflows to a trust or other entity, including senior and subordinated shares of interest, principal, or other cash inflows to be passed-through or paid-through, premiums due to guarantors, commercial paper obligations and residual interests, whether in the form of debt or equity.

Beneficial Interest Holder ("BIH")

Holder of beneficial interests

Cleanup Call

An option held by the servicer, which may be the transferor, to purchase transferred financial assets, or the remaining beneficial interests not held by the transferor, its affiliates, or its agents in a qualifying SPE (or in a series of beneficial interests in transferred assets within a qualifying SPE), when the amount of outstanding assets falls to a level at which the cost of servicing those assets becomes burdensome in relation to the benefits or servicing.

Collateral

Personal or real property in which a security interest has been given.

Derecognize

Remove previously recognized assets or liabilities from the balance sheet.

Derivative Financial Instrument

A derivative instrument (as defined in *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions*) that is a financial instrument (refer to *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk*, paragraph 2).

Embedded Call (See paragraphs 41 and 43)

A call option held by the issuer of a financial instrument that is part of and trades with the underlying instrument. For example, a bond may allow the issuer to call it by posting a public notice well before its stated maturity that asks the current holder to submit it for early redemption and provides that interest ceases to accrue on the bond after the early redemption date. Rather than being an obligation of the initial purchaser of the bond, an embedded call trades with and diminishes the value of the underlying bond.

Financial Asset

Cash, evidence of an ownership interest in an entity, or a contract that conveys to a second entity a contractual right (a) to receive cash or another financial instrument from a first entity or (b) to exchange other financial instruments on potentially favorable terms with the first entity.

Financial Liability

A contract that imposes on one entity a contractual obligation (a) to deliver cash or another financial instrument to a second entity or (b) to exchange other financial instruments on potentially unfavorable terms with the second entity.

Guaranteed Mortgage Securitization

A securitization of mortgage loans which includes a substantive guarantee by a third party.

Interests That Continue to be Held by a Transferor

Other interests in transferred assets, those that are not part of the proceeds of the transfer, over which the transferor has not relinquished control. Includes securities backed by the transferred assets, undivided interests, and cash reserve accounts and residual interests in securitization trusts.

Proceeds

Cash, derivatives, or other assets that are obtained in a transfer of financial assets, less any liabilities incurred.

Recourse

The right of a transferee of receivables to receive payment from the transferor of those receivables for (a) failure of debtors to pay when due, (b) the effects of prepayments, or (c) adjustments resulting from defects in the eligibility of the transferred receivables.

Residual

Residuals are a class of purchased beneficial interests or interests that continue to be held by the transferor that have rights to the last cash flows from the pool of securitized assets and are not rated by a Nationally Recognized Statistical Rating Organization (NRSRO). Residuals are to be carried at fair value with the difference between fair value and the allocated cost basis recognized as an unrealized gain or loss;

Securitization

The process by which financial assets are transformed into securities.

Security Interest

A form of interest in property that provides that upon default of the obligation for which the security interest is given, the property may be sold in order to satisfy that obligation.

Seller

A transferor that relinquishes control over financial assets by transferring them to a transferee in exchange for consideration.

Servicing Asset

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are expected to more than adequately compensate the servicer for performing the servicing. A servicing contract is either (a) undertaken in conjunction with selling or securitizing the financial assets being serviced or (b) purchased or assumed separately.

Servicing Liability

A contract to service financial assets under which the estimated future revenues from stated servicing fees, late charges, and other ancillary revenues are not expected to adequately compensate the servicer for performing the servicing.

Transfer

The conveyance of a noncash financial asset by and to someone other than the issuer of that financial asset. Thus, a transfer includes selling a receivable, putting it into a securitization trust, or posting it as collateral but excludes the origination of that receivable, the settlement of that receivable, or the restructuring of that receivable into a security in a troubled debt restructuring.

Transferee

An entity that receives a financial asset, a portion of a financial asset, or a group of financial assets from a transferor.

Transferor

An entity that transfers a financial asset, a portion of a financial asset, or a group of financial assets that it controls to another entity.

Undivided Interest

Partial legal or beneficial ownership of an asset as a tenant in common with others. The proportion owned may be pro rata, for example, the right to receive 50 percent of all cash flows from a security, or non-pro rata, for example, the right to receive the interest from a security while another has the right to the principal.

~~**Unrestricted collateral**~~

~~Securities received that may be sold or repledged and which were obtained under agreements that are not subject to repurchase or redemption on short notice, for example, by substitution of other collateral or termination of the contract.~~

Unilateral ability (See paragraphs 41 and 42)

A capacity for action not dependent on the actions (or failure to act) of any other party.

EXHIBIT B - ILLUSTRATIONS

Illustration—Recording Transfers with Proceeds of Cash, Derivatives, and Other Liabilities

1. Company A sells loans with a fair value of $1,100 and a carrying amount of $1,000. Company A retains no servicing responsibilities but obtains an option to purchase from the transferee loans similar to the loans sold (which are readily obtainable in the marketplace) and assumes a limited recourse obligation to repurchase delinquent loans.

Company A agrees to provide the transferee a return at a floating rate of interest even though the contractual terms of the loan are fixed rate in nature (that provision is effectively an interest rate swap).

Fair Values	
Cash proceeds	$1,050
Interest rate swap	40
Call option	70
Recourse obligation	60

Net Proceeds		
Cash received		$1,050
Plus:	Call option	70
	Interest rate swap	40
Less:	Recourse obligation	(60)
Net proceeds		$1,100

Gain on Sale	
Net proceeds	$1,100
Carrying amount of loans sold	1,000
Gain on sale	$ 100

Journal Entry		
Cash	1,050	
Interest rate swap	40	
Call option	70	
Loans		1,000
Recourse obligation		60
Gain on sale		100
To record transfer		

Illustration—Recording Transfers of Partial Interests

2. Company B sells a pro rata nine-tenths interest in loans with a fair value of $1,100 and a carrying amount of $1,000. There is no servicing asset or liability, because Company B estimates that the benefits of servicing are just adequate to compensate it for its servicing responsibilities.

Fair values	
Cash proceeds for nine-tenths sold	$990
One-tenth interest continued to be held by the transferor [($990 ÷9/10)×1/10]	110

Carrying Amount Based on Relative Fair Values

	Fair Value	Percentage of Total Fair Value	Allocated Carrying Amount
Nine-tenths interest sold	$990	90	$900
One-tenth interest continued to be held by the transferor	110	10	100
Total	$ 1,100	100	$1,000

Gain on Sale	
Net proceeds	$ 990
Carrying amount of loans sold	900
Gain on sale	$90

Journal Entry		
Cash	990	
Loans		900
Gain on sale		90
To record transfer		

Illustration—Sale of Receivables with Servicing Obtained

3. Company C originates $1,000 of loans that yield 10 percent interest income for their estimated lives of 9 years. Company C sells the $1,000 principal plus the right to receive interest income of 8 percent to another entity for $1,000. Company C will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the right to receive half of the interest income not sold. The remaining half of the interest income not sold is considered an interest-only strip receivable. At the date of the transfer, the fair value of the loans is $1,100. The fair values of the servicing asset and the interest-only strip receivable are $40 and $60, respectively.

Fair values	
Cash proceeds	$1,000
Servicing asset	40
Interest-only strip receivable	60

Net Proceeds		
Cash proceeds		$1,000
Servicing asset		40
	Net Proceeds	$1,040

Carrying Amount Based on Relative Fair Values

Illustration—Recording Transfers of Partial Interests with Proceeds of Cash, Derivatives, Other Liabilities, and Servicing

4. Company D originates $1,000 of prepayable loans that yield 10 percent interest income for their 9-year expected lives. Company D sells nine-tenths of the principal plus interest of 8 percent to another entity. Company D will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the 2 percent of the interest income not sold. Company D obtains an option to purchase from the transferee loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse obligation to repurchase delinquent loans. At the date of transfer, the fair value of the loans is $1,100.

Fair values	
Cash proceeds	$900
Call option	70
Recourse obligation	60
Servicing asset	90
One-tenth interest continued to be held by transferor	100

Net Proceeds	
Cash received	$900
Plus: Servicing Asset	90
Plus: Call option	70
Less: Recourse obligation	(60)

Illustration—Recording Transfers If It Is Not Practicable to Estimate a Fair Value

5. Company E sells loans with a carrying amount of $1,000 to another entity for cash proceeds of $1,050 plus a call option to purchase loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse obligation to repurchase any delinquent loans. Company E undertakes an obligation to service the transferred assets for the other entity. In Case 1, Company E finds it impracticable to estimate the fair value of the servicing contract, although it is confident that servicing revenues will be more than adequate

compensation for performing the servicing. In Case 2, Company E finds it impracticable to estimate the fair value of the recourse obligation.

Fair Values	**Case 1**	**Case 2**
Cash proceeds	$1,050	$1,050
Servicing asset	XX*	40
Call option	70	70
Recourse obligation	60	XX*
Fair value of loans transferred	1,100	1,100

* Not practicable to estimate fair value

Net Proceeds	**Case 1**	**Case 2**
Cash received	$1,050	$1,050
Plus: Servicing Asset	XX*	40
Plus: Call option	70	70
Less: Recourse obligation	(60)	XX

Statutory Issue Paper No. 145

Accounting for Transferable and Non-Transferable State Tax Credits

STATUS
Finalized December 7, 2011

Original SSAP and Current Authoritative Guidance: SSAP No. 94R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance allows for transferable state tax credits to be admitted assets as long as they comply with the requirements of *SSAP No. 94—Accounting for Transferable State Tax Credits*. It has been identified that some states have requested to allow non-transferable tax credits to be admitted based on specific criteria.

2. Currently, generally accepted accounting principles do not provide separate guidance for transferable state tax credits; general guidance for income taxes is found in *FASB Accounting Standards Codification Topic 740, Income Taxes* which incorporated *FASB Statement No. 109, Accounting for Income Taxes* (FAS 109). *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10* (SSAP No. 101) notes the adoption of FAS 109 with modifications for state income taxes, the realization criteria for deferred tax assets, and the recording of the impact of changes in its deferred tax balances. The Office of the Comptroller of the Currency in Interpretive Letter #948 dated December 2002 concluded that "purchasing, holding and subsequently reselling **transferable** state tax credits are permissible activities for national banks" (bolding added for emphasis).

3. The purpose of this issue paper is to amend SSAP No. 94 to expand the admittance criteria to include non-transferable state tax credits that meet specific criteria.

SUMMARY CONCLUSION

4. This issue paper amends guidance included in SSAP No. 94 by 1) substantively revising the title; 2) incorporating the criteria for non-transferable state tax credits as described in paragraphs 7 and 8; 3) adding a disclosure; and 4) updating terminology throughout the document as appropriate.

5. The primary proposed revisions to the guidance allowing admission for non-transferable state tax credits are tracked below. Illustration of the substantively revised SSAP No. 94 (reflected as SSAP No. 94R) is reflected in Illustration A.

> 4. The criteria in paragraphs 5 and 6 are for transferable state tax credits (i.e. credits which may be sold or assigned). The criteria in paragraphs 7 and 8 are for non-transferable state tax credits (i.e., those which cannot be sold or assigned to other parties).
>
> **Transferable State Tax Credits**
>
> 45. Some states have enacted laws that create programs by which transferable state tax credits are granted to entities under certain specified conditions (e.g., an entity makes an investment in a particular industry). The terms of these state tax credits vary from state to state and, within a state, from program to program. However, many of these transferable state tax credit programs share the following four characteristics:

a. The tax credit is nonrefundable;

b. The holder of the transferable state tax credit may sell or otherwise transfer a transferable state tax credit to another entity, which can likewise resell or transfer the credit;

c. The transferable state tax credit will expire if not used by a predetermined date; and

d. The transferable state tax credit can be applied against either state income tax or state premium tax.

~~5~~6. For purposes of this statement, such programs will be referred to as "transferable state tax credits." The criteria in subparagraphs ~~4~~5.b., ~~4~~5.c. and ~~4~~5.d. must be present in order for the transferable state tax credit to receive the accounting treatment described in this statement. When a reporting entity purchases a transferable state tax credit from another entity, the transaction does not result in a continuing investment in a business entity (i.e. limited partnership).

Non-transferable State Tax Credits

7. If the original or subsequent holder of the transferable tax credit is not able to transfer the tax credit, then the admissibility criteria in paragraph 8 for non-transferable tax credits apply. These non-transferable state tax credits share the following characteristics:

a. The tax credit is nonrefundable;

b. The successive holder of a state tax credit must redeem the credit, by April 15 of the subsequent year to the entity's acquisition of the state tax credit and is not permitted to carry-over, carry-back, obtain a refund, sell or assign the credit.

c. The non-transferable state tax credit will expire if not used by the predetermined date; and

d. The non-transferable state tax credit can be applied against either state income tax or state premium tax.

8. The criteria in subparagraphs 7.b., 7.c. and 7.d. must be present in order for the non-transferable state tax credit to receive the accounting treatment described in this statement.

~~68~~9. Transferable and non-transferable state tax credits as defined within this SSAP held by reporting entities ~~will~~ meet the definition of assets as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and ~~will be~~are admissible assets to the extent that they comply with the requirements of this statement. If the criteria in paragraphs 6 or 8 are not met, the tax credits are nonadmitted.

DISCUSSION

6. This issue paper amends SSAP No. 94 to expand the admittance criteria to include non-transferable state tax credits that meet specific provisions. Although the transferability of state tax credits was previously identified as a characteristic needed for admittance within statutory accounting, it has been identified that specific state laws regarding the use of state tax credits by April 15th of the subsequent year provide conservative treatment that also warrants admittance within statutory financial statements. The original request included the phrase "required by the applicable states' laws." It was felt that this did not achieve the statutory accounting goals of consistency and comparability. It was replaced with the phrase "specific criteria." This issue paper also expands the disclosures required by identifying transferable and non-transferable state tax credits, and the admitted and nonadmitted portions of each classification.

History of SSAP No. 94 Guidance

7. As detailed in *Issue Paper No. 126—Accounting for Transferable State Tax Credits*, SSAP No. 94 was established as a result of consideration from an interested parties' request in 2003. Interested parties proposed that state tax credits (1) should qualify as an admitted asset to the extent it is probable they will be realized, consistent with the treatment in SSAP No. 35 of credits granted directly to the reporting entity; (2) should not be netted against the tax liability consistent with the treatment in SSAP No. 35 of credits granted directly to the reporting entity; and (3) any gain that accrues to the reporting entity through the use of these tax credits should be reported as miscellaneous income at the time the credits are used. To accomplish this, interested parties' proposed nonsubstantive changes to SSAP No. 35.

8. In considering the interested parties' 2002 proposal, the Statutory Accounting Principles Working Group considered the December 2002, Office of the Comptroller of the Currency (the regulatory body for national banks) Interpretive Letter #948, which indicated that "purchasing, holding, and subsequently reselling transferable state tax credits is a permissible activity for national banks". In its ruling, the OCC stated that "transferable state tax credits … offset a tax liability, dollar-for-dollar, and are therefore the functional equivalent of money." The Working Group noted that this interpretive letter focused attention on Missouri's transferable state tax credit programs, but that the characterizations that "the purchase and transfer of … state tax credits is a noncomplex and fairly rapid process" and that "demand for these tax credits typically exceeds supply during tax season" are likely to apply more generally to other states' programs.

9. Although the interested parties had recommended a nonsubstantive change to *SSAP No. 35—Guaranty Fund and Other Assessments,* the Working Group concluded that this placement was not consistent with the scope paragraphs in SSAP No. 35, as that SSAP includes assessments or mechanisms to fund insolvent reporting entities. Since transferable state tax credits are not assessments or mechanisms to fund insolvent reporting entities, the Working Group concluded that transferable state tax credits do not seem to have been contemplated when SSAP No. 35 was developed and that interested parties' proposed revisions did not meet the criteria for a nonsubstantive change. The Working Group moved this item to the substantive active list with an issue paper to be developed, with guidance from the Working Group, particularly as to the admissibility and possible limitations on the admissibility of the transferable state tax credits. In considering this issue, the following was included in the agenda item:

> If statutory accounting guidance is developed, it may be appropriate to address transferable state tax credits as an admitted asset. They seem to be marketable and can generate economic benefits to the reporting entity, even if they are not immediately available to pay policyholder obligations. **However, the transferable state tax credits represent a prepayment of premium taxes, statutory accounting usually nonadmits prepaid expenses, as they are not readily available to pay policyholder obligations. The difference between these transferable state tax credits and other prepaid expenses is the ability to sell the state tax credits. This ability to sell the transferable state tax credits** is what helps it to meet the other *SSAP No. 4—Assets and Nonadmitted Assets* criteria of an asset.

10. Paragraph 19 of Issue Paper No. 126 identifies the transferability of a state tax credit as a major factor in allowing admittance:

> 19. This issue paper provides new statutory accounting guidance for a type of investment, which is not currently addressed in the *Accounting Practices and Procedures Manual*. Therefore, in accordance with SSAP No. 4, they default to a nonadmitted asset. In evaluating transferable state tax credits, several points were considered. **The transferable characteristics of these state tax credits are a major factor in developing statutory accounting guidance, which would admit investments in transferable state tax credits that comply with the guidance.**

Consideration of Non-Transferable State Tax Credits:

11. As identified in Issue Paper No. 126, even though transferable state tax credits represent a prepayment of premium taxes which would be nonadmitted, they were deemed to be admitted based on the fact that they can be sold. The proposed revision would be a distinct change in the admissibility guidance currently reflected within SSAP No. 94 as non-transferable state tax credits would be allowed to be admitted.

12. One of the reasons that transferability was a key issue in developing SSAP No. 94 was due to variations among states regarding the terms and limitations on the use of state tax credits. By requiring transferability, these various terms and limitations (e.g., limitations in the amount of tax credits that could be used in a tax year) were concluded not to be as relevant since the tax credits could be subsequently sold.

13. The following reasons were noted for the working group's support of the admittance of non-transferable state tax credits if the specific criteria illustrated in paragraph 6 of Issue Paper No. 126 is met:

a. This proposal is presented as a good public policy issue and economic development, allowing companies domiciled within states with laws that require usage of tax credits within a designated timeframe and that limit transferability to also be allowed to reflect state tax credits as admitted assets.

b. The short-term usage requirement identified within the proposal is a conservative requirement. It was noted that there is no confirmation on a market for state tax credits, so just because they are transferable, does not mean that they could actually be subsequently sold. By requiring usage within a specific time frame, these assets will be reflected within a reporting entity's financials for a short period of time. It was noted that "transferable" state tax credits could be reflected for an extensive period of time until the tax credit expires or an impairment has been identified.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

14. As noted above, existing guidance for transferable state tax credits is in SSAP No. 94. Tracked changes to SSAP No. 94 are shown in Illustration A.

RELEVANT LITERATURE:

Statutory Accounting

- *Issue Paper No. 126—Accounting for Transferable State Tax Credits*

Generally Accepted Accounting Principles

- *FASB Statement No. 109, Accounting for Income Taxes* was adopted with modification in *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10* (SSAP No. 101).

State Regulations:

State laws may prescribe specific criteria regarding the use of state tax credits. The revisions proposed in this issue paper are intended to allow admittance for state laws that require use of a state tax credit before April 15 of the year subsequent in which the purchase or assignment of a state tax credit is made, and that prohibit subsequent transfer of the state tax credit.

Issued:	June 12, 2006; Substantively revised December 7, 2011
Effective Date:	December 31, 2006; Substantive revisions detailed in Issue Paper No. 145 are effective December 31, 2011
Affects:	No other pronouncements
Affected by:	No other pronouncements
Interpreted by:	No other pronouncements

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for transferable and non-transferable state tax credits that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

2. Investments in Low Income Housing Tax Credits as discussed in *SSAP No. 93—Accounting for Low Income Housing Tax Credit Property Investments*, which involve an investment by a reporting entity in a limited liability company or similar entity that earns tax credits as a consequence of its operating activities involving low income housing developments and passes those tax credits to its investors, are not within the scope of this statement.

3. Investments in a CAPCO (Certified Capital Company), organized as a partnership or an LLC, which is a company, authorized by state statute that borrows from investors (insurance companies), in order to make venture capital investments in "qualified" businesses, are not within the scope of this statement. Although associated with tax credits, the insurance company is paid principal and interest on its investment with the CAPCO. Depending upon the terms of the CAPCO offering, principal and interest payments to the insurance company will come from the CAPCO and/or the state. The CAPCO will make cash payments directly to the insurance company while the state will make payments in the form of premium or income tax credits.

SUMMARY CONCLUSION

4. The criteria in paragraphs 5 and 6 are for transferable state tax credits (i.e., credits which may be sold or assigned). The criteria in paragraphs 7 and 8 are for non-transferable state tax credits (i.e., those which cannot be sold or assigned to other parties).

45. Some states have enacted laws that create programs by which transferable state tax credits are granted to entities under certain specified conditions (e.g., an entity makes an investment in a particular industry). The terms of these state tax credits vary from state to state and, within a state, from program to program. However, many of these transferable state tax credit programs share the following four characteristics:

a. The tax credit is nonrefundable;

b. The holder of the transferable state tax credit may sell or otherwise transfer the transferable state tax credit to another entity, which can likewise resell or transfer the credit;

c. The transferable state tax credit will expire if not used by a predetermined date; and

d. The transferable state tax credit can be applied against either state income tax or state premium tax.

~~5~~6. For purposes of this statement, such programs will be referred to as "transferable state tax credits." The criteria in subparagraphs ~~4~~5.b., ~~4~~5.c. and ~~4~~5.d. must be present in order for the transferable state tax credit to receive the accounting treatment described in this statement. When a reporting entity purchases a transferable state tax credit from another entity, the transaction does not result in a continuing investment in a business entity (i.e. limited partnership).

Non-Transferable State Tax Credits

7. If the original or subsequent holder of the transferable tax credit is not able to transfer the tax credit, then the admissibility criteria in paragraph 8 for non-transferable tax credits apply. These non-transferable state tax credits share the following characteristics:

a. The tax credit is nonrefundable;

b. The successive holder of a state tax credit must redeem the credit by April 15 of the subsequent year to the entity's acquisition of the state tax credit and is not permitted to carry-over, carry-back, obtain a refund, sell or assign the credit;

c. The non-transferable state tax credit will expire if not used by the predetermined date; and

d. The non-transferable state tax credit can be applied against either state income tax or state premium tax.

8. The criteria in subparagraphs 7.b., 7.c. and 7.d. must be present in order for the non-transferable state tax credit to receive the accounting treatment described in this statement.

~~6~~9. Transferable and non-transferable state tax credits as defined within this SSAP held by reporting entities ~~will~~ meet the definition of assets as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and ~~will be~~are admissible assets to the extent that they comply with the requirements of this statement. If the criteria in paragraphs 6 or 8 are not met, the tax credits are nonadmitted.

Acquisition

~~7~~10. Transferable and non-transferable state tax credits are recorded at cost at the date of acquisition.

Balance Sheet Treatment

~~8~~11. Transferable and non-transferable state tax credits expected to be realized are initially recorded at cost.

~~9~~12. Transferable and non-transferable state tax credits shall be established gross of any related state tax liabilities and reported in the category of other-than-invested assets (not reported net).

~~10~~13. As transferable and non-transferable state tax credits are redeemed, the carrying value of the tax credits is reduced dollar for dollar by the amount of ~~transferable~~ state tax credits applied toward the reporting entity's applicable state tax liability.

Income Statement Treatment

~~11~~14. Gains on transferable and non-transferable state tax credits are deferred until the value of the ~~transferable~~ state tax credits utilized exceeds the cost of the ~~transferable~~ state tax credits or until the ~~transferable~~ state tax credits are sold to other entities and the payment received is greater than the book value.

~~12~~15. Losses on transferable and non-transferable state tax credits are recognized when known.

~~13~~16. Gains and losses on transferable and non-transferable state tax credits are reflected in other income.

Impairment

~~14~~17. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the transferable or non-transferable state tax credits. ~~Transferable s~~State tax credits should be evaluated for impairment at each reporting date.

~~15~~18. When there is a decline in the realizability of a transferable or non-transferable state tax credit owned by the reporting entity that is other than temporary, the asset shall be written down to the expected realizable amount and the amount of the write down shall be accounted for as a realized loss. The expected realizable value is the new cost basis.

~~16~~19. The new cost basis shall not be changed for subsequent recoveries in realizability.

Disclosures

~~17~~20. The following disclosures shall be made in the financial statements. For purposes of this disclosure, total unused transferable and non-transferable state tax credits represent the entire transferable and non-transferable state tax credits available:

a. Carrying value of transferable and non-transferable state tax credits gross of any related state tax liabilities by state and in total,

b. Total unused transferable and non-transferable state tax credits by state;

c. Method of estimating utilization of remaining transferable and non-transferable state tax credits or other projected recovery of the current carrying value.

d. Impairment amount recognized in the reporting period, if any.

e. Identify state tax credits by transferable and non-transferable classifications, and identify the admitted and nonadmitted portions of each classification.

Effective Date and Transition

~~18~~21. This statement is effective for reporting periods ending on or after December 31, 2006. Early adoption is permitted. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. Substantive revisions to 1) revising the title; 2) incorporating the criteria for non-transferable state tax credits as described in paragraphs 7 and 8;

3) adding a disclosure; and 4) updating terminology throughout the document as appropriate, are effective for reporting periods ending on or after December 31, 2011.

Appendix A – Accounting for Transferable State Tax Credits

On 1/1/X1 SAM Insurance Company purchased transferable state tax credits for a cost of $100,000. The transferable state tax credits are redeemable for $160,000 and expire at the end of 12/31/X4. SAM initially expects to utilize the tax credits before expiration in their state of domicile in the amount of $40,000 per year. In year X4, SAM sells the remaining $30,000 in transferable state tax credits for $20,000.

1/1/x1	Transferable state tax credits	100,000	
	Cash		100,000
	To record the purchase of the tax credits		
6/30/x1	Premium tax expense	40,000	
	Premium taxes payable to domiciliary state		40,000
	To record premium tax expense and accrue the liability in Year 1.		
10/1/x1	Premium tax payable	40,000	
	Transferable state tax credits		40,000
	To record the use of tax credits in Year 1. The reporting entity expects to be able to utilize remaining tax credits before expiration.		
6/30/x2	Premium tax expense	60,000	
	Premium taxes payable to domiciliary state		60,000
	To record premium tax expense and accrue the liability in Year 2.		
9/30/x2	Premium tax payable	60,000	
	Transferable state tax credits		60,000
	To record the use of taxes credits in Year 2. The reporting entity expects to be able to utilize remaining tax credits before expiration.		
6/30/x3	Premium tax expense	30,000	
	Premium taxes payable to domiciliary state		30,000
	To record premium tax expense and accrue the liability in Year 3.		
9/30/x3	Premium tax payable	30,000	
	Other income		30,000
	To record the use of premium tax credits in excess of cost and recognize a gain on premium tax credits in other income. The Company intends to sell the remaining tax credits in year 4.		
6/30/x4	Cash	20,000	
	Other income		20,000
	To record the sale of the remaining tax credits.		

Appendix B – Accounting for Non-Transferable State Tax Credits

On 7/1/X1 LJW Insurance Company purchased non-transferable state tax credits for a cost of $100,000. The state tax credits are redeemable for $110,000, are not transferable and expire on, April 15, 20x2. LJW expects to utilize the tax credits before expiration in their state of domicile in the amount of $110,000.

7/1/x1	State tax credits	100,000	
	Cash		100,000
	To record the purchase of the tax credits		
9/30/x1	Premium tax expense	200,000	
	Premium taxes payable to domiciliary state		200,000
	To record premium tax expense and accrue the liability.		
3/15/x2	Premium tax payable	110,000	
	Other Income		10,000
	State tax credits		100,000
	To record the use of premium tax credits in excess of cost and recognize a gain on premium tax credits in other income. (The additional $90,000 of premium taxes payable would still be due.)		

Issue Paper No. 146

Share-Based Payments With Non-Employees

STATUS
Adopted November 12, 2013

Original SSAP and Current Authoritative Guidance: SSAP No. 104R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. *SSAP No. 104—Share-Based Payments* provides statutory accounting principles for transactions in which an entity exchanges its equity instruments with employees in share-based payment transactions. SSAP No. 104 (effective Jan. 1. 2013), adopts with modification GAAP guidance for stock options and stock purchase plans within GAAP *Accounting Standards Codification Topic 718: Compensation – Stock Compensation, as amended by ASU 2010-13.* SSAP No. 104 does not currently provide guidance for share-based payment transactions with non-employees.

2. This issue paper provides substantive revisions to adopt, with modification, GAAP *Accounting Standards Codification Topic 505-50, Equity, Equity Payments to Non-Employees* within SSAP No. 104, resulting in a substantively revised SSAP No. 104 (SSAP No. 104R).

3. ASC 505-50 addresses the accounting and reporting for both the issuer (that is the purchaser or grantor) and recipient (that is, the goods or service provider or grantee) for a subset of share-based payment transactions depending on whether the grantee meets the definition of an employee. The guidance in ASC 505-50 addresses transactions in which the grantee receives shares of stock, stock options or other equity instruments in settlement of the entire transaction or, if the transaction is part cash and part equity instruments, in settlement of the portion of the transaction for which the equity instruments constitute the consideration.

4. The adoption, with modification, of ASC 505-50 within this Issue Paper will reflect adoption with modification of the following pre-codification GAAP standards, revising previous statutory accounting conclusions regarding these standards:

a. *EITF 96-18, Accounting for Equity Instruments That Are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods or Services:* EITF 96-18 is currently listed as rejected as not applicable in *INT 99-00: Compilation of Rejected EITFs*. Under the guidance in this issue paper, and the adoption of a substantively revised SSAP to adopt with modification ASC 505-50, the GAAP Cross-Reference to SAP (Appendix D) will be revised to identify that EITF 96-18 is adopted with modification in SSAP No. 104R.

b. *EITF 00-08, Accounting by a Grantee for an Equity Instrument to Be Received in Conjunction with Providing Goods or Services:* EITF 00-08 is currently adopted with modification in INT 00-32. Under the guidance in this issue paper, and the adoption of a substantively revised SSAP to adopt with modification ASC 505-50, the GAAP Cross-Reference to SAP (Appendix D) will be revised to identify that EITF 00-08 is adopted with modification in SSAP No.104R, and INT 00-32 will be nullified.

c. *EITF 00-18, Accounting Recognition for Certain Transactions Involving Equity Instruments Granted to Other Than Employees*: EITF 00-18 is currently pending statutory review. Under the guidance in this issue paper, and the adoption of a substantively revised SSAP to adopt with modification ASC 505-50, the GAAP Cross-Reference to SAP (Appendix D) will be revised to identify that EITF 00-18 is adopted with modification in SSAP No.104R.

SUMMARY CONCLUSION

5. This issue paper provides statutory accounting principles for transactions in which an entity exchanges its equity instruments to non-employees in share-based payment transactions. It incorporates the GAAP objective for these transactions, requiring recognition in the financial statements of the most reliably measurable fair values of such transactions. Furthermore, it indicates that the accounting for these share-based payment transactions shall reflect the rights conveyed to the holder of the instruments and the obligations imposed on the issuer of the instruments, regardless of how the transactions are structured.

6. The adoption, with modification, of ASC 505-50 will be reflected in a substantively revised SSAP No. 104R. The tracked changes to reflect this guidance are in Illustration A.

DISCUSSION

7. Per information received from industry representatives, share-based payments with non-employees are conducted by insurers, and consideration of related GAAP guidance should occur, with expansion of SSAP No. 104 for these transactions.

8. Similar to the conclusions reached in *Issue Paper No. 129, Share-Based Payment, A Replacement of SSAP No. 13—Stock Options and Stock Purchase Plans*, which are adopted in SSAP No. 104, the statutory accounting revisions predominantly adopt GAAP guidance for share-based payments with limited modifications to reflect existing statutory accounting concepts. As such, this issue paper adopts the GAAP guidance in ASC 505-50 with modifications as follows:

a. To reduce variations from the GAAP guidance, this issue paper does not restrict a reporting entity from recognizing a prepaid asset to reflect the cost for the exchange of share-based payment before the receipt of goods or services. However, consistent with statutory accounting principles in *SSAP No. 29—Prepaid Expenses*, these assets are nonadmitted as they are not readily available to satisfy policyholder obligations.

b. Pursuant to the statutory accounting concept of consistency, this issue paper clarifies that the minimum value method is not an acceptable method for determining the fair value of non-employee awards for all (public/non-public) entities.

c. Consistent with guidance in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* for recognition of loss contingency estimates, the recognition of expected costs based on different possible outcomes, the amount recognized should reflect management's best estimate. If an amount within a range of possible outcomes cannot be deemed a better estimate, the midpoint of the range shall be recognized. This is different from the GAAP guidance that allows recognition of the lowest aggregate amount within a range.

d. GAAP references are revised to reflect applicable statutory accounting guidance.

EFFECTIVE DATE

9. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principles (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions

reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of reporting periods beginning on or after January 1, 2014, with early adoption permitted.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

- *SSAP No. 104—Share-Based Payments*

Generally Accepted Accounting Principles

- *Accounting Standards Codification Topic 505-50, Equity, Equity Payments to Non-Employees*

The GAAP guidance in the ASC 505-50 has not been duplicated within this issue paper. This is similar to the process reflected in Issue Paper No. 129—Share-Based Payments, A Replacement of SSAP No. 13—Stock Options and Stock Purchase Plans (Issue Paper No. 129) as the GAAP guidance reflected the bulk of the proposed statutory guidance. (A similar process was also followed for Issue Paper No. 132—Accounting for Pensions, A Replacement of SSAP No. 89, Issue Paper No. 133—Accounting for Postretirement Benefits Other Than Pensions, A Replacement of SSAP No. 14, and Issue Paper No. 134—Servicing Assets/Liabilities, An Amendment of SSAP No. 91.) The tracked changes to reflect ASC 505-50 in SSAP No. 104R are shown in illustration A.

ILLUSTRATION A – SSAP NO. 104 - REVISED

SCOPE OF STATEMENT

1. This statement provides statutory accounting principles for transactions in which an entity exchanges its equity instruments to employees and non-employees in share-based payment transactions. This statement does not provide statutory accounting principles for employee share ownership plans;~~,~~ those transactions are addressed in *SSAP No. 12—Employee Stock Ownership Plans*.

SUMMARY OF ISSUE

2. The objective of accounting for transactions under share-based payment arrangements with employees is to recognize in the financial statements the employee services received in exchange for equity instruments issued or liabilities incurred and the related cost to the entity as those services are consumed. The objective of accounting for share-based payment transactions with non-employees is to recognize in the financial statements the most reliably measurable fair values of such transactions. This statement uses the terms compensation and payment in their broadest senses to refer to the consideration paid for employee services and goods and services regardless of whether the supplier is an employee.

3. The accounting for all share-based payment transactions shall reflect the rights conveyed to the holder of the instruments and the obligations imposed on the issuer of the instruments, regardless of how those transactions are structured. This statement requires that the cost resulting from all share-based payment transactions be recognized in the financial statements. This statement establishes fair value as the measurement objective in accounting for share-based payment arrangements and requires all entities to apply a fair-value-based measurement method[1] in accounting for share-based payment transactions with employees except for equity instruments held by employee stock ownership plans.

Scope and Scope Exceptions

4. Employees - This statement applies to all share-based payment transactions in which an entity acquires employee services by issuing (or offering to issue) its shares, share options, or other equity instruments or by incurring liabilities to an employee that meet either of the following conditions:

   a. The amounts are based, at least in part[2], on the price of the entity's shares or other equity instruments. ~~(The phrase "at least in part" is used because an award of share-based compensation may be indexed to both the price of an entity's shares and something else that is neither the price of the entity's shares nor a market, performance, or service condition.)~~

   b. The awards require or may require settlement by issuing the entity's equity shares or other equity instruments.

[1] Accounting pronouncements that require fair value measurements but that are excluded from *SSAP No. 100—Fair Value Measurements* is limited to this statement addressing share-based payment transactions. The fair value measurement objective in this statement is generally consistent with the fair value measurement objective in SSAP No. 100. However, for certain share-based payment transactions with employees, the measurements at the grant date are fair-value-based measurements, not fair value measurements. Although some measurements in this statement are fair value measurements, for practical reasons this statement is excluded in its entirety from SSAP No. 100. To be consistent with GAAP guidance on share-based payment transactions, the definition of fair value for use in this statement is: "the amount at which the asset (or liability) could be bought (or incurred) or sold (settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale." Observable market prices of identical or similar equity or liability instruments in active markets are the best estimate of fair value and, if available, should be used as the basis for the measurement of equity and liability instruments awarded in a share-based payment transaction with employees.

[2] The phrase "at least in part" is used because an award of share-based compensation may be indexed to both the price of an entity's shares and something else that is neither the price of the entity's shares nor a market, performance, or service condition.

5. Share-based payments awarded to an employee of the reporting entity by a related party or other holder of an economic interest in the entity as compensation for services provided to the entity are share-based payment transactions to be accounted for under this statement unless the transfer is clearly for a purpose other than compensation for services to the reporting entity. The substance of such a transaction is that the economic interest holder makes a capital contribution to the reporting entity, and that entity makes a share-based payment to its employee in exchange for services rendered. An example of a situation in which such a transfer is not compensation is a transfer to settle an obligation of the economic interest holder to the employee that is unrelated to employment by the entity.

6. ~~The guidance in this statement does not apply to share-based transactions for other than employee services.~~ Non-Employees - This statement applies to all share-based payment transactions in which an entity acquires goods or services by issuing (or offering to issue) its shares, share-options, or other equity instruments or by incurring liabilities to a goods or service provider that is not an employee in amounts based, at least in part[3], on the price of the entity's shares or other equity instruments or that require or may require settlement by issuing the entity's equity shares or other equity instrument.

7. The guidance in this statement does not apply to equity instruments held by an employee stock ownership plan. Such equity instruments shall follow the guidance in *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12). The guidance in this statement does not apply to transactions involving equity instruments either issued to a lender or investor that provides financing to the issuer or issued in a business combination.

8. The guidance for share-based payments to employees is contained in paragraphs 9-114, and the guidance for share-based payments to non-employees is contained in paragraphs 115-142. The guidance for employees is further ~~in this statement is~~ divided as follows:

a. Compensatory Share-Based Payment Plans: Paragraphs 9-104.

b. Noncompensatory Share-Based Payment Plans: Paragraphs 105-111.

c. Consolidated/Holding Company Share-Based Payment Plans: Paragraphs 112-114.

Employee Share-Based Payments - Compensatory ~~Share-Based Payment Plans~~

~~RECOGNITION~~

Recognition Principle for Share-Based Payment Transactions

9. Stock purchase and stock option plans that do not meet the criteria of a non-compensatory plan (paragraphs 105-111) and are not otherwise excluded from the scope of this statement shall be classified as compensatory and follow the recognition, measurement and disclosure guidance in paragraphs 10-104.

10. An entity shall recognize the services received in a share-based payment transaction with an employee as services are received. Employee services themselves are not recognized before they are received. The entity shall recognize either a corresponding increase in equity or a liability, depending on whether the instruments granted satisfy the equity or liability classification criteria (see paragraphs 14-27). As the services are consumed, the entity shall recognize the related cost.

11. The accounting for all share-based payment transactions shall reflect the rights conveyed to the holder of the instruments and the obligations imposed on the issuer of the instruments, regardless of how those transactions are structured. For example, the rights and obligations embodied in a transfer of equity shares to an employee for a note that provides no recourse to other assets of the employee (that is, other

[3] See Footnote 2

than the shares) are substantially the same as those embodied in a grant of equity share options. Thus, that transaction shall be accounted for as a substantive grant of equity share options.

12. Assessment of both the rights and obligations in a share-based payment award and any related arrangement and how those rights and obligations affect the fair value of an award requires the exercise of judgment in considering the relevant facts and circumstances.

Determining the Grant Date

13. As a practical accommodation, in determining the grant date of an award subject to this statement, assuming all other criteria in the grant date definition have been met, a mutual understanding of the key terms and conditions of an award to an individual employee shall be presumed to exist at the date the award is approved in accordance with the relevant corporate governance requirements (that is, by the Board or management with the relevant authority) if both of the following conditions are met:

a. The award is a unilateral grant and, therefore, the recipient does not have the ability to negotiate the key terms and conditions of the award with the employer.

b. The key terms and conditions of the award are expected to be communicated to an individual recipient within a relatively short time period from the date of approval. A relatively short time period is that period in which an entity could reasonably complete all actions necessary to communicate the awards to the recipients in accordance with the entity's customary human resource practices.

Determining Whether to Classify a Financial Instrument as a Liability or As Equity

14. ~~This p~~Paragraphs 14~~,through paragrap~~-27, provide~~s~~ guidance for determining whether certain financial instruments awarded in share-based payment transactions are liabilities. In determining whether an instrument not specifically discussed in those paragraphs shall be classified as a liability or as equity, an entity shall apply statutory accounting principles applicable to financial instruments issued in transactions not involving share-based payment.

15. Unless paragraphs 16-27 require otherwise, an entity shall apply the classification criteria in Appendix A, as they are effective at the reporting date, in determining whether to classify as a liability a freestanding financial instrument given to an employee in a share-based payment transaction. Paragraphs 64-68 provide criteria for determining when instruments subject to this statement subsequently become subject to other applicable statutory accounting principles.

16. In determining the classification of an instrument, an entity shall take into account the classification requirements that are effective for that specific entity at the reporting date as established by Appendix A. In addition, a call option written on an instrument that is not classified as a liability under those classification requirements also shall be classified as equity so long as those equity classification requirements for the entity continue to be met, unless liability classification is required under the provisions of paragraphs 19 and 20.

17. Appendix A does not apply to outstanding shares embodying a conditional obligation to transfer assets, for example, shares that give the employee the right to require the employer to repurchase them for cash equal to their fair value (puttable shares). A put right may be granted to the employee in a transaction that is related to a share-based compensation arrangement. If exercise of such a put right would require the entity to repurchase shares issued under the share-based compensation arrangement, the shares shall be accounted for as puttable shares. A puttable (or callable) share awarded to an employee as compensation shall be classified as a liability if either of the following conditions is met:

a. The repurchase feature permits the employee to avoid bearing the risks and rewards normally associated with equity share ownership for a reasonable period of time from the date the requisite service is rendered and the share is issued. An employee begins to bear the risks and rewards normally associated with equity share ownership when all the requisite service has been rendered. A repurchase feature that can be exercised only upon the occurrence of a contingent event that is outside the employee's control (such as an initial public offering) would not meet this condition until it becomes probable that the event will occur within the reasonable period of time.

b. It is probable that the employer would prevent the employee from bearing those risks and rewards for a reasonable period of time from the date the share is issued.

For this purpose, a period of six months or more is a reasonable period of time.

18. A puttable (or callable) share that does not meet either of those conditions shall be classified as equity.

19. Options or similar instruments on shares shall be classified as liabilities if either of the following conditions is met:

a. The underlying shares are classified as liabilities.

b. The entity can be required under any circumstances to settle the option or similar instrument by transferring cash or other assets. A cash settlement feature that can be exercised only upon the occurrence of a contingent event that is outside the employee's control (such as an initial public offering) would not meet this condition until it becomes probable that event will occur.

20. For example, a reporting entity that is a Securities and Exchange Commission (SEC) registrant may grant an option to an employee that, upon exercise, would be settled by issuing a mandatorily redeemable share. Because the mandatorily redeemable share would be classified as a liability under Appendix A (as well as under *SSAP No. 72—Surplus and Quasi-Reorganizations*), the option also would be classified as a liability.

21. An award may be indexed to a factor in addition to the entity's share price. If that additional factor is not a market, performance, or service condition, the award shall be classified as a liability for purposes of this statement, and the additional factor shall be reflected in estimating the fair value of the award.

22. For this purpose, an award of equity share options granted to an employee of an entity's foreign operation that provides for a fixed exercise price denominated either in the foreign operation's functional currency or in the currency in which the employee's pay is denominated shall not be considered to contain a condition that is not a market, performance, or service condition. Therefore, such an award is not required to be classified as a liability if it otherwise qualifies as equity. For example, equity share options with an exercise price denominated in euros granted to employees of a U.S. entity's foreign operation whose functional currency is the euro are not required to be classified as liabilities if those options otherwise qualify as equity. In addition, such options are not required to be classified as liabilities even if the functional currency of the foreign operation is the U.S. dollar, provided that the employees to whom the options are granted are paid in euros.

23. The accounting for an award of a share-based payment shall reflect the substantive terms of the award and any related arrangement. Generally, the written terms provide the best evidence of the substantive terms of an award. However, an entity's past practice may indicate that the substantive terms of an award differ from its written terms. For example, an entity that grants a tandem award under which an employee receives either a stock option or a cash-settled stock appreciation right is obligated to pay

cash on demand if the choice is the employee's, and the entity thus incurs a liability to the employee. In contrast, if the choice is the entity's, it can avoid transferring its assets by choosing to settle in stock, and the award qualifies as an equity instrument. However, if an entity that nominally has the choice of settling awards by issuing stock predominately settles in cash or if the entity usually settles in cash whenever an employee asks for cash settlement, the entity is settling a substantive liability rather than repurchasing an equity instrument. In determining whether an entity that has the choice of settling an award by issuing equity shares has a substantive liability, the entity also shall consider whether:

a. It has the ability to deliver the shares. (Federal securities law generally requires that transactions involving offerings of shares under employee share option arrangements be registered, unless there is an available exemption. For purposes of this statement, such requirements do not, by themselves, imply that an entity does not have the ability to deliver shares and thus do not require an award that otherwise qualifies as equity to be classified as a liability.)

b. It is required to pay cash if a contingent event occurs (see paragraphs 19-20).

24. A provision that permits employees to effect a broker-assisted cashless exercise of part or all of an award of share options through a broker does not result in liability classification for instruments that otherwise would be classified as equity if both of the following criteria are satisfied:

a. The cashless exercise requires a valid exercise of the share options.

b. The employee is the legal owner of the shares subject to the option (even though the employee has not paid the exercise price before the sale of the shares subject to the option).

25. A broker that is a related party of the entity must sell the shares in the open market within a normal settlement period, which generally is three days, for the award to qualify as equity.

26. Similarly, a provision for either direct or indirect (through a net-settlement feature) repurchase of shares issued upon exercise of options (or the vesting of nonvested shares), with any payment due employees withheld to meet the employer's minimum statutory withholding requirements resulting from the exercise, does not, by itself, result in liability classification of instruments that otherwise would be classified as equity. However, if an amount in excess of the minimum statutory requirement is withheld, or may be withheld at the employee's discretion, the entire award shall be classified and accounted for as a liability.

27. Minimum statutory withholding requirements are to be based on the applicable minimum statutory withholding rates required by the relevant tax authority (or authorities, for example, federal, state, and local), including the employee's share of payroll taxes that are applicable to such supplemental taxable income.

Market, Performance, and Service Conditions

28. Accruals of compensation cost for an award with a performance condition shall be based on the probable outcome of that performance condition—compensation cost shall be accrued if it is probable that the performance condition will be achieved and shall not be accrued if it is not probable that the performance condition will be achieved. If an award has multiple performance conditions (for example, if the number of options or shares an employee earns varies depending on which, if any, of two or more performance conditions is satisfied), compensation cost shall be accrued if it is probable that a performance condition will be satisfied. In making that assessment, it may be necessary to take into account the interrelationship of those performance conditions.

29. If an award requires satisfaction of one or more market, performance, or service conditions (or any combination thereof), compensation cost shall be recognized if the requisite service is rendered, and no compensation cost shall be recognized if the requisite service is not rendered.

Payroll Taxes

30. A liability for employee payroll taxes on employee stock compensation shall be recognized on the date of the event triggering the measurement and payment of the tax to the taxing authority (for a nonqualified option in the United States, generally the exercise date). Payroll taxes, even though directly related to the appreciation on stock options, are operating expenses and shall be reflected as such in the statement of operations.

Initial Measurement

31. While some of the material in paragraphs 31-34 was written in terms of awards classified as equity, it applies equally to awards classified as liabilities. The subparagraphs of paragraph 36 provide specific guidance for awards classified as liabilities.

32. A share-based payment transaction with employees shall be measured based on the fair value (or in certain situations specified in this statement, a calculated value or intrinsic value) of the equity instruments issued.

33. An entity shall account for the compensation cost from share-based payment transactions with employees in accordance with the fair-value-based method set forth in this statement. That is, the cost of services received from employees in exchange for awards of share-based compensation generally shall be measured based on the grant-date fair value of the equity instruments issued or on the fair value of the liabilities incurred. The cost of services received by an entity as consideration for equity instruments issued or liabilities incurred in share-based compensation transactions with employees shall be measured based on the fair value of the equity instruments issued or the liabilities settled. The portion of the fair value of an instrument attributed to employee service is net of any amount that an employee pays (or becomes obligated to pay) for that instrument when it is granted. For example, if an employee pays $5 at the grant date for an option with a grant-date fair value of $50, the amount attributed to employee service is $45.

34. However, this statement provides certain exceptions (paragraph 49) to that measurement method if it is not possible to reasonably estimate the fair value of an award at the grant date. A reporting entity that is not able to reasonably estimate the fair value of its equity options and similar instruments may measure its liabilities under share-based payment arrangements at intrinsic value (see paragraphs 36.b. and 48).

Terms of the Award Affect Fair Value

35. The terms of a share-based payment award and any related arrangement affect its value and, except for certain explicitly excluded features, such as a reload feature, shall be reflected in determining the fair value of the equity or liability instruments granted. For example, the fair value of a substantive option structured as the exchange of equity shares for a nonrecourse note will differ depending on whether the employee is required to pay nonrefundable interest on the note.

Measurement Objective – Fair Value at Grant Date

36. The measurement objective for equity instruments awarded to employees is to estimate the fair value at the grant date of the equity instruments that the entity is obligated to issue when employees have rendered the requisite service and satisfied any other conditions necessary to earn the right to benefit from the instruments (for example, to exercise share options). That estimate is based on the share price and

other pertinent factors, such as expected volatility, at the grant date. The following subparagraphs provide guidance regarding the measurement objective and measurement date for liability instruments:

a. Measurement Objective and Measurement Date for Liabilities: At the grant date, the measurement objective for liabilities incurred under share-based compensation arrangements is the same as the measurement objective for equity instruments awarded to employees as described in paragraph 36. However, the measurement date for liability instruments is the date of settlement.

b. Measurement Objective and Measurement Date for Liabilities of Entities Subject to Paragraph 48: An entity subject to paragraph 48 shall make a policy decision of whether to measure all of its liabilities incurred under share-based payment arrangements at fair value or to measure all such liabilities at intrinsic value. Consistent with the guidance in paragraph 48, an entity that is not able to reasonably estimate the fair value of its equity share options and similar instruments because it is not practicable for it to estimate the expected volatility of its share price shall make a policy choice of whether to measure its liabilities under share-based payment arrangements at calculated value or at intrinsic value.

37. The fair value of an equity share option or similar instrument shall be measured based on the observable market price of an option with the same or similar terms and conditions.

38. Such market prices for equity share options and similar instruments granted to employees are frequently not available; however, they may become so in the future. As such, the fair value of an equity share option or similar instrument shall be estimated using a valuation technique such as an option-pricing model. For this purpose, a similar instrument is one whose fair value differs from its intrinsic value, that is, an instrument that has time value. For example, a share appreciation right that requires net settlement in equity shares has time value; an equity share does not.

Factors or Restrictions that Impact the Determination of Fair Value at Grant Date

Vesting Versus Nontransferability

39. To satisfy the measurement objective in paragraph 36, the restrictions and conditions inherent in equity instruments awarded to employees are treated differently depending on whether they continue in effect after the requisite service period. A restriction that continues in effect after an entity has issued instruments to employees, such as the inability to transfer vested equity share options to third parties or the inability to sell vested shares for a period of time, is considered in estimating the fair value of the instruments at the grant date. For equity share options and similar instruments, the effect of nontransferability (and nonhedgeability, which has a similar effect) is taken into account by reflecting the effects of employees' expected exercise and postvesting employment termination behavior in estimating fair value (referred to as an option's expected term).

Forfeitability

40. A restriction that stems from the forfeitability of instruments to which employees have not yet earned the right, such as the inability either to exercise a nonvested equity share option or to sell nonvested shares, is not reflected in estimating the fair value of the related instruments at the grant date. Instead, those restrictions are taken into account by recognizing compensation cost only for awards for which employees render the requisite service.

Performance of Service Conditions

41. Awards of share-based employee compensation ordinarily specify a performance condition or a service condition (or both) that must be satisfied for an employee to earn the right to benefit from the award. No compensation cost is recognized for instruments that employees forfeit because a service condition or a performance condition is not satisfied (that is, instruments for which the requisite service is not rendered).

42. The fair-value-based method described in paragraphs 36 and 39-43 uses fair value measurement techniques, and the grant-date share price and other pertinent factors are used in applying those techniques. However, the effects on the grant-date fair value of service and performance conditions that apply only during the requisite service period are reflected based on the outcomes of those conditions. This statement refers to the required measure as fair value.

Market Conditions

43. Some awards contain a market condition. The effect of a market condition is reflected in the grant-date fair value of an award. (Valuation techniques have been developed to value path-dependent options as well as other options with complex terms. Awards with market conditions, as defined in this statement, are path-dependent options.) Compensation cost thus is recognized for an award with a market condition provided that the requisite service is rendered, regardless of when, if ever, the market condition is satisfied.

Market, Performance, and Service Conditions That Affect Conditions Other than Vesting or Exercisability

44. Market, performance, and service conditions (or any combination thereof) may affect an award's exercise price, contractual term, quantity, conversion ratio, or other factors that are considered in measuring an award's grant-date fair value. A grant-date fair value shall be estimated for each possible outcome of such a performance or service condition, and the final measure of compensation cost shall be based on the amount estimated at the grant date for the condition or outcome that is actually satisfied.

Nonvested or Restricted Shares

45. A nonvested equity share or nonvested equity share unit awarded to an employee shall be measured at its fair value as if it were vested and issued on the grant date.

46. Nonvested shares granted to employees usually are referred to as restricted shares, but this statement reserves that term for fully vested and outstanding shares whose sale is contractually or governmentally prohibited for a specified period of time.

47. A restricted share awarded to an employee, that is, a share that will be restricted after the employee has a vested right to it, shall be measured at its fair value, which is the same amount for which a similarly restricted share would be issued to third parties.

Calculated Value for Entities Not Reasonably Able to Estimate Fair Value

48. An entity may not be able to reasonably estimate the fair value of its equity share options and similar instruments because it is not practicable for it to estimate the expected volatility of its share price. In that situation, the entity shall account for its equity share options and similar instruments based on a value calculated using the historical volatility of an appropriate industry sector index instead of the expected volatility of the entity's share price (the calculated value). Throughout the remainder of this statement, provisions that apply to accounting for share options and similar instruments at fair value also apply to calculated value.

Difficulty of Estimation

49. It should be possible to reasonably estimate the fair value of most equity share options and other equity instruments at the date they are granted. However, in rare circumstances, it may not be possible to reasonably estimate the fair value of an equity share option or other equity instrument at the grant date because of the complexity of its terms.

50. An equity instrument for which it is not possible to reasonably estimate fair value at the grant date shall be accounted for based on its intrinsic value (paragraph 70) for measurement after issue date.

Reload and Contingent Features

51. The fair value of each award of equity instruments, including an award of options with a reload feature (reload options), shall be measured separately based on its terms and the share price and other pertinent factors at the grant date. The effect of a reload feature in the terms of an award shall not be included in estimating the grant-date fair value of the award. Rather, a subsequent grant of reload options pursuant to that provision shall be accounted for as a separate award when the reload options are granted.

52. A contingent feature of an award that might cause an employee to return to the entity either equity instruments earned or realized gains from the sale of equity instruments earned for consideration that is less than fair value on the date of transfer (including no consideration), such as a clawback feature shall not be reflected in estimating the grant-date fair value of an equity instrument.

Requisite Service Period

53. An entity shall make its initial best estimate of the requisite service period at the grant date (or at the service inception date, if that date precedes the grant date) and shall base accruals of compensation cost on that period.

54. The initial best estimate and any subsequent adjustment to that estimate of the requisite service period for an award with a combination of market, performance, or service conditions shall be based on an analysis of all of the following:

a. All vesting and exercisability conditions

b. All explicit, implicit, and derived service periods

c. The probability that performance or service conditions will be satisfied.

Market, Performance, and Service Conditions

55. Performance or service conditions that affect vesting are not reflected in estimating the fair value of an award at the grant date because those conditions are restrictions that stem from the forfeitability of instruments to which employees have not yet earned the right. However, the effect of a market condition is reflected in estimating the fair value of an award at the grant date (paragraph 43). For purposes of this statement, a market condition is not considered to be a vesting condition, and an award is not deemed to be forfeited solely because a market condition is not satisfied.

Subsequent Measurement

56. Guidance that equally applies to both liabilities and equity is generally found in paragraphs 57-69. Paragraphs 70-78 provide additional subsequent measurement guidance for awards classified as equity and paragraphs 79-82 provide additional subsequent measurement guidance for awards classified as liabilities.

Recognition of Compensation Costs Over the Requisite Service

57. The compensation cost for an award of share-based employee compensation classified as equity shall be recognized over the requisite service period, with a corresponding credit to equity (generally, paid-in capital). The requisite service period is the period during which an employee is required to provide service in exchange for an award, which often is the vesting period. The requisite service period is estimated based on an analysis of the terms of the share-based payment award.

58. The total amount of compensation cost recognized at the end of the requisite service period for an award of share-based compensation shall be based on the number of instruments for which the requisite service has been rendered (that is, for which the requisite service period has been completed). An entity shall base initial accruals of compensation cost on the estimated number of instruments for which the requisite service is expected to be rendered. That estimate shall be revised if subsequent information indicates that the actual number of instruments is likely to differ from previous estimates. The cumulative effect on current and prior periods of a change in the estimated number of instruments for which the requisite service is expected to be or has been rendered shall be recognized in compensation cost in the period of the change. Previously recognized compensation cost shall not be reversed if an employee share option (or share unit) for which the requisite service has been rendered expires unexercised (or unconverted).

59. An entity shall reverse previously recognized compensation cost for an award with a market condition only if the requisite service is not rendered.

Estimating the Requisite Service Period

60. The requisite service period may be explicit or it may be implicit, being inferred from an analysis of other terms in the award, including other explicit service or performance conditions. The requisite service period for an award that contains a market condition can be derived from certain valuation techniques that may be used to estimate grant-date fair value. An award may have one or more explicit, implicit, or derived service periods; however, an award may have only one requisite service period for accounting purposes unless it is accounted for as in-substance multiple awards. An award with a graded vesting schedule that is accounted for as in-substance multiple awards is an example of an award that has more than one requisite service period (paragraph 63).

61. The service inception date is the beginning of the requisite service period. If the service inception date precedes the grant date, accrual of compensation cost for periods before the grant date shall be based on the fair value of the award at the reporting date. In the period in which the grant date occurs, cumulative compensation cost shall be adjusted to reflect the cumulative effect of measuring compensation cost based on fair value at the grant date rather than the fair value previously used at the service inception date (or any subsequent reporting date).

62. An entity shall adjust that initial best estimate in light of changes in facts and circumstances. Whether and how the initial best estimate of the requisite service period is adjusted depends on both the nature of the conditions identified in paragraph 54 and the manner in which they are combined, for example, whether an award vests or becomes exercisable when either a market or a performance condition is satisfied or whether both conditions must be satisfied.

Graded Vesting Awards

63. An entity shall make a policy decision about whether to recognize compensation cost for an award with only service conditions that has a graded vesting schedule in either of the following ways:

a. On a straight-line basis over the requisite service period for each separately vesting portion of the award as if the award was, in-substance, multiple awards.

b. On a straight-line basis over the requisite service period for the entire award (that is, over the requisite service period of the last separately vesting portion of the award).

However, the amount of compensation cost recognized at any date must at least equal the portion of the grant-date value of the award that is vested at that date.

Awards May Become Subject to Other Guidance

64. Paragraphs 65-68 are intended to apply to those instruments issued in share-based payment transactions with employees accounted for under this statement, and to instruments exchanged in a business combination for share-based payment awards of the acquired business that were originally granted to employees of the acquired business and are outstanding as of the date of the business combination. Instruments issued, in whole or in part, as consideration for goods or services other than employee service shall not be considered to have been issued in exchange for employee service when applying the guidance in those paragraphs, irrespective of the employment status of the recipient of the award on the grant date.

65. A freestanding financial instrument issued to an employee in exchange for past or future employee services that is subject to initial recognition and measurement guidance within this statement shall continue to be subject to the recognition and measurement provisions of this statement throughout the life of the instrument, unless its terms are modified when the holder is no longer an employee. Only for purposes of this paragraph, a modification does not include a change to the terms of an award if that change is made solely to reflect an equity restructuring provided that both of the following conditions are met:

a. There is no increase in fair value of the award (or the ratio of intrinsic value to the exercise price of the award is preserved, that is, the holder is made whole) or the antidilution provision is not added to the terms of the award in contemplation of an equity restructuring.

b. All holders of the same class of equity instruments (for example, stock options) are treated in the same manner.

66. Other modifications of that instrument that take place when the holder is no longer an employee shall be subject to the modification guidance in paragraph 68. Following modification, recognition and measurement of the instrument should be determined through reference to other applicable statutory accounting principles.

67. Once the classification of an instrument is determined, the recognition and measurement provisions of this statement shall be applied until the instrument ceases to be subject to the requirements discussed in paragraph 65. Other applicable statutory accounting principles applies to a freestanding financial instrument that was issued under a share-based payment arrangement but that is no longer subject to this statement.

68. An entity may modify (including cancel and replace) or settle a fully vested, freestanding financial instrument after it becomes subject to other applicable statutory accounting principles. Such a modification or settlement shall be accounted for under the provisions of this statement unless it applies equally to all financial instruments of the same class regardless of whether the holder is (or was) an employee (or an employee’s beneficiary). Following the modification, the instrument continues to be accounted for under other applicable statutory accounting principles. A modification or settlement of a class of financial instrument that is designed exclusively for and held only by current or former employees (or their beneficiaries) may stem from the employment relationship depending on the terms of the modification or settlement. Thus, such a modification or settlement may be subject to the

requirements of this statement. See paragraph 65 for a discussion of changes to awards made solely to reflect an equity restructuring.

Change in Classification Due to Change in Probable Settlement Outcome

69. An option or similar instrument that is classified as equity, but subsequently becomes a liability because the contingent cash settlement event is probable of occurring, shall be accounted for similar to a modification from an equity to liability award. That is, on the date the contingent event becomes probable of occurring (and therefore the award must be recognized as a liability), the entity recognizes a share-based liability equal to the portion of the award attributed to past service (which reflects any provision for acceleration of vesting) multiplied by the award's fair value on that date. To the extent the liability equals or is less than the amount previously recognized in equity, the offsetting debit is a charge to equity. To the extent that the liability exceeds the amount previously recognized in equity, the excess is recognized as compensation cost. The total recognized compensation cost for an award with a contingent cash settlement feature shall at least equal the fair value of the award at the grant date. The guidance in this paragraph is applicable only for options or similar instruments issued as part of employee compensation arrangements. That is, the guidance included in this paragraph is not applicable, by analogy or otherwise, to instruments outside employee share-based payment arrangements.

Subsequent Measurement - Awards Classified as Equity

Fair Value Not Reasonably Estimable

70. An equity instrument for which it is not possible to reasonably estimate fair value at the grant date shall be remeasured at each reporting date through the date of exercise or other settlement. The final measure of compensation cost shall be the intrinsic value of the instrument at the date it is settled. Compensation cost for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered at the reporting date) in the intrinsic value of the instrument in each reporting period. The entity shall continue to use the intrinsic value method for those instruments even if it subsequently concludes that it is possible to reasonably estimate their fair value.

Contingent Features

71. A contingent feature of an award that might cause an employee to return to the entity either equity instruments earned or realized gains from the sale of equity instruments earned for consideration that is less than fair value on the date of transfer (including no consideration), such as a clawback feature, shall be accounted for if and when the contingent event occurs.

Modification of An Award

72. A modification of the terms or conditions of an equity award shall be treated as an exchange of the original award for a new award. In substance, the entity repurchases the original instrument by issuing a new instrument of equal or greater value, incurring additional compensation cost for any incremental value. The effects of a modification shall be measured as follows:

a. Incremental compensation cost shall be measured as the excess, if any, of the fair value of the modified award determined in accordance with the provisions of this statement over the fair value of the original award immediately before its terms are modified, measured based on the share price and other pertinent factors at that date. As indicated in paragraph 48, references to fair value throughout this statement shall be read also to encompass calculated value. The effect of the modification on the number of instruments expected to vest also shall be reflected in determining incremental compensation cost.

The estimate at the modification date of the portion of the award expected to vest shall be subsequently adjusted, if necessary, in accordance with paragraph 58.

b. Total recognized compensation cost for an equity award shall at least equal the fair value of the award at the grant date unless at the date of the modification the performance or service conditions of the original award are not expected to be satisfied. Thus, the total compensation cost measured at the date of a modification shall be the sum of the following:

i. The portion of the grant-date fair value of the original award for which the requisite service is expected to be rendered (or has already been rendered) at that date, and

ii. The incremental cost resulting from the modification.

Compensation cost shall be subsequently adjusted, if necessary, in accordance with paragraph 58.

c. A change in compensation cost for an equity award measured at intrinsic value in accordance with paragraph 70 shall be measured by comparing the intrinsic value of the modified award, if any, with the intrinsic value of the original award, if any, immediately before the modification.

73. Paragraphs 64-68 provide additional guidance on accounting for modifications of certain freestanding financial instruments that initially were subject to this statement but subsequently became subject to other applicable statutory accounting principles.

Short-Term Inducements

74. A short-term inducement shall be accounted for as a modification of the terms of only the awards of employees who accept the inducement. Other inducements are modifications of the terms of all awards subject to them and shall be accounted for as such.

Equity Restructuring or Business Combination

75. Exchanges of share options or other equity instruments or changes to their terms in conjunction with an equity restructuring or a business combination are modifications for purposes of this statement. Except for a modification to add an antidilution provision that is not made in contemplation of an equity restructuring, accounting for a modification in conjunction with an equity restructuring requires a comparison of the fair value of the modified award with the fair value of the original award immediately before the modification in accordance with paragraph 72. If those amounts are the same, for instance, because the modification is designed to equalize the fair value of an award before and after an equity restructuring, no incremental compensation cost is recognized. See paragraph 65 for an additional exception.

Repurchase or Cancellation

76. The amount of cash or other assets transferred (or liabilities incurred) to repurchase an equity award shall be charged to equity, to the extent that the amount paid does not exceed the fair value of the equity instruments repurchased at the repurchase date. Any excess of the repurchase price over the fair value of the instruments repurchased shall be recognized as additional compensation cost. An entity that repurchases an award for which the requisite service has not been rendered has, in effect, modified the requisite service period to the period for which service already has been rendered, and thus the amount of

compensation cost measured at the grant date but not yet recognized shall be recognized at the repurchase date.

Cancellation and Replacement

77. Cancellation of an award accompanied by the concurrent grant of (or offer to grant) a replacement award or other valuable consideration shall be accounted for as a modification of the terms of the cancelled award. (The phrase *offer to grant* is intended to cover situations in which the service inception date precedes the grant date.) Therefore, incremental compensation cost shall be measured as the excess of the fair value of the replacement award or other valuable consideration over the fair value of the cancelled award at the cancellation date in accordance with paragraph 72. Thus, the total compensation cost measured at the date of a cancellation and replacement shall be the portion of the grant-date fair value of the original award for which the requisite service is expected to be rendered (or has already been rendered) at that date plus the incremental cost resulting from the cancellation and replacement.

78. A cancellation of an award that is not accompanied by the concurrent grant of (or offer to grant) a replacement award or other valuable consideration shall be accounted for as a repurchase for no consideration. Accordingly, any previously unrecognized compensation cost shall be recognized at the cancellation date.

Subsequent Measurement - Awards Classified as Liabilities

Measurement

79. The fair value of liabilities incurred in share-based payment transactions with employees shall be remeasured at the end of each reporting period through settlement.

80. Changes in the fair value (or intrinsic value for an entity that elects that method) of a liability incurred under a share-based payment arrangement that occur during the requisite service period shall be recognized as compensation cost over that period. The percentage of the fair value (or intrinsic value) that is accrued as compensation cost at the end of each period shall equal the percentage of the requisite service that has been rendered at that date. Changes in the fair value (or intrinsic value) of a liability that occur after the end of the requisite service period are compensation costs of the period in which the changes occur. Any difference between the amount for which a liability award is settled and its fair value at the settlement date as estimated in accordance with the provisions of this statement is an adjustment of compensation cost in the period of settlement.

81. Reporting entities shall measure a liability award under a share-based payment arrangement based on the award's fair value (or calculated value in accordance with paragraph 48) remeasured at each reporting date until the date of settlement. Compensation costs for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered at the reporting date) in the fair value of the instrument for each reporting period.

Modification of an Award

82. A modification of a liability award is accounted for as the exchange of the original award for a new award. However, because liability awards are remeasured at their fair value (or calculated value for an entity subject to paragraph 48) at each reporting date, no special guidance is necessary in accounting for a modification of a liability award that remains a liability after the modification.

Look-Back Plans

83. The accounting guidance in this section addresses the accounting for certain employee stock purchase plans with a look-back option. An example of a look-back option is a provision that establishes

the purchase price as an amount based on the lesser of the stock's market price at the grant date or its market price at the exercise date (or purchase date).

84. As with all employee share purchase plans, the objective of the measurement process for employee share purchase plans with a look-back option is to reasonably measure fair value of the award at the grant date. Paragraph 70 provides guidance on the measurement requirements if it is not possible to reasonably estimate fair value at the grant date.

Accounting for Tax Effects of Share-Based Compensation Awards

85. Income tax regulations specify allowable tax deductions for instruments issued under share-based payment arrangements in determining an entity's income tax liability. For example, under tax law, allowable tax deductions may be measured as the intrinsic value of an instrument on a specified date. The time value component, if any, of the fair value of an instrument generally may not be tax deductible. Therefore, tax deductions may arise in different amounts and in different periods from compensation costs recognized in financial statements. Similarly, the amount of expense reported for an employee stock ownership plan during a period may differ from the amount of the related income tax deduction prescribed by income tax rules and regulations.

86. This guidance addresses how temporary differences are recognized for share-based payment arrangement awards that are classified either as equity or as liabilities under the requirements of paragraphs 14-27. Incremental guidance is also provided for issues related to employee stock ownership plans.

Tax Effects for Instruments Classified as Equity

87. The cumulative amount of compensation cost recognized for instruments classified as equity that ordinarily would result in a future tax deduction under existing tax law shall be considered to be a deductible temporary difference in applying the requirements of *SSAP No. 101—Income Taxes, a Replacement of SSAP No. 10R and SSAP No. 10* (SSAP No. 101). The deductible temporary difference shall be based on the compensation cost recognized for financial reporting purposes. Compensation cost that is capitalized as part of the cost of an asset, such as inventory, shall be considered to be part of the tax basis of that asset for financial reporting purposes.

88. Recognition of compensation cost for instruments that ordinarily do not result in tax deductions under existing tax law shall not be considered to result in a deductible temporary difference. A future event can give rise to a tax deduction for instruments that ordinarily do not result in a tax deduction. The tax effects of such an event shall be recognized only when it occurs. An example of a future event that would be recognized only when it occurs is an employee's sale of shares obtained from an award before meeting a tax law's holding period requirement, sometimes referred to as a disqualifying disposition, which results in a tax deduction not ordinarily available for such an award.

Tax Effects for Instruments Classified as Liability

89. The cumulative amount of compensation cost recognized for instruments classified as liabilities that ordinarily would result in a future tax deduction under existing tax law also shall be considered to be a deductible temporary difference. The deductible temporary difference shall be based on the compensation costs recognized for financial reporting purposes.

Accounting for Tax Effects – Initial Measurement

90. SSAP No. 101 requires a deferred tax asset to be evaluated for future realization and to be reduced by a statutory valuation allowance to the amount that is more likely than not to be realized. Differences between the deductible temporary difference computed pursuant to paragraphs 87-88 and the

tax deduction that would result based on the current fair value of the entity's shares shall not be considered in measuring the gross deferred tax asset or determining the need for a valuation allowance for a deferred tax asset recognized under these requirements.

Accounting for Tax Effects – Subsequent Measurement

91. If a deduction reported on a tax return for an award of equity instruments exceeds the cumulative compensation cost for those instruments recognized for financial reporting, any resulting realized tax benefit that exceeds the previously recognized deferred tax asset for those instruments is the excess tax benefit. If only a portion of an award is exercised, determination of the excess tax benefits shall be based on the portion of the award that is exercised.

92. The amount deductible for an award of equity instruments on the employer's tax return may be less than the cumulative compensation costs recognized for financial reporting purposes. The write-off of a deferred tax asset related to that deficiency, net of the related statutory valuation allowance, if any, shall first be offset to the extent of any remaining gross paid-in and contributed surplus from excess tax benefits arising from previous awards granted, modified, or settled in cash and measured in accordance with a fair value based method of accounting. An entity shall exclude from that amount excess tax benefits from share-based payment arrangements that are outside the scope of this statement, excess tax benefits from employee stock ownership plans, and excess tax benefits that have not been realized pursuant to the requirements established in SSAP No. 101.

93. An excess tax benefit determined pursuant to paragraph 91 shall be recognized as gross paid-in and contributed surplus, except that an excess of a realized tax benefit for an award over the deferred tax asset for that award shall be recognized in the income statement to the extent that the excess stems from a reason other than changes in the fair value of an entity's shares between the measurement date for accounting purposes and a later measurement date for tax purposes.

94. Paragraph 92 contains measurement guidance on how much, if any, of the write-off of a deferred tax asset from a tax deficiency shall be offset against additional paid-in capital. The remaining balance, if any, of the write-off of a deferred tax asset related to a tax deficiency shall be recognized in the income statement.

Tax Benefits of Dividends on Share-Based Payment Awards to Employees

95. A realized income tax benefit from dividends or dividend equivalents that are charged to unassigned-funds (surplus) and are paid to employees for any of the following equity classified awards shall be recognized as an increase to gross paid-in and contributed surplus:

a. Nonvested equity shares

b. Nonvested equity share units

c. Outstanding equity share options.

96. The amount recognized in gross paid-in and contributed surplus for the realized income tax benefit from dividends on the awards identified in the preceding paragraph shall be included in the pool of excess tax benefits available to absorb tax deficiencies on share-based payment awards.

97. Dividends or dividend equivalents paid to employees for the awards identified in paragraph 95 may result in a tax deduction prior to the actual realization of the related tax benefit because the employer, for example, has a net operating loss carryforward. The income tax benefit of those dividends shall not be recognized until the deduction reduces income taxes payable. Unrealized income tax benefits from dividends on equity-classified employee share-based payment awards shall be excluded from the

pool of excess tax benefits available to absorb potential future tax deficiencies on share-based payment awards.

98. Dividends or dividend equivalents paid to employees on the portion of an award of equity shares or other equity instruments that vests shall be charged to unassigned funds (surplus). If the related award is not expected to vest, dividends or dividend equivalents shall be recognized as compensation costs. Dividends and dividend equivalents shall be reclassified between unassigned funds (surplus) and compensation costs in a subsequent period if the entity changes its forfeiture estimates (or actual forfeitures differ from previous estimates).

99. Adjustments to gross paid-in and contributed surplus for reclassifications of the tax benefits from dividends on the awards discussed in the preceding paragraph in subsequent periods increase or decrease the entity's pool of excess tax benefits available to absorb tax deficiencies by a corresponding amount. Additionally, the tax benefits from dividends that are reclassified from gross paid-in and contributed surplus to the income statement (that is, as a reduction of income tax expense or an increase of income tax benefit) if an entity's estimate of forfeitures increases (or actual forfeitures exceed the entity's estimates) shall be limited to the entity's pool of excess tax benefits available to absorb tax deficiencies on the date of the reclassification.

Accounting for Rabbi Trusts

100. Rabbi trusts are grantor trusts generally set up to fund compensation for a select group of management or highly paid executives. To qualify as a rabbi trust for income tax purposes, the terms of the trust agreement must explicitly state that the assets of the trust are available to satisfy the claims of general creditors in the event of bankruptcy of the employer.

101. There are four potential scenarios for deferred compensation arrangements where amounts earned by an employee are invested in the stock of the employer and placed in a "rabbi trust."

Plan A: The plan does not permit diversification and must be settled by the delivery of a fixed number of shares of employer stock.

Plan B: The plan does not permit diversification and may be settled by the delivery of cash or shares of employer stock.

Plan C: The plan permits diversification; however, the employee has not diversified (the plan may be settled in cash, shares of employer stock, or diversified assets).

Plan D: The plan permits diversification and the employee has diversified (the plan may be settled in cash, shares of employer stock, or diversified assets).

102. The accounts of the rabbi trust should be consolidated with the accounts of the employer in the financial statements of the employer.

a. For Plan A, employer stock held by the rabbi trust should be classified in equity in a manner similar to the manner in which treasury stock is accounted for. Subsequent changes in the fair value of the employer's stock should not be recognized. The deferred compensation obligation should be classified as an equity instrument and changes in the fair value of the amount owed to the employee should not be recognized.

b. For Plans B and C, employer stock held by the rabbi trust should be classified in equity in a manner similar to the manner in which treasury stock is accounted for. Subsequent changes in the fair value of the employer's stock should not be recognized. The deferred compensation obligation should be classified as a liability and adjusted with a corresponding charge (or credit) to compensation cost, to reflect the changes in the fair value of the amount owed to the employee.

c. For Plan D, assets held by the rabbi trust should be accounted for in accordance with statutory accounting principles for the particular asset (for example, if the diversified asset is a marketable equity security, that security would be accounted for in accordance with SSAP No. 30). The deferred compensation obligation should be classified as a liability and adjusted, with a corresponding charge (or credit) to compensation cost, to reflect changes in the fair value of the amount owed to the employee. Changes in the fair value of the deferred compensation obligation should not be recorded in unrealized gains or losses, even if changes in the fair value of the assets held by the rabbi trust are recorded in surplus~~,~~ pursuant to *SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled or affiliated entities)*.~~, in surplus.~~

Disclosures – Employee Share-Based Payments

103. An entity with one or more share-based payment arrangements shall disclose information that enables users of the financial statements to understand all of the following:

a. The nature and terms of such arrangements that existed during the period and the potential effects of those arrangements on shareholders;

b. The effect of compensation costs arising from share-based payment arrangements on the income statement;

c. The method of estimating the fair value of the goods or services received, or the fair value of the equity instruments granted (or offered to grant), during the period; and

d. The cash flow effects resulting from share-based payment arrangements.

104. The disclosures in paragraph 103 are for annual audited statutory financial statements only. Appendix B ~~provides~~ illustrates the information needed to achieve the objectives in this paragraph.

Employee Share-Based Payments - Noncompensatory ~~Employee Share Purchase~~ Plans

Overview and Background

105. This section provides guidance to all entities that use employee share purchase plans. The entity must first determine whether the plan is compensatory or noncompensatory. This is determined by the terms of the plan (paragraphs 106-107). A plan with an option feature, for example a look-back feature, is considered compensatory.

Recognition

106. An employee share purchase plan that satisfies all of the following criteria does not give rise to recognizable compensation costs (that is, the plan is noncompensatory):

a. The plan satisfies either of the following conditions:

i. The terms of the plan are no more favorable than those available to all holders of the same class of shares. Note that a transaction subject to an employee share purchase plan that involves a class of equity shares designed exclusively for and held only by current or former employees or their beneficiaries may be compensatory depending on the terms of the arrangement.

ii. Any purchase discount from the market price does not exceed the per-share amount of share issuance costs that would have been incurred to raise a significant amount of capital by a public offering. A purchase discount of 5 percent or less from the market price shall be considered to comply with this condition without further justification. A purchase discount greater than 5 percent that cannot be justified under this condition results in compensation cost for the entire amount of the discount. Note that an entity that justifies a purchase discount in excess of 5 percent shall reassess at least annually, and no later than the first share purchase offer during the fiscal year, whether it can continue to justify that discount pursuant to this paragraph.

b. Substantially all employees that meet limited employment qualifications may participate on an equitable basis.

c. The plan incorporates no option features, other than the following:

i. Employees are permitted a short period of time—not exceeding 31 days—after the purchase price has been fixed to enroll in the plan.

ii. The purchase price is based solely on the market price of the shares at the date of purchase, and employees are permitted to cancel participation before the purchase date and obtain a refund of amounts previously paid (such as those paid by payroll withholdings).

107. A plan provision that establishes the purchase price as an amount based on the lesser of the equity share's market price at date of grant or its market price at date of purchase, commonly called a look-back plan, is an example of an option feature that causes the plan to be compensatory. Similarly, a plan in which the purchase price is based on the share's market price at date of grant and that permits a participating employee to cancel participation before the purchase date and obtain a refund of amounts previously paid contains an option feature that causes the plan to be compensatory.

108. The requisite service period for any compensation cost resulting from an employee share purchase plan is the period over which the employee participates in the plan and pays for the shares.

Initial Measurement

109. The objective in paragraph 36 also applies to the fair value measurements associated with grants under a compensatory employee share purchase plan. The objective in this paragraph states that the fair value measurement method is to estimate the fair value of the equity instruments, based on the share price and other measurement assumptions at the grant date, that are issued in exchange for employee services.

Subsequent Measurement

110. Changes in total employee withholdings during a purchase period that occur solely as a result of salary increases, commissions, or bonus payments are not plan modifications if they do not represent changes to the terms of the award that was offered by the employer and initially agreed to by the employee at the grant (or measurement) date. Under those circumstances, the only incremental compensation cost is that which results from the additional shares that may be purchased with the additional amounts withheld (using the fair value calculated at the grant date). For example, an employee may elect to participate in the plan on the grant date by requesting that 5 percent of the employee's annual salary be withheld for future purchases of stock. If the employee receives an increase in salary during the term of the award, the base salary on which the 5 percent withholding amount is applied will increase, thus increasing the total amount withheld for future share purchases. That increase in withholdings as a result of the salary increase is not considered a plan modification and thus only increases the total

compensation cost associated with the award by the grant date fair value associated with the incremental number of shares that may be purchased with the additional withholdings during the period. The incremental number of shares that may be purchased is calculated by dividing the incremental amount withheld by the exercise price as of the grant date (for example, 85 percent of the grant date stock price).

111. Any decreases in the withholding amounts (or percentages) shall be disregarded for purposes of recognizing compensation cost unless the employee services that were valued at the grant date will no longer be provided to the employer due to a termination. However, no compensation cost shall be recognized for awards that an employee forfeits because of failure to satisfy a service requirement for vesting. The accounting for decreases in withholdings is consistent with the requirement in paragraph 58 that the total amount of compensation cost that must be recognized for an award be based on the number of instruments for which the requisite service has been rendered (that is, for which the requisite service period has been completed).

Employee Share-Based Payments - Consolidated / Holding Company Plans

112. Except for the disclosure requirement in paragraph 113 below, the provisions of this statement do not apply to a reporting entity, as long as:

a. The reporting entity is not directly liable for obligations under the share-based payment plan.

b. Compensation costs associated with share-based payments provided by a related party or holder of an economic interest in the reporting entity, equal to the required contribution to the plan for the period, are included in allocated expenses to the reporting entity. A liability shall be established for any such contributions due and unpaid.

113. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of the expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed.

114. If the reporting entity is directly liable for the share-based payment plan, then the other provisions of this statement apply.

Non-Employee Share-Based Payments

115. Reporting entities that grant share-based payments to non-employees shall recognize the goods acquired or services received as part of the transaction when it obtains the goods or as services are received. A grantor may need to recognize a *nonadmitted prepaid* asset before it actually receives goods or services if it first exchanges share-based payment for an enforceable right to receive those goods or services. Nonetheless, the goods or services shall not be recognized before they are received. *(The nonadmitted asset recognized prior to the goods and services would be eliminated upon receipt of the goods and services that are recognized.)*

116. If fully vested, nonforfeitable equity instruments are issued at the date the grantor and grantee enter into an agreement for goods or services (no specific performance is required by the grantee to retain those equity instruments), then, because of the elimination of any obligation on the part of the counterparty to earn the equity instruments, a measurement date has been reached. A grantor shall recognize the equity instruments when they are issued (in most cases, when the agreement is entered into). Whether the corresponding cost is an immediate expense or a *nonadmitted* prepaid asset depends on the specific facts and circumstances. A grantor may conclude that an asset (other than a note or a receivable) has been received in return for fully-vested, nonforfeitable equity instruments that are issued at the date the grantor and grantee enter into an agreement for goods or services (and no specific

performance is required by the grantee in order to retain those equity instruments). Such an asset shall not be displayed as contra-equity by the grantor of the equity instrument. The transferability (or lack thereof) of the equity instruments shall not affect the balance sheet display of this *nonadmitted prepaid* asset. This guidance is limited to transactions in which equity instruments are transferred to other than employees in exchange for goods or services.

117. An entity may grant fully vested, nonforfeitable equity instruments that are exercisable by the grantee only after a specified period of time if the terms of the agreement provide for earlier exercisability if the grantee achieves specified performance conditions. Any measured cost of the transaction shall be recognized in the same period(s) and in the same manner as if the entity had paid cash for the goods or services or used cash rebates as a sales discount instead of paying with, or using, the equity instruments.

118. A recognized *nonadmitted prepaid* asset, expense, or sales discount shall not be reversed if a stock option that the counterparty has the right to exercise expires unexercised. *As noted in paragraph 115, the goods and services shall not be recognized before they are received.*

119. A grantor shall recognize either a corresponding increase in equity or a liability, depending on whether the instruments granted satisfy the equity or liability classification criteria established in paragraphs 14-27 *for employee share-based payments*. As the goods or services are disposed of or consumed, the grantor shall recognize the related cost, unless other statutory accounting principles require costs to be expensed when incurred. In these instances, when the goods or services are received, the grantor shall recognize the related cost.

Initial Measurement – Reporting Entity Grantor/Issuer

120. Share-based payment transactions with non-employees shall be measured at the fair value of the consideration received or the fair value of the equity instruments issued, whichever is more reliably measurable.

121. The accounting for all share-based payment transactions shall reflect the rights conveyed to the holder of the instruments and the obligations imposed on the issuer of the instruments, regardless of how those transactions are structured. The terms of a share-based payment award and any related arrangement affect its value and, except for certain explicitly excluded features, such as a reload feature, shall be reflected in determining the fair value of the equity or liability instruments granted. Assessment of both the rights and obligations in a share-based payment award and any related arrangement and how those rights and obligations affect the fair value of an award requires the exercise of judgment in considering the relevant facts and circumstances. The minimum value method (a method that reflects the time value of an option but ignores the volatility value) is not an acceptable method for determining the fair value of non-employee awards.

122. If the fair value of goods or services received in a share-based payment transaction with non-employees is more reliably measurable than the fair value of the equity instruments issued, the fair value of the goods or services received shall be used to measure the transaction. In contrast, if the fair value of the equity instruments issued in a share-based payment transaction with non-employees is more reliably measurable than the fair value of the consideration received, the transaction shall be measured based on the fair value of the equity instruments issued.

123. Sales incentives in the form of equity instruments shall be measured at the fair value of the sales incentive or the fair value of the equity instruments issued, whichever is more reliably measurable.

124. The issuer/*grantor* shall measure the fair value of the equity instruments *provided in share-based payment* transactions using the stock price and other measurement assumptions as of the earlier of the following dates, referred to as the measurement date:

a. The date at which a commitment for performance by the counterparty to earn the equity instruments is reached (a performance commitment[4])

b. The date at which the counterparty's performance is complete.

125. The counterparty's performance is complete when the counterparty has delivered or, in the case of sales incentives, purchased the goods or services, despite the fact that at that date the quantity or all the terms of the equity instruments may yet depend on other events (this would occur, for example, if a target stock price requirement has not been met when the counterparty has delivered the goods or services).

126. Situations may arise in which counterparty performance may be required over a period of time but the equity award granted to the party performing the services is fully vested and nonforfeitable on the date the parties enter into the contract. While this type of arrangement may be rare, because, typically, vesting provisions do exist, the measurement date for an award that is nonforfeitable and that vests immediately could be the date the parties enter into the contract, even though services have not yet been performed.

127. If fully vested, nonforfeitable equity instruments are issued at the date the grantor and grantee enter into an agreement for goods or services (no specific performance is required by the grantee to retain those equity instruments), then, because of the elimination of any obligation on the part of the counterparty to earn the equity instruments, a measurement date has been reached.

128. If an entity grants fully vested, nonforfeitable equity instruments that are exercisable by the grantee only after a specified period of time and the terms of the agreement provide for earlier exercisability if the grantee achieves specified performance conditions, the grantor shall measure the fair value of the equity instruments at the date of grant and shall recognize that measured cost in the same period(s) and in the same manner as if the grantor had paid cash.

Initial Measurement – Reporting Entity Grantee/Provider

129. An entity (the grantee or provider) may enter into transactions to provide goods or services in exchange for equity instruments. The grantee shall measure the fair value of the equity instruments in these transactions using the stock price and other measurement assumptions as of the earlier of either of the following dates referred to as the measurement date:

a. The date the parties come to a mutual understanding of the terms of the equity-based compensation arrangement and a commitment for performance by the grantee to earn the equity instruments (a performance commitment[5]) is reached, or

b. The date at which the grantee's performance necessary to earn the equity instruments is complete (that is, the vesting date).

[4] A performance commitment is a commitment under which performance by the grantee to earn the equity instruments is probable because of sufficiently large disincentives for nonperformance. The disincentives must result from the relationship between the grantor and the grantee. Forfeiture of the equity instruments as the sole remedy in the event of the grantee's nonperformance is not considered a sufficiently large disincentive for purposes of applying the guidance. In addition, the ability to sue for nonperformance, in and of itself, does not represent a sufficiently large disincentive to ensure that performance is probable. (A granting entity may always be able to sue for nonperformance but it is not always clear whether any significant damages would result.)

[5] See Footnote 4.

Measurement Before the Measurement Date

130. In accordance with other accounting guidance, it may be appropriate for an issuer to recognize costs related to share-based payment transactions with non-employees before a measurement date has occurred:

a. If the quantity and terms of the equity instruments are known up front, the equity instruments shall be measured at their then-current fair values at each interim financial reporting date.

b. If the quantity and terms of the equity instruments are not known up front, and the transaction is only impacted by market conditions, the equity instruments shall be measured at their then-current fair values at each interim financial reporting date.

c. If the quantity and terms of the equity instruments are not known up front, and the transaction is only impacted by counterparty performance conditions or both market conditions and counterparty performance conditions, the equity instruments shall be measured at their then-current *best estimate of the possible outcomes. When no amount within a range can be deemed a better estimate, then the midpoint of the range shall be used.*

Measurement at the Measurement Date – Transactions Involve Only Market Conditions

131. The quantity or terms of an equity instrument may be dependent only on market conditions. If, on the measurement date, the quantity or any of the terms of the equity instruments are dependent on the achievement of market conditions, then the issuer shall use the fair value of the equity instruments for recognition purposes. That fair value shall be calculated as the fair value of the equity instruments without regard to the market condition plus the fair value of the issuer's commitment to change the quantity or terms of the equity instruments based on whether the market condition is met.

132. As it relates to a grantee, if on the measurement date the quantity or any of the terms of the equity instrument are dependent on the achievement of a market condition, then the grantee shall measure revenue based on the fair value of the equity instruments inclusive of the adjustment provisions. That fair value would be calculated as the fair value of the equity instruments without regard to the market condition plus the fair value of the commitment to change the quantity or terms of the equity instruments if the market condition is met. That is, the existence of a market condition that, if achieved, results in an adjustment to an equity instrument generally affects the value of the instrument. Pricing models have been adapted to value many of those path-dependent equity instruments.

133. The quantity or terms of an equity instrument may be dependent on counterparty performance conditions. If, on the measurement date, the quantity or any of the terms of the equity instruments are dependent on the achievement of counterparty performance conditions that, based on the different possible outcomes, result in a range of aggregate fair values for the equity instruments as of that date, then the issuer should utilize the *best estimate* (that is, the variable terms times the applicable number of equity instruments) amount within that range for recognition purposes. *When no amount within the range can be deemed a better estimate, then the midpoint of the range shall be used*. The amount may be zero *only if zero is determined to be the best estimate*. This guidance also applies if the quantity or terms of an equity instrument is dependent on both market conditions and counterparty performance conditions.

Subsequent Measurement

134. After the issuer measures the then-current fair value of the issuer's commitment related to the market condition as described in paragraph 131, the issuer shall, to the extent necessary, recognize and

classify future changes in the fair value of this commitment in accordance with any relevant accounting guidance on financial instruments.

135. Paragraph 133 provides measurement date guidance on the measurement of transactions that involve counterparty performance conditions. As each quantity and term become known and until all the quantities and terms that stem from the counterparty's performance become known, the best estimate or midpoint aggregate fair value measured pursuant to the guidance in that paragraph shall be adjusted, to reflect additional cost of the transaction, using the modification accounting methodology described in paragraphs 72-73. That is, the adjustment shall be measured at the date of the revision of the quantity or terms of the equity instruments as the difference between the then-current fair value of the revised instruments utilizing the then-known quantity or term and the then-current fair value of the old equity instruments immediately before the quantity or term becomes known. The then-current fair value is calculated using the assumptions that result in the *best estimate or midpoint* aggregate fair value (in accordance with paragraph 133) if the quantity or any other terms remain unknown.

136. Paragraph 133 also provides measurement date guidance on the measurement of transactions that involve both market conditions and counterparty performance conditions. Through the date the last performance-related condition is resolved, the issuer shall apply modification accounting (paragraphs 72-73) for the resolution of both counterparty performance conditions and market conditions. If, at the time the last counterparty performance-related condition is resolved, any market conditions remain, then the issuer shall measure the then-current fair value of the issuer's commitment to issue additional equity instruments or change the terms of the equity instruments based on whether the market condition is met. This measured amount is an additional cost of the transaction. After the issuer measures the then-current fair value of the issuer's commitment related to the market condition, the issuer shall, to the extent necessary, recognize and classify future changes in the fair value of this commitment in accordance with any relevant accounting literature on financial instruments.

137. Paragraph 128 addresses the situation in which an entity grants fully vested, nonforfeitable equity instruments with terms that provide for potential acceleration of exercisability and establishes that the grantor shall measure the fair value of the equity instruments at the date of grant and shall recognize that measured cost in the same period(s) and in the same manner as if the grantor had paid cash. For these situations, if, after the arrangement date, the grantee performs as specified and exercisability is accelerated, the grantor shall record incremental cost measured at the date of the revision of the terms of the equity instruments (that is, the acceleration date) as the difference between the then-current fair value of the revised instruments utilizing the accelerated exercisability date and the then-current fair value of the old equity instruments immediately before exercisability is accelerated. If the only change in the terms of the equity instruments is the acceleration of exercisability, the application of this methodology will only result in a significant additional charge if the expected dividend on the underlying instrument exceeds the sum of the effect of discounting the exercise price and the loss of time value (exclusive of the effect of discounting the exercise price) resulting from the early exercise of the equity instrument.

Subsequent Measurement – Grantee Accounting

138. A grantee may be party to an arrangement in which the terms of the equity instruments are subject to adjustment after the measurement date. Paragraphs 139-140 address transactions in which any of the terms of the equity instruments are subject to adjustment after the measurement date (that is, the terms of the equity instrument are subject to adjustment based on performance above the level committed to in a performance commitment, performance after the instrument is earned, or market conditions) and how the grantee shall account for an increase in fair value as a result of an adjustment (upon resolution of the contingency after the measurement date) as revenue.

139. If, on the measurement date, the quantity or any of the terms of the equity instruments are dependent on the achievement of grantee performance conditions (beyond those conditions for which a performance commitment exists), then changes in fair value of the equity instrument that result from an

adjustment to the instrument upon the achievement of a performance condition shall be measured as additional revenue from the transaction using a methodology consistent with modification accounting described in paragraphs 72-73. That is, the adjustment shall be measured at the date of the revision of the quantity or terms of the equity instrument as the difference between the then-current fair value of the revised instruments utilizing the then-known quantity and terms and the then-current fair value of the old equity instruments immediately before the adjustment.

140. Changes in fair value of the equity instruments after the measurement date unrelated to the achievement of performance conditions shall be accounted for in accordance with any relevant guidance on the accounting and reporting for investments in equity instruments.

Disclosures - Non-Employee Share Based Payment

141. An entity (grantor) that acquires goods or services other than employee services in share-based payment transactions shall provide disclosures similar to those required by paragraphs 103-104 to the extent that those disclosures are important to an understanding of the effects of those transactions on the financial statements. These disclosures, if applicable, are for annual audited statutory financial statements only.

142. An entity (grantee) shall disclose, in each period's financial statements, the amount of gross operating revenue recognized as a result of nonmonetary transactions addressed within this statement. These disclosures, if applicable, are for annual audited statutory financial statements only.

Relevant Literature

~~115.~~143. This statement adopts, with modification, GAAP guidance regarding stock options and stock purchase plans reflected in *Topic 718: Compensation – Stock Compensation, as amended by ASU 2010-13, Compensation – Stock Compensation (Topic 18): Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Current of the Market in Which the Underlying Equity Security Trades*, with the exception of FASB Codification *Subtopic 718-40: Employee Stock Ownership Plans*. Statutory guidance on employee stock ownership plans is provided in *SSAP No. 12—Employee Stock Ownership Plans*. This adoption with modification includes the related implementation guidance reflected within the FASB Codification Topic 718, not reflected within this standard. Modifications to the adopted GAAP guidance are as follows:

a. GAAP references are revised to reference applicable statutory accounting guidance;

b. GAAP reporting line items (either explicitly provided in the statement or adopted by reference – such as the GAAP implementation guidance) shall be replaced to reference applicable statutory annual statement line items. (For example, GAAP references to "other comprehensive income" shall be reflected within "Surplus - Unassigned Funds").

c. GAAP guidance to calculate earnings per share is not applicable to statutory accounting and has not been included within the statement.

d. GAAP effective date and transition, and transition disclosures have not been incorporated. Reporting entities shall follow the effective date and transition elements provided within this statement.

e. Inclusion of guidance specific to statutory for consolidated/holding company plans.

144. This statement adopts, with modification, GAAP guidance regarding the exchange of equity instruments for goods or services with non-employees as reflected *in Subtopic 505-50 – Equity, Equity-Payments to Non-Employees*. Modifications to this adopted GAAP guidance are as follows:

a. Prepaid assets are nonadmitted.

b. Costs for goods and services shall be recognized when the goods or services are received consistent with other statutory accounting principles.

c. Minimum value method for determining fair value is rejected for all entities.

d. Estimates of expected costs for the exchange of equity instruments dependent on market conditions or performance obligations shall be determined based on the best estimate of fair values. If a better estimate cannot be determined, then the midpoint (rather than the lowest amount) of aggregate fair values within the range shall be used.

e. GAAP references are revised to reference applicable statutory accounting guidance.

~~116.~~145. The adoption, with modification, of FASB Codification Topic 718 and Subtopic 505-50 detailed in paragraphs ~~115~~143-144 also reflects adoption, with modification, of the following pre-codification GAAP standards:

a. *FAS 123R, Share-Based Payment* (FAS 123R);

b. *FAS 150, Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity* (FAS 150) – (Adopted only to the extent referenced in FAS 123R for classifying instruments as equity or liability for application in this statement. Adopted guidance is reflected in Appendix A);

c. *FASB Staff Position FAS 123(R)-1: Classification and Measurement of Freestanding Financial Instruments Originally issued in Exchange for Employee Services under FASB Statement No. 123(R)* (FAS 123R-1);

d. *FASB Staff Position (FSP) FAS 123(R)-2: Practical Accommodation to the Application of Grant Date as Defined in FASB Statement No. 123(R)* (FSP FAS 123R-2);

e. *FASB Staff Position (FSP) FAS123(R)-4: Classification of Options and Similar Instruments Issued as Employee Compensation That Allow for Cash Settlement upon the Occurrence of a Contingent Event* (FSP FAS 123R-4);

f. *FASB Staff Position (FSP) FAS 123(R)-5: Amendment of FASB Staff Position FAS 123R-1* (FSP FAS 123R-5);

g. *FASB Staff Position (FSP) FAS 123(R)-6: Technical Corrections of FASB Statement No. 123(R)* (FSP FAS 123R-6);

h. *FASB Emerging Issues Task Force 96-18: Accounting for Equity Instruments That are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling Goods or Services.*

~~h.~~i. *FASB Emerging Issues Task Force 97-14: Accounting for Deferred Compensation Arrangements Where Amounts Earned Are Held in a Rabbi Trust and Invested* (EITF 97-14);

j. *FASB Emerging Issues Task Force 00-08: Accounting by a Grantee for an Equity Instrument to Be Received in Conjunction with Providing Goods or Services.*

~~i.~~k. *FASB Emerging Issues Task Force 00-16: Recognition and Measurement of Employer Payroll Taxes on Employee Stock-Based Compensation* (EITF 00-16);~~ and~~

l. *FASB Emerging Issues Task Force 00-18: Accounting Recognition for Certain Transactions Involving Equity Instruments Granted to Other Than Employees*; and~~.~~

~~j.~~m. *FASB Technical Bulletin 97-01, Accounting under Statement 123 for Certain Employee Stock Purchase Plans with a Look-Back Option* (TB 97-01).

~~117.~~146. The adoption, with modification of FASB Codification Topic 718 in this statement reflects rejection of the following pre-codification GAAP standards:

a. *FASB Staff Position (FSP) FAS 123(R)-3: Transition Election Related to Accounting for the Tax Effects of Share-Based Payment Awards* (FSP FAS 123R-3); and

b. *FASB Staff Position (FSP) EITF 03-6-1; Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities* (FSP EITF 03-6-1),.

Effective Date and Transition

~~118.~~147. This statement shall be effective prospectively (paragraph 119) for years beginning January 1, 2013, with interim and annual financial reporting thereafter. The cumulative effect of initially applying this statement, if any, shall be recognized as of the required effective date as a change in accounting principle under SSAP No. 3. Early adoption is permitted for December 31, 2012, financial statements, with interim and annual reporting thereafter.

~~119.~~148. Reporting entities with existing share-based payment instruments that applied the guidance contained in *SSAP No. 13—Stock Options and Stock Purchase Plans* (SSAP No. 13) shall apply the requirements of the adopted SSAP No. 104 prospectively to new awards and to awards modified, repurchased, or cancelled after the required effective date. Those reporting entities shall continue to account for any portion of awards outstanding at the date of initial application using the accounting principles originally applied to those awards (SSAP No. 13).

149. The substantive revisions to this statement to incorporate guidance for share-based payment transactions for non-employees, reflected predominantly in paragraphs 115-142, are effective prospectively initially for years ending December 31, 2014. The cumulative effect of initially applying this statement, if any, shall be recognized as of the required effective date as a change in accounting principle under *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3).

APPENDIX A: Classification Criteria: Liability or Equity

Classification Criteria

1. As detailed in paragraph 14 of the statement, an entity shall apply the classification criteria detailed in paragraphs 14-27 in the statement, as they are effective at the reporting date, in determining whether to classify as a liability a freestanding financial instrument given to an employee in a share-based payment transaction.

2. The guidance in this Section shall be applied to a freestanding financial instrument in its entirety. Any nonsubstantive or minimal features shall be disregarded in applying the classification provisions of this Section. Judgment, based on consideration of all the terms of an instrument and other relevant facts and circumstances, is necessary to distinguish substantive, nonminimal features from nonsubstantive or minimal features.

Mandatorily Redeemable Financial Instruments

3. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the reporting entity.

4. A financial instrument that embodies a conditional obligation to redeem the instrument by transferring assets upon an event not certain to occur becomes mandatorily redeemable if that event occurs, the condition is resolved, or the event becomes certain to occur.

5. In determining if an instrument is mandatorily redeemable, all terms within a redeemable instrument shall be considered. The following items do not affect the classification of a mandatorily redeemable financial instrument as a liability:

a. A term extension option

b. A provision that defers redemption until a specified liquidity level is reached

c. A similar provision that may delay or accelerate the timing of a mandatory redemption.

6. If a financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument in this statement. However, that financial instrument would be assessed at each reporting period to determine whether circumstances have changed such that the instrument now meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument is reclassified as a liability.

Obligations to Repurchase Issuer's Equity Shares by Transferring Assets

7. An entity shall classify as a liability (or an asset in some circumstances) any financial instrument, other than an outstanding share, that, at inception, has both of the following characteristics:

a. It embodies an obligation to repurchase the issuer's equity shares, or is indexed to such an obligation, and~~.~~

b. It requires or may require the issuer to settle the obligation by transferring assets.

8. In this statement, "indexed to" is used interchangeably with "based on variations in the fair value of." The phrase "requires or may require" encompasses instruments that either conditionally or

unconditionally obligate the issuer to transfer assets. If the obligation is conditional, the number of conditions leading up to the transfer of assets is irrelevant.

9. Examples of financial instruments that meet the criteria in paragraph 7 of Appendix A include forward purchase contracts or written put options on the issuer's equity shares that are to be physically settled or net cash settled.

10. All obligations that permit the holder to require the issuer to transfer assets result in liabilities, regardless of whether the settlement alternatives have the potential to differ.

11. Certain financial instruments that embody obligations that are liabilities within the scope of this statement also may contain characteristics of assets but be reported as single items. Some examples include the following:

a. Net-cash-settled or net-share-settled forward purchase contracts.

b. Certain combined options to repurchase the issuer's shares.

Those instruments are classified as assets or liabilities initially or subsequently depending on the instrument's fair value on the reporting date.

12. An instrument that requires the issuer to settle its obligation by issuing another instrument (for example, a note payable in cash) ultimately requires settlement by a transfer of assets, accordingly:

a. When applying paragraphs 7-11 of Appendix A, this also would apply for an instrument settled with another instrument that ultimately may require settlement by a transfer of assets (warrants for puttable shares).

b. It is clear that a warrant for mandatorily redeemable shares would be a liability under this statement.

Certain Obligations to Issue a Variable Number of Shares

13. A financial instrument that embodies an unconditional obligation, or a financial instrument other than an outstanding share that embodies a conditional obligation, that the issuer must or may settle by issuing a variable number of its equity shares shall be classified as a liability (or an asset in some circumstances) if, at inception, the monetary value of the obligation is based solely or predominantly on any one of the following:

a. A fixed monetary amount known at inception (for example, a payable settleable with a variable number of the issuer's equity shares),

b. Variations in something other than the fair value of the issuer's equity shares (for example, a financial instrument indexed to the Standard and Poor's S&P 500 Index and settleable with a variable number of the issuer's equity shares), or

c. Variations inversely related to changes in the fair value of the issuer's equity shares (for example, a written put option that could be net share settled).

Prohibition on Combining Freestanding Financial Instruments

14. A freestanding financial instrument that is within the scope of this statement shall not be combined with another freestanding financial instrument in applying paragraphs 3-13 of Appendix A. For example, a freestanding written put option that is classified as a liability under this statement shall not be combined with an outstanding equity share.

Distinguishing Liability from Equity – Scope and Scope Exclusions

15. The guidance in paragraphs 14-27 of this statement applies to any freestanding financial instrument, including one that has any of the following attributes:

a. Comprises more than one option or forward contract, or

b. Has characteristics of both a liability and equity and, in some circumstances, also has characteristics of an asset (for example, a forward contract to purchase the issuer's equity shares that is to be net cash settled). Accordingly, this statement does not address an instrument that has only characteristics of an asset.

For example, an instrument that consists of a written put option for an issuer's equity shares and a purchased call option and nothing else is a freestanding financial instrument. That freestanding financial instrument embodies an obligation to repurchase the issuer's equity shares and is subject to the requirements of this statement.

APPENDIX B: Disclosure Information

1. The following list indicates the minimum information needed to achieve the objectives in paragraph 103 and 141 and illustrates how the disclosure requirements might be satisfied. In some circumstances, an entity may need to disclose information beyond the following to achieve the disclosure objectives:

a. A description of the share-based payment arrangement(s), including the general terms of awards under the arrangement(s), such as:

i. The requisite service period(s) and any other substantive conditions (including those related to vesting)

ii. The maximum contractual term of equity (or liability) share options or similar instruments

iii. The number of shares authorized for awards of equity share options or other equity instruments.

b. The method it uses for measuring compensation cost from share-based payment arrangements with employees.

c. For the most recent year for which an income statement is provided, both of the following:

i. The number and weighted-average exercise prices (or conversion ratios) for each of the following groups of share options (or share units):

(a) Those outstanding at the beginning of the year

(b) Those outstanding at the end of the year

(c) Those exercisable or convertible at the end of the year

(d) Those that during the year were:

(1) Granted

(2) Exercised or converted

(3) Forfeited

(4) Expired.

ii. The number and weighted-average grant-date fair value (or calculated value for an entity that uses that method or intrinsic value for awards measured pursuant to paragraph 49) of equity instruments not specified in (c)(1), for all of the following groups of equity instruments:

(a) Those nonvested at the beginning of the year

(b) Those nonvested at the end of the year

(c) Those that during the year were:

(1) Granted

(2) Vested

(3) Forfeited.

d. For each year for which an income statement is provided, both of the following:

i. The weighted-average grant-date fair value (or calculated value for an entity that uses that method or intrinsic value for awards measured at that value pursuant to paragraphs 49-50) of equity options or other equity instruments granted during the year, and

ii. The total intrinsic value of options exercised (or share units converted), share-based liabilities paid, and the total fair value of shares vested during the year.

e. For fully vested share options (or share units) and share options expected to vest at the date of the latest statement of financial position, both of the following:

i. The number, weighted-average exercise price (or conversion ratio), aggregate intrinsic value, and weighted-average remaining contractual term of options (or share units) outstanding, and

ii. The number, weighted-average exercise price (or conversion ratio), aggregate intrinsic value, and weighted-average remaining contractual term of options (or share units) currently exercisable (or convertible).

f. For each year for which an income statement is presented, both of the following (An entity that uses the intrinsic value method pursuant to paragraphs 49-50 is not required to disclose the following information for awards accounted for under that method):

i. A description of the method used during the year to estimate the fair value (or calculated value) of awards under share-based payment arrangements, and

ii. A description of the significant assumptions used during the year to estimate the fair value (or calculated value) of share-based compensation awards, including (if applicable):

(a) Expected term of share options and similar instruments, including a discussion of the method used to incorporate the contractual term of the instruments and employees' expected exercise and postvesting employment termination behavior into the fair value (or calculated value) of the instrument.

(b) Expected volatility of the entity's shares and the method used to estimate it. An entity that uses a method that employs different volatilities during the contractual term shall disclose the range of expected volatilities used and the weighted-average expected volatility. An entity that uses the calculated value method shall disclose the reasons why it is not practicable for it to estimate the expected volatility of its share price, the appropriate industry sector index that it has selected, the reasons for selecting that particular index, and how it has calculated historical volatility using that index.

(c) Expected dividends. An entity that uses a method that employs different dividend rates during the contractual term shall disclose the range of expected dividends used and the weighted-average expected dividends.

(d) Risk-free rate(s). An entity that uses a method that employs different risk-free rates shall disclose the range of risk-free rates used.

(e) Discount for post-vesting restrictions and the method for estimating it.

g. An entity that grants equity or liability instruments under multiple share-based payment arrangements with employees shall provide the information specified in paragraph (a) through (f) separately for different types of awards to the extent that the differences in the characteristics of the awards make separate disclosure important to an understanding of the entity's use of share-based compensation. For example, separate disclosure of weighted-average exercise prices (or conversion ratios) at the end of the year for options (or share units) with a fixed exercise price (or conversion ratio) and those with an indexed exercise price (or conversion ratio) could be important. It also could be important to segregate the number of options (or share units) not yet exercisable into those that will become exercisable (or convertible) based solely on fulfilling a service condition and those for which a performance condition must be met for the options (share units) to become exercisable (convertible). It could be equally important to provide separate disclosures for awards that are classified as equity and those classified as liabilities. In addition, an entity that has multiple share-based payment arrangements with employees shall disclose information separately for different types of awards under those arrangements to the extent that differences in the characteristics of the awards make separate disclosure important to an understanding of the entity's use of share-based compensation.

h. For each year for which an income statement is presented, both of the following:

i. Total compensation cost for share-based payment arrangements

(a) Recognized in income as well as the total recognized tax benefit related thereto

(b) Capitalized as part of the cost of an asset.

ii. A description of significant modifications, including:

(a) The terms of the modifications,

(b) The number of employees affected,

(c) The total incremental compensation cost resulting from the modifications.

i. As of the latest balance sheet date presented, the total compensation cost related to nonvested awards not yet recognized and the weighted-average period over which it is expected to be recognized.

j. If not separately disclosed elsewhere, the amount of cash received from exercise of share options and similar instruments granted under share-based payment arrangements and the tax benefit realized from stock options exercised during the annual period.

k. If not separately disclosed elsewhere, the amount of cash used to settle equity instruments granted under share-based payment arrangements.

l. A description of the entity's policy, if any, for issuing shares upon share option exercise (or share unit conversion), including the source of those shares (that is, new shares or treasury shares). If as a result of its policy, an entity expects to repurchase shares in the following annual period, the entity shall disclose an estimate of the amount (or a range, if more appropriate) of shares to be repurchased during that period.

2. In addition to the information required by this statement, an entity may disclose supplemental information that it believes would be useful to investors and creditors, such as a range of values calculated on the basis of different assumptions, provided that the supplemental information is reasonable and does not lessen the prominence and credibility of the information required by this statement. The alternative assumptions shall be described to enable users of the financial statements to understand the basis for the supplemental information.

Issue Paper No. 147

Working Capital Finance Investments

STATUS
Finalized December 15, 2013

Original SSAP and Current Authoritative Guidance: SSAP No. 105

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper establishes statutory accounting principles for working capital finance investments held by reporting entities. This issue paper amends *SSAP No. 20—Nonadmitted Assets* (SSAP No. 20) to allow working capital finance investments as admitted assets to the extent they conform to the requirements of this issue paper.

SUMMARY CONCLUSION

2. Working capital finance investments represent a confirmed short-term obligation[1] to pay a specified amount owed by one party (the obligor) to another (typically a supplier of goods), generated as a part of a working capital finance investment program currently designated by the NAIC Securities Valuation Office. Pursuant to the working capital finance investment program, this short-term obligation has been transferred by the entity entitled to payment (typically a supplier of goods) to a third party investor.

3. Working capital finance investments held by a reporting entity represent a right for the reporting entity to receive future payment. This issue paper provides accounting and reporting guidelines for the right to receive payment under working capital finance programs that meet particular criteria working capital finance program that meet particular criteria.

Working Capital Finance Program - Definitions and Conditions

4. A "working capital finance program" is an open account program under which an investor may purchase interests, or evidence thereof, in commercial non-insurance receivables. A working capital finance program is created for the benefit of a commercial investment-grade obligor and its suppliers of goods or services, and facilitated by a finance agent.

5. A working capital finance program transfers a right to payment to an investor from a short-term obligation and arises from transactions among:

a. a buyer of goods or services that becomes an obligor to the supplier of goods or services,

b. the supplier(s) of those goods or services,

c. a finance agent , and

d. an investor.

[1] All references to short-term obligations in this issue paper refer to obligations not exceeding one year.

6. A "working capital finance investment" is an interest in payment(s) from a confirmed supplier receivable issued pursuant to a working capital finance program. The payment (maturity) date must not exceed one year from the date of invoice from the supplier to the obligor. This investment is created when the investor purchases from a working capital finance program that is currently designated as NAIC "1" or "2" by the NAIC Securities Valuation Office, any of the following:

a. One or more confirmed supplier receivables;

b. in case of a participation, a participation interest in one or more confirmed supplier receivables issued by the finance agent or lead lender holding confirmed supplier receivables; or

c. a certificate, note or other interest manifestation, documented in a way that is verifiable by regulators, representing a legally enforceable interest in a right to payment from a trust, other special purpose entity or pool holding confirmed supplier receivables.

7. "Obligor" is the party that purchases the goods or services that generates the original supplier receivable (and payable for the Obligor). The obligor must be a single entity, which has an NAIC designation of "1" or "2" or a Credit Rating Provider equivalent. The obligor must confirm the supplier receivable described in paragraph 11 as described in the confirmation process in paragraphs 12-14.

8. "Supplier" is the party that sells the goods or services to the obligor. The supplier sells the confirmed supplier receivables in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office at a price agreed to by the finance agent and/or investor.

9. "Investor" is the party purchasing a working capital finance investment in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office.

10. The "finance agent" is a bank, financial institution, other financial intermediary, or service provider that facilitates the working capital finance program, arranges the sale, assignment or transfer of the confirmed supplier receivable to the investor for a fee and administers the payment mechanism. In the case of participation, the finance agent must inform the reporting entity investor of a default or event of default as soon as it becomes aware of such default or event of default. For the working capital finance program to qualify under this SSAP, the finance agent must meet the requirements of either paragraph 10.a. or 10.b.:

a. The finance agent is directly regulated by, or falls under the supervision of, a financial regulator of its domiciliary country provided that such country appears on the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* List of Jurisdictions Eligible for Netting and that the Securities Valuation Office determines that the regulator is the functional equivalent of the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, or the Federal Deposit Insurance Corporation; or

b. Payments from the obligor must 1) be paid directly to the reporting entity (investor) and cannot flow through the finance agent and 2) there can be no commingling of payments or assets with those of the obligor, supplier, servicer or trust administrator or other investors.

11. A "confirmed supplier receivable" is a first priority perfected security interest or right to payment a monetary obligation from the obligor arising from the sale of goods or services from the supplier to the obligor the payment of which has been confirmed by the obligor committing and stating that the obligations under the agreement and any payment shall not be affected by the invalidity, unenforceability,

existence, performance or non-performance of the underlying commercial trade transaction or any related contract or undertaking nor that it will not protest, delay, or deny, nor offer nor assert any defenses, personal or otherwise, against payment to the supplier or any party taking claims, interests, or rights to payments made by the supplier.

a. The confirmed supplier receivable must be sold, assigned or otherwise transferred in a manner that results in an absolute, irrevocable and legally enforceable obligation that has been confirmed by the Obligor.

b. In the case of a participation, the certificates or other evidence of participation provide an absolute, irrevocable, and legally enforceable obligation of the finance agent or holder of the confirmed supplier receivable to pay to the reporting entity investor all of the amounts due to it under the confirmed supplier receivable, without reduction or delay arising from any claims that the finance agent may have against the reporting entity investor. The reporting entity investor's ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to the discretion of the finance agent or other lenders or investors. The reporting entity investor's ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to, other than during a cure period not to exceed thirty days, the discretion of the finance agent or other lenders or investors.

Confirmation Process

12. In the case of a purchase, the investor shall verify, prior to the sale that the obligor has confirmed the respective amounts, payment dates and related invoice numbers' specified dates and has waived all defenses to payment. in the case of a participation, the finance agent must verify that the obligor has confirmed the respective amounts, payment dates and related invoice numbers' specified due dates, and has waived all defenses to payment in accordance with the confirmation process.

13. The obligor must commit and state that upon confirmation of a supplier receivable it is obligated to pay to the investor, the finance agent, or any third party acting as agent or trustee for the investor, a sum equal to the full amount of that confirmed supplier receivable(s) on a date certain stated in the confirmation and that it waives any right of setoff or other defenses to avoid or delay the full and timely payment of such confirmed supplier receivable. The documents establishing the working capital finance program or the confirmation must state and confirm that the obligation to pay must be independent of any other contracts or claims that might be raised in defense arising from any transaction financed in connection with the WCFP, the confirmed supplier receivable, or any other courses of performance or courses of dealing with the supplier.

14. In the case of participation, the investor must certify that it has a commercially reasonable belief that its participation interest meets the Uniform Commercial Code's standards for creating and preserving first priority security interests in the payments due and in the confirmed supplier receivables. Commercially reasonable belief shall mean the SVO deems the investor's belief reasonable in light of the systems, policies, or practices commonly recognized in the field of investing in participations. The investor must be able to demonstrate to a regulator or to the SVO, upon either's request, the basis for its commercially reasonable belief that the WCFP creates and preserves the investor's ability to enforce a first priority perfected security interest in the confirmed supplier receivables.

15. In the case of a certificate, note, or other manifestation, capable of verification, representing a right to payment from a trust, other special purpose entity, or special purpose pool holding confirmed supplier receivables, the investor must certify that it has a commercially reasonable belief that the documents establishing and governing the working capital finance program create and preserve interests in the confirmed supplier receivables capable of being enforced by the trustee or other entity holding confirmed supplier receivables as first priority perfected security interests under the Uniform Commercial

Code. The investor must be able to demonstrate the basis for such belief to a regulator or to the SVO upon either's request. Commercially reasonable belief shall mean the SVO deems the investor's belief reasonable in light of the systems, policies, and practices commonly recognized in the field of investing in securitizations, loan backed, structured, or trust-issued securities.

Program Requirements

16. The Working Capital Finance Program investor must provide in its annual filing with the Securities Valuation Office an annual audit of the consolidated financial statements of the group of which the finance agent is part, which does not report any qualifications related to servicing, and one of the following:

a. An annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16, reporting on controls at a service organization related to the administration of the investment; or

b. An annual audit of the internal controls of the consolidated group of which the finance agent is part, which does not note any material weaknesses related to servicing.

The NAIC Securities Valuation Office would review the materiality of the report findings in making their determination of the assignment of a designation.

17. If the credit rating of the working capital finance program or obligor falls to non-investment grade (below the equivalent of NAIC designation "1" or "2"), the reporting entity shall nonadmit the working capital finance investments obtained under the related working capital finance program and/or the related obligor. Due to the short-term nature of these investments, once an investment is nonadmitted due to the credit rating of the working capital finance program or the obligor, those investments will continue to be nonadmitted.

18. Reporting entity investors must have the ability to monitor the working capital finance program and the credit-related activities of the obligor. Reporting entity investors must provide information as requested to the state of domicile indicating that they have the ability to monitor on an ongoing basis the activities of the working capital finance program. Initial permission to invest in Working Capital Finance Investment Programs may be required from the domiciliary commissioner.

19. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that if a dispute arises among any of the parties under any of the contracts or agreements that are a part of or that together constitute the working capital finance program, each party agrees that the dispute will be submitted to a court of competent jurisdiction in the United States or a constituent state thereof or of an alternative dispute resolution process recognized thereby. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that any dispute arising under any of the contracts or agreements that are a part of or that together constitute the working capital finance program must be resolved pursuant to the laws of the United States or a constituent state thereof that address the substance of the dispute but excluding those laws addressing conflicts of law.

Exclusions

20. A working capital finance investment excludes any receivables financed through:

a. Factoring: the purchase of receivables in bulk from a supplier where the receivables represent the payment obligations of potentially thousands of buyers to a single supplier, in which the buyers have no relationship with or contractual obligation to pay the factor and retain all legal defenses to payment they may have against the supplier;

b. Forfaiting: the purchase of one or a series of receivables from exporters by a forfaiter to enable the exporter (seller) to finance a commercial transaction with a buyer in which the Obligor has no relationship with or contractual obligation to pay the forfaiter and retains all legal defenses to pay it may have against the seller;

c. Invoice discounting: the advancement of funds by a finance company to a business entity with the funds advanced limited to a defined percentage of the business entity's eligible and outstanding receivables.

21. Eligible Confirmed Supplier Receivables must not:

a. Include insurance or insurance related assets;

b. Be impaired or in default at the time of purchase;

c. Have a payment (maturity) date longer than one year from the date of the invoice from the Supplier to the Obligor giving rise to the confirmed supplier receivable, and the maturity date must not be subject to change or rolling; nor

d. Include any receivable of any parent or affiliate of the reporting entity investor, and neither the Obligor nor any Supplier may be affiliated with the reporting entity investor. Working Capital Finance Investments that have obligors or vendors that are affiliated with the investor are ineligible, and therefore, nonadmitted assets.

ACCOUNTING AND REPORTING

22. The right to receive payment generated by a working capital finance investment issued under a working capital finance program is considered to meet the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets*, and is an admitted asset to the extent the investment conforms to the requirements of this issue paper and the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*. For programs that comply with all of these elements, working capital finance investments shall be valued and reported in accordance with this issue paper, the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, and the designation assigned in the NAIC Valuations of Securities product. Programs that do not comply with the elements in this Issue Paper are nonadmitted. Working Capital Finance Investments are reported as other invested assets in the financial statements.

23. A Working Capital Finance Investment shall be recorded on the trade date. At acquisition, the Working Capital Finance Investment shall be initially reported at cost, excluding brokerage and other related fees, and all other costs (internal costs, or costs paid for origination, purchase or commitment to purchase such investments), which shall be expensed as incurred.

24. After initial acquisition, the Working Capital Finance Investment shall be reported at amortized cost until the specified maturity date, unless the investment, or a portion thereof, is deemed to be uncollectible or when an other-than-temporary impairment has occurred. In the event that a working capital finance investment is purchased by a reporting entity investor at a premium (amount to be received by the entity under the confirmed supplier receivable is less than the price paid for the investment), the excess paid by the reporting entity investor in comparison to the amount receivable under the confirmed supplier receivable must be immediately expensed.

25. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses from working capital finance investments shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an IMR, realized gains and losses from working capital finance investments shall be reported as net realized capital gains or losses in the statement of income.

For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

26. A Working Capital Finance Investment may provide for a prepayment penalty or acceleration fee in the event the working capital finance investment is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

27. *SSAP No. 34—Investment Income Due and Accrued* shall be followed for determining and recording investment income earned on working capital finance investments acquired at a discount. In accordance with *SSAP No. 34—Investment Income Due and Accrued*, investment income shall be reduced for amounts that have been determined to be uncollectible, however amounts more than 15 days overdue are nonadmitted.

Default

28. A working capital finance investment payment that is uncollected by the reporting entity within fifteen days after the due date shall be considered in default and nonadmitted. If the reporting entity has any other working capital finance investment assets from the same defaulting counterparty, all other working capital finance investments from that counterparty shall be nonadmitted. All working capital finance investments from a counterparty identified in default shall be evaluated for impairment.

Impairment

29. An other-than-temporary impairment INT 06-07 shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a confirmed supplier receivable, including the payment on the established due date. Pursuant to this guidance, assessment of other-than-temporary impairment shall include an evaluation of the financial condition and short-term prospects of the obligor. If it is determined that a decline in the fair value of a working capital finance investment below book/adjusted carrying value is due to an other-than-temporary impairment, an impairment loss shall be recognized as a realized loss equal to the entire difference between the working capital finance investment's carrying value and fair value as of the reporting period for which the assessment is made. Fair value shall be determined in accordance with *SSAP No. 100—Fair Value Measurements*, and reflect the price to sell the asset in an orderly market between market participants. As such, the fair value shall reflect the assumptions market participants will use in pricing the asset, including assumptions about risk.

30. For reporting entities required to maintain an AVR/IMR, the entire amount of the realized loss from the other-than temporary impairment shall be recorded through the AVR, in accordance with SSAP No. 7.

31. Upon recognition of an other-than-temporary impairment, the fair value of the working capital finance investment on the measurement date shall become the new cost basis of the working capital finance investment and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Once an investment is determined to be other-than-temporarily impaired, until all expected payments are received, the reporting entity must re-evaluate the investment quarterly and reassess fair value, with recognized realized losses for the difference between the book/adjusted carrying value and the current fair value. This process shall continue until either all expected payments are received, or the entity has recognized a realized loss for the entire uncollected carrying value.

Disclosures

32. The financial statements shall include the following disclosures:

a. Fair value in accordance with *SSAP No. 100—Fair Value Measurements*

b. Concentrations of credit risk in accordance with SSAP No. 27—*Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk* (SSAP No. 27) in the annual audited statutory financial reports only.

c. Information regarding the aggregate book/adjusted carrying value of working capital finance investment by designation including gross assets with nonadmitted and net admitted amounts annually. (Note that programs designated 3-6 are nonadmitted.)

	Gross Asset CY	Non-admitted Asset CY	Net Admitted Asset CY
WCFI Designation 1			
WCFI Designation 2			
WCFI Designation 3			
WCFI Designation 4			
WCFI Designation 5			
WCFI Designation 6			
Total			

d. Annual and quarterly information regarding the aggregate book/adjusted carrying value maturity distribution on the underlying working capital finance investments by the following categories: maturities up to 180 days and 181 to 365 days.

e. Any events of default of working capital finance investments during the reporting period.

33. Refer to the preamble for further discussion regarding disclosure requirements.

DISCUSSION

34. Bills receivable in general are an asset class that has been historically nonadmitted by statutory accounting. They were nonadmitted prior to codification and explicitly nonadmitted in *SSAP No. 20—Nonadmitted Assets*.

35. This work was originated by discussions with the Valuation of Securities (E) Task Force. In May 2011, the Statutory Accounting Principles (E) Working Group replied to the Valuation of Securities (E) Task Force regarding a current exposure they had to the *Purposes and Procedures of the Securities Valuation Office*. The Statutory Accounting Principles (E) Working Group indicated that such assets are nonadmitted by statutory accounting and that a more defined and structured program for working capital finance investments would be required before consideration for admitted asset status. The Working Group noted that because bills receivable are explicitly nonadmitted under statutory accounting, a robust discussion was needed.

Date: May 9, 2011
RE: SVO exposure draft of Working Capital Notes.

This memo is to provide brief formal comments on the exposure draft of proposed changes to the Purposes and Procedures Manual of the Securities Valuation Office for Working Capital Notes. It does not provide detailed comments on the proposed wording, at this time. The Statutory Accounting Principles Working Group is willing to hold meetings to learn more about the proposed new invested asset class which are based on bills receivable. Currently under *SSAP No. 20—Nonadmitted Assets* the following are nonadmitted assets.

4. Consistent with paragraph 2, the following assets shall be nonadmitted:

   b. Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Investments—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized as there are no underlying assets, which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations;

According to our preliminary understanding of the proposal, these Working Capital Notes would, in substance, be uncollateralized bills receivable, not for premium, and would be **nonadmitted** under current statutory accounting guidance. Any reporting entity currently investing in these as admitted assets, would need some type of state prescribed or permitted practice to be an admitted asset; this practice would be listed in the annual statement as part of note 1. Formal changes would be needed to the statutory accounting guidance before these could be considered admitted invested assets without a prescribed or permitted practice.

Because bills receivable are explicitly nonadmitted under statutory accounting, we believe a robust discussion is needed. The Working Group urges Valuation of Securities Task Force to delay the adoption of changes to the Purposes and Procedures Manual of the Securities Valuation Office until such time as a comprehensive discussion throughout the solvency framework can occur to fully review and address this proposed new invested asset class. We are also concerned about the potential to have the SVO assign NAIC designation (unless requested by a state) for what is ultimately a nonadmitted asset under the NAIC Accounting Practices and Procedures Manual.

The Statutory Accounting Principles Working Group is planning a call with the company to hear more about the proposed admitted invested assets in May. Because admitting a new invested asset class involves changes in valuation, accounting, reporting and risk based capital, we believe that it is preferable to have a comprehensive proposal submitted by industry to the multiple groups which would be impacted, similar to the type of multi-faceted proposal that was submitted for low income housing tax credits a few years ago. Historically, some of this work has been coordinated by the Invested Assets Working Group, and we would support a referral to that working group for a more robust discussion and coordination between the various relevant working groups and task forces of the proposed new invested assets. Regardless of the outcome of a referral, we urge that the proposed changes to the SVO P&P Manual be delayed until such time as the asset has been comprehensively addressed by Statutory Accounting Principles Working Group, Blanks Working Group and Capital Adequacy Task Force.

The Working Group stands ready to accept a comprehensive proposal on this topic from industry.

36. The Valuation of Securities (E) Task Force and the Invested Assets (E) Working Group both conducted calls on this issue in 2011 and 2012. In addition, the Statutory Accounting Principles (E) Working Group also received a presentation from a finance agent regarding their program.

37. In October 2012, a referral from the Valuation of Securities (E) Task Force recommended consideration of granting Securities Valuation Office designated programs admitted other invested assets status. The referral is excerpted in Appendix A. The referral was based on a New York proposal and also recommended annual statement Schedule BA treatment. If supported, changes will also need to be adopted into the *Purposes and Procedures Manual of the Securities Valuation Office*.

38. Some regulators continued to expressed concerns regarding the ability of smaller entities to monitor the investments in such programs on an ongoing basis. That concern was the basis of the recommendation reflected in the initial draft presented to the Working Group to have department of insurance approval.

39. The October 2012 referral incorporated a statutory accounting request to include information in the filing to the Securities Valuation Office that includes an annual audit of the consolidated financial statements of the finance agent which does not report any qualifications relating to servicing, and one of the following:

> a. An annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16, reporting on controls at a service organization related to the administration of the investment; or
>
> b. An annual audit of the internal controls of the consolidated group of which the finance agent is part, which does not note any material weaknesses related to servicing.

This request was to address internal control risk concerns with regard the program.

40. Capital Adequacy (E) Task Force has also determined a capital charge for the receivables.

RELEVANT STATUTORY ACCOUNTING

Statutory Accounting

41. *SSAP No. 20—Nonadmitted Assets*, paragraph 4.b. explicitly prohibited bills receivable as admitted assets:

> 4. Consistent with paragraph 2, the following assets shall be nonadmitted:
>
> > b. Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Investments—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized, as there are no underlying assets, which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations.

Effective Date and Transition

42. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and, therefore, the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years beginning on or after January 1, 2014. A change resulting from the adoption of the resulting SSAP shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3–Accounting Changes and Corrections of Errors*.

Amendment to SSAP No. 20—Nonadmitted Assets

43. Upon adoption of the statement related to this issue paper, *SSAP No. 20—Nonadmitted Assets* paragraph 4.b. is amended to allow the admission of working capital finance investments as follows:

> 4. Consistent with paragraph 2, the following assets shall be nonadmitted:
>
> > b. Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Investments—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized, as

there are no underlying assets, which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Receivables arising from working capital finance programs designated by the Securities Valuation Office are subject to the guidance in SSAP No. 105;

Appendix A: October 2012 Valuation of Securities Task Force Referral

During a conference call held on September 6, 2012, the Valuation of Securities (E) Task Force adopted a New York proposal (Attached) that would provide statutory accounting guidance for Working Capital Finance Investments (WCFI), described is the attachment. During the discussion held on September 6, the Task Force agreed to adopt and refer the proposal to the Statutory Accounting Principles (E) Working Group - so it can determine statutory accounting guidance; the Capital Adequacy (E) Task Force - so it can consider risk-based capital issues and the Blanks Working Group - so it could consider reporting and related issues.

We recommend that the Statutory Accounting Principles (E) Working Group adopt the proposed statutory accounting guidance. In addition, the Task Force recommends that the Capital Adequacy (E) Task Force consider that WCFIs must be preapproved by the SVO before an insurer can engage in them and that the SVO has developed a corporate methodology which would assign NAIC 1 or 2 Designations based on the credit risk associated with the corporate obligor, as it currently does for other bonds. The Task Force urges the Blanks (E) Working Group to consider the Task Force's opinion that WCFIs be reported on Schedule BA. The Task Force discussed the relative benefits between Schedule BA and DA and concluded that WCFIs should be reported as Other Invested Assets and therefore Schedule BA provides an enhanced disclosure framework deemed more appropriate for the investment.

It would be desirable to permit investments in WCFIs effective January 1, 2013. However, we recognize that the time remaining in this calendar year may not permit the Statutory Accounting Principles (E) Working Group, the Capital Adequacy (E) Task Force and the Blanks Working Group to finalize and implement regulatory instructions for this asset class. In that case, we would support the development of an interim process to permit insurers to purchase WCFIs beginning January 1, 2013.

NY Proposal:

Refer the language below, defining Working Capital Finance Investments, to Statutory Accounting Principles (E) Working Group, with a request for an amendment to SSAP No. 20 and additional SSAP guidance as necessary, if SAPWG determines that WCFIs should be admitted assets.

Background:

The SAPWG returned to VOS TF an earlier proposal and asked for additional criteria that would cover these investments to be added to that original proposal. The responsibility to develop the additional criteria was given to IAWG, which presented a list of criteria at the NAIC 2012 Spring Meeting.

This proposal on Working Capital Finance Investments and Working Capital Finance Arrangement incorporates, as appropriate, the criteria developed by the IAWG and those set forth in the SVO Staff Proposal ("Permit Working Capital Finance Notes to be Invested Assets". dated March 2, 2011) and adds certain criteria and controls to the requirements as necessary.

Changes to earlier language on WCFI/WCFA

This proposal:

- provides an alternative to the requirement that WCFIs are bought directly from the vendor;
- helps preserve Investors' interests by requiring first priority perfected security interests;
- only requires ledgers to be filed upon request (instead of continuously);

- permits participations;
- permits obligations arising from transactions outside of the United States;
- allows all insurers to invest in WCFI;
- allows affiliates of parties (e.g., vendors or Finance Agent) to the transaction to make transfers to the program;
- permits WCFI to be denominated in currencies other than USD;
- permits vendors and Obligors to be non-U.S. entities; and
- permits servicers and trust administrators to be entities subject to supervision by non-U.S. financial regulators.

Working Capital Finance Investment (WCFI)

Definition: Each investment in Confirmed Supplier Receivables (as defined below) under a program that is approved by the SVO as meeting the criteria specified in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office.*

A WCFI manifests a right to payment and arises from transactions among:

- a buyer of goods or services that becomes an obligor of a supplier of goods or services,
- the supplier/s of those goods or services,
- a financial intermediary, and
- an investor.

A WCFI represents the transfer of the right to payment from the supplier to the investor and confirms the investor's right to payment free of any holdback, delay, or other stoppage in payment arising from claims that the obligor might otherwise assert against the supplier.

The supplier and the financial intermediary negotiate the discount rate to be applied to the receivable.

The obligor, prior to or upon transfer to the investor or financial intermediary confirms its obligation to make payments due under the investment:

- the sum due on that receivable;
- the date on which payments under it are to be made; and
- free of any and all defenses to payment arising from claims that it otherwise assert against the supplier or anyone taking interests from the supplier.

The financial intermediary or the investor then pays the supplier in exchange for the confirmed receivable.

Only investments that are commercial non-insurance receivables, meet the criteria specified in the NAIC *Accounting Practices and Procedures Manual*, accord with all applicable Statutory Accounting Principles, that are not impaired or in default, and that have been issued by a program to which the SVO has assigned a NAIC designation of "1" or "2" may be considered to be eligible for admitted asset treatment.

Investments in Confirmed Supplier Receivables of obligors affiliated with the investor are ineligible, and therefore non-admitted, assets.

Working Capital Finance Arrangement (WCFA)

A Working Capital Finance Arrangement (WCFA) is an open account program under which an Investor may purchase interests, or evidence thereof, in commercial non-insurance receivables. A WFCA is created for the benefit of a commercial investment grade obligor and its suppliers of goods or services, and facilitated by a financial intermediary.

Under a WCFA, an Investor reviews individual supplier receivables or evidence of interests therein presented to it by either the obligor or supplier itself or an intervening financial intermediary and then exercises its discretion to purchase of finance, or refrain from purchasing or financing, the receivables.

All contracts or agreements that are a part of or that together constitute a WCFA must state expressly that if a dispute arises among any of the parties under of any of the contracts or agreements that are a part of or that together constitute the WCFA, each party agrees that the dispute will be submitted to a court of competent jurisdiction in the United States or a constituent state thereof or of an alternative dispute resolution process recognized thereby. All contracts or agreements that are a part of or that together constitute a WCFA must state expressly that any dispute arising under any of the contracts or agreements that are a part of or that together constitute the WCFA must be resolved pursuant to the laws of the United States or a constituent state thereof that address the substance of the dispute but excluding those laws addressing conflicts of law.

A WCFA must include the availability, from the servicer or another third party, of a detailed ledger recording details of each trade receivable purchased, including but not limited to the origination date, purchase date, confirmed payment date, actual dates when payments are received, face value and purchase cost. Upon request, the ledger must be submitted to the SVO or the regulator of the state of domicile of the Investor.

The Investor in a WCFA must have a reasonable belief, based on express representations and warranties, and must be able to demonstrate (through, for example, proof of funding, possession, the filing of UCC financing statements) to its regulators and the SVO upon request, that the holder in a WCFI under an approved WCFA has a first priority perfected security interest in the WCFI.

For WCFAs structured as sales, assignments, or transfers to the Investor, the Investor is considered to be the holder.

For WCFAs structured as participations where the Finance Agent is the payee of the confirmed supplier receivables, the Finance Agent is considered to be the holder.

For WCFAs structured as participations where each participant is a payee, the Investor is considered to be the holder.

For WCFAs where the WCFIs under the program are transferred to a trust or other legal structure, the trust or legal structure is considered to be the holder.

WCFI – Detailed Defined Terms

Working Capital Finance Investment (WCFI)

A Working Capital Finance Investment (WCFI) is an interest in a Confirmed Supplier Receivable issued pursuant to a WCFA. It is created when the Investor purchases from a WCFA that has been assigned a NAIC 1 or 2 designation:

- one or more Confirmed Supplier Receivables;
- in case of a participation, a participation certificate issued by the Finance Agent or lead; or

- in case of a securitization, a certificate or note representing an interest in and right to payment from a trust, other separate special purpose entity, or pool holding Confirmed Supplier Receivables.

Confirmed Supplier Receivables
A Confirmed Supplier Receivable is a first priority perfected security interest claim or right to payment of a monetary obligation from the Obligor arising from the sale of goods or services from the Supplier to the Obligor the payment of which the Obligor has confirmed by representing and warranting that it will not protest, delay, or deny, nor offer nor assert any defenses against, payment to the supplier or any party taking claim or right to payment from the supplier.

Once confirmed, a confirmed supplier receivables may be sold, assigned, or otherwise transferred by the Supplier to:

- the Investor; or
- a Finance Agent that:
  a. in turn resells, the rights as payee to the Investor or to a trust or other legal structure that is obligated to transfer payments received from the Obligor with respect to the confirmed supplier receivables to the Investor; or
  b. acts as a "lead" in a participation in which the Finance Agent is the payee under the WCFI and is obligated to transfer to the Investor, payments received from the Obligor with respect to the confirmed supplier receivables and without reduction for any reason other than those specifically identified in the WCFA and directly related to the WCFA program (e.g., there be no reduction for cross-default provisions under other arrangements between the Finance Agent and the Investor).

Eligible confirmed supplier receivables cannot include insurance or insurance related assets.

Confirmed supplier receivables are sold, assigned, or otherwise transferred under the terms of a WCFA individually from the Suppliers.

Confirmed supplier receivables must be sold, assigned, or otherwise transferred in a manner that results in an absolute, irrevocable and legally enforceable obligation that the Obligor pay the amount represented by the confirmed supplier receivables and provide the new owner or holder (Seller or Investor) with the full legal rights to the Obligor's payment and, either directly or through the Finance Agent, to the exercise of creditor rights to receive the payments flow associated with the confirmed supplier receivables.

In the case of a participation, the certificates or other evidence of participation provide an absolute, irrevocable, and legally enforceable obligation that the Finance Agent or holder of the confirmed supplier receivables to pay to the Investor all of the amounts due to it under the confirmed supplier receivables, without reduction or delay arising from any claims that the Finance Agent may have against the Investor, and that the Investor's ability to exercise its rights as creditor, or to direct the Finance Agent to exercise the rights of a creditor on its behalf, not be subject to the discretion of the Finance Agent or other lenders or investors, other than for a period of cure not to exceed 30 days.

Obligor
Obligor is the party that purchases the goods or services that generate the original supplier receivable (and payable for the Obligor).

Obligor must be a single entity that itself must be rated investment grade. No receivable of any parent or affiliate may be transferred under, or serve as an underlying for any evidence issued pursuant to, the program.

Obligor sets up the program with the eligible/approved Finance Agent.

Obligor must have a NAIC Designation of 1 or 2 or CRP equivalent.

Obligor must confirm the Supplier receivable as described in the Confirmation Process below.

Supplier
Supplier is the party that sells the goods or services to the Obligor.

Supplier sells the confirmed supplier receivables in accordance with the terms of the SVO approved WCFA at a discounted price agreed to by the Investor.

Investor
Investor is the party purchasing a WCFI in accordance with the terms of the WCFA.

Finance Agent
The Finance Agent is a bank, financial institution, service provider, or other financial intermediary that facilitates the program; arranges the sale, assignment or transfer of the Confirmed Supplier Receivable to the Investor for a fee and administers the payment mechanism. The payment mechanism may be, for example, a lockbox arrangement. Prior to the sale, this party verifies that the Obligor has confirmed both the amount due and the due date, and has waived defenses to payment.

One of these requirements must be in effect:

a. The Finance Agent is directly regulated by or falls under the supervision of a financial regulator of its domiciliary country provided that such country appears on the SVO P&P Manual's List of Jurisdictions Eligible for Netting and that the SVO determines that the regulator is the equivalent of the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, or the Federal Deposit Insurance Corporation; or

b. payments from the Obligor must be paid directly to the insurer or into a lockbox and cannot flow through the Finance Agent and there can be no commingling of payments or assets with those of the Obligor, servicer, or trust administrator or other Investors.

The annual SVO filing regarding the program must include an annual audit of the consolidated financial statements of the Finance Agent that does not note any qualifications relating to servicing; and one of the following:

a. an annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16, reporting on Controls at a Service Organization related to the administration of the investment; or

b. an annual audit of the internal controls of the consolidated group of which the Finance Agent is part, which does not note any material weaknesses relating to servicing.

Confirmation Process
The Obligor confirms that it has an obligation, independent of any other contracts or claims which might be raised in defense against such payment arising from the transactions financed by the WFCA, or any other courses of performance or courses of dealing with the Supplier, to pay to the Finance Agent or Investor a sum equal to the amount of the supplier receivable to be purchased by the Finance Agent or Investor. The Obligor must expressly waive any right of setoff or other defenses to the full and timely payment of such Confirmed Supplier Receivable.
The Obligor asserts that it will not assert any right which it may have acquired, or may acquire, to not pay the Supplier (the amounts due under the supplier receivable) as a result of a dispute arising under the

commercial transaction between Obligor and Supplier against payments due to the Finance Agent or Investor.

Maximum Maturity

The maximum maturity of a WFCI of a confirmed supplier receivables must not exceed a final maturity of one year from the date of the extension or advance from the Supplier to the Obligor giving rise to the confirmed supplier receivables.

Participations

In the case of a participation, in considering whether the Investors' interests meet the Uniform Commercial Code's standards for preserving first priority perfected security interests, the SVO must

a. consider, among other factors, where relevant:
   - the extent to which the relationships among the parties are stated expressly;
   - the extent to which financial covenants exist that may provide early warning signs of deteriorating credit;
   - the obligations of the Finance Agent, administrator, or other lead to inform the Investor of a default or an event of default;
   - whether the Investor's ability to exercise its rights in a default or event of default are subject to the consent or agreement of the Finance Agent, lead, or other Investors;
   - the extent of management and administration by the Finance Agent or lead, whether the Finance Agent or lead is required to notify participants of events of it is aware that may constitute a default or an event of default under the agreement with the Obligor;
   - the standard of care by which the lead's liability or duties to the participants should be defined;
   - the allocation of payments; and the presence of any third party guarantees in favor of the Finance Agent, the lead, or any other participants;
   - the manner of sharing expenses;
   - how liabilities and losses are addressed;
   - the ability of the Finance Agent, lead, or a participant to assign or encumber its interests;
   - the existence of cross-purchase agreements;
   - the existence of an option exercisable by the Finance Agent, lead, or another participant to buy the interests of other participants;
   - and the ability of another participant, other than the Finance Agent, to assume the administration and management of the transaction, or;

b. require that the insurance company certify that its participation interest meets the Uniform Commercial Code's standards for preserving first priority perfected security interests

In the case of a participation, the Finance Agent from which the Investor took the note must inform the Investor of a default or event of default as soon as it becomes aware of such default or event of default.

Exclusions

A WCFI excludes any receivable/s financed through:

- Factoring: the purchase of receivables in bulk from a supplier where the receivables represent the payment obligations of potentially thousands of buyers to a single supplier, in which the buyers have no relationship with or contractual obligation to pay the factor and retain all legal defenses to payment they may have against the supplier;
- Forfaiting: the purchase of one or a series of receivables from exporters by a forfaiter to enable the exporter (seller) to finance a commercial transaction with a buyer in which the Obligor has no relationship with or contractual obligation to pay the forfaiter and retains all legal defenses to pay it may have against the seller; or

- Invoice discounting: the advancement of funds by a finance company to a business entity with the funds advanced limited to a defined percentage of the business entity's eligible and outstanding receivables.

SVO Approval and Designation

Any amendment to the WCFA, and any WCFI issued thereunder that differs from those approved by the SVO, must be filed with the SVO.

An insurance company that files a WCFI with the SVO must have in place such policies and procedures as they consider necessary to monitor and manage risks associated with this investment activity. Such policies and procedures must reflect an understanding of the private nature of the receivables market, the tri-party nature of WCFI and confirmed supplier receivables, the risks identified and provided for by the SVO credit assessment process, such other issues as may be relevant to recovery of the loan assuming a default has occurred as well as such aspects usages of trade in receivables financing as they determine are consistent with their underlying due diligence obligations. Insurance companies are encouraged to build such protections as they believe are necessary to them into the terms of the programs they intend to invest in.

Issue Paper No. 148

Affordable Care Act Section 9010 Assessment

STATUS:
Initially Adopted – December 15, 2013
Adopted to Reflect SSAP No. 106 – June 12, 2014

Current Authoritative Guidance for Affordable Care Act Section 9010 Assessment: SSAP No. 106

Original SSAP from Issue Paper: SSAP No. 35R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper establishes statutory accounting principles for the fee payable under Section 9010 of the federal Affordable Care Act (ACA) by reporting entities. This issue paper provides historical documentation of the substantive revisions to *SSAP No. 35—Guaranty Fund and Other Assessments – Revised* (SSAP No. 35R) in Appendix A. The changes reflected in Appendix A were adopted in SSAP No. 35R in December 2013 and were subsequently moved in 2014 to a separate statement, *SSAP No. 106—Affordable Care Act Section 9010 Assessment*. Also at that time, additional disclosures related to the risk-sharing provisions of the Affordable Care Act were incorporated. These changes are shown in Appendix B. In addition, this issue paper provides documentation of the extended discussion related to the Section 9010 ACA assessment including the two major viewpoints on the topic. Paragraphs 2 through 8 of this issue paper provide the proposed new guidance to SSAP No. 35R, and paragraph 9 shows the tracked changes to the existing 2013 disclosure as well as expanding the 2014 disclosure. Paragraphs 10 through 21 detail the discussions, paragraphs 22 through 33 provided comments on the Statement of Concepts, and the remaining paragraphs contain relevant literature.

SUMMARY CONCLUSION

Affordable Care Act Section 9010 Assessment

2. *ASU 2011-06: Other Expenses – Fees Paid to the Federal Government by Health Insurers* (ASU 2011-06) provides specific guidance related to the assessment in Section 9010 of the Affordable Care Act. ASU 2011-06 is a consensus of the Financial Accounting Standards Board (FASB) Emerging Issues Task Force. This issue paper proposes to adopt ASU 2011-06 with the following modifications: 1) to require full expense recognition on January 1 of the fee year and 2) to require the reclassification from unassigned surplus to special surplus in the data year for the estimated amount payable in the upcoming year, and 3) other modifications for statutory accounting terminology as reflected in this issue paper.

3. The Affordable Care Act (ACA) imposes an assessment on entities that issue health insurance for each calendar year beginning on or after January 1, 2014. Pursuant to Section 9010 of the ACA, a reporting entity's portion of the assessment is paid no later than September 30 of the applicable calendar year (the fee year) beginning in 2014 and is not tax deductible. The amount of the assessment for the reporting entity is based on the ratio of the amount of an entity's subject net health premiums written for any U.S. health risk during the preceding calendar year (data year) to the aggregate amount of subject net health premiums written by all subject U.S. health insurance providers during the preceding calendar year. The ACA includes some significant exclusions regarding which entities are required to pay the assessment. This guidance applies to all entities that are subject to the fee. The guidance in this section (paragraphs 3-9) applies to the unique facts and circumstances in the ACA; accordingly, an entity should

apply judgment when evaluating the facts and circumstances of other assessment arrangements before analogizing to the guidance for Section 9010 of the ACA.

4. Throughout this discussion of the Section 9010 assessment of the ACA, the following terms apply:

a. The term “data year” means the calendar year immediately before the fee year. For example, 2014 is the data year for fee year 2015.

b. The “term fee” year means the calendar year in which the assessment must be paid to the U.S. Treasury.

5. A reporting entity’s portion of the annual assessment becomes payable to the U.S. Treasury once the reporting entity provides health insurance (in the fee year) for any subject U.S. health risk for each calendar year beginning on or after January 1, 2014.

6. The liability related to the Section 9010 ACA assessment shall be estimated and recorded in full once the entity provides qualifying health insurance (typically January 1) in the applicable calendar year in which the assessment is paid (fee year) with a corresponding entry to expense. The Section 9010 ACA assessment shall be recognized in full on January 1 of the fee year, in the operating expense category of Taxes, Licenses and Fees.

7. Liability recognition of the Section 9010 fee is not required in the data year. In the data year, the reporting entity is required to reclassify from unassigned surplus to special surplus an amount equal to its estimated subsequent fee year assessment. This segregation in special surplus is accrued monthly throughout the data year. The reclassification from unassigned surplus to special surplus does not reduce total surplus. On January 1 of the fee year, the prior year segregation in special surplus is reversed and the full current fee year assessment liability shall be accrued.

8. The Section 9010 ACA annual assessment does not represent a cost related to the acquisition of policies that is consistent with the definition of acquisition costs in *SSAP No. 71—Policy Acquisition Costs and Commissions.*

Disclosures

9. A disclosure for year-end 2013 was adopted in SSAP No. 35R early in the discussion on the Section 9010 fee. The disclosure was subsequently extended to include years on and after 2014. In addition, for 2014 and thereafter, the disclosure was also expanded to include information on the amounts reflected in special surplus in the data year as detailed below:

23. For the Section 9010 ACA assessment:

a. For the annual reporting period ending December 31, 2013 and thereafter, a reporting entity subject to the assessment under Section 9010 of the Affordable Care Act, shall provide a disclosure of the assessment payable in the upcoming year consistent with the guidance provided under *SSAP No. 9—Subsequent Events* for a Type II subsequent event. The disclosure shall provide information regarding the nature of the assessment and an estimate of its financial impact, including the impact on its risk based capital position as if it had occurred on the balance sheet date. In accordance with SSAP No. 9, paragraph 9, the reporting entity shall also consider whether there is a need to present pro forma financial statements regarding the impact of the assessment, based on its judgment of the materiality of the assessment.

b. Additionally for annual reporting periods ending on or after December 31, 2014, the disclosure in paragraph 23.a. is expanded to include information on the amounts reflected in special surplus in the data year. The disclosure shall provide information regarding the nature of the assessment and the Total Adjusted Capital and Authorized Control Level (in dollars) before and after adjustment (as reported in its estimate of special surplus applicable to the 9010 fee) to reflect the fee as of the annual reporting date as if it had been reported on the balance sheet date. The disclosure shall also provide a statement as to whether an RBC action level would have been triggered had the fee been reported as of the balance sheet date.

DISCUSSION

10. This topic was discussed at the Statutory Accounting Principles (E) Working Group with input from the Financial Condition (E) Committee. In addition, the Health Insurance and Managed Care (B) Committee and the Accounting Practices and Procedures (E) Task Force were invited to participate in a number of the discussions via conference call. The Working Group reviewed Section 9010 of the ACA and the generally accepted accounting principles (GAAP) guidance in ASU 2011-06 (excerpted in the relevant literature section of this issue paper).

Timing of Liability Recognition

11. During this review, the Working Group had a series of discussions regarding the timing of the recognition of the liability. Section 9010 of the ACA allocates the assessment based on the ratio of prior year premium to total subject premium. Section 9010 further notes, "the term 'covered entity' means any entity which provides health insurance for any United States health risk during the calendar year in which the fee under this section is due." Different parties participating in the discussions put varying degrees of emphasis on the ACA phrase "provides insurance."

12. ASU 2011-06 specifies that the liability for the fee should be estimated and recorded in full once the entity provides qualifying health insurance in the applicable calendar year in which the fee is payable, with a corresponding deferred cost that is amortized to expense using a straight-line method of allocation unless another method better allocates the fee over the calendar year that it is payable.

13. The discussions coalesced into two primary views regarding the timing of the recognition of the liability for the Section 9010 ACA fee. These views are summarized below as the data year view and as the fee year view. Data year and fee year terms are defined in the summary conclusion section of this issue paper. Although both views had some impact on the ultimate decisions, the fee year view is the primary view reflected in the summary conclusion.

Data Year Recognition View

14. The group that advocated liability recognition at December 31 of the data year had the following primary points:

a. This group was in support of the generally accepted accounting principles (GAAP) dissenter opinion detailed in ASU 2011-06, which advocated data year liability recognition. This dissenter opinion was based on the view that an entity subject to the fee incurs a constructive liability throughout the year as related revenues are recognized. Following that view, the constructive liability then becomes a legal liability the first day revenues are recognized in the subsequent year; a relatively inconsequential event for a going concern. Therefore, absent a decision (before the start of the next calendar year) to cease doing business, an entity should record a liability in the same year related revenues are recognized.

b. This group noted the objectives of GAAP reporting differ from the objectives of statutory accounting principles (SAP) reporting. GAAP is designed to meet the varying needs of the different users of financial statements, while SAP is designed to address the concerns of regulators, who are the primary users of statutory financial statements. The differences in objectives between GAAP and SAP are especially pronounced in the FASB Emerging Issues Task Force opinion detailed in ASU 2011-06. The summary of ASU 2011-06 states that the objective is to address questions about how health insurers should recognize and classify in their income statements fees mandated by the ACA. It is clear from this language that FASB's focus was on the impact of the ACA fee on the income statement with limited focus on when the ACA fee liability should be recognized.

c. This group advocated that the fee, at a minimum, represents a loss contingency in the data year.

d. As a practical matter, insurers legally commit to provide insurance for the subsequent year (fee year) before the end of the year (data year). This view places emphasis on the fact that the reporting entity has "committed to provide insurance" in the year the fee is paid on or before December 31 of the data year. This group contended that "committing to provide insurance" is the same as the "provides insurance" liability threshold in the ACA.

e. Advocates of this view noted that the obligation to recognize a liability in *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets – Revised* (SSAP No. 5R) had been met because it factors in the ACA law, contract law and the federal Health Insurance Portability and Accountability Act (HIPAA). Some of the federal laws, in particular, require 3 to 6 months' notice if a policy will not be renewed or will be cancelled.

f. A significant percentage of policies are non-calendar year policies. Policies have level-term payments and, as such, billings in the data year include anticipated costs for the fee year amount. Members of industry confirmed that amounts were being collected in the data year for non-calendar year policies. Advocates of this view noted that if there is not a corresponding accrual in the data year, then data year income and assets are overstated. Correspondingly, there would be a permanent increase (overstatement) in capital in the year-end financial statements.

g. Supporters of this view noted that it is also consistent with the existing liability recognition principles in SSAP No. 35R regarding guaranty fund assessments which are recognized on the date of insolvency, instead of on the date of assessment. In addition, it is consistent with the existing guidance for premium-based assessments in SSAP No. 35R, which notes that the event that obligates the entity is generally writing the premiums or becoming obligated to write or renew (such as multiple-year, noncancelable policies) the premiums on which the assessments are expected to be based.

h. Supporters of this view noted that failure to recognize the liability for the fee in the data year's financial statements hampers the regulators' ability to utilize critical solvency tools that are dependent on an accurate assessment of an insurer's total surplus. Solvency monitoring tools such as risk-based capital (RBC), Insurance Regulatory Information System (IRIS) ratios, Financial Analysis Solvency Tools (FAST) including scores, holding company approval thresholds, standards for companies deemed to be in hazardous financial condition, investment law limitations, and extraordinary dividend approval thresholds will be rendered ineffective due to the failure to record the liability for the fee.

i. Supporters of this view noted that it is consistent with statutory Statement of Concepts **conservatism** principle.

j. In the event of liquidation, the ACA fee may have higher priority for payment than certain recorded liabilities.

Fee Year Recognition View

15. The group that advocates liability recognition on January 1 of the fee year had the following primary points:

a. This group was in support of the GAAP majority (adopted) FASB Emerging Issues Task Force opinion detailed in ASU 2011-06, which requires liability recognition in the year the fee is paid. This group advocated for statutory accounting principles (SAP) and GAAP to be consistent regarding accrual of the Section 9010 ACA fee.

b. This group contended that the criteria of an incurred liability in SSAP No. 5R and SSAP No. 35R have not been met in the data year. This group contends that the insurer must actually "provide coverage in the fee year" before the liability is incurred. They view the obligating event as providing coverage on or after January 1 of the fee year.

c. As a practical matter, insurers legally commit to provide insurance for the subsequent year (fee year) before the end of the year (data year). Supporters of this view contended that legally committing to provide insurance in the fee year was not enough to trigger the liability.

d. In response to the issue of contract law cancellation requirements of the federal Health Insurance Portability and Accountability Act (HIPAA) that require, in some cases, 3 to 6 months' notice by an insurer if a policy is not going to be renewed, or is planned to be cancelled; this group noted that it is possible for policyholders to cancel without notice.

e. A significant percentage of policies are non-calendar year policies. Policies have level-term payments and, as such, billings in the data year include anticipated costs for the fee year amount. Members of industry confirmed that amounts were being collected in the data year for non-calendar year policies. They expressed concerns regarding Medical Loss Ratio (MLR) treatment of these amounts and recommended as a possible compromise, to include in the unearned premium liability, the amount collected in the data year. This liability was not included in the proposed guidance because it was determined this treatment would not be consistent with unearned premium guidance currently within statutory accounting, as well as some MLR guidance issued by the U.S. Department of Health and Human Services which prohibited deduction of fee amounts in the data year for the MLR calculation.

f. Although the assessment is based on prior year premium, supporters of this view argued that it should be viewed as an annual operating expense consistent with the ASU 2011-06 as opposed to the existing liability recognition for premium based assessment guidance in SSAP No. 35R.

Timing of Expense Recognition and Surplus Impact

16. The Working Group discussed the timing of the surplus reduction and expense recognition and exposed multiple documents for discussion including various proposals for phasing in liability recognition in the data year. The phase-in proposals were an attempt to ease the concerns raised by industry regarding rate-shock and the inability of some insurers to raise rates for the next couple of years due to various issues. The August 2013 and November 2013 Working Group exposures reflect a modified GAAP approach with fee year recognition modified for full surplus recognition on January 1 of the fee year.

17. The Working Group discussed various options for the timing of expense recognition including expensing 1) in the data year; 2) in full January 1 of the fee year; 3) over nine months in the fee year; 4)

over 12 calendar months of the fee year and 5) over 12 months from October 1 of the data year through payment on September 30 of the fee year.

18. ASU 2011-06 recognizes the expense over the calendar year or another method if it is more accurate. Industry representatives advocated for a similar expense recognition approach with modifications using a nonadmitted deferred expense asset. Industry advocated an approach, which recognized the full impact in surplus on January 1, and then establishes a nonadmitted deferred expense asset. The deferred expense asset is then amortized to expense over the calendar year similar to GAAP expense recognition timing.

19. Deferring expenses over 12 months of the fee year was determined to be inconsistent with explicit language in the Statement of Concepts Recognition guidance which notes that:

> Accounting treatments, which tend to defer expense recognition, do not generally represent acceptable SAP treatment.

In addition, some members of the Working Group noted that the nonadmitted deferred cost asset does not meet the definition of an asset. The Working Group's exposure adopts GAAP with modification to require full expense recognition on January 1 of the fee year. and 2) to require the reclassification from unassigned surplus to special surplus in the data year for the estimated amount payable.

Special Surplus Segregation

20. It was noted that the year-end financial statements are used in many of the regulatory financial solvency tools, such as risk-based capital (RBC), dividend limitations noted in the Insurance Holding Company System Regulatory Act (Model 440), various financial analysis and regulatory tools. Therefore, omitting this material liability from year-end recognition in the data year would hamper year-end analysis of insurers and require state regulators to perform additional manual reviews. Partially to address these concerns, disclosures regarding the estimated fee year amount and the impact on RBC were adopted. However, Working Group members noted that the regulatory ability to act on disclosures is weaker than the regulatory ability to act on liability recognition.

21. An industry compromise was developed to require the estimated amount payable for the fee year to be reflected as a reclassification of surplus from unassigned surplus to special surplus in the data year. This reclassification does not decrease total surplus. While this does provide transparency to the financial statements and somewhat limits the source of dividend payments, it does not fully limit the amount of dividends which may be paid. The primary determinant of whether a dividend is extraordinary is ten percent of total surplus. If a dividend is not extraordinary, a company may pay it without prior approval. The Working Group noted that an insurer would get an artificial increase in the ordinary/extraordinary dividend data year threshold equal to ten percent of the amount payable for the fee year. This accrual in special surplus is subsequently reversed on January 1 of the fee year when the fee year payable is recognized.

Statutory Statement of Concepts

22. The Working Group discussion directed that an analysis of the proposed guidance with the statutory statement of concepts be prepared for inclusion in this Issue Paper.

Conservatism

23. The Preamble, paragraph 30 calls for accounting to be reasonably conservative. Section 9010 of the Affordable Care Act (ACA) indicates the amount of the fee is allocated based on prior year health premium (data year) if the reporting entity is a provider of health insurance coverage as of January 1 of the year the fee is paid (fee year). The unusual wording in the ACA creates questions regarding when the

liability is triggered. *ASU 2011-06 – Fees Paid to the Federal Government by Health Insurers* (ASU 2011-06) determined that the liability is incurred on January 1 of the year the fee is paid. ASU 2011-06 also explicitly scoped the liability as separate from insurance-related assessments and notes that the fee does not meet the GAAP definition of a policy acquisition cost. The definition of a liability incorporated by statutory accounting in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets –Revised* (SSAP No. 5R) is based on the GAAP definition of a liability. Therefore, SAP and GAAP should have similar conclusions regarding the incurral of a liability.

24. The fee year view currently exposed by the Working Group and the position adopted by the Emerging Issues Task Force in ASU 2011-06 indicates that a liability has not been incurred until provision of insurance coverage in the fee year. If the obligating event for the liability is viewed as January 1 of the fee year, then it is conservative to recognize the liability in full as soon as it is incurred on January 1 of the fee year.

25. The fee year view is not considered as conservative as the data year view with regard to recognition of the ACA fee liability, but it is consistent with the GAAP guidance in ASU 2011-06 that was adopted.

Consistency

26. Paragraph 31 of the Preamble highlights the importance of meaningful and comparable financial information. Statutory accounting requires expensing of acquisition costs and establishing loss reserves at policy inception. Other administrative costs of policies are recognized as a liability when incurred. Policy pricing includes some elements, such as administrative overhead, which are not recognized as liabilities until they are incurred.

27. Preamble, paragraph 31 also calls for "consistency in the development and application of statutory accounting principles." This proposal preserves that consistency without imposing a different standard for recognition of the future fee payments.

Recognition

28. The Preamble, paragraph 34 states that liabilities require recognition as they are incurred. Under this proposal, GAAP and SAP define liability recognition consistently. Given the dual trigger in the law of writing premium in the data year and providing insurance in the fee year, recognition in the fee year is consistent with the FASB Emerging Issues Task Force conclusion in ASU 2011-06. Therefore, defining the liability triggering event as providing insurance in the fee year is consistent with U.S. GAAP.

29. The Fee can be invoiced any time during the fee year, but must be paid no later than September 30. GAAP guidance in ASU 2011-06 amortizes the Fee through December of the fee year. Statutory accounting recognizes expenses as incurred, as they are no longer available to pay policyholders. This is consistent with the statement of concepts regarding recognition and conservatism. However, ASU 2011-06 varies from statutory conservatism, by deferring recognition of the liability expense over the course of the fee calendar year. Deferring expenses is explicitly in conflict with the following quote in the Recognition concept in paragraph 35 of the Preamble, "Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment." A deferred expense asset is also inconsistent with the definition of an asset as it does not represent a future benefit and no expenses have been prepaid. The current exposure by the Working Group is to expense in full on January 1 of the fee year.

30. The Working Group noted that provision of coverage to a single policyholder in the fee year triggers the obligation of the full liability based on all subject policies in the preceding year. Policyholder acceptance on January 1 of the fee year of a calendar year policy is further evidence of a liability existing in the data year.

31. The proposal requires that reporting entities establish in special surplus funds an amount equal to the anticipated Fee payable in the next year. This segregation in special surplus in the data year is to provide transparency on the face of the financial statements regarding the subsequent year's fee payable. This provides regulators additional information for year-end regulatory decisions and financial analysis. In addition, there are annual disclosures, including a disclosure that reflects RBC as if the liability was accrued in the data year.

Conclusion

32. The proposal generally defers recognition of the Fee liability until the fee year consistent with GAAP. It also provides transparency with the segregation in special surplus.

Data Year Recognition (Dissenting Opinion) Statutory Statement of Concepts

33. The group that advocated liability recognition at December 31 of the data year conducted its own analysis that reflects how the proposed guidance aligns with the statutory accounting principles Statement of Concepts:

Conservatism

34. The Working Group is concerned regarding the material amount of the Fee that will be recognized as a liability on January 1 of the fee year without substantive commercial action of the insurer. It was further concerned that not recognizing the liability in the data year was inconsistent with the concept of conservatism.

35. The most fundamental question that the Working Group addresses in the proposed guidance is the timing of the liability for the ACA fee. Should the liability be accrued at year-end of the data year or accrued on January 1 of each fee year? The general concept of conservatism states that if there is uncertainty about incurring a loss, one should tend toward recording such loss. Although there may be disagreement with respect to the appropriate timing for recognition of this liability, recording the liability at year-end is the most conservative approach. Since the primary responsibility of statutory accounting is to regulate for financial solvency, the use of conservatism by the SAPWG in developing accounting principles for statutory reporting purposes is critical and cannot be ignored.

36. The proposed guidance clearly violates the concept of conservatism when focusing on the fundamental question: when should the liability for the ACA fees be established.

Consistency

37. Current statutory accounting in SSAP No. 35R requires that entities subject to premium-based administrative type assessments recognize a liability for such assessment when the entity writes the premium or becomes obligated to write the premium. However, the proposed guidance ignores this approach and creates a special exception for health insurance entities subject to the ACA fee. This special treatment is inconsistent with the existing liability recognition principles in SSAP No. 35R.

38. One of the three essential characteristics of a liability is that the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice. Some advocates of the proposed guidance have argued that an entity can avoid tax obligations by not providing any health insurance coverage during the fee year by choosing to go or be out of business each December 31; and, therefore, the health insurers should not have to record a liability for the ACA fee. However, the same health insurers that make this contention are also reporting significant amounts of deferred tax assets that are dependent on the existence of sufficient taxable income of the appropriate character in the carryfoward period. These contradictory outlooks on future operations and earnings are inconsistent.

39. The proposed guidance violates the concept of consistency and the regulators' need for meaningful, comparable financial information to determine an insurer's financial condition.

Recognition

40. The fee meets the definition of a liability when the premium subject to the assessment has been written or the reporting entity is obligated to write the premium. In order to meet Health Insurance Portability and Accountability Act (HIPAA) requirements or to comply with contractual commitments, insurers are legally obligated to provide insurance in the subsequent year when entering into contracts during the previous year that have policy periods that extend into that same subsequent year. When a reporting entity has committed, or has a legal obligation, to provide insurance in the year the assessment is payable, it has met the secondary trigger in the ACA and a liability should be required to be accrued in that year's financial statements.

41. Advocates of the proposed guidance have argued that while a health insurer may be contractually bound to provide coverage in the payment year, the policyholder has no reciprocal obligation to accept such coverage. However, *SSAP No. 9—Subsequent Events* (SSAP No. 9) would address this particular situation. SSAP No. 9 requires an entity to recognize in the financial statements the effects of all material Type I subsequent events that provide additional evidence about conditions that existed at the date of the balance sheet. The health insurer's contractual obligation to provide coverage in the payment year is the condition that existed at the date of the balance sheet date. The policyholders' actions on January 1 provide the additional evidence about those same conditions. If all of the policyholders of the health insurer do not accept coverage, there is no need to establish an ACA fee liability. However, if any single policyholder does accept coverage, that acceptance provides the additional evidence about conditions that existed at the date of the balance sheet (the contractual obligation), and an ACA fee liability needs to be recognized in the financial statements.

42. The revised SSAP No. 35R violates the concept of recognition and the principal focus of solvency measurement: the determination of financial condition though analysis of the balance sheet.

Data Year (Dissenting Opinion) Conclusion

43. The proposed guidance clearly violates the fundamental concepts on which statutory financial accounting and reporting standards are based.

RELEVANT LITERATURE

Generally Accepted Accounting Principles

44. *Accounting Standards Update 2011-06 Other Expenses (Topic 720) Fees Paid to the Federal Government by Health Insurers* (ASU 2011-06) was issued in July 2011. The amendments in this update specify that the liability for the fee should be estimated and recorded in full once the entity provides qualifying health insurance in the applicable calendar year in which the fee is payable with a corresponding deferred cost that is amortized to expense using a straight-line method of allocation unless another method better allocates the fee over the calendar year that it is payable. Additionally, this Update indicates that the fee would not meet the definition of an acquisition cost. Excerpts from ASU 2011-06 are as follows:

> **Scope and Scope Exceptions**
>
> **405-30-15-3** The guidance in this Subtopic does not apply to the following transactions and activities:

a. Amounts payable or paid as a result of reinsurance contracts or arrangements that are in substance reinsurance, including assumed reinsurance activities and certain **involuntary pools** that are covered by Topic 944.

b. Assessments of depository institutions related to bank insurance and similar funds.

c. The annual fee imposed on health insurers by the Patient Protection and Affordable Care Act as amended by the Health Care and Education Reconciliation Act (the Acts). The accounting for the Acts' fee is addressed in Subtopic 720-50.

Other Expenses—Fees Paid to the Federal Government by Pharmaceutical Manufacturers and Health Insurers

Overview and Background

720-50-05-1 This Subtopic provides guidance on the annual ~~fee~~fees paid by pharmaceutical manufacturers and health insurers to the U.S. Treasury in accordance with the Patient Protection and Affordable Care Act as amended by the Health Care and Education Reconciliation Act (the Acts).

720-50-05-2 The Acts impose ~~an~~ annual ~~fee~~fees on the pharmaceutical manufacturing industry for each calendar year beginning on or after January 1, 2011, and on the health insurance industry for each calendar year beginning on or after ~~January 1, 2011~~January 1, 2014. An entity's portion of the annual fee is payable no later than September 30 of the applicable calendar year and is not tax deductible. ~~The annual fee ranges from $2.5 billion to $4.1 billion in total, a portion of which will be allocated to individual entities on the basis of the amount of their branded prescription drug sales for the preceding year as a percentage of the industry's branded prescription drug sales for the same period. An entity's portion of the annual fee becomes payable to the U.S. Treasury once a pharmaceutical manufacturing entity has a gross receipt from branded prescription drug sales to any specified government program or in accordance with coverage under any government program for each calendar year beginning on or after January 1, 2011.~~ **[Content amended and moved to paragraph 720-50-05-3]**

720-50-05-3 For the pharmaceutical manufacturing industry, the~~The~~ annual fee ~~ranges from $2.5 billion to $4.1 billion in total, a portion of~~ which will be allocated to individual ~~entities~~pharmaceutical manufacturers on the basis of the amount of their branded prescription drug sales for the preceding year as a percentage of the industry's branded prescription drug sales for the same period. ~~An~~A pharmaceutical manufacturing entity's portion of the annual fee becomes payable to the U.S. Treasury once the ~~a pharmaceutical manufacturing~~ entity has a gross receipt from branded prescription drug sales to any specified government program or in accordance with coverage under any government program for each calendar year beginning on or after January 1, 2011. **[Content amended as shown and moved from paragraph 720-50-05-2]**

720-50-05-4 For the health insurance industry, the annual fee will be allocated to individual health insurers based on the ratio of the amount of an entity's net premiums written during the preceding calendar year to the amount of health insurance for any U.S. health risk that is written during the preceding calendar year. A health insurance entity's portion of the annual fee becomes payable to the U.S. Treasury once the entity provides health insurance for any U.S. health risk for each calendar year beginning on or after January 1, 2014.

Scope and Scope Exceptions

720-50-15-1 The guidance in this Subtopic applies to all pharmaceutical manufacturers and health insurers that are subject to the annual fee imposed by the Acts described in paragraphs 720-50-05-1 ~~and 720-50-05-2~~through 05-4. The guidance in this Subtopic is based on the unique facts and circumstances of the fee to be paid by pharmaceutical manufacturers and health insurers in accordance with the Acts; accordingly, an entity should apply judgment when evaluating the facts and circumstances of other fee arrangements before analogizing to the guidance in this Subtopic.

Recognition

720-50-25-1 The liability related to the annual fee described in ~~paragraph~~paragraphs 720-50-05-1 through 05-4 shall be estimated and recorded in full upon the first qualifying sale for pharmaceutical manufacturers or once the entity provides qualifying health insurance for health insurers in the applicable calendar year in which the fee is payable with a corresponding deferred cost that is amortized to expense using a straight-line method of allocation unless another method better allocates the fee over the calendar year that it is payable. The annual fee imposed on health insurers does not represent a cost related to the acquisition of policies that is consistent with the definition of an *acquisition cost* in Subtopic 944-30.

Other Presentation Matters

720-50-45-1 The annual fee described in ~~paragraph~~paragraphs 720-50-05-1 through 05-4 shall be presented as an operating expense.

Transition Related to Accounting Standards Update No. 2011-06, *Other Expenses (Topic 720): Fees Paid to the Federal Government by Health Insurers*

720-50-65-2 The following represents the transition and effective date information related to Accounting Standards Update No. 2011-06, *Other Expenses (Topic 720): Fees Paid to the Federal Government by Health Insurers:*

a. The pending content that links to this paragraph shall be effective for calendar years beginning after December 31, 2013.

b. The pending content that links to this paragraph does not require an entity to reevaluate its existing policies related to similar fees assessed by governmental authorities.

45. The amendments in ASU 2011-06 were adopted by the affirmative vote of six members of the Financial Accounting Standards Board. The Statutory Accounting Principles (E) Working Group also noted and discussed the dissenting opinion.

Mr. Schroeder objects to the issuance of the amendments in this Update. Mr. Schroeder agrees with recognition of the liability for the fee, but disagrees with the timing of its recognition and the related deferred cost being amortized over the calendar year the fee is payable. Mr. Schroeder believes that the fee generally meets the essential characteristics of a liability, as outlined in paragraphs 35 through 40 of FASB Concepts Statement No. 6, *Elements of Financial Statements*, in the year used to calculate the fee and should be accrued over the course of that year. This is based on the view that an entity subject to the fee incurs a constructive liability throughout the year as related revenues are recognized. Following that view, the constructive liability then becomes a legal liability the first day revenues are recognized in the subsequent year; a relatively inconsequential event for a going concern. Mr. Schroeder believes that absent a decision (before the start of the next calendar year) to cease doing business, an entity should record a liability in the same year related revenues are recognized.

46. Excerpts of the federal Affordable Care Act, Section 9010, are as follows:

SEC. 9010. IMPOSITION OF ANNUAL FEE ON HEALTH INSURANCE PROVIDERS.
(a) IMPOSITION OF FEE.—

(1) IN GENERAL.—Each covered entity engaged in the business of providing health insurance shall pay to the Secretary not later than the annual payment date of each

calendar year beginning after 2013 a fee in an amount determined under subsection (b). [*Amended by section 10905(f)(1) and section 1406(a)(1) of HCERA*.]

(2) ANNUAL PAYMENT DATE.—For purposes of this section, the term ‘‘annual payment date’’ means with respect to any calendar year the date determined by the Secretary, but in no event later than September 30 of such calendar year.

(b) DETERMINATION OF FEE AMOUNT.—[*Replaced by section 10905(b)*.]

(1) IN GENERAL.—With respect to each covered entity, the fee under this section for any calendar year shall be equal to an amount that bears the same ratio to the applicable amount as—

(A) the covered entity's net premiums written with respect to health insurance for any United States health risk that are taken into account during the preceding calendar year, bears to

(B) the aggregate net premiums written with respect to such health insurance of all covered entities that are taken into account during such preceding calendar year.

(2) AMOUNTS TAKEN INTO ACCOUNT.—For purposes of paragraph (1)—[*As revised by section 1406(a)(2) of HCERA*.]

(A) IN GENERAL.—The net premiums written with respect to health insurance for any United States health risk that are taken into account during any calendar year with respect to any covered entity shall be determined in accordance with the following table:

With respect to a covered entity's net premiums written during the calendar year that are:	*The percentage of net premiums written that are taken into account is:*
Not more than $25,000,000	0 percent
More than $25,000,000 but not more than $50,000,000.	50 percent
More than $50,000,000............................	100 percent

(B) PARTIAL EXCLUSION FOR CERTAIN EXEMPT ACTIVITIES.—
After the application of subparagraph (A), only 50 percent of the remaining net premiums written with respect to health insurance for any United States health risk that are attributable to the activities (other than activities of an unrelated trade or business as defined in section 513 of the Internal Revenue Code of 1986) of any covered entity qualifying under paragraph (3), (4), (26), or (29) of section 501(c) of such Code and exempt from tax under section 501(a) of such Code shall be taken into account.

(3) SECRETARIAL DETERMINATION.—The Secretary shall calculate the amount of each covered entity's fee for any calendar year under paragraph (1). In calculating such amount, the Secretary shall determine such covered entity's net premiums written with respect to any United States health risk on the basis of reports submitted by the covered entity under subsection (g) and through the use of any other source of information available to the Secretary.

(c) COVERED ENTITY.—[*As revised by section 1406(a)(3) of HCERA*.]

(1) IN GENERAL.—For purposes of this section, the term ‘‘covered entity’’ means any entity which provides health insurance for any United States health risk during the calendar year in which the fee under this section is due.

(2) EXCLUSION.—Such term does not include—

(A) any employer to the extent that such employer self-insures its employees' health risks,

(B) any governmental entity, [*As revised by section 10905(f)(2)*.]

(C) any entity— [*Subparagraphs (C) through (E) revised by section 10905(c) and subsequently rewritten in entirety, including striking subparagraph (E), by section 1406(a)(3) of HCERA*.]

(i) which is incorporated as a nonprofit corporation under a State law,

(ii) no part of the net earnings of which inures to the benefit of any private shareholder or individual, no substantial part of the activities of which is carrying on propaganda, or otherwise attempting, to influence legislation (except as otherwise provided in section 501(h) of the Internal Revenue Code of 1986), and which does not participate in, or intervene in (including the publishing or distributing of statements), any political campaign on behalf of (or in opposition to) any candidate for public office, and

(iii) more than 80 percent of the gross revenues of which is received from government programs that target low-income, elderly, or disabled populations under titles XVIII, XIX, and XXI of the Social Security Act, and

(D) any entity which is described in section 501(c)(9) of such Code and which is established by an entity (other than by an employer or employers) for purposes of providing health care benefits.

(3) CONTROLLED GROUPS.—

(A) IN GENERAL.—For purposes of this subsection, all persons treated as a single employer under subsection (a) or (b) of section 52 of the Internal Revenue Code of 1986 or subsection (m) or (o) of section 414 of such Code shall be treated as a single covered entity (or employer for purposes of paragraph (2)). [*Note: sentence at end should have been inserted at end of this subparagraph*.]

(B) INCLUSION OF FOREIGN CORPORATIONS.—For purposes of subparagraph (A), in applying subsections (a) and (b) of section 52 of such Code to this section, section 1563 of such Code shall be applied without regard to subsection (b)(2)(C) thereof. If any entity described in [*executed to reflect probable intent of amendment made by section 1406(a)(3)(C)*] subparagraph (C) or (D) of paragraph (2) is treated as a covered entity by reason of the application of the preceding sentence, the net premiums written with respect to health insurance for any United States health risk of such entity shall not be taken into account for purposes of this section. [*Previous sentence added by section 10905(f)(3) "at the end" of this paragraph; likely placement should have been at end of subparagraph (A).]*.

(4) JOINT AND SEVERAL LIABILITY.—[*As added by section 1406(a)(3)(D) of HCERA*.] If more than one person is liable for payment of the fee under subsection (a) with respect to a single covered entity by reason of the application of paragraph (3), all such persons shall be jointly and severally liable for payment of such fee.

(d) UNITED STATES HEALTH RISK.—For purposes of this section, the term ''United States health risk'' means the health risk of any individual who is—

(1) a United States citizen,

(2) a resident of the United States (within the meaning of section 7701(b)(1)(A) of the Internal Revenue Code of 1986), or

(3) located in the United States, with respect to the period such individual is so located.

(e) APPLICABLE AMOUNT.—[*Replaced by section 10905(b) and subsequently revised by section 1306(a)(4) of HCERA*.] For purposes of subsection (b)(1)—

(1) YEARS BEFORE 2019.—In the case of calendar years beginning before 2019, the applicable amount shall be determined in accordance with the following table:

Calendar year	**Applicable amount**
2014	$8,000,000,000
2015	$11,300,000,000
2016	$11,300,000,000
2017	$13,900,000,000
2018	$14,300,000,000.

(2) YEARS AFTER 2018.—In the case of any calendar year beginning after 2018, the applicable amount shall be the applicable amount for the preceding calendar year increased by the rate of premium growth (within the meaning of section 36B(b)(3)(A)(ii) of the Internal Revenue Code of 1986) for such preceding calendar year.

(f) TAX TREATMENT OF FEES.—The fees imposed by this section—

(1) for purposes of subtitle F of the Internal Revenue Code of 1986, shall be treated as excise taxes with respect to which only civil actions for refund under procedures of such subtitle shall apply, and

(2) for purposes of section 275 of such Code shall be considered to be a tax described in section 275(a)(6).

(g) REPORTING REQUIREMENT.—

(1) IN GENERAL.—Not later than the date determined by the Secretary following the end of any calendar year, each covered entity shall report to the Secretary, in such manner as the Secretary prescribes, the covered entity's net premiums written with respect to health insurance for any United States health risk for such calendar year. [*As revised by section 10904(f)(4)*.]

(2) PENALTY FOR FAILURE TO REPORT.—

(A) IN GENERAL.—In the case of any failure to make a report containing the information required by paragraph (1) on the date prescribed therefor (determined with regard to any extension of time for filing), unless it is shown that such failure is due to reasonable cause, there shall be paid by the covered entity failing to file such report, an amount equal to—

(i) $10,000, plus

(ii) the lesser of—

(I) an amount equal to $1,000, multiplied by the number of days during which such failure continues, or

(II) the amount of the fee imposed by this section for which such report was required.

(B) TREATMENT OF PENALTY.—The penalty imposed under subparagraph (A)—

(i) shall be treated as a penalty for purposes of subtitle F of the Internal Revenue Code of 1986,

(ii) shall be paid on notice and demand by the Secretary and in the same manner as tax under such Code, and

(iii) with respect to which only civil actions for refund under procedures of such subtitle F shall apply.

(3) ACCURACY-RELATED PENALTY.—[*As added by section 1406(a)(5) of HCERA*.]

(A) IN GENERAL.—In the case of any understatement of a covered entity's net premiums written with respect to health insurance for any United States health risk for any calendar year, there shall be paid by the covered entity making such understatement, an amount equal to the excess of—

(i) the amount of the covered entity's fee under this section for the calendar year the Secretary determines should have been paid in the absence of any such understatement, over

(ii) the amount of such fee the Secretary determined based on such understatement.

(B) UNDERSTATEMENT.—For purposes of this paragraph, an understatement of a covered entity's net premiums written with respect to health insurance for any United States health risk for any calendar year is the difference between the amount of such net premiums written as reported on the return filed by the covered entity under paragraph (1) and the amount of such net premiums written that should have been reported on such return.

(C) TREATMENT OF PENALTY.—The penalty imposed under subparagraph (A) shall be subject to the provisions of subtitle F of the Internal Revenue Code of 1986 that apply to assessable penalties imposed under chapter 68 of such Code.

(4) TREATMENT OF INFORMATION.—[*As added by section 1406(a)(5) of HCERA*.] Section 6103 of the Internal Revenue Code of 1986 shall not apply to any information reported under this subsection.

(h) ADDITIONAL DEFINITIONS.—For purposes of this section—

(1) SECRETARY.—The term ''Secretary'' means the Secretary of the Treasury or the Secretary's delegate.

(2) UNITED STATES.—The term ''United States'' means the several States, the District of Columbia, the Commonwealth of Puerto Rico, and the possessions of the United States.

(3) HEALTH INSURANCE.—[*Replaced by section 10905(d)*.]

The term ''health insurance'' shall not include—

(A) any insurance coverage described in paragraph (1)(A) or (3) of section 9832(c) of the Internal Revenue Code of 1986,

(B) any insurance for long-term care, or

(C) any medicare supplemental health insurance (as defined in section 1882(g)(1) of the Social Security Act).

(i) GUIDANCE.—The Secretary shall publish guidance necessary to carry out the purposes of this section and shall prescribe such regulations as are necessary or appropriate to prevent avoidance of the purposes of this section, including inappropriate actions taken to qualify as an exempt entity under subsection (c)(2). [*As revised by section 10905(e)*.]

(j) EFFECTIVE DATE.—[*Replaced by section 1406(a)(6) of HCERA; previous amendment by section 19095(f)(5)(A) was unexecutable*.] This section shall apply to calendar years beginning after December 31, 2013.

Effective Date and Transition

47. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principles (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and, therefore, the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years beginning on or after January 1, 2014.

Appendix A – Tracked Changes to SSAP No. 35R

Note – The changes reflected in this Appendix illustrate the revisions to SSAP No. 35R adopted in December 2013. This guidance was subsequently moved in 2014 into *SSAP No. 106—Affordable Care Act Section 9010 Assessment* as illustrated in Appendix B.

Statement of Statutory Accounting Principles No. 35 – Revised

Guaranty Fund and Other Assessments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for guaranty fund and other assessments.

2. Guaranty fund assessments represent a funding mechanism employed by states to provide funds to cover policyholder obligations of insolvent reporting entities. Most states have enacted legislation establishing guaranty funds for both life and health insurance and for property and casualty insurance to provide for covered claims or to meet other insurance obligations of insolvent reporting entities in the state.

3. This statement addresses other assessments including but not limited to workers' compensation second injury funds and for funds that pay operating costs of an insurance department, a state guaranty fund, and/or the workers' compensation board. This statement also addresses health related assessments including but not limited to state health insurance high-risk pools, health insurance small group and individual reinsurance pools, state health demographic or risk adjustment assessments.

SUMMARY CONCLUSION

4. This statement adopts with modification guidance from *Accounting Standard Codification 405-30, Insurance-Related Assessments* (ASC 405-30) as reflected within this SSAP. Consistent with ASC 405-30-25-1, entities subject to assessments shall recognize liabilities for insurance-related assessments when all of the following conditions are met (paragraph ~~13~~15 provides guidance on applying the recognition criteria):

a. An assessment has been imposed or information available prior to issuance of the statutory financial statements indicates that it is probable that an assessment will be imposed.

b. The event obligating an entity to pay an imposed or probable assessment has occurred on or before the date of the financial statements.

c. The amount of the assessment can be reasonably estimated.

Guaranty fund and other assessments shall be charged to expense (Taxes, Licenses and Fees) and a liability shall be accrued when the above criteria are met except for certain health related assessments which shall be reported as a part of claims. Health related assessments that are reported as a part of claims instead of taxes, licenses and fees are those assessments that are designed for the purpose of spreading the risk of severe claims or adverse enrollment selection among all participating entities, and where the funds collected via the assessment are re-distributed back to the participating entities based upon the cost of specific claims, enrollment demographics, or other criteria affecting health care expenses. This standard does not permit liabilities for guaranty funds or other assessments to be discounted.

5. *ASU 2011-06: Other Expenses – Fees Paid to the Federal Government by Health Insurers* (ASU 2011-06) is adopted with modifications reflected in this statement. ASU 2011-06 provides specific guidance related to the assessment in Section 9010 of the Affordable Care Act and the statutory accounting guidance is included in paragraphs 16-21.

~~5.~~6. For refunded guaranty or other fund assessments and assessments used to fund state operating expenses, reporting entities shall credit the refund or charge the assessment to expense when notification of the refund or assessment is made.

~~6.~~7. For premium-based guaranty fund assessments, except those that are prefunded, paragraph 4.a. is met when the insolvency has occurred. For purposes of applying this guidance, the insolvency shall be considered to have occurred when a reporting entity meets a state's (ordinarily the state of domicile of the insolvent reporting entity) statutory definition of an insolvent reporting entity. In most states, the reporting entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation. Prefunded guaranty-fund assessments and premium-based administrative type assessment are presumed probable when the premiums on which the assessments are expected to be based are written. Loss-based administrative-type and second injury fund assessments are presumed probable when the losses on which the assessments are expected to be based are incurred.

~~7.~~8. Paragraph 4.b. requires that the event obligating an entity to pay an imposed or probable assessment has occurred on or before the date of the financial statements. Based on the fundamental differences in how assessment mechanisms operate, the event that makes an assessment probable (for example, an insolvency) may not be the event that obligates an entity. The following defines the event that obligates an entity to pay an assessment:

a. For premium-based assessments, the event that obligates the entity is generally writing the premiums or becoming obligated to write or renew (such as multiple-year, noncancelable policies) the premiums on which the assessments are expected to be based. Some states, through law or regulatory practice, provide that an insurance entity cannot avoid paying a particular assessment even if that insurance entity reduces its premium writing in the future. In such circumstances, the event that obligates the entity is a formal determination of insolvency or similar triggering event. For example, in certain states, an insurance entity may remain liable for assessments even though the insurance entity discontinues the writing of premiums. In this circumstance, the underlying cause of the liability is not the writing of the premium, but the insolvency. Regulatory practice would be determined based on the stated intentions or prior history of the insurance regulators.

b. For loss-based assessments, the event that obligates an entity is an entity's incurring the losses on which the assessments are expected to be based.

~~8.~~9. Paragraph 4.c. requires that the amounts can be reasonably estimated. For retrospective-premium-based guaranty fund assessments, a reporting entity's estimate of the liability shall reflect an estimate of its share of the ultimate loss expected from the insolvency. The reporting entity shall also estimate any applicable premium tax credits and policy surcharges. An entity need not be able to compute the exact amounts of the assessments or be formally notified of such assessments by a guaranty fund to make a reasonable estimate of its liability. Entities subject to assessments may have to make assumptions about future events, such as when the fund making the assessment will incur costs and pay claims to determine the amounts and the timing of assessments. The best available information about market share or premiums by state and premiums by line of business generally should be used to estimate the amount of future assessments. Estimates of loss-based assessments should be consistent with estimates of the underlying incurred losses and should be developed based upon enacted laws or regulations and expected assessment rates. Premium tax credits or policy surcharges may only be considered in the estimate if it is probable they will be realized. Because of the uncertainties surrounding some insurance-related assessments, the range of assessment liability may have to be re-evaluated regularly during the assessment process. Changes in the amount of the liability (or asset) as information becomes available over time and revisions to estimates in the amount or timing of the payments shall be recorded in taxes, licenses and fees.

~~9.~~10. In accordance with SSAP No. 5R, when the reasonable estimate of the loss is a range, the amount in the range that is considered the best estimate shall be accrued. When, in management's opinion, no amount within management's estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management's estimate in the range shall be accrued. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued.

Reporting Assets for Premium Tax Offsets and Policy Surcharges

~~10.~~11. The liability for accrued assessments shall be established gross of any probable and estimable recoveries from premium tax credits and premium surcharges. When it is probable that a paid or accrued assessment will result in an amount that is recoverable from premium tax offsets or policy surcharges, an asset shall be recognized for that recovery in an amount that is determined based on current laws, projections of future premium collections or policy surcharges from in-force policies, and as permitted in accordance with paragraphs ~~10~~11.a., ~~10~~11.b. and ~~10~~11.c. Any recognized asset from premium tax credits or policy surcharges shall be re-evaluated regularly to ensure recoverability. Upon expiration, tax credits no longer meet the definition of an asset and shall be written off.

a. For assessments paid before premium tax credits are realized or policy surcharges are collected, an asset results, which represents a receivable for premium tax credits that will be taken and policy surcharges which will be collected in the future. These receivables, to the extent it is probable they will be realized, meet the definition of assets, as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement. The asset shall be established and reported independent from the liability (not reported net).

b. Assets recognized from accrued liability assessments shall be determined in accordance with the type of guaranty fund assessment as detailed in the following subparagraphs. Assets recognized from accrued liability assessments meet the definition of an asset under SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement.

i. For retrospective-premium-based and loss-based assessments, to the extent that it is probable that accrued liability assessments will result in a recoverable amount in a future period from business currently in-force considering appropriate persistency rates for long-duration contracts, an asset shall be recognized at the time the liability is recorded. (In-force policies do not include expected renewals of short-term contracts.

ii. For prospective-premium-based assessments, the recognition of assets from accrued liability assessments is limited to the amount of premium an entity has written or is obligated to write and to the amounts recoverable over the life of the in-force policies. This SSAP requires reporting entities to recognize prospective-based-premium assessments as the premium is written or obligated to be written by the reporting entity. Accordingly, the expected premium tax offset or policy surcharge asset related to the accrual of prospective-premium-based assessments shall be based on and limited to the amount recoverable as a result of premiums the insurer has written or is obligated to write.

c. An asset shall not be established for paid or accrued assessments that are recoverable through future premium rate structures.

~~11.~~12. An evaluation of assets recognized under paragraph ~~10~~ 11 shall be made in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) to determine if there is any impairment. If, in accordance with SSAP No. 5R, it is probable that the asset is no longer realizable, the asset shall be written off to the extent it is not realizable and charged to income in the period the determination is made. Considering expected future premiums other than on in-force policies in evaluating recoverability of premium tax offsets or policy surcharges is not permitted.

Acting as an Agent for Collection and Remittance of Fees and Assessments

~~12.~~13. In certain circumstances, a reporting entity acts as an agent for certain state or federal agencies in the collection and remittance of fees or assessments. In these circumstances, the liability for the fees and assessments rests with the policyholder rather than with the reporting entity. The reporting entity's obligation is to collect and subsequently remit the fee or assessment. When both the following conditions are met, an assessment shall not be reported in the statement of operations of a reporting entity:

a. The assessment is reflected as a separately identifiable item on the billing to the policyholder; and

b. Remittance of the assessment by the reporting entity to the state or federal agency is contingent upon collection from the insured.

~~13.~~14. The impact to the statement of operations depends on the nature of the charge:

a. For charges which are the ultimate responsibility of the policyholder, follow existing guidance in paragraph ~~12~~13, and pass these charges and recoveries through the balance sheet with no impact to the statement of operations.

b. For charges which are the ultimate responsibility of the reporting entity and may be recovered all or in part, apply gross or net reporting in the statement of operations as appropriate based on the nature of the charge and recovery. For example, charges which are considered in rate development or for which the recovery is classified as premium should be reported gross, charges for which recovery is considered a reduction of the expense should be reported net.

c. For collection or administrative fees, report such fees as revenue in the statement of operations as "Finance and Service Charges Not Included in Premiums" or "Aggregate Write-Ins for Miscellaneous Income".

Applying the Recognition Criteria

~~14.~~15. Application of the recognition criteria in paragraph 4:

a. *Retrospective-premium-based guaranty-fund assessments* - An assessment is probable of being imposed when a formal determination of insolvency occurs[1]. At that time, the premium that obligates the entity for the assessment liability has already been written. Accordingly, an entity that has the ability to reasonably estimate the amount of the

[1] As detailed within paragraph ~~6~~ 7 for premium-based guaranty-fund assessments, an insolvency shall be considered to have occurred when a reporting entity meets a state's (ordinarily the state of domicile of the insolvent reporting entity) statutory definition of an insolvent reporting entity. In most states, the reporting entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation.

assessment shall recognize a liability for the entire amount of future assessments related to a particular insolvency when a formal determination of insolvency is rendered.

b. *Prospective-premium-based guaranty-fund assessments* - The event that obligates the entity for the assessment liability generally is the writing of, or becoming obligated to write or renew, the premiums on which the expected future assessments are to be based (for example, multiple-year contracts under which an insurance entity has no discretion to avoid writing future premiums). Therefore, the event that obligates the entity generally will not have occurred at the time of the insolvency. Law or regulatory practice affects the event that obligates the entity in either of the following ways:

i. In states that, through law or regulatory practice, provide that an entity cannot avoid paying a particular assessment in the future (even if the entity reduces premium writings in the future), the event that obligates the entity is a formal determination of insolvency or a similar event. An entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability for the entire amount of future assessments that cannot be avoided related to a particular insolvency when a formal determination of insolvency occurs.

ii. In states without such a law or regulatory practice, the event that obligates the entity is the writing of, or becoming obligated to write, the premiums on which the expected future assessments are to be based. An entity that has the ability to reasonably estimate the amount of the assessments shall recognize a liability when the related premiums are written or when the entity becomes obligated to write the premiums.

c. *Prefunded-premium-based guaranty-fund assessments* - A liability for an assessment arises when premiums are written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability as the related premiums are written.

d. *Other premium-based assessments* - Other premium-based assessments shall be accounted for in the same manner as prefunded premium-based guaranty-fund assessments.

e. *Loss-based assessments* - An assessment is probable of being asserted when the loss occurs. The obligating event of the assessment also has occurred when the loss occurs. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability as the related loss is incurred.

f. *Administrative-type assessments* – As this assessment is typically an annual amount per entity assessed to fund operations of the guaranty association, regardless of the existence of an insolvency, such assessments are generally expensed in the period assessed.

Affordable Care Act Section 9010 Assessment

16. The Affordable Care Act (ACA) imposes an assessment on entities that issue health insurance for each calendar year beginning on or after January 1, 2014. Pursuant to Section 9010 of the ACA, a reporting entity's portion of the assessment is paid no later than September 30 of the applicable calendar year (the fee year) beginning in 2014 and is not tax deductible. The amount of the assessment for the reporting entity is based on the ratio of the amount of an entity's subject net health premiums written for any U.S. health risk during the preceding calendar year (data year) to the aggregate amount of subject net health premiums written by all subject U.S. health insurance providers during the preceding calendar year. The ACA includes some significant exclusions regarding which entities are required to pay the assessment. This guidance applies to all entities that are subject to the fee. The guidance in this Section

(paragraphs 16-21) applies to the unique facts and circumstances in the ACA; accordingly, an entity should apply judgment when evaluating the facts and circumstances of other assessment~~s~~ arrangements before analogizing to the guidance for Section 9010 of the ACA.

17. Throughout this discussion of the Section 9010 assessment of the ACA, the following terms apply:

a. The term ”data year” means the calendar year immediately before the fee year. ~~Thus,~~ For example, 2014 is the data year for fee year 2015.

b. The term “fee year" means the calendar year in which the assessment must be paid to the U.S. Treasury.

18. A reporting entity’s portion of the annual assessment becomes payable to the U.S. Treasury once the reporting entity provides health insurance (in the fee year) for any subject U.S. health risk for each calendar year beginning on or after January 1, 2014.

19. The liability related to the Section 9010 ACA assessment shall be estimated and recorded in full once the entity provides qualifying health insurance (typically January 1) in the applicable calendar year in which the assessment is paid (fee year) with a corresponding entry to expense. The Section 9010 ACA assessment shall be recognized in full on January 1 of the fee year, in the operating expense category of Taxes, Licenses and Fees.

20. Liability recognition of the Section 9010 fee is not required in the data year. In the data year, the reporting entity is required to reclassify from unassigned surplus to special surplus an amount equal to its estimated subsequent fee year assessment. This segregation in special surplus is accrued monthly throughout the data year. The reclassification from unassigned surplus to special surplus does not reduce total surplus. On January 1 of the fee year, the prior year segregation in special surplus is reversed and the full current fee year assessment liability shall be accrued.

21. The Section 9010 ACA annual assessment does not represent a cost related to the acquisition of policies that is consistent with the definition of acquisition costs in *SSAP No. 71—Policy Acquisition Costs and Commissions.*

Disclosures

~~15.~~22. For guaranty fund and other non-Section 9010 ACA assessments, a reporting entity shall disclose the following:

a. Describe the nature of any assessments that could have a material financial effect, by type of assessment, and state the estimate of the liability, identifying whether the corresponding liability has been recognized under paragraph 4, a liability has not been recognized as the obligating event has not yet occurred, or that an estimate cannot be made.

b. For assessments with liabilities recognized under paragraph 4, disclose the amount of the recognized liabilities, any related asset for premium tax credits or policy surcharges, the periods over which the assessments are expected to be paid, and the period over which the recorded premium tax offsets or policy surcharges are expected to be realized.

c. Disclose assets recognized from paid and accrued premium tax offsets or policy surcharges, and include a reconciliation of assets recognized within the previous year’s Annual Statement to the assets recognized in the current year’s Annual Statement. The reconciliation shall reflect, in aggregate, each component of the increase and decrease in paid and accrued premium tax offsets and policy surcharges, including the amount charged off.

d. Disclosures shall be made in accordance with paragraph 25 of SSAP No. 5R when there is at least a reasonable possibility that the impairment of an asset from premium tax offsets or policy surcharges may have been incurred.

~~16.~~23. For the Section 9010 ACA assessment:

a. For the annual reporting period ending December 31, 2013 and thereafter, a reporting entity subject to the assessment under Section 9010 of the Affordable Care Act, shall provide a disclosure of the assessment payable in the upcoming year consistent with the guidance provided under *SSAP No. 9—Subsequent Events* for a Type II subsequent event. The disclosure shall provide information regarding the nature of the assessment and an estimate of its financial impact, including the impact on its risk based capital position as if it had occurred on the balance sheet date. In accordance with SSAP No. 9, paragraph 9, the reporting entity shall also consider whether there is a need to present pro forma financial statements regarding the impact of the assessment, based on its judgment of the materiality of the assessment.

b. Additionally, for annual reporting periods ending on or after December 31, 2014, the disclosure in paragraph 23.a.is expanded to include information on the amounts reflected in special surplus in the data year. The disclosure shall provide information regarding the nature of the assessment and the Total Adjusted Capital and Authorized Control Level (in dollars) before and after adjustment (as reported in its estimate of special surplus applicable to the 9010 fee) to reflect the fee as of the annual reporting date as if it had been reported on the balance sheet date. The disclosure shall also provide a statement as to whether an RBC action level would have been triggered had the fee been reported as of the balance sheet date.

~~17.~~24. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

~~18.~~25. This statement adopts GAAP guidance for recording guaranty fund and other assessments, which is contained in *Accounting Standards Codification 405-30, Insurance Related Assessments* (ASC 405-30) to the extent reflected in this SSAP. Statutory accounting modifications from ASC 405-30 are as follows:

a. The option to discount accrued liabilities (and reflect the time value of money in anticipated recoverables) is rejected for statutory accounting. Liabilities for guaranty funds or other assessments shall not be discounted.

b. The use of a valuation allowance for premium tax offsets and policy surcharges no longer probable for realization has been rejected for statutory accounting. Evaluation of assets shall be made in accordance with SSAP No. 5R, and if it is probable that the asset is no longer realizable, the asset shall be written off and charged to income in the period the determination is made.

c. Guidance within ASC 405-30 pertaining to noninsurance entities has been rejected as not applicable for statutory accounting.

26. The guidance in paragraph ~~13~~ 14 adopted *Emerging Issues Task Force No. 06-3: How Taxes Collected from Customers and Remitted to Governmental Authorities Should Be Presented in the Income Statement (That is, Gross versus Net Presentation)* and was effective September 2007.

~~19.~~27. *ASU 2011-06: Other Expenses – Fees Paid to the Federal Government by Health Insurers* is adopted with modifications: 1) to require full expense recognition on January 1 of the fee year and 2) to require the reclassification from unassigned surplus to special surplus in the data year for the estimated amount payable, and 3) other modifications for statutory accounting terminology as reflected in paragraphs 16-21.

Effective Date and Transition

~~20.~~28. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Substantive revisions to paragraphs 4, ~~6~~7, ~~7~~8, ~~8~~9, ~~10~~11, ~~11~~12, ~~13~~15 and ~~14~~22 are initially effective for the reporting period beginning January 1, 2011. The result of applying this revised Statement shall be considered a change in accounting principle in accordance with SSAP No. 3. Pursuant to SSAP No. 3, the cumulative effect of changes in accounting principles shall be reported as an adjustment to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect recognized through surplus from initial application of this Statement shall reflect the removal of liabilities established under SSAP No. 35, and the re-establishment of liabilities required under SSAP No. 35R. If there is no change in the liabilities recognized (for example, retrospective-premium based assessments), no cumulative effect adjustment shall occur. With regards to assets, the entity shall complete an assessment of the SSAP No. 35 asset reported as of the transition date. If it is determined that the reported asset exceeds what is allowed under SSAP No. 35R, then the excess asset shall be written-off, through unassigned funds, so the ultimate asset reflected corresponds with what is permitted under SSAP No. 35R. Although it is possible that the excess asset will be reinstated once the liability assessment is recognized (prospective-premium based assessments), it is inappropriate to continue to reflect an asset for assessments that are not reflected within the financial statements. The guidance in paragraph ~~13~~ 14 adopted *Emerging Issues Task Force No. 06-3: How Taxes Collected from Customers and Remitted to Governmental Authorities Should Be Presented in the Income Statement (That is, Gross versus Net Presentation)* and was effective September 2007. The Section 9010 ACA fee has specific guidance (adopted December 2013), detailed in paragraphs 16-21, that is initially effective for annual reporting periods beginning January 1, 2014.

RELEVANT ISSUE PAPERS

- *Issue Paper No. 35—Accounting for Guaranty Fund and Other Assessments*
- *Issue Paper No. 143—Prospective-Based Guaranty Fund Assessments*

EXHIBIT A – PRIMARY METHODS OF GUARANTY FUND ASSESSMENTS

a. *Retrospective-premium-based assessments* - Guaranty funds covering benefit payments of insolvent life, annuity, and health insurance entities typically assess entities based on premiums written or received in one or more years before the year of insolvency. Assessments in any year are generally limited to an established percentage of an entity's average premiums for the three years preceding the insolvency. Assessments for a given insolvency may take place over several years.

b. *Prospective-premium-based assessments* - Guaranty funds covering claims of insolvent property and casualty insurance entities typically assess entities based on premiums written in one or more years after the insolvency. Assessments in any year are generally limited to an established percentage of an entity's premiums written or received for the year preceding the assessment. Assessments for a given insolvency may take place over several years.

c. *Prefunded-premium-based assessments* - This kind of assessment is intended to prefund the costs of future insolvencies. Assessments are imposed before any particular insolvency and are based on the current level of written premiums. Rates to be applied to future premiums are adjusted as necessary.

d. *Administrative-type assessments* - These assessments are typically a flat (annual) amount per entity to fund operations of the guaranty association, regardless of the existence of an insolvency.

e. *Other premium-based assessments* - Entities are subject to a variety of other insurance-related assessments. Many states and a number of local governmental units have established other funds supported by assessments. The most prevalent uses for such assessments are (*a*) to fund operating expenses of state insurance regulatory bodies (for example, the state insurance department or workers' compensation board) and (*b*) to fund second-injury funds.

   i. *Premium-based* - The assessing organization imposes the assessment based on the entity's written premiums. The base year of premiums is generally either the current year or the year preceding the assessment.

   ii. *Loss-based* - The assessing organization imposes the assessment based on the entity's incurred losses or paid losses in relation to that amount for all entities subject to that assessment in the particular jurisdiction.

Appendix B – Illustration of SSAP No. 106: ACA Assessments

Note – The changes reflected in this Appendix illustrate the substantive placement revisions to SSAP No. 35R adopted in December 2013 (reflected in Appendix A), which were subsequently moved in 2014 into *SSAP No. 106—Affordable Care Act Section 9010 Assessments*. Also at that time, additional disclosures related to the Section 9010 fee of the Affordable Care Act were incorporated. The changes to the disclosures are reflected as tracked revisions in this issue paper.

Statement of Statutory Accounting Principles No. 106

Affordable Care Act Assessments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the Affordable Care Act Section 9010 assessment and disclosures related to the risk sharing provisions of the Affordable Care Act.

SUMMARY CONCLUSION

2. This statement adopts *ASU 2011-06: Other Expenses – Fees Paid to the Federal Government by Health Insurers* (ASU 2011-06) with modifications identified in paragraph 11. ASU 2011-06 provides specific guidance related to the assessment in Section 9010 of the Affordable Care Act.

Affordable Care Act Section 9010 Assessment

3. The Affordable Care Act (ACA) imposes an assessment on entities that issue health insurance for each calendar year beginning on or after January 1, 2014. Pursuant to Section 9010 of the ACA, a reporting entity's portion of the assessment is paid no later than September 30 of the applicable calendar year (the fee year) beginning in 2014 and is not tax deductible. The amount of the assessment for the reporting entity is based on the ratio of the amount of an entity's subject net health premiums written for any U.S. health risk during the preceding calendar year (data year) to the aggregate amount of subject net health premiums written by all subject U.S. health insurance providers during the preceding calendar year. The ACA includes some significant exclusions regarding which entities are required to pay the assessment. The guidance in this statement applies to all reporting entities that are subject to the fee. The guidance in this statement applies to the unique facts and circumstances in the ACA; accordingly, an entity should apply judgment when evaluating the facts and circumstances of other assessments arrangements before analogizing the guidance for Section 9010 of the ACA.

4. Throughout this discussion of the Section 9010 assessment of the ACA, the following terms apply:

a. The term "data year" means the calendar year immediately before the fee year. For example, 2014 is the data year for fee year 2015.

b. The term "fee year" means the calendar year in which the assessment must be paid to the U.S. Treasury.

5. A reporting entity's portion of the annual assessment becomes payable to the U.S. Treasury once the reporting entity provides health insurance (in the fee year) for any subject U.S. health risk for each calendar year beginning on or after January 1, 2014.

6. The liability related to the Section 9010 ACA assessment shall be estimated and recorded in full once the entity provides qualifying health insurance (typically January 1) in the applicable calendar year in which the assessment is paid (fee year) with a corresponding entry to expense. The Section 9010 ACA

assessment shall be recognized in full on January 1 of the fee year, in the operating expense category of Taxes, Licenses and Fees.

7. Liability recognition of the Section 9010 fee is not required in the data year. In the data year, the reporting entity is required to reclassify from unassigned surplus to special surplus an amount equal to its estimated subsequent fee year assessment. This segregation in special surplus is accrued monthly throughout the data year. The reclassification from unassigned surplus to special surplus does not reduce total surplus. On January 1 of the fee year, the prior year segregation in special surplus is reversed and the full current fee year assessment liability shall be accrued.

8. The Section 9010 ACA annual assessment does not represent a cost related to the acquisition of policies that is consistent with the definition of acquisition costs in *SSAP No. 71—Policy Acquisition Costs and Commissions*.

Disclosures

9. For the Section 9010 ACA assessment:

a. For the annual reporting period ending December 31, 2013, and thereafter, a reporting entity subject to the assessment under section 9010 of the Affordable Care Act, shall provide a disclosure of the assessment payable in the upcoming year consistent with the guidance provided under *SSAP No. 9—Subsequent Events* for a Type II subsequent event. The disclosure shall provide information regarding the nature of the assessment and an estimate of its financial impact, including the impact on its risk-based capital position as if it had occurred on the balance sheet date. In accordance with SSAP No. 9, paragraph 9, the reporting entity shall also consider whether there is a need to present pro forma financial statements regarding the impact of the assessment, based on its judgment of the materiality of the assessment.

b. Additionally, for annual reporting periods ending on or after December 31, 2014, the disclosure in paragraph 9.a. is expanded to include information on the amounts reflected in special surplus in the data year.

i. The reporting entity shall disclose the amount of premium written for the current year that is the basis for the determination of the section 9010 fee assessment to be paid in the subsequent year (net assessable premium). Prior year amounts shall also be included for comparative purposes;

~~i.~~ii. Reporting entities shall provide information regarding the nature of the assessment, the estimated amount of the assessment payable in the upcoming year (current and prior year)and the amount of assessment paid (current and prior year), and ;

~~ii.~~iii. The disclosure shall also provide the Total Adjusted Capital and Authorized Control Level (in dollars) before and after adjustment (as reported in its estimate of special surplus applicable to the 9010 fee) to reflect the fee as of the annual reporting date as if it had been reported on the balance sheet date. The disclosure shall also provide a statement as to whether an RBC action level would have been triggered had the fee been reported as of the balance sheet date.

10. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

11. *A*SU *2011-06: Other Expenses – Fees Paid to the Federal Government by Health Insurers* is adopted with the following modifications: 1) to require full expense recognition on January 1 of the fee year, 2) to require the reclassification from unassigned surplus to special surplus in the data year for the estimated amount payable, and 3) other modifications for statutory accounting terminology as reflected in this statement.

Effective Date and Transition

12. This statement is effective for years beginning January 1, 2014. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The Section 9010 ACA fee specific guidance in paragraphs 2-8 and paragraph 9.b. was adopted December 2013 with a January 1, 2014, effective date. This guidance was originally reflected in *SSAP No. 35—Guaranty Fund and Other Assessments – Revised* (SSAP No. 35R). The disclosure language in paragraph 9a was also moved from SSAP No. 35R, but was originally effective December 31, 2013. The guidance from SSAP No. 35R was moved into this statement in month/year. This movement was a placement change and did not result revisions to the accounting guidance previously included in SSAP No. 35R.

Issue Paper No. 149

Wholly-Owned Single Real Estate Property in an LLC

STATUS
Finalized December 12, 2014

Original SSAP and Current Authoritative Guidance: SSAP No. 40R
Also refer to SSAP No. 48.

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for real estate investments is in *SSAP No. 40—Real Estate Investments* (SSAP No. 40), and guidance for investments in joint ventures, partnership, and limited liability companies (LLC) is in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48). Reporting entities can own real estate through an LLC to provide a liability shield against the risks of holding real estate. Single property real estate that is wholly-owned (100%) by a single reporting entity in an LLC, if specific criteria are met, is in substance a real estate investment.

2. This issue paper provides substantive revisions to incorporate individual real estate investments wholly-owned by a single entity through an LLC, which meet specific criteria, within the scope of SSAP No. 40. The revisions also exclude these investments from SSAP No. 48.

SUMMARY CONCLUSION

3. This issue paper substantively revises the scope of SSAP No. 40 and SSAP No. 48. The substantive revisions to SSAP No. 40 and SSAP No. 48 are shown below.

Substantive Revisions to SSAP No. 40:

> 2. Real estate investments are defined as directly-owned real estate properties and single real estate property investments that are directly and wholly-owned through a limited liability company (LLC) that meet all of the criteria in paragraph 4. ~~These~~ Real estate investments may be acquired in exchange for consideration (including but not limited to cash, a contract for deed or mortgage, or other non-cash consideration), obtained through foreclosure or voluntary conveyance in satisfaction of a mortgage loan, or received as contributed surplus. Real estate investments meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.
>
> 3. Real estate investments include certain acquisition, development and construction arrangements (ADC) as defined in *SSAP No. 38—Acquisition, Development and Construction Arrangements* (SSAP No. 38).
>
> 4. A single real estate property investment that is wholly-owned by an LLC that is directly[1] and wholly-owned by the reporting entity shall be captured within this statement, and reported on Schedule A – Real Estate if all of the following criteria are met. Real estate owned through an

[1] For example, qualifying LLCs that are owned by a downstream holding company are not within scope of this statement regardless if the downstream holding company is wholly-owned by the reporting entity.

LLC that meets the stated criteria shall follow all statutory requirements within this statement[2]. Real estate owned through an LLC that does not meet the criteria shall be reported on Schedule BA – Other Long-Term Invested Assets. Regardless if reported on Schedule A or Schedule BA, all LLC's owned by the reporting entity shall be detailed in Schedule Y.

a. The real estate LLC has no transactions of its own other than transactions associated with an ownership structure utilized only for the ownership and management of a single real estate investment exclusively for the reporting entity (e.g., real estate taxes). A reporting entity may have more than one LLC that wholly-owns a single real estate property investment, but each LLC must separately comply with the paragraph 4 conditions, and be separately reported on Schedule A. All transactions of the LLC shall be reported as transactions of the reporting entity pursuant to the guidance in paragraphs 15-17.

b. The LLC only owns a single real estate property supported by an appraisal pursuant to paragraphs 13-14. A single real estate property can include multiple parcels of land and more-than-one structure; however, to be considered a single real estate property, the multiple of parcels of land and structure(s) must be contiguously located and managed together as a single asset (with reasonable allowances for public access routes). Criteria that may assist with determining a single real estate property would include the legal definition of the property, real estate tax assessments, postal address, the appraisal and the management and use of the property.

c. The reporting entity solely controls the real estate property in a manner similar to directly-owned real estate. As such, the reporting entity controls others' access to the real estate, and the real estate must be able to be sold exactly as, and as promptly as, directly-owned real estate.

d. The reporting entity solely and distinctly possesses all risks (other than the limitation of potential liability afforded by the LLC structure itself) and rewards of ownership of the real estate investment, without any constraints imposed by the LLC.

e. The reporting entity is the only member of the LLC. The LLC is not comprised of any other members, including: groups, competing interests, mutual beneficial interests, or co-venturers. The single-member ownership is required even if other members in the LLC are affiliates. An LLC comprised of affiliated parties is not within scope of this statement.

f. There shall be no apportionment by the LLC or the reporting entity of the appraised value, expenses or income from the single real estate property to any other entity or between the general or separate account.

Disclosures (New Paragraph 27)

27. An entity that holds real estate investments through an LLC, which qualifies for inclusion in this statement because all the criteria in paragraph 4 are met, shall separately report each investment on Schedule A, and code the real estate as wholly-owned through an LLC.

Effective Date and Transition (New Paragraphs 36-37)

36. The substantive revisions to incorporate real estate property investments that are wholly-owned by an LLC that is directly and wholly-owned by the reporting entity in accordance with the

[2] The inclusion in this statement of real estate owned by a single member LLC is not an election by the reporting entity. All real estate owned in an LLC meeting the criteria in paragraph 4 are required to be captured within this statement, and are subject to this statement's requirements for valuation and admittance. Departures from the requirements within this SSAP, or continuing to follow SSAP No. 48 for these investments would be considered a departure from NAIC statutory accounting principles subject to permitted or prescribed practice disclosure requirements.

criteria detailed in paragraph 4 are effective as of January 1, 2015**.** For these investments previously reported within SSAP No. 48, and owned as of the effective date, the reporting entity shall recognize a cumulative effect of a change in accounting principle as if the entity had followed this statement since acquisition of the real estate investment property. The change from applying these substantive revisions shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

37. To determine statement value for real estate owned through an LLC as of the paragraph 36 effective date, the reporting entity shall:

a. Allocate the original cost of the real estate investment to land and property other-than-land pursuant to paragraph 8.

b. To arrive at the current depreciated cost for property (excluding land), the entity shall apply the depreciation that would have occurred if this statement had been applied since acquisition, in accordance with the original expected useful life, adjusted for subsequent capital improvements pursuant to paragraph 16.

c. The depreciated cost calculated under paragraph 37.b. shall be compared to a current appraisal to determine if an impairment assessment is required under SSAP No. 90. Recognition of impairment shall result in a new cost basis for the property, with recalculation of the depreciation based on the property's remaining useful life, as limited by the terms of this statement.

d. The depreciated cost, reflecting any impairment from paragraph 37.c., less encumbrances, shall be recognized as the real estate investment as of the effective date.

Substantive Revisions to SSAP No. 48:

SCOPE OF THE STATEMENT

1. This statement establishes statutory accounting principles for investments in any joint ventures, partnerships, and limited liability companies, including investments in certified capital companies (CAPCO) per *INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)*, whether or not it is considered to be controlled by or affiliated with the reporting entity. Single real estate property investments that are wholly-owned by an LLC that is directly and wholly-owned by the reporting entity, and that meet the criteria established in *SSAP No. 40—Real Estate Investments*, are excluded from this statement. This statement does not address the accounting for investments in partnerships and limited liability companies that invest in Low Income Housing Tax Credit Properties as discussed in *SSAP No. 93—Accounting for Low Income Housing Tax Credit Property Investments* (SSAP No. 93). However, investments in certain state Low Income Housing Tax Credit Property Investments that do not fall within the scope of SSAP No. 93 are covered by the requirements of this statement.

EFFECTIVE DATE AND TRANSITION (NEW PARAGRAPH 26)

26. The substantive revisions to incorporate single real estate property investments wholly-owned by an LLC that is directly and wholly-owned by the reporting entity in accordance with the criteria detailed in SSAP No. 40 are effective as of January 1, 2015**.** For these investments previously reported within the scope of this statement, the reporting entity shall follow the transition guidance in SSAP No. 40.

DISCUSSION

4. In August 2013, a sponsor submitted an agenda item (Ref #2013-17) to the Statutory Accounting Principles (E) Working Group recommending revisions to indicate that if the substance of a real estate transaction means that absolute control and all rights over the real estate are with the insurer, and just the

insurer, then the accounting and reporting should be in accordance with *SSAP No. 40—Real Estate Investments* and *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate*.

5. Within the submitted agenda item, the sponsor advocated that for these transactions, the arm's length economic transaction is the purchase of real estate, not an investment in an LLC. The single member / single asset LLC is a conduit that one invests "through" not "in," and the insurer's control over the real estate is total and absolute, as control is equivalent to direct ownership. The sponsor noted that the insurer can establish absolute control equivalent to direct ownership by meeting all of the following conditions:

a. The insurer controls others' access to the real estate to the extent that the real estate is the "asset" with an appraisal. It can be sold exactly as and, as promptly as, any other real estate sale. From the perspective of *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4), it is real estate that is the asset standing ready to satisfy policy owner needs;

b. Risks and rewards of ownership of the real estate as discussed in *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25), are solely and distinctly in possession of the insurer without any constraints imposed by the LLC with constraints defined as in *SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishment of Liabilities* (SSAP No. 103);

c. No members are in the single-member/single asset LLC except for the insurer itself, no "group" or competing interest, "mutual" beneficial interest or "co venturer", affiliated or not, having any ownership interest in the real estate as anticipated by SSAP No. 48;

d. The single-member/single-asset LLC has no transactions of its own;

e. Lacking any interests outside of the insurer's general account, there is absolutely no need or reason to apportion the appraised value, expenses or income from the real estate. All accounting requirements of SSAP No. 40 are met to the extent that the asset could reasonably meet the comment in Schedule BA instructions that it could be "normally includable" in Schedule A;

f. The LLC is not a business in itself but is an administrative device. It follows the model of an "Investment Affiliate" in RBC Instructions that is organized to engage in the ownership and management of investments exclusively for the insurer for which risk based capital factors are those of the underlying asset; and,

g. The insurer will disclose use of single-member/single-asset LLCs as required by *SSAP No. 1—Disclosure of Accounting Policies, Risk and Uncertainties, and Other Disclosures* (SSAP No. 1).

6. In reviewing the sponsor-submitted agenda item, NAIC staff identified that some real estate transactions are separately housed in LLC structures for legal liability reasons, and under existing statutory accounting guidance, these wholly-owned structures would be within the scope of SSAP No. 48, and be reported using an equity method as defined in *SSAP No. 97—Investments in Subsidiary, Controlled or Affiliated Entities* (SSAP No. 97). Pursuant to guidance in SSAP No. 97, these investments would be considered U.S. noninsurance SCA entities and be recorded based on the audited U.S. GAAP equity of the investee.

7. In identifying the differences that would occur if these real estate structures were moved to SSAP No. 40, NAIC staff noted the following:

a. Reduction of RBC: For real estate reported on Schedule A (SSAP No. 40), the health/P&C RBC charge is 0.10 of the book/adjusted carrying value and 0.10 of the encumbrances, the life RBC charge is 0.15 of the book/adjusted carrying value and 0.12 of the encumbrances. For life annual statement filers, these investments reported on Schedule BA through an LLC receive a 0.23 RBC pre-tax charge on the book/adjusted carrying value, with an additional 0.20 pre-tax charge on the encumbrances. For property and health annual statement filers, these investments receive a 0.20 RBC charge on the book/adjusted carrying value.

b. Reduction of Carrying Value: Real estate accounted for under SSAP No. 40 is valued at depreciated cost, and generally reported at depreciated cost less encumbrances. (Property held for sale is reported at the lower of fair value, or depreciated cost less encumbrances.)

c. Depreciating Asset: Real estate property other than land accounted for under SSAP No. 40 is depreciated over its estimated useful life, not to exceed fifty years. Expenditures to put the real estate asset back into good condition or to keep it in good operating condition are expensed as incurred. Expenditures that add or prolong the life of the property are added to the cost of the property and depreciated over the remaining estimated useful life.

d. Admitted Asset Restrictions: Real estate property held for the production of income, or held for sale under SSAP No. 40 are required to have a current appraisal. A current appraisal is defined as one that is no more than five years old. Property not supported by a current appraisal is nonadmitted. Under SSAP No. 48, investments in an LLC were nonadmitted if not supported by audited financial statements.

e. Disallowance of Fair Value Gains: Real estate properties held under SSAP No. 40 are not permitted to reflect fair value increases in value.

8. In December 2013, after initially exposing the agenda item for comment, and submitting a referral to the Capital Adequacy (E) Task Force, the Statutory Accounting Principles (E) Working Group noted that comments received from interested parties supported the concepts and conditions within the agenda item. Additionally, the comments requested an expansion of the scope of the agenda item to include multi-member insurers and real estate held in a holding company system. In discussing this proposed expansion, the Working Group agreed to limit consideration to single-member/single-asset situations, and potentially consider a broader project under the investment classification project (Ref #2013-36).

9. In August 2014, the Statutory Accounting Principles (E) Working Group considered comments from the Capital Adequacy (E) Task Force and directed staff to proceed with drafting guidance to incorporate these assets into SSAP No. 40 with a caveat that the guidance could be amended under the Working Group’s current investment classification project. In discussing this option, representatives from interested parties’ stated support for this approach, and noted that the proposed move between SSAPs would be fairly easy to incorporate within their financial reporting systems.

10. During the August 2014 discussion, NAIC staff clarified that the current Working Group direction would be to draft guidance to not allow optionality in determining whether the real estate assets fall within SSAP No. 48 or SSAP No. 40, therefore the assets that meet the criteria would be solely captured within SSAP No. 40. This discussion highlighted that this change would allow a reporting change from Schedule BA to Schedule A, resulting in a lower RBC charge, but the change would also possibly result in a lower asset value, as SSAP No. 40 requires a depreciated cost value net of encumbrances instead of GAAP equity. Additionally, under SSAP No. 40, an appraisal is required for the asset to be admitted, and an appraisal is not required for the asset to be admitted under SSAP No. 48. Comments received from Working Group members stated support for the improved reporting

transparency if these investments were captured under SSAP No. 40, and noted that industry seems aware of the accounting impact that will occur with implementation of these changes.

EFFECTIVE DATE

11. Upon adoption of this issue paper, the NAIC will release a substantively revised statement of statutory accounting principles (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of reporting periods after January 1, 2015.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

Statutory Issue Paper No. 150

Accounting for the Risk-Sharing Provisions of the Affordable Care Act

STATUS
Finalized November 16, 2014

Original SSAP and Current Authoritative Guidance: SSAP No. 107

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The Affordable Care Act (ACA) imposes fees and premium stabilization provisions on health insurance issuers offering commercial health insurance. This issue paper recommends accounting for three programs known as risk adjustment, reinsurance and risk corridors that take effect in 2014. Risk adjustment is a permanent risk-spreading program (ACA Section 1343). The temporary transitional reinsurance program (ACA Section 1341) and temporary risk corridors program (ACA Section 1342) are for years 2014 through 2016.

2. Specific terms included in Appendix A are unique to these programs and should not be applied to other aspects of statutory accounting. The required payments to the programs by reporting entities are described as "contributions" in the program literature but are referred to in this guidance as assessments for clarity. Amounts redistributed by the programs back to reporting entities are termed "payments" by the programs. These "payments" are recoverables/receivables for the reporting entity and are termed program distributions or receivables (to the reporting entity) in this guidance. The reporting of payable or receivable amounts in this guidance is from the perspective of the reporting entity. The statement based on this issue paper will nullify *INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act.*

SUMMARY CONCLUSION

3. This issue paper establishes statutory accounting principles for the risk-sharing provisions of the ACA. The manner in which these provisions are applied in the determination of the medical loss ratios (MLR) and rebates may be different from these as the MLR calculations are based on the ACA Section 2718(b).

Risk Adjustment Program – Description and Overview

4. The risk adjustment program based on Section 1343 of the ACA is effective beginning in the 2014 benefit year and continues as a permanent program.

5. The risk adjustment program includes health plans (except certain exempt and grandfathered plans) in the individual or small group markets both on and off the exchange. All covered risk adjustment plans are required to participate in the risk adjustment program.

6. The purpose of the risk adjustment program is to transfer funds from lower risk plans to higher risk plans within similar plans in the same state in order to adjust premiums for adverse selection among carriers caused by membership shifts due to guarantee issue and community rating mandates. States may set up their own risk adjustment programs, or they may permit Health and Human Services (HHS) to develop and manage the program in the state. In addition to the risk adjustment amount, HHS determines the user fee. In states operating their own risk adjustment program, the state will determine the fee.

7. Risk adjustment assessments and distributions will be computed based on the reporting entity's risk score versus the overall market risk score after applying adjustments. Risk adjustment assessments will be made if the plan average actuarial risk of all of their enrollees in a market and state is lower than the plan average risk of all enrollees in fully insured plans in that market and state risk pool. Risk adjustment distributions will be made to health plan issuers whose plans have an average actuarial risk that is greater than the plan average actuarial risk scores in that market and state risk pool. The reinsurance program is not considered in the computation.

8. HHS will collect a user fee to support the administration of the HHS-operated risk adjustment program. This fee applies to issuers of risk adjustment covered plans in states in which HHS is operating the risk adjustment program. For example, HHS projects that the per capita risk adjustment user fee for 2014 is approximately $1 per enrollee per year. Similar terms will apply for the user fees of state operated programs.

9. All risk adjustment distributions made to issuers are completely funded through the amounts assessed to other issuers within the same market in the same state to ensure equality between program distributions and assessments. Consequently, risk adjustment assessments will be invoiced prior to processing program distributions to issuers. Once applicable risk adjustment assessments by issuers are received by HHS or the state, funds will be redistributed to the higher risk plans. Each issuer that offers a risk adjustment covered plan will be notified of risk adjustment distributions or assessments by June 30 of the year following the benefit year to align with the program distributions and assessment processing. Risk adjustment assessments owed by an issuer to HHS or the state are required to be remitted within 30 days of notification of the assessment. Once applicable assessments are received by HHS or the state, funds will be redistributed to the higher risk plans.

Risk Adjustment Program – Accounting Treatment

10. The accounting elements of the ACA permanent risk adjustment program, which are considered separately, include the user fee and the risk adjustment assessments and distributions.

11. The user fee is paid to HHS in states where the risk adjustment program is being operated by HHS and to the state program if operated by the state. Risk adjustment user fees shall be treated as government assessments. These fees are treated the same as other non-income-based governmental taxes and fees in that they are recognized as an expense and liability when the premium subject to the assessment is written.

12. Premium adjustments pursuant to the risk adjustment program will be based upon the risk scores (health status) of enrollees, participating in risk adjustment covered plans rather than the actual loss experience of the insured. This program bears some similarities to the Medicare Advantage risk adjustment program[1] under which the plan receives additional funding (or pays additional amounts) based on adjustments to risk scores of enrollees (see *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage*).

13. The risk adjustment payables and receivables shall be accounted for as premium adjustments subject to redetermination as specified in this issue paper.

a. Risk adjustment payables meet the definition of liabilities as set forth in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R). Risk adjustment receivables meet the definition of an asset and are admissible to the extent that they meet all of the criteria in this issue paper.

[1] The ACA program also has significant differences from the Medicare Advantage risk adjustment program, which is retrospective, administered as a single national program, with most enrollees administered by the federal government. By contrast, the ACA risk adjustment is not retrospective, and is administered by each entity by state and by plan.

b. Risk adjustment payables and receivables shall be estimated based on experience to date. The method used to estimate the payables and receivables shall be reasonable and consistent between reporting periods. Reporting entities shall be aware of the significant uncertainties involved in preparing estimates and be both diligent and conservative in their estimations. In exercising the judgment required to prepare reasonable estimates for the financial reporting of risk adjustment program payables and receivables, the statutory accounting concept of conservatism shall be followed. In addition, reporting entities are required to have sufficient data to determine a reasonable estimate. Ensuring sufficient data requires that the reporting entity's estimate is based on demonstrated knowledge of the marketplace and annual information which includes patient encounter and diagnosis code data to determine the differences in the actuarial risk profile of the reporting entity's insureds versus the market participants in the particular market and state risk pool. Sufficient data shall incorporate patient default scores, if applicable, under the terms of the risk adjustment program. In addition, the estimates shall be consistent with other financial statement assertions and the pricing scenarios used by the reporting entity.

c. Premium revenue adjustments for the risk adjustment program are estimated for the portion of the policy period that has expired and shall be reported as an immediate adjustment to premium. Accrued risk adjustment receivables shall be recorded as a write-in for other-than-invested assets, with a corresponding entry to premiums; accrued risk adjustment payables shall be recorded as a liability with a corresponding entry to premiums. Reporting entities shall record additions or reductions to revenue resulting from the risk adjustment program in the period in which the changes in risk scores of enrollees result in reasonably estimable additions or reductions. The risk adjustment program receivables shall be reported gross of payables.

d. The risk adjustment receivables are administered through a federal governmental program. Once amounts are collected by the governmental entity, there is an obligation to distribute the funds. Amounts over 90 days due shall not cause the receivable to be treated as a nonadmitted asset based solely on aging.

e. Provided that the risk adjustment receivables due the reporting entity are determined in a manner that is consistent with the requirements of this issue paper, the receivables are admitted assets until determination of impairment or payment denial is received from the governmental entity or government-sponsored entity administering the program. Upon notification that payments to be paid to the reporting entity will be less than the recorded receivables, any amount in excess of the confirmed amount shall be written off and charged to income, except for amounts that are under appeal. Any receivable for risk adjustment amounts under appeal shall be reflected as a nonadmitted asset.

f. Evaluation of the collectibility of all amounts receivable from the risk adjustment program shall be made for each reporting period. If, in accordance with SSAP No. 5R, it is probable that the risk adjustment receivables are uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible that a portion of the balance determined in accordance with this paragraph is not anticipated to be collected and is therefore not written off, the disclosure requirements outlined in SSAP No. 5R shall be followed.

Transitional Reinsurance Program – Description and Overview

14. The transitional reinsurance program based on Section 1341 of the ACA is effective for plan years 2014 through 2016. Reinsurance assessments will be collected and distributions will be issued during the three-year term.

15. All issuers of major medical commercial products and third party administrators (TPAs) on behalf of uninsured group health plans are required to contribute funding at the national contribution rate to HHS. States establishing reinsurance programs may collect additional funding. Non-grandfathered individual plans are eligible to receive benefit program distributions via an excess-of-loss reinsurance system. Grandfathered plans are ineligible. Group plans are required to contribute funding, but are not eligible to receive reinsurance program distributions.

16. In general, this transitional reinsurance program provides funding to issuers in the individual market that incur high claims costs for enrollees. The program requires assessments from all issuers and TPAs on behalf of group health plans based on a per member annual fee established by HHS. The reinsurance assessment will fund reinsurance program distributions plus disbursements to the U.S. Treasury, in addition to covering administrative expenses of the program.

17. Consequently, the term "reinsurance" does not represent actual reinsurance between licensed insurers as defined by *SSAP No. 61—Revised—Life, Deposit-Type and Accident and Health Reinsurance* (SSAP No. 61R). This program is similar to an involuntary pool in *SSAP No. 63—Underwriting Pools and Associations Including Intercompany Pools* (SSAP No. 63) for the individual insured health products subject to the 2014 ACA market reforms. For the group plans, which are required to contribute funding but are not eligible to receive program distributions, the program is an assessment payable by the reporting entity and not a pool.

18. The national transitional reinsurance program assessment rate for all issuers and TPAs will be established by HHS and will be designed to collect more than $12 billion in 2014 to cover the required $10 billion for the reinsurance program, the $2 billion contribution to the U.S. Treasury, and additional amounts to cover the administrative costs of the federal government entity and applicable reinsurance entities. States electing to operate their own reinsurance program have the option to increase the reinsurance assessment rate to provide additional funding for the reinsurance program or to fund the administrative expenses of the applicable reinsurance entity. Assessments for the reinsurance program must fund the reinsurance program of $10 billion in 2014, $6 billion in 2015 and $4 billion in 2016, plus disbursements to the U.S. Treasury of $2 billion, $2 billion and $1 billion for years 2014 through 2016, in addition to covering administrative expenses of the applicable reinsurance entity or HHS.

19. Reinsurance program distributions will be processed either by the applicable reinsurance entity or by HHS and will be made to issuers of non-grandfathered individual market plans for high claim costs of enrollees. Distributions from the applicable reinsurance entity to insurers providing individual coverage will be calculated as a coinsurance rate multiplied by the eligible claims submitted for an individual enrollee's covered benefits between an attachment point and the reinsurance cap for each benefit year. The coinsurance rate, attachment point and reinsurance cap are initially determined by HHS, but may be modified by the state, if the state chooses to establish its own reinsurance program.

20. Each state is eligible to establish a reinsurance program, regardless of whether the state establishes a Marketplace Exchange. If a state establishes a reinsurance program, the state must enter into a contract with an applicable reinsurance entity or entities or establish a reinsurance entity to carry out the program. If a state does not elect to establish its own reinsurance program, HHS will administer the reinsurance program on behalf of that state. HHS establishes the annual administrative portion for the fee. (For example, the 2014 fee will be $0.11 per-member per-year resulting in $20.3 million of administrative expense funding).

21. Reinsurance assessments to fund the program are made on an annual basis with billing beginning December 15, 2014. An insurer may submit claims for reimbursement when an enrollee of the reinsurance-eligible plan has met the applicable criteria as determined by either the state or HHS. Claims may be submitted through April 30 of the year following the benefit year. HHS will distribute reinsurance program funds among issuers nationally based on submitted claims. Issuers will be notified of pending reinsurance distributions by June 30 following the benefit year. If the requests for distributions exceed the

actual assessments collected, HHS will reduce reinsurance distributions on a pro-rata basis. If the requests for distributions are less than actual assessments collected, HHS will increase reinsurance distributions on a pro-rata basis.

Transitional Reinsurance Program – Accounting Treatment

22. Due to the diverse elements of the transitional reinsurance program, which includes characteristics of traditional reinsurance, involuntary pools and governmental assessments, a hybrid accounting approach is required. The accounting treatment for the transitional reinsurance program outlined below is discussed in terms of the payables and receivables and the impact to the health insurance products subject to the program.

23. The following are the broad groupings of the health insurance products subject to the transitional reinsurance program:

a. Individual insured health products subject to the 2014 ACA market reforms. This excludes grandfathered and non-grandfathered 2013 products (referred to as subject individual insured products);

b. Other insured health products. This encompasses products which are not subject to the ACA market reforms including individual grandfathered and non-grandfathered (referred to as other insured health products);

c. Self-insured health products.

24. The guidance in this section will provide treatment for each of the assessments payable and program distribution receivable elements of the program listed below for the health insurance products listed in paragraph 23.

a. Assessments for reinsurance

b. Administrative costs assessments

c. Additional U.S. Treasury assessment

d. Reinsurance distributions

Subject Individual Insured Health Products

Subject Individual Insured Issuers - Assessments Payable for Reinsurance

25. Transitional reinsurance assessments attributable to enrollees in individual plans are treated as ceded reinsurance premium. This applies both to assessments made at the national assessment rate and to any state-elected additional assessments that will fund reinsurance program distributions. Ceded premiums would be reported as a reinsurance cession and follow reinsurance accounting in accordance with SSAP No. 61R, paragraph 17 and paragraphs 25-26:

> Transfer of Risk
>
> 17. Reinsurance agreements must transfer risk from the ceding entity to the reinsurer in order to receive the reinsurance accounting treatment discussed in this statement. If the terms of the agreement violate the risk transfer criteria contained herein, (i.e., limits or diminishes the transfer of risk by the ceding entity to the reinsurer), the agreement shall follow the guidance for Deposit Accounting. In addition, any contractual feature that delays timely reimbursement violates the conditions of reinsurance accounting.

> Reinsurance Premiums
>
> 25. For all reinsurance arrangements, the assuming entity must report premiums under the terms of the reinsurance contract as income and establish any asset or liability consistent with the methods and assumptions used to establish its policy reserves and guidance contained in *SSAP No. 51—Life Contracts*, *SSAP No. 54—Individual and Group Accident and Health Contracts*, and *SSAP No. 59—Credit Life and Accident and Health Insurance Contracts*. The ceding entity shall reduce premium income by the amounts paid or payable to the reinsurers. The ceding entity shall reduce its deferred and uncollected premiums reported as an asset by the corresponding proportionate amount of any deferred and uncollected premium attributable to those insurance policies reinsured. When the ceding entity has collected the premium but has not remitted the proportionate share to the reinsurer, the ceding entity shall establish a liability for the amount due the reinsurer. The assuming entity shall record an asset for premiums receivable from the ceding entity.
>
> 26. If the assuming entity receives reinsurance premium prior to the due date, consistent with SSAP No. 51, paragraph 7, and SSAP No. 54, paragraph 6, advance premiums are reported as a liability for the reinsurer in the statutory financial statement and not considered income until due. Such amounts are not included in premium or the unearned premium reserve (if applicable) until the due date. If the ceding entity pays reinsurance premium prior to the due date, the amount of the prepaid item shall be reflected as a write-in admitted asset and it should not be recognized in the income statement until due. Such amounts are not included in ceded premiums or ceded unearned premium but should be subject to impairment analysis.

26. For the individual coverage issuers, this is an involuntary pool and under the terms of the transitional reinsurance program, the transfer of risk and timely reimbursement requirements of SSAP No. 61R are deemed to be met.

27. With regard to individual coverage issuers, the transitional reinsurance program is more similar to traditional reinsurance than it is to an assessment, because program assessments are made to and program distributions are received from the government or government-sponsored entity. Accordingly, the program is accounted for as reinsurance for individual insured products subject to the transitional reinsurance program.

28. The provisions of SSAP No. 63, paragraph 3, define involuntary pools as follows:

> 3. Involuntary pools represent a mechanism employed by states to provide insurance coverage to those with higher than average probability of loss who otherwise would be excluded from obtaining coverage. Reporting entities are generally required to participate in the underwriting results, including premiums, losses, expenses, and other operations of involuntary pools, based on their proportionate share of similar business written in the state. Involuntary plans are also referred to as residual market plans, involuntary risk pools, and mandatory pools.

29. The transitional reinsurance program differs from an involuntary pool as just described, in that there is not a proportionate sharing of the entire results of a pool. However, the purpose is very similar: to address the additional costs associated with high-risk individuals. Furthermore, HHS has noted, *"the Affordable Care Act ... requires that states eliminate or modify high-risk pools to the extent necessary to carry out the reinsurance program,"* which likewise highlights the similar purposes of the two mechanisms. Therefore, SSAP No. 63, paragraph 8, provides additional relevant guidance:

> 8. Underwriting results relating to voluntary and involuntary pools shall be accounted for on a gross basis whereby the participant's portion of premiums, losses, expenses, and other operations of the pools are recorded separately in the financial statements rather than netted against each other. Premiums and losses shall be recorded as direct, assumed, and/or ceded as applicable. If the reporting entity is a direct writer of the business, premiums shall be recorded as directly written and accounted for in the same manner as other business which is directly written

> by the entity. To the extent that premium is ceded to a pool, premiums and losses shall be recorded in the same manner as any other reinsurance arrangement. A reporting entity who is a member of a pool shall record its participation in the pool as assumed business as in any other reinsurance arrangement.

As the transitional reinsurance program is a mechanism for sharing the additional costs associated with high-risk individuals, it is accounted for as traditional reinsurance.

Subject Individual Insured Issuers - Reinsurance Administrative Expense Assessments

30. The assessment payable by the reporting entity for administrative expenses attributable to individual coverage is reflected as ceded premium. This applies both to assessments made at the national assessment rate and to any state-required assessments that will provide additional funding for administrative expenses.

31. Normally reinsurance premiums are set at a level intended to cover anticipated claim costs and include an administrative charge component. Therefore, as a matter of consistency, it is appropriate to include the administrative charge component for the transitional reinsurance program in ceded premium for individual insured products.

Subject Individual Insured Issuers - U.S. Treasury Assessment

32. Because this portion of the assessment is earmarked for the U.S. Treasury and not for the reimbursement of claims or to cover the operating costs of the reinsurance program, it is a federal assessment not based on income. This portion of the assessment is not treated as ceded premium, but as an assessment under SSAP No. 35R and is reflected in the same expense category as taxes, licenses and fees. This is also consistent with annual statement expense reporting categories.

Subject Individual Insured Issuers - Reinsurance Program Distributions

33. Program distributions received from the ACA transitional reinsurance program for individual insurance is reflected as ceded claim benefit recoveries. This applies both to distributions received pursuant to the uniform federal reinsurance parameters and to any state distribution received.

34. In keeping with the rationale for reinsurance assessments above, distributions receivable from the transitional reinsurance program for individual insurance products is reflected the same as traditional reinsurance recoveries. SSAP No. 61R, paragraph 27, states:

> 27. Policy benefit payments paid or payable by the reinsurer shall be reported in the summary of operations and reduces the ceding entity's reported benefit payments. The reinsurer shall establish a liability for its share of any unpaid claim payments and the ceding entity shall reduce any policy and contract claim liability with respect to the reinsured policies or establish a receivable for the amount due from the reinsurer for claims paid.

35. Therefore, recoveries received are reported in the summary of operations and will reduce the ceding entity’s reported benefits paid.

36. HHS and all applicable reinsurance entities shall be reported consistent with providers to an involuntary pool and will be treated as authorized reinsurers for the purposes of financial reporting for subject individual health products.

37. All receivables from the transitional reinsurance program are subject to the 90-day nonadmission rule beginning from when program receivables are due to be disbursed by the government or a government-sponsored entity. That is, the 90-day rule begins when governmental receivables are due, not from the date of initial accrual. The announced governmental or government-sponsored entity distribution date shall be the contractual due date similar to Appendix A-791, paragraph 2h, which requires that

payments due from the reinsurer are made in cash within ninety (90) days of the settlement date. The receivable is also subject to impairment analysis.

Other Insured Health Products

Other Insured Health Products – Assessments Payable for Reinsurance

38. Transitional reinsurance program reinsurance assessments made for enrollees in fully insured plans other than individual plans are treated as an assessment payable by the reporting entity and charged to taxes, licenses and fees. This applies both to assessments made at the national assessment rate and to any state assessments that will fund reinsurance program distributions. In this case, for fully insured non-individual plans, the entity cannot, under the terms of the program, be deemed to be "participating," as funds for claim recoveries will not be re-distributed back to the issuer for the coverage that is being assessed. Therefore, issuers of other insured health products that are not for individuals are paying an involuntary fee but are not participating in an involuntary pool.

39. The treatment of the transitional reinsurance program reinsurance assessments for non-individual fully insured plans differs from the treatment for individual plans. Since the non-individual plans are not eligible for reimbursement, they are not participating in a reinsurance arrangement, and thus, the assessments are not treated as ceded premium. As an involuntary assessment, the transitional reinsurance program reinsurance assessments, consistent with SSAP No. 35R are treated as an assessment payable by the reporting entity and charged to taxes, licenses and fees expense. The expense is accrued in proportion to the other insured health enrollees base that will be used to determine the assessments payable as the premium subject to the assessment is written.

Other Insured Health Products - Reinsurance Administrative Expense Assessments

40. The reinsurance program administrative costs for other insured health products are an assessment payable by the reporting entity. This applies both to assessments made at the national assessment rate and to any state assessment that will fund administrative expenses and is reflected in the same expense category as taxes, licenses and fees.

Other Insured Health Products - U.S. Treasury Assessment

41. The additional U.S. Treasury assessment for other insured health products is a federal assessment payable by the reporting entity which is not based on income and is reflected in the same expense category as taxes, licenses and fees.

Other Insured Health Products - Reinsurance Program Distributions (not applicable)

42. Reinsurance recoveries will not occur for insured health products other than individual. Other insured health products will pay the transitional reinsurance program assessments payable but not receive program distributions for claims.

Self-Insured Health Products

Self-Insured Health Products - Assessments Payable for Reinsurance

43. Assessments made on behalf of self-insured plans which are administered by the reporting entity are uninsured plans and are excluded from the reporting entity's statement of operations, with respect to both monies received from the plans and assessments disbursed by the reporting entity. Any resulting liabilities or receivables shall be reported as liabilities and receivables held in connection with uninsured plans. This treatment is consistent with *SSAP No. 47—Uninsured Plans* (SSAP No. 47)*,* paragraphs 5 and 8-11.

44. The self-insured plan, not the reporting entity, is legally liable for assessments for the transitional reinsurance program. The funds are a bona fide pass-through by the reporting entity, which is merely providing a service for the self-insured (uninsured) plan. Therefore, the reporting entity will not report revenues or expenses for the assessments for the transitional reinsurance program.

45. The reporting entity may have received funds from the self-insured plans in advance of making disbursements. In that event, a liability is established for funds held in connection with self-insured plans.

46. The reporting entity, depending on its arrangement with the (uninsured) plan, may make a disbursement before receiving full funding from the plan. In that event, an asset is established for amounts receivable in connection with uninsured plans. The asset would be subject to the rules for admissibility and impairment as prescribed in SSAP No. 47, paragraphs 9-10.

Self-Insured Health Products - Reinsurance Administrative Expense Assessments Payable and U.S. Treasury Assessment

47. A reporting entity providing a service for a self-insured plan that is uninsured shall apply the pass-through treatment for the transitional reinsurance program’s administrative cost assessments and additional U.S. Treasury contribution amounts. The uninsured plan, not the reporting entity, is legally liable. Therefore, the reporting entity will not report revenues or expenses with respect to the transitional reinsurance program’s administrative cost assessments and additional U.S. Treasury contribution amounts.

Self-Insured Health Products - Reinsurance Payments (not applicable)

48. Reinsurance recoveries will not occur for self-insured health products, as these products will pay fees but not receive claims reimbursements.

Risk Corridors – Description and Overview

49. The risk corridors program based on Section 1342 of the ACA is effective for benefit years beginning in 2014 through 2016. The risk corridors program applies to Qualified Health Plans (QHPs) in the individual and small group markets whether sold on or outside of an exchange.

50. The purpose of the risk corridors program is to provide limitations on issuer losses and gains for QHPs through additional protection against initial pricing risk. The program creates a mechanism for sharing the risk for allowable costs between the federal government and the QHP issuers. The program is applied at the QHP level, not the issuer or market segment level. Although the risk-corridor program provides protection against extreme bounds of experience, there is a substantial corridor in which all variance in experience directly affects the financial return of the reporting entity.

51. To determine whether an issuer pays into (contributes), or receives distributions from, the risk corridors program, HHS will compare Allowable Costs[2] and the Target Amount[3] based on a formula that compares allowable costs. Below is an example (before transition requirements) for a QHP.

a. When a QHP’s Allowable Costs for any benefit year are more than 103% but not more than 108% of the Target Amount, HHS will pay the QHP issuer an amount equal to 50% of the Allowable Costs in excess of 103% of the target amount.

[2] With respect to a QHP, Allowable Costs is an amount equal to the sum of incurred claims of the QHP issuer, adjusted to include qualifying expenditures by the QHP for activities that improve health care quality, expenditures for health information technology and meaningful use requirements and other required adjustments.

[3] With respect to a QHP, the Target Amount is an amount equal to the total premiums earned with respect to a QHP, including any premium tax credit under any governmental program, reduced by the allowable administrative costs of the plan.

b. When a QHP's Allowable Costs for any benefit year are more than 108% of the Target Amount, HHS will pay the QHP issuer an amount equal to 2.5% of the Target Amount plus 80% of the Allowable Costs in excess of 108% of the target Amount.

c. If a QHP's Allowable Costs for any benefit year are less than 97% but not less than 92% of the Target Amount, the QHP issuer must remit assessments payable to HHS in an amount equal to 50% of the difference between 97% of the Target Amount and the Allowable Costs.

d. When a QHP's Allowable Costs for any benefit year are less than 92% of the Target Amount, the QHP issuer must remit assessments payable to HHS in an amount equal to the sum of 2.5% of the Target Amount plus 80% of the difference between 92% of the Target Amount and the Allowable Costs.

52. The risk corridors program creates a mechanism for sharing risk for allowable costs between the federal government and QHP issuers. The ACA establishes the risk corridors program as a federal program; consequently, HHS will operate the risk corridors program under federal rules without state variations. The risk corridors program is intended to protect against inaccurate rate setting in the early years of the exchanges by limiting the extent of issuer losses and gains. In the event that risk corridors programs collections are not sufficient to cover all the required distributions, the ACA requires the use of other sources of federal funding for the required distributions, subject to the availability of appropriations.

53. The final risk corridors settlement calculation will be communicated by HHS after the end of the benefit year and after premium and loss adjustments related to the reinsurance and risk adjustment programs have been determined.

Risk Corridors – Accounting Treatment

54. This program is similar to the risk corridors program established for the Medicare Part D prescription drug coverage[4]. However, due to the asymmetrical nature of the risk-corridor calculation, an overstatement of expense in one cell, which is theoretically offset by the understatement of expense in another cell, does not necessarily result in zero financial impact.

55. Payables and receivables pursuant to the temporary risk corridors program shall be accounted for as specified in this issue paper.

56. Risk corridor assessments meet the definition of liabilities as set forth in SSAP No. 5R. Risk corridor receivables due to the reporting entity meet the definition of an asset and are admissible to the extent that they meet all of the criteria in this issue paper.

a. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.

b. The additions or reductions to premium revenue resulting from the risk corridors program are recognized over the contractual period of coverage, to the extent that such additions or reductions are reasonably estimable. Reporting entities shall be aware of the

[4] The ACA risk corridors program also has significant differences between the Medicare risk corridors program. The ACA risk corridors program is performed at a significantly more granular plan specific level with a pro-rata allocation of the issuer's overall claim costs for the plan's state/ market cell.

significant uncertainties involved in preparing estimates and be both diligent and conservative in their estimations. Risk corridors payables and receivables shall be estimated based on experience to date. The method used to estimate the payables and receivables shall be reasonable and consistent between reporting periods. In exercising the judgment required to prepare reasonable estimates for the financial reporting of risk corridors program payables and receivables, the statutory accounting concept of conservatism shall be followed. In addition, reporting entities are required to have sufficient information to determine a reasonable estimate. Part of ensuring sufficient information requires that the reporting entity's estimate is based on demonstrated knowledge of the impacts of the other risk-sharing programs on the risk corridors program and the terms of the risk corridors program. In addition, the estimates shall be consistent with other financial statement assertions and the pricing scenarios used by the reporting entity.

c. The risk corridors receivables are from a federal governmental program. Amounts over 90 days due shall not cause the receivable to be treated as a nonadmitted asset based solely on aging.

d. Provided that the risk corridors receivables due the reporting entity are determined in a manner that is consistent with the requirements of this issue paper, the receivables are admitted assets until determination of impairment or payment denial is received from the governmental entity or government-sponsored entity administering the program. Upon notification that payments to be paid to the reporting entity will be less than the recorded receivables, any amount in excess of the confirmed amount shall be written off and charged to income, except for amounts that are under appeal. Any receivable for risk adjustment amounts under appeal shall be reflected as a nonadmitted asset.

e. Evaluation of the collectibility of all amounts receivable from the risk corridors program shall be made for each reporting period. If, in accordance with SSAP No. 5R, it is probable that the risk corridors receivables are uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible, that a portion of the balance determined in accordance with this paragraph is not anticipated to be collected and is therefore not written off, the disclosure requirements outlined in SSAP No. 5R shall be followed.

f. Reporting shall be consistent with *SSAP No. 66—Retrospectively Rated Contracts* (SSAP No. 66), paragraph 9 guidance on reporting for retrospective premium.

> 9. Retrospective premium adjustments are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Additional retrospective premiums and return retrospective premiums shall be recorded as follows:
>
> a. Property and Casualty Reporting Entities:
>
> i. Accrued additional retrospective premiums shall be recorded as a receivable with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed.
>
> ii. Accrued return retrospective premiums shall be recorded as part of the change in unearned premium (detailed in the underwriting and investment exhibit) liability with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium

when accrued shall be recorded through written premium when billed.

iii. Ceded retrospective premium balances payable shall be recorded as liabilities, consistent with SSAP No. 62R. Ceded retrospective premiums recoverable shall be recorded as an asset. Consistent with *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64), ceded retrospective premium balances payable may be deducted from ceded retrospective premiums recoverable when a legal right of setoff exists.

b. Life and Accident and Health Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, provision for experience rating refunds, with a corresponding entry to premiums.

c. Managed Care/Accident and Health Reporting Entities

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, as part of Accident and Health Reserves (reserve for rate credits or experience rating refunds), with a corresponding entry to premiums.

Disclosures

57. The financial statements shall disclose on an annual and quarterly basis beginning in the first quarter of 2014, the assets, liabilities and revenue elements by program regarding the risk-sharing provisions of the Affordable Care Act for the reporting periods which are impacted by the programs including the listing in sections a-c below. Reporting entities shall also indicate if they wrote any accident and health insurance premium, which is subject to the Affordable Care Act risk-sharing provisions. In the event that the balances are zero, the reporting entity should provide context to explain the reasons for the zero balances, including insufficient data to make an estimate, no balances or premium was excluded from the program, etc. Asset balances shall reflect admitted asset balances. The disclosure shall include the following:

a. ACA Permanent Risk Adjustment Program

i. Premium adjustments receivable due to ACA Risk Adjustment

ii. Risk adjustment user fees payable for ACA Risk Adjustment

iii. Premium adjustments payable due to ACA Risk Adjustment

iv. Reported as revenue in premium for accident and health contracts (written/collected) due to ACA Risk Adjustment

v. Reported in expenses as ACA risk adjustment user fees (incurred/paid)

b. ACA Transitional Reinsurance Program

i. Amounts recoverable for claims paid due to ACA Reinsurance

ii. Amounts recoverable for claims unpaid due to ACA Reinsurance (contra-liability)

iii. Amounts receivable relating to uninsured plans for contributions for ACA Reinsurance

iv. Liabilities for contributions payable due to ACA Reinsurance - not reported as ceded premium

v. Ceded reinsurance premiums payable due to ACA Reinsurance

vi. Liability for amounts held under uninsured plans contributions for ACA Reinsurance

vii. Ceded reinsurance premiums due to ACA Reinsurance

viii. Reinsurance recoveries (income statement) due to ACA Reinsurance payments or expected payments

ix. ACA Reinsurance Contributions – not reported as ceded premium

c. ACA Temporary Risk Corridors Program

i. Accrued retrospective premium due from ACA Risk Corridors

ii. Reserve for rate credits or policy experience rating refunds due to ACA Risk Corridors

iii. Effect of ACA Risk Corridors on net premium income (paid/received)

iv. Effect of ACA Risk Corridors on change in reserves for rate credits

58. In addition, beginning in annual 2014 and both quarterly and annual thereafter, a roll forward of prior year ACA risk-sharing provisions specified asset and liability balances shall be disclosed in the annual statutory Notes to Financial Statements, as illustrated in Appendix B. Note for the roll forward illustration, assets shall be reflected gross of any nonadmission. The reasons for adjustments to prior year balances (i.e. federal audits, revised participant counts, information which impacted risk score projections, etc.) shall also be disclosed. For year-end 2014, all columns and rows are expected to be zero since 2014 is the first year that a receivable or liability will be recorded.

Effective Date and Transition

59. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principles (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and, therefore, the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years ending on or after December 15, 2014.

DISCUSSION

60. The Emerging Accounting Issues (E) Working Group adopted *INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act* in April 2014*,* and made a simultaneous referral to the Statutory Accounting Principles (E) Working Group to consider accounting guidance for the ACA risk-sharing provisions, including potential nonadmittance for receivables for the risk adjustment and risk corridors receivables in excess of payables, in an issue paper and SSAP as soon as possible.

61. The overall parameters of the risk adjustment program create uncertainties in the estimation process and ultimately in the reporting entities' financial statements, particularly in 2014.

a. The reporting entity/issuer does not have all of the data that is relevant to calculating its risk score because the reporting of risk score data will lag. For example, it is unlikely that encounter data will be complete for October, November and December. This fact will likely cause the issuer to employ one of two courses of action:

i. The reporting entity might seek to perform a complex estimation on the incurred but unpaid claims in order to attempt to translate the information to increases in enrollees' risk scores as of year-end, or

ii. The reporting entity might conclude that it is unable to reliably estimate the risk score attributable to incurred but unpaid claims and derive its risk adjustment score estimate from claims already paid. In that case, the issuer will expect to see favorable development in its risk adjustment estimate in successive calendar years as the estimate is adjusted to reflect the improved accuracy in risk scores from claims paid after year–end.

b. The reporting entity/issuer's ultimate assessment payable or receivable for a risk adjustment cell is based on the relative relationships between its aggregate risk score and the risk scores of all issuers participating in the risk adjustment cell. Although some states will ask issuers to propose data prior to the close of the benefit year, changes by one issuer of information or classification can significantly impact the risk adjustment estimates for all issuers. The American Academy of Actuaries has noted that this uncertainty will be greater in 2014 than in subsequent periods because after 2014, carriers will have an understanding of what the aggregate risk score is for each risk adjustment cell from prior year's data[5].

c. The ACA will increase existing uncertainty at year–end regarding exposure to the number of insureds since the ACA requires that reporting entity/ issuers extend a grace period from the typical historical practice of 30 days to 90 days for insureds receiving a premium subsidy via the exchanges.

62. The risk corridors program has elements of federal responsibility and industry representatives requested that this be treated as a federal governmental obligation and not subject to the 90-day rule similarly to a government uninsured or insured plan similar to the treatment in *SSAP No. 47—Uninsured Plans* and *SSAP No. 84—Certain Health Care Receivables and Receivables Under Government Insured Plans*. This was subsequently extended to the risk adjustment program after the Working Group heard comments on the first exposure draft.

63. For a number of reasons, the Working Group directed redrafting of the nonadmission of receivables in excess of payables for the risk adjustment and risk corridors programs to allow admission of the receivables subject to specified criteria. The Working Group noted that the Capital Adequacy (E)

[5] Financial Reporting Implications Under the Affordable Care Act, developed by the Health Practice Financial Reporting Committee of the American Academy of Actuaries.

Task Force has adopted a health RBC sensitivity test related to the Section 9010 ACA fee and that this issue paper will incorporate the balance and roll-forward disclosures which were originally placed in SSAP No. 35R by a separate agenda item. Premium deficiency reserve guidance in SSAP No. 54 continues to apply to the health products and must be considered in the development of the actuarial opinion. In addition, it was noted that the transitional reinsurance program and the risk adjustment program have mitigating effects to the possible errors in the risk corridors program.

64. The replacement language stressed conservatism in the preparation of estimates, having sufficient data to base estimates on and having knowledge of the marketplace. In addition, impairment evaluations were stressed and nonadmission of amounts after notification of denial even if appeals are pending was added. While SSAP No. 54 provides guidance on contracts subject to redetermination, and SSAP No. 66 provides guidance on retrospectively rated contracts, this issue paper provided more explicit guidance which shall be followed to fit the facts and circumstances of the risk adjustment and risk corridors programs.

RELEVANT LITERATURE

Statutory Accounting

65. Statutory accounting provides guidance in various statements that are relevant to the accounting for risk-sharing provisions.

66. Excerpts of SSAP No. 6 on Determination of Due Date

> Determination of Due Date
>
> 7. The due date for all premium balances addressed by this statement is determined as follows:
>
> The due date for all premium balances addressed by this statement is determined as follows:
>
> a. Original and deposit premiums—governed by the effective date of the underlying insurance contract and not the agent/reporting entity contractual relationship;
>
> b. Endorsement premiums—governed by the effective date of the insurance policy endorsement;
>
> c. Installment premiums—governed by the contractual due date of the installment from the insured;
>
> d. Audit premiums and retrospective premiums—governed by insurance policy or insurance contract provisions. If the due date for receivables relating to these policies is not addressed by insurance policy provisions or insurance contract provisions, any uncollected audit premium (either accrued or billed) is nonadmitted.
>
> 8. The provisions of paragraph 7 shall be applied to all balances due except those arising from force placed insurance obtained by a lender for collateral protection, certain policies, known as Trustee Sales Guarantees (TSGs), issued by title insurance companies to lenders on defaulted real estate loans and crop/hail policies. For forced placed insurance policies, the due date for purposes of applying paragraph 9 shall be the date of billing. For TSGs, the due date for purposes of applying paragraph 9 shall be the expiration of the grace period given to the defaulted debtor, which is provided by statute. Crop/hail premiums are considered installment premiums in accordance with paragraph 7 and accordingly, the due date for purposes of applying paragraph 9 shall be governed by the contractual due date of the installment.

67. SSAP No. 54 provides the following regarding contracts subject to redetermination:

> Contracts Subject to Redetermination
>
> 27. This statement also applies to other contracts which are subject to redetermination such as Federal (and State) Groups - subject to rate adjustments through audits by the Office of Personnel Management (OPM). Reporting entities are required to give Federal Groups the lowest rates that are being charged to similar groups.
>
> 28. Amounts due from insureds or subscribers and amounts due to insureds or subscribers under contracts subject to redetermination meet the definitions of assets and liabilities as set forth in *SSAP No. 4—Assets and Nonadmitted Assets* and SSAP No. 5R, respectively.
>
> 29. Contract redeterminations shall be estimated based on the experience to date. The method used to estimate the liability shall be reasonable based on the reporting entity's procedures, and consistent among reporting periods. An examination of contract requirements in relation to the rates being charged and the current status of applicable audits (e.g., OPM, Centers for Medicare and Medicaid Services (or such other name that this entity shall be known as) and other Federal, state or government department) is a common method used to estimate such contract redeterminations.
>
> 30. Premium adjustments for contracts subject to redetermination are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Accrued premium adjustments shall be recorded as a write-in for other-than-invested assets, with a corresponding entry to premiums; accrued return premium adjustments shall be recorded as a liability with a corresponding entry to premiums.
>
> 31. If, in accordance with SSAP No. 5R, it is probable that the additional premium adjustment is uncollectible, any uncollectible premium shall be written off against operations in the period the determination is made and the disclosure requirements outlined in SSAP No. 5R shall be made.
>
> 32. Premium adjustments for contracts subject to redetermination shall be determined and billed or refunded in accordance with the policy provisions or contract provisions. If such premiums are not billed in accordance with the policy provisions or contract provisions, or the policy provisions or contract provisions do not address the due date of such premiums, the accrual shall be nonadmitted. This is consistent with the guidance for audit premiums established in SSAP No. 6.

68. SSAP No. 61R, paragraph 27, provides the following regarding treatment of the transitional reinsurance program for individual insurance products and is reflected the same as traditional reinsurance recoveries:

> Policy benefit payments paid or payable by the reinsurer shall be reported in the summary of operations and reduces the ceding entity's reported benefit payments. The reinsurer shall establish a liability for its share of any unpaid claim payments and the ceding entity shall reduce any policy and contract claim liability with respect to the reinsured policies or establish a receivable for the amount due from the reinsurer for claims paid.

69. The provisions of SSAP No. 63, paragraph 3, defines involuntary pools and paragraph 8 provides additional relevant guidance:

> 3. Involuntary pools represent a mechanism employed by states to provide insurance coverage to those with higher than average probability of loss who otherwise would be excluded from obtaining coverage. Reporting entities are generally required to participate in the underwriting results, including premiums, losses, expenses, and other operations of involuntary pools, based on their proportionate share of similar business written in the state. Involuntary plans are also referred to as residual market plans, involuntary risk pools, and mandatory pools.

> 8. Underwriting results relating to voluntary and involuntary pools shall be accounted for on a gross basis whereby the participant's portion of premiums, losses, expenses, and other operations of the pools are recorded separately in the financial statements rather than netted against each other. Premiums and losses shall be recorded as direct, assumed, and/or ceded as applicable. If the reporting entity is a direct writer of the business, premiums shall be recorded as directly written and accounted for in the same manner as other business which is directly written by the entity. To the extent that premium is ceded to a pool, premiums and losses shall be recorded in the same manner as any other reinsurance arrangement. A reporting entity who is a member of a pool shall record its participation in the pool as assumed business as in any other reinsurance arrangement.

70. SSAP No. 66, provides the following regarding retrospectively rated contracts:

> 3. *A retrospectively rated contract is one which has the final policy premium calculated based* on the loss experience of the insured during the term of the policy (including loss development after the term of the policy) and the stipulated formula set forth in the policy or a formula required by law. The periodic adjustments may involve either the payment of return premium to the insured or payment of an additional premium by the insured, or both, depending on experience. Retrospective rating features are common in certain property and casualty contracts, group life, and group accident and health contracts. Some contracts have retrospective features required by law. Contracts with retrospective rating features are referred to as loss sensitive contracts.
>
> 8. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.
>
> 9. Retrospective premium adjustments are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Additional retrospective premiums and return retrospective premiums shall be recorded as follows:
>
> a. Property and Casualty Reporting Entities:
>
> i. Accrued additional retrospective premiums shall be recorded as a receivable with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed.
>
> ii. Accrued return retrospective premiums shall be recorded as part of the change in unearned premium (detailed in the underwriting and investment exhibit) liability with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed.
>
> iii. Ceded retrospective premium balances payable shall be recorded as liabilities, consistent with SSAP No. 62R. Ceded retrospective premiums recoverable shall be recorded as an asset. Consistent with *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64), ceded retrospective premium balances payable may be deducted from ceded retrospective premiums recoverable when a legal right of setoff exists.

b. Life and Accident and Health Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, provision for experience rating refunds, with a corresponding entry to premiums.

c. Managed Care/Accident and Health Reporting Entities

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, as part of Accident and Health Reserves (reserve for rate credits or experience rating refunds), with a corresponding entry to premiums. Retrospective premium adjustments are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium.

11. Once accrued retrospective premium is billed, the due date is governed by *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*. Life and accident and health reporting entities shall nonadmit any accrued retrospective premium that is more than 90 days due. If a reporting entity has issued more than one policy to the same insured, retrospective balances shall be netted in accordance with SSAP No. 64.

12. If, in accordance with SSAP No. 5R, it is probable that the additional retrospective premium is uncollectible, any uncollectible additional retrospective premium shall be written off against operations in the period the determination is made. If it is reasonably possible a portion of the balance in excess of the nonadmitted portion determined in accordance with paragraph 109 is not anticipated to be collected, the disclosure requirements outlined in SSAP No. 5R shall be made.

Generally Accepted Accounting Principles

71. GAAP did not issue additional guidance to address the risk-sharing provisions of the ACA.

APPENDIX A: GLOSSARY

The terms included in this appendix are specific to the risk-sharing provisions of the ACA; accordingly, they are not intended to be applied to other topics.

Affordable Care Act (ACA) – The Patient Protection and Affordable Care Act (PPACA), commonly called the Affordable Care Act (ACA), is a United States federal statute signed into law on March 23, 2010.

Applicable Reinsurance Entity – A tax-exempt not-for-profit organization, the duties of which shall be to carry out the transitional reinsurance program by coordinating the funding and operation of the risk-spreading mechanisms designed to stabilize the individual markets during the implementation of health reform.

Cell – The risk corridor calculation is done at the QHP (Qualified Health Plan) level – the cell is state, market (individual or small group), QHP.

Assessment – Required payments into the applicable reinsurance entity by all issuers of major medical commercial products and third-party administrators to fund the transitional reinsurance program.

Exchange – Health insurance marketplaces, also called Health Exchanges, are organizations set up to facilitate the purchase of health insurance in every state of the United States in accordance with the Patient Protection and Affordable Care Act. The exchanges are regulated, online marketplaces, administered by either federal or state government, where individuals, families and small businesses can purchase qualified health insurance plans starting October 1, 2013, with coverage beginning January 1, 2014. Exchanges will also determine who qualifies for subsidies and make subsidy payments to insurers on behalf of individuals receiving them. They will also accept applications for other health coverage programs such as Medicaid and Children's Health Insurance Program (CHIP).

Exempt Plans – Certain health plans that are determined not to be a risk adjustment covered plan in the applicable federally certified risk adjustment methodology (45 C.F.R. § 153.20), grandfathered health plans, group health insurance coverage benefits that are not an integral part of a group health plan, are limited scope, or supplemental benefits (45 C.F.R. § 146.145(c)), and individual health insurance coverage excepted benefits (45 C.F.R. § 148.220).

Grandfathered Plans – A group health plan that was created or an individual health insurance policy that was purchased on or before March 23, 2010. Grandfathered plans are exempted from many changes required under the ACA. Plans or policies may lose their "grandfathered" status if they make certain significant changes that reduce benefits or increase costs to consumers. New employees and new family members may be added to grandfathered group plans after March 23, 2010.

Health & Human Services (HHS) – The Department of Health and Human Services (HHS) is the United States government's principal agency that oversees CMS, which administers programs for protecting the health of all Americans and providing essential human services.

Market Segment – Subset of consumers with its own set of demographic and other assumptions such as individual, state/federal, small group, group, Medicaid or Medicare.

Program Distribution– Amounts payable to or redistributed by the applicable reinsurance entity or the HHS to issuers of non-grandfathered individual market plans that incur high claims costs for enrollees and are eligible to receive benefit payments (recoveries).

Qualified Health Plan (QHP) – Under the Affordable Care Act, starting in 2014, an insurance plan that is certified by the Health Insurance Marketplace, provides essential health benefits and follows established limits on cost-sharing (such as deductibles, copayments, and out-of-pocket maximum amounts).

Risk Score – Individual risk score means a relative measure of predicted health care costs for a particular enrollee that is the result of a risk adjustment model. Claims-based risk-assessment models use data, typically from a 12-month period, to identify underlying conditions and assign a risk score for each individual based on an algorithm.

APPENDIX B: ACA Risk-Sharing Provisions Roll-Forward Illustration

Receivables are reflected gross of any nonadmission for this illustration.

	Accrued During the Prior Year on Business Written Before December 31 of the Prior Year		Received or Paid as of the Current Year on Business Written Before December 31 of the Prior Year		Differences		Adjustments			Unsettled Balances as of the Reporting Date

NAIC Policy Statement on Maintenance of Statutory Accounting Principles

Statutory accounting principles (SAPs) provide the basis for insurers to prepare financial statements to be filed with and utilized by state insurance departments for financial regulation purposes. Accuracy and completeness of such filings are critical to meaningful solvency monitoring. Accordingly, maintenance of SAP guidance for changes in the industry and changes in regulatory concerns is vital to preserving the usefulness of SAP financial statements.

The promulgation of new SAP guidance by the NAIC ultimately requires action of the entire membership. Responsibility for proposing new SAP will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will employ two working groups with distinctly different functions to carry out the charge of maintaining SAP. The Statutory Accounting Principles (E) Working Group (SAPWG) shall have the exclusive responsibility of developing and proposing new Statements of Statutory Accounting Principles (SSAPs). The Emerging Accounting Issues (E) Working Group (EAIWG) will respond to questions of application, interpretation, and clarification that are generally much narrower in scope than development of a new SSAP.

Composition of the Working Groups

The chair of the Task Force shall determine membership on both working groups subject to approval by the Financial Condition (E) Committee. The groups shall be limited in size to no more than 13 members and will include representation from the four zones of the NAIC. Membership shall be vested in the state (until such time as the membership may be changed) but continuity of individuals, to the extent possible, is extremely desirable.

Development of New SSAPs

New SSAPs will be developed from time-to-time that: 1) address issues not covered by existing SAP guidance; 2) amend existing SSAPs; or, 3) supersede existing SSAPs. The decision to undertake development of a new SSAP will rest with the SAPWG subject to approval of the Task Force. The SAPWG will report to the Task Force on its agenda and progress, if any, at each national meeting of the NAIC.

As new Statements of Statutory Accounting Principles (SSAPs) are developed, it is essential to review and, if necessary, update the status of Interpretations of the Emerging Accounting Issues (E) Working Group related to the SSAPs that are being replaced and/or the new SSAP being developed.

The following list of options is available to the SAPWG when a SSAP with existing interpretations is replaced:

a. **Interpretation of the new SSAP -** If the SAPWG would like to maintain the Interpretation, the new SSAP can be added to the list of statements interpreted by the Interpretation. In addition, the status section of the new SSAP will list the Interpretation number next to the heading “Interpreted by.”

b. **Nullification** - When an Interpretation is nullified by a subsequent SSAP or superseded by another Interpretation, the Interpretation is deemed no longer technically helpful, is shaded and moved to Appendix H (Superseded SSAPs and Nullified Interpretations), and the reason for the change is noted beneath the title of the Interpretation. The status section of the SSAP describes the impact of the new guidance and the effect on the Interpretation (for example, nullifies, incorporated in the new SSAP with paragraph reference, etc.).

c. **Incorporation** - When an Interpretation is incorporated into a new SSAP, the SAPWG can choose from the following two options:

i. If the Interpretation only interprets one SSAP, then the Interpretation is listed as being nullified under the "affects" section of the SSAP and the Interpretation is not referenced under the "interpreted by" section of the status page of the SSAP.

ii. If the Interpretation references additional SSAPs, and the SAPWG intends to maintain the guidance, the Interpretation is unchanged (no nullification). The new SSAP (Summary of Issue section) reflects that the Interpretation issue has been incorporated into the new statement.

Research and drafting on new SSAPs will be performed by the NAIC staff under the direction and supervision of the SAPWG which may enlist the assistance of interested parties with requisite technical expertise as needed or desired. The first step in developing new SSAPs will usually be the drafting of an Issue Paper (IP), which will contain summary conclusion, discussion and relevant literature sections. Public comment will be solicited on the IPs, and at least one public hearing will be held on an IP before it is converted to a SSAP. Upon approval by the SAPWG, all proposed SSAPs will be exposed for public comment for a period commensurate with the length of the draft and the complexities of the issue. Adoption of SSAPs by the SAPWG, after hearing and any further amendments, may be by simple majority. All SSAPs must be on the agenda for at least one public hearing before presentation to the Task Force for consideration. Adoption by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

If accounting guidance, reserving standards, asset valuation standards, or any other standards or rules affecting accounting practices and procedures are developed by other NAIC working groups, task forces, subcommittees, or committees, such guidance, standards or rules must be reviewed by the SAPWG and converted to an SSAP or a revised appendix. In cases where such guidance has already been subjected to substantial due process (e.g., public comment periods or public hearings), the SAPWG may recommend to the Task Force that either the IP or SSAP comment periods may be shortened or eliminated or the hearings may be eliminated.

Procedures for Emerging Accounting Issues (E) Working Group

The EAIWG will be responsible for responding to SAP questions that generally relate to application, interpretation and clarification. In no event shall a consensus opinion of the EAIWG amend, supersede or otherwise conflict with existing, effective SSAPs. In no event will a consensus be less than six out of a quorum of nine members of the EAIWG; a consensus will also be determined by a vote of seven of 10 members, eight of 11 or 12 members, and nine of 13 members. In the rare event that an opinion of the EAIWG would create SAP not addressed by SSAPs, concurrence of SAPWG (as determined by a majority vote) will be necessary before the guidance becomes effective.

The EAIWG's agenda will be established at the discretion of the chair, subject to approval of the Task Force. Every issue taken up by the EAIWG must be discussed at no less than two open meetings with opportunity for interested parties to present comments. The guidance contained in the consensus opinions of the group will become effective upon publication unless otherwise stated in the opinion. Consensus opinions can be overturned, amended or deferred only by a two-thirds majority of the Task Force.

NAIC Policy Statement on Comments to GAAP Exposure Drafts

As expressed in the Statement of Concepts, Statutory Accounting Principles (SAP) utilizes the framework established by Generally Accepted Accounting Principles (GAAP). The NAIC's guidance on SAP (defined in the *Accounting Practices and Procedures Manual*) is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting. Those GAAP Pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For GAAP Pronouncements that do not differ from SAP, the NAIC may specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC. Future SAP Pronouncements will specifically identify any GAAP Pronouncements that are to be included in SAP whether in whole, in part, or with modification as well as any GAAP Pronouncements that are rejected. Future GAAP Pronouncements, which SAP has not yet addressed, shall not be considered as providing authoritative statutory guidance.

As illustrated by the previous paragraph, the NAIC believes it is important to comment on GAAP exposure drafts that will affect SAP before such guidance is finalized. Exposing potentially contentious issues to the applicable GAAP bodies before completion will create a more efficient and effective maintenance process for the Statutory Accounting Principles (E) Working Group (SAPWG). In addition, this also allows the NAIC to be proactive to GAAP rather than reactive under the current system.

Comments on exposed GAAP Pronouncements affecting financial accounting and reporting will be developed at the discretion of the SAPWG chair. After the comment letter has been agreed to by the SAPWG, the chair of the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee must review and approve the letter before it is sent to the applicable GAAP body. Every reasonable attempt will be made to provide an adequate comment period to interested parties; however, FASB/American Institute of Certified Public Accountants (AICPA) deadlines may inhibit exposure in every instance. The chair will consider factors such as comment deadline and level of controversy surrounding the issue. The chair of the parent task force and Committee may override such decision at any time.

Comments on exposed Pronouncements promulgated by the AICPA will be developed at the discretion of the NAIC/AICPA Working Group chair. The chair may defer comment to the SAPWG if the pronouncement affects financial accounting guidance. After the comment letter has been agreed to by the NAIC/AICPA Working Group, the chair of the Financial Condition (E) Committee must review and approve the letter before it is sent to the applicable GAAP body. Every reasonable attempt will be made to provide an adequate comment period to interested parties, however FASB/AICPA deadlines may inhibit exposure in every instance. The chair will consider factors such as comment deadline and level of controversy surrounding the issue. The chair of the parent Committee may override such decision at any time.

These comment letters may be considered during the maintenance of finalized GAAP Pronouncements by the SAPWG (as defined in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles). Nevertheless, these letters will not bind the SAPWG to its tentative position during its deliberation to adopt, modify or reject the final GAAP guidance.

This page intentionally left blank.

NAIC Policy Statement On Statutory Accounting Principles Maintenance Agenda Process

The purpose of the following Policy Statement is to document the Statutory Accounting Principles (E) Working Group (SAPWG) maintenance agenda process.

As acknowledged in the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, the promulgation of new SAP guidance by the NAIC ultimately requires action of the entire membership. Responsibility for proposing new SAP will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will employ two working groups with distinctly different functions to carry out the charge of maintaining SAP. The SAPWG shall have the exclusive responsibility of developing and proposing new Statements of Statutory Accounting Principles (SSAPs). The Emerging Accounting Issues (E) Working Group will respond to questions of application, interpretation, and clarification that are generally much narrower in scope than development of a new SSAP.

Information and issues can be presented to the SAPWG in a variety of ways. Issues can be recommended or forwarded from other NAIC working groups or task forces, or from interested parties. Also, if any guidance within the Generally Accepted Accounting Principles (GAAP) Hierarchy (see § IV of the Preamble to the *Accounting Practices and Procedures Manual*) is added or revised, those changes must be considered by the SAPWG. In order for an issue to be placed on the **Pending List**, the recommending party must complete a Statutory Accounting Principles Maintenance Agenda Submission Form (Form A) and submit it to the NAIC SAPWG support staff no later than 20 business days prior to the next scheduled SAPWG meeting. The NAIC staff will prepare a submission form for all GAAP pronouncements that have not been previously addressed by the SAPWG. NAIC staff will update the **Pending List** before each National Meeting and will notify the recommending party of such action. If the SAPWG does not wish to address the issue (e.g.; issue deemed not applicable to statutory accounting) or rejects the position presented, then the item is moved to the **Rejected Report**. Should the SAPWG choose to address an issue, it is moved to either the **Substantive** or **Nonsubstantive Listings**.

The **Substantive Listing** are items that require a new issue paper and SSAP to address the issue. Once items are placed on this listing, they are prioritized and the formal maintenance policy is followed (see *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*). The SAPWG will utilize the NAIC website for exposure of substantive items. The **Nonsubstantive Listing** contains items that are considered editorial or technical in nature and therefore a new SSAP will not be developed. In other words, a revision to a SSAP for these items will not be deemed to modify its conclusion or original intent. The **Rejected Report** identifies all the items that were proposed to the SAPWG and rejected or deemed not applicable to statutory accounting. The **Active Report** identifies items that are in the process of completion. The **Active Report** is prioritized and shows the status of issue papers and SSAPs. The **Disposition Report** captures the conclusions of the SAPWG.

It should be noted that this Policy Statement addresses the process and the flow of information. The timing is left to the discretion of the SAPWG. For instance, an item can move from the pending list to the substantive disposition report in one, two or three National Meetings.

The NAIC staff will maintain a current Maintenance Agenda on the NAIC website at www.naic.org. Attachment A to this Policy Statement includes a flowchart depicting the flow of information. Attachment B includes a blank Form A. Attachment C is an example of the document that will be attached to all exposed documents and will serve as the notice of public hearing and request for written comments.

Attachment C

EXPOSURE DRAFT NUMBER - TITLE

Notice of Public Hearing and Request for Written Comments

Hearing Date: _________________ **Location: ________________**
Deadline for Written Notice of Intent to speak: **Deadline for Receipt of Written Comments:**

Basis for hearings. The Statutory Accounting Principles (E) Working Group (SAPWG) will hold a public hearing to obtain information from and views of interested individuals and organizations about the standards proposed in this Exposure Draft. The SAPWG will conduct the hearing in accordance with the National Association of Insurance Commissioners (NAIC) policy statement on open meetings. An individual or organization desiring to speak must notify the NAIC in writing by . Speakers will be notified as to the date, location, and other details of the hearings.

Oral presentation requirements. The intended speaker must submit a position paper, a detailed outline of a proposed presentation or comment letter addressing the standards proposed in the Exposure Draft by __________. Individuals or organizations whose submission is not received by that date will only be granted permission to present at the discretion of the SAPWG chair. All submissions should be addressed to the NAIC staff at the address listed below. Comments can also be submitted by electronic mail to ___________@naic.org.

Format of the hearings. Speakers will be allotted up to 10 minutes for their presentations to be followed by a period for answering questions from the SAPWG. Speakers should use their allotted time to provide information in addition to their already submitted written comments as those comments will have been read and analyzed by the SAPWG. Those submissions will be included in the public record and will be available at the hearings for inspection.

Copies. Exposure Drafts can be obtained on the Internet at the NAIC Home Page (http://www.naic.org). The documents can be downloaded using Microsoft Word or WordPerfect.

Written comments. Participation at a public hearing is not a prerequisite to submitting written comments on this Exposure Draft. Written comments are given the same consideration as public hearing testimony.

The Statutory Accounting Principles Statement of Concepts was adopted by the Accounting Practices & Procedures (EX4) Task Force on September 20, 1994, in order to provide a foundation for the evaluation of alternative accounting treatments. All issues considered by the SAPWG will be evaluated in conjunction with the objectives of statutory reporting and the concepts set forth in the Statutory Accounting Principles Statement of Concepts. Whenever possible, establish a relationship between your comments and the principles defining statutory accounting.

The exposure period is not meant to measure support for, or opposition to, a particular accounting treatment but rather to accumulate an analysis of the issues from other perspectives and persuasive comments supporting them. Therefore, form letters and objections without valid support for their conclusions are not helpful in the deliberations of the working group. Comments should not simply register your agreement or disagreement without a detailed explanation, a description of the impact of the proposed guidelines, or possible alternative recommendations for accomplishing the regulatory objective.

Any individual or organization may send written comments to ____________ at the address listed below, no later than _________. Comments can also be submitted by electronic mail to _______@naic.org. Electronic submission followed by signed hardcopy is preferred. After they have been reviewed by the SAPWG, these letters will be available for public inspection and may be obtained by contacting the NAIC Insurance Products and Services Division (816) 783-8300.

NAIC Policy Statement on Emerging Accounting Issues Agenda Process

The purpose of the following Policy Statement is to document the Emerging Accounting Issues (E) Working Group (EAIWG) agenda process.

As acknowledged in the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, the promulgation of new SAP guidance by the NAIC ultimately requires action of the entire membership. Responsibility for proposing new SAP will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will employ two working groups with distinctly different functions to carry out the charge of maintaining SAP. The Statutory Accounting Principles (E) Working Group shall have the exclusive responsibility of developing and proposing new Statements of Statutory Accounting Principles (SSAPs). The EAIWG will respond to questions of application, interpretation, and clarification that are generally much narrower in scope than development of a new SSAP.

Information and issues can be presented to the EAIWG in a variety of ways. Issues can be recommended or forwarded from other NAIC working groups or task forces, from interested parties or from the NAIC staff. In order for an issue to be placed on the Agenda, the recommending party must complete an Emerging Accounting Issues (E) Working Group Agenda Submission Form (Form B) and submit it to the NAIC staff no later than 20 business days prior to the next scheduled EAIWG meeting. NAIC staff will update the Agenda before each National Meeting and will notify the recommending party of such action. Every issue taken up by the EAIWG must be discussed at no less than two open meetings with opportunity for interested parties to present comments. The NAIC website will be utilized for such exposures. The website will maintain the applicable Form B and the tentative consensus opinions. Final consensus opinions will be published annually in Appendix B to the *Accounting Practices and Procedures Manual*. The guidance contained in the consensus opinions of the EAIWG will become effective upon publication unless otherwise stated in the opinion.

NAIC Policy Statement on the Impact of Statements of Statutory Accounting Principles on NAIC Publications

The purpose of the following Policy Statement is to document the process and procedure for identifying the impact of Statements of Statutory Accounting Principles (SSAP) on NAIC publications.

As referenced in the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, the promulgation of new SAP guidance by the NAIC ultimately requires action of the entire membership. Responsibility for proposing new SAP will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will employ two working groups with distinctly different functions to carry out the charge of maintaining SAP. The Statutory Accounting Principles (E) Working Group (SAPWG) shall have the exclusive responsibility of developing and proposing new SSAPs. The Emerging Accounting Issues (E) Working Group will respond to questions of application, interpretation, and clarification that are generally much narrower in scope than development of a new SSAP.

An SSAP can affect the various NAIC publications in many different ways. New accounting practices or procedures may result in new disclosures and reporting requirements (affecting Annual Statement Blank and Instructions), modified analysis techniques (affecting RBC formula or IRIS ratios), or new examination procedures (affecting Examiners Handbook).

The SAPWG shall evaluate the impact that newly adopted SSAPs will have on other NAIC publications. To that end, the SAPWG will complete a SSAP Impact on NAIC Publications form after adoption of every SSAP. This form will be used to evaluate the impact of the SSAP, and to recommend a modification as the SAPWG deems appropriate. The SAPWG may seek the assistance of NAIC staff or interested parties in drafting specific language for the affected publication.

After completion of the form, it will be forwarded with a recommendation to the affected working group or task force. The NAIC staff will update the SAPWG as to the progress of the recommendation.

Exhibit A includes a blank SSAP Impact on NAIC Publications form.

NAIC Policy Statement on Coordination of the Accounting Practices and Procedures Manual and the Annual Statement Blank

The purpose of the codification of statutory accounting principles (SAP) project was to produce a comprehensive guide to SAP for use by insurance departments, insurers, and auditors. Statutory accounting principles, as they existed prior to codification did not always provide a consistent and comprehensive basis of accounting and reporting. Insurance companies were sometimes uncertain about what rules to follow and regulators were sometimes unfamiliar with the accounting rules followed by insurers in other states. This was due in part to the fact that prior to codification, accounting guidance could be found in the NAIC Accounting Manual, Annual Statement Instructions, Examiners Handbook, and various states' laws and regulations. As a result, insurers' financial statements were not prepared on a comparable basis. Now that accounting requirements have been more rigidly stipulated by the NAIC, it is imperative that the accounting requirements and the reporting and disclosure requirements remain synchronized. This is an excellent opportunity to create a system of parallel requirements. This effort has already been recognized by the NAIC/AICPA Working Group. In 1999, the working group modified the *Model Regulation Requiring Annual Audited Financial Reports* to require the following for audited financial statements:

> Notes to financial statements. These notes shall be those required by the appropriate NAIC Annual Statement Instructions and the NAIC *Accounting Practices and Procedures Manual*. The notes shall include a reconciliation of differences, if any, between the audited statutory financial statements and the annual statement filed pursuant to Section [insert applicable section] of the [insert state] insurance law with a written description of the nature of these differences.

As stated in the model regulation, the NAIC/AICPA Working Group has an expectation that the requirements of the Annual Statement Instructions and the *Accounting Practices and Procedures Manual* will be identical in all pertinent parts that are subject to audit. There is no reason to create a different set of audit requirements in the Annual Statement Instructions when a complete and comprehensive guide to statutory accounting exists. However, it must be noted that the Statements of Statutory Accounting Principles (SSAPs) are not intended to prescribe the specific format of the detailed financial statements.

The scope of this Policy Statement is defined as follows:

> Any change to the annual statement core financials (balance sheet, income statement, cash flow and notes to the financial statements) must reviewed by the Statutory Accounting Principles (E) Working Group to determine whether it conflicts with the disclosure requirements of the SSAPs.

The scope is defined in broad terms because it is very difficult to specify what constitutes a conflict with the SSAPs. For example, the renumbering of the assets page does not conflict because there is not a SSAP that prescribes the order of asset presentation. Contrast this with a seemingly innocuous proposal to modify column 23 of Schedule P - Part 1 (salvage and subrogation anticipated) that would create a disclosure conflict with SSAP No. 55, paragraph 14.

In order to ascertain that the requirements of the Annual Statement Instructions and Blank are in harmony with the SSAPs (as they relate solely to the core financial statements), the following procedures shall be followed:

1. The Blanks Agenda Item Submission Form will include an interrogatory that will indicate to the Blanks (E) Working Group whether the proposal:

a. Affects the core financial statements
b. Conflicts with an existing SSAP
c. Is not currently required by a SSAP
d. Has been reviewed by the Statutory Accounting Principles (E) Working Group

2. One staff member from the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group is charged with verifying the accuracy of the interrogatory proposed in (1) above. After the staff member reviews the proposals, they will report their findings back to the applicable groups before each national meeting of the Blanks (E) Working Group. If the staff member identifies issues that need further exploration or consultation, the chairs of the two groups or certain members from each group will hold a joint meeting before the national meeting.

3. The Blanks (E) Working Group will reject proposals that will delete/modify information contained within the core financial statements that are required by an existing SSAP.

4. The Blanks (E) Working Group will either reject proposals that would require additional audited disclosure or audited information within the core financial statements if that same item is not required by an existing SSAP; or move it outside the core financial statements. The sponsoring party will still have the option of placing this information outside the core financial statements (e.g., general interrogatories or interrogatories to schedules) until the disclosure is included in a SSAP. If the disclosure were added to a SSAP in the future, it could be moved to the Notes to the Financial Statements and subject to audit at that time.

5. The NAIC will maintain a SSAP to Annual Statement cross-reference. This cross-reference will contain two significant features. First, it will list all of the SSAP disclosures and reference them to where in the Annual Statement the disclosure requirement is met. Second, the cross-reference will identify the Annual Statement components that are required by a SSAP. The cross-reference can be used by the Blanks (E) Working Group and interested parties in completing the new Blanks Agenda Item Submission Form Interrogatory.

The procedures included in this Policy Statement represent a significant change in the current process, but can only result in increased coordination between the Accounting Practices and Procedures (E) Task Force and the Blanks (E) Working Group. This coordination can only give rise to more consistent, meaningful guidance to the regulators, companies and auditors.

Appendix G
Implementation Guide (Guide)
for the
Annual Financial Reporting Model Regulation (Model)

Introduction

The new requirements within the Annual Financial Reporting Model Regulation related to auditor independence, corporate governance and internal control over financial reporting became effective in 2010. The Implementation Guide is being published to assist companies in planning and preparing for compliance with the new requirements.

The Implementation Guide (Guide) is intended to supplement the Model, not to create additional requirements, by providing interpretive guidance and clarifying the meaning of terms used in the Model. Such guidance is important to ensure common understanding between insurers and regulators and to memorialize the intent of the changes. Because issues and questions will occur from time-to-time, by placing the Guide outside of the Model, maintenance can be achieved in a cost effective way without reopening the Model especially when the issue under consideration is an interpretation of the requirements. The Guide should not be viewed as a requirement of complying with the *Accounting Practices and Procedures Manual*.

Maintaining the Guide

The responsibility of developing and maintaining the Guide resides with the NAIC/AICPA (E) Working Group with changes to the Guide following the NAIC regulatory due process. The Guide resides as an informational appendix to the NAIC *Accounting Practices & Procedures Manual* (AP&P Manual). The AP&P Manual was selected as the logical repository since the Guide provides instruction about compliance with the Model, which directly relates to financial reporting and statutory accounting.

The regulatory due process for modifying this Guide requires the NAIC/AICPA (E) Working Group to send adopted proposals to the Accounting Practices and Procedures (E) Task Force for adoption and inclusion in the AP&P Manual. If the Accounting Practices and Procedures (E) Task Force recommends substantive changes to the proposal received from the NAIC/AICPA (E) Working Group, the proposal should be returned to the NAIC/AICPA (E) Working Group for further deliberation.

Table of Contents

The Table of Contents for the Guide mirrors that of the Model. However, not all sections of the Model require interpretive guidance. Consequently, only those sections containing guidance are contained in the Guide. The presentation of the Guide is organized by the Section Title with the Section number of the Model appearing after the title.

Management's Report of Internal Control over Financial Reporting	16	13
Exemptions and Effective Dates	17	17
Appendix 1	16	22

Definitions (Section 3)

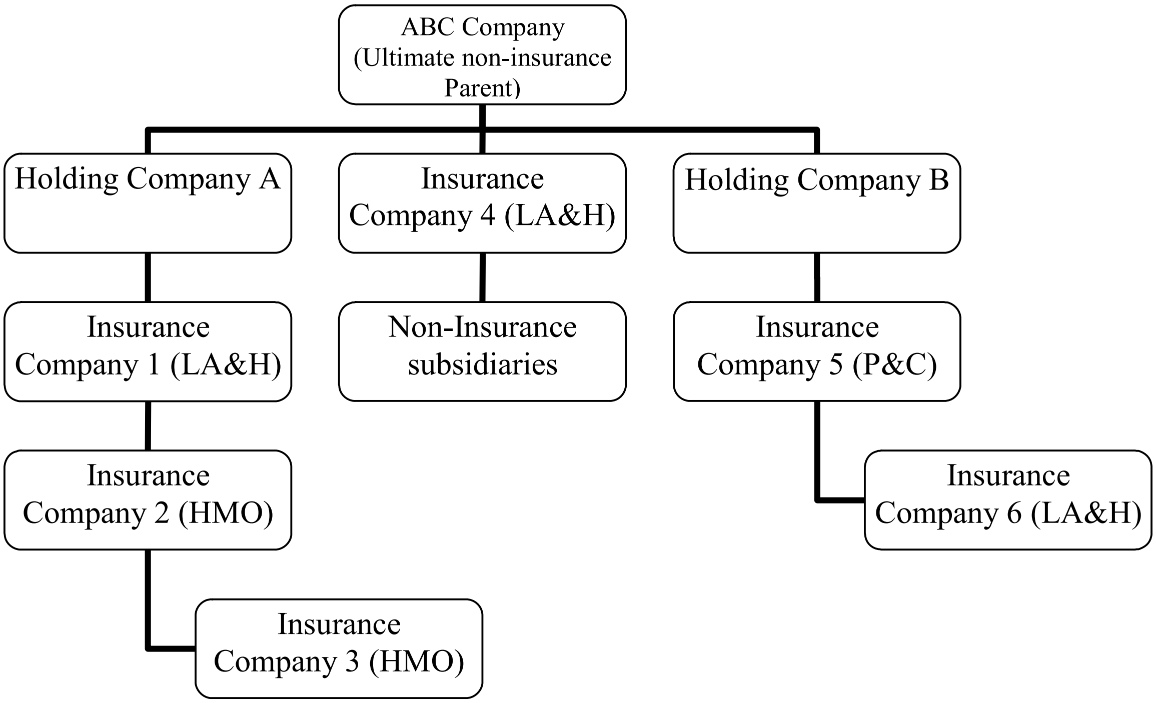
Certain terms and definitions contained in the Model need no further explanation. The Guide provides additional information for preparers and users for some definitions to facilitate their understanding.

"**Audited financial report**" (D), differs from the term "financial statements" in that the Audited financial report (see Section 5 of the Model) includes the financial statements plus the report of the independent certified public accountant. "Financial statements," therefore, excludes the report of the independent certified public accountant.

"**Group of insurers**" (H), as intended for use in the Model is to recognize the variety of structures that may exist. Companies within a holding company structure, or other set of insurers identified by management, may often share common management, systems or processes. Consequently, when management asserts to the effectiveness of their internal controls, it is appropriate to make such an assertion for those companies based upon the organization management determines to be most relevant to meet the reporting requirements. Because holding company structures, and other groups of insurers, can be complex and organized to meet corporate objectives, that structure may not align with the organizations that are responsible for managing and preparing the financial statements of the insurer. The Model provides flexibility to insurers to identify a "Group of insurers" for purposes of evaluating the effectiveness of their internal control over financial reporting. In determining the appropriate scope and level of testing for systems that are shared by a group of insurers, management is not required to expand the scope or perform additional testing that would be redundant for each legal entity included within the group of insurers. To the extent that a specific internal control or system is unique to and has a material impact on the preparation of the audited statutory financial statements of a legal entity included in a group of insurers and the legal entity exceeds the premium thresholds contained in Section 16, that control or system is to be included in management's evaluation of internal controls.

A “Group of insurers” that has been granted approval to file audited statutory consolidated or combined financial statements of a group of insurers (as described in Section 8) may set the scope and level of testing for purposes of determining effectiveness of internal controls over financial reporting consistent with the basis on which the audited statutory financial statements for the Group are prepared (i.e., at the combined or consolidated level).

The following example is intended to illustrate various ways that a “Group of insurers” could be determined. The example is not intended to be limiting in any way. Rather, it is intended to show the flexibility to be in compliance with the Model. Insurers are encouraged to notify the Commissioner of its initial “Group of insurers” and any subsequent changes to such group.



ABC Company (Ultimate non-insurance Parent)
Holding Company A
Insurance Company 4 (LA&H)
Holding Company B
Insurance Company 1 (LA&H)
Non-Insurance subsidiaries
Insurance Company 5 (P&C)
Insurance Company 2 (HMO)
Insurance Company 6 (LA&H)
Insurance Company 3 (HMO)

1. “Group of insurers” could be established at the ultimate parent level, i.e., one report of the effectiveness of internal controls for all insurers in the group-insurance companies 1-6.
2. Two “Group of insurers” could be established at the holding company level, i.e., holding company A and B. In this case, a separate report would be required for holding company A, holding company B, and if it met the reporting threshold, insurance company 4 since it is not in either group.
3. Two “Group of insurers” could be established based upon the type of insurance company, i.e., LA&H companies 1, 4 and 6 could be one group and HMO companies 2 and 3 in the second group. In this case, a separate report would be required for the LA&H companies, the HMO companies and if it met the reporting threshold, insurance company 5 since it is not in either group.
4. Two “Group of insurers” could be established based upon the way the entities are managed. For example, companies, 1, 2, 3 and 5 have the same management while companies 4 and 5 have common management.
5. If management elects not to identify a “Group of insurers” for purposes of evaluating the effectiveness of internal control over financial reporting then each reporting entity meeting the reporting requirements of Section 16 would prepare such a report.

"**Internal control over financial reporting**" (I), as defined in the Model is intended to have the same meaning as understood in the public sector to comply with the requirements of the Sarbanes-Oxley Act of 2002. Because some terms might not be fully defined and to avoid misunderstanding, this Guide attempts to clarify such terms. For example, the word "reliability" used in the phrase "reliability of financial statements" has the same meaning as that contained in the generally accepted accounting principles (GAAP) framework, Statement of Financial Accounting Concepts Two. This Statement is referenced in the Preamble, Part III, paragraph 24 of the AP&P Manual.

General Requirements Related to Filing and Extensions for Filing of Annual Audited Financial Reports and Audit Committee Appointment (Section 4)

Section 4D stipulates that each insurer required to file an annual Audited financial report pursuant to the Model shall designate a group of individuals as constituting its Audit committee. Section 4D further states that the Audit committee of an entity that controls an insurer may be deemed to be the insurer's Audit committee for purposes of this regulation at the election of the controlling person. The definition of Audit committee in Section 3 of the Model references Section 14E for exercising this election. However, a disclaimer within Section 14 of the Model indicates that the section shall not apply to SOX Compliant Entities or wholly-owned subsidiaries of SOX Compliant Entities. Regardless of the disclaimer, in order to comply with the second sentence in Section 4D, the Audit committee of any entity that controls an insurer (a SOX Compliant entity or a non-SOX Compliant Entity) may be deemed to be the insurer's Audit committee at the election of the controlling person, and only if such election is completed in the manner outlined in Section 14E.

The responsibility of the Audit committee is defined in Section 14 of the Model. Section 14 states that each member of the Audit committee shall be a member of the Board of Directors and sets forth the requirements for the proportion of independent Audit committee members based on the insurer's direct written and assumed premiums. The definition of an independent Audit committee member is outlined in Section 14.

Qualifications of Independent Certified Public Accountant (Section 7)

Lead Audit Partner Rotation Requirement (Section 7D)

Purpose
The purpose of this section is to provide companies and their independent accountants with guidance to enable an orderly transition in meeting the revised lead audit partner rotation requirements as set forth in Section 7.

Background
Section 7 provides certain limitations on the number of years an audit partner may serve in the capacity of lead audit partner for an insurance company audit. Previously, the lead audit partner was permitted to serve for seven consecutive years in that capacity with a two year break in service. Under the revised Model "…the lead …audit partner (having primary responsibility for the audit) may not act in that capacity for more than five (5) consecutive years. The person shall be disqualified from acting in that or a similar capacity for the same company or its insurance subsidiaries or affiliates for a period of five (5) consecutive years."

The new rotation requirements under Section 7 are effective beginning with audits of the 2010 financial statements. The rotation requirements of the Model and the interpretative guidance provided are applicable for statutory reporting and regulatory purposes. An insurer and its affiliates that are subject to the rotation requirements of the Securities and Exchange Commission (SEC) and Public Company Accounting Oversight Board (PCAOB) must also continue to comply with those rotation requirements.

Relief from the Lead Audit Partner Rotation Requirement (Section 7D)

The Model states:

> An insurer may make application to the Commissioner for relief from the above rotation requirement on the basis of unusual circumstances. This application should be made at least thirty (30) days before the end of the calendar year. The Commissioner may consider the following factors in determining if the relief should be granted:
>
> (a) Number of partners, expertise of the partners or the number of insurance clients in the currently registered firm;
>
> (b) Premium volume of the insurer; or
>
> (c) Number of jurisdictions in which the insurer transacts business.

The following examples illustrate circumstances that the Commissioner may consider in determining if relief from the lead partner rotation requirement shall be granted:

1. No other partners in the firm's local office have the qualifications to serve as lead audit partner and the use of a qualified partner resident in another location could result in increased audit risk and higher audit fees.
2. Limited number of partners in the firm that have the qualifications to serve as the lead audit partner.
3. Switching firms could result in increased audit risk due to the new engagement team's lack of familiarity with the insurer.
4. Limited availability of other firms in a particular location with the requisite expertise.
5. The regulator believes that complex issues at an insurer make a particular partner best suited to continue as lead audit partner
6. Short-term relief due to the occurrence of an unforeseeable event that renders a partner unable to continue as the lead audit partner on the engagement.
7. Short-term relief due to unexpected delays in the state's licensing or admission process that prevent the "new" lead audit partner from assuming that role.

Also, the granting of transitional relief may be warranted when the non-insurance parent or ultimate parent of an insurance company is an SEC registrant and the current lead audit partner on the SEC registrant has completed his or her rotation as the lead audit partner on insurance subsidiaries prior to completing his or her five-year rotation as the lead partner on the audit of the GAAP financial statements of the SEC registrant. In this situation the relief would allow the lead audit partner to complete his or her rotation on the SEC registrant as long as he or she no longer acts in the capacity of lead audit partner for any insurance subsidiaries and/or any downstream affiliates of the insurance subsidiaries.

Frequently Asked Questions (Section 7D)

Following are a series of frequently asked questions to assist companies and their independent accountants in interpreting this guidance. Dates provided refer to the year of financial statements under audit.

In determining when the lead audit partner must rotate, consecutive time served in the capacity of lead audit partner prior to the effective date of these rules would be counted (i.e., the lead audit partner is not afforded a "fresh start"). If the lead audit partner completed the two year break in service required by the previous version of the Model prior to the effective date of these rules, the partner is eligible to resume service as a lead audit partner for a five year period and need not wait additional years to accomplish a five year break in service.

1. 2010 would be the fifth year that a partner would serve as lead audit partner of an insurance company. Would that partner be able to complete the 2010 year-end audit?

   Yes. The partner would be able to complete the 2010 year-end audit; however, the partner would be required to rotate off the engagement after the 2010 year-end audit.

2. 2010 would be the sixth or seventh year that a partner would serve as the lead audit partner. Would that partner be able to serve in that capacity for the 2010 audit?

   No. The partner would be required to rotate off for the 2010 year-end audit. In determining when the lead audit partner must rotate, consecutive time served in the capacity of lead audit partner since the most recent two year break in service prior to the effective date of these rules would be counted.

3. If a partner serves as the concurring partner from 2007 – 2010, can that partner serve as the lead audit partner in 2011? If so, for how many years?

   Yes. The Model does not prohibit a partner that has served as the concurring partner from subsequently serving as the lead audit partner. The time served as concurring partner does not count towards the five year limitation. In the situation above, the partner would be permitted to serve as lead audit partner from the 2011 year-end audit through the 2015 year-end audit.

4. Can a lead audit partner serve as the concurring review partner during the required five year break in service?

   Yes. The Model specifies that a partner may not act in "that or a similar capacity for the same company or its insurance subsidiaries or affiliates for a period of five (5) consecutive years" where "that" refers to the role of lead audit partner. Therefore, the Model does not prohibit that partner from serving as concurring partner during that partner's five year break in service.

5. During the five-year break in service, can a partner serve as lead audit partner on an insurance company affiliate of that company?

   No. The Model specifies a "person shall be disqualified from acting in that or a similar capacity for the same company or its insurance subsidiaries or affiliates for a period of five (5) consecutive years." The phrase "insurance subsidiaries or affiliates" is interpreted to mean any subsidiaries and affiliates (whether insurance or non insurance).

6. If a lead audit partner serves for six years prior to the effective date of the revised Model (year-end audits from 2003 – 2008) then rotates off the engagement for two years (year-end audits 2009 – 2010), can that partner serve for five additional consecutive years (year-end audits from 2011 – 2015) as the lead audit partner?

   No. The requirement for a break in service of five consecutive years becomes effective for the 2010 year-end audits. If the partner has not completed the two-year break in service prior to the effective date of the new requirement, the partner becomes subject to the new requirement and must complete a five-year break in service. However, if the lead audit partner completes the two year break in service by 2009 instead of 2010, that partner would be permitted to resume the lead audit partner role in 2010.

7. A partner that served seven years as lead audit partner has not worked on the engagement for two years. Assuming 2010 otherwise would be year three of the break in service, can that partner assume the lead audit partner role for the 2010 year-end audit?

Yes. The requirement for the five year break in service starts with engagement years beginning 2010. Prior to 2010, the rotation requirement is for a two year break in service.

8. If a lead audit partner served in that capacity for years 2007 – 2009 and was not on the engagement (or that of any subsidiary or affiliate) for 2010, would that partner have to complete a five year break in service before again serving as the lead audit partner?

No. However, the partner could only serve as the lead audit partner for two more years since the partner has already served three years on this engagement.

9. Can a former lead audit partner currently in a break in service continue to serve the client in a role other than the lead audit partner, for example concurring partner or auxiliary partner, such as tax review partner or other assisting role?

Yes. The Model auditor rotation rules apply only to the role of lead audit partner on the audit of the insurance company and its insurance subsidiaries or affiliates.

10. 2010 is the first year that a partner serves as the lead audit partner on an insurer. The partner serves as the lead audit partner on that insurer for year-end audits of 2010 – 2012; however, during 2013 – 2015 that partner does not serve as the lead audit partner on that insurer or any of its affiliates. If that partner again serves the insurer (or any of its insurance subsidiaries or affiliates) as the lead audit partner for 2016 year-end audit, when must that partner rotate off the engagement?

The partner is permitted to serve as the lead audit partner for the 2016 and 2017 year-end audits and must begin a five-year break in service with the year-end 2018 audit. The break in service during 2013 – 2015 would be for less than the five-year period required by the Model. In order for the partner to be permitted to begin a new five-year service period as lead audit partner on the insurer or any of its insurance subsidiaries or affiliates, a full five-year break in service is required to be completed by that partner.

11. How is service as the lead audit partner on the audit of the GAAP-basis financial statements of a separate account evaluated under the Model?

A separate account is not a legal entity, but an accounting entity with accounting records for variable contract assets, liabilities, income, and expenses segregated as a discrete operation within the insurance company. Therefore, the separate account is considered to be an insurance affiliate for purposes of applying the Model.

If the insurer is a part of a mutual fund complex, the mutual funds are considered to be non insurance affiliates even if held as investments in the insurer's separate accounts.

12. An insurer changes to a new independent accounting firm. At the same time, the lead audit partner for that insurer joins the new independent accounting firm. Would the lead audit partner's time at the previous accounting firm count toward the five year rule at the new accounting firm?

Yes. The rule specifically applies to the lead audit partner and not the independent accounting firm.

13. Some firms have individuals that are CPAs but not partners (i.e., nonequity participants such as directors or principals) that serve in the role of the lead audit partner. Can such a CPA serve in the role of the lead audit partner of an insurance company?

Yes. The Model defines the lead audit partner as the individual having "primary responsibility for the audit." Whether this capacity is served by a partner or other CPA with the equivalent qualifications is at the discretion of the independent accounting firm. As such, the individual would be subject to the rotation requirements of the lead audit partner under Section 7.

Questions 14 through 23 are based on the following hypothetical fact pattern and assume there are no public registrants in the group.

Neither insurance subsidiary A nor insurance subsidiary B has any investment in non insurance subsidiary C.

- Partner Smith served as the lead audit partner on non insurance holding company H for six years through the 2010 year-end audit.
- Partner Jones served as the lead audit partner on insurance subsidiary A for four years through the 2010 year-end audit.
- Partner Little served as the lead audit partner on insurance subsidiary B for three years through the 2010 year-end audit.
- Partner Brown served as the lead audit partner on non insurance subsidiary C for two years through the 2010 year-end audit.
- Partner Miller served as the lead audit partner on insurance subsidiary D for three years through the 2010 year-end audit.
- Partner King served as the lead audit partner on non insurance subsidiary E for seven years through the 2010 year-end audit.

14. Can Partner Smith rotate from serving as the lead audit partner on non insurance holding company H to serving as the lead audit partner on insurance subsidiary B for the 2011 year-end audit?

Yes. The limitation under Section 7 initiates with service as the lead audit partner of an *insurer*. Assuming Partner Smith has not previously served as the lead audit partner on an insurer, he or she can then serve as the lead audit partner on insurance subsidiary B or any of its affiliates for up to five years.

15. Can Partner King rotate from serving as the lead audit partner on non insurance subsidiary E to serving as the lead audit partner on insurance subsidiary B for the 2011 year-end audit?

Yes. The limitation initiates with service as the lead audit partner of an *insurer*. Assuming Partner King has not previously served as the lead audit partner on an insurer, he or she can then serve as the lead audit partner on insurance subsidiary B or any of its affiliates for up to five years.

16. Can Partner Brown rotate from serving as the lead audit partner on non insurance subsidiary C to serving as lead audit partner on insurance subsidiary B for the 2011 year-end audit?

Yes. The limitation initiates with service as the lead audit partner of an *insurer*. Assuming Partner Brown has not previously served as the lead audit partner on an insurer, he or she can then serve as the lead audit partner on insurance subsidiary B or any of its affiliates for up to five years.

Therefore, Brown could serve insurance subsidiary B for five years beginning with the 2011 year-end audit.

17. Can Partner Brown rotate from serving as the lead audit partner on non insurance subsidiary C to serving as lead audit partner on Holding Company H for the 2011 year-end audit?

    Yes. C is a non insurance subsidiary and H is a non insurance holding company; therefore, assuming Partner Brown has not previously served as the lead audit partner on an insurer, the partner rotation requirements of Section 7 are not applicable relative to non insurance subsidiary C and non insurance holding company H.

18. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner for insurance subsidiary B for the 2011 year-end audit?

    Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate).

19. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner on non insurance subsidiary C for the 2011 year-end audit?

    Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

20. Can Partner King rotate from serving as the lead audit partner on non insurance subsidiary E to serving as the lead audit partner on non insurance subsidiary C for the 2011 year-end audit?

    Yes. E is a non insurance subsidiary and C is a non insurance subsidiary; therefore, assuming Partner King has not previously served as the lead audit partner on an insurer, the partner rotation requirements of Section 7 are not applicable relative to non insurance subsidiary E and non insurance subsidiary C.

21. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner on non insurance subsidiary E for the 2011 year-end audit?

    Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

22. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner on insurance subsidiary D for the 2011 year-end audit?

    Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

23. Can Partner Little rotate from serving as the lead audit partner on insurance subsidiary B to serving as the lead audit partner on non insurance subsidiary E for the 2011 year-end audit?

    Yes. However, Little can only serve for two years due to three years prior service as the lead audit partner on insurance subsidiary B (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

Prohibited Services (Section 7 G)

The Model does not allow the Commissioner to accept an Audited financial report prepared by an accountant who provides the insurer, contemporaneously with the audit, non-audit services as outlined within the Model. One of the prohibited services outlined in the Model consists of bookkeeping or other services related to the accounting records or financial statements of the insurer. The prohibition in this area should include, but is not limited to, services related to the preparation of the Annual Statement to be submitted by the insurer. However, the drafting of the Audited financial report would not be prohibited, provided that the accountant does not assume decision-making authority (e.g., approval of journal entries) in compiling the draft report.

Communication of Internal Control Related Matters Noted in an Audit (Section 11)

In addition to the annual Audited financial report, each insurer must furnish the Commissioner with a written communication as to any unremediated material weakness in its internal control over financial reporting noted during the audit. The communication is prepared by the accountant within 60 days after the filing of the annual Audited financial report and is filed by the insurer. Recognizing it may not always be practical, insurers are encouraged to file the communication concurrently with the filing of the annual Audited financial report for those years in which the insurer is aware that a financial condition examination has been scheduled. The insurer is required to provide a description of remedial actions taken or proposed to correct unremediated material weaknesses, if the actions are not described in the accountant's communication.

The Model requires that the Commissioner be notified when unremediated material weaknesses in internal control over financial reporting were noted during the audit. Previous versions of the Model required such communication when any significant deficiencies in internal control over financial reporting were noted during the audit, whether remediated or not. This distinction is important because of the level of severity of the internal control deficiency that is applicable to each term. The terms "material weakness" and "significant deficiency" have the same meaning respectively as used in PCAOB or American Institute of Certified Public Accountants (AICPA) auditing literature - PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements or AICPA AU Section 325, Communicating Internal Control Matters Identified in an Audit (see Section 16E of this Guide for the definitions of material weakness and significant deficiency that are included in the auditing literature). However, the insurer is expected to maintain information about significant deficiencies that were communicated by its auditors and such information should be available for review during the financial condition examination.

The following is an example of the type of communication that an insurer should prepare to communicate the remedial actions taken or proposed to correct a material weakness in its internal control over financial reporting noted during an audit.

Communication of Internal Control Related Matter Noted in an Audit - Sample

Honorable Commissioner
State of Domicile Insurance Department
State of Domicile

Dear Honorable Commissioner:

During the audit completed for the year ended December 31, 20XX, for XYZ Holding Company Inc ("XYZ"), a material weakness was noted in XYZ's internal control over financial reporting related to the calculation of insurance reserves. Due to the manner in which the data for homeowners policies are captured by the systems used in its Southeastern US regional office, changes in XYZ's estimate of insurance reserves for certain policies are not reviewed by XYZ's Actuarial Department prior to being recorded in the company's accounting records.

A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis. In connection with the weakness noted above, XYZ's management has taken remedial actions to change its procedures for coding policies issued in the states affected so that all homeowners' policy data are included in the Actuarial Department review of estimate of insurance reserves. This change was effective on July 1, 20XX.

Should you have any questions regarding this matter, please do not hesitate to contact me at the number noted above.

Regards,

XYZ Holding Company, Inc.

Requirements for Audit Committees (Section 14)

A disclaimer within Section 14 of the Model indicates that the section shall not apply to SOX Compliant Entities or wholly-owned subsidiaries of SOX Compliant Entities. This disclaimer was placed within the Model to avoid conflicts between the independence requirements of the Model and those required of public companies under Section 301 of the Sarbanes Oxley Act of 2002. The expectation of regulators in developing this disclaimer was that the same independent Audit committee required of public companies under Section 301 would be deemed to be the insurer's Audit committee for purposes of this regulation (pursuant to Section 4D of the Model) or would participate in the oversight of the insurers within the group. Therefore, if material weaknesses, significant deficiencies and/or significant solvency concerns are identified at the legal entity level, the independent Audit committee should be involved in addressing these issues, regardless of their materiality at the consolidated, parent company level.

Independence of an Audit Committee Member (Section 14C)

A policyholder would be considered "independent" unless they receive direct compensation from the insurer for other unrelated services.

A person who is otherwise considered independent and also serves on the Board of Directors of a contracting entity (e.g., medical provider, vendors, banks, etc.) is considered independent.

An otherwise non-independent member of the Board of Directors is considered independent for Audit committee purposes if state law requires participation on the Board (e.g., Medical providers) as long as the member is not an officer or employee of the insurer or one of its affiliates.

Notification letter (Section 14E)

In accordance with Section 14E, upon the initial election by the insurer to designate the Audit committee of an entity that controls the insurer as its Audit committee, the insurer shall provide written notification to the Commissioner of the affected insurer. This notification shall identify the controlling entity and the basis for the election. This election remains in effect for perpetuity, until rescinded, at which time written notification would need to be provided to the Commissioner of the insurer. The notification letter should be timely filed with the Commissioner by the ultimate controlling person prior to the issuance of the statutory Audited financial report. However, each of the affected insurers (i.e. those that will have an Audit committee designated by its ultimate controlling person) that is subject to the provisions of Section 14 shall ensure that the notification letter is filed with the Commissioner. Absence such filing, each of the affected insurers would be individually responsible for complying with Section 14. For example, referring to the "Group of insurers" chart in Section 3, if the ABC Company is the ultimate controlling person and elects to have its Audit committee serve as the Audit committee for insurance company 5, then ABC Company would file the notification letter (insurance company 5 would have to ensure that the notification letter is filed or comply with Section 14 as a single entity). Once submitted, the election remains in effect until rescinded. The following example illustrates the reporting requirement.

> The XYZ insurance company (e.g., insurance company 5) is an indirect subsidiary of and controlled by ABC Company. ABC Company has an independent Audit committee comprised of directors of ABC Company. XYZ insurance Company has elected to designate the Audit committee of ABC Company as the Audit committee of XYZ insurance Company for purposes of complying with Audit committee requirements of the Annual Financial Reporting Model Regulation.

(Signed)____ (Date)______________
(XYZ Insurance Company Chief Executive Officer)
(Signed)____ (Date)______________
(ABC Company Chief Executive Officer)

Transitional Guidance (Section 14G)

Once a company exceeds the requisite thresholds for Audit committee requirements contained in Section 14 of the Model, it is required to comply with the Audit committee requirements by January 1 following one (1) complete calendar year. The following are examples of transitional period requirements.

A: Company surpasses $300 million threshold:

ABC Insurance Company has reached the $300 million requisite threshold in its December 31, 2011 audited statutory statement and therefore will be required to meet "majority (50% or more) member independence" Audit committee requirements by January 1, 2013, providing the company necessary time for recruitment and approvals.

B: Company surpasses $500 million threshold:

ABC Insurance Company has subsequently reached the $500 million requisite threshold in its December 31, 2014 audited statutory statement and therefore will be required to meet the "Supermajority (75% or more) member independence" Audit committee requirements by January 1, 2016.

C: Company drops below threshold amount:

If ABC Insurance Company has penetrated the requisite $500 million threshold and has been in compliance with the requirements but subsequently drops below the $500 million threshold, e.g., $450 million in its December 31, 2018 audited statutory statements, the company would be subject to the "majority (50% or more) member independence" requirement and could reduce the Audit committee independence in 2019. Companies, however, are encouraged to structure their Audit committees with at least a supermajority of independent Audit committee members.

Hardship Waiver (Section 14H)

An insurer may make application to the Commissioner for a waiver from the Section 14 requirements based upon hardship. Examples may include, but are not limited to, requests based on the business type of the entity, the availability of qualified board members, or the ownership (e.g., entities owned by non-profit health systems) or organizational structure of the entity. If the application for a waiver is approved, the insurer would file, with its annual statement filing, the approval for relief from Section 14 with the states that it is licensed in or doing business in and the NAIC. If the nondomestic state accepts electronic filing with the NAIC, the insurer would file the approval in an electronic format acceptable to the NAIC.

Management's Report of Internal Control over Financial Reporting (Section 16)

Premium Threshold (Section 16A)

The term "direct written premium" is frequently associated with the property/casualty business. While the Model continues to use the term, it raises the question for other businesses, e.g., life and fraternal, what is the appropriate measure for assessing compliance? The following examples have been developed to illustrate the computation since the starting point is the audited financial statements of the reporting entity, and it is possible that the amount reported may not be consistent with written premium as reported in the regulatory reporting blank.

The annual direct written and assumed premium:

- ♦ will be derived from the annual Audited financial report of an individual insurer, as of December 31 immediately preceding
- ♦ are generally reported in the Statement of Operations of the Audited Financial Report on an 'earned' and a 'net of reinsurance ceded' basis
- ♦ will be computed by making the following adjustments:

P/C, Health and Title entities:

	$
Premiums earned (Statement of Income in Audited financial report)	A
Add/Deduct: Change in unearned premium	B
Add: Reinsurance ceded	C
Direct written and assumed premium *	D=A+B+C

*Note: Direct written and assumed premium would be reduced by any premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program

- A - Premiums earned per the Statement of Income will generally equal the Annual Statement, Page 4.
- B - Change in unearned premium is the difference between the current period amount and the prior year-end amount reported in the liabilities section of the balance sheet. The amount may also be derived from other company prepared exhibits.
- C - Reinsurance ceded may be derived from the notes to the Audited financial report, if disclosed, or other company prepared exhibits or schedules. If the Statement of Income or Statement of Operations separately presents reinsurance ceded, an adjustment is not required.
- D - Must be equal to, or greater than, $500 million in order to be subject to Section 16 reporting.

Life and Fraternal entities:

	$
Premiums earned (Statement of Operations in Audited financial report)	A
Add: Reinsurance ceded	B
Direct written and assumed premium	C=A+B

- A - Premiums earned per the Statement of Operations will generally equal the Annual Statement, Page 4.
- B - Reinsurance ceded may be derived from the notes to the Audited financial report, if disclosed, or other company prepared exhibits or schedules. If the Statement of Operations separately presents reinsurance ceded, an adjustment is not required.
- C - Must be equal to, or greater than, $500 million in order to be subject to Section 16 reporting.

Companies in an RBC Level Event or in Hazardous Financial Condition (Section 16B)

For purposes of this subsection, the phrase “RBC level event” refers to any of the regulatory action levels described in the Risk-Based Capital requirements or the trend test. For example, if the reporting entity’s total adjusted capital is equal to or less than 200% of the required risk-based capital, the result would trigger regulatory action.

Management’s Report of Internal Control over Financial Reporting (Sections 16C & 16D)

Management must annually provide their domiciliary insurance department with a report on internal controls over the statutory financial statement process. Recognizing it may not always be practical, insurers are encouraged to file the report concurrently with the filing of the annual Audited financial report for those years in which the insurer is aware that a financial condition examination has been scheduled. The elements to be included in the report are outlined in 16D.

As outlined in Section 16C, an addendum is required for all reports that rely on a Section 404 Report (Sarbanes-Oxley). The Model states that the Section 404 Report means management’s report on internal control over financial reporting as defined by the SEC and the related attestation report of the independent certified public accountant. However, in 2010, the Dodd-Frank Act exempted non-accelerated SEC filers (those reporting companies that do not meet the definition of either an “accelerated filer” or a “large accelerated filer” under Exchange Act Rule 12b-2.) from the requirement to obtain the related attestation report of the independent certified public accountant. As such, non-accelerated SEC filers may file a Section 404 Report that does not include an attestation report of the independent certified public accountant, along with the appropriate addendum, to fulfill requirements in this area.

Alternately, insurers may utilize a report received as a result of work performed in accordance with Statement of Standards in Attestation Engagements (SSAE) No. 15 in a similar fashion to a Section 404 Report. As such, there are two main types of reports that can be provided:

- Reports from entities that have complied with all required elements of Section 404 of the Sarbanes-Oxley Act (or have received an SSAE No. 15 report) either as a requirement or on a voluntary basis.
- Reports from entities that have not complied with Section 404 of the Sarbanes-Oxley Act (or have not received an SSAE No. 15 report).

Appendix 1 of this guide provides examples of Management’s Report of Internal Controls over Financial Reporting utilizing various facts and circumstances.

Section 16D(2): Management must make an assertion regarding the effectiveness of the insurer’s Internal control over financial reporting to the best of its knowledge and belief after diligent inquiry. For purposes of filing the report, “diligent inquiry” means conducting a search and thorough review of relevant documents which are reasonably likely to contain significant information with regards to Internal control over financial reporting and making reasonable inquiries of current employees and agents whose duties include responsibility for Internal control over financial reporting.

Section 16D(5): The report must disclose any unremediated material weaknesses in Internal control over financial reporting that exist as of the balance sheet date. If the insurer or Group of insurers has identified an unremediated material weakness, management is not permitted to conclude that its Internal control over financial reporting is effective and it must include a description of the nature of any unremediated material weakness in the report. December 31 is used as the measurement date to whether a material control weakness is unremediated for purposes of reporting under this section of the Model.

Section 16D(6): Users of the report should be aware of the inherent limitations in Internal control over financial reporting. PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements provides the following description of such inherent limitations:

> Internal control over financial reporting has inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements will not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

Additionally, readers of the report should be aware that projecting management's assertion regarding the effectiveness of Internal control over financial reporting to future periods is subject to the risk that controls may become inadequate because of changes in conditions, or the degree of compliance with policies or procedures may deteriorate.

Section 16D(7): The report must include signatures of the chief executive officer and chief financial officer (or the equivalent position/title). If a report is being filed on behalf of a Group of insurers, management should identify the officeholders (i.e., the CEO and CFO of Company ABC) that have the authority to sign the report on behalf of the all of the legal entities being reported upon within the Group of insurers.

Basis for Management's Review and Assertions (Section 16E)

One of the primary reasons for the new Section 16 of the Model is to bring additional focus and attention to internal control over financial reporting. Financial reporting is the underpinning of many of the solvency oversight activities of insurance regulators. Section 16 of the Model identifies management's responsibilities for internal control over financial reporting and provides regulators additional assurances of the effectiveness of internal control practices in a cost effective manner.

The basis for Management's Report of Internal Control over Financial Reporting shall be subject to insurance departments' financial condition examinations. Because of this and other solvency tools available to regulators, there is no requirement that the independent certified public accountant be engaged to perform an examination of the effectiveness of internal control over financial reporting. However, Section 9 requires the independent public accountant to consider (as that term is defined in AICPA Statement on Auditing Standards (SAS) No. 102, Defining Professional Requirements in Statements on Auditing Standards, or its replacement) the most recently available Management's Report of Internal Control over Financial Reporting in planning and performing the audit of the statutory financial statements. SAS No. 102, paragraph 4 states, "If a SAS provides that a procedure or action is one that the auditor "should consider," the consideration of the procedure or action is presumptively required, whereas carrying out the procedure or action is not." AU Section 319 of the Professional Standards of the AICPA, Consideration of Internal Control in a Financial Statement Audit, requires that the auditor obtain an understanding of internal control sufficient to plan and execute the audit. It is in this context that the auditor is required to "consider" management's report. There is no requirement that the auditor test or otherwise use management's report.

The Model does not mandate a specific framework for management’s review and evaluation of internal controls. SEC registrants typically (but are not required to) use the COSO Internal Control-Integrated Framework in assessing the effectiveness of internal control over financial reporting. The COSO-sponsored “Enterprise Risk Management-Integrated Framework” and the PCAOB Guidance for Smaller Public Companies Reporting on Internal Control over Financial Reporting are other examples of relevant literature companies may want to consider in applying such a framework. Under the Model, however, management, when making its assessment and preparing its report, has discretion as to the nature of the internal control framework used. Insurers shall have flexibility as to the frequency and scope of testing activities and the documentation provided upon examination to support the assertions. Management should assess and select an appropriate framework or approach based upon its business risks and objectives.

Management’s assertions about the effectiveness of internal controls enhance oversight and understanding of insurer solvency by allowing regulators to have greater confidence in the accuracy of financial reporting, which also provides a benefit to policyholders and creditors. An expected benefit of this enhancement, where internal controls are effective, is that financial examinations will become more efficient and risk-focused.

Management’s Report of Internal Control over Financial Reporting may span more than one legal entity. Because internal controls are primarily about processes and these processes are often applied across multiple legal entities within an organization, (e.g., investment systems, premium and loss/benefit systems, and financial reporting processes), management may consider common processes and the associated controls when determining the Group of insurers for reporting purposes.

The Model provides flexibility in meeting the requirements of Section 16D and E. The controls included in the scope of management’s report should only include those controls deemed significant or critical by management. The following examples represent aspects and components of internal control that insurers may want to consider when making the assertions and determining relevant documentary evidence. These are not intended to serve as, and should not be considered, requirements:

- The internal control environment including oversight provided by the Audit committee of the Board of Directors. Insurers may want to consider how they can demonstrate “Tone at the Top.” The insurer’s compliance programs, code of conduct and the processes for reporting policy exceptions and overrides of controls may also be appropriate to consider.

- The risk assessment process utilized and identification of the areas of potential material internal control risk related to the financial statement. Risk areas that one might typically find for an insurance enterprise include:
    - Investments (including capital expenditures)
    - Policy and Claim Reserves
    - Benefit Payments
    - Premiums / Agent’s Balances
    - Reinsurance
    - Related Party (Affiliate) Transactions
    - Operating Expenses/Taxes

- The control activities in place including procedures over financial reporting, which in management’s judgment are appropriate under the circumstances. These might include the daily or monthly controls management relies upon in the normal course of its activities. They would also include any SAS 70 reports received from vendors upon which management relies. General information systems and technology controls might also be considered.

- The monitoring and testing processes used in the normal course of business to ascertain that the internal controls are in place and are working as intended. Insurers may want to consider describing the purpose, function or role of an internal audit department and/or describe other self-audit and analysis activities.

- The information and communication processes, including the frequency of reporting and monitoring activities and communication of internal control responsibilities.

Section 16D(5) of the Model indicates that if one or more unremediated material weaknesses in Internal control over financial reporting exists as of the balance sheet date, then management is not permitted to conclude that internal control over financial reporting is effective and it must include a description of the nature of any unremediated material weaknesses in the report. For purposes of this determination, material weakness has the same meaning as used in PCAOB or AICPA auditing literature – PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements or AICPA AU Section 325, Communicating Internal Control Related Matters Identified in an Audit. Such guidance provides the following definitions:

> Significant Deficiency – A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.
>
> Material Weakness – A material weakness is a deficiency, or combination of deficiencies, in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis.

Insurers filing Management's Report of Internal Control over Financial Reporting as a Group of insurers may want to also consider identifying or documenting common systems and controls used by multiple companies within an insurance holding company system and how such information was used in the development of the Group of insurers for reporting purposes.

To allow insurers to comply with Section 16 in a cost effective manner, management may base its assertions, in part, upon its review, monitoring and testing processes performed in the normal course of it activities. Management may also consider diligent inquiry of key process owners throughout the organization to provide additional assurance as to the operating effectiveness of its internal control over financial reporting. For purposes of filing the report, "diligent inquiry" means conducting a search and thorough review of relevant documents which are reasonably likely to contain significant information with regards to Internal control over financial reporting and making reasonable inquiries of current employees and agents whose duties include responsibility for Internal control over financial reporting.

Exemptions and Effective Dates (Section 17)

Hardship Waivers (Section 17A)

Notwithstanding any other provision of the Model, an insurer may make written application to the Commissioner for waiver from any or all provisions of the Model based upon financial or organizational hardship. For example, the Commissioner could under this section grant a waiver of the Section 14B audit committee independence requirements to a company exceeding the $500 million premium threshold, even though the Section 14H waiver would not apply. This exemption is granted at the discretion of the Commissioner, and may be granted at any time for a specified period or periods.

Specific Effective Dates (Section 17F)

An insurer will be required to file a Section 16 report if the insurer exceeds the premium threshold (as defined in Section 16A.)

1. Assume the insurer reports premiums as follows (note that the direct written and assumed premium in these examples would be reduced by any premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program) :

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	410.5	425.7	450.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	526.3	545.8	578.0

In the above example, the insurer has reached the requisite threshold in 201x+1 and therefore will file its first Section 16 report effective December 31, 201x+3.

2. Assume the insurer reports premiums as follows:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	380.5	390.8	410.5	425.7
Add: Reinsurance ceded	100.5	110.7	115.7	115.8	120.1
Gross direct written and assumed premium	450.8	491.2	506.5	526.3	545.8

In the above example, the insurer has reached the requisite threshold in 201x+2 and therefore will file its first Section 16 report effective December 31, 201x+4.

3. Assume the insurer reports premiums as follows:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	380.5	410.5	425.7
Add: Reinsurance ceded	100.5	115.7	110.7	115.8	120.1
Gross direct written and assumed premium	450.8	506.5	491.2	526.3	545.8

In the above example, the insurer has reached the requisite threshold in 201x+1 and therefore will file its first Section 16 report effective December 31, 201x+3. Because the insurer dropped below the threshold in 201x+2, the insurer is not required to file a Section 16 report and thus, the reporting period starts over. The insurer reaches the threshold in 201x+3 and therefore, required to file the Section 16 report effective December 31, 201x+5. The insurer may choose to begin voluntarily filing the Section 16 report beginning with 201x+3 especially if the insurer has done the work to prepare the report.

Business Combination

A business combination is defined as acquisition of insurance/reinsurance business through:

A. a stock acquisition,
B. inforce reinsurance assumption, or
C. a merger of insurers in a Group of insurers

A. Stock Acquisitions

Assume Company A, which has premiums of $500m or more, buys Company B and retains Company B as a separate legal entity.

If Company B has premiums of less than $500m (as derived from Section 16A), no Section 16 report is required.

If Company B has premiums of $500m or more (as derived from Section 16A), a Section 16 report is required.

1. Assume Company B is acquired effective January 1, 201x and subsequently reports premiums as follows. Assume further that Company A and B elect to file separate Section 16 reports:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	410.5	425.7	450.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	526.3	545.8	578.0

In the above example, Company B has reached the requisite threshold in 201x+1 and therefore will file its first Section 16 report effective December 31, 201x+3.

1. Assume Company B is acquired June 30, 201x+2 by Company A and Company B has premiums as follows. Assume further that Company A elects to file a single Section 16 report with the Group of insurers consisting of Company A and B:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	410.5	425.7	450.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	526.3	545.8	578.0

In the above example, Company B has reached the requisite threshold in 201x+1 and therefore will file its first Section 16 report effective December 31, 201x+3. However due to the acquisition in 201x+2, the first combined Section 16 report, i.e., Group of insurers, would be effective December 31, 201x+4, two years subsequent to acquisition.

B. *Inforce Reinsurance Assumption*

For the purposes of determining premiums pursuant to Section 16A, assumed premiums from the assumption of an inforce reinsurance transaction will be excluded from the measurement of premiums, for two calendar years subsequent to acquisition.

Assume the insurer assumed an inforce transaction effective June 30, 201x+2 and reports premiums as follows:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	610.5	850.7	875.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	726.3	970.8	1,003.0
Less: Gross assumed premium resulting from a business combination	0	0	200.0	425.0	425.0
Gross direct written and assumed premium, subject to Section 16	450.8	506.5	526.3	545.8	578.0

In the above example, the insurer has reached the requisite threshold in 201x+1 and therefore will file its first Section 16 report effective December 31, 201x+3, however only for business inforce in 201x+1 and still inforce in 201x+3. The business assumed at June 30, 201x+2 will be subject to a Section 16 report effective December 31, 201x+4, two calendar years after acquisition.

C. *Mergers of Insurers in a Group of Insurers*

If the merged insurer has premiums of less than $500m (as derived from Section 16A), a Section 16 report is not required.

If the merged insurer has premiums of $500m or more (as derived from Section 16A), a Section 16 report is required.

1. Assume that Insurer A and Insurer B have Gross direct written and assumed premiums as follows, and agree to merge effective January 1, 201x+1, with Insurer A as the surviving entity:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Gross direct written and assumed premium – Insurer A	450.3	460.8	510.5	n/a	n/a
Gross direct written and assumed premium – Insurer B	100.5	115.7	115.8	n/a	n/a
Less: Intercompany transactions – gross	-	65.3	62.2	n/a	n/a
Combined gross direct written and assumed premiums Insurer A	-	511.2	564.1	n/a	n/a

In the above example, the merged entity (insurer A) has reached the requisite threshold in 201x+1, and will file its first Section 16 report effective December 31, 201x+3.

2. Assume that Insurer A and Insurer B have Gross direct written and assumed premiums as follows, and agree to merge effective January 1, 201x+2, with Insurer A as the surviving entity:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Gross direct written and assumed premium – Insurer A	450.3	460.8	510.5	n/a	n/a
Gross direct written and assumed premium – Insurer B	100.5	115.7	115.8	n/a	n/a
Less: Intercompany transactions – gross	-	-	62.2	n/a	n/a
Combined gross direct written and assumed premiums Insurer A	-	-	564.1	n/a	n/a

APPENDIX 1

Illustrative Examples of Management's Report of Internal Control over Financial Reporting

The following are examples of Management's Report of Internal Controls over Financial Reporting utilizing different facts and circumstances. These are only examples and individual company facts and circumstances will dictate the contents of their report. However, there are common elements that should be included in all reports as discussed in Sections 16C and 16D of the Model.

Example A: An SEC registrant or a member of a holding company system whose parent is an SEC registrant that had all material control processes over statutory financial reporting addressed in its Section 404 report .... Page 23

Example B: An SEC registrant or a member of a holding company system who is a SEC registrant and is a non-accelerated filer that had all material control processes over statutory financial reporting addressed in its Section 404 report. For these non-accelerated filers, the Section 404 report does not require the report of independent registered public accounting firm on internal control over financial reporting .... Page 25

Example C: An SEC registrant or a member of a holding company system whose parent is an SEC registrant that did not have all material control processes over statutory financial reporting addressed in its Section 404 report .... Page 27

Example D: An SEC registrant or a member of a holding company system who is a SEC registrant and is a non-accelerated filer that did not have all material control processes over statutory financial reporting addressed in its Section 404 report. For these non-accelerated filers, the Section 404 report does not require the report of independent registered public accounting firm on internal control over financial reporting .... Page 30

Example E: A non-SEC registrant or a member of a holding company system that voluntarily complied with Section 404 of the Sarbanes-Oxley Act and produced a report on internal controls which included an auditor's opinion .... Page 33

Example F: A company [or "group of insurers"] that is not subject to Section 404 and utilized their own framework to evaluate controls .... Page 35

Example G: An SEC registrant or a member of a holding company system whose parent is an SEC registrant that had all material control processes addressed in their Section 404 report and had an unremediated material weakness .... Page 37

Example H: An SEC registrant or member of a holding company system whose parent is an SEC registrant that did not include all material processes over statutory financial reporting addressed in its Section 404 report and had an unremediated material weakness noted .... Page 39

Example I: An SEC registrant or member of a holding company system whose parent is an SEC registrant that had all material processes over statutory financial reporting addressed in its Section 404 report. However, they recently acquired another insurer that is not included in their assessment .... Page 42

EXAMPLE A: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT HAD ALL MATERIAL CONTROL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company Inc ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).* Based on our assessment under that framework, management concluded that the Group of insurers' internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 16C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers' internal control structure over the statutory financial statements for the year ended December 31, 201X.

EXAMPLE B: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHO IS A SEC REGISTRANT AND IS A NON-ACCELERATED FILER THAT HAD ALL MATERIAL CONTROL PROCESSES OVER STATUTORY REPORTING ADDRESSED IN ITS SECTION 404 REPORT. FOR THIS NON-ACCELERATED FILER, THE SECTION 404 REPORT DOES NOT REQUIRE THE REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM ON INTERNAL CONTROL OVER FINANCIAL REPORTING.

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model] as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on our assessment under that framework, management concluded that the Group of insurers' internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 16 of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). This does not include a report of independent registered public accounting firm on internal control over financial reporting for XYZ, as it is not required for non-accelerated filers In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers' internal control structure over the statutory financial statements for the year ended December 31, 201X.

ATTACHMENT A

XYZ Holding Company, Inc.
Addendum to Management's Report of Internal Control over Financial Reporting
For the Year Ended December 31, 201X

For purposes of this filing, the "Section 404 Report" means Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting contained in or incorporated by reference in the Company's Form 10-K/20-F. Accordingly, as required by [relevant state statute or Section 16C of the Model], management of XYZ hereby affirms that the only material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers that were excluded from the Section 404 Report are the processes discussed below. Management of XYZ hereby affirms that all other material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers were included in the Section 404 Report. The following statutory financial reporting processes were reviewed separately from the internal controls reported by the Group of insurers in its Section 404 report:

Significant Control Processes not tested due to Group Materiality Considerations

The Section 404 report excludes certain control processes deemed material to individual insurance legal entities included within the Group of insurers. This exclusion was due to group materiality decisions made at the parent company level. These processes, and the legal entities within the Group of insurers impacted, are listed as follows:

Workers' Compensation Claims Processing – The HIJ claims processing system is utilized to process workers' compensation claims material to ABC Insurance Subsidiary and DEF Insurance Subsidiary.

Related Party Transactions Eliminated through Consolidation

The Section 404 report does not consider controls surrounding related party transactions as the effects of those transactions are eliminated through consolidation at the holding company financial statement level. Significant related party transactions, and the legal entities within the Group of insurers impacted, are listed as follows:

Affiliate reinsurance agreements – A significant amount of reinsurance coverage is obtained by ABC Insurance Subsidiary and DEF Insurance Subsidiary through contracts with XYZ Parent Company.

Management service agreements – ABC Insurance Subsidiary receives all of its management services through an agreement with XYZ Parent Company.

Tax allocation agreements – ABC Insurance Subsidiary and DEF Insurance Subsidiary are subject to an intercompany tax allocation agreement with XYZ Parent Company.

Deferred Income Taxes

Federal income taxes are provided for XYZ's estimated current and deferred liability. Deferred taxes are provided for differences between the financial statement and tax bases of assets and liabilities. Pursuant to *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10*, changes in deferred tax assets and liabilities are recognized as a separate component of gains and losses in statutory surplus, while under GAAP/IFRS, these changes are included in income tax expense or benefit. Gross deferred tax assets not meeting the realization criteria outlined in SSAP No. 101 are not admitted.

Nonadmitted Assets

Certain XYZ assets (principally furniture, equipment, prepaid expenses, agents' balances, and certain deferred tax assets) have been designated as nonadmitted assets under statutory accounting guidance (primarily in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 20—Nonadmitted Assets*). Such nonadmitted assets are excluded from assets by a charge to statutory surplus. Under GAAP/IFRS, such amounts are carried at amortized cost with an appropriate valuation allowance, as necessary.

Asset Valuation Reserve ("AVR")

The AVR represents a statutory contingency reserve for life and health insurers for credit related risk on most invested assets, and is charged to surplus pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.* No such reserve is required under GAAP/IFRS accounting.

Interest Maintenance Reserve ("IMR")

The IMR represents the deferral of interest-related realized gains and losses, net of tax, on primarily fixed maturity investments, amortized into income over the remaining life of the investment sold pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Management of XYZ conducted an assessment of the internal controls over these processes and concluded that they were effective with respect to the audited statutory financial statements.

(Please note that this is not intended to be an all-inclusive list. It should only include material process that were not covered in the Section 404 Report. The facts and circumstances of each situation will determine the items to be included.)

EXAMPLE D: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHO IS A SEC REGISTRANT AND IS A NON-ACCLERATED FILER THAT DID NOT HAVE ALL MATERIAL CONTROL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT. FOR THESE NON-ACCELERATED FILERS, THE SECTION 404 REPORT DOES NOT REQUIRE THE REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM ON INTERNAL CONTROL OVER FINANCIAL REPORTING.

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model] as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on our assessment under that framework, management concluded that the Group of insurers' internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 16 of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). This does not include a report of independent registered public accounting firm on internal control over financial reporting for XYZ, as it is not required for non-accelerated filers. In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers' internal control structure over the statutory financial statements for the year ended December 31, 201X.

ATTACHMENT A

XYZ Holding Company, Inc.
Addendum to Management's Report of Internal Control over Financial Reporting
For the Year Ended December 31, 201X

For purposes of this filing, the "Section 404 Report" means Management's Report of Internal Control over Financial Reporting only contained in or incorporated by reference in the Company's Form 10-K/20-F. This does not include a report of independent registered public accounting firm on internal control over financial reporting, as it is not required for non-accelerated filers. Accordingly, as required by [relevant state statute or Section 16 of the Model], management of XYZ hereby affirms that the only material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers that were excluded from the Section 404 Report are the processes discussed below. Management of XYZ hereby affirms that all other material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers were included in the Section 404 Report.

Significant Control Processes not tested due to Group Materiality Considerations

The Section 404 report excludes certain control processes deemed material to individual insurance legal entities included within the Group of insurers. This exclusion was due to group materiality decisions made at the parent company level. These processes, and the legal entities within the Group of insurers impacted, are listed as follows:

Workers' Compensation Claims Processing – The HIJ claims processing system is utilized to process workers' compensation claims material to ABC Insurance Subsidiary and DEF Insurance Subsidiary.

Related Party Transactions Eliminated through Consolidation

The Section 404 report does not consider controls surrounding related party transactions as the effects of those transactions are eliminated through consolidation at the holding company financial statement level. Significant related party transactions, and the legal entities within the Group of insurers impacted, are listed as follows:

Affiliate reinsurance agreements – A significant amount of reinsurance coverage is obtained by ABC Insurance Subsidiary and DEF Insurance Subsidiary through contracts with XYZ Parent Company.

Management service agreements – ABC Insurance Subsidiary receives all of its management services through an agreement with XYZ Parent Company.

Tax allocation agreements – ABC Insurance Subsidiary and DEF Insurance Subsidiary are subject to an intercompany tax allocation agreement with XYZ Parent Company.

Deferred Income Taxes

Federal income taxes are provided for XYZ's estimated current and deferred liability. Deferred taxes are provided for differences between the financial statement and tax bases of assets and liabilities. Pursuant to *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10*, changes in deferred tax assets and liabilities are recognized as a separate component of gains and losses in statutory surplus, while under GAAP/IFRS, these changes are included in income tax expense or benefit. Gross deferred tax assets not meeting the realization criteria outlined in SSAP No. 101 are not admitted.

Nonadmitted Assets

Certain XYZ assets (principally furniture, equipment, prepaid expenses, agents' balances, and certain deferred tax assets) have been designated as nonadmitted assets under statutory accounting guidance (primarily in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 20—Nonadmitted Assets*). Such nonadmitted assets are excluded from assets by a charge to statutory surplus. Under GAAP/IFRS, such amounts are carried at amortized cost with an appropriate valuation allowance, as necessary.

Asset Valuation Reserve ("AVR")

The AVR represents a statutory contingency reserve for life and health insurers for credit related risk on most invested assets, and is charged to surplus pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Interest Maintenance Reserve ("IMR")

The IMR represents the deferral of interest-related realized gains and losses, net of tax, on primarily fixed maturity investments, amortized into income over the remaining life of the investment sold pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Management of XYZ conducted an assessment of the internal controls over these processes and concluded that they were effective with respect to the audited statutory financial statements.

(Please note that this is not intended to be an all-inclusive list. It should only include material process that were not covered in the Section 404 Report. The facts and circumstances of each situation will determine the items to be included.)

Management's Report of Internal Control over Financial Reporting

As a non-SEC registrant, XYZ Holding Company, Inc. ("XYZ") is not required to prepare or file with the U.S. Securities and Exchange Commission a Sarbanes-Oxley Act Section 404 report on internal control over financial reporting. However, management has elected to prepare, and have audited by XYZ's independent certified public accountant, such a report for the fiscal year-ended December 31, 201X.

Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).* Based on our assessment under that framework, management concluded that the Group of insurers' internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 16C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] the attached copy of XYZ's Section 404 Report for the fiscal year ended December 31, 201X, which includes Management's Report of Internal Control over Financial Reporting and report of independent registered public accounting firm on internal control over financial reporting for XYZ. In addition, an Addendum (Attachment A) is included to this report that identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers' internal control structure over the statutory financial statements for the year ended December 31, 201X.

EXAMPLE F: A COMPANY [OR "GROUP OF INSURERS"] THAT IS NOT SUBJECT TO SECTION 404 AND UTILIZED THEIR OWN FRAMEWORK TO EVALUATE CONTROLS

Management's Report of Internal Control over Financial Reporting

[As a non-SEC registrant, XYZ Holding Company, Inc. ("XYZ") is not required to prepare or file with the U.S. Securities and Exchange Commission a Sarbanes-Oxley Act Section 404 report on internal control over financial reporting. Each of the insurance companies listed on Attachment A is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment A.]

Management of ABC Insurance Company [or XYZ] is responsible for establishing and maintaining adequate internal control over statutory financial reporting. The Company has established an internal control system designed to provide reasonable assurance regarding the fair presentation of statutory financial reporting. The Company developed its own internal framework for evaluating the effectiveness of internal control over statutory financial reporting. The Company's framework includes the identification and evaluation of the company's internal control environment and areas of potential material internal control risk, documentation of existing internal controls, monitoring and testing of those key controls, documentation of remedial actions planned or taken, if any, and communication of the findings of the evaluation by the Company's senior management to the Audit committee of the Board of Directors.

Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Company's internal control over statutory financial reporting, which included identifying, reviewing, monitoring and testing significant internal controls over statutory financial reporting. Based on our assessment under the above described approach and through diligent inquiry, management has concluded that the Company's internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Company's internal control structure over the statutory financial statements for the year ended December 31, 201X.

EXAMPLE G: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT HAD ALL MATERIAL CONTROL PROCESSES ADDRESSED IN THEIR SECTION 404 REPORT AND HAD AN UNREMEDIATED MATERIAL WEAKNESS

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly-owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).*

A material weakness was noted in XYZ's internal control over financial reporting related to the calculation of insurance reserves. Due to the manner in which the data for homeowners policies are captured by the systems used in its Southeastern US regional office, changes in XYZ's estimate of insurance reserves for certain policies are not reviewed by XYZ's Actuarial Department prior to being recorded in the company's accounting records.

A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the company's financial statements will not be prevented, or detected and corrected on a timely basis. In connection with the weakness noted above, XYZ's management has taken remedial actions to change its procedures for coding policies issued in the states affected so that all homeowners policy data are included in the Actuarial Department review of estimate of insurance reserves. This change was effective on July 1, 20XX.

As a result of the unremediated material weakness described above, XYZ management has concluded that, as of December 31, 201X, XYZ's internal control over statutory financial reporting was not effective.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 16C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

XYZ Holding Company, Inc.
Addendum to Management's Report of Internal Control over Financial Reporting
For the Year Ended December 31, 201X

For purposes of this addendum, the "Section 404 Report" means Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting contained in or incorporated by reference in the Form 10-K/20-F. Accordingly, as required by [relevant state statute or Section 16C of the Model], management of XYZ hereby affirms that there are no material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers that were excluded from the Section 404 Report.

EXAMPLE H: AN SEC REGISTRANT OR MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT DID NOT INCLUDE ALL MATERIAL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT AND HAD AN UNREMEDIATED MATERIAL WEAKNESS NOTED

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly-owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).*

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

A material weakness was noted in XYZ's internal control over financial reporting related to the calculation of insurance reserves. Due to the manner in which the data for homeowners policies are captured by the systems used in its Southeastern US regional office, changes in XYZ's estimate of insurance reserves for certain policies are not reviewed by XYZ's Actuarial Department prior to being recorded in the company's accounting records.

A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the company's financial statements will not be prevented, or detected and corrected on a timely basis. In connection with the assessment above, XYZ's management identified a material weakness as of December 31, 201X in the controls over the calculation of insurance reserves.

As a result of the unremediated material weakness described above, XYZ management has concluded that, as of December 31, 201X, XYZ's internal control over statutory financial reporting was not effective.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 16C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ's Form 10-K for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

ATTACHMENT A

XYZ Holding Company, Inc.
Addendum to Management's Report of Internal Control over Financial Reporting
For the Year Ended December 31, 201X

For purposes of this filing, the "Section 404 Report" means Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting contained in or incorporated by reference in the Company's Form 10-K/20-F. Accordingly, as required by [relevant state statute or Section 16C of the Model], management of XYZ hereby affirms that the only material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers that were excluded from the Section 404 Report are the processes discussed below. Management of XYZ hereby affirms that all other material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers were included in the Section 404 Report. The following statutory financial reporting processes were reviewed separately from the internal controls reported by the Group of insurers in its Section 404 report:

Significant Control Processes not tested due to Group Materiality Considerations

The Section 404 report excludes certain control processes deemed material to individual insurance legal entities included within the Group of insurers. This exclusion was due to group materiality decisions made at the parent company level. These processes, and the legal entities within the Group of insurers impacted, are listed as follows:

Workers' Compensation Claims Processing – The HIJ claims processing system is utilized to process workers' compensation claims material to ABC Insurance Subsidiary and DEF Insurance Subsidiary.

Related Party Transactions Eliminated through Consolidation

The Section 404 report does not consider controls surrounding related party transactions as the effects of those transactions are eliminated through consolidation at the holding company financial statement level. Significant related party transactions, and the legal entities within the Group of insurers impacted, are listed as follows:

Affiliate reinsurance agreements – A significant amount of reinsurance coverage is obtained by ABC Insurance Subsidiary and DEF Insurance Subsidiary through contracts with XYZ Parent Company.

Management service agreements – ABC Insurance Subsidiary receives all of its management services through an agreement with XYZ Parent Company.

Tax allocation agreements – ABC Insurance Subsidiary and DEF Insurance Subsidiary are subject to an intercompany tax allocation agreement with XYZ Parent Company.

Deferred Income Taxes

Federal income taxes are provided for XYZ's estimated current and deferred liability. Deferred taxes are provided for differences between the financial statement and tax bases of assets and liabilities. Pursuant to

SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10, changes in deferred tax assets and liabilities are recognized as a separate component of gains and losses in statutory surplus, while under GAAP/IFRS, these changes are included in income tax expense or benefit. Gross deferred tax assets not meeting the realization criteria outlined in SSAP No. 101 are not admitted.

Nonadmitted Assets

Certain XYZ assets (principally furniture, equipment, prepaid expenses, agents' balances, and certain deferred tax assets) have been designated as nonadmitted assets under statutory accounting guidance (primarily in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 20—Nonadmitted Assets*). Such nonadmitted assets are excluded from assets by a charge to statutory surplus. Under GAAP/IFRS, such amounts are carried at amortized cost with an appropriate valuation allowance, as necessary.

Asset Valuation Reserve ("AVR")

The AVR represents a statutory contingency reserve for life and health insurers for credit related risk on most invested assets, and is charged to surplus pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.* No such reserve is required under GAAP/IFRS accounting.

Interest Maintenance Reserve ("IMR")

The IMR represents the deferral of interest-related realized gains and losses, net of tax, on primarily fixed maturity investments, amortized into income over the remaining life of the investment sold pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.* No such reserve is required under GAAP/IFRS accounting.

Management of XYZ conducted an assessment of the internal controls over these processes and concluded that they were effective with respect to the audited statutory financial statements.

(Please note that this is not intended to be an all-inclusive list. It should only include material processes that were not covered in the Section 404 Report. The facts and circumstances of each situation will determine the items to be included.)

EXAMPLE I: AN SEC REGISTRANT OR MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT HAD ALL MATERIAL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT. HOWEVER, THEY RECENTLY ACQUIRED ANOTHER INSURER THAT IS NOT INCLUDED IN THEIR ASSESSMENT

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).* This assessment excluded an evaluation of internal controls over financial reporting for RST Insurance Company which was recently acquired. Based on our assessment under that framework, management concluded that the Group of insurers' internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 16C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers' internal control structure over the statutory financial statements for the year ended December 31, 201X.
