NAIC

National Association of Insurance Commissioners

Accounting Practices and Procedures Manual

As of March 2015

Volume I

NAIC
National Association of Insurance Commissioners

The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

Accounting & Reporting
Information about statutory accounting principles and the procedures necessary for filing financial annual statements and conducting risk-based capital calculations.

Consumer Information
Important answers to common questions about auto, home, health and life insurance — as well as buyer's guides on annuities, long-term care insurance and Medicare supplement plans.

Financial Regulation
Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

Legal
Comprehensive collection of NAIC model laws, regulations and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

Market Regulation
Regulatory and industry guidance on market-related issues, including antifraud, product filing requirements, producer licensing and market analysis.

NAIC Activities
NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

Special Studies
Studies, reports, handbooks and regulatory research conducted by NAIC members on a variety of insurance-related topics.

Statistical Reports
Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health and life insurance.

Supplementary Products
Guidance manuals, handbooks, surveys and research on a wide variety of issues.

Capital Markets & Investment Analysis
Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

White Papers
Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

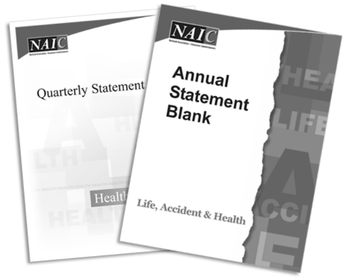
Companion Products

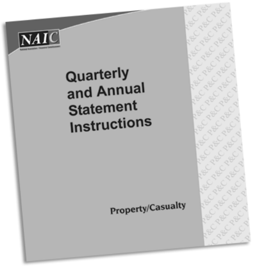
The following companion products provide additional information on the same or similar subject matter. Many customers who purchase the ***Accounting Practices and Procedures Manual*** also obtain one or more of the following products:



NAIC
Quarterly Statement
Health
NAIC
Annual Statement Blank
Life, Accident & Health

Annual and Quarterly Statement Blanks

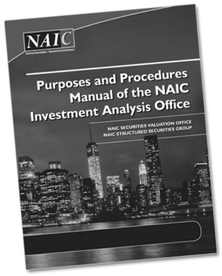
To be used with its companion products, this publication provides the appropriate format for filing quarterly and annual statement data with the states and the NAIC. Proper use allows users to identify system changes that can improve the method in which data is first collected, and allows users to ascertain if their annual statement software vendor has also complied with NAIC requirements. Updated annually.



NAIC
Quarterly and Annual Statement Instructions
Property/Casualty

Annual and Quarterly Statement Instructions

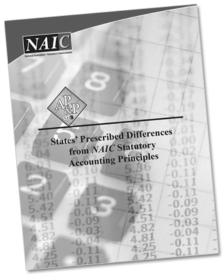
Includes a summary of changes to the instructions for the following year. When used with its companion products, it allows for proper preparation of annual and quarterly statements, including all supplemental information that must also be filed to remain in compliance with NAIC mandates. Instructions provide guidance for completing the various pages of the statements when the line descriptions are not self-explanatory. Updated annually.



NAIC
Purposes and Procedures Manual of the NAIC Investment Analysis Office
NAIC SECURITIES VALUATION OFFICE
NAIC STRUCTURED SECURITIES GROUP

Purposes and Procedures Manual of the NAIC Securities Valuation Office

This publication is the primary source for insurers to comply with regulatory reporting requirements. Contains the NAIC's credit assessment methodologies and valuation policies, and takes precedence over other SVO publications covering a number of categories. Subscribers receive periodic email alerts relating to regulatory developments concerning securities. These alerts will be sent directly from the NAIC's Securities Valuation Office. Electronic format only. Updated biannually.



NAIC
States' Prescribed Differences from NAIC Statutory Accounting Principles

States' Prescribed Differences from NAIC Statutory Accounting Principles

The Accounting Practices and Procedures Manual presents a comprehensive basis of accounting that should be followed if not in conflict with state statutes and/or regulations. Should the domiciliary state set forth accounting guidance that differs from the AP&P Manual, disclosures of such must be made. This publication provides information regarding each state's prescribed differences from NAIC statutory accounting principles, including a citation to the respective state statute and/or regulation. Updated annually.

How to Order

☎ 816.783.8300 ✉ prodserv@naic.org 🖱 http://store.naic.org

International orders must be prepaid, including shipping charges. Please contact an NAIC Customer Service Representative, Monday - Friday, 8:30 am - 5 pm CT.

MAINTENANCE PROCESS

The Statutory Accounting Principles (E) Working Group maintains codified statutory accounting principles (SAP) by concluding on generally accepted accounting principles (GAAP) or addressing new statutory accounting issues. As items are adopted, updates to the Manual are posted to the password-protected website listed below.

Website: **www.naic.org/committees_e_app_manual_updates.htm**

User ID and password for updates to the Manual adopted after the NAIC Spring 2014 National Meeting through the Spring 2015 National Meeting:

User ID: **RECOGNITION** (enter exactly as presented – case sensitive)
Password: **2015STATUTORY** (enter exactly as presented – case sensitive)

Email Notification
Should you wish to be notified by the NAIC when the password-protected website is updated, visit the website listed above and follow the link to sign up for email notification of updates to the statutory accounting website. The NAIC will retain the database; therefore, if you were receiving notifications via email in 2014, there is no need to resubmit your request in 2015.

Password for updates adopted after the NAIC Spring 2015 National Meeting through the Spring 2016 National Meeting requires purchase of the 2016 Manual.

Access to new updates adopted after the NAIC Spring 2015 National Meeting will be included with the pre-purchase of the subsequent year's Manual (March 2016 publication). Purchasers of the 2016 Manual may enter the password-protected NAIC website and download updates finalized after the NAIC Spring 2015 National Meeting through the Spring 2016 National Meeting.

Ordering Information: You may pre-purchase the March 2016 *Accounting Practices and Procedures Manual* by contacting an NAIC representative at 816.783.8300, http://www.naic.org/store_home.htm or e-mail at prodserv@naic.org. The March 2016 *Accounting Practices and Procedures Manual* will be delivered in two parts, first the User ID and Password required to obtain access to the updates website, and then the Manual in March 2016. Please contact an NAIC representative as indicated above with any questions on this process.

DEDICATION

The *Accounting Practices and Procedures Manual* is dedicated to Norris Clark, California Department of Insurance (retired), Chair of the Codification of Statutory Accounting Principles Working Group, and its successors, the Statutory Accounting Principles and Emerging Accounting Issues (E) Working Groups from September 1994 through July 2004, and to Joseph Fritsch, New York Department of Financial Services (retired), Chair of the Statutory Accounting Principles (E) Working Group from 2004 through December 2012.

Your dedication, leadership, intelligence and passion were the driving forces behind the creation and continued development of the comprehensive statutory accounting and financial reporting model presented in this publication. Your contributions throughout the years are appreciated and will not be forgotten.

How to Use This Manual

The contents of this manual are arranged as follows:

Volume I:
- Table of Contents
- Summary of Changes
- Preamble
- Statements of Statutory Accounting Principles
- Index to the Statements of Statutory Accounting Principles
- Glossary
- Appendix A – Excerpts of NAIC Model Laws
- Appendix B – Interpretations of the Emerging Accounting Issues (E) Working Group

Volume II:
- Appendix C – Actuarial Guidelines
- Appendix D – GAAP Cross-Reference to SAP
- Appendix E – Issue Papers 1-75

Volume III:
- Appendix E – Issue Papers 76-150
- Appendix F – Policy Statements
- Appendix G – Implementation Guide for the Model Audit Rule
- Appendix H – Superseded SSAPs and Nullified Interpretations (This appendix is no longer included within the printed Manual but is still accessible within the AP&P Folio View CD-ROM and on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage, www.naic.org/committees_e_app_manual_updates.htm).

The arrangement of material as indicated above is included in the Table of Contents at the front of each Volume. A detailed Table of Contents also proceeds each section covering the material within.

Summary of Changes:

This section provides a summary of the changes that were made to the As of March 2014 version of the *Accounting Practices and Procedures Manual* to create the As of March 2015 version. This is divided into substantive revisions to statutory accounting principles, nonsubstantive revisions to statutory accounting principles, and revisions to the appendices included in the Manual. This is a key resource for users who are looking to identify changes from the prior edition.

Preamble:

Each and every user of the Manual should read this section. Many regulators consider this document one of the most important parts of the Manual as it provides the foundation for statutory accounting principles (SAP). Some of the significant topics covered in the Preamble include codification project background, statement of concepts, statutory hierarchy, materiality and disclosures.

Statements of Statutory Accounting Principles:

As indicated by the Statutory Hierarchy, the Statements of Statutory Accounting Principles (SSAPs) are the primary authoritative statutory accounting practices and procedures promulgated by the NAIC. These statements are the result of issue papers that have been exposed for public comment and finalized. Finalized issue papers are in Appendix E and ARE NOT authoritative. While it is not intended that there be any significant differences between an underlying issue paper and the resultant SSAP, if differences exist, the SSAP prevails and shall be considered definitive. Readers may use the NAIC website to keep abreast of substantive and nonsubstantive

changes to the SSAPs. Completely superseded SSAPs are no longer authoritative and have been removed from the printed Manual but are available for reference on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage (www.naic.org/committees _e_app_manual_updates.htm). The completely superseded SSAPs have been retained in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

The cover page of each SSAP contains a STATUS section that can affect the implementation of each SSAP. The STATUS section contains the following:

> TYPE OF ISSUE – SSAPs designated as Common Area apply to all insurers. Although the nomenclature or terms provided in the prescribed annual statement forms may vary among different types of insurers, only one set of nomenclature or terms may have been used in the SSAP. For example, the Statement of Income found in the Property and Casualty Annual Statement shall be considered as synonymous with the Summary of Operations found in the Life and Health Annual Statement.
>
> ISSUED – Date when the SSAP was adopted by the NAIC. SSAPs designated with Initial Draft were adopted by the NAIC Plenary in March 1998 as part of the Codification Project (SSAP Nos. 1-73). The date included for SSAP No. 74, and subsequent SSAPs, denotes when the Statutory Accounting Principles (E) Working Group adopted the SSAP.
>
> EFFECTIVE DATE – Date representing when the SSAP is effective. Many times there are additional details relative to the transition provided within the SSAP.
>
> AFFECTS/AFFECTED BY – A useful tool for tracking relationships between statements and interpretations is contained within these sections. The "affects" section is used when a SSAP substantively amends or supersedes previously issued SSAPs. Nullified INTs are also noted in this section. Readers are referenced to another SSAP in the "affected by" section if the SSAP has been substantively amended or superseded. Text within paragraphs substantively amended or superseded may also be "shaded" to notify readers that revised guidance is available.
>
> INTERPRETED BY – This section includes a reference to the applicable Interpretation (INT) of the Emerging Accounting Issues (E) Working Group contained within Appendix B of the Manual which provides interpretative guidance as a result of issues raised by users of the Manual or related GAAP guidance. INTs are generally effective when adopted. Readers should note that the Manual only contains the INTs finalized through December 2014 due to the fact that the Manual is published annually. Readers may use the NAIC website, as indicated on the inside front cover of the Manual, to keep abreast of recently issued INTs.

Refer to the Relevant Literature and Effective Date and Transition sections of the SSAP for details of substantive and nonsubstantive changes.

Appendix A – Excerpts of NAIC Model Laws:

In most cases, the source document for information included in Appendix A is an NAIC Model Regulation or Law. These Appendices are referenced by specific SSAPs and should only be used in context of the Appendix and the SSAP that references it.

Appendix B – Interpretations of the Emerging Accounting Issues (E) Working Group:

The Emerging Accounting Issues (E) Working Group (EAIWG) is responsible for responding to SAP questions that generally relate to application, interpretation and clarification. Appendix B includes the final interpretations of the EAIWG through December 2014. Once an INT is

finalized, the related SSAP will contain reference to the applicable INT. Interpretations that have been nullified are removed from the printed Manual and posted for reference on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage (www.naic.org/committees_e_app_manual_updates.htm). The nullified INTs are retained in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

Appendix C – Actuarial Guidelines:

The NAIC Life Actuarial (A) Task Force and Health Actuarial (B) Task Force have been asked on many occasions to assist a particular state insurance department in interpreting a statute dealing with an actuarial topic relative to an unusual policy form or situation not contemplated at the time of original drafting of a particular statute. The Life Actuarial (A) Task Force and Health Actuarial (B) Task Force, in developing interpretations or guidelines, must often consider the intent of the statute, the reasons for initially adopting the statute and the current situation. The Life Actuarial (A) Task Force and Health Actuarial (B) Task Force feel that for those situations which are sufficiently common to all states, the publishing of actuarial guidelines on these topics would be beneficial to the regulatory officials in each state and would promote uniformity in regulation which is beneficial to everyone. To this end, the Life Actuarial (A) Task Force and Health Actuarial (B) Task Force have developed certain actuarial guidelines and will continue to do so as the need arises. The guidelines are not intended to be viewed as statutory revisions but merely a guide to be used in applying a statute to a specific circumstance.

Appendix D – GAAP Cross-Reference to SAP:

As expressed in the Statement of Concepts, SAP utilizes the framework established by Generally Accepted Accounting Principles (GAAP). Appendix D includes GAAP pronouncements that have been considered in the development of SAP. This listing includes GAAP pronouncements issued through December 2014. This Appendix is a valuable and efficient tool for readers who are interested in the status of a particular GAAP pronouncement in the SAP model.

Appendix E – Issue Papers:

This section includes all of the issue papers associated with SSAPs adopted by the Statutory Accounting Principles (E) Working Group through December 2014. The issue papers are used as the first step in developing new SSAPs and contain a recommended conclusion, discussion and relevant literature section. Issue papers **DO NOT** constitute an authoritative level of statutory accounting, as supported by the statutory hierarchy, and should only be used as reference material. Nevertheless, issue papers are an important part of the Manual because they reference the history and discussion of the related SSAP. The "Relevant Statutory Accounting and GAAP Guidance" section of the issue paper contains excerpts of accounting guidance in place at the time the Statutory Accounting Principles (E) Working Group considered (but not necessarily adopted) when forming the conclusions reached in the resultant SSAP.

Appendix F – Policy Statements:

This section includes the NAIC Policy Statements applicable to SAP. These statements provide the basis by which SAP is maintained, documentation of the agenda process and other important issues that affect this manual.

Appendix G – Implementation Guide for Model Audit Rule:

This section includes the NAIC Implementation Guide for the Model Audit Law. This section is for informational purposes. The Implementation Guide should not be viewed as a requirement of complying with the *Accounting Practices and Procedures Manual*.

Appendix H – Completely Superseded SSAPs and Nullified Interpretations

In 2013, the Statutory Accounting Principles (E) Working Group adopted a proposal to remove completely superseded SSAPs and nullified interpretations (INTs) from the printed Manual and

include these items on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage (www.naic.org/committees_e_app_manual_updates.htm). By including on this password-protected updates page, all who annually subscribe to the printed *Accounting Practices and Procedures Manual* will continue to have access to the superseded and nullified guidance for historical purposes. The completely superseded SSAPs and nullified INTs have been retained in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

How to Use this Manual …

... to account for a certain item under NAIC SAP

As the SSAPs represent the highest level of NAIC statutory authority, readers should begin their search there. The Index to SSAPs is a useful tool to identify which SSAP(s) address the issue. Once the pertinent SSAP has been identified, it can be used to locate other documents that may also address the issue. On the SSAP cover page, readers will be referred to other SSAPs if there have been substantive changes made to it or INTs if there have been interpretations of the SSAP. Within the body of the SSAP, readers may be referred to Appendix A or C for further guidance. There is a reference located at the end of each SSAP to issue paper(s) used in the development of the SSAP. The DISCUSSION section of the issue paper provides documentation supporting the conclusions reached in the SSAP. As supported by the statutory hierarchy, readers should only utilize the issue papers as support to the SSAP as they ARE NOT authoritative. The Statutory Hierarchy contains a detailed listing of levels of authoritative literature.

... to compare SAP to GAAP for a particular issue

Appendix D is an excellent reference for users who are interested in determining how SAP addresses an issue that has been adopted by GAAP. Appendix D provides a reference to the SSAP or INT that addresses a particular GAAP pronouncement. As indicated in the Preamble, users should not utilize GAAP until and unless adopted by the NAIC. Within the body of the applicable SSAP or INT, readers will find documentation as to the reason for adoption, rejection, or adoption with modification of a particular GAAP pronouncement.

... to identify the relationship between the Manual and State law

Once a reader has identified the accounting treatment for a particular transaction or issue within the Manual, one must consider the effect of state law. That is, the Manual is not intended to preempt states' legislative and regulatory authority. It is intended to establish a comprehensive basis of accounting recognized and adhered to if not in conflict with state statutes and/or regulations, or when the state statutes and/or regulations are silent. For instance, if a state prohibits the admission of goodwill, insurers domiciled in that state are required to nonadmit all goodwill instead of following the NAIC guidance contained within *SSAP No. 68—Business Combinations and Goodwill*. Insurers should refer to their state laws and regulations regarding deviations from this manual.

... to obtain updates to the latest published Manual

The Manual contains information as of December 2014. Please note that there will be modifications to the accounting pronouncements included in the Manual from year to year, as such guidance is subject to the maintenance process. To address this, the NAIC has a website dedicated to providing updates on the latest information impacting statutory accounting. A user must pre-order the As of March 2016 Manual in order to obtain access to the changes occurring during 2015 that are maintained within this password-protected website. Once access is granted, a user may enter the website and download an issue paper, statement of statutory accounting principles, appendix or interpretation that affects the Manual. This website also includes the latest minutes of the Statutory Accounting Principles (E) Working Group and Emerging Accounting Issues (E) Working Group. To learn more about how to obtain updates to the latest published Manual, refer to the Maintenance Process page, which precedes the Table of Contents.

... to learn how changes are made to the Manual and how to stay abreast of such changes

Appendix F contains several NAIC Policy Statements that document the process by which the Manual will be modified. It also outlines the process by which the Statutory Accounting Principles (E) Working Group and the Emerging Accounting Issues (E) Working Group will conduct their business. Readers are able to track the development of SAP by attending the national meetings of the working groups or through use of the NAIC website. Further details regarding the website can be found at www.naic.org.

... to contact the NAIC regarding questions about the Manual

The following NAIC staff may be contacted regarding questions about the Manual:

Summary of Changes to the *As of March 2014 Version* of the *Accounting Practices and Procedures Manual* included in the *As of March 2015 Version*

The following represents a summary of the changes that were made to the *As of March 2014* version of the *Accounting Practices and Procedures Manual* (Manual) to create the *As of March 2015* version.

The first section summarizes substantive revisions to statutory accounting principles. Substantive revisions introduce original or modified accounting principles. Substantive revisions can be reflected in an existing SSAP or a new SSAP. When substantive revisions are made to an existing SSAP, the front of the SSAP identifies the substantive changes and effective date of the substantive revisions. If substantive revisions in an existing SSAP are depicted by underlines (new language) and strikethroughs (removed language), this tracking will not be shown in subsequent manuals. Substantively revised SSAPs and new SSAPs usually refer to a corresponding issue paper that will reflect the substantive revisions for historical purposes. If language in an existing SSAP is superseded, the superseded language is shaded, with the reader referred to the new or substantively revised SSAP. SSAPs that are completely superseded and interpretations that are nullified are included in Appendix H.

The second section summarizes the nonsubstantive revisions to statutory accounting principles. Nonsubstantive changes are characterized as language clarifications which do not modify the original intent of a SSAP, or changes to reference material. Nonsubstantive changes are depicted by underlines (new language) and strikethroughs (removed language) and will not be shown as marked in subsequent manuals.

The third section summarizes any revisions to the appendices in the Manual.

1. Substantive Revisions – Statutory Accounting Principles

Section	Reference	Description
SSAP No. 40R SSAP No. 48	2013-17	Revisions related to wholly-owned single real estate held in an LLC, which meets specific conditions, with an effective date of Jan. 1, 2015.
SSAP No. 106 SSAP No. 35R	2014-01 2014-13	New SSAP moves guidance on the Affordable Care Act Section 9010 from SSAP No. 35R and includes nonsubstantive edits to the disclosures.
SSAP No. 107 SSAP No. 35R	2014-12 2013-28	New SSAP addresses the risk-sharing provisions of the Affordable Care Act known as risk adjustment, reinsurance and risk corridors. With this adoption, the disclosures previously located within SSAP No. 35R are moved to this SSAP and INT 13-04 is nullified.

2. Nonsubstantive Revisions – Statutory Accounting Principles

Section	Reference	Description
Preamble	2013-35	Revisions clarify that as of Sept. 15, 2009, AICPA SOPs will no longer be reviewed for statutory accounting.
SSAP No. 1 SSAP No. 4	2014-16	Revisions clarify the guidance for restricted assets.
SSAP No. 3 SSAP No. 68	2013-29	Revisions clarify that the disclosure exemption for mergers with shell entities does not change the Jan. 1 date to determine the cumulative effect in accounting principle.
SSAP No. 11	2014-07	Revisions identify the adoption of specific paragraphs from *Accounting Principles Board Opinion (APB) 12, Omnibus Opinion – 1967* and add guidance to reflect previously adopted GAAP, with minor technical edits.
SSAP No. 16R	2014-04	Revisions make the capitalization policy disclosure consistent with other SSAPs.

SSAP No. 19 SSAP No. 22	2014-05	Revisions adopt with modification *ASU 2014-05–Service Concession Arrangements* to clarify that service concession arrangements are not within the scope of SSAP No. 22 and shall not be recognized as property, plant or equipment in SSAP No. 19.
SSAP No. 26 SSAP No. 43R	2014-02	Revisions incorporate a new “structured note” disclosure and clarify that the guidance in SSAP No. 43R pertains to structured securities, not structured notes.
SSAP No. 35R	2013-28	Revisions include disclosures pertaining to the risk-sharing provisions of the Affordable Care Act programs (risk adjustment, reinsurance and risk corridors). These disclosures were subsequently moved to SSAP No. 107.
SSAP No. 55	2014-19	Revisions clarify that claims-related losses for extra contractual obligations and bad faith lawsuits are to be included in losses. Also, technical revisions related to prepaid adjustment expenses.
SSAP No. 56	2014-18	Revisions clarify the reporting of separate accounts disclosures.
SSAP No. 57	2014-06	Revisions to the disclosure requirements, with corresponding terminology revisions.
SSAP No. 86	2013-32	Revisions adopt *ASU 2013-10–Inclusion of the Fed Funds Effective Swap Rate (or Overnight Index Swap Rate) as a Benchmark Interest Rate for Hedge Accounting Purposes.* This ASU defines a benchmark interest rate and eliminates the restriction on different rates for similar hedges.
	2014-09	Revisions reject *ASU 2014-03–Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps—Simplified Hedge Accounting Approach (PCC)* as not applicable.
	2014-11	Revisions clarify the reporting of derivatives between Schedule DB and the balance sheet.
SSAP No. 92 SSAP No. 102	2013-37	Revisions adopt by reference *ASU 2011-09–Disclosures about an Employer’s Participation in a Multiemployer Plan* and incorporate limited additional disclosures for multiemployer plans.
SSAP No. 97	2013-31	Revisions add reference in Appendix B – Determining the Valuation Method, to the SSAP’s downstream holding company guidance.
SSAP No. 101	2014-20	Revisions clarify the RBC authorized control level used in the DTA calculation.
SSAP No. 104R	2014-17	Revisions adopt *ASU 2014-12–Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period* with an effective date of Jan. 1, 2016, with early adoption permitted.

3. Revisions to the Appendices

Section	Reference	Description
Appendix A	2014-21	Revisions incorporate changes to *Appendix A-010: Minimum Reserve Standards for Individual and Group Health Insurance Contracts* to allow the 2012 Group Long-Term Disability Table adopted by the Health Actuarial (B) Task Force with a Jan. 1, 2017, effective date and early adoption permitted.

Appendix B	2013-04 (EAIWG) 2014-12 (SAPWG)	*INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act* was adopted to provide temporary guidance on the risk-sharing provisions. This INT was subsequently nullified by SSAP No. 107 and moved to Appendix H.
	2014-26 (SAPWG)	Placement revisions move GAAP guidance identified as rejected from INT 99-00 into Issue Paper No. 99. INT 99-00 was nullified and moved to Appendix H.
Appendix C	2014-22	*Actuarial Guideline XLVII: Application of Company Experience in the Calculation of Claim Reserves Under the 2012 Group Long-Term Disability Valuation Table* has been added. *Actuarial Guideline XLVIII: Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued Under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (Model 830) has been added. Actuarial Interpretations 38 through 41 have been added to Appendix C2.
Appendix D	2013-35	Revisions update the appendix based on the consideration of GAAP through the statutory review process. These revisions are not tracked as changes. Additionally, revisions clarify that as of Sept. 15, 2009, AICPA SOPs will no longer be reviewed for statutory accounting.
Appendix E		Revisions reflect the rejection of the following GAAP guidance as not applicable to statutory accounting in *Issue Paper No. 99—Nonapplicable GAAP Pronouncements* (Issue Paper No. 99):
	2013-34	• *ASU 2012-04–Technical Corrections and Improvements*
	2014-03	• *ASU 2013-12–Definition of a Public Business Entity, An Addition to the Master Glossary*
	2014-14	• *ASU 2014-10–Development Stage Entities*
	2013-35	• *SOP 09-1–Performing Agreed-Upon Procedures Engagements That Address the Completeness, Accuracy, or Consistency of XBRL-Tagged Data*
	2014-26 2014-08	Placement revisions move GAAP guidance identified as rejected from INT 99-00 into Issue Paper No. 99. Additionally, revisions add reference of the original SSAP that corresponds with each issue paper, as well as the current authoritative SSAP guidance.
		The following issue papers were adopted or amended:
	2014-01	• *Issue Paper No. 148—Affordable Care Act Section 9010 Assessment*
	2014-13 2013-17	• *Issue Paper No. 149—Wholly-Owned Single Real Estate Property in an LLC*
	2014-12	• *Issue Paper No. 150—Accounting for the Risk-Sharing Provisions of the Affordable Care Act*
Appendix F	N/A	No revisions have been made to this appendix.
Appendix G	N/A	No revisions have been made to this appendix.
Appendix H	2014-26 2013-04 (EAIWG) 2014-12 (SAPWG)	Revisions add nullified INTs: • *INT 99-00: Compilation of Rejected EITFs* • *INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act*

This page intentionally left blank.

Statutory Accounting Principles
Preamble

Interpreted by: INT 00-20

I. Accounting Practices and Procedures Promulgated by the NAIC

1. The NAIC, through its committees and working groups, facilitates many projects of importance to the insurance regulators, industry, and users of statutory financial information. That is evidenced by the mission statement and charges of the NAIC Accounting Practices and Procedures Task Force of the Financial Condition (E) Committee (Accounting Practices and Procedures (E) Task Force).

2. The mission of the Accounting Practices and Procedures (E) Task Force is to identify, investigate and develop solutions to accounting problems with the ultimate goal of guiding insurers in properly accounting for various aspects of their operations and to modify the NAIC *Accounting Practices and Procedures Manuals for Property and Casualty Insurance Companies*, *for Life, Accident and Health Insurance Companies*, and *for Health Maintenance Organizations* (Accounting Practices and Procedures manuals) to reflect changes necessitated by task force action and to study innovative insurer accounting practices which affect the ability of regulators to determine the true financial condition of insurers.

3. To carry out the mission, the Accounting Practices and Procedures (E) Task Force is charged with carrying out the following initiatives:

- Provide authoritative guidance to insurance regulators on current statutory accounting issues.
- Continue evaluation of statutory accounting principles for purposes of development, expansion and codification.
- Extend evaluation of statutory accounting principles to address areas specific to health entities.
- The Codification of Statutory Accounting Principles (E) Working Group (Statutory Accounting Principles (E) Working Group as of January 1, 2000) will maintain codified statutory accounting principles by providing periodic updates to the guidance which address new statutory issues and new generally accepted accounting principles (GAAP) pronouncements as they develop.

4. This comprehensive guide to Statutory Accounting Principles, composed of the Preamble, the Statements of Statutory Accounting Principles (SSAPs), and the Appendices, is intended to respond to the initiatives noted above. The guide and interpretations of the Emerging Accounting Issues (E) Working Group shall be referred to as the *Accounting Practices and Procedures Manual* - version effective January 1, 2001 (during the transition period until the 1998 version is no longer maintained and updated by the NAIC). The 1998 version of the *Accounting Practices and Procedures Manual* will be maintained and published until December 31, 2000. However, this Manual is not intended to preempt states' legislative and regulatory authority. It is intended to establish a comprehensive basis of accounting recognized and adhered to if not in conflict with state statutes and/or regulations, or when the state statutes and/or regulations are silent.

5. The principles established by this Manual are effective January 1, 2001. Accounting changes adopted to conform to the provisions of these statements shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle; however, specific effective dates, and transition or grandfathering rules, if any, are contained in each SSAP.

II. Background

A. An Accounting Environment for Insurance Companies

6. Accounting is the process of accumulating and reporting financial information about an economic unit or group of units. Relative to commercial enterprises, the users of accounting information include management, investors, potential investors, lenders, investment analysts, regulators, and customers. Although customers of most commercial enterprises have no direct financial interest therein and generally are only concerned with the price to be paid for the product or service purchased, they may use accounting information to make choices as to the entity with which they engage in a business transaction. This is particularly relevant to purchases of insurance products inasmuch as insurance contracts involve a promise to pay which may extend years into the future. Insurance products may provide benefits well in excess of the purchase price or premium. The benefits ultimately received are almost always greater than the price (premium) paid and can only be estimated at the time the product (policy) is purchased.

7. Insurance is regulated on a state by state basis in the United States. Each state has its own regulatory framework generally led by an insurance commissioner. Insurance commissioners are charged with overseeing the financial condition of insurance companies doing business in their jurisdictions and they require meaningful financial, statistical, and operating information about the companies. This financial oversight is designed to help ensure that policyholders and claimants receive the requisite benefits from the policies sold, often times such products having been sold years or decades prior to when the benefits are due. Frequently, this regulatory perspective differs markedly from the perspectives of other users of insurers' accounting information. In recognition of these special concerns and responsibilities, statutory accounting principles have been established by statute, regulation, and practice.

B. Statutory Accounting Principles (SAP)

8. In simplest terms, SAP has been those accounting principles or practices prescribed or permitted by an insurer's domiciliary state. Statutory accounting practices have been interspersed in the insurance laws, regulations, and administrative rulings of each state, the Accounting Practices and Procedures manuals, the Annual Statement Instructions, the NAIC *Financial Condition Examiners Handbook,* the *Purposes and Procedures Manual of the NAIC ~~Securities Valuation~~Investment Analysis Office*, and NAIC committee, task force, and working group minutes. In addition, there are many statutory practices widely accepted by both insurers and regulators which have never been codified.

9. SAP is conservative in some respects but not unreasonably conservative over the span of economic cycles, or in recognition of the primary statutory responsibility to regulate for financial solvency. SAP attempts to determine at the financial statement date an insurer's ability to satisfy its obligations to its policyholders and creditors.

C. Comparison Of GAAP And SAP

10. The objectives of GAAP reporting differ from the objectives of SAP. GAAP is designed to meet the varying needs of the different users of financial statements. SAP is designed to address the concerns of regulators, who are the primary users of statutory financial statements. As a result, GAAP stresses measurement of emerging earnings of a business from period to period, (i.e., matching revenue to expense), while SAP stresses measurement of ability to pay claims in the future. This difference is illustrated by the fact that statutory policy reserves are intentionally established on a conservative basis emphasizing the long-term nature of the liabilities. Under GAAP, the experience expected by each

company, with provision for the risk of adverse deviation, is used to determine the reserves it will establish for its policies. GAAP reserves may be more or less than the statutory policy reserves.

11. Some other differences between SAP and GAAP have included:

- GAAP has recognized certain assets which, for statutory purposes, have been either nonadmitted or immediately expensed. Policy acquisition costs are expensed as incurred under SAP since the funds so expended are no longer available to pay future liabilities. Insurance company financial statements prepared in accordance with GAAP defer costs incurred in the acquisition of new business and amortize them over the premium recognition period.

- Deferred income taxes have, historically, not been recognized under SAP.

- The methods of accounting for certain aspects of reinsurance under GAAP may have varied from SAP, e.g., credit for reinsurance in unauthorized companies.

D. Purpose of Codification

12. The purpose of the codification of statutory accounting principles is to produce a comprehensive guide to SAP for use by insurance departments, insurers, and auditors. Statutory accounting principles, as they existed prior to codification did not always provide a consistent and comprehensive basis of accounting and reporting. The prescribed or permitted statutory accounting model resulted in practices that could have varied from state to state. Insurance companies were sometimes uncertain about what rules to follow and regulators were sometimes unfamiliar with the accounting rules followed by insurers in other states. As a result, insurers' financial statements were not always prepared on a comparable basis.

13. In engaging this project, it was necessary to revisit principles that had been developed over a long period of time and to consider recently identified accounting issues not currently addressed by SAP. In many cases, previously available choices of accounting methods were eliminated. Also considered was the current state of the regulatory environment and the tools more recently developed, such as risk-based capital (RBC). These new financial analytical tools allowed for a reconsideration of the level of conservatism necessary to achieve regulatory objectives.

14. The Codification project will result in more complete disclosures and more comparable financial statements, which will make the insurance departments' analysis techniques more meaningful and effective. The project will provide examiners and analysts with uniform accounting rules against which companies' financial statements can be evaluated. RBC, an important tool used by the states to measure solvency of insurers, will be reported more consistently with the benefit of codification.

E. History of Codification

15. In 1989, the NAIC adopted a Solvency Agenda designed to enhance the ability of state regulators to protect insurance consumers from the financial trauma of insurer insolvency. In recognition of the fact that enhancement of solvency regulation is an ongoing process, the agenda was updated in 1991. Since 1991, most major initiatives of the 1991 Solvency Agenda have been accomplished. They include: 1) revision of the NAIC *Financial Condition Examiners Handbook*, 2) development of a risk-based capital approach to define required levels of capital and surplus, 3) development of a model law on authorized insurer investments, 4) creation of a centralized financial analysis unit to perform comprehensive analysis of insurance companies who may be troubled, 5) development of computerized analytical routines for use by state insurance departments, and 6) creation of an NAIC education fund.

16. The codification project is also a direct result of the 1991 Solvency Agenda. The goal was "evaluation of existing statutory accounting principles as presently outlined in the *Accounting Practices and Procedures Manual* for purposes of further development, expansion, and codification."

17. Beginning in 1994, the NAIC's efforts to codify SAP were strengthened and reorganized recognizing the need for expediency. There was both a commitment of substantial financial resources as well as the selection of a team of dedicated regulators who were willing to commit the time and effort necessary to accomplish one of the most significant undertakings that has been faced by the NAIC.

18. Recognition of this effort was given by the AICPA when in 1995 they issued *Statement of Position 95-5—Auditor's Report on Statutory Financial Statements of Insurance Enterprises* (SOP 95-5) so that an auditor's opinion on a "prescribed or permitted" basis could continue until codification was completed. SOP 95-5 states "The codification is expected to result in a hierarchy of statutory accounting practices that will provide a comprehensive basis of accounting that can be applied consistently to all insurance enterprises." At that time, it was believed that once Codification was effective, in order for certified public accountants (CPAs) to issue opinions on statutory statements, SAP had to be considered an "Other Comprehensive Basis of Accounting" (OCBOA) by the American Institute of Certified Public Accountants (AICPA).

19. Codification is not intended to preempt state legislative and regulatory authority. While Codification is expected to be the foundation of a state's statutory accounting practices, it may be subject to modification by practices prescribed or permitted by a state's insurance commissioner. Statutory financial statements will continue to be prepared on the basis of accounting practices prescribed or permitted by the states. As a result, in 1998 the AICPA's Insurance Companies Committee determined that it will not be necessary for the Auditing Standards Board to grant the Codification status as an OCBOA since it will not be the sole basis for preparing statutory financial statements. Further, auditors will be permitted to continue to provide audit opinions on practices prescribed or permitted by the insurance department of the state of domicile.

F. Scope of Project

20. The conceptual framework used in developing and maintaining statutory accounting principles for insurance companies is summarized in the Statutory Accounting Principles Statement of Concepts. The application of the concepts of conservatism, consistency and recognition assure that guidance developed and codified as part of this project is consistent with the underlying objectives of statutory accounting.

21. This Guide has been developed using the body of statutory accounting principles as prescribed in the statutory hierarchy of accounting guidance, which is incorporated into the Statement of Concepts. This hierarchy provides the guidance for judging the presentation of statutory financial statements in conformance with statutory accounting principles.

September 20, 1994

III. Statutory Accounting Principles Statement of Concepts

Purpose of Statement of Concepts for Statutory Accounting Principles

22. This document states the fundamental concepts on which statutory financial accounting and reporting standards are based. These concepts provide a framework to guide the National Association of Insurance Commissioners ("NAIC") in the continued development and maintenance of statutory accounting principles ("SAP" or "statutory basis") and, as such, these concepts and principles constitute an accounting basis for the preparation and issuance of statutory financial statements by insurance companies in the absence of state statutes and/or regulations.[1]

23. The NAIC and state insurance departments are primarily concerned with statutory accounting principles that differ from GAAP reflective of the varying objectives of regulation. Recodification of areas where SAP and GAAP are parallel is an inefficient use of limited resources.

24. SAP utilizes the framework established by GAAP.[2] This document integrates that framework with objectives exclusive to statutory accounting. The NAIC's guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC may specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC.

25. The body of statutory accounting principles is prescribed in the statutory hierarchy of accounting guidance. This hierarchy provides the framework for judging the presentation of statutory financial statements in conformance with statutory accounting principles.

26. Statutory requirements vary from state to state. While it is desirable to minimize these variations, to the extent that they exist it is the objective of NAIC statutory accounting principles to provide the standard against which the exceptions will be measured and disclosed if material.

Objectives of Statutory Financial Reporting

27. The primary responsibility of each state insurance department is to regulate insurance companies in accordance with state laws with an emphasis on solvency for the protection of policyholders. The ultimate objective of solvency regulation is to ensure that policyholder, contract holder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety. The cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of

[1] As stated in the NAIC's constitution, the NAIC is an association of chief insurance regulatory officials of the 50 states, the District of Columbia, American Samoa, Guam, Puerto Rico, and the Virgin Islands whose objective is to serve the public by assisting several state insurance supervisory officials, individually and collectively, in achieving the following fundamental insurance regulatory objectives:

1. Maintenance and improvement of state regulation of insurance in a responsive and efficient manner;
2. Reliability of the insurance institution as to financial solidity and guaranty against loss;
3. Fair, just, and equitable treatment of policyholders and claimants.

[2] The GAAP framework applicable to insurance accounting is set forth in *Statements of Financial Accounting Concepts One, Two, Five, and Six*. These documents, promulgated by the Financial Accounting Standards Board, set forth the objectives and concepts which are used in developing accounting and reporting standards.

policyholders. An accounting model based on the concepts of conservatism, consistency, and recognition is essential to useful statutory financial reporting.

28. Statutory reporting applies to all insurers authorized to do business in the United States and its territories, and requires sufficient information to meet the statutory objectives. However, statutory reporting as contained in this guide is not intended to preempt state legislative and regulatory authority. The SAP financial statements include the balance sheet and related summary of operations, changes in capital and surplus, and cash flow statements. Because these basic financial statements cannot be expected to provide all of the information necessary to evaluate an entity's short-term and long-term stability, management must supplement the financial statements with sufficient disclosures (e.g., notes to financial statements, management's discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided.

Concepts

Conservatism

29. Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.

30. Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.

Consistency

31. The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.

Recognition

32. The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.

33. The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due

to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

34. Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).

35. Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

36. SAP income reflects the extent that changes have occurred in SAP assets and liabilities for current period transactions, except changes in capital resulting from receipts or distributions to owners. SAP income also excludes certain other direct charges to surplus which are not directly attributable to the earnings process (e.g., changes in nonadmitted assets).

Conclusion

37. This document states the fundamental concepts for financial statements presented on the basis of SAP. These concepts summarize the conceptual framework that the NAIC uses in developing and maintaining statutory accounting principles for insurance companies. These concepts will also assure that guidance will be provided consistently with the underlying objectives of statutory accounting and will aid in the review of emerging accounting issues.

38. The multitude of unique circumstances and individual transactions makes it virtually impossible for any codification of accounting principles to be totally comprehensive. Application of SAP, either contained in the SSAPs or defined as GAAP and adopted by the NAIC, to unique circumstances or individual transactions should be consistent with the concepts of conservatism, consistency, and recognition.

IV. Statutory Hierarchy

The following Hierarchy is not intended to preempt state legislative and regulatory authority.

Level 1:

- SSAPs, including GAAP reference material to the extent adopted by the NAIC from the FASB Accounting Standards Codification[3] (FASB Codification or GAAP guidance)[4, 5].

Level 2:

- Consensus positions of the Emerging Accounting Issues (E) Working Group as adopted by the NAIC

Level 3:

- NAIC Annual Statement Instructions
- *Purposes and Procedures Manual of the NAIC Investment Analysis*~~*Securities Valuation*~~ *Office*

Level 4:

- Statutory Accounting Principles Statement of Concepts[6]

Level 5:

- Sources of nonauthoritative GAAP accounting guidance and literature, including: (a) practices that are widely recognized and prevalent either generally or in the industry, (b) FASB Concept Statements, (c) AICPA Issue Papers, (d) International Financial Reporting Standards, (e) Pronouncements of professional associations or regulatory agencies, (f) Technical Information Service Inquiries and Replies included in the AICPA Technical Practice Aids, and (g) Accounting textbooks, handbooks and articles.

[3] Effective September 15, 2009, the FASB Codification is the source of authoritative U.S. generally accepted accounting principles. As of that date, the FASB Codification superseded all then-existing non-SEC accounting and reporting standards. All other nongrandfathered, non-SEC accounting literature not included in the FASB Codification is nonauthoritative. As of September 15, 2009, AICPA Statements of Position are no longer reviewed as part of the statutory maintenance process as they are no longer considered authoritative GAAP literature. If the AICPA were to address an issue that affects the FASB Codification, an accounting standard update (ASU) would be issued and reviewed for applicability to statutory accounting.

[4] FAS 133 Implementation Issues are excluded from the NAIC hierarchy and statutory accounting standard review process unless considered significant and relevant to statutory accounting and specifically requested for review as part of the maintenance process, or in accordance with future projects in which review of a specific FAS 133 Implementation Issue would be considered beneficial. (These items are excluded from the maintenance process as SSAP No. 86 only adopts the framework of the guidance included in FAS 133.)

[5] FASB Staff Positions (FSPs) adopted after May 9, 2008, are reviewed as part of the statutory accounting maintenance review process. FSPs adopted prior to May 9, 2008, were reviewed as part of the maintenance process if considered to be 'Board-directed'. (Board-directed FSPs were issued to provide narrow and limited revisions to the FASB statements or FASB interpretations formerly provided in FASB Technical Bulletins.) FSPs that were not considered 'Board-directed' were considered to provide application guidance similar to that found in FASB Staff Implementation Guides and Staff Announcements and were not reviewed as part of the statutory accounting maintenance review process.

[6] The Statutory Accounting Principles Statement of Concepts incorporates by reference FASB Concepts Statements One, Two, Five and Six to the extent they do not conflict with the concepts outlined in the statement. However, for purposes of applying this hierarchy the FASB Concepts Statements shall be included in Level 5 and only those concepts unique to statutory accounting as stated in the statement are included in Level 4.

39. If the accounting treatment of a transaction or event is not specified by the SSAPs, preparers, regulators and auditors of statutory financial statements should consider whether the accounting treatment is specified by another source of established statutory accounting principles. If an established statutory accounting principle from one or more sources in Level 2 or 3 is relevant to the circumstances, the preparer, regulator or auditor should apply such principle. If there is a conflict between statutory accounting principles from one or more sources in Level 2 or 3, the preparer, regulator or auditor should follow the treatment specified by the source in the higher level—that is, follow Level 2 treatment over Level 3. Revisions to guidance in accordance with additions or revisions to the NAIC statutory hierarchy should be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

40. Because of developments such as new legislation or the evolution of a new type of business transaction, there sometimes are no established statutory accounting principles for reporting a specific transaction or event. In those instances, it might be possible to report the event or transaction on the basis of its substance by selecting a statutory accounting principle that appears appropriate when applied in a manner similar to the application of an established statutory principle to an analogous transaction or event. In the absence of a SSAP or another source of established statutory accounting principles, the preparer, regulator or auditor of statutory financial statements may consider other accounting literature, depending on its relevance in the circumstances. Other accounting literature includes the Statutory Accounting Principles Statement of Concepts and GAAP reference material and accounting literature identified in Level 5. The appropriateness of other accounting literature depends on its relevance to the particular circumstances, the specificity of the guidance, and the general recognition of the issuer or author as an authority. For example, the Statutory Accounting Principles Statement of Concepts would be more authoritative than any other sources of accounting literature. Similarly, FASB Concepts Statements would normally be more influential than other sources of nonauthoritative GAAP pronouncements.

V. Statements of Statutory Accounting Principles

41. This Manual consists primarily of Statements of Statutory Accounting Principles (SSAPs). SSAPs are the primary Accounting Practices and Procedures promulgated by the NAIC. These statements are the result of issue papers that have been exposed for public comment and finalized. Finalized issue papers are in Appendix E. While it is not intended that there be any significant differences between an underlying issue paper and the resultant SSAP, if differences exist, the SSAP prevails and shall be considered definitive.

42. SSAPs designated as Common Area apply to all insurers. Although the nomenclature or terms provided in the prescribed annual statement forms may vary among different types of insurers, only one set of nomenclature or terms may have been used in the SSAP. For example, the Statement of Income found in the Property and Casualty Annual Statement shall be considered as synonymous with the Summary of Operations found in the Life and Health Annual Statement.

43. Once promulgated, statements will only be amended or superseded through the issuance of new SSAP pronouncements. If it is necessary to substantially modify or augment the guidance in a SSAP, a new statement will be promulgated and/or the statement will be reissued with "revised" in the title. Non-substantial changes will be included in the existing statement with changes tracked (i.e., new text will be underlined and deleted text as strikethrough) in the next printing of the Manual. Then no changes will be shown after the initial year. A useful tool for tracking of the relationships between statements is contained in the "Status" section of each statement which includes sections labeled "Affects" and "Affected By." As SSAPs are issued in the future that modify or augment the guidance previously provided, these sections will identify the relationships between statements.

VI. Materiality

44. Those who make accounting decisions and those who make judgments as regulators and auditors continually confront the need to make judgments about materiality. Materiality judgments are primarily quantitative in nature. They pose the question: Is this item large enough for users of the information to be influenced by it? However, the answer to that question will usually be affected by the nature of the item; items too small to be thought material if they result from routine transactions may be considered material if they arise in abnormal circumstances.

45. Materiality judgments are concerned with screens or thresholds. Is an item, an error, or an omission large enough, considering its nature and the attendant circumstances, to pass over the threshold that separates material from immaterial items? The more important a judgment item is, the finer the screen should be that will be used to determine whether it is material. For example:

- Circumstances where an accounting adjustment puts an insurer in danger of being in breach of a covenant or regulatory requirement may justify a lower materiality threshold than if its position were stronger. For example, an error resulting from an insurer incorrectly reporting certain nonadmitted assets as admitted assets might be considered material if the classification of those assets as nonadmitted would cause the insurer to trigger an event under the Risk-Based Capital requirements.

- A failure to disclose separately a nonrecurrent item of revenue may be material at a lower threshold than would otherwise be the case if the revenue turns a loss into a profit or reverses the trend of earnings from a downward to an upward trend.

- A miscategorization of assets or liabilities that would not be material in amount to the basic financial statements, but would cause the insurer to trigger an event under the Risk-Based Capital requirements, might be material.

- Amounts too small to warrant disclosure or correction in normal circumstances may be considered material if they arise from abnormal or unusual transactions or events.

46. Almost always, the relative rather than the absolute size of a judgment item determines whether it should be considered material in a given situation. Losses from bad debts that could be shrugged off as routine by a large insurer may threaten the continued existence of a small one. An error in reserve valuation may be material in a small insurer for which it cut earnings in half but immaterial in an insurer for which it might make a barely perceptible ripple in the earnings.

47. Another factor in materiality judgments is the degree of precision that is attainable in estimating the judgment item. The amount of deviation that is considered immaterial may increase as the attainable degree of precision decreases. For example, accounts payable usually can be estimated more accurately than can contingent liabilities arising from litigation or threats of it, and a deviation considered to be material in the first case may be quite trivial in the second.

48. Individual judgments are required to assess materiality. The essence of the materiality concept is clear. The omission or misstatement of an item in a statutory financial statement is material if, in the light of surrounding circumstances, the magnitude of the item is such that it is probable that the judgment of a reasonable person relying upon the statutory financial statement would have been changed or influenced by the inclusion or correction of the item.

49. The provisions of this Manual need not be applied to immaterial items.$^{\text{(INT 00-20)}}$

VII. Relationship to GAAP

50. As expressed in the Statement of Concepts, SAP utilizes the framework established by GAAP. This Manual integrates that framework with objectives exclusive to statutory accounting. The NAIC's guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. GAAP guidance that is not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC may specifically adopt GAAP guidance to be included in statutory accounting. Elements of the FASB Codification do not become part of SAP until and unless adopted by the NAIC. Future SAP pronouncements will specifically identify any element of the FASB Codification that is to be included in SAP whether in whole, in part, or with modification as well as any rejected GAAP guidance. GAAP guidance which SAP has not yet addressed shall not be considered as providing authoritative statutory guidance.

VIII. Relationship to Developments within NAIC

51. Various NAIC committees and their working groups will be involved in issues, at any point in time, that could impact accounting guidance. Recommendations that affect accounting guidance must be referred to the Accounting Practices and Procedures (E) Task Force which has the responsibility for the maintenance of this Manual for determination of appropriate inclusion in SAP.

52. There are instances where the Codification of Statutory Accounting Principles (E) Working Group (Statutory Accounting Principles (E) Working Group as of January 1, 2000) has established an accounting principle in a SSAP but deferred maintenance and update of the detailed guidance to other NAIC task forces and their working groups. Those instances are specifically set forth in the individual SSAPs and include specific guidance for calculation of the Interest Maintenance Reserve (IMR), the Asset Valuation Reserve (AVR), the provision for overdue reinsurance, and periodic update to the *Purposes and Procedures Manual of the NAIC* Investment Analysis~~*Securities Valuation*~~ *Office*.

53. Changes to statutory accounting principles are not authoritative until approved by the general membership of the NAIC.

IX. Permitted Accounting Practices

54. In instances where the domiciliary state regulator is considering approval of a request for an accounting practice that departs from the NAIC *Accounting Practices and Procedures Manual* (Manual) and state prescribed accounting practices, the domiciliary regulator must provide Notice as defined in paragraphs 55-57.

55. No domiciliary state regulatory authority shall grant an approval to use an accounting practice, as described in paragraph 54, unless it provides Notice at least 5 days in advance of such approval.

56. This Notice must disclose the following information regarding the requested accounting practice request to all other states in which the insurer is licensed prior to the financial statement filing date:

a. The nature and a clear description of the permitted accounting practice request;

b. The quantitative effect of the permitted accounting practice request with all other approved permitted accounting practices currently in effect as disclosed in Appendix A-205: Illustrative Disclosure of Differences Between NAIC Statutory Accounting Practices and Procedures and Accounting Practices Prescribed or Permitted by the State of Domicile, for that insurer in the domiciliary state;

c. The effect of the requested permitted accounting practice on a legal entity basis and on all parent and affiliated United States insurance companies, if applicable; and

d. Identify any potential effects on and quantify the potential impact to each financial statement line item affected by the request. The potential impact may be determined by comparing the financial statements prepared in accordance with NAIC SAP and the financial statements incorporating the requested permitted accounting practice.

57. The granting of approval for an accounting practice request by the domiciliary state regulator does not preempt or in any way limit any individual state's legislative and regulatory authority.

X. Financial Statements

A. Annual Financial Statement

58. Each state requires all insurance companies doing business in that state to file an annual financial statement. All states use the annual statement blank promulgated by the NAIC, but each state retains the authority to make changes in those statements. Changes made by states generally require only supplemental information and do not change the basic financial information.

59. To the extent that disclosures required by a SSAP are made within specific notes, schedules, or exhibits to the annual statement, those disclosures are not required to be duplicated in a separate note. Annual statutory financial statements which are not accompanied by annual statement exhibits and schedules (e.g., annual audit report) shall include all disclosures required by the SSAPs based on the applicability, materiality and significance of the item to the insurer. Certain disclosures, as noted in individual SSAPs, are required in the annual audited statutory financial statements only.

B. Interim Financial Statements

60. Interim financial statements, including quarterly statements, shall follow the form and content of presentation prescribed by the domiciliary state for the quarterly financial statements. The NAIC quarterly statement form has been adopted by each state with minor variations as required by certain states.

61. The interim financial information shall include disclosures sufficient to make the information presented not misleading. It may be presumed that the users of the interim financial information have read or have access to the annual statement for the preceding period and that the adequacy of additional disclosure needed for a fair presentation, except in regard to material contingencies may be determined in that context. Accordingly, footnote disclosure which would substantially duplicate the disclosure contained in the most recent annual statement or audited financial statements, such as a statement of significant accounting policies and practices, details of accounts which have not changed significantly in amount or composition since the end of the most recently completed fiscal year, may be omitted. However disclosure shall be provided where events subsequent to the end of the most recent fiscal year have occurred which have a material impact on the insurer. Disclosures shall encompass, for example, significant changes since the end of the period reported on the last annual statement in such items as: statutory accounting principles and practices, estimates inherent in the preparation of financial statements, status of long term contracts, capitalization including significant new borrowings or modifications of existing financial arrangements, and the reporting entity resulting from business combinations or dispositions. Notwithstanding the above, where material noninsurance contingencies exist, disclosure of such matters shall be provided even though a significant change since year end may not have occurred.

Permitted Practices Advance Notification Requirement Implementation Questions and Answers

1. Q: **Why is the issue of permitted accounting practices important?**

   A: Since the Codification of the NAIC *Accounting Practices and Procedures Manual* (AP&P Manual), there has been continued emphasis on uniformity among the states. With the adoption of Codification, the belief was that permitted accounting practices would be limited. The intent of the policy statement on permitted accounting practices is to provide notification prior to granting permitted accounting practices to other states in which an insurer is licensed. Proactive notification encourages communication between state insurance regulators who share a common interest in the solvency of insurance companies writing business in their state.

2. Q: **What is the difference between a permitted accounting practice and a prescribed practice?**

   A: **Permitted** accounting practices include practices specifically requested by an insurer that depart from NAIC Statutory Accounting Principles (SAP) and state prescribed accounting practices, as described below, and have received approval from the insurer's domiciliary state regulatory authority.

   Prescribed accounting practices are those practices that are incorporated directly or by reference by state laws, regulations and general administrative rules applicable to all insurance enterprises domiciled in a particular state. The NAIC AP&P Manual is not intended to preempt states' legislative and regulatory authority.

   If a reporting entity requests an accounting practice that differs from state prescribed accounting practices, but is in accordance with NAIC SAP, advance notice of approval is not required.

3. Q: **Does a permitted accounting practice request require approval/consensus from other states before it is granted by the domiciliary state?**

   A: No, the domiciliary state regulatory authority does not need approval or consensus from other state regulatory authorities to grant a permitted accounting practice. The granting of approval for an accounting practice request by the domiciliary state regulator does not preempt or in any way limit any individual state's legislative and regulatory authority.

   If a state does not comply with the advance notice provision but approves a permitted practice, the lack of notice does not invalidate the permitted practice for the reporting entity. In addition, the reporting entity is required to disclose accounting practices that depart from the NAIC accounting practices and procedures, which affect statutory surplus or risk based capital pursuant to *SSAP No. 1—Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures*.

4. Q: **How does the domestic regulator communicate an insurer's request for a permitted accounting practice to other states?**

   A: The NAIC can facilitate the communication of this information through the Permitted Practice Database within the Exam Tracking System. In order to develop a repository of all permitted accounting practice notifications, all regulatory authorities should distribute permitted accounting practice notifications using the procedures prescribed by the NAIC members. When providing permitted accounting practice notifications, the regulatory authority will provide the following information in instances where they are considering approval of a request:

- Detailed description of the permitted accounting practice request, including the specific NAIC Statutory Accounting Principles or state prescribed practices from which the practice departs
- Whether the permitted accounting practice was granted the previous year
- The financial statement filing date in which the permitted accounting practice will be reflected and the timeframe for which the permitted accounting practice is granted (e.g., indefinitely, until withdrawn, specific date – month, day, year)
- Explanation for providing less than the required advance notice
- The financial statement line items the permitted accounting practice will affect and the respective financial impact for each line item identified
- The total financial impact to capital and surplus for all approved/requested permitted accounting practices
- The effect of the permitted accounting practice on a legal entity basis and on all parent and affiliated U.S. insurance companies, if applicable
- Whether the permitted accounting practice is approved or the decision is pending

Grandfather Clause: Please note that those permitted accounting practices that have been granted prior to December 2004 for an indefinite time period do not require a new notice to other states and are not required to be filed through the ETS system. If the permitted accounting practice is considered by the state for reaffirmation annually then annual advance notice is required.

5. Q: **If a Department of Insurance received a request for a permitted accounting practice from an insurer licensed in only one state, is the Department required to comply with communication requirements outlined in the Preamble?**

A: No, an insurer licensed in only one state is not subject to the permitted accounting practices communication policy included in the Preamble. The goal of the permitted accounting practices communication policy is to encourage open communication between state regulatory authorities and promote uniformity. As permitted accounting practices granted to an insurer licensed in only one state would not impact states outside of the domiciliary state, they do not need to be communicated to other regulatory authorities.

6. Q: **Are requests for permitted accounting practices kept confidential?**

A: The communication of permitted accounting practices will be facilitated through the NAIC's Permitted Practice Database of the Exam Tracking System, which is a confidential, regulator-only system and/or through regulator-to-regulator e-mail exchange.

7. Q: **Is a state required to provide advance notification for accounting practices that are explicitly permitted under the AP&P Manual, with the approval of the commissioner?**

A: No, for example, a reporting entity is required to obtain domiciliary commissioner approval for a capital contribution as described in *SSAP No. 72—Surplus and Quasi-Reorganizations*, paragraph 8:

> 8. Notes or other receivables received as additional capital contributions satisfied by receipt of cash or readily marketable securities prior to filing of the statutory financial

> statement shall be treated as a Type I subsequent event in accordance with SSAP No. 9 and as such shall be considered an admitted asset based on the evidence of collection and approval of the domiciliary commissioner. To the extent that the notes or other receivables are not satisfied, they shall be nonadmitted.

These types of transactions are not a departure from NAIC SAP and do not require a request for a permitted accounting practice.

8. Q: When will the permitted accounting practices communication policy become effective?

A: The Statutory Accounting Principles (E) Working Group, the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee held a joint conference call to approve the guidance on November 30, 2004. The policy became effective in December 2004 upon approval by the Executive/Plenary Committee. The policy will be incorporated into the *Accounting Practices and Procedures Manual* and the Financial Regulation Standards and Accreditation (F) Committee will consider such changes to the *NAIC Financial Regulations Standards and Accreditation Manual* during the normal maintenance process.

9. Q: When submitting a permitted accounting practice request, is the financial statement effect quantified for all affiliates, or only those materially affected?

A: It is important that the insurer identify any potential effects on and quantify the potential impact to each financial statement line item on a legal entity basis and on all parent and affiliated U.S. insurance companies, if applicable. The notification from the regulator should only include the effect on a legal entity basis for those entities materially affected positively or negatively by the permitted accounting practice.

Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the disclosure of accounting policies, risks and uncertainties, the use of accounting practices which depart from NAIC statutory accounting practices and procedures, and other disclosures.

2. Separate statements of statutory accounting principles have disclosure requirements specific to the topics addressed in those statements. Additional disclosure requirements not addressed in other statements are included herein.

SUMMARY CONCLUSION

3. Refer to the preamble for further discussion of disclosure requirements. The disclosures required under paragraph 6 concerning changes in accounting policies shall be made for each financial statement presented. The disclosures required under paragraphs 9, 10, 12, 13, 15 and 16 shall be included in the annual audited statutory financial reports only.

Accounting Policies and Practices

4. Accounting policies are defined as the specific accounting principles and the methods of applying those principles that are utilized in preparing the statutory financial statements.

5. Disclosure shall be made of all accounting policies that affect the assets, liabilities, capital and surplus or results of operations of the reporting entity. The disclosure shall encompass important judgments as to the appropriateness of principles relating to recognition of revenue particularly when selecting between acceptable alternatives, or methods particular to the business.

6. Disclosure of accounting policies shall be made in a separate Summary of Significant Accounting Policies as the initial note in the notes to the financial statements. If the reporting entity has changed the accounting policies since the end of its preceding year, the changes shall be disclosed in the quarterly financial statements.

7. NAIC statutory accounting practices and procedures are those that are set forth in the *Accounting Practices and Procedures Manual*. If a reporting entity employs accounting practices that depart from the NAIC accounting practices and procedures, disclosure of the following information about those accounting practices that affect statutory surplus or risk-based capital shall be made at the date each financial statement is presented:

a. A description of the accounting practice;

b. A statement that the accounting practice differs from NAIC statutory accounting practices and procedures; and

c. The monetary effect on net income and statutory surplus of using an accounting practice which differs from NAIC statutory accounting practices and procedures.

d. If an insurance enterprise's risk-based capital would have triggered a regulatory event had it not used a prescribed or permitted practice, that fact should be disclosed in the financial statements.

These disclosures shall be disclosed in Note 1 as illustrated in Appendix A-205. Additionally, a reference to Note 1 shall be included in the individual notes to financial statements impacted by the prescribed or permitted practices as applicable.

8. Disclosure of the following information shall be made about accounting practices when NAIC statutory accounting practices and procedures do not address the accounting for the transaction:

a. A description of the transaction and of the accounting practice used; and

b. A statement that NAIC statutory accounting practices and procedures do not address the accounting for the transaction.

Risks and Uncertainties

9. Companies shall make disclosures in their financial statements about risks and uncertainties existing as of the date of those statements in the following areas:

a. Nature of operations;

b. Use of estimates in the preparation of financial statements;

c. Certain significant estimates; and

d. Current vulnerability due to certain concentrations.

Nature of Operations

10. Financial statements shall include a summary of the ownership and relationships of the reporting entity and all affiliated companies, and a description of the major products or services the reporting entity sells or provides and its principal markets, including the locations of those markets. If the entity operates in more than one business, the disclosure should also indicate the relative importance of its operations in each business and the basis for the determination (e.g., assets, revenues, or earnings). Disclosures about the nature of operations need not be quantified; relative importance could be conveyed by use of terms such as predominately, about equally, or major.

Use of Estimates in the Preparation of Financial Statements

11. Financial statements shall include an explanation that the preparation of financial statements in conformity with the annual statement instructions and the *Accounting Practices and Procedures Manual* requires the use of management's estimates.

Certain Significant Estimates

12. Disclosure regarding an estimate shall be made when known information available prior to issuance of the financial statements indicates that both of the following criteria are met:

a. It is at least reasonably possible that the estimate of the effect on the financial statements of a condition, situation, or set of circumstances that existed at the date of the financial statements will change in the near term due to one or more future confirming events; and

b. The effect of the change would be material to the financial statements.

13. The disclosure shall indicate the nature of the uncertainty and include an indication that it is at least reasonably possible that a change in the estimate will occur in the near term (generally a period of time not to exceed one year from the date of the financial statements). If the estimate involves a loss contingency as defined in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*, the disclosure shall include an estimate of the possible loss or range of loss, or state that such an estimate cannot be made. Reporting entities shall disclose the factors that cause the estimate to be sensitive to change.

Current Vulnerability Due to Certain Concentrations

14. Vulnerability from concentrations arises because an entity is exposed to risk of loss greater than it would have had it mitigated its risk through diversification. Such risks manifest themselves differently, depending on the nature of the concentration, and vary in significance.

15. Financial statements shall disclose the concentrations described in paragraph 16 of this statement if, based on information known to management prior to issuance of the financial statements, all of the following criteria are met:

a. The concentration exists at the date of the financial statements;

b. The concentration makes the enterprise vulnerable to the risk of a near-term severe (more than material but less than catastrophic) impact; and

c. It is at least reasonably possible that the events that could cause the severe impact will occur in the near term.

16. Concentrations, including known group concentrations, described below require disclosure if they meet the criteria of paragraph 15 of this statement. (Group concentrations exist if a number of counterparties or items that have similar economic characteristics collectively expose the reporting entity to a particular kind of risk.) Some concentrations may fall into more than one category:

a. Concentrations in the volume of business transacted with a particular customer, supplier, or lender. The potential for the severe impact can result, for example, from total or partial loss of the business relationship. For the purposes of this statement, it is always considered at least reasonably possible that any customer will be lost in the near term;

b. Concentrations in revenue from particular products or services. The potential for severe impact can result, for example, from volume or price changes for a particular source of revenue;

c. Concentrations in the available sources of labor, services, licenses, or other rights used in the entity's operations;

d. Concentrations in the market or geographic area in which an entity conducts its operations. The potential for severe impact can result, for example, from negative effects of the economic and political forces within the market or geographic area. For the purposes of this statement, it is always considered at least reasonably possible that operations located outside an entity's home country will be disrupted in the near term.

Other Disclosures

17. For each year that a balance sheet is presented (annual), reporting entities shall disclose the following information in the financial statements:

a. Amounts not recorded in the financial statements that represent segregated funds held for others, the nature of the assets and the related fiduciary responsibilities associated with such assets. One example of such an item is escrow accounts held by title insurance companies; and

b. The amount and nature of any assets pledged to others as collateral or otherwise restricted (e.g., not under the exclusive control, assets subject to a put option contract, etc.)[1] in the general and separate accounts[2] by the reporting entity in comparison to total assets and total admitted assets. (Pursuant to SSAP No. 4, paragraph 6, all assets pledged as collateral or otherwise restricted shall be reported in this disclosure regardless if the asset is considered an admitted asset.) This disclosure shall include the following items:

i. Reported assets subject to contractual obligation for which liability is not shown;

ii. Collateral held under security lending agreements;

iii. Assets subject to repurchase agreements;

iv. Assets subject to reverse repurchase agreements;

v. Assets subject to dollar repurchase agreements;

vi. Assets subject to dollar reverse repurchase agreements;

vii. Assets placed under option contracts;

viii. Letter stock or securities restricted as to sale – excluding FHLB stock;

ix. FHLB capital stock;

x. Assets on deposit with states;

xi. Assets on deposit with other regulatory bodies;

xii. Pledged as collateral to the FHLB (including assets backing funding agreements);

xiii. Assets pledged as collateral not captured in other categories; and

xiv. Other restricted assets.

18. The financial statements shall disclose forward commitments which are not derivative instruments (e.g., the commitment to purchase a GNMA security two months after the commitment date, or a private placement six months after the commitment date).

Supplemental Investment Disclosure

19. For the current year, reporting entities shall disclose the information required by Appendix A-001, Investments of Reporting Entities. A Summary Investment Schedule and Investment Risk Interrogatories shall be filed with the audited statutory financial statements. The Summary Investment Schedule shall be filed with the Annual Statement whereas the interrogatories shall be filed as a supplement to the Annual Statement by April 1 for the applicable reporting period.

[1] The aggregate information captured within this disclosure is intended to reflect the information reported in the Annual Statement Investment Schedules in accordance with the coding of investments that are not under the exclusive control of the reporting entity, including assets loaned to others and the information reported in the General Interrogatories.

[2] Restricted assets in the separate account are not intended to reflect amounts "restricted" only because they are insulated from the general account or because they are attributed to specific policyholders. Separate account assets shall be captured in this disclosure only if they are restricted outside of these characteristics.

20. The Life, Accident and Health and Fraternal Annual Statement Instructions include instructions for completing Schedule 1 Selected Financial Data. This Supplemental schedule is required to be included in the annual audit report for Life, Accident and Health and Fraternal reporting entities.

Subprime Mortgage Related Risk Exposure

21. Reporting entities shall disclose information pertaining to subprime mortgage related risk exposure and related risk management practices, regardless of the materiality of the exposure, in the statutory financial statements. These disclosures are not required in the annual audited financial statements. Although definitions may differ among reporting entities, the following features are commonly recognized characteristics of subprime mortgage loans:

a. An interest rate above prime to borrowers who do not qualify for prime rate loans;

b. Borrowers with low credit ratings (FICO scores);

c. Interest-only or negative amortizing loans;

d. Unconventionally high initial loan-to-value ratios;

e. Low initial payments based on a fixed introductory rate that expires after a short initial period, then adjusts to a variable index rate plus a margin for the remaining term of the loan;

f. Borrowers with less than conventional documentation of their income and/or net assets;

g. Very high or no limits on how much the payment amount or the interest rate may increase at reset periods, potentially causing a substantial increase in the monthly payment amount, and/or;

h. Include substantial prepayment penalties and/or prepayment penalties that extend beyond the initial interest rate adjustment period.

22. To the extent such information is available, reporting entities shall consider exposure to subprime mortgage related risk through the following sources:

a. Direct investments in subprime mortgage loans;

b. Direct investments in securities with underlying subprime exposure, such as residential mortgage backed securities, commercial mortgage backed securities, collateralized debt obligations, structured securities (including principal protected notes), hedge funds, credit default swaps, and special investment vehicles;

c. Equity investments in subsidiary, controlled or affiliated entities with significant subprime related risk exposure;

d. Underwriting risk on policies issued for Mortgage Guaranty or Financial Guaranty insurance coverage.

23. As it relates to the exposure described above, reporting entities shall provide the following information:

a. A narrative description of the manner in which the reporting entity specifically defines its exposure to subprime mortgage related risk in practice. Disclose the general categories of information considered in determining exposure to subprime mortgage related risk.

Differentiation should be made between exposure to unrealized losses due to changes in asset values versus exposure to realized losses resulting from receiving less than anticipated cash flows or due to potential sale of assets to meet future cash flow requirements. Risk management or mitigation strategies shall also be disclosed.

b. Direct exposure through investments in subprime mortgage loans. Disclose the following information for the aggregate amount of directly held subprime mortgage loans: book adjusted carrying value (excluding accrued interest); fair value; value of land and buildings; any other-than-temporary impairment losses recognized to date; default rate for the subprime portion of the loan portfolio. This information shall be segregated by the categories of Mortgages in the Process of Foreclosure, Mortgages in Good Standing and Mortgages with Restructured Terms.

c. Direct exposure through other investments. Reporting entities shall consider subprime mortgage related risk exposure through other investments for the following types of investments:

i. Residential mortgage backed securities

ii. Commercial mortgage backed securities

iii. Collateralized debt obligations

iv. Structured securities (including principal protected notes)

v. Equity investments in subsidiary, controlled or affiliated entities with significant subprime mortgage related risk exposure (a general description of the nature and extent of the SCA's exposure should be included)

vi. Other assets (including but not limited to hedge funds, credit default swaps, special investment vehicles)

Aggregated by the above investment types, reporting entities shall disclose the following: actual cost; book adjusted carrying value; fair value; any other-than-temporary impairment losses recognized to date.

d. Underwriting exposure to subprime mortgage risk through Mortgage Guaranty or Financial Guaranty insurance coverage. Disclose the following information, by coverage type, related to underwriting exposure on policies issued for Mortgage Guaranty coverage or Financial Guaranty coverage and any other lines of insurance expected to be impacted: the aggregate amount of subprime related losses paid in the current year; the aggregate amount of subprime related losses incurred in the current year; the aggregate amount of subprime related case reserves at the end of the current period; the aggregate amount of subprime related IBNR reserves at the end of the current period.

Stress Liquidity Risks

24. Reporting entities may be requested to complete disclosures pertaining to stress liquidity risks pursuant to inquiries and templates, or variations thereof, included in the *NAIC Financial Condition Examiners Handbook*. These disclosures may be considered confidential, therefore are not captured within the statutory financial statements. As noted in the *NAIC Financial Condition Examiners Handbook,* requests for reporting entities to complete these templates may occur at any time and are not limited to instances of comprehensive statutory examinations.

Relevant Literature

25. This statement adopts Accounting Principles Board Opinion No. 22, Disclosure of Accounting Policies, Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, Chapter 2A, “Comparative Financial Statements,” AICPA Statement of Position No. 94-5, Disclosures of Certain Matters in the Financial Statements of Insurance Enterprises, and AICPA Statement of Position No. 94-6, Disclosures of Certain Significant Risks and Uncertainties. The disclosure of certain accounting policies within specific notes to the Annual Statement is required by the Annual Statement Instructions.

Effective Date and Transition

26. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Cash, Drafts, and Short-Term Investments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles and related reporting for cash, drafts, and short-term investments.

SUMMARY CONCLUSION

Cash

2. Cash constitutes a medium of exchange that a bank or other similar financial institution will accept for deposit and allow an immediate credit to the depositor's account.

3. Also classified as cash for financial statement purposes, although not falling within the above definition of cash, are savings accounts and certificates of deposit in banks or other similar financial institutions with maturity dates within one year or less from the acquisition date, and cash equivalents. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities[1] of three months or less qualify under this definition. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

4. Cash meets the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4), and is an admitted asset to the extent it conforms to the requirements of this statement.

Treatment of Negative Cash Balances

5. If a reporting entity has multiple cash accounts, the net amount of all accounts shall be reported jointly. Cash accounts with positive balances shall not be reported separately from cash accounts with negative balances. If in the aggregate, the reporting entity has a net negative cash balance, it shall be reported as a negative asset and shall not be recorded as a liability.

Drafts

6. A draft is defined as an order to pay a sum certain in money. It is signed by the drawer (e.g., the insurance company or its agent), and payable to order or bearer (e.g., the policyholder). When the draft is presented to the drawee (i.e., the bank), it is paid only upon approval by the reporting entity.

7. Drafts and checks have different legal characteristics. A check is payable on demand, whereas a draft must be approved for payment by the reporting entity before it is honored by the bank. Because of these different characteristics, a draft meets the definition of a liability as defined by *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*. Outstanding checks are accounted for as a reduction of cash.

8. A reporting entity that utilizes instruments meeting the definition of drafts shall elect one of the following accounting methods:

[1] Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.

a. Draft Issued Method—When a draft is issued, an increase in paid losses and a related decrease in loss reserves is recorded. Drafts that have not been presented for payment and remain outstanding at the balance sheet date are reflected as a liability.

b. Draft Honored Method—An increase in paid losses and a related decrease in loss reserves is recorded when the draft is presented by the bank to the reporting entity for approval and reimbursement. Consequently, under a draft honored method there is no liability for outstanding drafts.

9. The method elected by a reporting entity to account for drafts issued and outstanding shall remain consistent from year to year. Procedures for changes in the accounting method shall be governed by *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3).

Short-Term Investments

10. All investments with remaining maturities (or repurchase dates under repurchase agreements) of one year or less at the time of acquisition (excluding those investments classified as cash equivalents as defined in paragraph 3) shall be considered short-term investments. Short-term investments include, but are not limited to, bonds, commercial paper, money market instruments, repurchase agreements, and collateral and mortgage loans which meet the above criteria. Short-term investments shall not include certificates of deposit.

11. All short-term investments shall be accounted for in the same manner as similar long-term investments. Investments in money market funds shall be reported in accordance with the guidance in the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office*.

12. Short-term investments meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement.

Disclosures

13. The following disclosures shall be made for short-term investments in the financial statements:

a. Fair values in accordance with *SSAP No. 100—Fair Value Measurements*;

b. Concentrations of credit risk in accordance with *SSAP No. 27—Disclosure of Information* a*bout Financial Instruments with Off-Balance-Sheet Risk* and *Financial Instruments with Concentrations of Credit Risk*;

c. Basis at which the short-term investments are stated.

14. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 13.b. shall be included in the annual audited statutory financial reports only.

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. Guidance in paragraph 3 related to terms reset at predefined dates was previously included within *INT 08-10: Contractual Terms of Investments and Investor Intent* and was effective for periods beginning December 5, 2008.

Accounting Changes and Corrections of Errors

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for changes in accounting, which include changes in accounting principles, estimates, and reporting entities, and for corrections of errors in previously issued financial statements.

SUMMARY CONCLUSION

2. An accounting change is defined as a change in an accounting principle, an accounting estimate, or the reporting entity. The correction of an error in previously issued financial statements is not deemed to be an accounting change. The treatment of a change resulting from an insurance department examination will depend on whether the change resulted from a correction of an error, a change in accounting principle, or a change in estimate.

Change in Accounting Principle

3. A change in accounting principle results from the adoption of an accepted accounting principle, or method of applying the principle, which differs from the principles or methods previously used for reporting purposes. A change in the method of applying an accounting principle shall be considered a change in accounting principle.

4. A characteristic of a change in accounting principle is that it concerns a choice from among two or more statutory accounting principles. However, a change in accounting principle is neither (a) the initial adoption of an accounting principle in recognition of events or transactions occurring for the first time or previously immaterial in their effect, nor (b) the adoption or modification of an accounting principle necessitated by transactions or events that are clearly different in substance from those previously occurring.

5. The cumulative[1] effect of changes in accounting principles shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods.

Change in Accounting Estimate

6. Changes in estimates used in accounting are necessary consequences of periodic presentations of financial statements which require estimating the effects of future events. Examples of items for which estimates are necessary include service lives of depreciable assets and changes in loss reserve estimates for property and casualty companies. Accounting estimates change as new events occur, as more experience is acquired, or as additional information is obtained.

7. A change in accounting estimate shall be included in the statement of income in the period when the change becomes known.

[1] If additional changes are identified in subsequent quarters of a fiscal year related to a change in accounting principles recognized initially during the first quarter, such changes shall be considered part of the cumulative effect of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods. For example, adjustments to an amount recorded as of January 1, 2001, would be recorded as changes in accounting principle rather than corrections of an error through the period of 2001.

8. If the effect of a change in accounting principle is inseparable from the effect of a change in accounting estimate, then the change shall be considered as a change in accounting estimate for purposes of applying the accounting principles set forth in this statement.

Correction of an Error

9. Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared. In contrast, a change in accounting estimate results from new information, or subsequent developments and, accordingly, from better insight or improved judgment. Thus, an error is distinguished from a change in estimate.

10. Corrections of errors in previously issued financial statements shall be reported as adjustments to unassigned funds (surplus) in the period an error is detected. If a reporting entity becomes aware of a material error in a previously filed financial statement after it has been submitted to the appropriate regulatory agency, the entity shall file or be directed to file an amended financial statement if approved by its domiciliary regulator.

Impact on Historical Schedules

11. Changes which do not affect assets, liabilities, revenues, expenses, or surplus but which materially affect historical information in the financial statement supplemental schedules (e.g., Schedule P for property and casualty insurers or Schedule O for life and accident and health insurers) shall be reflected in the current year's schedules with appropriate notations made directly to the affected schedules and in the notes to the financial statements.

Mergers

12. For mergers, prior years' amounts in the Annual Statement shall be restated as if the merger had occurred as of January 1 of the prior year. Additionally, restatement shall be required for the two most recent years included in the Five Year Historical Summary. The Five Year Historical Summary shall include a footnote indicating that the other three years have not been restated. A reporting entity that merges with an entity which effectively is a shell company[2] (i.e., the reporting entity has no outstanding underwriting liabilities) shall be exempt from ~~the above requirements~~prior year restatement.

Disclosures

13. Disclosure of material changes in accounting and correction of errors shall include:

a. A brief description of the change, encompassing a general disclosure of the reason and justification for change or correction;

b. The impact of the change or correction on net income, surplus, total assets, and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations); and

c. The effect on net income of the current period for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of

[2] When one of the entities is a "shell company," the prior ~~period~~year amounts shall only consist of the "non-shell company." The merger with a shell entity shall be reflected as of January 1 of the current year.

accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material; and

d. When subsequent financial statements are issued containing comparative restated results as a result of the filing of an amended financial statement, the reporting entity shall disclose that the prior period has been restated and the nature and amount of such restatement.

14. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

15. This statement rejects *Accounting Research Bulletin No. 51, Consolidated Financial Statements*, *FASB Interpretation No. 46, Consolidation of Variable Interest Entities, an Interpretation of ARB No. 51,* and *FASB Statement No. 94, Consolidation of All Majority-Owned Subsidiaries, an amendment of ARB 51, with related amendments of APB Opinion No. 18 and ARB No. 43, Chapter 12*.

16. This statement rejects paragraphs 1—19 and 26—27 of *Accounting Principles Board Opinion No. 9, Reporting the Results of Operations,* which address the treatment of extraordinary items and prior period adjustments and the related *AICPA Accounting Interpretations, Reporting the Results of Operations: Unofficial Accounting Interpretations of APB Opinion No. 9*. This statement also rejects *Accounting Principles Board Opinion No. 20*, *Accounting Changes, AICPA Accounting Interpretations, Accounting Changes: Accounting Interpretations of APB Opinion No. 20, FASB Interpretation No. 20, Reporting Accounting Changes under AICPA Statements of Position, an interpretation of APB Opinion No. 20* and *FASB Statement No. 154, Accounting Changes and Error Corrections, a replacement of APB Opinion No. 20 and FASB Statement No. 3 (FAS 154). FASB Statement No. 16*, *Prior Period Adjustments,* is rejected as corrections of errors in previously issued financial statements are reported as adjustments to unassigned funds (surplus).

Effective Date and Transition

17. This statement is effective for years beginning January 1, 2001. The guidance in the footnote to paragraph 5 was originally contained within *INT 01-27: Accounting Change versus Correction of Error* and was effective October 16, 2001. The guidance in the footnote to paragraph 12 was originally contained within *INT 00-05: Exemption to Merger Disclosure in SSAP No. 3* and was effective June 12, 2000.

Assets and Nonadmitted Assets

SCOPE OF STATEMENT

1. This statement establishes the definition of an “asset” for use in statutory accounting and establishes the criteria for consistent treatment of nonadmitted assets.

SUMMARY CONCLUSION

2. For purposes of statutory accounting, an asset shall be defined as: probable[1] future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others’ access to it[2], and (c) the transaction or other event giving rise to the entity’s right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

a Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or

b Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

[1] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states:
Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement No. 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

[2] If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

Assets Pledged as Collateral or Otherwise Restricted

6. Assets that are pledged to others as collateral or otherwise restricted (not under the exclusive control of the insurer, subject to a put option contract, etc.) shall be identified in the investment schedules pursuant to the codes in the annual statement instructions, disclosed in accordance with *SSAP No. 1—Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures* (SSAP No. 1), reported in the general interrogatories, and included in any other statutory schedules or disclosure requirements requesting information for assets pledged as collateral or otherwise restricted. Restricted assets should be reviewed to determine admitted or nonadmitted assets status in the statutory financial statements per the terms of their respective SSAPs. Asset restrictions may be a factor in determining the admissibility of an asset under a respective SSAP[3]. However, determining that a restricted asset is an admitted asset does not eliminate the statutory requirements to document and identify the asset as one that is pledged as collateral or otherwise restricted.

7. Assets pledged as collateral are one example of assets that are not under the exclusive control of the insurer, and are therefore restricted, even if the assets are admitted under statutory accounting guidelines (e.g., the asset is substitutable and/or other related SSAP conditions are met). As such, the asset shall be coded as pledged in the investment schedules pursuant to the annual statement instructions, disclosed in accordance with SSAP No. 1, reported in the general interrogatories, and included in any other statutory schedules or disclosure requirements requesting information for assets pledged as collateral or otherwise restricted.

Disclosure

~~6.~~8. The financial statements shall disclose if the written capitalization policy and the resultant predefined thresholds changed from the prior period and the reason(s) for such change.

Relevant Literature

~~7.~~9. This statement adopts *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements,* paragraphs 25-33.

Effective Date and Transition

~~8.~~10. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Guidance reflected in paragraphs 3, 5 and 8, incorporated from SSAP No. 87, was originally effective for years beginning on and after January 1, 2004. The guidance in footnote 2 to paragraph 2 was originally contained within *INT 01-03: Assets Pledged as Collateral or Restricted for the Benefit of a Related Party* and was effective June 11, 2001.

Liabilities, Contingencies and Impairments of Assets

SCOPE OF STATEMENT

1. This statement defines and establishes statutory accounting principles for liabilities, contingencies and impairments of assets.

SUMMARY CONCLUSION

Liabilities

2. A liability is defined as certain or probable[1] future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable[1] future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

Joint and Several Liabilities

5. Joint and several liability arrangements for which the total obligation amount under the arrangement is fixed[2] at the reporting dates shall be measured and reported as the sum of:

a. The amount the reporting entity agreed to pay on the basis of the agreements among its co-obligors, and

b. Any additional amount the reporting entity expects to pay on behalf of its co-obligors. When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be the additional amount included in the measurement of the obligation. If no amount within the range is a better estimate than any other amount, then the midpoint shall be used.

[1] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states:
Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

[2] Examples of items within the scope of this guidance include debt arrangements, other contractual obligations, and settled judicial litigation and judicial rulings. Loss contingencies, guarantees, pension and other postretirement benefit obligations and taxes are excluded from this guidance and shall be accounted for under the statutory accounting provisions specific to those topics.

Loss Contingencies or Impairments of Assets

6. For purposes of implementing the statutory accounting principles of loss contingency or impairment of an asset described below, the following additional definitions shall apply:

a. Probable—The future event or events are likely to occur;

b. Reasonably Possible—The chance of the future event or events occurring is more than remote but less than probable;

c. Remote—The chance of the future event or events occurring is slight.

7. A loss contingency or impairment of an asset is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible loss to an enterprise that will ultimately be resolved when one or more future event(s) occur or fail to occur (e.g., collection of receivables).

8. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

b. The amount of loss can be reasonably estimated.

9. This accounting shall be followed even though the application of other prescribed statutory accounting principles or valuation criteria may not require, or does not address, the recording of a particular liability or impairment of an asset (e.g., a known impairment of a bond even though the VOS manual has not recognized the impairment).

10. Additionally, in instances where a judgment, assessment or fine has been rendered against a reporting entity, there is a presumption that the criteria in paragraph 8.a. and 8.b. have been met. A judgment is considered "rendered" when a court enters a verdict, notwithstanding the entity's ability to file post-trial motions and to appeal. The amount of the liability shall include the anticipated settlement amount, legal costs, insurance recoveries and other related amounts and shall take into account factors such as the nature of the litigation, progress of the case, opinions of legal counsel, and management's intended response to the litigation, claim, or assessment.

11. When the condition in paragraph 8.a. is met with respect to a particular loss contingency, and the reasonable estimate of the loss is a range, which meets the condition in paragraph 8.b., an amount shall be accrued for the loss. When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be accrued. When, in management's opinion, no amount within management's estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management's estimate in the range shall be accrued. For purposes of this paragraph, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be used.

12. The use of the midpoint in a range will be applicable only in the rare instance where there is a continuous range of possible values, and no amount within that range is any more probable than any other. This guidance is not applicable when there are several point estimates which have been determined

as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine their best estimate of the liability.

Tax Contingencies

13. As directed by SSAP No. 101, tax loss contingencies (including related interest and penalties) for current and all prior years, shall be computed in accordance with this SSAP, with the following modifications:

a. The term "probable" as used in this standard shall be replaced by the term "more likely than not (a likelihood of more than 50 percent)" for federal and foreign income tax loss contingencies only.

b. For purposes of the determination of a federal and foreign income tax loss contingency, it shall be presumed that the reporting entity will be examined by the relevant taxing authority that has full knowledge of all relevant information.

c. If the estimated tax loss contingency is greater than 50 percent of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100 percent of the original tax benefit recognized.

As noted in SSAP No. 101, state taxes (including premium, income and franchise taxes) shall also be computed in accordance with this SSAP. These items (as detailed in SSAP No. 101) are not impacted by the modifications detailed in paragraphs 13.a.-13.c.

Gain Contingencies

14. A gain is defined as an increase in surplus which results from peripheral or incidental transactions of a reporting entity and from all other transactions and other events and circumstances affecting the reporting entity except those that result from revenues or investments by owners. If, on or before the balance sheet date, (a) the transaction or event has been fully completed, and (b) the amount of the gain is determinable, then the transaction or event is considered a gain, and is recognized in the financial statements. The definition of a gain excludes increases in surplus that result from activities that constitute a reporting entity's ongoing major or central operations or activities. Because investment activities are central to an insurer's operations, increases in surplus that result from such investment activities are excluded from the definition of gains. Revenues are inflows or other enhancements of assets of a reporting entity or settlements of its liabilities (or a combination of both) from providing products, rendering services, or other activities that constitute the reporting entity's ongoing major or central operations. Investments by owners include any type of capital infused into the surplus of the reporting entity.

15. A gain contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (as defined in the preceding paragraph) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur (e.g., a plaintiff has filed suit for damages associated with an event occurring prior to the balance sheet, but the outcome of the suit is not known as of the balance sheet date). Gain contingencies shall not be recognized in a reporting entity's financial statements. However, if subsequent to the balance sheet date but prior to the issuance of the financial statements, the gain contingency is realized, the gain shall be disclosed in the notes to financial statements and the unissued financial statements should not be adjusted to record the gain. A gain is generally considered realizable when noncash resources or rights are readily convertible to known amounts of cash or claims to cash.

Guarantees

16. A guarantee contract is a contract that contingently requires the guarantor to make payments (either in cash, financial instruments, other assets, shares of its stock, or provision of services) to the guaranteed party based on changes in the underlying that is related to an asset, a liability, or an equity security of the guaranteed party. Commercial letters of credit and loan commitments, by definition, are not considered guarantee contracts. Also excluded from the definition are indemnifications or guarantees of an entity's own performance, subordination arrangements or a noncontingent forward contract. This definition could include contingent forward contracts if the characteristics of this paragraph are met.

17. The following guarantee contracts are not subject to the guidance in paragraphs 20-25 and paragraphs 29-32:

a. Guarantees already excluded from the scope of SSAP No. 5R;

b. Guarantee contracts accounted for as contingent rent;

c. Insurance contract guarantees, including guarantees embedded in deposit-type contracts;

d. Contracts that provide for payments that constitute a vendor rebate by the guarantor based on either the sales revenue or the number of units sold by the guaranteed party;

e. A guarantee or indemnification whose existence prevents the guarantor from being able to either account for a transaction as the sale of an asset that is related to the guarantee's underlying or recognize in earnings the profit from that sale transaction;

f. Registration payment arrangements; and

g. A guarantee that is accounted for as a credit derivative instrument at fair value under SSAP No. 86, as described in paragraph ~~53~~54.e. of SSAP No. 86.

18. The following types of guarantees are exempted from the initial liability recognition in paragraphs 20-25, but are subject to the disclosure requirements in paragraphs 29-32:

a. Guarantee that is accounted for as a derivative instrument, other than credit derivatives within SSAP No. 86;

b. Guarantee for which the underlying is related to the performance of nonfinancial assets that are owned by the guaranteed party, including product warranties;

c. Guarantee issued in a business combination that represents contingent consideration;

d. Guarantee in which the guarantor's obligation would be reported as an equity item;

e. Guarantee by an original lessee that has become secondarily liable under a new lease that relieved the original lessee from being the primary obligator;

f. Guarantees (as defined in paragraph 16) made to/or on behalf of directly or indirectly wholly-owned insurance or non-insurance subsidiaries[3]; and

[3] The exclusion for wholly-owned subsidiaries includes guarantees from a parent to, or on behalf of, a direct wholly-owned insurance or non-insurance subsidiary as well as guarantees made from a parent to, or on behalf of, an indirect wholly-owned insurance or non-insurance subsidiary. The "wholly-owned" exclusion in paragraph 18.f. does not include guarantees issued from one subsidiary to another subsidiary, regardless if both subsidiaries are wholly-owned (directly or indirectly) by a parent company.

g. Intercompany and related party guarantees that are considered "unlimited" (e.g., typically in response to a rating agency's requirement to provide a commitment to support).

19. With the exception of the provision for guarantees made to/or on behalf of a wholly-owned subsidiaries in paragraph 18.f. and "unlimited" guarantees in 18.g., this guidance does not exclude guarantees issued as intercompany transactions or between related parties from the initial liability recognition requirement. Thus, unless the guarantee is provided on behalf of a wholly-owned subsidiary or considered "unlimited," guarantees issued between the following parties are subject to the initial recognition and disclosure requirements:

a. Guarantee issued either between parents and their subsidiaries or between corporations under common control;

b. A parent's guarantee of its subsidiary's debt to a third party; and

c. A subsidiary's guarantee of the debt owed to a third party by either its parent or another subsidiary of that parent.

20. At the inception of a guarantee, the guarantor shall recognize in its statement of financial position a liability for that guarantee. Except as indicated in paragraph 22, the objective of the initial measurement of the liability is the fair value[4] of the guarantee at its inception.

21. The issuance of a guarantee obligates the guarantor (the issuer) in two respects: (a) the guarantor undertakes an obligation to stand ready to perform over the term of the guarantee in the event that the specified triggering events or conditions occur (the noncontingent aspect) and (b) the guarantor undertakes a contingent obligation to make future payments if those triggering events or conditions occur (the contingent aspect). Because the issuance of a guarantee imposes a noncontingent obligation to stand ready to perform in the event that the specified triggering event occurs, the provisions of paragraph 8 should not be interpreted as prohibiting the guarantor from initially recognizing a liability for that guarantee even though it is not probable that payments will be required under that guarantee.

22. In the event that, at the inception of the guarantee, the guarantor is required to recognize a liability under paragraph 8 for the related contingent loss, the liability to be initially recognized for that guarantee shall be the greater of (a) the amount the satisfies the fair value objective as discussed in paragraph 20 or (b) the contingent liability amount required to be recognized at inception of the guarantee by paragraph 8. For many guarantors, it would be unusual for the contingent liability under (b) to exceed the amount that satisfies the fair value objective at the inception of the guarantee.

23. The offsetting entry pursuant to the liability recognition at the inception of the guarantee depends on the circumstances in which the guarantee was issued. Examples include:

a. If the guarantee was issued in a standalone transaction for a premium, the offsetting entry would the consideration received.

b. If the guarantee was issued in conjunction with the sale of assets, a product, or a business, the overall proceeds would be allocated between the consideration being remitted to the guarantor for issuing the guarantee and the proceeds from that sale. That allocation would affect the calculation of the gain or loss on the sale transaction.

[4] As practical expedients, when a guarantee is issued in a standalone arm's-length transaction, the liability recognized at the inception of the guarantee should be the premium received or receivable by the guarantor. When a guarantee is issued as part of a transaction with multiple elements, the liability recognized at the inception of the guarantee should be an estimate of the guarantee's fair value. In that circumstance, guarantors should consider what premium would be required by the guarantor to issue the same guarantee in a standalone arm's-length transaction.

c. If a residual value guarantee were provided by a lessee-guarantor when entering into an operating lease, the offsetting entry would be reflected as prepaid rent, which would be nonadmitted under SSAP No. 29.

d. If a guarantee were issued to an unrelated or related party for no consideration on a standalone basis, the offsetting entry would be to expense.

24. Except for the measurement and recognition of continued guarantee obligations after the settlement of a contingent guarantee liability described in paragraph 25, this standard does not describe in detail how the guarantor's liability for its obligations under the guarantee would be measured subsequent to initial recognition. The liability that the guarantor initially recognized in accordance with paragraph 20 would typically be reduced (as a credit to income) as the guarantor is released from risk under the guarantee. Depending on the nature of the guarantee, the guarantor's release from risk has typically been recognized over the term of the guarantee (a) only upon either expiration or settlement of the guarantee, (b) by a systematic and rational amortization method, or (c) as the fair value of the guarantee changes (for example, guarantees accounted for as derivatives). The reduction of liability does not encompass the recognition and subsequent adjustment of the contingent liability recognized under paragraph 8 related to the contingent loss for the guarantee. If the guarantor is required to subsequently recognize a contingent liability for the guarantee, the guarantor shall eliminate any remaining noncontingent liability for that guarantee and recognize a contingent liability in accordance with paragraph 8.

25. After recognition and settlement of a contingent guarantee liability in accordance with paragraph 8, a guarantor shall assess whether remaining potential obligations exist under the guarantee agreement. If the guarantor still has potential obligations under the guarantee contract, the guarantor shall recognize the remaining noncontingent guarantee that represents the current fair value of the potential obligation remaining under the guarantee agreement. This noncontingent guarantee liability shall be released in accordance with paragraph 24.

Disclosures

26. Disclose the following information for each joint and several liability arrangements accounted for under paragraph 5. If co-obligors are related parties, disclosure requirements in *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* also apply.

a. The nature of the arrangement including: 1) how the liability arose, 2) the relationship with co-obligors, and 3) the terms and conditions of the arrangements.

b. The total outstanding amount under the arrangement, which shall not be reduced by the effect of any amounts that may be recoverable from other entities.

c. The carrying amount, if any, of the entity's liability and the carrying amount of a receivable recognized, if any.

d. The nature of any recourse provisions that would enable recovery from other entities of the amounts paid, including any limitations on the amounts that might be recovered.

e. In the period the liability is initially recognized and measured or in a period the measurement changes significantly: 1) the corresponding entry, and 2) where the entry was recorded in the financial statements.

27. If a loss contingency or impairment of an asset is not recorded because only one of the conditions in paragraph 8 a. or8 b. is met, or if exposure to a loss exists in excess of the amount accrued pursuant to the provisions described above, disclosure of the loss contingency or impairment of the asset shall be made in the financial statements when there is at least a reasonable possibility that a loss or an additional

loss may have been incurred. The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made. (Disclosures for tax contingencies as identified in paragraph 13 shall be completed as instructed within SSAP No. 101.)

28. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

29. Certain loss contingencies, the common characteristic of each being a guarantee, shall be disclosed in financial statements even though the possibility of loss may be remote. Examples include (a) guarantees of indebtedness of others, and (b) guarantees to repurchase receivables (or, in some cases, to repurchase related properties) that have been sold or otherwise assigned. The disclosure of those loss contingencies, and others that in substance have the same characteristics, shall be applied to statutory financial statements. The disclosure shall include the nature and amount of the guarantee. Consideration shall be given to disclosing, if estimable, the value of any recovery that could be expected to result, such as from the guarantor's right to proceed against an outside party.

30. A guarantor shall disclose the following information about each guarantee, or each group or similar guarantees (except product warranties addressed in paragraph 32), even if the likelihood of the guarantor's having to make any payments under the guarantee is remote. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed:

a. The nature of the guarantee, including the approximate term of the guarantee, how the guarantee arose, and the events and circumstances that would require the guarantor to perform under the guarantee, the ultimate impact to the financial statements (specific financial statement line item) after the settlement of the contract guarantee if action under the guarantee was required (e.g., increase to the investment, dividends to stockholder, etc) and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the guarantee. For example, the current status of the payment/performance risk of a credit-risk-related guarantee could be based on either recently issued external credit ratings or current internal groupings used by the guarantor to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.

b. The potential amount of future payments (undiscounted) the guarantor could be required to make under the guarantee. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the guarantee (which are addressed under (d) below). If the terms of the guarantee provide for no limitation to the maximum potential future payments under the guarantee, that fact shall be disclosed. If the guarantor is unable to develop an estimate of the maximum potential amount of future payments under its guarantee, the guarantor shall disclose the reasons why it cannot estimate the maximum potential amount.

c. The current carrying amount of the liability, if any, for the guarantor's obligations under the guarantee (including the amount, if any, recognized under paragraph 8), regardless of whether the guarantee is freestanding or embedded in another contract.

d. The nature of (1) any recourse provisions that would enable the guarantor to recover from third parties any of the amounts paid under the guarantee and (2) any assets held either as collateral or by third parties that, upon the occurrence of any triggering event or condition under the guarantee, the guarantor can obtain and liquidate to recover all or a portion of the amounts paid under the guarantee. The guarantor shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the guarantee.

31. An aggregate compilation of guarantee obligations shall include the maximum potential of future payments of all guarantees (undiscounted), the current liability (contingent and noncontingent) reported in the financial statements, and the ultimate financial statement impact based on maximum potential payments (undiscounted) if performance under those guarantees had been triggered.

32. As product warranties are excluded from the initial recognition and initial measurement requirements for guarantees, a guarantor is not required to disclose the maximum potential amount of future payments. Instead the guarantor is required to disclose for product warranties the following information:

a. The guarantor's accounting policy and methodology used in determining its liability for product warranties (Including any liability associated with extended warranties).

b. A tabular reconciliation of the changes in the guarantor's aggregate product warranty liability for the reporting period. That reconciliation should present the beginning balance of the aggregate product warranty liability, the aggregate reductions in that liability for payments made (in cash or in kind) under the warranty, the aggregate changes in the liability for accruals related to product warranties issued during the reporting period, the aggregate changes in the liability for accruals related to preexisting warranties (including adjustments related to changes in estimates), and the ending balance of the aggregate product warranty liability.

33. The financial statements shall contain adequate disclosure about the nature of any gain contingency. However, care should be exercised to avoid misleading implications as to the likelihood of realization.

34. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

35. This statement adopts *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), *FASB Statement 114, Accounting by Creditors for Impairment of a Loan* only as it amends in part FAS 5 and paragraphs 35 and 36 of *FASB Statement of Financial Accounting Concepts No. 6—Elements of Financial Statements. FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss, An Interpretation of FASB Statement No. 5* (FIN No. 14) is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum as discussed in paragraph 3 of FIN No. 14. This statement adopts with modification *ASU 2013-04, Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation is Fixed at the Reporting Date* with the same statutory modification adopted for FIN 14.

36. This statement adopts with modification *FASB Interpretation No. 45: Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others, an interpretation of FASB Statements No. 5, 57, and 107 and rescission of FASB Interpretation No. 34* (FIN 45), *FASB Interpretation No. 45-3, Application of FASB Interpretation No. 45 to Minimum Revenue Guarantees Grated to a Business or Owner* (FSP FIN 45-3)*, and FASB Staff Position FAS 133-1 and FIN 45-4, Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45* (FSP FAS 133-1 and FIN 45-4). Statutory Modifications to FIN 45 include initial liability recognition for guarantees issued as part of intercompany or related party

transactions, assessment and recognition of non-contingent guarantee obligations after recognition and settlement of a contingent obligation and revise the GAAP guidance to reflect statutory accounting terms and restrictions. Under this statement, intercompany and related party guarantees (including guarantees between parents and subsidiaries) should have an initial liability recognition unless the guarantee is considered "unlimited" or is made to/or on behalf of a wholly-owned subsidiary. (An example of an intercompany "unlimited" guarantee would be a guarantee issued in response to a rating agency's requirement to provide a commitment to support.) In instances in which an "unlimited" guarantee exists or a guarantee has been made to/or on behalf of a wholly-owned subsidiary, this statement requires disclosure, pursuant to the disclosure requirements adopted from FIN 45. The adoption of FIN 45 superseded the previously adopted guidance *in FASB Interpretation No. 34, Disclosure of Indirect Guarantees of Indebtedness of Others, An interpretation of FASB Statement No. 5.* This statement also adopts Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967, paragraphs 2 and 3 with the modification that AVR, IMR and Schedule F Penalty shall be shown gross. Appropriation of retained earnings discussed in paragraph 15 of FAS 5 is addressed in *SSAP No. 72—Surplus and Quasi-Reorganizations.*

37. This statement adopts with modification the guidance in paragraphs 7-11 of *FSP EITF 00-19-2, Accounting for Registration Payment Arrangements*. This guidance specifies that the contingent obligation to make future payments or otherwise transfer consideration under a registration payment arrangement, whether issued as a separate agreement or included as a provision for a financial instrument, other agreement, should be separately recognized and measured in accordance with *FAS 5, Accounting for Contingencies*. The guidance in FSP EITF 00-19-2 is modified as follows:

a. Registration payment arrangements meet the definition of a loss contingency in accordance with paragraph 7.

b. Financial instruments shall be accounted for in accordance with the statutory accounting principles for that specific asset type. Registration payment arrangement obligations shall be separate from the measurement and recognition of financial instruments subject to such arrangements.

c. Transition revisions resulting from application of this guidance shall be accounted for as a change in accounting principle pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). In accordance with SSAP No. 3, the cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds in the period of change in the accounting principles.

Effective Date and Transition

38. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

39. The guidance for guarantees included within paragraphs 16-25 and 30-32 shall be applicable to all guarantees issued or outstanding as of December 31, 2011. Thereafter, disclosure of all guarantees shall be annually reported, with interim reporting required for new guarantees issued, and/or existing guarantees when significant changes are made. Guidance in paragraph 37 was previously reflected within *INT 08-06: FSP EITF 00-19-2, Accounting for Registration Payment Arrangements* and was effective September 22, 2008.

APPENDIX A – NONADMITTANCE OF PREMIUM RECEIVABLES (PARAGRAPH 9.a.) 6

This page intentionally left blank.

Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for direct and group billed uncollected premiums, bills receivable for premiums, and amounts due from agents and brokers (collectively referred to as agents).

2. This statement does not address uncollected and deferred premiums for life considerations.

SUMMARY CONCLUSION

3. Premium transactions conducted directly with the insured result in uncollected premium balances.

4. Bills receivable, which are generally interest bearing, are used by reporting entities as a method of financing premiums.

5. Amounts due from agents result from various transactions ranging from premiums collected by the agents on behalf of the reporting entity to amounts advanced to the agent by the reporting entity to finance agency operations.

6. Uncollected premium balances, bills receivable for premiums, and amounts due from agents meet the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets,* and are admitted assets to the extent they conform to the requirements of this statement[1]. Premiums owed by agents shall be reflected net of commissions, if permitted by the contract. Balances resulting from advances to agents, which are primarily encountered in the life insurance industry, are nonadmitted if (a) the amounts are in the form of unsecured loans or advances, (b) the contractual terms for repayment are through application of future renewal commissions and/or other credits, or (c) the terms of repayment do not provide readily available cash for the satisfaction of policyholder liabilities.

Determination of Due Date

7. The due date for all premium balances addressed by this statement is determined as follows:

   a. Original and deposit premiums—governed by the effective date of the underlying insurance contract and not the agent/reporting entity contractual relationship;

   b. Endorsement premiums—governed by the effective date of the insurance policy endorsement;

   c. Installment premiums—governed by the contractual due date of the installment from the insured;

   d. Audit premiums and retrospective premiums—governed by insurance policy or insurance contract provisions. If the due date for receivables relating to these policies is not

[1] Premiums billed prior to the effective date do not meet the definition of an asset per SSAP No. 4. Therefore, an asset/receivable should not be recognized on the financial statements until the effective date of the underlying policy/contract (i.e. the effective date of the contract gives rise to the entity's right). The mailing of a premium billing has no determination in the reporting of such premiums as an asset. Additionally, advance premiums are only recognized when the reporting entity receives cash payment for premiums prior to the effective date of the contract. In the event that the reporting entity bills and receives payment for premiums prior to the effective date, the reporting entity will recognize the receipt of cash with a corresponding credit to advance premiums (in this case a receivable is not recognized as the payment is received prior to the effective date).

addressed by insurance policy provisions or insurance contract provisions, any uncollected audit premium (either accrued or billed) is nonadmitted.

8. The provisions of paragraph 7 shall be applied to all balances due except those arising from force placed insurance obtained by a lender for collateral protection, certain policies, known as Trustee Sales Guarantees (TSGs), issued by title insurance companies to lenders on defaulted real estate loans and crop/hail policies. For forced placed insurance policies, the due date for purposes of applying paragraph 9 shall be the date of billing. For TSGs, the due date for purposes of applying paragraph 9 shall be the expiration of the grace period given to the defaulted debtor, which is provided by statute. Crop/hail premiums are considered installment premiums in accordance with paragraph 7 and accordingly, the due date for purposes of applying paragraph 9 shall be governed by the contractual due date of the installment.

Impairment

9. Nonadmitted amounts are determined as follows:

a. Uncollected Premium—To the extent that there is no related unearned premium, any uncollected premium balances which are over ninety days due shall be nonadmitted. If an installment premium is over ninety days due, the amount over ninety days due plus all future installments that have been recorded on that policy shall be nonadmitted[2];

b. Bills Receivable—Bills receivable shall be nonadmitted if either of the following conditions are present:

i. If any installment is past due, the entire bills receivable balance from that policy is nonadmitted; or

ii. If the bills receivable balance due exceeds the unearned premium on the policy for which the note was accepted, the amount in excess of the unearned premium is nonadmitted.

c. Agents' Balances—The uncollected agent's receivable on a policy by policy basis which is over ninety days due shall be nonadmitted regardless of any unearned premium;

i. If amounts are both payable to and receivable from an agent on the same underlying policy, and the contractual agreements between the agent and the reporting entity permit offsetting, the nonadmitted portion of amounts due from that agent shall not be greater than the net balance due, by agent;

ii. If reconciling items between a reporting entity's account and an agent's account are over ninety days due, the amounts shall be nonadmitted.

10. After calculation of nonadmitted amounts, an evaluation shall be made of the remaining admitted assets in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R), to determine if there is impairment. If, in accordance with SSAP No. 5R, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible a portion of the balance is uncollectible and is therefore not written off, disclosure requirements outlined in SSAP No. 5R shall be followed.

[2] Installment premiums include monthly billed premiums on group accident and health policies. For group accident and health contracts, the existence of a nonadmitted *de minimus* over ninety-day balance would not cause future installments that have been recorded on that policy to also be nonadmitted. The *de minimus* over ninety-day balance itself shall be treated as nonadmitted as it is over ninety days old, and pursuant to paragraph 10, the entire current balance is subject to a collectability analysis.

11. Amounts classified as nonadmitted assets collected subsequent to the date of the statutory financial statements shall not be used to adjust the nonadmitted asset otherwise calculated.

Wash Transactions

12. Amounts due from agents (affiliated or nonaffiliated) that are collected prior to the date of the financial statements and then repaid to the agent by the reporting entity or one of the reporting entity's affiliates subsequent to the date of the financial statements shall be accounted for in accordance with the substance of the transaction (a wash transaction) and not its form. Accordingly, the payments received shall be accounted for as deposits and a liability shall be established for the same amount. The amounts due shall be reestablished as an asset and subjected to asset collectibility and nonadmitted asset calculations using the original due date of the receivable.

13. Short-term financing by third parties shall also be considered a wash transaction if the substance of the transaction is to avoid the nonadmitted asset principle set forth in this statement.

Disclosures

14. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance in the footnote to paragraph 6 was originally contained within *INT 02-02: SSAP No. 6 and Billing of Premium Before Effective Date* and was effective March 18, 2002. The guidance in the footnote to paragraph 9 was originally contained within *INT 01-01: Application of SSAP No. 6 Paragraph 9.a. to de minimus Receivable Balances of Group Accident and Health Policies* and was effective March 26, 2001.

- *Issue Paper No. 10—Uncollected Premium Balances*
- *Issue Paper No. 21—Bills Receivable For Premiums*

APPENDIX A – NONADMITTANCE OF PREMIUM RECEIVABLES (PARAGRAPH 9.a.)

The application of paragraph 9.a. (uncollected installment premium) can be illustrated through the following journal entries:

Worker’s compensation policy written on 1/1/X1 for $120,000 billed on installment basis at the end of each month.

Required Journal Entries:

1/1/X1	Installments booked but deferred and not yet due	120,000	
	Written premium		120,000
	Change in unearned premium reserve	120,000	
	Unearned premium reserve		120,000

Initial journal entry written on effective date of policy

1/30/X1	Premiums in course of collection	10,000	
	Installments booked but deferred and not yet due		10,000
	Unearned premium reserve	10,000	
	Change in unearned premium reserve		10,000

Monthly journal entry to record installments

Balance of accounts on 4/30/X1:

Installments booked but deferred and not yet due	80,000
Unearned premium reserve	80,000
Premiums in course of collection	40,000
Written premium	120,000
Change in unearned premium reserve	80,000
Earned premium	40,000

If no collections have been made as of 4/30/X1 then paragraph 9.a. would stipulate that the entire balance of $40,000 residing in the premiums in course of collection account would be nonadmitted. As the installments receivable and unearned premium reserve offset one another, no further amounts would be deemed nonadmitted at this point. In fact, as long as any of the premiums in course of collection account are 90 days past the contractual due date of the installment, then all subsequent installment billings would automatically be nonadmitted (i.e., May, June, July receivables of $10,000).

Statement of Statutory Accounting Principles No. 7

Asset Valuation Reserve and Interest Maintenance Reserve

Asset Valuation Reserve and Interest Maintenance Reserve

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for an asset valuation reserve (AVR) and an interest maintenance reserve (IMR) for life and accident and health insurance companies, excluding separate accounts. Separate account AVR/IMR reporting is addressed in *SSAP No. 56—Separate Accounts.*

SUMMARY CONCLUSION

2. Life and accident and health insurance companies shall recognize liabilities for an AVR and an IMR. The AVR is intended to establish a reserve to offset potential credit-related investment losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable. The IMR defers recognition of the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the liability released.

3. The IMR and AVR shall be calculated and reported as determined per guidance in the SSAP for the specific type of investment (e.g. SSAP No. 43R for loan-backed and structured securities), or if not specifically stated in the respective SSAP, in accordance with the NAIC *Annual Statement Instructions* for Life and Accident and Health Insurance Companies.

Effective Date and Transition

4. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Subsequent Events

SCOPE OF STATEMENT

1. This statement defines subsequent events and establishes the criteria for recording such events in the financial statements and/or disclosing them in the notes to the financial statements. The conclusions in this statement apply to both quarterly and annual statement filings.

SUMMARY CONCLUSION

Key Terms

2. Subsequent events shall be defined as events or transactions that occur subsequent to the balance sheet date, but before the issuance of the statutory financial statements and before the date the audited financial statements are issued, or available to be issued. The issuance of the statutory financial statements includes not only the submission of the Quarterly and Annual Statement but also the issuance of the audit opinion by the reporting entity's certified public accountant.

3. Material subsequent events shall be considered either:

a. Type I – Recognized Subsequent Events: Events or transactions that provide additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements;

b. Type II – Nonrecognized Subsequent Events: Events or transactions that provide evidence with respect to conditions that did not exist at the balance sheet date but arose after that date.

4. **Financial statements are issued**. Financial statements are considered issued when they are widely distributed to shareholders and other financial statement users for general use and reliance in a form and format that complies with SAP.

5. **Financial statements are available to be issued**. Financial statements are considered available to be issued when they are complete in a form and format that complies with SAP and all approvals necessary for issuance have been obtained, for example, from management, the board of directors, and/or significant shareholders. The process involved in creating and distributing the financial statements will vary depending on an entity's management and corporate governance structure as well as statutory and regulatory requirements. An entity that has a current expectation of widely distributing its financial statements to its shareholders and other financial statement users shall evaluate subsequent events through the date that the financial statements are issued. All other entities shall evaluate subsequent events through the date that the financial statements are available to be issued.

Recognition Guidance

6. An entity shall recognize in the financial statements the effects of all material Type I subsequent events that provide additional evidence about conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements. Any changes in estimates resulting from the use of such evidence shall be recorded in the financial statements unless specifically prohibited, (e.g., subsequent collection of agents balances over 90 days due when determining nonadmitted agents balances as prohibited by *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*).

7. For material Type I subsequent events, the nature and the amount of the adjustment shall be disclosed in the notes to the financial statements only if necessary to keep the financial statements from being misleading.

8. Material Type II subsequent events shall not be recorded in the financial statements, but shall be disclosed in the notes to the financial statements. For such events, an entity shall disclose the nature of the event and an estimate of its financial effect, or a statement that such an estimate cannot be made.

9. An entity also shall consider supplementing the historical financial statements with pro forma financial data. Occasionally, a nonrecognized subsequent event may be so significant that disclosure can best be made by means of pro forma financial data. Such data shall give effect to the event as if it had occurred on the balance sheet date. In some situations, an entity also shall consider presenting pro forma statements. If an event is of such a nature that pro forma disclosures are necessary to keep the financial statements from being misleading, disclosure of supplemental pro forma financial data shall be made including the impact on net income, surplus, total assets, and total liabilities giving effect to the event as if it had occurred on the date of the balance sheet.

10. Identifying events that require adjustment of the financial statements under the criteria stated in the conclusion calls for the management of the entity to exercise judgment and accumulate knowledge of the facts and circumstances surrounding the event. For example, a loss on an uncollectible agent's balance as a result of an agent's deteriorating financial condition leading to bankruptcy subsequent to the balance sheet date would be indicative of conditions existing at the balance sheet date, thereby requiring the recording of such event to the financial statements before their issuance. On the other hand, a similar loss resulting from an agent's major casualty loss such as a fire or flood subsequent to the balance sheet date would not be indicative of conditions existing at the balance sheet date and recording of the event to the financial statements would not be appropriate. However, this is a Type II subsequent event which would require disclosure in the notes to the financial statements.

11. The following are examples of Type I recognized subsequent events:

a. If the events that gave rise to litigation had taken place before the balance sheet date and that litigation is settled, after the balance sheet date but before the financial statements are issued or are available to be issued, for an amount different from the liability recorded in the accounts, then the settlement amount should be considered in estimating the amount of liability recognized in the financial statements at the balance sheet date.

b. Subsequent events affecting the realization of assets, such as receivables and inventories or the settlement of estimated liabilities, should be recognized in the financial statements when those events represent the culmination of conditions that existed over a relatively long period of time. For example, a loss on an uncollectible trade account receivable as a result of a customer's deteriorating financial condition leading to bankruptcy after the balance sheet date but before the financial statements are issued or are available to be issued ordinarily will be indicative of conditions existing at the balance sheet date. Thus, the effects of the customer's bankruptcy filing shall be considered in determining the amount of uncollectible trade accounts receivable recognized in the financial statements at the balance sheet date.

12. The following are examples of Type II nonrecognized subsequent events:

a. Sale of a bond or capital stock issued after the balance sheet date but before financial statements are issued or are available to be issued

b. A business combination that occurs after the balance sheet date but before financial statements are issued or are available to be issued

c. Settlement of litigation when the event giving rise to the claim took place after the balance sheet date but before financial statements are issued or are available to be issued

d. Loss of plant or inventories as a result of fire or natural disaster that occurred after the balance sheet date but before financial statements are issued or are available to be issued

e. Losses on receivables resulting from conditions (such as a customer's major casualty) arising after the balance sheet date but before financial statements are issued or are available to be issued

f. Changes in the fair value of assets or liabilities (financial or nonfinancial) or foreign exchange rates after the balance sheet date but before financial statements are issued or are available to be issued

g. Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees after the balance sheet date but before financial statements are issued or are available to be issued

Disclosures

13. In addition to the disclosure of subsequent events as required throughout this statement, for annual and interim reporting periods, reporting entities shall disclose the dates through which subsequent events have been evaluated for statutory reporting and for audited financial statements along with the dates the statutory reporting statements and the audited financial statements were issued, or available to be issued. In the audited financial statements, reporting entities shall specifically identify subsequent events identified after the date subsequent events were reviewed for statutory reporting.

14. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

15. The above guidance was originally adopted to be consistent with the AICPA *Statement on Auditing Standards No. 1*, Section 560, *Subsequent Events*. In 2009, *FASB Statement No. 165, Subsequent Events* (FAS 165), was adopted for statutory accounting. The adoption of this guidance should not result in significant changes in the subsequent events that an entity reports, through either recognition or disclosure, in its financial statements. FAS 165 introduced the concept of available to be issued and requires additional disclosures on the dates for which an entity evaluated subsequent events as well as the date the financial statements were issued, or available to be issued. Guidance within ASU 2010-09 (modifications to Subtopic 855-10 in the FASB Codification) has been rejected for statutory accounting.

Effective Date and Transition

16. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Changes adopted as a result of FAS 165, are effective for years ending on and after December 31, 2009.

Postemployment Benefits and Compensated Absences

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for postemployment benefits and for compensated absences.

2. The scope of this statement includes:

a. All forms of postemployment benefits that meet the conditions in paragraph 5.

b. Split-dollar life-insurance arrangements if the arrangement is, in substance, an individual deferred compensation contract.

c. Other deferred compensation contracts.

d. Compensated Absences.

3. The scope of this statement does not include:

a. Benefits paid to active employees other than compensated absences.

b. Benefits paid at retirement or provided through a pension or postretirement benefit plan, including special or contractual termination benefits payable upon termination from a pension or other postretirement plan. Guidance for these benefits is addressed in SSAP No. 102 and SSAP No. 92 respectively.

c. Individual deferred compensation contracts, if those contracts taken together are equivalent to a defined benefit pension plan or other postretirement plan. Guidance for these benefits is addressed in SSAP No. 102 and SSAP No. 92 respectively.

d. Other postemployment benefits that do not meet the conditions in paragraph 5. Such postemployment benefits shall be assessed as contingent liabilities in accordance with SSAP No. 5R.

e. Stock compensation plans accounted for under *SSAP No. 104R—Share-Based Payments.*

SUMMARY CONCLUSION

~~2.~~4. Postemployment benefits are all types of benefits provided by an employer to former or inactive employees or agents, their beneficiaries, and covered dependents, after employment but before retirement. Those benefits include, but are not limited to, salary continuation, supplemental unemployment benefits, severance benefits, disability-related benefits (including workers' compensation), job training and counseling, ~~and~~ continuation of benefits such as health care benefits and life insurance coverage, and special or contractual termination benefits payable before retirement and that are not payable from a pension or other postretirement plan. Compensated absences include, but are not limited to, benefits such as vacation, sick pay, sabbatical leave and other similar benefits, and holidays.

~~3.~~5. A reporting entity shall accrue a liability for postemployment benefits and for employees' compensation for future absences if all of the following conditions are met:

a. The reporting entity's obligation relating to compensated absences and postemployment benefits is attributable to employees' services already rendered;

b. The obligation relates to rights that vest[1] or accumulate[2];

c. Payment is probable; and

d. The amount can be reasonably estimated.

6. A liability for amounts to be paid as a result of employees' rights to compensated absences shall be accrued, considering anticipated forfeitures, in the year in which earned. Furthermore, the definition of a liability does not limit an employer's liability for compensated absences solely to rights to compensation for those absences that eventually vest. The definition also encompasses a constructive obligation for reasonable estimable compensation for past services that, based on the employer's past practices, probably shall be paid and can be reasonably estimated.

7. Individual facts and circumstances must be considered in determining when nonvesting rights to compensated absences are earned by services rendered. The requirement to accrue a liability for nonvesting rights to compensated absences depends on whether the unused rights expire at the end of the year in which earned, or accumulate and carried forward to succeeding years, thereby increasing the benefits that would otherwise be available in those latter years. If the rights expire, a liability for future absences shall not be accrued at year-end because the benefits to be paid in subsequent years would not be attributable to employee services rendered in prior years. If unused rights do accumulate and increase the benefits otherwise available in subsequent years, a liability shall be accrued to the extent that it is probable that employees will be paid in subsequent years for the increased benefits attributable to the accumulated rights and the amount can be reasonably estimated.

~~4. In the unlikely situation in which a reporting entity does not accrue a liability in accordance with paragraph 3 only because the amount cannot be reasonably estimated (i.e., condition d. is not met), that fact and the reasons therefore shall be disclosed in the financial statements.~~

~~5.~~8. A reporting entity shall accrue a liability for employees' compensated absences and postemployment benefits reimbursable under service agreements with an affiliate, if all of the conditions of paragraph ~~3~~5 are met.

~~6.~~9. Postemployment benefits provided to employees or agents in connection with their termination can include special termination benefits and contractual termination benefits. Special termination benefits are defined as those that are offered only for a short period of time in exchange for employees' voluntary termination of service; contractual termination benefits are defined as those required by the terms of a plan only if a specified event, such as a facility closing, occurs. An employer that offers special termination benefits to employees or agents shall recognize a liability and an expense when the employees or agents accept the offer and the amount can be reasonably estimated. An employer that provides contractual termination benefits shall recognize a liability and an expense when it is probable that employees or agents will be entitled to benefits and the amount can be reasonably estimated. The cost of such termination benefits shall include the amount of any lump-sum payments and the present value of any expected future payments.

~~7. An employer is not required to accrue a liability for nonvesting accumulating rights for compensated absences if the right to receive those benefits is contingent upon future events and continued employment.~~

[1] In this statement, vested rights are those for which the reporting entity has an obligation to make payment even if an employee terminates; thus, they are not contingent on an employee's future service.

[2] For purposes of this statement, accumulate means that earned but unused rights to compensated absences may be carried forward to one or more periods subsequent to that in which they are earned, even though there may be a limit to the amount that can be carried forward.

Sabbatical Leave and Other Similar Benefits

~~8.~~10. An entity may provide its employees with a benefit in the form of a compensated absence known as a sabbatical leave (sabbatical) whereby the employee is entitled to paid time off after working for an entity for a specified period of time. During the sabbatical, the individual continues to be a compensated employee and is not required to perform any duties for the entity. This issue is limited to those arrangements under which the sabbatical or other similar benefit arrangement is unrestricted (i.e., the employee is not required to perform any direct or indirect services for or on behalf of the entity during the absence). Arrangements in which employees are required to engage in research or public service to enhance the reputation of or otherwise benefit the entity are not within the scope of this statement.

~~9.~~11. An employee's right to a compensated absence under a sabbatical or other similar benefit arrangement (a) that requires the completion of a minimum service period and (b) in which the benefit does not increase with additional years of service accumulates pursuant to paragraph ~~3~~5.b. of this Statement for arrangements in which the individual continues to be a compensated employee and is not required to perform duties for the entity during the absence. Therefore, assuming all of the other conditions of paragraph ~~3~~5 are met, the compensation cost associated with a sabbatical or other similar benefit arrangement should be accrued over the requisite service period.

Sick-Pay Benefits

12. The employer’s actual administration of sick-pay benefits shall determine the appropriate accounting. In accounting for compensated absences, the form of an employer’s policy for compensated absences shall not prevail over actual practices. If sick-pay benefits are treated as compensated absences (e.g., employees are paid sick leave benefits even though absences are not the result of illness, or employees are allowed to take compensated terminal leave for accumulated unused sick-pay benefits prior to retirement), they shall be captured within paragraph 5. Otherwise, an employer is not required to accrue a liability for nonvesting accumulating rights to receive sick-pay benefits (compensation for an employee’s absence due to illness.) This statement does not prevent an employer from accruing a liability for such non-vesting, accumulating sick-pay benefits if the criteria in paragraph 5 is met.

Deferred Compensation Arrangements Accounted for Individually

13. To the extent the terms of a contract attribute all or a portion of the expected future benefits to an individual year of the employee's service, the cost of those benefits shall be recognized in that year. To the extent the terms of the contract attribute all or a portion of the expected future benefits to a period of service greater than one year, the cost of those benefits shall be accrued over that period of the employee's service in a systematic and rational manner. If elements of both current and future services are present, only the portion applicable to the current services shall be accrued.

14. Some deferred compensation contracts provide for periodic payments to employees or their surviving spouses for life with provisions for a minimum lump-sum settlement in the event of the early death of one or all of the beneficiaries. The estimated amount of future payments to be made under such contracts shall be accrued over the period of active employment from the time the contract is entered into.

15. The amounts to be accrued periodically under paragraph 13 shall result in an accrued amount at the full eligibility date equal to the then present value of all of the future benefits expected to be paid. Such estimates shall be based on the life expectancy of each individual concerned (based on the most recent mortality tables available) or on the estimated cost of an annuity contract rather than on the minimum payable in the event of early death. At the end of that period the aggregate amount accrued shall equal the then present value of the benefits expected to be provided to the employee, any beneficiaries, and covered dependents in exchange for the employee's service to that date.

Consolidated/Holding Company Plans

~~10.~~16. The employees of many reporting entities are eligible for certain compensated absence and postemployment benefits granted by a parent company or holding company. An entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation from the parent company or holding company of the benefits earned during the period. A liability shall be established for any such amounts due but not yet paid.

~~11.~~17. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for the benefits, then the requirements outlined in paragraphs 2-15~~7~~ shall be applied.

Disclosures

~~12.~~18. The following disclosures shall be made for defined benefit postemployment plans for which the reporting entity is directly liable (i.e., the plan resides directly in the reporting entity):

a. A reconciliation of beginning and ending balances of the benefit obligation showing separately, if applicable, the effects during the period attributable to service cost, interest cost, contributions by plan participants, actuarial gains and losses, foreign currency exchange rate changes, benefits paid, plan amendments, business combinations, divestitures, curtailments, settlements, and special termination benefits;

b. A reconciliation of beginning and ending balances of the fair value of plan assets showing separately, if applicable, the effects during the period attributable to actual return on plan assets, foreign currency exchange rate changes, contributions by the reporting entity, contributions by plan participants, benefits paid, business combinations, divestitures, and settlements;

c. The amount of net periodic benefit cost recognized, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component~~amount of recognized gains and losses~~, the ~~amount of~~ prior service cost or credit component~~recognized~~, the transition asset or obligation component, and the amount of gain or loss recognized due to ~~a~~ settlements or curtailments;~~ and~~

d. If applicable, the cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event~~.~~; and

e. The nature and effect of significant nonroutine events, such as amendments, combinations, divestures, curtailments and settlements.

19. ~~e.~~ If it is not practicable to estimate, and therefore, not accrue the liability (i.e., conditions a, b and c of paragraph 5~~3~~ are met but condition d is not), that fact and the reasons therefore shall be disclosed in the financial statements. Refer to the Preamble for further discussion regarding the disclosure requirements.

Employee Stock Ownership Plans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the plan sponsors' accounting for Employee Stock Ownership Plans (ESOPs).

SUMMARY CONCLUSION

2. An ESOP is an employee benefit plan that is described by the Employee Retirement Income Security Act of 1974 (ERISA) and the Internal Revenue Code of 1986 as a stock bonus plan, or a combination stock bonus and money purchase pension plan, designed to invest primarily in employer stock. For such plans, reporting entities shall adopt AICPA *Statement of Position 93-6, Employers' Accounting for Employee Stock Ownership Plans* (SOP 93-6) except that debt obligations of ESOPs shall be reported consistent with *SSAP No. 15—Debt and Holding Company Obligations*, and the related income tax effects shall be accounted for consistent with *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10* (SSAP No. 101), as further clarified in this statement. There are two basic forms of ESOPs: leveraged and nonleveraged. A summary of the financial reporting for each is provided below.

Leveraged ESOPs

3. A leveraged ESOP borrows money to acquire shares of the employer company (sponsor). The money may be borrowed from the plan sponsor or from an outside lender, with or without a guarantee from the plan sponsor. The debt usually is collateralized by the employer's shares. Debt obligations of an ESOP shall be reported as borrowed money by company sponsors, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company or the sale or exchange of the company's securities.

4. The sponsor shall record the issuance of shares or the sale of treasury shares to an ESOP when it occurs. The consideration recorded for the stock issued is unearned compensation and the unearned ESOP shares shall be recorded as a separate reduction of unassigned funds (surplus).

5. The unearned shares initially held by the ESOP in a suspense account are called suspense or unallocated shares. As the debt is repaid (generally from employer contributions and dividends on the employer's stock), suspense shares are released and must be allocated to individual accounts as of the end of the ESOP's fiscal year. As ESOP shares are committed to be released, unearned ESOP shares shall be credited and, depending on the purpose for which the shares are released, either (a) compensation cost, (b) dividends payable, or (c) compensation liabilities shall be charged consistent with SOP 93-6.

6. Because employers control the use of dividends on unallocated shares, dividends on unallocated shares are not considered dividends for financial reporting purposes (although such dividends are generally subject to normal dividend requirements under state statutes or regulations). Dividends on unallocated shares used to pay debt service shall be reported as a reduction of debt or of accrued interest payable. Dividends on unallocated shares paid to participants or added to participant accounts shall be reported as compensation cost. Dividends on allocated shares shall be charged to unassigned funds (surplus).

7. If the ESOP sells the suspense shares and uses the proceeds to repay the debt, the employer shall report the release of the suspense shares as a credit to unearned ESOP shares based on the cost of the shares to the ESOP, charge debt and accrued interest payable, and recognize the difference in paid-in capital. However, if there is a difference between the amount paid to an outside lender and the net carrying amount of the debt, such difference shall be reported as a capital gain or loss on extinguishment

of debt and, accordingly, shall be charged to operations and disclosed in the financial statements with other disclosures required by paragraph 17.

8. If an employer reacquires the suspense shares from the ESOP, the purchase of the shares shall be accounted for as a treasury stock transaction consistent with SOP 93-6.

Nonleveraged ESOPs

9. Employers with nonleveraged ESOPs shall report compensation cost equal to the contribution called for in the period under the plan.

10. Employers with nonleveraged ESOPs shall charge dividends on shares held by the ESOPs to unassigned funds (surplus), except that dividends on suspense account shares of pension reversion ESOPs shall be accounted for the same way as dividends on suspense account shares of leveraged ESOPs.

Pension Reversion ESOPs

11. Pension reversion ESOPs are created by transferring the assets of a defined benefit pension plan to existing or newly created ESOPs and may be leveraged or nonleveraged. Pension reversion ESOPs shall be accounted for consistent with SOP 93-6.

Issues Related to Accounting for Income Taxes

Leveraged ESOPs

12. The amount of ESOP-related expense for a leveraged ESOP for a period may differ from the amount of the ESOP-related income tax deduction (prescribed by income tax rules and regulations) for that period. Such differences shall be reported in accordance with SSAP No. 101.

13. If the cost of shares committed to be released is greater than their fair value, the employer shall credit the tax effect of the amount by which the deductible expense exceeds the book expense to unassigned funds. Conversely, if the cost of shares committed to be released is less than their fair value, the employer shall charge the tax effect of the amount by which the book expense exceeds the deductible expense to unassigned funds. Such amounts shall be limited to the amount of previous credits to unassigned funds related to cost exceeding fair value of ESOP shares committed to be released in previous periods.

14. The tax benefit of tax-deductible dividends on allocated ESOP shares shall be recorded as a reduction of income tax expense.

Nonleveraged ESOPs

15. Reporting entities with nonleveraged ESOPs may accrue compensation cost for financial reporting purposes earlier than the cost is deductible for income tax purposes. Accruing the compensation cost earlier for financial reporting purposes creates a temporary difference that shall be accounted for in accordance with SSAP No. 101.

Other

16. Under federal income tax regulations, employer securities (such as convertible preferred stock) that are held by participants in an ESOP and are not readily tradable on an established market must include a put option. Securities subject to such repurchase obligations shall be reported as outstanding and as a component of capital stock and/or gross paid-in and contributed surplus in accordance with *SSAP No. 72—Surplus and Quasi-reorganizations*.

Disclosures

17. An employer sponsoring an ESOP shall disclose the following information about the plan, if applicable:

a. A description of the plan, the basis for determining contributions, including the employee groups covered, and the nature and effect of significant matters affecting comparability of information for all periods presented. For leveraged ESOPs and pension reversion ESOPs, the description shall include the basis for releasing shares and how dividends on allocated and unallocated shares are used;

b. A description of the accounting policies followed for ESOP transactions, including the method of measuring compensation and the classification of dividends on ESOP shares;

c. The amount of compensation cost recognized during the period;

d. The number of allocated shares, committed-to-be-released shares, and suspense shares held by the ESOP at the balance sheet date;

e. The fair value of unearned ESOP shares at the balance sheet date; and

f. The existence and nature of any repurchase obligation, including disclosure of the fair value of the shares allocated as of the balance sheet date, which are subject to a repurchase obligation.

18. Refer to the preamble for further discussions regarding disclosure requirements. The disclosures in paragraph 17 shall be included in the annual audited statutory financial reports only.

Relevant Literature

19. This statement adopts SOP 93-6 with a modification to reject paragraphs 13 and 25 to the extent they require reporting all debt obligations of an ESOP as liabilities, paragraphs 28-34, 44, and 53.b. as they relate to earnings per share, and paragraph 37 as it relates to reporting gains and losses on extinguishment of debt.

20. This statement rejects *FASB Emerging Issues Task Force No. 89-11, Sponsor's Balance Sheet Classification of Capital Stock with a Put Option Held by an Employee Stock Ownership Plan*.

Effective Date and Transition

21. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Debt and Holding Company Obligations

SCOPE OF STATEMENT

1. The purpose of this statement is to establish statutory accounting principles for recording debt and related disclosure requirements, including holding company obligations and any related guarantees in the financial statements of an insurance company subsidiary, and debt obligations of Employee Stock Ownership Plans (ESOPs).

SUMMARY CONCLUSION

Debt

2. Debt shall be reported as a liability unless (a) it is debt on real estate in accordance with *SSAP No. 40R—Real Estate Investments* (i.e., reported as a reduction in the carrying value of real estate), (b) it is offset against another asset in accordance with *SSAP No. 64—Offsetting and Netting of Assets and Liabilities*, or (c) other treatment is specified elsewhere within the *Accounting Practices and Procedures Manual*. Instruments that meet the requirements to be recorded as surplus as specified in *SSAP No. 72—Surplus and Quasi-Reorganizations* are not considered debt.

3. Debt discount or premium, if any, shall be reported in the balance sheet as a direct deduction from or addition to the face amount of the note. Discount or premium shall be amortized over the life of the note using the interest method.

4. Interest on debt shall be accrued and charged to operations over the life of the debt, except when capitalized in accordance with *SSAP No. 44—Capitalization of Interest*. Interest payable shall include interest payable on all debt reported as a liability, approved interest on surplus notes, and interest payable on debt reported as a reduction in the carrying value of real estate.

5. Debt issuance costs (e.g., loan fees and legal fees) do not meet the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets*. Accordingly, these costs shall be charged to operations in the period incurred.

6. Debt obligations of ESOPs shall be reported as debt by company sponsors, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company, or the sale or exchange of the company's securities. ESOPs are addressed in *SSAP No. 12—Employee Stock Ownership Plans*.

7. Debt which is subject to a troubled debt restructuring shall be accounted for in accordance with *SSAP No. 36—Troubled Debt Restructuring*.

8. Convertible debt securities that are convertible into common stock of the issuer or an affiliated company at a specified price at the option of the holder and which are sold at a price not significantly in excess of the face amount shall be accounted for solely as debt at the time of issuance. An expense shall be recognized, equal to the fair value of additional securities granted or other consideration issued to induce conversion subsequent to the issuance of convertible debt securities. This guidance applies regardless of who initiates the offer, the debt holder or the debtor, and whether the offer applies to all debt holders.

9. Proceeds from debt issued with detachable stock purchase warrants shall be allocated based on the relative fair value of the two securities at the time of issuance. The value attributable to the warrants shall be accounted for as paid-in capital.

10. Other types of debt securities, e.g., capital notes, shall be accounted for in accordance with the substance of the transaction.

11. A reporting entity shall derecognize a liability if, and only if, it has been extinguished. A liability has been extinguished if either of the following conditions is met:

a. The reporting entity pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods or services, or reacquisition by the debtor of its outstanding debt securities; or

b. The reporting entity is legally released from being the primary obligor under the liability, either judicially or by the creditor.

Convertible Debt Securities with Beneficial Conversion Features

12. Entities may issue convertible debt securities and convertible preferred stock with a nondetachable conversion feature that is in-the-money at the commitment date (a "beneficial conversion feature"). Those securities may be convertible into common stock at the lower of a conversion rate fixed at the commitment date or a fixed discount to the market price of the common stock at the date of conversion. Certain convertible securities may have a conversion price that is variable based on future events such as a subsequent round of financing at a price lower than the convertible securities' original conversion price, a liquidation or a change in control of the company, or an initial public offering at a share price lower than an agreed-upon amount.

13. Convertible debt securities and convertible preferred stock with beneficial conversion features are to be valued according to the appropriate statutory accounting statement; *SSAP No. 26—Bonds, Excluding Loan-Backed and Structured Securities* or *SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities).*

Accounting for Changes in Line-of-Credit or Revolving-Debt Arrangements

14. A line-of-credit or revolving-debt arrangement is an agreement that provides the borrower with the option to make multiple borrowings up to a specified maximum amount to repay portions of previous borrowings, and to then reborrow under the same contract. Line-of-credit and revolving-debt arrangements may include both amounts drawn by the debtor (a debt instrument) and a commitment by the creditor to make additional amounts available to the debtor under predefined terms (a loan commitment). In most situations, a debtor incurs costs to establish line-of-credit or revolving-debt arrangements, and some or all of the costs are deferred and amortized over the term of the arrangement.

15. Modifications to or exchanges of line-of-credit or revolving-debt arrangements, including the accounting for unamortized costs at the time of the change, fees paid to or received from the creditor and third-party costs incurred shall be expensed when incurred.

Holding Company Obligations

16. In situations where the reporting entity does not guarantee the obligation of the holding company, there is no legal obligation on the part of the reporting entity. Therefore, the reporting entity shall not record the obligation of its parent holding company unless the obligation relates to services or benefits incurred by a non-insurance parent company or holding company on its behalf. In these situations, the reporting entity shall recognize an expense for its share of the services or benefits provided to it during the period by the parent company or holding company based on an allocation from the parent or holding company. A liability shall be established for any such amounts due, but not yet paid. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. *SSAP No. 11—Postemployment Benefits and Compensated Absences* (SSAP No. 11), *SSAP No. 92—Accounting for Postretirement Benefits Other Than Pensions, A Replacement of SSAP No. 14* (SSAP No. 92) and *SSAP No. 102—Accounting for Pensions, A Replacement of SSAP No. 89* (SSAP No. 102)

address specific examples where the obligation relates to benefits provided to the subsidiary by a non-insurance parent company or holding company.

17. If the reporting entity guarantees an obligation of the holding company, the guidance in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* shall be followed for determining the recording and disclosure of the guarantee. SSAP Nos. 11, 92 and 102 provide specific accounting and disclosure guidelines for employee benefit plans when the reporting entity is directly liable for obligations under the plan.

Accounting for the Settlement of the Equity-Settled Portion of a Convertible Debt Instrument That Permits or Requires the Conversion Spread to Be Settled in Stock

18. Upon settlement of a security with the characteristics of Instrument C in *FASB Emerging Issues Task Force 90-19, Convertible Bonds with Issuer Option to Settle for Cash upon Conversion*, by payment of the accreted value of the obligation (recognized liability) in cash and settlement of the conversion spread (unrecognized equity instrument) with stock, only the cash payment should be considered in the computation of gain or loss on extinguishment of the recognized liability. That is, any shares transferred to settle the embedded equity instrument (referred to as the excess conversion spread in EITF 90-19) would not be considered in the settlement of the debt component.

Accounting for Federal Home Loan Banks

19. Funding agreements issued to a federal home loan bank (FHLB) shall be evaluated on an individual basis, and shall be accounted for according to the substance of the individual arrangement and entity licensing. If the arrangement is in substance a funding agreement, including that the funds are used in an investment spread capacity, it shall be accounted for consistent with other funding agreements in accordance with *SSAP No. 52—Deposit-Type Contracts*. If the arrangement is in substance a borrowing agreement, it shall be accounted for in accordance with this statement, consistent with other borrowed money.

Disclosures

20. The financial statements shall disclose the following items related to debt, including FHLB borrowings accounted for under this SSAP:

a. Date issued;

b. Pertinent information concerning the kind of borrowing (e.g., debentures, commercial paper outstanding, bank loans, and lines of credit);

c. Face amount of the debt;

d. Carrying value of debt;

e. The rate at which interest accrues;

f. The effective interest rate;

g. Collateral requirements;

h. Interest paid in the current year;

i. A summary of significant debt terms and covenants and any violations;

j. The combined aggregate amount of maturities and sinking fund requirements for each of the five years following the latest balance sheet presented;

k. If debt was considered to be extinguished by in-substance defeasance prior to the effective date of this statement and any of the debt remains outstanding, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period; and

l. If assets are set aside after the effective date of this statement solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets.

21. FHLB borrowings accounted for under SSAP No. 15 should follow the disclosure requirements required in paragraph 20 as well as the disclosure requirements included in *SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled or affiliated entities)*, paragraph 16.

22. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

23. This statement adopts *Accounting Principles Board Opinion No. 14, Accounting for Convertible Debt and Debt Issued with Stock Purchase Warrants* and *FASB Statement No. 84, Induced Conversions of Convertible Debt*.

24. This statement adopts *Accounting Principles Board Opinion No. 21, Interest on Receivables and Payables,* with a modification to require that debt issuance costs be charged to operations.

25. This statement adopts *Accounting Principles Board Opinion No. 26, Early Extinguishment of Debt* with modification to require that gains and losses from extinguishment of debt be reported as capital gains or losses, and charged to operations.

26. This statement adopts paragraphs 13 and 25 of AICPA *Statement of Position 93-6, Employers' Accounting for Employee Stock Ownership Plans* (SOP 93-6) with a modification to exclude debt obligations when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company's stock, contributions from the company, or the sale or exchange of the company's securities. This statement rejects paragraph 37 of SOP 93-6 as it relates to reporting gains and losses on extinguishment of debt which shall be accounted for consistent with *SSAP No. 24—Discontinued Operations and Extraordinary Items.*

27. This statement adopts *FASB Emerging Issues Task Force No. 90-19, Convertible Bonds with Issuer Option to Settle for Cash upon Conversion* with a modification to reject guidance related to earnings per share.

28. This statement adopts *FASB Technical Bulletin No. 80-1, Early Extinguishment of Debt through Exchange for Common or Preferred Stock,* with a modification to reject guidance related to classification of the loss as an extraordinary item.

29. This statement adopts the following pronouncements:

a. *Accounting Principles Board Opinion No. 12, paragraphs 16 and 17, Omnibus Opinion—1967*;

b. AICPA *Accounting Interpretations of APB 21, Interest on Receivables and Payables*;

c. AICPA *Accounting Interpretations of APB 26, Early Extinguishment of Debt*;

d. *FASB Emerging Issues Task Force No. 85-9, Revenue Recognition on Options to Purchase Stock of Another Entity;*

e. *FASB Emerging Issues Task Force No. 85-17, Accrued Interest upon Conversion of Convertible Debt*;

f. *FASB Emerging Issues Task Force No. 85-29, Convertible Bonds with a "Premium Put"*;

g. *FASB Emerging Issues Task Force No. 86-8, Sale of Bad-Debt Recovery Rights;*

h. *FASB Emerging Issues Task Force No. 86-15, Increasing-Rate Debt*;

i. *FASB Emerging Issues Task Force No. 86-18, Debtor's Accounting for a Modification of Debt Terms*;

j. *FASB Emerging Issues Task Force No. 86-28, Accounting Implications of Indexed Debt Instruments*;

k. *FASB Emerging Issues Task Force No. 86-36, Invasion of a Defeasance Trust*;

l. *FASB Emerging Issues Task Force No. 95-15, Recognition of Gain or Loss When a Binding Contract Requires a Debt Extinguishment to Occur at a Future Date for a Specified Amount*.

30. This statement rejects *FASB Statement No. 4, Reporting Gains and Losses from Extinguishment of Debt* and *FASB Statement No. 64, Extinguishments of Debt Made to Satisfy Sinking-Fund Requirements—an Amendment of FASB Statement No. 4*. This statement also rejects *FASB Emerging Issues Task Force No. 84-40, Long-Term Debt Repayable by a Capital Stock, FASB Emerging Issues Task Force No. 98-5, Accounting for Convertible Securities with Beneficial Conversion Features or Contingently Adjustable Conversion Ratios,* and *FASB Emerging Issues Task Force No. 98-14, Debtor's Accounting for Changes in Line-of-Credit or Revolving-Debt Arrangements*.

Effective Date and Transition

31. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.* The guidance in paragraphs 12 and 13 was originally contained within *INT 00-08: EITF 98-5: Accounting for Convertible Securities with Beneficial Conversion Features or Continently Adjustable Conversion Ratios* and was effective September 11, 2000. The guidance in paragraphs 14 and 15 was originally contained within *INT 00-10: EITF 98-14: Debtor's Accounting for Changes in Line-of-Credit or Revolving-Debt Arrangements* and was effective June 12, 2000. The guidance in paragraph 18 was originally contained within *INT 04-15: EITF 03-7: Accounting for the Settlement of the Equity-Settled Portion of a Convertible Debt Instrument That Permits or Requires the Conversion Spread to be Settled in Stock (Instrument C of Issue No. 90-19)* and was effective December 5, 2004. Guidance in paragraph 19 was previously included within *INT 08-08: Balance Sheet Presentation of Funding Agreements Issued to a Federal Home Loan Bank* and was effective for periods beginning March 15, 2009. Guidance in paragraphs 20-21 related to FHLB agreements and borrowings was initially effective January 1, 2014.

Electronic Data Processing Equipment and Accounting for Software

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for electronic data processing (EDP) equipment and provisions for the accounting of other software.

SUMMARY CONCLUSION

EDP Equipment and Operating / Nonoperating System Software

2. EDP equipment and software generally meet the definition of assets established in *SSAP No. 4—Assets and Nonadmitted Assets*. EDP equipment and operating system software are admitted assets to the extent they conform to the requirements of this statement. Nonoperating system software are nonadmitted assets.

3. EDP equipment and operating system software shall be depreciated over the lesser of its useful life or three years. Nonoperating system software shall be depreciated over the lesser of its useful life or five years. In either case, the methods detailed in *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements* (SSAP No. 19) shall be used.

4. The aggregate amount of admitted EDP equipment and operating system software (net of accumulated depreciation) shall be limited to three percent of the reporting entity's capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any EDP equipment and operating system software, net deferred tax assets and net positive goodwill.(INT 01-18)

5. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold shall be expensed when purchased, otherwise the EDP Equipment, operating and nonoperating system software assets shall be capitalized and depreciated in accordance with paragraph 3. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Research and Development Costs Incurred to Obtain or Develop Computer Software

6. Guidance on the accounting for research and development costs is provided in *SSAP No. 17—Preoperating and Research and Development Costs* (SSAP No. 17), and requires all research and development costs to be expensed when incurred. Pursuant to the guidance adopted within that SSAP:

a. To the extent that the acquisition, development, or improvement of a process by an enterprise for use in its selling or administrative activities includes costs for computer software, those costs are not research and development costs.

b. Costs incurred to purchase or lease computer software developed by others are not research and development costs unless the software is for use in research and development activities.

c. Costs incurred by an enterprise in developing computer software internally for use in its research and development activities are research and development costs. This includes costs incurred during all phases of software development because all of those costs are incurred in research and development activities.

7. Costs for computer software determined to be research and development costs shall be accounted for and disclosed in accordance with SSAP No. 17. Software costs not considered to be research and development costs shall be accounted for in accordance with this SSAP.

Accounting for the Costs of Computer Software to be Sold

8. This Statement adopts with modification *FASB Codification 985-20, Software - Costs of Software to be Sold, Leased or* Marketed (ASC 985-20) to preclude the capitalization of software development costs and to reject guidance regarding the treatment of capitalized costs. Additionally, this Statement rejects *FASB Codification 985-330, Software - Inventory (ASC 985-330)*. Statutory modifications to ASC 985-20 and rejection of ASC 985-330 precludes capitalization of costs, and requires such costs to be expensed, for:

a. Costs of producing product masters incurred subsequent to establishing technological feasibility. Those costs include coding and testing performed subsequent to establishing technological feasibility.

b. Software production costs for computer software that is to be used as an integral part of a product or process.

c. All indirect costs, including overhead related to programmers and the facilities they occupy.

d. Costs incurred for duplicating computer software, documentation and training materials from product masters and for physically packaging the product for distribution.

Software Revenue Recognition

9. This Statement adopts with modification *FASB Codification 985-605, Revenue Recognition* (ASC 985-605), as revised by *ASU 2009-14, Certain Revenue Arrangements That Include Software Elements* (ASU 2009-14), for statutory accounting terms and concepts:

a. References to GAAP guidance outside FASB Codification topic 985-605 shall be followed only to the extent in which that specific GAAP guidance has been adopted[1] for statutory accounting. The guidance within the applicable SSAP or statutory interpretation shall be considered the authoritative statutory guidance.

b. Any references to the accounting for capitalized development costs is rejected as all development costs are required to be expensed when incurred.

Costs of Computer Software Developed or Obtained for Internal Use and Web Site Development Costs

10. This Statement adopts with modification *FASB Codification 350-40, Internal Use Software* (ASC 350-40) for statutory accounting terms and concepts. This Statement also adopts *FASB Codification 350-50, Website Development Costs* (ASC 350-50) in its entirety.

[1] If statutory accounting principles do not address the FASB Codification reference, consideration of whether the GAAP guidance is adopted for statutory accounting shall be determined in accordance with the respective pre-codification GAAP guidance.

11. The modifications to ASC 350-40 are as follows:

a. ASC 350-40-15-4 states that the accounting for costs of reengineering activities, which often are associated with new or upgraded software applications, is not included within scope. This guidance is expanded to require that such costs be expensed as incurred.

b. ASC 350-40-25-16 is amended to require that entities that license internal-use computer software follow the operating lease provisions outlined in *SSAP No. 22—Leases.*

c. ASC 350-40-35-4 is amended to require entities to follow the amortization guidelines as established in paragraph 10 of *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*

d. ASC 350-40-35-5 is amended to require that capitalized operating system software shall be depreciated for a period not to exceed three years. Capitalized nonoperating system software shall be depreciated for a period not to exceed five years. This is consistent with paragraph 3 of this Statement.

e. ASC 350-40-35-9 is amended to require that if during the development of internal use software, an entity decided to market the software to others, the entity shall immediately expense any amounts previously capitalized.

f. ASC 350-40-50-1 is amended to require entities to follow the disclosure provisions provided in paragraph 14 of this SSAP and paragraph 5 of SSAP No. 17.

g. Any software costs capitalized in accordance with paragraphs 10 and 11 shall be deemed either operating or nonoperating system software costs. Entities shall make this determination in accordance with the definitions of operating and nonoperating system software contained in the Glossary. As noted in paragraph 2, nonoperating system software is a nonadmitted asset.

Non-Software Deliverables in Arrangements Containing More-Than-Incidental Software

12. In an arrangement that includes software that is more than incidental to the products or services as a whole, software and software-related elements are included within the scope of this guidance. Software-related elements include software products and services as well as any non-software deliverable(s) for which a software deliverable is essential to its functionality. For example, in an arrangement that includes software, computer hardware that will contain the software, and additional unrelated equipment, if the software is essential to the functionality of the hardware, the hardware would be considered software-related and, therefore, included within the scope of this guidance. However, because the software is not essential to the functionality of the unrelated equipment, the equipment would not be considered software-related and would, therefore, be excluded from the scope.

13. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of costs incurred within the scope of paragraphs 10 and 11 shall be expensed when incurred. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Disclosures

14. The disclosures in this paragraph are specific to EDP equipment and operating and nonoperating system software, but shall also be followed as directed under paragraph 11.f.

a. Depreciation and amortization expense for the period;

b. For EDP equipment and operating system software, balances of major classes of depreciable assets, by nature or function, at the balance sheet date;

c. For EDP equipment and operating system software, accumulated depreciation and amortization, either by major classes of depreciable assets or in total, at the balance sheet date; and

d. A general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets.

15. The financial statements shall ~~D~~disclose if the written capitalization policies~~, identified in paragraphs 5 and 13,~~ and the resultant thresholds have changed from the prior period and the reason(s) for such change.

16. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph~~s~~ 14 ~~and 15~~ shall be included in the annual audited statutory financial reports only.

Effective Date and Transition

17. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance in paragraph 12 was originally contained within *INT 04-13: EITF 03-5: Applicability of AICPA Statement of Position 97-2 to Non-Software Deliverables in an Arrangement Containing More-Than-Incidental Software* and was effective December 5, 2004.

18. EDP equipment and operating system software capitalized prior to January 1, 2001 shall be depreciated over the lesser of its remaining useful life or three years. Nonoperating system software capitalized prior to January 1, 2001 shall be depreciated over the lesser of its remaining useful life or five years.

Relevant Literature

19. The revisions to this Statement, adopted in October 2010, result from incorporating previously adopted statutory accounting guidance from SSAP No. 17, SSAP No. 79, SSAP No. 81, SSAP No. 82 and SSAP No. 87 into this Statement. Revisions to incorporate the previously adopted statutory accounting guidance within this SSAP shall not be considered new statutory accounting guidance. This Statement also adopts with modification ASU 2009-14, which revises the previous GAAP guidance adopted under SSAP No. 81. The GAAP revisions adopted within ASU 2009-14 are considered nonsubstantive and are effective immediately.

20. This Statement references GAAP guidance in accordance with the current FASB Codification. The references to the FASB Codification are intended to reflect the previously adopted pre-codification GAAP guidance as communicated within SSAP No. 17, SSAP No. 81 and SSAP No. 82:

a. The pre-codification GAAP guidance reflected within SSAP No. 17 and incorporated within paragraph 8 through reference to the FASB ASC 985-20 includes:

i. *FASB Statement No. 86, Accounting for the Costs of Computer Software to be Sold, Leased or Otherwise Marketed* was adopted with the exception of paragraphs 5 and 6 and paragraphs 8-11. Those paragraphs were rejected to preclude the capitalization of software development costs.

ii. *FASB Emerging Issues Task Force No. 96-14, Accounting for Costs Associated with Modifying Computer Software for the Year 2000* was adopted. This guidance was not included within the FASB Codification as it is considered no longer technologically helpful.

b. The pre-codification GAAP guidance reflected within SSAP No. 81 and incorporated within paragraph 9 through reference to the FASB ASC 985-605 includes:

i. *AICPA Statement of Position 97-2, Software Revenue Recognition* paragraphs 6-91 was adopted with certain modifications.

ii. *AICPA Statement of Position 98-9, Modification of SOP 97-2 Software Revenue Recognition, With Respect to Certain Transactions* paragraphs 6-8 was adopted. (Note: The adopted paragraphs reflect all of the changes to SOP 97-2.)

iii. *FASB Emerging Issues Task Force No. 00-3, Application of AICPA Statement of Position 97-2 to Arrangements That Include the Right to Use Software Stored on Another Entity's Hardware* was adopted in its entirety.

iv. *AICPA Statement of Position 98-4, Deferral of the Effective Date of a Provision of SOP 97-2, Software Revenue Recognition* was considered not applicable because the effective date was inconsistent with SSAP No. 81.

c. The pre-codification GAAP guidance reflected within SSAP No. 82 and incorporated within paragraphs 10 and 11 through reference to the FASB ASC 350-40 includes:

i. *AICPA Statement of Position 98-1, Accounting for the Costs of Computer Software Developed or Obtained for Internal Use* paragraphs 11-42 and paragraph 93 were adopted with modification.

ii. *FASB Emerging Issues Task Force No. 00-2, Accounting for Web Site Development Costs* was adopted in its entirety.

21. SSAP No. 16, SSAP No. 17 and SSAP No. 79 were effective for years beginning January 1, 2001. SSAP No. 81 and SSAP No. 82 were effective for years beginning January 1, 2002. SSAP No. 87 was effective for years beginning on and after January 1, 2004. Transition guidance from the initial adoption of these SSAPs has expired and is not duplicated within this Statement.

Preoperating and Research and Development Costs

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for organizational costs, research and development costs, and start-up costs for new and existing entities.

SUMMARY CONCLUSION

2. Preoperating, including organization and startup costs, and research and development costs shall be expensed as incurred. Preoperating and research and development costs are incurred for such new projects as: (a) arranging operations for a new entity (e.g., legal, actuarial and accounting costs associated with regulatory approval and licensing and issuance of stock), (b) establishing production, sales or service facilities at a new site, (c) changing operations or production significantly, or (d) developing and producing a new product, adopting a new process or offering a new service. Also included in research and development costs are all nonrefundable advance payments for goods or services that will be used or rendered for research and development activities. These nonrefundable advance payments shall be expensed when the advance payment is made.

3. Costs associated with business process reengineering activities, whether done internally or by third parties, shall be expensed when incurred. The total consulting contract price (or the sum of the linked contracts with the same vendor) in a business process reengineering project shall be allocated to each activity based on the relative fair values when a third party is used to complete such a project.

4. Preoperating, including organization and start-up costs, and research and development costs specifically exclude tangible assets acquired in connection with such activities.

Disclosures

5. Disclosure shall be made in the financial statements of the total research and development costs charged to expense in each period for which an income statement is presented. The disclosure shall be included in the annual audited statutory financial report only.

6. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

7. This statement adopts *FASB Statement No. 2, Accounting for Research and Development Costs* and *FASB Interpretation No. 6, Applicability of FASB Statement No. 2 to Computer Software*. From January 1, 2001 through October 2010, this statement also adopted *FASB Statement No. 86*, *Accounting for the Costs of Computer Software to be Sold, Leased or Otherwise Marketed* (FAS 86), with the exception of paragraphs 5 and 6 and paragraphs 8-11. These paragraphs have been rejected to preclude the capitalization of software development costs. *FASB Emerging Issues Task Force No. 96-14, Accounting for the Costs Associated with Modifying Computer Software for the Year 2000* (EITF 96-14) and *FASB Emerging Accounting Issues Task Force No. 97-13: Accounting for Costs Incurred in Connection with a Consulting Contract or an Internal Project that Combines Business Process Reengineering and Information Technical Transformation* (EITF 97-13) are adopted. Effective October 2010, FAS 86 and EITF 96-14 were rejected as FASB issued new GAAP guidance, which is reviewed in SSAP No. 16R.

8. This statement rejects *FASB Statement No. 7*, *Accounting and Reporting by Development Stage Enterprises, FASB Interpretation No. 7, Applying FASB Statement No. 7 in Financial Statements of Established Operating Enterprises, an interpretation of FASB Statement No. 7* and *FASB Emerging Issues Task Force No. 07-3, Accounting for Nonrefundable Advance Payments for Goods or Services Received for Use in Future Research and Development Activities.*

Effective Date and Transition

9. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Guidance reflected in paragraph 2 was previously included in *INT 08-04: FASB Emerging Issues Task Force No. 07-3, Accounting for Nonrefundable Advance Payments for Goods or Services Received for Use in Future Research and Development Activities* and was originally effective May 31, 2008.

Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for furniture, fixtures, and equipment (excluding electronic data processing equipment and software that is addressed in *SSAP No. 16R—Electronic Data Processing Equipment and Accounting for Software* (SSAP No. 16R), leasehold improvements paid by the reporting entity as lessee, and depreciation of property and amortization of leasehold improvements. Concession service arrangements, as defined in SSAP No. 22, are not leases, nor should they be recognized as property, plant or equipment. Therefore, these arrangements, and improvements to infrastructures within concession service arrangements, are outside of the scope of this standard.

SUMMARY CONCLUSION

Furniture, Fixtures and Equipment

2. Furniture, fixtures and equipment generally meet the definition of assets established in *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4). Such items also meet the criteria defining nonadmitted assets in SSAP No. 4. Accordingly, these assets shall be depreciated against net income as the estimated economic benefit expires and the undepreciated portion of these assets shall be reported as nonadmitted assets and charged against surplus.(INT 01-18)

3. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of such assets shall be expensed when purchased. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Leasehold Improvements Paid by the Reporting Entity as Lessee

4. Leasehold improvements shall be defined as lessee expenditures that are permanently attached to an asset that a reporting entity is leasing under an operating lease.

5. Leasehold improvements that increase the value and enhance the usefulness of the leased asset meet the definition of assets established in SSAP No. 4. Within that definition, such items also meet the criteria defining nonadmitted assets. Accordingly, such assets shall be reported as nonadmitted assets and charged against surplus. These nonadmitted assets shall be amortized against net income over the shorter of their estimated useful life or the remaining life of the original lease excluding renewal or option periods. Leasehold improvements that do not meet the definition of assets shall be charged to expense when acquired.

6. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of such assets shall be expensed when purchased. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Maintenance Costs Paid by Lessee

7. Maintenance costs incurred by the lessee for maintenance on the leased item that do not increase the value and enhance the usefulness of the leased asset shall be expensed when incurred. Reimbursable deposits shall be reflected as nonadmitted assets. Deposits paid to the lessor, reimbursable when the lessee incurs costs for lease maintenance activities, shall be recorded as nonadmitted assets. When the

amount on deposit is less than probable of being returned, the deposit shall be recognized as an additional lease expense.

Depreciation and Amortization

8. Depreciable assets include all tangible capital assets classified as either admitted or nonadmitted in accordance with SSAP No. 4. Land shall not be considered a depreciable asset.

9. The acquisition cost of depreciable assets, net of salvage, shall be depreciated against net income over the estimated useful lives of the assets in a systematic and rational manner. The acquisition cost of a leasehold improvement shall be amortized against net income over the shorter of its estimated useful life or the original lease term excluding options or renewal periods. For leasehold improvements capitalized subsequent to inception of the lease, the cost shall be amortized over the shorter of its estimated useful life or the remaining original lease term excluding options or renewal periods. Amounts capitalized for leasehold improvements in periods subsequent to the original lease term (i.e., during renewal periods), are amortized utilizing the shorter of the estimated useful life of the asset or the remaining term of the renewal period.

10. A variety of systematic depreciation and amortization methods is available such as the straight-line method, sum-of-the-years' digits method, and various declining balance methods. The depreciation or amortization method selected shall be that which most appropriately allocates the cost of the depreciable asset or leasehold improvement over its estimated useful life. The use of the sinking fund or constant yield methods of depreciation does not constitute acceptable statutory accounting practice.

11. Useful lives of depreciable assets and leasehold improvements can be obtained from contractors, appraisers, engineers, and manufacturers, or they may be based on prior experience. Estimates published by the Internal Revenue Service can be helpful in the selection of useful lives for specific assets.

12. Changes in the estimated useful lives of depreciable assets or leasehold improvements from one period to another shall be considered a change in accounting estimate and shall be accounted for in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3).

13. Changes in depreciation or amortization methods from one period to another shall be considered a change in accounting principle and shall be accounted for in accordance with SSAP No. 3.

14. Depreciation and amortization expense shall be recorded in the statement of income in accordance with *SSAP No. 70—Allocation of Expenses*.

Disclosures

15. The following disclosures shall be made in the financial statements:

a. Depreciation and amortization expense for the period;

b. A general description of the method or methods used in computing depreciation and amortization with respect to major classes of depreciable assets and leasehold improvements.

16. The financial statements shall disclose if the written capitalization policy and the resultant predefined thresholds changed from the prior period and the reason(s) for such change.

17. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 15 shall be included in the annual audited statutory financial reports only.

Relevant Literature

18. This statement adopts paragraphs 4 and 5 of *Accounting Principles Board Opinion No. 12, Omnibus* Opinion*—1967*. This statement also adopts *AICPA Practice Bulletin No. 1, Purpose and Scope of AcSEC Practice Bulletins and Procedures for Their Issuance, Exhibit A*.

19. This statement rejects *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, "*Chapters 9A and 9C;" however, it is considered appropriate to use the concepts of depreciating assets discussed in the GAAP guidance, which requires that the acquisition cost less salvage value be recorded as an expense over the estimated useful life of the asset, as the basis for the statutory guidance in this statement. *FASB Emerging Issues Task Force No. 08-3: Accounting by Lessees for Maintenance Deposits* is adopted with modification to require reimbursable deposits to be reflected as nonadmitted assets.

Effective Date and Transition

20. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. Guidance reflected in paragraphs 3, 6 and 16, incorporated from SSAP No. 87, was originally effective for years beginning on and after January 1, 2004. Guidance in paragraph 7 related to maintenance costs paid by lessee was previously included within *INT 09-05: FASB Emerging Issues Task Force No. 08-3: Accounting by Lessees for Maintenance Deposits* and was effective for periods beginning September 21, 2009.

21. The use of the sinking fund or constant yield method does not constitute acceptable statutory accounting practice and these methods shall not be applied to new properties acquired since December 3, 1990 (the date the Emerging Accounting Issues (E) Working Group reached its conclusion regarding this method) nor if the reporting entity changes its existing properties' method of depreciation. This conclusion would not impact those properties currently being depreciated using the constant yield method.

Nonadmitted Assets

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for nonadmitted assets which are not specifically addressed in other statements.

SUMMARY CONCLUSION

2. The definition and accounting treatment for nonadmitted assets is outlined in *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) as follows:

> 3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted.

SSAP No. 4 defines nonadmitted assets as follows:

> A nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:
>
> a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
>
> b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.
>
> If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

3. This statement shall not be considered an all-inclusive list of nonadmitted assets. Certain admitted assets and nonadmitted assets are addressed in other SSAPs.

4. Consistent with paragraph 2, the following assets shall be nonadmitted:

a. Deposits in Suspended Depositories—Amounts on deposit with suspended depositories may not be fully recoverable. Any amounts not reasonably expected to be recovered shall be written off in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R). Amounts in excess of that written off shall be nonadmitted as they are not available to satisfy obligations to policyholders;

b. Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Investments—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized as there are no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Receivables arising from working capital finance programs designated by the Securities Valuation Office are subject to the guidance in SSAP No. 105;

c. Loans on Personal Security, Cash Advances To, Or In The Hands Of, Officers Or Agents And Travel Advances—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off typically are unsecured and as such have no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Some of these items may also be considered prepaid expenses which, per *SSAP No. 29—Prepaid Expenses*, are nonadmitted;

d. All "Non-Bankable" Checks—Examples of "non-bankable" checks are NSF (non-sufficient funds) checks, post-dated checks, or checks for which payment has been stopped. Although these checks may still maintain probable future benefits (and thus meet the definition of assets), at the date on which they are non-bankable they are not available for policyholder obligations and shall be nonadmitted until the uncertainty related to the probable future benefit is resolved and the checks are converted to available funds;

e. Trade Names And Other Intangible Assets[1]—These assets, by their nature, are not readily marketable and available to satisfy policyholder obligations and shall be nonadmitted;

f. Automobiles, Airplanes and Other Vehicles—Automobiles, airplanes and other vehicles meet the definition of assets established in SSAP No. 4. However, they are not readily available to satisfy policyholder obligations and as a result the undepreciated portion shall be nonadmitted. The accounting for these assets shall be consistent with the accounting for equipment provided in *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements* or for commercial airplane leveraged leases, refer to the guidance in SSAP No. 22;

g. Company's Stock as Collateral for Loan—When a reporting entity lends money and accepts its own stock as collateral for the loan, it shall report the amount of the loan receivable and any related accrued interest on the loan as a nonadmitted asset. The asset is nonadmitted as the collateral could not be used to satisfy the obligation in the event of default.

Relevant Literature

5. This statement adopts with modification *FASB Emerging Issues Task Force No. 08-7: Accounting for Defensive Intangible Assets* to nonadmit defensible intangible assets. This statement rejects Chapters 3A and 11 of *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins*.

[1] Defensible intangible assets are defined as an intangible asset acquired in a business combination or an asset acquisition that an entity does not intend to actively use but does intend to prevent others from using. These may also be referred to as a "locked-up asset" because while the asset is not being actively used, it is likely contributing to an increase in the value of other assets owned by the entity. These assets are not readily available to satisfy policyholder obligations and shall be nonadmitted.

Effective Date and Transition

6. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance reflected in footnote 1, incorporated from *INT 09-03: EITF 08-7: Accounting for Defensive Intangible Assets*, was effective June 13, 2009. With the adoption of *SSAP No. 105—Working Capital Finance Investments*, revisions were incorporated into paragraph 4.b. These revisions from SSAP No. 105 are retained for historical purposes within *Issue Paper No. 147—Working Capital Finance Investments*.

Other Admitted Assets

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for admitted assets which are not specifically addressed in other statements.

SUMMARY CONCLUSION

2. The definition and accounting treatment for admitted assets is outlined in paragraphs 2 and 3 of *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) as follows:

> 2. For purposes of statutory accounting, an asset shall be defined as: probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.
>
> 3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:
>
> a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
>
> b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.
>
> If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

3. Consistent with paragraph 2, the following assets shall be considered admitted and shall be reported in accordance with SSAP No. 4. These admitted assets are not addressed in other statements.

Collateral Loans

4. Collateral loans are unconditional obligations for the payment of money secured by the pledge of an investment[1] and meet the definition of assets as defined in SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement. The outstanding principal balance on the loan and any related accrued interest shall be recorded as an admitted asset subject to the following limitations:

[1] Investment defined as those assets listed in Section 3 of Appendix A-001: *Investments of Reporting Entities*.

a. Loan Impairment—Determination as to the impairment of a collateral loan shall be based on current information and events. When it is considered probable that any portion of amounts due under the contractual terms of the loan will not be collected the loan is considered impaired. The impairment shall be measured based on the fair value of the collateral less estimated costs to obtain and sell the collateral. The difference between the net value of the collateral and the recorded asset shall be written off in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R);

b. Nonadmitted Asset—In accordance with *SSAP No. 20—Nonadmitted Assets*, collateral loans secured by assets that do not qualify as investments shall be nonadmitted. Further, any amount of the loan outstanding which is in excess of the permitted relationship of fair value of the pledged investment to the collateral loan shall be treated as a nonadmitted asset.

Cash Value of Structured Settlements

5. The reporting of the present value of structured settlement annuities where the reporting entity is the owner and payee as described in SSAP No. 65, paragraph 17.a. shall account for the annuity an admitted asset at its net present realizable value. The annuity described is reported as an other-than-invested asset. Income from the annuities shall be recorded as miscellaneous income. The present value of the annuity and the related amortization schedule shall be obtained from the issuing life insurance company at the time the annuity is purchased. When the reporting entity is the owner and payee, no reduction shall be made to loss reserves.

The Amount That Could Be Realized on Life Insurance Where the Reporting Entity is Owner and Beneficiary or Has Otherwise Obtained Rights to Control the Policy

6. The amount that could be realized on life insurance policies where the reporting entity is the owner and beneficiary, or has otherwise obtained the rights to control the policy, is similar to a cash deposit that is realizable on demand. As such, the amount that could be realized on a life insurance policy as of the date to which premiums have been paid shall be reported as an admitted asset. In determining the amount that could be realized, reporting entities shall consider the cash surrender value as well as other contractual terms which limit or provide for additional realizable amounts. Amounts recoverable by the reporting entity at the discretion of the issuing company shall not be included. Amounts realizable beyond one year from the surrender date shall be discounted. For group policies or a group of individual life policies, reporting entities shall assume surrender on a policy by policy or certificate by certificate basis, unless contractual terms only allow for surrender of all policies or certificates as a group, in which case the amount that could be realized shall be determined on a group basis.

Receivables for Securities

7. Sales of securities are recorded as of the trade date. A receivable due from the broker is established in instances when a security has been sold, but the proceeds from the sale have not yet been received. Unless the receivable for securities, other than a receivable arising from the sale of a security which was acquired on a "To Be Announced" ("TBA") basis, or from the sale of securities that are received as stock distributions that may be restricted (unregistered) or in physical form, and which has yet to be actually received (see paragraph 10), meets the criteria set forth in paragraph 9, the receivable for securities is an admitted asset to the extent it conforms to the requirements of this statement.

8. An evaluation shall be made in accordance with SSAP No. 5R, to determine if there is impairment. If, in accordance with SSAP No. 5R, it is probable the balance or any portion thereof is uncollectible, any such deemed uncollectible receivable shall be written off and charged against income in the period the determination is made. If it is reasonably possible, but not probable, the balance or any

portion thereof is uncollectible and is therefore not written off, the disclosure requirements outlined in SSAP No. 5R shall be followed.

9. Receivables for securities not received within 15 days from the settlement date shall be nonadmitted and shall be classified as "other-than-invested assets."

10. Receivables arising from the secondary sale of securities acquired on a TBA basis, or from stock distributions that may be restricted (unregistered) or in physical form, which have not yet been received by the seller in the secondary sale transaction, may be admitted until the security is exchanged for payment. TBA securities are originally purchased well in advance of the actual date of security issuance (frequently 90 days or more). Accordingly, secondary sales of securities so acquired may occur before the date of issuance. Sales of securities so acquired always include a provision that requires simultaneous delivery of the security and receipt of consideration. Upon the secondary sale, and prior to the actual receipt, of a security acquired on a TBA basis, the seller in the secondary sale transaction records a liability for the book value of the security thus sold and a receivable for the consideration reflected in the secondary sale transaction. Profits or losses emanating from the secondary sale transaction are recorded in the same manner as profits and losses emanating from any other sale transaction involving an investment.

Other Amounts Receivable Under Reinsurance Contracts

11. Amounts receivable from Servicemen's Group Life Insurance (SGLI) or Federal Employees' Group Life Insurance (FEGLI) pools and Federal Crop Insurance programs shall be reported as admitted assets.

Guaranteed Investment Contracts

12. Guaranteed Investment Contracts (GICs) purchased for investment purposes meet the definition of assets as defined in SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement.

13. Purchases for which all contractual rights and ownership of the GIC result in an investment similar to a corporate bond shall be accounted for in accordance with the guidance in *SSAP No. 26—Bonds, Excluding Loan-Backed and Structured Securities*.

14. An investment in a GIC payment stream is created when an intermediary purchases individual GICs, pools them, and sells the rights to the payment stream. These investments shall be reported as other long-term invested assets and shall be carried at amortized cost.

15. If, in accordance with SSAP No. 5R, it is probable that the carrying value of a GIC is not fully recoverable the investment shall be considered impaired. Accordingly, the cost basis of the investment shall be written down to the undiscounted estimated cash flows and the amount of the write down shall be accounted for as a capital loss. The new cost basis shall not be changed for subsequent recoveries in fair value.

State Guaranty Association Loan Agreements

16. State guaranty associations have the statutory authority to reinsure any or all of the policies of an impaired or insolvent insurer and borrow funds. When this is done in the case of reinsurance, the assuming carrier receives assets supporting the liabilities from the insolvent company's estate and/or the responsible state guaranty association. If available, the state guaranty association transfers cash at the closing of the transaction. Loan agreements may be utilized in the event a guaranty association does not have the funds on hand or is unable to raise the funds by the closing date. In the case of adverse cash flow situations, guaranty associations may enter into loan agreements with insurers to provide funds that will

allow the association to perform its duties as required by statute. These loan agreements are essentially credit risk free because the notes are backed by all member insurers of an association.

17. Loan agreements issued by state guaranty associations taken by an insurance company in connection with funding an assumption reinsurance agreement or as interim financing meet the definition of assets as defined in SSAP No. 4, are admitted assets to the extent they conform to the requirements of this statement, and shall be reported as a note receivable—other-than-invested assets.

Relevant Literature

18. This statement is consistent with *FASB Statement No. 114, Accounting by Creditors for the Impairment of a Loan* which was adopted with modification in *SSAP No. 37—Mortgage Loans*. This statement is consistent with *Accounting Principles Board Opinion No. 21, Interest on Receivables and Payables* which was adopted in *SSAP No. 15—Debt and Holding Company Obligations.*

19. This statement adopts *FASB Emerging Issues Task Force No. 88-5, Recognition of Insurance Death Benefits* and *FASB Technical Bulletin 85-4, Accounting for Purchases of Life Insurance* with the modification that the entity must be the owner and the beneficiary. This statement also adopts with modification *FASB Emerging Issues Task Force No. 06-05, Accounting for Purchases of Life Insurance – Determining the Amount That Could be Realized in Accordance with FASB Technical Bulletin No. 85-4*. Guidance has been included within this SSAP to clarify how to determine the amount that could be realized on life insurance in situations where the reporting entity is the owner and beneficiary or has otherwise obtained rights to control the policy.

Effective Date and Transition

20. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

APPENDIX A – APPLICATIONS OF THE STANDARDS TO SPECIFIC ASPECTS OF ACCOUNTING FOR SALE-LEASEBACK TRANSACTIONS **18**

This page intentionally left blank.

Leases

SCOPE OF STATEMENT

1. The purpose of this statement is to establish statutory accounting principles for leases by lessors and lessees. It addresses:

   a. Accounting and reporting by lessees;

   b. Accounting and reporting by lessors;

   c. Sale-leaseback transactions;

   d. Leveraged leases for lessors;

   e. Related party leases; and

   f. Disclosures.

SUMMARY CONCLUSION

2. A lease is defined as an agreement conveying the right to use property, plant, or equipment (land and/or depreciable assets) usually for a stated period of time. This definition does not include agreements that are contracts for services that do not transfer the right to use property, plant, or equipment from one contracting party to the other (i.e., employee lease contracts) or service concession arrangements[1]. On the other hand, agreements that do transfer the right to use property, plant, or equipment meet the definition of a lease even though substantial services by the contractor (lessor) may be called for in connection with the operation or maintenance of the assets.

3. Integral equipment subject to a lease shall be evaluated as real estate per *SSAP No. 40R—Real Estate Investments.* Integral equipment or property improvements for which no statutory title registration system exists, the criterion in this SSAP (that the lease transfers ownership of the property to the lessee by the end of the lease term) is met in lease agreements that provide that, upon the lessee's performance in accordance with the terms of the lease, the lessor shall execute and deliver to the lessee such documents (including, if applicable, a bill of sale for the equipment) as may be required to release the equipment from the lease and to transfer ownership thereto to the lessee. This criterion is also met in situations in which the lease agreement requires the payment by the lessee of a nominal amount (for example, the minimum fee required by statutory regulation to transfer ownership) in connection with the transfer of ownership. Notwithstanding the foregoing guidance, a provision in a lease agreement that ownership of the leased property is not transferred to the lessee if the lessee elects not to pay the specified fee (whether nominal or otherwise) to complete the transfer of ownership is a purchase option. Such a provision would not satisfy this SSAP.

Determining Whether an Arrangement Contains a Lease

4. Determining whether an arrangement contains a lease that is within the scope of this SSAP should be based on the substance of the arrangement. Separate contracts with the same entity or related

[1] A service concession arrangement is an arrangement between a public sector entity grantor and an operating entity under which the operating entity operates the grantor's infrastructure (for example, airports, roads, bridges, tunnels, prisons and hospitals) for a specified period of time. A public-sector entity includes a governmental body or an entity to which the responsibility to provide public service has been delegated. In a service concession arrangement, both of the following conditions exist:

   a. The grantor controls or has the ability to modify or approve the services that the operating entity must provide with the infrastructure, to whom it must provide them, and at what price.

   b. The grantor controls, through ownership, beneficial entitlement, or otherwise, any residual interest in the infrastructure at the end of the term of the arrangement.

parties that are entered into at or near the same time are presumed to have been negotiated as a package and should, therefore, be evaluated as a single arrangement in considering whether there are one or more units of accounting. That presumption may be overcome if there is sufficient evidence to the contrary.

Property, Plant or Equipment

5. Property, plant or equipment, as used in this SSAP, includes only land and/or depreciable assets. Therefore, inventory (including equipment parts inventory) and minerals, precious metals or other natural resources cannot be the subject of a lease for accounting purposes because those assets are not depreciable. Additionally, intangibles (for example, motion picture film licensing rights or workforce) and rights to explore for minerals, precious metals or other natural resources are not depreciable assets (they are amortized or depleted) so they may not be the subject of a lease.

6. Although specific property, plant or equipment may be explicitly identified in an arrangement, it is not the subject of a lease if fulfillment of the arrangement is not dependent on the use of the specified property, plant or equipment. A warranty obligation that permits or requires the substitution of the same or similar property, plant or equipment when the specified property, plant, or equipment is not operating properly does not preclude lease treatment. In addition, a contractual provision (contingent or otherwise) permitting or requiring the owner/seller to substitute other property, plant or equipment for any reason on or after a specified date does not preclude lease treatment prior to the date of substitution.

7. Property, plant or equipment has been implicitly specified if, for example, the seller owns or leases only one asset with which to fulfill the obligation and it is not economically feasible or practicable for the owner/seller to perform its obligation through the use of alternative property, plant or equipment.

Right to Use Property, Plant or Equipment

8. An arrangement conveys the right to use property, plant or equipment if the arrangement conveys to the purchaser (lessee) the right to control the use of the underlying property, plant or equipment. The right to control the use of the underlying property, plant or equipment is conveyed if any one of the following conditions is met:

a. The purchaser has the ability or right to operate the property, plant or equipment or direct others to operate the property, plant or equipment in a manner it determines while obtaining or controlling more than a minor amount of the output or other utility of the property, plant or equipment,

b. The purchaser has the ability or right to control physical access to the underlying property, plant or equipment while obtaining or controlling more than a minor amount of the output or other utility of the property, plant or equipment, or

c. Facts and circumstances indicate that it is remote that one or more parties other than the purchaser will take more than a minor amount of the output or other utility that will be produced or generated by the property, plant or equipment during the term of the arrangement, and the price that the purchaser (lessee) will pay for the output is neither contractually fixed per unit of output nor equal to the current market price per unit of output as of the time of delivery of the output.

Reassessment of the Arrangement

9. The assessment of whether an arrangement contains a lease should be made at inception of the arrangement based on all of the facts and circumstances. A reassessment of whether the arrangement contains a lease after the inception of the arrangement shall be made only if (a) there is a change in the contractual terms, (b) a renewal option is exercised or an extension is agreed to by the parties to the

arrangement, (c) there is a change in the determination as to whether or not fulfillment is dependent on specified property, plant, or equipment, or (d) there is a substantial physical change to the specified property, plant, or equipment. A reassessment of an arrangement should be based on the facts and circumstances as of the date of reassessment, including the remaining term of the arrangement. Changes in estimate (for example, the estimated amount of output to be delivered to the purchaser or other potential purchasers) would not trigger a reassessment. Facts and circumstances that may affect whether to perform a reassessment may include any of the following:

a. Change in contractual terms. The arrangement should be reassessed under this guidance if the contractual arrangement among the parties involved changes, unless the change only renews or extends the arrangement.

b. Renewal or extension. A renewal or extension of the arrangement that does not include modification of any of the terms in the original arrangement prior to the end of the term of the original arrangement should be evaluated under the guidance only with respect to the renewal or extension period. The accounting for the remaining term of the original arrangement should continue without modification. The exercise of a renewal option that was included in the lease term at the inception of the arrangement would not be considered a renewal for the purpose of reevaluating the arrangement.

c. Dependency upon specific property, plant, or equipment. A change in the determination as to whether or not fulfillment is dependent on specified property, plant, or equipment requires a reassessment of the arrangement under this guidance to determine whether the arrangement contains a lease on a prospective basis.

d. Physical change to specific property, plant, or equipment. A substantial physical change to the specified property, plant, or equipment requires a reassessment of the arrangement under the guidance to determine whether the arrangement contains a lease on a prospective basis. For purposes of determining if a physical change to the specified property, plant, or equipment gives rise to a reassessment, increases or decreases in productive capacity that result from adding or subtracting a physically distinct unit of property, plant, or equipment should be ignored if fulfillment of the arrangement is dependent upon a distinct unit of property, plant, or equipment that remains unchanged.

10. When an arrangement (or a portion of an arrangement) ceases to be a lease or becomes a lease due to a modification to the arrangement or other change discussed above, the following guidance shall be applied to account for the revised categorization of the arrangement:

a. Supply arrangement to operating lease for the Purchaser/Lessee. Any recognized asset (such as a prepaid asset or a derivative) for the purchase contract is considered part of the minimum lease payments and is initially recognized as prepaid rent. Any recognized liability (such as a payable or a derivative) for the purchase contract is considered a reduction of the minimum lease payments and is initially recognized as a lease payable.

b. Supply arrangement to operating lease for the Seller/Lessor. Any recognized liability (such as a deferred revenue or derivative) for the sales contract is considered part of the minimum lease payments and is initially recognized as deferred rent. Any recognized asset (such as a receivable or derivative) for the sales contract is considered a reduction of the minimum lease payments and is initially recognized as a lease receivable provided the asset is recoverable from future receipts.

c. Operating lease to supply arrangement for the Purchaser/Lessee. Any recognized prepaid rent or rent payable is initially recognized as an asset or liability associated with the purchase contract.

d. Operating lease to supply arrangement for the Seller/Lessor. Any recognized deferred rent or rent receivable is initially recognized as a liability or an asset associated with the sales contract, subject to a recoverability test.

Multiple Element Arrangements That Contain a Lease

11. If an arrangement contains a lease and related executory costs, as well as other non-lease elements, the classification, recognition, measurement and disclosure requirements of this SSAP shall be applied by both the purchaser and the supplier to the lease element of the arrangement. Other elements of the arrangement not within the scope of this SSAP shall be accounted for in accordance with other applicable generally accepted accounting principles. For purposes of applying this SSAP, payments and other consideration called for by the arrangement shall be separated at the inception of the arrangement or upon a reassessment of the arrangement into (a) those for the lease, including the related executory costs and profits thereon, and (b) those for other services on a relative fair value basis.

Accounting and Reporting by Lessees

12. All leases shall be considered operating leases. Rent on an operating lease shall be charged to expense over the lease term as it becomes payable, except as provided in paragraphs 13 and 14.

13. As discussed in *FASB Technical Bulletin 85-3, Accounting for Operating Leases with Scheduled Rent Increases,* the effects of scheduled rent increases normally shall be recognized on a straight-line basis over the lease term.

14. Lease agreements may also include incentives for the lessee to sign the lease, such as an up-front cash payment to the lessee, payment of costs for the lessee (such as moving expenses), or the assumption by the lessor of the lessee's preexisting lease. As discussed in *FASB Technical Bulletin 88-1, Issues Relating to Accounting for Leases: Time Pattern of the Physical Use of the Property in an Operating Lease; Lease Incentives in an Operating Lease; Applicability of Leveraged Lease Accounting to Existing Assets of the Lessor; Money-Over-Money Lease Transactions; Wrap Lease Transactions,* incentives paid to or payments made on behalf of the lessee shall be considered reductions of minimum lease payments (i.e., the payments that the lessee is obligated to make or can be required to make in connection with the leased properties.) These incentives shall be recognized over the lease term on a straight-line basis unless the use of another systematic and rational allocation basis is more representative of the time pattern in which the leased property is physically employed. The lessee's immediate recognition of expenses or losses (e.g., moving costs, losses on subleases, write-offs of leasehold improvements) shall not be changed by this guidance.

15. For the early termination or non-use of leased property benefits, the lessee shall recognize liabilities, initially measured at fair value, as follows:

a. Liabilities for costs to terminate a contract before the end of its term shall be recognized when the entity terminates the contract in accordance with the contract terms (i.e., gives written notice of termination or negotiated termination with the lessor).

b. Liabilities for costs that will continue to be incurred under a contract for its remaining term without economic benefit shall be recognized as the cease-date (the date the entity ceases using the right conveyed by the contract – i.e., the right to use a leased property). The fair value of the liability at the cease-use date shall be determined based on the remaining lease rentals, adjusted for the effects of any prepaid or deferred items recognized under the lease, and reduced by estimated sublease rentals that could be reasonably obtained for the property, even if the entity does not intend to enter into a sublease. Remaining lease rentals shall not be reduced to an amount less than zero.

Maintenance Costs Incurred by Lessee

16. Maintenance costs incurred by the lessee for maintenance on the leased item that do not increase the value and enhance the usefulness of the leased asset shall be expensed when incurred pursuant to *SSAP No. 19—Furniture, Fixtures, and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements* (SSAP No. 19). Reimbursable deposits shall be reflected as nonadmitted assets. Deposits paid to the lessor, reimbursable when the lessee incurs costs for lease maintenance activities, shall be recorded as nonadmitted assets. When the amount on deposit is less than probable of being returned, the deposit shall be recognized as an additional lease expense.

Accounting for Contingent Rent for Lessees

17. A lessee should recognize contingent rental expense (in annual periods as well as in interim periods) prior to the achievement of the specified target that triggers the contingent rental expense, provided that achievement of that target is considered probable. Previously recorded rental expense should be reversed into income at such time that it is probable that the specified target will not be met.

Accounting and Reporting by Lessors

18. All leases, except leveraged leases as defined in paragraph 34, shall be considered operating leases and accounted for by the lessor as follows:

a. The leased property shall be included in the same balance sheet category it would be had the property not been leased. The property shall be depreciated following the lessor's normal depreciation policies for such assets;

b. Rental income shall be reported as investment income as it becomes receivable according to the provisions of the lease. However, as discussed in paragraphs 13 and 14 of this statement, rentals may be recognized before they become due, if rentals vary from the straight-line basis. The guidance in *SSAP No. 34—Investment Income Due and Accrued* shall be applied to the receivable balance; and

c. Initial direct costs shall be charged to expense when incurred and shall not be deferred and allocated over the lease term. Initial direct costs are those incremental costs that the lessor has incurred in directly evaluating, negotiating, administering, and closing a lease transaction.

19. The sale of property subject to an operating lease, or of property that is leased by or intended to be leased by the third-party purchaser to another party, shall not be treated as a sale if the seller or any party related to the seller (related party is defined in *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25)) retains substantial risks of ownership in the leased property.

Accounting for Contingent Rent for Lessors

20. Contingent rental income shall be recognized as revenue when the changes in the factor(s) on which the contingent lease payments is (are) based actually occur.

Sale-Leaseback Transactions

21. Sale-leaseback transactions involve the sale of property by the owner and a lease of the property back to the seller. Sale-leaseback accounting is a method of accounting in which the seller-lessee records the sale, removes all property and related liabilities from its balance sheet.

22. A sale of property that is accompanied by a leaseback of all or any part of the property for all or part of its remaining economic life shall be accounted for by the buyer-lessor and seller-lessee as a purchase and operating lease and a sale and an operating lease, respectively, unless the sale-leaseback includes sale of nonadmitted assets to a related party.

23. When applying sale-leaseback accounting, the sale and gains and losses thereon, shall be recognized in accordance with paragraphs 2 and 3 of *FASB Statement No. 28, Accounting for Sales with Leasebacks* (refer to Appendix A, paragraphs 46-49), except for sale-leaseback transactions involving real estate that are settled entirely in cash.

24. A sale of real estate, settled entirely in cash, that is accompanied by a leaseback of all or any part of the property for all or part of its remaining economic life shall be accounted for by the buyer-lessor and seller-lessee as a purchase and operating lease and a sale and an operating lease, respectively. The sale and gain or loss shall be recognized directly to special surplus funds and subsequently amortized to unassigned funds (surplus) over the lease term.

25. If the transaction involves a sale of nonadmitted assets to a related party, the transaction shall be accounted for by the deposit method (refer to Appendix A, paragraphs 42 and 43).

26. Paragraphs 26-33 present the additional standards of statutory accounting by a seller-lessee for sale-leaseback transactions regarding the lease term and sale-leaseback transactions involving real estate, including real estate with equipment, such as office buildings with furniture and fixtures. A sale-leaseback transaction involving real estate with equipment includes any sale-leaseback transaction in which the equipment and the real estate are sold and leased back as a package, irrespective of the relative value of the equipment and the real estate. Those paragraphs also address sale-leaseback transactions in which the seller-lessee sells property improvements or integral equipment[2] to a buyer-lessor and leases them back while retaining the underlying land.[3]

27. Sale-leaseback accounting shall be used by a seller-lessee only if a sale-leaseback transaction includes all of the following:

a. A normal leaseback as described in paragraph 28.

b. Payment terms and provisions that adequately demonstrate the buyer-lessor's initial and continuing investment in the property (refer to Appendix A, paragraphs 50-58).

[2] The terms *property improvements* or *integral equipment* as used in paragraphs 26-33 of this section refer to any physical structure or equipment attached to the real estate, or other parts thereof, that cannot be removed and used separately without incurring significant cost.

[3] Paragraphs 38 and 39 of FAS 66 address transactions in which the seller sells property improvements to a buyer and leases the underlying land to the buyer of the improvements. Under certain circumstances, paragraph 38 of FAS 66 precludes sales recognition for such transactions and requires that they be accounted for as leases of both the land and improvements. Paragraphs 26-33 of this section are not intended to modify paragraph 38 of FAS 66; thus, they do not address a sale-leaseback transaction that does not qualify for sales recognition under the provisions of paragraph 38 of FAS 66. However, those paragraphs do address a sale-leaseback transaction that qualifies for sales recognition under the provisions of paragraph 39 of FAS 66.

c. Payment terms and provisions that transfer all of the other risks and rewards of ownership as demonstrated by the absence of any other continuing involvement by the seller-lessee described in paragraphs 31-33 of this section and paragraphs 25-39 and 41-43 of FAS 66.

d. Admitted assets, if the buyer-lessor is a related party, or either admitted or nonadmitted assets if the buyer-lessor is not a related party. For purposes of this paragraph, related parties include those identified in SSAP No. 25 and entities created for the purpose of buying and leasing nonadmitted assets for the reporting entity and/or its affiliates.

28. A normal leaseback is a lessee-lessor relationship that involves the active use of the property by the seller-lessee in consideration for payment of rent, including contingent rentals that are based on the future operations of the seller-lessee,[4] and excludes other continuing involvement provisions or conditions described in paragraphs 31-33 of this section. The phrase active use of the property by the seller-lessee refers to the use of the property during the lease term in the seller-lessee's trade or business, provided that subleasing of the leased back property is minor.[5] If the present value of a reasonable amount of rental for that portion of the leaseback that is subleased is not more than 10 percent of the fair value of the asset sold, the leased back property under sublease is considered minor. Active use of the property may involve the providing of services where the occupancy of the property is generally transient or short-term and is integral to the ancillary services being provided. Those ancillary services include, but are not limited to, housekeeping, inventory control, entertainment, bookkeeping, and food services. Thus, the use of property by a seller-lessee engaged in the hotel or bonded warehouse business or the operation of a golf course or a parking lot, for example, is considered active use.

29. Terms of the sale-leaseback transaction that are substantially different from terms that an independent third-party lessor or lessee would accept represent an exchange of some stated or unstated rights or privileges. Those rights or privileges shall be considered in evaluating the continuing involvement provisions in paragraphs 31-33 of this section. Those terms or conditions include, but are not limited to, the sales price, the interest rate, and other terms of any loan from the seller-lessee to the buyer-lessor. The fair value of the property used in making that evaluation shall be based on objective evidence, for example, an independent third-party appraisal or recent sales of comparable property.

Continuing Involvement

30. A sale-leaseback transaction that does not qualify for sale-leaseback accounting because of any form of continuing involvement by the seller-lessee other than a normal leaseback shall be accounted for by the deposit method or as a financing (refer to Appendix A, paragraphs 42 and 45), whichever is appropriate under FAS 66. If the criteria of paragraph 27.d. is not met, the sale-leaseback shall be accounted for by the deposit method under FAS 66. The provisions or conditions described in paragraphs 31-33 of this section are examples of continuing involvement for the purpose of applying paragraphs 26-33.

31. Paragraphs 25-39 and 41-43 of FAS 66 describe forms of continuing involvement by the seller-lessee with the leased property that result in the seller-lessee not transferring the risks or rewards of

[4] Paragraphs 26-33 distinguish between contingent rentals that are based on the future operations of the seller-lessee and those that are based on some predetermined or determinable level of future operations of the buyer-lessor. The latter type of contingent rental is addressed in paragraph 32.e.

[5] The term *minor* is used here in the context of the underlying the classification criteria of this section. In that context, a test based on a 90 percent recovery test could be used as a guideline; that is, if the present value of a reasonable amount of rental for the leaseback represents 10 percent or less of the fair value of the asset sold, the seller-lessee could be presumed to have transferred to the [buyer-lessor] the right to substantially all of the remaining use of the property sold, and the seller-lessee could be presumed to have retained only a minor portion of such use.

ownership to the buyer-lessor. Two examples of continuing involvement specified in those paragraphs that are frequently found in sale-leaseback transactions are provisions or conditions in which:

a. The seller-lessee has an obligation or an option[6] to repurchase the property or the buyer-lessor can compel the seller-lessee to repurchase the property.

b. The seller-lessee guarantees the buyer-lessor's investment or a return on that investment for a limited or extended period of time.

32. Other provisions or conditions that are guarantees and that do not transfer all of the risks of ownership shall constitute continuing involvement for the purpose of applying paragraphs 26-33 to sale-leaseback transactions and include, but are not limited to, the following:

a. The seller-lessee is required to pay the buyer-lessor at the end of the lease term for a decline in the fair value of the property below the estimated residual value on some basis other than excess wear and tear of the property levied on inspection of the property at the termination of the lease.

b. The seller-lessee provides nonrecourse financing to the buyer-lessor for any portion of the sales proceeds or provides recourse financing in which the only recourse is to the leased asset.

c. The seller-lessee is not relieved of the obligation under any existing debt related to the property.

d. The seller-lessee provides collateral on behalf of the buyer-lessor other than the property directly involved in the sale-leaseback transaction, the seller-lessee or a related party to the seller-lessee guarantees the buyer-lessor's debt, or a related party to the seller-lessee guarantees a return of or on the buyer-lessor's investment.

e. The seller-lessee's rental payment is contingent on some predetermined or determinable level of future operations of the buyer-lessor.[7]

33. The following provisions or conditions also shall be considered examples of continuing involvement for the purpose of applying paragraphs 26-33 to sale-leaseback transactions:

a. The seller-lessee enters into a sale-leaseback transaction involving property improvements or integral equipment[8] without leasing the underlying land to the buyer-lessor. [9]

[6] A right of first refusal based on a bona fide offer by a third party ordinarily is not an obligation or an option to repurchase. An agreement that allows the seller-lessee to repurchase the asset in the event no third-party offer is made is an option to repurchase.

[7] Paragraphs 26-33 distinguish between contingent rentals that are based on the future operations of the seller-lessee and those that are based on some predetermined or determinable level of future operations of the buyer-lessor.

[8] The terms *property improvements* or *integral equipment* as used in paragraphs 26-33 of this section refer to any physical structure or equipment attached to the real estate, or other parts thereof, that cannot be removed and used separately without incurring significant cost.

[9] Paragraphs 38 and 39 of FAS 66 address transactions in which the seller sells property improvements to a buyer and leases the underlying land to the buyer of the improvements. Under certain circumstances, paragraph 38 of FAS 66 precludes sales recognition for such transactions and requires that they be accounted for as leases of both the land and improvements. Paragraphs 26-33 of this section are not intended to modify paragraph 38 of FAS 66; thus, they do not address a sale-leaseback transaction that does not qualify for sales recognition under the provisions of paragraph 38 of FAS 66. However, those paragraphs do address a sale-leaseback transaction that qualifies for sales recognition under the provisions of paragraph 39 of FAS 66.

b. The buyer-lessor is obligated to share with the seller-lessee any portion of the appreciation of the property.

c. Any other provision or circumstance that allows the seller-lessee to participate in any future profits of the buyer-lessor or the appreciation of the leased property, for example, a situation in which the seller-lessee owns or has an option to acquire any interest in the buyer-lessor.

Leveraged Leases for Lessors

34. Generally, leveraged leases are those in which the lessor acquires, through the incurrence of debt (such that the lessor is substantially "leveraged" in the transaction), property, plant or equipment with the intentions to lease the asset(s) to the lessee. Leveraged leases are defined as those leases that meet the criteria set forth in paragraph 42.a.-d. (and the related paragraphs to which 42 refers) of *FASB Statement No. 13, Accounting* for *Leases* (FAS 13). Leases which meet the preceding definition shall be accounted for in accordance with paragraphs 43-47 (and the related paragraphs to which 43-47 refer) of FAS 13. Pursuant to paragraph 46 of FAS 13, as updated by FSP FAS 13, any estimated residual value and all other important assumptions affecting estimated total net income shall be reviewed at least annually. The projected timing of income tax cash flows generated by the lease is an important assumption and shall be reviewed annually, or more frequently, if events or changes in circumstances indicate that a change in timing has occurred or is projected to occur. The lessor shall record its investment net of the nonrecourse debt. In cases where the asset being leased is a nonadmitted asset, any net leveraged lease asset shall be nonadmitted. However, leveraged leases involving commercial airplanes are admitted assets.

Related-Party Leases

35. This statement applies to arms-length transactions. To the extent that leases between related parties are, in substance, arms-length transactions the guidance in this statement shall be applied. The determination of whether related party leases qualify as arms-length transactions is addressed in SSAP No. 25.

Disclosures

36. The following disclosures shall be made in the financial statements of lessees:

a. A general description of the lessee's leasing arrangements including, but not limited to, the following:

i. Rental expense for each period for which an income statement is presented, with separate amounts for minimum rentals, contingent rentals, and sublease rentals. Rental payments under leases with terms of a month or less that were not renewed need not be included;

ii. The basis on which contingent rental payments are determined;

iii. The existence and terms of renewal or purchase options and escalation clauses; and

iv. Restrictions imposed by lease agreements, such as those concerning dividends, additional debt, and further leasing.

v. Identification of lease agreements that have been terminated early or for which the lessee is no longer using the leased property benefits, and the liability recognized in the financial statements under these agreements.

b. For leases having initial or remaining noncancelable lease terms in excess of one year:

i. Future minimum rental payments required as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding years; and

ii. The total of minimum rentals to be received in the future under noncancelable subleases as of the date of the latest balance sheet presented.

c. For sale-leaseback transactions:

i. A description of the terms of the sale-leaseback transaction, including future commitments, obligations, provisions, or circumstances that require or result in the seller-lessee's continuing involvement; and

ii. For those accounted for as deposits, (a) the obligation for future minimum lease payments as of the date of the latest balance sheet presented in the aggregate and for each of the five succeeding years and (b) the total of minimum sublease rentals, if any, to be received in the future under noncancelable subleases in the aggregate and for each of the five succeeding years.

37. When leasing is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the following information with respect to leases shall be disclosed in the financial statements:

a. For operating leases:

i. The cost and carrying amount, if different, of property on lease or held for leasing by major classes of property according to nature or function, and the amount of accumulated depreciation in total as of the date of the latest balance sheet presented;

ii. Minimum future rentals on noncancelable leases as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding years;

iii. Total contingent rentals included in income for each period for which an income statement is presented; and

iv. A general description of the lessor's leasing arrangements.

b. For leveraged leases:

i. A description of the terms including the pretax income from the leveraged leases. For purposes of presenting the investment in a leveraged lease in the lessor's balance sheet, the amount of related deferred taxes shall be presented separately (from the remainder of the net investment);

ii. Separate presentation (from each other) shall be made of pretax income from the leveraged lease, the tax effect of pretax income, and the amount of investment tax credit recognized as income during the period; and

iii. When leveraged leasing is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the components of the net investment balance in leveraged leases shall be disclosed.

38. Companies shall disclose the effect on the balance sheet and the income statement resulting from a change in lease classification under paragraph 3, for leases that at inception would have been classified differently had the guidance in paragraph 3 been in effect at the inception of the original lease.

39. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

40. This statement rejects FAS 13*,* as amended and interpreted, except for certain of the guidance on operating leases, sale-leaseback transactions and leveraged leases (i.e., paragraphs 15, 16.(b., c., d.), 19.(a., b.), 23.(b., c.), 36, 37, 39.c. and, 42-47). A complete list of all FASB Statements, Interpretations and Technical Bulletins adopted and rejected in this statement is as follows:

a. Accounting Standards Codification (ASC) 420-10-25 paragraphs 11-13 and ASC 420-10-30 paragraph 8 regarding the recognition of costs to terminate an operating lease before the end of the term and costs that will continue to be incurred under the contract for its remaining term without economic benefit are adopted. Other provisions of ASC 420 are rejected in SSAP No. 24.

Effective Date and Transition

41. This statement is effective for years beginning January 1, 2001. The provisions of this statement shall be applied to all new leases entered into, or for existing leases which are renewed, on or after January 1, 2001. The guidance in paragraph 3 was originally contained within *INT 02-15: EITF 00-11: Lessors' Evaluation of Whether Leases of Certain Integral Equipment Meet the Ownership Transfer Requirements of FASB Statement 13* and should be applied to (a) leases for which lease inception occurs after January 1, 2003, and (b) leases modified after January 1, 2003, that meet the criteria in paragraph 9 of FAS 13 to be considered as new agreements. The guidance in paragraphs 4-11 was originally contained within *INT 04-20: EITF 01-8: Determining Whether an Arrangement Contains a Lease* and was effective March 13, 2005. Guidance in paragraph 16 related to maintenance costs incurred by lessee was previously

included within *INT 09-05: EITF 08-3: Accounting by Lessees for Maintenance Deposits* and was effective for periods beginning September 21, 2009. The guidance in paragraphs 17 and 18 was originally contained within *INT 00-27: EITF 98-9: Accounting for Contingent Rent* and was effective September 11, 2000. The guidance in paragraph 34 regarding commercial airplanes was originally contained within *INT 00-02: Accounting for Leveraged Leases Involving Commercial Airplanes Under SSAP No. 22—Leases* and was effective March 13, 2000.

APPENDIX A – APPLICATIONS OF THE STANDARDS TO SPECIFIC ASPECTS OF ACCOUNTING FOR SALE-LEASEBACK TRANSACTIONS

Deposit Method

42. Paragraphs 25 and 30 of this statement describe certain circumstances in which it is appropriate to account for a transaction using the deposit method. If a sale-leaseback transaction is accounted for by the deposit method, lease payments decrease and collections on the buyer-lessor's note, if any, increase the seller-lessee's deposit account. The property and any related debt continue to be included in the seller-lessee's balance sheet, and the seller-lessee continues to depreciate the property. Under the provisions of paragraph 21 of FAS 66, a seller-lessee that is accounting for any transaction by the deposit method shall recognize a loss if at any time the net carrying amount of the property exceeds the sum of the balance in the deposit account, the fair value of the unrecorded note receivable, and any debt assumed by the buyer.

43. If a sale-leaseback transaction accounted for by the deposit method subsequently qualifies for sales recognition under this statement and SSAP No. 40R, the transaction is accounted for using sale-leaseback accounting, and the gain or loss is recognized in accordance with the provisions of paragraph 46 of this statement. In addition, the leaseback is classified and accounted for in accordance with this statement as if the sale had been recognized at the inception of the lease. The change in the related lease accounts that would have been recorded from the inception of the lease had the transaction initially qualified for sale-leaseback accounting is included in computing the gain or loss recognized in accordance with paragraph 46 of this statement.

Financing Method

44. Paragraphs 31-33 describe some common forms of continuing involvement with the property by the seller that preclude a sale-leaseback transaction from sale-leaseback accounting. Depending on the nature and duration of the continuing involvement with the property, those provisions may require a sale-leaseback transaction to be accounted for as a financing. If a sale-leaseback transaction is reported as a financing, lease payments, exclusive of an interest portion, decrease and collections on the buyer-lessor's note increase the seller-lessee's liability account with a portion of the lease payments being recognized under the interest method. The seller-lessee reports the sales proceeds as a liability, continues to report the real estate or the real estate and equipment as an asset, and continues to depreciate the property.

45. If a sale-leaseback transaction accounted for as a financing subsequently qualifies for sales recognition under this statement and SSAP No. 40R, the transaction is then recorded using sale-leaseback accounting, and the cumulative change in the related balance sheet accounts is included in the computation of the gain recognized in accordance with the provisions of paragraph 46 of this statement. In addition, the leaseback is classified and accounted for as an operating lease as if the sale had been recognized at the inception of the lease. The change in the related lease accounts from the inception of the lease to the date the sale is recognized is included in the gain recognized in accordance with paragraph 46 of this statement.

Sale-Leaseback Transactions

46. A sale-leaseback transaction that qualifies for sales recognition under the provisions of this statement is accounted for using sale-leaseback accounting by the seller-lessee. The proper approach is first to determine the gain that would be recognized under SSAP No. 40R as if the transaction were a sale without a leaseback and then to allocate that gain as provided by this statement over the remaining lease term. The gain to be deferred and amortized in proportion to the leaseback is the gain that would otherwise be recognized in that year under the provisions of SSAP No. 40R, except for the amount that can be currently recognized[9]. The total gain is recognized immediately if the leaseback is considered minor under the context of paragraph 48.a. of this statement. The gain to be recognized currently under

paragraph 48.b. of this statement is the amount of gain in excess of the present value of the minimum lease payments if the leaseback is classified as an operating lease.

47. Sale-leaseback transactions involve the sale of property by the owner and a lease of the property back to the seller. A sale of property that is accompanied by a leaseback of all or any part of the property for all or part of its remaining economic life shall be accounted for by the seller-lessee in accordance with the provisions of paragraph 48 and shall be accounted for by the purchaser-lessor in accordance with the provisions of paragraph 49.

48. Any profit or loss on the sale[10] shall be deferred and amortized in proportion to the related gross rental charged to expense over the lease term unless:

a. The seller-lessee relinquishes the right to substantially all of the remaining use of the property sold (retaining only a minor portion of such use)[10], in which case the sale and the leaseback shall be accounted for as separate transactions based on their respective terms. However, if the amount of rentals called for by the lease is unreasonable under market conditions at the inception of the lease, an appropriate amount shall be deferred or accrued, by adjusting the profit or loss on the sale, and amortized as specified in the introduction of this paragraph to adjust those rentals to a reasonable amount.

b. The seller-lessee retains more than a minor part but less than substantially all of the use of the property through the leaseback and realizes a profit on the sale[9] in excess of the present value of the minimum lease payments over the lease term because the leaseback is classified as an operating lease. In that case, the profit on the sale in excess of either the present value of the minimum lease payments or the recorded amount of the leased asset, whichever is appropriate, shall be recognized at the date of the sale. For purposes of applying this provision, the present value of the minimum lease payments for an operating lease shall be computed using the interest rate that would be used to apply the 90 percent recovery criterion[10].

c. The fair value of the property at the time of the transaction is less than its undepreciated cost, in which case a loss shall be recognized immediately up to the amount of the difference between undepreciated cost and fair value.

49. The purchaser-lessor shall record the transaction as a purchase and an operating lease.

Initial and Continuing Investment in Real Estate

50. Adequacy of a buyer's initial investment shall be measured by (a) its composition (paragraphs 51-52 and (b) its size compared with the sales value of the property (paragraph 53).

51. The buyer's initial investment shall include only: (a) cash paid as a down payment, (b) the buyer's notes supported by irrevocable letters of credit from institutions that are listed by the Securities

[9] "Profit or loss on the sale" is used in this paragraph to refer to the profit or loss that would be recognized on the sale if there were no leaseback. For example, on a sale of real estate subject to the *SSAP No.—40 Real Estate Investments* (SSAP No. 40R) the profit on the sale to be deferred and amortized in proportion to the leaseback would be the profit that could otherwise be recognized in accordance with SSAP No. 40R.

[10] "Substantially all" and "minor" are used here in the context of the concepts underlying the classification criteria of FASB Statement No. 13. In that context, a test based on the 90 percent recovery criterion of Statement No. 13 could be used as a guideline; that is, if the present value of a reasonable amount of rental for the leaseback represents 10 percent or less of the fair value of the asset sold, the seller-lessee could be presumed to have transferred to the purchaser-lessor the right to substantially all of the remaining use of the property sold, and the seller-lessee could be presumed to have retained only a minor portion of such use.

Valuation Office of the National Association of Insurance Commissioners as meeting credit standards, (c) payments by the buyer to third parties to reduce existing indebtedness on the property, and (d) other amounts paid by the buyer that are part of the sales value. Other consideration received by the seller, including other notes of the buyer, shall be included as part of the buyer's initial investment only when that consideration is sold or otherwise converted to cash without recourse to the seller.

52. The initial investment shall not include:

a. Payments by the buyer to third parties for improvements to the property

b. A permanent loan commitment by an independent third party to replace a loan made by the seller

c. Any funds that have been or will be loaned, refunded, or directly or indirectly provided to the buyer by the seller or loans guaranteed or collateralized by the seller for the buyer.

53. The buyer's initial investment shall be adequate to demonstrate the buyer's commitment to pay for the property and shall indicate a reasonable likelihood that the seller will collect the receivable. Lending practices of independent established lending institutions provide a reasonable basis for assessing the collectibility of receivables from buyers of real estate. Therefore, to qualify, the initial investment shall be equal to at least a major part of the difference between usual loan limits and the sales value of the property.

54. The buyer's continuing investment in a real estate transaction shall not qualify unless the buyer is contractually required to pay each year on its total debt for the purchase price of the property an amount at least equal to the level annual payment that would be needed to pay that debt and interest on the unpaid balance over no more than (a) 20 years for debt for land and (b) the customary amortization term of a first mortgage loan by an independent established lending institution for other real estate. For this purpose, contractually required payments by the buyer on its debt shall be in the forms specified in paragraph 51 as acceptable for an initial investment. Except as indicated in the following sentence, funds to be provided directly or indirectly by the seller (paragraph 52.c.) shall be subtracted from the buyer's contractually required payments in determining whether the initial and continuing investments are adequate. If a future loan on normal terms from an established lending institution bears a fair market interest rate and the proceeds of the loan are conditional on use for specified development of or construction on the property, the loan need not be subtracted in determining the buyer's investment.

Release Provisions

55. An agreement to sell property (usually land) may provide that part or all of the property may be released from liens securing related debt by payment of a release price or that payments by the buyer may be assigned first to released property. If either of those conditions is present, a buyer's initial investment shall be sufficient both to pay release prices on property released at the date of sale and to constitute an adequate initial investment on property not released or not subject to release at that time in order to meet the criterion of an adequate initial investment for the property as a whole.

56. If the release conditions described in paragraph 55 are present, the buyer's investment shall be sufficient, after the released property is paid for, to constitute an adequate continuing investment on property not released in order to meet the criterion of an adequate continuing investment for the property as a whole (paragraph 54).

57. If the amounts applied to unreleased portions do not meet the initial and continuing-investment criteria as applied to the sales value of those unreleased portions, profit shall be recognized on each released portion when it meets the criteria in SSAP No. 40R, paragraph ~~18~~19 as if each release were a separate sale.

58. Tests of adequacy of a buyer's initial and continuing investments described in paragraphs 31-33 shall be applied cumulatively when the sale is consummated and annually afterward. If the initial investment exceeds the minimum prescribed, the excess shall be applied toward the required annual increases in the buyer's investment.

Foreign Currency Transactions and Translations

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for accounting for foreign currency transactions and translations.

SUMMARY CONCLUSION

2. A foreign currency transaction is a transaction denominated in a currency other than the reporting entity's functional currency. The reporting entity's functional currency is defined as the currency of the primary economic environment in which the reporting entity operates. Foreign currency translation is the translation of financial statements, denominated in the reporting entity's functional currency, into U.S. dollars prior to their incorporation into financial statements through consolidation or the equity method of accounting.

3. For the purposes of this statement, a U.S. domiciled reporting entity's reporting currency shall be defined as the U.S. dollar, regardless of the primary economic environment in which the reporting entity operates. In order to ensure consistency, all elements of statutory financial statements shall be reported in U.S. dollars.

4. Each foreign currency transaction shall be examined and a determination made if the foreign currency transaction was made in support of insurance operations denominated in the same foreign currency. For example, some reporting entities engage in insurance operations in foreign countries with the premiums collected and claims paid in local currency. As in any insurance operation there will at times be uncollected premiums, policy reserves, unpaid claims, and other incomplete transactions that must be recorded in the reporting entity's balance sheet. Premiums, reserves, and claims normally are recorded in U.S. dollars at the rate of exchange that is in effect at the time the policy is written, or when the claim is incurred. Changes in exchange rates, while not affecting the foreign policyholder, do affect the value of the foreign business as it is recorded in U.S. dollars.

5. Foreign currency transactions made in support of insurance operations denominated in the same foreign currency, such as foreign branches, shall be accounted for as follows:

a. Canadian Insurance Operations—Canadian insurance operations, resulting in less than 10% of the reporting entity's admitted assets, less than 10% of the reporting entity's liabilities and less than 10% of the reporting entity's net premium, can be translated to U.S. dollars by making an adjustment to the net assets of the foreign operation. The adjustment is calculated by summarizing the assets and liabilities in the foreign currency and in U.S. dollars. The net value is converted to U.S. dollars at the current rate of exchange and compared with the net value in U.S. dollars recorded by the reporting entity. Any difference in the net value to current exchange rates is recorded as a separate asset or liability and the change in the foreign exchange adjustment is recorded as an unrealized capital gain or loss;

b. All Other Foreign Insurance Operations—All other foreign insurance operations must be translated to U.S. dollars as follows: each financial statement line shall be translated to U.S. dollars by applying the following exchange rates: (i) for assets and liabilities, the exchange rate at the balance sheet date shall be used and (ii) for revenues, expenses, gains, losses and surplus adjustments, the exchange rate at the dates on which those elements are recognized shall be used. Because translation at the exchange rates at the dates the numerous revenues, expenses, gains, losses and surplus adjustments are recognized is generally impractical, an appropriately weighted average exchange rate for the period may be used to translate those elements. Gains or losses due to translating foreign operations to U.S. dollars shall be recorded as unrealized capital gains or losses.

6. All other foreign currency transactions shall be accounted for as follows:

a. Assets and liabilities denominated in foreign currencies shall be accounted for at their U.S. dollar equivalent values using exchange rates at the balance sheet date. Income and expenses recognized during an accounting period shall be recorded at an appropriately weighted average exchange rate;

b. Changes in balance sheet asset and liability values due to fluctuations in foreign currency exchange rates shall be recorded as unrealized capital gains and losses until the asset is sold or exchanged or the liability is settled. Upon settlement, previously recorded unrealized capital gains and losses shall be reversed and the foreign exchange profit or loss for the entire holding period shall be recorded as a realized capital gain or loss;

c. Transactions involving settlement in cash, such as purchases, payment of expenses, sales, and receipt of income, shall be recorded at their U.S. dollar equivalent value based on the foreign currency exchange rate as of the transaction date. Any foreign currency exchange gains or losses on purchases, payment of expenses, sales, maturities or changes in income or expense accruals shall be recorded as a capital gain or loss realized on the purchase, sale or maturity.

7. Nominal information such as par value of investments may be expressed in the foreign currency or U.S. dollar equivalent (description of issue), but where the information is displayed comparatively (column of par values), U.S. dollar equivalent amount shall be used. The U.S. dollar equivalent amount is translated utilizing the exchange rate at the balance sheet date. Ratios and factors shall be based on data that is entirely consistent with respect to currency.

8. A currency in a highly inflationary environment (one that has cumulative inflation of approximately 100% or more over a three year period) is not considered stable enough to serve as a functional currency and the more stable currency of the reporting parent is to be used instead. If a reporting entity's books of record are not maintained in its functional currency, remeasurement into the functional currency is required. That remeasurement is required before translation into the reporting currency. The remeasurement process is intended to produce the same result as if the reporting entity's books of record had been maintained in the functional currency. The remeasurement of and subsequent accounting for transactions denominated in a currency other than the functional currency shall be recognized as a realized gain or loss in the statement of operations.

Discontinued Operations and Extraordinary Items

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles related to the accounting and reporting for the effects of the disposal of a segment of a business and extraordinary items.

SUMMARY CONCLUSION

Definitions

2. The following definitions shall apply:

a. "Discontinued operations" shall be defined as the operations of a segment of a business that has been sold, abandoned, spun off (INT 08-05), or otherwise disposed of or, although still operating, is the subject of a formal plan for disposal;

b. A "segment" of a business shall be defined as a component of an entity, likely in the form of a subsidiary, whose activities represent a separate major type of business or class of customer. The assets, results of operations, and activities of a segment must be clearly distinguished, physically and operationally and for financial reporting purposes, from the other assets, results of operations, and activities of the entity. The fact that the results of operations of the segment being sold or abandoned cannot be separately identified strongly suggests that the transaction should not be classified as the disposal of a segment of the business. The disposal of a segment of a business shall be distinguished from other disposals of assets incident to the evolution of the entity's business, such as the disposal of a line of business or the shifting of marketing activities from one location to another;

c. "Measurement date" shall be defined as the date on which management having authority to approve the action commits itself to a formal plan to dispose of a segment of the business, whether by sale or abandonment. The plan, at a minimum, should include identification of the major assets to be disposed of, the expected method of disposal, the period expected to be required for completion of the disposal, an active program to find a buyer if disposal is to be by sale, the estimated results of operations of the segment from the measurement date to the disposal date (defined below), and the estimated proceeds or salvage to be realized by disposal;

d. "Disposal date" shall be defined as the date of closing the sale if the disposal is by sale or the date that operations cease if the disposal is by abandonment;

e. "Extraordinary items" shall be defined as those events or transactions which meet both of the following criteria:

i. Unusual nature—the underlying event or transaction possesses a high degree of abnormality and is clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the reporting entity, taking into account the environment in which the reporting entity operates; and

ii. Infrequency of occurrence—the underlying event or transaction would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the reporting entity operates.

Discontinued Operations

3. If a loss is expected from the proposed sale or abandonment of a segment of business, the estimated loss shall be accrued at the measurement date, as defined in paragraph 2. If a gain is expected, it shall be recognized when realized, which ordinarily is the disposal date. This accounting is consistent with the accounting provided for in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*.

4. The determination of whether a gain or loss results from the disposal shall be made at the measurement date based on estimates at that date of the net realizable value of the segment after giving consideration to any estimated costs and expenses directly associated with the disposal and, if a plan of disposal is to be carried out over a period of time and contemplates continuing operations during that period, to any estimated income or losses from operations. If it is expected that net losses from operations will be incurred between the measurement date and the expected disposal date, the computation of the gain or loss on disposal shall also include an estimate of such amounts. If it is expected that net income will be generated from operations during that period the computation shall include the estimated net income, limited however to the amount of any loss otherwise recognizable for the disposal, with any remainder accounted for when realized. Any changes in the original estimate shall be accounted for in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

5. The results of a reporting entity's discontinued operations shall be reported consistently with the entity's reporting of continuing operations (i.e., no separate line item presentation in the balance sheet or statement of operations aggregating current and future losses from the measurement date).

6. Additionally, the financial statements for the period encompassing the measurement date and the year subsequent shall contain the following:

a. The identity of the segment of business that has been or will be discontinued;

b. The expected disposal date, if known (see definition in paragraph 2);

c. The expected manner of disposal;

d. A description of the remaining assets and liabilities of the segment at the balance sheet date; and

e. The amounts related to the discontinued operations and the effect on the financial statements, including the balance sheet and income statement line items which have been affected.

7. If material revisions are made to the estimates of the cost to dispose of a segment in years subsequent to the disclosure required in paragraph 6, the nature and the effect of the revisions to the estimates shall be disclosed for the period in which the revision was made including the effect on income or loss from operations and the effect on the carrying amount of the remaining assets and liabilities of the segment at the balance sheet date. Examples of circumstances in which those types of adjustments may arise include the following:

a. The resolution of contingencies that arise pursuant to the terms of the disposal transaction, such as the resolution of purchase price contingencies and indemnification issues with the purchaser.

b. The resolution of contingencies that arise from and are directly related to the operation of the component prior to its disposal, such as environmental and product warranty obligations retained by the seller.

c. The settlement of employee benefit plan obligations (pension, postemployment benefits other than pensions, and other postemployment benefits), provided that the settlement is directly related to the disposal transaction[1].

Extraordinary Items

8. Extraordinary items, as defined in paragraph 2, shall be reported consistently with the reporting entity's reporting of continuing operations (i.e., no separate line item presentation in the balance sheet or statement of operations). Such items shall not be charged directly to surplus unless specifically addressed elsewhere within the *Accounting Practices and Procedures Manual*.

9. The nature of an extraordinary event or transaction and the principal items entering into the determination of an extraordinary gain or loss shall be disclosed in the financial statements. This disclosure shall include the line items, which have been affected by the estimate of the extraordinary item.

10. Material events or transactions that are either unusual or occur infrequently, but not both, are not considered extraordinary items. However, such material events or transactions shall be disclosed in the financial statements.

Business Interruption Insurance Recoveries

11. Business interruption (BI) insurance is designed to protect the prospective earnings or profits of the insured entity. That is, BI insurance provides coverage if business operations are suspended due to the loss of use of property and equipment resulting from a covered cause of loss. BI insurance coverage generally provides for reimbursement of certain costs and losses incurred during the reasonable period required to rebuild, repair, or replace the damaged property. The types of costs and losses covered typically include:

a. Gross margin that was "lost" or not earned due to the suspension of normal operations

b. A portion of fixed charges and expenses in relation to that lost gross margin

c. Other expenses incurred to reduce the loss from business interruption (for example, rent of temporary facilities and equipment, use of subcontractors, and so forth)

An entity may choose how to classify BI insurance recoveries in the statement of operations, as long as that classification is not contrary to existing statutory accounting principles.

Disclosures

12. The following information should be disclosed in the notes to the financial statements in the period(s) in which BI insurance recoveries are recognized:

a. The nature of the event resulting in business interruption losses

[1] Paragraph 51 of *SSAP No. 102—Accounting for Pensions, A Replacement of SSAP No. 89* and paragraph ~~80~~81 of *SSAP No. 92—Accounting for Postretirement Benefits Other than Pensions, A Replacement of SSAP No. 14* define settlement as "a transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a pension benefit obligation, and (c) eliminates significant risks related to the obligation and the assets used to effect the settlement." A settlement is directly related to the disposal transaction if there is a demonstrated direct cause-and-effect relationship and the settlement occurs no later than one year following the disposal transaction, unless it is delayed by events or circumstances beyond an entity's control (refer to paragraph 22 of *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments, Discontinued Operations)*.

b. The aggregate amount of BI insurance recoveries recognized during the period and the line item(s) in the statement of operations in which those recoveries are classified (including amounts defined as an extraordinary item pursuant to this SSAP).

13. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

14. This statement adopts the accounting principles relating to the accounting for the disposal of a segment of a business included in *Accounting Principles Board Opinion No. 30*, *Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions,* (APB No. 30), paragraphs 13-18 and adopts the definition of an extraordinary item included in paragraph 20 of APB 30. This statement also adopts *AICPA Accounting Interpretations, Reporting the Results of Operations: Accounting Interpretations of APB Opinion No. 30*, relating to the definition of extraordinary items and terminology relevant to the disposal of a segment and the criteria for recording a related loss. This statement also adopts *FASB Emerging Issues Task Force No. 85-36, Discontinued Operations with Expected Gain and Interim Operating Losses.* This statement adopts with modification *Emerging Issues Task Force No. 01-13: Income Statement Display of Business Interruption Insurance Recoveries*, with changes of GAAP references to statutory terminology.

15. This statement rejects all other paragraphs of APB 30 and all other interpretations of APB 30 relating to the accounting and reporting of discontinued operations, extraordinary items and unusual or infrequently occurring events and transactions. This statement rejects *FASB Statement No. 146, Accounting for Costs Associated with Exit or Disposal Activities, FASB Emerging Issues Task Force No. 94-3, Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs Incurred in a Restructuring),* and *FASB Emerging Issues Task Force No. 95-18, Accounting and Reporting for a Discontinued Business Segment When the Measurement Date Occurs after the Balance Sheet Date but before the Issuance of Financial Statements*.

16. This statement adopts subparagraphs a through c from paragraph 44 of *FASB Statement No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets* (FAS 144). This statement also defers the implementation of all other paragraphs of FAS 144 to *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments*.

Effective Date and Transition

17. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. The guidance in paragraphs 11 and 12 was originally contained in *INT 02-17: EITF 01-13: Income Statement Display of Business Interruption Insurance Recoveries* and was effective Sept. 10, 2002.

Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties

SCOPE OF STATEMENT

1. Related party transactions are subject to abuse because reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair and reasonable to the reporting entity or its policyholders. As such, related party transactions require specialized accounting rules and increased regulatory scrutiny. This statement establishes statutory accounting principles and disclosure requirements for related party transactions.

2. If a company receives the stock of an affiliated company as a capital contribution rather than through a purchase, the transaction shall be accounted for according to *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25)*, SSAP No. 95—Exchange of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95), or *SSAP No. 97,* based on the details of each transaction. The statutory purchase method within *SSAP No. 68—Business Combinations* (SSAP No. 68) is not applicable for stock received as a capital contribution.

SUMMARY CONCLUSION

3. Related parties are defined as entities that have common interests as a result of ownership, control, affiliation or by contract. Related parties shall include but are not limited to the following:

a. Affiliates of the reporting entity, as defined in paragraph 4;

b. Trusts for the benefit of employees, such as pension and profit-sharing trusts and Employee Stock Ownership Plans that are managed by or under the trusteeship of management of the reporting entity, its parent or affiliates;

c. The principal owners of the reporting entity;

d. The management of the reporting entity, its parent or affiliates (including directors);

e. Members of the immediate families of principal owners and management of the reporting entity, its parent or affiliates and their management;

f. Parties with which the reporting entity may deal if either party directly or indirectly controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interest;

g. A party which can, directly or indirectly, significantly influence the management or operating policies of the reporting entity, which may include a provider who is contracting with the reporting entity. This is not intended to suggest that all provider contracts create related party relationships;

h. A party which has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests;

i. Attorney-in-fact of a reciprocal reporting entity or any affiliate of the attorney-in-fact; and

j. A U.S. manager of a U.S. Branch or any affiliate of the U.S. manager of a U.S. Branch.

4. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48). Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

5. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

6. Control as defined in paragraph 5 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18*. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.

b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.

c. An entity where the insurer has given up participation rights[1] as a shareholder to the investee.

7. Transactions between related parties must be in the form of a written agreement. The written agreement must provide for timely settlement of amounts owed, with a specified due date. Amounts owed to the reporting entity over ninety days from the written agreement due date shall be nonadmitted, except to the extent this is specifically addressed by other statements of statutory accounting principles (SSAPs). If the due date is not addressed by the written agreement, any uncollected receivable is nonadmitted.

Related Party Loans

8. Loans or advances (including debt, public or private) made by a reporting entity to its parent or principal owner shall be admitted if approval for the transaction has been obtained from the domiciliary commissioner and the loan or advance is determined to be collectible based on the parent or principal

[1] The term "participating rights" refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee's ordinary course of business and is distinguished from the more limited type of rights referred to as “protective rights”. Refer to the sections entitled: “Protective Rights” and “Substantive Participating Rights” in EITF 96-16, *Investor's Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term “participating rights” shall be used consistent with the discussion of substantive participating rights in this EITF.

owner's independent payment ability. An affiliate's ability to pay shall be determined after consideration of the liquid assets or revenues available from external sources (i.e., determination shall not include dividend paying ability of the subsidiary making the loan or advance) which are available to repay the balance and/or maintain its account on a current basis. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets – Revised* (SSAP No. 5R), it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

9. Loans or advances by a reporting entity to all other related parties shall be evaluated by management and nonadmitted if they do not constitute arm's-length transactions as defined in paragraph 12. Loans or advances made by a reporting entity to related parties (other than its parent or principal owner) that are economic transactions as defined in paragraph 12 shall be admitted. This includes financing arrangements with providers of health care services with whom the reporting entity contracts with from time to time. Such arrangements can include both loans and advances to these providers. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with SSAP No. 5R, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

10. Any advances under capitation arrangements made directly to providers, or to intermediaries that represent providers, that exceed one month's payment shall be nonadmitted assets.

11. Indirect loans are loans or extensions of credit to any person who is not an affiliate, where the reporting entity makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the reporting entity making the loans or extensions of credit. The admissibility of indirect loans made by a reporting entity for the benefit of its parent or principal owner shall be determined in accordance with the guidelines in paragraph 8. Indirect loans or advances made for the benefit of all other related parties shall be evaluated and accounted for consistent with loans or advances to related parties as described in paragraphs 9 and 10.

Transactions Involving the Exchange of Assets or Liabilities

12. An arm's-length transaction is defined as a transaction in which willing parties, each being reasonably aware of all relevant facts and neither under compulsion to buy, sell, or loan, would be willing to participate. A transaction between related parties involving the exchange of assets or liabilities shall be designated as either an economic transaction or non-economic transaction. An economic transaction is defined as an arm's-length transaction which results in the transfer of the risks and rewards of ownership and represents a consummated act thereof, i.e., "permanence." The appearance of permanence is also an important criterion in assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed. If subsequent events or transactions reverse the effect of an earlier transaction prior to the issuance of the financial statements, the reversal shall be considered in determining whether economic substance existed in the case of the original transaction. Subsequent events are addressed in *SSAP No. 9—Subsequent Events*. An economic transaction must represent a bonafide business purpose demonstrable in measurable terms. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction. The statutory accounting shall follow the substance, not the form of the transaction.

13. In determining whether there has been a transfer of the risks and rewards of ownership in the transfer of assets or liabilities between related parties, the following—and any other relevant facts and circumstances related to the transaction—shall be considered:

a. Whether the seller has a continuing involvement in the transaction or in the financial interest transferred, such as through the exercise of managerial authority to a degree usually associated with ownership;

b. Whether there is an absence of significant financial investment by the buyer in the financial interest transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer;

c. Whether repayment of debt that constitutes the principal consideration in the transaction is dependent on the generation of sufficient funds from the asset transferred;

d. Whether limitations or restrictions exist on the buyer's use of the financial interest transferred or on the profits arising from it;

e. Whether there is retention of effective control of the financial interest by the seller.

14. A transaction between related parties may meet the criteria for treatment as an economic transaction at one level of financial reporting, but may not meet such criteria at another level of financial reporting. An example of such a transaction is a reporting entity purchasing securities at fair value from an affiliated reporting entity that carried the securities at amortized cost. This transaction meets the criteria of an economic transaction at this level of financial reporting, and therefore, the selling reporting entity would record a gain and the acquiring reporting entity would record the securities at their cost (fair value on the transaction date). At the common parent level of reporting, this transaction has resulted in the mere inflation of surplus, and therefore, is a non-economic transaction. The parent reporting entity shall defer the net effects of any gain or increase in surplus resulting from such transactions by recording a deferred gain and an unrealized loss. The deferred gain shall not be recognized by the parent reporting entity unless and until arms-length transaction(s) with independent third parties give rise to appropriate recognition of the gain.

15. A non-economic transaction is defined as any transaction that does not meet the criteria of an economic transaction. Similar to the situation described in paragraph 14, transfers of assets from a parent reporting entity to a subsidiary, controlled or affiliated entity shall be treated as non-economic transactions at the parent reporting level because the parent has continuing indirect involvement in the assets.

16. When accounting for a specific transaction, reporting entities shall use the following valuation methods:

a. Economic transactions between related parties shall be recorded at fair value at the date of the transaction. To the extent that the related parties are affiliates under common control, the controlling reporting entity shall defer the effects of such transactions that result in gains or increases in surplus (see paragraph 14);

b. Non-economic transactions between reporting entities, which meet the definition of related parties above, shall be recorded at the lower of existing book values or fair values at the date of the transaction;

c. Non-economic transactions between a reporting entity and an entity that has no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or it's affiliates, shall be recorded at the fair value at the date of the transaction; however, to the extent that the transaction results in a gain, that gain shall be deferred until such time as permanence can be verified;

d. Transactions which are designed to avoid statutory accounting practices shall be reported as if the reporting entity continued to own the assets or to be obligated for a liability directly instead of through a subsidiary.

Examples of transactions deemed to be non-economic include security swaps of similar issues between or among affiliated companies, and swaps of dissimilar issues accompanied by exchanges of liabilities between or among affiliates.

Transactions Involving Services

17. Transactions involving services between related parties can take a variety of different forms. One of the significant factors as to whether these transactions will be deemed to be arm's length is the amount charged for such services. In general, amounts charged for services are based either on current market rates or on allocations of costs. Determining market rates for services is difficult because the circumstances surrounding each transaction are unique. Unlike transactions involving the exchange of assets and liabilities between related parties, transactions for services create income on one party's books and expense on the second party's books, and therefore, do not lend themselves to the mere inflation of surplus. These arrangements are generally subject to regulatory approval.

18. Transactions involving services provided between related parties shall be recorded at the amount charged. Regulatory scrutiny of related party transactions where amounts charged for services do not meet the fair and reasonable standard established by Appendix A-440, may result in (a) amounts charged being recharacterized as dividends or capital contributions, (b) transactions being reversed, (c) receivable balances being nonadmitted, or (d) other regulatory action. Expenses that result from cost allocations shall be allocated subject to the same fair and reasonable standards, and the books and records of each party shall disclose clearly and accurately the precise nature and details of the transaction. See *SSAP No 70—Allocation of Expenses* for additional discussion regarding the allocation of expenses.

Disclosures

19. The financial statements shall include disclosures of all material related party transactions. In some cases, aggregation of similar transactions may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm's-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

a. The nature of the relationships involved;

b. A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, any non-insurance transactions which involve less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:

i. Date of transaction;

ii. Explanation of transaction;

iii. Name of reporting entity;

iv. Name of affiliate;

v. Description of assets received by reporting entity;

vi. Statement value of assets received by reporting entity;

vii. Description of assets transferred by reporting entity; and

viii. Statement value of assets transferred by reporting entity.

c. The dollar amounts of transactions for each of the periods for which financial statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period;

d. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement;

e. Any guarantees or undertakings, written or otherwise, shall be disclosed in accordance with the requirements of SSAP No. 5R. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed;

f. A description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party. This shall include, but is not limited to, sale lease-back arrangements, computer or fixed asset leasing arrangements, and agency contracts, which remove assets otherwise recordable (and potentially nonadmitted) on the reporting entity's financial statements;

g. The nature of the control relationship whereby the reporting entity and one or more other enterprises are under common ownership or control and the existence of that control could result in operating results or financial position of the reporting entity significantly different from those that would have been obtained if the enterprises were autonomous. The relationship shall be disclosed even though there are no transactions between the enterprises; and

h. The amount deducted from the value of an upstream intermediate entity or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated entity, in accordance with the *Purposes and Procedure Manual of the NAIC Investment Analysis*~~*Securities Valuation*~~ *Office*, "Procedures for Valuing Common Stocks and Stock Warrants."

20. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

21. This statement adopts *FASB Statement No. 57, Related Party Disclosures* with a modification to paragraph 3 to require disclosure of compensation arrangements, expense allowances, and other similar items in the ordinary course of business.

22. This statement rejects AICPA *Accounting Interpretations, Business Combinations: Accounting Interpretations of APB Opinion No. 16, #39*, "Transfers and Exchanges Between Companies Under Common Control."

23. Guidance in paragraph 7 was incorporated from SSAP No. 96 as discussed in *Issue Paper No. 128—Settlement Requirements for Intercompany Transactions, An Amendment to SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*. SSAP No. 96 was nullified in 2011 with the guidance from that SSAP retained within this SSAP.

Effective Date and Transition

24. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

25. Guidance reflected in paragraph 7, incorporated from SSAP No. 96, is effective for reporting periods ending December 31, 2007. Early adoption is permitted. A change resulting from the application of this paragraph shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). Guidance reflected in paragraph 2, incorporated from *INT 03-16: Contribution of Stock*, was originally effective December 7, 2003.

Bonds, Excluding Loan-Backed and Structured Securities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for bonds, excluding loan-backed and structured securities.

SUMMARY CONCLUSION

2. Bonds shall be defined as any securities representing a creditor relationship, whereby there is a fixed schedule for one or more future payments. This definition includes:

a. U.S. Treasury securities,(INT 01-25)

b. U.S. government agency securities,

c. Municipal securities,

d. Corporate bonds,

e. Bank participations,

f. Convertible debt, including mandatory convertible debt as defined in paragraph 9,

g. Certificates of deposit that have a fixed schedule of payments and a maturity date in excess of one year from the date of acquisition,

h. Commercial paper,

i. Exchange Traded Funds, which qualify for bond treatment, as identified in the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office*, and

j. Class 1 Bond Mutual Funds, as identified in the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office*.

Loan-backed and structured securities meet this definition, but are excluded from the scope of this statement, and are addressed in *SSAP No. 43R—Loan-Backed and Structured Securities.* Securities which meet the definition above, but have a maturity date of one year or less from the date of acquisition are addressed in *SSAP No. 2—Cash, Drafts, and Short-term Investments*. Mortgage loans and other real estate lending activities made in the ordinary course of business meet the definition above, but are not addressed in this statement. These types of transactions are addressed in *SSAP No. 37—Mortgage Loans* and *SSAP No. 39—Reverse Mortgages*. Investments in a debt instrument of a certified capital company (CAPCO) shall be reported as a bond in accordance with *INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)*.

3. Bonds meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

Acquisitions and Sales

4. A bond acquisition or disposal shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement bonds which shall be recorded on the funding date. At acquisition, bonds shall be reported at their cost, including brokerage and other related fees.

5. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses on sales of bonds shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized gains and losses on sales of bonds shall be reported as net realized capital gains or losses in the statement of income.

Amortized Cost

6. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond $^{\text{(INT 07-01)}}$. Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion), except "make whole" call provisions, shall be amortized to the call or maturity value/date[1] which produces the lowest asset value (yield to worst). Although the concept for yield to worst shall be followed for all callable bonds, make whole call provisions, which allow the bond to be callable at any time, shall not be considered in determining the timeframe for amortizing bond premium or discount unless information is known by the reporting entity indicating that the issuer is expected to invoke the make whole call provision.

Balance Sheet Amount

7. Bonds, except mandatory convertible securities addressed in paragraph 9, shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis*~~*Securities Valuation*~~ *Office*, and the designation assigned in the NAIC *Valuations of Securities* product prepared by the NAIC Securities Valuation Office. For reporting entities that maintain an Asset Valuation Reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; with all other bonds (NAIC designations 3 to 6) reported at the lower of amortized cost or fair value.

8. The premium paid on a zero coupon convertible bond that produces a negative yield as a result of the value of a warrant exceeding the bond discount shall be written off immediately so that a negative yield is not produced. The full amount of the premium should be recorded as amortization within investment income on the date of purchase.

9. Mandatory convertible securities are defined as a type of convertible bond that has a required conversion or redemption feature. Either on or before a contractual conversion date, the holder must convert the mandatory convertible security into the underlying common stock. Mandatory convertible securities are subject to special reporting instructions and are therefore not assigned NAIC designations or unit prices by the SVO. The balance sheet amount for mandatory convertible securities shall be reported at the lower of amortized cost or fair value during the period prior to conversion. This reporting method is not impacted by NAIC designation or information received from credit rating providers (CRPs). Upon conversion, these securities will be subject to the accounting guidance of the statement that reflects their revised characteristics.

10. For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

[1] For continuously callable bonds with a lockout period, the first call date after the lockout period shall be used in determining the amortization of any premium. If there is no lockout period, and make whole call provisions are not included, any premium for continuously callable bonds shall be expensed completely at acquisition. (For continuously callable bonds, the first call date after the lockout period, or the date of acquisition if no lockout period exists, shall be used as the "effective date of maturity" for reporting in Schedule D, Part 1.)

Impairment

11. An other-than-temporary (INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition. A decline in fair value which is other-than-temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value. If it is determined that a decline in the fair value of a bond is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the bond's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. Credit related other-than-temporary impairment losses shall be recorded through the AVR; interest related other-than-temporary impairment losses shall be recorded through the IMR.

12. In periods subsequent to the recognition of an other-than-temporary impairment loss for a bond, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment. The fair value of the bond on the measurement date shall become the new cost basis of the bond and the new cost basis shall not be adjusted for subsequent recoveries in fair value. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized over the remaining life of the security in the prospective manner based on the amount and timing of future estimated cash flows. The security shall continue to be subject to impairment analysis for each subsequent reporting period. Future declines in fair value which are determined to be other-than temporary shall be recorded as realized losses.

Income

13. Interest income for any period consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of bonds, and the addition of discount accrual. In accordance with *SSAP No. 34—Investment Income Due and Accrued*, investment income shall be reduced for amounts which have been determined to be uncollectible. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

14. A bond may provide for a prepayment penalty or acceleration fee in the event the bond is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

Origination Fees

15. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction such as the private placement of bonds. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the bond consistent with paragraph 6 of this statement. Other origination fees shall be recorded as income upon receipt.

Origination, Acquisition, and Commitment Costs

16. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the bond, consistent with paragraph 4 of this statement. All other costs,

including internal costs or costs paid to an affiliated entity related to origination, purchase or commitment to purchase bonds shall be charged to expense when incurred.

Commitment Fees

17. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the bond is issued. If the bond is not issued, then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

18. A fee paid to the reporting entity to obtain a commitment to be able to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 6 of this statement over the life of the bond as an adjustment to the investment income on the bond. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Exchanges and Conversions

19. If a bond is exchanged or converted into other securities (including conversions of mandatory convertible securities addressed in paragraph 9), the fair value of the bond surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. However, if the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the bond surrendered, then it shall become the cost basis for the new securities.

Disclosures

20. The financial statements shall include the following disclosures:

a. Fair value in accordance with *SSAP No. 100—Fair Value Measurements*;

b. Concentrations of credit risk in accordance with *SSAP No. 27—Disclosure of Information* a*bout Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk* (SSAP No. 27);

c. The basis at which the bonds are stated;

d. Amortization method;

e. For each balance sheet presented, the book/adjusted carrying values, fair values, excess of book/carrying value over fair value or fair value over book/adjusted carrying values for each pertinent bond category issued by:

i. U.S. Governments;

ii. All Other Governments;

iii. States, Territories and Possessions (Direct and Guaranteed);

iv. Political Subdivisions of States, Territories and Possessions (Direct and Guaranteed);

v. Special Revenue & Special Assessment Obligations and all Non-Guaranteed Obligations of Agencies and Authorities of Governments and Their Political Subdivisions;

vi. Industrial & Miscellaneous (Unaffiliated);

vii. Hybrid Securities;

viii. Parent, Subsidiaries and Affiliates;

f. For the most recent balance sheet, the book/adjusted carrying values and the fair values of bonds due:

i. In one year or less;

ii. After one year through five years;

iii. After five years through ten years;

iv. After ten years; and

g. For each period for which results of operations are presented, the proceeds from sales of such bonds and gross realized gains and gross realized losses on such sales.

h. For each balance sheet presented, all bonds in an unrealized loss position for which other-than-temporary declines in value have not been recognized

i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and

ii. The aggregate related fair value of bonds with unrealized losses.

i. The disclosures in paragraphs 20.h.i. and 20.h.ii. should be segregated by those bonds that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with SSAP No. 100.

j. As of the most recent balance sheet date presented, additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.

k. When it is not practicable to estimate fair value in accordance with SSAP No. 100, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

i. The aggregate carrying value of the investments not evaluated for impairment, and

ii. The circumstances that may have a significant adverse effect on the fair value.

l. Separately identify structured notes, on a CUSIP basis, with information by CUSIP for actual cost, fair value, book/adjusted carrying value, and whether the structured note is a mortgage-referenced security.[2]

21. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraphs 20.b., 20.e., 20.f., 20.g., 20.h., 20.i., 20.j. and 20.k. shall be included in the annual audited statutory financial reports only.

Relevant Literature

22. This statement adopts *AICPA Statement of Position 90-11, Disclosure of Certain Information by Financial Institutions About Debt Securities Held as Assets,* and *AICPA Practice Bulletin No. 4, Accounting for Foreign Debt/Equity Swaps*. This statement also adopts *FASB Staff Position 115-1/124-1, The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments*, paragraph 16, with modification to be consistent with statutory language in the respective statutory accounting statements.

23. This statement rejects the GAAP guidance for debt securities, which is contained in *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities, FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases, FASB Emerging Issues Task Force No. 89-18, Divestitures of Certain Investment Securities to an Unregulated Commonly Controlled Entity under FIRREA,* and *FASB Emerging Issues Task Force No. 96-10, Impact of Certain Transactions on Held-to-Maturity Classifications Under FASB Statement No. 115.*

Effective Date and Transition

24. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.* The guidance in paragraphs 11 and 12 was previously included within *SSAP No. 99—Accounting for Securities Subsequent to an Other-Than-Temporary Impairment* and was effective for reporting periods beginning on January 1 2009, and thereafter, with early adoption permitted. In 2010, the guidance from SSAP No. 99 was incorporated within the impacted standards, with SSAP No. 99 superseded. The original impairment guidance included in this standard, and the substantive revisions reflected in SSAP No. 99 are retained for historical purposes in Issue Paper No. 131. Guidance reflected in paragraph 8, incorporated from *INT 02-05: Accounting for Zero Coupon Convertible Bonds*, was originally effective December 8, 2002. Guidance adopted in December 2013 clarifying the 'yield to worst' concept for bonds with make whole call provisions is a nonsubstantive change initially effective January 1, 2014, unless the company has previously been following the guidance. (Companies that have previously been following the original intent, as clarified in the revisions, should not be impacted by these changes.)

Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for disclosure of information about financial instruments with off-balance-sheet risk and financial instruments with concentration of credit risk.

SUMMARY CONCLUSION

2. A financial instrument shall be defined as cash, evidence of an ownership interest in an entity, or a contract that both:

a. Imposes on one entity a contractual obligation (i) to deliver cash or another financial instrument to a second entity or (ii) to exchange other financial instruments on potentially unfavorable terms with the second entity; and

b. Conveys to that second entity a contractual right (i) to receive cash or another financial instrument from the first entity or (ii) to exchange other financial instruments on potentially favorable terms with the first entity.

3. Examples of the financial instruments, which encompass both assets and liabilities recognized and not recognized in the financial statement, to which this statement applies include, but are not limited to, short-term investments, bonds, common stocks, preferred stocks, mortgage loans, derivatives[1], financial guarantees written, standby letters of credit, notes payable and deposit-type contracts.

Disclosure of Extent, Nature, and Terms of Financial Instruments with Off-Balance-Sheet Risk

4. For financial instruments[2] with off-balance-sheet risk, except as noted in paragraphs 14 and 15 of *FASB Statement No. 105, Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk* (FAS 105), a reporting entity shall disclose in the financial statements the following information by class of financial instrument:

a. The face or contract amount (or notional principal amount if there is no face or contract amount); and

b. The nature and terms including, at a minimum, a discussion of (i) the credit and market risk of those instruments, (ii) the cash requirements of those instruments, and (iii) the related accounting policy pursuant to the requirements of *APB Opinion No. 22, Disclosure of Accounting Policies*.

5. Additional disclosures related to derivatives and embedded credit derivatives are addressed in *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions* (SSAP No. 86*)*.

[1] The financial instruments captured within this Statement shall include financial instruments that contain embedded derivatives that are not separately recognized as financial instruments with derivatives under SSAP No. 86, and that expose the holder to the possibility (however remote) of making future payments.

[2] See Footnote 1

Disclosure of Credit Risk of Financial Instruments with Off-Balance-Sheet Credit Risk

6. For financial instruments[3] with off-balance-sheet credit risk, except as noted in paragraphs 14 and 15 of FAS 105, an entity shall disclose in the financial statements the following information by class of financial instrument:

a. The amount of accounting loss the entity would incur if any party to the financial instrument failed completely to perform according to the terms of the contract and the collateral or other security, if any, for the amount due proved to be of no value to the entity; and

b. The entity's policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity's access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments.

Disclosure of Concentrations of Credit Risk of All Financial Instruments

7. Except as noted in paragraph 14 of FAS 105, a reporting entity shall disclose all significant concentrations of credit risk arising from all financial instruments[4] whether from an individual or group. Group concentrations of credit risk exist if a number of individuals or groups are engaged in similar activities and have similar economic characteristics that would cause their ability to meet contractual obligations to be similarly affected by changes in economic or other conditions. The following shall be disclosed in the financial statements about each significant concentration:

a. Information about the (shared) activity, region, or economic characteristic that identifies the concentration;

b. The amount of the accounting loss due to credit risk the entity would incur if parties to the financial instruments that make up the concentration failed completely to perform according to the terms of the contracts and the collateral or other security, if any, for the amount due proved to be of no value to the entity; and

c. The entity's policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity's access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments.

Annual and Quarterly Disclosure Requirements

8. Refer to the preamble for further information regarding disclosure requirements. The disclosures in paragraph 7 shall be included in the annual audited statutory financial reports only.

Relevant Literature

9. This statement adopts the provisions of FAS 105 with the following modifications:

a. The disclosures required in paragraph 17 of FAS 105 shall distinguish between derivatives entered into for hedging purposes and for other-than-hedging purposes.

[3] See Footnote 1

[4] See Footnote 1

b. Paragraph 19 of FAS 105 is rejected. It addresses voluntary disclosures not required by this statement.

Effective Date and Transition

10. This statement is effective for years beginning January 1, 2001.

Prepaid Expenses

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the accounting for prepaid expenses. This statement does not address accounting for deferred policy acquisition costs and other underwriting expenses, income taxes, and guaranty fund assessments. This statement does not address nonrefundable advance payments for goods or services received for use in future research and development activities, which are addressed in *SSAP No. 17—Preoperating and Research and Development Costs.*

SUMMARY CONCLUSION

2. A prepaid expense is an amount which has been paid in advance of receiving future economic benefits anticipated by the payment. Prepaid expenses generally meet the definition of assets in *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4). Such expenditures also meet the criteria defining nonadmitted assets as specified in SSAP No. 4, (i.e., the assets are not readily available to satisfy policyholder obligations). Prepaid expenses shall be reported as nonadmitted assets and charged against unassigned funds (surplus). They shall be amortized against net income as the estimated economic benefit expires.

3. In accordance with the reporting entity's written capitalization policy, prepaid expenses less than a predefined threshold shall be expensed when purchased. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Disclosures

4. The financial statements shall disclose if the written capitalization policy and the resultant predefined thresholds changed from the prior period and the reason(s) for such change.

Relevant Literature

5. This statement rejects *AICPA Practice Bulletin No. 13, Direct-Response Advertising and Probable Future Benefits, AICPA Statement of Position 93-7, Reporting on Advertising Costs* and *FASB Emerging Issues Task Force No. 88-23, Lump-Sum Payments under Union Contracts*.

Effective Date and Transition

6. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Guidance reflected in paragraphs 3 and 4, incorporated from SSAP No. 87, was originally effective for years beginning on and after January 1, 2004.

Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for common stocks.

2. Investments in common stock of subsidiaries, controlled or affiliated entities (investments in affiliates) are not within the scope of this statement. They are addressed in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88*.

SUMMARY CONCLUSION

3. Common stocks (excluding investments in affiliates) are securities which represent a residual ownership in a corporation and shall include:

a. Publicly traded common stocks;

b. Master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York, American, or NASDAQ exchanges;

c. Publicly traded common stock warrants;

d. Shares of mutual funds, except for certain money market funds, Class 1 Bond Funds, and Exchange Traded Funds, which qualify for bond or preferred stock treatment, as designated in the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office*, regardless of the types or mix of securities owned by the fund, e.g., bonds, stocks, money market instruments, or other type of investments;

e. Common stocks that are not publicly traded, including equity interests in certified capital companies in accordance with *INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)*; and

f. Common stocks that are restricted as to transfer of ownership. Restricted stock shall be defined as a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral), except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted. Regardless of redemption timeframe, FHLB capital stock is considered restricted stock until actual redemption by the FHLB.

4. Common stocks meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted* Assets and are admitted assets to the extent they conform to the requirements of this statement.

Acquisitions and Sales

5. At acquisition, common stocks shall be reported at their cost, including brokerage and other related fees. Common stock acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.

6. A reporting entity can subscribe for the purchase of stock, but not be required to make payment until a later time. Transactions of this nature are common in the formation of corporations. Common stock acquired under a subscription represents a conditional transaction in a security authorized for issuance but

not yet actually issued. Such transactions are settled if and when the actual security is issued and the exchange or National Association of Securities Dealers (NASD) rules that the transactions are to be settled. Common stock acquired under a subscription shall be recorded as an admitted asset when the reporting entity or its designated custodian or transfer agent takes delivery of the security and the security is recorded in the name of the reporting entity or its nominee (i.e., the accounting for such common stock acquisitions shall be on the settlement date).

Balance Sheet Amount

7. Investments in unaffiliated common stocks shall be valued at fair value. For FHLB capital stock, which is only redeemable at par, the fair value shall be presumed to be par, unless considered other-than-temporarily impaired.

8. For reporting entities required to maintain an Asset Valuation Reserve (AVR), the accounting for unrealized capital gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus.

Impairment

9. For any decline in the fair value of a common stock which is determined to be other than temporary [INT 06-07] the common stock shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. For those reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7. Subsequent fluctuations in fair value shall be recorded as unrealized gains or losses. Future declines in fair value which are determined to be other than temporary shall be recorded as realized losses. A decline in fair value which is other than temporary includes situations where a reporting entity has made a decision to sell a security at an amount below its carrying value.

Income

10. Dividends on common stock shall be recorded as investment income on the ex-dividend date with a corresponding receivable to be extinguished upon receipt of cash (i.e., dividend income shall be recorded on stocks declared to be ex-dividends on or prior to the statement date).

11. For reporting entities required to maintain an AVR, the accounting for realized capital gains and losses on sales of common stock shall be in accordance with SSAP No. 7. For reporting entities not required to maintain an AVR, realized gains and losses on sales of common stock shall be reported as realized gains/losses in the statement of operations.

Stock Splits, Stock Dividends, Payment in Kind Dividends, and Stock Exchanges

12. Stock splits, stock dividends, payment in kind dividends, and stock exchanges shall be accounted for in accordance with *SSAP No. 95—Exchange of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95).

FHLB Capital Stock

13. FHLB capital stock is held by reporting entities that are members of an FHLB. Each reporting entity must acquire FHLB capital stock for membership and maintain capital stock holding sufficient to

support its business activity (borrowings[1]) in accordance with the respective FHLB's capital plan. The price of FHLB capital stock cannot fluctuate, and all FHLB capital stock must be purchased, repurchased or transferred at its par value. FHLB capital stock is restricted for redemption in accordance with the FHLB capital plan and shall be coded as restricted within the financial statements (e.g., investment schedules and general interrogatories).

14. Acquisition of FHLB capital stock allows members to conduct business activity (borrowings) from an FHLB. The amount of capital stock acquired determines the reporting entity's eligible borrowing amount. At a minimum, all borrowings from an FHLB (regardless of structure) must also be fully collateralized in accordance with the FHLB capital plan, which determines the amount of collateral required by type of pledged instrument. Collateral pledged to an FHLB shall be coded as restricted within the financial statements (e.g., investments schedules and general interrogatories). Collateral pledged to an FHLB is considered an admitted asset if all of the following conditions are met:

a. the asset would have been admitted under SSAP No. 4;

b. the pledging insurer continues to receive the income on the pledged collateral;

c. the pledging insurer can remove and substitute other securities with little or advance notice to the FHLB as long as the insurer complies with related investment quality and market value provisions; and

d. there has been no uncured default or event to indicate an impairment or loss contingency for the pledged assets.

Disclosures

15. The following disclosures regarding common stocks shall be made in the financial statements:

a. Basis at which the common stocks are stated; and

b. A description, as well as the amount, of common stock that is restricted outside of FHLB agreements and the nature of the restriction. (Disclosures of FHLB capital stock are captured in paragraph 16.)

c. For each balance sheet presented, all common stocks in an unrealized loss position for which other-than-temporary declines in value have not been recognized

i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and

ii. The aggregate related fair value of common stocks with unrealized losses.

d. The disclosures in (i) and (ii) above should be segregated by those common stocks that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with *SSAP No. 100—Fair Value Measurements*.

[1] Membership in an FHLB allows reporting entities to take advances / borrow from the FHLB. These borrowings can be structured in a variety of ways, for example: debt, funding agreements, repurchase agreements, securities lending, etc. Borrowings from an FHLB shall be reflected in the financial statements in accordance with the SSAP that addresses the substance of the agreement.

e. As of the most recent balance sheet presented, additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.

f. When it is not practicable to estimate fair value, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

i. The aggregate carrying value of the investments not evaluated for impairment, and

ii. The circumstances that may have a significant adverse effect on the fair value.

FHLB Disclosures

16. For FHLB agreements, the following information shall be disclosed in the financial statements for current and prior year and between general account and separate account activity. The information in the disclosures shall be presented gross even if a right to offset per SSAP No. 64 exists.

a. General description of FHLB agreements, with information on the nature of the agreement, type of borrowing (advances, lines of credit, borrowed money, etc.) and use of the funding.

b. Amount of FHLB capital stock held, in aggregate, and classified as follows: i) membership stock (separated by Class A and Class B); ii) Activity Stock; and iii) Excess Stock. For membership stock, report the amount of FHLB capital stock eligible for redemption[2] and the anticipated timeframe for redemption: i) less than 6 months, ii) 6 months to 1 year, iii) 1 year to 3 years, and iv) 3 to 5 years.

c. Amount (fair value and carrying value) of collateral pledged to the FHLB as of the reporting date, In addition, report the maximum amount of collateral pledged to the FHLB at any time during the current reporting period. (Maximum shall be determined on the basis of carrying value, but with fair value also reported)

d. Aggregate amount of borrowings at the reporting date from the FHLB, reflecting compilation of all advances, loans, funding agreements, repurchase agreements, securities lending, etc., outstanding with the FHLB, and classify whether the borrowing is in substance: i) debt (*SSAP No. 15—Debt and Holding Company Obligations*), ii) a funding agreement (*SSAP No. 52—Deposit-Type Contracts*), or iii) Other. For funding agreements, report the total reserves established. Report the maximum amount of aggregate borrowings from an FHLB at any time during the current reporting period, the actual or estimated maximum borrowing capacity as determined by the insurer, with a description of how the borrowing capacity was determined, and whether current borrowings are subject to prepayment penalties.

17. The disclosures in paragraphs 15.c. through 15.f. shall be included in the annual audited statutory financial reports only. The FHLB disclosures in paragraph 16 are required in all interim and annual financial statements regardless if the activity is materially different from the activity reported during the prior reporting period. Refer to the Preamble for further discussion regarding disclosure requirements.

[2] For FHLB membership stock to be eligible for redemption, written notification must have been provided to the FHLB prior to the reporting date.

Relevant Literature

18. This statement rejects *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities*.

Effective Date and Transition

19. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Revisions adopted to this statement in October 2013 amending SSAP No. 15 and SSAP No. 52 to incorporate FHLB disclosure information are initially effective for interim and annual reporting periods after January 1, 2014.

Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities)

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for preferred stock.

2. Investments in preferred stock of subsidiaries, controlled or affiliated entities, including preferred stock interests of certified capital companies (CAPCO) per *INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)* are included within the scope of this statement.

SUMMARY CONCLUSION

3. Preferred stock which may or may not be publicly traded, is defined as any class or series of shares the holders of which have any preference, either as to the payment of dividends or distribution of assets on liquidation, over the holder of common stock (as defined in *SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)*) issued by an entity. Preferred stock shall include but not be limited to:

a. Redeemable preferred stock, including mandatory sinking fund preferred stock and preferred stock redeemable at the option of the holder;

b. Perpetual preferred stock, including nonredeemable preferred stock and preferred stock redeemable at the option of the issuer; and

c. Exchange Traded Funds, which qualify for preferred stock treatment, as identified in the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office.*

4. Redeemable preferred stock is defined as preferred stock that must be redeemed by the issuing enterprise or is redeemable at the option of the reporting entity. It includes mandatory sinking fund preferred stock and payment-in-kind (PIK) preferred stock.

5. Mandatory sinking fund preferred stock is defined as redeemable preferred stock subject to a 100% mandatory sinking fund, annual installments of which will (a) commence not more than 10 years from the date of issue or December 31, 1978, if outstanding on that date; (b) be not less than 2% of the number of shares issued (or outstanding on December 31, 1978, if issued prior to that date); (c) provide for the redemption of the entire issue over a period not longer than 40 years from the date of issue, or December 31, 1978, if outstanding on that date. Redeemable preferred stock which is subject to a 100% mandatory sinking fund, but which does not, at date of issue or December 31, 1978, if outstanding at that time, meet one or more of the other requirements above, shall be considered as mandatory sinking fund preferred stock at the time the deficiency is cured through the passage of time or otherwise.

6. PIK preferred stock is defined as redeemable preferred stock on which, at the option of the issuer, dividends can be paid in additional securities rather than cash.

7. Perpetual preferred stock is defined as preferred stock with no redemption or sinking fund features or preferred stock redeemable at the option of the issuer.

8. Restricted preferred stock is defined as a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.

9. Preferred stocks meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

Acquisitions and Sales

10. At acquisition, preferred stock shall be reported at cost, including brokerage and other related fees. PIK stock received as dividends shall be recorded at fair value. Acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.

11. A reporting entity can subscribe for the purchase of stock, but not be required to make payment until a later time. Transactions of this nature are common in the formation of corporations. Preferred stock acquired under a subscription represents a conditional transaction in a security authorized for issuance but not yet actually issued. Such transactions are settled if and when the actual security is issued and the exchange or National Association of Securities Dealers (NASD) rules that the transactions are to be settled. Preferred stock acquired under a subscription shall be recorded as an admitted asset when the reporting entity or its designated custodian or transfer agent takes delivery of the security and the security is recorded in the name of the reporting entity or its nominee, (i.e., the accounting for such preferred stock acquisitions shall be on the settlement date).

Amortization

12. Redeemable preferred stock purchased at a premium shall be amortized to reduce the carrying value to the call or redemption value over the period to the call or earliest redemption date, whichever produces the lowest asset value (yield to worst). Redeemable preferred stock purchased at a discount shall be amortized to increase the carrying value to par value over the period to maturity or the latest redemption date.

13. PIK preferred stock shall be amortized to the lower of the call price or par value, measured in either case at the end of the stock dividend period and based on all of the shares expected to be held at the end of that period, including those received as dividends.

14. Amortization shall be calculated using the interest method and shall be reported as increases or decreases in dividends collected during the year.

Balance Sheet Amount

15. The NAIC Securities Valuation Office classifies preferred stocks into six redeemable preferred stock quality categories (designations RP1 through RP6) and six perpetual preferred stock quality categories (designation P1 through P6.) Preferred stocks shall be classified in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office* and the designation assigned in the *Valuations of Securities* product prepared by the NAIC Securities Valuation Office.

16. Preferred stock shall be valued based on (a) the underlying characteristics of the security, (b) the quality rating of the security as defined in the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office* and assigned in the NAIC *Valuations of Securities* product, and (c) whether an Asset Valuation Reserve (AVR) is maintained by the reporting entity. For reporting entities that maintain an AVR, redeemable preferred stocks and perpetual preferred stocks designated highest-quality, high-quality and medium-quality (NAIC designations RP1 to RP3 and P1 to P3, respectively) shall be reported at book value; redeemable preferred stocks and perpetual preferred stocks that are designated low quality, lowest quality and in or near default (NAIC designations RP4 to RP6 and P4 to P6, respectively) shall be reported at the lower of book value or fair value. For reporting entities that do not maintain an AVR, redeemable preferred stocks designated highest-quality and high-quality (NAIC designations RP1 and RP2, respectively) shall be reported at book value; perpetual preferred stocks

designated highest-quality and high-quality (NAIC designations P1 and P2, respectively) shall be reported at fair value; and redeemable preferred stocks and perpetual preferred stocks that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations RP3 to RP6 and P3 to P6, respectively) shall be reported at the lower of book value or fair value.

17. Step-up preferred stock (a security with the structure of a preferred stock, that has the cash flow characteristics of a debt instrument) is considered a security with characteristics of both debt and equity, and the accounting and valuation of such securities shall be consistent with SVO guidelines as stipulated in the *Purposes and Procedures Manual of the NAIC* *Investment Analysis*~~*Securities Valuation*~~ *Office*.

18. For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

Reporting Entities That Do Not Maintain An AVR

19. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair value.

20. Highest-quality or high-quality perpetual preferred stocks (NAIC designations 1 and 2), which have characteristics of equity securities, shall be reported at fair value. All other perpetual preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost or fair value.

Reporting Entities That Do Maintain An AVR

21. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of cost, amortized cost, or fair value.

22. Highest-quality, high-quality or medium quality perpetual preferred stocks (NAIC designations 1 to 3), which have characteristics of equity securities, shall be valued at cost. All other perpetual preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of cost or fair value.

Impairment of Redeemable Preferred Stock

23. An other-than-temporary (INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the security in effect at the date of acquisition. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value (i.e., amortized cost). If it is determined that a decline in the fair value of a redeemable preferred stock is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the redeemable preferred stock's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.

24. In periods subsequent to the recognition of other-than-temporary impairment loss for a redeemable preferred stock, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment, and in accordance with paragraph 19 or paragraph 21, as applicable. The fair value of the redeemable preferred stock on the measurement date shall become the new cost basis of the redeemable preferred stock and the new cost basis shall not be adjusted for subsequent recoveries in fair value. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized over the remaining life of the security in the prospective manner based on the amount and timing of future estimated cash flows. The security shall continue to be subject to impairment analysis for each subsequent reporting period. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

Impairment of Perpetual Preferred Stock

25. If it is determined that a decline in the fair value of a perpetual preferred stock is other-than-temporary (INT 06-07), an impairment loss shall be recognized as a realized loss equal to the entire difference between the perpetual preferred stock's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell a security at an amount below its carrying value.

26. In periods subsequent to the recognition of an other-than-temporary impairment loss for a perpetual preferred stock, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment, and in accordance with paragraph 20 or paragraph 22, as applicable. The fair value of the perpetual preferred stock on the measurement date shall become the new cost basis of the perpetual preferred stock and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Future declines in fair value which are determined to be other-than-temporary, shall be recorded as realized losses.

Income

27. Dividends on preferred stock (whether cumulative or noncumulative), other than mandatorily redeemable preferred stock, shall be recorded as investment income on the ex-dividend date with a corresponding receivable to be extinguished upon receipt of cash (i.e., dividend income shall be recorded on preferred stock declared to be ex-dividend on or prior to the statement date).

28. Dividends on mandatorily redeemable preferred stock shall be accrued to the redemption price, even if not declared, using the interest method over the period ending on the redemption date.

29. Cash dividends paid on PIK stock during the stock dividend period shall be accounted for as a reduction in the investment.

Exchanges and Conversions

30. If preferred stock is exchanged or converted into other securities, the fair value of the preferred stock surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. However, if the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the preferred stock surrendered, then it shall become the cost basis for the new securities.

Disclosures

31. The following disclosures regarding preferred stocks shall be made in the financial statements:

a. Fair values in accordance with *SSAP No. 100—Fair Value Measurements;*

b. Concentrations of credit risk in accordance with SSAP No. 27;

c. Basis at which the preferred stocks are stated; and

d. A description, as well as the amount, of preferred stock that is restricted and the nature of the restriction.

e. For each balance sheet presented, all preferred stocks in an unrealized loss position for which other-than-temporary declines in value have not been recognized

i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and

ii. The aggregate related fair value of preferred stocks with unrealized losses.

f. The disclosures in (i) and (ii) above should be segregated by those preferred stocks that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with *SSAP No. 100—Fair Value Measurements.*

g. As of the date of the most recent balance sheet presented, additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.

h. When it is not practicable to estimate fair value, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

i. The aggregate carrying value of the investments not evaluated for impairment, and

ii. The circumstances that may have a significant adverse effect on the fair value.

32. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure requirements of paragraphs 31.b., 31.e., 31.f., 31.g. and 31.h. shall be included in the annual audited statutory financial reports only.

Relevant Literature

33. This statement rejects *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities* and *FASB Emerging Issues Task Force No. 86-32, Early Extinguishment of a Subsidiary's Mandatorily Redeemable Preferred Stock*. This statement adopts *FASB Staff Position 115-1/124-1, The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments,* paragraph 16, with modification to be consistent with statutory language in the respective statutory accounting statements.

Effective Date and Transition

34. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.* The guidance in paragraphs 23-26 was previously included within *SSAP No. 99—Accounting for Securities Subsequent to an Other-Than-Temporary Impairment* and was effective for reporting periods beginning on January 1, 2009, and thereafter, with early adoption permitted. In 2010, the guidance from SSAP No. 99 was incorporated within the impacted standards, with SSAP No. 99 superseded. The original impairment guidance included in this standard, and the substantive revisions reflected in SSAP No. 99 are retained for historical purposes within Issue Paper No. 131. The guidance in paragraphs 2 and 3 to SSAP No. 32 was originally superseded January 1, 2005, by guidance included in *SSAP No. 88—Investments in Subsidiaries, Controlled and Affiliated Entities, A replacement of SSAP No. 46*, and then subsequently reflected in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88.* In 2011, the guidance related to preferred stock of SCAs from SSAP No. 97 was incorporated into this statement and revised to reflect a definition of preferred stock. The original guidance included in this statement, and the substantive revisions reflected in SSAP No. 88 and SSAP No. 97 (including the title change already reflected in SSAP No. 32) are retained for historical purposes within Issue Paper Nos. 32 and 118.

Investment Income Due and Accrued

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investment income due and accrued.

SUMMARY CONCLUSION

2. Investment income due shall be defined as investment income earned and legally due to be paid to the reporting entity (i.e., receivable) as of the reporting date. Investment income accrued shall be defined as investment income earned as of the reporting date but not legally due to be paid to the reporting entity until subsequent to the reporting date.

3. In general, gross investment income shall be recorded as earned and shall include investment income collected during the period, the change in investment income due and accrued, the change in unearned investment income plus any amortization (e.g., discounts or premiums on bonds, origination fees on mortgage loans, etc.) Immediate amortization of premium which occurs upon recognition of an other-than-temporary impairment loss for a debt security with a recorded premium shall be reported as a realized loss and shall not be included in investment income.

4. Investment income due and accrued shall be recorded as an asset in accordance with *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4). An evaluation shall be made of such assets in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R), to determine whether an impairment exists. Amounts determined to be uncollectible shall be written off through the statement of operations. Then an evaluation shall be made to determine nonadmitted amounts.

5. This two-step process is set forth below.

   a. Investment income due and accrued shall be assessed for collectibility. If, in accordance with SSAP No. 5R, it is probable the investment income due and accrued balance is uncollectible, the amount shall be written off and shall be charged against investment income in the period such determination is made;

   b. Any remaining investment income due and accrued (i.e., amounts considered probable of collection) representing either (1) amounts that are over 90 days past due (generated by any invested asset except mortgage loans in default), or (2) amounts designated elsewhere in the *Accounting Practices and Procedures Manual* as nonadmitted shall be considered nonadmitted assets and recognized through a direct charge to surplus in accordance with SSAP No. 4. These nonadmitted amounts shall be subject to continuing assessments of collectibility and, if determined to be uncollectible, a write-off shall be recorded in the period such determination is made in accordance with paragraph 5.a.

6. Accrued interest on mortgage loans that are in default (as defined in *SSAP No. 37—Mortgage Loans*) shall be recorded as Investment Income Due and Accrued when such interest is deemed collectible. Interest can be accrued on mortgage loans in default if deemed collectible; if interest is deemed uncollectible, it shall not be accrued and any previously accrued amounts are to be written off in accordance with the guidelines in paragraph 5.a. If a mortgage loan in default has interest 180 days past due which has been assessed as collectible, all interest shall be considered a nonadmitted asset and recognized through a direct charge to surplus as outlined in paragraph 5.b.

Disclosures

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)

a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;

b. Disclose total amount excluded.

8. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

9. This statement adopts *FASB Staff Position 115-1/124-1, The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments,* paragraph 16, with modification to be consistent with statutory language in the respective statutory accounting statements.

10. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.* The guidance in paragraph 3 was previously included within *SSAP No. 99—Accounting for Securities Subsequent to an Other-Than-Temporary Impairment* and was effective for reporting periods beginning on January 1, 2009, and thereafter, with early adoption permitted. In 2010, the guidance from SSAP No. 99 was incorporated within the impacted standards, with SSAP No. 99 superseded. The original paragraph 3 guidance from this standard, and the substantive revisions reflected in SSAP No. 99 are retained for historical purposes within Issue Paper No. 131.

This page intentionally left blank.

Guaranty Fund and Other Assessments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for guaranty fund and other assessments.

2. Guaranty fund assessments represent a funding mechanism employed by states to provide funds to cover policyholder obligations of insolvent reporting entities. Most states have enacted legislation establishing guaranty funds for both life and health insurance and for property and casualty insurance to provide for covered claims or to meet other insurance obligations of insolvent reporting entities in the state.

3. This statement addresses other assessments including but not limited to workers' compensation second injury funds and for funds that pay operating costs of an insurance department, a state guaranty fund, and/or the workers' compensation board. This statement also addresses health related assessments including but not limited to state health insurance high-risk pools, health insurance small group and individual reinsurance pools, state health demographic ~~or~~and risk adjustment assessments. Guidance regarding the Affordable Care Act Section 9010 assessment is provided in *SSAP No. 106—Affordable Care Act Section 9010 Assessment* (SSAP No. 106)~~ and the Affordable Care Act Section 9010 assessment~~.

SUMMARY CONCLUSION

4. This statement adopts with modification guidance from *Accounting Standard Codification 405-30,* Insurance-*Related Assessments* (ASC 405-30) as reflected within this SSAP. Consistent with ASC 405-30-25-1, entities subject to assessments shall recognize liabilities for insurance-related assessments when all of the following conditions are met (paragraph 14~~15~~ provides guidance on applying the recognition criteria):

a. An assessment has been imposed or information available prior to issuance of the statutory financial statements indicates that it is probable that an assessment will be imposed.

b. The event obligating an entity to pay an imposed or probable assessment has occurred on or before the date of the financial statements.

c. The amount of the assessment can be reasonably estimated.

Guaranty fund and other assessments shall be charged to expense (Taxes, Licenses and Fees) and a liability shall be accrued when the above criteria are met except for certain health related assessments which shall be reported as a part of claims. Health related assessments that are reported as a part of claims instead of taxes, licenses and fees are those assessments that are designed for the purpose of spreading the risk of severe claims or adverse enrollment selection among all participating entities, and where the funds collected via the assessment are re-distributed back to the participating entities based upon the cost of specific claims, enrollment demographics, or other criteria affecting health care expenses. This standard does not permit liabilities for guaranty funds or other assessments to be discounted.

~~5. *ASU 2011-06: Other Expenses – Fees Paid to the Federal Government by Health Insurers* (ASU 2011-06) is adopted with modifications reflected in this statement. ASU 2011-06 provides specific guidance related to the assessment in Section 9010 of the Affordable Care Act and the statutory accounting guidance is included in paragraphs 16-21.~~

~~6.~~5. For refunded guaranty or other fund assessments and assessments used to fund state operating expenses, reporting entities shall credit the refund or charge the assessment to expense when notification of the refund or assessment is made.

~~7.~~6. For premium-based guaranty fund assessments, except those that are prefunded, paragraph 4.a. is met when the insolvency has occurred. For purposes of applying this guidance, the insolvency shall be considered to have occurred when a reporting entity meets a state's (ordinarily the state of domicile of the insolvent reporting entity) statutory definition of an insolvent reporting entity. In most states, the reporting entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation. Prefunded guaranty-fund assessments and premium-based administrative type assessment are presumed probable when the premiums on which the assessments are expected to be based are written. Loss-based administrative-type and second injury fund assessments are presumed probable when the losses on which the assessments are expected to be based are incurred.

~~8.~~7. Paragraph 4.b. requires that the event obligating an entity to pay an imposed or probable assessment has occurred on or before the date of the financial statements. Based on the fundamental differences in how assessment mechanisms operate, the event that makes an assessment probable (for example, an insolvency) may not be the event that obligates an entity. The following defines the event that obligates an entity to pay an assessment:

a. For premium-based assessments, the event that obligates the entity is generally writing the premiums or becoming obligated to write or renew (such as multiple-year, noncancelable policies) the premiums on which the assessments are expected to be based. Some states, through law or regulatory practice, provide that an insurance entity cannot avoid paying a particular assessment even if that insurance entity reduces its premium writing in the future. In such circumstances, the event that obligates the entity is a formal determination of insolvency or similar triggering event. For example, in certain states, an insurance entity may remain liable for assessments even though the insurance entity discontinues the writing of premiums. In this circumstance, the underlying cause of the liability is not the writing of the premium, but the insolvency. Regulatory practice would be determined based on the stated intentions or prior history of the insurance regulators.

b. For loss-based assessments, the event that obligates an entity is an entity's incurring the losses on which the assessments are expected to be based.

~~9.~~8. Paragraph 4.c. requires that the amounts can be reasonably estimated. For retrospective-premium-based guaranty fund assessments, a reporting entity's estimate of the liability shall reflect an estimate of its share of the ultimate loss expected from the insolvency. The reporting entity shall also estimate any applicable premium tax credits and policy surcharges. An entity need not be able to compute the exact amounts of the assessments or be formally notified of such assessments by a guaranty fund to make a reasonable estimate of its liability. Entities subject to assessments may have to make assumptions about future events, such as when the fund making the assessment will incur costs and pay claims to determine the amounts and the timing of assessments. The best available information about market share or premiums by state and premiums by line of business generally should be used to estimate the amount of future assessments. Estimates of loss-based assessments should be consistent with estimates of the underlying incurred losses and should be developed based upon enacted laws or regulations and expected assessment rates. Premium tax credits or policy surcharges may only be considered in the estimate if it is probable they will be realized. Because of the uncertainties surrounding some insurance-related assessments, the range of assessment liability may have to be re-evaluated regularly during the assessment process. Changes in the amount of the liability (or asset) as information becomes available over time and revisions to estimates in the amount or timing of the payments shall be recorded in taxes, licenses and fees.

~~10.~~9. In accordance with SSAP No. 5R, when the reasonable estimate of the loss is a range, the amount in the range that is considered the best estimate shall be accrued. When, in management's opinion, no amount within management's estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management's estimate in the range shall be accrued. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued.

Reporting Assets for Premium Tax Offsets and Policy Surcharges

~~11.~~10. The liability for accrued assessments shall be established gross of any probable and estimable recoveries from premium tax credits and premium surcharges. When it is probable that a paid or accrued assessment will result in an amount that is recoverable from premium tax offsets or policy surcharges, an asset shall be recognized for that recovery in an amount that is determined based on current laws, projections of future premium collections or policy surcharges from in-force policies, and as permitted in accordance with paragraphs ~~11~~10.a., ~~11~~10.b. and ~~11~~10.c. Any recognized asset from premium tax credits or policy surcharges shall be re-evaluated regularly to ensure recoverability. Upon expiration, tax credits no longer meet the definition of an asset and shall be written off.

a. For assessments paid before premium tax credits are realized or policy surcharges are collected, an asset results, which represents a receivable for premium tax credits that will be taken and policy surcharges which will be collected in the future. These receivables, to the extent it is probable they will be realized, meet the definition of assets, as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement. The asset shall be established and reported independent from the liability (not reported net).

b. Assets recognized from accrued liability assessments shall be determined in accordance with the type of guaranty fund assessment as detailed in the following subparagraphs. Assets recognized from accrued liability assessments meet the definition of an asset under SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement.

i. For retrospective-premium-based and loss-based assessments, to the extent that it is probable that accrued liability assessments will result in a recoverable amount in a future period from business currently in-force considering appropriate persistency rates for long-duration contracts, an asset shall be recognized at the time the liability is recorded. In-force policies do not include expected renewals of short-term contracts.

ii. For prospective-premium-based assessments, the recognition of assets from accrued liability assessments is limited to the amount of premium an entity has written or is obligated to write and to the amounts recoverable over the life of the in-force policies. This SSAP requires reporting entities to recognize prospective-based-premium assessments as the premium is written or obligated to be written by the reporting entity. Accordingly, the expected premium tax offset or policy surcharge asset related to the accrual of prospective-premium-based assessments shall be based on and limited to the amount recoverable as a result of premiums the insurer has written or is obligated to write.

c. An asset shall not be established for paid or accrued assessments that are recoverable through future premium rate structures.

~~12.~~11. An evaluation of assets recognized under paragraph ~~11~~10 shall be made in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) to determine if there is any impairment. If, in accordance with SSAP No. 5R, it is probable that the asset is no longer realizable, the asset shall be written off to the extent it is not realizable and charged to income in the period the determination is made. Considering expected future premiums other than on in-force policies in evaluating recoverability of premium tax offsets or policy surcharges is not permitted.

Acting as an Agent for Collection and Remittance of Fees and Assessments

~~13.~~12. In certain circumstances, a reporting entity acts as an agent for certain state or federal agencies in the collection and remittance of fees or assessments. In these circumstances, the liability for the fees and assessments rests with the policyholder rather than with the reporting entity. The reporting entity's obligation is to collect and subsequently remit the fee or assessment.(INT 02-22) When both the following conditions are met, an assessment shall not be reported in the statement of operations of a reporting entity:

a. The assessment is reflected as a separately identifiable item on the billing to the policyholder; and

b. Remittance of the assessment by the reporting entity to the state or federal agency is contingent upon collection from the insured.

~~14.~~13. The impact to the statement of operations depends on the nature of the charge:

a. For charges which are the ultimate responsibility of the policyholder, follow existing guidance in paragraph ~~13~~12, and pass these charges and recoveries through the balance sheet with no impact to the statement of operations.

b. For charges which are the ultimate responsibility of the reporting entity and may be recovered all or in part, apply gross or net reporting in the statement of operations as appropriate based on the nature of the charge and recovery. For example, charges which are considered in rate development or for which the recovery is classified as premium should be reported gross, charges for which recovery is considered a reduction of the expense should be reported net.

c. For collection or administrative fees, report such fees as revenue in the statement of operations as "Finance and Service Charges Not Included in Premiums" or "Aggregate Write-Ins for Miscellaneous Income".

Applying the Recognition Criteria

~~15.~~14. Application of the recognition criteria in paragraph 4:

a. *Retrospective-premium-based guaranty-fund assessments* - An assessment is probable of being imposed when a formal determination of insolvency occurs[1]. At that time, the premium that obligates the entity for the assessment liability has already been written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability for the entire amount of future assessments related to a particular insolvency when a formal determination of insolvency is rendered.

[1] As detailed within paragraph ~~7~~6 for premium-based guaranty-fund assessments, an insolvency shall be considered to have occurred when a reporting entity meets a state's (ordinarily the state of domicile of the insolvent reporting entity) statutory definition of an insolvent reporting entity. In most states, the reporting entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation.

b. *Prospective-premium-based guaranty-fund assessments* - The event that obligates the entity for the assessment liability generally is the writing of, or becoming obligated to write or renew, the premiums on which the expected future assessments are to be based (for example, multiple-year contracts under which an insurance entity has no discretion to avoid writing future premiums). Therefore, the event that obligates the entity generally will not have occurred at the time of the insolvency. Law or regulatory practice affects the event that obligates the entity in either of the following ways:

i. In states that, through law or regulatory practice, provide that an entity cannot avoid paying a particular assessment in the future (even if the entity reduces premium writings in the future), the event that obligates the entity is a formal determination of insolvency or a similar event. An entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability for the entire amount of future assessments that cannot be avoided related to a particular insolvency when a formal determination of insolvency occurs.

ii. In states without such a law or regulatory practice, the event that obligates the entity is the writing of, or becoming obligated to write, the premiums on which the expected future assessments are to be based. An entity that has the ability to reasonably estimate the amount of the assessments shall recognize a liability when the related premiums are written or when the entity becomes obligated to write the premiums.

c. *Prefunded-premium-based guaranty-fund assessments* - A liability for an assessment arises when premiums are written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability as the related premiums are written.

d. *Other premium-based assessments* - Other premium-based assessments shall be accounted for in the same manner as prefunded premium-based guaranty-fund assessments.

e. *Loss-based assessments* - An assessment is probable of being asserted when the loss occurs. The obligating event of the assessment also has occurred when the loss occurs. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment shall recognize a liability as the related loss is incurred.

f. *Administrative-type assessments* – As this assessment is typically an annual amount per entity assessed to fund operations of the guaranty association, regardless of the existence of an insolvency, such assessments are generally expensed in the period assessed.

~~Affordable Care Act Section 9010 Assessment~~

~~16. The Affordable Care Act (ACA) imposes an assessment on entities that issue health insurance for each calendar year beginning on or after January 1, 2014. Pursuant to Section 9010 of the ACA, a reporting entity's portion of the assessment is paid no later than September 30 of the applicable calendar year (the fee year) beginning in 2014 and is not tax deductible. The amount of the assessment for the reporting entity is based on the ratio of the amount of an entity's subject net health premiums written for any U.S. health risk during the preceding calendar year (data year) to the aggregate amount of subject net health premiums written by all subject U.S. health insurance providers during the preceding calendar year. The ACA includes some significant exclusions regarding which entities are required to pay the assessment. This guidance applies to all entities that are subject to the fee. The guidance in this Section (paragraphs 16-21) applies to the unique facts and circumstances in the ACA; accordingly, an entity~~

~~should apply judgment when evaluating the facts and circumstances of other assessments arrangements before analogizing to the guidance for Section 9010 of the ACA.~~

~~17. Throughout this discussion of the Section 9010 assessment of the ACA, the following terms apply:~~

~~a. The term "data year" means the calendar year immediately before the fee year. For example, 2014 is the data year for fee year 2015.~~

~~b. The term "fee year" means the calendar year in which the assessment must be paid to the U.S. Treasury.~~

~~18. A reporting entity's portion of the annual assessment becomes payable to the U.S. Treasury once the reporting entity provides health insurance (in the fee year) for any subject U.S. health risk for each calendar year beginning on or after January 1, 2014.~~

~~19. The liability related to the Section 9010 ACA assessment shall be estimated and recorded in full once the entity provides qualifying health insurance (typically January 1) in the applicable calendar year in which the assessment is paid (fee year) with a corresponding entry to expense. The Section 9010 ACA assessment shall be recognized in full on January 1 of the fee year, in the operating expense category of Taxes, Licenses and Fees.~~

~~20. Liability recognition of the Section 9010 fee is not required in the data year. In the data year, the reporting entity is required to reclassify from unassigned surplus to special surplus an amount equal to its estimated subsequent fee year assessment. This segregation in special surplus is accrued monthly throughout the data year. The reclassification from unassigned surplus to special surplus does not reduce total surplus. On January 1 of the fee year, the prior year segregation in special surplus is reversed and the full current fee year assessment liability shall be accrued.~~

~~21. The Section 9010 ACA annual assessment does not represent a cost related to the acquisition of policies that is consistent with the definition of acquisition costs in *SSAP No. 71—Policy Acquisition Costs and Commissions*.~~

Disclosures

~~22.~~15. ~~For guaranty fund and other non-Section 9010 ACA assessments, a~~A reporting entity shall disclose the following:

a. Describe the nature of any assessments that could have a material financial effect, by type of assessment, and state the estimate of the liability, identifying whether the corresponding liability has been recognized under paragraph 4, a liability has not been recognized as the obligating event has not yet occurred, or that an estimate cannot be made.

b. For assessments with liabilities recognized under paragraph 4, disclose the amount of the recognized liabilities, any related asset for premium tax credits or policy surcharges, the periods over which the assessments are expected to be paid, and the period over which the recorded premium tax offsets or policy surcharges are expected to be realized.

c. Disclose assets recognized from paid and accrued premium tax offsets or policy surcharges, and include a reconciliation of assets recognized within the previous year's Annual Statement to the assets recognized in the current year's Annual Statement. The reconciliation shall reflect, in aggregate, each component of the increase and decrease in paid and accrued premium tax offsets and policy surcharges, including the amount charged off.

d. Disclosures shall be made in accordance with paragraph 27 of SSAP No. 5R when there is at least a reasonable possibility that the impairment of an asset from premium tax offsets or policy surcharges may have been incurred.

~~23. For the Section 9010 ACA assessment:~~

~~a. For the annual reporting period ending December 31, 2013, and thereafter, a reporting entity subject to the assessment under section 9010 of the Affordable Care Act, shall provide a disclosure of the assessment payable in the upcoming year consistent with the guidance provided under *SSAP No. 9—Subsequent Events* for a Type II subsequent event. The disclosure shall provide information regarding the nature of the assessment and an estimate of its financial impact, including the impact on its risk-based capital position as if it had occurred on the balance sheet date. In accordance with SSAP No. 9, paragraph 9, the reporting entity shall also consider whether there is a need to present pro forma financial statements regarding the impact of the assessment, based on its judgment of the materiality of the assessment.~~

~~b. Additionally, for annual reporting periods ending on or after December 31, 2014, the disclosure in paragraph 23.a. is expanded to include information on the amounts reflected in special surplus in the data year. The disclosure shall provide information regarding the nature of the assessment and the Total Adjusted Capital and Authorized Control Level (in dollars) before and after adjustment (as reported in its estimate of special surplus applicable to the 9010 fee) to reflect the fee as of the annual reporting date as if it had been reported on the balance sheet date. The disclosure shall also provide a statement as to whether an RBC action level would have been triggered had the fee been reported as of the balance sheet date.~~

~~24.~~16. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

~~25.~~17. This statement adopts GAAP guidance for recording guaranty fund and other assessments, which is contained in *Accounting Standards Codification 405-30, Insurance Related Assessments* (ASC 405-30) to the extent reflected in this SSAP. Statutory accounting modifications from ASC 405-30 are as follows:

a. The option to discount accrued liabilities (and reflect the time value of money in anticipated recoverables) is rejected for statutory accounting. Liabilities for guaranty funds or other assessments shall not be discounted.

b. The use of a valuation allowance for premium tax offsets and policy surcharges no longer probable for realization has been rejected for statutory accounting. Evaluation of assets shall be made in accordance with SSAP No. 5R, and if it is probable that the asset is no longer realizable, the asset shall be written off and charged to income in the period the determination is made.

c. Guidance within ASC 405-30 pertaining to noninsurance entities has been rejected as not applicable for statutory accounting.

~~26.~~18. This statement also adopts with modification *Emerging Issues Task Force No. 06-3: How Taxes Collected from Customers and Remitted to Governmental Authorities Should Be Presented in the Income Statement (That is, Gross versus Net Presentation)* (EITF 06-3), now included in *Accounting Standards*

Codification 605-45, Revenue Recognition, Principal Agent Considerations to the extent reflected in paragraph ~~14~~13 of this statement.

~~27. *ASU 2011-06: Other Expenses – Fees Paid to the Federal Government by Health Insurers* is adopted with modifications: 1) to require full expense recognition on January 1 of the fee year, 2) to require the reclassification from unassigned surplus to special surplus in the data year for the estimated amount payable, and 3) other modifications for statutory accounting terminology as reflected in paragraphs 16-21.~~

Effective Date and Transition

~~28.~~19. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Substantive revisions to paragraphs 4, ~~7~~6, ~~8~~7, ~~9~~8, ~~11~~10, ~~12~~11, ~~15~~14 and ~~22~~15 are initially effective for the reporting period beginning January 1, 2011. The result of applying this revised Statement shall be considered a change in accounting principle in accordance with SSAP No. 3. Pursuant to SSAP No. 3, the cumulative effect of changes in accounting principles shall be reported as an adjustment to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect recognized through surplus from initial application of this Statement shall reflect the removal of liabilities established under SSAP No. 35, and the re-establishment of liabilities required under SSAP No. 35R. If there is no change in the liabilities recognized (for example, retrospective-premium based assessments), no cumulative effect adjustment shall occur. With regards to assets, the entity shall complete an assessment of the SSAP No. 35 asset reported as of the transition date. If it is determined that the reported asset exceeds what is allowed under SSAP No. 35R, then the excess asset shall be written-off, through unassigned funds, so the ultimate asset reflected corresponds with what is permitted under SSAP No. 35R. Although it is possible that the excess asset will be reinstated once the liability assessment is recognized (prospective-premium based assessments), it is inappropriate to continue to reflect an asset for assessments that are not reflected within the financial statements. The guidance in paragraph ~~14~~13 adopted with modification *Emerging Issues Task Force No. 06-3: How Taxes Collected from Customers and Remitted to Governmental Authorities Should Be Presented in the Income Statement (That is, Gross versus Net Presentation)* and was incorporated from INT 07-03 and effective September 29, 2007. The Section 9010 ACA fee has specific guidance (adopted December 2013)~~detailed in paragraphs 16-21~~ that ~~is~~was ~~initially~~ effective for annual reporting periods beginning January 1, 2014, and was moved to SSAP No. 106 in June 2014.

Relevant Issue Papers

- *Issue Paper No. 35—Accounting for Guaranty Fund and Other Assessments*
- *Issue Paper No. 143—Prospective-Based Guaranty Fund Assessments*
- *Issue Paper No. 148—Affordable Care Act Section 9010 Assessment*

EXHIBIT A – PRIMARY METHODS OF GUARANTY FUND ASSESSMENTS

a. *Retrospective-premium-based assessments* - Guaranty funds covering benefit payments of insolvent life, annuity, and health insurance entities typically assess entities based on premiums written or received in one or more years before the year of insolvency. Assessments in any year are generally limited to an established percentage of an entity's average premiums for the three years preceding the insolvency. Assessments for a given insolvency may take place over several years.

b. *Prospective-premium-based assessments* - Guaranty funds covering claims of insolvent property and casualty insurance entities typically assess entities based on premiums written in one or more years after the insolvency. Assessments in any year are generally limited to an established percentage of an entity's premiums written or received for the year preceding the assessment. Assessments for a given insolvency may take place over several years.

c. *Prefunded-premium-based assessments* - This kind of assessment is intended to prefund the costs of future insolvencies. Assessments are imposed before any particular insolvency and are based on the current level of written premiums. Rates to be applied to future premiums are adjusted as necessary.

d. *Administrative-type assessments* - These assessments are typically a flat (annual) amount per entity to fund operations of the guaranty association, regardless of the existence of an insolvency.

e. *Other premium-based assessments* - Entities are subject to a variety of other insurance-related assessments. Many states and a number of local governmental units have established other funds supported by assessments. The most prevalent uses for such assessments are (*a*) to fund operating expenses of state insurance regulatory bodies (for example, the state insurance department or workers' compensation board) and (*b*) to fund second-injury funds.

    i. *Premium-based* - The assessing organization imposes the assessment based on the entity's written premiums. The base year of premiums is generally either the current year or the year preceding the assessment.

    ii. *Loss-based* - The assessing organization imposes the assessment based on the entity's incurred losses or paid losses in relation to that amount for all entities subject to that assessment in the particular jurisdiction.

Troubled Debt Restructuring

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for troubled debt restructuring.

SUMMARY CONCLUSION

2. A troubled debt restructuring is defined as a debt restructuring whereby the creditor, for economic or legal reasons related to the debtor's financial difficulties, grants a concession to the debtor that it would not otherwise grant. That concession either stems from an agreement between the creditor and the debtor or is imposed by law or a court. Many troubled debt restructurings involve modifying terms to reduce or defer cash payments required of the debtor in the near future to help the debtor attempt to improve its financial condition and eventually be able to pay the creditor. The creditor, for example, may accept cash, other assets, or an equity interest in the debtor in satisfaction of the debt though the value received is less than the amount of the debt, because the creditor concludes the concession will maximize recovery of its investment. A debtor in a troubled debt restructuring can obtain funds from sources other than the existing creditor, if at all, only at effective interest rates (based on market prices) so high that it cannot afford to pay them. A troubled debt restructuring shall include debt that is fully satisfied by foreclosure, repossession, or other transfer of assets or by grant of equity securities by the debtor that is, in a technical sense, not restructured.

3. The determination of whether a debt restructuring is considered a troubled debt restructuring, as defined above, shall be made independently for the debtor and the creditor.

4. A debt restructuring shall not necessarily be considered a troubled debt restructuring for purposes of this statement even if the debtor is experiencing some financial difficulties. In general, a debtor that can obtain funds from sources other than the existing creditor at market interest rates at or near those for nontroubled debt is not involved in a troubled debt restructuring. For example, a troubled debt restructuring is not involved if:

a. The fair value of cash, other assets, or an equity interest accepted by a creditor from a debtor in full satisfaction of its receivable at least equals the creditor's recorded investment in the receivable;

b. The fair value of cash, other assets, or an equity interest transferred by a debtor to a creditor in full settlement of its payable at least equals the debtor's carrying amount of the payable;

c. The creditor reduces the effective interest rate on the debt primarily to reflect a decrease in market interest rates in general or a decrease in the risk so as to maintain a relationship with a debtor that can readily obtain funds from other sources at the current market interest rate;

d. The debtor issues, in exchange for its debt, new marketable debt having an effective interest rate based on its market price that is at or near the current market interest rates of debt with similar maturity dates and stated interest rates issued by nontroubled debtors; or

e. The debtor, in connection with bankruptcy proceedings, enters into debt restructuring that results in a general restatement of most of the debtor's liabilities.

Determining Whether a Creditor Has Granted a Concession

5. A creditor has granted a concession when, as a result of the restructuring, it does not expect to collect all amounts due, including interest accrued at the original contract rate. In that situation, and if the payment of principal at original maturity is primarily dependent on the value of collateral, an entity shall consider the current value of that collateral in determining whether the principal will be paid.

6. A creditor may restructure a debt in exchange for additional collateral or guarantees from the debtor. In that situation, a creditor has granted a concession when the nature and amount of that additional collateral or guarantees received as part of a restructuring do not serve as adequate compensation for other terms of the restructuring. When additional guarantees are received in a restructuring, an entity shall evaluate both a guarantor's ability and its willingness to pay the balance owed.

7. If a debtor does not otherwise have access to funds at a market rate for debt with similar risk characteristics as the restructured debt, the restructuring would be considered to be at a below-market rate, which may indicate that the creditor has granted a concession. In that situation, a creditor shall consider all aspects of the restructuring in determining whether it has granted a concession.

8. A temporary or permanent increase in the contractual interest rate as a result of a restructuring does not preclude the restructuring from being considered a concession because the new contractual interest rate on the restructured debt could still be below market interest rates for new debt with similar risk characteristics. In that situation, a creditor shall consider all aspects of the restructuring in determining whether it has granted a concession.

Determining Whether a Debtor Is Experiencing Financial Difficulties

9. In evaluating whether a receivable is a troubled debt restructuring, a creditor must determine whether the debtor is experiencing financial difficulties. In making this determination, a creditor shall consider the following indicators:

a. The debtor is currently in payment default on any of its debt. In addition, a creditor shall evaluate whether it is probable that the debtor would be in payment default on any of its debt in the foreseeable future without the modification. That is, a creditor may conclude that a debtor is experiencing financial difficulties, even though the debtor is not currently in payment default.

b. The debtor has declared or is in the process of declaring bankruptcy.

c. There is substantial doubt as to whether the debtor will continue to be a going concern.

d. The debtor has securities that have been delisted, are in the process of being delisted, or are under threat of being delisted from an exchange.

e. On the basis of estimates and projections that only encompass the debtor's current capabilities, the creditor forecasts that the debtor's entity-specific cash flows will be insufficient to service any of its debt (both interest and principal) in accordance with the contractual terms of the existing agreement for the foreseeable future.

f. Without the current modification, the debtor cannot obtain funds from sources other than the existing creditors at an effective interest rate equal to the current market interest rate for similar debt for a nontroubled debtor.

The above list of indicators is not intended to include all indicators of a debtor's financial difficulties.

Evaluating Whether a Restructuring Results in a Delay in Payment That is Insignificant

10. A restructuring that results in only a delay in payment that is insignificant is not a concession. The following factors, when considered together, may indicate that a restructuring results in a delay in payment that is insignificant:

a. The amount of the restructured payments subject to the delay is insignificant relative to the unpaid principal or collateral value of the debt and will result in an insignificant shortfall in the contractual amount due.

b. The delay in timing of the restructured payment period is insignificant relative to any one of the following:

i. The frequency of payments due under the debt

ii. The debt's original contractual maturity

iii. The debt's original expected duration

11. If the debt has been previously restructured, an entity shall consider the cumulative effect of the past restructurings when determining whether a delay in payment resulting from the most recent restructuring is insignificant.

Accounting by Debtors

12. A debtor shall account for a troubled debt restructuring according to the type of the restructuring (transfer of assets in full settlement, grant of equity interest in full settlement, modification of terms or combination of types). Generally, troubled debt restructuring involving the transfer of assets or the grant of an equity interest shall be accounted for at the fair value of the assets transferred or the equity interest granted.

13. A debtor in a troubled debt restructuring involving only modification of terms of a payable—that is, not involving a transfer of assets or grant of an equity interest—shall account for the effects of the restructuring prospectively from the time of restructuring, and shall not change the carrying amount of the payable at the time of the restructuring unless the carrying amount exceeds the total future cash payments specified by the new terms. That is, the effects of changes in the amounts or timing (or both) of future cash payments designated as either interest or face amount shall be reflected in future periods. Interest expense shall be computed in a way that a constant effective interest rate is applied to the carrying amount of the payable at the beginning of each period between restructuring and maturity. The new effective interest rate shall be the discount rate that equates the present value of the future cash payments specified by the new terms (excluding amounts contingently payable) with the carrying amount of the payable.

14. If the total future cash payments specified by the new terms of a payable, including both payments designated as interest and those designated as face amount, are less than the carrying amount of the payable, the debtor shall reduce the carrying amount to an amount equal to the total future cash payments specified by the new terms and shall recognize a gain on restructuring of payables equal to the amount of the reduction. Thereafter, all cash payments under the terms of the payable shall be accounted for as reductions of the carrying amount of the payable, and no interest expense shall be recognized on the payable for any period between the restructuring and maturity of the payable.

15. A debtor shall not recognize a gain on a restructured payable involving indeterminate future cash payments as long as the maximum total future cash payments may exceed the carrying amount of the payable. Amounts designated either as interest or as face amount by the new terms may be payable contingent on a specified event or circumstance (e.g., the debtor may be required to pay specified

amounts if its financial condition improves to a specified degree within a specified period). To determine whether the debtor shall recognize a gain according to the provisions of paragraphs 13 and 14, those contingent amounts shall be included in the "total future cash payments specified by the new terms" to the extent necessary to prevent recognizing a gain at the time of restructuring that may be offset by future interest expense. Thus, the debtor shall apply *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) in which probability of occurrence of a gain contingency is not a factor and shall assume that contingent future payments will have to be paid. The same principle applies to amounts of future cash payments that must sometimes be estimated to apply the provisions of paragraphs 13 and 14. For example, if the number of future interest payments is flexible because the face amount and accrued interest is payable on demand or becomes payable on demand, estimates of total future cash payments shall be based on the maximum number of periods possible under the restructured terms.

16. If a troubled debt restructuring involves amounts contingently payable, those contingent amounts shall be recognized as a payable and as interest expense in future periods in accordance SSAP No. 5R. Thus, in general, interest expense for contingent payments shall be recognized in each period in which (a) it is probable that a liability has been incurred and (b) the amount of that liability can be reasonably estimated. Before recognizing a payable and interest expense for amounts contingently payable, however, accrual or payment of those amounts shall be deducted from the carrying amount of the restructured payable to the extent that contingent payments included in "total future cash payments specified by the new terms" prevented recognition of a gain at the time of restructuring (paragraph 15).

Accounting by Creditors

17. A creditor shall account for a troubled debt restructuring according to the type of the restructuring (receipt of assets in full satisfaction, modification of terms, combination of types). Generally, troubled debt restructuring involving the transfer of assets shall be accounted for at the fair value of the assets received. Troubled debt restructuring involving modification of terms shall be accounted for at fair value (as determined by acceptable appraisal methodologies) in accordance with *SSAP No. 100—Fair Value Measurements (SSAP No. 100)*. If the restructured loan is collateral dependent, fair value shall be the fair value of the collateral. If the restructured loan is not collateral dependent, fair value shall be determined in accordance with SSAP No. 100. If the determined fair value of the loan is less than the recorded investment in the loan (including accrued interest, net deferred loan fees or costs, and unamortized premium or discount), a new cost basis shall be established at the fair value with the difference being recorded as a realized loss in the statement of operations. After the troubled debt restructuring, a creditor shall account for the assets consistent with the statutory guidance for such assets.

18. A creditor shall account for assets, including foreclosed property and equity interests in corporations, joint ventures, or partnerships, received in satisfaction of the loan at their fair value (as determined by acceptable appraisal methodologies) at the time of restructuring or at the book value of the loan if lower. If the fair value is less than the book value, the required writedown shall be recognized as a realized capital loss. The creditor shall reclassify the asset from loans to the appropriate asset account, such as real estate or other invested assets, at the time that the creditor obtains clear title to the asset except for mortgage loans which shall be reclassified at the beginning of the redemption period unless it is probable that the mortgage loan will be redeemed. After the troubled debt restructuring, a creditor shall account for the assets received in satisfaction of the loan consistent with the statutory guidance for similar assets.

19. Any fees received in connection with a modification of terms of a troubled debt restructuring shall be applied as a reduction of the recorded investment in the loan. All costs associated with the restructuring, including direct loan origination costs, shall be charged to expense as incurred.

Disclosure by Debtors

20. A debtor in a troubled debt restructuring shall disclose in the financial statements the following information about troubled debt restructurings that have occurred during a period for which financial statements are presented:

a. For each restructuring or separate restructuring within a fiscal period for the same category of payables, (e.g., accounts payable or subordinated debentures), a description of the principal changes in terms, the major features of settlement, or both;

b. Aggregate gain on restructuring of payables and the related income tax effect; and

c. Aggregate net gain or loss on transfers of assets recognized during the period.

21. A debtor shall disclose in financial statements for periods after a troubled debt restructuring the extent to which amounts contingently payable are included in the carrying amount of restructured payables. A debtor shall also disclose total amounts that are contingently payable on restructured payables and the conditions under which those amounts would become payable or would be forgiven.

22. Refer to the preamble for further discussion regarding disclosure requirements.

Disclosure by Creditors

23. A creditor shall disclose in the financial statements the information captured in paragraphs 23.a., 23.b. and 23.c. about troubled debt restructuring as of the date of each balance sheet presented. Disclosures captured from paragraphs 23.d. and 23.e. are required in the statutory audited financial statements only:

a. As of the date of each statement of financial position presented, the recorded investment in the loans for which impairment has been recognized in accordance with this statement and the related realized capital loss

b. The amount of commitments, if any, to lend additional funds to debtors owing receivables whose terms have been modified in troubled debt restructuring

c. The creditor’s income recognition policy for interest income on an impaired loan

d. For troubled debt restructurings that occurred during the annual reporting period, aggregated by type of instrument, qualitative and quantitative information on (1) how the items were modified and (2) the financial effects of the modifications

e. If restructured within the previous 12 months and there has been a payment default during that period, disclose qualitative and quantitative information about the defaulted instruments, aggregated by type of instrument, including: (1) type of instruments that defaulted and (2) the amount of recorded investments for which default occurred

24. Refer to the preamble for further discussion regarding disclosure requirements.

25. This statement is not intended to modify the requirement for life and health insurers to complete the Annual Statement exhibit disclosing long-term mortgage loans in good standing with restructured terms.

Relevant Literature

26. This statement adopts with modification *FASB Statement No. 15*, *Accounting by Debtors and Creditors for Troubled Debt Restructurings* (FAS 15) to specify that creditors shall reclassify assets obtained in a troubled debt restructuring from loans to the appropriate asset account at the time the creditor obtains clear title to the asset, except for mortgage loans which shall be reclassified at the beginning of the redemption period unless it is probable that the mortgage loan will be redeemed and with modification to require that gains and losses from extinguishment of debt be reported as capital gains or losses, and charged to operations. In August 2012, this statement was revised to adopt paragraphs 310-40-15-13 through 310-40-15-18 and 310-40-15-20 of the FASB Codification incorporated through *FASB ASU 2011-02, A Creditors Determination of Whether a Restructuring Is a Troubled Debt Restructuring*. Also in August 2012, this statement adopted with modification the disclosure requirements included in paragraphs 310-10-50-33 through 310-10-50-34 of the FASB Codification originally incorporated from *ASU 2010-20, Receivables (Topic 310), Disclosures About the Credit Quality of Financing Receivables and the Allowance for Credit Losses*, deferred by *ASU 2011-01, Receivables (Topic 310), Deferral of the Effective Date of Disclosures about Troubled Debt Restructurings in Update No. 2010-20* and reinstated through ASU 2011-02. These disclosure requirements have been modified to be applicable for all troubled debt restructurings within the scope of SSAP No. 36, rather than limited to troubled debt restructurings of "financing receivables." The revisions adopted in August 2012 from ASU 2011-02 and ASU 2010-20 are effective January 1, 2013, with early application permitted.

27. This statement adopts paragraphs 9, 22, and 25 of *FASB Statement No. 114*, *Accounting by Creditors for Impairment of a Loan* (FAS 114). Paragraphs 6.d., 13 and 21 of FAS 114 are rejected. *FASB Statement No. 118*, *Accounting by Creditors for Impairment of a Loan—Income Recognition and Disclosures* is adopted as it relates to troubled debt restructuring.

28. This statement adopts *FASB Technical Bulletin 81-6, Applicability of Statement 15 to Debtors in Bankruptcy Situations* and *FASB Technical Bulletin 80-2, Classification of Debt Restructuring by Debtors and Creditors*. It also adopts *FASB Emerging Issue Task Force No. 87-18, Use of Zero Coupon Bonds in a Troubled Debt Restructuring*, *FASB Emerging Issue Task Force No. 87-19, Substituted Debtors in a Troubled Debt Restructuring*, *FASB Emerging Issue Task Force No. 89-15*, *Accounting for a Modification of Debt Terms When the Debtor is Experiencing Financial Difficulties* consistent with the modifications to FAS 15 discussed in this statement, *FASB Emerging Issues Task Force No. 96-22, Applicability of the Disclosures Required by FASB Statement No. 114 When a Loan Is Restructured in a Troubled Debt Restructuring into Two (or More) Loans* and *FASB EITF 02-4: Determining Whether a Debtor's Modification or Exchange of Debt Instruments is Within the Scope of FASB Statement No. 15.*

29. Although *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases* (FAS 91) was rejected in *SSAP No. 26—Bonds, Excluding Loan-Backed and Structured Securities*, this statement is consistent with paragraph 14 of *FAS No. 91.*

30. This statement rejects *FASB Emerging Issues Task Force No. 94-8, Accounting for Conversion of a Loan into a Security in a Troubled Debt Restructuring* and *FASB Technical Bulletin 94-1*, *Application of Statement 115 to Debt Securities Restructured in a Troubled Debt Restructuring.*

Effective Date and Transition

31. This statement is effective for years beginning January 1, 2001. The provisions of this statement shall be applied to all troubled debt restructurings entered into on or after January 1, 2001. The adoption of *FASB EITF 02-4: Determining Whether a Debtor's Modification or Exchange of Debt Instruments is within the Scope of FASB Statement No. 15* was incorporated from INT 03-12 and effective December 7, 2003.

Mortgage Loans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the accounting and reporting of mortgage loans and related fees.

SUMMARY CONCLUSION

2. A mortgage loan is defined as a debt obligation that is not a security, which is secured by a mortgage on real estate. (A security is a share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer that (a) either is represented by an instrument issued in bearer or registered form, or if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer, (b) is of a type commonly dealt in on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment, and (c) either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations).

3. Mortgage loans meet the definition of assets as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

Commitment Fees

4. Commitment (or commitment standby) fees are fees paid to the reporting entity that obligate the reporting entity to make or acquire a loan or to satisfy an obligation of another party under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the loan is granted. If the loan is not granted, then the fees shall be recorded as investment income by the reporting entity when the commitment is no longer available.

5. A fee paid to the reporting entity to obtain a commitment to be able to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 9 over the life of the loan as an adjustment to the investment income on the loan. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Loan Origination Fees

6. Loan origination fees are defined as fees charged to the borrower in connection with the process of originating, refinancing, or restructuring a loan. The term includes, but is not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to a lending transaction. Nonrefundable loan origination fees shall not be recorded until received in cash. Nonrefundable fees representing points shall be deferred as part of the loan balance and amortized over the life of the loan in accordance with paragraph 9. Nonrefundable fees other than points shall be recorded in income upon receipt.

Loan Origination, Acquisition, and Commitment Costs

7. All costs incurred in connection with originating a loan, acquiring purchased loans or committing to purchase loans shall be charged to expense as incurred.

Initial Investment

8. For mortgage loans originated by the reporting entity, the initial investment in mortgage loans shall be recorded at the principal amount of the loan net of any amounts deferred under the provisions of paragraphs 5 and 6. For mortgage loans purchased by a reporting entity, the initial investment shall be recorded as the amount paid to the seller. Accordingly, there may be a premium or discount on such loans resulting from a difference between the amount paid and the principal amount.

Amortization

9. Premiums and discounts on acquired loans, and mortgage interest points and commitment fees (if such qualify for amortization as described in paragraphs 5 and 6) shall be recognized as an adjustment of yield over the life of the loan (i.e., the period of time until total principal proceeds of the loan are received in cash) to produce a constant effective yield each year to maturity. If the reporting entity holds a large number of similar loans for which the prepayments of principal are probable, (probable is used in the same context as in paragraph 6 in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*, which defines probable as the future event or events are likely to occur), and the timing and amount can be reasonably estimated, the reporting entity shall include estimates of future principal prepayments in the calculation of the constant effective yield necessary to apply the interest method. The amount recognized as an adjustment of yield shall be credited or charged to interest income in the calculation of net investment income.

Prepayments

10. Payments received in advance of due dates may produce prepaid interest which shall be recorded as a liability, Unearned Investment Income, on the reporting entity's balance sheet. The portion of the payments received in advance of due dates that represents prepayments of principal shall be recorded as a reduction in the mortgage loan balance.

11. A mortgage loan may provide for a prepayment penalty or acceleration fee in the event the loan is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

Interest Income

12. Interest income shall be recorded as earned and shall be included in investment income in the Summary of Operations. Interest income shall include interest collected, the change in interest income due and accrued, and the change in unearned interest income as well as amortization of premiums, discounts, and deferred fees as specified in paragraph 9.

Accrued Interest

13. Reporting entities that use servicing agents for their mortgage loans shall report the Interest Due and Accrued asset on the balance sheet consistently with the income statement treatment of the charge for servicing costs. If interest income is reported net of servicing costs, which is usual when the servicing agent fee is based on a percentage retention of each interest payment, then the interest receivable in the balance sheet shall be net of the related servicing costs. If interest is reported gross, with the servicing costs reported as an expense item, then interest due and accrued shall be reflected as an asset at the gross amount, with an appropriate liability to reflect the related servicing cost accrual.

14. When a loan is determined to be in default (per the contractual terms of the loan), the accrued interest on the loan shall be recorded as investment income due and accrued if deemed collectible. If a loan in default has any investment income due and accrued which is 180 days past due and collectible, the investment income shall continue to accrue, but all interest related to the loan is to be reported as a

nonadmitted asset. If accrued interest on a mortgage loan in default is not collectible, the accrued interest shall be written off immediately and no further interest accrued.

15. Contingent interest represents income generated through the occurrence of specific economic events in relation to the borrower. For example, contingent interest may become payable upon the attainment of a given level of cash flow or income. Contingent interest may be reported as income when received or accrued. The proper accrual of such income does, however, require an analysis of the applicable provisions in the underlying agreement and the verification that the prerequisite conditions have been met.

Impairments

16. A mortgage loan shall be considered to be impaired when, based on current information and events, it is probable that a reporting entity will be unable to collect all amounts due according to the contractual terms of the mortgage agreement. According to the contractual terms means that both the contractual principal payments and contractual interest payments of the mortgage loan will be collected as scheduled in the mortgage agreement. A reporting entity shall measure impairment based on the fair value (as determined by acceptable appraisal methodologies) of the collateral less estimated costs to obtain and sell. The difference between the net value of the collateral and the recorded investment in the mortgage loan shall be recognized as an impairment by creating a valuation allowance with a corresponding charge to unrealized loss or by adjusting an existing valuation allowance for the impaired loan with a corresponding charge or credit to unrealized gain or loss. Subsequent to the initial measurement of impairment, if there is a significant change (increase or decrease) in the net value of the collateral, the reporting entity shall adjust the valuation allowance; however, the net carrying amount of the loan shall at no time exceed the recorded investment in the loan. For reporting entities required to maintain an asset valuation reserve (AVR), the unrealized gain or loss on impairments shall be included in the calculation of the AVR. If the impairment is other than temporary (INT 06-07), a direct write down shall be recognized as a realized loss, and a new cost basis is established. This new cost basis shall not be changed for subsequent recoveries in value. Mortgage loans for which foreclosure is probable shall be considered permanently impaired.

17. For loans that are in default, being voluntarily conveyed, or being foreclosed, the carrying value shall be adjusted for additional expenses, such as insurance, taxes, and legal fees that have been incurred to protect the investment or to obtain clear title to the property to the extent that these amounts are deemed to be recoverable from the ultimate disposition of the property. However, if these costs cannot reasonably be expected to be recovered, they shall not be added to the carrying value, and the costs shall be expensed.

Escrow Payments

18. Amounts paid to the reporting entity by the mortgagor to cover future tax payments, insurance premiums, and other costs related to the property requires the creation of escrow accounts in the general ledger to record these liabilities. If these amounts are held by the servicing agents, they shall be reported on the reporting entity’s balance sheet both as an asset and as a liability when they produce income for the reporting entity. This may occur if the servicing agent invests the escrow funds and is required to remit the income (or portion thereof) to the reporting entity.

Construction Loans

19. A construction loan is defined as a mortgage loan of less than three years in term, made for financing the cost of construction of a building or other improvement to real estate, which is secured by the real estate. The principal amount of a construction loan shall be the amount of funds disbursed to the borrower. If, in accordance with the terms of the contract, interest is deferred until the maturity of the loan, the accrued interest shall be included in the balance of the loan outstanding. The impairment test in

paragraph 16 shall be applied to all construction loans, regardless of whether there are any defaults. Accordingly, construction loans shall not be reported at an amount greater than the fair value of the property. The percentage of completion of the property shall be considered in determining fair values of property securing construction loans.

Disclosures

20. The following disclosures shall be made in the financial statements:

a. Fair values in accordance with *SSAP No. 100—Fair Value Measurements;*

b. Concentrations of credit risk in accordance with SSAP No. 27 as well as 1) information as to how and to what extent management monitors the credit quality of its mortgage loans in an ongoing manner, and 2) to assess the quantitative and qualitative risks arising from the credit quality of its mortgage loans. To meet these objectives reporting entities shall provide information, aggregated by type, about the credit quality of mortgage loans including the following;

i. A description of the credit quality indicator

ii. The recorded investment in mortgage loans by credit quality indicator

iii. For each credit quality indicator, the date or range of dates in which the information was updated for that credit quality indicator

c. Description of the valuation basis of the mortgage loans;

d. Information on the minimum and maximum rates of interest received for new loans made by category;

e. Maximum percentage of any one loan to the value of security at the time of the loan;

f. An age analysis of mortgage loans, aggregated by type, capturing: 1) recorded investment of current mortgage loans, 2) recorded investment of mortgage loans past due classified as 30-59 days past due, 60-89 days past due, 90-179 days past due, and greater than 180 days past due; 3) recorded investment of mortgage loans 90 days and 180 days past due still accruing interest; 4) interest accrued for mortgage loans 90 days and 180 days past due; and 5) recorded investment and number of mortgage loans where interest has been reduced, by percent reduced; and

g. Taxes, assessments, and amounts advanced not included in the mortgage loan total.

21. The following additional disclosures shall be made for impaired loans:

a. The total recorded investment in impaired loans, aggregated by type, at the end of each period and (i) the amount for which there is a related allowance for credit losses determined in accordance with this statement and the amount of that allowance and (ii) the amount for which there is no related allowance for credit losses determined in accordance with this statement;

b. The policy for recognizing interest income on impaired loans, including how cash receipts are recorded;

c. For each period for which results of operations are presented, the average recorded investment, aggregated by type, in the impaired loans during each period, the related amount of interest income recognized during the time within that period that the loans were impaired, the recorded investments on nonaccrual status pursuant to SSAP No. 34, paragraph 6 and, unless not practicable, the amount of interest income recognized using a cash-basis method of accounting during the time within that period that the loans were impaired; and

d. For each period for which results of operations are presented, the activity in the allowance for credit losses account, including the balance in the allowance for credit losses account at the beginning and end of each period, additions charged to operations, direct write-downs charged against the allowance, and recoveries of amounts previously charged off.

22. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure requirements of paragraph 20.b. shall be included in the annual audited statutory financial reports only.

Relevant Literature

23. This statement adopts *FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan* (FAS 114), and *FASB Statement No. 118, Accounting by Creditors for Impairment of a Loan—Income Recognition and Disclosures, an amendment of FASB Statement No. 114*, for collateral dependent loans with the following modifications:

a. Impairment shall be measured based on the fair value of the collateral less costs to obtain and sell, whereas that is just one option under FAS 114; and

b. The reporting entity is required to record any other than temporary impairment as a realized loss and shall not record subsequent recoveries in fair value.

24. This statement adopts disclosure requirements in paragraphs 310-10-50-7, 310-10-50-7A, 310-10-50-15, and 310-10-50-29(b) of *ASU 2010-20, Disclosures about the Credit Quality of Financing Receivables and the Allowance For Credit Losses* (ASU 2010-20) for mortgage loans only. Other disclosure requirements of ASU 2010-20, and the application of the adopted disclosures to other investments or receivables are rejected as not applicable for statutory accounting. This statement also adopts *FASB Emerging Issues Task Force Issue No. 84-19, Mortgage Loan Payment Modifications*.

25. This statement rejects *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, *FASB Emerging Issues Task Force No. 88-17, Accounting for Fees and Costs Associated with Loan Syndications and Loan Participations,* and *AICPA Practice Bulletin 6, Amortization of Discounts on Certain Acquired Loans*.

Effective Date and Transition

26. This statement is effective for years beginning January 1, 2001. Initial recognition of the impairment losses resulting from the application of this statement shall apply to mortgage loans held at January 1, 2001, and be based on management's best estimates as of that date. Insurers shall release all unamortized amounts included in IMR related to prepayment penalties upon adoption of Codification and recognize such change in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).* A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

Acquisition, Development and Construction Arrangements

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for real estate acquisition, development and construction (ADC) arrangements and provides guidance on when to account for ADC arrangements as mortgage loans and when to account for ADC arrangements as investments in real estate or real estate joint ventures.

SUMMARY CONCLUSION

2. ADC arrangements shall be defined as lending agreements that are made to the owner of property to finance the acquisition, development and construction of real estate projects on the property in which the lender participates in the expected residual profits. Expected residual profit is the amount of profit, whether called interest or another name (e.g., equity kicker) above a reasonable amount of interest and fees expected to be earned by the lender. ADC arrangements shall include participations in loans and purchased loans that meet that definition of ADC arrangements.

3. If the lender is expected to receive over 50% of the expected residual profits of the project, the ADC arrangement shall be classified and accounted for as an investment in real estate in accordance with *SSAP No. 40R—Real Estate Investments*. If the lender is expected to receive 50% or less of the expected residual profits, the ADC arrangement shall be classified and accounted for as a loan or as a real estate joint venture, depending on the circumstances.

4. If any of the characteristics in paragraph 9.b. through 9.e. of *AcSEC Practice Bulletin 1*, "Exhibit I, ADC Arrangements" (PB1), or if a qualifying personal guarantee (as defined in PB1) is present, the ADC arrangement shall be classified and accounted for as a construction loan in accordance with *SSAP No. 37—Mortgage Loans*. Otherwise, the ADC arrangement shall be classified and accounted for as a real estate joint venture in accordance with *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*.

5. The factors that are evaluated in determining the accounting treatment at inception may subsequently change for some ADC arrangements, for example, as a result of a renegotiation of the terms. Consequently, the accounting treatment for an ADC arrangement shall be periodically reassessed, as described in paragraph 20 of PB1. Any changes in classification shall result in a reclassification of the asset at the amount the asset should be reported at under its new classification with the net effect, if any, charged to income in the period that the change in classification is made.

6. Regardless of whether an ADC arrangement is accounted for as an investment in real estate, a joint venture, or a mortgage loan, the ADC arrangement meets the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and is an admitted asset to the extent it conforms to the requirements of this statement.

7. ADC arrangements may involve related parties, in which case, *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* shall also be followed.

Relevant Literature

8. This statement adopts PB1, "Exhibit I, ADC Arrangements" and *FASB Emerging Issues Task Force No. 86-21, Application of the AICPA Notice to Practitioners regarding Acquisition, Development, and Construction Arrangements to Acquisition of an Operating Property.*

Effective Date and Transition

9. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

Reverse Mortgages

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for reverse mortgages.

SUMMARY CONCLUSION

2. A reverse mortgage loan is defined as a non-recourse loan with the following characteristics:

   a. It is secured by a mortgage against the primary residence of the borrower;

   b. It guarantees a stream of cash disbursements to the borrower, either for the life of the borrower with no limit or up to a set percentage of the value of the residence or as a line of credit which the borrower can draw upon as needed; and

   c. It has no maturity date and requires no repayment until one of the following events occur:

      i. The borrower dies;

      ii. The borrower sells the residence;

      iii. The residence ceases to be the borrower's primary residence; or

      iv. The borrower terminates the loan by paying back the outstanding balance.

3. A reverse mortgage meets the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and is an admitted asset to the extent it conforms to the requirements of this statement. Reverse mortgages shall be recorded as an other invested asset on the reporting entity's statement of financial position and Schedule BA, Other Long-Term Invested Assets, of the Annual Statement.

4. To be considered admitted assets, investments in reverse mortgages are limited to first lien mortgages only.

5. All expenses associated with acquiring reverse mortgages shall be recognized immediately as investment expense.

6. Revenue associated with originating or otherwise acquiring reverse mortgages, including non-refundable fees, shall be amortized to investment income on a straight line basis over the period from inception to the expected maturity date.

7. Generally, fees are not paid by the borrower at the time of closing but become payable when the outstanding balance of the reverse mortgage becomes due. In these situations, no accounting entries are recorded at the time of closing. Investment income shall be recognized and the outstanding balance of the loan shall increase as the fees are amortized.

8. If fees are paid by the borrower at the time of closing, a liability shall be established. Investment income shall be recognized and the liability shall decrease as the fees are amortized.

9. Interest is payable by the borrower when the outstanding balance of the reverse mortgage becomes due. Accrued interest shall be calculated on the outstanding balance of the loan on a monthly basis. As it is earned, accrued interest shall be recorded to investment income and added to the outstanding balance of the loan.

10. The outstanding balance of the reverse mortgage shall include the accumulation of amounts disbursed, accrued interest, and amortized origination fees (i.e., origination fees not paid by the borrower at the time of closing). Neither the fair value of the underlying collateral nor the obligation for future cash payments guaranteed by the lender are recorded.

11. The lender's equity in the appreciation of the property, if any, is not recorded until realized upon the sale of the home.

Valuation and Impairment

12. The major categories of risk affecting reverse mortgages are:

a. Mortality risk—risk of loan payments extending beyond the borrower's original projected life expectancy. Since most reverse mortgages guarantee a continuing monthly payment to the borrower, there is the possibility that the borrower will collect cash payments and accrue interest exceeding the ultimate disposal value of the collateral. In situations where loan payments extend beyond the borrower's original projected life expectancy, the reporting entity will experience a diminished yield, and may experience a loss. Reverse mortgage contracts shall be combined into groups which are of sufficient size to provide an actuarially and statistically credible basis for estimating life expectancy to project future cash flows;

b. Collateral risk—risk of deterioration in the value of the collateral such that it is insufficient to cover the loan balance. This risk shall be evaluated loan-by-loan and is based on information obtained from periodic real estate appraisals and other pertinent information;

c. Interest rate risk—risk of interest rates rising on adjustable rate reverse mortgages to the extent that accrued interest creates a collateral risk.

13. Reverse mortgages subject to the risks addressed in paragraph 12 shall be reported net of an appropriate actuarially calculated valuation reserve. Assumptions shall be applied consistently to similar loans. The assumptions, cash flow projections, and evaluation of risk shall be reviewed and updated at least annually. The fair value of the underlying collateral and the obligation for future cash payments guaranteed by the lender shall be considered in cash flow projections. Future appreciation in property value beyond the valuation date shall not be included in the projection of cash receipts.

14. If the impairment is temporary, any resulting adjustment shall be made to the valuation reserve (contra-asset) and unrealized gains and losses. Subsequent to the initial measurement of impairment, if there is a significant change (increase or decrease) in the risk factors affecting the value of the mortgage, the reporting entity shall adjust the valuation allowance in accordance with paragraph 13; however, the net carrying amount of the loan shall at no time exceed the recorded investment in the loan. The term recorded investment in the loan is distinguished from net carrying amount of the loan because the latter term is net of the valuation allowance, while the former term is not. The recorded investment (including accrued interest, net deferred loan fees, and unamortized premium or discount) in the loan does, however, reflect any direct write down of the investment. If the impairment is other than temporary (INT 06-07), the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The new basis shall not be changed for subsequent recoveries in fair value. A reverse mortgage shall be considered to be impaired when, based on current information and events, it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the reverse mortgage. "According to the contractual terms" means that both the contractual principal payments and contractual interest payments of the loan will be collected as specified in the reverse mortgage agreement.

Disclosures

15. The following disclosures shall be made for reverse mortgages in the financial statements:

    a. A description of the reporting entity's accounting policies and methods, including the statistical methods and assumptions used in calculating the reserve;

    b. General information regarding the reporting entity's commitment under the agreement;

    c. The reserve amount which is netted against the asset value;

    d. Investment income or loss recognized in the period as a result of the re-estimated cash flows.

16. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

17. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

Real Estate Investments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for real estate investments.

SUMMARY CONCLUSION

2. Real estate investments are defined as directly-owned real estate properties and single real estate property investments that are directly and wholly-owned through a limited liability company (LLC) that meet all of the criteria in paragraph 4. Real estate investments may be acquired in exchange for consideration (including but not limited to cash, a contract for deed or mortgage, or other non-cash consideration) obtained through foreclosure or voluntary conveyance in satisfaction of a mortgage loan, or received as contributed surplus. Real estate investments meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

3. Real estate investments include certain acquisition, development and construction arrangements (ADC) as defined in *SSAP No. 38—Acquisition, Development and Construction Arrangements* (SSAP No. 38).

4. A single real estate property investment that is wholly-owned by an LLC that is directly[1] and wholly-owned by the reporting entity shall be captured within this statement and reported on Schedule A – Real Estate if all of the following criteria are met. Real estate owned through an LLC that meets the stated criteria shall follow all statutory requirements within this statement[2]. Real estate owned through an LLC that does not meet the criteria shall be reported on Schedule BA – Other Long-Term Invested Assets. Regardless if reported on Schedule A or Schedule BA, all LLC's owned by the reporting entity shall be detailed in Schedule Y.

a. The real estate LLC has no transactions of its own other than transactions associated with an ownership structure utilized only for the ownership and management of a single real estate investment exclusively for the reporting entity (e.g., real estate taxes). A reporting entity may have more than one LLC that wholly-owns a single real estate property investment, but each LLC must separately comply with the paragraph 4 conditions, and be separately reported on Schedule A. All transactions of the LLC shall be reported as transactions of the reporting entity pursuant to the guidance in paragraphs 15-17.

b. The LLC only owns a single real estate property supported by an appraisal pursuant to paragraphs 13-14. A single real estate property can include multiple parcels of land and more than one structure; however, to be considered a single real estate property, the multiple of parcels of land and structure(s) must be contiguously located and managed together as a single asset (with reasonable allowances for public access routes). Criteria that may assist with determining a single real estate property would include the legal definition of the property, real estate tax assessments, postal address, the appraisal and the management and use of the property.

[1] For example, qualifying LLCs that are owned by a downstream holding company are not within scope of this statement regardless if the downstream holding company is wholly-owned by the reporting entity.

[2] The inclusion in this statement of real estate owned by a single member LLC is not an election by the reporting entity. All real estate owned in an LLC meeting the criteria in paragraph 4 are required to be captured within this statement, and are subject to this statement's requirements for valuation and admittance. Departures from the requirements within this SSAP, or continuing to follow SSAP No. 48 for these investments would be considered a departure from NAIC statutory accounting principles subject to permitted or prescribed practice disclosure requirements.

c. The reporting entity solely controls the real estate property in a manner similar to directly-owned real estate. As such, the reporting entity controls others' access to the real estate, and the real estate must be able to be sold exactly as, and as promptly as, directly-owned real estate.

d. The reporting entity solely and distinctly possesses all risks (other than the limitation of potential liability afforded by the LLC structure itself) and rewards of ownership of the real estate investment, without any constraints imposed by the LLC.

e. The reporting entity is the only member of the LLC. The LLC is not comprised of any other members, including: groups, competing interests, mutual beneficial interests, or co-venturers. The single-member ownership is required even if other members in the LLC are affiliates. An LLC comprised of affiliated parties is not within scope of this statement.

f. There shall be no apportionment by the LLC or the reporting entity of the appraised value, expenses or income from the single real estate property to any other entity or between the general or separate account.

5. Real estate investments shall be reported in accordance with the following balance sheet categories, with parenthetical disclosure of the amount of related encumbrances:

a. Properties occupied by the company – depreciated cost, less encumbrances;

b. Properties held for the production of income – depreciated cost, less encumbrances; and

c. Properties held for sale – lower of depreciated cost or fair value, less encumbrances and estimated costs to sell the property. (Paragraph 21 of *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments* (SSAP No. 90) provides criteria that must be met for this real estate classification.).

6. Any real estate which is owned by and is more than 50% occupied by the reporting entity and its affiliates shall be considered property occupied by the company. "More than 50% occupied" shall mean that the square footage occupied by the reporting entity and its affiliates totals more than 50% of the rentable square footage of the property, including common areas. This shall include property occupied by the company which is not necessarily home office (e.g., claims processing, data processing and branch centers). Property which does not meet this 50% requirement shall be classified as property held for the production of income or property held for sale, consistent with SSAP No. 90.

7. Encumbrances represent outstanding mortgages or other debt related to the real estate investment and any unpaid accrued acquisition or construction costs. Participating mortgage loan liabilities are addressed in paragraphs 22-24. Interest expense shall be included in investment expenses.

8. The cost of real estate represents the fair value of the consideration exchanged plus any costs incurred to place the real estate asset in usable condition, including but not limited to, brokerage fees, legal fees, demolition, clearing and grading, fees of architects and engineers, any additional expenditures made for equipment and fixtures that are made a permanent part of the structure and certain interest costs as provided for in *SSAP No. 44—Capitalization of Interest*. Where cost includes both land and building, the cost shall be allocated among the assets purchased based on the relative values determined using appraisals, as described in paragraph 13. The cost shall be reduced by any amounts received for sales of rights or privileges in connection with the property or by any cash recoveries received after acquiring title to the property. The cost of real estate which has been foreclosed upon shall be initially established in accordance with *SSAP No. 36—Troubled Debt Restructuring*. The cost of contributed real estate shall be initially established in accordance with *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95) as a nonreciprocal transfer.

9. Internal preacquisition costs classified as nonoperating at the date of a property acquisition (that otherwise meet the requirements of paragraph 4 of FAS 67) shall be capitalized. If the entity subsequently determines that the property should have been classified as operating at the date of acquisition, such costs should be charged to expense and any additional costs shall be expensed as incurred. If internal preacquisition costs classified as operating at the date of acquisition were expensed as incurred, and the entity subsequently determines that the property should have been classified as nonoperating, the expensed costs shall remain as originally reported and shall not be reclassified to capitalized costs.

10. The cost of property included in real estate investments, other than land, shall be depreciated over the estimated useful life, not to exceed fifty years. Depreciation expense shall be included in investment expenses.

11. Properties occupied by the company and properties held for the production of income shall be carried at depreciated cost less encumbrances unless events or circumstances indicate the carrying amount of the asset (amount prior to reduction for encumbrances) may not be recoverable. Paragraph 5 of *FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of* (FAS 121), provides examples of events or changes in circumstances which indicate that the recoverability of the carrying amount of properties occupied by the company or properties held for the production of income should be assessed. If the events or changes in circumstances set forth in paragraph 5 of FAS 121 are present or if other events or changes in circumstances indicate that the carrying amount of properties occupied by the company or properties held for the production of income may not be recoverable, the entity shall determine whether an impairment loss must be recognized in accordance with paragraph 6 of FAS 121. Property occupied by the company shall be evaluated using the asset grouping approach of paragraph 8 of FAS 121. An impairment loss is measured as the amount by which the individual carrying amounts exceed the fair value of properties occupied by the company or properties held for the production of income. Fair value is determined in accordance with paragraph 13 of this statement. If the fair value of the asset is less than the carrying value, the asset shall be written down to the fair value thereby establishing a new cost basis. The new cost basis shall not be changed for subsequent recoveries in fair value. The adjustment shall be recorded in the statement of operations as a realized loss.

12. Properties that the reporting entity has the intent to sell or is required to sell shall be classified as properties held for sale and carried at the lower of depreciated cost or fair value less encumbrances and estimated costs to sell the property consistent with paragraph 16 of FAS 121. The intent to sell a property exists when management, having the authority to approve the action, has committed to a plan to dispose of the asset, either by sale or abandonment. Fair value of the asset shall be determined in accordance with paragraph 13 of this statement. Subsequent revisions to the fair value of the asset shall be accounted for in accordance with paragraph 17 of FAS 121.

13. The current fair value of real estate shall be determined on a property by property basis (i.e., increases in the fair value of one property shall not be used to offset declines in fair value of another). If market quotes are unavailable, estimates of fair value shall be determined by an appraisal (internal or third party), which is based upon an evaluation of all relevant data about the market, considering the following:

a. A physical inspection of the premises;

b. The present value of future cash flows generated by the property (Discounted Cash Flows), or capitalization of stabilized net operating income (Direct Capitalization);

c. Current sales prices of similar properties with adjustments for differences in the properties (Sales Comparison Approach);

d. Costs to sell the property if the reporting entity does not have the intent or ability to hold the real estate as an investment; and

e. Replacement costs of the improvements, less depreciation, plus the value of the land (Cost Approach).

14. For all properties held for the production of income, the reporting entity must maintain an appraisal that is no more than five years old as of the reporting date. For all properties held for sale, an appraisal shall be obtained at the time such property is classified as held for sale, and subsequently an appraisal shall be maintained that is no more than five years old as of the reporting date. However, if conditions indicate there has been a significant decrease in the fair value of a property, a current appraisal shall be obtained. Additionally, appraisals shall be obtained for real estate investments at the time of foreclosure or contribution. Contributed real estate shall be supported by an independent third party appraisal at the date of contribution. If any of the previous conditions exist but an appraisal has not been obtained, the related property shall be considered a nonadmitted asset until the required appraisals are obtained.

Income, Expenses, and Capital Improvements

15. Rental income on real estate leased is addressed in *SSAP No. 22—Leases*, which requires that rental income be included in investment income. Expenses incurred in operating the real estate investment, including but not limited to, real estate taxes, utilities, and ordinary repair and maintenance, shall be charged to expense as incurred and included in investment expenses.

16. Expenditures that are necessary to put the asset back into good operating condition or to keep it in good operating condition, shall be charged to expense as incurred. Expenditures that add to or prolong the life of the property shall be added to the cost of the real estate (capitalized) and depreciated over the remaining estimated useful life of the property. If the property was fully depreciated at the time capital improvements are incurred, the capital improvements shall be capitalized and depreciated over the remaining extended useful life of the asset.

17. A reporting entity shall include in both its income and expenses an amount for rent relating to its occupancy of its own buildings. The amount recorded shall be at a rate comparable to rent received from others and/or rental rates of like property in the same area. If this is unavailable, it shall be derived from consideration of the repairs, expenses, taxes, and depreciation incurred, plus interest added at an average fair rate on the carrying value of the reporting entity’s investment in its home office building.

Sale of Real Estate

18. Recognition of profit on sales of real estate investments shall be accounted for in accordance with *FASB Statement No. 66, Accounting for Sales of Real Estate* (FAS 66), except as modified in paragraph 20 of this statement, *FASB Emerging Issues Task Force No. 87-9*, *Profit Recognition on Sales of Real Estate with Insured Mortgages or Surety Bonds, FASB Emerging Issues Task Force No. 87-29, Exchange of Real Estate Involving Boot, FASB Interpretation No. 43, Real Estate Sales an interpretation of FASB Statement No. 66* (FIN 43) and *FASB Emerging Issues Task Force No. 00-13, Determining Whether Equipment is “Integral Equipment” Subject to FASB Statements No. 66 and No. 98* (INT 06-13). This statement applies to all sales of real estate including real estate with property improvements or integral equipment. The terms “property improvements” and “integral equipment” refer to any physical structure or equipment attached to the real estate that cannot be removed and used separately without incurring significant costs, such as an office building. Additionally, this guidance applies to all transfers of financial assets that are in substance real estate.

19. Profit shall be recognized in full when real estate is sold, provided (a) the profit is determinable, that is, the collectibility of the sales price is reasonably assured or the amount that will not be collectible

can be estimated, and (b) the earnings process is virtually complete, that is, the seller is not obliged to perform significant activities after the sale to earn the profit. Unless both conditions exist, recognition of all or part of the profit shall be postponed. Profit shall not be recognized by the full accrual method until all of the following criteria are met:

a. A sale is consummated;

b. The buyer's initial and continuing investments are adequate to demonstrate a commitment to pay for the property;

c. The seller's receivable is not subject to future subordination; and

d. The seller has transferred to the buyer the usual risks and rewards of ownership in a transaction that is in substance a sale and does not have a substantial continuing involvement with the property after the sale.

20. The calculation of the buyer's initial investment specified in paragraph 9 of FAS 66 shall be modified to reflect that buyer's notes must be supported by letters of credit from institutions that are listed by the Securities Valuation Office of the National Association of Insurance Commissioners as meeting credit standards to be included in determining the buyer's initial investment. Any profit or loss is considered a realized gain or loss in the year of the sale in accordance with FAS 66.

Real Estate Projects Under Development

21. Costs and initial rental operations of real estate projects under development, which include ADC arrangements accounted for as real estate under the provisions of SSAP No. 38, shall be accounted for in accordance with *FASB Statement No. 67, Accounting for Costs and Initial Rental Operations of Real Estate* Projects (FAS 67). Costs incurred in connection with real estate projects shall be expensed as incurred unless the criteria established in FAS 67 are met. The statement value of a real estate project, or parts thereof, held for sale or development and sale shall not exceed the estimated selling price in the ordinary course of business less estimated costs of completion (to stage of completion assumed in determining the selling price), holding, and disposal (net realizable value). If costs exceed net realizable value, capitalization of eligible costs shall continue, however, an allowance shall be provided to reduce the admitted value to estimated net realizable value.

Participating Mortgage Loans

22. A participating mortgage loan is established when the lender is entitled to participate in appreciation of the fair value of mortgaged real estate, the results of operations of the mortgaged real estate project, or in both. Mortgage loan participation features should be recorded at fair value at inception of the loan. The borrower should recognize a participation liability for the determined fair valued amount, with a corresponding debit to a debt discount account. The debt discount should be amortized by the interest method, using the effective interest rate. After inception, adjustment of the participation liability should occur at each reporting date to current fair value. The corresponding debit or credit should be to the related debt discount account. The revised debt discount should be amortized prospectively, using the effective interest rate method.

23. The real estate investment with the participating mortgage loan should be reported in accordance with paragraph 5, with no adjustment for appreciation of fair value.

24. Extinguishment of participating mortgage loans prior to the due date should be determined in accordance with *SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and* Extinguishments *of Liabilities* (SSAP No. 103). Gains or losses from early extinguishment should be

determined in considering the difference between the recorded amount of debt (including unamortized debt discount and the participation liability) and the amount exchanged to extinguish the debt.

Disclosures

25. An entity that recognizes an impairment loss shall disclose all of the following in financial statements that include the period of the impairment write-down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment;

b. The amount of the impairment loss and how fair value was determined; and

c. The caption in the statement of operations in which the impairment loss is aggregated.

26. An entity that engages in retail land sales operations shall disclose:

a. Maturities of accounts receivable for each of the five years following the date of the financial statements;

b. Delinquent accounts receivable and the method(s) for determining delinquency;

c. The weighted average and range of stated interest rates of receivables;

d. Estimated total costs and estimated dates of expenditures for improvements for major areas from which sales are being made over each of the five years following the date of the financial statements; and

e. Recorded obligations for improvements.

27. An entity that holds real estate investments through an LLC, which qualifies for inclusion in this statement because all the criteria in paragraph 4 are met, shall separately report each investment on Schedule A, and code the real estate as wholly-owned through an LLC.

28. An entity that holds real estate investments with participating mortgage loan features should disclose:

a. Aggregate amount of participating mortgage obligations at the balance-sheet date, with separate disclosure of the aggregate participation liabilities and related debt discounts.

b. Terms of participations by the lender in either the appreciation in the fair value of the mortgaged real estate project or the results of operations of the mortgaged real estate project, or both.

29. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

30. This statement adopts FAS 66*,* with modification to paragraph 10 to indicate that only letters of credit from institutions listed by the Securities Valuation Office of the National Association of Insurance Commissioners shall be included in determining the buyer's initial investment. Additionally, as they relate to FAS 66, the following are adopted: *FASB Emerging* Issues *Task Force Issue No. 86-6, Antispeculation Clauses in Real Estate Sales Contracts*, *FASB Emerging Issues Task Force No* 87-9*, Profit Recognition on Sales of Real Estate with Insured Mortgages or Surety Bonds, FASB Emerging Issues Task Force No* 87-29*, Exchange of Real Estate Involving Boot, FASB Emerging Issues Task Force*

No. 88-12, Transfer of Ownership Interest as Part of Down Payment under FASB Statement No. 66, FASB Emerging Issues Task Force No. 88-24, Effect of Various Forms of Financing under FASB Statement No. 66, FASB Emerging Issues Task Force No. 06-8: Applicability of the Assessment of a Buyer's Continuing Investment under FASB Statement No. 66 for Sales of Condominiums, with modification consistent to paragraph 9 of FAS 66, in which continuing investment payments made in the form of buyer's notes must be supported by letters of credit from institutions that are listed by the Securities Valuation Office of the National Association of Insurance Commissioners as meeting credit standards to be included in determining the buyer's initial investment, and *FASB Emerging Issues Task Force No. 07-6: Accounting for the Sale of Real Estate Subject to the Requirements of FASB Statement No. 66, When the Arrangements Includes a Buy Sale Clause*.

31. This statement adopts *FASB Interpretation No. 43, Real Estate Sales, an Interpretation of FASB Statement No. 66* (FIN 43), which clarifies that the phrase "all real estate sales" includes sales of real estate with property improvements or integral equipment that cannot be removed and used separately from the real estate without incurring significant costs. This statement adopts *FASB Emerging Issues Task Force No. 84-17, Profit Recognition on Sales of Real Estate with Graduated Payment Mortgages or Insured Mortgages, FASB Emerging Issues Task Force No. 89-13, Accounting for the Cost of Asbestos Removal, FASB Emerging Issues Task Force No. 89-14, Valuation of Repossessed Real Estate, FASB Emerging Issues Task Force No. 90-8, Capitalization of Costs to Treat Environmental Contamination, FASB Emerging Issues Task Force No. 95-23, The Treatment of Certain Site Restoration/Environmental Exit Costs When Testing a Long-Lived Asset for Impairment, FASB Emerging Issues Task Force 97-11: Accounting for Internal Costs Relating to Real Estate Property Acquisitions, FASB Emerging Issues Task Force No. 98-8: Accounting for Transfers of Investments That Are in Substance Real Estate* and *FASB Emerging Issues Task Force No. 00-13, Determining Whether Equipment is "Integral Equipment" Subject to FASB Statements No. 66 and No. 98,* which clarifies the term "integral equipment" as used in this statement.

32. This statement adopts FAS 121 for real estate investments except for paragraphs 13, 14.c. and 14.d. which are rejected in *SSAP No. 68—Business Combinations and Goodwill*. This statement adopts FAS 67, AICPA *Statement of Position 92-1, Accounting for Real Estate Syndication Income,* and AICPA *Statement of Position 92-3*, *Accounting for Foreclosed Assets*. This statement also adopts *FAS 152: Accounting for Real Estate Time-Sharing Transactions, an amendment to FASB Statements No. 66 and 67*. FAS 152 is adopted as it modifies previously adopted GAAP guidance in FAS 66 and FAS 67 to identify the guidance that should/should not be applied to real estate time-sharing transactions. This guidance is adopted as it impacts the scope of previous adopted GAAP guidance to prevent an unnecessary GAAP to SAP difference. However, real estate time-sharing transactions are considered not applicable for statutory accounting, and the GAAP guidance in SOP 04-2 is rejected in Issue Paper No. 99.

33. This statement adopts *AICPA Statement of Position 97-1: Accounting by Participating Mortgage Loan* Borrowers (SOP 97-1) regarding the borrower's accounting for a participating mortgage loan.

34. This statement rejects paragraph 52 of *FASB Statement No. 60, Accounting and Reporting by Insurance* Enterprises and *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins*, "Chapter 10, Taxes, Section A—Real Estate and Personal Property Taxes."

Effective Date and Transition

35. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Correction of Errors*. Guidance in paragraphs 18-20 was previously included within *SSAP No. 77—Real Estate Sales* and was effective for years beginning January 1, 2002. The original guidance included in this standard from SSAP No. 77 is retained for historical purposes in Issue Paper No. 106. Guidance related to EITF 06-8 referenced in paragraph 30 was

incorporated from *INT 08-02: EITF 06-8: Applicability of the Assessment of a Buyer's Continuing Investment under FASB Statement No. 66 for Sales of Condominiums* and was effective for periods beginning May 31, 2008. The guidance reflected in paragraph 30 adopting *EITF 07-6: Accounting for the Sale of Real Estate Subject to the Requirements of FASB Statement No. 66, When the Agreement Includes a Buy-Sell Clause* was incorporated from *INT 08-07: EITF 07-6, Accounting for the Sale of Real Estate Subject to the Requirements of FASB Statement No. 66 When the Agreement Includes a Buy-Sell Clause,* and was effective September 22, 2008.

36. The substantive revisions to incorporate real estate property investments that are wholly-owned by an LLC that is directly and wholly-owned by the reporting entity in accordance with the criteria detailed in paragraph 4 are effective as of January 1, 2015. For these investments previously reported within SSAP No. 48 and owned as of the effective date, the reporting entity shall recognize a cumulative effect of a change in accounting principle as if the entity had followed this statement since acquisition of the property. The change from applying these substantive revisions shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

37. To determine statement value for real estate owned through an LLC as of the paragraph 36 effective date, the reporting entity shall:

a. Allocate the original cost of the real estate investment to land and property other-than-land pursuant to paragraph 8.

b. To arrive at the current depreciated cost for property (excluding land), the entity shall apply the depreciation that would have occurred if this statement had been applied since acquisition, in accordance with the original expected useful life, adjusted for subsequent capital improvements pursuant to paragraph 16.

c. The depreciated cost calculated under paragraph 37.b. shall be compared to a current appraisal to determine if an impairment assessment is required under SSAP No. 90. Recognition of impairment shall result in a new cost basis for the property, with recalculation of the depreciation based on the property's remaining useful life, as limited by the terms of this statement.

d. The depreciated cost, reflecting any impairment from paragraph 37.c., less encumbrances, shall be recognized as the real estate investment as of the effective date.

Surplus Notes

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for issuers and holders of surplus notes, and for holders of capital notes. Statutory accounting principles for issuers of capital notes are provided in *SSAP No. 15—Debt and Holding Company Obligations*.

SUMMARY CONCLUSION

Issuers of Surplus Notes

2. Reporting entities sometimes issue instruments that have the characteristics of both debt and equity. These instruments are commonly referred to as surplus notes, the term used herein, but are also referred to as surplus debentures or contribution certificates. These instruments are used for various reasons, including but not limited to:

a. Providing regulators with flexibility in dealing with problem situations to attract capital to reporting entities whose surplus levels are deemed inadequate to support their operations;

b. Providing a source of capital to mutual and other types of non-stock reporting entities who do not have access to traditional equity markets for capital needs;

c. Providing an alternative source of capital to stock reporting entities, although not for the purpose of initially capitalizing the reporting entity.

3. Surplus notes issued by a reporting entity that are subject to strict control by the commissioner of the reporting entity's state of domicile and have been approved as to form and content shall be reported as surplus and not as debt only if the surplus note contains the following provisions:

a. Subordination to policyholders;

b. Subordination to claimant and beneficiary claims;

c. Subordination to all other classes of creditors other than surplus note holders; and

d. Interest payments and principal repayments require prior approval of the commissioner of the state of domicile.

4. Proceeds received by the issuer must be in the form of cash or other admitted assets having readily determinable values and liquidity satisfactory to the commissioner of the state of domicile.

5. Interest shall not be recorded as a liability nor an expense until approval for payment of such interest has been granted by the commissioner of the state of domicile. All interest, including interest in arrears, shall be expensed in the statement of operations when approved for payment. Unapproved interest shall not be reported through operations, shall not be represented as an addition to the principal or notional amount of the instrument, and shall not accrue further interest, i.e., interest on interest.

6. As of the date of approval of principal repayment by the commissioner of the state of domicile, the issuer shall reclassify such approved payments from surplus to liabilities.

7. Costs of issuing surplus notes (e.g., loan fees and legal fees) shall be charged to operations when incurred.

8. Discount or premium, if any, shall be reported in the balance sheet as a direct deduction from or addition to the face amount of the note. Such discount or premium shall be charged or credited to the statement of operations concurrent with approved interest payments on the surplus note and in the same proportion or percentage as the approved interest payment is to the total estimated interest to be paid on the surplus note.

Holders of Capital or Surplus Notes

9. Investments in capital or surplus notes meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

10. Capital or surplus notes shall be accounted for in accordance with *SSAP No. 26—Bonds, Excluding Loan-Backed and Structured Securities* (SSAP No. 26). Holders of capital or surplus notes shall value their investment as follows:

a. Rated Notes

i. If the notes have been rated by an NAIC credit rating provider (CRP) and have a designation equivalent of NAIC 1, then amortized cost shall be used. If the notes are rated and monitored by two NAIC CRPs, the lowest of the ratings shall be assigned. In case of notes rated and monitored by three or more NAIC CRPs, the NAIC CRP ratings will be ordered according to their NAIC equivalents and the rating falling second lowest will be selected, even if that rating is equal to that of the first lowest.

ii. The *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office* contains a listing of NAIC equivalent CRP designations as well as a listing of insurers that meet the requirements of paragraph 10.a.i.

b. Non-Rated Notes

i. If the notes are not CRP rated or have an NAIC designation equivalent of NAIC 2 through 6, then value as follows:

(a) At its outstanding face value, notwithstanding the payment of interest and/or principal, when the notes were issued by a reporting entity whose capital and surplus (excluding surplus notes included therein) is greater than or equal to the greater of 5% of its admitted assets (excluding separate accounts) or $6,000,000. The valuation shall be calculated using the most recently filed statutory financial statements of the entity that issued the notes;

(b) By applying a "statement factor" to the outstanding face amount of the capital or surplus notes, notwithstanding the payment of interest and/or principal when the notes were issued by a reporting entity whose capital and surplus (excluding surplus notes included therein) is less than or equal to the greater of 5% of its admitted assets (excluding separate accounts) or $6,000,000. The "statement factor" is equal to the total capital and surplus, including surplus notes, less the greater of 5% of admitted assets (excluding separate accounts) or $6,000,000, divided by the capital or surplus notes. The valuation should be calculated using the most recently filed statutory financial statements of the entity that issued the notes. Should the result of the "statement factor" yield a product less than zero, the capital or surplus notes shall be carried at zero and not a negative amount.

Capital or surplus debenture(s) must not be valued in excess of the lesser of the value determined above or amortized cost and are to be reported as other invested assets. If the notes are issued by an entity which is subject to any order of liquidation, conservation, rehabilitation or any company action level event based on its risk-based capital, then the valuation is at zero, notwithstanding any previous payments of interest and/or principal. The admitted asset value of a capital or surplus note shall not exceed the amount that would be admitted if the instrument was considered an equity instrument and added to any other equity investments in the issuer held directly or indirectly by the holder of the capital or surplus note. If the calculated value (after application of paragraph 10.b.i.(b)) is less than the outstanding face value, then that amount shall be accounted for as a nonadmitted asset.

11. A holder of a surplus note must value the note at zero in any period in which the issuer of the note is under regulatory action. Once the issuer is no longer under regulatory action, the holder values the note according to the guidance in paragraph 10.a. or 10.b. as appropriate.

12. Only interest that has been approved by the issuer's domiciliary commissioner shall be accrued as income by a holder of surplus notes in a manner consistent with SSAP No. 26.

Disclosures

13. The notes to the financial statements of a reporting entity that issues surplus notes shall disclose the following as long as the surplus notes are outstanding:

a. Date issued;

b. Description of the assets received;

c. Holder of the note or if public the names of the underwriter and trustee;

d. Amount of note;

e. Carrying value of note;

f. The rate at which interest accrues;

g. Maturity dates or repayment schedules, if stated;

h. Unapproved interest and/or principal;

i. Interest and/or principal paid in the current year;

j. Total interest and/or principal paid on surplus notes;

k. Subordination terms;

l. Liquidation preference to the reporting entity's common and preferred shareholders;

m. The repayment conditions and restrictions.

14. In addition to the above, a reporting entity shall identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to rule 144A under the Securities Act of 1933), and any holder of 10% or more of

the outstanding amount of any surplus note registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

Relevant Literature

15. This statement adopts the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office*, "Procedures for Valuing Surplus Debentures." This statement rejects *AICPA Practice Bulletin No. 15, Accounting by the Issuer of Surplus Notes*, which requires surplus notes to be accounted for as debt and that interest be accrued over the life of the surplus note, irrespective of the approval of interest and principal payments by the insurance commissioner.

Effective Date and Transition

16. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3*—Accounting *Changes and Corrections of Errors*. The provisions of paragraph 3, which are required for an instrument to qualify as a surplus note, apply to all surplus notes issued or amended after December 12, 1991. Surplus notes issued on or before December 12, 1991, shall not be required to meet the provisions of paragraph 3 in order to be accounted for as a surplus note. Guidance reflected in paragraph 11, incorporated from *INT 04-02: Surplus Notes Issued by Entities Under Regulatory Action*, was originally effective June 13, 2004.

Sale of Premium Receivables

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the sale or factoring of premium receivables.

SUMMARY CONCLUSION

2. For purposes of this statement, receivables shall only include amounts due to the reporting entity for premium receivables (i.e., uncollected premium, agent's balances, and bills receivable).

3. A transfer of receivables can take the form of a transfer with recourse or a transfer without recourse:

a. Recourse means that the transferee has the right to receive payment from the transferor of those receivables for (i) failure of the debtors to pay when due, (ii) the effects of prepayments, or (iii) adjustments resulting from defects in the eligibility of the transferred receivables, for example defects in the legal title of the transferred receivables. When the transferor has the right to repurchase (a call) or the transferee has the right to require the transferor to repurchase (a put) the transferred receivables, the transfer shall be considered to have recourse;

b. Without recourse means that the transferor has surrendered all of the future economic implications of the risks and rewards embodied in the transferred receivables.

4. A transfer of receivables with recourse shall not be recognized as a sale. A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received.

5. If a transfer qualifies to be recognized as a sale, the difference between (a) the sales price and (b) the receivables transferred shall be recognized as a gain or loss. If receivables are sold with servicing retained and the stated servicing fee is less than a current (normal) servicing fee rate (a servicing fee rate that is representative of servicing fee rates most commonly used in comparable servicing agreements covering similar types of receivables) or no servicing fee is specified, the gain or loss recognized by the sale of receivables shall be adjusted to recognize the deviation of the stated servicing fee rate from the commonly used servicing fee rate and a liability shall be established to provide for a normal servicing fee in each subsequent servicing period, which shall not be less than the estimated servicing costs. When the stated servicing fee is greater than a normal servicing fee the gain or loss shall not be adjusted and the excess servicing fee revenues shall not be recorded currently but shall be recorded when realized.

6. If the conditions of paragraph 3.b. are not met, or the transfer is for other than cash, the receivables shall remain on the transferor's financial statements. A liability shall be established in an amount equal to the greater of the carrying amount of the receivables transferred or the amount of the proceeds received. To the extent that the proceeds received are less than the carrying amount of receivables transferred, a loss shall be recorded. The carrying amount of the receivable balance shall be evaluated at each reporting period and adjusted for any uncollectible amounts. The liability shall be derecognized as the transferee receives cash. When the proceeds received are greater than the receivables transferred, the liability shall be derecognized on a pro rata basis as the receivables are collected.

Disclosures

7. For transfers of receivables reported as sales, the transferor's financial statements shall disclose:

  a. The proceeds to the transferor; and

  b. The gain or loss recorded on the sale.

8. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

9. This statement rejects paragraph 83 of *FASB Statement No. 125*, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125) to the extent that it permits sales recognition for sales of receivables with recourse provisions. FAS 125 is addressed in its entirety in *SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*, which was superseded by *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. *SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* adopts with modification *FAS 166, Accounting for Transfers of Financial Assets—An Amendment of FASB Statement No. 104* and supersedes SSAP No. 91R.

Effective Date and Transition

10. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

APPENDIX A – QUESTION AND ANSWER IMPLEMENTATION GUIDE 20

Index to Questions: 20

This page intentionally left blank.

Loan-Backed and Structured Securities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investments in loan-backed securities and structured securities. In accordance with *SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 103), retained beneficial interests from the sale of loan-backed securities and structured securities are accounted for in accordance with this statement. In this statement loan-backed securities and structured securities are collectively referred to as loan-backed securities.

SUMMARY CONCLUSION

2. Loan-backed securities are defined as securitized assets not included in structured securities, as defined below, for which the payment of interest and/or principal is directly proportional to the payments received by the issuer from the underlying assets, including but not limited to pass-through securities, lease-backed securities, and equipment trust certificates.

3. Structured securities are defined as loan-backed securities which have been divided into two or more classes for which the payment of interest and/or principal of any class of securities has been allocated in a manner which is not proportional to payments received by the issuer from the underlying assets.

4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring organization. The assets securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer's obligation has been fully satisfied. The investor only has direct recourse to the issuer's assets, but may have secondary recourse to third parties through insurance or guarantee for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying assets. Some sponsors do guarantee the performance of the underlying assets.

5. Loan-backed and structured securities meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

6. The scope of this statement encompasses all types of loan-backed and structured securities, including, but not limited to, the following:

a. Loan-backed and structured securities acquired at origination,

b. Loan-backed and structured securities acquired subsequent to origination for which it is probable, at acquisition, that the reporting entity will be able to collect all contractually required payments receivable, and are accounted for at acquisition under SSAP No. 103,

c. Loan-backed and structured securities for which it is probable, either known at acquisition or identified during the holding period[1], that the reporting entity will be unable to collect all contractually required payments receivable, and

[1] Securities classified within the type of paragraph 6.a. or 6.b. may be required to change classification to type 6.c. when it becomes probable that the reporting entity will be unable to collect all contractually required payments receivable.

d. Transferor's beneficial interests in securitization transactions that are accounted for as sales under SSAP No. 103 and purchased beneficial interests in securitized financial assets[2].

7. At acquisition, loan-backed and structured securities, except for loan-backed or structured securities that are beneficial interests that are not of high credit quality or can contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded amount[3] (see paragraphs 20-23), shall be reported at cost, including brokerage and related fees. Acquisitions and dispositions shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement loan-backed and structured securities which shall be recorded on the funding date. For securities where all information is not known as of the trade date (e.g., actual payment factors and specific pools), a reporting entity shall make its best estimate based on known facts.

8. Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method and shall be recorded as an adjustment to investment income.(INT 07-01) The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the loan-backed and structured securities is expected to occur, not the stated maturity period.

9. Interest shall be accrued using the effective-yield method using the redemption prices and redemption dates used for amortizing premiums and discounts. Interest income consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of loan-backed and structured securities, and the addition of discount accrual. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

10. For reporting entities required to maintain an IMR, the accounting for realized capital gains and losses on sales of loan-backed and structured securities shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized gains and losses on sales of loan-backed and structured securities shall be recorded on the trade date and shall be reported as net realized capital gains or losses in the Statement of Income.

11. A loan-backed or structured security may provide for a prepayment penalty or acceleration fee in the event the investment is liquidated prior to its scheduled termination date. These fees shall be reported as investment income when received.

Collection of All Contractual Cashflows is Probable

12. The following guidance applies to loan-backed and structured securities for which it is probable that the investor will be able to collect all contractually required payments receivable. (Paragraphs 17-19 provide guidance for securities in which collection of all contractual cash flows is not probable and paragraphs 20-23 provide guidance for beneficial interests.) Prepayments are a significant variable element in the cash flow of loan-backed and structured securities because they affect the yield and determine the expected maturity against which the yield is evaluated. Falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created by rising interest rates which slow repayment and can

[2] The accounting requirements related to these type of securities included in paragraphs 20-23 shall be determined at acquisition or initial transfer.

[3] As referenced in the Relevant Literature section, this statement adopts EITF 99-20, including the scope requirements of that guidance.

significantly lengthen the duration of the security. Differences in cash flows can also result from other changes in the cash flows from the underlying assets. If assets are delinquent or otherwise not generating cash flow, which should be reflected in the cash flow analysis through diminishing security cash flows, even if assets have not been liquidated and gain/losses have not been booked.

13. Changes in currently estimated cash flows, including the effect of prepayment assumptions, on loan-backed and structured securities shall be reviewed periodically, at least quarterly. The prepayment rates of the underlying loans shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.

14. Loan-backed and structured securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions, using either the prospective or retrospective adjustment methodologies, consistently applied by type of securities. However, if at anytime during the holding period, the reporting entity determines it is no longer probable that they will collect all contractual cashflows, the reporting entity shall apply the accounting requirements in paragraphs 17-19.

15. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the security is determined to be other than temporarily impaired.

16. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

Collection of All Contractual Cashflows is Not Probable

17. The following guidance applies to loan-backed and structured securities with evidence of deterioration of credit quality since origination for which it is probable, either known at acquisition or identified during the holding period, that the investor will be unable to collect all contractually required payments receivable, except for those beneficial interests that are not of high credit quality or can contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded amount determined at acquisition (see paragraphs 20-23).

18. The reporting entity shall recognize the excess of all cash flows expected at acquisition over the investor’s initial investment in the loan-backed or structured security as interest income on an effective-yield basis over the life of the loan-backed or structured security (accretable yield).[4] Any excess of

[4] A loan-backed or structured security may be acquired at a discount because of a change in credit quality or rate or both. When a loan-backed or structured security is acquired at a discount that relates, at least in part, to the security’s credit quality, the effective interest rate is the discount rate that equates the present value of the investor’s estimate of the security’s future cash flows with the purchase price of the loan-backed or structured security.

contractually required cash flows over the cash flows expected to be collected is the nonaccretable difference. Expected prepayments shall be treated consistently for determining cash flows expected to be collected and projections of contractual cash flows such that the nonaccretable difference is not affected. Similarly, the difference between actual prepayments and expected prepayments shall not affect the nonaccretable difference.

19. An investor shall continue to estimate cash flows expected to be collected over the life of the loan-backed or structured security. If, upon subsequent evaluation:

a. The fair value of the loan-backed or structured security has declined below its amortized cost basis, an entity shall determine whether the decline is other than temporary $^{\text{(INT 06-07)}}$. For example, if, based on current information and events, there is a decrease in cash flows expected to be collected (that is, the investor is unable to collect all cash flows expected at acquisition plus any additional cash flows expected to be collected arising from changes in estimate after acquisition (in accordance with paragraph 19.b.), an other-than-temporary impairment shall be considered to have occurred. The investor shall consider both the timing and amount of cash flows expected to be collected in making a determination about whether there has been a decrease in cash flows expected to be collected.

b. Based on current information and events, if there is a significant increase in cash flows previously expected to be collected or if actual cash flows are significantly greater than cash flows previously expected, the investor shall recalculate the amount of accretable yield for the loan-backed or structured security as the excess of the revised cash flows expected to be collected over the sum of (1) the initial investment less (2) cash collected less (3) other-than-temporary impairments plus (4) amount of yield accreted to date. The investor shall adjust the amount of accretable yield by reclassification from nonaccretable difference. The adjustment shall be accounted for as a change in estimate in conformity with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3), with the amount of periodic accretion adjusted over the remaining life of the loan-backed or structured security (prospective method).

Beneficial Interests

20. The following paragraphs provide statutory accounting guidance for interest income and impairment for a reporting entity that continues to hold an interest in securitized financial assets accounted for as sales under SSAP No. 103, or that purchases a beneficial interest in securitized financial assets that are not of high credit quality or can contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded amount, determined at acquisition or the date of transfer[5]. Beneficial interests that are of high credit quality and cannot contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded investment, shall be accounted for in accordance with paragraphs 12-16.

21. The reporting entity shall recognize the excess of all cash flows attributable to the beneficial interest estimated at the acquisition/transaction date (referred to herein as the transaction date) over the initial investment (the accretable yield) as interest income over the life of the beneficial interest using the effective yield method. If the holder of the beneficial interest is the reporting entity that transferred the financial assets for securitization, the initial investment would be the fair value of the beneficial interest

[5] The accounting requirements related to these types of securities included in paragraphs 20-23 shall be determined at acquisition or initial transfer. As referenced in the Relevant Literature section, this Statement adopts EITF 99-20 (as amended by FAS 166), including the scope requirements of that guidance.

as of the date of transfer, as required by SSAP No. 103. The amount of accretable yield shall not be displayed in the balance sheet.

22. The reporting entity that holds a beneficial interest shall continue to update the estimate of cash flows over the life of the beneficial interest. If upon evaluation:

a. Based on current information and events it is probable that there is a favorable (or an adverse) change in estimated cash flows from the cash flows previously projected, then the investor shall recalculate the amount of accretable yield for the beneficial interest on the date of evaluation as the excess of estimated cash flows over the beneficial interest's reference amount (the reference amount is equal to (1) the initial investment less (2) cash received to date less (3) other-than-temporary impairments recognized to date [as described in paragraph 22.b.] plus (4) the yield accreted to date. The adjustment shall be accounted for prospectively as a change in estimate in conformity with SSAP No. 3, with the amount of periodic accretion adjusted over the remaining life of the beneficial interest. Based on estimated cash flows, interest income may be recognized on a beneficial interest even if the net investment in the beneficial interest is accreted to an amount greater than the amount at which the beneficial interest could be settled if prepaid immediately in its entirety.

b. The fair value of the beneficial interest has declined below its reference amount; a reporting entity shall determine whether the decline is other-than-temporary. If, based on current information and events it is probable that there has been an adverse change in estimated cash flows (in accordance with paragraph 22.a.), then (1) an other-than-temporary impairment shall be considered to have occurred and (2) the beneficial interest shall be written down to the current estimate of cash flows at the financial reporting date discounted at a rate equal to the current yield used to accrete the beneficial interest with the resulting change being recognized as a realized loss. Determining whether there has been a favorable (or an adverse) change in estimated cash flows from the cash flows previously projected (taking into consideration both the timing and amount of the estimated cash flows) involves comparing the present value of the remaining cash flows as estimated at the initial transaction date (or at the last date previously revised) against the present value of the cash flows estimated at the current financial reporting date. The cash flows shall be discounted at a rate equal to the current yield used to accrete the beneficial interest. If the present value of the original cash flows estimated at the initial transaction date (or the last date previously revised) is less than the present value of the current estimate of cash flows expected to be collected, the change is considered favorable (that is, an other-than-temporary impairment shall be considered to have not occurred). If the present value of the original cash flows estimated at the initial transaction date (or the last date previously revised) is greater than the present value of the current estimated cash flows, the change is considered adverse (that is, an other-than-temporary impairment shall be considered to have occurred). However, absent any other factors that indicate an other-than-temporary impairment has occurred, changes in the interest rate of a "plain-vanilla," variable-rate beneficial interest generally shall not result in the recognition of an other-than-temporary impairment[6] (a plain-vanilla, variable-rate

[6] Changes in the interest rate of a "plain-vanilla," variable-rate beneficial interest (a plain-vanilla, variable-rate beneficial interest does not include those variable-rate beneficial interests with interest rate reset formulas that involve either leverage or an inverse floater) generally should not result in the recognition of an other-than-temporary impairment. For plain-vanilla, variable-rate beneficial interests, the yield is changed to reflect the revised interest rate based on the contractual interest rate reset formula. For example, if a beneficial interest pays interest quarterly at a rate equal to LIBOR plus 2 percent, the yield of that beneficial interest is changed prospectively to reflect changes in LIBOR. However, changes in the fair value of a plain-vanilla, variable-rate beneficial interest due to credit events should be considered when evaluating whether there has been an other-than-temporary impairment.

beneficial interest does not include those variable-rate beneficial interests with interest rate reset formulas that involve either leverage or an inverse floater).

23. All cash flows estimated at the transaction date are defined as the holder's estimate of the amount and timing of estimated future principal and interest cash flows used in determining the purchase price or the holder's fair value determination for purposes of determining a gain or loss under SSAP No. 103. Subsequent to the transaction date, estimated cash flows are defined as the holder's estimate of the amount and timing of estimated principal and interest cash flows based on the holder's best estimate of current information and events. A change in estimated cash flows is considered in the context of both timing and amount of the estimated cash flows.

Reporting Guidance for All Loan-Backed and Structured Securities

24. Loan-backed and structured securities shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office*, and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office or equivalent specified procedure. The carrying value method shall be determined as follows:

a. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed and structured securities shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.

b. For reporting entities that do not maintain an AVR, loan-backed and structured securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

Designation Guidance

25. For securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process. The *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office* provides detailed guidance. A general descripton of the processes is as follows:

a. Financial Modeling: The NAIC identifies securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers' carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. Securities where modeling results in zero expected loss in all scenarios are automatically considered to have a final NAIC designation of NAIC 1, regardless of the carrying value. The three-step process for modeled securities is as follows:

i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the **initial** NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 24 based upon the **initial** NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation that shall be used for investment schedule reporting is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 25.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. This final NAIC designation shall be applicable for statutory accounting and reporting purposes (including establishing the AVR charges). The final designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 25.a.ii.).

b. Modified Filing Exempt Securities: The modified filing exempt method is for securities that are not subject to modeling under paragraph 25.a., and is further defined in the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office* and have a NAIC Credit Rating Provider (CRP) rating. The four-step process for these securities is similar to the three-step process described in paragraph 25.a.i. through 25.a.iii.

i. Step 1: Translate ARO Rating – Translate CRP Rating to the NAIC Designation Equivalent in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office*. If the result is NAIC 1 or NAIC 6, the remaining steps do not need to be performed; use the NAIC 1 or NAIC 6 to establish the appropriate carrying value methodology per paragraph 24 and report the NAIC 1 or NAIC 6 as the Final Designation. For NAIC 2 through NAIC 5, proceed to Step 2.

ii. Step 2: Determine Initial Designation – Use the NAIC 2 through NAIC 5 from Step 1 to identify the appropriate breakpoints from the pricing matrix (see table, "NAIC Designations Breakpoints for Loan-Backed and Structured Securities" provided in Part Three Section 3 (c) (iv) (A) of the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office*) and compare to the amortized cost (divided by outstanding par) to determine the **initial** NAIC designation.

iii. Step 3: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 24 based upon the **initial** NAIC designation determined in Step 2.

iv. Step 4: Determine Final Designation – If the appropriate carrying value methodology established in Step 3 results in the security being carried at amortized cost (including securities where the carrying value method is lower of amortized cost or fair value where the amortized cost is the lower value), then the **final** NAIC designation is the same as the **initial** NAIC designation. If the appropriate carrying value methodology established in Step 3 results in the security being carried at fair value (thus the carrying value method is lower of amortized cost and fair value, and the fair value is the lower value), use the converted ARO rating NAIC designation from Step 2 to identify the appropriate breakpoints from the pricing matrix and compare to the fair value (divided by outstanding par) to determine the **final** NAIC designation. This final NAIC designation shall be applicable for statutory accounting and reporting purposes (including establishing the AVR charges). The final NAIC designation is not used for establishing the appropriate carrying value method in Step 3 (paragraph 25.b.ii.).

c. All Other Loan-Backed and Structured Securities: For loan-backed and structured securities not subject to paragraphs 25.a. (financial modeling) or 25.b. (modified filing exempt), follow the established designation procedures according to the appropriate section of the *Purposes and Procedures Manual of the NAIC Investment Analysis~~Securities Valuation~~ Office*. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 24. Examples of these securities include, but are not limited to, equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, and loan-backed and structured securities with SVO assigned NAIC designations.

Specific Interim Reporting Guidance for RMBS/CMBS Securities

26. The guidance in this paragraph shall be applied in determining the reporting method for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 25, regardless of the quarterly methodology used.

a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 25.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 25.a.) for these securities acquired subsequent to year-end.

c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 26.a. or 26.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 25.b. or paragraph 25.c. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 25.b. or paragraph 25.c. as appropriate).

Unrealized Gains and Losses and Impairment Guidance

27. For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with paragraph 36 of this statement. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

28. The application of this reporting requirement resulting from NAIC designation (i.e., lower of cost or fair value) is not a substitute for other-than-temporary impairment recognition (paragraphs 33-37). For

securities reported at fair value where an other-than-temporary impairment has been determined to have occurred, the realized loss recognized from the other-than-temporary impairment shall first be applied towards the realization of any unrealized losses previously recorded as a result of fluctuations in the security's fair value due to the reporting requirements. After the recognition of the other-than-temporary impairment, the security shall continue to report unrealized gains and losses as a result of fluctuations in fair value.

29. If the fair value of a loan-backed or structured security is less than its amortized cost basis at the balance sheet date, an entity shall assess whether the impairment is other than temporary. Amortized cost basis includes adjustments made to the cost of an investment for accretion, amortization, collection of cash, previous other-than-temporary impairments recognized as a realized loss (including any cumulative-effect adjustments recognized in accordance with paragraphs 56-58 of this statement).

30. If an entity intends to sell the loan-backed or structured security (that is, it has decided to sell the security), an other-than-temporary impairment shall be considered to have occurred.

31. If an entity does not intend to sell the loan-backed or structured security, the entity shall assess whether it has the intent and ability[7] to retain the investment in the security for a period of time sufficient to recover the amortized cost basis. If the entity does not have the intent and ability to retain the investment for the time sufficient to recover the amortized cost basis, an other-than-temporary impairment shall be considered to have occurred.

32. If the entity does not expect to recover the entire amortized cost basis of the security, the entity would be unable to assert that it will recover its amortized cost basis even if it does not intend to sell the security and the entity has the intent and ability to hold. Therefore, in those situations, an other-than temporary impairment shall be considered to have occurred. In assessing whether the entire amortized cost basis of the security will be recovered, an entity shall compare the present value of cash flows expected to be collected from the security with the amortized cost basis of the security. If present value of cash flows expected to be collected is less than the amortized cost basis of the security, the entire amortized cost basis of the security will not be recovered (that is, a non-interest related decline[8] exists), and an other-than-temporary impairment shall be considered to have occurred. A decrease in cashflows expected to be collected on a loaned-backed or structured security that results from an increase in prepayments on the underlying assets shall be considered in the estimate of the present value of cashflows expected to be collected.

33. In determining whether a non-interest related decline exists, an entity shall calculate the present value of cash flows expected to be collected based on an estimate of the expected future cash flows of the impaired loan-backed or structured security, discounted at the security's effective interest rate.

a. For securities accounted for under paragraphs 12-16 – the effective interest rate of the loan-backed or structured security is the rate of return implicit in the security (that is, the contractual interest rate adjusted for any net deferred fees or costs, premium, or discount existing at the origination or acquisition of the security).[9]

[7] This assessment shall be considered a high standard due to the accounting measurement method established for the securities within the scope of this Statement (amortized cost).

[8] A non-interest related decline is a decline in value due to fundamental credit problems of the issuer. Fundamental credit problems exist with the issuer when there is evidence of financial difficulty that may result in the issuer being unable to pay principal or interest when due. An interest related decline in value may be due to both increases in the risk-free interest rate and general credit spread widening.

[9] See Footnote 1.

b. For securities accounted for under paragraphs 17-19 – the effective interest rate is the rate implicit immediately prior to the recognition of the other-than-temporary impairment.

c. For securities accounted for under paragraphs 20-23 – the reporting entity shall apply the guidance in paragraph 22.b.

34. When an other-than-temporary impairment has occurred because the entity intends to sell the security or has assessed that that they do not have the intent and ability to retain the investments in the security for a period of time sufficient to recover the amortized cost basis, the amount of the other-than-temporary impairment recognized in earnings as a realized loss shall equal the entire difference between the investment's amortized cost basis and its fair value at the balance sheet date. (This guidance includes loan-backed and structured securities previously held at lower of cost or market. For these securities, upon recognition of an other-than-temporary impairment, unrealized losses would be considered realized.)

35. When an other-than-temporary impairment has occurred because the entity does not expect to recover the entire amortized cost basis of the security even if the entity has no intent to sell and the entity has the intent and ability to hold, the amount of the other-than-temporary impairment recognized as a realized loss shall equal the difference between the investment's amortized cost basis and the present value of cash flows expected to be collected, discounted at the loan-backed or structured security's effective interest rate in accordance with paragraph 33. (This guidance includes loan-backed and structured securities previously held at lower of cost or market. For these securities, upon recognition of an other-than-temporary impairment, unrealized losses would be considered realized for the non-interest related decline. Hence, unrealized losses could continue to be reflected for these securities due to the reporting requirements.)

36. For reporting entities required to maintain an AVR or IMR, the accounting for unrealized gains and losses shall be in accordance with paragraph 36.a. For realized gains and losses, the AVR and IMR analysis required and provision to allocate gains and losses between AVR and IMR is the same regardless whether the realized loss results from an impairment write-down or whether there was a gain or loss upon sale. Guidance on specific scenarios resulting in realized gains and losses are addressed in paragraphs 36.b. through 36.f.:

a. Unrealized Gains and Losses – Record all unrealized gains and losses through AVR. At the time an unrealized gain or loss is realized, the accounting shall follow the premise in paragraph 36, as detailed in paragraphs 36.b. through 36.f. for specific transactions. Unrealized gains or losses that are realized shall be reversed from AVR before the recognition of the realized gain or loss within AVR and IMR. Gains and losses shall only be reflected in IMR when realized and as appropriate based on the analysis of interest and non-interest factors.

b. Other-Than-Temporary Impairment – Non-interest related other-than-temporary impairment losses shall be recorded through the AVR. If the reporting entity wrote the security down to fair value due to the intent to sell or does not have the intent and ability to retain the investment for a period of time sufficient to recover the amortized cost basis, the non-interest related portion of the other-than-temporary impairment losses shall be recorded through the AVR; the interest related other-than-temporary impairment losses shall be recorded through the IMR. The analysis for bifurcating impairment losses between AVR and IMR shall be completed as of the date when the other-than-temporary impairment is determined.

c. Security Sold at a Loss Without Prior OTTI – An entity shall bifurcate the loss into AVR and IMR portions depending on interest and non-interest related declines in accordance with the analysis performed as of the date of sale. As such, an entity shall report the loss in separate AVR and IMR components as appropriate.

d. Security Sold at a Loss With Prior OTTI – An entity shall bifurcate the current realized loss into AVR and IMR portions depending on interest and non-interest related declines in accordance with the analysis performed as of the date of sale. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.

e. Security Sold at a Gain With Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale. The bifurcation between AVR and IMR that occurs as of the date of sale may be different from the AVR and IMR allocation that occurred at the time of previous other-than-temporary impairments. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.

f. Security Sold at a Gain Without Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale.

37. For situations where an other-than-temporary impairment is recognized pursuant to paragraphs 34 and 35 of this statement, the previous amortized cost basis less the other-than-temporary impairment recognized as a realized loss shall become the new amortized cost basis of the investment. That new amortized cost basis shall not be adjusted for subsequent recoveries in fair value. Therefore, the prospective adjustment method shall be used for periods subsequent to loss recognition.

38. In periods subsequent to the recognition of an other than temporary impairment loss for a loan-backed or structured security, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment at an amortized cost basis equal to the previous amortized cost basis less the other-than-temporary impairment recognized as a realized loss. The difference between the new amortized cost basis and the cash flows expected to be collected shall be accreted as interest income. A reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the loan-backed or structured security.

a. For securities accounted for under paragraphs 12-19, if upon subsequent evaluation, there is a significant increase in the cash flows expected to be collected or if actual cash flows are significantly greater than cash flows previously expected, such changes shall be accounted for as a prospective adjustment to the accretable yield in accordance with paragraphs 17-19. The security shall continue to be subject to impairment analysis for each subsequent reporting period. The new amortized cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

b. For beneficial interests accounted for under paragraphs 20-23, a reporting entity shall apply the guidance in paragraphs 21-22 to account for changes in cash flows expected to be collected.

39. It is inappropriate to automatically conclude that a security is not other-than-temporarily impaired because all of the scheduled payments to date have been received. However, it also is inappropriate to automatically conclude that every decline in fair value represents an other-than-temporary impairment. Further analysis and judgment are required to assess whether a decline in fair value indicates that it is

probable that the holder will not collect all of the contractual or estimated cash flows from the security. In addition, the length of time and extent to which the fair value has been less than cost can indicate a decline is other than temporary. The longer and/or the more severe the decline in fair value, the more persuasive the evidence that is needed to overcome the premise that it is probable that the holder will not collect all of the contractual or estimated cash flows from the issuer of the security.

40. In making its other-than-temporary impairment assessment, the holder shall consider all available information relevant to the collectibility of the security, including information about past events, current conditions, and reasonable and supportable forecasts, when developing the estimate of future cash flows. Such information generally shall include the remaining payment terms of the security, prepayment speeds, the financial condition of the issuer(s), expected defaults, and the value of any underlying collateral. To achieve that objective, the holder shall consider, for example, industry analyst reports and forecasts, sector credit ratings, and other market data that are relevant to the collectibility of the security. The holder also shall consider how other credit enhancements affect the expected performance of the security, including consideration of the current financial condition of the guarantor of a security (if the guarantee is not a separate contract) and/or whether any subordinated interests are capable of absorbing estimated losses on the loans underlying the security. The remaining payment terms of the security could be significantly different from the payment terms in prior periods (such as for some securities backed by "nontraditional loans"[10]). Thus, the holder shall consider whether a security backed by currently performing loans will continue to perform when required payments increase in the future (including "balloon" payments). The holder also shall consider how the value of any collateral would affect the expected performance of the security. If the fair value of the collateral has declined, the holder needs to assess the effect of that decline on the ability of the holder to collect the balloon payment.

Origination Fees

41. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the loan-backed or structured security consistent with paragraph 8 of this statement. Other origination fees shall be recorded as income upon receipt.

Origination, Acquisition, and Commitment Costs

42. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the loan-backed or structured security, consistent with paragraph 7 of this statement. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase, or commitment to purchase loan-backed and structured securities, shall be charged to expense when incurred.

Commitment Fees

43. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to

[10] A nontraditional loan may have features such as (a) terms that permit principal payment deferral or payments smaller than interest accruals (negative amortization), (b) a high loan-to-value ratio, (c) multiple loans on the same collateral that when combined result in a high loan-to value ratio, (d) option adjustable-rate mortgages (option ARMs) or similar products that may expose the borrower to future increases in repayments in excess of increases that result solely from increases in the market interest rate (for example, once negative amortization results in the loan reaching a maximum principal accrual limit), (e) an initial interest rate that is below the market interest rate for the initial period of the loan term and that may increase significantly when that period ends, and (f) interest-only loans that should be considered in developing an estimate of future cash flows.

obtain a commitment to make funds available at some time in the future, generally, is refundable only if the loan-backed or structured security is issued. If the loan-backed or structured security is not issued, then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

44. A fee paid to the reporting entity to obtain a commitment to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 8 of this statement over the life of the loan-backed or structured security as an adjustment to the investment income on the loan-backed or structured security. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Giantization/Megatization of FHLMC or FNMA Mortgage Backed Securities

45. Giantization/megatization of mortgage backed securities is defined as existing pools of FHLMC or FNMA mortgage-backed securities (MBS) with like coupon and prefix which are repooled together by the issuing agency creating a new larger security. The new Fannie Mae “Mega” or Freddie Mac “Giant” is a guaranteed MBS pass-through representing an undivided interest in the underlying pools of loans.

46. Repooled FHLMC and FNMA securities meet the definition of substantially the same as defined in *SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. The transaction shall not be considered a sale/purchase and no gain or loss shall be recognized. To properly document the repooling, the transaction shall be reported through Schedule D of the Annual Statement as a disposition and an acquisition.

47. Transaction fees charged by the issuing agencies shall be capitalized and amortized over the life of the repooled security.

Structured Notes Acquired for a Specified Investment Strategy

48. To achieve certain strategic investment results, structured ~~note~~ securities may be issued in combination with other structured ~~note~~ securities as a unit or a pair. One strategy involves the purchase of two structured ~~notes~~securities with opposite interest rate reset provisions. Under that strategy, the fixed coupon rate or maturity date for each structured ~~note~~security would be determined shortly after issuance depending on movements in market interest rates. Following that reset date, the resulting yields on each of the structured ~~note~~ securities will move in opposite directions; however, the average yield of the two securities will generally reflect the market yield of the combined instruments in effect on the issuance date. In situations when structured ~~note~~ securities are issued in combination with other structured ~~note~~ securities as a unit or a pair, each structured ~~note~~ security shall be accounted for separately in accordance with the appropriate SSAP. The guidance in paragraph 8 of SSAP No. 103 on the accounting for transfers of entire financial assets or group of entire financial assets that qualify as sales shall be applied to each structured note upon transfer.

Disclosures

49. In addition to the disclosures required for invested assets in general, the following disclosures regarding loan-backed and structured securities shall be made in the financial statements. Regardless of the allowances within paragraph 59 of the Preamble, the disclosures in paragraph 49.f., 49.g. and 49.h. are required in separate, distinct notes to the financial statements:

a. Fair values in accordance with *SSAP No. 100—Fair Value Measurements* (SSAP No. 100).

b. Concentrations of credit risk in accordance with SSAP No. 27;

c. Basis at which the loan-backed and structured securities are stated;

d. The adjustment methodology used for each type of security (prospective or retrospective);

e. Descriptions of sources used to determine prepayment assumptions.

f. All securities within the scope of this statement with a recognized other-than-temporary impairment, disclosed in the aggregate, classified on the basis for the other-than-temporary impairment: (1) intent to sell, (2) inability or lack of intent to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, or (3) present value of cash flows expected to be collected is less than the amortized cost basis of the security.

g. For each security with an other-than-temporary impairment, recognized in the current reporting period by the reporting entity, as the present value of cash flows expected to be collected is less than the amortized cost basis of the securities:

    i. The amortized cost basis, prior to any current-period other-than-temporary impairment.

    ii. The other-than-temporary impairment recognized in earnings as a realized loss.

    iii. The fair value of the security.

    iv. The amortized cost basis after the current-period other-than-temporary impairment.

h. All impaired securities (fair value is less than cost or amortized cost) for which an other-than-temporary impairment has not been recognized in earnings as a realized loss (including securities with a recognized other-than-temporary impairment for non-interest related declines when a non-recognized interest related impairment remains):

    i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and

    ii. The aggregate related fair value of securities with unrealized losses.

i. The disclosures in (i) and (ii) above should be segregated by those securities that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with SSAP No. 100.

j. Additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.

k. When it is not practicable to estimate fair value, the investor should disclose the following additional information, if applicable:

i. The aggregate carrying value of the investments not evaluated for impairment, and

ii. The circumstances that may have a significant adverse effect on the fair value.

50. Refer to the preamble for further discussion regarding disclosure requirements. All disclosures within this statement, except disclosures included in paragraphs 49.b. and 49.k., shall be included within the interim and annual statutory financial statements. Disclosure requirements in paragraphs, 49.b. and 49.k. are required in the annual audited statutory financial statements only.

Relevant Literature

51. This statement adopts *FASB Emerging Issues Task Force No. 99-20*, *Exchange of Interest-Only and Principal-Only Securities for a Mortgage-Backed Security,* as amended by *FAS 166, Accounting for Transfers of Financial Assets, An Amendment of FAS 140,* and *FASB Staff Position EITF 99-20-1, Amendments to the Impairment Guidance of EITF Issue No. 99-20.* This statement adopts paragraphs 5, 7 and 9 of AICPA *Statement of Position 03-03, Accounting for Certain Loans or Debt Securities Acquired in a Transfer* (SOP 03-03) for loan-backed and structured securities only. With the exception of this specific adoption, consideration of SOP 03-03 is still pending consideration for statutory accounting.

52. This statement rejects *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities* and *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*.

53. This statement also rejects *FASB Emerging Issues Task Force No. 89-4, Accounting for a Purchased Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate, FASB Emerging Issues Task Force No. 90-2, Exchange of Interest-Only and Principal-Only Securities for a Mortgage-Backed Security, FASB Emerging Issues Task Force No. 93-18, Recognition of Impairment for an Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate*, *FASB Emerging Issues Task Force No. 96-12, Recognition of Interest Income and Balance Sheet Classification of Structured Notes,* and *FASB Emerging Issues Task Force No. 98-15, Structured Notes Acquired for a Specified Investment Strategy*.

Effective Date and Transition

54. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

55. For securities purchased prior to January 1, 1994, where historical cash flows are not readily available for applying the retrospective method, the reporting entity may use January 1, 1994 as the acquisition date and the then book value as the cost for purposes of determining yield adjustments in future periods.

56. This revised statement (except for the guidance in paragraph 25 inserted in December 2009) supersedes SSAP No. 98 and paragraph 13 of SSAP No. 99 effective September 30, 2009. For reporting entities that either early adopted the requirements of SSAP No. 98 or previously adopted a statutory accounting policy that was in accordance with the prescriptions of SSAP No. 98, and if such reporting entities do not intend to sell the security, and have the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, those reporting entities shall recognize the cumulative effect of reversing the impact of the adoption of SSAP No. 98, or an equivalent statutory accounting policy, and paragraph 13 of SSAP No. 99 as an adjustment to the opening balance of

unassigned funds (surplus) as of July 1, 2009, with a corresponding adjustment to applicable financial statement elements.

57. The accounting and reporting requirements of this revised statement (except for the guidance in paragraph 25 inserted in December 2009) shall be applied to existing and new investments held by a reporting entity on or after September 30, 2009. For loan-backed and structured securities held at the beginning of the interim period of adoption (July 1, 2009) and continue to be held as of September 30, 2009, if a reporting entity does not intend to sell the security, and has the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, the reporting entity shall recognize the cumulative effect of initially applying this revised statement as an adjustment to the opening balance of unassigned funds (surplus) as of July 1, 2009, with a corresponding adjustment to applicable financial statement elements. The cumulative effect on unassigned funds (surplus) shall be calculated by comparing the present value of the cash flows expected to be collected determined in accordance with the methodology in paragraph 33, as applicable, with the amortized cost basis of the loan-backed and structured security as of the beginning of the interim period in which this revised statement is adopted (July 1, 2009). The cumulative-effect adjustment shall include related tax effects. The discount rate used to calculate the present value of the cash flows expected to be collected shall be the rate in effect before recognizing any other-than-temporary impairments and not a rate that has been adjusted to reflect those impairments.

58. The amortized cost basis of a security for which an other-than-temporary impairment was previously recognized shall be adjusted by the amount of the cumulative-effect adjustment before taxes. The difference between the new amortized cost basis and the cash flows expected to be collected shall be accreted as interest income (see paragraph 38).

59. In the period of adoption, an entity shall provide the disclosures required by SSAP No. 3 for changes in accounting principles.

60. In December 2009, guidance in paragraph 25 was inserted and subsequent paragraphs were renumbered. These changes were related to a new method of determining the final NAIC designation. Substantive revisions related to determining the final NAIC designation, are effective for reporting periods ending on or after December 31, 2009. Changes related to determining the final NAIC designation will be accounted for on a prospective basis. No cumulative effect adjustments or application of the NAIC designation guidance to prior events or periods are permitted, similar to a change in accounting estimate.

61. In June 2010, nonsubstantive revisions were adopted to paragraphs 27 and 36 to clarify the accounting for gains and losses between AVR and IMR for SSAP No. 43R securities. As illustrated within paragraph 36, the AVR and IMR analysis required and provision to allocate gains and losses between AVR and IMR is the same regardless whether the security is written down as a result of an impairment analysis or whether the security was sold. Although the revisions to paragraphs 27 and 36 are considered nonsubstantive and are in accordance with the communicated intent provided in the Question and Answer Implementation Guide, it was identified that some entities had not correctly interpreted the Question and Answer Implementation Guide and such entities would need to make significant system changes to comply with the AVR and IMR bifurcation requirements for sale transactions. As a result, the revisions to paragraphs 27 and 36 adopted in June 2010 have an effective date of January 1, 2011 with early application allowed. Entities that have previously bifurcated gains and losses between AVR and IMR for sale transactions shall not reverse previous bifurcations, and shall not revert to a process that does not bifurcate gains and losses between AVR and IMR when conducting future sales transactions before the January 1, 2011 effective date. Thus, if an entity bifurcated gains and losses from sale transactions between AVR and IMR anytime after the adoption of SSAP No. 43R (September 2009), that entity must continue to bifurcate gains and losses resulting from sale transactions for SSAP No. 43R securities in accordance with the nonsubstantive revisions to paragraphs 27 and 36 adopted in June 2010.

62. The guidance in paragraph 48 was originally contained within *INT 00-11: EITF 98-15: Structured Notes Acquired for a Specified Investment Strategy* and was effective September 11, 2000. Revisions adopted in October 2010 to paragraphs 2, 3 and 4 are effective January 1, 2011. The nonsubstantive revisions clarify the definitions of loan-backed and structured securities.

APPENDIX A – QUESTION AND ANSWER IMPLEMENTATION GUIDE

SSAP No. 43R—Loan-Backed and Structured Securities – Revised (SSAP No. 43R), with an effective date of September 30, 2009, was issued to provide revised guidance on the accounting and impairment treatment for loan-backed and structured securities. SSAP No. 43R superseded *SSAP No. 43—Loan-backed and Structured Securities* (SSAP No. 43), *SSAP No. 98—Treatment of Cash Flows When Quantifying Changes in Valuations and Impairments, an Amendment of SSAP No. 43* (SSAP No. 98) and paragraph 13 of *SSAP No. 99—Accounting for Certain Securities Subsequent to an Other-Than-Temporary Impairment* (SSAP No. 99).

Questions regarding implementation of SSAP No. 43R were raised by reporting entities, regulators and auditors. It was determined that this Question & Answer Implementation Guide should be issued as an aid in understanding and implementing SSAP No. 43R due to the relatively high number of inquiries received.

This Q&A is effective for reporting periods ending on or after December 31, 2009. The Statutory Accounting Principles (E) Working Group assumes that industry made their best efforts to adopt the guidance set forth under SSAP No. 43R in the third quarter of 2009. The Statutory Accounting Principles (E) Working Group also acknowledges that at year-end 2009 there were many outstanding questions which resulted in this Q&A. It is recommended that any adjustment to the other-than-temporary impairment cumulative effect as a result of this Q&A be reflected in the 2009 Annual Statement with no restatement of the prior quarterly statement.

Index to Questions:

No.	Question
1	Are reporting entities permitted to establish an accounting policy to write down a SSAP No. 43R other-than-temporarily impaired security, for which a “non-interest” related decline exists, to fair-value regardless of whether the reporting entity intends to sell, or has the intent and ability to hold?
2	Can a reporting entity avoid completing a cash-flow assessment or testing for a specific other-than-temporarily impaired security when the entity believes there is a clear cash-flow shortage (i.e., non-interest related impairment) and elect to recognize a full impairment for the SSAP No. 43R security (no impairment bifurcation), with fair value becoming the new amortized cost basis, and recognition of the full other-than-temporary impairment as a realized loss?
3	Can reporting entities change their “intend to sell” or “unable to hold” assertions and recover previously recognized other-than-temporary impairments?
4	Under SSAP No. 43R, in accordance with the cumulative adjustment provisions, is it possible for a previously other-then-temporarily impaired security to be completely “unimpaired” (not recognized as OTTI)?
5	How do the regulators intend the phrase “intent and ability to hold” as used within SSAP No. 43R to be interpreted?
6	How do contractual prepayments affect the determination of credit losses?

No.	Question
7	Paragraph 36 states that AVR and IMR should be accounted for in accordance with SSAP No. 7, however paragraph 36 also states that AVR and IMR should be separated into two components if the entity has the intent to sell or does not have the intent and ability to retain the investment for a time sufficient to recover the amortized cost basis. This guidance is different from the treatment when the gain or loss is due to an actual sale and also different from the treatment for SSAP No. 26 investments. When an impairment is recognized, should an entity follow SSAP No. 7 when an investment changes by two or more NAIC categories (i.e., reported entirely in AVR) or stay within the guidance of SSAP No. 43R?
8	If a security is sold and no previous other-than-temporary impairment was recognized, how should the entity record the loss within AVR and IMR?
9	If a security with a recognized other-than-temporary impairment is subsequently sold for a gain, how should the gain be recognized within AVR and IMR?
10	Shall a cumulative effect adjustment be recorded to reflect other-than-temporary impairments for securities for which an other-than-temporary impairment was not previously recorded under SSAP No. 43 or for securities for which an other-than-temporary impairment was previously recorded under SSAP No. 43, but not to the extent required under SSAP No. 43R?
11	If a reporting entity had previously adopted SSAP No. 98, or had a company policy in accordance with SSAP No. 98, and had previously recognized an other-than-temporary impairment to fair value, if at September 30, 2009, the entity has the intent and ability to retain the security for a period of time to recover the amortized cost, is the entity permitted to make a cumulative effect adjustment to reflect a reversal of the previously recognized loss?
12	If a reporting entity had previously adopted SSAP No. 98, or had a company policy in accordance with SSAP No. 98, and had previously recognized an other-than-temporary impairment in accordance with SSAP No. 98, if an additional other-than-temporary impairment is necessary under SSAP No. 43R, should the additional other-than-temporary impairment be recognized as part of the cumulative effect adjustment permitted under SSAP No. 43R?
13	With respect to the calculation of the cumulative effect adjustment, paragraph 57 states the following: “The cumulative effect adjustment shall include related tax effects.” Because of the interrelated nature of realized gains and losses, AVR and IMR and taxes to AVR and IMR, should the cumulative effect adjustment also be net of AVR and IMR effects?
14	Are the disclosure requirements within paragraphs 49.f. and 49.g. of SSAP No. 43R required to be completed for the current reporting quarter only, or as a year-to-date cumulative disclosures?
15	If an impairment loss is recognized based on the "present value of projected cash flows" in one period is the entity required to get new cash flows every reporting period subsequent or just in the periods where there has been a significant change in the actual cash flows from projected cash flows?

No.	Question
16	What disclosure information is required for securities recognized as OTTI on the basis of "present value of projected cash flows," in years subsequent to the OTTI?
17	Do RMBS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?
18	The NAIC Designation process for RMBS may incorporate loss expectations that differ from the reporting entity's expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?
19	For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?
20	Should the initial or final rating be used to determine the AVR/IMR classification on sold securities?
21	Why is the final designation used for the AVR/IMR classification of realized gains and losses on sales? If the initial rating results in a NAIC 6 designation, and the final designation is higher, how does this impact reporting for AVR/IMR?

1. ***Question*** - Are reporting entities permitted to establish an accounting policy to write down a SSAP No. 43R other-than-temporarily impaired security, for which a "non-interest" related decline exists, to fair-value regardless of whether the reporting entity intends to sell, or has the intent and ability to hold?

1.1 Pursuant to the guidance in SSAP No. 43R, optionality is not permitted. As such, an accounting policy that differs from SSAP No. 43R would be considered a departure from statutory accounting principles as prescribed by the NAIC *Accounting Practices and Procedures Manual.*

2. ***Question*** – Can a reporting entity avoid completing a cash-flow assessment or testing for a specific other-than-temporarily impaired security when the entity believes there is a clear cash-flow shortage (i.e., non-interest related impairment) and elect to recognize a full impairment for the SSAP No. 43R security (no impairment bifurcation), with fair value becoming the new amortized cost basis, and recognition of the full other-than-temporary impairment as a realized loss?

2.1 Under the basis of SSAP No. 43R, an entity is not permitted to elect a write-down to fair value in lieu of assessing cash flows and bifurcating "interest" and "non-interest" impairment components. As noted in paragraph 32, if the entity does not have the intent to sell, and has the intent and ability to hold, but does not expect to recover the entire amortized cost basis of the security, the entity shall compare the present value of cash flows expected to be collected with the amortized cost basis of the security. If present value of cash flows expected to be collected is less than the amortized cost basis of the security, the entire amortized cost basis of the security will not be recovered (a non-interest decline exists) and an other-than-temporary impairment shall be considered to have occurred. Pursuant to paragraph 35, when an other-than-temporary impairment has occurred because the entity does not expect to recover the entire amortized cost basis of the security even if the entity has no intent to sell and the entity has the intent and ability to hold, the amount of the other-than-temporary impairment recognized as a realized loss shall equal the difference between the investment's amortized cost basis and the present value of cash flows expected to be collected, discounted at the loan-backed or structured security's effective interest rate.

2.2 If the entity does not want to assess cash flows of an impaired security (fair value is less than amortized cost), the entity can designate the security as one the entity intends to sell, or one that the entity does not have the intent and ability to hold, providing it is reflective of the true intent and assessment of the ability of the entity. Once an impaired security has this designation, pursuant to paragraph 30 or 31, an other-than-temporary impairment shall be considered to have occurred. As detailed in paragraph 34, the amount of the other-than-temporary impairment recognized in earnings as a realized loss shall equal the entire difference between the investment's amortized cost basis and its fair value at the balance sheet date.

2.3 As addressed in question 3 of this Question and Answer Guide, reporting entities are not permitted to change assertions regarding their intent to sell or their lack of intent and ability to hold. Once the security has been identified as one the entity intends to sell, or as a security that the entity does not have the intent and ability to hold, that assertion shall not change as long as the entity continues to hold the security.

3. ***Question*** - Can reporting entities change their "intend to sell" or "unable to hold" assertions and recover previously recognized other-than-temporary impairments?

3.1 No, a reporting entity is not permitted to change assertions and reverse previously recognized SSAP No. 43R other-than-temporary impairments. Although an entity may elect to hold a security due to a favorable change in the security's fair value, once the security has been identified as one the entity intends to sell, or as a security that the entity does not have the intent and ability to hold for purposes of initially recognizing an other-than-temporary impairment, that assertion shall not change as long as the entity continues to hold the security.

3.2 Reporting entities that have recognized an other-than-temporary impairment on a SSAP No. 43R security in a manner corresponding with an assertion on the intent to sell or the lack of the intent and ability to hold, for which a subsequent other-than-temporary impairment has been identified, shall recognize a realized loss for the difference between the current amortized cost (reflecting the previously recognized SSAP No. 43R other-than-temporary impairment) and the fair value at the balance sheet date of the subsequent impairment. Thus, bifurcation of impairment between interest and non-interest related declines is not permitted for securities in which an other-than-temporary impairment was previously recognized on the basis that the reporting entity had the intent to sell, or lacked the intent and ability to hold, regardless if the entity has subsequently decided to hold the security.

3.3 Reporting entities shall reclassify a security as one for which there is an intent to sell, or for which there is not an intent or ability to hold, regardless if a bifurcated other-than-temporary impairment had previously been recognized, as soon as the entity realizes that they can no longer support a previous assertion to hold the security. In making such reclassifications, if the security is impaired, the difference between the amortized cost (reflecting the initial non-interest other-than-temporary impairment recognized) and fair value at the balance sheet date of the reclassification shall be recognized as a realized loss, with fair value reflecting the new amortized cost basis. Once such a reclassification occurs, and the security is classified as one for which there is an intent to sell, or for which there is not an intent and ability to hold, the security must continue to carry that assertion until it is no longer held by the reporting entity.

4. ***Question*** – Under SSAP No. 43R, in accordance with the cumulative adjustment provisions, is it possible for a previously other-then-temporarily impaired security to be completely "unimpaired" (not recognized as OTTI)?

4.1 Yes, a security that was previously determined to be other-than-temporarily impaired may be completely "unimpaired" under SSAP No. 43R if the other-than-temporary impairment is determined to be 100% interest related upon adoption. If there is any aspect of non-interest impairment (present value of cash flows expected to be collected is less than amortized cost) then the security would continue to be considered other-than-temporarily impaired under SSAP No. 43R. The amount recognized as a realized loss, if applicable, has changed. (Please refer to the cumulative effect adjustment guidance.)

4.2 Although *INT 06-07: Definition of Phrase "Other Than Temporary"* (INT 06-07) did not require a security to be considered other-than-temporarily impaired if the impairment was 100% caused by interest related declines, it has been identified that reporting entities may have been compelled to write-down such securities as other-than-temporarily impaired due to the time and/or extent to which the security had been impaired. Thus, in these instances, if there is no "non-interest" related decline, and the reporting entity does not have the intent to sell and has the intent and ability to hold until recovery of the amortized cost basis, then under the SSAP No. 43R cumulative effect transition provisions, such securities will be completely "unimpaired" (not recognized as OTTI).

5. ***Question*** – How do the regulators intend the phrase "intent and ability to hold" as used within SSAP No. 43R to be interpreted?

5.1 SSAP No. 43R paragraph 31 states in part "…the entity shall assess whether it has the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis. If the entity does not have the intent and ability to retain the investment for the time sufficient to recover the amortized cost basis, an other-than-temporary impairment shall be considered to have occurred."

5.2 The intent of this language within SSAP No. 43R is focused on ensuring that, as of the balance sheet date, after considering the entity's own cash or working capital requirements and contractual or regulatory obligations and all known facts and circumstances related to the impaired security, the entity does not have the intention of selling the impaired security and has the current intent and ability to hold the security to recovery. Due to impairment bifurcation provisions provided within SSAP No. 43R, and the amortized cost measurement method generally permitted for loan-backed and structured securities, the assessment of "intent and ability" is intended to be a high standard. Despite the intent of paragraph 31, it is identified that information not known to the entity may become known in subsequent periods and/or facts and circumstances related to an individual holding or group of holdings may change thereby influencing the entity's subsequent determination of intent and ability with respect to a security or securities.

5.3 If a reporting entity asserts that it has the intent and ability to hold a security, or group of securities, until recovery of the amortized cost, but sells or otherwise disposes the security or securities prior to such recovery, the reporting entity shall be prepared to justify this departure from their original assertion to examiners and auditors. SSAP No. 43R purposely does not identify specific circumstances in which a change in assertion would be justifiable, but requires judgment from management, examiners and auditors on whether future assertions warrant closer review.

5.4 Delaying recognition of other-than-temporary impairments is a cause of serious concern by the regulators, and entities that habitually delay such recognition through false assertions on the "intent and ability to hold" may face increased scrutiny and regulatory action by their domiciliary state. It is imperative that a reporting entity recognize the full other-than-temporary impairment as soon as the entity realizes that they will no longer be able to hold the security until recovery of the amortized cost basis. Greater scrutiny shall be placed on securities sold or otherwise disposed shortly after a financial statement reporting date if such securities had been excluded from the full other-than-temporary impairment recognition on the basis of the reporting entity's intent and ability to hold.

5.5 As noted in paragraph 3.3 of this question and answer guide, once a security is classified as one for which there is an intent to sell, or for which there is not an intent and ability to hold, the security must continue to carry that assertion until the security is no longer held by the reporting entity.

6. ***Question*** – How do contractual prepayments affect the determination of credit losses?

6.1 Paragraph 32 of SSAP No. 43R states that "A decrease in cash flows expected to be collected on a loan-backed or structured security that results from an increase in prepayments on the underlying assets shall be considered in the estimate of present value of cash flows expected to be collected." Paragraph 14 states that "Loan-backed and structured securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions, using either the prospective or retrospective adjustment methodologies consistently applied by type of securities."

6.2 The language in paragraph 32 is consistent with GAAP, and the GAAP guidance related to the treatment of prepayments in the consideration of credit losses was intended to provide clarification for determining the "cash flows expected to be collected" on interest-only securities and other similar securities that can be contractually prepaid or otherwise settled in such a way that the holder would not recover substantially all of the investment. These securities are generally accounted for in accordance with paragraphs 17-23 of SSAP No. 43R, which requires that an entity estimate cash flows expected to be collected including both amount and timing. Therefore, for securities under SSAP No. 43R, excluding those accounted for under paragraphs 17-23, decreases in cash flows resulting in contractual prepayments should be considered yield adjustments rather than potential credit losses.

7. ***Question*** – Paragraph 36 states that AVR and IMR should be accounted for in accordance with SSAP No. 7, however paragraph 36 also states that AVR and IMR should be separated into two components if the entity has the intent to sell or does not have the intent and ability to retain the investment for a time sufficient to recover the amortized cost basis. This guidance is different from the treatment when the gain or loss is due to an actual sale and also different from the treatment for SSAP No. 26 investments. When an impairment is recognized, should an entity follow SSAP No. 7 when an investment changes by two or more NAIC categories (i.e., reported entirely in AVR) or stay within the guidance of SSAP No. 43R?

7.1 SSAP No. 43R includes specific guidance on the treatment for AVR and IMR of other-than-temporary impairment losses which indicates that an entity should bifurcate the loss into AVR and IMR portions depending on whether it is an interest or a non-interest related decline. It was the Statutory Accounting Principles (E) Working Group's intention that for those securities subject to SSAP No. 43R, an entity should report the gain or loss in separate AVR and IMR components regardless of whether the NAIC designation of the security has changed by two or more NAIC designations. The Statutory Accounting Principles (E) Working Group acknowledges that the actual language of SSAP No. 43R is inconsistent and not explicit on this point. In addition, the Statutory Accounting Principles (E) Working Group also notes that due to the rapid adoption of SSAP No. 43R, the annual statement instructions were not fully updated. As a result, a Form A and updates to the annual statement instructions are being prepared for 2010 review. The Form A and updates will address the issue of bifurcation of gains or losses on sales between AVR and IMR for those securities subject to SSAP No. 43R. Appropriate disclosures will also be included in the Form A. In June 2010, nonsubstantive revisions were adopted to paragraphs 27 and 36 to clarify the bifurcation of gains and losses between AVR and IMR. Guidance on the effective date for these nonsubstantive revisions is included within paragraph 61.

8. ***Question*** – If a security is sold and no previous other-than-temporary impairment was recognized, how should the entity record the loss within AVR and IMR?

8.1 As noted in paragraph 7.1, it was intended that reporting entities shall follow the guidance in SSAP No. 43R that indicates an entity shall bifurcate the loss into AVR and IMR portions depending on interest and non-interest related declines. As such, an entity should report the loss in separate AVR and IMR components as appropriate. The AVR/IMR analysis performed, and resulting AVR/IMR allocation, for SSAP No. 43R securities should be same regardless whether the security is written down as a result of an impairment analysis or whether the security was sold without any impairment. A Form A is being prepared to more directly address this issue in SSAP No. 43R. In June 2010, nonsubstantive revisions were adopted to paragraphs 27 and 36 to clarify the bifurcation of gains and losses between AVR and IMR. Guidance on the effective date for these nonsubstantive revisions is included within paragraph 61.

9. ***Question*** – If a security with a recognized other-than-temporary impairment is subsequently sold for a gain, how should the gain be recognized within AVR and IMR?

9.1 As noted in paragraph 7.1, it was intended that reporting entities that recognize an other-than-temporary impairment for securities within SSAP No. 43R that subsequently sell such securities for a gain, shall recognize the gain proportionately through AVR and IMR relative to analysis performed of the gain at the date of the sale. A Form A is being prepared to more directly address this issue in SSAP No. 43R. In June 2010, nonsubstantive revisions were adopted to paragraphs 27 and 36 to clarify the bifurcation of gains and losses between AVR and IMR. Guidance on the effective date for these nonsubstantive revisions is included within paragraph 61.

10. ***Question*** – Shall a cumulative effect adjustment be recorded to reflect other-than-temporary impairments for securities for which an other-than-temporary impairment was not previously recorded under SSAP No. 43 or for securities for which an other-than-temporary impairment was previously recorded under SSAP No. 43, but not to the extent required under SSAP No. 43R?

10.1 Paragraph 57 of SSAP No. 43R states that the cumulative effect applies to securities "for which an other-than-temporary impairment was previously recognized under SSAP No. 43." Does this imply that no cumulative effect should be recorded for securities for which an impairment was not previously recorded, and therefore any credit related impairment prior to July 1, 2009 is recorded in 3Q 2009 earnings? The following facts are provided to illustrate this scenario:

- At 6/30 the insurer owns a security whose fair value is less than cost and has undiscounted cash flows of $97. A $3 impairment is recorded. At 7/1 discounted cash flows (under SSAP No. 43R) are calculated as $90. The difference of $7 ($97-90) is recorded as a cumulative adjustment as required by SSAP No. 43R.

- At 6/30 the insurer owns a security whose fair value is less than cost but has undiscounted expected cash flows of $101. Therefore, no impairment is recorded. At 7/1 discounted cash flows (under SSAP No. 43R) are calculated as $90. Is the difference of $10 ($100-$90) recorded as a cumulative adjustment or does it get recorded as an impairment through earnings for the quarter ended 9/30/09?

10.2 The Statutory Accounting Principles (E) Working Group has concluded that in both cases a cumulative adjustment shall be recorded. If not, in the first example, a company that recognized a small impairment under SSAP No. 43 would not have to recognize any additional pre-7/1/09 credit-related impairment in their income statement, while in the second case, a company that did not happen to trigger an impairment under SSAP No. 43 would be required to recognize the entire pre-7/1/09 credit-related impairment in their 2009 income statement.

10.3 Recording cumulative adjustments for both scenarios is consistent with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). SSAP No. 3 states that "a change in accounting principle results from an adoption of an accepted accounting principle, or method of applying the principle…The cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods."

As a result of this Q&A item, the following nonsubstantive revisions have been made to paragraphs 56 and 57 of SSAP No. 43R as follows:

> 56. This revised statement supersedes SSAP No. 98 and paragraph 13 of SSAP No. 99 effective September 30, 2009. For reporting entities that either early adopted the requirements of SSAP No. 98 or previously adopted a statutory accounting policy that was in accordance with the prescriptions of SSAP No. 98, and if such reporting entities do not intend to sell the security, and have the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, those reporting entities shall recognize the cumulative effect of reversing the impact of the adoption of SSAP No. 98, or an equivalent statutory accounting policy, and paragraph 13 of SSAP No. 99 as an adjustment to the opening balance of unassigned funds (surplus) as of July 1, 2009, with a corresponding adjustment to applicable financial statement elements.
>
> 57. The accounting and reporting requirements of this revised statement shall be applied to existing and new investments held by a reporting entity on or after September 30, 2009. For loan-backed and structured securities held at the beginning of the interim period of adoption (July 1, 2009) and continue to be held as of September 30, 2009, if a reporting entity does not intend to sell the security, and has the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, the reporting entity shall recognize the cumulative effect of initially applying this revised statement as an adjustment to the opening balance of unassigned funds (surplus) as of July 1, 2009, with a corresponding adjustment to applicable financial statement elements. The cumulative effect on unassigned funds (surplus) shall be calculated by comparing the present value of the cash flows expected to be collected determined in accordance with the methodology in paragraph 33, as applicable, with the amortized cost basis of the loan-backed and structured security as of the beginning of the interim period in which this revised statement is adopted (July 1, 2009). The cumulative-effect adjustment shall include related tax effects. The discount rate used to calculate the present value of the cash flows expected to be collected shall be the rate in effect before recognizing any other-than-temporary impairments and not a rate that has been adjusted to reflect those impairments.

11. ***Question*** – If a reporting entity had previously adopted SSAP No. 98, or had a company policy in accordance with SSAP No. 98, and had previously recognized an other-than-temporary impairment to fair value, if at September 30, 2009, the entity has the intent and ability to retain the security for a period of time to recover the amortized cost, is the entity permitted to make a cumulative effect adjustment to reflect a reversal of the previously recognized loss?

11.1 Yes, under the cumulative effect guidance within SSAP No. 43R the entity shall reflect a reversal of the previously recognized loss so that only any non-interest other-than-temporary impairment, determined by comparing the present value of cash flows expected to be collected with the amortized cost of the security, is reflected within the financial statements. (See question 4 regarding whether a previously recognized other-than-temporary impairment can be completely "unimpaired".)

12. ***Question*** – If a reporting entity had previously adopted SSAP No. 98, or had a company policy in accordance with SSAP No. 98, and had previously recognized an other-than-temporary impairment in accordance with SSAP No. 98, if an additional other-than-temporary impairment is necessary under SSAP No. 43R, should the additional other-than-temporary impairment be recognized as part of the cumulative effect adjustment permitted under SSAP No. 43R?

12.1 To further elaborate on this question, assume that an entity early adopted SSAP No. 98 or had an accounting policy similar to SSAP No. 98, and, for a particular security, the entity had previously recognized an other-than-temporary impairment. Assume, at September 30, 2009, the entity has the intent and ability to retain the security for a period of time sufficient to recover the amortized cost. Under SSAP No. 43R, should the cumulative catch-up adjustment recorded to unassigned funds (surplus) as of July 1, 2009 be only the amount required to reverse the previously recognized loss, or does the entity make the adjustment for the amount necessary to recognize the impairment in accordance with the requirements of SSAP No. 43R? The following facts are provided to illustrate this scenario:

o	Fair Value at 7/1/09	$75
o	PV of Expected Cash Flows at 7/1/09	$90
o	Amortized Cost at 7/1/09	$100
o	Impairment Under SSAP No. 98 Previously Recognized	$25
o	Cumulative Catch Adjustment if Apply Only Paragraph 56	$25
o	Cumulative Catch Adjustment if Apply Paragraphs 56 and 57	$15

12.2 The cumulative effect recorded by the entity relative to this previously impaired security would be the amount necessary to adjust surplus as of **July 1** to what it would have been had the requirements of SSAP No. 43R been applied as of that date. Therefore, in this example the cumulative effect adjustment (prior to the impact of related taxes and AVR and IMR, if any) is $15. Please note the emphasis as of July 1. If an additional other-than-temporary impairment is recognized during the third-quarter, this additional other-than-temporary impairment would not be included in the cumulative effect, but would be reflected as a recognized loss within the third-quarter financials.

13. ***Question*** – With respect to the calculation of the cumulative effect adjustment, paragraph 57 states the following: “The cumulative effect adjustment shall include related tax effects.” Because of the interrelated nature of realized gains and losses, AVR and IMR and taxes to AVR and IMR, should the cumulative effect adjustment also be net of AVR and IMR effects?

13.1 Yes. The impact of a cumulative effect adjustment of a new accounting standard typically reflects the net impact of adoption. Accordingly, the cumulative effect adjustment from adopting SSAP No. 43R should be presented net of taxes, AVR and IMR. Alternatively, the cumulative effect may exclude AVR and IMR impact if the AVR and IMR impact is reflected in applicable financial statement elements and the impact is reflected in capital and surplus.

14. ***Question*** – Are the disclosure requirements within paragraphs 49.f. and 49.g. of SSAP No. 43R required to be completed for the current reporting quarter only, or as a year-to-date cumulative disclosures?

14.1 The disclosures should reflect the year-to-date other-than-temporary impairments. The “fair value” reported within the disclosure is intended to reflect the fair value at the date of the other-than-temporary impairment, and shall not be updated due to the fluctuations identified at subsequent reporting dates. If a security has more than one other-than-temporary impairment identified during a fiscal reporting year, the security shall be included on the disclosure listing separately for each identified other-than-temporary impairment. Notation shall be included on the disclosure identifying the other-than-temporary impairments that were recognized for each respective reporting period. (Please note that question 16 addresses subsequent year disclosure for OTTI securities that continue to be held.)

15. ***Question*** – If an impairment loss is recognized based on the "present value of projected cash flows" in one period is the entity required to get new cash flows every reporting period subsequent or just in the periods where there has been a significant change in the actual cash flows from projected cash flows?

15.1 The guidance in paragraph 38 of SSAP No. 43R indicates that a reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the loan-backed or structured security. This guidance is explicit that the reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the loan-backed or structured security.

15.2 As provided in paragraph 2.2 of this Q&A, if the entity does not want to assess cash flows of an impaired security (fair value is less than amortized cost), the entity can designate the security as one the entity intends to sell, or one that the entity does not have the intent and ability to hold, providing it is reflective of the true intent and assessment of the ability of the entity. Reporting entities subject to the requirements of AVR and IMR should allocate the impairment loss between AVR and IMR accordingly.

16. ***Question*** – What disclosure information is required for securities recognized as OTTI on the basis of "present value of projected cash flows," in years subsequent to the OTTI?

16.1 Paragraph 49.g. is explicit that disclosure shall continue to occur for securities with other-than-temporary impairments that continue to be held by the reporting entity. As such, disclosure must continue in all future reporting periods, even over subsequent years, for which the security continues to be held.

17. ***Question*** – Do RMBS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?

17.1 SSAP No. 43R and several other statements of statutory accounting principle require use of the scientific (constant yield) method of amortization. In addition to purchase price, the purchase date is an inherent part of this method and will typically result in different amortization values for different lots. Therefore, RMBS in different lots can result in a different NAIC designation for the same CUSIP. In accordance with the current instructions for calculating AVR and IMR, reporting entities are required to keep track of the different lots separately, which means reporting the different designations. Specific to the RMBS proposal only, for year-end 2009 and until an alternative long-term solution is developed, if companies' accounting and reporting systems do not accommodate this approach, a weighted-average method on a legal entity basis can be used. To the extent that a different accounting method applies to a legal entity's general and separate account, then the weighted average for each account should be calculated separately for the general account and separate account.

18. ***Question*** – The NAIC Designation process for RMBS may incorporate loss expectations that differ from the reporting entity's expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?

18.1 In accordance with *INT 06-07: Definition of Phrase "Other Than Temporary*," reporting entities are expected to "consider all available evidence" at their disposal, including the information that can be derived from the NAIC designation.

19. ***Question*** **-** For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

19.1 *The answer to this question is identical to the answer for question 17.* SSAP No. 43R and several other statements of statutory accounting principle require use of the scientific (constant yield) method of amortization. In addition to purchase price, the purchase date is an inherent part of this method and will typically result in different amortization values for different lots. Therefore, RMBS in different lots can result in a different NAIC designation for the same CUSIP. In accordance with the current instructions for calculating AVR and IMR, reporting entities are required to keep track of the different lots separately, which means reporting the different designations. Specific to the RMBS proposal only, for year-end 2009 and until an alternative long-term solution is developed, if companies' accounting and reporting systems do not accommodate this approach, a weighted-average method on a legal entity basis can be used. To the extent that a different accounting method applies to a legal entity's general and separate account, then the weighted average for each account should be calculated separately for the general account and separate account.

20. ***Question*** - Should the initial or final designation be used to determine the AVR/IMR classification on sold securities?

20.1 The final designation should be utilized to determine the AVR/IMR classification on sold securities.

21. ***Question*** - Why is the final designation used for the AVR/IMR classification of realized gains and losses on sales? If the initial designation results in a NAIC 6 designation and the final designation is higher, how does this impact reporting for AVR/IMR?

21.1 With regards for AVR/IMR determination and other reporting purposes, the FINAL designation, after application of the multi-step method described in paragraph 25, shall be used. The initial designation, which is not used for any reporting purposes except for determining the carrying value method as described in paragraph 24, is only an interim step in determining the (final) NAIC designation. However, as noted in paragraph 25, securities assigned an NAIC 6 designation are not modified by the carrying value; therefore the final designation is also an NAIC 6. The same is true for securities assigned an NAIC 1 designation by the SVO. As NAIC 1 securities are assumed to have zero expected loss, the initial designation is not modified by the carrying value; therefore the final designation is also an NAIC 1. (Please see paragraph 25 and related subparagraphs for additional information related to the multi-step method.)

Capitalization of Interest

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for capitalization of interest.

SUMMARY CONCLUSION

2. The historical cost of acquiring an asset generally includes the necessary costs incurred to bring it to the condition and location necessary for its intended use. If an asset requires a period of time in which to carry out the activities necessary to bring it to that condition and location, the interest cost incurred during that period as a result of expenditures for the asset shall be included as a part of the historical cost of acquiring the asset.

3. Interest cost shall be capitalized for the following types of assets:

a. Assets constructed or otherwise produced for an enterprise's own use (including assets constructed or produced for the enterprise by others for which deposits or progress payments have been made);

b. Assets intended for sale or lease that are constructed or otherwise produced as discrete projects (e.g., real estate developments);

c. Investments (equity, loans, and advances) accounted for by the equity method while the investee has activities in progress necessary to commence its planned principal operations provided that the investee's activities include the use of funds to acquire qualifying assets for its operations. The equity method is defined in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88* (SSAP No. 97).

4. Interest cost shall not be capitalized for the following types of assets:

a. Assets that are in use or ready for their intended use in the earning activities of the enterprise;

b. Assets that are not being used in the earning activities of the enterprise and that are not undergoing the activities necessary to get them ready for use;

c. Investments accounted for by the equity method after the planned principal operations of the investee begin;

d. Investments in regulated investees that are capitalizing both the cost of debt and equity capital;

e. Assets acquired with gifts and grants that are restricted by the donor or grantor to acquisition of those assets to the extent that funds are available from such gifts and grants. Interest earned from temporary investment of those funds that is similarly restricted shall be considered an addition to the gift or grant for this purpose;

f. Nonadmitted assets.

5. Capitalized interest meets the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and is an admitted asset to the extent it conforms to the requirements of this statement.

Capitalization

6. The amount of interest cost to be capitalized for qualifying assets shall be determined in accordance with paragraphs 12-16 of *FASB Statement No. 34*, *Capitalization of Interest Cost* (FAS 34) and paragraph 6 of *FASB Statement No. 62, Capitalization of Interest Cost in Situations Involving Certain Tax-Exempt Borrowings and Certain Gifts and Grants* (FAS 62).

7. The capitalization period shall be in accordance with paragraphs 17-19 of FAS 34 and paragraph 7 of FAS 62.

Disclosures

8. Disclosures shall be made in the financial statements in accordance with paragraph 21 of FAS 34.

9. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure in paragraph 8 shall be included in the annual audited statutory financial reports only.

Impairment

10. Capitalized interest shall be assessed for impairment in conjunction with the assessment of the related asset. Interest capitalization shall not cease when such an assessment requires recognition of a lower value for the asset than acquisition cost; rather the provision required to reduce acquisition cost to such lower value shall be increased appropriately.

Relevant Literature

11. The statutory principles established in this statement adopt the GAAP accounting principles for capitalization of interest cost set forth in FAS 34, *FASB Statement No. 42, Determining Materiality for Capitalization of Interest Cost*, *FASB Statement No. 58, Capitalization of Interest Cost in Financial Statements That Include Investments Accounted for by the Equity Method*, and FAS 62, except that nonadmitted assets are ineligible for capitalization of interest.

Effective Date and Transition

12. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Uninsured Plans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for all uninsured plans. This statement does not encompass policies written under the National Flood Insurance Program created by the Federal Emergency Management Agency (FEMA). Guidance for policies written under the National Flood Insurance Program is included in *SSAP No. 62R—Property and Casualty Reinsurance* (SSAP No. 62R).

SUMMARY CONCLUSION

2. For purposes of this statement, uninsured accident and health plans, including HMO administered plans, and uninsured property and casualty plans (collectively referred to as uninsured plans) are defined as plans for which a reporting entity, as an administrator, performs administrative services such as claims processing for a third party that is at risk, and accordingly, the administrator has not issued an insurance policy, regardless of whether an identification card is issued. In the case of uninsured accident and health plans, the administrator may arrange for the provision of medical services through a contracted or employed provider network. The plan (whether insured by another reporting entity or self insured) bears all of the insurance risk, and there is no possibility of loss or liability to the administrator caused by claims incurred related to the plan. The administrator, however, may be subject to credit risk with regard to the risk bearing entity. An uninsured accident and health plan may be either an Administrative Services Only (ASO) plan or an Administrative Services Contract (ASC) plan. Under an ASO plan, claims are paid from a bank account owned and funded directly by the uninsured plan sponsor; or, claims are paid from a bank account owned by the reporting entity, but only after the reporting entity has received funds from the uninsured plan sponsor that are adequate to fully cover the claim payments. Under an ASC plan, the reporting entity pays claims from its own bank accounts, and only subsequently receives reimbursement from the uninsured plan sponsor. No arrangement where the reporting entity receives a capitated payment for providing medical services to a third party shall qualify as an uninsured plan.

3. Uninsured accident and health plans also include Federal, state or other government department funded programs such as Medicare cost contracts where there is no underwriting risk to the reporting entity. Under Medicare cost contracts, service provided to recipients includes the direct delivery of health care for which the reporting entity is reimbursed based on costs incurred as provided for in regulations governing the administration of such contracts. Other such programs may include some Medicaid contracts for which administration or other non-underwriting services are provided.

4. Partially insured or combination plans exist, under which the reporting entity issues an insurance policy for some of the risks related to the claims (e.g. minimum premium and stop loss coverage), but acts as an administrator for some, or all, of the claims paid by the plan. Such plans shall be treated as two plans: an insured plan (the part for which the reporting entity has issued a policy) and an uninsured plan (the part that meets the definition in paragraph 2 of this statement). The components related to uninsured plans shall be accounted for using the accounting principles established in this statement; the components related to insured plans shall be accounted for as insurance.

Revenue/Expense Recognition

5. The administrator's statement of operations shall exclude all income and expenses related to claims, losses, premiums, and other amounts received or paid on behalf of uninsured ASO or uninsured ASC plans. An administrator acting as a provider of services, that provides such services through a salaried network, where the cost allocation of the service provided to insured vs. uninsured plans cannot be reasonably determined, shall report medical and hospital expenses on a gross basis by type of expense and report revenue from uninsured plans on a gross basis as fee for service income.

6. Commissions, expenses, and taxes paid by the administrator to administer such plans shall be reported on a gross basis by type of expense. Where the only functions provided are administrative, administrative fees and related reimbursements from the plan shall be deducted from general expenses. Reporting entities filing the health blank should deduct administrative fees and related reimbursements from general administrative expenses or claim adjustment expenses if the administrative services provided include services for claim adjustment expenses as defined in *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses*. Where the reporting entity provides both administration and health care services directly, income from Medicare or similarly structured cost based reimbursement contracts is not recorded as premium but is recorded as revenue in the appropriate category. Health care services rendered as "medical and hospital" categorized by type and administrative expenses by type of expense shall be reported on an incurred basis.

7. Income from cost based reimbursement contracts is recorded as revenue because the service provided is for the direct delivery of care to recipients. There are risks associated with these plans in that all costs incurred under the contract may not be reimbursable and revenues may be adjusted based on subsequent challenges of costs included in filed cost reports. In addition, revenue may also be adjusted based on the performance under the terms of the contract or other external factors.

Amounts Receivable

8. Amounts receivable from uninsured plans for (a) claims and other costs paid by the administrator on behalf of the third party at risk and (b) fees related to services provided by the administrator to the plan meet the definition of assets as set forth in *SSAP No. 4—Assets and Nonadmitted Assets*. A receivable shall not be recorded for unpaid claims. A receivable related to Medicare or a similarly structured cost based reimbursement contract shall only be recorded when services have been rendered.

9. Specific funds received as reimbursements (or advance payments) for uninsured claims under a partially uninsured plan, including but not limited to the Medicare Part D program should be accounted for per this Statement. These funds include 'Reinsurance Payments' and 'Low Income Subsidy (cost-sharing portion)'. These funds are paid by the Government for a portion of claims above the out-of-pocket threshold or relate to PDP payments for all or a portion of the deductible, the coinsurance and the co-payment amounts for low-income beneficiaries. Refer to *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage* for additional information and definitions of terms specifically related to Medicare Part D business.

10. An evaluation shall be made of the amounts receivable to determine any nonadmitted amounts. Next, an evaluation shall be made in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R), to determine whether there is an impairment. This two step process is set forth below:

a. Uncollected uninsured plan receivables (excluding Medicare and similar government plans) over ninety days due shall be accounted for as a nonadmitted asset;

b. Remaining amounts determined to be uncollectible shall be written off. If in accordance with SSAP No. 5R, it is "probable" the amount receivable is uncollectible, any uncollectible amount receivable shall be written off against operations in the period such determination is made. If it is "reasonably possible" the amount receivable is uncollectible, the disclosure requirements outlined in SSAP No. 5R paragraph 27 shall be made. This evaluation may consider irrevocable letters of credit to which the administrator is beneficiary, amounts on deposit with the administrator or other unrestricted funds available to the administrator.

11. The following shall provide additional guidance in determining the nonadmitted portion of amounts receivable from uninsured plans:

a. Amounts classified as nonadmitted assets collected subsequent to the date of the statutory financial statements shall not be used to decrease the nonadmitted asset otherwise calculated;

b. The due date is governed by the contractual billing date of the uninsured plan;

c. Medicare and similar government funded plans—Amounts due related to Medicare and similar government plans shall not be nonadmitted when they become over ninety days due. Appropriate reserves shall be established to cover costs incurred which may not be reimbursed upon final determination by the governing agencies under the cost contract or for adjustments to revenues based on performance under the terms of the contract or other external factors.

Liabilities

12. A liability shall be established for funds held by an administrator in its general assets for the benefit of an uninsured plan or for funds which may be owed by the administrator in connection with the administration of an uninsured plan. A liability relating to one plan shall not be offset by an asset relating to a different plan. Administrators shall not record aggregate reserves, claim/loss reserves, or liabilities (except for Medicare or similarly structured cost based reimbursement contracts) for any other claim costs paid by the administrator on behalf of uninsured plans.

Disclosures

13. The statutory financial statements shall provide the following:

a. Information with regard to the profitability to the administrator of all ASO plans and the uninsured portions of partially insured plans for which the reporting entity serves as an ASO administrator;

For the total and each category separately provided: (i) net reimbursement for administrative expenses (including administrative fees) in excess of actual expenses, (ii) total net other income or expense (including interest paid to or received from plans), and (iii) total net gain or loss from operations and (iv) the claim payment volume;

b. Information with regard to the profitability to the administrator of all ASC plans and the uninsured portions of partially insured plans for which the reporting entity serves as an ASC administrator;

For the total and each category separately provided: (i) gross reimbursement for medical cost incurred, (ii) gross administrative fees accrued, (iii) other income or expense (including interest paid to or received from plans), (iv) gross expenses incurred (claims and administrative), and (v) total net gain or loss from operations.

c. Information with regards to Medicare or similarly structured cost based reimbursement contracts shall include: (i) major components of revenue by payor, (ii) receivables from payors with account balances the greater of 10% of gross amounts receivable relating to uninsured accident and health plans or $10,000, (iii) recorded allowances and reserves for adjustment of recorded revenues, (iv) adjustments to revenue resulting from audit of receivables related to revenues recorded in the prior period.

14. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investments in any joint ventures, partnerships, and limited liability companies, including investments in certified capital companies (CAPCO) per *INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)*, whether or not it is considered to be controlled by or affiliated with the reporting entity. Single real estate property investments that are wholly-owned by an LLC that is directly and wholly-owned by the reporting entity, and that meet the criteria established in *SSAP No. 40R—Real Estate Investments*, are excluded from this statement. This statement does not address the accounting for investments in partnerships and limited liability companies that invest in Low Income Housing Tax Credit Properties as discussed in *SSAP No. 93—Accounting for Low Income Housing Tax Credit Property Investments* (SSAP No. 93). However, investments in certain state Low Income Housing Tax Credit Property Investments that do not fall within the scope of SSAP No. 93 are covered by the requirements of this statement.

SUMMARY CONCLUSION

2. Investments in joint ventures shall include investments in corporate joint ventures and unincorporated joint ventures (also referred to as undivided interests in ventures). A corporate joint venture is defined as a corporation owned and operated by a small group (the joint venturers) as a separate and specific business or project for the mutual benefit of the members of the group. A corporate joint venture usually provides an arrangement under which each joint venturer may participate, directly or indirectly, in the overall management of the joint venture. Joint venturers thus have an interest or relationship other than as passive investors. An unincorporated joint venture is similar in its purpose but is not incorporated.

3. Investments in partnerships shall include investments in general partnership interests and limited partnership interests. A general partnership is defined as an association in which each partner has unlimited liability. Each partner assumes joint and several liability for all partnership debts. A limited partnership shall be defined as a partnership having two classes of partners: (a) general partners who manage the partnership, subject to the partnership agreement, and have personal liability for the general obligations of the partnership and (b) limited partners who are passive investors and have no personal liability beyond their investment.

4. A limited liability company is defined as a business organization which is a hybrid of a corporation and partnership whereby the owners have limited liability like a corporation and profits may pass through to the owners for tax purposes like a partnership if certain criteria are met. The owner’s personal liability is limited to his own acts and the owners can fully participate in the management of the business with no adverse impact on their limited liability.

5. Investments in the ventures defined in paragraphs 2-4 meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement. Investments in joint ventures, partnerships, and limited liability companies shall be reported in Other Invested Assets in the financial statements.

6. Investments in these ventures, except for joint ventures, partnerships and limited liability companies with a minor ownership interest, shall be reported using an equity method as defined in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88*, (SSAP No. 97) paragraphs 8.b.i. through 8.b.iv.

7. Investments reported using an equity method from SSAP No. 97, paragraph 8.b.ii. through 8.b.iv. may have fiscal year ends, not calendar year ends. To recognize a change to the reporting year-end of an equity method investee, including changes in, or the elimination of, previously existing differences (lag

period) due to the reporting entity's ability to obtain financial results from a reporting period that is more consistent with, or the same as, that of the reporting entity's, the guidance included in *FASB Emerging Issues Task Force No. 06-9: Reporting a Change in (or the elimination of) a Previously Existing Difference Between the Fiscal Year-End of a Parent Company and That of a Consolidated Entity or Between the Reporting Period of an Investor and That of an Equity Method Investee* that defines such reporting period changes as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* shall be followed.

8. Joint ventures, partnerships and limited liability companies in which the entity has a minor ownership interest (i.e., less than 10%) or lacks control as stipulated in paragraphs 13 and 14, shall be recorded based on the underlying audited U.S. GAAP equity of the investee. Refer to SSAP No. 97 for guidance related to other-than-unqualified opinions. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest (i.e., less than 10%) or lacks control as stipulated in paragraphs 13 and 14 may be recorded based on either of the valuation methodologies allowed under paragraphs 8.a. or 8.b. The amount to be recorded shall be defined as the initial investment in an investee at cost (as defined in paragraph 3 of *SSAP No. 68—Business Combinations and Goodwill)* plus subsequent capital contributions to the investee. The carrying amount of the investment shall be adjusted for the amortization of the basis difference (difference between the cost and the underlying GAAP equity), as well as to recognize the reporting entity's share of: (i) the audited U.S. GAAP basis earnings or losses of the investee after the date of acquisition, adjusted for any distributions received, or (ii) if audited U.S. GAAP basis financial statements of the investee are not available, the earnings or losses of the investee after the date of acquisition, adjusted for any distributions received, based on either one of the valuation methodologies allowed under paragraphs 8.a. or 8.b. If either one of the valuation methodologies allowed under paragraphs 8.a. or 8.b. is used to value the investment, documentation must be maintained regarding the reason that audited U.S. GAAP basis financial statements could not be provided.

a. Non U.S. joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10% and for which audited U.S. GAAP basis financial statements of the investee are not available, may be recorded based on:

i. the U.S. GAAP basis equity as set forth in the audited footnote reconciliation of the investee's equity and income to U.S. GAAP within the investee's audited foreign GAAP prepared financial statements or,

ii. the IFRS basis equity as set forth in the investee's audited IFRS financial statements prepared in compliance, both annually and quarterly, with IFRS as issued by the International Accounting Standards Board (IASB).

b. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10%, measured at the holding company level, may be recorded based on the underlying audited U.S. tax basis equity. For investments recorded based on the underlying audited U.S. tax basis equity, the reporting entity shall review investments held by the joint venture, partnership or limited liability company in accordance with the impairment guidance in paragraphs 16 and 17. The reporting entity must first attempt to obtain audited U.S. GAAP basis financial statements and, if such financial statements are unavailable, must maintain documentation regarding the reason that audited U.S. GAAP basis financial statements could not be provided.

A reporting entity's share of adjustments, excluding changes in capital contributions to the investee, that are recorded directly to the investee's stockholders' equity shall also be recorded as adjustments to the carrying value of the investment with an offsetting amount recorded to unrealized capital gains and losses on investments.

9. Entities may recognize their investment in joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest based on an unaudited basis for investment determination (i.e., foreign GAAP, IFRS, or tax basis as allowed under paragraph 8) if annual audited information is not complete as of the annual statement filing deadline. The recorded investment shall be adjusted for annual audit adjustments, if any, as soon as annual audited information is available. If financial statements of an investee are not sufficiently timely for the reporting entity to apply an equity method to the investee's current results of operations, the reporting entity shall record its share of the earnings or losses of an investee from the most recent available financial statements. A lag in reporting shall be consistent from period to period.

10. If an additional investment, in whole or in part, represents, in substance, the funding of prior losses, the entity should recognize previously suspended losses only up to the amount of the additional investment determined to represent the funding of prior losses. Whether the investment represents the funding of prior losses depends on the facts and circumstances.

11. Judgment is required in determining whether prior losses are being funded and that all available information should be considered in performing the related analysis. The following are certain factors to consider in that regard. However, no one factor should be considered presumptive or determinative.

a. Whether the additional investment is acquired from a third party or directly from the investee. When the additional investment is purchased from a third party and the investee does not obtain additional funds either from the investor or the third party, it is unlikely that, in the absence of other factors, prior losses are being funded**.**

b. The fair value of the consideration received in relation to the value of the consideration paid for the additional investment. For example, if the fair value of the consideration received is less than the fair value of the consideration paid, it may indicate that prior losses are being funded to the extent that there is disparity in the value of the exchange.

c. Whether the additional investment results in an increase in ownership percentage of the investee. In instances in which the investment is made directly with the investee, the investor should consider the form of the investment and whether other investors are making simultaneous investments proportionate to their interests. Investments made without a corresponding increase in ownership or other interests, or a pro rata equity investment made by all existing investors, may indicate that prior losses are being funded.

d. The seniority of the additional investment relative to existing equity of the investee. An investment in an instrument that is subordinate to other equity of the investee may indicate that prior losses are being funded.

12. Upon making the additional investment, the investor should evaluate whether it has become otherwise committed to provide financial support to the investee.

13. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by common management, or (d) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

14. Control as defined in paragraph 13 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13% and therefore each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18*. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting interests of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

a. Any limited partner investment in a Limited Partnership, unless the limited partner is affiliated with the general partner.

b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.

c. An entity where the insurer has given up participation rights as a shareholder to the investee.

15. The reporting entity's share of undistributed earnings and losses of the investee shall be included in unrealized gains and losses of the reporting entity. The reporting entity's share of other changes in the investee's surplus (e.g., the change in the investee's nonadmitted assets) shall be recorded by the investor as a component of unrealized capital gains and losses on investments. Distributions received from an investee shall be recognized in investment income when declared to the extent that they are not in excess of the undistributed accumulated earnings attributable to the investee. Distributions declared in excess of the undistributed accumulated earnings attributable to the investee shall reduce the carrying amount of the investment.

Impairment

16. For any decline in the fair value of an investment in a joint venture, partnership, or limited liability company which is determined to be other than temporary(INT 06-07), the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary, shall be recorded as realized losses.

17. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment. Even if the fair value of an investment is below the carrying amount it is not necessarily indicative of a loss in value that is other than temporary. Similarly, the existence of investee operating losses may indicate a loss in value; however, it is not necessarily indicative of a loss in value that is other than temporary.

Disclosures

18. The significance of an investment to the reporting entity's financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investee. Disclosures as follows shall be made for all investments in joint ventures, partnerships, or limited liability companies that exceed 10% of the total admitted assets of the reporting entity:

a. (1) the name of each joint venture, partnership or limited liability company and percentage of ownership, (2) the accounting policies of the reporting entity with respect to investments in joint ventures, partnerships and limited liability companies and (3) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., nonadmitted goodwill or other nonadmitted assets) and the accounting treatment of the difference;

b. For joint ventures, partnerships, and limited liability companies for which a quoted market price is available, the aggregate value of each joint venture, partnership, or limited liability company investment based on the quoted market price; and

c. Summarized information as to assets, liabilities, and results of operations for joint ventures, partnerships, and limited liability companies either individually or in groups.

19. Any commitment or contingent commitment (e.g., guarantees or commitments to provide additional capital contributions) to a joint venture, partnership, or limited liability company shall be disclosed.

20. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write-down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment; and

b. The amount of the impairment and how fair value was determined.

21. Any change due to the requirements of paragraph 7 shall be disclosed per SSAP No. 3.

22. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

23. This statement adopts with modification *FASB Emerging Issues Task Force No. 06-9: Reporting a Change in (or the elimination of) a Previously Existing Difference between the fiscal Year-End of a Parent Company and That of a Consolidated Entity or between the Reporting Period of an Investor and That of an Equity Method Investee*. The modifications include:

a. Adopt the guidance that defines such reporting period changes as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors,* modified to apply only to equity method investments. For instances in which this change in accounting principle occurs, disclosure requirements of SSAP No. 3 shall be followed.

b. The consolidation guidance in EITF 06-9 is rejected.

c. Changes affecting companies reporting investments in SCA entities using the equity method: Investments in SSAP No. 97 paragraph 8.b.i. entities are required to be calendar year-end. Investments in SSAP No. 97 paragraphs 8.b.ii. through 8.b.iv. entities may have other fiscal year ends, thus this issue could apply to equity method investments under 8.b.ii. through 8.b.iv. or under equity method valued investments that fall within the scope of SSAP No. 48.

24. This statement is inconsistent with the guidance in paragraph 17 of *APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock* (APB 18), which addresses when control exists. APB 18 is addressed in its entirety and rejected in SSAP No. 97. This statement also rejects

AICPA *Statement of Position 78-9, Accounting for Investments in Real Estate Ventures* and *FASB Emerging Issues Task Force No. 00-01, Investor Balance Sheet and Income Statement Display under the Equity Method for Investments in Certain Partnerships and Other Ventures*.

Effective Date and Transition

25. This statement is effective for years beginning January 1, 2001. For investments made in joint ventures, partnerships and limited liability companies prior to January 1, 2001, if the joint venture, partnership or limited liability company does not prepare audited GAAP financial statements, and the reporting entity together with all other investors subject to this statement does not have sufficient voting power (pursuant to the joint venture, partnership or limited liability agreement) to force the preparation of audited GAAP financial statements, the reporting entity may then value its investment based on unaudited GAAP or audited tax-basis financial statements. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Guidance in paragraph 1 was previously included within *SSAP No. 93—Accounting for Low Income Housing Tax Credit Property Investments* and was effective for reporting periods beginning on January 1, 2006, and thereafter, with early adoption permitted. The original guidance included in this standard, and the substantive revisions reflected in SSAP No. 93 are retained for historical purposes in Issue Paper No. 125. Guidance in paragraph 7 was previously included within *INT 08-03: EITF 06-9: Reporting a Change in (or the elimination of) a Previously Existing Difference between the fiscal Year-End of a Parent Company and That of a Consolidated Entity or between the Reporting Period of an Investor and That of an Equity Method Investee* and was effective for periods beginning May 31, 2008. Guidance reflected in paragraphs 10, 11, and 12 incorporated from *INT 04-10: Accounting for Subsequent Investments in an Investee after Suspension of Equity Method Loss Recognition*, was originally effective December 5, 2004. Revisions adopted to paragraph 8 in August 2012 to clarify the requirement for the amortization of the basis differences shall be initially effective January 1, 2013, unless the company was previously amortizing the basis difference. (Companies that have previously amortized the basis difference shall not be impacted by these revisions.) For companies initially applying on January 1, 2013, the revisions should be applied prospectively for both new and existing minority-owned investments, with the effective date for this revision being used as the measurement date to determine any basis difference, which is attributable to goodwill, to be amortized on existing minority-owned investments.

26. The substantive revisions to incorporate single real estate property investments wholly-owned by an LLC that is directly and wholly-owned by the reporting entity in accordance with the criteria detailed in SSAP No. 40R are effective as of January 1, 2015. For these investments previously reported within the scope of this statement, the reporting entity shall follow the transition guidance in SSAP No. 40R.

Policy Loans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for policy loans.

SUMMARY CONCLUSION

2. A policy (or contract) loan shall be defined as a loan to a policyholder, under the provisions of an insurance contract that is secured by the cash surrender value or collateral assignment of the related policy or contract. Policy loans shall include:

a. Cash loans, including loans resulting from early payment benefits or accelerated payment benefits, on contracts when the terms of the contract specify that such payments are policy loans secured by the policy;

b. Automatic premium loans, which are loans made in accordance with policy provisions whereby delinquent premium payments are automatically paid from the cash value at the end of the established grace period for premium payments.

3. Policy loans meet the definition of assets, as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets, except as specified in paragraphs 5 and 6 of this statement. Policy loans are readily available to satisfy policyholder obligations as the terms of the policy loan allow the reporting entity to offset an outstanding policy loan balance against the cash surrender value of the policy.

4. Policy loans shall be carried at the unpaid balance of the loan. The unpaid balance of the loan shall include any unpaid principal plus any accrued interest which is 90 days or more past due.

5. If the unpaid balance of the loan exceeds the cash surrender value or policy reserves established for the policy, the policy generally lapses. Cash surrender value shall be defined as the cash value of the basic policy plus cash value of any policy accumulations such as paid-up additions. The excess of the unpaid balance of the loan over the cash surrender value shall be evaluated for collectibility. If the amount is considered uncollectible, it shall be written off as a reduction of investment income in the statement of operations during the period it is determined to be uncollectible. Except for collateral assignment loans, all other amounts in excess of the cash surrender value shall be considered nonadmitted assets. The change in this nonadmitted asset shall be recorded as a change in nonadmitted assets as applicable.

6. A loan resulting from early payment benefits or accelerated payment benefits and secured by an assignment of the policy to the reporting entity as collateral for the loan shall be an admitted asset, except that the amount of any loan (including accrued interest) in excess of the policy reserve for that policy shall be nonadmitted. Upon death, the entire death benefit is recorded as a death benefit expense. The policy proceeds shall be used to repay the loan. Any proceeds in excess of that needed to repay the loan are payable to the named beneficiary.

7. Interest income on policy loans shall be recorded as earned and included in investment income consistent with *SSAP No. 34—Investment Income Due and Accrued*. For interest received before it is earned, unearned interest income shall be recorded as a liability in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*.

8. Accrued interest income on policy loans that is past due 90 days[1] or more shall be reclassified from Investment Income Due and Accrued and included in the unpaid balance of the policy loan as defined in paragraph 4.

Effective Date and Transition

9. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance in the footnote to paragraph 8 was originally contained within *INT 01-05: Classification of Accrued Interest on Policy Loans* and was effective March 26, 2001.

Classifications and Definitions of Insurance or Managed Care Contracts In Force

SCOPE OF STATEMENT

1. This statement provides a general framework for classifying insurance or managed care contracts into categories where the recognition of contract and policy reserves and related revenue, benefits, and claims is fundamentally different. Separate statements will establish the accounting principles for premium and income recognition and policy benefit and claim reserves for all contracts defined herein.

SUMMARY CONCLUSION

Overview

2. The primary purpose of insurance, including managed care coverage, is to provide economic protection from identified risks occurring or discovered within a specified period. These risks include death, disability, health benefits, outliving one's financial assets, and damage to property by an insured peril or damage or injury to the insured or third parties. The accounting for the contract is significantly influenced by the terms of the insurance or managed care contract.

3. In order to provide for a conservative, consistent, and comparable method of accounting for insurance or managed care contracts, premiums and related benefits shall be recognized considering the policy term, premium payment requirements, risks assumed and benefits provided under the contract using conservative assumptions as to interest, mortality, morbidity, and incurred costs for health benefits as applicable. The reserve and income recognition methods reflect the premium payment pattern and the insurance protection and/or benefits provided for in the insurance or managed care contract.

4. This statement establishes an overall framework for existing insurance or managed care contracts by identifying four broad categories of insurance or managed care contracts where the premium payment pattern and the protection and/or benefits provided are fundamentally different and, therefore, require different income recognition and reserving methods.

5. Insurance contracts providing any protection against death, disability, accident or illness in which the reporting entity assumes mortality or morbidity risk shall be classified as life or accident and health contracts, as applicable. Managed care contracts provide defined health care services to subscribers, members or policyholders, collectively referred to hereafter as subscribers, in return for fixed, periodic premiums (usually paid monthly) that are generally due at or before the beginning of the coverage period and shall be classified as health contracts. Contracts which insure against damage to property by an insured peril or damage or injury to the insured or third parties, generally over a fixed/limited period of time, shall be classified as property and casualty contracts. Contracts in which the reporting entity does not assume any mortality, morbidity, health benefit costs incurred, or casualty risk and which act exclusively as investment vehicles shall be classified as deposit-type contracts. Such classification shall be made at the inception of the contract and shall not change.

Life Contracts

6. The primary purpose of life insurance is to provide financial assistance to a beneficiary at the insured's death. The long period of coverage involving the risk of death, a risk which usually increases with age, is the distinguishing characteristic by which life insurance is set apart from other forms of insurance. Life insurance is often sold on a level premium basis under which the annual premium remains constant even though the expected policy benefits and services do not occur evenly over the duration of the contract. Premium revenue generally exceeds expected policy benefits in the early years of the contract and it is necessary to accrue, as premium revenue is recognized, a liability for costs that are expected to be paid in the later years of the contract.

7. The liability for expected costs relating to most types of life contracts is accrued over the current and expected renewal periods of the contracts. The net valuation premium is based upon an assumed interest rate and upon the frequency of death derived from mortality tables. The net premiums collected, after deducting benefits and other costs each year, are accumulated at interest. This accumulation, when combined with future net premiums and future investment income theoretically generates a sum sufficient to pay the claims resulting from the death or disabilities of the insured.

8. The liability which corresponds to this fund is referred to as the policy reserve. These contracts are generally expected to be in force for an extended period of time and require the performance of various functions and services for an undefined period of time and are generally not subject to unilateral changes in their provisions. The policy reserve is generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums, discounted at valuation interest and mortality.

9. Life insurance contracts shall include contracts with life contingencies, including, but not limited to:

- Whole life contracts
- Endowment contracts
- Term life contracts
- Supplementary contracts
- Group life contracts
- Franchise life contracts
- Universal life type contracts
- Variable life contracts
- Limited payment contracts
- Credit life contracts
- Annuity contracts

Life Contracts—Definitions

10. The contract for ordinary life insurance is between the company and the policy owner (often the insured). Many variations of ordinary life coverages are available to a purchaser of insurance, including participating, limited-payment periods, combinations of coverages, and decreasing (or increasing) death benefits. Industrial life insurance, also called “debit” insurance, is insurance under which premiums are paid monthly or more often, the face amount of the policy does not exceed a stated amount, and the words “industrial policy” are printed in prominent type on the face of the policy. Ordinary and industrial life insurance contracts are considered life contracts and include the types of coverage as described in the following paragraphs.

11. Whole life contracts provide a fixed amount of insurance coverage over the life of the insured and the related benefits are normally payable only upon the insured’s death. Premiums are paid over various periods as allowed by the terms of the policy contract. Whole life insurance contracts provide for nonforfeiture values, some common types being reduced paid up insurance, extended term insurance, and

cash values, and some provide for the payment of policy dividends. A level premium is usually paid for policies of this type, and the premium may be paid in annual or more frequent modes. An ordinary life (straight-life) policy stipulates that premiums are to be paid during the life of the insured.

12. Endowment contracts are principally savings contracts which incorporate an element of life insurance protection. Endowment insurance contracts provide a benefit if the insured survives the endowment period or the amount is paid to a beneficiary if the insured does not survive. A pure endowment contract only provides a benefit to the insured if he/she survives the endowment period. Endowment policies mature at a specified attained age of the insured or at the end of a specified period. Premium payments for endowment contracts are made over a specified period, but may also be made under a single-premium or limited-payment plan. Both whole life and endowment policies contain nonforfeiture or similar clauses which provide for a value in cash or some other form of insurance to be available in the event of failure to continue the required premiums.

13. Term life contracts provide insurance over a specified period of time. If the insured dies during this term, the face amount of the policy will be paid to the beneficiary. Policies for term insurance which are written for relatively short periods of time commonly grant the policyholder the right to renew for an additional period or periods up to a maximum age, such as 60 or 65, without requiring additional evidence of insurability. Rights to convert to whole life or endowment contracts may also be included in the contract. Term contracts may also be made for a period which will end when the insured reaches a certain age (for example, age 60 or 65). Such policies do not usually provide nonforfeiture values.

14. Supplementary contracts with life contingencies are a type of agreement between the insurance company and either the insured or the beneficiary, usually to provide for full or partial settlement of the amount payable upon the termination of an original contract. Generally, the proceeds are paid over the lifetime of one or more beneficiaries. This differs from a supplementary contract without life contingencies under which the proceeds are paid over a definite period without regard to the life of the beneficiary.

15. Group life contracts are insurance on the lives of a group of persons under a single master contract. Insurance of this type is customarily written on a yearly renewable term basis although some permanent group life is sold. Group life insurance is based on a master policy which usually precludes or disallows individual selection and is for the benefit of persons other than the policyholder. The individual insured members may receive certificates of insurance which evidence the contract. The contract is made by the policyholder and the insurer; there is no contract of insurance between the policyholder and the members. State statutes vary as to what constitutes a group and as to who may be a policyholder. Some states permit only employee-employer relationships in a group contract. Others permit union members, credit union members, or similar relationships in group contracts.

16. Franchise life contracts usually consist of individual policies offered to all persons in a general class (usually a work profession) who are related in some way such as belonging to a certain association.

17. Universal life and variable life contracts include those contracts which have terms that are not fixed and guaranteed relative to premium amounts, expense assessments, or benefits accruing to the policyholder. These contracts generally provide for death benefits and nonforfeiture values and may be issued on a fixed premium basis or on a flexible premium basis where the premiums are paid at the insured's discretion.

18. Limited-payment contracts are contracts with terms that are fixed and guaranteed and for which premiums are paid over a specified number of years or to a specified age. The insurance coverage continues for the remainder of the insured's life. A single-premium policy requires a lump-sum payment at the inception of the policy.

19. Credit life contracts are sold in connection with loans or other credit transactions not exceeding a stated duration and provide insurance protection against death. This form of insurance is generally issued in connection with the issuance of credit to an individual by a bank, retailer, finance company, or other similar organizations. This type of insurance most often protects the creditor to the extent of the unpaid balance of the loan in the form of decreasing term insurance; however, some credit life insurance is sold on a level-term basis.

20. An annuity contract is an arrangement whereby an annuitant is guaranteed to receive a series of stipulated amounts commencing either immediately or at some future date. The contract shall be issued to or for the benefit of an identifiable individual or group of individuals. Such a contract containing well-defined class-based (e.g. age, gender) annuity purchase rates used in defining either a specific or maximum purchase rate guarantee would constitute an annuity contract containing a life contingency that would require it to be classified as a life contract. Some examples of contracts issued for the benefit of a group of individuals include pension plan sponsors purchasing contracts for the benefit of their plan participants, employers or associations purchasing contracts for the benefit of their employees or members, and collective trusts purchasing contracts for the benefit of participating pension plans and their plan participants. The main types of annuity contracts with life contingencies are discussed below.

a. A deferred annuity provides for the accumulation of funds to be applied at some future period designated by the policyholder. Premium payments can be made in a lump sum amount (single premium deferred annuity), or periodically (flexible or fixed premium deferred annuity) as allowed by the policy contract. At the end of the accumulation period, the policyholder may elect to receive a lump sum distribution or may elect to receive periodic payments for life, or over a specific period, or some combination thereof;

b. A variable annuity is an annuity which includes a provision for benefit payments which vary in accordance with the rate of return of the underlying investment portfolio selected by the policyholder. The considerations for a variable annuity are usually invested in a separate account in which the value of the contract share varies according to the performance of the separate account before the commencement of annuity payments as well as after. Premium payments can be made in lump sum amounts or periodically as allowed by the policy contract. A minimum death benefit is often guaranteed during the annuity consideration accumulation period and these contracts are, therefore, classified as life contracts;

c. A straight-life annuity provides for periodic payments to the annuitant as long as the annuitant lives. Death of the annuitant constitutes completion of the contract and no further payments are made by the insurance company;

d. A life annuity with a period certain works essentially the same way as the straight-life annuity as the annuitant receives periodic payments for as long as the annuitant lives. However, if the annuitant dies before the end of the specified “certain” period, payments are continued to a beneficiary until the specified number of “certain” payments (i.e., the specified period in the contract) is completed;

e. A refund annuity is similar to the life annuity with a period certain in which the annuitant receives periodic payments for as long as the annuitant lives. There are two variants of this type of annuity. Under the cash refund annuity, a lump-sum payment is made at the death of the annuitant equal to the excess, if any, of the purchase price of the annuity over the sum of the annuity payments made to date of death. The installment refund annuity provides that annuity payments are to continue to a beneficiary after the death of the annuitant until the sum of all payments made equals the purchase price;

f. A joint and survivorship annuity provides for the continuation of payments after the death of one of the annuitants during the lifetime of the surviving annuitant.

Accident and Health Contracts

21. Health insurance policies or managed care contracts, offered by a health maintenance or similar organization, many life insurance and some property and casualty companies, may provide hospital, surgical, medical, loss of income, accidental death and dismemberment, or long term care coverage as well as other health related benefits. The insurance protection involving economic loss resulting from a medical condition (e.g., medical care expenses or the risk of disability) is the distinguishing characteristic by which accident and health insurance or managed care contracts are set apart from other forms of insurance. Health coverage is currently furnished under group or individual contracts. Coverage sold to individuals can be subdivided according to the reporting entity's right to continue the policy, limitations on the reporting entity's right to increase premiums, as well as other factors.

22. Accident and health contracts also include risk contracts with Medicaid and Medicare whereby the reporting entity assumes insurance risk.

23. Managed care contracts are contracts that provide defined health care services to subscribers in return for fixed, periodic premiums (usually paid monthly) that are generally due at or before the beginning of the coverage period. Managed care means a system or technique(s) generally used by reporting entities to affect access to and control payment for health care services. Managed care techniques most often include one or more of the following: 1) review of the medical necessity and appropriateness of services or site of services; 2) contracts with selected providers; 3) financial incentives for enrollees to use specific providers, services, or service sites; 4) controlled access to and coordination of services by a case manager; and 5) payor efforts to identify treatment alternatives and modify benefit restrictions for high cost patient care. Expenses for medical, hospital, pharmacy and other benefits are recognized based on the way the reporting entity provides for the contracted services. In some instances, this is through the payment of claims to providers as services are rendered which require a claims liability to be recorded as addressed in *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55) or through capitated arrangements based on contracts with providers, where expense is recognized ratably over the contract period in accordance with SSAP No. 55.

24. Similar to life insurance contracts, a significant amount of accident and health contracts is sold to individuals and groups on a level premium basis under which the annual premium remains constant even though the expected policy benefits and services may not occur evenly over the duration of the contract. Premium revenue for level premium contracts generally exceeds expected policy benefits in the early years of the contracts and it is necessary to accrue, as premium revenue is recognized, a liability for costs that are expected to be paid in the later years of the contracts.

25. The liability for expected costs relating to accident and health contracts sold on a level premium basis is accrued over the current and expected renewal periods of the contracts. The net valuation premium is based upon an assumed interest rate, persistency, and the frequency of expected death and disability claims, generally derived from mortality and morbidity tables. The net premiums collected, after deducting benefits and other costs each year, are accumulated with interest. Similar to life insurance, this accumulation or policy reserve, when combined with future net premiums and future investment income theoretically generate a sum sufficient to pay the claims resulting from the death or disabilities of the insured or subscriber. The reserve is generally calculated as the excess of the present value of future benefits to be paid to or on behalf of insureds or subscribers less the present value of future net premiums, discounted at valuation interest, mortality, and morbidity.

26. Accident and health contracts shall include contracts with health benefits or disability contingencies, including, but not limited to:

- Managed care contracts
- Income replacement contracts
- Expense reimbursement contracts
- Credit accident and health contracts
- Continuing care contracts
- Long-term care contracts
- Accidental death and dismemberment contracts

Accident and Health Contracts—Definitions

27. Accident and health contracts provide protection against economic losses resulting from accident, sickness or medical condition. This coverage may be provided under individual policies, under group or franchise policies, managed care contracts, Medicaid or Medicare risk contracts or it may be provided under certain special types of policies, such as credit accident and health insurance.

28. The economic losses which accident and health policies cover, or the types of benefits provided, will vary with different policies. The broad categories of economic losses protected against are medical and hospital expense and income replacement. For example, payments for hospital, surgical, or medical expenses may be provided under a hospital expense policy, while under other policies, a more comprehensive form of coverage, known as major medical insurance, may be offered. Similarly, policies may provide monthly benefits for loss of income from disability, either on a short-term or a long-term basis, or only for disabilities due to accident. Loss of life from accident may be covered under accidental death policies, while under certain limited accident policies, only accidental death from air travel may be covered.

29. Accident and health policies may be categorized by the form of policy through which the coverage is provided; it may be categorized according to the benefits provided by the policy; or it may be categorized by the contingencies insured against. These variations in types of policies and the benefits provided must be considered in discussing the reserves for accident and health policies.

30. Credit accident and health insurance contracts are similar to credit life insurance except the insurance protection is in the form of disability insurance.

31. Long-term care contracts represent any contract or policy rider providing coverage for not less than 12 consecutive months for each covered person for one or more necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital. Under long-term care contracts, the insured event is generally the inability of the contract holder to perform certain activities of daily living as compared to medical contracts which generally provide insurance protection against accident or sickness or disabilities contracts which generally provide income replacement protection.

Property and Casualty Contracts

32. Contracts which insure against damage to property by an insured peril or damage or injury to the insured or third parties shall be classified as property and casualty contracts. Damages shall include both physical and financial damages. Premiums from property and casualty contracts are generally recognized as earned over the exposure period of the contract in proportion to the amount of insurance protection provided.

33. The exposure to insurance risk for most property and casualty insurance contracts does not vary significantly during the duration of the contract. Premiums from property and casualty contracts shall be recognized as earned premium as discussed in *SSAP No. 53—Property Casualty Contracts—Premiums* (SSAP No. 53).

34. These contracts shall include but shall not be limited to:

- Traditional property and casualty insurance contracts
- Title insurance contracts
- Mortgage and financial guaranty contracts

Property and Casualty Contracts—Definitions

35. Property and casualty contracts include a variety of types of coverage, including, but not limited to, fire, workers' compensation, automobile, multiple peril, professional and miscellaneous liability, and fidelity and surety bonds as further discussed below.

36. Types of insurance represent the perils that are insured by property and liability insurance companies and classified as property and casualty contracts. Some of the more important types of insurance are as follows:

a. Fire and allied lines, which include coverage for fire, windstorm, hail, and water damage (but not floods);

b. Ocean marine, which includes coverage for ships and their equipment, cargos, freight or money to be paid for use of the ships, and liability to third parties for damages. This type of insurance includes inland as well as ocean water transportation;

c. Inland marine, which covers property in transit. (It also includes floaters, which are policies that cover movable property, such as a tourist's personal property);

d. Workers' compensation, which compensates employees for injuries or illness sustained in the course of their employment;

e. Automobile, which covers personal injury or automobile damage sustained by the insured and the related liability to third parties for losses caused by the insured;

f. Multiple peril, which is a package coverage including most property and liability coverage except workers' compensation, automobile insurance, and surety bonds;

g. Professional liability, which covers physicians, surgeons, dentists, hospitals, engineers, architects, accountants, attorneys, and other professionals from liability arising from error or misconduct in providing or failing to provide professional service;

h. Miscellaneous liability, which covers most other physical and property damages not included under workers' compensation, automobile liability, and multiple peril policies. (Damages include death, cost of care, and loss of services resulting from bodily injury, as well as loss of use of property);

i. Fidelity bonds, which cover employers against dishonest acts by employees. Blanket fidelity bonds cover groups of employees;

j. Surety bonds, which provide for monetary compensation to third parties for failure by the insured to perform specifically covered acts within a stated period. (Most surety bonds are issued for persons doing contract construction, persons connected with court actions, and persons seeking licenses and permits. Surety bonds also include financial guarantees.); and

k. Prepaid legal expense plans are established through group policies purchased by companies who in turn offer coverage to electing employees. The plans are offered as an employee benefit to help certificate holders more cost effectively solve their legal problems. For a small monthly premium, employees may consult with and/or receive representation from a plan attorney regarding any one of several covered services (such as will preparation, divorce, child adoption, etc.). The group policies are written for a set period, generally one year (and can be up to three-years), with the sponsoring company as the group policyholder. Policies may be canceled by the policyholder with 45 days notice. The reporting entity sends monthly premium bills to participating employers based on the previous month's actual employee count. Monthly premium installments are withheld from the participating employee's paycheck and are remitted to the insurance company along with a detailed listing of the number of plan participants that month. Similar to group accident and health policies, premium amounts vary from month to month depending on the number of employees participating in the plan that month.

37. In addition to these types, insurance is provided by excess and surplus lines. Excess liability covers the insured against loss in excess of a stated amount, but only for losses as covered and defined in an underlying policy. The underlying amount is usually insured by another policy but can be retained by the insured. Surplus lines include coverage for risks that do not fit normal underwriting patterns, risks that are not commensurate with standard rates, or risks that will not be written by standard carriers because of general market conditions. These kinds of policies are generally written by carriers not licensed in the jurisdiction where the risk is located and generally are not subject to regulations governing premium rates or policy language.

38. Insurance is generally available to the individual as a means of protection against loss. There are instances, however, in which a person cannot obtain insurance in the voluntary insurance market. States have established involuntary plans to provide insurance to those with high risks whom otherwise would be excluded from obtaining coverage. A common example is the Automobile Insurance Plan (formerly called the Assigned Risk Plan). Under this plan, all companies writing automobile insurance in a state are allocated a share of the involuntary business on an equitable basis. Other states use a reinsurance plan, under which each insurer accepts all applicants but may place high-risk drivers in a reinsurance pool, with premiums paid to and losses absorbed by the pool. Still another approach is a joint underwriting association, in which one or more servicing companies are designated to handle high-risk drivers. All insurers in the state may be required to participate in the underwriting results. Another example of involuntary plans includes Fair Access to Insurance Requirements (FAIR) plans. FAIR plans are federally approved, state-supervised programs established to provide coverage for property in high-risk areas. Companies that operate in the state are assessed for any underwriting losses experienced by the FAIR plan.

39. Medical malpractice pools were established when health-care professionals and institutions were experiencing difficulty in obtaining liability insurance in the voluntary insurance market. The pools were established by law and currently exist in the majority of states. All insurers writing related liability insurance in such states are considered mandatory participants in the pools as a condition for their continuing authority to transact business in such states.

40. Workers' compensation pools are similar to FAIR plans. As with FAIR plans, companies operating in a given state are assessed a proportionate share, based on direct writings, of the underwriting results of the pool.

41. Title insurance insures, guarantees, or indemnifies owners of real property or the holders of liens or encumbrances thereon against loss or damage suffered by unidentified instances of defective titles, liens or encumbrances or the unmarketability of the title.

42. Mortgage guaranty insurance protects a lender against loss of all or a portion of the principal amount of a mortgage loan upon default of the mortgagor. This type of insurance provides no protection other than against loss due to default.

Deposit-Type Contracts

43. Deposit-type contracts do not incorporate insurance risk. Contracts issued by insurers that do not incorporate risk from the death or disability of policyholders (mortality or morbidity risk) are more comparable to financial or investment instruments issued by other financial institutions than to insurance contracts.

44. Deposit-type contracts shall include contracts without any life or disability contingencies, including, but not limited to, certain types of the following policy categories:

- Supplemental contracts
- Lottery payouts
- Structured settlements
- Guaranteed interest contracts
- Income settlement options
- Dividend and coupon accumulations
- Annuities certain
- Premium and other deposit funds
- Funding Agreements without well-defined class-based (e.g. age, gender) annuity purchase rates defining either specific or maximum purchase rate guarantees (see SSAP No. 15, paragraph 19, paragraph 20 of this statement and *SSAP No. 52—Deposit-Type Contracts*, paragraph 20.)

45. Under deposit-type contracts, the policyholder may assume all, some, or none of the investment risk, depending on the contract terms. Amounts can be deposited in lump sum, or periodically as allowed by the policy contract. Deposit-type contracts would include annuities certain, whose income payments have no reference to life contingencies and benefits are paid over a specified period (i.e., 10 years, 20 years, etc.).

Relevant Literature

46. This statement rejects the GAAP classifications (i.e., short-duration and long-duration) found in *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*, *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, and *FASB Statement No. 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long Duration Participating Contracts*.

Effective Date and Transition

47. This statement is effective for years beginning January 1, 2001. The guidance in paragraph 36.k. was originally contained within *INT 01-23: Prepaid Legal Insurance Premium Recognition* and was effective June 11, 2001.

Life Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for income recognition and policy reserves for all contracts classified as life contracts defined in *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force*, except for credit insurance contracts which are discussed in *SSAP No. 59—Credit Life and Accident and Health Insurance Contracts* and separate account products which are discussed in *SSAP No. 56—Separate Accounts*.

SUMMARY CONCLUSION

Types of Premiums

2. The gross premium is the amount charged to the policyholder and taken into operations as premium income.

3. The net premium is the amount calculated on the basis of the interest and mortality table used to calculate the reporting entity's statutory policy reserves.

4. The difference between the gross premium and the net premium is referred to as "loading." Loading generally includes allowances for acquisition costs and other expenses but also includes the differences in mortality and interest assumptions utilized for pricing and statutory reserving purposes.

Premium Income Recognition

5. Premiums shall be recognized as income on the gross basis (amount charged to the policyholder) when due from policyholders under the terms of the insurance contract. As a result, premium income shall include first year and renewal premiums, as well as any related premium adjustments (i.e., retrospective premium contracts which are discussed in *SSAP No. 66—Retrospectively Rated Contracts*) provided for by the contract. The contractual due date shall be established through the predetermined billing procedure agreed to by the parties. In addition, premium income shall include single and flexible premium amounts when received from the policyholder. Further, the recognition of premium income and the change in loading shall be consistent with the assumptions made in calculating the related policy reserve.

6. Premium income shall include dividends, coupons, guaranteed annual pure endowments, and similar benefits provided by the insurance contract when such amounts are applied by the terms of the contract to provide additional paid-up insurance, annuities, or to shorten the endowment or premium-paying period. Premiums and considerations waived by the reporting entity under disability provisions contained in its policies and contracts, and reported in operations as a disability benefit, are included in premium income.

7. Premium income shall exclude premiums that have been received by the reporting entity prior to the reporting date but which are due on or after the next policy anniversary date (i.e., advance premiums as discussed in paragraph 27).

8. Premium income shall be reduced for premiums returned and allowances to industrial policyholders for the direct payment of premiums.

9. Premium income shall be increased by reinsurance premiums assumed and reduced by reinsurance premiums ceded. Reinsurance premiums assumed and ceded are defined and addressed in *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance*.

10. Death or other benefits used to fund new policies shall be accounted for as a benefit payment and as a new premium, another type of income, or a liability, as appropriate.

Premium Adjustments

11. In the summary of operations, the change in gross deferred and uncollected premiums is recorded as premium income. Deferred premiums are further discussed in paragraphs 23-25. Since only the net premiums are included in the computation of reserves and reported as an asset, it is necessary to adjust the gross premium for an amount representing the change in loading on deferred and uncollected premiums. The change in loading is included as an expense in the summary of operations and is not shown as a reduction to premium income.

Uncollected Premium Balances

12. Gross premiums that are due and unpaid as of the reporting date, net of loading, shall be classified as uncollected premiums. Uncollected premium balances which are less than 90 days past due meet the definition of an asset, as defined in *SSAP No. 4—Assets and Nonadmitted Assets,* and are admitted assets to the extent they conform to the requirements of this statement.

Other Considerations Received

13. Considerations for supplementary contracts, dividends left on deposit to accumulate interest, and amounts deposited and accumulated for guaranteed interest and group annuity contracts shall be recognized as deposit-type funds or considerations for supplemental contracts, as appropriate. These amounts are further discussed in *SSAP No. 52—Deposit-Type Contracts*.$^{\text{(INT 00-03)}}$

Waiver of Monthly Deductions for Flexible Premium Universal Life Insurance Policies

14. Flexible premium universal life insurance policies do not require specified premiums as traditional policies do. The “waiver” benefit entities offer is a “waiver of monthly deductions” benefit as opposed to a “waiver of premium” benefit. The difference being specific premiums may or may not be required under the policy regardless of whether the insured is disabled or not. Waiver of a deduction is not to be considered revenue nor a benefit paid, therefore a calculation of the amount of the deduction need not be made for flexible premium universal life insurance policies.

Policy Reserves

15. Statutory policy reserves shall be established for all unmatured contractual obligations of the reporting entity arising out of the provisions of the insurance contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. These statutory policy reserves are generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. Statutory policy reserves meet the definition of liabilities as defined in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5R.

16. The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-820 and A-822 and the actuarial guidelines found in Appendix C of this Manual. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

17. The preceding two paragraphs summarize the general reserve requirements for all types of life contracts. In addition to these general reserve requirements, Appendix A-820 provides additional guidance with respect to certain types of accumulation annuities that have flexible features (e.g., guaranteed nonforfeiture benefits such as interest guarantees, annuitization options, bailout features, partial withdrawals) which can create varying benefit streams if elected by the policyholder. Specific policies with such flexible features include most individual and some group annuity contracts, but exclude

any disability and accidental death benefits in these contracts. For benefits under these contracts, reserves shall be established according to the Commissioners' Annuity Reserve Valuation Method (CARVM). Generally under CARVM, the difference between all possible future guaranteed benefits streams, including guaranteed nonforfeiture benefits, over the future considerations is computed as of the end of each contract year. Each of these differences is discounted to the reporting date at the applicable valuation interest rate. A reserve is then recorded based on the greatest present value difference of each of the contract year calculations.

18. Unlike traditional life insurance contracts, flexible premium universal life-type contracts do not have guaranteed premiums and some assumption as to future premiums is required. Appendix A-585 establishes a minimum reserving method for universal life-type contracts by providing guidance on how to estimate future premiums on flexible premium universal life-type contracts so that traditional valuation methodologies can be used. Alternative minimum reserves shall be required, if applicable, for flexible premium universal life-type contracts if the guaranteed maturity premium is less than the valuation net premium. Appendix A-585 shall be used in establishing reserves for flexible premium universal life-type contracts.

19. Policy reserves for fixed premium universal life-type contracts shall also follow guidance in Appendix A-585. Certain fixed premium products offer the policyholder a secondary guarantee. A secondary guarantee provides the policyholder a guaranteed set of cash values, death benefits, and maturity benefits that will be provided regardless of the performance of the policy value. Appendix A-585 requires all guarantees to be considered when establishing policy reserves and shall be followed in establishing reserves for fixed premium universal life-type contracts.

20. Statutory policy reserves for those group annuity contracts or other contracts that, in whole or in part, establish the insurer's obligations by reference to a segregated portfolio of assets not owned by the insurer shall be established in accordance with the guidance in Appendix A-695. Statutory policy reserves for those contracts with nonlevel premiums or benefits, or contracts with secondary guarantees shall be established in accordance with the guidance in Appendix A-830. Statutory policy reserves for those group life contracts utilizing a separate account that meet the requirements outlined in paragraph 1 of Appendix A-200 shall be computed in accordance with the guidance in that appendix.

Valuation (Reserve) Method and Deferred Premiums

21. Reserves shall be established for all benefits guaranteed under the terms of the policy as of the reporting date using appropriate valuation methods, interest rates, mortality and morbidity rates, as applicable. However, as a practical expedient, reserves have been generally calculated as of the policy anniversary date (i.e., terminal reserves), not the reporting date. As a result, it is necessary to adjust the terminal reserve back to the reporting date. The components used to compute a terminal reserve shall consist of an interest rate, a mortality and/or morbidity table, and a valuation method (e.g., net level, full preliminary term, Commissioners' Reserve Valuation Method (CRVM), or CARVM). A terminal reserve is based on the assumption that all net premiums have been received, all interest earned, and all benefits paid to the end of the policy year.

22. Since terminal reserves are computed as of the end of a policy year and not the reporting date, the terminal reserve as of policy anniversaries immediately prior and subsequent to the reporting date are adjusted to reflect that portion of the net premium that is unearned at the reporting date. This is generally accomplished using either the mean reserve method or the mid-terminal method as discussed in the next four paragraphs. Other appropriate methods, including an exact reserve valuation, may also be used.

Mean Reserve Method

23. Under the mean reserve method, the policy reserve equals the average of the terminal reserve at the end of the policy year and the initial reserve (the initial reserve is equal to the previous year's terminal

reserve plus the net annual valuation premium for the current policy year). When reserves are calculated on the mean reserve basis, it is assumed that the net premium for a policy is collected annually at the beginning of the policy year and that policies are issued ratably over the calendar year.

24. However, as premiums are often received in installments more frequently than annually and since the calculation of mean reserves assumes payment of the current policy year's entire net annual premium, the policy reserve is overstated by the amount of net modal premiums not yet received for the current policy year as of the valuation date. As a result, it is necessary to compute and report a special asset to offset the overstatement of the policy reserve.

25. This special asset is termed "deferred premiums." Deferred premiums are computed by taking the gross premium (or premiums) extending from (and including) the modal (monthly, quarterly, semiannual) premium due date or dates following the valuation date to the next policy anniversary date and subtracting any such deferred premiums that have actually been collected. Deferred premium assets shall also be reduced by loading. Since the calculation of mean reserves assumes payment of the current policy year's entire net annual premium, deferred premium assets are considered admitted assets to compensate for the overstatement of the policy reserve.

Mid-Terminal Method

26. Under the mid-terminal method, the policy reserves are calculated as the average of the terminal reserves on the previous and the next policy anniversaries. These reserves shall be accompanied by an unearned premium reserve consisting of the portion of valuation premiums paid or due covering the period from the valuation date to the next policy anniversary date.

Advance Premiums

27. Advance premiums are those premiums that have been received by the reporting entity prior to the valuation date but which are due on or after the next policy anniversary date. The policyholder may remit one or more premiums in advance of specific due dates. Where premiums are remitted sufficiently far in advance, the premiums charged to the policyholder may be reduced or discounted to reflect the time value of money. The difference between the gross and discounted premium is ratably charged as interest in the summary of operations from the date of payment to the premium due date. At the premium due date, the amount received from the policyholder plus the accumulated interest equals the gross premium necessary to fund the policy. The total amount of such advance premiums, less any discount as of the valuation date, is reported as a liability in the statutory financial statement and is not considered premium income until due. The gross premium, not the net valuation premium, is recorded as the advance premium in recognition of the reporting entity's liability to refund such premiums in the event the policy is terminated.

Policyholder Dividend Liability

28. A reporting entity shall accrue, as applicable, the following items relating to participating policies. They are dividends due and unpaid, dividends apportioned (or not yet apportioned) for payment in the following twelve months, and dividends left on deposit to accumulate interest.

29. Dividends due and unpaid represent dividends payable to the policyholder in the current year but which have not been disbursed or otherwise applied at the reporting date.

30. Dividends payable in the following calendar year represent the estimated amount of all dividends declared by a reporting entity's board of directors prior to the end of the statement year which are not yet paid or due at the end of the year (dividends apportioned for payment) as well as all dividends payable in the following calendar year that have not been declared (dividends not yet apportioned for payment). For individual insurance the amount of this liability shall be equal to the aggregate amount of the dividends

estimated to be payable in the following calendar year whether or not declared or apportioned. For group insurance and pensions, the amount of liability is generally equal to the portion of the dividend payable in the following calendar year which has been earned in the current calendar year.

31. Dividends left on deposit with the reporting entity shall be recorded in the amount of the deposit and accrued interest thereon. At the balance sheet date, the interest accrued but not yet credited to the policyholders' accounts shall be established as part of this liability.

Coupons

32. Some entities issue policies that guarantee an annual return, usually evidenced by a coupon that is part of the policy and matures on the policy's anniversary. This return represents an annual pure endowment and is essentially a return of premium previously paid by the policyholder. For matured coupons that have been left to accumulate, the liability is determined in the same way as the liability for dividend accumulations. Interest accrued is calculated for each coupon from the date each matures. The liability for unmatured policyholder coupons shall be the face value of the coupon, discounted at interest and mortality.

Reserve Recognition

33. The difference between the policy reserves for life contracts at the beginning and end of the reporting period shall be reflected as the change in reserves in the summary of operations, except for any difference due to a change in valuation basis.

Change In Valuation Basis

34. A change in valuation basis shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a new method and a specific transition that allows for grading.

Supplemental Benefits

35. In addition to the basic policy benefit, the insurance contract may provide supplemental benefits. Supplemental benefits include, but are not limited to, accidental death benefits and waiver of premium benefits. If the terms of the contract provide for these benefits, appropriate reserves shall be established in accordance with the applicable standards within the *Accounting Practices and Procedures Manual*.

Unearned Income

36. Amounts assessed that represent compensation to the reporting entity for services to be provided in future periods and which are required to be refunded upon policy termination are not earned in the period assessed. Such amounts, if not already considered in the policy reserve, shall be reported as unearned income, a liability, and recognized as income as the related services are provided.

Accelerated Benefits

37. Accelerated benefits are benefits payable under a life insurance contract to a policyholder or certificateholder during the lifetime of the insured, in anticipation of death or upon the occurrence of

specified life-threatening or catastrophic conditions as defined by the policy or rider. These benefits reduce the death benefit otherwise payable under the life insurance contract and are payable upon the occurrence of a single qualifying event which results in the payment of a benefit amount fixed at the time of acceleration. When benefits are provided through the acceleration of benefits under group or individual life policies or riders to such policies, policy reserves shall be determined in accordance with Appendices A-820 and A-620. Reserves for such benefits in the aggregate shall be sufficient to cover policies upon which no claim has yet arisen as well as policies upon which an accelerated claim has arisen. Accounting guidance for accelerated benefit payments made in the form of a loan are addressed in *SSAP No. 49—Policy Loans*. In addition, accelerated benefit payments, for those accelerated benefits that reduce the policy, shall not be deferred but shall be charged to the summary of operations as a benefit expense when paid to the policyholder.

Additional Reserves Not Included Elsewhere

38. Additional actuarial liabilities are commonly held for such items as:

a. Provision for either nondeduction of deferred fractional premiums or return of premiums at death of the insured; and

b. Surrender values in excess of reserves otherwise required or carried.

Disclosures

39. For life and annuity reserves the financial statements shall disclose the following:

a. A description of reserve practices concerning the following:

i. Waiver of deduction of deferred fractional premiums upon death of insured;

ii. Return of portion of final premium for periods beyond the date of death; and

iii. Amount of any surrender value promised in excess of the reserve as legally computed;

b. The methods employed in the valuation of substandard policies;

c. The amount of insurance, if any, for which the gross premiums are less than the net premiums according to the valuation standards;

d. The method used to determine tabular interest, tabular less actual reserves released, and tabular cost (by formula or from the basic data for such items); and

e. The nature of significant other reserve changes.

40. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics for the categories of general account, separate account with guarantees, separate account nonguaranteed and the total as follows:

a. Subject to discretionary withdrawal:

i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;

(a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the insurer;

(b) In installments over five years or more, with or without a reduction in the interest rate during the installment period;

ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in paragraph 40.v.(d);

iii. At fair value, where the withdrawal of funds is payable at current fair value of the assets supporting the liabilities, the assets are stated at current fair value, and the liabilities are stated at the current fair value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at fair value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

(a) In a lump sum without adjustment;

(b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

(c) In a lump sum subject to a fixed surrender charge of less than 5%;

(d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified “bail out” rate and the “bail out” rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues;

b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded;

e. Total net.

41. If the reporting entity has reported life insurance premiums and annuity considerations deferred and uncollected on policies in force as of the financial statement date, disclose separately the amounts and the loading excluded for each of the following lines of business:

a. Industrial business;

b. Ordinary new business;

c. Ordinary renewal;

d. Credit life;

e. Group life;

f. Group annuity.

42. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.);

f. Total premium written.

43. Reporting entities shall disclose the relative percentage of participating insurance, the method of accounting for policyholder dividends, the amount of dividends, and the amount of any additional income allocated to participating policyholders in the financial statements.

44. Reporting entities shall disclose if the reserve amount calculated on the state prescribed or permitted valuation basis is materially different from the reserve amount calculated on the A-820 valuation basis[1]. Although the A-820 standard is viewed as a minimum one, it represents the baseline from which deviations are measured. The determination of whether difference meets the standard of materiality is subjective. Refer to the Preamble regarding further guidance on the criterion of materiality.

45. Refer to the preamble for further discussion regarding disclosure requirements.

[1] This issue applies to contracts issued January 1, 2001, and thereafter.

Effective Date and Transition

48. This statement is effective for years beginning January 1, 2001. Contracts issued prior to January 1, 2001 shall be accounted for based on the laws and regulations of the domiciliary state. State laws and regulations shall be understood to include anything considered authoritative by the domiciliary state under the individual state's statutory authority and due process procedures. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. The guidance in paragraph 14 was originally contained within *INT 00-30: Application of SSAP No. 51 Paragraph 6 to Waiver of Deduction on Flexible Premium Universal Life Insurance Policies* and was effective December 4, 2000. The guidance in paragraph 44 was originally contained within *INT 01-26: SSAP No. 51 and Reserve Minimum or Required Amount* and was effective January 1, 2001.

Deposit-Type Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for income recognition and policy reserves for all contracts classified as deposit-type contracts defined in *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (SSAP No. 50).

SUMMARY CONCLUSION

Introduction

2. As discussed in SSAP No. 50, deposit-type contracts are those contracts that do not subject the reporting entity to any risks arising from policyholder mortality or morbidity. A mortality or morbidity risk is present if, under the terms of the contract, the reporting entity is required to make payments or forego required premiums contingent upon the death or disability (in the case of life and disability insurance contracts) or the continued survival (in the case of annuity contracts) of a specific individual or group of individuals.

3. Deposit-type contracts frequently grant policyholders significant discretion over the amount and timing of deposits and withdrawals. Reporting entities are frequently granted significant discretion over amounts that accrue to or that are assessed against policyholders.

4. Due to the absence of mortality and/or morbidity risk and the discretionary characteristics noted in the preceding paragraph, the accounting principles for income recognition and policy reserves for deposit-type contracts differ from the accounting for life contracts set forth in *SSAP No. 51—Life Contracts,* accident and health contracts established in *SSAP No. 54—Individual and Group Accident and Health Contracts*, and credit insurance contracts as discussed in *SSAP No. 59—Credit Life and Accident and Health Insurance Contracts*.

5. Categories of contracts that may not subject the reporting entity to risks arising from policyholder mortality or morbidity include, but are not limited to, certain types of the following policy categories:

- Supplemental contracts
- Lottery payouts
- Structured settlements
- Guaranteed interest contracts
- Income settlement options
- Dividend and coupon accumulations
- Annuities certain
- Premium and other deposit funds

Income Recognition

6. Contracts issued by a reporting entity that do not incorporate mortality or morbidity risk shall not be accounted for as insurance contracts. Amounts received as payments for such contracts shall not be reported as revenues but shall be recorded directly to an appropriate policy reserve account.[INT 00-03]

Policy Reserves

7. Statutory policy reserves shall be established for all contractual obligations of the reporting entity arising out of the provisions of the contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. Statutory policy reserves meet the definition of liabilities as defined in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5R.

8. The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-820 and A-822, and the actuarial guidelines found in Appendix C of this Manual. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

9. The policy reserve for contracts without life contingencies where the future benefits are fixed and guaranteed (e.g., certain supplemental contracts, lottery payouts, structured settlements, guaranteed interest contracts, income settlement options, annuities certain, and unmatured coupon accumulations) shall be based on the present value of the future guaranteed benefits discounted at the valuation interest rate. The policy reserve for all other contracts (e.g., certain premium and other deposit funds, and dividend and matured coupon accumulations) shall be based on the accumulated amounts paid plus an income accumulation based on the contract provisions, less any withdrawals and applicable surrender charges.

10. Statutory policy reserves for those group annuity contracts or other contracts that, in whole or in part, establish the insurer's obligations by reference to a segregated portfolio of assets not owned by the insurer shall be established in accordance with the guidance in Appendix A-695. Statutory policy reserves for those contracts with nonlevel premiums or benefits, or contracts with secondary guarantees shall be established in accordance with the guidance in Appendix A-830. Statutory policy reserves for those group life contracts utilizing a separate account that meet the requirements outlined in paragraph 1 of Appendix A-200 shall be computed in accordance with the guidance in that appendix.

11. Policy reserves shall be increased for reinsurance assumed and decreased for reinsurance ceded as further described in *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance*.

Structured Settlements

12. Reporting entities that have accepted an assignment of obligations under structured settlements shall record those obligations consistent with the accounting and reporting provided for structured settlements in *SSAP No. 65—Property and Casualty Contracts*.

Cost Recognition

13. Interest credited to deposit-type contracts shall be recorded as an expense in the summary of operations when earned under the terms of the contract. Payments that represent a return of policyholder balances shall not be recorded as expenses. To the extent such payments differ from the recorded reserve, the difference shall be recorded in the summary of operations as a benefit expense.

Change In Valuation Basis

14. A change in valuation basis shall be defined as a change in the interest rate assumption or other factor affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as

a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a specific transition that allows for grading.

Unearned Income

15. Amounts assessed that represent compensation to the reporting entity for services to be provided in future periods and which are required to be refunded upon policy termination are not earned in the period assessed. Such amounts, if not already considered in the policy reserve, shall be reported as unearned income, a liability, and recognized as income as the related services are provided.

Additional Reserves Not Included Elsewhere

16. Additional actuarial liabilities are commonly held for such items as:

a. Surrender values in excess of reserves otherwise required or carried; and

b. Additional reserves required based on asset adequacy analysis as discussed in Appendix A-822.

17. Funding agreements issued to a Federal Home Loan Bank (FHLB) shall be evaluated on an individual basis, and shall be accounted for according to the substance of the individual arrangement and entity licensing. If the arrangement is in substance a funding agreement, including that the funds are used in an investment spread capacity, it shall be accounted for consistent with other funding agreements in accordance with this statement. If the arrangement is in substance a borrowing agreement, it shall be accounted for in accordance with *SSAP No. 15— Debt and Holding Company Obligations*, consistent with other borrowed money.

Disclosures

18. For life and annuity reserves, the financial statements shall disclose the following:

a. A description of reserve practices including the amount of any surrender value promised in excess of the reserve as legally computed;

b. The method of determination of tabular interest on funds not involving life contingencies; and

c. The nature of significant other reserve changes.

19. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics for the categories of general account, separate account with guarantees, separate account nonguaranteed and the total as follows:

a. Subject to discretionary withdrawal:

i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;

(a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the reporting entity; and

(b) In installments over five years or more, with or without a reduction in the interest rate during the installment period.

ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in paragraph 19.a.v.(d);

iii. At fair value, where the withdrawal of funds is payable at current fair value of the assets supporting the liabilities, the assets are stated at current fair value, and the liabilities are stated at the current fair value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at fair value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

(a) In a lump sum without adjustment;

(b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

(c) In a lump sum subject to a fixed surrender charge of less than 5%;

(d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified “bail out” rate and the “bail out” rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues;

b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded;

e. Total net.

20. For FHLB agreements accounted for under this statement, include information for the FHLB funding agreements with other reporting and disclosure requirements for deposit-type contracts under this statement and complete additional disclosure requirements in *SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled or affiliated entities),* paragraph 16.

21. For life insurance claims, disclose the following information regarding the reporting entity’s use of retained asset accounts for beneficiaries. For purposes of this disclosure, retained asset accounts represent settlement of life insurance proceeds, which are retained by the insurance entity within their general account for the benefit of the beneficiaries. Amounts held outside of the insurance entity, for example in a non-insurance subsidiary, affiliated or controlled entity accounted for under *SSAP No. 97—Investments in Subsidiary, Controlled, and Affiliated Entities, A Replacement of SSAP No. 88*, such as an interest bearing account established in the beneficiary’s name with a bank or thrift institution (and subject to applicable Federal Deposit Insurance Corporation coverage) are only required to be described in the

context of the structure of the reporting entity's program in accordance with paragraph 21.a., but quantitative information regarding retained asset accounts transferred outside of the reporting entity are not required. (See illustration in Appendix A.)

a. A narrative description of how the accounts are structured and reported within the reporting entity's financial statements (e.g., as drafts written by the reporting entity and reported within cash and supplemental contracts without life contingencies; as accounts transferred into the beneficiary's name to an affiliated or unaffiliated bank or other financial institution in which the reporting entity has disposed of its liabilities and related assets, etc). This description should include all of the different interest rates paid to retained asset account holders during the reporting year and the number of times changes in rates were made during the reporting year. The description should also include a listing of all applicable fees charged by the reporting entity that are directly or indirectly associated with the retained asset accounts. Also, indicate if the retained asset account is the default method for satisfying life insurance claims.

b. Number and balance of retained asset accounts in force at the end of the current year and prior year segregated within "aging categories" of "up to 12 months," "13 to 24 months," "25 to 36 months," "37 to 48 months," "49 to 60 months," "over 60 months;"

c. Number and balance of retained asset accounts in force at the beginning of the year segregated between individual and group contracts;

d. Number and amount of retained asset accounts issued during the year segregated between individual and group contracts;

e. Investment earnings credited to retained asset accounts segregated between individual and group contracts;

f. Fees and other charges assessed to retained asset accounts during the year segregated between individual and group contracts;

g. Number and amount of retained asset accounts transferred to state unclaimed property funds segregated between individual and group contracts;

h. Number and amount of retained asset accounts closed/withdrawn during the year segregated between individual and group contracts;

i. Number and balance of retained asset accounts in force at the end of the year segregated between individual and group contracts.

22. The disclosures in paragraph 21 are not required in the annual audited financial statements. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

23. This statement incorporates the requirements of Appendices A-235, A-695, A-820, A-822, the Actuarial Standards Board *Actuarial Standards of Practice*, and the actuarial guidelines found in Appendix C of this Manual.

24. This statement rejects *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*, *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, *FASB Statement 120, Accounting and Reporting by Mutual Life Insurance* Enterprises *and by Insurance Enterprises for Certain Long-Duration Participating Contracts*, AICPA *Practice Bulletin No. 8,*

Application of FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses From the Sale of Investments, to Insurance Enterprises, the AICPA *Audit and Accounting Guide—Audits of Stock Life Insurance Companies*, AICPA *Statement of Position 95-1, Accounting for Certain Activities of Mutual Life Insurance Enterprises* relating to accounting and reporting for policy reserves for short and long duration contracts, and *FASB Interpretation No. 40, Applicability of Generally Accepted Accounting Principles to Mutual Life Insurance and Other Enterprises, an interpretation of FASB Statements No. 12, 60, 97, and 113.*

Effective Date and Transition

25. This statement is effective for years beginning January 1, 2001. Contracts issued prior to January 1, 2001 shall be accounted for based on the laws and regulations of the domiciliary state. State laws and regulations shall be understood to include anything considered authoritative by the domiciliary state under the individual state's statutory authority and due process procedures. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. Guidance in paragraph 17 was previously included within *INT 08-08: Balance Sheet Presentation of Funding Agreements Issued to a Federal Home Loan Bank* and was effective for periods beginning March 15, 2009. Guidance in paragraph 20 related to FHLB agreements was initially effective January 1, 2014.

Property Casualty Contracts—Premiums

SCOPE OF STATEMENT

1. This statement establishes general statutory accounting principles for the recording and recognition of premium revenue for property and casualty contracts as defined in *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (SSAP No. 50).

2. Specific statutory requirements for certain property and casualty premiums are addressed in the following statements: (a) *SSAP No. 57—Title Insurance*, (b) *SSAP No. 58—Mortgage Guaranty Insurance,* (c) SSAP *No. 60—Financial Guaranty Insurance,* (d) *SSAP No. 62R—Property and Casualty Reinsurance,* (e) *SSAP No. 65—Property and Casualty Contracts,* and (f) *SSAP No. 66—Retrospectively Rated Contracts and Contracts*.

SUMMARY CONCLUSION

3. Except as provided for in paragraph 4, written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the coverage provided by the terms of the insurance contract. Frequently, insurance contracts are subject to audit by the reporting entity and the amount of premium charged is subject to adjustment based on the actual exposure. Premium adjustments are discussed in paragraphs 10-13 of this statement.

4. For workers' compensation contracts, which have a premium that may periodically vary based upon changes in the activities of the insured, written premiums may be recorded on an installment basis to match the billing to the policyholder. Under this type of arrangement, the premium is determined and billed according to the frequency stated in the contract, and written premium is recorded on the basis of that frequency.

5. Premiums for prepaid legal expense plans shall be recognized as income on the gross basis (amount charged to the policyholder or subscriber exclusive of copayments or other charges) when due from policyholders or subscribers, but no earlier than the effective date of coverage, under the terms of the contract. Due and uncollected premiums shall follow the guidance in *SSAP No.6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers* (SSAP No. 6), to determine the admissibility of premiums and related receivables.

6. Written premiums for all other contracts shall be recorded as of the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Flat fee service charges on installment premiums[1] (fees charged to policyholders who pay premiums on an installment basis rather than in full at inception of contract) are reported in the Other Income section of the Underwriting and Investment Exhibit as Finance and Service Charges. Flat fee service charges on installment premiums, which do not meet the requirements outlined in footnote 1 (e.g., policy may be cancelled for non-payment of fee or fee is refundable), shall be recorded as written premium on the effective date of the contract and subject to the unearned premium guidelines included in paragraph 8.

[1] If the policyholder elects to pay an installment rather than the full amount or the full remaining balance, the policyholder is traditionally charged a flat fee service charge on the subsequent billing cycle(s). The amount charged is primarily intended to compensate the insurer for the additional administrative costs associated with processing more frequent billings and has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum. As described, there is no underwriting risk associated with this service charge. If a policyholder does not pay the service charge, the policy is not cancelled (unlike non-payment of premium), but instead the policy is converted back to an annual pay plan. If a policyholder cancels coverage, the premium is returned but the service charge is not, as the service charge is not a part of premium. Clarification of finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.

7. The exposure to insurance risk for most property and casualty insurance contracts does not vary significantly during the contract period. Therefore, premiums from those types of contracts shall be recognized in the statement of income, as earned premium, using either the daily pro-rata or monthly pro-rata methods as described in paragraph 8. Certain statements provide for different methods of recognizing premium in the statement of operations for specific types of contracts. For contracts not separately identified in specific statements where the reporting entity can demonstrate the period of risk differs significantly from the contract period, premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided.

8. One of the following methods shall be used for computation of the unearned premium reserve:

a. Daily pro rata method—Calculate the unearned premium on each policy—At the end of each period, the calculation is made on each item of premium to ascertain the unexpired portion and to arrive at the aggregate unearned premium reserve;

b. Monthly pro rata method—This method assumes that, on average, the same amount of business is written each day of any month so that the mean will be the middle of the month. For example, one-year premiums written during the first three months of the year have, at the end of the year, the following unearned fractions: January-1/24; February-3/24; March-5/24.

9. Additional premiums charged to policyholders for endorsements and changes in coverage under the contract shall be recorded on the effective date of the endorsement and accounted for in a manner consistent with the methods discussed in paragraphs 4-8. This is done so that, at any point in time, a liability is accrued for unearned premium related to the unexpired portion of the policy endorsement.

Earned but Unbilled Premium

10. Adjustments to the premium charged for changes in the level of exposure to insurance risk (e.g., audit premiums on workers' compensation policies) are generally determined based upon audits conducted after the policy has expired. Reporting entities shall estimate audit premiums, the amount generally referred to as earned but unbilled (EBUB) premium, and shall record the amounts as an adjustment to premium, either through written premium or as an adjustment to earned premium. The estimate for EBUB may be determined using actuarially or statistically supported aggregate calculations using historical company unearned premium data, or per policy calculations.

11. EBUB shall be adjusted upon completion of the audit and the adjustment shall be recognized as revenue immediately. Upon completion of an audit that results in a return of premiums to the policyholder, earned premiums shall be reduced.

12. Reporting entities shall establish all of the requisite liabilities associated with the asset such as commissions and premium taxes. These liabilities shall be determined based on when premium is earned, not collected[2].

13. Ten percent of EBUB in excess of collateral specifically held and identifiable on a per policy basis shall be reported as a nonadmitted asset. To the extent that amounts in excess of the 10% are not anticipated to be collected, they shall be written off against operations in the period the determination is made.

[2] If an entity feels comfortable enough in their ability to collect the premium that an asset is recorded, they should also book the associated liabilities. Once an estimate of the premium has been made and the entity feels certain that it will be collected, it should also book the liabilities that will be due when they receive the cash. If the premiums were unearned and the policyholder had the ability to cancel, the definition of a liability has not been met.

Earned but Uncollected Premium

14. Reporting entities may utilize a voluntary procedure whereby policies are not cancelled for non-payment of the premium until after an extended cancellation period (example 30 days), as opposed to the shorter statutory cancellation period. There are other instances when a reporting entity provides coverage for periods when the payment has not been received. Prior to the cancellation of the policy the reporting entity acknowledges it is "at risk" and subject to "actual exposure" for a valid claim despite the fact that the reporting entity may not have received payment of the premium for this exposure. Reporting entities shall record earned but uncollected premium as direct and assumed written premium since the reporting entity is "at risk" and subject to "actual exposure" for the extended period of time when the policy is still in force and effective, whether or not the reporting entity collects a premium for this time period. Earned but uncollected premium would be charged to expenses **"**net gain or (loss) from agents or premium balances charged off" when it is determined to be uncollectible.

Advance Premiums

15. Advance premiums result when the policies have been processed, and the premium has been paid prior to the effective date. These advance premiums are reported as a liability in the statutory financial statement and not considered income until due. Such amounts are not included in written premium or the unearned premium reserve.

Premium Deposits on Perpetual Fire Deposits

16. Premium deposits on perpetual fire insurance risks should be charged as a liability to the extent of at least 90% of the gross amount of such deposit.

Premium Deficiency Reserve

17. When the anticipated losses, loss adjustment expenses, commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, and any future installment premiums on existing policies, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency, with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis to the extent they have previously been expensed. For purposes of determining if a premium deficiency exists, insurance contracts shall be grouped in a manner consistent with how policies are marketed, serviced and measured. A liability shall be recognized for each grouping where a premium deficiency is indicated. Deficiencies shall not be offset by anticipated profits in other policy groupings.

18. If a premium deficiency reserve is established in accordance with paragraph 17, disclose the amount of that reserve. If a reporting entity utilizes anticipated investment income as a factor in the premium deficiency calculation, the reporting entity's disclosures shall include a statement that anticipated investment income was utilized; however, the dollar amount need not be included. Reporting entities need to disclose by statement only that anticipated investment income was utilized in the calculation of premium deficiency reserves whether a reserve is recorded or not (i.e., the use of anticipated investment income mitigated the need for recording a premium deficiency reserve).

Disclosures

19. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.); and

f. Total premium written.

20. Refer to the preamble for further discussion regarding disclosure requirements.

Individual and Group Accident and Health Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for income recognition and policy reserves for all contracts classified as individual and group accident and health contracts as defined in *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force*, except for credit accident and health contracts which are discussed in *SSAP No. 59—Credit Life and Accident and Health Contracts*.

SUMMARY CONCLUSION

Premium Income Recognition

2. Premiums shall be recognized as income on the gross basis (amount charged to the policyholder or subscriber exclusive of copayments or other charges related to the receipt of health care services) when due from policyholders or subscribers, but no earlier than the effective date of coverage, under the terms of the contract. Due and uncollected premiums shall follow the guidance in *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers* (SSAP No. 6), to determine the admissibility of premiums and related receivables. Premiums waived by the reporting entity under disability provisions contained in its policies and contracts, and reported in operations as a disability benefit, are included in premium income.

3. Premium income shall exclude premiums that have been received by the reporting entity on or prior to the valuation date but which are due after the valuation date (i.e., advance premiums as discussed below).

4. Premium income shall be reduced for premiums returned and allowances to industrial policyholders for the direct payment of premiums.

5. Premium income shall be increased by reinsurance premiums assumed and reduced by reinsurance premiums ceded. Reinsurance premiums assumed and ceded are defined and addressed in *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance*.

6. Advance premiums are those premiums that have been received by the reporting entity prior to or on the valuation date but which are due after the valuation date. The total amount of such advance premiums is reported as a liability in the statutory financial statements and is not considered premium income until due. The gross premium, not the net valuation premium, is recorded as the advance premium in recognition of the reporting entity's liability to refund such premiums in the event the policy is terminated.

7. As discussed in *SSAP No. 47—Uninsured Plans* (SSAP No. 47), amounts received on behalf of uninsured plans or the uninsured portion of partially insured plans shall not be reported as premium income. Administrative fees for servicing the uninsured plans shall be deducted from general expenses. Conversely, income relating to the insured portion of any plan shall be reported as premium income.

8. Specific funds to be received under the Medicare Part D program received as premiums for coverage that is not retrospectively rated should be accounted for under this Statement. These funds include 'Beneficiary Premium (supplemental benefit portion)', as these payments are considered to be standard premium payments that do not meet the definitions under SSAP No. 47 or *SSAP No. 66—Retrospectively Rated Contracts* (SSAP No. 66). Refer to *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage* for additional information and definitions of terms specifically related to Medicare Part D business.

Reserve Requirements

9. The aggregate reserve for individual and group accident and health contracts generally consists of a policy reserve and a claim reserve as well as certain other miscellaneous reserves discussed in paragraph 24. The aggregate reserve reflects the future liabilities arising under accident and health policies. Policy reserves have traditionally been referred to as active life reserves and include unearned premium reserves. Policy reserves reflect that premiums cover future liabilities in addition to current claim costs and expenses. Claim reserves, sometimes referred to as disabled life reserves, are required on claims which involve continuing loss. The reserve in this case is a measure of the present value of future benefits or amounts not yet due as of the statement date (the unaccrued portion) which are expected to arise under claims which have been incurred as of the statement date. The aggregate reserve for individual and group accident and health contracts does not include claim liabilities which are the amounts payable at the reporting date (the accrued portion) and reflect the reporting entity's liability for benefits due as of the statement date. Claim liabilities are further discussed in *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses*.

10. Policy reserves for individual and group accident and health contracts shall include an unearned premium reserve and, as applicable, an additional or contract reserve where constant or level premiums are assumed for certain noncancelable or guaranteed renewable contracts. The claim reserve shall consist of a reserve for the present value of amounts not yet due.

11. Statutory policy reserves shall be established for all unmatured contractual obligations of the reporting entity arising out of the provisions of the contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. A prospective gross premium valuation is the ultimate test of reserve adequacy as of a given valuation date. Statutory reserves meet the definition of liabilities as defined in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5R.

12. The reserving methodologies and assumptions used in calculating individual and group accident and health reserves shall meet the provisions of Appendices A-010, A-641, A-820 and A-822 (as applicable) and the actuarial guidelines found in Appendix C of this Manual (as applicable). Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

Policy Reserves

13. Unearned premium reserves shall be required for all accident and health contracts for which premiums have been reported for a period beyond the date of valuation other than premiums paid in advance. The minimum unearned premium reserve that applies to the premium period beyond the valuation date shall be based on the valuation net modal premium if contract reserves are required and the gross modal unearned premium reserve if contract reserves are not required. If premiums due and unpaid are carried as an asset, such premiums must be treated as premiums in force, subject to unearned premium reserve determination. The value of unpaid commissions, premium taxes, and the cost of collection associated with due and unpaid premiums must be carried as an offsetting liability. In no event shall the aggregate policy reserve for all contracts be less than the unearned gross premium under such contracts. Additionally, the reserve shall never be less than the expected claims for the period beyond the valuation date represented by the unearned premium reserve, to the extent not provided for elsewhere.

14. Contract or additional reserves on accident and health contracts shall be recorded when premiums and benefits are not earned or incurred at the same incidence over the policy period (e.g., contracts having premiums determined on an issue-age basis where premiums and related morbidity, risk of loss, and the cost of coverage are not evenly matched). This evaluation may be applied on a rating block basis if the total premiums for the block were developed to support the total risk assumed and expected expenses for

the block each year, and a qualified actuary certifies the premium development (e.g., community-rated contracts). The additional reserves shall be set aside from the early years' level premiums to pay the claims that experience indicates will be incurred as the policy continues in force. The fact that the reporting entity may have the right to increase premiums or to decline renewal of the policies for certain reasons has no bearing on whether or not a contract or additional reserve should be held. These reserves shall apply regardless of whether or not benefits are currently being received and are in addition to unearned premium reserves discussed in paragraph 13.

15. Contract or additional reserves shall also be recorded where, due to the gross premium structure, the future benefits exceed the future net premiums (e.g., group conversion policies) or where the contract provides for the extension of benefits after the termination of the coverage (e.g., deferred maternity and other similar benefits).

16. A terminal reserve for accident and health contracts is the policy reserve at the end of a policy year to cover the assumed difference between future benefits and future net premiums. The components used to compute a terminal reserve shall consist of an interest rate, a mortality and/or morbidity table, and a valuation method (e.g., net level, one-year full preliminary term, and two-year full preliminary term) and where allowed, other assumptions. A terminal reserve is based on the assumption that all net premiums have been received, all interest earned, and all benefits paid to the end of the policy year.

17. Since terminal reserves are computed as of the end of a policy year and not the reporting date, the terminal reserve as of policy anniversaries immediately prior to and subsequent to the reporting date are adjusted to reflect that portion of the net premium that is unearned at the reporting date. This is generally accomplished using either the mean reserve method or the mid-terminal method as discussed in paragraphs 23-26 of *SSAP No. 51—Life Contracts*. Other appropriate methods, including an exact reserve valuation, may also be used.

18. For individual and group accident and health contracts, negative reserves on any benefit shall be offset against positive reserves for other benefits in the same policy but the mean reserve on any policy shall never be taken as less than one-half the valuation net premium. The majority of group accident and health policies are written in conjunction with group life or other policies. If these policies are an experience rated package, positive or favorable margins on one of the contracts can offset the need to establish additional reserves on the other contracts.

Additional Reserves (Premium Deficiency Reserves)

19. When the expected claims payments or incurred costs, claim adjustment expenses and administration costs exceed the premiums to be collected for the remainder of a contract period, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency, with a corresponding charge to operations. For purposes of determining if a premium deficiency exists, contracts shall be grouped in a manner consistent with how policies are marketed, serviced and measured. A liability shall be recognized for each grouping where a premium deficiency is indicated. Deficiencies shall not be offset by anticipated profits in other policy groupings. Such accruals shall be made for any loss contracts, even if the contract period has not yet started.

Claim Reserves

20. Claim reserves shall be accrued for estimated costs of future health care services to be rendered that the reporting entity is currently obligated to provide or reimburse as a result of premiums earned to date and that would be payable after the reporting date under the terms of arrangements, regulatory requirements or other requirements if the insured's or subscriber's illness or disability were to continue. It shall include a reserve for disability benefits covered under premium waiver provisions. For individual and group disability claims with a duration of less than two years, reserves may be based on the reporting entity's experience, if credible, or other methods, as appropriate. Generally, reserves for disability income

claims with durations of greater than two years shall be determined based on a tabular method using the age of the insured at the date of disablement, the number of months the insured already has been disabled, and the number of months remaining in the benefit period.

Reserve Recognition

21. The difference between the aggregate reserve for accident and health contracts at the beginning and end of the reporting period shall be reflected as the change in reserves in the summary of operations, except for any difference due to a change in valuation basis.

Change In Valuation Basis

22. A change in valuation basis shall be defined as a change in the interest rate, mortality and morbidity assumptions, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a new method and a specific transition that allows for grading.

Supplemental Benefits

23. In addition to the basic policy benefit, the contract may provide supplemental benefits. Supplemental benefits include, but are not limited to, accidental death benefits, dental and waiver of premium benefits. If the terms of the contract provide for these benefits, appropriate reserves shall be established in accordance with the applicable standards within the *Accounting Practices and Procedures Manual*.

Reserve Adequacy

24. As discussed in Appendix A-010, a prospective gross premium valuation is the ultimate test of the adequacy of a reporting entity’s accident and health reserves as of a given valuation date and shall be determined on the basis of unearned premium reserves, contract or additional reserves, claim reserves (including claim liabilities), and miscellaneous reserves combined; however, each component shall be computed separately.

Additional Reserves Not Included Elsewhere

25. Reserves for experience-rating refunds or the dividend liability in group policies are discussed in SSAP No. 66.

26. Additional actuarial or other liabilities are commonly held for such items as:

a. Surrender values in excess of reserves otherwise required or carried;

b. Additional reserves required based on asset adequacy analysis as discussed in Appendix A-822; and

c. Additional reserves for policies which contain conversion privileges or future contingent benefits.

Contracts Subject to Redetermination

27. This statement also applies to other contracts which are subject to redetermination such as Federal (and State) Groups – subject to rate adjustments through audits by the Office of Personnel Management (OPM). Reporting entities are required to give Federal Groups the lowest rates that are being charged to similar groups.

28. Amounts due from insureds or subscribers and amounts due to insureds or subscribers under contracts subject to redetermination meet the definitions of assets and liabilities as set forth in *SSAP No. 4—Assets and Nonadmitted Assets* and SSAP No. 5R, respectively.

29. Contract redeterminations shall be estimated based on the experience to date. The method used to estimate the liability shall be reasonable based on the reporting entity's procedures, and consistent among reporting periods. An examination of contract requirements in relation to the rates being charged and the current status of applicable audits (e.g., OPM, Centers for Medicare and Medicaid Services (or such other name that this entity shall be known as) and other Federal, state or government department) is a common method used to estimate such contract redeterminations.

30. Premium adjustments for contracts subject to redetermination are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Accrued premium adjustments shall be recorded as a write-in for other-than-invested assets, with a corresponding entry to premiums; accrued return premium adjustments shall be recorded as a liability with a corresponding entry to premiums.

31. If, in accordance with SSAP No. 5R, it is probable that the additional premium adjustment is uncollectible, any uncollectible premium shall be written off against operations in the period the determination is made and the disclosure requirements outlined in SSAP No. 5R shall be made.

32. Premium adjustments for contracts subject to redetermination shall be determined and billed or refunded in accordance with the policy provisions or contract provisions. If such premiums are not billed in accordance with the policy provisions or contract provisions, or the policy provisions or contract provisions do not address the due date of such premiums, the accrual shall be nonadmitted. This is consistent with the guidance for audit premiums established in SSAP No. 6.

Disclosures

33. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.); and

f. Total premium written.

34. Reporting entities shall disclose the relative percentage of participating insurance, the method of accounting for policyholder dividends, the amount of dividends, and the amount of any additional income allocated to participating policyholders in the financial statements.

35. If a premium deficiency reserve is established in accordance with paragraph 19, disclose the amount of that reserve. If a reporting entity utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the financial statements.

36. The financial statements shall disclose the method used by the reporting entity to estimate premium adjustments for contracts subject to redetermination. The amount of net premiums that are subject to such adjustments, as well as the corresponding percentage to total net premiums, shall be disclosed.

37. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

38. This statement incorporates the requirements of Appendices A-010, A-225, A-641, A-820, A-822 (as applicable), the Actuarial Standards Board *Actuarial Standards of Practice* and the actuarial guidelines found in Appendix C of this manual (as applicable).

39. This statement rejects *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* relating to accounting and reporting for individual and group accident and health contracts.

Effective Date and Transition

40. This statement is effective for years beginning January 1, 2001. Contracts issued prior to January 1, 2001 shall be accounted for based on the laws and regulations of the domiciliary state. State laws and regulations shall be understood to include anything considered authoritative by the domiciliary state under the individual state's statutory authority and due process procedures. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

Unpaid Claims, Losses, and Loss Adjustment Expenses

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for recording liabilities for unpaid claims and claim adjustment expenses for life insurance contracts and accident and health contracts and unpaid losses and loss adjustment expenses for property and casualty insurance contracts. This guidance applies equally to those entities with direct and reinsurance-assumed obligations. This statement applies to all insurance contracts as defined in *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (SSAP No. 50).

2. This statement does not address policy reserves for life and accident and health policies. These reserves are addressed in *SSAP No. 51—Life Contracts*, *SSAP No. 52—Deposit-Type Contracts*, *SSAP No. 54—Individual and Group Accident and Health Contracts* (SSAP No. 54), and *SSAP No. 59—Credit Life and Accident and Health Insurance Contracts.*

3. This statement does not address liabilities for punitive damages. These liabilities shall be recorded in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R).

SUMMARY CONCLUSION

4. Claims, losses, and loss/claim adjustment expenses shall be recognized as expenses when a covered or insured event occurs. In most instances, the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims made type policies, the covered or insured event is the reporting to the entity of the incident that gives rise to a claim. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event, and in order to recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income. Claims related extra contractual obligations losses and bad-faith losses shall be included in losses. See individual business types for the accounting treatment for adjustment expenses related to extra contractual obligations and bad-faith lawsuits.

5. The liability for unpaid LAE shall be established regardless of any payments made to third-party administrators, management companies or other entities except for capitated payments under managed care contracts. ~~The establishment of the liability for LAE gross of any amounts paid to these entities results in more meaningful financial statements in that the financial condition of the reporting entity is more appropriately stated. Further, the liability for claim adjustment expenses on indemnity accident and health contracts should be established in an amount necessary to adjust all unpaid claims irrespective of payments made to third-party administrators, etc. This supports the concept of consistency found in the Preamble to the *Accounting Practices and Procedures Manual,* as there is no overriding difference between unpaid LAE for property/casualty insurers and unpaid claim adjustment expenses of health entities. The applicability of guidance to managed care contracts.~~ The liability for claims adjustment expenses on non-capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments made to third-party administrators, etc. The liability for claims adjustment expenses on capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the exception that the liability is established net of capitated payments to providers.

Property/Casualty

6. The following are types of future costs relating to property and casualty contracts, as defined in SSAP No. 50, which shall be considered in determining the liabilities for unpaid losses and loss adjustment expenses:

a. Reported Losses: Expected payments for losses relating to insured events that have occurred and have been reported to, but not paid by, the reporting entity as of the statement date;

b. Incurred But Not Reported Losses (IBNR): Expected payments for losses relating to insured events that have occurred but have not been reported to the reporting entity as of the statement date. As a practical matter, IBNR may include losses that have been reported to the reporting entity but have not yet been entered to the claims system or bulk provisions. Bulk provisions are reserves included with other IBNR reserves to reflect deficiencies in known case reserves;

c. Loss Adjustment Expenses: Expected payments for costs to be incurred in connection with the adjustment and recording of losses defined in paragraphs 6.a. and 6.b. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage. Loss adjustment expenses can be classified into two broad categories: Defense and Cost Containment (DCC) and Adjusting and Other (AO):

i. DCC include defense[1], litigation, and medical cost containment expenses, whether internal or external. DCC include, but are not limited to, the following items:

(a) Surveillance expenses;

(b) Fixed amounts for medical cost containment expenses;

(c) Litigation management expenses;

(d) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by accident year;

(e) Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in defense of a claim, and fees or salaries for rehabilitation nurses, if such cost is not included in losses;

(f) Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and

(g) The cost of engaging experts;

[1] Legal defense costs incurred under the definition of covered damages or losses as the only insured peril would be accounted for as losses, while legal defense costs incurred under a duty to defend would be accounted for as Defense and Cost Containment (DCC). For policies where legal costs are the only insured peril, the insurer would record the legal costs that reimburse the policyholder as loss and, to the extent the insurer participated in the defense, would record its legal costs as DCC. This is not intended to change the classifications of legal expenses for existing long tailed lines of liability coverage, such as medical malpractice and workers' compensation insurance.

ii. AO are those expenses other than DCC as defined in (i) above assigned to the expense group "Loss Adjustment Expense". AO include, but are not limited to, the following items:

(a) Fees and expenses of adjusters and settling agents;

(b) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by calendar year;

(c) Attorney fees incurred in the determination of coverage, including litigation between the reporting entity and the policyholder;

(d) Fees and salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in the capacity of an adjuster; and

(e) Adjustment expenses arising from claims related lawsuits such as extra contractual obligations and bad faith lawsuits.

Life, Accident and Health

7. The following future costs relating to life and accident and health indemnity contracts, as defined in SSAP No. 50, shall be considered in determining the liability for unpaid claims and claim adjustment expenses:

a. Accident and Health Claim Reserves: Reserves for claims that involve a continuing loss. This reserve is a measure of the future benefits or amounts not yet due as of the statement date which are expected to arise under claims which have been incurred as of the statement date. This shall include the amount of claim payments that are not yet due such as those amounts commonly referred to as disabled life reserves for accident and health claims. The methodology used to establish claim reserves is discussed in SSAP No. 54.

b. Claim Liabilities for Life/Accident and Health Contracts:

i. Due and Unpaid Claims: Claims for which payments are due as of the statement date;

ii. Resisted Claims in Course of Settlement: Liability for claims that are in dispute and are unresolved on the statement date. The liability either may be the full amount of the submitted claim or a percentage of the claim based on the reporting entity's past experience with similar resisted claims;

iii. Other Claims in the Course of Settlement: Liability for claims that have been reported but the reporting entity has not received all of the required information or processing has not otherwise been completed as of the statement date;

iv. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as death, accident, or illness) but has not been reported to the reporting entity as of the statement date.

c. Claim Adjustment Expenses for Accident and Health Reporting Entities are those costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in paragraphs 7.a. and 7.b. Certain claim adjustment expenses reduce the number or cost of health services thereby resulting in lower premiums or lower premium increases. These claim adjustment expenses shall be classified as cost containment expenses.

d. Claim Adjustment Expenses for Life Reporting Entities: Costs expected to be incurred (including legal and investigation) in connection with the adjustment and recording of life claims defined in paragraph 7.b. This would include adjustment expenses arising from claims-related lawsuits such as extra contractual obligations and bad-faith lawsuits.

Managed Care

8. The following costs relating to managed care contracts as defined in SSAP No. 50 shall be considered in determining the claims unpaid and claims adjustment expenses:

a. Claims unpaid for Managed Care Reporting Entities:

i. Unpaid amounts for costs incurred in providing care to a subscriber, member or policyholder including inpatient claims, physician claims, referral claims, other medical claims, resisted claims in the course of settlement and other claims in the course of settlement;

ii. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as an accident, illness or other service) but has not been reported to the reporting entity as of the statement date;

iii. Additional unpaid medical costs resulting from failed contractors under capitation contracts and provision for losses incurred by contractors deemed to be related parties for which it is probable that the reporting entity will be required to provide funding;

b. Claim Adjustment Expenses for Managed Care Reporting Entities are those costs expected to be incurred in connection with the adjustment and recording of managed care claims defined in paragraph 8.a. Certain claim adjustment expenses reduce the number or cost of health services thereby resulting in lower premiums or lower premium increases. These claim adjustment expenses shall be classified as cost containment expenses.

c. Liabilities for percentage withholds (“withholds”) from payments made to contracted providers;

d. Liabilities for accrued medical incentives under contractual arrangements with providers and other risk-sharing arrangements whereby the health entity agrees to share savings with contracted providers.

Managed Care and Accident and Health

9. Claim adjustment expenses for accident and health contracts and managed care contracts (identified in paragraphs 7.c. and 8.b.), including legal expenses, can be subdivided into cost containment expenses and other claim adjustment expenses:

a. Cost containment expenses: Expenses that actually serve to reduce the number of health services provided or the cost of such services. The following are examples of items that shall be considered “cost containment expenses” only if they result in reduced levels of costs or services:

i. Case management activities;

ii. Utilization review;

iii. Detection and prevention of payment for fraudulent requests for reimbursement;

iv. Network access fees to Preferred Provider Organizations and other network-based health plans (including prescription drug networks), and allocated internal salaries and related costs associated with network development and/or provider contracting;

v. Consumer education solely relating to health improvement and relying on the direct involvement of health personnel (this would include smoking cessation and disease management programs, and other programs that involve hands on medical education); and

vi. Expenses for internal and external appeals processes.

b. Other claim adjustment expenses: Claim adjustment expenses as defined in paragraph 7.c. or 8.b. that are not cost containment expenses. Examples of other claim adjustment expenses are:

i. Estimating the amounts of losses and disbursing loss payments;

ii. Maintaining records, general clerical, and secretarial;

iii. Office maintenance, occupancy costs, utilities, and computer maintenance;

iv. Supervisory and executive duties; and

v. Supplies and postage.

vi. This would include adjustment expenses arising from claims-related lawsuits such as extra contractual obligations and bad-faith lawsuits.

General

10. The liability for claim reserves and claim liabilities, unpaid losses, and loss/claim adjustment expenses shall be based upon the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and any other factors that would modify past experience. These liabilities shall not be discounted unless authorized for specific types of claims by specific SSAPs, including SSAP No. 54 and *SSAP No. 65—Property and Casualty Contracts*.

11. Various analytical techniques can be used to estimate the liability for IBNR claims, future development on reported losses/claims, and loss/claim adjustment expenses. These techniques generally consist of statistical analysis of historical experience and are commonly referred to as loss reserve projections. The estimation process is generally performed by line of business, grouping contracts with like characteristics and policy provisions. The decision to use a particular projection method and the results obtained from that method shall be evaluated by considering the inherent assumptions underlying the method and the appropriateness of those assumptions to the circumstances. No single projection method is inherently better than any other in all circumstances. The results of more than one method should be considered.

12. For each line of business and for all lines of business in the aggregate, management shall record its best estimate of its liabilities for unpaid claims, unpaid losses, and loss/claim adjustment expenses. Because the ultimate settlement of claims (including IBNR for death claims and accident and health

claims) is subject to future events, no single claim or loss and loss/claim adjustment expense reserve can be considered accurate with certainty. Management's analysis of the reasonableness of claim or loss and loss/claim adjustment expense reserve estimates shall include an analysis of the amount of variability in the estimate. If, for a particular line of business, management develops its estimate considering a range of claim or loss and loss/claim adjustment expense reserve estimates bounded by a high and a low estimate, management's best estimate of the liability within that range shall be recorded. The high and low ends of the range shall not correspond to an absolute best-and-worst case scenario of ultimate settlements because such estimates may be the result of unlikely assumptions. Management's range shall be realistic and, therefore, shall not include the set of all possible outcomes but only those outcomes that are considered reasonable. Management shall also follow the concept of conservatism included in the Preamble when determining estimates for claims reserves. However, there is not a specific requirement to include a provision for adverse deviation in claims.

13. In the rare instances when, for a particular line of business, after considering the relative probability of the points within management's estimated range, it is determined that no point within management's estimate of the range is a better estimate than any other point, the midpoint within management's estimate of the range shall be accrued. It is anticipated that using the midpoint in a range will be applicable only when there is a continuous range of possible values, and no amount within that range is any more probable than any other. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine its best estimate of the liability.

14. If a reporting entity chooses to anticipate salvage and subrogation recoverables (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), the recoverables shall be estimated in a manner consistent with paragraphs 10-12 of this statement and shall be deducted from the liability for unpaid claims or losses. If a reporting entity chooses to anticipate coordination of benefits (COB) recoverables of Individual and Group Accident and Health Contracts, the recoverables shall be estimated in a manner consistent with paragraphs 10-12 of this statement and shall be deducted from the liability for unpaid claims or losses. A separate receivable shall not be established for these recoverables. In addition, these recoverables are also subject to the impairment guidelines established in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) and an entity shall not reduce its reserves for any recoverables deemed to be impaired.

15. Changes in estimates of the liabilities for unpaid claims or losses and loss/claim adjustment expenses resulting from the continuous review process, including the consideration of differences between estimated and actual payments, shall be considered a change in estimate and shall be recorded in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). SSAP No. 3 requires changes in estimates to be included in the statement of operations in the period the change becomes known. This guidance also applies to the period subsequent to the March 1 filing deadline for annual financial statements through the filing deadline of June 1 for audited annual financial statements.

Disclosures

16. The financial statements shall include the following disclosures for each year full financial statements are presented. The disclosure requirement in paragraph 16.d. is also applicable to the interim financial statements if there is a material change from the amounts reported in the annual filing. Life and annuity contracts are not subject to this disclosure requirement.

a. The balance in the liabilities for unpaid claims and unpaid losses and loss/claim adjustment expense reserves at the beginning and end of each year presented;

b. Incurred claims, losses, and loss/claim adjustment expenses with separate disclosures of the provision for insured or covered events of the current year and increases or decreases in the provision for insured or covered events of prior years;

c. Payments of claims, losses, and loss/claim adjustment expenses with separate disclosures of payments of losses and loss/claim adjustment expenses attributable to insured or covered events of the current year and insured or covered events of prior years;

d. The reasons for the change in the provision for incurred claims, losses, and loss/claim adjustment expenses attributable to insured or covered events of prior years. The disclosure should indicate whether additional premiums or return premiums have been accrued as a result of the prior-year effects;

e. A summary of management's policies and methodologies for estimating the liabilities for losses and loss/claim adjustment expenses, including discussion of claims for toxic waste cleanup, asbestos-related illnesses, or other environmental remediation exposures;

f. Disclosure of the amount paid and reserved for losses and loss/claim adjustment expenses for asbestos and/or environmental claims, on a direct, assumed and net of reinsurance basis (the reserves required to be disclosed in this section shall exclude amounts relating to policies specifically written to cover asbestos and environmental exposures). Each company should report only its share of a group amount (after applying its respective pooling percentage) if the company is a member of an intercompany pooling agreement; and

g. Estimates of anticipated salvage and subrogation (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), deducted from the liability for unpaid claims or losses.

17. All reporting entity types are required to disclose the dollar amount of any claims/losses related to extra contractual obligation lawsuits or bad faith lawsuits paid during the reporting period on a direct basis. The number of such claims paid shall be disclosed in a note.

18. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

19. Although FASB *Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60), is rejected in SSAP No. 50, this statement is consistent with the guidance provided for the recognition of claim costs in FAS 60 with the exception of the statutory requirement to accrue the midpoint of a range of loss or loss adjustment expense reserve estimates when no point within management's continuous range of reasonably possible estimates is determined to be a better estimate than any other point.

20. This statement also rejects *AICPA Statement of Position 92-4, Auditing Insurance Entities' Loss Reserves.*

21. Guidance in paragraphs 7.c., 8.b. and 9 was incorporated from SSAP No. 85. SSAP No. 85 was issued in 2002 to amend SSAP No. 55 and provide clarification regarding what costs should be classified as claim adjustment expenses on accident and health contracts. In August 2011, SSAP No. 85 was nullified and the guidance was incorporated into this SSAP. *Issue Paper No. 116—Claim Adjustment Expenses, Amendments to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* provides historical reference on the original guidance included in SSAP No. 55 as well as the revisions originally reflected in SSAP No. 85.

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. Guidance reflected in paragraphs 7.c., 8.b. and 9, incorporated from SSAP No. 85, is effective for years ending on and after December 31, 2003. The guidance incorporated into paragraphs 1, 3, 6.c.ii., 7.d. and 9.b.vi. was originally included in *INT 03-17: Classification of Liabilities from Extra Contractual Obligation Lawsuits*, and was initially effective March 10, 2004. The guidance in paragraph 5 was previously included in *INT 02-21: Accounting for Prepaid Loss Adjustment Expenses and Claim Adjustment Expenses* effective for reporting periods ending on or after December 31, 2002, for all contracts except for capitated managed care contracts and December 31, 2006, for capitated managed care contracts. The guidance in paragraph 14 related to coordination of benefits was originally contained within *INT 00-31: Application of SSAP No. 55 Paragraph 12 to Health Entities* and was effective December 4, 2000. The guidance reflected in footnote 1, incorporated from *INT 06-14: Reporting of Litigation Costs Incurred for Lines of Business in which Legal Expenses Are the Only Insured Peril*, was effective June 2, 2007.

Separate Accounts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for accounting and reporting for separate accounts in both the general account and separate account statements.

SUMMARY CONCLUSION

Introduction

2. Separate accounts are used to fund variable life insurance, variable annuities, modified guaranteed annuities and modified guaranteed life insurance, or various group contracts under pension or other employee benefit plans where funds are held in a separate account to support a liability. When separate accounts are established and filed accordingly, they may be used to fund guaranteed benefits. Separate account contracts may also be used to accumulate funds which are intended to be applied at some later time to provide life insurance or to accumulate proceeds applied under settlement or dividend options.

3. Assets held in separate accounts are owned by the insurer. All investment income and realized and unrealized capital gains and losses from assets allocated to a separate account, net of related investment expenses, are generally reflected in the separate account and, except for modified guaranteed annuities, modified guaranteed life insurance, and separate accounts established and filed to provide guaranteed benefits, investment performance is generally not guaranteed by the insurer. Charges relating to contract guarantees, administration, and investment management are deducted from separate accounts.

General Account Reporting

4. Insurance activities such as sales, underwriting and contract administration, premium collection and payment of premium taxes, claims, and benefits are functions of the insurance company distinct from the separate account and shall be accounted for as transactions of the general account.

5. For those separate account contracts classified as life contracts under *SSAP No. 50—Classification and Definitions of Insurance or Managed Care Contracts In Force,* premiums and annuity considerations shall be recorded as income in the Summary of Operations of the general account, and as transfers to premiums and considerations in the separate account statement. Deposit-type contracts shall be recorded in the general account in accordance with *SSAP No. 52—Deposit-Type Contracts*.(INT 00-03) Charges (e.g., fees associated with investment management, administration, and contract guarantees) assessed on the separate accounts, as well as the net gain from operations of the separate account, shall be recorded as income in the Summary of Operations of the general account. Expenses relating to investment management, administration, and contract guarantees pertaining to separate account operations, as well as benefits and surrenders incurred on behalf of separate account contracts classified as life contracts, net transfers between separate accounts, commissions, and premium taxes (if any) shall be recorded as expenses in the Summary of Operations of the general account.

6. The general account shall include the total assets and liabilities, including transfers due or accrued, of any separate accounts business which it maintains and, therefore, the surplus, if any, of its separate accounts business. Transfers to the general account due or accrued shall be reported on a net basis so that the asset and the liability totals of the general account are not overstated. Changes in the surplus of the separate accounts business of an insurer, except for changes resulting from the net gain from operations of the separate account, shall be charged or credited directly to the unassigned funds (surplus) of the general account.

7. Where a variable annuity contract or variable life insurance contract contains a guaranteed minimum death benefit, any reserve liability for such death benefit provision shall be recorded and held in the general account based on the reserving guidance in paragraphs 25 and 26. Any differences between the benefit paid and the separate account asset value of the contract shall be charged against or credited to the general account in its net gain from operations.

8. Separate account surplus may not become negative. For example, for separate account contracts which have annuitized (i.e., contracts in the payout stage), lower than expected mortality on variable annuity contracts containing mortality guarantees may cause a deficiency in the investment funds underlying the contract reserves. Thus the general account incurs an expense and the separate account realizes revenue to cover the deficiency, if necessary. Conversely, excess funds from higher than expected mortality will result in mortality gains, which are included in the Summary of Operations of the separate account and are ultimately recorded as equity in net income from separate account operations as discussed in paragraph 5.

9. Separate account surplus created through the use of the commissioners' reserve valuation method (CRVM), commissioners' annuity reserve valuation method (CARVM), or other reserving methods, shall be reported by the general account as an unsettled transfer from the separate account. The net change on such transfers shall be included as a part of the net gain from operations in the general account.

10. Surplus funds transferred from the general account to the separate account, commonly referred to as seed money, and earnings accumulated thereon shall be reported as surplus in the separate accounts until transferred or repatriated to the general account. The transfer of such funds between the separate account and the general account shall be reported as surplus contributed or withdrawn during the year.

11. If an Asset Valuation Reserve (AVR) is required for investments held by separate accounts, it is combined with the general account AVR and accounted for in the general account financial statements (see *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*). The criteria for determining when an AVR is required for separate accounts are described in paragraph 18 of this statement.

12. Reporting entities collect fees for managing Separate Account Guaranteed Investment Contracts (GICs), Synthetic GICs, as well as participating separate account group annuities. These are in the form of administrative fees, risk fees and some investment management fees. For defined contribution business, these are in the form of fees related to mutual fund management. These fees are meant to offset expenses and generate some profit.

13. Amounts receivable from contractholders for separate account management fees meet the definition of assets as set forth in *SSAP No. 4—Assets and Nonadmitted Assets*.

14. An evaluation shall be made of the amounts receivable to determine any nonadmitted amounts. Next, an evaluation shall be made in accordance with *SSAP No. 5R—Liabilities, Contingencies and* Impairments *of Assets* (SSAP No. 5R), to determine whether there is an impairment. This two step process is set forth below:

a. Uncollected separate account management fees receivable over ninety days due shall be accounted for as a nonadmitted asset. Reporting entities shall begin aging the receivable when it is contractually required to be billed, or in the absence of contract specifications, when the reporting entity actually sends the bill to the contractholder;

b. Remaining amounts determined to be uncollectible shall be written off. If in accordance with SSAP No. 5R, it is "probable" the amount receivable is uncollectible, any uncollectible amount receivable shall be written off against operations in the period such determination is made. If it is "reasonably possible" the amount receivable is uncollectible, the disclosure requirements outlined in SSAP No. 5R paragraph 27 shall be made.

Separate Account Reporting

15. The separate accounts annual statement is concerned with the flow of funds related to investment activities and obligations of the separate accounts and with the transfer of funds between the separate account and the general account. As a result, the separate account statement shall report only the assets, liabilities, and operations of the separate account and shall not include general account expenses related to investment management, administration, or contract guarantees pertaining to separate account operations which are recorded in the general account.

16. The separate account records premiums, considerations (net of loading for sales charges such as commissions and premium taxes) and receipts (other than for net investment income and realized capital gains and losses) as income transfers from the general account. Net investment income and realized and unrealized capital gains and losses relating to the investment operations of the separate account are recorded as income in the Summary of Operations. When the contract provides for such, expenses and taxes associated with the separate account investment operations shall be deducted in the determination of net investment income. Deposits and withdrawals on deposit-type contracts shall be recorded in the Summary of Operations. Benefits and surrenders, reserve transfers, policy loans, policyholder charges (e.g., fees associated with investment management, administration, and contract guarantees), and federal income taxes relating to the separate account are recorded as expense transfers to the general account in the Summary of Operations. The net change in aggregate reserves relating to separate account contracts is reported as an expense in the Summary of Operations.

17. Assets supporting fund accumulation contracts (GICs), which do not participate in underlying portfolio experience, with a fixed interest rate guarantee, purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer, will be recorded as if the assets were held in the general account. Assets supporting all other contractual benefits shall be recorded at fair value on the date of valuation, or if there is no readily available market, then in accordance with the valuation procedures in the applicable contract.

Separate Account AVR and IMR Reporting

18. An AVR is generally required for separate accounts when the insurer, rather than the policyholder/contractholder, suffers the loss in the event of asset default or fair value loss. An AVR is required unless:

a. The asset default or fair value risk is borne directly by the policyholders; or

b. The regulatory authority for such separate accounts already explicitly provides for a reserve for asset default risk, where such reserves are essentially equivalent to the AVR.

19. Assets supporting traditional variable annuities and variable life insurance generally do not require an AVR because the policyholders/contractholders bear the risk of change in the value of the assets. However, an AVR is required for that portion of the assets representing the insurer's equity interest in the investments of the separate account (e.g., seed money).

20. Assets supporting typical modified guaranteed contracts, market value adjusted contracts, and contracts with book value guarantees similar to contracts generally found in the general account do require an AVR because the insurer is responsible for credit related asset or fair value loss.

21. Certain separate accounts are also required to maintain an Interest Maintenance Reserve (IMR). The IMR requirements for investments held in separate accounts are applied on an account by account

basis. If an IMR is required for a separate account, all of the investments in that separate account are subject to the requirement. If an IMR is not required for a separate account, none of the investments in that separate account are subject to the requirement.

22. An IMR is required for separate accounts with assets recorded at book value, but is not required for separate accounts with assets recorded at fair value. For example, separate accounts for traditional variable annuities or variable life insurance do not require an IMR because assets and liabilities are valued at fair value.

23. If an IMR is required for investments held by separate accounts, it is kept separate from the general account IMR and accounted for in the separate accounts statement.

24. The AVR and IMR shall be calculated and reported in accordance with the NAIC *Annual* Statement Instructions *for Life, Accident and Health Insurance Companies*.

Policy Reserves

25. Statutory policy reserves shall be established for all contractual obligations of the insurer arising out of the provisions of the insurance contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. These statutory policy reserves are generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. Statutory policy reserves meet the definition of liabilities as defined in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5R.

26. The reserving methodologies and assumptions used in computation of policy reserves shall also meet the provisions of Appendices A-200, A-250, A-270, A-255, A-585, A-588, A-620, A-695, A-820, A-822 and the actuarial guidelines found in Appendix C of this Manual. Where separate account contracts have guaranteed elements, the basis for determining the value of the liability shall be consistent with the basis used for asset values (i.e., valuation interest rates as defined in Appendix A-820 shall be used when assets are recorded as if held in the general account and current interest rates based on market rates shall be used when assets are recorded at fair value). Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

27. Statutory policy reserves for those group annuity contracts or other contracts that, in whole or in part, establish the insurer's obligations by reference to a segregated portfolio of assets not owned by the insurer shall be established in accordance with the guidance in Appendix A-695. Statutory policy reserves for those contracts with nonlevel premiums or benefits, or contracts with secondary guarantees shall be established in accordance with the guidance in Appendix A-830. Statutory policy reserves for those group life contracts utilizing a separate account that meet the requirements outlined in paragraph 1 of Appendix A-200 shall be computed in accordance with the guidance in that appendix.

Other Liabilities

28. The separate account shall accrue as a liability, subject to contractual provisions, amounts payable, including, but not limited to:

a. Fees associated with investment management, administration, and contract guarantees;

b. Investment expenses;

c. Investment taxes, licenses, and fees (Investment taxes such as real estate taxes, licenses and fees (excluding federal income taxes) are usually paid directly by the separate account but may be transferred to the general account for payment);

d. Federal income taxes;

e. Unearned investment income;

f. Net transfer due to (from) the general account;

g. Remittances and items not allocated;

h. Payable for investments purchased;

i. Net adjustments in assets and liabilities due to foreign exchange rates.

Seed Money

29. When a new separate account is initiated, the insurer may make a temporary transfer of surplus funds commonly referred to as seed money to the separate account. Such funds and earnings accumulated thereon shall be reported as surplus in the separate accounts statement until transferred or repatriated to the general account. The transfer of such funds to and from the separate account shall be reported as surplus contributed or withdrawn during the year.

Disclosures

30. Paragraphs 31-34 detail the separate account disclosure requirements that shall be included within the Life, Accident and Health Annual Statement Blank. Paragraphs 35-38 detail the separate account disclosure requirements that shall be included within the Separate Account Annual Statement Blank.

31. The general account financial statement shall include detailed information on the reporting entity's separate account activity. These disclosures shall include:

a. A narrative of the general nature of the reporting entity's separate account business.

b. Identification of the separate account assets that are legally insulated from the general account claims.

c. Identification of the separate account products that have guarantees backed by the general account. This shall include:

i. Identification of the total maximum guarantee for separate account products as of the reporting date;

ii. Amount of risk charges paid by the separate account to the general account for the past five (5) years[1] as compensation for the risk taken by the general account; and

iii. Amount paid by the general account due to separate account guarantees during the past five (5) years.

[1] Reporting entities are permitted to prospectively 'build' the five-year disclosure. Thus, upon the first year of application of the disclosure requirements, reporting entities should illustrate one year of the disclosure requirement. In the second year, the reporting entity would disclose two years, and so forth until the disclosure includes five years of disclosures.

d. Discussion of securities lending transactions within the separate account, separately including the amount of any loaned securities within the separate account, and if policy and procedures for the separate account differ from the general account.

32. For each grouping (as detailed in paragraph 33), the following shall be disclosed:

a. Premiums, considerations or deposits received during the year;

b. Reserves by the valuation basis of the investments supporting the reserves at the financial statement date. List reserves for separate accounts whose assets are carried at fair value separately from those whose assets are carried at amortized cost/book value;

c. Reserves by withdrawal characteristics, ~~i.e.,~~including whether or not the separate account is subject to discretionary withdrawal. For reserves subject to discretionary withdrawal, the below categories are included if applicable:

i. With ~~or~~ market value adjustment;

ii. ~~or to withdraw~~ at book value without market value adjustment and with surrender charge of 5% or more;

iii. at fair value;

iv. at book value without market value adjustment and with ~~or without~~ surrender charge of less than 5%;

d. Reserves for asset default risk, as described in paragraph 18.b., that are recorded in lieu of AVR.

33. For the disclosures required in paragraph 32, separate accounts shall be addressed in the following groupings (which are the same as those used for risk-based capital):

a. Separate Accounts with Guarantees:

i. Indexed separate accounts, which are invested to mirror an established index which is the basis of the guarantee;

ii. Nonindexed separate accounts, with reserve interest rate at no greater than 4% and/or fund long-term interest guarantee in excess of a year that does not exceed 4%;

iii. Nonindexed separate accounts, with reserve interest rate at greater than 4% and/or fund long-term interest guarantee in excess of a year that exceeds 4%.

b. Nonguaranteed Separate Accounts—Variable separate accounts, where the benefit is determined by the performance and/or fair value of the investments held in the separate account. Include variable accounts with incidental risks, nominal expense, and minimum death benefit guarantees.

34. Provide a reconciliation of the amount reported as transfers to and from separate accounts in the Summary of Operations of the separate accounts statement and the amount reported as net transfers to or from separate accounts in the Summary of Operations of the general accounts statement.

35. The Separate Account Annual Statement Blank shall include detailed information on the characteristics of the separate account assets, specifically categorizing separate account assets in accordance with the following characteristics:

a. Identification of separate account assets that are legally insulated from the general account and those which are not legally insulated.

b. Amount of separate account assets that represent seed money, other fees and expenses due to the general account, and additional required surplus amounts.[2] This disclosure shall include the amount of seed money and other fees and expenses currently included in the separate account, as well as the amount of seed money received and repaid to the general account during the current year. This disclosure shall also include information on insulation (if applicable)[3], the time duration for which seed money and other fees and expenses due the general account are retained in the separate account, and information on how whether seed money is invested pursuant to general account directives or in accordance with stated policies and procedures.

c. Identification of the separate account assets in which the investment directive is not determined by a contractholder. (In most instances, having multiple investment choices at the option of a contractholder would be considered a situation in which the investment directive is determined by a contractholder. This is not true for situations in which the asset is invested in a manner that mirrors the investment directives of the general account.) Situations in which the investment directive is not determined by the contractholder (and situations in which the reporting entity is the contractholder) shall include disclosure regarding whether the investments of the respective separate account assets, if included within the general account investments, would have resulted with the reporting entity exceeding any investment limitations imposed on the general account.

d. Identification of the separate account assets in which less than 100% of investment proceeds are attributed to a contractholder. This shall include identification of the separate account investment income attributed to the reporting entity during the reporting period and whether such income was transferred to the general account or reinvested within the separate account. Instances in which such income is reinvested within the separate account shall include disclosure on whether the subsequent investments, if categorized with investments in the general account, would have exceeded investment limitations imposed on the general account.

36. For all separate account assets not reported at fair value, indicate the measurement basis (amortized cost or other method) for each asset (or asset class) and whether the measurement method was grandfathered in under the transition guidance in this SSAP, or whether the measurement method is allowed under a prescribed or permitted practice. This disclosure shall include a comparison of the assets' reported value to fair value with identification of the resulting unrealized gain/loss that would have been recorded if the assets had been reported at fair value.

37. For all separate accounts that include securities lending transactions, disclose the reporting entity's use and policy of securities lending within the separate account, including the amount of loaned securities from the separate account at the reporting date, the percentage of separate account assets lent as of that date, a description for which type of accounts (e.g., book value accounts, market value account

[2] Additional Required Surplus Amounts is defined as additional or permanent surplus that is required to be retained in the separate account in accordance with state law or regulations. These amounts should not include reinvested separate account investment proceeds that have not been allocated to separate account contract holders.

[3] As seed money is considered a temporary transfer of funds, it is generally not considered insulated.

accounts) are lent, if the separate account policyholder is notified or approves of such practices, the policy for requiring collateral, whether the collateral is restricted and the amount of collateral for transactions that extend beyond one year from the reporting date. This disclosure requires the entity to provide the following information as of the date of the statement of financial position: (1) the aggregate amount of contractually obligated open collateral positions (aggregate amount of securities at current fair value or cash received for which the borrower may request the return of on demand) and the aggregate amount of contractually obligated collateral positions under 30-day, 60-day, 90-day, and greater than 90-day terms, (2) the aggregate fair value of all securities acquired from the sale, trade and use of the accepted collateral (reinvested collateral), and (3) information about the sources and uses of that collateral.

38. Identify all products reported as a separate account product under statutory accounting principles and identify whether each product was classified differently under GAAP. For products that resulted with different classifications between GAAP and SAP, identify the characteristic(s) of the product that prevented it from receiving a separate account classification under GAAP. This disclosure is applicable for all reporting entities. Thus, if GAAP financial statements were not filed, the reporting entity should complete this disclosure as if GAAP financials had been completed.

39. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

40. This statement rejects AICPA *Statement of Position 03-1, Accounting and Reporting by* Insurance Enterprises *for Certain Nontraditional Long-Duration Contracts and for Separate Accounts* (SOP 03-1). The disclosure elements included within this SSAP are derived from the criteria for separate account reporting under SOP 03-1; however, this SSAP does not restrict separate account reporting pursuant to the criteria established in SOP 03-1.

41. This statement incorporates the requirements of Appendices A-200, A-250, A-255, A-270, A-585, A-588, A-620, A-695, A-812, A-820, A-821, A-822 the Actuarial Standards Board *Actuarial Standards of Practice*, and the actuarial guidelines found in Appendix C of this Manual.

Effective Date and Transition

42. This statement is effective for years beginning January 1, 2001. Contracts with assets held in a Separate Account that were issued in accordance with applicable state laws and regulations and issued prior to that effective date, for which assets and liabilities have been recorded using a consistent basis since issue, i.e., both assets and liabilities are recorded either as if in the general account ("book value") or as at fair value (current interest rates based on market rates shall be used for liabilities when assets are recorded at fair value), shall continue to be recorded using such basis until such time as the applicable contract terms or provisions are substantially changed, such as by a contract amendment modifying interest rate or withdrawal provisions. State laws and regulations shall be understood to include anything considered authoritative by the domiciliary state under the individual state's statutory authority and due process procedures. Changes that do not require change in the basis of recording would include: address changes, continued deposits, and other non-substantive changes such as these. For example, additional funds received after January 1, 2001 under contracts issued prior to January 1, 2001 may continue to be recorded using the basis in effect prior to January 1, 2001 until such time as a triggering change is made. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

43. Disclosure revisions adopted in September 2009 to paragraphs 30-38 shall initially be reported within the 2010 annual financial statements, with annual reporting thereafter.

GLOSSARY

Guarantee

Represents an insurance company's general account contractual obligation to reimburse life insurance and annuity policyholders for their separate account investment losses including the return of principal, minimum crediting rates, minimum death, withdrawal, accumulation of income benefits and no-lapse guarantees, and for separate account mortality losses.

Total Maximum Guarantee

Is the difference between the total amount of liability the general account is subject to reimbursing as at the balance sheet date and the policyholder's contract value referenced by the guarantee (e.g., account value). For guarantees in the event of death, it is the minimum guaranteed amount available to the contractholder upon death in excess of the contractholder's contract value referenced by the guarantee (e.g., account balance) at the balance sheet date. For guarantees of amounts at annuitization, it is the present value of the minimum guaranteed annuity payments available to the contractholder determined in accordance with the terms of the contract in excess of the contract value referenced by the guarantee (e.g., account balance).

Insulation

The legal protection of separate account assets equal to the reserves and supporting contract liabilities from the general account liabilities of the insurance enterprise ensuring that the separate account contract holder is not subjected to insurer default risk to the extent of their assets held in the separate account.

Risk Charge

The contractual amount the general account charges the separate account policyholders’ account for compensation relating to the general account’s guarantee on separate account assets or contract performance.

Title Insurance

SCOPE OF STATEMENT

1. Title insurance insures that the policyholder has title to the property on the subject real estate as of the date of policy issuance, subject to exceptions and exclusions in the policy. When issued, a title policy has a one-time premium and reserves are established by the title insurance company. Title insurance differs from other lines of property and casualty insurance because its basic goal is risk elimination.

2. This statement establishes statutory accounting principles for title insurance and addresses areas where title insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement, title insurance accounting shall comply with statutory accounting guidance for other lines of property and casualty insurance.

SUMMARY CONCLUSION

General

3. Title insurers perform many services in connection with the transfer of real estate; however, their principal function involves insuring, guaranteeing, or indemnifying owners of real property or the holders of liens or encumbrances thereon against loss or damage due to defective titles, liens, or encumbrances or, in most states, the unmarketability of the title.

4. In addition to insuring against defective records or examination of those records, an insurer insures against "non-record defects" such as:

a. Forgeries;

b. Fraud;

c. Confusion of name in change of title;

d. Incompetence (minors or persons of unsound mind);

e. Mistakes in public records;

f. Undisclosed or missing heirs;

g. Instruments executed under a fabricated or expired power of attorney;

h. Deeds delivered after death of grantor or grantee or without the consent of the grantor;

i. Deeds by persons supposedly single but actually married;

j. Wills not probated;

k. Liens against property (e.g., mechanics liens and tax liens);

l. Falsified records.

5. Before a title insurance policy is issued, the title insurer, or its agent, must search and examine public records concerning the ownership, liens, and encumbrances on the subject real estate together with information relating to persons having an interest in the real property as well as maps and other records to determine that title to the property is insurable, or defects can be overcome.

Premium Revenue and Loss Reserve Recognition

6. A variety of services are generally provided (either by the title insurance underwriter, its agent, or others) in connection with the transfer of title to real estate. Title insurance premiums frequently are determined in the rate-making process based on the bundle of services provided, including some or all of title search and examination and closing or escrow fees~~, referred to as “Gross All-Inclusive” premiums~~. By statute or custom, certain states exclude a combination of title search, ~~and~~ examination and closing or escrow fees from the rate-making process for title insurance premiums~~, referred to as “Gross Risk Rate” premiums~~. Premiums shall be recorded at the date of policy issuance, on a gross~~either the Gross All-Inclusive or Gross Risk Rate~~ premium basis, consistent with the rate-making method used. The premium related to a title insurance policy is due upon the effective date of the insurance and is not refundable. The term of a title insurance policy is indefinite because the policyholder is insured for as long as he or his heirs or devisees have an interest in the property.

7. Amounts paid to or retained by agents shall be reported as an expense.

8. A liability shall be established for all known unpaid claims and loss adjustment expenses (known claims reserve) with a corresponding charge to income. The known claim reserve is further detailed in the Title Annual Statement Operations and Investment Exhibit on Unpaid Losses and Loss Adjustment Expenses. The known claims reserve should be the estimated costs to settle reported claims based upon the most current information available to the company as of the balance sheet date. This amount cannot be less than the aggregate of the individual case reserves.

9. Premium revenue shall be deferred to the extent necessary to maintain a Statutory or Unearned Premium Reserve (SPR or UPR) determined in accordance with the reserve section of Appendix A-628.

10. If the actuarially determined liability (the sum of the known claims reserve, IBNR claims reserve, and loss adjustment expense reserve) exceeds the sum of the known claims reserve and SPR or UPR, a supplemental reserve shall be established that is equal to the difference between these sums. This calculation is explicitly detailed in the Title Annual Statement Operations and Investment Exhibit for Unpaid Losses and Loss Adjustment Expenses..

11. The actuarially determined liability for the sum of known claims reserve required in paragraph 8 and the IBNR claims and loss adjustment expenses required in paragraph 10 of this statement shall be determined consistently with the guidance detailed in *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* and consistent with paragraph 13 of this statement.

12. Assets acquired in settlement of claims (e.g., mortgages and real estate) shall be accounted for consistent with the guidance related to the asset acquired. For example, an impaired loan shall be accounted for in accordance with *SSAP No. 37—Mortgage Loans*, and real estate acquired in foreclosure shall be accounted for in accordance with *SSAP No. 40R—Real Estate Investments*.

Salvage and Subrogation

13. Salvage and subrogation shall be reflected as follows:

a. Paid losses shall be reported net of realized, but not anticipated, salvage and subrogation. Case basis loss and loss adjustment expense reserves shall not be reduced for anticipated salvage and subrogation, nor shall an asset be established;

b. Paid salvage and subrogation is not realized until a salvage asset or an actual payment pursuant to a subrogation right is in the direct control of the insurer and admissible as an asset for statutory reporting purposes in its own right;

c. Salvage assets and payments pursuant to a subrogation right shall be recorded at current fair value. Current fair value of real estate shall be established through an appraisal conducted by a qualified independent appraiser;

d. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount less than the value at which it was originally placed on the books of the insurer, then the loss on disposition shall be treated as a decrease in paid salvage (same effect as an addition to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation will be treated as a loss on disposition or change in value of an asset, and shall not be deducted from the salvage on the corresponding claim;

e. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount greater than the value at which it was originally placed on the books of the insurer, then the gain on disposition shall be treated as an increase in paid salvage (same effect as a deduction to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation shall be treated as a gain on disposition or change in value of an asset and shall not be added to the salvage on the corresponding claim;

f. In completing Schedule P and Part 3B, IBNR reserves may make an actuarially determined provision for the expected value of future salvage and subrogation on open claims and IBNR claims.

Reinsurance

14. Although by their nature, title claims relate to errors or omissions that occurred prior to the inception of the reinsurance agreement, title reinsurance contracts shall be accounted for as prospective reinsurance agreements if they meet all of the other criteria established in *SSAP No. 62R—Property and Casualty Reinsurance*.

Allocation of Expenses

15. This statement establishes uniform allocation rules to classify title insurance expenses within prescribed principal groupings. It is necessary to allocate those expenses which may contain characteristics of more than one classification, which this statement will refer to as allocable expenses.

16. Allocable expenses for title insurance companies shall be classified into the following categories on the expense section of the Operations and Investment Exhibit of the annual statement.

a. Title and Escrow Operating Expenses—Title and escrow operating expenses consist of all expenses incurred in relation to engaging in the business of title insurance, including costs associated with the following: (i) issuing or offering to issue a title insurance policy; (ii) soliciting or negotiating the issuance of a title insurance policy; (iii) guaranteeing, warranting or otherwise insuring the correctness of title searches affecting title to real property; (iv) handling of escrows, settlements or closings; (v) executing title insurance policies, effecting contracts of reinsurance, and abstracting, searching or examining titles. Also included are specifically identifiable and allocated expenses relating to the following activities; (i) supervision and training of employees and agents; (ii) operating costs for branch offices or agencies; (iii) underwriting activities; (iv) receiving and paying of premiums and commissions; (v) maintaining general and detailed records; (vi) data processing, advertising, and publicity, clerical, secretarial, office maintenance, supervisory, and executive duties; (vii) postage and delivery; and (viii) all other functions reasonably associated with the business of title insurance. Title and escrow operating expenses do not include losses, loss adjustment expenses (allocated or unallocated), expense of other operations, or investment expenses. The expenses include only amounts incurred directly by the insurer and do not include expenses incurred by any agents (regardless of ownership interest).

b. Title and Escrow Operating Expenses are further broken down in the annual statement by the distribution network that gives rise to the expense incurrence. Accordingly, expenses are specifically identified or allocated (in accordance with reasonable allocation procedures consistently applied) to either Direct Operations, Non-affiliated Agency Operations, or Affiliated Agency Operations.

c. Unallocated Loss Adjustment Expenses (ULAE)—ULAE are those indirect costs incurred by a title insurer, typically internal to the company, which are necessary to process claims or manage the claims settlement function and which are not incurred on a claim-specific basis. ULAE shall include all costs of outside parties involved in claims adjusting services, but shall not include any costs incurred by agents in settlement of title or other claims.

d. Investment Expenses—Investment expenses are those expenses incurred in the investing of funds and the pursuit of investment income, including specifically identifiable and allocated expenses related to such activities as: (i) initiating or handling orders and recommendations for investments; (ii) research, pricing, appraising, and valuing; (iii) disbursing funds and collecting income; (iv) safekeeping of securities and valuable papers; (v) maintaining general and detailed records; (vi) data processing; (vii) general clerical, secretarial, office maintenance, supervisory, and executive duties; (viii) supplies, postage, and the like; and (ix) all other functions reasonably attributable to the investment of funds. Real estate expenses and real estate taxes are attributable to the Investment Expenses group.

e. Other Operations—The amounts shown for this category represent the allocable expenses incurred by the company in operations other than title and escrow, unallocated loss adjustment, or investment activities.

17. Allocation to the above categories should be based on a method that yields the most accurate results. Specific identification of an expense with an activity that is represented by one of the categories above will generally be the most accurate method. Where specific identification is not feasible, allocation of expenses should be based upon pertinent factors or ratios such as studies of employee activities, salary ratios, or similar analyses.

18. Many companies operate within a group where personnel and facilities are shared. Shared expenses, including expenses under the terms of a management contract, shall be apportioned to the companies incurring the expense as if the expense had been paid solely by the incurring company. The apportionment shall be completed based upon specific identification to the company incurring the expense. Where specific identification is not feasible, apportionment shall be based upon pertinent factors or ratios. Any basis adopted to apportion expenses shall be that which yields the most accurate results and may result from special studies of employee activities, salary ratios, premium ratios or similar analyses. Expenses that relate solely to the operations of an insurance company, such as personnel costs associated with the adjusting and paying of claims, must be borne solely by the insurance company and are not to be apportioned to other companies within a group. Pertinent factors in making this determination shall include which entity has the ultimate obligation to pay the expense. Apportioned expenses are subject to presentation and allocation as provided in paragraphs 16 and 17.

Title Plant

19. Title plants are an integrated and indexed collection of title records consisting of documents, maps, surveys, or entries affecting title to real property or any interest in or encumbrance on the property,

which have been filed or recorded in the jurisdiction for which the title plant is established or maintained. They are tangible assets unique to the title insurance industry and are the principal productive asset used to generate title insurance revenue and to mitigate the risk of claims. Title plant shall be reported as an admitted asset, subject to the following valuation restrictions:

a. Costs incurred to construct a title plant, including the costs incurred to obtain, organize, and summarize historical information in an efficient and useful manner, shall be capitalized until the title plant can be used by the company to conduct title searches and issue title insurance policies. The capitalized costs shall be directly related to, and properly identified with, the activities necessary to construct the title plant;

b. Purchased title plants, including a purchased undivided interest in a title plant, shall be recorded at cost at the date of acquisition. For a title plant acquired separately, cost shall be measured by the fair value of the consideration given. For title plant acquired as part of a group of assets, cost shall be measured by the fair value of the consideration given and then cost shall be allocated to the title plant based on its fair value in relation to the total fair value of the group of assets acquired. For title plants acquired as part of a purchase of assets or in a business combination, cost shall be determined in accordance with *SSAP No. 68—Business Combinations and Goodwill*;

c. A backplant, i.e., a title plant that antedates the period of time covered by the existing title plant may be purchased or constructed. Costs to construct a backplant must be properly identifiable to qualify for capitalization;

d. Costs incurred after a title plant is operational to (i) convert the information from one storage and retrieval system to another, or (ii) modify or modernize the storage and retrieval system shall not be capitalized;

e. Costs incurred to maintain a title plant shall be expensed as incurred;

f. Costs incurred to perform title searches shall be expensed as incurred;

g. An investment in a title plant or plants in an amount equal to the actual cost shall be allowed as an admitted asset for title insurers. The aggregate carrying value of an investment in a title plant or plants shall not exceed the lesser of 20% of admitted assets or forty percent (40%) of surplus to policyholders, both as required to be shown on the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner; if the amount of the investment exceeds the above limits, the excess amount shall be recorded as a nonadmitted asset.

20. Certain circumstances may indicate that the value of the title plant may be impaired and, thus, the carrying value of the asset may not be recoverable. If there is an indication of possible impairment of value, the title plant shall be evaluated for impairment and recorded in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*. The following are examples of circumstances that may indicate impairment:

a. Effects of obsolescence, demand, and other economic factors;

b. A significant change in legal requirements or statutory practices in the jurisdiction for which the title plant is established and maintained;

c. A current period operating or cash flow loss combined with a history of such losses or projections that indicate continued losses associated with the revenue produced by the title plant;

d. Failure to maintain the title plant on a current basis and/or lack of appropriate maintenance to keep the title plant up to date; or,

e. Abandonment of a title plant.

21. A properly maintained title plant has an indeterminate life and does not diminish in value with the passage of time, and accordingly, shall not be depreciated.

22. A title insurer may (a) sell its title plant and relinquish all rights to its future use, (b) sell an undivided ownership interest in its title plant, or (c) sell a copy of its title plant or the right to use it. Accounting and presentation for each type of sale noted shall be as follows:

a. When a title insurer sells its title plant and relinquishes all rights to its future use, consideration received shall be presented as a separate component of revenue net of the carrying value of the title plant sold;

b. When a title insurer sells an undivided ownership interest in its title plant, consideration received shall be presented as a separate component of revenue net of the pro rata portion of the carrying value of the title plant;

c. When a title insurer sells a copy of its title plant or the right to use it, consideration received shall be presented as a separate component of revenue and the carrying value of the title plant shall not be reduced.

Disclosures

23. The financial statements shall disclose the following for each period presented:

~~a. The amount of premium revenue reported on the Gross All-Inclusive and on the Gross Risk Rate premium basis;~~

~~b.~~a. The amount of the known claims reserve, SPR/UPR, and the supplemental reserve;

~~c.~~b. Whether the insurer uses discounting in the calculation of its supplemental reserve, the method and rate used to determine the discount, and the amount of such discount.

24. Any material individual component of the reported expense categories shall be presented either on the face of the Summary of Operations or within the footnotes or related exhibits to the financial statements.

25. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

26. This statement rejects *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60); however, it is considered appropriate to use the factors to be considered in the determination of the ultimate cost of settling claims included in FAS 60 when establishing the reserves in accordance with paragraphs 8 and 10 of this statement.

27. This statement adopts *FASB Statement No. 61, Accounting for Title Plant*, with modification for carrying value restrictions. Restrictions on the total carrying value of an investment in a title plant or plants are determined by paragraph 19.g.

Effective Date and Transition

28. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

29. Additions to the SPR or UPR as a result of the provisions of paragraph 17.b.v. of Appendix A-628 shall be phased in pursuant to the provisions of paragraph 17.b.iv. of Appendix A-628.

Mortgage Guaranty Insurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for mortgage guaranty insurance and addresses areas where mortgage guaranty insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement and Appendix A-630, mortgage guaranty insurance accounting shall comply with statutory accounting guidance for other lines of property and casualty insurance.

2. Mortgage guaranty insurance protects a lender against loss of all or a portion of the principal amount of a mortgage loan upon default of the mortgagor. Mortgage guaranty insurance differs from other types of property and casualty insurance in that coverage is long-term, and in most cases premiums are level and paid monthly. Most states require issuers of mortgage guaranty contracts to be monoline insurers and impose limitations on the aggregate amount of risk insured based on geographic territories. Additionally, states may require mortgage guaranty insurers to reinsure with only selected reinsurers.

SUMMARY CONCLUSION

General

3. Mortgage guaranty insurance is provided on residential loans (one to four family residences, including condominiums and townhouses). Coverage can range from as little as 5% on pool insurance to as much as 100% of the outstanding loan amount on individual policies. Most policies cover 10% to 30% of the loan amount and are written on first mortgage loans where the loan amount is a high percentage (generally 80% to 95%) of the value of the mortgaged property.

4. Lenders obtain mortgage guaranty insurance to facilitate sales of mortgage loans in secondary markets. It also enables lenders to make a greater number of high ratio (above 80%) loans and allows them to diversify their portfolio of loans.

5. Mortgage guaranty insurers market directly to mortgage lenders. Individual mortgage loans or pools of mortgage loans are insured under individual insurance certificates or policies; each loan, however, is separately underwritten.

6. Mortgage guaranty insurance companies generally offer the following premium payment plans: (a) monthly premiums, (b) a single premium which provides coverage for periods ranging from three to 15 years, (c) nonlevel annual premiums, and (d) level annual premiums. All policies are renewable at the discretion of the lender. The mortgage guaranty insurer does not have an option to cancel or nonrenew the policy, except for fraud or nonpayment of the premium.

7. Premiums are based upon: (a) the percentage of insurance coverage provided, (b) the ratio of the insured mortgage loan to the property value or sales price, and (c) the term and/or premium payment method selected by the lender. Premiums are quoted as a percentage of the total mortgage loan insured and increase as insurance coverage and loan-to-value ratio increases.

8. If a default occurs, the mortgage guaranty insurer generally requires the lender to foreclose and tender merchantable title to the mortgaged property in order to make a claim. The insurer may then, at its option: (a) purchase the property for the lender’s cost (generally the entire remaining principal loan balance plus accumulated interest and allowable expenses), (b) pay the percentage of the lender’s cost specified by the policy, or (c) arrange for the lender to sell the property and reimburse the lender for any loss up to an agreed amount. Under settlement option (a), the insurer intends to resell the property with the expectation of reducing the amount of loss which would have resulted if option (b) had been elected.

Insured Risk

9. The nature of the insured risk is influenced by certain factors which set mortgage guaranty insurance apart from other types of insurance. These factors are addressed in paragraphs 10-12.

Exposure Period

10. The exposure period is significantly longer for mortgage insurance than for most other property and casualty insurance products. The exposure period can run for the term of the mortgage; however, the average policy life is seven years. The policy is terminated when the mortgage obligation is satisfied or the lender elects to cancel or not renew the policy. In contrast to mortgage guaranty insurance, most property and casualty products need not be renewed by the insurer at the expiration of the policy. Mortgage insurance is renewable at the option of the insured at the renewal rate quoted when the policy commitment was issued.

Losses

11. Losses are affected by the following factors specific to mortgage guaranty insurance:

a. The insured peril—the default of a borrower arises from the credit risk associated with mortgage loans. The frequency of loss is strongly influenced by economic conditions. The likelihood of individual default is further increased if the property has deteriorated since a borrower in financial difficulty will be less able to sell the property at a price sufficient to discharge the mortgage;

b. Mortgage insurance losses can be divided into three categories:

i. Normal losses associated with regular business cycles, interruptions in the borrower’s earning power, and errors made in evaluating the borrower’s willingness or ability to meet mortgage obligations;

ii. Defaults caused by adverse local economic conditions;

iii. Widespread defaults caused by a severe depression in the U.S. economy.

Loss Incidence

12. Losses are incurred over the exposure period which runs for the term of the mortgage. However, loss incidence peaks in the earlier years. When a loan has been delinquent two to four months, the policy requires the lender to notify the insurer. The lender generally agrees to institute foreclosure proceedings six to nine months from the date of delinquency. Foreclosure can require an additional 18 months which means a considerable delay between the delinquency and the presentation of the claim. Without adverse economic conditions, most delinquencies do not result in a loss payment. Once a claim is presented, payment normally is made within one or two months and ultimate loss costs can be known relatively quickly.

Pool Insurance

13. Mortgage guaranty insurance may be provided on pools of mortgage loans. Typically, pool insurance supports mortgage-backed securities or group sales. Unlike other pool or group products, each loan is individually underwritten.

14. Pool insurance may be provided on loans that are already insured by primary insurance, in which case the pool insurance provides an additional level of coverage, or it may be provided on loans without primary insurance (usually loans with loan-to-value ratios below 80%). Generally, pool insurance

provides 100% coverage and includes a stop-loss limit of liability which may range from 5% to 20% of the initial aggregate principal balance. Because of regulatory requirements in some states, pool insurance usually uses participating reinsurance arrangements to limit the exposure of any one mortgage insurer of a pool of loans to 25% of each mortgage insured.

15. Pool insurance policies are not cancelable by the insurer except for nonpayment of premium. These policies may be written on mortgage pools having terms of up to 30 years. However, the average policy life is 8 to 12 years.

16. Upon default, the insurer has the same options as with individual insured mortgage loans. However, pool insurance loss payments are reduced by settlements under primary insurance and subject to the stop-loss limit.

17. Three kinds of mortgage-backed securities which use pool insurance are:

a. Mortgage-backed bonds—Issued by banks, savings and loan associations and other mortgage lenders as a general obligation of the issuing institution. These bonds are collateralized by a pool of mortgages and have a stated rate of return and maturity date;

b. Mortgage revenue bonds—Issued by state and local housing authorities to support housing affordability for targeted income groups;

c. Mortgage pass-through certificates—Issued by banks, savings and loan associations, mortgage bankers, and others providing an undivided interest in a pool of mortgages with principal and interest payment passed to the certificate holder as received.

Premium Revenue Recognition

18. Written premium shall be recorded in accordance with *SSAP No. 53—Property Casualty Contracts—Premiums*. Premium revenue shall be earned as follows:

a. For monthly premium plans, revenues shall be earned in the month to which they relate;

b. For annual premium plans, revenues shall be earned on a pro rata basis over the applicable year;

c. For single premium plans, revenues shall be earned over the policy life in relation to the expiration of risk;

d. Additional first year premiums or initial renewal premiums on nonlevel policies shall be deferred and amortized to income over the anticipated premium paying period of the policy in relation to the expiration of risk.

Unpaid Losses and Loss Adjustment Expense Recognition

19. Unpaid losses and loss adjustment expenses shall be recognized in accordance with *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55). For mortgage guaranty insurance contracts, the default shall be considered the incident that gives rise to a claim as discussed in SSAP No. 55. If a claim is ultimately presented, the date of default shall be considered the loss incurred date.

20. The process for estimating the liability shall include projections for losses that have been reported as well as those that have been incurred but not reported. The estimates shall be made based on historical data, trends, economic factors, and other statistical information including paid claims, reported losses, insurance in force statistics, and risk statistics.

21. Real estate and mortgages are acquired by mortgage guaranty insurers to mitigate losses. These assets shall be shown on the balance sheet at the lower of cost or net realizable value, net of encumbrances. Gains or losses from the holding or disposition of these assets shall be recorded as a component of losses incurred. Rental income or holding expenses shall be included in loss adjustment expenses.

Contingency Reserve

22. In addition to the unearned premium reserve, mortgage guaranty insurers shall maintain a liability referred to as a statutory contingency reserve. The purpose of this reserve is to protect policyholders against loss during periods of extreme economic contraction. The annual addition to the liability shall equal 50% of the earned premium from mortgage guaranty insurance contracts and shall be maintained for ten years regardless of the coverage period for which premiums were paid. With commissioner approval, when required by statute, the contingency reserve may be released in any year in which actual incurred losses exceed 35% of the corresponding earned premiums. Any such reductions shall be made on a first-in, first-out basis. Changes in the reserve shall be recorded directly to unassigned funds (surplus).

Premium Deficiency Reserve

23. When the anticipated losses, loss adjustment expenses, commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, contingency reserve, and the estimated future renewal premium on existing policies, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency with a corresponding charge to operations. Commissions and other acquisition costs need not be considered in the premium deficiency analysis to the extent they have been expensed. If an insurer utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the financial statements.

U.S. Mortgage Guaranty Tax and Loss Bonds

24. To obtain a current federal income tax benefit derived from annual additions to the statutory contingency reserve (for tax purposes, the mortgage guaranty account), mortgage guaranty insurers must purchase tax and loss bonds to the extent of the tax benefits. These bonds are noninterest bearing obligations of the U.S. Treasury and mature 10 years after issue. The usual purpose of tax and loss bonds is to satisfy taxes that will be due in 10 years when the tax benefit is reversed; however, the bonds may be redeemed earlier in the event of excess underwriting losses. These bonds are reported as admitted assets allowing mortgage insurers to conserve capital. In accordance with *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10*, temporary differences (as defined in that statement) do not include amounts attributable to the statutory contingency reserve to the extent that “tax and loss” bonds have been purchased.

Contingency Reserve (for Tax Purposes, the Mortgage Guaranty Account)

25. Under IRS Code Section 832(e), mortgage guaranty insurers are permitted to deduct the annual addition to the contingency reserve from gross income. The tax deduction is generally an amount equal to (a) 50% of earned premium, or (b) taxable income as computed prior to this special deduction if less than 50% of earned premium. Annual deductions not utilized for tax purposes during the current period may be carried forward for eight years on a basis similar to net operating losses. The amount deducted must be restored to gross income after ten years; however, it may be restored to gross income at an earlier date in the event of a taxable net operating loss.

26. The tax deduction is permitted only if special U.S. Mortgage Guaranty Tax and Loss Bonds are purchased in an amount equal to the tax benefit derived from the deduction. Upon redemption the tax and loss bonds can be used to satisfy the additional tax liability that arises when the deduction is restored to income.

Disclosures

27. Mortgage guaranty insurers shall make all disclosures required by other statements within the *Accounting Practices and Procedures Manual*, including but not limited to the requirements of SSAP No. 55, and *SSAP No. 1—Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures*.

28. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

29. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Credit Life and Accident and Health Insurance Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for income recognition and policy reserves for all contracts classified as credit life and credit accident and health contracts defined in *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force*.

SUMMARY CONCLUSION

Definitions

2. Credit life and accident and health insurance contracts will be referred to collectively as “credit insurance” for purposes of this statement. Credit insurance is generally issued in connection with the issuance of credit to an individual by a bank, retailer, finance company, or other similar organization. This type of insurance most often protects the creditor to the extent of the unpaid balance of the loan. Contracts sold in connection with loans or other credit transactions not exceeding a stated duration shall be reported as credit insurance. Mortgage guaranty insurance is addressed in *SSAP No. 58—Mortgage Guaranty Insurance*. Credit policies are generally limited to issues of 120 months or less in most states. Credit insurance is sold as either an individual or group policy and may provide for single or joint life coverage.

3. Credit life insurance, generally in the form of decreasing term insurance, is issued on the lives of debtors to cover payment of loan balances in case of death. Credit accident and health insurance is insurance on a debtor to either provide indemnity for payments becoming due on a specific loan or other credit transaction while the debtor is disabled.

4. Premiums for credit insurance contracts shall be defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract.

Income Recognition

5. Consistent with *SSAP No. 51—Life Contracts*, premiums shall be recognized in the summary of operations as income on the gross basis (amount charged to the policyholder) when due from policyholders under the terms of the insurance contract.

Policy Reserves

6. Statutory policy reserves shall be established for all unmatured contractual obligations of the reporting entity arising out of the provisions of the insurance contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. The statutory policy reserves for credit life contracts are generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. The statutory policy reserves for credit accident and health contracts generally consist of an unearned premium reserve, and other reserves, as required, as further discussed in paragraphs 11, 12, 13, and 14. Statutory policy reserves meet the definition of liabilities as defined in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5R.

7. The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-010, A-820 and A-822, and the actuarial guidelines found in Appendix C of this Manual. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

8. Policy reserves are established through either a gross unearned premium reserve or a mortality/morbidity reserve. The gross unearned premium reserve represents the estimated amount of

premium for insurance coverage that has not yet expired. The mortality/morbidity reserve represents the estimated amount of future anticipated benefits, discounted at valuation interest and mortality/morbidity, to be incurred on policies in force.

9. When the level of insurance risk is constant during the contract period, policy reserves shall be recognized over the period of risk using either the daily pro-rata or monthly pro-rata methods as described in *SSAP No. 53—Property Casualty Contracts—Premiums*. Policy reserves for contracts where the level of insurance risk is not constant throughout the contract period shall be recognized over the period of risk in proportion to the amount of insurance protection provided. Various methods may be used to accomplish this as described below. The reporting entity shall select the method that most closely reflects the pattern of insurance protection provided. To the extent that these methods do not reflect the pattern of insurance protection provided, the reporting entity shall modify or develop, if necessary, a method that recognizes net income from the policy over the exposure period of the contract in proportion to the amount of insurance protection provided.

10. Single premium credit life policy reserves shall be based on either a gross unearned premium reserve based on a refund formula, or a reserve based on assumed risks using mortality factors. In practice, various methods exist and are currently used to estimate the amount of gross unearned premiums applicable to the unexpired portion of the policies in force. For decreasing gross coverage, the gross unearned premium may be estimated using a Rule of 78's method; for decreasing net payoff coverage, either the Rule of 78's or the single-premium method is used; and for level coverage, the pro-rata method is generally used. The reporting entity shall select a method that reflects the pattern of insurance protection provided.

11. Except as noted in paragraph 12, policy reserves for credit A&H policies shall be based on either a gross unearned premium reserve using the pro rata, Rule of 78's, mean of pro rata and Rule of 78's, or actuarial methods. The gross unearned premium reserve is a measure of the single premium for the debt's remaining term and amount. Most states required reporting entities to record a gross unearned premium reserve using the Rule of 78's method. In practice, such a gross unearned premium reserve has been the average of the Rule of 78's and the pro rata methods. The reporting entity shall select a method that reflects the pattern of insurance protection provided. Also, the method should be consistent with the refund method actually used or required in the state.

12. For single premium credit disability policies issued on or after January 1, 2002, Appendix A-010 requires that a contract reserve be established using a standardized morbidity table. For single premium credit disability policies issued prior to January 1, 2002, reserves may be established either according to the standards in Appendix A-010 or paragraph 11. Once an insurer elects to calculate reserves for all contracts on the standard in Appendix A-010, all future valuations must be on that basis.

13. For all credit contracts in the aggregate, if the premium refund liability exceeds the aggregate recorded reserve, an additional liability shall be established. This premium refund (excess) liability may include consideration of commission, premium tax, and other expenses recoverable. The excess reserve shall be established for the surrender values (premium refund) in excess of the mortality reserves. As such, the surrender values may be net of commissions, premium taxes, etc. Additionally, the excess reserve is calculated on an aggregated basis by combining all credit life and accident and health policies and certificates.

14. When the anticipated benefits, expected dividends to policyholders and maintenance cost exceed the recorded policy reserve, a premium deficiency reserve shall be recognized by recording an additional liability for the excess deficiency with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis since they have previously been expensed.

15. The difference between the policy reserves at the beginning and end of the reporting period shall be reflected as the change in reserves or change in unearned premium, as appropriate, in the summary of operations, except for any difference due to a change in valuation basis as discussed in paragraph 16.

Change In Valuation Basis

16. A change in valuation basis shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in policy reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the Summary of Operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a new method and a specific transition that allows for grading.

Disclosures

17. For life reserves the financial statements shall disclose the following:

a. A description of reserve practices concerning the following:

i. Waiver of deduction of deferred fractional premiums upon death of insured;

ii. Return of portion of final premium for periods beyond the date of death;

b. The methods employed in the valuation of substandard policies;

c. The amount of insurance, if any, for which the gross premiums are less than the net premiums according to the valuation standards;

d. The method used to determine tabular interest, tabular less actual reserves released, and tabular cost (by formula or from the basic data for such items);

e. The nature of significant other reserve changes.

18. If the company has reported life insurance premiums deferred and uncollected on policies in force as of the financial statement date, disclose separately the amounts and the loading excluded for credit life business.

19. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.);

f. Total premium written.

20. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

21. This statement incorporates the requirements of Appendices A-010, A-225, A-812, A-818, A-820 and A-822, and the Actuarial Standards Board *Actuarial Standards of Practice* and the actuarial guidelines found in Appendix C of this Manual.

22. This statement rejects *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* relating to accounting and reporting for credit life and accident and health insurance contracts.

Effective Date and Transition

23. This statement is effective for years beginning January 1, 2001. Contracts issued prior to January 1, 2001 shall be accounted for based on the laws and regulations of the domiciliary state. State laws and regulations shall be understood to include anything considered authoritative by the domiciliary state under the individual state's statutory authority and due process procedures. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. The guidance in paragraph 13 pertaining to establishing the excess reserve for surrender values was originally contained within *INT 01-29: SSAP No. 59 and Application to Credit Life* and was effective December 10, 2001.

Financial Guaranty Insurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for financial guaranty insurance and addresses areas where financial guaranty insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement, financial guaranty insurance accounting shall comply with statutory accounting guidance for other lines of property and casualty insurance.

SUMMARY CONCLUSION

2. Financial guaranty insurance provides protection against financial loss as a result of default, changes in interest rate levels, differentials in interest rate levels between markets or products, fluctuations in exchange rates between currencies, inconvertibility of one currency into another, inability to withdraw funds held in a foreign country resulting from restrictions imposed by a governmental body, changes in the value of specific assets or commodities, financial or commodity indices, or price levels in general. Financial guaranty insurance does not provide protection from losses which occur due to fortuitous physical events, failure or deficiency in the operation of equipment, or the inability to extract natural resources. Additionally, it does not provide coverage from losses related to various types of bonds (e.g., individual or schedule public official bond; a contract bond; a court bond), credit insurance, guaranteed investment contracts, and residual value insurance.

3. Included in the definition of financial guaranty insurance is student loan insurance. Student loan insurance includes financial guarantees issued as a surety bond or financial guarantee policies issued to a bank or other lending financial institution, under which the insurer agrees to provide financial guaranty of each student loan made by the bank within specified underwriting criteria. As each loan is made, the premium for that loan is paid to the insurer by the bank from the proceeds of the loan that are retained by the bank at issuance. Usually repayment of the loan is expected to commence six months after graduation. If and when there is a default in repayment of the loan by the graduate, the insurer pays the bank or lending institution the unpaid principal and interest on the loan, takes possession of the loan, and initiates recovery efforts. Student loan insurance is subject to the provisions of this statement and the statutory contingency reserve.

Premium Revenue Recognition

4. Written premium shall be recorded in accordance with *SSAP No. 53—Property Casualty Contracts—Premiums* except that installment premiums, which may vary substantially over the term of the contract since the total amount insured and the premium rate are contingent upon the performance of the insured obligations, shall be recorded when received.

5. When premiums are paid on the installment basis, premium revenue shall be recognized in the statement of operations using the monthly pro-rata method. Premiums not paid on the installment basis shall be recognized in the statement of operations in proportion with the amount and expected coverage period of the insured risk.

6. When the anticipated losses, loss adjustment expenses, and maintenance cost exceed the recorded unearned premium reserve and contingency reserve, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis since they have previously been expensed. If a reporting entity utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the financial statements.

Unpaid Losses and Loss Adjustment Expense Recognition

7. Unpaid losses and loss adjustment expenses shall be recognized in accordance with *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55). Each financial guaranty insurer shall establish and maintain reserves for unpaid losses and loss adjustment expenses. The initial date of default shall be considered the incident which gives rise to a claim. Loss reserves shall include a reserve for claims reported and unpaid net of collateral.

8. A deduction from loss reserves shall be allowed for the time value of money by application of a discount rate equal to the average rate of return on the admitted assets of the financial guaranty insurer as of the date of the computation of the reserve. The discount rate shall be adjusted at the end of each calendar year. In addition, a reserve component for incurred but not reported claims shall be reasonably estimated, if deemed necessary by the financial guaranty insurer or required by the commissioner following an examination or actuarial analysis.

Contingency Reserve

9. In addition to the unearned premium reserve and the liability established for unpaid losses and loss adjustment expenses, financial guaranty insurers shall maintain a liability referred to as a statutory contingency reserve. The purpose of this reserve is to protect policyholders against loss during periods of extreme economic contraction.

10. The contingency reserve shall be the greater of fifty percent of premiums written for each category or the amount provided by applying the following percentages to the principal guaranteed in each calendar year. The premiums written shall be net of reinsurance if the reinsurer has established a contingency reserve.

a.	Municipal obligation bonds	0.55 percent
b.	Special revenue bonds	0.85 percent
c.	Investment grade Industrial Development Bonds (IDBs) secured by collateral or having a term of seven years or less, and utility first mortgage obligations	1.00 percent
d.	Other investment grade IDBs	1.50 percent
e.	Other IDBs	2.50 percent
f.	Investment grade obligations, secured by collateral or having a term of seven years or less	1.00 percent
g.	Other investment grade obligations not secured	1.50 percent
h.	Non-investment grade consumer debt obligations	2.00 percent
i.	Non-investment grade asset backed securities	2.00 percent
j.	All other non-investment grade obligations	2.50 percent

11. Additions to the reserve for items a. through e. in paragraph 10, equal to one-eightieth of the amounts derived by applying the appropriate contribution specified above, shall be made each quarter for a period of twenty (20) years. Additions to the reserve for items f. through j. in paragraph 10, equal to one-sixtieth of the amounts derived by applying the appropriate contribution specified above, shall be made each quarter for a period of fifteen (15) years.

12. For contingency reserves required to be maintained for 20 years, contributions may be discontinued if the total reserve established for all categories in paragraphs 10.a. through 10.e. exceeds the sum of the percentages contained therein multiplied by the unpaid principal guaranteed. For contingency reserves required to be maintained for 15 years, contributions may be discontinued if the total reserve established for all categories in paragraphs 10.f. through 10.j. exceeds the sum of the percentages contained therein multiplied by the unpaid principal guaranteed.

13. The contingency reserve may also be released in the following circumstances:

a. For contingency reserves required to be maintained for 20 years:

i. In any year in which actual incurred losses exceed 35% of the corresponding earned premiums, with commissioner approval;

ii. If the reserve has been in existence less than 40 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer's financial guarantees, with commissioner approval;

iii. If the reserve has been in existence more than 40 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer's financial guarantees, upon 30 days prior written notice to the commissioner.

b. For contingency reserves required to be maintained for 15 years:

i. In any year in which actual incurred losses exceed 65% of the corresponding earned premiums, with commissioner approval;

ii. If the reserve has been in existence less than 30 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer's financial guarantees, with commissioner approval;

iii. If the reserve has been in existence more than 30 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer's financial guarantees, upon 30 days prior written notice to the commissioner.

Any reductions shall be made on a first-in first-out basis. Changes in the reserve shall be recorded through unassigned funds (surplus).

Disclosures

14. Financial guaranty insurers shall make all disclosures required by paragraphs 15-17 as well as other statements within the *Accounting Practices and Procedures Manual*, including but not limited to the requirements of SSAP No. 55 and *SSAP No. 1—Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures*. (For disclosures within paragraph 16 and 17, all "expected" amounts and terms should be determined in accordance with management estimates.) In all instances, the insurer shall disclose when they elect to reflect timeframes or recognition principles from *FASB Statement No. 163*, *Accounting for Financial Guarantee Insurance Contracts—an interpretation of FASB Statement No. 60* (FAS 163) as permitted within the disclosure requirements.

15. An insurance enterprise shall disclose information that enables users of its financial statements to understand the factors affecting the present and future recognition and measurement of financial guarantee insurance contracts.

16. To meet the disclosure objective in paragraph 15, an insurance enterprise shall disclose the following information for each annual reporting statement, and in any interim period if a significant change has occurred in that interim period:

a. For financial guarantee insurance contracts where premiums are received as installment payments over the period of the contract, rather than at inception

i. The unearned premium revenue as of the reporting date, in proportion with the amount and expected coverage period of the insured risk, which would have been reflected if the premium had been received at inception[1].

b. A schedule of premiums (undiscounted) expected to be collected under all installment contracts detailing the following:

i. The four quarters of the subsequent annual period and each of the next four annual periods

ii. The remaining periods aggregated in five-year increments

c. A rollforward of the expected future premiums (undiscounted), including:

i. Expected future premiums – Beginning of Year

ii. Less - Premium payments received for existing installment contracts

iii. Add – Expected premium payments for new installment contracts

iv. Adjustments to the expected future premium payments

v. Expected future premiums – End of Year

d. For non-installment contracts for which premium revenue recognition has been accelerated, the amount and reasons for acceleration.

e. A schedule of the future expected earned premium revenue on non-installment contracts as of the latest date of the statement of financial position detailing the following:

i. The four quarters of the subsequent annual period and each of the next four annual periods

ii. The remaining periods aggregated in five year increments

f. For the claim liability[2]

i. The rate used to discount the claim liability. This rate[3] shall equal the average rate of return on the admitted assets of the financial guaranty insurer as of the annual date of the computation of the reserve

[1] If desired, a reporting entity that follows FAS 163 for GAAP may elect to report this disclosure in accordance with the revenue recognition principles of FAS 163.

[2] The reference to "claim liability" throughout the disclosure requirements shall reflect the "reserves for unpaid losses and loss adjustment expenses" from paragraphs 7 and 8 of this statement.

[3] The annual discount rate calculated pursuant to this paragraph shall be utilized for the subsequent year's quarterly financial statements. Per paragraph 8, the discount rate shall be adjusted at the end of each year.

ii. The significant component(s) of the change in the claim liability for the period (the accretion of the discount on the claim liability, changes in the timing, establishment of new reserves for defaults of insured contracts, changes or establishment of deficiency reserves, and changes or establishment of reserves for incurred but not reported claims), and the amount relating to each component(s).

g. A description of the insurance enterprise's risk management activities used to track and monitor deteriorating insured financial obligations, including the following:

i. A description of each grouping or category used to track and monitor deteriorating insured financial obligations

ii. The insurance enterprise's policies for placing an insured financial obligation in, and monitoring, each grouping or category

iii. The insurance enterprise's policies for avoiding or mitigating claim liabilities, the related expense and liability reported during the period for those risk mitigation activities (not including reinsurance), and a description of where that expense and that liability are reported in the statement of income and the statement of financial position, respectively.

17. An insurance enterprise shall disclose the following information for each annual and interim period related to the claim liability:

a. A schedule of insured financial obligations at the end of each interim period detailing, at a minimum, the following for each category or grouping of these financial obligations (see Appendix A):

i. Number of issued and outstanding financial guarantee insurance contracts

ii. Remaining weighted-average[4] contract period

iii. Insured contractual payments outstanding[5], segregating principal and interest

iv. Gross claim liability[6]

v. Gross potential recoveries[7]

vi. Discount, net (both claim liability and potential recoveries[8]

[4] Weighted average contract period shall be based on management's estimate of the weighted average life of the contracts. If desired, a reporting entity that follows FAS 163 for GAAP may elect to mirror the time period calculated under FAS 163.

[5] Contractual payments outstanding shall be based on management's estimates of receivables. If desired, a reporting entity that follows FAS 163 for GAAP may elect to mirror the time period calculated under FAS 163.

[6] Represents the unpaid losses and loss adjustment expenses calculated in accordance with SSAP No. 55 and SSAP No. 60, but excluding the effects of subrogation recoveries, ceded reinsurance and discounting.

[7] Includes (a) subrogation recoveries, which are deducted from the gross claim liabilities in accordance with paragraph 14 of SSAP No. 55 and (b) ceded reinsurance recoveries on unpaid losses, which are deducted from the gross claim liability in accordance with paragraph 104.a. of SSAP No. 62R.

[8] Represents the discounting effect of the gross claim liability, subrogation recoveries, and reinsurance recoveries.

vii. Net claim liability[9]

viii. Reinsurance recoverables[10]

ix. Unearned premium revenue[11]

18. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

19. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance in paragraph 3 was originally contained within *INT 00-04: Student Loan Insurance* and was effective June 12, 2000.

REFERENCES

Relevant Issue Papers

- *Issue Paper No. 69—Financial Guaranty Insurance*

[9] Represents the gross claim liability less gross potential recoveries and the net discount. This line should reconcile to the sum of line 10, column 8 and column 9 (financial guaranty net unpaid losses and net unpaid loss adjustment expenses) of the Underwriting and Investment Exhibit, Part 2a – Unpaid Losses and Loss Adjustment Expenses.

[10] Represents reinsurance recoverables on paid losses which is reported as an asset with paragraph 20 of SSAP No. 62R. This line should reconcile to "Amounts recoverable from reinsurers" on the balance sheet.

[11] Unearned premium revenue (UPR) should be consistent with the UPR measurement principles of SSAP No. 60. UPR reported in this schedule may not reconcile to line 10, column 5 of the Underwriting and Investment Exhibit, Part 1a – Recapitulation of all Premiums. To the extent that this amount does not reconcile to line 10, column 5 of the Underwriting and Investment Exhibit, Part 1a – Recapitulation of Premiums, provide an additional reconciliation to line 10, column 5 of the Underwriting and Investment Exhibit, Part 1a in a footnote to the tabular disclosures required in paragraph 17.

APPENDIX A – DISCLOSURE ILLUSTRATION

A1. The example below assumes the insurance enterprise uses a surveillance list with four surveillance categories to track and monitor its insured financial obligations. The surveillance list and four surveillance categories are used for illustrative purposes only. The surveillance categories shown below describe the claim liability before the mitigating effects of potential recoveries. The following are brief descriptions of each surveillance category to provide context to the example:

a. Category A includes insured financial obligations that are still currently performing (that is, insured contractual payments are made on time but the likelihood of an event of default has increased since the financial guarantee insurance contract was first issued), but if economic conditions persist for an extended period of time, they may not be performing in the future. The issuer of the insured financial obligation may have experienced credit deterioration as a result of a general economic downturn. As a result, the present value of expected net cash outflows may exceed the unearned premium revenue of the financial guarantee insurance contract some time in the future.

b. Category B includes insured financial obligations that are currently characterized as potentially nonperforming and may require action by the insurance enterprise to avoid or mitigate an event of default.

c. Category C includes insured financial obligations that are characterized as nonperforming and for which actions to date by the insurance enterprise have not been successful in avoiding or mitigating an event of default. The insurance enterprise continues its efforts to cure the claim, but an event of default is imminent.

d. Category D includes insured financial obligations where an event of default has occurred.

	Surveillance Categories				
	A	B	C	D	Total
Number of policies	37	16	5	4	62
Remaining weighted-average contract period (in years)	16	14	11	12	
Insured contractual payments outstanding:					
Principal	$ 656,000,000	$ 409,000,000	$ 196,000,000	$ 111,000,000	$ 1,372,000,000
Interest	478,000,000	298,000,000	150,000,000	73,000,000	999,000,000
Total	$ 1,134,000,000	$ 707,000,000	$ 346,000,000	$ 184,000,000	$ 2,371,000,000
Gross claim liability	$ 1,045,000,000	$ 690,000,000	$ 330,000,000	$ 184,000,000	$ 2,249,000,000
Less:					
Gross potential recoveries	752,000,000	381,000,000	29,000,000	7,000,000	1,169,000,000
Discount, net	159,000,000	153,000,000	125,000,000	78,000,000	515,000,000
Net claim liability	$ 134,000,000	$ 156,000,000	$ 176,000,000	$ 99,000,000	565,000,000
Unearned premium revenue	$ 7,000,000	$ 4,000,000	$ 2,000,000	$ - (a)	$ 13,000,000
Reinsurance recoverables	$ 10,000,000	$ 19,000,000	$ 25,000,000	$ 27,000,000	$ 81,000,000

(a) In this instance, it is assumed that once an insured financial obligation is in Category D, the only remaining obligation of the insurance enterprise is making claim payments. As such, all related balances of the insured financial obligation are written off, including the unearned premium revenue.

GLOSSARY 20

Life, Deposit-Type and Accident and Health Reinsurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for life, deposit-type and accident and health reinsurance. This statement applies to life, deposit-type and accident and health contracts as defined in *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (SSAP No. 50).

SUMMARY CONCLUSION

Indemnity Reinsurance

2. Reinsurance is an agreement by which a reporting entity transfers all or part of its risk under a contract to another reporting entity. The entity that issued the policy is called the primary insurer, direct writer, or ceding entity and the entity to which the risk is transferred is called the reinsurer or assuming entity. The process of transferring the risk from the ceding entity to the reinsurer is known as a cession. If an assuming entity, in turn, transfers a portion of this risk, the process is called a retrocession. A retrocession is customarily made when the amount assumed is beyond the reinsurer's limits of retention.

3. There is no direct relationship between the reinsurer or the retrocessionaire and the ceding entity's policyholder unless there is a "cut-through endorsement." In the event of the ceding entity's insolvency, except in the case of a "cut-through endorsement," the policyholder or beneficiary under a contract that is reinsured has the same status as a policyholder or beneficiary of a policy that was not reinsured. An entity may not need to be licensed, have accredited reinsurer status or other means of authorization in a state in order to act as a reinsurer of a domestic entity. However, the domestic entity is not permitted to take reserve credits on the business ceded to any unauthorized reinsurers or certified reinsurers to the extent that they are not properly securitized by means of a trust, letter of credit or funds withheld or other acceptable forms of collateral.

4. Fronting arrangements, pools and association business are often accomplished using reinsurance contracts.(INT 03-02) The guidance included in this statement also applies to these types of contracts except as specifically exempted.

Retention

5. In formulating its rules for accepting applications for insurance, an entity must decide upon three areas of action—retaining, reinsuring, or declining the risks presented. Entities of various sizes have different desired capacities to write insurance on a single life and/or entire blocks of business or portfolios. An entity determines the amount of risk exposure it is able to accept and retain as its own insurance business. Having made this determination, the entity then decides what to do with any risks presented that exceed the maximum amount it is willing to retain. It has two choices—accept the additional risk and reinsure it, or decline the extra risk.

6. Business to be written is expected to be profitable, so the direct writing entity will generally want to retain as much of the risk as possible, consistent with its overall objectives. The entity also will want to avoid exposure to large losses that could jeopardize its financial condition and the policy values of its policyholders. Consequently, a common practice in the life insurance industry is for a reporting entity to establish a schedule for maximum amounts of insurance, called retention limits, which it will retain at its own risk on individual lives in various categories of insurance. By adopting a suitably chosen schedule of retention, the reporting entity eliminates exposure to large losses and reduces fluctuations in the cost of death claims from year to year, which could adversely affect the reporting entity's surplus position. In addition, the reporting entity can utilize aggregate stop loss reinsurance to protect it from aggregate claims exceeding a specific threshold.

7. There are also reasons why a reporting entity might retain less than its defined maximum. One is to transfer from the ceding entity to the reinsurer the part of the surplus strain that results from writing new life insurance. The ceding entity may wish to limit the risk of loss on substandard business. Testing new coverages or new classes of lives may lead to reinsurance.

Reinsurance Arrangements

8. Reinsurance can be on a facultative or an automatic basis. For facultative, each risk is handled separately at the time it is written. When the direct writing entity receives an application for a policy and it wishes to reinsure some or all of the risk, it negotiates with another entity for a transfer of all or a portion of that risk. For purely facultative cessions, the assuming entity is not obligated to assume any of the risk until its offer to reinsure is accepted. For facultative obligatory reinsurance, the assuming entity is obligated to reinsure the risk subject to its having sufficient available capacity.

9. For automatic reinsurance, the ceding entity agrees to reinsure with the reinsurance entity all cases which meet certain defined conditions for amounts as defined in the reinsurance agreement. The reinsurance entity is bound to accept all such amounts, up to a predetermined maximum. Amounts in excess of automatic limits set out in the reinsurance agreement may be handled as facultative cessions. When the amount lies within the automatic maximum limit, called the binding authority, the ceding entity issues its policy upon completion of its underwriting procedures and without securing the prior approval of the reinsurance entity. Notification of automatic reinsurance is sent to the reinsurer within a specified period after the ceding entity issues its policy.

10. By agreeing to accept all business automatically ceded to it, the reinsurer is relying on the underwriting judgment of the ceding entity and is bound to accept the case even when it, the reinsurer, may not agree with the underwriting action. The reinsurer is protected by the requirement that the ceding entity retains at its own risk its defined retention limit for the class of business that is involved and by the maximum which may be ceded automatically.

Types of Reinsurance Arrangements

11. Once an entity has decided to reinsure amounts in excess of its desired retention, it may proceed in one of several basic arrangements—coinsurance, modified coinsurance, yearly renewable term or non-proportional. Such contracts may have funds withheld.

Coinsurance

12. In this arrangement, the risks are reinsured on the same plan as that of the original policy. The direct writer and the reinsurer share in the risk in the same manner. The ceding entity pays the reinsurer a proportional part of the premiums collected from the insured. In return, the reinsurer reimburses the ceding entity for the proportional part of the death or accident and health claim payments and other benefits provided by the policy, including nonforfeiture values, policy dividends, experience rating refunds, commissions, premium taxes, and other direct expenses agreed to in the contract. The reinsurer must also establish the required reserves for the portion of the policy it has assumed. A single policy can be coinsured with more than one entity or under more than one reinsurance contract with the same entity as long as the combined total of reinsurance and the retention of the ceding entity is not more than 100% of the risk.

13. In coinsurance of participating policies, the reinsurer may reimburse the ceding entity for its portion of the dividends paid to the policyholder. In determining its schedule of dividends, the ceding entity takes into account the experience on the business as written. If the reinsurer reimburses dividends it will typically accept the ceding entity's schedule but may require input into the schedule. Changes to the schedule may have to be agreed to by the reinsurer. Coinsurance of all or a portion of a block of business also is used in situations where a severe strain is placed on the direct writing entity's surplus in the first

policy year. For example, the premium received by the direct writer during the first policy year usually is insufficient to pay the high first-year commissions and other costs of issue and to establish the initial reserve. In such an example, coinsurance relieves some of the surplus strain of adding large amounts of new insurance.

Modified coinsurance

14. The "modified coinsurance" or "modco" arrangement is a variation of coinsurance. The ceding entity has transferred all or a portion of the net policy liabilities on the reinsured policies to the reinsurer, and the reinsurer is required to indemnify the ceding entity for the same amount. The assets necessary to support the reserves for the original policies are maintained by the ceding entity instead of the reinsurer. This is accomplished by designating in the contract the transfer of the net policy liabilities to the assuming entity and an immediate transfer back to the extent of the modco deposit. Under modified coinsurance, the assuming entity shall transfer to the ceding entity the increase in the reserve on the reinsured portion. This transaction reflects the reinsurer's risk with respect to the reinsured business and its obligation to maintain the reserves supporting such obligation. In some cases, a policy may be reinsured partially on a coinsurance arrangement and partially on a modified coinsurance arrangement. This may be accomplished through the use of two contracts or in a single contract.

Yearly renewable term (YRT)

15. Under this arrangement of reinsurance, the ceding entity transfers the net amount at risk on the portion reinsured to the reinsurer and pays a one-year term premium. The "net amount at risk"—as defined in the contract—is usually the amount of insurance provided by the policy in excess of the ceding entity's reserve on it.

Non-proportional

16. Other forms of reinsurance are also available, such as catastrophe and stop loss coverage. These arrangements provide for financial protection to the ceding entity for aggregate losses rather than providing indemnification for an individual policy basis as described in the preceding three reinsurance arrangements. Catastrophic and stop loss reinsurance are written on an annual basis to protect the ceding entity from excessive aggregate losses. Usually, the coverage does not extend over the life of the underlying policy nor is there any requirement on the ceding entity to renew the arrangement.

Transfer of Risk

17. Reinsurance agreements must transfer risk from the ceding entity to the reinsurer in order to receive the reinsurance accounting treatment discussed in this statement. If the terms of the agreement violate the risk transfer criteria contained herein, (i.e., limits or diminishes the transfer of risk by the ceding entity to the reinsurer), the agreement shall follow the guidance for Deposit Accounting. In addition, any contractual feature that delays timely reimbursement violates the conditions of reinsurance accounting.

18. This paragraph applies to all life, deposit-type and accident and health reinsurance agreements except for yearly renewable term reinsurance agreements and non-proportional reinsurance agreements such as stop loss and catastrophe reinsurance. All reinsurance agreements covering products that transfer significant risk shall follow the guidance for reinsurance accounting contained in this statement. All reinsurance contracts covering products that do not provide for sufficient transfer of risk shall follow the guidance for Deposit Accounting.

19. Yearly renewable term (YRT) reinsurance agreements that transfer a proportionate share of mortality or morbidity risk inherent in the business being reinsured and do not contain any of the conditions described in Appendix A-791, paragraphs 2.b., 2.c., 2.d., 2.h., 2.i., 2.j. or 2.k., shall follow the

guidance for reinsurance accounting, including paragraphs 55-57 that apply to indemnity reinsurance. Contracts that fail to meet the requirements for reinsurance accounting shall follow the guidance for Deposit Accounting. For all treaties entered into on or after January 1, 2003, the deferral guidance in paragraph 3 of A-791 shall also apply to YRT agreements. Since YRT agreements only transfer the mortality or morbidity risks to the reinsurer, the recognition of income shall be reflected on a net of tax basis, as gains emerge based on the mortality or morbidity experience.

20. For non-proportional reinsurance agreements such as stop loss and catastrophe reinsurance agreements, contract terms shall be evaluated to assess whether they transfer significant risk to the reinsurer. For example, prepayment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity limits the risk to the reinsurer. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payment to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Reinsurance accounting shall apply to all non-proportional agreements that transfer significant risk and do not contain any provisions that protect the reinsurer from incurring a loss. Contracts that fail to meet the requirements for reinsurance accounting shall follow the guidance for Deposit Accounting.

Accounting and Reporting of Reinsurance

21. The obligation of reporting reinsurance in force and of determining unpaid premiums and incurred claims and other balances is generally on the ceding entity because it knows the current status of the policies it has written directly and reinsured. A lag will develop between the time of the entry of the underlying policy transaction on the books of the ceding entity and the transmittal of information and its entry on the books of the assuming entity. The assuming entity shall estimate any material unreported premiums and related costs.

22. The ceding entity must report these items in its balance sheet:

a. Credits (deductions) to its policy and claim reserves and unpaid claims;

b. Premiums or other amounts payable on reinsured risks;

c. Amounts recoverable on claims, surrender values, dividends, experience rating refunds, taxes, commissions, and other expenses;

d. Modified coinsurance reserves; and,

e. Amounts receivable or payable for funds withheld.

23. Similarly, in its balance sheet, the assuming entity must report:

a. Reserves for reinsurance assumed reduced by any modified coinsurance reserves;

b. Reinsurance premiums receivable or other amounts receivable;

c. Amounts payable for claims, surrender values, dividends, experience rating refunds, taxes, commissions, and other expenses; and,

d. Amounts receivable or payable for funds withheld by the ceding entity.

24. While the premiums, commissions, expense allowances, reserves, claims, etc. will result in a net amount, the proper way to report them is in their separate classifications on the balance sheet. Each

reinsurance agreement must be accounted for separately. Certain assets and liabilities are created by entities when they engage in reinsurance contracts. Reinsurance assets meet the definition of assets as defined by *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted to the extent they conform to the requirements of this statement.

Reinsurance Premiums

25. For all reinsurance arrangements, the assuming entity must report premiums under the terms of the reinsurance contract as income and establish any asset or liability consistent with the methods and assumptions used to establish its policy reserves and guidance contained in *SSAP No. 51—Life Contracts*, *SSAP No. 54—Individual and Group Accident and Health Contracts*, and *SSAP No. 59—Credit Life and Accident and Health Insurance Contracts*. The ceding entity shall reduce premium income by the amounts paid or payable to the reinsurers. The ceding entity shall reduce its deferred and uncollected premiums reported as an asset by the corresponding proportionate amount of any deferred and uncollected premium attributable to those insurance policies reinsured. When the ceding entity has collected the premium but has not remitted the proportionate share to the reinsurer, the ceding entity shall establish a liability for the amount due the reinsurer. The assuming entity shall record an asset for premiums receivable from the ceding entity.

26. If the assuming entity receives reinsurance premium prior to the due date, consistent with SSAP No. 51 paragraph 7 and SSAP No. 54, paragraph 6, advance premiums are reported as a liability for the reinsurer in the statutory financial statement and not considered income until due. Such amounts are not included in premium or the unearned premium reserve (if applicable) until the due date. If the ceding entity pays reinsurance premium prior to the due date, the amount of the prepaid item shall be reflected as a write-in admitted asset and it should not be recognized in the income statement until due. Such amounts are not included in ceded premiums or ceded unearned premium but should be subject to impairment analysis.

Reinsurance Benefit Payments

27. Policy benefit payments paid or payable by the reinsurer shall be reported in the summary of operations and reduces the ceding entity's reported benefit payments. The reinsurer shall establish a liability for its share of any unpaid claim payments and the ceding entity shall reduce any policy and contract claim liability with respect to the reinsured policies or establish a receivable for the amount due from the reinsurer for claims paid.

Reinsurance of Deposit-Type Contracts

28. At the outset of a reinsurance contract covering deposit-type contracts as defined in *SSAP No. 52—Deposit-Type Contracts*, the net consideration exchanged between the parties shall be recorded as a contra-liability (reduction of reserve) by the payer of the net considerations and as a liability (reserve) by the receiver. Throughout the life of the contract, receipts and disbursements shall be recorded through the asset/liability accounts.

Expenses

29. It is common for the assuming entity to provide an expense allowance to cover expenses of the ceding entity. The allowance is frequently nonspecific with respect to premium taxes and other general expenses of the ceding entity and it is usually combined with and accounted for as part of the commissions on reinsurance assumed or ceded.

30. Commissions on direct business, commissions and expense allowances on reinsurance assumed, and commissions and expense allowances on reinsurance ceded are each accounted for separately in the summary of operations and on the balance sheet. Accordingly, for entities reporting on the Life, Accident

and Health Annual Statement, commissions and expense allowances on reinsurance ceded are reported as income in the summary of operations and the balance sheet provision for due and accrued amounts is reported as an asset. For entities reporting on the Health Annual Statement commissions and expense allowance on reinsurance ceded are reported as an offset to administrative expenses.

31. The taxes, commissions, and other expenses that will be paid by the assuming entity to the ceding entity are agreed upon when the reinsurance agreement is negotiated. These items are calculated in accordance with the reinsurance agreement and usually relate to premiums or claims or both. At the statement date, the amount of unpaid expenses is generally based upon the amount of premiums and claims unpaid at that date.

32. Some coinsurance contracts provide that the assuming entity pay to the ceding entity a commission that exceeds the first-year premium. In the absence of any guarantees for payment of future premiums, or other similar persistency guarantees, these commissions are accounted for on the cash basis. If, however, the contract contains a persistency guarantee which provides for return of the excess commission, the ceding entity must record the excess commission as a liability. This liability is then released as future premiums are paid to the assuming entity or the persistency guarantee otherwise expires. The rate of release is determined in accordance with the anticipated experience and reasonable commission rate for first-year and renewal premiums. Excess commissions such as these are a means of financing for the ceding entity.

33. If renewal expense allowances in any accounting period are not sufficient to cover anticipated allocable renewal expenses of the ceding entity on the portion of the business reinsured, a liability is to be established by the ceding entity for the present value of the shortfall. In establishing this liability, assumptions are to be used equal to the applicable statutory reserve basis on the business reinsured. Anticipated allocable expenses include commissions, premium taxes and direct expenses including, but not limited to, billing, valuation, claims and maintenance expected by the entity at the time the business is reinsured.

Experience Refunds

34. Some reinsurance contracts, generally proportional reinsurance, provide that the reinsurer will refund an agreed upon portion of its profit to the ceding entity. The reinsurance contract will provide the calculation and the factors to be included.

35. If the contract provides for experience refunds, the ceding entity must record, as an asset, the amount of the refund receivable as of the statement date, but reduced by any amount that is contingent upon future experience. The assuming entity is also required to record, as a liability, the amount of the refund calculated at the statement date, but without regard to any effects that future experience might have.

Credits for Ceded Reinsurance

36. The credit taken by the ceding entity under the coinsurance arrangement is calculated using the same methodology and assumptions used in determining its policy and claim reserves. It is, of course, only for the percentage of the risk that was reinsured. Under modified coinsurance, the reserve credit is reduced by the modco deposit retained by the ceding entity. If the entity reinsures on a yearly renewable term basis, it is itself buying insurance for the portion of the ceded amount at risk. The amount of yearly renewable term reinsurance that is required on a given policy generally decreases each year as the entity’s reserve increases. The net amount at risk may increase, however, on interest sensitive products such as universal life. The amount at risk on accident and health yearly renewal term reinsurance will remain level and the reinsurance premium will increase each year.

37. The reserve credit taken by the ceding entity is reported as a reduction to the reserves and not as an asset of the entity. The ceding entity's reserve credit and assuming entity's reserve for yearly renewable term reinsurance shall be computed as the one year term mean reserve on the amount of insurance ceded. The ceding entity must use the same mortality and interest bases which were used for valuing the original policy before reinsurance. The credit may also be computed on a pro rata basis if the result is not materially different from the credit computed on the mean reserve basis. For all types of reinsurance, the ceding entity also takes credit for other amounts due from the reinsurer such as unpaid claims and claims incurred but not reported. If contemplated by the reinsurance contract, recognition of related assets and liabilities must occur (policy loans, due and deferred premiums, etc.).

38. Non-proportional reinsurance is entered into on an annual basis to limit the claims experience of the ceding entity and thereby protect its financial integrity. When the period of the arrangement exceeds one year, the contract must be carefully reviewed to determine if the end result more closely follows proportional reinsurance. No reserve credit is taken for non-proportional reinsurance unless the aggregate attachment point has in fact been penetrated. In order for an entity to reflect reserve credits on a prospective basis, the entity will need to demonstrate that the present value of expected recoveries using realistic assumptions, to be realized from the reinsurer are in excess of the present value of the reinsurance premiums guaranteed to be paid by the ceding entity under the terms of the contract. Because non-proportional reinsurance aggregates experience, and does not indemnify the ceding entity for each policy loss, the use of statutory assumptions underlying the insured policies is inappropriate for determining any reserve credit to be taken by the ceding entity. Historical experience, pricing assumptions and asset shares shall be considered in determining if the reinsurer may be reasonably expected to pay any claims. The reserve credit taken shall only reflect these reasonable expectations. This treatment of non-proportional reinsurance is similar to the way property and casualty (P&C) reinsurance is considered. This is because these modes of reinsurance more closely follow P&C indemnification principles than life insurance formula basis, and because these coverages are very similar to excess insurance on P&C products. In determining the appropriate reserve credit, the probability of a loss penetrating to the reinsurer's level of coverage (using reasonable assumptions) must be multiplied by the expected amount of recovery. This is the same as reserve credits on coinsurance where the probability of a claim (i.e., mortality) is multiplied by the expected return (i.e., death benefit). In that the coverage is for aggregate experience, the mortality assumptions underlying any one policy risk are inappropriate to analyze the appropriate credits for non-proportional coverage.

Reserves for Reinsurance Assumed

39. In assuming any insurance risks, the assuming entity is required to establish policy reserves that are consistent with its obligations. The reserves it must establish, therefore, are also dependent upon the arrangement of reinsurance that is used. For risks transferred under the reinsurance arrangement, policy and claim reserves must be at least equal to the required reserves calculated using the same methodology and assumptions that would be used if the reinsurer had written the risk directly.

Accounting for Modified Coinsurance Arrangements

40. The following accounting applies to modified coinsurance arrangements:

a. Ceding Entity—In a modified coinsurance arrangement, the ceding entity retains the assets equal to the modified coinsurance reserve. This reserve represents a prepayment of the reinsurer's future obligation. Premiums paid or payable to the reinsurer net of any experience refunds shall result in the reduction of premium income. Policy benefit payments paid by the reinsurer shall reduce the ceding entity's reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the summary of operations as they are earned. The modified coinsurance reserve is included in the category of policy reserves. The modified coinsurance reserve adjustment from period-to-period shall be reported separately in the summary of operations;

b. Assuming Entity (Reinsurer)—Premiums received or receivable by the reinsurer shall increase premium income net of any experience refunds and policy benefit payments paid by the reinsurer shall increase the reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the summary of operations when payable. The statutory policy reserves exclude the modified coinsurance reserve. The modified coinsurance reserve adjustment from period-to-period shall be reported separately in the summary of operations. The reinsurer's accounting of its obligations shall be consistent with the ceding entity's accounting for the transfer of the obligations.

For separate accounts: The assuming reinsurer should account for the CRVM/CARVM expense allowances belonging to the assuming company when the ceding company holds the assets supporting the full account balance (prior to modification for CRVM/CARVM expense allowances) in its separate accounts as follows:

i. The assuming company records the CRVM/CARVM expense allowances in the Liabilities line, "Transfers to Separate Accounts due or accrued (net)" and includes them in the caption disclosure: "Including $_______, accrued for expense allowances recognized in reserves net of reinsurance"

ii. Period changes are recorded in the Summary of Operations Line, "Net transfers to or (from) Separate Accounts"

Accounting for Coinsurance With Funds Withheld Arrangements

41. The following accounting applies to coinsurance arrangements with funds withheld:

a. Ceding Entity—Premiums paid or payable to the reinsurer net of any experience refunds shall reduce premium income. Policy benefit payments paid by the reinsurer shall reduce the ceding entity's reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the summary of operations as they are earned. A net reduction to policy reserves shall be taken for the portion of the obligation assumed by the reinsurer. Any amounts withheld by the ceding entity shall be recorded as a separate liability. Reporting entities filing the annual statement for life and accident and health insurers shall record any interest due or payable on the amounts withheld as a component of aggregate write-ins for miscellaneous deductions. Reporting entities filing the health annual statement shall record any interest due or payable on the amounts withheld as a component of aggregate write-ins for other income or expense.

b. Assuming Entity (Reinsurer)—Premiums received or receivable by the reinsurer net of any experience refunds shall increase premium income and policy benefit payments paid by the reinsurer shall increase the reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the summary of operations when payable. The reinsurer shall record its share of the statutory policy reserves attributable to the business identified in the contract. Any funds withheld by the ceding entity shall be recorded as an accounts receivable. For reporting entities filing the annual statement for life and accident and health insurers shall record any interest earned or receivable on the funds withheld as a component of aggregate write-ins for miscellaneous income. Reporting entities filing the health annual statement shall record any interest earned or receivable on the funds withheld as a component of aggregate write-ins for other income or expense.

Uncollectible Reinsurance

42. The ceding and assuming companies must determine if reinsurance recoverables are collectible. If it is probable that reinsurance recoverables on paid or unpaid claim or benefit payments will be uncollectible, consistent with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*, these amounts shall be written off through a charge to the Statement of Operations utilizing the same accounts which established the reinsurance recoverables.

Reinsurance Ceded to a Certified Reinsurer

43. A certified reinsurer is an assuming insurance entity that does not meet the requirements to be considered an authorized reinsurer in the domestic state of the ceding insurance entity, but has been certified by such state and is required to provide collateral as security for its reinsurance obligations incurred under contracts entered into or renewed on or after the effective date of certification.

44. Credit for reinsurance ceded to a certified reinsurer is permitted if security is held by or on behalf of the ceding entity in accordance with the certified reinsurer's rating assigned by the domestic state of the ceding insurance entity, and in accordance with requirements of *Appendix A-785* of this manual. Such deposits are to be held under the control of the ceding entity. Additionally, any securities held under such an arrangement must be investments that the ceding entity is allowed to make under the provision of the investment sections of the insurance statutes of its domiciliary state. Other permissible arrangements include irrevocable trusts or "clean" letters of credit.

45. An upgrade in a certified reinsurer's assigned rating applies on a prospective basis, i.e., the revised collateral requirement applies only to contracts entered into or renewed on or after the effective date of the new rating (see A-785). A downgrade in a certified reinsurer's rating applies on a retroactive basis, i.e., the revised collateral requirement applies to all reinsurance obligations incurred by the assuming insurer under its certified reinsurer status. Notwithstanding a change in a certified reinsurer's rating or revocation of its certification, a reporting entity that has ceded reinsurance to such certified reinsurer is allowed a three (3)-month grace period before recording a provision for reinsurance due to collateral deficiency associated with such rating downgrade and increased collateral requirement for all reinsurance ceded to such assuming insurer under its certified reinsurer status, unless the reinsurance is found by the commissioner of the reporting entity's domestic state to be at high risk of uncollectibility.

46. With respect to reinsurance contracts involving a certified reinsurer, the contract must include a proper funding clause, which requires the certified reinsurer to provide and maintain security in an amount sufficient to avoid the imposition of any financial statement penalty on the ceding insurance entity for reinsurance ceded to the certified reinsurer. However, this does not preclude negotiation for higher contractual collateral amounts.

47. A liability is established by the ceding entity to offset credit taken in various balance sheet accounts for reinsurance ceded to a certified reinsurer in an amount proportionate to any deficiency in the amount of acceptable security that is provided by the certified reinsurer as compared to the amount of security that is required to be provided in accordance with the certified reinsurer's rating. In determining the amount of this liability, the ceding insurance entity must first determine the net obligations subject to collateral from the certified reinsurer, which is equal to the following:

a. Reserve credits taken including any Interest Maintenance Reserve (IMR) liability adjustment; plus

b. Claim liability credits taken on paid and unpaid (in course of settlement) claims recoverable; plus

c. Other asset increases or liability reductions resulting from amounts recoverable from the assuming entity including commissions, expense allowances, modified coinsurance reserve adjustments, experience rating refunds, and estimated incurred but not reported claim liabilities; less

d. Amounts contractually due the assuming entity.

48. The liability for reinsurance with certified reinsurers due to collateral deficiency is then determined as follows:

a. The net obligations subject to collateral from the certified reinsurer as calculated in paragraph 47; less

b. The net obligations subject to collateral from the certified reinsurer as calculated in paragraph 47 multiplied by the ratio of the amount of collateral provided by the certified reinsurer to the amount of collateral required to be provided by the certified reinsurer in accordance with its rating assigned by the domestic state of the ceding entity.

49. The net liability defined in paragraphs 47 and 48 shall never be less than zero for any particular certified reinsurer. The change in liability for reinsurance with certified reinsurers is a direct charge or credit to surplus.

Unauthorized Reinsurance

50. If the reinsurer is not authorized, otherwise approved or certified to do business, the reinsurance is considered to be unauthorized. A liability is established to offset credit taken in various balance sheet accounts for reinsurance ceded to unauthorized reinsurers. Credit for reinsurance with unauthorized companies shall be permitted if the ceding entity holds securities or cash of the assuming entity equal to the reserve credit taken. Such deposits are to be held under the control of the ceding entity. Additionally, any securities held under such an arrangement must be investments that the ceding entity is allowed to make under the provision of the investment sections of the insurance statutes. Other permissible arrangements include irrevocable trusts or “clean” letters of credit. If the assuming entity is not licensed or is not an authorized reinsurer in the domiciliary state of the ceding entity or if the reinsurance does not meet required standards, the ceding entity must set up a net liability equal to the following:

a. Reserve credits taken including any Interest Maintenance Reserve (IMR) liability adjustment; plus

b. Claim liability credits taken on paid and unpaid (in course of settlement) claims recoverable; plus

c. Other asset increases or liability reductions resulting from amounts recoverable from the assuming entity including commissions, expense allowances, modified coinsurance reserve adjustments, experience rating refunds, and estimated incurred but not reported claim liabilities; less

d. Deposits by or funds withheld from the reinsurer, as provided for in the reinsurance treaty and in compliance with the security requirements of Appendix A-785, pledged as security for the payment of reinsurance obligations. Such deposits or funds are typically held by the ceding entity or are placed in a trust or custodial account. Amounts placed in trust or custodial accounts are held subject to withdrawal by, and under the control of, the ceding entity; less

e. Amounts of reinsurance recoverables covered by a clean, irrevocable letter of credit issued by a qualified U.S. financial institution as defined in Appendix A-785; less

f. Amounts contractually due the assuming entity.

51. The net liability defined in paragraph 50 shall never be less than zero for any particular reinsurer. The change in liability for unauthorized reinsurance is a direct charge or credit to surplus.

Syndicated Letters of Credit

52. With a Syndicated Letter of Credit (Syndicated LC), the reinsurer enters into an agreement with a group of banks (the "Issuing Banks") and an agent bank (the "Agent"). Each Issuing Bank and the Agent is an NAIC-approved bank and a "qualified bank". This agreement requires the Agent to issue, on behalf of the each of the Issuing Banks, letters of credit in favor of the ceding insurer. The credit is issued (as an administrative matter) only through the Agent's letter of credit department. Each issuing bank signs the Syndicated LC through the Agent, as its attorney-in-fact. Syndicated LCs are consistent with A-785, in that the Syndicated LC is the legal equivalent of multiple letters of credit separately issued by each of the issuing banks. Reporting entities shall take a reduction in the liability on account of reinsurance recoverables secured by the Syndicated LC if all of the following conditions are met:

a. All listed banks on the letter of credit are qualified and meet the criteria of the NAIC SVO approved bank listing;

b. Banks are severally and not jointly liable; and

c. Specific percentages for each assuming bank are listed in the letter of credit.

Funds Held Under Reinsurance Treaties with Unauthorized Reinsurers or Certified Reinsurers

53. This liability is established for funds deposited by or contractually withheld from unauthorized reinsurers or certified reinsurers.

Accounting for Interest Maintenance Reserve (IMR)

54. The interest-related gain or loss (net of taxes) associated with the sale, transfer or reinsurance of a block of liabilities must be credited or charged to the IMR in accordance with the IMR instructions contained in the NAIC Annual Statement Instructions for Life and Accident and Health Insurance Companies.

Gains and Losses on Indemnity Reinsurance

55. Under an indemnity reinsurance arrangement the ceding entity continues to be liable to the policyholders and the reinsurer has no obligations to them except in the case of cut-through agreements. Typically the ceding entity will continue to perform all functions in connection with claims and other policyholder services. Gains and losses on indemnity reinsurance are defined as the net experience under the reinsurance contract within a calendar year. Net experience (underwriting gains or loss) includes ceded premiums, claims, expense allowances, reserve adjustments, any IMR liability adjustment, and experience refunds and dividends.

56. Losses that occur in any year of an indemnity reinsurance contract are immediately recognized. For reinsurance of in-force blocks of business, gains that occur in the initial calendar year are accounted for in accordance with Appendix A-791, paragraph 3. If a retrocession of all or a portion of an in-force block of assumed business occurs contemporaneously with assuming the in-force block of business, any resulting net gain from assuming the in-force block of business and the retrocession shall be accounted for in accordance with Appendix A-791. Any resulting net loss shall be recognized immediately in earnings.

57. For indemnity reinsurance agreements entered into for other than in-force blocks of business, the gains and losses are immediately recognized by the ceding and assuming entity.

Recaptures and Commutations

58. A recapture or a commutation of a reinsurance agreement is a transaction which results in the complete and final settlement and discharge of all present and future obligations between the parties arising out of the agreement or a portion of the agreement. Commuted and recaptured balances shall be accounted for by writing them off through the accounts, exhibits and schedules in which they were originally recorded. The assumed reserves and reserve credits taken are eliminated by the reinsurer and ceding entity, respectively. The reinsurer and ceding entity must also make any required IMR liability adjustment changes. Any net gain or loss is reported in the summary of operations.

Deposit Accounting

59. To the extent that a reinsurance contract does not, despite its form, provide for sufficient transfer of risk amounts exchanged between the parties are to be accounted for and reported as follows:

a. At the outset of the reinsurance contract, the net consideration exchanged between the parties shall be recorded as an asset by the payer of the net considerations and as a liability by the receiver. The amount to be admitted as an asset is subject to the limitations for transactions with unauthorized reinsurers described in Appendix A-785. Throughout the life of the contract, receipts and disbursements shall be recorded through the asset/liability accounts. Income and losses shall be recognized by a party when, according to the terms of the contract, it has earned the amount and the other party has no recourse to repayment of such amount in future periods. When the contract is completed, or when there is a loss payment in excess of the deposit, any difference between consideration and recoveries shall be recorded as other miscellaneous insurance income or miscellaneous insurance loss;

b. No deduction shall be made from the policy or claim reserves on the balance sheet, schedules and exhibits.

Assumption Reinsurance

60. An entity may sell all or part of a block of insurance business through an assumption reinsurance agreement. Typically, under an assumption reinsurance arrangement, the reinsurance contract is intended to effect a novation, thereby to extinguish the ceding entity's liability to the policyholder. Assumption reinsurance requires that the reinsurer issue assumption certificates to the existing policyholders and take over responsibility for policyholder services. On occasion, the reinsurer will contract with the original entity to continue to provide such services on a fee basis or may contract with a third party. Regulatory approval of assumption reinsurance arrangements is usually required. Approval is also usually required from the policyholders, who have a predetermined time period in which to accept or reject the reinsurance transfer. After the deadline has passed, approval is considered implied for all outstanding responses. For those policyholders that reject the transfer, the reinsurance agreement typically converts to an indemnity arrangement. Under this circumstance, reinsurance accounting, as defined earlier in this statement, is to be followed.

Accounting for Assumption Reinsurance Transactions

61. Accounting for assumption reinsurance transactions involves all existing assets and liabilities with respect to the assumed policies. This involves policy reserves, policy loans, net due and deferred premiums, dividend accumulations, dividend liability, policy claims, advance premiums, unearned

interest on policy loans, etc. The total effect of all of these assets and liabilities is collectively referred to as net policy liabilities.

62. Typically, because a block of in-force business has value, the sale transaction will result in a gain to the ceding entity. If the policies are somewhat mature and have reasonably large net policy liabilities, the transaction probably will result in a transfer of cash or other assets by the ceding entity. In this case, the net policy liabilities released by the ceding entity will be greater than the value of the assets transferred. If the policies are young and have very small net policy liabilities, the assuming entity may pay some amount in the purchase. The ceding entity is to follow accounting for indemnity reinsurance for the policies sold until it has been formally relieved of the legal liability by either consent from the policyholders or when the expiration period for objecting to the transfer has expired. Upon release of the liability or risk, the ceding entity shall recognize any gain or loss immediately. The gain or loss shall be the difference between the book value of the assets and liabilities including any unamortized IMR allocated or related to the block of business transferred. Direct and ceded balances are to be eliminated and gains are to be taken into income proportionally as the policyholders approve the transfer or at the end of the response period.

63. The assuming entity is to value the assets acquired at the date of acquisition at their fair values, and the reserves are to be established according to statutory requirements based on the benefits in the individual policies reinsured. If the liabilities exceed the assets, the difference represents goodwill that must be amortized into operations using the interest method over the life of the policies, but for a period not to exceed 10 years. Goodwill resulting from assumption reinsurance transactions shall be included in the total goodwill of an entity when calculating the amount of goodwill that is a nonadmitted asset pursuant to *SSAP No. 68—Business Combinations and Goodwill*. If the assets exceed the liabilities, the assuming entity shall record a deferred liability and amortize the amount into operations using the interest method over the expected life of the business but not to exceed ten years.

64. Upon initiation of the assumption reinsurance contract, the ceding and assuming companies are to report all balances reinsured as direct adjustments to the balance sheet. Any net gain or loss is reported as miscellaneous income when recognized.

Accounting for Non-Economic Assumption Reinsurance Transactions

65. When the sale, transfer, or reinsurance of an in-force block of business occurs between affiliated companies that is not an economic transaction, the ceding and assuming entity shall not recognize any gain or loss. The statutory liabilities and any unamortized IMR shall be transferred from the ceding entity to the assuming entity without adjustment. The assuming entity shall amortize any transferred IMR at the same rate or amount that would have occurred for the ceding entity. To the extent that the value of the assets transferred by the ceding entity or the net asset value recorded by the assuming entity differs from the liabilities including any unamortized IMR, the ceding and assuming entity shall defer and amortize their respective differences consistent with the interest method described for non-affiliated transactions.

Disclosures

66. For life and annuity reserves the financial statements shall disclose the following:

a. A description of reserve practices concerning the following:

i. Waiver of deduction of deferred fractional premiums upon death of insured;

ii. Return of portion of final premium for periods beyond the date of death;

iii. Amount of any surrender value promised in excess of the reserve as legally computed;

b. The methods employed in the valuation of substandard policies;

c. The amount of insurance, if any, for which the gross premiums are less than the net premiums according to the valuation standards;

d. The method used to determine tabular interest, tabular less actual reserves released, and tabular cost (by formula or from the basic data for such items);

e. The method of determination of tabular interest on funds not involving life contingencies; and

f. The nature of significant other reserve changes.

67. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics for the categories of general account, separate account with guarantees, separate account nonguaranteed and the total as follows:

a. Subject to discretionary withdrawal:

i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;

(a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the entity;

(b) In installments over five years or more, with or without a reduction in the interest rate during the installment period.

ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in 67.v.(d) below;

iii. At fair value, where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current fair value, and the liabilities are stated at the current fair value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at fair value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

(a) In a lump sum without adjustment;

(b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

(c) In a lump sum subject to a fixed surrender charge of less than 5%;

(d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified “bail out” rate and the “bail out” rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues.

b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded; and

e. Total net.

68. Reconcile the total annuity reserves and deposit fund liabilities amount disclosed to the appropriate sections of the Aggregate Reserve for Life Policies and Contracts Exhibit and the Deposit Funds and Other Liabilities without Life or Disability Contingencies Exhibit, of the Life, Accident & Health Annual Statement and the corresponding lines in the Separate Accounts Statement.

69. Disclosures shall be made consistent with the interrogatories made under the “Ceded Reinsurance Report” detailed in the NAIC *Annual Statement Instructions For Life, Accident and Health Insurance Companies* in the Notes to the Financial Statements section.

70. Describe uncollectible reinsurance written off during the year reported in the following annual statement classifications, including the name or names of the reinsurer(s):

a. Claims incurred;

b. Claim adjustment expenses incurred;

c. Premiums earned; and

d. Other.

71. Describe commutation of ceded reinsurance during the year reported in the following annual statement classifications, including the name or names of the reinsurer(s):

a. Claims incurred;

b. Claim adjustment expenses incurred;

c. Premiums earned; and

d. Other.

72. The financial statements shall disclose the impact on any reporting period in which a certified reinsurer’s rating has been downgraded or its certified reinsurer status is subject to revocation and additional collateral has not been received as of the filing date. The disclosure should include the following:

a. Name of certified reinsurer downgraded or subject to revocation of certified reinsurer status and relationship to the reporting entity;

b. Date of downgrade or revocation and jurisdiction of action;

c. Collateral percentage requirements pre and post downgrade or revocation;

d. Net obligation subject to collateral;

e. As of the end of the current quarter, the estimated impact of the collateral deficiency to the reporting entity as a result of the assuming entity's downgrade or revocation of certified reinsurer status, (At year-end the actual impact of the collateral deficiency on the provision for reinsurance shall be disclosed).

f. U.S. domiciled reinsurers are eligible for certified reinsurer status. If the reporting entity is a certified reinsurer, the financial statements shall disclose the impact on any reporting period in which its certified reinsurer rating is downgraded or status as a certified reinsurer is subject to revocation. Such disclosure shall include information similar to paragraphs 72.b., 72.c. and 72.d. and the expectation of its ability to meet the increased requirements.

73. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

74. This statement adopts with modification *FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts*. The statutory accounting principles established by this statement differ substantially from GAAP, reflecting much more detailed guidance, as follows:

a. Reserve credits taken by ceding companies as a result of reinsurance contracts are netted against the ceding entity's policy and claim reserves and unpaid claims;

b. First year and renewal ceding commissions on indemnity reinsurance of new business are recognized as income. Ceding commissions on ceded in-force business are included in the calculation of initial gain or loss;

c. As discussed in SSAP No. 50, statutory accounting defines deposit-type contracts as those contracts which do not include any mortality or morbidity risk. GAAP defines investment contracts as those that do not subject the insurance enterprise to significant policyholder mortality or morbidity risk. (The distinction is any mortality or morbidity risk for statutory purposes vs. significant mortality or morbidity risk for GAAP purposes.) Therefore, a contract may be considered an investment contract for GAAP purposes, and that same contract may be considered other than deposit-type for statutory purposes. A reinsurance treaty covering contracts that have insignificant mortality or morbidity risk (i.e., contracts classified as other than deposit-type contracts for statutory purposes, but investment contracts for GAAP purposes) that does not transfer that mortality or morbidity risk, but does transfer all of the significant risk inherent in the business being reinsured (e.g., lapse, credit quality, reinvestment or disintermediation risk) qualifies for reinsurance accounting for statutory reporting purposes, but would not qualify for reinsurance accounting treatment for GAAP purposes;

d. Initial gains on indemnity reinsurance of in-force blocks of business have unique accounting treatment. A portion of the initial gain (equal to the tax effect of the initial gain in surplus) is reported as commissions and expense allowances on reinsurance ceded in the statement of operations. The remainder of the initial gain is reported on a net-of-tax basis as a write-in for gain or loss in surplus in the Capital and Surplus Account. In subsequent years, the ceding entity recognizes income on the reinsurance ceded line for the net-of-tax profits that emerged on the reinsured block of business with a corresponding decrease in the write-in for gain or loss in surplus;

e. This statement prohibits recognition of a gain or loss in connection with the sale, transfer or reinsurance of an in-force block of business between affiliated entities in a non-economic transaction. Any difference between the assets transferred by the ceding entity and the liabilities, including unamortized IMR, shall be deferred and amortized under the interest method;

f. This statement requires that a liability be established through a provision reducing surplus for unsecured reinsurance recoverables from unauthorized reinsurers;

g. This statement prescribes offsetting certain reinsurance premiums.

75. This statement incorporates Appendices A-785 and A-791.

Effective Date and Transition

76. This statement is effective for years beginning January 1, 2001, and, except as noted in paragraphs 77-80, applies to all reinsurance contracts entered into or amended subsequent to January 1, 1996. Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3).

77. The accounting and reporting practices revised by this statement shall not apply to reinsurance agreements in force on January 1, 1996.

78. The requirements of paragraph 18 relating to reinsurance of deposit-type contracts shall be effective for all accounting periods beginning on or after January 1, 2001. The guidance in paragraph 19 pertaining to applying deferral guidance to YRT treaties was originally contained within *INT 02-08: Application of A-791 to YRT Reinsurance of a Block of Business* and was effective January 1, 2003. The guidance in paragraph 40 related to separate accounts was originally contained within *INT 02-04: Recognition of CARVM and CRVM Expense Allowances by the Assuming Reinsurer in a Modified Coinsurance Agreement* and was effective March 18, 2002. The guidance in paragraph 52 was originally contained within *INT 02-09: A-785 and Syndicated Letters of Credit* and was effective September 12, 2004.

79. Agreements which were: a) entered into on or after January 1, 1996, and which do not transfer risk shall be accounted for as deposits; b) amended on or after January 1, 1996, and which do not transfer risk shall be accounted for prospectively as deposits with the appropriate reclassification of outstanding reinsurance balances as deposits with no surplus impact. For arrangements which were amended on or after January 1, 1996, a change in accounting principle associated with the revised accounting in this statement shall be applied prospectively with no adjustment to surplus as required by SSAP No. 3.

80. The guidance related to certified reinsurers is applicable only to cedants domiciled in states that have enacted/promulgated the certified reinsurer collateral framework, and only for their cessions to reinsurers certified under that domestic law/rule, and shall be effective for all reporting periods beginning on or after December 31, 2012.

GLOSSARY[1]

Assume

To accept or take over an insurance risk; the reverse of cede.

Assumption Reinsurance

The form of reinsurance that extinguishes the ceding entity's liability to the policyholder. The reinsurer directly assumes all the service and financial obligations of the original entity on the block of business being assumed. Unlike indemnity reinsurance, assumption reinsurance makes the assuming entity (reinsurer) directly liable to the policyholders. In some instances, the original entity may continue to administer and service the business but, if it does so, it does it as the agent of the reinsurer.

Automatic Maximum Limit

The amount of risk which can be automatically ceded if all other conditions are met. Also called the binding authority.

Authorized Reinsurer

An assuming entity is considered an authorized reinsurer if either: 1) it is licensed in the domiciliary state of the ceding entity; 2) it is an accredited reinsurer in the domiciliary state of the ceding entity; 3) it is domiciled and licensed in a state which employs standards regarding credit for reinsurance substantially similar to those of the domiciliary state of the ceding entity and maintains surplus of at least $20 million; 4) it maintains a trust for the benefit of all its U.S. policyholders and ceding entities equal to its U.S. liabilities plus a level of surplus prescribed in the NAIC model law on credit for reinsurance; or 5) it is a reinsurer accepting risks located in jurisdictions where the laws require reinsurance to be ceded to such entity.

Automatic Reinsurance

A reinsurance agreement under which the reinsurer is obligated to accept or assume risks which meet certain specific criteria based on the ceding entity's underwriting. The reinsurance is ceded on the underwriting judgment of the ceding entity without a case by case concurrence of the reinsurer, up to a specified amount, the automatic maximum limit. The ceding entity normally is required to keep its full stipulated retention for the class of business involved on any case ceded automatically. Often certain defined types of cases are not eligible for automatic treatment. Cases in excess of the automatic maximum limits or otherwise ineligible for automatic cover can usually be submitted for facultative consideration.

Binding Authority

The amount of risk over the ceding entity's retention which can be automatically ceded if all other conditions are met. Also called the automatic maximum limit.

Catastrophe Reinsurance

A form of non-proportional reinsurance offering the ceding entity protection against excess losses from multiple claims arising out of a single event or a single large loss. Typically, reinsurance benefits will be

[1] Definitions in this glossary are adapted from the Society of Actuaries' Reinsurance Section Treaty Committee paper, "Discussion of Reinsurance Provisions in a Life Reinsurance Agreements," dated August 1, 1994, and the glossary contained in *Life, Health, and Annuity Reinsurance*, by John E. Tiller, Jr., FSA, and Denise Fagerbert, FSA (ACTEX Publications, Inc.).

paid if at least a specified minimum number of claims exceeding a minimum threshold amount of benefits arises out of a single event. When these conditions are met, the ceding entity is reimbursed for a percentage (often 100%) of the claims over the threshold attachment point up to the maximum reinsurance benefit specified in the treaty.

Cede

To transfer an insurance risk from the entity originally issuing the policy to another insurance entity known as the reinsurer; the reverse of assume.

Certified Reinsurer

A certified reinsurer is an assuming insurance entity that does not meet the requirements to be considered authorized in the domestic state of the ceding insurer, but has been certified by such state and is required to provide collateral as security for its reinsurance obligations incurred under contracts entered into or renewed on or after the effective date of certification. The amount of security required to be provided by the certified reinsurer in order for a domestic ceding insurer to be eligible to receive financial statement credit for the reinsurance ceded is determined by an evaluation and rating that is assigned to the certified reinsurer by the domestic state of the ceding insurance entity.

Cession

The process of transferring risk from the ceding entity to the reinsurer.

Coinsurance

Indemnity life reinsurance in which the reinsurer participates in the risks and rewards of the policy provisions; the ceding entity retains its liability to the contractual relationship with the insured. The reinsurer is liable not only for its portion of the death benefit, but also all the nonforfeiture values. The reinsurer receives its proportionate share of the ceding entity's gross premium less a coinsurance allowance for commissions and other expenses. The reinsurer holds the reserve on its portion of the policy and usually retains any excess investment earnings.

Commutation

The termination of all obligations between the parties to a reinsurance agreement, normally accompanied by a final cash settlement. Commutation may be required by the reinsurance agreement or may be effected by mutual agreement.

Credit for Reinsurance

Negative entries (i.e., reductions) to the ceding entity's policy reserves and positive entries (i.e., increases) to the ceding entity's assets (amounts recoverable from reinsurers). In the context of reinsurance, the term "credit" is the opposite of its meaning in pure accounting terminology. In balance sheet accounting, a credit is a positive entry to a liability (reserve).

Cut Through Endorsement

An endorsement to a policy and referred to in a reinsurance agreement which requires that, in the event of the ceding entity's insolvency, any loss covered under the reinsurance agreement will be paid by the reinsurer directly to the insured (or a third party beneficiary).

Experience Rating Refund

A part of the profits under a reinsurance agreement which is returned to the ceding entity, allowing the ceding entity to share in a portion of profits realized on the reinsurance.

Facultative Reinsurance

Reinsurance under which the ceding entity has the option (faculty) of submitting and the reinsurer has the option of accepting or declining individual risks. Thus it is reinsurance that the ceding entity chooses to submit to a reinsurer for its consideration and which may be ceded to the reinsurer only if the reinsurer makes an offer to reinsure. The underwriting classification assigned to the risk for purposes of the reinsurance is determined by the reinsurer. Facultative reinsurance may be ceded under the facultative terms of an automatic treaty for risks that the ceding entity cannot or does not wish to cede automatically, or it may be ceded under a purely facultative treaty.

Facultative Obligatory Reinsurance

A form of reinsurance that shares aspects of both facultative and automatic reinsurance. As with facultative reinsurance, the ceding entity has no obligation to offer specific cases to the reinsurer. However, once a case is offered to the facultative obligatory reinsurer, the case is treated largely as if it were automatic. The reinsurer receives no underwriting information and is offered the case at the ceding entity's rating with the option to accept or reject the case. While not always stated in the treaty, it is usually understood that the case will be rejected by the reinsurer only if the reinsurer does not have available capacity (i.e., its own retention and automatic retrocession facilities).

Fronting Arrangement

A situation where one insurance entity issues policies to specified applicants and reinsures all or substantially all of the risks on the insurance to another insurance entity for a fee or portion of the profits. Fronting typically is used in jurisdictions where the reinsuring entity is not licensed to do business.

Funds Withheld

Assets that would normally be paid over to a reinsurer but are withheld by the ceding entity to permit statutory credit for nonadmitted reinsurance, to reduce a potential credit risk, or to retain control over investments. Under certain conditions, the reinsurer may withhold funds from the ceding entity.

Indemnity Reinsurance

The form of reinsurance under which the ceding entity secures reinsurance as a partial or total reimbursement on the risks assumed on policies it has issued or reinsured. Under indemnity reinsurance, the reinsurer has no relationship with the original policyholders; the ceding entity continues to administer and service the insurance on which it has secured reinsurance and remains fully responsible for all the interests of the policyholders. If the reinsurer cannot or does not honor its obligations to the ceding entity, the ceding entity would still be fully liable to its policyholders.

Indemnity reinsurance may be employed, not only between a direct writing entity and a reinsurer, but also between two reinsurers when retrocession of risks is being implemented.

Mod-Co Reserve Adjustment

The net of two modified coinsurance items: the interest on reserves (payable by the ceding entity to the reinsurer) and the increase in the reserve (payable by the reinsurer to the ceding entity) or decrease in the reserve (payable by the ceding entity to the reinsurer).

Modified Coinsurance

Indemnity life insurance that differs from coinsurance only in that the reserves are retained by the ceding entity, which represents a prepayment of all or a portion of the reinsurer's future obligation. Periodically an adjustment is made to the mean reserve on deposit with the ceding entity. This is usually done quarterly but may be done more frequently. If the reserve increases, the increase in mean reserve less interest on the mean reserve held at the end of the previous accounting period is paid by the reinsurer to the ceding entity. If the mean reserve decreases, the decrease and interest are paid by the ceding entity to the reinsurer. The appropriate interest rate is defined in the treaty.

Net Amount at Risk

The excess of the death benefit of a policy over the policy reserve. It is the amount which must come from surplus in the event of a death claim.

Non-Proportional Reinsurance

Reinsurance that is not secured on individual lives for specific individual amounts of reinsurance, but rather reinsurance that protects the ceding entity's overall experience on its entire portfolio of business, or at least a broad segment of it. The most common forms of non-proportional reinsurance are stop loss reinsurance and catastrophe reinsurance.

Non-proportional reinsurance is a form of casualty insurance. Usually neither the premium nor continuance of coverage is guaranteed beyond a specified term.

Pool

A method of allocating reinsurance among several reinsurers. Using this method, each reinsurer receives a specified percentage of risk ceded into the pool. Percentages may vary by reinsurer.

Proportional Reinsurance

Reinsurance on a particular life for a specified amount or share generally, though not necessarily, secured at the time the policy is issued to the insured. The continuation of coverage guarantees for the reinsurance generally parallel those in the life insurance coverage reinsured. Most life reinsurance conducted in the United States is done so on a proportional basis.

Recapture

The process by which the ceding entity recovers the liabilities transferred to a reinsurer. Reinsurance treaties often provide that if a ceding entity increases its retention, the ceding entity can, under previously agreed upon terms, take back (recapture) amounts of insurance previously ceded to fill up its new retention.

Reinsurer

An insurance entity to which another insurance entity can transfer, through the mechanism of reinsurance, part or all of its risk under a policy or policies it has issued or reinsured. If the transfer of risk is secured through indemnity reinsurance, the reinsurer becomes liable to the ceding entity for the reinsured benefits while the original entity, the ceding entity, remains fully liable to its insured policyholders. If the transfer of risk is secured through assumption reinsurance, the original entity steps out of the picture and transfers all of its liabilities and responsibilities to the reinsurer, who then is henceforth directly responsible to the original policyholders.

Retention

The portion of a policy which the ceding entity retains for its own liability on life insurance. It is normally expressed in terms of face amount of insurance, especially if more than the mortality risk is reinsured. It is sometimes expressed in terms of risk amount, particularly with single premium products.

An entity's retention is often graded by age and/or underwriting classification. Less frequently, special reduced retentions apply to specified risks, such as those engaging in aviation activities or with histories of coronary artery disease.

Retrocession

A form of reinsurance under which a reinsurer cedes to another insurer (the retrocessionaire) part or all of the reinsurance it has assumed from another entity. The original ceding entity has no relationship or recourse to the retrocessionaire and the original reinsurer remains fully liable to its client, the original ceding entity.

Retrocession provides a reinsurer with a method of accommodating its clients with respect to larger risks while still managing its own risk exposure.

Stop Loss Reinsurance

A form of non-proportional reinsurance under which the reinsurer pays some or all of a ceding entity's aggregate retained losses in excess of a predetermined dollar amount or in excess of a percentage of premium. Stop loss coverage provides protection against an excessive number or amount of claims in any given contract period.

Unauthorized Reinsurer

A reinsurer that is neither authorized, certified nor accredited (see "Authorized Reinsurer" and "Certified Reinsurer"). The ceding entity still may be able to take credit in its financial statements for reinsurance ceded to an unauthorized reinsurer if the reinsurer provides sufficient security for amounts due under the reinsurance treaty. This can usually be accomplished by permitting the ceding entity to withhold funds due the reinsurer (funds withheld approach) or by the reinsurer providing the ceding entity with a letter of credit, in a form acceptable to the state in question, or by the reinsurer establishing a trust agreement for the benefit of the ceding entity.

Yearly Renewable Term (YRT)

A form of life reinsurance under which the mortality or morbidity risks, but not the permanent plan reserves, are transferred to the reinsurer for a premium that varies each year with the amount at risk and the ages of the insureds. The amount of reinsurance, which may change annually, is generally the amount of insurance provided by the policy in excess of the primary insurer's reserve.

Statement of Statutory Accounting Principles No. 62 - Revised

Property and Casualty Reinsurance

STATUS

Type of Issue:	Common Area
Issued:	Finalized March 13, 2000; substantively revised December 5, 2009, and December 18, 2012
Effective Date:	January 1, 2001; substantive revisions in paragraphs 31.e., 80-83 and 98 (detailed in Issue Paper No. 137) are effective January 1, 2010; certified reinsurer changes effective December 31, 2012
Affects:	Supersedes SSAP No. 75 with guidance incorporated August 2011 Nullifies and incorporates INT 02-06, INT 02-09
Affected by:	No other pronouncements

Property and Casualty Reinsurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for property and casualty reinsurance. A wide range of methods for structuring reinsurance arrangements can be employed depending on the requirements of individual companies. This statement deals with the more commonly employed methods.

SUMMARY CONCLUSION

General

2. Reinsurance is the assumption by an insurer of all or part of a risk undertaken originally by another insurer. The transaction whereby a reinsurer cedes all or part of the reinsurance it has assumed to another reinsurer is known as a retrocession.

3. Reinsurance has many beneficial purposes. Among them are that it enables an insurance entity to (a) expand its capacity, (b) share large risks with other insurers, (c) spread the risk of potential catastrophes and stabilize its underwriting results, (d) finance expanding volume by sharing the financial burden of reserves, (e) withdraw from a line or class of business, and (f) reduce its net liability to amounts appropriate to its financial resources.

4. Reinsurance agreements are generally classified as treaty or facultative. Treaty reinsurance refers to an arrangement involving a class or type of business written, while facultative reinsurance involves individual risks offered and accepted.

5. Reinsurance coverage can be pro rata (i.e., proportional reinsurance) where the reinsurer shares a pro rata portion of the losses and premium of the ceding entity or excess of loss (i.e., non-proportional) where the reinsurer, subject to a specified limit, indemnifies the ceding entity against the amount of loss in excess of a specified retention. Most reinsurance agreements fall into one of the following categories:

I. Treaty Reinsurance Contracts—Pro Rata:

A. Quota Share Reinsurance—The ceding entity is indemnified against a fixed percentage of loss on each risk covered in the agreement;

B. Surplus Share Reinsurance—The ceding entity establishes a retention or "line" on the risks to be covered and cedes a fraction or a multiple of that line on each policy subject to a specified maximum cession;

II. Treaty Reinsurance Contracts—Excess of Loss:

A. Excess Per Risk Reinsurance—The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to each risk covered by a treaty;

B. Aggregate Excess of Loss Reinsurance—The ceding entity is indemnified against the amount by which the ceding entity's net retained losses incurred during a specific period exceed either a predetermined dollar amount or a percentage of the entity's subject premiums for the specific period subject to a specified limit;

III. Treaty Reinsurance Contracts—Catastrophe: The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to an accumulation of losses resulting from a catastrophic event or series of events;

IV. Facultative Reinsurance Contracts—Pro Rata: The ceding entity is indemnified for a specified percentage of losses and loss expenses arising under a specific insurance policy in exchange for that percentage of the policy's premium;

V. Facultative Reinsurance Contracts—Excess of Loss: The ceding entity is indemnified, subject to a specified limit, for losses in excess of its retention with respect to a particular risk.

Characteristics of Reinsurance Agreements

6. Common contract provisions that may affect accounting practices include:

a. Reporting responsibility of the ceding entity—Details required and time schedules shall be established;

b. Payment terms—Time schedules, currencies intended, and the rights of the parties to withhold funds shall be established;

c. Payment of premium taxes—Customarily the responsibility of the ceding entity, a recital of nonliability of the reinsurer may be found;

d. Termination—May be on a cut-off or run-off basis. A cut-off provision stipulates that the reinsurer shall not be liable for loss as a result of occurrences taking place after the date of termination. A run-off provision stipulates that the reinsurer shall remain liable for loss under reinsured policies in force at the date of termination as a result of occurrences taking place after the date of termination until such time as the policies expire or are canceled; and

e. Insolvency clause—Provides for the survival of the reinsurer's obligations in the event of insolvency of the ceding entity, without diminution because of the insolvency.

7. Reinsurance contracts shall not permit entry of an order of rehabilitation or liquidation to constitute an anticipatory breach by the reporting entity, nor grounds for retroactive revocation or retroactive cancellation of any contracts of the reporting entity.

Required Terms for Reinsurance Agreements

8. In addition to credit for reinsurance requirements applicable to reinsurance transactions generally, no credit or deduction from liabilities shall be allowed by the ceding entity for reinsurance recoverable where the agreement was entered into after the effective date of these requirements (see paragraphs 107 and 108) unless each of the following conditions is satisfied:

a. The agreement must contain an acceptable insolvency clause;

b. Recoveries due the ceding entity must be available without delay for payment of losses and claim obligations incurred under the agreement, in a manner consistent with orderly payment of incurred policy obligations by the ceding entity;

c. The agreement shall constitute the entire contract between the parties and must provide no guarantee of profit, directly or indirectly, from the reinsurer to the ceding entity or from the ceding entity to the reinsurer;

d. The agreement must provide for reports of premiums and losses, and payment of losses, no less frequently than on a quarterly basis, unless there is no activity during the period. The report of premiums and losses shall set forth the ceding entity's total loss and loss expense reserves on the policy obligations subject to the agreement, so that the respective obligations of the ceding entity and reinsurer will be recorded and reported on a basis consistent with this statement;

e. The agreement must include a proper reinsurance intermediary clause, if applicable, which stipulates that the credit risk for the intermediary is carried by the assuming insurance entity;

f. With respect to reinsurance contracts involving a certified reinsurer, the agreement must include a proper funding clause, which requires the certified reinsurer to provide and maintain security in an amount sufficient to avoid the imposition of any financial statement penalty on the ceding insurance entity for reinsurance ceded to the certified reinsurer. However, this does not preclude negotiation for higher contractual collateral amounts; and

g. With respect to retroactive reinsurance agreements, the following additional conditions apply:

i. The consideration to be paid by the ceding entity for the retroactive reinsurance must be a sum certain stated in the agreement;

ii. Direct or indirect compensation to the ceding entity or reinsurer is prohibited;

iii. Any provision for subsequent adjustment on the basis of actual experience in regard to policy obligations transferred, or on the basis of any other formula, is prohibited in connection with a retroactive reinsurance transaction, except that provision may be made for the ceding entity's participation in the reinsurer's ultimate profit, if any, under the agreement;

iv. A retroactive reinsurance agreement shall not be canceled or rescinded without the approval of the commissioner of the domiciliary state of the ceding entity.

Reinsurance Agreements with Multiple Cedents

9. Reinsurance agreements with multiple cedents require allocation agreements. The allocation agreement can be part of the reinsurance agreement or a separate agreement. If the agreement has multiple cedents:

a. The allocation must be in writing and

b. The terms of the allocation agreement must be fair and equitable.

Reinsurance Contracts Must Include Transfer of Risk

10. The essential ingredient of a reinsurance contract is the transfer of risk. The essential element of every true reinsurance agreement is the undertaking by the reinsurer to indemnify the ceding entity, i.e., reinsured entity, not only in form but in fact, against loss or liability by reason of the original insurance. Unless the agreement contains this essential element of risk transfer, no credit shall be recorded.(INT 02-22)

11. Insurance risk involves uncertainties about both (a) the ultimate amount of net cash flows from premiums, commissions, claims, and claims settlement expenses (underwriting risk) and (b) the timing of the receipt and payment of those cash flows (timing risk). Actual or imputed investment returns are not an element of insurance risk. Insurance risk is fortuitous—the possibility of adverse events occurring is outside the control of the insured.

12. Determining whether an agreement with a reinsurer provides indemnification against loss or liability (transfer of risk) relating to insurance risk requires a complete understanding of that contract and other contracts or agreements between the ceding entity and related reinsurers. A complete understanding includes an evaluation of all contractual features that (a) limit the amount of insurance risk to which the reinsurer is subject (e.g., experience refunds, cancellation provisions, adjustable features, or additions of profitable lines of business to the reinsurance contract) or (b) delay the timely reimbursement of claims by the reinsurer (e.g., payment schedules or accumulating retentions from multiple years).

13. Indemnification of the ceding entity against loss or liability relating to insurance risk in reinsurance requires both of the following:

a. The reinsurer assumes significant insurance risk under the reinsured portions of the underlying insurance agreements; and

b. It is reasonably possible that the reinsurer may realize a significant loss from the transaction.

14. A reinsurer shall not have assumed significant insurance risk under the reinsured contracts if the probability of a significant variation in either the amount or timing of payments by the reinsurer is remote. Implicit in this condition is the requirement that both the amount and timing of the reinsurer's payments depend on and directly vary with the amount and timing of claims settled by the ceding entity. Contractual provisions that delay timely reimbursement to the ceding entity prevent this condition from being met.

15. The ceding entity's evaluation of whether it is reasonably possible for a reinsurer to realize a significant loss from the transaction shall be based on the present value of all cash flows between the ceding and assuming companies under reasonably possible outcomes, without regard to how the individual cash flows are described or characterized. An outcome is reasonably possible if its probability is more than remote. The same interest rate shall be used to compute the present value of cash flows for each reasonably possible outcome tested. A constant interest rate shall be used in determining those present values because the possibility of investment income varying from expectations is not an element of insurance risk. Judgment is required to identify a reasonable and appropriate interest rate.

16. Significance of loss shall be evaluated by comparing the present value of all cash flows, determined as described in paragraph 15, with the present value of the amounts paid or deemed to have been paid to the reinsurer. If, based on this comparison, the reinsurer is not exposed to the reasonable possibility of significant loss, the ceding entity shall be considered indemnified against loss or liability relating to insurance risk only if substantially all of the insurance risk relating to the reinsured portions of the underlying insurance agreements has been assumed by the reinsurer. In this narrow circumstance, the reinsurer's economic position is virtually equivalent to having written the insurance contract directly. This condition is met only if insignificant insurance risk is retained by the ceding entity on the retained portions of the underlying insurance contracts, so that the reinsurer's exposure to loss is essentially the same as the reporting entity's.

17. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions

for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payment to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Therefore, any feature that may affect the timing of the reinsurer's reimbursement to the ceding entity shall be closely scrutinized.

Accounting for Reinsurance

18. Reinsurance recoverables shall be recognized in a manner consistent with the liabilities (including estimated amounts for claims incurred but not reported) relating to the underlying reinsured contracts. Assumptions used in estimating reinsurance recoverables shall be consistent with those used in estimating the related liabilities. Certain assets and liabilities are created by entities when they engage in reinsurance contracts. Reinsurance assets meet the definition of assets as defined by *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted to the extent they conform to the requirements of this statement.

19. Accounting for members of a reinsurance pool shall follow the accounting for the pool member which issued the underlying policy.[INT 03-02] Specific accounting rules for underwriting pools and associations are addressed in *SSAP No. 63—Underwriting Pools and Associations Including Intercompany Pools* (SSAP No. 63).

20. Reinsurance recoverable on loss payments is an admitted asset. Notwithstanding the fact that reinsurance recoverables on paid losses may meet the criteria for offsetting under the provisions of *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64), reinsurance recoverables on paid losses shall be reported as an asset without any available offset. Unauthorized reinsurance and reinsurance ceded to certified reinsurers is included in this asset and reflected separately as a liability to the extent required. Penalty for overdue authorized reinsurance shall be reflected as a liability.

21. Funds held or deposited with reinsured companies, whether premiums withheld as security for unearned premium and outstanding loss reserves or advances for loss payments, are admitted assets provided they do not exceed the liabilities they secure and provided the reinsured is solvent. Those funds which are in excess of the liabilities, and any funds held by an insolvent reinsured shall be nonadmitted.

22. Prospective reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for losses that may be incurred as a result of future insurable events covered under contracts subject to the reinsurance. Retroactive reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance. A reinsurance agreement may include both prospective and retroactive reinsurance provisions.

23. The distinction between prospective and retroactive reinsurance agreements is based on whether the agreement reinsures future or past insured events covered by the underlying insurance policies. For example, in occurrence-based insurance, the insured event is the occurrence of a loss covered by the insurance contract. In claims-made insurance, the insured event is the reporting to the insurer, within the period specified by the policy, of a claim for a loss covered by the insurance agreement. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance agreement is a retroactive agreement. (However, a reinsurance agreement that reinsures claims reported to an insurer that are covered under currently effective claims-made insurance policies is a prospective reinsurance agreement.)

24. It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the agreement is substantively prospective shall be determined based on the facts and circumstances. However, except as respects business assumed by a

U.S. reinsurer from ceding companies domiciled outside the U.S. and not affiliated with such reinsurer, or business assumed by a U.S. reinsurer where either the lead reinsurer or a majority of the capacity on the agreement is domiciled outside the U.S. and is not affiliated with such reinsurer, if an agreement entered into, renewed or amended on or after January 1, 1994 has not been finalized, reduced to a written form and signed by the parties within nine months after the commencement of the policy period covered by the reinsurance arrangement, then the arrangement is presumed to be retroactive and shall be accounted for as a retroactive reinsurance agreement. This presumption shall not apply to: (a) facultative reinsurance contracts, nor to (b) reinsurance agreements with more than one reinsurer which are signed by the lead reinsurer (i.e., the reinsurer setting the terms of the agreement for the reinsurers) within nine months after the commencement of the policy period covered by the reinsurance agreement, nor to (c) reinsurance agreements with more than one reinsurer (whether signed by the lead reinsurer or not) which were entered into, renewed or amended on or before December 31, 1996, (and which were not renewed or amended after that date) if reinsurers representing more than 50% of the capacity on the agreement have signed cover notes, placement slips or similar documents describing the essential terms of coverage and exclusions within nine months after the commencement of the policy period covered by the reinsurance arrangement. Also exempt from this presumption are reinsurance agreements where one of the parties is in conservation, rehabilitation, receivership or liquidation proceedings.

25. Prospective and retroactive provisions included within a single agreement shall be accounted for separately. If separate accounting for prospective and retroactive provisions included within a single agreement is impracticable, the agreement shall be accounted for as a retroactive agreement provided the conditions for reinsurance accounting are met.

Accounting for Prospective Reinsurance Agreements

26. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of written and earned premiums by the ceding entity and shall be earned over the remaining contract period in proportion to the amount of reinsurance protection provided or, if applicable, until the reinsurer’s maximum liability under the agreement has been exhausted. If the amounts paid are subject to adjustment and can be reasonably estimated, the basis for amortization shall be the estimated ultimate amount to be paid. Reinstatement premium, if any, shall be earned over the period from the reinstatement of the limit to the expiration of the agreement.

27. Changes in amounts of estimated reinsurance recoverables shall be recognized as a reduction of gross losses and loss expenses incurred in the current period statement of income. Reinsurance recoverables on paid losses shall be reported as an asset, reinsurance recoverables on loss and loss adjustment expense payments, in the balance sheet. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be netted against the liability for gross losses and loss adjustment expenses.

Accounting for Retroactive Reinsurance Agreements

28. Certain reinsurance agreements which transfer both components of insurance risk cover liabilities which occurred prior to the effective date of the agreement. Due to potential abuses involving the creation of surplus to policyholders and the distortion of underwriting results, special accounting treatment for these agreements is warranted.

29. All retroactive reinsurance agreements entered into, renewed or amended on or after January 1, 1994 (including subsequent development of such transactions) shall be accounted for and reported in the following manner:

a. The ceding entity shall record, without recognition of the retroactive reinsurance, loss and loss expense reserves on a gross basis on the balance sheet and in all schedules and exhibits;

b. The assuming entity shall exclude the retroactive reinsurance from loss and loss expense reserves and from all schedules and exhibits;

c. The ceding entity and the assuming entity shall report by write-in item on the balance sheet, the total amount of all retroactive reinsurance, identified as retroactive reinsurance reserve ceded or assumed, recorded as a contra-liability by the ceding entity and as a liability by the assuming entity;

d. The ceding entity shall, by write-in item on the balance sheet, restrict surplus resulting from any retroactive reinsurance as a special surplus fund, designated as special surplus from retroactive reinsurance account;

e. The surplus gain from any retroactive reinsurance shall not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid;

f. The special surplus from retroactive reinsurance account for each respective retroactive reinsurance agreement shall be reduced at the time the ceding entity begins to recover funds from the assuming entity in amounts exceeding the consideration paid by the ceding entity under such agreement, or adjusted as provided in paragraph 29.j.;

g. For each agreement, the reduction in the special surplus from retroactive reinsurance account shall be limited to the lesser of (i) the actual amount recovered in excess of consideration paid or (ii) the initial surplus gain resulting from the respective retroactive reinsurance agreement. Any remaining balance in the special surplus from retroactive reinsurance account derived from any such agreement shall be returned to unassigned funds (surplus) upon elimination of all policy obligations subject to the retroactive reinsurance agreement;

h. The ceding entity shall report the initial gain arising from a retroactive reinsurance transaction (i.e., the difference between the consideration paid to the reinsurer and the total reserves ceded to the reinsurer) as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Gain and included under Other Income;

i. The assuming entity shall report the initial loss arising from a retroactive reinsurance transaction, as defined in the preceding paragraph 29.g., as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Loss and included under Other Income;

j. Any subsequent increase or reduction in the total reserves ceded under a retroactive reinsurance agreement shall be reported in the manner described in the preceding paragraphs 29.h. and 29.i., in order to recognize the gain or loss arising from such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry on the balance sheet shall be adjusted, upward or downward, to reflect such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry shall be equal to or less than the total ceded reserves under all retroactive reinsurance agreements in-force as of the date of the financial statement. Special surplus arising from a retroactive reinsurance transaction shall be considered to be earned surplus (i.e., transferred to unassigned funds (surplus)) only when cash recoveries from the assuming entity exceed the consideration paid by the ceding entity as respects such retroactive reinsurance transaction; and

k. The consideration paid for a retroactive reinsurance agreement shall be reported as a decrease in ledger assets by the ceding entity and as an increase in ledger assets by the assuming entity.

(For an illustration of ceding entity accounting entries see Question 33 in Exhibit A.)

30. Portfolio reinsurance is the transfer of an insurer's entire liability for in force policies or outstanding losses, or both, of a segment of the insurer's business. Loss portfolio transactions are to be accounted for as retroactive reinsurance.

31. The accounting principles for retroactive reinsurance agreements in paragraph 29 shall not apply to the following types of agreements (which shall be accounted for as prospective reinsurance agreements unless otherwise provided in this statement):

a. Structured settlement annuities for individual claims purchased to implement settlements of policy obligations;

b. Novations, (i.e., (i) transactions in which the original direct insurer's obligations are completely extinguished, resulting in no further exposure to loss arising on the business novated or (ii) transactions in which the original assuming entity's obligations are completely extinguished) resulting in no further exposure to loss arising on the business novated, provided that (1) the parties to the transaction are not affiliates (or if affiliates, that the transaction has the prior approval of the domiciliary regulators of the parties) and (2) the accounting for the original reinsurance agreement will not be altered from retroactive to prospective;

c. The termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business;

d. Intercompany reinsurance agreements, and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction; or

e. Reinsurance/retrocession agreements that meet the criteria of property/casualty run-off agreements described in paragraphs 80-83.

32. Retroactive reinsurance agreements resulting in surplus gain to the ceding entity (with or without risk transfer) entered into between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) shall be reported as follows:

a. The consideration paid by the ceding entity shall be recorded as a deposit and reported as a nonadmitted asset; and

b. No deduction shall be made from loss and loss adjustment expense reserves on the ceding entity's balance sheet, schedules, and exhibits.

33. The accounting and reporting provisions applicable to retroactive reinsurance apply to all transactions transferring liabilities in connection with a court-ordered rehabilitation, liquidation, or receivership. The requirement to include stipulated contract provisions in the reinsurance agreements

shall not apply to these transactions, with written approval of the ceding entity's domiciliary commissioner.

34. Novations meeting the requirements of paragraph 31.b. shall be accounted for as prospective reinsurance agreements. The original direct insurer, or the original assuming insurer, shall report amounts paid as a reduction of written and earned premiums, and unearned premiums to the extent that premiums have not been earned. Novated balances (e.g., loss and loss adjustment expense reserves) shall be written off through the accounts, exhibits, and schedules in which they were originally recorded. The assuming insurer shall report amounts received as written and earned premiums, and obligations assumed as incurred losses in the statement of income.

Deposit Accounting

35. To the extent that a reinsurance agreement does not, despite its form, transfer both components of insurance risk, all or part of the agreement shall be accounted for and reported as deposits in the following manner:

a. At the outset of the reinsurance agreement, the net consideration paid by the ceding entity (premiums less commissions or other allowances) shall be recorded as a deposit by the ceding company and as a liability by the assuming entity. The deposit shall be reported as an admitted asset by the ceding company if (i) the assuming company is licensed, accredited or otherwise qualified in the ceding company's state of domicile as described in Appendix A-785 or (ii) there are funds held by or on behalf of the ceding company which meet the requirements of paragraph 18 of Appendix A-785;

b. At subsequent reporting dates, the amount of the deposit/liability shall be adjusted by calculating the effective yield on the deposit agreement to reflect actual payments to date (receipts and disbursements shall be recorded through the deposit/liability accounts) and expected future payments (as discussed below), with a corresponding credit or charge to interest income or interest expense;

c. The calculation of the effective yield shall use the estimated amount and timing of cash flows. If a change in the actual or estimated timing or amount of cash flows occurs, the effective yield shall be recalculated to reflect the revised actual or estimated cash flows. The deposit shall be adjusted to the amount that would have existed at the reporting date had the new effective yield been applied since the inception of the reinsurance agreement. Changes in the carrying amount of the deposit asset/liability resulting from changes in the effective yield shall be recorded as interest income or interest expense;

d. It shall be assumed that any cash transactions for the settlement of losses will reduce the asset/liability accounts by the amount of the cash transferred. When the remaining losses are revalued upward, an increase in the deposit liability shall be recorded as interest expense – by the assuming company. Conversely, the ceding company shall increase its deposit (asset) with an offsetting credit to interest income; and increase its outstanding loss liability with an offsetting charge to incurred losses;

e. No deduction shall be made from the loss and loss adjustment expense reserves on the ceding company's Statement of Financial Position, schedules, and exhibits;

f. The assuming company shall record net consideration to be returned to the ceding company as a liability.

(For an illustration of the provisions of paragraph 35, see Exhibit C)

Assumed Reinsurance

36. Reinsurance premiums receivable at the end of the accounting period are combined with direct business receivables and reported as agents' balances or uncollected premiums. Where the ceding entity withholds premium funds pursuant to the terms of the reinsurance agreement, such assets shall be shown by the assuming entity as funds held by or deposited with reinsured companies. Reporting entities shall record any interest earned or receivable on the funds withheld as a component of aggregate write-ins for miscellaneous income.

37. If the assuming entity receives reinsurance premium prior to the effective date of the reinsurance contract, consistent with *SSAP No. 53—Property Casualty Contracts-Premiums*, paragraph 15, advance premiums shall be reported as a liability in the statutory financial statement and not considered income until the effective date of the coverage. Such amounts are not included in written premium or the unearned premium reserve. If the assuming entity receives reinsurance premium after the effective date of the reinsurance contract but prior to the due date, the amount received shall be reported as a reduction of the asset for deferred but not yet due (earned but unbilled premiums).

38. Reinsurance premiums more than 90 days overdue shall be nonadmitted except (a) to the extent the assuming entity maintains unearned premium and loss reserves as to the ceding entity, under principles of offset accounting as discussed in SSAP No. 64, or (b) where the ceding entity is licensed and in good standing in assuming entity's state of domicile. Reinsurance premiums are due pursuant to the original contract terms (as the agreement stood on the date of execution). In the absence of a specific contract date, reinsurance premiums will be deemed due thirty (30) days after the date on which (i) notice or demand of premium due is provided to the ceding entity or (ii) the assuming entity books the premium (see *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*).

39. A lag will develop between the time of the entry of the underlying policy transaction on the books of the ceding entity and the transmittal of information and entry on the books of the assuming entity. Assuming companies shall estimate unreported premiums and related costs to the extent necessary to prevent material distortions in the loss development contained in the assuming entity's annual statement schedules where calendar year premiums are compared to accident year losses.

40. Proportional reinsurance (i.e., first dollar pro rata reinsurance) premiums shall be allocated to the appropriate annual statement lines of business in the Underwriting and Investment exhibits. Non-proportional assumed reinsurance premiums shall be classified as reinsurance under the appropriate subcategories.

41. Assumed retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in paragraph 29.

42. Amounts payable by reinsurers on losses shall be classified as unpaid losses. Assumed reinsurance payable on paid losses shall be classified as a separate liability item on the balance sheet. IBNR losses on assumed reinsurance business shall be netted with ceded losses on the balance sheet and listed separately by annual statement line of business in the Underwriting and Investment exhibits.

Ceded Reinsurance

43. Ceded reinsurance premiums payable (net of ceding commission) shall be classified as a liability. Consistent with SSAP No. 64, ceded reinsurance premiums payable may be deducted from amounts due from the reinsurer, such as amounts due on assumed reinsurance, when a legal right of offset exists.

44. With regard to reinsurance premium paid prior to the effective date of the contract, the ceding entity shall reflect the prepaid item as a write-in admitted asset and it should not be recognized in the income statement until the effective date of the coverage. Such amounts are not included in ceded written premiums or ceded unearned premium but should be subject to impairment analysis. With regard to reinsurance premium paid by ceding entity after the reinsurance contract is in effect but prior to the due date, the ceding entity shall treat this item as a reduction to the liability for ceded reinsurance premiums payable. That liability reflects not only premiums unpaid but also amounts booked but deferred and not yet due.

45. Amounts withheld by the ceding entity that would otherwise be payable under the reinsurance agreement shall be reported as funds held by entity under reinsurance treaties. Reporting entities shall record any interest due or payable on the amounts withheld as a component of aggregate write-ins for miscellaneous income.

46. Ceded reinsurance transactions shall be classified in the annual statement line of business which relates to the direct or assumed transactions creating the cession or retrocession.

47. Ceded retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in paragraph 29.

48. Reinsurance accounting shall not be allowed for modeled trigger securitizations. Modeled trigger securitization transactions do not result in the kind of indemnification (in form and in fact) required by this SSAP, and are therefore not eligible for reinsurance accounting. Modeled trigger transactions should be evaluated as securitization transactions rather than as reinsurance transactions and should receive the accounting treatment recommended for securitization transactions.

Adjustable Features/Retrospective Rating

49. Reinsurance treaties may provide for adjustment of commission, premium, or amount of coverage, based on loss experience. The accounting for common examples is outlined in the following paragraphs:

Commission Adjustments

50. An accrual shall be maintained for the following adjustable features based upon the experience recorded for the accounting period:

a. Contingent or Straight Profit—The reinsurer returns to the ceding entity a stipulated percentage of the profit produced by the business assumed from the ceding entity. Profit may be calculated for any specified period of time, but the calculation is often based on an average over a period of years; and

b. Sliding Scale—A provisional rate of commission is paid over the course of the agreement, with a final adjustment based on the experience of the business ceded under the agreement.

Premium Adjustments

51. If the reinsurance agreement incorporates an obligation on the part of the ceding entity to pay additional premium to the assuming entity based upon loss experience under the agreement, a liability in the amount of such additional premium shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to pay such additional premium occur(s). The assuming entity shall recognize an asset in a consistent manner. If the reinsurance agreement

incorporates an obligation on the part of the assuming entity to refund to the ceding entity any portion of the consideration received by the assuming entity based upon loss experience under the agreement, an asset in the amount of any such refund shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to make such refund occur(s). The initial provisional or deposit premium is recalculated retrospectively, based on loss experience under the agreement during a specified period of time; the calculation is often based on an average over a period of years. The assuming entity shall recognize a liability in a consistent manner.

Adjustments in the Amount of Coverage

52. The amount of coverage available for future periods is adjusted, upward or downward, based on loss experience under the agreement during a specified period of time. If the reinsurance agreement incorporates a provision under which the reinsurance coverage afforded to the ceding entity may be increased or reduced based upon loss experience under the agreement, an asset or a liability shall be recognized by the ceding entity in an amount equal to that percentage of the consideration received by the assuming entity which the increase or reduction in coverage represents of the amount of coverage originally afforded. The asset or liability shall be recognized during the accounting period in which the loss event(s) (or absence thereof) giving rise to the increase or decrease in reinsurance coverage occur(s), and shall be amortized over all accounting periods for which the increased or reduced coverage is applicable. The term “consideration” shall mean, for this purpose, the annualized deposit premium for the period used as the basis for calculating the adjustment in the amount of coverage to be afforded thereafter under the agreement.

Impairment

53. Include as a nonadmitted asset, amounts accrued for premium adjustments on retrospectively rated reinsurance agreements with respect to which all uncollected balances due from the ceding company have been classified as nonadmitted.

Commissions

54. Commissions payable on reinsurance assumed business shall be included as an offset to Agents’ Balances or Uncollected Premiums. Commissions receivable on reinsurance ceded business shall be included as an offset to Ceded Reinsurance Balances Payable.

55. If the ceding commission paid under a reinsurance agreement exceeds the anticipated acquisition cost of the business ceded, the ceding entity shall establish a liability, equal to the difference between the anticipated acquisition cost and the reinsurance commissions received, to be amortized pro rata over the effective period of the reinsurance agreement in proportion to the amount of coverage provided under the reinsurance contract.

Unauthorized Reinsurance

56. If the assuming reinsurer is not authorized, otherwise approved or certified to do business in the ceding entity’s domiciliary state, the assumed reinsurance is considered to be unauthorized. A provision is established to offset credit taken in various balance sheet accounts for reinsurance ceded to unauthorized reinsurers. Credit for reinsurance with unauthorized reinsurers shall be permitted to the extent the ceding entity holds collateral in accordance with appendix A-785. If the assuming reinsurer is not licensed or is not an authorized reinsurer in the domiciliary state of the ceding entity or if the reinsurance does not meet required standards, the ceding entity must set up a provision for reinsurance liability in accordance with the NAIC Annual Statement Instructions for Property and Casualty Insurance Companies Schedule F.

57. The provision defined in paragraph 56 shall never be less than zero for any particular reinsurer. The change in liability for unauthorized reinsurance is a direct charge or credit to surplus.

Reinsurance Ceded to a Certified Reinsurer

58. The term certified reinsurer shall have the same meaning as set forth in the Appendix A-785.

59. Credit for reinsurance ceded to a certified reinsurer is permitted if security is held by or on behalf of the ceding entity in accordance with the certified reinsurer's rating assigned by the domestic state of the ceding insurance entity, and in accordance with Appendix A-785 of this manual. However, nothing in this guidance would prohibit the parties to a reinsurance agreement from agreeing to provisions establishing security requirements that exceed the minimum security requirements established for certified reinsurers.

60. An upgrade in a certified reinsurer's assigned rating applies on a prospective basis, i.e., the revised collateral requirement applies only to contracts entered into or renewed on or after the effective date of the new rating (see A-785). A downgrade in a certified reinsurer's rating applies on a retroactive basis, i.e., the revised collateral requirement applies to all reinsurance obligations incurred by the assuming insurer under its certified reinsurer status. Notwithstanding a change in a certified reinsurer's rating or revocation of its certification, a reporting entity that has ceded reinsurance to such certified reinsurer is allowed a three (3)-month grace period before recording a provision for reinsurance due to collateral deficiency associated with such rating downgrade and increased collateral requirement for all reinsurance ceded to such assuming insurer under its certified reinsurer status, unless the reinsurance is found by the commissioner of the reporting entity's domestic state to be at high risk of uncollectibility.

61. A provision is established by the ceding entity to offset credit taken in various balance sheet accounts for reinsurance ceded to a certified reinsurer in an amount proportionate to any deficiency in the amount of acceptable security that is provided by the certified reinsurer as compared to the amount of security that is required to be provided in accordance with the certified reinsurer's rating. The calculation of the provision for a collateral shortfall is separate from the calculation of the provision for overdue reinsurance ceded to certified reinsurers and shall be calculated in accordance with the NAIC Annual Statement Instructions for Property and Casualty Insurance Companies.

62. The provision defined in paragraph 61 shall never be less than zero for any particular certified reinsurer. The change in liability for reinsurance with certified reinsurers is a direct charge or credit to surplus.

Funds Held Under Reinsurance Treaties

63. This liability is established for funds deposited by or contractually withheld from reinsurers or reinsurers.

Provision for Reinsurance

64. The NAIC Annual Statement Instructions for Property and Casualty Companies for Schedule F—Provision for Overdue Reinsurance, provide for a minimum reserve for uncollectible reinsurance with an additional reserve required if an entity's experience indicates that a higher amount should be provided. The minimum reserve Provision for Reinsurance is recorded as a liability and the change between years is recorded as a gain or loss directly to unassigned funds (surplus). Any reserve over the minimum amount shall be recorded on the statement of income by reversing the accounts previously utilized to establish the reinsurance recoverable.

65. The provision for reinsurance is calculated separately for unauthorized, authorized and certified reinsurers. An authorized reinsurer is licensed, accredited or approved by the ceding entity's state of domicile; a certified reinsurer is certified by the ceding entity's state of domicile; an unauthorized reinsurer is not so licensed, accredited, approved or certified.

Asbestos and Pollution Contracts – Counterparty Reporting Exception

66. Upon approval by the domiciliary regulator(s) of the ceding entity (either the original direct insurer in the case of a reinsurance agreement or the original assuming reinsurer in the case of a retrocession agreement), an exception may be allowed with respect to a retroactive reinsurance agreement providing substantially duplicate coverage as prior reinsurance agreements on asbestos and/or pollution exposures. Under this exception, a reporting entity may aggregate reinsurers into one line item in Schedule F reflecting the counterparty under the retroactive agreement for the purposes of determining the Provision for Reinsurance. This exception would allow the Provision for Reinsurance to reflect that amounts have been recovered by the reporting entity under the duplicate coverage provided by the retroactive contract, and that inuring balances from the original contract(s) are payable to the retroactive counterparty. An agreement must meet all of the requirements in paragraphs 66.a. through 66.e. in order to be considered for this exception.

a. The underlying agreement clearly indicates the credit risk associated with the collection of the reporting entity's inuring reinsurance recoverables and losses related to the credit risk will be covered by the retroactive reinsurance counterparty.

b. The retroactive reinsurance agreement must transfer significant risk of loss.

c. The assuming retroactive reinsurance counterparty must have a financial strength rating from at least two nationally recognized statistical rating organizations (NRSRO), the lowest of which is higher than or equal to the NRSRO ratings of the underlying third-party reinsurers.

d. The transaction is limited to reinsurance recoverables attributable to asbestos, and/or pollution.

e. The recoverables from the inuring reinsurers remain subject to credit analysis and contingent liability analysis.

67. The reporting entity will continue to detail the reporting of original reinsurers that were aggregated for one line reporting per paragraph 66 as provided in the Annual Statement Instructions. The aggregation reporting in schedule F is only to the extent that inuring balances from original reinsurance contracts are also payable to the retroactive reinsurance counterparty. This guidance is not intended to allow credit for reinsurance with respect to any amounts that do not meet the requirements of Appendix A-785. This guidance is not intended to otherwise change the application of retroactive accounting guidance for the retroactive portions of the contract that are not duplicative of the original reinsurance. Other portions of the retroactive contracts should continue to follow guidance applicable to retroactive accounting and reporting.

Syndicated Letters of Credit

68. With a Syndicated Letter of Credit (Syndicated LC), the reinsurer enters into an agreement with a group of banks (the "Issuing Banks") and an agent bank (the "Agent"). Each Issuing Bank and the Agent is an NAIC-approved bank and a "qualified bank". This agreement requires the Agent to issue, on behalf of the each of the Issuing Banks, letters of credit in favor of the ceding insurer. The credit is issued (as an administrative matter) only through the Agent's letter of credit department. Each issuing bank signs the

Syndicated LC through the Agent, as its attorney-in-fact. Syndicated LCs are consistent with A-785, in that the Syndicated LC is the legal equivalent of multiple letters of credit separately issued by each of the issuing banks. Reporting entities shall take a reduction in the liability on account of reinsurance recoverables secured by the Syndicated LC if all of the following conditions are met:

a. All listed banks on the letter of credit are qualified and meet the criteria of the NAIC SVO approved bank listing;

b. Banks are severally and not jointly liable; and

c. Specific percentages for each assuming bank are listed in the letter of credit.

Disputed Items

69. Occasionally a reinsurer will question whether an individual claim is covered under a reinsurance agreement or may even attempt to nullify an entire agreement. A ceding entity, depending upon the individual facts, may or may not choose to continue to take credit for such disputed balances. A ceding entity shall take no credit whatsoever for reinsurance recoverables in dispute with an affiliate.

70. Items in dispute are those claims with respect to which the ceding entity has received formal written communication from the reinsurer denying the validity of coverage.

Uncollectible Reinsurance

71. Uncollectible reinsurance balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

Commutations

72. A commutation of a reinsurance agreement, or any portion thereof, is a transaction which results in the complete and final settlement and discharge of all, or the commuted portion thereof, present and future obligations between the parties arising out of the reinsurance agreement.

73. In commutation agreements, an agreed upon amount determined by the parties is paid by the reinsurer to the ceding entity. The ceding entity immediately eliminates the reinsurance recoverable recorded against the ultimate loss reserve and records the cash received as a negative paid loss. Any net gain or loss shall be reported in underwriting income in the statement of income.

74. The reinsurer eliminates a loss reserve carried at ultimate cost for a cash payout calculated at present value. Any net gain or loss shall be reported in underwriting income in the statement of income.

75. Commuted balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

National Flood Insurance Program

76. The National Flood Insurance Program was created by the Federal Emergency Management Agency (FEMA) and is designed to involve private insurers in a write-your-own (WYO) flood insurance program financially backed by FEMA at no risk to the insurer. To become a participating WYO entity, the entity signs a document with the Federal Insurance Administration (FIA) of the Federal Emergency Management Agency known as the Financial Assistance/Subsidy Arrangement.

77. Premium rates are set by FEMA. The WYO participating companies write the flood insurance coverage qualifying for the program on their own policies, perform their own underwriting, premium collections, claim payments, administration, and premium tax payments for policies written under the program.

78. Monthly accountings are made to FIA and participants draw upon FEMA letters of credit for deficiencies of losses, loss expenses, and administrative expenses in excess of premiums, subject to certain percentage limitations on expenses.

79. Policies written by the reporting entity under the National Flood Insurance Program are considered insurance policies issued by the reporting entity, with reinsurance ceded to FEMA. (Such policies are not considered uninsured plans under *SSAP No. 47—Uninsured Plans* (SSAP No. 47.) Balances due from or to FEMA shall be reported as ceded reinsurance balances receivable or payable. The commission and fee allowances received from FEMA shall be reported consistent with reinsurance ceding commission.

Accounting for the Transfer of Property and Casualty Run-Off Agreements

80. Property and casualty run-off agreements are reinsurance or retrocession agreements that are intended to transfer essentially all of the risks and benefits of a specific line of business or market segment that is no longer actively marketed by the transferring insurer or reinsurer. A property and casualty run-off agreement is not a novation as the transferring insurer or reinsurer remains primarily liable to the policyholder or ceding entity under the original contracts of insurance or reinsurance. Reinsurance agreements between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) are not eligible for the exception for property and casualty run-off agreements in paragraph 31.e.

Criteria

81. The accounting treatment for property and casualty run-off agreements must be approved by the domiciliary regulators of the transferring entity (either the original direct insurer in the case of a reinsurance agreement or the original assuming reinsurer in the case of a retrocession agreement) and the assuming entity. If the transferring entity and assuming entity are domiciled in the same state, then the regulator of the state where the majority of the transferred liabilities is located shall be asked to approve the accounting treatment. In determining whether to approve an agreement for this accounting treatment, the regulators shall require the following:

a. Assuming Entity Properly Licensed – The entity assuming the run-off agreement must have the appropriate authority or license to write the business being assumed.

b. Limits and Coverages – The reinsurance or retrocession agreement shall provide the same limits and coverages that were afforded in the original insurance or reinsurance agreement.

c. Non-recourse – The reinsurance or retrocession agreement shall not contain any adjustable features or profit share or retrospective rating, and there shall be no recourse (other than normal representations and warranties that would be associated with a purchase and sale agreement) directly or indirectly against the transferring entity.

d. Risk Transfer – The reinsurance or retrocession agreement must meet the requirements of risk transfer as described in this statement.

e. Financial Strength of Reinsurer – The assuming reinsurer shall have a financial strength rating from at least two independent rating agencies (from NAIC credit rating providers (CRP)) which is equal to or greater than the current ratings of the transferring entity. The lowest financial strength rating received from an NAIC acceptable rating organization rating agency will be used to compare the financial strength ratings of the transferring and assuming entities.

f. Assessments – The assuming reinsurer or retrocessionaire (if required in the original reinsurance contract) shall be financially responsible for any and all assessments, including guaranty fund assessments, that are assessed against the transferring entity related to the insurance business being assumed.

g. Applicable Only to "Run-off" Business – The reinsurance or retrocession agreement shall only cover liabilities relating to a line(s) of business or specific market segments no longer actively marketed by the transferring entity.

h. Non-cancelable Reinsurance – The reinsurance or retrocession agreement shall provide that the reinsurance or retrocessional coverage provided by the proposed agreement cannot be cancelable by either party for any reason. (However, this provision will not override standard contracts law and principles and will not prevent any remedies, including rescission or termination that might be available for breach, misrepresentation, etc.)

Statutory Schedules and Exhibits

82. At the inception of the transaction, the transferring entity shall record the consideration paid to the assuming entity as a paid loss. If the consideration paid by the transferring entity is less than the loss reserves transferred, the difference shall be recorded by the ceding entity as a decrease in losses incurred. The assuming entity shall record the consideration received as a negative paid loss. In addition, the transferring entity shall record an increase to ceded reinsurance recoverable for the amount of the transferred reserve. Journal entries illustrating these transactions, including situations in which the transaction includes an unearned premium reserve, are included in Exhibit B of this Statement.

83. The assuming entity will report the business in the same line of business as reported by the original insurer or reinsurer. The assuming entity will report the business at the same level of detail using the appropriate statutory schedules and exhibits.

Disclosures

84. Unsecured Reinsurance Recoverables:

a. If the entity has with any individual reinsurers, authorized, unauthorized, or certified an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium, that exceeds 3% of the entity's policyholder surplus, list each individual reinsurer and the unsecured aggregate recoverable pertaining to that reinsurer; and

b. If the individual reinsurer is part of a group, list the individual reinsurers, each of its related group members having reinsurance with the reporting entity, and the total unsecured aggregate recoverables for the entire group.

85. Reinsurance Recoverables in Dispute—Reinsurance recoverable on paid and unpaid (including IBNR) losses in dispute by reason of notification, arbitration or litigation shall be identified if the

amounts in dispute from any entity (and/or affiliate) exceed 5% of the ceding entity's policyholders surplus or if the aggregate of all disputed items exceeds 10% of the ceding entity's policyholders surplus. Notification means a formal written communication from a reinsurer denying the validity of coverage.

86. Uncollectible Reinsurance—Describe uncollectible reinsurance written off during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):

a. Losses incurred;

b. Loss adjustment expenses incurred;

c. Premiums earned; and

d. Other.

87. Commutation of Ceded Reinsurance—Describe commutation of ceded reinsurance during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):

a. Losses incurred;

b. Loss adjustment expenses incurred;

c. Premiums earned; and

d. Other.

88. Retroactive Reinsurance—The table illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under Retroactive Reinsurance in the Notes to Financial Statements section shall be completed for all retroactive reinsurance agreements that transfer liabilities for losses that have already occurred and that will generate special surplus transactions. The insurer (assuming or ceding) shall assign a unique number to each retroactive reinsurance agreement and shall utilize this number for as long as the agreement exists. Transactions utilizing deposit accounting shall not be reported in this note.

89. Reinsurance Assumed and Ceded—The tables illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under "Reinsurance Assumed and Ceded in the Notes to Financial Statements" section shall be completed as follows:

a. The financial statements shall disclose the maximum amount of return commission which would have been due reinsurers if all reinsurance were canceled with the return of the unearned premium reserve; and

b. The financial statements shall disclose the accrual of additional or return commission, predicated on loss experience or on any other form of profit sharing arrangements as a result of existing contractual arrangements.

90. A specific interrogatory requires information on reinsurance of risk accompanied by an agreement to release the reinsurer from liability, in whole or in part, from any loss that may occur on the risk or portion thereof.

91. Disclosures for paragraphs 92-97 represent annual statement interrogatories, which are required to be included with the annual audit report beginning with audit reports on financial statements as of and for the period ended December 31, 2006. The disclosures required within paragraphs 92-97 shall be included in accompanying supplemental schedules of the annual audit report beginning in year-end 2006.

These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1994. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the reinsurance summary supplemental filing.

92. Disclose if any risks are reinsured under a quota share reinsurance contract with any other entity that includes a provision that would limit the reinsurer's losses below the stated quota share percentage (e.g. a deductible, a loss ratio corridor, a loss cap, an aggregate limit or any similar provisions)? If yes, indicate the number of reinsurance contracts containing such provisions and if the amount of reinsurance credit taken reflects the reduction in quota share coverage caused by any applicable limiting provision(s).

93. Disclose if the reporting entity ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement: (i) it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; (ii) it accounted for that contract as reinsurance and not as a deposit; and (iii) the contract(s) contain one or more of the following features or other features that would have similar results:

a. A contract term longer than two years and the contract is noncancellable by the reporting entity during the contract term;

b. A limited or conditional cancellation provision under which cancellation triggers an obligation by the reporting entity, or an affiliate of the reporting entity, to enter into a new reinsurance contract with the reinsurer, or an affiliate of the reinsurer;

c. Aggregate stop loss reinsurance coverage;

d. A unilateral right by either party (or both parties) to commute the reinsurance contract, whether conditional or not, except for such provisions which are only triggered by a decline in the credit status of the other party;

e. A provision permitting reporting of losses, or payment of losses, less frequently than on a quarterly basis (unless there is no activity during the period); or

f. Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.

94. Disclose if the reporting entity during the period covered by the statement ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; excluding cessions to approved pooling arrangements or to captive insurance companies that are directly or indirectly controlling, controlled by, or under common control with (i) one or more unaffiliated policyholders of the reporting entity, or (ii) an association of which one or more unaffiliated policyholders of the reporting entity is a member, where:

a. The written premium ceded to the reinsurer by the reporting entity or its affiliates represents fifty percent (50%) or more of the entire direct and assumed premium written by the reinsurer based on its most recently available financial statement; or

b. Twenty–five percent (25%) or more of the written premium ceded to the reinsurer has been retroceded back to the reporting entity or its affiliates in separate reinsurance contract.

95. If affirmative disclosure is required for paragraph 93 or 94, provide the following information:

a. A summary of the reinsurance contract terms and indicate whether it applies to the contracts meeting paragraph 93 or 94;

b. A brief discussion of management's principal objectives in entering into the reinsurance contract including the economic purpose to be achieved; and

c. The aggregate financial statement impact gross of all such ceded reinsurance contracts on the balance sheet and statement of income.

96. Except for transactions meeting the requirements of paragraph 31, disclose if the reporting entity ceded any risk under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:

a. Accounted for that contract as reinsurance (either prospective or retroactive) under statutory accounting principles (SAP) and as a deposit under generally accepted accounting principles (GAAP); or

b. Accounted for that contract as reinsurance under GAAP and as a deposit under SAP.

97. If affirmative disclosure is required for paragraph 96, explain in a supplemental filing why the contract(s) is treated differently for GAAP and SAP.

98. Disclosures for the Transfer of Property and Casualty Run-off Agreements

a. Disclose if the reporting entity has entered into any agreements which have been approved by their domiciliary regulator and have qualified pursuant to paragraph 31.e. (also see paragraphs 80-83).

b. If affirmative, provide a description of the agreement and the amount of consideration paid and liabilities transferred.

99. The financial statements shall disclose the following with respect to reinsurance agreements which qualify for reinsurer aggregation in accordance with paragraphs 66-67:

a. A description of the significant terms of the reinsurance agreement, including established limits and collateral, and

b. The amount of unexhausted limit as of the reporting date.

100. The financial statements shall disclose the following with respect to reinsurance agreements that have been accounted for as deposits:

a. A description of the reinsurance agreements.

b. Any adjustment of the amounts initially recognized for expected recoveries. The individual components of the adjustment (e.g., interest accrual, change due to a change in estimated or actual cash flow) shall be disclosed separately.

101. The financial statements shall disclose the impact on any reporting period in which a certified reinsurer's rating has been downgraded or its certified reinsurer status is subject to revocation and additional collateral has not been received as of the filing date. The disclosure should include the following:

a. Name of certified reinsurer downgraded or subject to revocation of certified reinsurer status and relationship to the reporting entity;

b. Date of downgrade or revocation and jurisdiction of action;

c. Collateral percentage requirements pre and post downgrade or revocation;

d. Net ceded recoverable subject to collateral;

e. As of the end of the current quarter, the estimated impact of the collateral deficiency to the reporting entity as a result of the assuming entity's downgrade or revocation of certified reinsurer status. (At year-end the actual impact of the collateral deficiency on the provision for reinsurance shall be disclosed.)

102. U.S. domiciled reinsurers are eligible for certified reinsurer status. If the reporting entity is a certified reinsurer, the financial statements shall disclose the impact on any reporting period in which its certified reinsurer rating is downgraded or status as a certified reinsurer is subject to revocation. Such disclosure shall include information similar to paragraphs 101.b., 101.c. and 101.d. and the expectation of its certified reinsurer's ability to meet the increased requirements.

103. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

104. This statement adopts with modification *FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113) and FASB *Emerging Issues Task Force No. 93-6, Accounting for Multiple-Year Retrospectively Rated Contracts by Ceding and Assuming Enterprises* for the following:

a. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be reported as a contra-liability netted against the liability for gross losses and loss adjustment expenses;

b. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of unearned premiums;

c. The gain created by a retroactive reinsurance agreement because the amount paid to the reinsurer is less than the gross liabilities for losses and loss adjustment expenses ceded to the reinsurer is reported in the statement of income as a write-in gain in other income by the ceding entity and a write-in loss by the assuming entity. The gain created by a retroactive reinsurance agreement is restricted as a special surplus account until the actual retroactive reinsurance recovered is in excess of the consideration paid;

d. This statement requires that a liability (provision for reinsurance) be established through a provision reducing unassigned funds (surplus) for unsecured reinsurance recoverables from unauthorized or certified reinsurers and for certain overdue balances due from authorized reinsurers;

e. Some reinsurance agreements contain adjustable features that provide for adjustment of commission, premium or amount of coverage, based on loss experience. This statement requires that the asset or liability arising from the adjustable feature be computed based on experience to date under the agreement, and the impact of early termination may only be considered at the time the agreement has actually been terminated;

f. Structured settlements are addressed in *SSAP No. 65—Property and Casualty Contracts*. Statutory accounting and FAS 113 are consistent in accounting for structured settlement annuities where the reporting entity is the owner and payee and where the claimant is the payee and the reporting entity has been released from its obligation. FAS 113 distinguishes structured settlement annuities where the claimant is the payee and a legally enforceable release from the reporting entity's liability is obtained from those where the claimant is the payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the reporting entity has not been released from its obligation; and

g. This statement requires that reinsurance recoverables on unpaid losses and loss adjustment expenses be presented as a contra-liability. Requirements for offsetting and netting are addressed in SSAP No. 64.

105. This statement adopts American Institute of Certified Public Accountants (AICPA*) Statement of Position 98-7, Deposit Accounting: Accounting for Insurance and Reinsurance Contracts That Do Not Transfer Insurance Risk* (SOP 98-7) paragraphs 10-12 and 19 (subsection b only). This statement rejects AICPA SOP 98-7 paragraphs 13-17 and 19 (subsections a and c).

106. This statement rejects AICPA *Statement of Position No. 92-5, Accounting for Foreign Property and Liability Reinsurance*. This statement incorporates Appendix A-785 as applicable.

Effective Date and Transition

107. This statement shall apply to:

a. Reinsurance agreements entered into, renewed, or amended on or after January 1, 1994. An amendment is any revision or adjustment of contractual terms. The payment of premiums or reimbursement of losses recoverable under the agreement shall not constitute an amendment; and

b. Reinsurance agreements in force on January 1, 1995, which cover losses occurring or claims made on or after that date on policies reinsured under such agreements.

108. The guidance shall not apply to:

a. Reinsurance agreements which cover only losses occurring or claims made before January 1, 1994, and which were entered into before January 1, 1994, and were not subsequently renewed or amended; and

b. Reinsurance agreements that expired before and were not renewed or amended after January 1, 1995.

109. The guidance in paragraphs 49-53 shall be effective for all accounting periods beginning on or after January 1, 1996, and shall apply to reinsurance agreements entered into, renewed or amended on or after January 1, 1994.

110. This statement, including the guidance in paragraph 35 incorporated from SSAP No. 75, is effective for years beginning January 1, 2001. Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

a. Revisions to paragraph 31.e., related to paragraphs 80-83, and disclosures in paragraph 98 documented in *Issue Paper No. 137—Transfer of Property and Casualty Reinsurance Run-off Agreements* are effective for contracts entered on or after January 1, 2010.

b. The guidance in paragraphs 35, 100 and 105 was previously included within *SSAP No. 75—Reinsurance Deposit Accounting—An Amendment to SSAP No. 62R, Property and Casualty Reinsurance* (SSAP No. 75) and was also effective for years beginning January. 1, 2001. In 2011, the guidance from SSAP No. 75 was incorporated within this statement, with SSAP No. 75 nullified. The original guidance included in this statement for deposit accounting, as well as the original guidance adopted in SSAP No. 75, are retained for historical purposes in Issue Paper No. 104. The guidance in paragraph 48 was originally contained within *INT 02-06: Indemnification in Modeled Trigger Transactions* and was effective June 9, 2002. The guidance in paragraph 68 was originally contained within *INT 02-09: A-785 and Syndicated Letters of Credit* and was effective September 12, 2004.

c. The guidance related to certified reinsurers is applicable only to cedants domiciled in states that have enacted/promulgated the new collateral framework and only for their cessions to reinsurers certified under that domestic law/rule. The requirements applicable to contracts with certified reinsurers shall be effective for all reporting periods beginning on or after December 31, 2012.

111. The guidance in paragraphs 66-67 and 99 allowing retroactive reinsurance exceptions for asbestos and pollution contracts is effective for all accounting periods beginning on or after January 1, 2014.

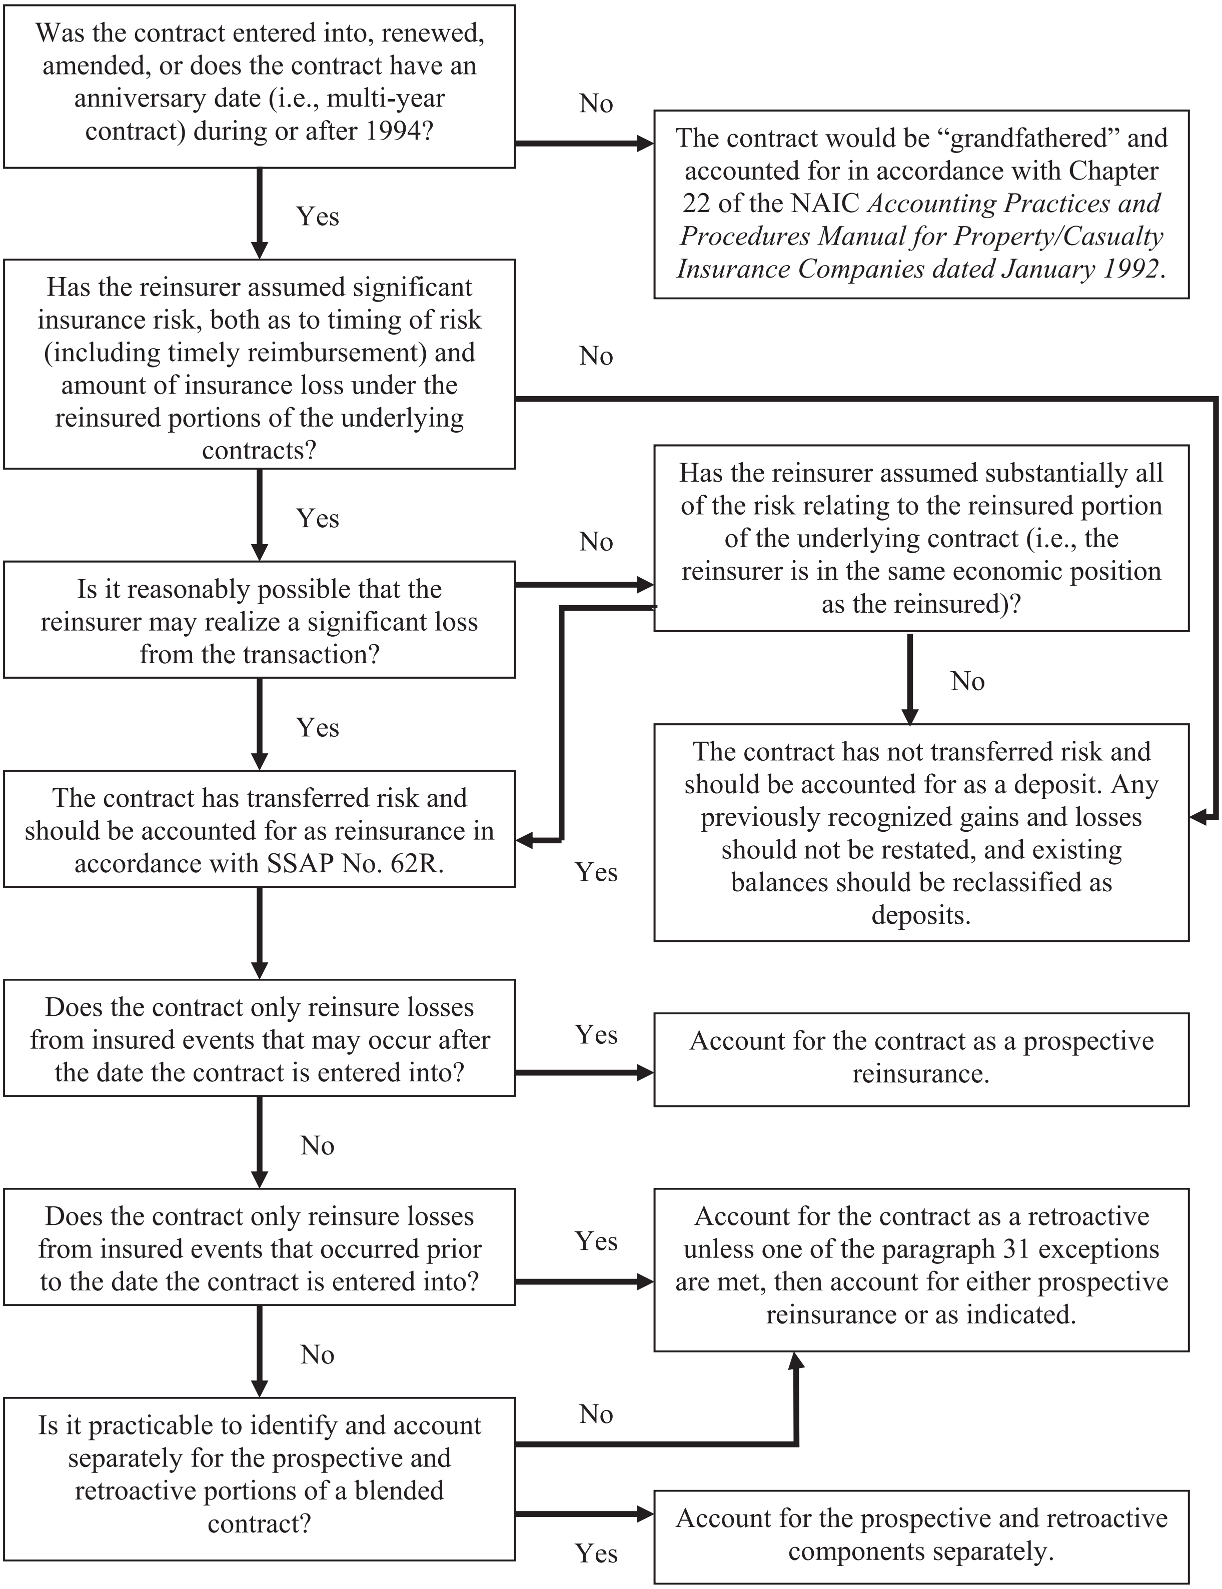
CLASSIFYING REINSURANCE CONTRACTS



Was the contract entered into, renewed, amended, or does the contract have an anniversary date (i.e., multi-year contract) during or after 1994?

The contract would be "grandfathered" and accounted for in accordance with Chapter 22 of the NAIC *Accounting Practices and Procedures Manual for Property/Casualty Insurance Companies dated January 1992*.

Has the reinsurer assumed significant insurance risk, both as to timing of risk (including timely reimbursement) and amount of insurance loss under the reinsured portions of the underlying contracts?

Has the reinsurer assumed substantially all of the risk relating to the reinsured portion of the underlying contract (i.e., the reinsurer is in the same economic position as the reinsured)?

Is it reasonably possible that the reinsurer may realize a significant loss from the transaction?

The contract has not transferred risk and should be accounted for as a deposit. Any previously recognized gains and losses should not be restated, and existing balances should be reclassified as deposits.

The contract has transferred risk and should be accounted for as reinsurance in accordance with SSAP No. 62R.

Does the contract only reinsure losses from insured events that may occur after the date the contract is entered into?

Account for the contract as a prospective reinsurance.

Does the contract only reinsure losses from insured events that occurred prior to the date the contract is entered into?

Account for the contract as a retroactive unless one of the paragraph 31 exceptions are met, then account for either prospective reinsurance or as indicated.

Is it practicable to identify and account separately for the prospective and retroactive portions of a blended contract?

Account for the prospective and retroactive components separately.

EXHIBIT A – IMPLEMENTATION QUESTIONS AND ANSWERS

Applicability

1. Q: The accounting practices in SSAP No. 62R specify the accounting and reporting for reinsurance contracts. What contracts are considered reinsurance contracts for purposes of applying these accounting practices?

   A: Any transaction that indemnifies an insurer against loss or liability relating to insurance risk shall be accounted for in accordance with the accounting practices included in SSAP No. 62R. Therefore, all contracts, including contracts that may not be structured or described as reinsurance, shall be accounted for as reinsurance when those conditions are met.

2. Q: The provisions of this statement will apply to (a) reinsurance contracts entered into, renewed or amended on or after January 1, 1994, and (b) any other reinsurance contracts that are in force on January 1, 1995 and cover insurable events on the underlying insurance policies that occur on or after that date. What contracts would be exempt from the new accounting rules included in SSAP No. 62R?

   A: The only exempt contracts are:

   1) Purely retroactive reinsurance contracts that cover only insured events occurring before January 1, 1994, provided those contracts were entered into before that date and are not subsequently amended and

   2) Contracts that expired before January 1, 1995 and are not amended after that date.

3. Q: This statement is to be applied to contracts which are amended on or after January 1, 1994. What if the change in terms is not significant, or the terms changed have no financial effect on the contract?

   A: In general, the term amendment should be viewed broadly to include all but the most trivial changes. Examples of amendments include, but are not limited to, replacing one assuming entity with another (including an affiliated entity), or modifying the contract's limit, coverage, premiums, commissions, or experience-related adjustable features. No distinction is made between financial and non-financial terms.

4. Q: Must the accounting provisions of SSAP No. 62R be applied to an *otherwise exempt* contract if the ceding entity pays additional premiums under the contract on or after January 1, 1994?

   A: The answer depends on why the additional premiums are paid. If the additional premiums are the result of a renegotiation, adjustment, or extension of terms, the contract is subject to the accounting provisions of SSAP No. 62R. However, additional premiums paid without renegotiation, adjustment, or extension of terms would not make an otherwise exempt contract subject to those provisions.

5. Q: Prospective and retroactive portions of a reinsurance contract are allowed to be accounted for separately, if practicable. Can the retroactive portion of an existing contract be segregated and, therefore, exempted with other retroactive contracts covering insured events occurring prior to January 1, 1994?

   A: No. The transition provisions apply to an entire contract, which is either subject to or exempt from the revised provisions of SSAP No. 62R. A ceding entity may bifurcate a contract already subject to the new accounting rules in SSAP No. 62R and then account for both the prospective and retroactive portions in accordance with the new accounting standard.

Risk Transfer

6. Q: Do the new risk transfer provisions apply to existing contracts?

A: Yes, the new risk transfer provisions apply to some existing contracts. SSAP No. 62R applies in its entirety only to existing contracts which were renewed or amended on or after January 1, 1994, or which cover losses occurring or claims made after that date. Therefore, those contracts must be evaluated to determine whether they transfer risk and qualify for reinsurance accounting. For accounting periods commencing on or after January 1, 1995, balances relating to such contracts which do not transfer insurance risk shall be reclassified as deposits and shall be accounted for and reported in the manner described under the caption Reinsurance Contracts Must Include Transfer of Risk.

SSAP No. 62R does not apply to existing contracts which were entered into before, and were not renewed or amended on or after, January 1, 1994, and which cover only losses occurring or claims made before that date, nor to contracts which expired before, and were not renewed or amended on or after, January 1, 1995. Those contracts will continue to be accounted for in the manner provided by SSAP No. 62R before these revisions.

7. Q: How does the effective date affect the assessment of whether a significant loss to the reinsurer was reasonably possible?

A: The risk transfer assessment is made at contract inception, based on facts and circumstances known at the time. Because that point in time has passed for existing contracts, some have suggested that the risk transfer provisions be applied as of the effective date. However, that approach to the risk transfer assessment would violate the requirement to consider all cash flows from the contract. Therefore, the test must be applied from contract inception, considering the effect of any subsequent contract amendments. Careful evaluation and considered judgment will be required to determine whether a significant loss to the reinsurer was reasonably possible at inception.

8. Q: Should risk transfer be reassessed if contractual terms are subsequently amended?

A: Yes. When contractual terms are amended, risk transfer should be reassessed. For example, a contract that upon inception met the conditions for reinsurance accounting could later be amended so that it no longer meets those conditions. The contract should then be reclassified and accounted for as a deposit.

9. Q: How should the risk transfer assessment be made when a contract has been amended?

A: No particular method is prescribed for assessing risk transfer in light of a contract amendment. Whether an amended contract in substance transfers risk must be determined considering all of the facts and circumstances in light of the risk transfer requirements. Judgment also will be required to determine whether an amendment in effect creates a new contract.

10. Q: For purposes of evaluating whether a contract with a reinsurer transfers risk, what constitutes a contract?

A: A contract is not defined, but is essentially a question of substance. It may be difficult in some circumstances to determine the boundaries of a contract. For example, the profit-sharing provisions of one contract may refer to experience on other contracts and, therefore, raise the question of whether, in substance, one contract rather than several contracts exist.

The inconsistency that could result from varying interpretations of the term *contract* is limited by requiring that features of the contract or other contracts or agreements that directly or indirectly compensate the reinsurer or related reinsurers for losses be considered in evaluating whether a particular contract transfers risk. Therefore, if agreements with the reinsurer or related reinsurers, in the aggregate, do not transfer risk, the individual contracts that make up those agreements also would not be considered to transfer risk, regardless of how they are structured.

11. Q: If the assessment of risk transfer changes after the initial assessment at contract inception, how should the ceding entity account for the change?

A: The status of a contract should be determinable at inception and, absent amendment, subsequent changes should be very rare. If the risk of significant loss was not deemed reasonably possible at inception, and a significant loss subsequently occurred, the initial assessment was not necessarily wrong, because remote events do occur. Likewise, once a reasonable possibility of significant loss has been established, such loss need not occur in order to maintain the contract's status as reinsurance.

12. Q: SSAP No. 62R requires that reasonably possible outcomes be evaluated to determine the reinsurer's exposure to significant loss. What factors should be considered in determining whether a scenario being evaluated is reasonably possible?

A: The term *reasonably possible* means that the probability is more than remote. The test is applied to a particular scenario, not to the individual assumptions used in the scenario. Therefore, a scenario is not reasonably possible unless the likelihood of the entire set of assumptions used in the scenario occurring together is reasonably possible.

13. Q: In determining the amount of the reinsurer's loss under reasonably possible outcomes, may cash flows directly related to the contract other than those between the ceding and assuming companies, such as taxes and operating expenses of the reinsurer, be considered in the calculation?

A: No. The evaluation is based on the present value of all cash flows *between the ceding and assuming enterprises* under reasonably possible outcomes and, therefore, precludes considering other expenses of the reinsurer in the calculation.

14. Q: In evaluating the significance of a reasonably possible loss, should the reasonably possible loss be compared to gross or net premiums?

A: Gross premiums should be used.

15. Q: How does a commutation clause affect the period of time over which cash flows are evaluated for reasonable possibility of significant loss to the reinsurer?

A: All cash flows are to be assessed under reasonably possible outcomes. Therefore, unless commutation is expected in the scenario being evaluated, it should not be assumed in the calculation. Further, the assumptions used in a scenario must be internally consistent and economically rational in order for that scenario's outcome to be considered reasonably possible.

16. Q: What interest rate should be used in each evaluated scenario to make the present value calculation?

A: A reasonable and appropriate rate is required, which generally would reflect the expected timing of payments to the reinsurer and the duration over which those cash flows are expected to be invested by the reinsurer.

17. Q: SSAP No. 62R refers to payment schedules and accumulating retentions from multiple years as features that delay timely reimbursement of claims. Does the presence of those features generally prevent a contract from meeting the conditions for reinsurance accounting?

A: Yes. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payments to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Therefore, any feature that may affect the timing of the reinsurer's reimbursement to the ceding entity should be closely scrutinized.

18. Q: What if a contract contains a feature such as a payment schedule or accumulating retention but could still result in the reasonable possibility of significant loss to the reinsurer?

A: Both of the following conditions are required for reinsurance accounting:

a. Transfer of significant risk arising from uncertainties about both (i) the ultimate amount of net cash flows from premiums, commission, claims, and claim settlement expenses paid under a contract (underwriting risk) and (ii) the timing of the receipt and payment of those cash flows (timing risk); and

b. Reasonable possibility of significant loss to the reinsurer.

Because both condition (a) and condition (b) must be met, failure to transfer significant timing and underwriting risk is not overcome by the possibility of significant loss to the reinsurer.

19. Q: Is it permissible to evaluate timely reimbursement on a present value basis?

A: No. The word timely is used in the ordinary temporal sense to refer to the length of time between payment of the underlying reinsured claims and reimbursement by the reinsurer.

While the test for reasonable possibility of significant loss to the reinsurer provides for a present value-based assessment of the economic characteristics of the reinsurance contract, the concept of timely reimbursement relates to the transfer of insurance risk (condition a. above), not the reasonable possibility of significant loss (condition b. above). Accordingly, timely reimbursement should be evaluated based solely on the length of time between payment of the underlying reinsured losses and reimbursement by the reinsurer.

20. Q: Are there any circumstances under which the conditions for risk transfer need not be met?

A: Yes. An extremely narrow and limited exemption is provided for contracts that reinsure either an individual risk or an underlying book of business that is inherently profitable. When substantially all of the insurance risk relating to the reinsured portions of the underlying insurance contracts has been assumed by the reinsurer, the contract meets the conditions for reinsurance accounting. To qualify under this exception, no more than trivial insurance risk on the reinsured portions of the underlying insurance contracts may be retained by the ceding entity. The reinsurer's economic position must be virtually equivalent to having written the relevant portions of the reinsured contracts directly.

21. Q: In determining whether a reinsurance contract qualifies under the exception referred to in the preceding question, how should the economic position of the reinsurer be assessed in relation to that of the ceding entity?

A: The assessment should be made by comparing the net cash flows of the reinsurer under the reinsurance contract with the net cash flows of ceding entity on the reinsured portions of the underlying insurance contracts. This may be relatively easy for reinsurance of individual risks or for unlimited-risk quota-share reinsurance, because the premiums and losses on these types of reinsurance generally are the same as the premiums and losses on the reinsured portions of the underlying insurance policies.

In other types of reinsurance, determining the reinsurer's net cash flows relative to the insurer is likely to be substantially more difficult. For example, it generally would be difficult to demonstrate that the ceding entity's premiums and losses for a particular layer of insurance are the same as the reinsurer's premiums and losses related to that layer. If the economic position of the reinsurer relative to the insurer cannot be determined, the contract would not qualify under the exception.

Accounting Provisions

22. Q: An existing contract that was accounted for as reinsurance no longer qualifies for reinsurance accounting under the new accounting rules included in SSAP No. 62R. How should the ceding and assuming companies account for the contract in future periods?

A: Because the statement of income cannot be restated, previously recognized gains and losses are not revised. If the contract was entered into before, and not renewed or amended on or after, January 1, 1994 and covers only losses occurring or claims made before that date, or the contract expired before January 1, 1995 and was not renewed or amended on or after that date, it would continue to be accounted for in the manner provided before these revisions.

For accounting periods commencing on or after January 1, 1995, existing balances relating to contracts which do not transfer insurance risk and which were entered into on or after January 1, 1994 (covering losses occurring or claims made after that date) would be reclassified as deposits.

Premium payments to a reinsurer would be recorded as deposits. Likewise, losses recoverable from a reinsurer would not be recognized as receivables. Rather, any reimbursement for losses would be accounted for upon receipt as a refund of a deposit.

23. Q: What is the definition of past insurable events that governs whether reinsurance coverage is prospective or retroactive? For example, could a reinsurance contract that covers losses from asbestos and pollution claims on occurrence-based insurance policies effective during previous periods be considered prospective if the reinsurance coverage is triggered by a court interpretation that a loss is covered within the terms of the underlying insurance policies?

A: The distinction between prospective and retroactive reinsurance is based on whether a contract reinsures future or past insured events covered by the underlying reinsurance contracts. In the example above, the insured event is the occurrence of loss within the coverage of the underlying insurance contracts, not the finding of a court. Therefore, the fact that the asbestos exposure or pollution is covered under insurance policies effective during prior periods makes the reinsurance coverage in this example retroactive.

24. Q: Would the answer to the above question change if the reinsurance were written on a claims-made basis?

A: No. The form of the reinsurance—whether claims-made or occurrence-based—does not determine whether the reinsurance is prospective or retroactive. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance contract is a retroactive contract.

25. Q: What is the effect of adjustments to future premiums or coverage in determining whether reinsurance is prospective or retroactive?

A: Adjustments to future premiums or coverage may affect the accounting for a reinsurance contract. Whenever an adjustment results in a reinsurer providing new or additional coverage for past insurable events, that coverage is retroactive. For example, if subsequent years' premiums under a multiple accident year contract create additional coverage for previous accident years, the additional coverage is retroactive, even if the original coverage provided in the contract for those accident years was prospective. Likewise, if current losses under a multiple-year contract eliminate coverage in future periods, some or all of the premiums to be paid in those future periods should be charged to the current period.

26. Q: A reinsurance contract is entered into after the contract's effective date. Is the coverage between the contract's effective date and the date the contract was entered into prospective or retroactive?

A: The portion of the contract related to the period of time between the effective date of the contract and the date the contract was entered into is retroactive because it covers insured events that occurred prior to entering into the reinsurance contract.

27. Q: How is the date the reinsurance contract was entered into determined?

A: It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the contract is substantively prospective must be determined based on the facts and circumstances. For example, a contract may be considered to have been substantively entered into even though regulatory approval of that contract has not taken place.

The absence of agreement on significant terms, or the intention to establish or amend those terms at a later date based on experience or other factors, generally indicates that the parties to the contract have not entered into a reinsurance contact, but rather have agreed to enter into a reinsurance contract at a future date. If contractual provisions under a contract substantively entered into at a future date covered insurable events prior to that date, that coverage is retroactive.

In any event, SSAP No. 62R provides that if a contract (except facultative contracts and contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date, it is presumed to be retroactive.

28. Q: Are contracts to reinsure calendar-year incurred losses considered blended contracts that have both prospective and retroactive elements?

A: Yes. Most reinsurance contracts covering calendar-year incurred losses combine coverage for insured events that occurred prior to entering into the reinsurance contract with coverage for future insured events and, therefore, include both prospective and retroactive elements.

In any event, SSAP No. 62R provides that if a contract (except facultative contracts, contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date it is presumed retroactive.

29. Q: When the prospective and retroactive portions of a contract are being accounted for separately, how should premiums be allocated to each portion of the contract?

A: No specific method for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of a contract is required. However, separate accounting for the prospective and retroactive portions of a contract may take place only when an allocation is practicable.

Practicability requires a reasonable basis for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of the contract, considering all amounts paid or deemed to have been paid regardless of the timing of payment. If a reasonable basis for allocating the premiums between the prospective and retroactive coverage does not exist, the entire contract must be accounted for as a retroactive contract.

30. Q: A retroactive reinsurance contract contains a cut-through provision that provides the ceding entity's policyholders and claimants with the right to recover their claims directly from the reinsurer. May the ceding entity immediately recognize earned surplus associated with this type of contract?

A: No. SSAP No. 62R states that earned surplus may not be recognized "until the actual retroactive reinsurance recovered exceeds the consideration paid."

31. Q: A ceding entity enters into a retroactive reinsurance agreement that gives rise to segregated surplus. If the reinsurer prepays its obligation under the contract, may the ceding entity recognize earned surplus at the time the prepayment is received?

A: Segregated surplus arising from retroactive reinsurance transactions is earned as actual liabilities that have been transferred are recovered or terminated. Therefore, earned surplus is based on when the reinsurer settles its obligations to the ceding entity, and it may be appropriate to recognize earned surplus at the time the prepayment is received.

However, all of the facts and circumstances must be considered to determine whether the ceding entity has substantively recovered the liabilities transferred to the reinsurer. For example, if the ceding entity agrees to compensate the reinsurer for the prepayment, such as by crediting the reinsurer with investment income on prepaid amounts or balances held, the ceding entity has not, in substance, recovered its transferred liabilities but rather has received a deposit from the reinsurer that should be accounted for accordingly.

32. Q: If the ceding entity does not expect to receive any recoveries because the reinsurer has agreed to reimburse claimants under the reinsured contracts directly, would the ceding entity be considered to have recovered or terminated its transferred liabilities?

A: No. In the example given, the reinsurer is substantively acting as disbursing agent for the ceding entity. Therefore, the ceding entity cannot be said to have recovered amounts due from the reinsurer before payment is made to the claimant.

33. Q: What accounting entries would a ceding entity make to report a retroactive reinsurance contract?

A: Accounting Entries for a Ceding Entity to Report a Retroactive Reinsurance Contract:

Entry 1

Retroactive Reinsurance Reserves Ceded or Assumed (B/S)	10,000	
Retroactive Reinsurance Gain (I/S)		2,000
Cash		8,000

To record initial portfolio transfer see items #3 and #8. The ceding entity must establish the segregated surplus per item #4.

Entry 1A

Retro. Reins. Gain	2,000	
Profit/Loss Account		2,000

To close gain from retroactive transaction.

Entry 1B

Profit/Loss Account	2,000	
Special Surplus from Retro. Reins.		2,000

To close profit from retroactive reinsurance to special surplus.

Entry 2

Cash	2,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		2,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $8,000, and special surplus from retroactive reinsurance account equals $2,000; therefore, segregated surplus account is not changed per item #10.

Entry 3

Retroactive Reinsurance Reserves Ceded or Assumed (B/S)	3,000	
Retroactive Reinsurance Gain (I/S)		3,000

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is increased to $5,000 as a result of this upward development.

Entry 3A

Retro. Reinsurance Gain	3,000	
Profit/Loss Account		3,000

To close profit from retroactive reinsurance.

Entry 3B

Profit/Loss (I/S)	3,000	
Special Surplus from Retro. Reins.		3,000

To close profit and loss account to special surplus. (Retroactive reinsurance reserves ceded or assumed account balance equals $11,000. Special Surplus from retroactive reinsurance balance equals $5,000.)

Entry 4

Cash	4,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		4,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $7,000, therefore segregated surplus account is not changed per item #10.

Entry 5

Cash	3,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		3,000

To record recovery of paid losses from reinsurer. Outstanding ceded reserves after recovery equals $4,000, therefore the following entry is needed per items #6 and #10.

Entry 5A

Special Surplus—Retro. Reins.	1,000	
Unassigned Funds		1,000

Retroactive Reinsurance reserves ceded or assumed after this entry equals $4,000.

Entry 6

Retroactive Reinsurance Loss (I/S)	1,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		1,000

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is decreased as a result of this downward development to $3,000. The following entry is needed per items #6 and #10.

Entry 6A

Profit/Loss Account	1,000	
Retro. Reins. Loss		1,000

To close loss to profit and loss account.

Entry 6B

Special Surplus from Retro. Reins.	1,000	
Profit/Loss Account		1,000

To close profit and loss account to special surplus. (Remaining balance of retroactive reinsurance reserve ceded or assumed account equals $3,000.) (Special surplus from retro. reins. account balance equals $3,000.)

Entry 7

Cash	2,500	
Retroactive Reinsurance Gain (I/S)	500	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		3,000

Entry 7A

Profit and Loss Account	500	
Retro. Reins. Gain		500

To close other income to profit and loss account.

Entry 7B

Special Surplus from Retro. Reins.	500	
Profit/Loss Account		500

To close profit and loss account to special surplus. (Remaining balance of special surplus from retro. reins. account equals $2,500.) (Remaining balance of retroactive reinsurance reserve ceded or assumed account -0-.)

Entry 7C

Special Surplus from Retro. Reins.	2,500	
Unassigned Funds		2,500

To close remaining special surplus account to unassigned surplus.

34. Q: How should the parties account for an adverse loss development reinsurance contract where, as of the statement date, the attachment level of the contract exceeds the ceding company's current case and IBNR reserves for the covered accident years (i.e. no surplus gain and no reinsurance recoverable as of the statement date), and the ceding company transferred cash to the reinsurer at the inception of the contract?

A: An adverse loss development reinsurance contract covering prior accident years meets the definition of "retroactive reinsurance" set forth in paragraph 22 of SSAP No. 62R:

> ….reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance….

Paragraph 29.k. of SSAP No. 62R specifically provides that the consideration paid for a retroactive reinsurance contract is to be recorded as a decrease in ledger assets by the ceding entity and an increase in ledger assets by the assuming entity.

Question 33 illustrates the accounting entries for retroactive reinsurance contracts.

If the retroactive reinsurance contract transfers both components of insurance risk then, pursuant to paragraph 29 of SSAP No. 62R, the ceding company would record the consideration paid as a decrease in ledger assets, recognize an expense for the reinsurance ceded through Other Income or Loss accounts as a write-in item identified as "Retroactive Reinsurance Ceded", and record the recoverable from the reinsurer as a contra liability.

No contra liability is established until and unless (and then only to the extent that) the ceding company establishes reserves which exceed the attachment point.

For the contract described, at inception no contra liability is recorded to offset current liability for the business ceded, since the ceded retroactive reinsurance premium relates to coverage in excess of the current liabilities recorded by the ceding company.

Once the ceding company's recorded liabilities exceed the attachment point of the adverse loss development reinsurance contract and triggers reinsurance recoverable from the reinsurer, a contra liability is established by the ceding company for the amount of the reinsurance recoverable. Any surplus resulting from the retroactive reinsurance is carried as a write-in item on the balance sheet designated as "Special Surplus from Retroactive Reinsurance Account." The surplus gain may not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid.

If any portion of a retroactive reinsurance contract does not transfer insurance risk, then the portion which does not transfer risk is accounted for as a deposit pursuant to paragraph 35. The deposit is reported as an admitted asset of the ceding company if the reinsurer is licensed, accredited, certified or otherwise qualified in the ceding company's state of domicile as described in Appendix A-785, or if there are funds held by or on behalf of the ceding company as described in that appendix. Receipts and disbursements under the contract are recorded through the deposit/liability accounts. Amounts received in excess of the deposit made are recognized as a gain in the Other Income or Loss account.

Accounting entries for a ceding entity to report a retroactive reinsurance contract at the inception of which the cedent's reserves are lower than the attachment point of the reinsurance coverage:

Assume the company pays $16m to purchase adverse development coverage of $50m, above an attachment point.

Entry 1: Payment of Retrospective Reinsurance Premium

Retrospective Reinsurance Expense*	$16m	
Cash		$16m

The company pays $16m premium for the retrospective reinsurance contract.
*This is an Other Expense item, it does not flow through Schedule F or Schedule P.

Entry 2: Adverse Development Reaches the Attachment Point

Losses Incurred	$25m	
Gross Loss Reserve		$25m
Recoverable on Retro Reinsurance Contract**	$25m	
Other Income*		$9m
Contra – Retro Reinsurance Expense*		$16m
Surplus***	$9m	
Segregated Surplus***		$9m

The company incurs $25m development on reserves related to the contract.
*These are Other Income/Expense items do not flow through Schedule F or Schedule P.
**A contra-liability write-in item, not netted against loss reserves.
***Surplus is segregated in the amount of [$25m - $16m = $9m] recoverables less consideration paid.

Entry 3: Cash is Recovered on Paid Losses

Cash	$20m	
Recoverable on Retrospective Reinsurance Contract		$20m
Segregated Surplus	$4m	
Surplus		$4m

The company recovers $20m cash from reinsurer on this retro contract. Segregated Surplus decreases in the amount of [$20m - $16m = $4m] (decreases for amount recovered in excess of consideration paid).

35. Q: How should a ceding company account for payment of the premium for a retroactive reinsurance contract by the ceding company's parent company or some other person not a party to the reinsurance contract (for example, adverse loss development reinsurance contracts purchased by the parent company in the context of the purchase or sale of the ceding company)?

A: If the reinsurance premium is not paid directly by the ceding company but is instead paid on behalf of the ceding company by the ceding company's parent company or some other entity not a party to the reinsurance contract, then the ceding company should (1) record an increase in gross paid in and contributed surplus in the amount of the reinsurance premium to reflect the contribution to surplus by the parent or third party payor, and (2) record an expense in the amount of the reinsurance premium and account for the contract as provided in Questions 33 and 34.

EXHIBIT B – P&C RUNOFF REINSURANCE TRANSACTIONS

The following provides illustrative journal entries for P&C Runoff Reinsurance Transactions.

Example 1: Transfer of existing block of runoff business **with no residual UPR** on books of Transferor

Cedent/Transferor		**DR**	**CR**
Day 1 – Cedent transfers 50,000 in reserves for 50,000			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	50,000	
Cash	Asset ↓		50,000
Losses Paid (U/W Part 2 & Sch. P)	I/S ↓	50,000	
Change in Reserves - Incurred Losses (U&I Part 2)	I/S ↑		50,000
Unlike novation, gross reserves stay on books of transferor			
Day 360 – Negative Development on Transferred Business - 3,000			
Reinsurance Recoverable on Unpaid Losses (Sch. F)	Contra Liab ↑	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserve			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	53,000	
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↓		53,000
Reinsurer/ Transferee			
Day 1 – Cedent transfers 50,000 in reserves for 50,000			
Cash	Asset ↑	50,000	
Reported Losses on Reins. Assumed (U&I Part 2A & Sch. P)	Liab ↑		50,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S ↓	50,000	
Losses Paid or Incurred (negative) (U&I Part 2 & Sch. P)	I/S ↑		50,000
Day 360 – Negative Development on Transferred Business - 3,000:			
Change in Reserves – Incurred Losses (U&I Part 2)	I/S↓	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	53,000	
Cash	Asset ↓		53,000

Comments:
Since the Transferor is ceding incurred losses neither party should have premium impacted. To do that would distort many financial ratios.

Example 2: Transfer of existing block of runoff business **with some residual UPR** of 10,000 on books of Transferor (this should be less common).

Cedent/Transferor		**DR**	**CR**
Day 1 – Cedent transfers 50k in reserves & 10k UPR for 60,000			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	50,000	
Unearned Premium Reserve (U&I Part 1 & 1A)	Liab ↓	10,000	
Cash	Asset ↓		60,000
Ceded Premium Written (U&I Part 1B)	I/S ↓	10,000	
Losses Paid (U&I Part 2 & Sch. P)	I/S ↓	50,000	
Change in Reserves - Incurred Losses (U&I Part 2)	I/S ↑		50,000
Change in UPR (U&I Part 1 & 1A)	I/S ↑		10,000
Unlike novation, gross reserves stay on books of transferor			
Day 180 – Premium is Fully Earned (Assumes 80% Loss Ratio)			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	8,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		8,000
To mirror the increase in unpaid losses by the transferee			
Day 360 – Negative Development on Transferred Business - 3,000:			
Reinsurance Recoverable on Unpaid Losses (Sch. F)	Contra Liab ↑	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserves (50+8+3)			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	61,000	
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↓		61,000

Reinsurer/Transferee			
Day 1 – Cedent transfers 50k in reserves & 10k UPR for 60,000			
Cash	Asset ↑	60,000	
Reported Losses on Reins. Assumed (U&I Part 2A & Sch. P)	Liab ↑		50,000
Unearned Premium Reserve (U&I Part 1 & 1A)	Liab ↑		10,000
Assumed Premium Written (U&I Part 1B)	I/S ↑		10,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S ↓	50,000	
Change in UPR (U&I Part 1 & 1A)	I/S ↓	10,000	
Losses Paid or Incurred (negative) (U&I Part 2 & Sch. P)	I/S ↑		50,000
Day 180 – Premium is Fully Earned (Assumes 80% Loss Ratio)			
Unearned Premium Reserve (U&I Part 1 & 1A)	Liab ↓	10,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		8,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S↓	8,000	
Change in UPR (U&I Part 1 & 1A)	I/S ↑		10,000
To record the increase in unpaid losses by the transferee			
Day 360 – Negative Development on Transferred Business -3,000:			
Change In Reserves – Incurred Losses (U&I Part 2)	I/S↓	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserves (50+8+3)			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	61,000	
Cash	Asset ↓		61,000

Comments:
In this second example, the portion of the runoff business that has an UPR associated with it is essentially booked as prospective reinsurance. Other elements of the example are the same except that we assumed an 80% loss ratio on the unearned portion of the business.

EXHIBIT C – ILLUSTRATION OF A REINSURANCE CONTRACT THAT IS ACCOUNTED FOR AS A DEPOSIT USING THE INTEREST METHOD

Assumptions:

Premium = $1,000 (assumes no commissions or allowances)
Coverage Period = 1 year
Initial expected recoveries = $225 per year (at end of year) for five years
Initial Implicit rate = 4 percent*

*present value of $225 per year for five years at 4 percent = $1,000

At the end of Year 2, the timing of anticipated recoveries under the reinsurance contract changes. A reevaluation of the implicit interest rate produces a rate of 3.63 percent and an asset of $640 at the end of the year.

Description	Interest Income	Cash Recoveries	Deposit Balance
Initial payment			$1,000
Year 1 (4%)	$ 40		$1,040
End of Year 1		$ (225)	$ 815
Year 2 (4%)	$ 33		$ 848
End of Year 2		$ (200)	$ 648
Yield Adjustment	$ (8)		$ 640
Year 3 (3.63%)	$ 23		$ 663
End of Year 3		$ (175)	$ 488
Year 4 (3.63%)	$ 18		$ 506
End of Year 4		$ (175)	$ 331
Year 5 (3.63%)	$ 12		$ 343
End of Year 5		$ (175)	$ 168
Year 6 (3.63%)	$ 7		$ 175
End of Year 6		$ (175)	$ 0

At the inception of the contract, the ceding insurer records a deposit asset of $ 1,000 and the assuming company, a $1,000 deposit liability. The asset is admitted providing the conditions for credit for reinsurance are met.

At subsequent reporting dates, the deposit asset is adjusted by calculating the effective yield on the reinsurance agreement to reflect actual payments to date and expected future payments with a corresponding credit to interest income by the ceding company and interest expense by the assuming company.

At the end of year two, it is determined that the expected cash flows will differ from previous estimates, resulting in a lower effective yield on the deposit asset. The deposit asset is adjusted to the amount that would have existed at the reporting date had the new effective yield been applied from the inception of the reinsurance agreement. The adjustment is charged to interest income, i.e., as a reduction of interest income. Interest income during the remaining term of the agreement is reduced accordingly (i.e., the yield is reduced from 4.0% to 3.63%).

Underwriting Pools and Associations Including Intercompany Pools

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for underwriting pools and associations.

SUMMARY CONCLUSION

2. Underwriting pools and associations can be categorized as follows: (a) involuntary, (b) voluntary, and (c) intercompany.

3. Involuntary pools represent a mechanism employed by states to provide insurance coverage to those with higher than average probability of loss who otherwise would be excluded from obtaining coverage. Reporting entities are generally required to participate in the underwriting results, including premiums, losses, expenses, and other operations of involuntary pools, based on their proportionate share of similar business written in the state. Involuntary plans are also referred to as residual market plans, involuntary risk pools, and mandatory pools.

4. Voluntary pools are similar to involuntary pools except they are not state mandated and a reporting entity participates in the pool voluntarily. In addition, voluntary pools are not limited to the provision of insurance coverage to those with higher than average probability of loss, but often are used to provide greater capacity for risks with exceptionally high levels of insurable values (e.g., aircraft, nuclear power plants, refineries, and offshore drilling platforms).

5. Intercompany pooling relates to business which is pooled among affiliated entities who are party to a pooling arrangement.(INT 03-02)

6. Participation in a pool may be on a joint and several basis, i.e., in addition to a proportional share of losses and expenses incurred by the pool, participants will be responsible for their share of any otherwise unrecoverable obligations of other pool participants. In certain instances, one or more entities may be designated as servicing carriers for purposes of policy issuance, claims handling, and general administration of the pooled business, while in other cases a pool manager or administrator performs all of these functions and simply bills pool participants for their respective shares of all losses and expenses incurred by the pool. In either case, liabilities arising from pooled business are generally incurred on a basis similar to those associated with non-pooled business, and should therefore be treated in a manner consistent with the guidelines set forth in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R).

7. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all of the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares. Arrangements whereby there is one lead company that retains 100% of the pooled business and all or some of the affiliated companies have a 0% net share of the pool may qualify as intercompany pooling. In these arrangements, only the policy issuing entity has direct liability to its policyholders or claimants; other pool participants are liable as reinsurers for their share of the issuing entity's obligations. Although participants may use different assumptions (e.g., discount rates) in recording transactions, the timing of recording transactions shall be consistently applied by all participants.

8. Underwriting results relating to voluntary and involuntary pools shall be accounted for on a gross basis whereby the participant's portion of premiums, losses, expenses, and other operations of the pools are recorded separately in the financial statements rather than netted against each other. Premiums and losses shall be recorded as direct, assumed, and/or ceded as applicable. If the reporting entity is a direct writer of the business, premiums shall be recorded as directly written and accounted for in the same

manner as other business which is directly written by the entity. To the extent that premium is ceded to a pool, premiums and losses shall be recorded in the same manner as any other reinsurance arrangement. A reporting entity who is a member of a pool shall record its participation in the pool as assumed business as in any other reinsurance arrangement.

9. Underwriting results relating to intercompany pools shall be accounted for and reported as described in paragraph 8. While it is acceptable that intercompany pooling transactions be settled through intercompany arrangements and accounts, intercompany pooling transactions shall be reported on a gross basis in the appropriate reinsurance accounts consistent with other direct, assumed and ceded business.

10. Equity interests in, or deposits receivable from, a pool represent cash advances to provide funding for operations of the pool. These are admitted assets and shall be recorded separately from receivables and payables related to a pool's underwriting results. Receivables and payables related to underwriting results shall be accounted for in accordance with the guidance in paragraphs 6-8. If it is probable that these receivables are uncollectible, any uncollectible amounts shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible but is not written off, disclosure requirements outlined in SSAP No. 5R shall be followed.

Disclosures

11. If a reporting entity is part of a group of affiliated entities which utilizes a pooling arrangement under which the pool participants cede substantially all of their direct and assumed business to the pool, the financial statements shall include:

a. A description of the basic terms of the arrangement and the related accounting;

b. Identification of the lead entity and of all affiliated entities participating in the intercompany pool (include NAIC Company Codes) and indication of their respective percentage shares of the pooled business;

c. Description of the lines and types of business subject to the pooling agreement;

d. Description of cessions to non-affiliated reinsurers of business subject to the pooling agreement, and indication of whether such cessions were prior to or subsequent to the cession of pooled business from the affiliated pool members to the lead entity;

e. Identification of all pool members which are parties to reinsurance agreements with non-affiliated reinsurers covering business subject to the pooling agreement and which have a contractual right of direct recovery from the non-affiliated reinsurer per the terms of such reinsurance agreements;

f. Explanation of any discrepancies between entries regarding pooled business on the assumed and ceded reinsurance schedules of the lead entity and corresponding entries on the assumed and ceded reinsurance schedules of other pool participants;

g. Description of intercompany sharing, if other than in accordance with the pool participation percentage, of the Provision for Overdue Reinsurance (Schedule F, Part ~~7~~8) and the write–off of uncollectible reinsurance;

h. Amounts due to/from the lead entity and all affiliated entities participating in the intercompany pool as of the balance sheet date.

12. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

13. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Offsetting and Netting of Assets and Liabilities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for offsetting and netting of assets and liabilities.

SUMMARY CONCLUSION

2. Assets and liabilities shall be offset and reported net only when a valid right of setoff exists except as provided for in paragraphs 3 and 4. A right of setoff is a reporting entity's legal right, by contract or otherwise, to discharge all or a portion of the debt owed to another party by applying an amount that the other party owes to the reporting entity against the debt$^{(\text{INT 09-08})}$. A valid right of setoff exists only when all the following conditions are met:

a. Each of the two parties owes the other determinable amounts. An amount shall be considered determinable for purposes of this provision when it is reliably estimable by both parties to the agreement;

b. The reporting party has the right to set off the amount owed with the amount owed by the other party;

c. The reporting party intends to setoff; and

d. The right of setoff is enforceable at law.

3. Assets and liabilities that meet the criteria for offset shall not be netted when prohibited by specific statements of statutory accounting principles. An example of such is in the case of reinsurance recoverables on paid losses and ceded premiums payable as provided for in *SSAP No. 62R—Property and Casualty Reinsurance*.

4. Netting of assets and liabilities for reporting purposes when no valid right of setoff exists shall be allowed only when provided for by specific statements of statutory accounting principles. An example of such is in the case of real estate investments required to be shown net of encumbrances as provided for in *SSAP No. 40R—Real Estate Investments.*

5. Amounts due to or from affiliates shall be offset and reported net only when the provisions of paragraph 2 are met.

Disclosures

6. The following quantitative information shall be disclosed (separately for assets and liabilities) at the end of each reporting period (interim and annual) when derivative, repurchase and reverse repurchase, and securities borrowing and securities lending assets and liabilities are offset and reported net in accordance with paragraph 2 (valid right to offset):

a. The gross amounts of recognized assets and recognized liabilities

b. The amounts offset in accordance with paragraph 2 (valid right to offset)

c. The net amounts presented in the statement of financial positions.

7. Assets and liabilities that have a valid right to offset under paragraph 2, but are not netted as they are prohibited under paragraph 3, are not required to be captured in the disclosures in paragraph 6.

Relevant Literature

8. This statement adopts paragraphs 1, 7 and 13 of *APB Opinion No. 10, Omnibus Opinion—1966* and *FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts* with modifications (1) to prohibit offsetting as provided in specific statements and require netting when provided in specific statements, and (2) to reject guidance in paragraphs 10, 10A, and 10B of FIN 39, as amended by FSP FIN 39-1, that permits a reporting entity election to offset fair value amounts recognized for derivative instruments and fair value amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral arising from the derivative instruments with the same counterparty under a master netting agreement. Offsetting for statutory accounting purposes is limited to situations meeting the conditions in paragraph 2 and 4 of this SSAP. This statement adopts *FASB Emerging Issues Task Force No. 86-25, Offsetting Foreign Currency Swaps.*

9. This statement rejects *FSP FIN 39-1, Amendment of FASB Interpretation 39*. This statement rejects *FASB Interpretation No. 41, Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements.* FIN 41 has an offsetting exception for repurchase and reverse repurchase agreements and permits offsetting when the reporting parties do not intend to set off. This guidance is rejected for statutory accounting, and payables under repurchase agreements may only be offset against amounts recognized as receivables under reverse repurchase agreements if there is a valid right to offset meeting all the conditions, including the intent to offset, detailed in paragraph 2. This statement rejects *ASU 2011-11, Disclosures about Offsetting Assets and Liabilities* and *ASU 2013-01, Clarifying the Scope of Disclosures about Offsetting Assets and Liabilities*. Statutory disclosure requirements for assets and liabilities reported net under a valid right to offset are detailed in paragraph 6.

Effective Date and Transition

10. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The revisions to paragraphs 8-9 are effective January 1, 2013. The revisions to paragraph 9 rejecting FIN 41 reflects a reversal of a prior decision to adopt FIN 41.

This page intentionally left blank.

Property and Casualty Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for property and casualty insurance contracts. Topics not covered by this statement shall comply with the more general statutory accounting guidance.

2. Topics specific to title insurance, mortgage guaranty insurance, and financial guaranty insurance are not within the scope of this statement. These topics are addressed in *SSAP No. 57—Title Insurance*, *SSAP No. 58—Mortgage Guaranty Insurance*, and *SSAP No. 60—Financial Guaranty Insurance*.

SUMMARY CONCLUSION

3. Property and casualty insurance contracts can be written to cover insured events on the following reporting bases:

a. Occurrence—These policies cover insured events that occur within the effective dates of the policy regardless of when they are reported to the reporting entity. Liabilities for losses on these policies shall be recorded when the insured event occurs;

b. Claims made—These policies cover insured events that are reported (as defined in the policy) within the effective dates of the policy, subject to retroactive dates when applicable. Liabilities for losses on these policies shall be recorded when the event is reported to the reporting entity; and

c. Extended reporting—Endorsements to claims made policies covering insured events reported after the termination of a claims made contract but subject to the same retroactive dates where applicable. See paragraphs 7 and 8 for guidance for when premium shall be earned and losses shall be recorded.

Claims Made Policies

4. Normally, when claims made coverage is obtained, existing coverage is being replaced. The existing coverage may have been a claims made policy or an occurrence policy. In either case, in an effort to reduce premium costs, the insured may request that the claims made coverage cover only claims reported within the effective dates of the policy that occur after a specified date. This specified date is referred to as the retroactive date of the claims made policy and eliminates duplicate coverage when converting from occurrence coverage to claims made coverage.

5. The liability for an insured event shall be determined in accordance with *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55).

6. Extended reporting endorsements, commonly referred to as tail coverage, allow extended reporting of insured events after the termination of a claims made contract. Extended reporting endorsements modify the exposure period of the underlying contract and can be for a defined period (e.g., six months, one year, five years) or can be for an indefinite period.

7. When a reporting entity issues an extended reporting endorsement or contract and the preceding claims made policy terminates, the reporting entity assumes liability for unreported claims and expense. This extended reporting coverage can be issued for an indefinite period or a fixed period. For indefinite reporting periods, premium shall be fully earned and loss and expense liability associated with unreported claims shall be recognized immediately. For coverage for a fixed period, premium shall be earned over the term of the fixed period, the reporting entity shall establish an unearned premium reserve for the unexpired portion of the premium and shall record losses as reported.

8. Some claims made policies provide extended reporting coverage at no additional charge in the event of death, disability, or retirement of a natural person insured. In such instance, a policy reserve is required to assure that premiums are not earned prematurely. The amount of the reserve should be adequate to pay for all future claims arising from these coverage features, after recognition of future premiums to be paid by current insureds for these benefits. The reserve, entitled "extended reporting endorsement policy reserve" shall be classified as a component part of the unearned premium reserve considered to run more than one year from the date of the policy.

9. When the anticipated losses, loss adjustment expenses, and maintenance costs anticipated to be reported during the extended reporting period exceed the recorded unearned premium reserve for a claims made policy, a premium deficiency reserve shall be recognized in accordance with *SSAP No. 53—Property Casualty Contracts—Premiums*.

Discounting

10. With the exception of fixed and reasonably determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims, property and casualty loss reserves shall not be discounted. No loss adjustment expense reserves shall be discounted.

11. Tabular reserves are indemnity reserves that are calculated using discounts determined with reference to actuarial tables which incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. Tabular reserves shall not include medical loss reserves or loss adjustment expense reserves.

12. Due to several instances in which states have prescribed or permitted practices to allow discounting on a non-tabular basis, recommended guidelines for discounting non-tabular unpaid loss and LAE are provided within Exhibit A. If a state has a prescribed or permitted practice allowing the use of discounts, or if discounting is utilized in accordance with this SSAP, financial statement disclosures are required in accordance with paragraphs 13-16.

13. In accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3), a change in the discount rate used in discounting loss reserves shall be accounted for as a change in estimate. SSAP No. 3 requires changes in estimates to be included in the statement of income in the period the change becomes known.

14. The financial statements shall disclose whether or not any of the liabilities for unpaid losses or unpaid loss adjustment expenses are discounted, including liabilities for workers' compensation. The following disclosures, for each line of business, shall be made separately:

a. Table(s) used;

b. Rate(s) used;

c. The amount of discounted liability reported in the financial statement; and

d. The amount of tabular discount, by the line of business and reserve category (i.e., case and Incurred But Not Reported (IBNR)).

15. If the rate(s) used to discount prior accident years' liabilities have changed from the previous financial statement or if there have been changes in other key discount assumptions such as payout patterns, the financial statements shall disclose:

a. Amount of discounted current liabilities at current rate(s) and assumption(s) (exclude the current accident year);

b. Amount of discounted current liabilities at previous rate(s) and assumption(s) (exclude the current accident year);

c. Change in discounted liability due to change in interest rate(s) and assumption(s); and

d. Amount of non-tabular discount, by line of business and reserve category (i.e., case, defense and cost containment, adjusting and other).

16. Refer to the preamble for further discussion regarding disclosure requirements.

Structured Settlements

17. Structured settlements are periodic fixed payments to a claimant for a determinable period, or for life, for the settlement of a claim. Frequently a reporting entity will purchase an annuity to fund the future payments. Reporting entities may purchase an annuity in which the entity is the owner and payee, or an annuity in which the claimant is the payee. When annuities are purchased to fund periodic fixed payments, they shall be accounted for as follows:

a. When the reporting entity is the owner and payee, no reduction shall be made to loss reserves. The annuity shall be recorded at its present value and reported as an other-than-invested asset. Income from the annuities shall be recorded as miscellaneous income. The present value of the annuity and the related amortization schedule shall be obtained from the issuing life insurance company at the time the annuity is purchased; and

b. When the claimant is the payee, loss reserves shall be reduced to the extent that the annuity provides for funding of future payments. The cost of the annuities shall be recorded as paid losses.

18. Statutory accounting and Generally Accepted Accounting Principles (GAAP) are consistent for the accounting of structured settlement annuities where the reporting entity is the owner and payee, and where the claimant is the owner and payee and the reporting entity has been released from its obligation. GAAP distinguishes structured settlement annuities where the owner is the claimant and a legally enforceable release from the reporting entity’s liability is obtained from those where the claimant is the owner and payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the claimant is the owner and payee yet the reporting entity has not been released from its obligation. Statutory accounting treats these settlements as completed transactions and considers the earnings process complete, thereby allowing for immediate gain recognition.

19. The following information regarding structured settlements shall be disclosed in the financial statements:

a. The amount of reserves no longer carried by the reporting entity because it has purchased annuities with the claimant as payee, and the extent to which the reporting entity is contingently liable for such amounts should the issuers of the annuities fail to perform under the terms of the annuities; and

b. The name, location, and aggregate statement value of annuities due from any life insurer to the extent that the aggregate value of those annuities equal or exceed 1% of policyholders’ surplus. This disclosure shall only include those annuities for which the reporting entity has not obtained a release of liability from the claimant as a result of the purchase of an annuity. The reporting entity shall also disclose whether the life insurers are licensed in the reporting entity’s state of domicile.

20. Refer to the preamble for further discussion regarding disclosure requirements.

Policies with Coverage Periods Equal to or in Excess of Thirteen Months

21. Some property and casualty insurance contracts are written for coverage periods that equal or exceed thirteen months. These contracts may be single premium or fixed premium policies, and generally are not subject to cancellation or premium modification by the reporting entity. The most common policies with such coverage periods are home warranty and mechanical breakdown policies. Accordingly, this guidance is primarily focused on home warranty and mechanical breakdown policies and does not apply to multiple-year contracts comprised of single-year policies, each of which have separate premiums and annual aggregate deductibles.

22. Revenues are generally not received in proportion to the level of exposure or period of exposure. In order to recognize the economic results of the contract over the contract period, a liability shall be established for the estimated future policy benefits while taking into account estimated future premiums to be received. Unearned premiums shall be recorded in accordance with paragraphs 23-33 of this statement.

23. Paragraphs 24-33 shall apply to all direct and assumed contracts or policies ("contracts"), excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts, that fulfill both of the following conditions:

a. The policy or contract term is greater than or equal to 13 months; and

b. The reporting entity can neither cancel the contract, nor increase the premium during the policy or contract term.

24. At any reporting date prior to the expiration of the contracts, the reporting entity is required to establish an adequate unearned premium reserve, to be reported as the unearned premium reserve. For each of the three most recent policy years, the gross (i.e., direct plus assumed) unearned premium reserve shall be no less than the largest result of the three tests described in paragraphs 27-29. For years prior to the three most recent policy years, the gross unearned premium reserve shall be no less than the larger of the aggregate result of Test 1 or the aggregate result of Test 2 or the aggregate result of Test 3 taken over all of those policy years.

25. Any reserve credit applicable for reinsurance ceded shall be appropriately reflected in the financial statements with the resulting net unearned premium reserve being established by the reporting entity.

26. The projected losses and expenses may be reduced for expected salvage and subrogation recoveries, but may not be reduced for anticipated deductible recoveries, unless the deductibles are secured by a letter of credit (LOC) or like security. Projected salvage and subrogation recoveries (net of associated expenses) shall be established based on reporting entity experience, if credible; otherwise, based on industry experience.

27. Test 1 is management's best estimate of the amounts refundable to the contractholders at the reporting date.

28. Test 2 is the gross premium multiplied by the ratio of paragraph 28.a. to paragraph 28.b.:

a. Projected future gross losses and expenses to be incurred during the unexpired term of the contracts; and

b. Projected total gross losses and expenses under the contracts.

29. Test 3 is the projected future gross losses and expenses to be incurred during the unexpired term of the contracts as adjusted below, reduced by the present value of the future guaranteed gross premiums, if any.

a. A provision for investment income is permitted in the unearned premium reserve only with respect to the projected future losses and expenses used to determine the unearned premium reserve, and not with respect to incurred but unpaid losses and expenses;

b. A provision for investment income on projected future losses and expenses may be calculated to the expected date the loss or expense is incurred, not from the expected date of payment;

c. The rate of interest used to calculate the provision for investment income shall be reviewed and changed as necessary at each reporting date and shall not exceed the lesser of the following two standards:

i. The reporting entity's future net yield to maturity on statutory invested assets as shown in Schedule D, less a 1.5% actuarial provision for adverse deviations; or

ii. The current yield to maturity on a United States Treasury debt instrument maturing in five (5) years as of the reporting date.

d. The reporting entity's statutory invested assets shall be reduced by the loss and loss adjustment expense reserves on unpaid losses and expenses to calculate "available invested assets." If the available invested assets are less than the result of Test 3, as calculated above, an "invested asset shortfall" exists. In this event, the Test 3 reserve shall be recalculated with the provision for investment income based on the restricted amount of available invested assets.

30. For the purposes of Tests 2 and 3 above, "expenses" shall include all incurred and anticipated expenses related to the issuance and maintenance of the policy, including loss adjustment expenses, policy issuance and maintenance expenses, commissions, and premium taxes.

31. The projected future losses and expenses are to be re-estimated for each reporting date, and the most recent estimate of these projected losses and expenses is to be used in these Tests. If a range is selected and no single point in the range is identified as being the most likely, then the midpoint of management's estimate of the range shall be used. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued.

32. The reporting entity shall provide an Actuarial Opinion and Report in conformity with the NAIC *Annual Statement Instructions for Property and Casualty Insurers*. Exhibit A of the actuarial opinion shall include the following three items:the Reserve for Direct and Assumed Unearned Premiums, the Reserve for Net Unearned Premiums (as reported on Page 3), and any other premium reserve items on which an opinion is being expressed. If any of these three items are material, the material item(s) must also be covered in the opinion and relevant comments paragraphs of the actuarial opinion.

33. The actuarial report shall include a description of the manner in which the adequacy of the amount of security for deductibles and self-insured retentions is determined. The actuarial report need not assess the credit-worthiness of the specific securities (e.g. LOC's), but the actuarial opinion must report collectibility problems if known to the actuary.

High Deductible Policies

34. Certain policies, particularly workers' compensation coverage, are available under high deductible plans. High deductible plans differ from self insurance coupled with an excess of loss policy because state laws generally require the reporting entity to fund the deductible and to periodically review the financial viability of the insured and make an assessment of the suitability of the deductible plan to the insured.

35. The liability for loss reserves shall be determined in accordance with SSAP No. 55. Because the risk of loss is present from the inception date, the reporting entity shall reserve losses throughout the policy period, not over the period after the deductible has been reached. Reserves for claims arising under high deductible plans shall be established net of the deductible, however, no reserve credit shall be permitted for any claim where any amount due from the insured has been determined to be uncollectible.

36. If the policy form requires the reporting entity to fund all claims including those under the deductible limit, the reporting entity is subject to credit risk, not underwriting risk. Reimbursement of the deductible shall be accrued and recorded as a reduction of paid losses simultaneously with the recording of the paid loss by the reporting entity.

37. If the reporting entity does not hold specific collateral for the policy, amounts accrued for reimbursement of the deductible shall be billed in accordance with the provisions of the policy or the contractual agreement and shall be aged according to the contractual due date. In the absence of a contractual due date, billing date shall be utilized for the aging requirement. Deductible recoverables that are greater than ninety days old shall be nonadmitted. However, if the reporting entity holds specific collateral for the high deductible policy, ten percent of deductible recoverable in excess of collateral specifically held and identifiable on a per policy basis, shall be reported as a nonadmitted asset in lieu of applying the aging requirement; however, to the extent that amounts in excess of the 10% are not anticipated to be collected they shall also be nonadmitted. The collateral requirements of this paragraph may be satisfied when an insured provides one collateral instrument to secure amounts owed under multiple policies, provided that the reporting entity has the contractual right to apply the collateral to the high deductible policy. Collateral obtained at a group level that is not supported by an existing pooling agreement requires a written allocation agreement among all collateral beneficiaries. The terms of such agreement must be fair and equitable. Documentation supporting any allocation of collateral among reporting entities must be maintained to allow proper calculation of the nonadmitted amounts and prohibit double counting of collateral.

38. The financial statements shall disclose the amount of reserve credit that has been recorded for high deductibles on unpaid claims and the amounts that have been billed and are recoverable on paid claims.

39. Refer to the preamble for further discussion regarding disclosure requirements.

Asbestos and Environmental Exposures

40. Asbestos exposures are defined as any loss or potential loss (including both first party and third party claims) related directly or indirectly to the manufacture, distribution, installation, use, and abatement of asbestos-containing material, excluding policies specifically written to cover these exposures. Environmental exposures are defined as any loss or potential loss, including third party claims, related directly or indirectly to the remediation of a site arising from past operations or waste disposal. Examples of environmental exposures include but are not limited to chemical waste, hazardous waste treatment, storage and disposal facilities, industrial waste disposal facilities, landfills, superfund sites, toxic waste pits, and underground storage tanks.

41. Reporting entities that are potentially exposed to asbestos and/or environmental claims shall record reserves consistently with SSAP No. 55.

42. The financial statements shall disclose the following if the reporting entity is potentially exposed to asbestos and/or environmental claims:

a. The reserving methodology for both case and IBNR reserves;

b. The amount paid and reserved for losses and loss adjustment expenses for asbestos and/or environmental claims, on a direct, assumed and net of reinsurance basis. Each company should report only its share of a group amount (after applying its respective pooling percentage) if the company is a member of an intercompany pooling agreement;

c. Description of the lines of business written for which there is potential exposure of a liability due to asbestos and/or environmental claims, and the nature of the exposure(s);

d. The following for each of the five most current calendar years[1] on both a gross and net of reinsurance basis, separately for asbestos and environmental losses (including coverage dispute costs):

Beginning reserves $______

Incurred losses and loss adjustment expenses ______

Calendar year payments for losses and loss adjustment expenses ______

Ending reserves $______

43. Refer to the preamble for further discussion regarding disclosure requirements.

Excess Statutory Reserve

44. This statement eliminates the requirement to record excess statutory reserves. Excess statutory reserves do not meet the definition of a liability established in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.*

Policyholder Dividends

45. Dividends to policyholders immediately become liabilities of the reporting entity when they are declared by the board of directors and shall be recorded as a liability. Incurred policyholder dividends are reported in the statement of income.

46. The financial statements shall disclose the terms of dividend restrictions, if any. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

47. Structured settlements are addressed in *FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113). FAS 113 is addressed in *SSAP*

[1] The requirement for five years of data is only applicable to the annual statement blank. The audited statutory financial report is only required to report two years. Additionally, the audited statutory financial statement shall include items not included in the notes to the annual statement blank where the blank's schedules and exhibits satisfy disclosure requirements that are not included in the audited statutory financial statement (i.e., Since the audited financial statements do not include Schedule P, all of the SSAP No. 55 disclosures shall be included in the audited notes to financial statements).

No. 62R—Property and Casualty Reinsurance. This statement rejects the AICPA *Audit and Accounting Guide—Audits of Property and Liability Insurance Companies.*

Effective Date and Transition

48. This statement is effective for years beginning January 1, 2001. To the extent that the requirements of paragraphs 23-33 produce a higher reserve than the reporting entity would have established through the use of their previous methodology, the reporting entity may phase in the additional reserve over a period not to exceed three years. Such a phase in period shall only be permitted if the reporting entity is able to demonstrate that it would not be operating in a hazardous financial condition and that there is not adverse risk to its insureds. The phase in shall be at least 60% of the difference between the reserve required by this statement and the reserve determined by the previous methodology during the first year, 80% in the second year, and 100% in the third year. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. The guidance in the footnote of paragraph 42.d. was originally contained within *INT 02-10: Statutory Audit Report Notes and the Reporting Requirements Related to Discosures Containing Multiple Year Information* and was effective June 9, 2002.

EXHIBIT A – GUIDELINES FOR STATES WHO PRESCRIBE OR PERMIT DISCOUNTING ON A NON-TABULAR BASIS

As discussed in paragraph 10 of this statement, with the exception of fixed and reasonably determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims, property and casualty loss reserves shall not be discounted. However, one of the most common prescribed or permitted state practices is to allow discounting of unpaid losses and unpaid loss adjustment expenses on a non-tabular basis. The recommendations in this exhibit are not requirements and therefore should only be viewed as a recommendation to those states that prescribe or permit non-tabular discounting.

Recommended Prescribed or Permitted Practice Guidelines

The state of XYZ office will permit [insert domestic companies if prescribed or insert insurance company name if prescribed] to discount its December 20XX unpaid loss (i.e., reported losses and incurred but not reported losses) and unpaid loss adjustment expense (LAE) reserves on an non-tabular basis subject to the following conditions:

1. The unpaid loss and LAE reserves shall be determined in accordance with *Actuarial Standard of Practice No. 20, Discounting of Property and Casualty Loss and Loss Adjustment Expense* (and as agreed to by an actuary) but in no event shall the rate used exceed the lesser of the following two standards:

   a. If the reporting entity's statutory invested assets are at least equal to the total of all policyholder reserves, the reporting entity's net rate of return on statutory invested assets, less 1.5%, otherwise, the reporting entity's average net portfolio yield rate less 1.5% as indicated by dividing the net investment income earned by the average of the reporting entity's current and prior year total assets; or

   b. The current yield to maturity on a United States Treasury debt instrument with maturities consistent with the expected payout of the liabilities.

2. Disclosure of the [insert either prescribed or permitted practice] in compliance with the requirements of the *NAIC Accounting Practices and Procedures Manual* and the *NAIC Annual Statement Instructions – Property and Casualty*, including but not limited to:

   Note 1 – Summary of Significant Accounting Policies

   A. Disclosure of permitted practice

      a. Disclose that the reporting entity employs a prescribed or permitted accounting practice that departs from the NAIC Accounting Practices and Procedures; and

      b. Disclose the monetary effect on net income and statutory surplus of using the practice of discounting on a non-tabular basis rather than the NAIC statutory accounting practice of discounting fixed and reasonably determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims.

   Note 32 – Discounting of Liabilities for Unpaid Losses or Unpaid Loss Adjustment Expenses
   XX. Non-tabular discounting

      a. Disclosure of whether the reporting entity is applying non-tabular discounting based upon a state prescribed or permitted practice. If permitted, provide further disclosure as to the date domiciliary state issued permitted practice and the expiration date of such practice;

b. Rate(s) used and the basis for the rate(s) used;

c. Amount of non-tabular discount disclosed by line of business and reserve category (i.e., unpaid loss, incurred but not reported, defense and cost containment expense, and adjusting and other expense); and

d. The amount of non-tabular discount reported in the statement.

Non-tabular discounting illustration:

	(1) Case	(2) IBNR	(3) Defense & Cost Containment Expense	(4) Adjusting & Other Expense
1. Homeowners/Farmowners				
2. Private Passenger Auto Liability/Medical				
3. Commercial Auto/Truck Liability/Medical				
4. Workers' Compensation				
5. Commercial Multiple Peril				
6. Medical Malpractice – Occurrence				
7. Medical Malpractice – Claims-Made				
8. Special Liability				
9. Other Liability – Occurrence

15. International				
16. Reinsurance Nonproportional Assumed Property				
17. Reinsurance Nonproportional Assumed Liability				
18. Reinsurance Nonproportional Assumed Financial Lines				
19. Products Liability – Occurrence				
20. Products Liability – Claims-Made				
21. Financial Guaranty/Mortgage Guaranty				
22. Total				

The rates used to discount Medical Malpractice unpaid losses at December 31, 20X2 have changed from the rates used at December 31, 20X1. At December 31, 20X2, the amount of discounted Medical Malpractice unpaid losses, excluding the current accident year, is $_______________. Had these unpaid losses been discounted at the rates used at December 31, 20X1 the amount of discounted liabilities would be $_______________. The reduction in the discounted liability due to the change in rates is $_______________.

This illustration neither regulates, permits, nor prohibits the practice of discounting liabilities for unpaid losses or unpaid loss adjustment expenses.

Retrospectively Rated Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for retrospectively rated contracts. This statement applies to property and casualty contracts, life insurance contracts, and accident and health contracts.

2. Retrospective reinsurance contracts are not within the scope of this statement. They are addressed in *SSAP No. 62R—Property and Casualty Reinsurance* (SSAP No. 62R).

SUMMARY CONCLUSION

3. A retrospectively rated contract is one which has the final policy premium calculated based on the loss experience of the insured during the term of the policy (including loss development after the term of the policy) and the stipulated formula set forth in the policy or a formula required by law. The periodic adjustments may involve either the payment of return premium to the insured or payment of an additional premium by the insured, or both, depending on experience. Retrospective rating features are common in certain property and casualty contracts, group life, and group accident and health contracts. Some contracts have retrospective features required by law. Contracts with retrospective rating features are referred to as loss sensitive contracts.

4. Amounts due from insureds and amounts due to insureds under retrospectively rated contracts meet the definitions of assets and liabilities as set forth in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* (SSAP No. 5R), respectively. Amounts due from insureds and amounts due to insureds under retrospectively rated contracts are admitted assets to the extent they conform to the requirements of this statement.

5. Initial premiums shall be recognized in accordance with *SSAP No. 51—Life Contracts, SSAP No. 53—Property Casualty Contracts—Premiums,* and *SSAP No. 54 —Individual and Group Accident and Health Contracts*.

6. Specific funds received by the prescription drug plan sponsor from either the Medicare Part D enrollee or the government as payment for standard coverage that will be subject to retrospective premium adjustments should be accounted for under this statement. These funds include 'Direct Subsidy', 'Low Income Subsidy (premium portion)', 'Beneficiary Premium (standard coverage portion)', 'Part D Payment Demonstration' and 'Risk Corridor Payment Adjustment'. The funds noted above have a final policy amount that is calculated based on the loss experience of the insured during the term of the policy, therefore should be treated as such. Refer to *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage* for additional information and definitions of terms specifically related to Medicare Part D business.

7. Because policy periods do not always correspond to reporting periods and because an insured's loss experience may not be known with certainty until sometime after the policy period expires, retrospective premium adjustments shall be estimated based on the experience to date using one of the following methods:

a. Property and Casualty Contracts:

i. Use of actuarially accepted methods in accordance with filed and approved retrospective rating plans. This includes but is not limited to the application of historical ratios of retrospective rated developments to earned standard premium to develop a ratio which is then applied to those policies for which no retrospective calculation has been recorded or for which no modification to the recorded calculation is needed. This method results in the calculation of one amount which is either a net asset or a net liability;

ii. Reviewing each individual retrospectively rated risk, comparing known loss development (including IBNR) with that anticipated in the policy contract to arrive at the best estimate of return or additional premium earned at that point in time. This method results in the calculation of an asset or a liability for each risk. The total of all receivables shall be recorded as an asset and the total of all return premiums shall be recorded as a liability.

b. Life and Accident & Health Contracts: Reporting entities offering group coverage have extensive underwriting procedures and complex individually negotiated benefits and contracts. Due to cost and reporting deadlines, these factors make it difficult to establish an exact valuation of retrospective premium adjustments. The method used to estimate the liability shall be reasonable based on the reporting entity's procedures and consistent among reporting periods. Common methods include a mathematical approach using a complex algorithm of the reporting entity's underwriting rules and experience rating practices, and an aggregate or group approach.

8. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.

9. Retrospective premium adjustments are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Additional retrospective premiums and return retrospective premiums shall be recorded as follows:

a. Property and Casualty Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as a receivable with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed;

ii. Accrued return retrospective premiums shall be recorded as part of the change in unearned premium (detailed in the underwriting and investment exhibit) liability with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed;

iii. Ceded retrospective premium balances payable shall be recorded as liabilities, consistent with SSAP No. 62R. Ceded retrospective premiums recoverable shall be recorded as an asset. Consistent with *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64), ceded retrospective premium balances payable may be deducted from ceded retrospective premiums recoverable when a legal right of setoff exists.

b. Life and Accident and Health Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums, with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, provision for experience rating refunds, with a corresponding entry to premiums.

c. Managed Care/Accident and Health Reporting Entities

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, as part of Accident and Health Reserves (reserve for rate credits or experience rating refunds), with a corresponding entry to premiums.

10. The amount of accrued estimated retrospective premiums to be recorded as a nonadmitted asset for property and casualty insurers shall be determined as follows:

a. 100% of the amount recoverable from any person for whom any agents' balances or uncollected premiums are classified as nonadmitted, and item (b), plus item (c) or (d) below. Once an insurer has elected either (c) or (d) below, a change from one to the other requires approval from the insurer's domiciliary state and such change must be disclosed in the financial statements.

b. Retrospective premium adjustments shall be determined and billed or refunded in accordance with the policy provisions or contract provisions. If accrued additional retrospective premiums are not billed in accordance with the policy provisions or contract provisions, the accrual shall be nonadmitted.

c. 10% of any accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss adjustment expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as described in Appendix A-785. Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to applying collateral by account. If the insurer is unable to allocate amounts by account, no credit may be taken for collateral.

d. An amount calculated using the factors below for accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as described in Appendix A-785.

Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to categorizing by Quality Rating.

Insured's Current Quality Rating*	Insured's Corporate Debt Equivalent to (S&P/Moody's)**	Percentage of Retro Premium to be Nonadmitted***
1	AAA, AA, A/Aaa, Aa, A	1%
2	BBB/Baa	2%
3	BB/Ba	5%
4	B/B	10%
5	CCC, CC, C/Caa, Ca	20%
6	CI, D/C, or insured in default on debt service payments, or insured's debt service payments are jeopardized upon filing of a bankruptcy petition	100%

* The Percentage of Retro Premium to be Nonadmitted is based upon the Insured's Current Quality Rating (i.e., if an insured's quality rating drops, the percentage relating to the lower quality rating is used in calculating the amount to be nonadmitted and vice versa).

** Insureds that do not have a debt rating issued by a publicly recognized rating agency are required to be rated by the NAIC's Securities Valuation Office (SVO).

*** In the event the insured has no debt rating (either from a publicly recognized rating agency or from the SVO) the insured's quality rating will be considered category 5 for purposes of this calculation (i.e., a factor of 20% shall be applied), unless the insurer is aware of conditions of the insured that would warrant a category 6 classification (i.e., a factor of 100%).

11. Once accrued retrospective premium is billed, the due date is governed by *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*. Life and accident and health reporting entities shall nonadmit any accrued retrospective premium that is more than 90 days due. If a reporting entity has issued more than one policy to the same insured, retrospective balances shall be netted in accordance with SSAP No. 64.

12. If, in accordance with SSAP No. 5R, it is probable that the additional retrospective premium is uncollectible, any uncollectible additional retrospective premium shall be written off against operations in the period the determination is made. If it is reasonably possible a portion of the balance in excess of the nonadmitted portion determined in accordance with paragraph 10 is not anticipated to be collected, the disclosure requirements outlined in SSAP No. 5R shall be made.

Disclosures

13. The financial statements shall disclose the method used by the reporting entity to estimate retrospective premium adjustments. The amount of net premiums written that are subject to retrospective rating features, as well as the corresponding percentage to total net premiums written, shall be disclosed. In addition, disclose whether accrued retrospective premiums are recorded through written premium or as an adjustment to earned premium.

14. The financial statements shall disclose the calculation of nonadmitted retrospective premium. If a reporting entity chooses treatment described in paragraph 10.c. or 10.d., the appropriate exhibit must be

included in the notes to financial statements in the Annual Statement. Once a reporting entity has elected either 10.c. or 10.d., a change from one to the other requires approval from the reporting entity's domiciliary state and such change must be disclosed in the financial statements.

15. The financial statements shall disclose the following amounts for medical loss ratio rebates required pursuant to the Public Health Service Act for the current reporting period year-to-date and prior reporting period year: incurred rebates, amounts paid and unpaid liabilities segregated into the following categories: individual, small group employer, large group employer and other. In addition, the impact of reinsurance assumed, ceded and net on the total medical loss ratio rebate shall be disclosed.

16. Refer to the preamble for further discussion of the disclosure requirements.

Relevant Literature

17. This statement rejects *FASB Emerging Issues Task Force No. 93-14, Accounting for Multiple Year Retrospectively Rated Insurance Contracts* (EITF 93-14) since it applies only to multiple-year retrospectively rated contracts. The statutory principles outlined in the conclusion above are consistent with the guidance provided for accounting and retrospectively rated contracts in *FASB Statement No. 60, Accounting and Reporting by Insurance Companies* (FAS 60) and EITF 93-14, with the exception of the requirement to record certain amounts as nonadmitted. Although FAS 60 is rejected in *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* and EITF 93-14 is rejected in this statement, it is considered appropriate that the accounting for retrospectively rated contracts be consistent with those provisions of both FAS 60 and EITF 93-14 as they are consistent with the Statement of Concepts.

Effective Date and Transition

18. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Other Liabilities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for other liabilities.

SUMMARY CONCLUSION

2. For purposes of identifying other liabilities, the guidance outlined in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) must be considered. This statement is not an all-inclusive list of other liabilities. Certain other liabilities are covered in other statements. All other liabilities, whether or not specifically identified in this statement, shall be recorded and disclosed in accordance with SSAP No. 5R, which states that "Liabilities shall be recorded on a reporting entity's financial statements when incurred."

Self-Insurance

3. Self-insurance occurs when an entity retains insurance risks associated with the entity's day-to-day operations that are commonly transferred to an insurer through an insurance contract.

4. The fact that a decision is made not to insure against losses that can reasonably be expected sometime in the future does not necessitate accrual by the entity if it is not probable that an asset has been impaired or a liability incurred at the date of the financial statements.

5. If an uninsured (self-insured) event occurs, which either creates a liability or impairs an asset, the entity shall either establish a liability or write-down the impaired asset. The liability shall be established using the same estimation methodology an insurance company uses when an insurance contract is issued for the type of insurance risk which is self-insured. *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* describes the specific reserving guidance which shall be followed.

6. The related costs shall be recorded based on the nature of the underlying expenses, and allocated in accordance with *SSAP No. 70—Allocation of Expenses*. Related costs shall be recorded based on the nature of the underlying expenses.

Amounts Withheld or Retained by Company as Agent or Trustee

7. A reporting entity may, in the normal course of its business, withhold funds as an agent or trustee which will ultimately be paid to others.

8. Amounts withheld or retained by an entity as trustee or agent shall be recorded as a liability when the salaries or other compensation are expensed (paragraphs 8.a. and 8.b.) or the funds are received (paragraphs 8.c. through 8.e.). Examples of such occurrences are:

   a. As an employer, the reporting entity deducts and withholds federal and state income taxes, social security taxes, charitable contributions, savings plan deductions, garnishments, employee contributions to pension plans, employee share of group life and health insurance premiums, and other employee salary withholdings or deductions;

   b. Amounts due under deferred compensation arrangements shall be accrued in accordance with the provisions of *SSAP No. 92—Accounting for Postretirement Benefits Other Than Pensions, A Replacement of SSAP No. 14* (SSAP No. 92). Segregated funds (i.e., Rabbi trusts and similar arrangements) shall not be netted against the accrued liability unless the requirements of *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64) are met.

c. For a reporting entity that invests in commercial and residential mortgages, the entity may require the mortgagor to prepay real estate taxes and property insurance premiums which the entity will hold in escrow and pay when due;

d. The reporting entity holds deposits in connection with leases of investment property; and

e. The reporting entity may receive and hold other funds in a fiduciary capacity.

Remittances and Items Not Allocated

9. Cash receipts cannot always be identified for a specific purpose or, for other reasons, applied to a specific account when received. The reporting entity shall record a liability for these cash receipts when the funds are received. These liability accounts are generally referred to as suspense accounts. Examples include:

a. Premium payments received with the application for policies which have not yet been issued;

b. Premium payments in an amount different than the amount billed by the reporting entity; and

c. Unidentified cash receipts.

Interest Payable

10. Interest payable includes interest on debt, interest on real estate obligations, and approved interest on surplus notes. It also includes interest on funds held as a deposit or security, such as those held by a ceding company against a reinsurer. The amount to be reported is the amount which has accrued and is unpaid at the balance sheet date.

Payable to Parent, Subsidiaries and Affiliates

11. A liability shall be recognized and identified as due to affiliates for expenditures incurred on behalf of the reporting entity by a parent, affiliates, or subsidiaries or for amounts owed through other intercompany transactions. Amounts due to or from affiliates shall be offset and reported net only when the provisions of SSAP No. 64 are met. Examples of these expenses are executive salaries, workers' compensation insurance premiums, and pension contributions.

12. Reinsurance transactions are not considered liabilities of this nature and are covered in *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance* and *SSAP No. 62R—Property and Casualty Reinsurance.*

Relevant Literature

13. This statement adopts *FASB Statement No. 116, Accounting for Contributions Received and Contributions Made* and AICPA *Statement of Position 96-1, Environmental Remediation Liabilities*. This statement is consistent with *FASB Statement No. 5, Accounting for Contingencies* as discussed in SSAP No. 5R.

Effective Date and Transition

14. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Business Combinations and Goodwill

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for business combinations. It addresses: (a) accounting for purchases of subsidiary, controlled and affiliated (SCA) investments (defined in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88* (SSAP No. 97)); (b) accounting for purchases of partnerships, joint ventures, and limited liability companies (defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*); (c) accounting for goodwill; and (d) accounting for mergers. This statement does not include guidance for stock of an affiliated company received as a capital contribution, rather than through a purchase. Stock received as a capital contribution is addressed by *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25), *SSAP No. 95—Exchange of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95), or SSAP No. 97*,* based on the details of each transaction. The statutory purchase method within *SSAP No. 68—Business Combinations* (SSAP No. 68) is not applicable for stock received as a capital contribution.

SUMMARY CONCLUSION

Business Combinations

2. A business combination shall be accounted for as either a statutory purchase or a statutory merger. Business combinations that create a parent-subsidiary relationship shall be accounted for as a statutory purchase. Business combinations where equity of one entity is issued in exchange for the equity of another entity, which is then canceled, and prospectively only one entity exists, shall be accounted for as a statutory merger.

Statutory Purchases of SCA Investments

3. The statutory purchase method of accounting is defined as accounting for a business combination as the acquisition of one entity by another. It shall be used for all purchases of SCA entities including partnerships, joint ventures, and limited liability companies. The acquiring reporting entity shall record its investment at cost. Cost is defined as the sum of: (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition.$^{\text{(INT 00-28)}}$ Contingent consideration issued in a purchase business combination that is embedded in a security or that is in the form of a separate financial instrument shall be recorded by the issuer at fair value at the acquisition date.

4. For those acquired SCA entities accounted for in accordance with paragraphs 8.b.i., 8.b.ii., 8.b.iii. or 8.b.iv. of SSAP No. 97, and joint venture, partnership or limited liability company entities accounted for in accordance with paragraph 8 of SSAP No. 48, goodwill is defined as the difference between the cost of acquiring the entity and the reporting entity's share of the book value of the acquired entity. When the cost of the acquired entity is greater than the reporting entity's share of the book value, positive goodwill exists. When the cost of the acquired entity is less than the reporting entity's share of the book value, negative goodwill exists. Goodwill resulting from assumption reinsurance shall be recorded as a separate write-in for other-than-invested assets. All other goodwill shall be reported in the carrying value of the investment.

5. A business combination accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraphs 8.b.ii., 8.b.iii. or, 8.b.iv. of SSAP No. 97 shall determine the amount of positive goodwill or negative goodwill created by the combination using the reporting entity's share of the GAAP net book value of the acquired entity, adjusted to a statutory basis of accounting in accordance with paragraph 9 of SSAP No. 97 in the case of acquired entities valued in accordance paragraphs 8.b.ii. or 8.b.iv. of SSAP No. 97. Business combinations accounted for under the

statutory purchase method and in which the acquired entity is valued in accordance with, paragraph 8.b.i. of SSAP No. 97 shall determine the amount of positive or negative goodwill created by the business combination using the insurer's share of the statutory book value of the acquired entity.

6. For those acquired SCA entities accounted for in accordance with paragraph 8.b.i. of SSAP No. 97 under the statutory purchase method, the historical bases of the acquired entity shall continue to be used in preparing its statutory financial statements. Therefore, pushdown accounting is not permitted.

7. Positive goodwill recorded under the statutory purchase method of accounting shall be admitted subject to the following limitation: Positive goodwill from all sources, including life, accident and health, and deposit-type assumption reinsurance, is limited in the aggregate to 10% of the acquiring entity's capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net positive goodwill, EDP equipment and operating system software, and net deferred tax assets. When negative goodwill exists, it shall be recorded as a contra-asset. Positive or negative goodwill resulting from the purchase of an SCA, joint venture, partnership or limited liability company shall be amortized to unrealized capital gains and losses on investments over the period in which the acquiring entity benefits economically, not to exceed 10 years. Positive or negative goodwill resulting from life, accident and health, and deposit-type assumption reinsurance shall be amortized to operations as a component of general insurance expenses over the period in which the assuming entity benefits economically, not to exceed 10 years. Goodwill shall be evaluated separately for each transaction.(INT 01-18)

Impairment

8. For any decline in the fair value of an entity, acquired through a purchase, that is other than temporary (INT 06-07), the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., nonadmitted goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary, shall be recorded as realized losses.

9. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment. A fair value of an investment that is below the carrying amount based on the statutory equity method or the existence of investee operating losses may indicate a loss in value; however, they are not necessarily indicative of a loss in value that is other than temporary.

Statutory Mergers

10. The statutory merger method of accounting is defined as accounting for a business combination in which the original investors in the investee receive equity of the reporting entity for their interest in the investee and only one entity survives. It shall be used for all business combinations accomplished by (a) issuing equity of a newly formed entity for the equity of the merging entities, (b) one entity issuing equity in exchange for the equity of another entity and immediately canceling the equity of that entity, or (c) the exchange of membership interest.

11. Under the statutory merger method, no acquisition shall be recognized because the combination is accomplished without disbursing resources of the constituents. Ownership interest continues and the former statutory bases of accounting shall be retained. However, if one of the merged entities did not employ the statutory basis of accounting, the accounts shall be adjusted to the statutory bases with an offsetting adjustment to beginning surplus of the earliest period presented. The recorded assets, liabilities, and related surplus accounts of the constituents shall be carried forward to the combined corporation at

their recorded statutory amounts. The capital accounts of the entities shall be adjusted as necessary to reflect the appropriate par values of the capital stock of the new entity. Adjustments to the capital stock account shall be made to gross paid-in and contributed surplus, to the extent there is a balance in the account.

12. Income of the combined reporting entity shall include income of the constituents for the entire fiscal period in which the combination occurs and the balance sheet and the statement of operations for the two years presented shall be restated, as required by *SSAP No. 3—Accounting Changes and Corrections of Errors*. A reporting entity that merges with an entity which effectively is a shell company[1] (i.e., the reporting entity has no outstanding underwriting liabilities) shall be exempt from prior year restatement.

Treatment of Goodwill When Previously Purchased or Merged Entity Ceases to Exist

13. Goodwill carried by an entity related to a previous business combination shall be charged or credited to surplus immediately in the event that the investee or previous investor that the goodwill relates to ceases to exist (e.g., by merger or dissolution). This guidance is intended to prevent recognition of goodwill when the acquisition, merger or dissolution of the investor or investee would result with the remaining entity reporting goodwill in itself. Internally generated goodwill, or amounts that reflect the goodwill of the reporting entity are not permitted under statutory accounting principles.

Disclosures

14. For business combinations accounted for under the statutory purchase method, the financial statements shall disclose the following for as long as unamortized goodwill is reported as a component of the investment:

a. The name and brief description of the acquired entity;

b. Method of accounting, that is the statutory purchase method;

c. Cost of the acquired entity and the amount of goodwill; and

d. The amount of amortization of goodwill recorded for the period.

15. For business combinations taking the form of a statutory merger, the financial statements shall disclose:

a. The names and brief description of the combined entities;

b. Method of accounting, that is the statutory merger method;

c. Description of the shares of stock issued in the transaction;

d. Details of the results of operations of the previously separate entities for the period before the combination is consummated that are included in the current combined net income, including revenue, net income, and other changes in surplus; and

e. A description of any adjustments recorded directly to surplus for any entity that previously did not prepare statutory statements.

[1] When one of the entities is a "shell company," the prior year amounts shall only consist of the "non-shell company." The merger with a shell entity shall be reflected as of January 1 of the current year.

16. The financial statements shall disclose the following information regarding goodwill resulting from assumption reinsurance:

a. The name of the ceding entity;

b. The type of business assumed;

c. The cost of the acquired business and the amount of goodwill; and

d. The amount of amortization of goodwill recorded for the period.

17. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write-down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment; and

b. The amount of the impairment charged to realized capital gains and losses and how fair value was determined.

Relevant Literature

18. This statement adopts paragraph 12 of *FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of* (FAS 121) to the extent that it addresses impairment of goodwill. Paragraphs 14.a. and 14.b. of FAS 121 are also adopted. Paragraphs 13, 14.c. and 14.d. of FAS 121 are rejected. *FASB Statement No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets* (FAS 144) supersedes FAS 121, but specifically scopes out the concept of goodwill. Given the applicability of the guidance found in paragraph 12 of FAS 121 to statutory accounting principles, the impairment guidance found in FAS 121, paragraph 12 is retained.

19. This statement adopts *FASB Emerging Issues Task Force No. 95-19, Determination of the Measurement Date for the Market Price of Securities Issued in a Purchase Business Combination* and *FASB Emerging Issues Task Force No. 97-8: Accounting for Contingent Consideration Issued in a Purchase Business Combination.*

Effective Date and Transition

21. This statement is effective for years beginning January 1, 2001. The provisions of this statement shall be applied to all business combinations entered into on or after January 1, 2001. Goodwill that had been written off prior to the effective date of this statement is prohibited from being restored for purposes of applying the provisions of this statement. The guidance in paragraphs 4-6 was previously included within *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88* and was effective for reporting periods ending on and after December 31, 2007. In 2011, the guidance related to goodwill included in SSAP No. 97 was incorporated into this statement. The original guidance included in this standard, and the substantive revisions reflected in SSAP No. 97 are retained for historical purposes within Issue Paper No. 118. Guidance reflected in paragraph 1, incorporated from *INT 03-16: Contribution of Stock*, was effective December 7, 2003.

Statement of Cash Flow

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the Statement of Cash Flow.

SUMMARY CONCLUSION

2. The Statement of Cash Flow shall be prepared using the direct method. Cash from operations shall be reported consistent with the Statement of Income, excluding the effect of current and prior year accruals. For purposes of the Statement of Cash Flow, cash shall include cash, cash equivalents and short-term investments. Specific instructions for the classification of items are provided in the Annual Statement Instructions.

Disclosures

3. The financial statements shall disclose the following:

   a. Transactions considered to be investing and financing activities (consistent with the classifications in the Annual Statement) that affect recognized assets or liabilities but do not result in cash receipts or cash payments in the period (in narrative or schedule form); and

   b. The cash and noncash aspects of the above transactions identified as investing or financing consistent with the classifications provided by the Annual Statement Instructions. Examples of noncash investing and financing transactions include:

      i. Converting debt to equity;

      ii. Acquiring assets by assuming directly related liabilities, such as purchasing a building by incurring a mortgage to the seller; and

      iii. Exchanging noncash assets or liabilities for other noncash assets or liabilities.

4. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

5. This statement adopts *FASB Emerging Issues Task Force Issue No. 95-13*, *Classification of Debt Issue Costs in the Statement of Cash Flows* which requires that cash payments for debt issue costs shall be classified as a financing activity in the Statement of Cash Flow. This statement adopts with modification *ASU 2012-05, Not-For-Profit Entities: Classification of the Sale Proceeds of Donated Financial Assets in the Statement of Cash Flows* for all reporting entities. Donated assets with donor-restrictions as to the sale or use of the contributed financial assets, or cash receipts from the sale of donated assets that are restricted as to use are not considered available to meet policyholder obligations and are nonadmitted in accordance with *SSAP No. 4—Assets and Nonadmitted Assets*.

6. *FASB Statement No. 95, Statement of Cash Flows, FASB Statement No. 102, Statement of Cash Flows—Exemption of Certain Enterprises and Classification of Cash Flows from Certain Securities Acquired for Resale, an amendment of FASB Statement No. 95*, and *FASB Statement No. 104, Statement of Cash Flows—Net Reporting of Certain Cash Receipts and Cash Payments and Classification of Cash Flows from Hedging Transactions, an amendment of FASB Statement No. 95*, are rejected in this statement.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

Allocation of Expenses

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for presentation and allocation of certain expenses of reporting entities into general categories and the apportionment of shared expenses between members of a group of entities.

SUMMARY CONCLUSION

2. This statement establishes uniform expense allocation rules to classify expenses within prescribed principal groupings. It is necessary to allocate those expenses which may contain characteristics of more than one classification, which this statement will refer to as allocable expenses.

3. Allocable expenses for property and casualty insurance companies shall be classified into one of three categories on the Underwriting and Investment Exhibit as follows:

a. Loss adjustment expenses—Expenses incurred in the adjusting, recording and paying of claims (including expenses associated with commutations);

b. Investment expenses—Expenses incurred in the investing of funds and pursuit of investment income. Such expenses include those specifically identifiable and allocated costs related to activities such as initiating and handling orders, researching and recommending investments (i.e., investment strategy), appraising, valuing, disbursing funds and collecting income, securities safekeeping, real estate taxes, records maintenance, data processing, support personnel, postage and supplies, office overhead, management and executive duties and all other functions reasonably associated with the investment of funds; or

c. Other underwriting expenses—Allocable expenses other than loss adjustment expenses and investment related expenses.

4. Similarly for life and accident and health insurers allocable expenses shall be categorized as general insurance expenses; insurance taxes, licenses and fees; or investment expenses which are netted against investment income on the Summary of Operations.

5. Allocable expenses for health insurers shall be classified as claim adjustment expenses; general administrative expenses; or investment expenses which are netted against investment income on the Statement of Revenue and Expenses.

6. Allocation to the above categories should be based on a method that yields the most accurate results. Specific identification of an expense with an activity that is represented by one of the categories above will generally be the most accurate method. Where specific identification is not feasible allocation of expenses should be based upon pertinent factors or ratios such as studies of employee activities, salary ratios or similar analyses.

7. Allocation may be entirely to one expense category based upon the type of expense incurred, for example, premium taxes would be 100% allocated to Other Underwriting Expenses for property and casualty companies. Other expenses may be allocated across several categories, such as salaries, which may be allocated to both general insurance expenses and net investment income of a life and accident and health company.

8. Many entities operate within a group where personnel and facilities are shared. Shared expenses, including expenses under the terms of a management contract, shall be apportioned to the entities incurring the expense as if the expense had been paid solely by the incurring entity. The apportionment

shall be completed based upon specific identification to the entity incurring the expense. Where specific identification is not feasible apportionment shall be based upon pertinent factors or ratios.

9. Any basis adopted to apportion expenses shall be that which yields the most accurate results and may result from special studies of employee activities, salary ratios, premium ratios or similar analyses. Expenses that relate solely to the operations of a reporting entity, such as personnel costs associated with the adjusting and paying of claims, must be borne solely by the reporting entity and are not to be apportioned to other entities within a group.

10. Apportioned expenses are subject to presentation and allocation as provided in paragraphs 3-6.

11. Any material individual component of the reported expense categories shall be presented either on the face of the Summary of Operations or within the footnotes or related Exhibits to the financial statements of the Life and Accident and Health annual statement, the Property and Casualty annual statement or the Health annual statement.

12. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

13. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Policy Acquisition Costs and Commissions

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for policy acquisition costs and commissions.

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

Surplus and Quasi-Reorganizations

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for statutory surplus and quasi-reorganizations.

SUMMARY CONCLUSION

2. Statutory surplus of a reporting entity consists of the following:

a. Capital stock;

b. Treasury stock;

c. Gross paid-in and contributed surplus;

d. Surplus notes;

e. Unassigned funds (surplus);

f. Special surplus funds; and

g. Other-than-special surplus funds.

Capital Stock

3. The articles of incorporation set forth the number of authorized shares of capital stock and the par value of each share. The capital stock account represents the number of shares issued times the par value of each share. When no par value is set forth, the reporting entity shall declare a "stated value" and record such amount in the capital stock account. Changes in the par value of a reporting entity's capital stock shall be reflected as a reclassification between the capital stock account and gross paid-in and contributed surplus.

4. Notes or other receivables received for the issuance of capital stock which have been approved by the domiciliary commissioner and have been satisfied by receipt of cash or readily marketable securities prior to the filing of the statutory financial statement shall be treated as a Type I subsequent event in accordance with *SSAP No. 9—Subsequent Events* (SSAP No. 9) and as such shall be considered an admitted asset. To the extent that the notes or other receivables are not satisfied, they shall be nonadmitted.

5. Stock splits, similar to stock dividends, have no impact on the overall surplus of a reporting entity. The distinction between a stock split and a stock dividend shall be made in accordance with *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research* Bulletins, "Chapter 7, Capital Accounts, Section B-Stock Dividends and Split-ups*"* (ARB 43). Stock splits shall be recorded by adjusting the capital stock account to reflect the par value of the outstanding number of shares after the split. An offsetting entry shall be made to paid-in or contributed surplus. Stock dividends shall be recorded in a manner consistent with paragraph 12.i.

Treasury Stock

6. Treasury stock is capital stock that has been issued and subsequently reacquired by the reporting entity. It is held for either reissuance or cancellation in the future. When a reporting entity's stock is acquired for purposes other than retirement, or when ultimate disposition has not yet been decided, the cost of acquired stock shall be reported as treasury stock which reduces statutory surplus. The acquisition

of treasury stock has no effect on either the number of shares issued or the amount of paid up capital shown in the capital stock account. Cancellation of treasury stock shall reduce the capital stock account by the par value and reduce paid-in or contributed surplus by the excess of cost over par value or stated value.

Gross Paid-in and Contributed Surplus

7. Gross paid-in and contributed surplus is the amount of capital received in excess of the par value of the stock issued. Changes in the par value of a reporting entity's capital stock shall be reflected as a reclassification between the capital stock account and gross paid-in and contributed surplus. Forgiveness of a reporting entity's obligations to its parent or other stockholders shall be accounted for as contributed surplus.

8. Notes or other receivables received as additional capital contributions satisfied by receipt of cash or readily marketable securities prior to the filing of the statutory financial statement shall be treated as a Type I subsequent event in accordance with SSAP No. 9 and as such shall be considered an admitted asset based on the evidence of collection and approval of the domiciliary commissioner. To the extent that the notes or other receivables are not satisfied, they shall be nonadmitted.

9. Real estate or other assets received as additional capital contributions are nonreciprocal transfers as defined in SSAP *No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95).

10. Stock purchase warrants issued in return for cash shall be credited to gross paid-in and contributed surplus. When debt instruments are issued with conversion features, no value shall be assigned to the conversion features unless the conversion feature is clearly separable from the debt obligation in the form of a detachable stock purchase warrant. In such instances the relative fair value of the detachable stock purchase warrant at time of issue shall be credited to gross paid-in and contributed surplus. For instances in which a reporting entity has issued puttable warrants or mandatorily redeemable warrants, such items shall be reflected as liabilities as the warrants obligate the reporting entity to ultimately transfer cash or other assets to the holder in order to repurchase the shares.

Surplus Notes

11. Surplus notes are financial instruments that are subject to strict control by the commissioner of the reporting entity's state of domicile and have been approved by the commissioner as to form and content. These instruments are commonly referred to as surplus notes but are also referred to as surplus debentures or contribution certificates. *SSAP No. 41—Surplus Notes* (SSAP No. 41) provides the specific characteristics of surplus notes and provides accounting guidance for surplus notes. Only notes meeting the requirements of SSAP No. 41 shall be accounted for as surplus notes.

Unassigned Funds (Surplus)

12. Unassigned funds (surplus) represents the undistributed and unappropriated amount of surplus at the balance sheet date. Certain components of unassigned funds (surplus) are addressed in more detail in other issue papers. Unassigned funds (surplus) is comprised of the cumulative effect of:

a. Net Income

Net income resulting from insurance and other operating activities of the reporting entity since its inception is a component of unassigned funds (surplus);

b. Unrealized Capital Gains and Losses on Investments

The cumulative unrealized capital gain or loss that results from differences between the prescribed statement value of investments carried at fair value and the cost of those investments is a component of unassigned funds (surplus). This component changes as periodic unrealized gains and losses are credited or charged directly to unassigned funds (surplus);

c. Effect of Exchange Rate Fluctuations

The cumulative gain or loss due to translating foreign operations to U.S. dollars and changes in balance sheet asset and liability values due to foreign currency translation is recorded as an unrealized capital gain or and loss and therefore is a component of unassigned funds (surplus). This component changes as the exchange rates fluctuate;

d. Nonadmitted Assets

The nonadmitted values of assets owned by a reporting entity are a reduction of unassigned funds (surplus). This component of unassigned funds (surplus) changes as nonadmitted asset values change. Changes in nonadmitted asset values are charged or credited directly to unassigned funds (surplus);

e. Provision for Reinsurance

A reporting entity must establish a statutory liability, provision for reinsurance, for unsecured reinsurance recoverables from unauthorized reinsurers and certain overdue balances from authorized reinsurers. The liability is charged directly to unassigned funds (surplus). Therefore, at any point in time there is a reduction of unassigned funds (surplus) equal to a reporting entity's liability for unauthorized reinsurance;

f. Asset Valuation Reserves

Where an Asset Valuation Reserve is required to be recorded as a statutory liability, there is a reduction of unassigned funds (surplus) in an amount equal to the liability. Changes to the Asset Valuation Reserve are charged or credited directly to unassigned funds (surplus);

g. Separate Accounts

A life insurer's balance sheet includes the total assets and liabilities of any separate accounts business which it maintains and, therefore, the surplus, if any, of its separate accounts business. Changes in the surplus of the separate accounts business of an insurer are charged or credited directly to unassigned funds (surplus);

h. Subscribers Savings Accounts

Subscribers Savings Accounts (SSAs) are unique to reciprocals. SSAs represent a portion of a reciprocal insurance company's surplus that has been identified as subscribers (policyholders) accounts. When the source of amounts credited to the subscriber accounts is from the reciprocal's operations, the amounts are reported as unassigned funds (surplus);

i. Dividends to Stockholders

Dividends declared are charged directly to unassigned funds (surplus) on the declaration date and are carried as a liability until paid. The amount of the dividend is the cash paid if it is a cash dividend, the fair value of the assets distributed if it is property dividend, or the par value of the company's stock if it is a stock dividend. A stock dividend is recorded as a transfer from unassigned funds (surplus) to capital stock. Stock dividends have no effect on total capital and surplus while other forms of dividends reduce surplus. Forgiveness by a reporting entity of any debt, surplus note or other obligation of its parent or other stockholders shall be accounted for as a dividend. Dividends paid to related parties are subject to the requirements of *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*;

j. Change in Accounting Principles

The effects of a change in accounting principle or the application of an accounting principle, such as a change in reserve account because of a change in valuation basis, are reported as a charge or credit to unassigned funds (surplus). The effect of these changes shall not be included in the determination of net income or loss;

k. Correction of an Error

Corrections of errors in previously issued financial statements are charged or credited directly to unassigned funds (surplus). The effect of corrections of errors shall not be included in the determination of net income or loss;

l. Stock Issuance Expenses

Expenses relating to the issuance of capital stock, for example underwriting commissions and filing fees are charged to unassigned funds (surplus);

m. Change in Surplus as a Result of Reinsurance

Life and accident and health insurers report increases in surplus that result from certain types of reinsurance transactions on a net of tax basis. As profits emerge from the ceded business the increase in surplus is amortized to income as provided for in Appendix A-791;

n. Changes in Deferred Tax Assets and Deferred Tax Liabilities

Consistent with the conclusions reached in *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10*, changes in deferred tax assets and deferred tax liabilities, including changes attributable to changes in tax rates and changes in tax status, if any, shall be recognized as a separate component of unassigned funds (surplus);

o. Other

This category includes other gains and losses in surplus not specifically identified elsewhere in this statement including but not limited to net proceeds from life insurance on employees, changes in the additional minimum pension liability as discussed in *SSAP No. 102—Accounting for Pensions, A Replacement of SSAP No. 89* and unearned compensation relating to stock issuances made under compensatory Employee Stock Ownership Plans, Stock Option Plans and Stock Purchase Plans.

Special Surplus Funds

13. A company may establish a segregated surplus account to provide for contingencies. Surplus thus appropriated is called appropriated surplus or special surplus funds. Surplus resulting from any retroactive reinsurance transaction entered by a property and casualty insurer must be recorded as an appropriation of surplus by the ceding company (special surplus from retroactive reinsurance account). Voluntary and

general contingency reserves which are not actual liabilities of the company are shown as appropriated surplus or special surplus funds.

Other-Than-Special Surplus Funds

14. Amounts provided to reporting entities, other than stock companies, in the organization stage to defray the expenses and meet initial minimum surplus requirements required to obtain a license to do the business of insurance or for the ongoing operations shall be reported as Other-Than-Special Surplus Funds. Examples of these types of deposits include but are not limited to: guaranty fund notes and subscriber accounts that represent individual subscriber contributions.

Quasi-Reorganizations

15. Restatement of gross paid-in and contributed surplus and unassigned funds (surplus) under a quasi-reorganization shall be permitted only if the criteria in both paragraphs 15.a. and 15.b. and either paragraph 15.c. or 15.d. are met:

a. The restatement is approved in writing by the domiciliary commissioner;

b. An 80% or greater change in the ultimate ownership of the reporting entity has occurred within six months prior to approval of the restatement;

c. A new business plan has been adopted that results in a substantive change in the operations and business mix of the reporting entity and the situation or circumstances that gave rise to the negative unassigned funds (surplus) will not be part of the ongoing operations;

d. The reporting entity is a shell company with no existing operations, in force policies or outstanding claims.

16. Restatement shall not result in the unassigned funds (surplus) account being greater than zero or the gross paid-in and contributed surplus account being less than zero immediately following the restatement. Total surplus as regards policyholders shall remain unchanged following restatement. The following components of unassigned funds (surplus) shall be considered in determining the amount available for restatement:

a. Net Income;

b. Effect of Exchange Rate Fluctuations;

c. Dividends to Stockholders;

d. Change in Accounting Principles;

e. Correction of an Error and

f. Stock Issuance Expenses.

17. The assets and liabilities of the reporting entity shall continue to be carried at historical cost or other value required by statutory accounting principles. No adjustments to assets or liabilities shall be made to reflect the effect of a quasi-reorganization.

18. The tax benefits of operating losses or tax credits existing at the date of a quasi-reorganization and subsequently recognized after the quasi-reorganization shall be recognized as an adjustment to gross paid-in and contributed surplus.

Demutualizations

19. Mutual insurance companies may undergo demutualization transactions and convert to stock enterprises. In order to effect a demutualization, a company may be required to issue consideration, often in the form of stock, to existing participating policyholders in exchange for their current membership interests. The receipt of such stock has no direct effect on the policyholders' contractual interests of their insurance policies (for example, it does not alter the cash surrender value of their life insurance policies). However, the governance of the mutual insurance company and, in particular, the participating policyholders' interest in that governance are modified. Stock received from a demutualization shall be accounted for at fair value with a gain recognized in income from continuing operations.

Changes in Statutory Surplus

20. The components of the change in the capital and surplus accounts shall be presented for each year for which an income statement is presented.

Disclosures

21. The financial statements shall disclose the following:

a. The number of shares of each class of capital stock authorized, issued and outstanding as of the balance sheet date and the par value or stated value of each class;

b. The dividend rate, liquidation value and redemption schedule (including prices and dates) of any preferred stock issues;

c. Dividend restrictions, if any, and an indication if the dividends are cumulative;

d. The dates and amounts of dividends, or distributions paid. Note for each payment whether the dividend or distribution was ordinary or extraordinary.

e. The portion of the reporting entity profits that may be paid as ordinary dividends to stockholders;

f. A description of any restrictions placed on the unassigned funds (surplus) including for whom the surplus is being held;

g. For mutual reciprocals and similarly organized entities, the total amount of advances to surplus not repaid, if any;

h. The total amount of stock held by the reporting entity, including stock of affiliated entities, for special purposes such as conversion of preferred stock, employee stock options, and stock purchase warrants;

i. A description of the reasons for changes in the balances of any special surplus funds from the prior period;

j. The portion of unassigned funds (surplus) represented or reduced by each of the following items:

i. unrealized gains and losses;

ii. nonadmitted asset values;

iii. separate account business;

iv. asset valuation reserves;

v. provision for reinsurance.

k. For reciprocal insurance companies only:

i. the amount of surplus identified as subscriber savings accounts;

ii. the source of the funds (either from the reciprocal's operations or contributed by the individual subscriber) and, the reporting location in surplus;

iii. the conditions upon which the balances are paid to the subscribers.

l. Disclosures required by SSAP No. 41;

m. Disclosures required by SSAP No. 9;

n. The impact of the restatement in a quasi-reorganization as long as financial statements for the period of the reorganization are presented; and

o. The effective date of a quasi-reorganization for a period of ten years following the reorganization.

22. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

23. Paragraphs 9 and 10 of *Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967,* are adopted with modification to eliminate the option of disclosing changes in the notes to the financial statements rather than in the Statement of Capital and Surplus. This statement originally adopted paragraphs 10 and 11 of *Accounting Principles Board Opinion No. 10, Omnibus Opinion—1966* (APB 10). However, for reporting periods ending after December 15, 1997, paragraphs 10 and 11 of APB 10 were deleted by paragraph 9, and replaced by paragraphs 6 and 7 of *FASB Statement No. 129, Disclosure of Information About Capital Structure* (FAS 129). As such, this statement adopts paragraphs 6, 7 and 9 of FAS 129. All other paragraphs of FAS 129 are rejected. This statement also adopts with modification paragraph 12 of *Accounting Principles Board Opinion No. 6* (APB 6), *Status of Accounting Research Bulletins,* to eliminate the option of recording treasury stock as an asset.

24. Paragraph 15 of *FASB Statement No. 5, Accounting For Contingencies*, is adopted by this statement. Paragraphs 1-4 and 10-16 of *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting* Research *Bulletins,* "Chapter 7, Capital Accounts, Section B—Stock Dividends and Stock Split-ups" are adopted by this statement*.*

25. This statement adopts with modification *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting* Research *Bulletins,* "Chapter 7, Capital Accounts, Section A—Quasi-Reorganization or Corporate Readjustment*,*" to permit restatement of gross paid-in and contributed surplus and unassigned funds (surplus) only in certain limited circumstances. This statement adopts *FASB Emerging Issues Task Force 99-4, Accounting for Stock Received from the Demutualization of a Mutual Insurance Company*.

26. This statement adopts with modification *Accounting Research Bulletin No. 46, Discontinuance of Dating Earned Surplus,* to require disclosure of the impact of the restatement in the financial statements as long as financial statements for the period of reorganization are presented and paragraph 28 of *Accounting Principles Board Opinion No. 9, Reporting the Results of Operations.* This statement rejects *FASB Emerging Issues Task Force No. 88-9, Put Warrants, FAS 150, Accounting for Certain Financial*

Instruments with Characteristics of both Liabilities and Equity (FAS 150), *FSP FAS 150-3, Effective Date, Disclosures and Transition for Mandatorily Redeemable Financial Instruments of Certain Nonpublic Entities and Certain Mandatorily Redeemable Noncontrolling Interests Under FASB Statement No. 150* (FSP FAS 150-3) and *FSP FAS 150-5, Issuer's Accounting Under FASB Statement No. 150 for Freestanding Warrants and Other Similar Instruments on Shares That Are Redeemable* (FSP FAS 150-5). FAS 150, and the corresponding FSPs are rejected as insurers do not prevalently issue financial instruments within the confines of these standards. However, guidance has been incorporated within this SSAP to ensure that puttable warrants and mandatorily redeemable warrants are reflected as liabilities, and not equity, within the financial statements.

27. This statement rejects paragraphs 1-11 and 13-24 of APB 6*, FASB Emerging Issue Task Force No. 85-1, Classifying Notes Received for Capital Stock,* and *FASB Emerging Issue Task Force No. 85-2, Classification of Costs Incurred in a Takeover Defense*.

28. This statement also rejects *Accounting Research Bulletin No. 43*, *Restatement and Revision of* Accounting Research *Bulletins,* "Chapter 1, Prior Opinions," paragraph 12 of APB 10*,* and *FASB Technical Bulletin No. 85-6, Accounting for a Purchase of Treasury Shares at a Price Significantly in Excess of the Current Market Price of the Shares and the Income Statement Classification of Costs Incurred in Defending against a Takeover Attempt.*

Effective Date and Transition

29. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance in paragraph 19 was originally contained within *INT 00-12: EITF 99-4, Accounting for Stock Received from the Demutualization of a Mutual Insurance Company* and was effective June 12, 2000.

Health Care Delivery Assets - Supplies, Pharmaceuticals and Surgical Supplies, Durable Medical Equipment, Furniture, Medical Equipment and Fixtures, and Leasehold Improvements in Health Care Facilities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for health care delivery assets - supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures and leasehold improvements.

SUMMARY CONCLUSION

2. This statement applies only to reporting entities which directly provide health care services to subscribers, members or policyholders. Such providers acquire and retain assets commonly referred to as "health care delivery assets" used in connection with the direct delivery of health care services in facilities owned or operated by the reporting entity and include supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures and leasehold improvements in health care facilities.

3. Furniture, medical equipment and fixtures used in connection with the direct provision of health care services include diagnostic equipment, laboratory equipment, patient monitoring equipment, hospital beds, examining tables, and operating room equipment.

4. Supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures, and leasehold improvements in health care facilities owned or operated by the reporting entity meet the definition of assets established in *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4). Pharmaceuticals and surgical supplies, and durable medical equipment held by reporting entities and used for the direct delivery of health care services are assets which are used to fulfill policyholder obligations within the meaning of SSAP No. 4 and are admitted assets to the extent that they conform to the requirements of this statement. Furniture, medical equipment and fixtures, and leasehold improvements held by health reporting entities and used for the direct delivery of health care services are admitted assets to the extent that they conform to the requirements of this statement. Furniture, fixtures and equipment, and leasehold improvements which are not used in the direct delivery of health care (e.g., for administrative activities including claims processing, billing, and maintenance of medical records) are nonadmitted assets and are addressed in *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements* (SSAP No. 19).

5. The reporting entity shall maintain a control system that provides for identification of quantities on hand and appropriate valuation (lower of cost or fair value) of supplies, pharmaceuticals and surgical supplies, and durable medical equipment.

6. Supplies except for pharmaceuticals and surgical supplies discussed in paragraph 7 (e.g., linens, uniforms and garments, food and other commodities, and housekeeping, maintenance, and office supplies) shall be nonadmitted assets.

7. Pharmaceutical and surgical supplies (e.g. drugs, surgical items (such as implants), and medical dressings) used directly in the treatment of medical conditions shall be admitted assets.

8. Durable medical equipment includes consumable or salable equipment such as wheelchairs, crutches, braces, that is generally classified as inventory, and is of a nature that it may be reused. Subscribers, members or policyholders may utilize durable medical equipment on a temporary basis and

later return the equipment to the provider. The provider shall recognize the diminution in value, if any, as a result of use of such equipment.

9. Furniture, medical equipment and fixtures, and leasehold improvements shall be depreciated over their estimated useful lives but for a period not to exceed three years, except for a leasehold improvement which shall be amortized against net income over the shorter of its estimated useful life or the remaining life of the original lease excluding renewal or option periods, using methods detailed in SSAP No. 19.

10. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of medical supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures, and leasehold improvements shall be expensed when purchased. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Disclosures

11. The financial statements shall disclose if the written capitalization policy and the resultant predefined thresholds changed from the prior period and the reason(s) for such change.

Relevant Literature

12. This statement rejects the AICPA *Audit and Accounting Guide: Health Care Organizations*.

Effective Date and Transition

13. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Guidance reflected in paragraphs 10 and 11, incorporated from SSAP No. 87, was originally effective for years beginning on and after January 1, 2004.

14. Medical supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures, and leasehold improvements capitalized prior to January 1, 2001 shall be depreciated over the shorter of its remaining useful life or three years.

Accounting for the Issuance of Insurance-Linked Securities Issued by a Property and Casualty Insurer through a Protected Cell

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the issuance of insurance-linked securities issued by a property and casualty insurer through a protected cell. This statement applies to property and casualty contracts as defined in *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (SSAP No. 50).

SUMMARY CONCLUSION

2. An insurance-linked security can be issued by the insurer through a protected cell for purchase by investors. A protected cell is retained within the insurance or reinsurance company and is used to insulate the proceeds of the securities offering from the general business risks of the insurer, granting an additional comfort level for investors of the securitized instrument. The insurance exposures that have been securitized by the insurance-linked security are attributed to the protected cell.

3. Under the terms of the security, the principal may be paid to the investor on a specified maturity date, with interest, unless a trigger event occurs. The proceeds of the security offering will collateralize (i) the issuer's obligation under an insurance or reinsurance agreement if a trigger event occurs and (ii) the issuer's obligation to repay the security if a trigger event does not occur.

4. If the trigger event takes place before a specified date, the issuer is relieved of some or its entire obligation to repay the securityholders, and the investor incurs a loss of some or all of its investment. The security must be issued with an indemnity trigger.

5. In an insurance-linked security, the insurer that originated the transaction has hedged its portfolio of insurance risks by transferring certain of those risks to the securityholders. Should the triggering event occur, the issuer would incur a loss that would be partly offset by the amount of liability to securityholders from which it is relieved. This statement provides statutory accounting guidance solely for indemnity triggered insurance securitization transactions conducted through a protected cell.

Accounting for Prefunded Insurance-Linked Securities for Business Attributed to the Protected Cell from the General Account

General Account Reporting

6. Activities such as sales, underwriting and contract administration, premium collection and payment of premium taxes, and claims processing are activities of the insurance company distinct from the protected cell and shall be accounted for as transactions of the general account.

7. Amounts paid to the protected cell for underwriting risks, which ultimately will be securitized by the protected cell, shall be reported separately as a reduction of written and earned premiums in the current period general account's statement of income. This premium is earned by the general account in accordance with *SSAP No. 53—Property Casualty Contracts–Premiums* (SSAP No. 53).

8. At the maturity of the protected cell all assets and liabilities of the protected cell are distributed based on the contractual agreement with the securityholders. If after this distribution assets still reside in the protected cell, these assets shall be attributed to the general account and recognized as an adjustment to surplus.

9. Insurance claim liabilities arising from past insurable events attributed to the protected cell account from the general account shall be accounted for as retroactive reinsurance as prescribed in *SSAP No. 62R—Property and Casualty Reinsurance* (SSAP No. 62R).

10. General account recoverables from the protected cell as a result of an indemnity based securitized event, shall be recognized separately as a reduction of gross losses and loss expenses incurred in the current period general account's statement of income. General account recoverables from the protected cell on unpaid reported and incurred but not reported losses and loss adjustment expenses shall be netted against the liability for gross losses and loss adjustment expenses in the general account's balance sheet. Recoverables from the protected cell shall not exceed the assets carried at fair value in the protected cell.

11. The general account shall include an aggregate write-in for the total assets and an aggregate write-in for liabilities of any protected cell which it maintains. Transfers to the general account due or accrued shall be reported on a net basis so that the asset and the liability totals of the general account are not overstated.

Protected Cell Reporting

12. The protected cell annual statement is concerned with the investment activities and obligations relating to insurance-linked securities attributed to that protected cell. As a result, the protected cell statement shall report only the financial activities of the protected cell and shall not include general account expenses related to insurance activities which are recorded for in the general account.

13. The protected cell shall record premium income for transactions attributed to it by the general account as income reported in the protected cell's statement of income. This premium attribution is earned by the protected cell in accordance with SSAP No. 53.

14. The obligation from the issuance of the insurance-linked security is recorded as Funds Held Under Securitization Agreement, a liability on the protected cell balance sheet which is reported at its contractual value which will be the lower of the scheduled amount to be repaid to investors or the fair value of the investments in the protected cell. All protected cell assets shall be reported at fair value. Interest expenses payable to securityholders associated with the protected cell investment operations shall be deducted in the determination of net operating income of the cell. Net investment income and realized capital gains and losses relating to the investment operations of the protected cell are recorded as net investment income. Payables to the general account shall not exceed the assets carried at fair value in the protected cell.

15. Changes in both (i) the fair value of the protected cell invested assets and (ii) the protected cell contractual value of liabilities to investors shall be reported as an unrealized gain/loss in the equity section of the protected cell balance sheet.

16. If the trigger event occurs with respect to the underlying exposures attributed to the protected cell, the protected cell shall record the appropriate incurred losses in its current period statement of income. Correspondingly, the Funds Held Under Securitization Agreement shall be reduced and offset by gross losses incurred in the current period Statement of Income. The applicable funds to cover the subject exposure are then attributed to the general account via a balance sheet account, "Due to/from the General Account."

17. If the trigger event does not take place on or before the contractual maturity date, the protected cell repays the security as prescribed in the debt contract by reducing Funds Held Under Securitization Agreement.

Disclosures

General Account

18. The general account shall reflect all activities with its protected cells as an aggregate write-in in its statutory balance sheet and income statement. The general account shall also disclose in its notes to the financial statements the types and amounts of exposures /risks attributed to each of its protected cells.

Protected Cells

19. Each protected cell of a protected cell company shall prepare and submit to all states where the protected cell company is licensed and the NAIC the following supplemental financial information:

a. Balance Sheet

b. Income Statement

c. Statement of Cash Flows

d. Investment Schedules as typically required for a property/casualty insurer

e. Schedule P

20. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

21. This statement only contemplates transactions with an indemnity-based trigger, as such they would be excluded from *FAS No. 133, Accounting for Derivative Instruments and Hedging Activities*.

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3).

GLOSSARY [1]

Fair Value – See *SSAP No. 100—Fair Value Measurements*

Fully Funded – With respect to any exposure attributed to a protected cell, the fair value of the protected cell assets, on the date on which the insurance securitization is effected, equals or exceeds the maximum possible exposure attributable to the protected cell with respect to such exposures.

General Account – The assets and liabilities of a protected cell company other than protected cell assets and protected cell liabilities.

Indemnity Trigger – A transaction term by which relief of the issuer's obligation to repay investors is triggered by its incurring a specified level of losses under its insurance or reinsurance contracts.

Protected Cell – An identified pool of assets and liabilities of a protected cell company segregated and insulated by means of this Act from the remainder of the protected cell company's assets and liabilities.

Protected Cell Account – A specifically identified bank or custodial account established by a protected cell company for the purpose of segregating the protected cell assets of one protected cell from the protected cell assets of other protected cells and from the assets of the protected cell company's general account.

Protected Cell Assets – All assets, contract rights and general intangibles, identified with and attributable to a specific protected cell of a protected cell company.

Protected Cell Company – A domestic insurer that has one or more protected cells.

Protected Cell Company Insurance Securitization – The issuance of debt instruments, the proceeds from which support the exposures attributed to the protected cell, by a protected cell company where repayment of principal or interest, or both, to investors pursuant to the transaction terms is contingent upon the occurrence or nonoccurrence of an event with respect to which the protected cell company is exposed to loss under insurance or reinsurance contracts it has issued.

Protected Cell Liabilities – All liabilities and other obligations identified with and attributable to a specific protected cell of a protected cell company.

[1] Definitions in this glossary were adapted from the Protected Cell Company Model Act as adopted by the Insurance Securitization Working Group of the Financial Condition (E) Committee in 1999. These definitions are not intended to change the meaning of any terms used elsewhere in the *Accounting Practices and Procedures Manual*, and should only be used in the context of SSAP No. 74.

Reporting on the Costs of Start-Up Activities

SCOPE OF STATEMENT

1. This statement addresses start-up costs. In practice, various terms are used to refer to start-up costs, such as pre-opening, pre-operating, and organization costs. For purpose of this statement, these costs are referred to as start-up costs.

SUMMARY CONCLUSION

2. Costs of start-up activities, including activities related to organizing a new entity (commonly referred to as organization costs), shall be expensed as incurred. Start-up activities are defined broadly as those one-time activities related to: (1) opening a new facility; (2) introducing a new product or service; (3) conducting business in a new territory; (4) conducting business with a new class of customer or beneficiary; (5) initiating a new process in an existing facility; or (6) commencing some new operation.

Disclosures

3. Cost of start-up activities incurred in an accounting period shall be disclosed in the annual audited statutory financial report only.

4. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

5. This statement adopts American Institute of Certified Public Accountants (AICPA) *Statement of Position SOP 98-5, Reporting on the Costs of Start-Up Activities* (SOP 98-5), which requires costs of start-up activities and organization costs to be expensed as incurred. This statement is consistent with *SSAP No. 17—Preoperating and Research and Development Costs* (SSAP No. 17).

Effective Date and Transition

6. This statement is effective for years beginning January 1, 2002. Adoption as of January 1, 2001 is encouraged but not required. Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3).

Multiple Peril Crop Insurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for Multiple Peril Crop Insurance (MPCI). This statement also establishes statutory accounting principles for the Aquatic Crop Reinsurance Agreement (hereinafter included in the term MPCI).

SUMMARY CONCLUSION

Introduction

2. Farming has always been an inherently risky enterprise because farmers operate at the mercy of nature and frequently are subjected to weather-related perils such as droughts, floods, hurricanes, and other natural disasters. Since the 1930s, many farmers have been able to transfer part of the risk of loss in production to the federal government through the subsidized MPCI program administered by the Federal Crop Insurance Corporation (FCIC), an agency of the United States Department of Agriculture. Major legislation enacted in 1980 and 1994 restructured the MPCI program. The 1980 legislation enlisted, for the first time, private insurance companies to sell, service, and share the risk of MPCI insurance policies. Subsequently, in 1994, the Federal Crop Insurance Reform and Department of Agriculture Reorganization Act revised the program to offer farmers two primary levels of insurance coverage, catastrophic and buy-up.

3. Catastrophic insurance is designed to provide farmers with protection against extreme crop losses for a small processing fee. Buy-up insurance provides protection against more typical and smaller crop losses in exchange for a policyholder-paid premium. The government subsidizes the total premium for catastrophic insurance and a portion of the premium for buy-up insurance. Farmers who purchase buy-up crop insurance must choose both the coverage level (the proportion of the crop to be insured) and the unit price (such as, per bushel) at which any loss is calculated. With respect to the coverage level of production, farmers can choose to insure as much as 85 percent of normal production or as little as 50 percent of normal production at different price levels. With respect to the unit price, farmers choose whether to value their insured production at FCICs full estimated market price or at a percentage of the full price.

4. In recent years, FCIC has introduced a new risk management tool called revenue insurance. Unlike traditional crop insurance, which insures against losses in the level of crop production, revenue insurance plans insure against losses in revenue. The plans protect the farmer from the effects of declines in crop prices or declines in crop yields, or both. Like traditional buy-up insurance, the government subsidizes a portion of the premiums. One of the plans, called Crop Revenue Coverage, is available in many states for major crops. Two other plans, called Income Protection and Revenue Assurance, are available to farmers in only limited areas.

5. Companies participate in the MPCI program with FCIC through the Standard Reinsurance Agreement (SRA) per the terms of which the insurance companies share in the underwriting results of each policy. The SRA reinsurance terms provide a company the flexibility to limit its exposure on a state by state basis. MPCI premium is not expense loaded, therefore FCIC pays the insurance companies, on behalf of the policyholder, a percent of premium for administrative expenses associated with selling and servicing crop insurance policies, including the expenses associated with adjusting claims.

6. The FCIC utilizes an escrow account to distribute or collect additional funds. Premium (collected from the policyholders and the federal government subsidy) is deposited in the escrow account and is available to pay the claims arising under the program.

Premium Recognition

7. MPCI gross premium is defined as the contractually determined amount specified by FCIC to the policyholder for the effective period of the contract based on the actuarially determined expectation of risk and policy benefits associated with the coverage provided by the terms of the insurance contract. In addition, gross premium shall also include the government premium subsidy paid on behalf of the policyholder.

8. MPCI ceded premium and losses are defined as the amount calculated by applying the proportional and non-proportional factors as stated in the SRA. An example of this application is shown in Exhibit A to this statement.

9. MPCI written premium shall be recorded as soon as an estimate can be made, but no later than the processing date. Upon recording written premium, a liability for the unearned premium reserve shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided.

10. The company shall disclose the method used to compute the unearned premium reserve in the financial statements.

Amounts Receivable or Payable

11. The company shares underwriting risk with FCIC and can earn or lose money according to the claims it must pay farmers for crop losses. The company earns underwriting profits when the net retained premiums exceed the net crop loss claims paid. The company incurs underwriting losses when the net claims paid for crop losses exceed the net retained premiums. These definitions do not consider underwriting expenses, which would be included for traditional statutory accounting underwriting gains and losses. The use of the terms underwriting gains and losses in this issue paper are unique to the MPCI program. As the premiums of the program are held by FCIC in escrow, the company shall recognize as a write-in asset a receivable from FCIC for the amount of the underwriting gain (as defined in this paragraph). Whereas, when the company is in an underwriting loss position, the company shall recognize a write-in liability to the FCIC for the amount of the underwriting loss (as defined in this paragraph), as the monies held in the escrow account are not sufficient to cover the company's claims. In accordance with the SRA, funds that remain in escrow will be distributed to the company at the conclusion of the contract period if the contract results in a gain to the company. If the company owes additional funds to the escrow (i.e., it is in a loss position), those funds are remitted on a periodic basis until the contract expires. These amounts shall be recorded net as the program meets the requirements of offsetting as defined in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64). In accordance with *SSAP No. 21—Other Admitted Assets* (SSAP No. 21), the amount receivable under the Federal Crop Insurance program shall be reported as an admitted asset.

12. Amounts receivable from policyholders meet the definition of an admitted asset as set forth in *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) and should be accounted for in accordance with *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers* (SSAP No. 6). The due date shall be governed by contractual due date of the premium billing, and not the effective date of the contract.

Unpaid Losses and Loss Adjustment Expenses

13. In accordance with *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55), losses and loss adjustment expenses shall be recognized as expense when a covered or insured event occurs.

14. The covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event and, in order to recognize the expense of a covered or insured event, it is necessary to establish a liability. The following are the types of future costs relating to the MPCI program:

a. Reported Losses: Expected payments for losses relating to insured events that have occurred and have been reported to, but not paid by, the insurer as of the statement date;

b. Incurred But Not Reported Losses, (IBNR): Expected payments for losses relating to insured events that have occurred but have not been reported to the insurer as of the statement date;

c. Loss Adjustment Expenses: Costs expected to be incurred in connection with the adjustment and recording of losses defined in paragraphs 14.a. and 14.b. of this statement.

Administrative Expense Payment

15. FCIC pays the insurance companies a percent of premium for administrative expenses associated with selling and servicing crop insurance policies, including the expenses associated with adjusting claims. The expense payment associated with the catastrophic coverage shall be recorded as a reduction of loss expenses whereas the expense payment for the buy-up coverage shall be recorded as a reduction of other underwriting expenses. The company shall disclose the total amounts received for each type of coverage.

Escrow Account

16. The escrow account shall not be recorded on the financial statements of the insurance company. This account is considered an FCIC account and as such is not owned by the insurance company, however, the company’s underwriting gain is reflected as a receivable in accordance with paragraph 11.

Effective Date

17. This statement is effective for SRA contracts entered into on or after January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Correction of Errors* (SSAP No. 3).

EXHIBIT A - ILLUSTRATION OF CEDED PREMIUMS AND LOSSES

NOTES TO THE ILLUSTRATION

Fund	The reinsurance fund specified in the Standard Reinsurance Agreement (SRA).
Column 1	Reinsured Company proportional reinsurance retention percentage.
Column 2	Gross Written Premium equals the insured paid premium amount plus premium subsidy provided by FCIC.
Column 3	Net Retained Premium is the Reinsured Company retained premium after proportional reinsurance. Gross Written Premium (Column 2) times the Reinsured Company retention percentage (Column 1).
Column 4	Proportional Ceded Premium is the premium retained by FCIC after proportional reinsurance. Gross Written Premium (Column 2) minus the Reinsured Company Net Retained Premium (Column 3).
Column 5	Reinsured Company proportional reinsurance retention percentage (Column 1).
Column 6	Gross Losses equals total claim payments to insured.
Column 7	Net Retained Losses are the Reinsured Company retained losses after proportional reinsurance. Gross Losses (Column 6) times the Reinsured Company retention percentage (Column 5).
Column 8	Proportional Ceded Losses are the losses retained by FCIC after proportional reinsurance. Gross Losses (Column 6) minus the Reinsured Company Net Retained Losses (Column 7).
Column 9	Retained Loss Ratio is the Reinsured Company's Net Retained Losses (Column 7) divided by the Reinsured Company's Net Retained Premium (Column 3).
Column 10	Underwriting (Gain)/Loss is the Reinsured Company share of the MPCI program gain or loss after calculating the non-proportional reinsurance provided in the SRA.
Column 11	Non-Proportional Ceded Premium is equal to the Reinsured Company Net Retained Premium (Column 3) minus Net Retained Losses (Column 7) minus an Underwriting (Gain) (Column 10) if one exists. This is FCIC's share of the underwriting gain after proportional reinsurance, based on the non-proportional reinsurance gain sharing factors specified in the SRA.
Column 12	Non-Proportional Ceded Losses is equal to the Reinsured Company Net Retained Premium (Column 3) minus Net Retained Losses (Column 7) minus an Underwriting Loss (Column 10) if one exists. This is FCIC's share of the underwriting loss after proportional reinsurance, based on the non-proportional reinsurance loss sharing factors specified in the SRA.
Column 13	Final Retained Premium is equal to the Reinsured Company Net Retained Premium (Column 3) minus the Non-Proportional Ceded Premium (Column 11). The Reinsured Company Net Retained Premium after proportional reinsurance is reduced by the amount of FCIC's underwriting gain share after non-proportional reinsurance.

Column 14 Final Retained Losses is equal to the Reinsured Company Net Retained Premium (Column 3) minus the Non-Proportional Ceded Losses (Column 12). The Reinsured Company Net Retained Losses after proportional reinsurance are reduced by the amount of FCIC's underwriting loss share after non-proportional reinsurance.

Column 15 Final Retained Loss Ratio is equal to Final Retained Losses divided by Final Retained Premium.

(a) Calculated based on the loss ratios for each fund by state. Net Retained Premium (Col 3) is applied to the percentages of Section II. C. and D. of the Standard Reinsurance Agreement.

(b) If the fund is in a GAIN position then there would be Non-proportional ceded premium. If the fund is in a LOSS position then there would be Non-proportional ceded losses.

Since each fund and state stands alone in the calculations, there is a possibility of Non-proportional ceded premium AND ceded losses within the same reinsurance year. There is also the possibility of this within the same fund (some states with a Gain and some states with a Loss).

Mezzanine Real Estate Loans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for Mezzanine Real Estate Loans (MREL). An MREL is a loan secured by a pledge of direct or indirect equity interests in an entity that owns real estate (the "real estate owner"). The real estate owner is typically the borrower under a mortgage loan secured by the same real estate. The MREL borrower ("mezz borrower") may be the real estate owner or one or more of the holder(s) of the direct or indirect equity interest(s) in the real estate owner. As used herein, "direct equity interests" means the then issued and outstanding shares or units of partnership, membership or other beneficial interests in the real estate owner, and "indirect equity interests" means the then issued and outstanding shares or units of partnership, membership or other beneficial interests in a member, partner, shareholder or other holder of direct equity interests in the real estate owner.

SUMMARY CONCLUSION

2. For statutory accounting purposes, a MREL shall be defined as a debt obligation, that is not a security, which is secured by a pledge of equity interest in an entity that owns real estate. (A security is a share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer that:

a. Either is represented by an instrument issued in bearer or registered form, or if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer;

b. Is of a type commonly dealt in on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment; and

c. Either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations).

3. MREL's meet the definition of assets as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

4. Reporting entities holding MREL's shall follow the accounting, reporting and disclosure requirements defined within *SSAP No. 37—Mortgage Loans* (SSAP No. 37).

5. In order for a MREL to qualify as an admitted asset, the MREL agreement (the agreement) shall:

a. Require that each pledgor abstain from granting additional security interests in the equity interest pledged; and

b. In addition to satisfaction of the requirements set forth in paragraphs 5.c. and 5.d., the MREL lender shall employ techniques to minimize the likelihood or impact of a bankruptcy filing on the part of the real estate owner and, if different, on the part of the mezz borrower. These techniques may include (by way of example and not limitation) one or more of the following: (i) separateness covenants, (ii) cash management techniques, (iii) exceptions to the non-recourse provisions for damages arising out of the mezz borrower's failure to comply with covenants prohibiting additional debt, transfers of the real estate, transfers of pledged interests, and violation of the single asset/single purpose covenants, (iv) full recourse liability in the event of a bankruptcy filing on the part of the real estate owner and, if different, on the part of the mezz borrower, and (v) loan guaranties; and

The selection of techniques that are applied in the instance of any particular MREL to achieve said purposes requires an exercise of judgement by the MREL lender. The reasonableness of the techniques utilized in any particular MREL will be assessed in light of the credit characteristics of the MREL borrower, any guarantors and the underlying real estate at the time of origination. Utilizing this standard provides flexibility to the MREL lender and provides a basis for the regulator and auditor in analyzing the reasonableness of the judgement of the MREL lender; and

c. The real estate owner and, if different, the mezz borrower shall:

i. Hold no assets other than, in the case of the real estate owner, the real property, and in the case of the mezz borrower (if different), the equity interest in the real estate owner;

ii. Not engage in any business other than, in the case of the real estate owner, the ownership and operation of the real estate, and in the case of the mezz borrower (if different), holding an ownership interest in the real estate owner; and

iii. Not incur additional debt, other than limited trade payables, a first mortgage loan (in the case of the real estate owner), and the MREL (in the case of the mezz borrower, if different).

d. At the time of the initial investment, the MREL lender shall corroborate that the sum of the first mortgage and the MREL does not exceed 100% of the value of the real estate as evidenced by a current appraisal. Acceptable appraisal methods are described in paragraph ~~12~~13 of *SSAP No. 40R—Real Estate Investments*.

Disclosures

6. The financial statements shall disclose, as applicable, the requirements of SSAP No. 37 paragraphs 20, 21 and 22. The MREL lender shall report in Appendix A-001 to its annual statement the amount and percentages of its total admitted assets held in MREL and the largest three investments held in MREL except that such detail shall not be required for assets held in MREL totaling less than 2.5% of its total admitted assets.

Effective Date and Transition

7. This statement is effective for years ending on and after December 31, 2001. Any change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Certain Health Care Receivables and Receivables Under Government Insured Plans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for pharmaceutical rebate receivables, claim overpayment receivables, loans and advances to providers who do not meet the definition of related parties, capitation arrangement receivables, risk-sharing receivables, and amounts receivable under government insured plans.

SUMMARY CONCLUSION

Overview

2. Pharmaceutical rebates are arrangements between pharmaceutical companies and reporting entities in which the reporting entities receive rebates based upon the drug utilization of its subscribers at participating pharmacies. These rebates are sometimes recorded as receivables by reporting entities using estimates based upon historical trends which should be adjusted to reflect significant variables involved in the calculation, such as number of prescriptions written/filled, type of drugs prescribed, use of generic vs. brand-name drugs, etc. In other cases, the reporting entity determines the amount of the rebate due based on the actual use of various prescription drugs during the accumulation period and then bills the pharmaceutical company. Oftentimes, a pharmacy benefits management company may determine the amount of the rebate based on a listing (of prescription drugs filled) prepared for the reporting entity's review. The reporting entity will confirm the listing and the pharmaceutical rebate receivable.

3. Claim overpayments may occur as a result of several events, including but not limited to claim payments made in error to a provider. Reporting entities often establish receivables for claim overpayments.

4. A health entity may make loans or advances to large hospitals or other providers. Such loans or advances are supported by legally enforceable contracts and are generally entered into at the request of the provider. In many cases, loans or advances are paid monthly and are intended to represent one month of fee-for-service claims activity with the respective provider.

5. A capitation arrangement is a compensation plan used in connection with some managed care contracts in which a physician or other medical provider is paid a flat amount, usually on a monthly basis, for each subscriber who has elected to use that physician or medical provider. In some instances, advances are made to a provider under a capitation arrangement in anticipation of future services.

6. Risk-sharing agreements are contracts between reporting entities and providers with a risk-sharing element based upon utilization. The compensation payments for risk-sharing agreements are typically estimated monthly and settled annually. These agreements can result in receivables due from the providers if annual utilization is different than that used in estimating the monthly compensation.

7. The definition and accounting treatment for nonadmitted assets is outlined in paragraph 3 of *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) as follows:

> As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet", and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or

b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

8. Pharmaceutical rebate receivables, claim overpayment receivables, loans and advances to providers, capitation arrangement receivables, risk-sharing receivables, and amounts receivable under government insured plans meet the definition of assets as set forth in SSAP No. 4, and are admitted assets to the extent that the requirements for admission defined in this statement are met.

9. This statement shall not be considered an all-inclusive list of health care receivables. Certain health care receivables are addressed in other statements. Health care receivable assets not addressed in other statements or this statement are nonadmitted assets.

Pharmaceutical Rebate Receivables

10. Pharmaceutical rebates receivables consist of reasonably estimated amounts and billed amounts. Both the billed amount and the estimated amount shall be admitted assets subject to the conditions specified below:

a. Estimated amounts shall be related solely to actual prescriptions filled during the 3 months immediately preceding the reporting date;

b. Billed amounts represent pharmaceutical rebate receivables that have been invoiced or confirmed in writing but not collected as of the reporting date. Billed amounts for an estimated amount under paragraph 10.a. shall be admitted only if the determination of the rebate, based on actual prescriptions filled, occurs and is invoiced or confirmed in writing within the 2 months following the reporting date of the estimated amount. Adjustments to previously billed amounts related to prior periods shall be nonadmitted until invoiced or confirmed in writing. Pharmaceutical rebates that have not been collected within 90 days of the invoice date or confirmation date shall be nonadmitted. Furthermore, if accrued pharmaceutical rebate receivables are not invoiced or confirmed in writing in accordance with the contract provisions, the accrual shall be nonadmitted; and

c. Evaluation of the collectibility of pharmaceutical rebate receivables shall be made periodically. If in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R), it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

11. The method used to reasonably estimate the receivable shall be consistent from period to period and shall be adjusted periodically for any changes in the underlying pharmaceutical rebate contract provisions. The financial statements shall disclose information regarding the reporting entity's pharmaceutical rebates in accordance with paragraph 24 of this statement.

12. Income from pharmaceutical rebates of insured plans shall be reported as a reduction to claims expense on the summary of operations.

13. Receivable and payable balances related to uncollected pharmaceutical rebates of uninsured plans shall be recorded on the financial statements of the reporting entity. Any pharmaceutical rebates earned by the reporting entity that are in excess of the amounts to be remitted to the uninsured plan pursuant to an administrative services agreement shall be determined consistent with the requirements of paragraphs 10 and 11 and shall be reported on the balance sheet as an amount receivable relating to uninsured accident and health plans, and as a reduction to general expenses on the statement of operations.

Claim Overpayment Receivables

14. A claim overpayment shall not be recorded as a receivable until invoiced. To the extent that the claim overpayment meets the setoff conditions in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64) and the overpayment is a specific identifiable payment and not an estimate, the receivable may be admitted up to the amount of the payable to the provider for reported claims (i.e., excluding incurred but not reported claims). The receivable and payable shall be reported gross rather than netted on the balance sheet. Evaluation of the collectibility of claim overpayment receivables shall be made periodically. If in accordance with SSAP No. 5R, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. Amounts in excess of that written off that do not meet the right of offset conditions shall be nonadmitted as they are not available to satisfy policyholder obligations.

Loans and Advances to Providers

15. Loans or advances to providers who meet the definition of related parties in *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* shall follow the guidance in that statement. To the extent a loan or advance to a non-related party provider meets the setoff conditions in SSAP No. 64, the loan or advance may be admitted up to the amount of the payable to the provider for reported claims (i.e., excluding incurred but not reported claims).

16. In addition, a loan or advance to a non-related party hospital shall be admitted up to the amount of claims incurred and payable to the hospital if all of the following conditions are met:

a. The loan or advance meets the setoff conditions in SSAP No. 64;

b. The loan or advance is supported by a legally enforceable contract;

c. The loan or advance is administered pursuant to contractual terms;

d. The contractual terms of the agreement provide for separate quarterly reconciliations;

e. Each quarterly reconciliation shall be completed within nine months of the end of such quarter; and

f. A quarterly reconciled difference shall be settled within 90 days of the date the reconciliation is completed.

17. If a quarterly reconciliation is not performed or settled in accordance with paragraphs 16.e. and 16.f., all assets for loans or advances to that hospital shall be nonadmitted.

18. The receivable and payable shall be reported gross rather than netted on the balance sheet. Evaluation of the collectibility of loans and advances to providers shall be made periodically. If in accordance with SSAP No. 5R, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. Amounts in excess of that written off that do not meet the right of offset conditions shall be nonadmitted as they are not available to satisfy policyholder obligations.

Capitation Arrangement Receivables

19. Advances to providers under capitation arrangements that are made under the terms of an approved provider services contract in anticipation of future services shall be admitted to the extent that the advanced amount does not exceed one month of average capitation payments for the subject provider during the preceding twelve months, and provided that the contract cannot be terminated before the end of the month for which the advanced amount was paid. Evaluation of the collectibility of capitation arrangement receivables shall be made periodically. If in accordance with SSAP No. 5R, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

Risk-Sharing Receivables

20. Risk-sharing receivables may consist of reasonably estimated amounts and billed amounts. Both the billed amount and the estimated amount shall be admitted assets subject to the conditions specified below:

a. Risk-sharing receivables and payables shall only be recorded when reasonably estimated. Estimates of risk-sharing receivables may be admitted if based on at least six months of actual claims experience for each risk-sharing contract. The contractual terms of any risk-sharing agreement shall provide for evaluation of the experience under the contract at least annually. The determination of the risk-sharing balance shall commence no later than 6 months following the close of such annual period, and the balance shall be invoiced no later than 8 months following close of the annual period;

b. Billed amounts represent risk-sharing receivables that have been invoiced but not collected as of the reporting date. Risk-sharing receivables and payables shall be invoiced or refunded in accordance with the contractual provisions of the risk-sharing agreement. Adjustments resulting in increases to previously billed amounts related to prior periods shall be nonadmitted until invoiced. Adjustments resulting in decreases to previously billed amounts shall be recognized immediately. Risk-sharing receivables that have not been collected within 90 days of the date of billing shall be nonadmitted;

c. Risk-sharing receivables and payables shall be reported gross rather than netted on the balance sheet. However, if a reporting entity has both a receivable and payable balance with the same provider and the balances meet the setoff conditions in SSAP No. 64, those balances shall be netted in accordance with SSAP No. 64; and

d. Evaluation of the collectibility of risk-sharing receivables shall be made quarterly. If in accordance with SSAP No. 5R, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

21. The method used to reasonably estimate the receivable shall be consistent from period to period and shall be adjusted periodically for any changes in the underlying risk-sharing contract. The financial statements shall disclose information regarding the reporting entity's risk-sharing receivables in accordance with paragraph 25 of this statement.

22. Income/expense from risk-sharing contracts shall be reported as a component of claims expense on the summary of operations.

Amounts Receivable Under Government Insured Plans

23. Amounts receivable under government insured plans, including amounts over 90 days due, that qualify as accident and health contracts in accordance with *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts in Force* shall be admitted assets. Amounts receivable under government insured plans include but are not limited to receivables under Medicare, Medicaid and similarly funded government insured plans. Evaluation of the collectibility of amounts receivable under government insured plans shall be made periodically. If in accordance with SSAP No. 5R, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. The collectibility and any nonadmission of amounts receivable from the government insured or uninsured plans are addressed here and in *SSAP No. 47—Uninsured Plans*, paragraph 11.c. Refer to *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage* for additional information and definitions of terms specifically related to Medicare Part D business.

Disclosures

24. The financial statements shall disclose the method used by the reporting entity to estimate pharmaceutical rebate receivables. Furthermore, for the most recent three years and for each quarter therein, the reporting entity shall also disclose the following:

a. Estimated balance of pharmacy rebate receivable as reported on the financial statements;

b. Pharmacy rebates as invoiced or confirmed in writing; and

c. Pharmacy rebates collected.

An example of this disclosure is shown in Exhibit A to this statement.

25. The financial statements shall disclose the method used by the reporting entity to estimate its risk-sharing receivables. If any receivable and payable balances with the same provider are netted, the reporting entity shall disclose the gross receivable and payable balances in the notes to the financial statements. Furthermore, for the most recent three years, the reporting entity shall also disclose the following:

a. Risk-sharing receivables as estimated and reported on the prior year financial statements for annual periods ending in the current year;

b. Risk-sharing receivables as estimated and reported on the financial statements for annual periods ending in the current year and the following year;

c. Risk-sharing receivables invoiced as determined after the annual period;

d. Risk-sharing receivables not yet invoiced; and

e. Amounts collected from providers as payments under risk-sharing contracts.

An example of this disclosure is shown in Exhibit B to this statement.

Effective Date and Transition

26. This statement is effective for years ending on and after December 31, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

27. Prior to January 1, 2003, reporting entities may transition the invoicing provision outlined in paragraph 10 and shall invoice pharmaceutical rebates on no less than a semi-annual basis. Furthermore, prior to January 1, 2003, reporting entities may transition the 90 day admissibility provision outlined in paragraph 10 and shall nonadmit pharmaceutical rebates if such rebates have not been collected within 180 days of the billing date.

28. Prior to January 1, 2003, reporting entities may transition the invoicing provision outlined in paragraph 20 and shall invoice the risk-sharing balance no later than 11 months following the close of the annual period.

12/31/2003	$150	$147			
9/30/2003	130	133	$62		
6/30/2003	142	143	70	$55	
3/30/2003	157	152	65	42	$20
12/31/2002	125	132	70	27	20
9/30/2002	123	129	62	31	14
6/30/2002	112	120	54	20	16
3/31/2002	110	118	57	39	20
12/31/2001	68	75	34	20	10
9/30/2001	60	59	27	17	10
6/30/2001	57	60	31	15	10
3/31/2001	45	50	25	18	7

EXHIBIT B – ILLUSTRATION OF RISK-SHARING RECEIVABLES

(000 omitted)

Calendar Year	Evaluation Period Year Ending	Risk-Sharing Receivable as Estimated and Reported in the Prior Year	Risk-Sharing Receivable as Estimated and Reported in the Current Year	Risk-Sharing Receivable Invoiced	Risk-Sharing Receivable Not Invoiced	Actual Risk-Sharing Amounts Collected in Year Invoiced	Actual Risk-Sharing Amounts Collected First Year Subsequent	Actual Risk-Sharing Amounts Collected Second Year Subsequent	Actual Risk-Sharing Amounts Collected – All Other
2003	2003	$245	$232	$155	$77	$0			
	2004	XXX	$189	XXX	$189	XXX	XXX		
2002	2002	$223	$225	$203	$22	$0	$200		
	2003	XXX	$245	XXX	$245	XXX	XXX	XXX	XXX
2001	2001	$190	$178	$174	$4	$0	$170	$5	
	2002	XXX	$223	XXX	$223	$XXX	XXX	XXX	XXX

If there were only one contract or if all contracts have the same experience period, then there would only be an entry in either the “Invoiced” or “Not Invoiced” column for the current year. This example assumes varying dates on experience periods for multiple contracts. Assumptions: Two risk-sharing contracts are in place, one with an experience period that ends 3/31/03 and one with an experience period that ends 10/31/03.

The $155,000 receivable for the contract period that ends 3/31/03 would be invoiced no later than 11/30/03 (or 8 months following close of the contract period) and could be collected no later than 2/28/04. Therefore, the $155,000 would appear in the “Invoiced” column in 2003 but not shown as collected in 2003. Further, the $189,000 estimate for the experience period that ends 3/31/04 could be recorded on the December 31, 2003 financial statement, since there is more than six months of experience under the contract.

The contract with the experience period that ends 10/31/03 with an estimated $77,000 receivable would be invoiced by 6/30/04 and collected by 09/30/04. Therefore, it would appear in the “Not Invoiced” column and not shown as collected in 2003. However, no estimate could be reported on the December 31, 2003 financial statement for the experience period that ends 10/31/04, because there is less than six months of experience under the contract.

EXHIBIT C – IMPLEMENTATION GUIDE

The purpose of this guide is to assist regulators as well as reporting entities in the practical application of SSAP No. 84.

Pharmaceutical Rebate Receivables

1. Q: What is a reasonable method of determining receivables for estimated amounts?

A: At any one reporting date, a reporting entity's receivable for pharmaceutical rebates can consist of two distinct amounts: 1) an estimated amount, and 2) a billed amount (that can include adjustments to previously billed amounts). The estimated amount represents the reporting entity's best estimate of the rebates it expects to receive for those prescriptions drugs filled during the most recent quarter, i.e. at 12/31/20X1, the estimate would relate to those prescriptions filled during the fourth quarter of 20X1. Estimated rebate amounts for prescription drugs filled in any other quarter must be nonadmitted.

When determining its estimate, the reporting entity should use the most accurate methods possible that utilize historical information relative to pharmaceutical rebates received. The reporting entity should use methods that consider contractual changes in rebate amounts, seasonality differences, changes in membership or premium revenue, changes in utilization of drugs with varying rebate levels, etc.

2. Q: Paragraph 10.b. states, "Billed amounts for an estimated amount under paragraph 10.a. shall be admitted only if the determination of the rebate, based on actual prescriptions filled, occurs and is invoiced or confirmed in writing within the 2 months following the reporting date of the estimated amount." What is meant by the phrase "within 2 months following the reporting date of the estimated amount?" Why does the SSAP make a distinction between those rebates that are invoiced and those that are confirmed in writing?

A: This sentence is worded in this fashion in order to show the relationship between an estimated amount and the related billed amount. At any reporting date, a billed amount will qualify as an admitted asset only if it was invoiced or confirmed in writing within the two months following the most previously filed financial statement, or the financial statement in which the related estimate was reported. E.g., using the example in Q&A 1, the reporting entity could admit billed amounts for rebates attributable to prescriptions drugs filled in *third quarter* of 20X1, only if the rebates were invoiced or confirmed in writing no later than 11/30/20X1. Further, the billed amount must be collected by 2/28/20X2 or it will become a nonadmitted asset.

Secondly, reporting entities typically administer their pharmaceutical benefit programs in one of two fashions, either directly or though a pharmaceutical benefit manager (PBM). The SSAP makes a distinction for these two instances. Entities that contract directly with the pharmaceutical company will invoice the pharmaceutical company for its rebates. However, for those entities that use a PBM, the SSAP requires that to admit billed amounts the reporting entity must receive reports from the PBM on a quarterly basis; the reports should provide fairly detailed information as to the number of each prescription drug filled, the rebate for each individual drug, the total amount of rebates to be received, any rebates to be received that relate to prior periods, etc. The reporting entity must then accept or "confirm" the report, and then communicate formal acceptance of the report to the PBM. Only after this occurs is the amount considered confirmed as required by the SSAP.

3. Q: What is a reasonable method of confirming a report received from our PBM?

A: The reporting entity should perform whatever verification procedures it deems necessary to provide adequate assurance that the report is accurate. These procedures might include, but are not limited to, reviewing the information required from the PBM as discussed in Q&A 2, verification of payments for prescription drug charges, trend testing, etc.

4. Q: Rebates relating to uninsured plans have been included in the gross receivable for pharmaceutical rebates. However, much of the amount was nonadmitted because of the requirement to bill within two months was not met. Is it still necessary to record the payable to the uninsured plan, even though the liability is essentially a pass-through?

A: Yes, the liability must still be recorded, regardless of the fact that the related asset may be nonadmitted.

5. Q: Should the disclosure in Exhibit A include rebates for both insured and uninsured business?

A: Yes, the disclosure to be included in the Notes to Financial Statements for pharmaceutical rebate receivables should include pharmaceutical rebates of insured and uninsured business. However, ultimately the reporting entity must have the ability to separately identify rebates for insured and uninsured business, given the distinct difference in treatment on the Statement of Revenue and Expenses.

6. Q: Please explain the transition period related to the invoicing of pharmaceutical rebate receivables.

A: The transition applies to all reporting periods preceding January 1, 2003, and allows transition for the invoicing and collection provisions found in paragraph 10.b. Throughout the transition period, the reporting entity may invoice (or confirm in writing) its pharmaceutical rebates semi-annually, i.e. the receivable for the estimated or billed amount may include two quarters, depending upon the invoice dates elected. However, reporting entities must still invoice or confirm in writing their rebates within 2 months of the end of each semi-annual period for the billed amount to be admitted.

For example, during the transition period B&P HMO elected to invoice its pharmaceutical rebates with semi-annual periods ending 12/31/2001 and 6/30/2002. B&Ps admitted asset for pharmaceutical rebate receivables for reporting periods ending 12/31/2001 through 3/31/2003 would be comprised of the following:

Transition period:

12/31/2001 Estimated amounts: third and fourth quarters of 2001
Billed amounts: none

3/31/2002 Estimated amounts: first quarter of 2002
Billed amounts: third and fourth quarters of 2001 if billed by 2/28/2002 (note that these billed amounts must be collected by 8/31/2002)

6/30/2002 Estimated amounts: first and second quarters of 2002
Billed amounts: third and fourth quarters of 2001 if billed by 2/28/2002 (note that these billed amounts must be collected by 8/31/2002)

9/30/2002 Estimated amounts: third quarter of 2002
Billed amounts: first and second quarters of 2002 if billed by 8/31/2002 (these billed amounts must be collected by 1/1/2003, the date of full implementation of SSAP No. 84)

12/31/2002 Estimated amounts: third and fourth quarters of 2002
Billed amounts: first and second quarters of 2002 if billed by 8/31/2002 (take note that these billed amounts must be collected by 1/1/2003, the date of full implementation of SSAP No. 84)

Full implementation of SSAP No. 84

3/31/2003 Estimated amounts: first quarter of 2003
Billed amounts: fourth quarter of 2002 if billed by 2/28/2003

Note that this situation will result in no admitted asset allowed for the billed amount related to the third quarter of 2002, given that the requirements of the SSAP are fully effective on 1/1/2003. B&P should consider invoicing its rebates as required by the SSAP prior to the close of the transition period to avoid this situation.

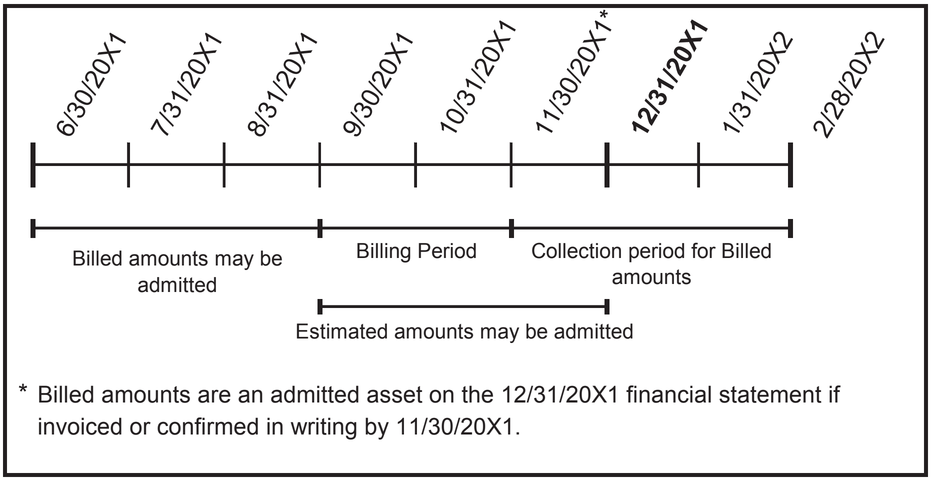
7. Q: How much historical data is required in the pharmaceutical rebates disclosure in 2001 and 2002?

A: Reporting entities should include as much information as possible when completing this disclosure in 2001 and 2002. Be aware that in 2001 and 2002, this disclosure will be included under Note 20, Other Items. In 2003, this disclosure will be a separate note.

8. Q: Should the disclosure include rebates invoiced or confirmed in writing that relate to prior periods?

A: Yes. The disclosure should include all rebates invoiced or confirmed in writing during the respective quarter, whether such rebates relate to the most recently invoiced quarter or any quarter preceding that.

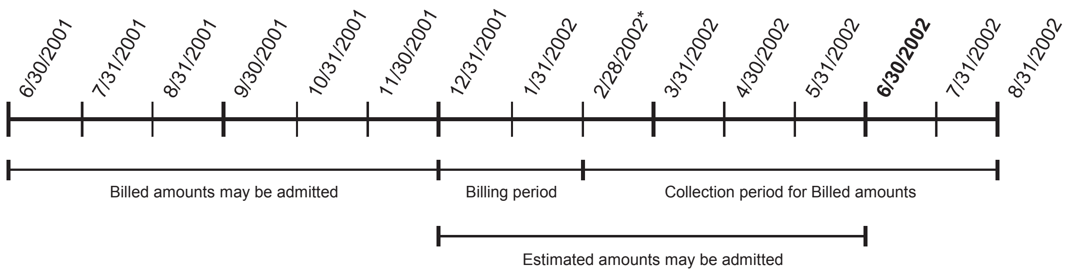
Illustrative timeline of SSAP No. 84 requirements relative to pharmaceutical rebate receivables, assuming a financial statement date of 12/31/20X1:



6/30/20X1
7/31/20X1
8/31/20X1
9/30/20X1
10/31/20X1
11/30/20X1*
12/31/20X1
1/31/20X2
2/28/20X2
Billed amounts may be admitted
Billing Period
Collection period for Billed amounts
Estimated amounts may be admitted

* Billed amounts are an admitted asset on the 12/31/20X1 financial statement if invoiced or confirmed in writing by 11/30/20X1.

Illustrative timeline of SSAP No. 84 transition guidance as related to pharmaceutical rebate receivables, assuming a financial statement date of 6/30/2002 and that the reporting entity has elected to invoice/confirm in writing its rebates at 12/31/2001 and 6/30/2002:



6/30/2001

Billed amounts may be admitted
Billing period
Collection period for Billed amounts
Estimated amounts may be admitted

* Billed amounts for the third and fourth quarters of 2001 can be classified as an admitted asset on the 6/30/2002 financial statement if invoiced or confirmed in writing by 2/28/2002.

Loans and Advances to Providers

9. Q: Why was a distinction made between loans and advances to providers and loans and advances to hospitals?

A: This distinction was made to recognize the unique nature of certain arrangements between reporting entities and hospitals, whereby the participating hospitals are loaned and advanced amounts monthly or quarterly. Such arrangements oftentimes result in lower charges to the reporting entity and work to the benefit of the reporting entity.

10. Q: With regard to the phrase "a loan or advance to a non-related party hospital shall be admitted up to the amount of claims incurred and payable to the hospital," what does this mean? Does this require that the IBNR valuation be performed for each hospital in which funds are loaned or advanced?

A: In a situation in which amounts are loaned/advanced to a hospital, as the hospital provides services and reports such to the reporting entity, the costs of such services are applied against the outstanding loan. Also applied against the loan is the reporting entity's estimate of the amount of services provided but not yet reported, i.e. IBNR. The remaining portion of the loan represents the receivable subject to the requirements of the SSAP.

In determining the amount of claims incurred and payable to a particular hospital, the reporting entity should use the most accurate method available. In most instances an IBNR calculation would be the most accurate method of determining this amount.

11. Q: Please explain the reconciliation requirements in paragraph 16.d. and 16.e. related to loans and advances to hospitals.

A: While loans and advances to hospitals are typically paid monthly, the SSAP requires that such balances be reconciled at least quarterly on a per-hospital basis. The SSAP further requires that each quarter's account be reconciled within nine months of the end of that quarter, i.e. the reconciliation for the quarter ending 3/31/20X1 must be completed by 12/31/20X1.

Therefore, at 12/31/20X1, a reporting entity can have four quarters of loans and advances in its receivable: three quarters worth of unreconciled amounts and one quarter that has been reconciled but not settled.

12. Q: If amounts are loaned or advanced to a hospital but the reconciliation requirements of paragraph 16 are not met, must these amounts be nonadmitted?

A: Not necessarily. In this event, the guidance in paragraph 15 can be followed to determine admissibility, in that the loan or advance may be admitted up to the amount of the payable to the provider for reported claims.

Risk-Sharing Receivables

13. Q: The SSAP allows for the classification of certain estimates of risk-sharing receivables as admitted assets. In what instances may estimates be admitted, and what is a reasonable method of determining receivables for estimated amounts?

A: At any reporting date, a reporting entity's receivable for any one risk-sharing arrangement can consist of two amounts: 1) an estimated amount, and 2) a billed amount (that can include adjustments to previously billed amounts). An estimate can be admitted only if at least six months have passed since the commencement of the annual experience period. The estimated amount represents the reporting entity's best estimate of the receivable related to the contract period from inception to the reporting date.

When determining its estimate, the reporting entity should use the most accurate methods possible that utilize inception-to-date encounter data relative to outpatient surgery encounters, hospital days, etc. If the reporting entity cannot reasonably estimate its risk-sharing receivables, then such amounts must be nonadmitted.

14. Q: The SSAP requires that the determination of the risk share balance begin within six months from the end of the annual experience period, and further requires that the final amount must be invoiced no later than eight months following the close of such period. Must data accumulation stop with month six? Can the reporting entity utilize experience data from months seven and eight in its calculation?

A: The reporting entity should use as much experience data as possible within the 8-month invoicing requirement of paragraph 20.a. This requirement was included to ensure that reporting entities are being proactive when determining risk share balances but was in no way intended to limit the amount of experience data considered.

15. Q: Describe a situation when a receivable and payable would exist with the same provider under a risk-sharing arrangement?

A: This could happen 1) if the risk-share arrangement requires separate risk sharing for each line of business, for certain large groups, etc. or 2) where two contract/evaluation periods under a risk-sharing arrangement are involved.

16. Q: Please explain the transition period related to the invoicing of risk-sharing receivables.

A: The transition applies to all reporting periods preceding January 1, 2003, and allows transition for the invoicing provision found in paragraph 20. Throughout the transition period, the reporting entity may invoice its risk-sharing receivables within 11 months of the end of the contract period, i.e. 11/30/20X2 for a risk-sharing contract with an annual period ending 12/31/20X1. Therefore, during the transition period estimated amounts may be admitted for an additional three-month time period, i.e. from 7/1/20X1 through 11/30/20X2.

17. Q: The disclosure for risk-sharing receivables seems confusing. Please explain what should be included in columns three through six that address estimated and billed/invoiced balances.

A: The third column from the left contains the heading “Risk-Sharing Receivable as Estimated and Reported in the Prior Year.” This column should reflect the amount of risk-sharing receivables as determined in the prior year and reported as admitted assets on the prior year’s financial statement. Therefore, there will never be information reported for the year subsequent to the year in question, as contracts with evaluation periods ending in the following year cannot have risk-sharing receivables recorded in the previous year.

The fourth column, “Risk-Sharing Receivable as Estimated and Reported in the Current Year,” should contain the admitted amounts of risk-sharing receivables on the current year’s financial statement. These amounts should be segregated between those agreements with contract periods ending in the current year and those ending in the following year.

The fifth column from the left contains the heading “Risk-Sharing Receivable Invoiced” and will contain the amount of risk-sharing receivables invoiced during the designated year, regardless of whether such are outstanding as of the financial statement date.

The sixth column, reflecting the heading “Risk-Sharing Receivable Not Invoiced,” should contain the current year-end receivable balance for agreements which qualify for estimation under paragraph 20.b., i.e. the contract has been in effect for at least six months but no amounts have been invoiced. Note that a particular reporting entity might not have any estimated receivables, if that entity’s risk-sharing contracts have not been in effect for at least six months.

Be aware that in 2001 and 2002, this disclosure will be included under Note 20, Other Items. In 2003, this disclosure will be a separate note.

Accounting for Derivative Instruments and Hedging Activities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for derivative instruments and hedging, income generation, and replication (synthetic asset) transactions using selected concepts outlined in *FASB Statement No. 133*, *Accounting for Derivative Instruments and Hedging Activities* (FAS 133).

2. This statement supersedes the provisions of *SSAP No. 31— Derivative Instruments*.

SUMMARY CONCLUSION

3. This statement addresses the recognition of derivatives and measurement of derivatives used in:

a. Hedging transactions;

b. Income generation transactions; and

c. Replication (synthetic asset) transactions

Definitions (for purposes of this statement)

4. “Derivative instrument” means an agreement, option, instrument or a series or combination thereof:

a. To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or

b. That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.

5. Derivative instruments include, but are not limited to; options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures and any other agreements or instruments substantially similar thereto or any series or combination thereof.

a. “Caps” are option contracts in which the cap writer (seller), in return for a premium, agrees to limit, or cap, the cap holder’s (purchaser) risk associated with an increase in a reference rate or index. For example, in an interest rate cap, if rates go above a specified interest rate level (the strike price or the cap rate), the cap holder is entitled to receive cash payments equal to the excess of the market rate over the strike price multiplied by the notional principal amount. Because a cap is an option-based contract, the cap holder has the right but not the obligation to exercise the option. If rates move down, the cap holder has lost only the premium paid. A cap writer has virtually unlimited risk resulting from increases in interest rates above the cap rate;

b. “Collar” means an agreement to receive payments as the buyer of an option, cap or floor and to make payments as the seller of a different option, cap or floor;

c. “Floors” are option contracts in which the floor writer (seller), in return for a premium, agrees to limit the risk associated with a decline in a reference rate or index. For example, in an interest rate floor, if rates fall below an agreed rate, the floor holder (purchaser) will receive cash payments from the floor writer equal to the difference between the market rate and an agreed rate multiplied by the notional principal amount;

d. "Forwards" are agreements (other than futures) between two parties that commit one party to purchase and the other to sell the instrument or commodity underlying the contract at a specified future date. Forward contracts fix the price, quantity, quality, and date of the purchase and sale. Some forward contracts involve the initial payment of cash and may be settled in cash instead of by physical delivery of the underlying instrument;

e. "Futures" are standardized forward contracts traded on organized exchanges. Each exchange specifies the standard terms of futures contracts it sponsors. Futures contracts are available for a wide variety of underlying instruments, including insurance, agricultural commodities, minerals, debt instruments (such as U.S. Treasury bonds and bills), composite stock indices, and foreign currencies;

f. "Options" are contracts that give the option holder (purchaser of the option rights) the right, but not the obligation, to enter into a transaction with the option writer (seller of the option rights) on terms specified in the contract. A call option allows the holder to buy the underlying instrument, while a put option allows the holder to sell the underlying instrument. Options are traded on exchanges and over the counter;

g. "Swaps" are contracts to exchange, for a period of time, the investment performance of one underlying instrument for the investment performance of another underlying instrument, typically, but not always, without exchanging the instruments themselves. Swaps can be viewed as a series of forward contracts that settle in cash and, in some instances, physical delivery. Swaps generally are negotiated over-the-counter directly between the dealer and the end user. Interest rate swaps are the most common form of swap contract. However, foreign currency, commodity, and credit default swaps also are common;

h. "Warrants" are instruments that give the holder the right to purchase an underlying financial instrument at a given price and time or at a series of prices and times outlined in the warrant agreement. Warrants may be issued alone or in connection with the sale of other securities, for example, as part of a merger or recapitalization agreement, or to facilitate divestiture of the securities of another business entity.

6. "Firm commitment" is an agreement with an unrelated party, binding on both parties and expected to be legally enforceable, with the following characteristics:

a. The agreement specifies all significant terms, including the quantity to be exchanged, the fixed price, and the timing of the transaction. The fixed price may be expressed as a specified amount of an entity's functional currency or of a foreign currency. It may also be expressed as a specified interest rate or specified effective yield;

b. The agreement includes a disincentive for nonperformance that is sufficiently large to make performance probable; and

c. For investments in subsidiary, controlled, and affiliated entities (as defined by *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88* (SSAP No. 97)) and investments in limited liability companies (as defined by *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*) it must be probable that acquisition will occur within a reasonable period of time.

7. A hedging transaction is defined as a derivative(s) transaction which is entered into and maintained to reduce:

a. The risk of a change in the fair value or cash flow of assets and liabilities which the reporting entity has acquired or incurred or has a firm commitment to acquire or incur or for which the entity has forecasted acquisition or incurrence; or

b. The currency exchange rate risk or the degree of foreign currency exposure in assets and liabilities which a reporting entity has acquired or incurred or has a firm commitment to acquire or incur or for which the entity has forecasted acquisition or incurrence.

8. "Income generation transaction" is defined as derivatives written or sold to generate additional income or return to the reporting entity. They include covered options, caps, and floors (e.g., a reporting entity writes an equity call option on stock that it already owns).

9. "Replication (Synthetic Asset) transaction" is a derivative transaction entered into in conjunction with other investments in order to reproduce the investment characteristics of otherwise permissible investments. A derivative transaction entered into by an insurer as a hedging or income generation transaction shall not be considered a replication (synthetic asset) transaction.

10. "Forecasted transaction" is a transaction that is expected to occur for which there is no firm commitment. Because no transaction or event has yet occurred and the transaction or event when it occurs will be at the prevailing market price, a forecasted transaction does not give an entity any present rights to future benefits or a present obligation for future sacrifices.

11. An "underlying" is a specified interest rate, security price, commodity price, foreign exchange rate, index of prices or rates, or other variable (including the occurrence or nonoccurrence of a specified event such as a scheduled payment under contract). An underlying may be a price or rate of an asset or liability but is not the asset or liability itself.

12. "Benchmark Interest Rate" is a widely recognized and quoted rate in an active financial market that is broadly indicative of the overall level of interest rates attributable to high-credit-quality obligors in that market. It is a rate that is widely used in a given financial market as an underlying basis for determining the interest rates of individual financial instruments and commonly referenced in interest-rate-related transactions. In theory, the benchmark interest rate should be a risk-free rate (that is, has no risk of default). In some markets, government borrowing rates may serve as a benchmark. In other markets, the benchmark interest rate may be an interbank offered rate. In the United States, currently only the interest rates on direct Treasury obligations of the U.S. government and, for practical reasons, the London Interbank Offered Rate (LIBOR) swap rate and the Fed Funds Effective Swap Rate (also referred to as the Overnight Index Swap Rate) are considered to be benchmark interest rates.

Embedded Derivative Instruments

~~12.~~13. Contracts that do not in their entirety meet the definition of a derivative instrument, such as bonds, insurance policies, and leases, may contain "embedded" derivative instruments—implicit or explicit terms that affect some or all of the cash flows or the value of other exchanges required by the contract in a manner similar to a derivative instrument. The effect of embedding a derivative instrument in another type of contract ("the host contract") is that some or all of the cash flows or other exchanges that otherwise would be required by the contract, whether unconditional or contingent upon the occurrence of a specified event, will be modified based on one or more underlyings. An embedded derivative instrument shall not be separated from the host contract and accounted for separately as a derivative instrument.

Impairment

~~13.~~14. This statement adopts the impairment guidelines established by *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) for the underlying financial assets or liabilities.

Recognition and Measurement of Derivatives Used in Hedging Transactions

~~14.~~15. Derivative instruments represent rights or obligations that meet the definitions of assets (*SSAP No. 4—Assets and Nonadmitted Assets*) or liabilities (SSAP No. 5R) and shall be reported in financial statements. In addition, derivative instruments also meet the definition of financial instruments as defined in *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk* (SSAP No. 27). Should the cost basis of the derivative instrument be undefined (i.e., no premium is paid), the instrument shall be disclosed in accordance with paragraphs 44-47 of *SSAP No. 100—Fair Value Measurements* (SSAP No. 100). Derivative instruments are admitted assets to the extent they conform to the requirements of this statement.

~~15.~~16. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting).

~~16.~~17. Entities shall not bifurcate the effectiveness of derivatives. A derivative instrument is either classified as an effective hedge or an ineffective hedge. Entities must account for the derivative using fair value accounting if it is deemed to be ineffective or becomes ineffective. Entities may redesignate a derivative in a hedging relationship even though the derivative was used in a previous hedging relationship that proved to be ineffective. An entity shall prospectively discontinue hedge accounting for an existing hedge if any one of the following occurs:

a. Any criterion in paragraphs 20-32~~19-31~~ is no longer met;

b. The derivative expires or is sold, terminated, or exercised (the effect is recorded as realized gains or losses or, for effective hedges of firm commitments or forecasted transactions, in a manner that is consistent with the hedged transaction – see paragraph 18~~17~~);

c. The entity removes the designation of the hedge; or

d. The derivative is deemed to be impaired in accordance with paragraph 14~~13~~. A permanent decline in a counterparty's credit quality/rating is one example of impairment required by paragraph 14~~13~~, for derivatives used in hedging transactions.

~~17.~~18. For those derivatives which qualify for hedge accounting, the change in the carrying value or cash flow of the derivative shall be recorded consistently with how the changes in the carrying value or cash flow of the hedged asset, liability, firm commitment or forecasted transaction are recorded. Upon termination of a derivative that qualified for hedge accounting, the gain or loss shall adjust the basis of the hedged item and be recognized in income in a manner that is consistent with the hedged item (alternatively, if the item being hedged is subject to IMR, the gain or loss on the hedging derivative may be realized and shall be subject to IMR upon termination.) Entities who choose the alternative method shall apply it consistently thereafter.

Hedge Designations

~~18.~~19. An entity may designate a derivative instrument as hedging the exposure to:

a. Changes in the fair value of an asset or a liability or an identified portion thereof that is attributable to a particular risk. This type of hedge can be utilized regardless of whether the hedged asset or liability is recorded in the financial statements at fair value;

b. Variability in expected future cash flows that are attributable to a particular risk. That exposure may be associated with an existing recognized asset or liability (such as all or certain future interest payments on variable-rate debt) or a forecasted transaction; or

c. Foreign currency exposure. Specific examples include a fair value or cash flow hedge of a foreign-currency-denominated firm commitment or financial instrument.

Fair Value Hedges

~~19.~~20. Fair value hedges qualify for hedge accounting if all of the following criteria are met:

a. At inception of the hedge, the formal documentation requirements of paragraph 35~~34~~ are met;

b. Both at inception of the hedge and on an ongoing basis, the hedging relationship must be highly effective in achieving offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months. All assessments of effectiveness shall be consistent with the risk management strategy documented for that particular hedging relationship;

c. The term highly effective describes a cash flow hedging relationship where the change in fair value of the derivative hedging instrument is within 80 to 125 percent of the opposite change in the fair value of the hedged item attributable to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique. Further guidance on determining effectiveness can be found within Exhibits A and B;

d. The hedged item is specifically identified as either all or a specific portion of a recognized asset or liability or of an unrecognized firm commitment. The hedged item is a single asset or liability (or a specific portion thereof) or is a portfolio of similar assets or a portfolio of similar liabilities (or a specific portion thereof);

e. If similar assets or similar liabilities are aggregated and hedged as a portfolio, the individual assets or individual liabilities must share the risk exposure for which they are designated as being hedged. The change in fair value attributable to the hedged risk for each individual item in a hedged portfolio must be expected to respond in a generally proportionate manner to the overall change in fair value of the aggregate portfolio attributable to the hedged risk; and

f. If the hedged item is a financial asset or liability, a recognized loan servicing right, or a nonfinancial firm commitment with financial components, the designated risk being hedged is:

i. the risk of changes in the overall fair value of the entire hedged item,

ii. the risk of changes in its fair value attributable to changes in benchmark interest rate,

iii. the risk of changes in its fair value attributable to changes in the related foreign currency exchange rates, or

iv. the risk of changes in its fair value attributable to both changes in the obligor's creditworthiness and changes in the spread over the benchmark interest rate with respect to the related financial asset's or liability's credit sector at inception of the hedge (referred to as credit risk).

If the risk designated as being hedged is not the risk in paragraph ~~19~~20.f.i., two or more of the other risks (benchmark interest rate risk, foreign currency exchange risk, and credit risk) may simultaneously be designated as being hedged.

The benchmark interest rate being hedged in a hedge of interest rate risk must be specifically identified as part of the designation and documentation at the inception of the hedging relationship. ~~Ordinarily, an entity should designate the same benchmark interest rate as the risk being hedged for similar hedges; the use of different benchmark interest rates for similar hedges should be rare and must be justified.~~ In calculating the change in the hedged item's fair value attributable to changes in the benchmark interest rate, the estimated cash flows used in calculating fair value must be based on all of the contractual cash flows of the entire hedged item. Excluding some of the hedged item's contractual cash flows (for example, the portion of the interest coupon in excess of the benchmark interest rate) from the calculation is not permitted.[1] An entity may not simply designate prepayment risk as the risk being hedged for a financial asset. However, it can designate the option component of a prepayable instrument as the hedged item in a fair value hedge of the entity's exposure to changes in the fair value of that "prepayment" option, perhaps thereby achieving the objective of its desire to hedge prepayment risk. The effect of an embedded derivative of the same risk class must be considered in designating a hedge of an individual risk. For example, the effect of an embedded prepayment option must be considered in designating a hedge of benchmark interest rate risk.

Cash Flow Hedges

~~20.~~21. Cash flow hedges qualify for hedge accounting if all of the following criteria are met:

a. At inception of the hedge, the formal documentation requirements of paragraph 35~~34~~ are met;

b. Both at inception of the hedge and on an ongoing basis, the hedging relationship shall be highly effective in achieving offsetting cash flows attributable to the hedged risk during the term of the hedge. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months. All assessments of effectiveness shall be consistent with the originally documented risk management strategy for that particular hedging relationship; and

c. The term highly effective describes a cash flow hedging relationship where the change in cash flows or present value of cash flows of the derivative hedging instrument is within 80 to 125 percent of the opposite change in the cash flows or present value of the cash flows of the hedged item attributable to the hedged risk. It shall also apply when an R-

[1] The first sentence of paragraph ~~19~~20.d. that specifically permits the hedged item to be identified as either all or a specific portion of a recognized asset or liability or of an unrecognized firm commitment is not affected by the provisions in this subparagraph.

squared of .80 or higher is achieved when using a regression analysis technique. Further guidance on determining effectiveness can be found within Exhibits A and B.

Hedging Forecasted Transactions

~~21.~~22. A forecasted transaction is eligible for designation as a hedged transaction in a cash flow hedge if all of the following additional criteria are met:

a. The forecasted transaction is specifically identified as a single transaction or a group of individual transactions. If the hedged transaction is a group of individual transactions, those individual transactions must share the same risk exposure for which they are designated as being hedged. Thus, a forecasted purchase and a forecasted sale cannot both be included in the same group of individual transactions that constitute the hedged transaction.

b. The occurrence of the forecasted transaction is probable. An assessment of the likelihood that a forecasted transaction will take place should not be based solely on management's intent because intent is not verifiable. The transaction's probability should be supported by observable facts and the attendant circumstances. Consideration should be given to the following circumstances in assessing the likelihood that a transaction will occur:

i. The frequency of similar past transactions;

ii. The financial and operational ability of the entity to carry out the transaction;

iii. Substantial commitments of resources to a particular activity (for example, a manufacturing facility that can be used in the short run only to process a particular type of commodity);

iv. The extent of loss or disruption of operations that could result if the transaction does not occur; and

v. The likelihood that transactions with substantially different characteristics might be used to achieve the same business purpose (for example, an entity that intends to raise cash may have several ways of doing so, ranging from a short-term bank loan to a common stock offering).

The term probable requires a significantly greater likelihood of occurrence than the phrase more likely than not. In addition, both the length of time until a forecasted transaction is projected to occur and the quantity of the forecasted transaction are considerations in determining probability. Other factors being equal, the more distant a forecasted transaction is, the less likely it is that the transaction would be considered probable and the stronger the evidence that would be needed to support an assertion that it is probable. For example, a transaction forecasted to occur in five years may be less likely than a transaction forecasted to occur in one year. However, forecasted interest payments for the next 20 years on variable-rate debt typically would be probable if supported by an existing contract. Additionally, other factors being equal, the greater the physical quantity or future value of a forecasted transaction, the less likely it is that the transaction would be considered probable and the stronger the evidence that would be required to support an assertion that it is probable. For example, less evidence generally would be needed to support forecasted investments of $100,000 in a particular month than would be needed to support forecasted investments of $950,000 in that month by an entity, even if its investments have averaged $950,000 per month for the past 3 months.

A forecasted transaction that is expected to occur within 2 months of the original forecasted date (or time frame) may still be considered probable. If the transaction will not occur until greater than 2 months after the original forecasted date, it is no longer probable and will be accounted for as per the following paragraph.

If a forecasted transaction is determined to no longer be probable per the standards above, hedge accounting shall cease immediately and any deferred gains or losses on the derivative must be recognized in unrealized gains or losses. If an entity demonstrates a pattern of determining that hedged forecasted transactions probably will not occur, such action would call into question both the entity's ability to accurately predict forecasted transactions and the propriety of using hedge accounting in the future for similar forecasted transactions. Accordingly, hedge accounting for transactions forecasted by that entity will no longer be permitted.

c. If the hedged transaction is the forecasted purchase or sale of a nonfinancial asset, the designated risk being hedged is (1) the risk of changes in the functional-currency-equivalent cash flows attributable to changes in the related foreign currency exchange rates or (2) the risk of changes in the cash flows relating to all changes in the purchase price or sales price of the asset (reflecting its actual location if a physical asset), not the risk of changes in the cash flows relating to the purchase or sale of a similar asset in a different location or of a major ingredient.

d. If the hedged transaction is the forecasted purchase or sale of a financial asset or liability or the variable cash inflow or outflow of an existing financial asset or liability, the designated risk being hedged is (1) the risk of changes in the cash flows of the entire asset or liability, such as those relating to all changes in the purchase price or sales price (regardless of whether that price and the related cash flows are stated in the entity's functional currency or a foreign currency), (2) the risk of changes in its cash flows attributable to changes in the designated benchmark interest rate, (3) the risk of changes in the functional-currency-equivalent cash flows attributable to changes in the related foreign currency exchange rates, or (4) the risk of changes in its cash flows attributable to default or changes in the obligor's creditworthiness, and changes in the spread over the benchmark interest rate with respect to the hedged item's credit sector at inception of the hedge. Two or more of the above risks may be designated simultaneously as being hedged. The benchmark interest rate being hedged in a hedge of interest rate risk must specifically be identified as part of the designation and documentation at the inception of the hedging relationship. An entity may not designate prepayment risk as the risk being hedged.

Foreign Currency Hedges

~~22.~~23. If the hedged item is denominated in a foreign currency, an entity may designate the following types of hedges of foreign currency exposure, as specified in paragraphs 20-22~~19-21~~:

a. A fair value hedge of an unrecognized firm commitment or a recognized asset or liability;

b. A cash flow hedge of a forecasted transaction, an unrecognized firm commitment, the forecasted functional-currency-equivalent cash flows associated with a recognized asset or liability, or a forecasted intercompany transaction; or

c. A hedge of a net investment in a foreign operation.

~~23.~~24. The recognition in earnings of the foreign currency transaction gain or loss on a foreign-currency-denominated asset or liability based on changes in the foreign currency spot rate is not considered to be the remeasurement of that asset or liability with changes in fair value attributable to foreign exchange risk recognized in earnings. Thus, those criteria are not impediments to either a foreign currency fair value or cash flow hedge of such a foreign-currency-denominated asset or liability or a foreign currency cash flow hedge of the forecasted acquisition or incurrence of a foreign-currency-denominated asset or liability whose carrying amount will be remeasured at spot exchange rates. A foreign currency derivative instrument that has been entered into with another member of a holding company can be a hedging instrument in a fair value hedge or in a cash flow hedge of a recognized foreign-currency-denominated asset or liability or in a net investment hedge only if that other member has entered into an offsetting contract with an unrelated third party to hedge the exposure it acquired from issuing the derivative instrument to the affiliate that initiated the hedge.

~~24.~~25. The provisions in paragraph 24~~23~~ that permit a recognized foreign-currency-denominated asset or liability to be the hedged item in a fair value or cash flow hedge of foreign currency exposure also pertain to a recognized foreign-currency-denominated receivable or payable that results from a hedged forecasted foreign-currency-denominated sale or purchase on credit. An entity may choose to designate a single cash flow hedge that encompasses the variability of functional currency cash flows attributable to foreign exchange risk related to the settlement of a foreign-currency-denominated receivable or payable resulting from a forecasted sale or purchase on credit. Alternatively, an entity may choose to designate a cash flow hedge of the variability of functional currency cash flows attributable to foreign exchange risk related to a forecasted foreign-currency-denominated sale or purchase on credit and then separately designate a foreign currency fair value hedge of the resulting recognized foreign-currency-denominated receivable or payable. In that case, the cash flow hedge would terminate (be dedesignated) when the hedged sale or purchase occurs and the foreign-currency-denominated receivable or payable is recognized. Although the use of the same foreign currency derivative instrument for both the cash flow hedge and the fair value hedge is not prohibited, some ineffectiveness may result.

Foreign Currency Fair Value Hedges

~~25.~~26. *Unrecognized firm commitment*. A derivative instrument or a nonderivative financial instrument that may give rise to a foreign currency transaction gain or loss can be designated as hedging changes in the fair value of an unrecognized firm commitment, or a specific portion thereof, attributable to foreign currency exchange rates. The designated hedging relationship qualifies for hedge accounting if all the fair value hedge criteria in paragraph 20~~19~~ are met.

~~26.~~27. *Recognized asset or liability*. A nonderivative financial instrument shall not be designated as the hedging instrument in a fair value hedge of the foreign currency exposure of a recognized asset or liability. A derivative instrument can be designated as hedging the changes in the fair value of a recognized foreign-currency-denominated asset or liability (or a specific portion thereof) for which a foreign currency transaction gain or loss is recognized in earnings. All recognized foreign-currency-denominated assets or liabilities for which a foreign currency transaction gain or loss is recorded in earnings may qualify for hedge accounting if all the fair value hedge criteria in paragraph 20~~19~~ are met.

~~27.~~28. *Securities carried at fair value*. A nonderivative financial instrument shall not be designated as the hedging instrument in a fair value hedge of the foreign currency exposure of security carried at fair value. A derivative instrument can be designated as hedging the changes in the fair values of an debt security carried at fair value (or a specific portion thereof) attributable to changes in foreign currency exchange rates. The designated hedging relationship qualifies for hedge accounting if all the fair value hedge criteria in paragraph 20~~19~~ are met. An equity security carried at fair value can be hedged for changes in the fair value attributable to changes in foreign currency exchange rates and qualify for hedge accounting if all the fair value hedge criteria in paragraph 20~~19~~ are met and the following two conditions are satisfied.

a. The security is not traded on an exchange (or other established marketplace) on which trades are denominated in the investor's functional currency; and

b. Dividends or other cash flows to holders of the security are all denominated in the same foreign currency as the currency expected to be received upon sale of the security.

~~28.~~29. Gain and losses on a qualifying foreign currency fair value hedge shall be accounted for as specified in paragraphs 16-18~~15-17~~ and Exhibit C. The gain or loss on a nonderivative hedging instrument attributable to foreign currency risk is the foreign currency transaction gain or loss as determined under *SSAP No. 23— Foreign Currency Transactions and Translations* (SSAP No. 23).

Foreign Currency Cash Flow Hedges

~~29.~~30. A nonderivative financial instrument shall not be designated as a hedging instrument in a foreign currency cash flow hedge. A derivative instrument designated as hedging the foreign currency exposure to variability in the functional-currency-equivalent cash flows associated with a forecasted transaction (for example, a forecasted sale to an unaffiliated entity with the price to be denominated in a foreign currency), a recognized asset or liability, an unrecognized firm commitment, or a forecasted intercompany transaction (for example, a forecasted sale to a foreign subsidiary or a forecasted royalty from a foreign subsidiary) qualifies for hedge accounting if all the following criteria are met:

a. The hedged transaction is denominated in a currency other than the hedging unit's functional currency.

b. All of the criteria in paragraph 21~~20~~ are met.

c. If the hedged transaction is a group of individual forecasted foreign-currency-denominated transactions, a forecasted inflow of a foreign currency and a forecasted outflow of the foreign currency cannot both be included in the same group.

d. If the hedged item is a recognized foreign-currency-denominated asset or liability, all the variability in the hedged item's functional-currency-equivalent cash flows must be eliminated by the effect of the hedge. (For example, with a variable-rate foreign-currency-denominated asset or liability a cash flow hedge cannot be used to hedge changes in exchange rates alone because the derivative would not eliminate all the variability in the functional currency cash flows.)

e. If the hedged transaction is the forecasted purchase or sale of a financial asset or liability or the interest payments on that financial asset or liability or the variable cash inflow or outflow of an existing financial asset or liability, the designated risk being hedged is (1) the risk of overall change in the hedged cash flows related to the asset or liability, such as those relating to all changes in the purchase price or sales price (regardless of whether that price and the related cash flows are stated in the entity's functional currency or a foreign currency), (2) the risk of changes in its cash flows attributable to changes in the designated benchmark interest rate (referred to as interest rate risk), (3) the risk of changes in the functional-currency-equivalent cash flows attributable to changes in the related foreign currency exchange rates, or (4) the risk of changes in its cash flows attributable to default, changes in the obligor's creditworthiness, and changes in the spread over the benchmark interest rate with respect to the hedged item's credit sector at inception of the hedge (referred to as credit risk). Two or more of the above risks may be designated simultaneously as being hedged. An entity may not designate prepayment risk as the risk being hedged.

The benchmark interest rate being hedged in a hedge of interest rate risk must be specifically identified as part of the designation and documentation at the inception of the hedging relationship. ~~Ordinarily, an entity should designate the same benchmark interest rate as the risk being hedged for similar hedges, consistent with FAS 133 paragraph 62; the use of different benchmark interest rates for similar hedges should be rare and must be justified.~~ In a cash flow hedge of a variable-rate financial asset or liability, either existing or forecasted, the designated risk being hedged cannot be the risk of changes in its cash flows attributable to changes in the specifically identified benchmark interest rate if the cash flows of the hedged transaction are explicitly based on a different index, for example, based on a specific bank's prime rate, which cannot qualify as the benchmark rate. However, the risk designated as being hedged could potentially be the risk of overall changes in the hedged cash flows related to the asset or liability, provided that the other criteria for a cash flow hedge have been met.

~~30.~~31. A qualifying foreign currency cash flow hedge shall be accounted for in accordance with paragraphs 16-18~~15-17~~ and Exhibit C.

Hedges of the Foreign Currency Exposure of a Net Investment in a Foreign Operation

~~31.~~32. A derivative instrument or a nonderivative financial instrument that may give rise to a foreign currency transaction gain or loss under SSAP No. 23 can be designated as hedging the foreign currency exposure of a net investment in a foreign operation. The gain or loss on a hedging derivative instrument (or the foreign currency transaction gain or loss on the nonderivative instrument) that is designated as, and is effective as, an economic hedge of the net investment in a foreign operation shall be reported in the same manner as a translation adjustment to the extent it is effective as a hedge. The hedged net investment shall be accounted for consistent with SSAP No. 23; the provisions of this statement for recognizing the gain or loss on assets designated as being hedged in a fair value hedge do not apply to the hedge of a net investment in a foreign operation.

Hedge Effectiveness

~~32.~~33. The measurement of hedge effectiveness for a particular hedging relationship shall be consistent with the entity's risk management strategy and the method of assessing hedge effectiveness that was documented at the inception of the hedging relationship, as discussed in paragraph 35~~34~~.

~~33.~~34. The gain or loss on a derivative designated as a hedge and assessed to be effective is reported consistently with the hedged item. If an entity's defined risk management strategy for a particular hedging relationship excludes a specific component of the gain or loss, or related cash flows, on the hedging derivative from the assessment of hedge effectiveness (as discussed in Exhibit B), that excluded component of the gain or loss shall be recognized as an unrealized gain or loss. For example, if the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the changes in the option's time value would be recognized in unrealized gains or losses. Time value is equal to the fair value of the option less its intrinsic value.

Documentation Guidance

~~34.~~35. At inception of the hedge, documentation must include:

a. A formal documentation of the hedging relationship and the entity's risk management objective and strategy for undertaking the hedge, including identification of the hedging instrument, the hedged item, the nature of the risk being hedged, and how the hedging instrument's effectiveness in offsetting the exposure to changes in the hedged item's fair value or variability in cash flows attributable to the hedged risk will be assessed. There must be a reasonable basis for how the entity plans to assess the hedging instrument's effectiveness;

b. An entity's defined risk management strategy for a particular hedging relationship may exclude certain components of a specific hedging derivative's change in fair value, such as time value, from the assessment of hedge effectiveness, as discussed in paragraph 34~~33~~ and Exhibit B;

c. Signature of approval, for each instrument, by person(s) authorized, either by the entity's board of directors or a committee authorized by the board, to approve such transactions; and

d. A description of the reporting entity's methodology used to verify that opening transactions do not exceed limitations promulgated by the state of domicile.

~~35.~~36. For all derivatives terminated, expired, or exercised during the year:

a. Signature of approval, for each instrument, by person(s) authorized, either by the entity's board of directors or a committee authorized by the board, to approve such transactions;

b. A description, for each instrument, of the nature of the transaction, including:

i. The date of the transaction;

ii. A complete and accurate description of the specific derivative, including description of the underlying securities, currencies, rates, indices, commodities, derivatives, or other financial market instruments;

iii. Number of contracts or notional amount;

iv. Date of maturity, expiry or settlement;

v. Strike price, rate or index (termination price for futures contracts);

vi. Counterparty, or exchange on which the transaction was traded; and

vii. Consideration paid or received, if any, on termination.

c. Description of the reporting entity's methodology to verify that derivatives were effective hedges; and

d. Identification of any derivatives that ceased to be effective as hedges.

~~36.~~37. For derivatives open at quarter-end:

a. A description of the methodology used to verify the continued effectiveness of hedges;

b. An identification of any derivatives that have ceased to be effective as hedges;

c. A description of the reporting entity's methodology to determine fair values of derivatives;

d. Copy of Master Agreements, if any, where indicated on Schedule DB Part D.

Recognition and Measurement of Derivatives Used in Income Generation Transactions

General

~~37.~~38. Income generation transactions are defined as derivatives written or sold to generate additional income or return to the reporting entity. They include covered options, caps, and floors (e.g., a reporting entity writes an equity call option on stock that it already owns).

~~38.~~39. Because these transactions require writing derivatives, they expose the reporting entity to potential future liabilities for which the reporting entity receives a premium up front. Because of this risk, dollar limitations and additional constraints are imposed requiring that the transactions be "covered" (i.e., offsetting assets can be used to fulfill potential obligations). To this extent, the combination of the derivative and the covering asset works like a reverse hedge where an asset owned by the reporting entity in essence hedges the derivative risk.

~~39.~~40. As with derivatives in general, these instruments include a wide variety of terms regarding maturities, range of exercise periods and prices, counterparties, underlying instruments, etc.

~~40.~~41. The principal features of income generation transactions are:

a. Premium received is initially recorded as a deferred liability;

b. The accounting of the covering asset or underlying interest controls the accounting of the derivative. The covering asset/underlying interest is accounted at either fair value (e.g., common stocks) or (amortized) cost (e.g., bonds);

c. The gain/loss on termination of the derivative is a capital item. For life insurance companies, it shall be subject to IMR treatment if interest rate related;

d. For options that are exercised, the remaining premium shall adjust the proceeds (cost) associated with the exercise resulting in no explicit gain or loss reported for the derivative itself.

Written Fixed Income Covered Call Options

~~41.~~42. The principal features of written fixed income covered call options are:

a. The general approach is to value at cost (i.e., consideration received) without amortization over the life of the contract if the original duration is less than one year, otherwise carry at amortized cost;

b. An alternative to the general approach combines the accounting of the written option with the covering asset and then uses standard accounting for callable bonds (yield to worst amortization) on the adjusted asset. This method prevents the possibility of future loss recognition upon exercise while at the same time providing recognition of the income feature of the option over time. This approach would appear most relevant for longer-lived covered European call options, which are in substance like callable bonds;

c. For life insurance companies, the gain or loss flows through the IMR if the covering asset or underlying interest is subject to the IMR using callable bond rules to determine the remaining life;

d. Reporting entities are responsible for timely recognition of any probable losses that may occur as a result of the strategy. If the exercise price is below the covering asset's book value, the asset shall be evaluated for write down or disclosure treatment in accordance with SSAP No. 5R. All relevant factors such as whether the option is currently exercisable, the fair value of the bond relative to its exercise price, to what extent the statement value of the option premium offsets any loss on the asset, or how any IMR transaction on exercise would affect unassigned funds (surplus) and income shall be considered.

~~42.~~43. Written fixed income covered call options shall be accounted for as follows:

STATUS OF OPTION	COVERING ASSET VALUED AT AMORTIZED COST	COVERING ASSET VALUED AT FAIR VALUE
Open	Record premium as deferred liability. Carry at amortized value. (Alternatively carry at consideration received if original duration is less than 1 year to maturity.) Alternatively, attach premium to covering asset and amortize (under yield to worse scenario) using standard callable bond accounting.	Record premium as deferred liability. Changes in fair value recorded as unrealized adjustments to unassigned funds (surplus) – gain/loss.
Closed – Expired	Premium received recognized as realized capital gain. Gain from expiration to flow through IMR, if applicable. (1)	Premium received recognized as realized capital gain.
Closed – Exercised	Adjust disposition proceeds. (Include in capital gain/loss of disposed asset.) Gain or loss from disposition to flow through IMR, if applicable. (1)	Adjust disposition proceeds. (Include in capital gain/loss of disposed asset.)
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain or loss from disposition to flow through IMR, if applicable. (1)	Recognize net amount as realized capital gain/loss.

NOTE (1) If premium is attached to covering asset, the accounting treatment for the covering asset applies.

Written Covered Put Options

~~43.~~44. The principal features of written covered put options are:

a. The accounting for the underlying interest instead of the covering asset governs the accounting of the written put while it is open. For example, if a reporting entity wrote a put requiring it to purchase a certain common stock (underlying interest) at a specific price, the reporting entity might cover that option by holding cash or cash equivalents (covering asset). The accounting for the common stock would govern the accounting of the option in this case;

b. As with covered call writing for life insurance companies, gain/loss on termination may be subject to IMR over the remaining life of the underlying interest;

c. As with covered call writing, entities writing put options for income generation purposes are responsible for timely recognition of any probable losses that may occur as a result of the strategy.

~~44.~~45. Written covered put options shall be accounted for as follows:

STATUS OF OPTION	UNDERLYING INTEREST VALUED AT AMORTIZED COST	UNDERLYING INTEREST VALUED AT FAIR VALUE
Open	Record premium as deferred liability. Carry at amortized value. (Alternatively carry at consideration received if original duration is less than 1 year to maturity.)	Record premium as deferred liability. Changes in fair value recorded as unrealized adjustments to unassigned funds (surplus) – gain/loss.
Closed – Expired	Premium received recognized as realized capital gain. Gain from expiration to flow through IMR, if applicable.	Premium received recognized as realized capital gain.
Closed – Exercised	Adjust acquisition cost by premium received.	Adjust acquisition cost by premium received.
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain or loss from disposition to flow through IMR, if applicable.	Recognize net amount as realized capital gain/loss.

Written Fixed Income Caps and Floors

~~45.~~46. The principal features of written fixed income caps and floors are:

a. The value of the premium received shall be amortized into income over the life of the contract. For caps and floors, where the entity is selling off possible excess interest/income, the value of the covering asset is not relevant;

b. Gain/loss may be subject to IMR. The expected maturity would be the derivative contract's maturity.

~~46.~~47. Written fixed income caps and floors shall be accounted for as follows:

STATUS OF OPTION	COVERING ASSET VALUED AT AMORTIZED COST	COVERING ASSET VALUED AT FAIR VALUE
Open	Record premium as deferred liability. Carry at amortized value. (Alternatively carry at consideration received if original duration is less than 1 year to maturity.) Amortize over life of contract to produce constant yield. Record any interest expense as "Other Investment Income" – negative value.	Record premium as deferred liability. Changes in fair value recorded as unrealized adjustments to unassigned funds (surplus) – gain/loss.
Closed – Matured	Would usually mature at zero amortized value. Any remaining unamortized value recognized as ordinary income through a final amortization adjustment.	Premium received recognized as realized capital gain.
Closed – Exercised	Not applicable.	Not applicable.
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain/loss on termination to flow through IMR, if applicable.	Recognize net amount as realized capital gain/loss.

Recognition and Measurement of Derivatives Used in Replication (Synthetic Asset) Transactions

~~47.~~48. Replication (Synthetic Asset) transaction means a derivative transaction entered into in conjunction with other investments in order to reproduce the investment characteristics of otherwise permissible investments. A derivative transaction entered into by an insurer as a hedging or income generation transaction shall not be considered a replication (synthetic asset) transaction.

~~48.~~49. Any premium paid or received shall be carried as an asset or liability on the balance sheet (Derivative line on the Assets (or) Liabilities pages). Premiums paid or received on the replication (synthetic asset) derivative should be amortized into investment income or expense until the exercise, termination or maturity date of the derivative.

~~49.~~50. If the replication (synthetic asset) transaction would be carried at amortized cost and the cash instrument used is carried at amortized cost, then the derivative used should be carried at amortized cost. The derivative may be valued at fair value when both the replication (synthetic asset) and the cash instrument are valued at amortized cost. This is consistent with the alternative valuation methods available for hedges. If the replication (synthetic asset) transaction would be carried at fair value and/or the cash instrument used is carried at fair value, then the derivative used should be carried at fair value.

	(a)	(b)	(c)	(d)
	If the Replication (Synthetic Asset) is Valued at:	And Cash Instrument(s) Used is (are) Valued at:	The Derivative is Valued at:	Alternative Derivative Value Basis:
1.	Amortized Cost	Amortized Cost	Amortized Cost	Fair value
2.	Fair value	Fair value	Fair value	N/A
3.	Amortized Cost	Fair value	Fair value	N/A
4.	Fair value	Amortized Cost	Fair value	N/A

~~50.~~51. In the case of No. 3 in the chart above, the fair values for the cash instrument and derivative, when added together, shall not exceed the replication (synthetic asset) statement value. If this does occur, the excess shall reduce the fair value of the derivative and shall be recorded as an unrealized gain separate from the AVR.

~~51.~~52. If the replication (synthetic asset) transaction involves the exchange of interest related cash flows (default free assets), then the cash flows should be accrued as investment income. If the replication (synthetic asset) transaction involves the exchange of total return or change in index cash flows, then the cash flows should be segregated between interest income and fair value (equity) changes. The interest income portion should be accrued as investment income.

~~52.~~53. If the derivative is carried at fair value, the periodic change in the fair value should be recorded as an unrealized gain or loss adjustment to surplus until the transaction is terminated. If the replication (synthetic asset) transaction involves the exchange of total return or change in index cash flows, then the cash flows should be segregated between interest income and fair value (equity) changes. The fair value (equity) change should be recognized as a deferred asset/liability until the termination of the contract. Gains or losses on the derivative at termination or sale should be recognized as realized.

Disclosure Requirements

~~53.~~54. Reporting entities shall disclose the following for all derivative contracts used:

a. General disclosures:

i. A description of the reporting entity's objectives for using derivatives, i.e., hedging, income generation or replication;

ii. A description of the context needed to understand those objectives and its strategies for achieving those objectives;

iii. The description for hedging objectives shall identify the category, e.g., fair value hedges, cash flow hedges, or foreign currency hedges, and for all objectives, the type of instrument(s) used;

iv. A description of the accounting policies for derivatives including the policies for recognizing (or reasons for not recognizing) and measuring the derivatives used, and when recognized, where those instruments and related gains and losses are reported;

v. The net gain or loss recognized in unrealized gains or losses during the reporting period representing the component of the derivative instruments' gain or loss, if any, excluded from the assessment of hedge effectiveness; and

vi. The net gain or loss recognized in unrealized gains or losses during the reporting period resulting from derivatives that no longer qualify for hedge accounting.

b. Disclosures by type of instrument outstanding, e.g., call options, floors, etc.:

i. Notional or contract amounts;

ii. Carrying and fair values; and

iii. A discussion of the market risk, credit risk, and cash requirements of the derivatives.

c. For derivatives held for other-than-hedging purposes in addition to a and b above:

i. Average fair value of the derivatives during the reporting period together with the related end-of-period fair value distinguishing between assets and liabilities;

ii. Net gains or losses detailed by class, business activity or other category that is consistent with the management of those activities and where the net gains or losses are reported.

d. The financial statements shall disclose details of covered items and/or written transactions to allow evaluation of cash flow implications for all written covered options used for income generation.

e. A seller[2] of credit derivatives[3] shall disclose information[4] about its credit derivatives and hybrid instruments[5] that have embedded credit derivatives to enable users of financial

[2] The term "seller" refers to the party that assumes credit risk, which could be a guarantor in a guarantee-type contract, and any party that provides the credit protection in an option-type contract, a credit default swap, or any other credit derivative contract. A seller is also sometimes referred to as a writer of the contract.

[3] A credit derivative instrument is (1) in which one or more of its underlyings are related to the credit risk of a specified entity (or a group of entities) or an index based on the credit risk of a group of entities and (2) that exposes the seller to potential loss from credit-risk-related events specified in the contract. Examples of credit derivatives within the scope of this paragraph include, but are not limited to, credit default swaps, credit spread options, and credit index products. This also includes a hybrid instrument that has an embedded credit derivative (e.g., a credit-linked note). The disclosures required by this paragraph do not apply to an embedded derivative feature related to the transfer of credit risk that is only in the form of subordination of one financial instrument to another.

[4] One way to present the information for groups of similar credit derivatives would be first to segregate the disclosures by major types of contracts (single-name credit default swaps, traded indexes, other portfolio products and swaptions) and then, for each major type, provide additional subgroups for major types of referenced/underlying asset classes (e.g., corporate debt, sovereign debt, and structured finance).

[5] A hybrid instrument is considered a contract that includes the host contract and an embedded derivative. Unlike FAS 133, statutory accounting guidance in *SSAP No. 86—Accounting for Derivative Instruments and Hedging Activities* (SSAP No. 86) does not permit embedded derivatives to be separated from the host contract and accounted for separately as a derivative instrument. As noted in paragraph ~~53~~54.e., the seller of the hybrid instrument shall disclose the required information for the entire hybrid instrument, not just the embedded credit derivative.

statements to assess their potential effect on its financial position, income and cash flows. The seller of a credit derivative shall disclose the following information for each credit derivative, or each group of credit derivatives, even if the likelihood of the seller's having to make any payments under the credit derivative is remote. With respect to hybrid instruments that have embedded credit derivatives, the seller of the embedded credit derivative shall disclose the required information for the entire hybrid instrument, not just the embedded credit derivative.

i. The nature of the credit derivative, including the approximate term of the credit derivative, the reason(s) for entering into the credit derivative, the events or circumstances that would require the seller to perform under the credit derivative, and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the credit derivative. For example, the current status of the payment/performance risk of a credit derivative could be based on either recently issued external credit ratings or current internal groupings used by the seller to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.

ii. The maximum potential amount of future payments (undiscounted) the seller could be required to make under the credit derivative. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the credit derivative (which are addressed under ~~53~~54.e.iv. below). If the terms of the credit derivative provide for no limitation to the maximum potential future payments under the contract, that fact shall be disclosed. If the seller is unable to develop an estimate of the maximum potential amount of future payments under the credit derivative, the seller shall disclose the reasons why it cannot estimate the maximum potential amount.

iii. The fair value of the credit derivative as of the date of the statement of financial position.

iv. The nature of (1) any recourse provisions that would enable the seller to recover from third parties any of the amounts paid under the credit derivative and (2) any assets held either as collateral or by third parties that, upon the occurrence of any specified triggering event or condition under the credit derivative, the seller can obtain and liquidate to recover all or a portion of the amounts paid under the credit derivative. The seller shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the credit derivative. In its estimate of potential recoveries, the seller of credit protection shall consider the effect of any purchased credit protection with identical underlying(s).

f. A holder of a financial instrument with an embedded credit derivative[6] that exposes the holder to the possibility (however remote) of being required to make future payments (not merely receive reduced cash inflows) because the possibility of those future payments is not caused by subordination (such as the subordination of one beneficial interest to another tranche of a securitization, thereby redistributing credit risk) shall

[6] This disclosure is required even though the embedded credit derivative is not separated under statutory accounting and recognized as a derivative. These requirements are also applicable to hybrid instruments that are beneficial interests in securitized financial assets.

provide the following disclosures for the entire hybrid instrument, not just the embedded credit derivative:

i. The nature of the embedded credit derivative, including the approximate term of the embedded credit derivative, the events or circumstances that would require the holder to perform under the embedded credit derivative, and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the embedded credit derivative.

ii. The maximum potential amount of future payments (undiscounted) the holder could be required to make under the embedded credit derivative. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the embedded credit derivative (which are addressed under paragraph ~~53~~54.f.iv.). If the terms of the embedded credit derivative provide for no limitation to the maximum potential future payments under the contract, that fact shall be disclosed. If the holder is unable to develop an estimate of the maximum potential amount of future payments under the embedded credit derivative, the holder shall disclose the reasons why it cannot estimate the maximum potential amount.

iii. The fair value of the hybrid instrument containing the embedded credit derivative as of the date of the statement of financial position.

iv. The nature of (1) any recourse provisions that would enable the holder to recover from third parties any of the amounts paid under the embedded credit derivative and (2) any assets held either as collateral or by third parties that, upon the occurrence of any specified triggering event or condition under the embedded credit derivative, the holder can obtain and liquidate to recover all or a portion of the amounts paid under the credit derivative. The holder shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the embedded credit derivative. In its estimate of potential recoveries, the holder of credit protection shall consider the effect of any purchased credit protection with identical underlying(s).

g. For derivatives accounted for as cash flow hedges of a forecasted transaction, disclose:

i. The maximum length of time over which the entity is hedging its exposure to the variability in future cash flows for forecasted transactions excluding those forecasted transactions related to the payment of variable interest on existing financial instruments; and

ii. The amount of gains and losses classified in unrealized gains/losses related to cash flow hedges that have been discontinued because it was no longer probable that the original forecasted transactions would occur by the end of the originally specified time period or within 2 months of that date.

h. All derivatives are required to be shown gross on Schedule DB. However, derivatives may be reported net in the financial statements (pages 2 and 3 of the statutory financial statements) in accordance with *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64) when a valid right to offset exists. Derivatives offset in accordance with SSAP No. 64 and reported net in the financial statement shall follow the disclosure requirements in SSAP No. 64, paragraph 6. (Derivative Assets and Derivative

Liabilities reported on the balance sheet shall agree to columns 5 and 6, respectively, after netting, on Schedule DB – Part D – Section 1.)

i. The disclosure requirements of paragraphs ~~53~~54.a., ~~53~~54.b., and ~~53~~54.g. shall be included in the Annual Statement. Refer to the preamble for further discussion regarding interim disclosure requirements. The disclosure requirements of paragraphs ~~53~~54.a. through ~~53~~54.g. shall be included in the annual audited statutory financial reports. Paragraph 59 of the Preamble states that disclosures made within specific schedules or exhibits to the Annual Statement need not be duplicated in a separate note.

~~54.~~55. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

~~55.~~56. This statement adopts the framework established by FAS 133, *FASB Statement No. 137, Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133, An amendment of FASB Statement No. 133* (FAS 137) and *FASB Statement No. 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities, An amendment of FASB Statement No. 133* (FAS 138), for fair value and cash flow hedges, including its technical guidance to the extent such guidance is consistent with the statutory accounting approach to derivatives utilized in this statement. This statement adopts the provisions of FAS 133 and 138 related to foreign currency hedges. With the exception of guidance specific to foreign currency hedges and amendments specific to refining the hedging of interest rate risk (under FAS 138, the risk of changes in the benchmark interest rate would be a hedged risk), this statement rejects FAS No. 137 and 138 as well as the various related Emerging Issues Task Force interpretations. This statement adopts paragraphs 4 and 25 of *FASB Statement No. 149: Amendment of Statement 133 on Derivative Instruments and Hedging Activities* (FAS 149) regarding the definition of an underlying and guidance for assessing hedge effectiveness. All other paragraphs in FAS 149 are rejected as not applicable for statutory accounting. This statement adopts FSP FAS 133-1 and FIN 45-5*: Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No.45 and Clarification of the Effective Date of FASB Statement No. 161 (*FSP FAS 133-1 and FIN 45-4) and requires disclosures by sellers of credit derivatives. This statement rejects *FSP FIN 39-1, Amendments of FASB Interpretation No. 39*, and *ASU 2014-03, Derivatives and Hedging – Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps – Simplified Hedge Accounting Approach*.

~~56.~~57. This statement adopts revisions to ASC 815-20-25-15 as reflected within *ASU 2010-08, Technical Corrections to Various Topics*. This statement adopts revisions to ASC 815-10-50-4K as reflected within *ASU 2010-11, Derivatives and Hedging (Topic 815), Scope Exception Related to Embedded Credit Derivatives*, but rejects all other GAAP revisions from ASU 2010-11. These GAAP revisions are rejected as embedded derivatives are not separated from the host contract and recognized as derivatives under SSAP No. 86. Revisions are also incorporated to SSAP No. 86 to require disclosures on embedded credit derivatives that expose the holder of a financial instrument to the possibility of being required to make future payments. This disclosure is a modification to the GAAP disclosures specific to statutory accounting as embedded credit derivatives are not separately recognized under statutory accounting. It should be noted that the conclusions reached in this statement are not intended to usurp the rules and regulations put forth by states in their respective investment laws. The contents of this statement are intended to provide accounting guidance on the use of derivatives as allowed by an insurer's state of domicile. It is not intended to imply that insurers may use derivatives or cash instruments that the insurer's state of domicile does not allow under the state's insurance regulatory requirements, e.g., in replication transactions.

58. This statement adopts revisions to ASC 815-20 as reflected within *ASU 2013-10, Derivatives and Hedging, Inclusion of the Fed Funds Effective Swap Rate (or Overnight Index Swap Rate) as a*

benchmark interest rate for Hedge Accounting Purposes. These revisions define a benchmark interest rate, clarify what can be used in the U.S. for a benchmark interest rate, and eliminate the prior restriction on using different benchmark rates for similar hedges.

Effective Date and Transition

~~57.~~59. This statement is effective for derivative transaction entered into or modified on or after January 1, 2003. A modification is any revision or change in contractual terms of the derivative. SSAP No. 31 applies to derivative transaction prior to January 1, 2003. Alternatively, an insurer may choose to apply this statement to all derivatives to which the insurer is a party as of January 1, 2003. In either case, the insurer is to disclose the transition approach that is being used. Revisions adopted to paragraph 56~~55~~ to reject FSP FIN 39-1 is effective January 1, 2013, for companies that have previously reported a position in the balance sheet that was net of counterparty agreements. (Companies that have previously reported derivative instruments and/or related collateral gross shall not be impacted by these revisions.)

EXHIBIT A – DISCUSSION OF HEDGING EFFECTIVENESS

The Financial Accounting Standards Board established the Derivatives Implementation Group in 1999 to address execution of FAS 133. The Derivatives Implementation Group addressed two issues related to effectiveness that are applicable to this statement. The issues have been authored by the FASB staff and represents the staff's views, although FASB has discussed the responses at a public meeting and chosen not to object to dissemination of those responses. Official positions of the FASB are determined only after extensive due process and deliberation.

E7: Hedging—General: Methodologies to Assess Effectiveness of Fair Value and Cash Flow Hedges

Paragraph references: 20.b., 22, 28.b., 62, 86, 87

Date cleared by FASB Board: May 17, 2000

QUESTION

1. Since Statement 133 provides an entity with flexibility in choosing the method it will use in assessing hedge effectiveness, must an entity use a dollar-offset approach in assessing effectiveness?

BACKGROUND

2. Paragraph 20.b. of Statement 133 states, in part:

> Both at inception of the [fair value] hedge and on an ongoing basis, the hedging relationship is expected to be highly effective in achieving offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months.

3. Paragraph 28.b. indicates a similar requirement that the hedging relationship be expected to be highly effective in achieving offsetting changes in cash flows attributable to the hedged risk during the period that the hedge is designated.

4. Paragraph 22 of Statement 133 states, in part:

> The measurement of hedge ineffectiveness for a particular hedging relationship shall be consistent with the entity's risk management strategy and the method of assessing hedge effectiveness that was documented at the inception of the hedging relationship, as discussed in paragraph 20.a.

5. Paragraph 62 emphasizes that each entity must "define at the time it designates a hedging relationship the method it will use to assess the hedge's effectiveness in achieving offsetting changes in fair value or offsetting cash flows attributable to the risk being hedged." It also states, "This Statement does not specify a single method for either assessing whether a hedge is expected to be highly effective or measuring hedge ineffectiveness."

RESPONSE

6. No. Statement 133 requires an entity to consider hedge effectiveness in two different ways—in prospective considerations and in retrospective evaluations.

a. Prospective considerations.

Upon designation of a hedging relationship (as well as on an ongoing basis), the entity must be able to justify an expectation that the relationship will be highly effective over future periods in achieving offsetting changes in fair value or cash flows. That expectation, which is forward-looking, can be based upon regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information.

b. Retrospective evaluations.

At least quarterly, the hedging entity must determine whether the hedging relationship has been highly effective in having achieved offsetting changes in fair value or cash flows through the date of the periodic assessment. That assessment can be based upon regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information. If an entity elects at the inception of a hedging relationship to utilize the same regression analysis approach for both prospective considerations and retrospective evaluations of assessing effectiveness, then during the term of that hedging relationship those regression analysis calculations should generally incorporate the same number of data points. Electing to utilize a regression or other statistical analysis approach instead of a dollar-offset approach to perform retrospective evaluations of assessing hedge effectiveness may affect whether an entity can apply hedge accounting for the current assessment period as discussed below.

7. Paragraph 62 requires that at the time an entity designates a hedging relationship, it must define and document the method it will use to assess the hedge's effectiveness. That paragraph also states that ordinarily "an entity should assess effectiveness for similar hedges in a similar manner; use of different methods for similar hedges should be justified." Furthermore, it requires that an entity use that defined and documented methodology consistently throughout the period of the hedge. If an entity elects at the inception of a hedging relationship to utilize a regression analysis approach for prospective considerations of assessing effectiveness and the dollar-offset method to perform retrospective evaluations of assessing effectiveness, then that entity must abide by the results of that methodology as long as that hedging relationship remains designated. Thus, in its retrospective evaluation, an entity might conclude that, under a dollar-offset approach, a designated hedging relationship does not qualify for hedge accounting for the period just ended, but that the hedging relationship may continue and hedge accounting may be applied without interruption because, under a regression analysis approach, there is an expectation that the relationship will be highly effective in achieving offsetting changes in fair value or cash flows in future periods. In its next period's retrospective evaluation, covering the entire period for which the hedge has been designated, if that entity concludes that, under a dollar-offset approach, the hedging relationship has not been highly effective in having achieved offsetting changes in fair value or cash flows, hedge accounting may not be applied.

8. If an entity elects at the inception of a hedging relationship to utilize a regression analysis (or other statistical analysis) approach for either prospective considerations or retrospective evaluations of assessing effectiveness, then that entity must periodically update its regression analysis (or other statistical analysis). For example, if there is significant ineffectiveness measured and recognized in earnings for a hedging relationship, which is calculated each assessment period, the regression analysis should be rerun to determine whether the expectation of high effectiveness is still valid. As long as an entity reruns its regression analysis and determines that the hedging relationship is still expected to be highly effective, then it can continue to apply hedge accounting without interruption.

9. The application of a regression or other statistical analysis approach to assessing effectiveness is complex. Those methodologies require appropriate interpretation and understanding of the statistical inferences.

E8: Hedging–General: Assessing Hedge Effectiveness of Fair Value and Cash Flow Hedges Period-by-Period or Cumulatively under a Dollar-Offset Approach

Paragraph references: 20.b., 28.b., 30, 62, 64, 67

Date cleared by FASB Board: June 28, 2000

QUESTION

1. In periodically assessing retrospectively the effectiveness of a fair value hedge (or a cash flow hedge) in having achieved offsetting changes in fair values (or cash flows), an entity compares the change in the hedging instrument's fair value (or cash flows) to the change in the hedged item's fair value (or hedged transaction's cash flows) attributable to the hedged risk. If an entity elects at inception of a hedging relationship to utilize the dollar-offset approach for retrospective evaluations of assessing effectiveness, then should that entity base that comparison on (a) the fair value (or cash flow) changes that have occurred during the period being assessed (that is, on a period-by-period basis) or (b) the cumulative fair value (or cash flow) changes to date from the inception of the hedge? Is that entity permitted to use either a period-by-period approach or a cumulative approach on individual fair value hedges (or cash flow hedges) under a dollar-offset approach?

BACKGROUND

2. Paragraph 20.b. of Statement 133 states, in part:

> Both at inception of the [fair value] hedge and on an ongoing basis, the hedging relationship is expected to be highly effective in achieving offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months.…All assessments of effectiveness shall be consistent with the risk management strategy documented for that particular hedging relationship.

3. Paragraph 28.b. states, in part:

> Both at inception of the [cash flow] hedge and on an ongoing basis, the hedging relationship is expected to be highly effective in achieving offsetting cash flows attributable to the hedged risk during the term of the hedge, except as indicated in paragraph 28.d. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months.…All assessments of effectiveness shall be consistent with the originally documented risk management strategy for that particular hedging relationship.

4. Paragraph 30.b. specifies how effectiveness (on a derivative designated as a cash flow hedge) should be calculated. The calculation of effectiveness is, in part, based on "cumulative gain or loss on the derivative from inception of the hedge."

5. Paragraph 67 of the Statement states, in part:

> If the hedge initially qualifies for hedge accounting, the entity would continue to assess whether the hedge meets the effectiveness test and also would measure any ineffectiveness during the hedge period. If the hedge fails the effectiveness test at any time (that is, if the entity does not expect the hedge to be highly effective at achieving offsetting changes in fair values or cash flows), the hedge ceases to qualify for hedge accounting.

RESPONSE

6. In periodically (that is, at least quarterly) assessing retrospectively the effectiveness of a fair value hedge (or a cash flow hedge) in having achieved offsetting changes in fair values (or cash flows) under a dollar-offset approach, Statement 133 permits an entity to use either a period-by-period approach or a cumulative approach on individual fair value hedges (or cash flow hedges). The period-by-period approach involves comparing the changes in the hedging instrument's fair values (or cash flows) that have occurred during the period being assessed to the changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged that have occurred during the same period. The cumulative approach involves comparing the cumulative changes (to date from inception of the hedge) in the hedging instrument's fair values (or cash flows) to the cumulative changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged. At inception of the hedge, an entity may choose either approach in designating how effectiveness will be assessed, depending on the nature of the hedge documented in accordance with paragraphs 20.a. and 28.a. For example, an entity may decide that the cumulative approach is generally preferred, yet may wish to use the period-by-period approach in certain circumstances.

7. Paragraph 62 requires that at the time an entity designates a hedging relationship, it must define and document the method it will use to assess the hedge's effectiveness. That paragraph also states that ordinarily "an entity should assess effectiveness for similar hedges in a similar manner; use of different methods for similar hedges should be justified." Furthermore, it requires that an entity use that defined and documented methodology consistently throughout the period of the hedge. If an entity elects at inception of a hedging relationship to base its comparison of changes in fair value (or cash flows) on a cumulative approach, then that entity must abide by the results of that methodology as long as that hedging relationship remains designated. Electing to utilize a period-by-period approach instead of a cumulative approach (or vice versa) to perform retrospective evaluations of assessing hedge effectiveness under the dollar-offset method may affect whether an entity can apply hedge accounting for the current assessment period.

8. If an entity elects to base its comparison of changes in fair value (or cash flows) on a period-by-period approach, the period cannot exceed three months. Fair value (or cash flow) patterns of the hedging instrument or the hedged item (or hedged transaction) in periods prior to the period being assessed are not relevant.

9. The foregoing guidance relates to an entity's periodic retrospective assessment and determining whether a hedging relationship continues to qualify for hedge accounting.

10. The above response has been authored by the FASB staff and represents the staff's views, although the Board has discussed the above response at a public meeting and chosen not to object to dissemination of that response. Official positions of the FASB are determined only after extensive due process and deliberation.

EXHIBIT B – ASSESSMENT OF HEDGING EFFECTIVENESS

The following is based on paragraphs 62-70 of FAS 133 to offer additional guidance on assessing hedging effectiveness. The intent of such is to remain consistent with FAS 133 with respect to assessing hedge effectiveness.

1. This statement requires that an entity define at the time it designates a hedging relationship the method it will use to assess the hedge's effectiveness in achieving offsetting changes in fair value or offsetting cash flows attributable to the risk being hedged. It also requires that an entity use that defined method consistently throughout the hedge period to assess at inception of the hedge and on an ongoing basis whether it expects the hedging relationship to be highly effective in achieving offset. If the entity identifies an improved method and wants to apply that method prospectively, it must discontinue the existing hedging relationship and designate the relationship anew using the improved method. Although this statement suggests a method for assessing whether a hedge is expected to be highly effective or measuring hedge ineffectiveness, the appropriateness of a given method of assessing hedge effectiveness can depend on the nature of the risk being hedged and the type of hedging instrument used. Ordinarily, however, an entity should assess effectiveness for similar hedges in a similar manner; use of different methods for similar hedges should be justified.

2. In defining how hedge effectiveness will be assessed, an entity must specify whether it will include in that assessment all of the gain or loss on a hedging instrument. As discussed in paragraph 33, this statement permits (but does not require) an entity to exclude all or a part of the hedging instrument's time value from the assessment of hedge effectiveness, as follows:

a. If the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the change in the time value of the contract would be excluded from the assessment of hedge effectiveness.

b. If the effectiveness of a hedge with an option contract is assessed based on changes in the option's minimum value, that is, its intrinsic value plus the effect of discounting, the change in the volatility value of the contract would be excluded from the assessment of hedge effectiveness.

c. If the effectiveness of a hedge with a forward or futures contract is assessed based on changes in fair value attributable to changes in spot prices, the change in the fair value of the contract related to the changes in the difference between the spot price and the forward or futures price would be excluded from the assessment of hedge effectiveness.

In each circumstance above, changes in the excluded component would be included in unrealized gains or losses. As noted in paragraph 1 of this Exhibit, the effectiveness of similar hedges generally should be assessed similarly; that includes whether a component of the gain or loss on a derivative is excluded in assessing effectiveness. No other components of a gain or loss on the designated hedging instrument may be excluded from the assessment of hedge effectiveness.

3. In assessing the effectiveness of a cash flow hedge, an entity generally will need to consider the time value of money if significant in the circumstances. Considering the effect of the time value of money is especially important if the hedging instrument involves periodic cash settlements. An example of a situation in which an entity likely would reflect the time value of money is a tailing strategy with futures contracts. When using a tailing strategy, an entity adjusts the size or contract amount of futures contracts used in a hedge so that earnings (or expense) from reinvestment (or funding) of daily settlement

gains (or losses) on the futures do not distort the results of the hedge. To assess offset of expected cash flows when a tailing strategy has been used, an entity could reflect the time value of money, perhaps by comparing the present value of the hedged forecasted cash flow with the results of the hedging instrument.

4. Whether a hedging relationship qualifies as highly effective sometimes will be easy to assess. If the critical terms of the hedging instrument and of the entire hedged asset or liability (as opposed to selected cash flows) or hedged forecasted transaction are the same, the entity could conclude that changes in fair value or cash flows attributable to the risk being hedged are expected to completely offset at inception and on an ongoing basis. For example, an entity may assume that a hedge of a forecasted purchase of a commodity with a forward contract will be highly effective if:

a. The forward contract is for purchase of the same quantity of the same commodity at the same time and location as the hedged forecasted purchase.

b. The fair value of the forward contract at inception is zero.

c. Either the change in the discount or premium on the forward contract is excluded from the assessment of effectiveness and included directly in unrealized gains and losses pursuant to paragraph 22B or the change in expected cash flows on the forecasted transaction is based on the forward price for the commodity.

5. However, assessing hedge effectiveness can be more complex. For example, hedge effectiveness would be reduced by the following circumstances, among others:

a. A difference between the basis of the hedging instrument and the hedged item or hedged transaction (such as a Deutsche mark-based hedging instrument and Dutch guilder-based hedged item), to the extent that those bases do not move in tandem

b. Differences in critical terms of the hedging instrument and hedged item or hedged transaction, such as differences in notional amounts, maturities, quantity, location, or delivery dates.

Hedge effectiveness also would be reduced if part of the change in the fair value of a derivative is attributable to a change in the counterparty's creditworthiness.

6. A hedge that meets the effectiveness test specified in paragraphs 19.b. and 20.b. (that is, both at inception and on an ongoing basis, the entity expects the hedge to be highly effective at achieving offsetting changes in fair values or cash flows) also must meet the other hedge accounting criteria to qualify for hedge accounting. If the hedge initially qualifies for hedge accounting, the entity would continue to assess whether the hedge meets the effectiveness test. If the hedge fails the effectiveness test at any time (that is, if the entity does not expect the hedge to be highly effective at achieving offsetting changes in fair values or cash flows), the hedge ceases to qualify for hedge accounting. The discussions of measuring hedge effectiveness in the examples in the remainder of this Exhibit assume that the hedge satisfied all of the criteria for hedge accounting at inception.

Assuming Effectiveness in a Hedge with an Interest Rate Swap

7. An entity may assume effectiveness in a hedging relationship of interest rate risk involving an interest-bearing asset or liability and an interest rate swap (or a compound hedging instrument composed of an interest rate swap and a mirror-image call or put option as discussed in paragraph 7.d.) if all of the applicable conditions in the following list are met:

Conditions applicable to both fair value hedges and cash flow hedges

a. The notional amount of the swap matches the principal amount of the interest-bearing asset or liability being hedged.

b. If the hedging instrument is solely an interest rate swap, the fair value of that swap at the inception of the hedging relationship is zero. If the hedging instrument is a compound derivative composed of an interest rate swap and mirror-image call or put option as discussed in paragraph 7.d., the premium for the mirror-image call or put option must be paid or received in the same manner as the premium on the call or put option embedded in the hedged item. That is, the reporting entity must determine whether the implicit premium for the purchased call or written put option embedded in the hedged item was principally paid at inception-acquisition (through an original issue discount or premium) or is being paid over the life of the hedged item (through an adjustment of the interest rate). If the implicit premium for the call or put option embedded in the hedged item was principally paid at inception-acquisition, the fair value of the hedging instrument at the inception of the hedging relationship must be equal to the fair value of the mirror-image call or put option. In contract, if the implicit premium for the call or put option embedded in the hedged item is principally being paid over the life of the hedged item, fair value of the hedging instrument at the inception of the hedging relationship must be zero.

c. The formula for computing net settlements under the interest rate swap is the same for each net settlement. (That is, the fixed rate is the same throughout the term, and the variable rate is based on the same index and includes the same constant adjustment or no adjustment.)

d. The interest-bearing asset or liability is not prepayable (that is, able to be settled by either party prior to its scheduled maturity), except as indicated in the following sentences. This criterion does not apply to an interest-bearing asset or liability that is prepayable solely due to a call option provided that the hedging instrument is a compound derivative composed of an interest rate swap and a mirror-image call option. The call option is considered a mirror-image of the call option contained in the hedged item if (1) the terms of the two call options exactly match (see Statement 133 Implementation Issue No. E6: Hedging–General: The Shortcut Method and the Provisions That Permit the Debtor or Creditor to Require Prepayment) and (2) the entity is the writer of one call option and the holder (or purchaser) of the other call option. Similarly, this criterion does not apply to the interest-bearing asset or liability that is prepayable solely due to a put option provided that the hedging instrument is a compound derivative composed of an interest rate swap and a mirror-image put option.

e. Any other terms in the interest-bearing financial instruments or interest rate swaps are typical of those instruments and do not invalidate the assumption of no ineffectiveness.

Conditions applicable to fair value hedges only

f. The expiration date of the swap matches the maturity date of the interest-bearing asset or liability.

g. There is no floor or cap on the variable interest rate of the swap.

h. The interval between repricings of the variable interest rate in the swap is frequent enough to justify an assumption that the variable payment or receipt is at a market rate (generally three to six months or less).

Conditions applicable to cash flow hedges only

i. All interest receipts or payments on the variable-rate asset or liability during the term of the swap are designated as hedged, and no interest payments beyond the term of the swap are designated as hedged.

j. There is no floor or cap on the variable interest rate of the swap unless the variable-rate asset or liability has a floor or cap. In that case, the swap must have a floor or cap on the variable interest rate that is comparable to the floor or cap on the variable-rate asset or liability. (For this purpose, comparable does not necessarily mean equal. For example, if a swap's variable rate is LIBOR and an asset's variable rate is LIBOR plus 2 percent, a 10 percent cap on the swap would be comparable to a 12 percent cap on the asset.)

k. The repricing dates match those of the variable-rate asset or liability.

l. The index on which the variable rate is based matches the index on which the asset or liability’s variable rate is based.

8. The fixed rate on a hedged item need not exactly match the fixed rate on a swap designated as a fair value hedge. Nor does the variable rate on an interest-bearing asset or liability need to be the same as the variable rate on a swap designated as a cash flow hedge. A swap’s fair value comes from its net settlements. The fixed and variable rates on a swap can be changed without affecting the net settlement if both are changed by the same amount. That is, a swap with a payment based on LIBOR and a receipt based on a fixed rate of 5 percent has the same net settlements and fair value as a swap with a payment based on LIBOR plus 1 percent and a receipt based on a fixed rate of 6 percent.

9. Comparable credit risk at inception is not a condition for assuming effectiveness even though actually achieving perfect offset would require that the same discount rate be used to determine the fair value of the swap and of the hedged item or hedged transaction. To justify using the same discount rate, the credit risk related to both parties to the swap as well as to the debtor on the hedged interest-bearing asset (in a fair value hedge) or the variable-rate asset on which the interest payments are hedged (in a cash flow hedge) would have to be the same. However, because that complication is caused by the interaction of interest rate risk and credit risk, which are not easily separable, comparable creditworthiness is not considered a necessary condition to assume effectiveness in a hedge of interest rate risk.

EXHIBIT C – SPECIFIC HEDGE ACCOUNTING PROCEDURES FOR DERIVATIVES

Synopsis: Derivatives may be designated as hedges of changes in the fair value or variability in expected cash flows of assets, liabilities, forecasted transactions or firm commitments due to one or more of the following risks: interest rate, security price, commodity price, foreign exchange rate, index of prices or rates or other variables (excluding risks of identifiable insurable events such as death, disability, accident, illness, damage to property or damage or injury to an insured or third party). Derivatives used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). Under hedge accounting the valuation method used for the derivative shall be consistent with the valuation method used for the hedged item: e.g., amortized cost or fair value. Changes in the carrying value (i.e., amortization or fair value changes) or cash flow of the derivative shall be recognized in the same period and in the same category of income or surplus as the amortization or fair value changes of the hedged item: e.g. net gain from operations, realized capital gains and losses on investments, unrealized capital gains and losses on investments, or unrealized foreign exchange capital gain or loss.

The effects of hedge accounting are reflected in a manner that does not change the reporting of the item being hedged, consistent with the financial statement category that would normally be required under statutory accounting principles. Generally, if the change in the item being hedged is reported as a component of net gain from operations, the change in the derivative shall be reported in its appropriate component of net gain from operations. For example, a change in the aggregate reserve liabilities is reflected in its appropriate annual statement line change in aggregate reserves. A change in the related derivatives that are hedging that item is reflected through other income.

In the case where a portion of the item being hedged is reported as a component of net gain from operations, with the remainder reported as an other change to surplus, then the change in the hedging derivative is bifurcated; a portion is reported as a component of net gain from operations, in the appropriate category and included in the net gain from operations with the remainder reported as an other change to surplus.

For example, in the hedge of a foreign currency denominated asset the change in the value of the asset due to fluctuations in foreign exchange rates is recorded as unrealized capital gains or losses until the asset is sold. A derivative instrument that is in an effective hedging relationship of that item, shall have its change in value associated with fluctuations in foreign currency exchange rates bifurcated and recorded in unrealized capital gains and losses with the remaining change in value recorded consistent with the item being hedged (amortized cost or fair value).

A common purpose of entering into derivatives such as interest rate swaps and forwards as hedges is to change the interest rate characteristics of hedged items. Consistent with this purpose and the hedge accounting concept of matched accounting between the hedging and hedged item, hedged items may be viewed as bearing the changed interest rate characteristics and the cost of the derivatives may therefore be combined with the hedged items. All derivatives shall be reported on Schedule DB. When one or more derivatives hedge more than one asset, liability, forecasted transaction or firm commitment (or a portfolio of hedged items), a company may allocate the total derivative(s) to hedged items individually or in the aggregate. If derivatives are allocated to hedged items, indicate on Schedule DB the nature of the items hedged and the schedule or exhibit where they are presented.

An open derivative hedging a forecasted transaction or firm commitment shall be recorded at cost until the hedged transaction occurs. When the hedged forecasted transaction or firm commitment occurs, an open derivative shall be accounted for in a manner consistent with the hedged item (i.e., amortized cost or fair value).

Upon termination of a derivative that qualified for hedge accounting of an existing asset or liability or a forecasted transaction or firm commitment, the resulting gain or loss shall be recognized in income in a manner that is consistent with the hedged item. If the hedged item is recorded at amortized cost, the gain or loss shall adjust, individually or in the aggregate, the basis of the hedged item subject to amortization. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination. For terminated derivatives, indicate on Schedule DB, Section 2, Parts A and B the nature of the assets or liabilities so adjusted and the schedule or exhibit where they are presented.

Derivative instruments used in hedging transactions that (i) do not meet or no longer meet the criteria of an effective hedge or (ii) meet the required hedge criteria but the entity has chosen not to apply hedge accounting shall be accounted for at fair value and the changes in the fair value shall be recorded in surplus as unrealized gains or unrealized losses (referred to as fair value accounting). Hedge accounting may not be applied upon inception, redesignation or termination of a derivative designated in a hedging relationship if documentation is not maintained in accordance with SSAP No. 86 paragraphs 34-36.

Specific hedge accounting procedures for derivative instruments are outlined below.

1. Call and Put Options, Warrants, Caps, and Floors:

   a. Accounting at Date of Acquisition (purchase) or Issuance (written): The premium paid or received for purchasing or writing a call option, put option, warrant, cap or floor shall either be (i) recorded as an asset (purchase) or liability (written) on the Derivative line on the Assets (or) Liabilities pages or (ii) combined with the hedged item(s) individually or in the aggregate;

   b. Statement Value:

      i. Open derivatives hedging items recorded at amortized cost:

         (a) Options, warrants, caps, and floors purchased or written shall be valued at amortized cost in a manner consistent with the hedged item;

         (b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate hedged items, the estimated effective yield shall be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change). Specific treatment includes:

            (1) Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;

            (2) For hedges of forecasted transactions or firm commitments, the derivative may be recorded at cost until the hedged transaction occurs or it is determined that the hedge was not effective (see (d) in this section 1.b.i.);

            (3) For other derivatives, the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program.

         (c) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;

(d) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until (1) the hedged transaction occurs or (2) it is determined that the hedge was not effective (when the derivative is valued in accordance with (e) in this section);

(e) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or the designated portion of the derivative shall be valued at its current fair value with gains and losses recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.

ii. Open derivatives hedging items recorded at fair value (where gains and losses on the hedged item are recognized as adjustments to unassigned funds (surplus)):

(a) Options, warrants, caps, or floors purchased or written shall be valued at current fair value with changes in fair value recognized currently consistent with the hedged item; this will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus).

(b) For hedges where the cost of the derivative is combined with the hedged item, the fair value of the derivative and hedged item will be determined and reported separately, either individually or in the aggregate. The cost (book value) basis used to figure unrealized gain/loss on the derivative on Schedule DB is zero.

(c) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until the hedged transaction occurs or it is determined that the hedge was not effective (when fair value accounting is applied as described in the Introduction above).

iii. Open derivatives hedging items recorded at fair value, where gains and losses on the hedged item are recognized currently in earnings: options, warrants, caps, or floors purchased or written shall be valued at current fair value with changes in fair value recognized currently in earnings together with the gains and losses on the hedged item.

(a) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until (1) the hedged transaction occurs or (2) it is determined that the hedge was not effective (when fair value accounting is applied as described in (b) of this section).

(b) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, recognition of changes in fair value through earnings ceases. The derivative or the designated portion of the derivative shall continue to be valued at its current fair value, but thereafter gains or losses shall be recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.

c. Cash Flows and Income

i. Where the cost of the derivative is not combined with the hedged item:

(a) Amortization of premium or discount on derivatives is an adjustment to net investment income or another appropriate caption within operating income consistent with the reporting of the hedged item;

(b) Periodic cash flows and accruals of income/expense shall be reported in a manner consistent with the hedged item, such as net investment income or interest and adjustments on policy or deposit-type contract funds (operating income) or net realized capital gains.

ii. Where the cost of the derivative is combined with the hedged item, the cash flows and income of the derivative on Schedule DB will be zero. All related amortization and cash flow accounting shall be reported with the hedged item instead of with the derivative.

d. Gain/Loss on Termination of an option, warrant, cap or floor accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):

i. Exercise of an Option: The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;

ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination;

iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

iv. Upon the redesignation of a derivative from a currently effective hedging relationship-

(a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.

(b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.

(c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii) above.

2. Swaps, Collars, and Forwards (see also discussion in Introduction above):

a. Accounting at Date of Opening Position:

i. Any premium paid or received at date of opening shall either be (a) recorded on the Derivative line on the Assets (or) Liabilities pages or (b) combined with the hedged item(s), individually or in the aggregate;

b. Statement Value:

i. Open derivatives hedging items recorded at amortized cost:

(a) Swaps, collars, and forwards shall be valued at amortized cost in a manner consistent with hedged item;

(b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate hedged items the estimated effective yield shall be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change.) Specific treatment includes:

(1) Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;

(2) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until (a) the hedged transaction occurs or (b) it is determined that the hedge was not effective (see (5) in this section 2.b.i.);

(3) For other derivatives the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program;

(4) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;

(5) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or a designated portion of the derivative shall be valued at its current fair value with gains and losses recorded in unrealized gains or unrealized losses to the extent that it ceased to be an effective hedge. Upon redesignation into an effective hedging relationship, the derivative’s mark to fair value through unrealized gain or loss shall be reversed.

ii. Open derivatives hedging items recorded at fair value (where gains and losses on the hedged item are recognized as adjustments to unassigned funds (surplus)):

(a) Swaps, collars, or forwards shall be valued at current fair value with changes in fair value recognized currently consistent with the hedged item; this will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus);

(b) For hedges where the derivative is combined with the hedged item, the fair value of the derivative and hedge item shall be determined and reported separately, either individually or in the aggregate. The cost (book value) basis used to figure gain/loss on the derivative is zero.

iii. Open foreign currency swap and forward contracts hedging foreign currency exposure on items denominated in a foreign currency and translated into U.S. dollars where fair value accounting is not being used:

(a) The foreign exchange premium (discount) on the currency contract shall be amortized into income over the life of the contract or hedge program. The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened.

Amortization is not required if the contract was entered into within a year of maturity;

(b) A foreign currency translation adjustment shall be reflected as an unrealized gain/loss (unassigned funds (surplus) adjustment) using the same procedures as done to translate the hedged item;

(c) The unrealized gain/loss for the period equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the prior period end spot rate;

(d) The statement value of the derivative equals the amortized (premium) discount plus the cumulative unrealized gain/(loss) on the contract. The cumulative unrealized gain/(loss) equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened;

(e) Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on derivatives hedging forecasted transactions or firm commitments shall be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs;

(f) For hedges where the cost of the foreign currency contract is combined with the hedged item, the statement value on Schedule DB is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;

(g) If during the life of the currency contract it or a designated portion of the currency contract is not effective as a hedge, valuation at amortized cost shall cease. To the extent it ceased to be an effective hedge, a cumulative unrealized gain/loss (surplus adjustment) will be recognized equal to the notional amount or designated notional amount times the difference between the forward rate available for the remaining maturity of the contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.

iv. Open derivatives hedging items recorded at fair value, where gains and losses on the hedged item are recognized currently in earnings: swaps, collars and forwards shall be valued at current fair value with changes in fair value recognized currently in earnings together with the gains and losses on the hedged item.

(a) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, recognition of changes in fair value through earnings ceases. The derivative shall continue to be valued at its current fair value, but thereafter gains or losses shall be recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.

c. Cash Flows and Income:

i. Where the cost of the derivative is not combined with the hedged item:

(a) Amortization of premium paid or received on derivatives is an adjustment to net investment income or another appropriate caption within operating income consistent with the reporting of the hedged item;

(b) Periodic cash flows and accruals of income/expense are to be reported in a manner consistent with the hedged item, usually as net investment income or another appropriate caption within operating income.

ii. Where the cost of the derivative is combined with the hedged item, the cash flows and income of the derivative on Schedule DB is zero. All related amortization and cash flow accounting shall be reported with the hedged item instead of with the derivative.

d. Gain/Loss on Termination of a swap, collar or forward accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):

i. Exercise—The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;

ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination;

iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

iv. Upon the redesignation of a derivative from a currently effective hedging relationship-

(a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.

(b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.

(c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii) above.

3. Futures (see also discussion in Introduction above):

a. Accounting at Date of Acquisition:

i. Positions in futures contracts shall be initially valued at the amount of cash deposits (i.e., basis or book value of the contract), if any, placed with a broker and either be (a) recorded as an asset (paid) or liability (received) on the Derivative line on the Assets (or) Liabilities pages or (b) combined with the hedged item. Subsequent additions (reductions) in cash deposits plus changes in contract value from date of contract opening (i.e., variation margin) paid (received) will increase (decrease) the book value of the futures contract (hedge accounting).

b. Statement Value:

i. Hedges of Items Recorded at Amortized Cost:

(a) Futures shall be valued at book value;

(b) Book value of open futures contracts need not be amortized;

(c) For hedges where the variation margin portion of the cost of the futures contract is combined with the hedged item, the statement value of the futures contract would be equal to cash deposits outstanding, if any. The fair value of the futures contract and the hedged item will be determined and reported separately, either individually or in the aggregate. Fair value on futures contracts is limited to the value of the cash deposits outstanding;

(d) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost (with the variation margin deferred) until (1) the hedged transaction occurs or (2) it is determined that the hedge was not effective (see (e) in this section);

(e) If during the life of the futures contract it or a designated portion of the futures contract is no longer effective as a hedge, hedge accounting for the variation margin ceases. A gain/(loss) equal to the variation margin received (paid) shall be recognized in unrealized gains or unrealized losses (surplus adjustment) to the extent it or a designated portion of the variation margin ceased to be an effective hedge. Statement value will be limited to the cash deposits outstanding, if any, and subsequent changes in the variation margin will be recognized in unrealized gains or unrealized losses (surplus adjustment).

ii. Hedges of Items Recorded at Fair Value (where gains and losses on the hedged item are recognized as adjustments to unassigned funds (surplus)):

(a) Changes in futures contract value from date of contract opening (i.e., variation margin) shall be recognized currently consistent with the hedged item. Statement value will be limited to the cash deposits outstanding, if any;

(b) This will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus);

(c) For hedges where the variation margin of the futures contract is combined with the hedged item, the fair value of the futures contract and the hedged item will be determined and reported separately, either individually or in the aggregate.

iii. Open foreign currency futures contracts hedging foreign currency exposure on item(s) denominated in a foreign currency and translated into U.S. dollars (where fair value accounting is not being used):

(a) The foreign exchange premium (discount) on the currency contract will be amortized into net investment income over the life of the contract or hedge program. The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened.

Amortization is not required if the contract was entered into within a year of maturity;

(b) A foreign currency translation adjustment shall be reflected as an unrealized gain/loss (unassigned funds (surplus) adjustment) using the same procedures as is done to translate the hedged item. The cumulative unrealized gain/(loss) which equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened shall be reported as recognized variation margin;

(c) The statement value of the currency futures contract is book value, including any cash deposits outstanding and increase (decrease) for amortization of foreign exchange (premium) discount plus the foreign exchange translation gain/(loss), which is reported as deferred variation margin;

(d) Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on derivatives hedging forecasted transactions or firm commitments shall be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs;

(e) For hedges where the variation margin of the foreign currency contract is combined with the hedged item, the statement value of the foreign currency contract would equal the cash deposits outstanding, if any. The fair value of the derivative and the hedged item will be determined and reported separately, either individually or in the aggregate. Fair value on futures contracts is limited to the value of the cash deposits outstanding;

(f) If during the life of the currency contract it or a designated portion of the currency contract is not effective as a hedge, valuation at amortized cost ceases. To the extent it ceases to be an effective hedge, an unrealized gain/loss will be recognized equal to the notional amount or a designated portion of the notional amount times the difference between the forward rate available for the remaining maturity of the contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.

iv. Open futures hedging items recorded at fair value, where gains and losses on the hedging item are recognized currently in earnings shall be valued at current fair value with changes in fair value recognized currently in earnings.

(a) If during the life of the futures contract it or a designated portion of the futures contract is no longer effective as a hedge, current recognition in earnings of changes in fair value ceases. Prospective changes in the variation margin shall be recognized in unrealized gains or unrealized losses (surplus adjustment) to the extent it or a designated portion of the variation margin ceased to be an effective hedge. Statement value of the derivative will thereafter be limited to the cash deposits outstanding, if any.

c. Gain/Loss on Termination of a futures contract accounted for under hedge accounting:

i. Settlement at maturity of a futures contract—The remaining variation margin of the futures contract shall become an adjustment to the cost or proceeds of the hedged item(s) received, disposed of or held, individually or in aggregate;

ii. Sale, or other closing transaction of a futures contract which is an effective hedge—Any gain or loss on the transaction will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination;

iii Gain/loss on termination of futures contracts will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

iv. Upon the redesignation of a derivative from a currently effective hedging relationship-

(a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.

(b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.

(c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii) above.

Statement of Statutory Accounting Principles No. 90

Accounting for the Impairment or Disposal of Real Estate Investments

STATUS

Type of Issue:	Common Area
Issued:	June 13, 2005
Effective Date:	January 1, 2006
Affects:	Supersedes paragraphs 11, 12 and 25 of SSAP No. 40R
Affected by:	No other pronouncements
Interpreted by:	No other pronouncements

Accounting for the Impairment or Disposal of Real Estate Investments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the impairment or disposal of real estate investments and the treatment of long-lived assets associated with discontinued operations including nonadmitted intangible assets other than goodwill, such as trade names (referred to collectively as long-lived assets). This statement is not intended to conflict with guidance concerning operating results associated with discontinued operations, which is contained in *SSAP No. 24—Discontinued Operations and Extraordinary Items* (SSAP No. 24).

2. This statement supersedes *SSAP No. 40R—Real Estate Investments* (SSAP No. 40R), paragraphs ~~10~~11, ~~11~~12 and ~~24~~25.

3. This statement does not apply to (a) goodwill, (b) servicing assets, (c) financial instruments, including investments in equity securities accounted for under the cost or equity method, (d) deferred policy acquisition costs, and (e) deferred tax assets. This statement also does not apply to long-lived assets for which the accounting is prescribed by *FASB Codification 985-20 – Costs of Software to be Sold, Leased or Marketed* (ASC 985-20) as adopted with modification to preclude the capitalization of software development costs in *SSAP No. 16R—Electronic Data Processing Equipment and Accounting for Software (SSAP No. 16R)*. For a discussion on software development costs, see the guidance also in *SSAP No. 16R*. Statutory guidance on goodwill is in *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68).

SUMMARY CONCLUSION

Recognition and Measurement of an Impairment Loss

4. An impairment loss shall be recognized only if the carrying amount of a long-lived asset is not recoverable and exceeds its fair value. The carrying amount of a long-lived asset is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset. That assessment shall be based on the carrying amount of the asset at the date it is tested for recoverability, whether in use or under development. An impairment loss shall be measured as the amount by which the carrying amount of a long-lived asset exceeds its fair value as discussed in paragraph 16.

When to Test a Long-Lived Asset for Recoverability

5. A long-lived asset shall be tested for recoverability whenever events or changes in circumstances indicate that its carrying amount may not be recoverable. The following are examples of such events or changes in circumstances:

a. A significant decrease in the fair value of a long-lived asset

b. A significant adverse change in the extent or manner in which a long-lived asset is being used or in its physical condition

c. A significant adverse change in legal factors or in the business climate that could affect the value of a long-lived asset, including an adverse action or assessment by a regulator

d. An accumulation of costs significantly in excess of the amount originally expected for the acquisition or construction of a long-lived asset

e. A current-period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with the use of a long-lived asset

f. A current expectation that, more likely than not, a long-lived asset will be sold or otherwise disposed of significantly before the end of its previously estimated useful life.

6. Real estate investment properties occupied by the company (per SSAP No. 40R) shall not be subject to recoverability testing under paragraphs 4 and 5 of this statement. However, if any of the following conditions are present, the reporting entity's property occupied by the company on a property by property basis shall be subject to immediate recoverability testing, by determining the fair value of the property using the criteria in SSAP No. 40R, paragraph ~~12~~13:

a. The financial condition of the reporting entity is in question as described in paragraph 7 of this statement.

b. The property occupied by the company is held for sale as defined in paragraph 21 of this statement.

c. A significant adverse change in the physical condition of the property occupied by the company has occurred.

d. The management of the reporting entity has voluntarily determined a need for recoverability testing.

7. The following, while not meant to be an all-inclusive listing, are factors, which would indicate that the financial condition of the reporting entity is in question:

a. Entity is subject to regulatory action such as administrative supervision, corrective order based on hazard to policyholders, or substantially similar proceeding, whether voluntary or involuntary;

b. Entity is at any action or control level under Risk Based Capital;

c. Grounds exist for conservation, receivership, rehabilitation or liquidation;

d. Independent certified public accounting report issues a going concern opinion, adverse opinion or disclaimer of opinion.

8. When a long-lived asset is tested for recoverability, it also may be necessary to review depreciation estimates and methods as required by *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). Any revision to the remaining useful life of a long-lived asset resulting from that review also shall be considered in developing estimates of future cash flows used to test the asset for recoverability. However, any change in the accounting method for the asset resulting from that review shall be made only after applying this statement.

New Cost Basis

9. If an impairment loss is recognized, the adjusted carrying amount of a long-lived asset shall be its new cost basis. For a depreciable long-lived asset, the new cost basis shall be depreciated (amortized) over the remaining useful life of that asset. Restoration of a previously recognized impairment loss is prohibited.

Estimates of Future Cash Flows Used to Test a Long-Lived Asset for Recoverability

10. Estimates of future cash flows used to test the recoverability of a long-lived asset shall include only the future cash flows (cash inflows less associated cash outflows) that are directly associated with, and that are expected to arise as a direct result of, the use and eventual disposition of the asset, however properties occupied by company are exempt from this requirement and should follow the guidance in paragraphs 6 and 7 of this statement. Those estimates shall exclude interest charges that will be recognized as an expense when incurred.

11. Estimates of future cash flows used to test the recoverability of a long-lived asset shall incorporate the entity's own assumptions about its use of the asset and shall consider all available evidence. The assumptions used in developing those estimates shall be reasonable in relation to the assumptions used in developing other information used by the entity for comparable periods, such as internal budgets and projections, accruals related to incentive compensation plans, or information communicated to others. However, if alternative courses of action to recover the carrying amount of a long-lived asset are under consideration or if a range is estimated for the amount of possible future cash flows associated with the likely course of action, reporting entities shall use their best estimate in testing the recoverability of a long-lived asset.

12. Estimates of future cash flows used to test the recoverability of a long-lived asset shall be made for the remaining useful life of the asset to the entity.

13. Estimates of future cash flows used to test the recoverability of a long-lived asset that is in use, including a long-lived asset for which development is substantially complete, shall be based on the existing service potential of the asset at the date it is tested. The service potential of a long-lived asset encompasses its remaining useful life, cash-flow-generating capacity, and for tangible assets, physical output capacity. Those estimates shall include cash flows associated with future expenditures necessary to maintain the existing service potential of a long-lived asset, including those that replace the service potential of component parts of a long-lived asset (for example, the roof of a building). Those estimates shall exclude cash flows associated with future capital expenditures that would increase the service potential of a long-lived asset.

14. Estimates of future cash flows used to test the recoverability of a long-lived asset that is under development shall be based on the expected service potential of the asset when development is substantially complete. Those estimates shall include cash flows associated with all future expenditures necessary to develop a long-lived asset, including interest payments that will be capitalized as part of the cost of the asset.

15. If a long-lived asset that is under development is in use, estimates of future cash flows used to test the recoverability of that asset shall include the cash flows associated with future expenditures necessary to maintain the existing service potential of the asset as well as the cash flows associated with all future expenditures necessary to substantially complete the asset that is under development.

Fair Value

16. A discussion of fair value is contained in *SSAP No. 100—Fair Value Measurements*. This statement requires real estate investment properties occupied by the company (per SSAP No. 40R), that are determined to be subject to recoverability testing as discussed in paragraphs 6 and 7, to follow the guidance in SSAP No. 40R, paragraph ~~12~~13.

Long-Lived Assets Categories for Real Estate Investments

17. SSAP No. 40R states that real estate investments shall be reported in the balance sheet categories of properties occupied by the company, properties held for the production of income, and properties held for sale. Accounting guidance in *FASB Statement No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets* (FAS 144) distinguishes between long-lived assets to be held and used and long-lived assets to be disposed of. For statutory accounting purposes, long-lived assets to be held and used encompass real estate investments classified under SSAP No. 40R as properties occupied by the company and properties held for the production of income. Further, FAS 144 bifurcates the category of long-lived assets to be disposed of into long-lived assets to be disposed of other than by sale and long-lived assets to be disposed of by sale. Long-lived real estate investments to be disposed of other than by sale shall be classified either as properties occupied by the company or as properties held for the production of income. Long-lived real estate investments to be disposed of by sale shall be classified as properties held for sale.

Long-Lived Assets to Be Disposed of Other Than By Sale

18. A long-lived asset to be disposed of other than by sale (for example, by abandonment, in an exchange measured based on the recorded amount of the nonmonetary asset relinquished, or in a distribution to owners in a spinoff) shall continue to be classified as held and used until disposal. Paragraphs 4-17, and 31-35 shall apply while the asset is classified as held and used. If a long-lived asset is to be abandoned or distributed to owners in a spinoff together with other assets (and liabilities) as a group and that disposal group is a segment, paragraphs 31-35 shall apply to the disposal group at the date of disposal.

Long-Lived Assets to Be Abandoned

19. For purposes of this statement, a long-lived asset to be abandoned is disposed of when it ceases to be used. If an entity commits to a plan to abandon a long-lived asset before the end of its previously estimated useful life, depreciation estimates shall be revised in accordance with SSAP No. 3 to reflect the use of the asset over its shortened useful life. A long-lived asset that has been temporarily idled shall not be accounted for as if abandoned.

Long-Lived Assets to Be Exchanged or to Be Distributed to Owners in a Spinoff

20. For purposes of this statement, a long-lived asset to be disposed of in an exchange measured based on the recorded amount of the nonmonetary asset relinquished or to be distributed to owners in a spinoff is disposed of when it is exchanged or distributed. If the asset is tested for recoverability while it is classified as held and used, the estimates of future cash flows used in that test shall be based on the use of the asset for its remaining useful life, assuming that the disposal transaction will not occur. In addition to any impairment losses required to be recognized while the asset is classified as held and used, an impairment loss, if any, shall be recognized when the asset is disposed of if the carrying amount of the asset exceeds its fair value[1].

[1] The provisions of this paragraph apply to nonmonetary exchanges that are not recorded at fair value under the provisions of *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions.*

Long-Lived Assets to Be Disposed Of By Sale

Recognition

21. Real estate investment properties classified as held for sale or a long-lived asset to be sold shall be classified as held for sale in the period in which all of the following criteria are met:

a. Management, having the authority to approve the action, commits to a plan to sell the asset.

b. The asset is available for immediate sale in its present condition subject only to terms that are usual and customary for sales of such assets.

c. An active program to locate a buyer and other actions required to complete the plan to sell the asset have been initiated.

d. The sale of the asset is probable, and transfer of the asset is expected to qualify for recognition as a completed sale, within one year, except as permitted by paragraph 22.

e. The asset is being actively marketed for sale at a price that is reasonable in relation to its current fair value.

f. Actions required to complete the plan indicate that it is unlikely that significant changes to the plan will be made or that the plan will be withdrawn.

If at any time the criteria in this paragraph are no longer met (except as permitted by paragraph 22), a long-lived asset classified as held for sale shall be reclassified as held and used in accordance with paragraphs 29 and 30.

22. Events or circumstances beyond an entity's control may extend the period required to complete the sale of a long-lived asset beyond one year. An exception to the one-year requirement in paragraph 21.d. shall apply in the following situations in which such events or circumstances arise:

a. If at the date an entity commits to a plan to sell a long-lived asset the entity reasonably expects that others (not a buyer) will impose conditions on the transfer of the asset that will extend the period required to complete the sale and (1) actions necessary to respond to those conditions cannot be initiated until after a firm purchase commitment is obtained and (2) a firm purchase commitment is probable within one year.

b. If an entity obtains a firm purchase commitment and, as a result, a buyer or others unexpectedly impose conditions on the transfer of a long-lived asset previously classified as held for sale that will extend the period required to complete the sale and (1) actions necessary to respond to the conditions have been or will be initiated in a timely manner and (2) a favorable resolution of the delaying factors is expected.

c. If during the initial one-year period, circumstances arise that previously were considered unlikely and, as a result, a long-lived asset previously classified as held for sale is not sold by the end of that period and (1) during the initial one-year period the entity initiated actions necessary to respond to the change in circumstances, (2) the asset is being actively marketed at a price that is reasonable given the change in circumstances, and (3) the criteria in paragraph 21 are met.

23. A long-lived asset that is newly acquired and that will be sold rather than held and used shall be classified as held for sale at the acquisition date only if the one-year requirement in paragraph 21.d. is met (except as permitted by paragraph 22) and any other criteria in paragraph 21 that are not met at that date are probable of being met within a short period following the acquisition (usually within three months).

24. If the criteria in paragraph 21 are met after the balance sheet date but before issuance of the financial statements, a long-lived asset shall continue to be classified as held and used in those financial statements when issued. The information required by paragraph 37 shall be disclosed in the notes to the financial statements. If the asset is tested for recoverability (on a held-and-used basis) as of the balance sheet date, the estimates of future cash flows used in that test shall consider the likelihood of possible outcomes that existed at the balance sheet date, including the assessment of the likelihood of the future sale of the asset. That assessment made as of the balance sheet date shall not be revised for a decision to sell the asset after the balance sheet date. An impairment loss, if any, to be recognized shall be measured as the amount by which the carrying amount of the asset exceeds its fair value at the balance sheet date.

Measurement

25. Real estate investment properties classified as held for sale or a long-lived asset to be sold shall be measured at the lower of its carrying amount or fair value less encumbrances and estimated costs to sell the property. If the asset is newly acquired, the carrying amount of the asset shall be established based on its fair value less encumbrances and estimated costs to sell the property at the acquisition date. A long-lived asset shall not be depreciated (amortized) while it is classified as held for sale. Interest and other expenses attributable to the liabilities of a disposal classified as held for sale shall continue to be accrued.

26. Costs to sell are the incremental direct costs to transact a sale, that is, the costs that result directly from and are essential to a sale transaction and that would not have been incurred by the entity had the decision to sell not been made. Those costs include broker commissions, legal and title transfer fees, and closing costs that must be incurred before legal title can be transferred.

27. The carrying amounts of any assets that are not covered by this statement that are included in a disposal classified as held for sale shall be adjusted in accordance with other applicable statements of statutory accounting principles prior to measurement.

28. A realized loss shall be recognized in the summary of operations for any initial or subsequent write-down to fair value less cost to sell. A gain shall not be recognized for any subsequent increase in fair value less cost to sell until the asset is sold. The loss shall adjust only the carrying amount of a long-lived asset, whether classified as held for sale individually or as part of a disposal group. A gain or loss not previously recognized that results from the sale of a long-lived asset shall be recognized at the date of sale.

Changes to a Plan of Sale

29. If circumstances arise that previously were considered unlikely and, as a result, an entity decides not to sell a long-lived asset previously classified as held for sale, the asset shall be reclassified as held and used. A long-lived asset that is reclassified shall be measured individually at the lower of its (a) carrying amount before the asset was classified as held for sale, adjusted for any depreciation (amortization) expense that would have been recognized had the asset been continuously classified as held and used, or (b) fair value at the date of the subsequent decision not to sell.

30. Any required adjustment to the carrying amount of a long-lived asset that is reclassified as held and used shall be included in income from continuing operations in the period of the subsequent decision not to sell. That adjustment shall be reported in the same income statement caption used to report a loss, if any, recognized in accordance with paragraph 32.

Reporting Long-Lived Assets and Disposal Groups to Be Disposed Of

Reporting Discontinued Operations

31. For purposes of reporting income and losses related to discontinued operations; any reference to the phrase "component of an entity" is replaced with "segment" as defined in SSAP No. 24.

Reporting Disposal Gains or Losses in Operations

32. Any disposal gain or loss recognized for long-lived assets shall be included as a net realized gain or loss in the summary of operations.

Reporting a Long-Lived Asset or Disposal Group Classified as Held for Sale

33. The results of operations of a segment that either has been disposed of or is classified as held for sale shall be reported consistently with the entity's reporting of continuing operations.

34. A long-lived asset classified as held for sale shall be presented separately in the balance sheet. The assets and liabilities of a disposal classified as held for sale shall be presented separately in the asset and liability sections, respectively, of the balance sheet. Those assets and liabilities shall not be offset and presented as a single amount. The major classes of assets and liabilities classified as held for sale, in the case of real estate shall be separately disclosed either on the face of the balance sheet or in the notes to financial statements (paragraph 37).

Reporting Impairment Losses

35. Any impairment loss recognized on long-lived assets shall be recorded in the summary of operations as a realized loss.

Disclosures

36. The following information shall be disclosed in the notes to the financial statements that include the period in which an impairment loss is recognized:

a. A description of the impaired assets and the facts and circumstances leading to the impairment;

b. The amount of the impairment loss and how fair value was determined; and

c. The caption in the summary of operations which includes the impairment loss.

37. The following information shall be disclosed in the notes to the financial statements that cover the period in which a long-lived asset either has been sold or is classified as held for sale:

a. A description of the facts and circumstances leading to the expected disposal, the expected manner and timing of that disposal.

b. If applicable, the gain or loss recognized and if not separately presented on the face of the summary of operations, the caption in the summary of operations that includes that gain or loss.

38. If paragraph 29 applies, a description of the facts and circumstances leading to the decision to change the plan to sell the asset; and its effect on the results of operations for the period and any prior

periods presented shall be disclosed in the notes to financial statements that include the period of that decision.

Relevant Literature

39. FAS 144 supersedes *FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of* (FAS 121) and in part *Accounting Principles Board Opinion No. 30, Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions*. FAS 144 retains the requirements of FAS 121 to (a) recognize an impairment loss only if the carrying amount of a long-lived asset is not recoverable from its undiscounted cash flows and (b) measure an impairment loss as the difference between the carrying amount and fair value of the asset. FAS 144 requires that a long-lived asset to be abandoned, exchanged for a similar productive asset, or distributed to owners in a spinoff be considered held and used until it is disposed of. FAS 144 also sets forth that the accounting model for long-lived assets to be disposed of by sale is used for all long-lived assets, whether previously held and used or newly acquired. FAS 144 also resolves implementation issues that came about in the application of existing guidance. This statement adopts with modification *FAS 153, Exchanges of Nonmonetary Assets, An Amendment of APB Opinion No. 29* (FAS 153) for the accounting guidance of long-lived assets to be disposed of other than by sale addressed in paragraphs 18-20.

40. This statement adopts FAS 144 with modification to paragraphs 9, 17, 18, 19, 21, 25, 28, 35, 36, 37, 41, 42, 44, 45 and 47. Further, this statement rejects paragraphs 10-14, paragraphs 22-24, 26.d., and 43 of FAS 144. Refer to paragraph 41 of this statement for additional information with regard to these paragraphs.

41. The modifications to FAS 144 were made in order to maintain consistency with current statutory accounting principles and the Statement of Concepts:

a. Paragraph 9 is amended to require that changes in depreciation estimates and methods and amortization periods found as a result of a test for recoverability should be accounted for in accordance with SSAP No. 3;

b. Paragraphs 10-14, which address the grouping of assets, are rejected, as reporting entities should apply the guidance in this statement to each of its assets on an individual basis;

c. Paragraphs 17, 18, 19 and 21 discuss estimates of future cash flows used to test the recoverability of a long-lived asset, and states that a probability-weighted approach may be useful in considering the likelihood of those possible outcomes. For statutory accounting purposes, reporting entities shall use their best estimate in testing the recoverability of a long-lived asset;

d. Paragraphs 22-24, which discuss fair value, are rejected. The definition of fair value is in *SSAP No. 100—Fair Value Measurements*.

e. Paragraph 25 is amended to require that an impairment loss on properties occupied by the company and properties held for the production of income shall be recorded in the summary of operations as a realized loss;

f. Paragraph 28 is amended to require that changes in depreciation estimates shall be accounted for in accordance with SSAP No. 3;

g. If the sale is expected to occur beyond one year, paragraph 35 allows the cost to sell to be discounted. For statutory accounting purposes, the cost to sell shall not be discounted;

h. Paragraph 35 allows for expected future losses associated with the operations of a long-lived asset (disposal group) while it is held for sale to be excluded from the costs to sell. For statutory accounting purposes, the cost to sell should include expected future losses in accordance with SSAP No. 24, paragraph 4.

i. Paragraph 36 is amended to remove the reference to goodwill, as FAS 144 does not include goodwill within its scope unless such goodwill is included in an asset group that is or includes a reporting unit; paragraph 41.o. of this statement does not recognize a reporting unit. Paragraph 36 is further amended to require reporting entities to adjust all assets in accordance with other applicable statements of statutory accounting principles prior to measurement;

j. Paragraph 37 is amended to clarify that losses recognized as a result of adjustments to fair value less cost to sell shall be recorded in the summary of operations as a realized gain/loss. Paragraph 37 is also modified to disallow the recognition of any gain for subsequent increases in fair value less cost to sell until the asset is sold. This is consistent with the concept of conservatism found in the Statement of Concepts;

k. Within paragraphs 41, 42 and 44 of FAS 144 addressing discontinued operations; any reference to the phrase “component of an entity” is replaced with “segment” as defined in SSAP No. 24;

l. Paragraph 42 is amended to state that the results of operations of a discontinued operation shall be reported consistently with the entity’s reporting of continuing operations. This is consistent with the guidance found in paragraph 5 of SSAP No. 24;

m. Paragraph 44 is amended to state that adjustments to amounts previously reported related to continuing operations shall be reported consistently with the entity’s reporting of continuing operations. This is consistent with the guidance found in paragraph 5 of SSAP No. 24. In addition, paragraphs 44.a. through 44.c. are adopted into paragraph 5 of SSAP No. 24;

n. Paragraph 45 is amended to state that a gain or loss on an asset classified as held for sale that has been disposed of shall be included in the summary of operations as a realized gain or loss;

o. The disclosures in paragraphs 47.a. and 47.b. are adopted with respect to properties held for sale, except for the disclosures related to major classes of assets, as grouping has been rejected in this statement. Paragraphs 47.c. and 47.d. are rejected as such paragraphs relate to discontinued operations and segment reporting. The disclosures included in paragraphs 6 and 7 of SSAP No. 24 are more appropriate given the differences between statutory and generally accepted accounting principles reporting of discontinued operations;

p. Paragraph 26.d. requires the disclosure of the segment in which an impaired asset is reported. This paragraph is rejected, as statutory accounting requires accounting and reporting at the legal entity level. Further, any additional references to segments, reporting units, or disposal groups found in FAS 144 are also rejected, except with regard to a segment within the context of discontinued operations; and

q. Paragraph 43 is rejected and the guidance related to the recognition of losses/income expected between the measurement date and the expected disposal date included in paragraph 4 of SSAP No. 24 is retained, as such guidance is consistent with the concept of conservatism in the Statement of Concepts.

42. *FASB Statement No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets* (FAS 144) supersedes FAS 121, but specifically scopes out the concept of goodwill. Paragraphs 12-14 of FAS 121 address the impairment of goodwill and paragraphs 12, 14.a. and 14.b. of FAS 121 were adopted in SSAP No. 68. However, paragraph 12 of FAS 121 was superseded by *FASB Statement No. 142, Goodwill and Other Intangible Assets* (FAS 142), which was rejected in SSAP No. 68. Given the applicability of the guidance found in paragraph 12 of FAS 121 to statutory accounting principles, the impairment guidance found in FAS 121, paragraph 12 is retained. Paragraph 12 of FAS 121 has been excerpted in *Issue Paper No. 68—Business Combinations and Goodwill*, paragraph 31.

Effective Date and Transition

43. The provisions of this statement shall be applied to all assets on the books of the reporting entity within the scope of this statement for reporting periods beginning on and after January 1, 2006. The guidance within paragraphs 18-20 was originally amended with the adoption of SSAP No. 95, included in that statement, and effective for fiscal periods beginning after January 1, 2007. The original guidance included in this SSAP with tracked changes showing the amendments from SSAP No. 95 are retained for historical purposes within Issue Paper No. 127.

Accounting for Postretirement Benefits Other Than Pensions, A Replacement of SSAP No. 14

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles and related reporting for employers' postretirement plans other than pensions.

2. This statement applies to all postretirement benefits expected to be provided by an employer to current and former employees (including retirees, disabled employees, and other former employees who are expected to receive postretirement benefits), their beneficiaries, and covered dependents, pursuant to the terms of an employer's undertaking to provide those benefits. Other postretirement benefits include, but are not limited to, postretirement health care; life insurance provided outside a pension plan to retirees; and other welfare benefits such as tuition assistance, day care, legal services, and housing subsidies provided after retirement. Often those benefits are in the form of a reimbursement to plan participants or direct payment to providers for the cost of specified services as the need for those services arises, but they may also include benefits payable as a lump sum, such as death benefits. Much of the guidance in this statement focuses on postretirement health care plans. Nevertheless, this statement applies equally to all postretirement benefits other than pensions. A postretirement benefit plan may be part of a larger plan or arrangement that provides benefits currently to active employees as well as to retirees. In those circumstances, the promise to provide benefits to present and future retirees under the plan shall be segregated from the promise to provide benefits currently to active employees and shall be accounted for in accordance with the provisions of this statement. Absent evidence to the contrary, it shall be presumed that an employer that has provided postretirement benefits in the past or is currently promising those benefits to employees will continue to provide those future benefits. This statement supersedes the guidance in *SSAP No. 14—Postretirement Plans Other Than Pensions* (SSAP No. 14), nullifies and incorporates the guidance in *INT 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26) and nullifies *INT 01-16: Measurement Date for SSAP No. 8 Actuarial Valuations* (INT 01-16).

SUMMARY CONCLUSION

Single-Employer Defined Benefit Postretirement Plans

3. A defined benefit postretirement plan is one that defines the postretirement benefits in terms of (a) monetary amounts) or (b) benefit coverage to be provided. In some cases, an employer may limit its obligation through an individual or an aggregate "cap" on the employer's cost or benefit obligation. Plans of that nature are considered to be defined benefit postretirement plans. (Hybrid postretirement plans or ”cash-balance” plans are considered defined benefit plans for purposes of applying this statement.) For defined benefit plans, reporting entities shall adopt *FAS 158: Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132 (R)* (FAS 158) and *FASB Staff Position FAS 136(R)-1, Employers' Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 136(R)-1) with modifications as discussed in paragraph ~~99~~100.

4. A postretirement benefit is part of the compensation paid to an employee for services rendered. In a defined benefit plan, the employer promises to provide, in addition to current wages and benefits, future benefits during retirement. Generally, the amount of those benefits depends on the benefit formula (which may include factors such as the number of years of service rendered or the employee's compensation before retirement or termination), the longevity of the retiree and any beneficiaries and covered dependents, and the incidence of events requiring benefit payments (for example, illnesses affecting the amount of health care required). In most cases, services are rendered over a number of years before an employee retires and begins to receive benefits or is entitled to receive benefits as a need arises. Even though the services rendered by the employee are complete and the employee has retired, the total amount of benefits the employer has promised and the cost to the employer of the services rendered are not precisely determinable but can be estimated using the plan's benefit formula and estimates of the effects of relevant future events.

Elements of Accounting for Postretirement Benefits

5. Any method of accounting that recognizes the cost of postretirement benefits over employee service periods (before the payment of benefits to retirees) must deal with two factors that stem from the nature of the arrangement. First, estimates or assumptions must be made about the future events that will determine the amount and timing of the benefit payments. Second, an attribution approach that assigns benefits and the cost of those benefits to individual years of service must be selected.

6. The expected postretirement benefit obligation for an employee is the actuarial present value as of a particular date of the postretirement benefits expected to be paid by the employer's plan to or for the employee, the employee's beneficiaries, and any covered dependents pursuant to the terms of the plan. Measurement of the expected postretirement benefit obligation is based on the expected amount and timing of future benefits, taking into consideration the expected future cost of providing the benefits and the extent to which those costs are shared by the employer, the employee (including consideration of contributions required during the employee's active service period and following retirement, deductibles, coinsurance provisions, and so forth), or others (such as through governmental programs).

7. The accumulated postretirement benefit obligation as of a particular date is the actuarial present value of all future benefits attributed to an employee's service rendered to that date pursuant to paragraphs 30-31 and 42-45, assuming the plan continues in effect and that all assumptions about future events are fulfilled. Prior to the date on which an employee attains full eligibility for the benefits that employee is expected to earn under the terms of the postretirement benefit plan (the full eligibility date), the accumulated postretirement benefit obligation for an employee is a portion of the expected postretirement benefit obligation. On and after the full eligibility date, the accumulated postretirement benefit obligation and the expected postretirement benefit obligation for an employee are the same. Determination of the full eligibility date is affected by plan terms that provide incremental benefits expected to be received by or on behalf of an employee for additional years of service, unless those incremental benefits are trivial. Determination of the full eligibility date is not affected by plan terms that define when benefit payments commence or by an employee's current dependency status.

8. Net periodic postretirement benefit cost comprises several components that reflect different aspects of the employer's financial arrangements. The service cost component of net periodic postretirement benefit cost is the actuarial present value of benefits attributed to services rendered by employees during the period (the portion of the expected postretirement benefit obligation attributed to service in the period). The service cost component is the same for an unfunded plan, a plan with minimal funding, and a well-funded plan. The other components of net periodic postretirement benefit cost are interest cost (interest on the accumulated postretirement benefit obligation, which is a discounted amount), actual return on plan assets[1], amortization of any prior service cost or credit included in unassigned funds (surplus), amortization of the transition obligation or transition asset, and the gain or loss component which includes, to the extent recognized, amortization of the net gain or loss included in unassigned funds (surplus) (refer to paragraph 49).

[1] To address a question on how the expected return on plan assets affects the determination of net periodic benefit cost if the actual return on plan assets for a period is a component of net periodic benefit cost, it is noted that the expected return on plan assets generally will be different from the actual return on plan assets for the year. This statement provides for recognition of that difference (a net gain or loss) in unassigned funds in the period it arises. The amount recognized in unassigned funds is also a component of net periodic benefit cost for the current period. Thus, the amount recognized in unassigned funds and the actual return on plan assets, when aggregated, equal the expected return on plan assets. The amount recognized in unassigned funds affects future net periodic benefit cost through subsequent amortization, if any, of the net gain or loss. (This footnote reflects guidance included in E12 of FSP FAS 158-1.)

Measurement of Cost and Obligations

Accounting for the Substantive Plan

9. An objective of this statement is that the accounting reflects the terms of the exchange transaction that takes place between an employer that provides postretirement benefits and the employees who render services in exchange for those benefits, as those terms are understood by both parties to the transaction. Generally, the extant written plan provides the best evidence of the terms of that exchange transaction. However, in some situations, an employer's cost-sharing policy, as evidenced by past practice or by communication of intended changes to a plan's cost-sharing provisions, or a past practice of regular increases in certain monetary benefits may indicate that the substantive plan—the plan as understood by the parties to the exchange transaction—differs from the extant written plan. The substantive plan shall be the basis for the accounting.

10. Except as provided in paragraph 11, an employer's cost-sharing policy, as evidenced by the following past practice or communication, shall constitute the cost-sharing provisions of the substantive plan if either of the following conditions exist. Otherwise, the extant written plan shall be considered to be the substantive plan.

a. The employer has a past practice of (1) maintaining a consistent level of cost sharing between the employer and its retirees through changes in deductibles, coinsurance provisions, retiree contributions, or some combination of those changes or (2) consistently increasing or reducing the employer's share of the cost of the covered benefits through changes in retired or active plan participants' contributions toward their retiree health care benefits, deductibles, coinsurance provisions, out-of-pocket limitations, and so forth, in accordance with the employer's established cost-sharing policy.

b. The employer has the ability, and has communicated to affected plan participants its intent, to institute different cost-sharing provisions at a specified time or when certain conditions exist (for example, when health care cost increases exceed a certain level).

11. An employer's past practice of maintaining a consistent level of cost sharing with its retirees or consistently increasing or reducing its share of the cost of providing the covered benefits shall not constitute provisions of the substantive plan if accompanied by identifiable offsetting changes in other benefits or compensation or if the employer incurred significant costs, such as work stoppages, to effect that cost-sharing policy. Similarly, an employer's communication of its intent to institute cost-sharing provisions that differ from the extant written plan or the past cost-sharing practice shall not constitute provisions of the substantive plan (a) if the plan participants would be unwilling to accept the change without adverse consequences to the employer's operations or (b) if other modifications of the plan, such as the level of benefit coverage, or providing offsetting changes in other benefits, such as pension benefits, would be required to gain plan participants' acceptance of the change to the cost-sharing arrangement.

12. A past practice of regular increases in postretirement benefits defined in terms of monetary amounts may indicate that the employer has a present commitment to make future improvements to the plan and that the plan will provide monetary benefits attributable to prior service that are greater than the monetary benefits defined by the extant written plan. In those situations, the substantive commitment to increase those benefits shall be the basis for the accounting. Changes in the benefits, other than benefits defined in terms of monetary amounts, covered by a postretirement health care plan or by other postretirement benefit plans shall not be anticipated.

13. Contributions expected to be received from active employees toward the cost of their postretirement benefits and from retired plan participants are treated similarly for purposes of measuring

an employer's expected postretirement benefit obligation. That obligation is measured as the actuarial present value of the benefits expected to be provided under the plan, reduced by the actuarial present value of contributions expected to be received from the plan participants during their remaining active service and postretirement periods. In determining the amount of the contributions expected to be received from those participants toward the cost of their postretirement benefits, consideration is given to any related substantive plan provisions, such as an employer's past practice of consistently increasing or reducing the contribution rates as described in paragraphs 10-11. An obligation to return contributions received from employees who do not attain eligibility for postretirement benefits and, if applicable, any interest accrued on those contributions shall be recognized as a component of an employer's postretirement benefit obligation.

14. Automatic benefit changes specified by the plan that are expected to occur shall be included in measurements of the expected and accumulated postretirement benefit obligations and the service cost component of net periodic postretirement benefit cost. Also, plan amendments shall be included in the computation of the expected and accumulated postretirement benefit obligations once they have been contractually agreed to, even if some provisions take effect only in future periods. For example, if a plan amendment grants a different benefit level for employees retiring after a future date, that increased or reduced benefit level shall be included in current-period measurements for employees expected to retire after that date.

15. Measuring the net periodic postretirement benefit cost and accumulated postretirement benefit obligation based on best estimates is superior to implying, by a failure to accrue, that no cost or obligation exists prior to the payment of benefits. This statement requires the use of explicit assumptions, each of which individually represents the best estimate of a particular future event, to measure the expected postretirement benefit obligation. A portion of that expected postretirement benefit obligation is attributed to each period of an employee's service associated with earning the postretirement benefits, and that amount is accrued as service cost for that period.

16. The service cost component of postretirement benefit cost, any prior service cost, and the accumulated postretirement benefit obligation are measured using actuarial assumptions and present value techniques to calculate the actuarial present value of the expected future benefits attributed to periods of employee service. Each assumption used shall reflect the best estimate solely with respect to that individual assumption. All assumptions shall presume that the plan will continue in effect in the absence of evidence that it will not continue. Principal actuarial assumptions include the time value of money (discount rates); participation rates (for contributory plans); retirement age; factors affecting the amount and timing of future benefit payments, which for postretirement health care benefits consider past and present per capita claims cost by age, health care cost trend rates, Medicare reimbursement rates, and so forth; salary progression (for pay-related plans); and the probability of payment (turnover, dependency status, mortality, and so forth).

17. Assumed discount rates shall reflect the time value of money as of the measurement date in determining the present value of future cash outflows currently expected to be required to satisfy the postretirement benefit obligation. In making that assumption, employers shall look to rates of return on high-quality fixed-income investments currently available whose cash flows match the timing and amount of expected benefit payments. If settlement of the obligation with third-party insurers is possible (for example, the purchase of nonparticipating life insurance contracts to provide death benefits), the interest rates inherent in the amount at which the postretirement benefit obligation could be settled are relevant in determining the assumed discount rates. Assumed discount rates are used in measurements of the expected and accumulated postretirement benefit obligations and the service cost and interest cost components of net periodic postretirement benefit cost.

18. Pursuant to paragraph 17, an employer shall look to rates of return on high-quality fixed-income investments in determining assumed discount rates. The objective of selecting assumed discount rates

using that method is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the postretirement benefits when due. Notionally, that single amount, the accumulated postretirement benefit obligation, would equal the current fair value of a portfolio of high-quality zero coupon bonds whose maturity dates and amounts would be the same as the timing and amount of the expected future benefit payments. Because cash inflows would equal cash outflows in timing and amount, there would be no reinvestment risk in the yields to maturity of the portfolio. However, in other than a zero coupon portfolio, such as a portfolio of long-term debt instruments that pay semiannual interest payments or whose maturities do not extend far enough into the future to meet expected benefit payments, the assumed discount rates (the yield to maturity) need to incorporate expected reinvestment rates available in the future. Those rates shall be extrapolated from the existing yield curve at the measurement date. The determination of the assumed discount rate is separate from the determination of the expected rate of return on plan assets whenever the actual portfolio differs from the hypothetical portfolio described above. Assumed discount rates shall be reevaluated at each measurement date. If the general level of interest rates rises or declines, the assumed discount rates shall change in a similar manner.

19. The expected long-term rate of return on plan assets shall reflect the average rate of earnings expected on the existing assets that qualify as plan assets and contributions to the plan expected to be made during the period. In estimating that rate, appropriate consideration should be given to the returns being earned on the plan assets currently invested and the rates of return expected to be available for reinvestment. If the return on plan assets is taxable to the trust or other fund under the plan, the expected long-term rate of return shall be reduced to reflect the related income taxes expected to be paid under existing law. There is no assumption of an expected long-term rate of return on plan assets for plans that are unfunded or that have no assets that qualify as plan assets pursuant to this statement.

20. The service cost component of net periodic postretirement benefit cost and the expected and accumulated postretirement benefit obligations shall reflect future compensation levels to the extent the postretirement benefit formula defines the benefits wholly or partially as a function of future compensation levels. For pay-related plans, assumed compensation levels shall reflect the best estimate of the actual future compensation levels of the individual employees involved, including future changes attributed to general price levels, productivity, seniority, promotion, and other factors. All assumptions shall be consistent to the extent that each reflects expectations about the same future economic conditions, such as future rates of inflation. Measuring service cost and the expected and accumulated postretirement benefit obligations based on estimated future compensation levels entails considering any indirect effects, such as benefit limitations, that would affect benefits provided by the plan.

Assumptions Unique to the Postretirement Health Care Benefits

21. Measurement of an employer's postretirement health care obligation requires the use of several assumptions unique to health care benefits. Most significantly, it includes several assumptions about factors that will affect the amount and timing of future benefit payments for postretirement health care. Those factors include consideration of historical per capita claims cost by age, health care cost trend rates (for plans that provide a benefit in kind), and medical coverage to be paid by governmental authorities and other providers of health care benefits.

22. In principle, an employer's share of the expected future postretirement health care cost for a plan participant is developed by reducing the assumed per capita claims cost at each age at which the plan participant is expected to receive benefits under the plan by (a) the effects of coverage by Medicare [(INT 04-17)] and other providers of health care benefits, and (b) the effects of the cost-sharing provisions of the plan (deductibles, copayment provisions, out-of-pocket limitations, caps on the limits of the employer-provided payments, and retiree contributions). The resulting amount represents the assumed net incurred claims cost at each age at which the plan participant is expected to receive benefits under the plan. If contributions are required to be paid by active plan participants toward their postretirement health

care benefits, the actuarial present value of the plan participants' future contributions reduces the actuarial present value of the aggregate assumed net incurred claims costs.

23. The assumed per capita claims cost by age is the annual per capita cost, for periods after the measurement date, of providing the postretirement health care benefits covered by the plan from the earliest age at which an individual could begin to receive benefits under the plan through the remainder of the individual's life or the covered period, if shorter. The assumed per capita claims cost shall be the best estimate of the expected future cost of the benefits covered by the plan. It may be appropriate to consider other factors in addition to age, such as sex and geographical location, in developing the assumed per capita claims cost.

24. Past and present claims data for the plan, such as a historical pattern of gross claims by age (claims curve), should be used in developing the current per capita claims cost to the extent that those data are considered to be indicative of the current cost of providing the benefits covered by the plan. Those current claims data shall be adjusted by the assumed health care cost trend rate. The resulting assumed per capita claims cost by age, together with the plan demographics, determines the amount and timing of expected future gross eligible charges.

25. In the absence of sufficiently reliable plan data about the current cost of the benefits covered by the plan, the current per capita claims cost should be based, entirely or in part, on the claims information of other employers to the extent those costs are indicative of the current cost of providing the benefits covered by the plan. For example, the current per capita claims cost may be based on the claims experience of other employers derived from information in data files developed by insurance companies, actuarial firms, or employee benefits consulting firms. The current per capita claims cost developed on those bases shall be adjusted to best reflect the terms of the employer's plan and the plan demographics. For example, the information should be adjusted, as necessary, for differing demographics, such as the age and sex of plan participants, health care utilization patterns by men and women at various ages, and the expected geographical location of retirees and their dependents, and for significant differences between the nature and types of benefits covered by the employer's plan and those encompassed by the underlying data.

26. The assumption about health care cost trend rates represents the expected annual rates of change in the cost of health care benefits currently provided by the postretirement benefit plan, due to factors other than changes in the demographics of the plan participants, for each year from the measurement date until the end of the period in which benefits are expected to be paid. Past and current health care cost trends shall be used in developing an employer's assumed health care cost trend rates, which implicitly consider estimates of health care inflation, changes in health care utilization or delivery patterns, technological advances, and changes in the health status of plan participants. Differing services, such as hospital care and dental care, may require the use of different health care cost trend rates. It is appropriate for that assumption to reflect changes in health care cost trend rates over time. For example, the health care cost trend rates may be assumed to continue at the present level for the near term, or increase for a period of time, and then grade down over time to an estimated health care cost trend rate ultimately expected to prevail.

27. Certain medical claims may be covered by governmental programs under existing law or by other providers of health care benefits. Benefit coverage by those governmental programs shall be assumed to continue as provided by the present law and by other providers pursuant to their present plans. Presently enacted changes in the law or amendments of the plans of other health care providers that take effect in future periods and that will affect the future level of their benefit coverage shall be considered in current-period measurements for benefits expected to be provided in those future periods. Future changes in laws concerning medical costs covered by governmental programs and future changes in the plans of other providers shall not be anticipated.

28. In some cases, determining the assumed per capita claims cost by age as described in paragraphs 23-25 may not be practical because credible historical information about the gross per capita cost of covered benefits may not be available or determinable to satisfy the stated measurement approach. However, credible historical information about incurred claims costs may be available. In those cases, an alternative method of developing the assumed per capita claims cost may be used provided the method results in a measure that is the best estimate of the expected future cost of the benefits covered by the plan. For example, the assumed health care cost trend rates may be determined by adjusting the expected change in the employer's share of per capita incurred claims cost by age by a factor that reflects the effects of the plan's cost-sharing provisions. However, an approach that projects net incurred claims costs using unadjusted assumed health care cost trend rates would implicitly assume changes in the plan's cost-sharing provisions at those assumed rates and, therefore, is not acceptable unless the plan's cost-sharing provisions are indexed in that manner or the substantive plan operates in that manner.

29. Assumed discount rates include an inflationary element that reflects the expected general rate of inflation. Assumed compensation levels include consideration of future changes attributable to general price levels. Similarly, assumed health care cost trend rates include an element that reflects expected general rates of inflation for the economy overall and an element that reflects price changes of health care costs in particular. To the extent that those assumptions consider similar inflationary effects, the assumptions about those effects shall be consistent.

Attribution

30. An equal amount of the expected postretirement benefit obligation for an employee generally shall be attributed to each year of service in the attribution period (a benefit/years-of-service approach). However, some plans may have benefit formulas that attribute a disproportionate share of the expected postretirement benefit obligation to employees' early years of service. For that type of plan, the expected postretirement benefit obligation shall be attributed in accordance with the plan's benefit formula.

31. The beginning of the attribution period generally shall be the date of hire. However, if the plan's benefit formula grants credit only for service from a later date and that credited service period is not nominal in relation to employees' total years of service prior to their full eligibility dates, the expected postretirement benefit obligation shall be attributed from the beginning of that credited service period. In all cases, the end of the attribution period shall be the full eligibility date.

Recognition of Liabilities and Assets

32. An employer that sponsors one or more single-employer defined benefit postretirement plans other than pensions shall recognize in its statement of financial position the funded statuses of those plans. The status for each plan shall be measured as the difference between the fair value of plan assets and the accumulated postretirement benefit obligation (considering both vested and nonvested employees) as it is defined in this statement.

33. The employer shall aggregate the statuses of all overfunded plans and recognize that amount as a nonadmitted asset in its statement of financial position. It also shall aggregate the statuses of all underfunded plans and recognize that amount as a liability in its statement of financial position. It is not acceptable statutory accounting practice to offset pension or postretirement benefits other than pensions liability generated by one plan against the prepaid assets of another plan.

Recognition of Net Periodic Postretirement Benefit Cost

34. As with other forms of deferred compensation, the cost of providing postretirement benefits shall be attributed to the periods of employee service rendered in exchange for those future benefits pursuant to the terms of the plan. That cost notionally represents the change in the unfunded accumulated postretirement benefit obligation for the period, ignoring employer contributions to the plan, plan

settlements, and payments made by the employer directly to retirees. However, changes in that unfunded obligation that arise from experience gains and losses and the effects of changes in assumptions may be recognized as a component of net periodic postretirement benefit cost on a delayed basis. In addition, the effects of a plan initiation or amendment generally are recognized on a delayed basis.

35. The following components shall be included in the net postretirement benefit cost recognized for a period by an employer sponsoring a defined benefit postretirement plan: a) Service cost; b) Interest cost; c) Actual return on plan assets, if any; d) Amortization of any prior service cost or credit included in unassigned funds (surplus) to the extent required by paragraphs 40-45; e) Gain or loss (including the effects of changes in assumptions) to the extent recognized; and f) Amortization of any obligation or asset existing at the date of initial application of this statement, hereinafter referred to as the transition obligation or transition asset remaining in unassigned funds (surplus).

Service Cost

36. The service cost component recognized in a period shall be determined as the portion of the expected postretirement benefit obligation attributed to employee service during that period. The measurement of the service cost component requires identification of the substantive plan and the use of assumptions and an attribution method, which are discussed in paragraphs 9-31.

37. The prior service cost for nonvested employees not previously recognized[2] is not required to be included in net postretirement benefit cost entirely in the year this standard is adopted. Unrecognized prior service cost for nonvested employees shall be amortized as a component of the net postretirement benefit cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is adjusted each period as prior service cost is amortized (refer to paragraphs ~~100-103~~101-104 for transition guidance related to the recognition of the prior service cost for nonvested employees through unassigned surplus).

Interest Cost

38. The interest cost component recognized in a period shall be determined as the increase in the accumulated postretirement benefit obligation to recognize the effects of the passage of time. Measuring the accumulated postretirement benefit obligation as a present value requires accrual of an interest cost at rates equal to the assumed discount rates.

Actual Return on Plan Assets

39. For a funded plan, the actual return on plan assets shall be determined based on the fair value of plan assets at the beginning and end of the period, adjusted for contributions and benefit payments. If the fund holding the plan assets is a taxable entity, the actual return on plan assets shall reflect the tax expense or benefit for the period determined in accordance with generally accepted accounting principles. Otherwise, no provision for taxes shall be included in the actual return on plan assets.

Prior Service Cost

40. Plan amendments (including initiation of a plan) may include provisions that attribute the increase or reduction in benefits to employee service rendered in prior periods or only to employee service to be rendered in future periods. For purposes of measuring the accumulated postretirement benefit obligation, the effect of a plan amendment on a plan participant's expected postretirement benefit

[2] The previous statutory accounting guidance in *SSAP No. 14—Postretirement Benefits Other Than Pensions* excluded nonvested employees from the service cost calculation. This exclusion has been eliminated with the issuance of this SSAP.

obligation shall be attributed to each year of service in that plan participant's attribution period, including years of service already rendered by that plan participant, in accordance with the attribution of the expected postretirement benefit obligation to years of service as discussed in paragraphs 30-31. If a plan is initiated that grants benefits solely in exchange for employee service after the date of the plan initiation or a future date, no portion of the expected postretirement benefit obligation is attributed to prior service periods because, in that case, the credited service period for the current employees who are expected to receive benefits under the plan begins at the date of the plan initiation or the future date.

41. Plan amendments that improve benefits are granted with the expectation that the employer will realize economic benefits in future periods. Consequently, except as discussed in paragraph 44, this statement does not permit the cost of benefit improvements (that is, prior service cost) to be included in net periodic postretirement benefit cost entirely in the year of the amendment. Rather, paragraph 42 provides for recognition of prior service cost arising from benefit improvements during the remaining years of service to the full eligibility dates of those plan participants active at the date of the plan amendment.

42. A plan amendment that retroactively increases benefits (including benefits that are granted to fully eligible plan participants) increases the accumulated postretirement benefit obligation. The cost of the benefit improvement shall be recognized as a charge to unassigned funds (surplus) at the date of the amendment. Except as specified in the next sentence and in paragraphs 43-44, that prior service cost shall be amortized as a component of net periodic postretirement benefit cost by assigning an equal amount to each remaining year of service to the full eligibility date of each plan participant active at the date of the amendment who was not yet fully eligible for benefits at that date. If all or almost all of a plan's participants are fully eligible for benefits, the prior service cost shall be amortized based on the remaining life expectancy of those plan participants rather than on the remaining years of service to the full eligibility dates of the active plan participants. Unassigned funds (surplus) is adjusted as a result of amortizing prior service cost.

43. To reduce the complexity and detail of the computations required, consistent use of an alternative approach that more rapidly amortizes the prior service cost recognized in unassigned funds (surplus) is permitted. For example, a straight-line amortization of the cost over the average remaining years of service to full eligibility for benefits of the active plan participants is acceptable.

44. In some situations, a history of regular plan amendments and other evidence may indicate that the period during which the employer expects to realize economic benefits from an amendment that grants increased benefits is shorter than the remaining years of service to full eligibility for benefits of the active plan participants. Identification of those situations requires an assessment of the individual circumstances of the particular plan. In those circumstances, the amortization of prior service cost shall be accelerated to reflect the more rapid expiration of the employer's economic benefits and to recognize the cost in the periods benefited.

45. A plan amendment that retroactively reduces, rather than increases, benefits decreases the accumulated postretirement benefit obligation. The reduction in benefits shall be recognized as a corresponding credit (prior service credit) to unassigned funds (surplus) that shall be used first to reduce any remaining prior service cost included in unassigned funds (surplus), then to reduce any transition obligation remaining in unassigned funds (surplus). The excess, if any, shall be amortized as a component of net periodic postretirement benefit cost on the same basis as specified in paragraph 42 for prior service cost. Immediate recognition of the excess is not permitted.

Gains and Losses

46. Gains and losses are changes in the amount of either the accumulated postretirement benefit obligation or plan assets resulting from experience different from that assumed or from changes in assumptions. This statement generally does not distinguish between those sources of gains and losses. Gains and losses include amounts that have been realized as well as amounts that are unrealized. Because gains and losses may reflect refinements in estimates as well as real changes in economic values and because some gains in one period may be offset by losses in another or vice versa, this statement does not require recognition of gains and losses as components of net postretirement benefit cost in the period in which they arise, except as described in paragraph 51. Gains and losses that are not recognized immediately as a component of net periodic postretirement benefit cost shall be recognized as increases or decreases in unassigned funds (surplus) as they arise.

47. The expected return on plan assets shall be determined based on the expected long-term rate of return on plan assets and the fair value of plan assets.

48. Plan asset gains and losses are differences between the actual return on plan assets during a period and the expected return on plan assets for that period. Plan asset gains and losses include changes reflected in the fair value of plan assets.

49. As a minimum, amortization of a net gain or loss included in unassigned funds (surplus) shall be included as a component of net periodic postretirement benefit cost for a year if, as of the beginning of the year, that net gain or loss exceeds 10 percent of the greater of the accumulated postretirement benefit obligation or the fair value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active plan participants. If all or almost all of a plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of the average remaining service period.

50. Any systematic method of amortizing gains and losses included in unassigned funds (surplus) may be used in place of the minimum amortization specified in paragraph 49 provided that (a) the minimum amortization is recognized in any period in which it is greater (reduces the net gain or loss balance by more) than the amount that would be recognized under the method used, (b) the method is applied consistently, (c) the method is applied similarly to both gains and losses, and (d) the method used is disclosed. If an enterprise uses a method of consistently recognizing gains and losses immediately, any gain that does not offset a loss previously recognized in income pursuant to this paragraph shall first offset any transition obligation remaining in unassigned funds (surplus); any loss that does not offset a gain previously recognized in income pursuant to this paragraph shall first offset any transition asset remaining in unassigned funds (surplus).

51. In some situations, an employer may forgive a retrospective adjustment of the current or past years' cost-sharing provisions of the plan as they relate to benefit costs already incurred by retirees or may otherwise deviate from the provisions of the substantive plan to increase or decrease the employer's share of the benefit costs incurred in the current or past periods. The effect of a decision to temporarily deviate from the substantive plan shall be immediately recognized as a loss or gain.

52. The gain or loss component of net periodic postretirement benefit cost shall consist of (a) the difference between the actual return on plan assets and the expected return on plan assets, (b) any gain or loss immediately recognized or the amortization of the net gain or loss included in unassigned funds (surplus), and (c) any amount immediately recognized as a gain or loss pursuant to paragraph 51.

Measurement of Plan Assets

53. Plan assets are assets—usually stocks, bonds, and other investments (except certain insurance contracts as noted in paragraph 57)—that have been segregated and restricted (usually in a trust) to be used for postretirement benefits. The amount of plan assets includes amounts contributed by the employer, and by plan participants for a contributory plan, and amounts earned from investing the contributions, less benefits, income taxes, and other expenses incurred. Plan assets ordinarily cannot be withdrawn by the employer except under certain circumstances when a plan has assets in excess of obligations and the employer has taken certain steps to satisfy existing obligations. Securities of the employer held by the plan are includable in plan assets provided they are transferable.

54. Assets not segregated in a trust, or otherwise effectively restricted, so that they cannot be used by the employer for other purposes are not plan assets for purposes of this statement, even though the employer may intend that those assets be used to provide postretirement benefits. Those assets shall be accounted for in the same manner as other employer assets of a similar nature and with similar restrictions. Amounts accrued by the employer but not yet paid to the plan are not plan assets for purposes of this statement.

55. Plan investments, whether equity or debt securities, real estate, or other, shall be measured at their fair value as of the measurement date.

56. Plan assets used in plan operations (for example, buildings, equipment, furniture and fixtures, and leasehold improvements) shall be measured at cost less accumulated depreciation or amortization for all purposes.

Insurance Contracts

57. For purposes of this statement, an insurance contract is defined as a contract in which an insurance company unconditionally undertakes a legal obligation to provide specified benefits to specific individuals in return for a fixed consideration or premium; an insurance contract is irrevocable and involves the transfer of significant risk from the employer (or the plan) to the insurance company. Benefits covered by insurance contracts shall be excluded from the accumulated postretirement benefit obligation. Insurance contracts shall be excluded from plan assets.

58. Some insurance contracts (participating insurance contracts) provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser, the effect of which is to reduce the cost of the plan. If the participating insurance contract causes the employer to remain subject to all or most of the risks and rewards associated with the benefit obligation covered or the assets transferred to the insurance company, that contract is not an insurance contract for purposes of this statement, and the purchase of that contract does not constitute a settlement pursuant to paragraphs ~~80 through 85~~81-86. Endorsement split-dollar life insurance contracts[3] do not settle a liability for a postretirement benefit obligation. For these contracts and other insurance contracts that do not constitute settlement, reporting

[3] An endorsement split-dollar life insurance arrangement is a split-dollar life insurance arrangement in which the entity owns and controls the insurance policy. The employer enters into a separate agreement that splits the policy benefits between the employer and the employee. The employer owns the policy, controls all rights of ownership, and may terminate the insurance policy (and, in turn, the policy benefits promised to the employee). To effect the split-dollar arrangement, the employer endorses a portion of the death benefits to the employee (the employee designates a beneficiary for this portion of the death benefits). Upon the death of the employee, the employee's beneficiary typically receives the designated portion of the death benefits directly from the insurance entity and the employer receives the remainder of the death benefits. SSAP No. 21, paragraph 6 provides guidance for amounts reporting entities can realize when they are owner and beneficiary, or otherwise have obtained rights to control insurance policies.

entities shall accrue a liability for the postretirement benefit arrangement in accordance with this statement.

59. The purchase price of a participating insurance contract ordinarily is higher than the price of an equivalent contract without a participation right. The difference is the cost of the participation right. The cost of the participation right shall be recognized at the date of purchase as a nonadmitted asset. In subsequent periods, the participation right shall be nonadmitted and measured at its fair value if the contract is such that fair value is reasonably estimable. Otherwise the participation right shall be measured at its amortized cost (not in excess of its net realizable value), and the cost shall be amortized systematically over the expected dividend period under the contract.

60. To the extent that insurance contracts are purchased during the period to cover postretirement benefits attributed to service in the current period (such as life insurance benefits), the cost of those benefits shall be the cost of purchasing the coverage under the contracts, except as provided in paragraph 59 for the cost of a participation right. If all the postretirement benefits attributed to service in the current period are covered by nonparticipating insurance contracts purchased during that period, the cost of the contracts determines the service cost component of net postretirement benefit cost for that period. Benefits attributed to current service in excess of benefits provided by nonparticipating insurance contracts purchased during the current period shall be accounted for according to the provisions of this statement applicable to plans not involving insurance contracts.

61. Other contracts with insurance companies may not meet the definition of an insurance contract because the insurance company does not unconditionally undertake a legal obligation to provide specified benefits to specified individuals. Those contracts shall be accounted for as investments and measured at fair value. If a contract has a determinable cash surrender value or conversion value, that is presumed to be its fair value. For some contracts, the best available estimate of fair value may be contract value.

Measurement Date

62. The measurements of plan assets and benefit obligations required by this statement shall be as of the date of the employer's fiscal year-end statement of financial position. Even though the postretirement benefit measurements are required as of a particular date, all procedures are not required to be performed after that date. As with other financial statement items requiring estimates, much of the information can be prepared as of an earlier date and projected forward to account for subsequent events (for example, employee service).

63. Measurements of net periodic postretirement benefit cost for both interim and annual financial statements generally shall be based on the assumptions at the beginning of the year (assumptions used for the previous year-end measurements of plan assets and obligations) unless more recent measurements of both plan assets and the accumulated postretirement benefit obligation are available. For example, if a significant event occurs, such as a plan amendment, settlement, or curtailment, that ordinarily would call for remeasurement, the assumptions used for those later measurements shall be used to remeasure net periodic postretirement benefit cost from the date of the event to the year-end measurement date. Unless an employer remeasures both its plan assets and benefit obligations during the fiscal year, the funded status it reports in its interim-period statement of financial position shall be the same asset or liability recognized in the previous year-end statement of financial position adjusted for (a) subsequent accruals of net periodic postretirement benefit cost that exclude the amortization of amounts previously recognized in unassigned funds (surplus) (for example, subsequent accruals of service cost, interest cost, and return on plan assets) and (b) contributions to a funded plan, or benefit payments. Upon remeasurement, a business entity shall adjust its statement of financial position in a subsequent interim period to reflect the overfunded or underfunded status of the plan consistent with that measurement date.

Disclosures - Single-Employer Defined Postretirement Plans

64. An employer that sponsors one or more other defined benefit postretirement plans shall provide the following information for postretirement benefit plans other than pensions. Amounts related to the employer's results of operations shall be disclosed for each period for which a statement of income is presented. Amounts related to the employer's statement of financial position, shall be disclosed as of the date of each statement of financial position presented.

a. A reconciliation of beginning and ending balances of the benefit obligation showing separately, if applicable, the effects during the period attributable to each of the following: service cost, interest cost, contributions by plan participants, actuarial gains and losses, foreign currency exchange rate changes, benefits paid, plan amendments, business combinations, divestitures, curtailments, settlements, and special termination benefits.

b. A reconciliation of beginning and ending balances of the fair value of plan assets showing separately, if applicable, the effects during the period attributable to each of the following: actual return on plan assets, foreign currency exchange rate changes, contributions by the employer, contributions by plan participants, benefits paid, business combinations, divestitures, and settlements.

c. The funded status of the plans and the amounts recognized in the statement of financial position, showing separately the assets (nonadmitted) and liabilities recognized.

d. The objectives of the disclosures about postretirement benefit plan assets are to provide users of financial statements with an understanding of:

i. How investment allocation decisions are made, including the factors that are pertinent to an understanding of investment policies and strategies

ii. The classes of plan assets

iii. The inputs and valuation techniques used to measure the fair value of plan assets

iv. The effect of fair value measurements using significant unobservable inputs (Level 3) on changes in plan assets for the period

v. Significant concentrations of risk within plan assets.

An employer shall consider those overall objectives in providing the following information about plan assets:

(a) A narrative description of investment policies and strategies, including target allocation percentages or range of percentages considering the classes of plan assets disclosed pursuant to (b) below, as of the latest statement of financial position presented (on a weighted-average basis for employers with more than one plan), and other factors that are pertinent to an understanding of those policies and strategies such as investment goals, risk management practices, permitted and prohibited investments including the use of derivatives, diversification, and the relationship between plan assets and benefit obligations. For investment funds disclosed as classes as described in (b) below, a description of the significant investment strategies of those funds shall be provided.

(b) The fair value of each class of plan assets as of each date for which a statement of financial position is presented. Asset classes shall be based on the nature and risks of assets in an employer's plan(s). Examples of classes of assets include, but are not limited to, the following: cash and cash equivalents; equity securities, (segregated by industry type, company size, or investment objective); debt securities, issued by national, state, and local governments; corporate debt securities; asset-backed securities; structured debt; derivatives on a gross basis (segregated by type of underlying risk in the contract, for example, interest rate contracts, foreign exchange contracts, equity contracts, commodity contracts, credit contracts, and other contracts); investment funds (segregated by type of fund); and real estate. Those examples are not meant to be all inclusive. An employer should consider the overall objectives in paragraph 64.d. in determining whether additional classes of plan assets or further disaggregation of classes should be disclosed.

(c) A narrative description of the basis used to determine the overall expected long-term rate-of-return-on-assets assumption, such as the general approach used, the extent to which the overall rate-of-return-on-assets assumption was based on historical returns, the extent to which adjustments were made to those historical returns in order to reflect expectations of future returns, and how those adjustments were determined. The description should consider the classes of assets described in (b) above, as appropriate.

(d) Information that enables users of financial statements to assess the inputs and valuation techniques used to develop fair value measurements of plan assets at the reporting date. For fair value measurements using significant unobservable inputs, an employer shall disclose the effect of the measurements on changes in plan assets for the period. To meet those objectives, the employer shall disclose the following information for each class of plan assets disclosed pursuant to (b) above for each annual period:

(1) The level within the fair value hierarchy in which the fair value measurements in their entirety fall,[4] segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

(2) For fair value measurements of plan assets using significant unobservable inputs (Level 3), a reconciliation of the beginning and ending balances, separately presenting changes during the period attributable to the following:

[4] In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest level input that is significant to the fair value measurement in its entirety. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, considering factors specific to the asset or liability.

(i) Actual return on plan assets, separately identifying the amount related to assets still held at the reporting date and the amount related to assets sold during the period

(ii) Purchases, sales, and settlements, net

(iii) Transfers in and/or out of Level 3 (for example, transfers due to changes in the observability of significant inputs)

(3) Information about the valuation technique(s) and inputs used to measure fair value and a discussion of changes in valuation techniques and inputs, if any, during the period.

e. The benefits (as of the date of the latest statement of financial position presented) expected to be paid in each of the next five fiscal years, and in the aggregate for the five fiscal years thereafter. The expected benefits should be estimated based on the same assumptions used to measure the company’s benefit obligation at the end of the year and should include benefits attributable to estimated future employee service.

f. The employer’s best estimate, as soon as it can reasonably be determined, of contributions expected to be paid to the plan during the next fiscal year beginning after the date of the latest statement of financial position presented. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

g. The amount of net periodic benefit cost recognized, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to settlements or curtailments.

h. Separately the net gain or loss and net prior service cost or credit recognized in unassigned funds (surplus) for the period pursuant to paragraphs 42 and 46, and reclassification adjustments of unassigned funds (surplus) for the period, as those amounts, including amortization of the net transition asset or obligation, are recognized as components of net periodic benefit cost.

i. The amounts in unassigned funds (surplus) that have not yet been recognized as components of net periodic benefit cost, showing separately the net gain or loss, net prior service cost or credit, and net transition asset or obligation.

j. On a weighted-average basis, the following assumptions used in the accounting for the plans: assumed discount rates, rates of compensation increase (for pay-related plans), and expected long-term rates of return on plan assets specifying, in a tabular format, the assumptions used to determine the benefit obligation and the assumptions used to determine net benefit cost.

k. The assumed health care cost trend rate(s) for the next year used to measure the expected cost of benefits covered by the plan (gross eligible charges), and a general description of the direction and pattern of change in the assumed trend rates thereafter, together with the ultimate trend rate(s) and when that rate is expected to be achieved.

l. The effect of a one-percentage-point increase and the effect of a one-percentage-point decrease in the assumed health care cost trend rates on (1) the aggregate of the service and interest cost components of net periodic postretirement health care benefit costs and (2) the accumulated postretirement benefit obligation for health care benefits. (For purposes of this disclosure, all other assumptions shall be held constant, and the effects shall be measured based on the substantive plan that is the basis for the accounting.)

m. If applicable, the amounts and types of securities of the employer and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer or related parties, and any significant transactions between the employer or related parties and the plan during the period.

n. If applicable, any alternative method used to amortize prior service amounts or net gains and losses pursuant to paragraphs 43 and 50.

o. If applicable, any substantive commitment, such as past practice or a history of regular benefit increases, used as the basis for accounting for the benefit obligation.

p. If applicable, the cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event.

q. An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this statement.

r. The amounts in unassigned funds (surplus) expected to be recognized as components of net periodic benefit cost over the fiscal year that follows the most recent annual statement of financial position presented, showing separately the net gain or loss, net prior service cost or credit, and net transition asset or obligation.

s. The amount and timing of any plan assets expected to be returned to the employer during the 12-month period, or operating cycle if longer, that follows the most recent annual statement of financial position presented.

Employers with Two or More Plans

65. Postretirement benefits offered by an employer may vary in nature and may be provided to different groups of employees. As discussed in paragraph 66, in some cases an employer may aggregate data from unfunded plans for measurement purposes in lieu of performing separate measurements for each unfunded plan (including plans whose designated assets are not appropriately segregated and restricted and thus have no plan assets as that term is used in this statement). Net periodic postretirement benefit cost, the accumulated postretirement benefit obligation, and plan assets shall be determined for each separately measured plan or aggregation of plans by applying the provisions of this statement to each such plan or aggregation of plans.

66. The data from all unfunded postretirement health care plans may be aggregated for measurement purposes if (a) those plans provide different benefits to the same group of employees or (b) those plans provide the same benefits to different groups of employees. Data from other unfunded postretirement welfare benefit plans may be aggregated for measurement purposes in similar circumstances, such as when an employer has a variety of welfare benefit plans that provide benefits to the same group of employees. However, a plan that has plan assets (as defined herein) shall not be aggregated with other plans but shall be measured separately.

Disclosures – Employers with Two or More Defined Benefit Plans

67. The disclosures required by this statement shall be aggregated for all of an employer's other defined benefit postretirement plans unless disaggregating in groups is considered to provide useful information or is otherwise required by this paragraph and paragraph 68 of this statement. Disclosures shall be as of the date of each statement of financial position presented. If aggregate disclosures are presented, an employer shall disclose:

a. The aggregate benefit obligation and aggregate fair value of plan assets for plans with benefit obligations in excess of plan assets as of the measurement date of each statement of financial position presented.

68. A U.S. reporting entity may combine disclosures about pension plans or other postretirement benefit plans outside the United States with those for U.S. plans unless the benefit obligations of the plans outside the United States are significant relative to the total benefit obligation and those plans use significantly different assumptions.

Interim Financial Disclosures – Defined Benefit Plans

69. The following shall be disclosed within interim financial statements that include a statement of income:

a. The amount of net periodic benefit cost recognized, for each period for which a statement of income is presented, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the amount prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to a settlement or curtailment.

b. The total amount of the employer's contributions paid, and expected to be paid, during the current fiscal year, if significantly different from amounts previously disclosed pursuant to paragraph 64.f. of this statement. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

Multiemployer Plans

70. For purposes of this statement, a multiemployer plan is a postretirement benefit plan to which two or more unrelated employers contribute, usually pursuant to one or more collective-bargaining agreements. A characteristic of multiemployer plans is that assets contributed by one participating employer may be used to provide benefits to employees of other participating employers since assets contributed by an employer are not segregated in a separate account or restricted to provide benefits only to employees of that employer.

71. An employer participating in a multiemployer plan shall recognize as net postretirement benefit cost the required contribution for the period, which shall include both cash and the fair value of noncash contributions, and shall recognize as a liability any unpaid contributions required for the period.

72. In some situations, withdrawal from a multiemployer plan may result in an employer having an obligation to the plan for a portion of the plan's unfunded accumulated postretirement benefit obligation. If it is either probable or reasonably possible that (a) an employer would withdraw from the plan under circumstances that would give rise to an obligation or (b) an employer's contribution to the fund would be increased during the remainder of the contract period to make up a shortfall in the funds necessary to maintain the negotiated level of benefit coverage (a "maintenance of benefits" clause), the employer shall

apply the provisions *SSAP No. 5R—Liabilities, Contingencies, and Impairments of Assets* (SSAP No. 5R).

Disclosures - Multiemployer Plans

73. An employer shall disclose the amount of contributions to multiemployer plans for each annual period for which a statement of income is presented. An employer may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pension plans and other postretirement benefit plans. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture. This disclosure shall identify whether the contributions represent more than 5 percent of total contributions to the plan as indicated in the plan's most recently available annual report.

74. In addition to the requirements of paragraph 73, the following information shall be disclosed:

a. Whether a funding improvement plan or rehabilitation plan had been implemented or is pending.

b. Whether the reporting entity paid a surcharge to the plan.

c. A description of minimum contributions required for future periods, if applicable.

d. A qualitative description of the extent to which the employer could be responsible for the obligations of the plan, including benefits earned by employees during employment with another employer.

~~74.~~75. Pursuant to paragraph 72, if withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions and disclosures of SSAP No. 5R, shall apply.

Multiple-Employer Plans

~~75.~~76. Some postretirement benefit plans to which two or more unrelated employers contribute are not multiemployer plans. Rather, those multiple-employer plans are in substance aggregations of single-employer plans, combined to allow participating employers to pool plan assets for investment purposes or to reduce the costs of plan administration. Those plans ordinarily do not involve collective-bargaining agreements. They may also have features that allow participating employers to have different benefit formulas, with the employer's contributions to the plan based on the benefit formula selected by the employer. Those plans shall be considered single-employer plans rather than multiemployer plans for purposes of this statement, and each employer's accounting shall be based on its respective interest in the plan.

Postretirement Benefit Plans Outside the United States

~~76.~~77. This statement includes no special provisions applicable to postretirement benefit arrangements outside the United States. Those arrangements are subject to the provisions of this statement. The applicability of this statement to those arrangements is determined by the nature of the obligation and by the terms or conditions that define the amount of benefits to be paid, not by whether or how a plan is funded, whether benefits are payable at intervals or as a single amount, or whether the benefits are required by law or custom or are provided under a plan the employer has elected to sponsor.

Business Combinations

~~77.~~78. When an employer is acquired in a business combination and that employer sponsors a single-employer defined benefit postretirement plan, the assignment of the purchase price to individual assets acquired and liabilities assumed shall include a liability for the accumulated postretirement benefit obligation in excess of the fair value of the plan assets or an asset for the fair value of the plan assets in excess of the accumulated postretirement benefit obligation. The accumulated postretirement benefit obligation assumed shall be measured based on the benefits attributed by the acquired entity to employee service prior to the date the business combination is consummated, adjusted to reflect (a) any changes in assumptions based on the purchaser's assessment of relevant future events (as discussed in paragraphs 9-29) and (b) the terms of the substantive plan (as discussed in paragraphs 9-14) to be provided by the purchaser to the extent they differ from the terms of the acquired entity's substantive plan.

~~78.~~79. If the postretirement benefit plan of the acquired entity is amended as a condition of the business combination (for example, if the change is required by the seller as part of the consummation of the acquisition), the effects of any improvements attributed to services rendered by the participants of the acquired entity's plan prior to the date of the business combination shall be accounted for as part of the accumulated postretirement benefit obligation of the acquired entity. Otherwise, if improvements to the postretirement benefit plan of the acquired entity are not a condition of the business combination, credit granted for prior service shall be recognized as a plan amendment as discussed in paragraphs 40-45. If it is expected that the plan will be terminated or curtailed, the effects of those actions shall be considered in measuring the accumulated postretirement benefit obligation. Otherwise, no future changes to the plan shall be anticipated.

~~79.~~80. As a result of applying the provisions of paragraphs ~~77-78~~78-79, any previously existing net gain or loss, prior service cost or credit, or transition obligation or transition asset remaining in unassigned funds (surplus) is eliminated for the acquired employer's plan.

Accounting for Settlement of a Postretirement Benefit Obligation

~~80.~~81. For purposes of this statement, a settlement is defined as a transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a postretirement benefit obligation, and (c) eliminates significant risks related to the obligation and the assets used to effect the settlement. Examples of transactions that constitute a settlement include making lump-sum cash payments to plan participants in exchange for their rights to receive specified postretirement benefits and purchasing long-term nonparticipating insurance contracts for the accumulated postretirement benefit obligation for some or all of the plan participants.

~~81.~~82. A transaction that does not meet the three criteria of paragraph ~~80~~81 does not constitute a settlement for purposes of this statement. For example, investing in a portfolio of high-quality fixed-income securities with principal and interest payment dates similar to the estimated payment dates of benefits may avoid or minimize certain risks. However, that investment decision does not constitute a settlement because that decision can be reversed, and investing in that portfolio does not relieve the employer (or the plan) of primary responsibility for a postretirement benefit obligation nor does it eliminate significant risks related to that obligation.

~~82.~~83. For purposes of this statement, the maximum gain or loss subject to recognition in income when a postretirement benefit obligation is settled is the net gain or loss included in unassigned funds (surplus) defined in paragraphs 46-50 plus any transition asset remaining in unassigned funds (surplus). That maximum gain or loss includes any gain or loss resulting from remeasurements of plan assets and the accumulated postretirement benefit obligation at the time of settlement.

~~83.~~84. If the entire accumulated postretirement benefit obligation is settled and the maximum amount subject to recognition is a gain, the settlement gain shall first reduce any transition obligation remaining in unassigned funds (surplus); any excess gain shall be recognized in income. If the entire accumulated postretirement benefit obligation is settled and the maximum amount subject to recognition is a loss, the maximum settlement loss shall be recognized in income. If only part of the accumulated postretirement benefit obligation is settled, the employer shall recognize in income the excess of the pro rata portion (equal to the percentage reduction in the accumulated postretirement benefit obligation) of the maximum settlement gain over any remaining transition obligation or a pro rata portion of the maximum settlement loss.

~~84.~~85. If the purchase of a participating insurance contract constitutes a settlement, the maximum gain (but not the maximum loss) shall be reduced by the cost of the participation right before determining the amount to be recognized in income. As detailed in paragraph 58, the purchase of an endorsement split-dollar life insurance contract does not settle a liability for a postretirement benefit obligation.

~~85.~~86. If the cost of all settlements in a year is less than or equal to the sum of the service cost and interest cost components of net postretirement benefit cost for the plan for the year, gain or loss recognition is permitted but not required for those settlements. However, the accounting policy adopted shall be applied consistently from year to year.

Accounting for a Plan Curtailment

~~86.~~87. For purposes of this statement, a curtailment is an event that significantly reduces the expected years of future service of active plan participants or eliminates the accrual of defined benefits for some or all of the future services of a significant number of active plan participants. Curtailments include:

a. Termination of employees' services earlier than expected, which may or may not involve closing a facility or discontinuing a component of an entity.

b. Termination or suspension of a plan so that employees do not earn additional benefits for future service. In the latter situation, future service may be counted toward eligibility for benefits accumulated based on past service.

~~87.~~88. The prior service cost included in unassigned funds (surplus) associated with the portion of the future years of service that had been expected to be rendered, but as a result of a curtailment are no longer expected to be rendered, is a loss. For purposes of measuring the effect of a curtailment, prior service cost includes the cost of plan amendments and any remaining transition obligation. For example, a curtailment may result from the termination of a significant number of employees who were plan participants at the date of a prior plan amendment. The loss associated with that curtailment is measured as the portion of the remaining prior service cost included in unassigned funds (surplus) related to that (and any prior) plan amendment attributable to the previously expected remaining future years of service of the employees who were terminated and the portion of the remaining transition obligation attributable to the previously expected remaining future years of service of the terminated employees who were plan participants at the date of transition.

~~88.~~89. The accumulated postretirement benefit obligation may be decreased (a gain) or increased (a loss) by a curtailment. That (gain) loss shall reduce any net loss (gain) included in unassigned funds (surplus).

a. To the extent that such a gain exceeds any net loss included in unassigned funds (surplus) (or the entire gain, if a net gain exists), it is a curtailment gain.

b. To the extent that such a loss exceeds any net gain included in unassigned funds (surplus) (or the entire loss, if a net loss exists), it is a curtailment loss.

For purposes of applying the provisions of this paragraph, any transition asset remaining in unassigned funds (surplus) shall be treated as a net gain and shall be combined with the unrecognized net gain or loss arising subsequent to transition to this statement.

~~89.~~90. If the sum of the effects identified in paragraphs ~~87-88~~88-89 is a net loss, it shall be recognized in income when it is probable that a curtailment will occur and the net effect is reasonably estimable. If the sum of those effects is a net gain, it shall be recognized in income when the related employees terminate or the plan suspension or amendment is adopted.

~~90.~~91. A settlement and a curtailment may occur separately or together. If benefits expected to be paid in future periods are eliminated for some plan participants (for example, because a significant portion of the work force is dismissed or a plant is closed) but the plan remains in existence and continues to pay benefits, to invest assets, and to receive contributions, a curtailment has occurred but not a settlement. If an employer purchases nonparticipating insurance contracts for the accumulated postretirement benefit obligation and continues to provide defined benefits for future service, either in the same plan or in a successor plan, a settlement has occurred but not a curtailment. If a plan termination occurs (that is, the obligation is settled and the plan ceases to exist) and the plan is not replaced by a successor defined benefit plan, both a settlement and a curtailment have occurred (whether or not the employees continue to work for the employer).

Measurement of the Effects of Termination Benefits

~~91.~~92. An employer that offers special or contractual termination benefits to employees shall recognize a liability and a loss when the employees accept the offer and the amount can be reasonably estimated. An employer that provides contractual termination benefits shall recognize a liability and a loss when it is probable that employees will be entitled to benefits and the amount can be reasonably estimated. A situation involving special or contractual termination benefits may also result in a curtailment to be accounted for under paragraphs ~~86-89~~87-90.

~~92.~~93. The liability and loss recognized for employees who accept an offer of special termination benefits to be provided by a postretirement benefit plan shall be the difference between (a) the accumulated postretirement benefit obligation for those employees, assuming that those employees (active plan participants) not yet fully eligible for benefits would terminate at their full eligibility date and that fully eligible plan participants would retire immediately, without considering any special termination benefits and (b) the accumulated postretirement benefit obligation as measured in (a) adjusted to reflect the special termination benefits.

Defined Contribution Plans

~~93.~~94. For purposes of this statement, a defined contribution postretirement plan is a plan that provides postretirement benefits in return for services rendered, provides an individual account for each participant, and has terms that specify how contributions to the individual's account are to be determined rather than the amount of postretirement benefits the individual is to receive. Under a defined contribution plan, the postretirement benefits a plan participant will receive are limited to the amount contributed to the plan participant's account, the returns earned on investments of those contributions, and forfeitures of other plan participants' benefits that may be allocated to the plan participant's account.

~~94.~~95. To the extent a plan's defined contributions to an individual's account are to be made for periods in which that individual renders services, the net postretirement benefit cost for a period shall be the contribution called for in that period. If a plan calls for contributions for periods after an individual retires or terminates, the estimated cost shall be accrued during the employee's service period.

~~95.~~96. A postretirement benefit plan having characteristics of both a defined benefit plan and a defined contribution plan requires careful analysis. If the substance of the plan is to provide a defined benefit, as may be the case with some "target benefit" plans, the accounting requirements shall be determined in accordance with the provisions of this statement applicable to a defined benefit plan and the disclosure requirements within paragraph 64 shall be followed.

Disclosures - Defined Contribution Plans

~~96.~~97. An employer shall disclose the amount of cost recognized for defined contribution postretirement benefit plans for all periods presented separately from the amount of cost recognized for defined benefit plans. The disclosures shall include a description of the nature and effect of any significant changes during the period affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

Consolidated/Holding Company Plans

~~97.~~98. The employees of many reporting entities are eligible for certain postretirement benefits other than pensions provided by a parent company or holding company. A reporting entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation of the benefits earned during the period. A liability shall be established for any such amounts due but not yet paid.

~~98.~~99. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of the postretirement benefit expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for postretirement benefits other than pensions, then the requirements outlined in paragraphs 1-~~96~~97 and paragraphs ~~99-108~~100-109 of this statement shall be applied.

Relevant Literature

~~99.~~100. This statement adopts with modification paragraphs 1-7 and 16-18 as well as Appendix D – Amendments to Statement 106 and Appendix E – Amendments to Statement 132(R) of *FASB Statement No. 158, Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132(R)* (FAS 158). Paragraphs 8-10 and D2.u providing specific guidance for not-for-profit organizations are rejected. Paragraphs 11-15 regarding the effective dates for FAS 158 are rejected and paragraph 19 providing an alternative method for remeasuring plan assets and benefits obligations as of the fiscal year the measurement date provisions are applied is also rejected. The disclosure included within FAS 132 (R), as amended by FAS 158, pertaining specifically to pensions (paragraph 5.e.) has been rejected for inclusion within this standard. This Statement adopts the revisions to paragraph 5.d. of FAS 132(R) as amended by *FASB Staff Position FAS 132(R)-1, Employers' Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 132(R)-1) and *ASU 2010-06, Fair Value Measurements and Disclosures (Topic 820): Improving Disclosures about Fair Value Measurements* (ASU 2010-06). Other revisions to disclosure requirements as amended by FSP FAS 132(R)-1 relate to nonpublic entities and are rejected. This statement adopts *EITF 06-4, Accounting for Deferred Compensation and Postretirement Benefit Aspects of Endorsement Split-Dollar Life Insurance Arrangements*. This statement adopts by reference revisions to ASC 715-80 as detailed in *ASU 2011-09, Compensation – Retirement Benefits – Multiemployer Plans* with limited additional disclosures required within statutory financial statements. This statement adopts by reference *FSP FASB 158-1, Conforming Amendments to the Illustrations in FASB Statements No. 87, No. 88, and No. 106 and to the Related Staff Implementation Guides* (FSP FAS 158-1) to the extent that the examples and related implementation guides comply with the adopted GAAP guidance previously identified within this statement, as modified for statutory accounting. The following modifications from the adopted paragraphs of FAS 158 and FAS 106 have been incorporated within this standard:

a. All references to "other comprehensive income" or "accumulated other comprehensive income" within FAS 158 have been revised to reflect "unassigned funds (surplus)."

b. Any prepaid asset resulting from the excess of the fair value of plan assets over the accumulated postretirement benefit obligation shall be nonadmitted. Furthermore, any asset recognized from the cost of a "participation right" of an annuity contract per paragraph 59 shall also be nonadmitted.

c. Provisions within paragraph 57 and 58 of FAS 106, as amended by FAS 158, permitting a calculated market-related value of plan assets has been eliminated with only the fair value measurement method for plan assets retained.

d. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132(R), as amended by FAS 158, are rejected. All reporting entities shall follow the disclosure requirements within this statement which have been adopted from paragraph 5 of FAS 132(R), as amended by FAS 158.

e. Clarification has been included within this standard to ensure both vested and nonvested employees are included within the recognition of net postretirement benefit cost and in the accumulated postretirement benefit obligation. Although this is consistent with GAAP, this is a change from previous statutory accounting. As nonvested employees were excluded from statutory accounting under SSAP No. 14, guidance has been included to indicate that the unrecognized prior service cost attributed to nonvested individuals is not required to be included in net postretirement benefit cost entirely in the year this standard is adopted. The unrecognized prior service cost for nonvested employees shall be amortized as a component of net postretirement benefit cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is then adjusted each period as prior service cost is amortized. (Guidance is included within the transition related to the recognition of the prior service cost for nonvested employees through unassigned surplus.)

f. Conclusion of *Interpretation 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26) prohibiting the offset of defined benefit liabilities of one plan with prepaid assets of another plan has been incorporated within paragraph 33 of this statement.

g. Provisions within paragraph 44B of FAS 106, as amended by FAS 158, regarding the classification of underfunded liabilities as current or noncurrent liabilities and the classification of assets from overfunded plans as noncurrent assets has been rejected as inconsistent with statutory accounting.

h. Provisions within paragraph 65 of FAS 106, as amended by FAS 158, defining the fair value of investments have been rejected. Fair value definitions and measurement for investments shall be determined in accordance with statutory accounting guidance.

i. Provisions within paragraph 72 of FAS 106, as amended by FAS 158, regarding the plan assets measurement date for consolidating subsidiaries or entities utilizing the equity method under APB Opinion No. 18 has been rejected. For statutory accounting, all entities shall follow the measurement date guidance within paragraph 62 of this statement.

j. The disclosure requirement included within paragraph 5.e. of FAS 132(R) has been rejected for this statement as it specifically pertains to pensions.

k. Transition under FAS 158 is different from the requirements of this statement. FAS 158 requires publicly traded equity securities to initially apply the requirement to recognize the funded status of a postretirement benefit plan; the gains/losses, prior service costs/credits and transition obligations/assets that have not yet been included in net periodic benefit cost; and the disclosure requirements as of the end of the fiscal year ending after December 15, 2006. Transition guidelines for statutory accounting are defined in paragraphs ~~100-108~~101-109.

l. FAS 158 provided two approaches for an employer to transition to a fiscal year-end measurement date. For purposes of statutory accounting, the second approach permitting reporting entities to use earlier measurements determined for year-end reporting as of the fiscal year immediately preceding the year that the measurement date provisions is rejected. For consistency purposes, all reporting entities shall follow the first approach and remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied.

Effective Date and Transition

~~100.~~101.Reporting entities are required to disclose the accumulated postretirement benefit obligation and the fair value of plan assets for defined postretirement benefit plans in the first reporting period after the effective date of this standard and in each subsequent reporting period. This disclosure shall specifically note the funded/underfunded status of the postretirement benefit plan. Reporting entities shall also specifically note the surplus impact necessary, at each reporting date, to reflect the full benefit obligation within the financial statements.

~~101.~~102.This statement is effective for quarterly and annual reporting periods beginning on or after January 1, 2013 (transition date) with early adoption permitted. Any unfunded defined benefit amounts, as determined when the accumulated benefit obligation exceeds the fair value of plan assets, is a liability under SSAP No. 5R and shall be reported in the first quarter statutory financial statements after the transition date with a corresponding entry to unassigned funds (surplus). If the fair value of plan assets exceeds the accumulated benefit obligation, the asset shall be considered a nonadmitted asset. Net periodic benefit cost shall include a component for unrecognized prior service cost for nonvested employees beginning in 2013.

~~102.~~103.Gains or losses, prior service costs or credits (including prior service costs for non-vested participants pursuant to paragraph 37), and remaining transition assets or obligations (collectively referred to as “unrecognized items”) from prior application of SSAP No. 14 that have not yet been included in net periodic benefit cost as of December 31, 2012[5] shall be recognized as components of the ending balance of unassigned funds (surplus), net of tax, as of January 1, 2013 (provided that alternative transition is not elected per paragraph ~~103~~104.b.). The offset to unassigned funds is reported separately as an “Aggregate Write-In for Other Than Invested Assets” or as an “Aggregate Write-In for Other Liabilities.” After recognition, the full unfunded or overfunded status or the plan shall be reflected within the financial statements. Any prepaid asset resulting from an overfunded plan shall be nonadmitted.

~~103.~~104.Due to the potential impact to surplus as a result of immediately applying the accounting guidance in paragraph ~~102~~103, reporting entities may elect one of the following two methods, on an individual plan basis, to recognize the transition surplus impact:

a. Reporting entities may elect to recognize the entire transition surplus impact calculated from applying paragraph ~~102~~103, on an individual plan basis, as of January 1, 2013.

[5] The intent of the guidance is to recognize the unrecognized amounts as of December 31, 2012, annual statements, even if new actuarial projections (expected postretirement benefit obligations) are calculated as of January 1, 2013. (These projections would be considered in the recognition of the 2013 pension cost.)

b. Alternatively, reporting entities may elect to recognize the entire surplus impact from applying paragraph ~~102~~103, on an individual plan basis, over a period not to exceed ten (10) years. The surplus impact initially recognized as of January 1, 2013, under this transition option, and subsequently over the transition period, shall be the greater of:

i. Ten percent of the calculated surplus impact as of the transition date; and

ii. Amortization[6] of the "unrecognized items" (defined in paragraph ~~102~~103) into net periodic benefit cost, including any accelerated amortization of these items from curtailments or settlements that occur after the transition date. (If the amortization cannot be determined at transition, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for this component of the calculation. If the amount recognized for transition (greater of both components in paragraph ~~103~~104.b.) is subsequently determined to be less than what is amortized for the year (~~103~~104.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.);

If the surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact (collectively referred to as the "transition liability"[7]) on a systematic basis over a period not to exceed nine years. The minimum amount recognized each subsequent year shall be an amount that reflects the conditions within paragraph ~~103~~104.b. Additionally, reporting entities must recognize any remaining transition liability to the extent that the plan reflects a prepaid benefit cost. (For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded.) Furthermore, if circumstances result with a subsequent gain attributed to the plan that will be recognized in earnings, the entity must recognize an additional amount of the remaining transition liability to offset the recognized gain.(INT 13-03) Reporting entities are permitted to recognize the remaining transition liability, or an amount in excess of the minimum requirement, at any time after the transition date. This transition guidance is specific to the transition surplus impact from initially applying this statement on January 1, 2013. Thus, this transition guidance does not apply to additional liability calculated from subsequent comparison of the fair value of plan assets to the accumulated benefit obligation, or the impact of subsequent plan amendments.

~~104.~~105.Reporting entities electing to apply the transition guidance in paragraph ~~103~~104.b. must disclose the full transition surplus impact calculated from applying paragraph ~~102~~103 in the first quarter statutory financial statements after the transition date and each reporting period thereafter. This disclosure shall include the initial "transition liability" calculated under paragraph ~~102~~103 and the annual amortization amount of the "unrecognized items" into net periodic benefit cost. This disclosure shall include a schedule of the entity's anticipated recognition of the remaining surplus impact over the transition period.

[6] Unless otherwise impacted from the provisions within this statement or in accordance with changes to the benefit plan, the amortization of the unrecognized items into net periodic benefit cost shall continue to follow the existing amortization schedules in effect on the transition date.

[7] If the surplus deferral from paragraph ~~103~~104.b. is elected, the deferred liability, although comprised of the previous "unrecognized items" shall be collectively referred to as the "transition liability." Although reporting entities will need to continue to track the unrecognized items for amortization into net periodic cost (offset through unassigned funds), reporting entities shall not allocate the recognized surplus impact from transition to these categories. As noted in paragraph ~~103~~104.b.ii., the minimum amount of liability recognized under the deferral option must cover the annual amortization of the "unrecognized items" into net periodic benefit cost to prevent a surplus benefit.

~~105.~~106.The requirement to measure plan assets and benefit obligations as of the date of the reporting entity's financial statement year-end is effective for financial statement years beginning January 1, 2014. (The measurement date change will be initially reflected in the December 31, 2014, financial statements.)

~~106.~~107.In order to transition to a fiscal year-end measurement date, the reporting entity shall remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. The reporting entity shall use those new measurements to determine the effects of the measurement date change as of the beginning of the fiscal year that the measurement date provisions are applied.

~~107.~~108.The reporting entity shall measure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. This would result with the following:

a. Net periodic benefit cost for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied, exclusive of any curtailment or settlement gain or loss, shall be recognized, net of tax, as a separate adjustment of the opening balance of unassigned funds (surplus). That is, the pretax amount recognized as an adjustment to unassigned funds (surplus) is the net periodic benefit cost that without a change in measurement date otherwise would have been recognized on a delayed basis during the first interim period for the fiscal year that the measurement date provisions are applied.

b. Any gain or loss arising from a curtailment or settlement between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized in earnings in that period and not as an adjustment to unassigned funds (surplus). This provision prohibits a reporting entity from early application of the measurement date provisions when the reporting entity has issued financial statements for the prior year without recognition of such a settlement or curtailment.

c. Other changes in the fair value of plan assets and the benefit obligations (for example, gains or losses) for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized, net of tax, as a separate adjustment of the opening balance of unassigned funds (surplus) for the fiscal year that the measurement date provisions are applied.

~~108.~~109.Earlier application of the recognition or measurement date provisions is encouraged, however, early applications must be for all of the reporting entity's benefit plans. If early application is elected, the transition date shall reflect the January 1st of the year in which this standard is initially applied. Retrospective application is not permitted.

APPENDIX A – LOW INCOME HOUSING TAX CREDIT PROPERTY INVESTMENTS **8**

This page intentionally left blank.

Accounting for Low Income Housing Tax Credit Property Investments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investments in federal and certain state sponsored Low Income Housing Tax Credit (LIHTC) properties. State sponsored LIHTC programs that have the following characteristics are within the scope of and shall be accounted for in accordance with this statement:

a. The program is based upon Internal Revenue Code (IRC) section 42.

b. The investment requires an ongoing interest in a partnership, limited liability company, or similar pass thru type entity and cannot be transferred apart from this interest.

c. Resale value of the investment is not based upon the fair value of the underlying real estate.

d. Fair value of the investment is directly tied to the remaining stream of tax credits and deductible losses available to investors.

e. The critical element of value is known with a high degree of certainty before being marketed to investors.

f. The proportional amortized cost method is more indicative of liquidation value than the equity method.

State sponsored LIHTC programs requiring ownership in a partnership or limited liability company that do not have the foregoing characteristics shall continue to be accounted for in accordance with the requirements of *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48).

2. Some states have enacted laws that create programs by which transferable state tax credits are granted to entities under certain specified conditions (e.g., an entity makes an investment in a particular industry). Investments in transferable state tax credits are not within the scope of this statement.

SUMMARY CONCLUSION

3. *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48) prescribes accounting treatment for the valuation of partnerships and limited liability companies. Investments in certain state Low Income Housing Credits Investments that do not fall within the scope of this statement (SSAP No. 93) are covered by the requirements of SSAP No. 48.

4. LIHTC investments held by reporting entities meet the definition of an asset as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admissible assets to the extent that they comply with the requirements of this statement.

5. Resale valuation of these investments is based on the present value of the future stream of tax credits and deductible losses, and not the fair value of the underlying real estate.

6. Generally accepted accounting principles (GAAP) guidance for LIHTC investments is addressed in *Emerging Issues Task Force No. 94-1: Accounting for Tax Benefits Resulting from Investments in Affordable Housing Projects* (EITF 94-1). EITF 94-1 is listed as not applicable to statutory accounting in *Issue Paper No. 99—Nonapplicable GAAP Pronouncements* (Issue Paper No. 99). This statement modifies Issue Paper No. 99 to remove the reference to EITF 94-1 and adopts EITF 94-1 with modifications described in paragraph 8.

7. Structurally, these investments are typically owned by multiple investors with varying interests in a top tier limited partnership, which holds direct interests in the operating limited partnerships within a single LIHTC investment fund. In other words, a single investor may hold a 15% interest in the "fund" level partnership, which owns 99% interests in 10 operating level limited partnerships. Although, not technically guaranteed as contemplated in EITF 94-1, the risks related to LIHTC investments have proven to be historically low.

8. The modifications to EITF 94-1 are as follows:

a. State Low Income Housing Tax Credit property investments, which comply with the requirements of paragraph 1 of this statement are included and will receive the accounting treatment prescribed by this statement.

b. LIHTC investments (regardless of whether they are guaranteed) shall be initially recorded at cost and carried at amortized cost unless considered impaired as discussed in paragraphs 12-15 of this statement. The amortized cost method utilized shall be similar to the amortized cost method discussed in EITF 94-1 with a modification to include tax benefits during the holding period because the primary value of the LIHTC is derived during the property holding period (typically 15 years or less). An illustration has been provided in Appendix A to this statement. A reporting entity investor using the cost method shall amortize any excess of the carrying amount of the investment over its estimated residual value during the periods in which tax benefits are allocated to the investor. The estimated residual value used in determining the amount to be amortized is the estimated residual value at the end of the last period in which tax benefits are allocated to the investor and should not reflect anticipated inflation. Annual amortization should be based on the proportion of tax benefits received in the current year to total estimated tax benefits to be allocated to the investor.

c. Federal tax credits shall be recognized in the income statement as an offset to federal taxes in the tax reporting year in which the tax credit is utilized in accordance with *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10* (SSAP No. 101). State tax credits shall be recognized in the income statement as an offset to state premium tax or state income tax, whichever is applicable, in the tax reporting year in which the credit is utilized.

d. Tax benefits received, other than tax credits, shall be accounted for pursuant to SSAP No. 101. Amortization shall be reported as a component of net investment income.

e. *AICPA Statement of Position 78-9, Accounting for Investments in Real Estate Ventures* (SOP 78-9) is rejected for purposes of statutory accounting in SSAP No. 48. This statement does not intend to establish SOP 78-9 as applicable to statutory accounting.

f. *FASB Interpretation No. 46, Consolidation of Variable Interest Entities* is (FIN 46) rejected for purposes of statutory accounting in *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). This statement does not intend to establish FIN 46 as applicable to statutory accounting.

g. Many LIHTC investments require future equity contributions by the investor (equity contributions), that may be contingent on a variety of conditions, such as receiving representations, contract performance, meeting occupancy requirements, etc. If the commitment by the investor to provide equity contributions meets the definition of a liability as defined in *SSAP No. 5R—Liabilities Contingencies and Impairments of Assets* a liability shall be recorded. If the commitment to provide equity contributions does not meet the definition of a liability, the contingent commitment shall be disclosed in the notes to the financial statements with other contingent commitments.

h. *EITF 85-16: Leveraged Leases* (EITF 85-16) is adopted for purposes of statutory accounting in *SSAP No. 22—Leases* (SSAP No. 22). This statement does not intend to readdress the conclusions reached in SSAP No. 22.

i. *SSAP No. 97—Investments in Subsidiary, Controlled, and Affiliated Entities, a Replacement of SSAP No. 88* (SSAP No. 97) should be utilized to account for investments that qualify as subsidiary, controlled or affiliated entities.

j. The impairment guidance contained in this statement shall be followed.

k. For statutory accounting purposes, deferred taxes are not reported as a component of income from continuing operations in the income statement; rather deferred taxes are recognized as a separate component of gains and losses in unassigned funds (surplus).

9. Additional funding that does not result in additional tax credits for the reporting entity (investor) shall be expensed as a component of net investment income. In the event a reporting entity obtains additional tax credits for a LIHTC investment, the following shall be applied:

a. If additional tax credits are allocated without additional funding, the additional tax credits shall not be afforded any value; rather, the tax benefit is only recognized when realized.

b. If additional funding directly related to the additional tax credits is required, the provisions of this statement shall be followed as if the additional funding were a new investment in LIHTC property.

10. An investment amortized to residual value in accordance with paragraph 8.b. of this statement shall not be revalued under any other method during or subsequent to the amortization period, other than as discussed in this statement.

11. Changes in estimated losses shall be accounted for in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* as a change in estimate and included as a component of net investment income.

Impairment

12. Reporting entities with investments in LIHTC properties shall complete and document an impairment analysis at each reporting period. If it is determined that an impairment exists, the book value of the LIHTC investment shall be compared to the present value of future tax benefits discounted at a risk free rate of return, i.e., the rate on U.S. Treasury obligations of a similar duration, and the investment shall be written-down if the book value is higher. This will result in a new cost basis and the amount of the write-down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in fair value.

13. Among other things, an other-than-temporary impairment (INT 06-07) shall be considered to have occurred if it is probable that future tax benefits will not be received as expected. For example, for LIHTC properties based on state tax credits, if the reporting entity intends to decrease premium volume in that state, it may affect whether or not the tax credits in that state are realizable. The best available information about market share or premiums by state and premiums by line of business generally should be used to estimate the amount of future tax credits that are realizable. For purposes of determining impairment, future tax benefits consist of both estimated tax losses and anticipated tax credits. Loan default or a reasonable probability of credit recapture would signify that tax benefits would not be received as expected.

14. In a multi-tiered partnership, whereby one limited partnership exists only to hold interests in other limited partnerships that are each invested in different developments, the impairment should be determined at the lowest tier. The partnership that holds the assets in which the impairment is determined to exist will be adjusted to a new cost basis representing the lower of book value or the present value of future tax benefits discounted at a risk free rate of interest. This new cost basis and related realized loss shall be recognized by the holder of a LIHTC investment.

15. It should be noted that a foreclosure of a single property within an LIHTC investment fund only affects the loss of tax credits on a proportional basis. For example, a foreclosure of one property in a six property fund generating equal levels of credits would only eliminate 1/6 of the credits, thereby, only affecting 1/6 of the LIHTC investment fund value to the individual investors.

Audited Financial Statements

16. The reporting entity's return and book value of an LIHTC investment is reliant upon maintaining tax credit eligibility and not its share of the equity as reported on a financial statement. As such, a reporting entity shall monitor the tax credit eligibility of an LIHTC investment through requiring either audited GAAP or audited tax basis financial statements. In the event an audited GAAP or audited tax basis financial statement is not obtained, the asset shall be nonadmitted.

Disclosures

17. Disclose the number of remaining years of unexpired tax credits and the required holding period for the LIHTC investments.

18. Disclose if the LIHTC property is currently subject to any regulatory reviews and the status of such review. (Example investigations by the housing authority.)

19. Any commitment or contingent commitment (e.g., guarantees or commitments to provide additional capital contributions) including the amount of equity contributions that are contingent commitments related to LIHTC properties investments and the year(s) that contingent commitments are expected to be paid shall be disclosed.

20. The significance of an investment to the reporting entity's financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investment in a LIHTC. If in the aggregate the LIHTC investments exceed 10% of the total admitted assets of the reporting entity the following disclosures shall be made:

a. (i) The name of each partnership or limited liability company and percentage of ownership, (ii) the accounting policies of the reporting entity with respect to investments in partnerships and limited liability companies (iii) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., nonadmitted goodwill or other nonadmitted assets) and (iv) the accounting treatment of the difference;

b. For partnerships, and limited liability companies for which a quoted fair value is available, the aggregate value of each partnership, or limited liability company investment based on the quoted fair value; and

c. Summarized information as to assets, liabilities, and results of operations for partnerships, and limited liability companies either individually or in groups.

21. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write-down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment; and

b. The amount of the impairment and how fair value was determined.

22. Disclose the amount and nature of the write-downs or reclassifications made during the year due to the forfeiture or ineligibility of tax credits, etc. These write-downs may be based on actual property level foreclosure, loss of qualification due to occupancy levels, compliance issues with tax code provisions within an LIHTC investment or other issues.

23. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

24. This statement reinstates *EITF 94-1: Accounting for Tax Benefits from Investments in Affordable Housing Projects* as applicable to Statutory Accounting by removing it from *Issue Paper No. 99—Nonapplicable GAAP Pronouncements* (Issue Paper No. 99). This statement modifies Issue Paper No. 99 to remove the reference to EITF 94-1 and adopts EITF 94-1 with modifications described in paragraph 8 of this statement.

25. *AICPA Statement of Position 78-9, Accounting for Investments in Real Estate Ventures* (SOP 78-9) is rejected for purposes of statutory accounting in SSAP No. 48. This statement does not intend to establish SOP 78-9 as applicable to statutory accounting.

26. *FASB Interpretation No. 46, Consolidation of Variable Interest Entities* (FIN 46) is rejected for purposes of statutory accounting in SSAP No. 3. This statement does not intend to establish FIN 46 as applicable to statutory accounting.

27. *EITF 85-16: Leveraged Leases* (EITF 85-16) is adopted for purposes of statutory accounting in SSAP No. 22. This statement does not intend to readdress the conclusions reached in SSAP No. 22.

Effective Date and Transition

28. This statement is effective for reporting periods beginning on or after January 1, 2006. Early adoption is permitted. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. The guidance previously in paragraph 3 of this SSAP superseded paragraph 1 of SSAP No. 48. In 2011, this guidance was moved to *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* and deleted from this SSAP. The original guidance included in this standard is retained for historical purposes in Issue Paper No. 125.

APPENDIX A – LOW INCOME HOUSING TAX CREDIT PROPERTY INVESTMENTS

A Limited Partnership Investment in an Affordable Housing Project Accounted for Using the Amortized Cost Method (modified to include tax benefits):

This appendix is based on EITF 94-1 "Schedule 3 Cost Method with Amortization" with modifications to include tax benefits.

Terms:
Date of Investment: January 1, 20X1
Purchase Price of Investment: $100,000

Assumptions:

1. All cash flows (except initial investment) occur at the end of each year.

2. Depreciation expense is computed, for book and tax purposes, using the straight-line method with a 27.5 year life (the same method is used for simplicity).

3. The investor made a $100,000 investment for a 5 percent limited partnership interest in the project at the beginning of the first year of eligibility for the tax credit.

4. The partnership finances the project cost of $4,000,000 with 50 percent equity and 50 percent debt.

5. The annual tax credit allocation (equal to 8 percent of the project's original cost) will be received for a period of 10 years.

6. The investor's tax rate is 35 percent.

7. For simplicity, the project will operate with break-even pretax cash flows including debt service during the first 15 years of operations.

8. The project's taxable and book loss will be equal to depreciation expense.

9. The investor will maintain the investment for 15 years (so there will be no recapture of tax credits).

10. The investor expects that the estimated residual value of the investment will be zero.

	Beginning Investment Balance	Tax Credits	Tax Depreciation	Tax Loss Benefit	Total Tax Benefits	Amortization	Ending Investment Balance
Year	1	2	3	4	5	6	7
0							100,000
1	100,000	16,000	7,273	2,546	18,546	9,358	90,642
2	90,642	16,000	7,273	2,546	18,546	9,358	81,285
3	81,285	16,000	7,273	2,546	18,546	9,358	71,927
4	71,927	16,000	7,273	2,546	18,546	9,358	62,569
5	62,569	16,000	7,273	2,546	18,546	9,358	53,212
6	53,212	16,000	7,273	2,546	18,546	9,358	43,854
7	43,854	16,000	7,273	2,546	18,546	9,358	34,496
8	34,496	16,000	7,273	2,546	18,546	9,358	25,139
9	25,139	16,000	7,273	2,546	18,546	9,358	15,781
10	15,781	16,000	7,273	2,546	18,546	9,358	6,423
11	6,423		7,273	2,546	2,546	1,285	5,139
12	5,139		7,273	2,546	2,546	1,285	3,854
13	3,854		7,273	2,546	2,546	1,285	2,569
14	2,569		7,273	2,546	2,546	1,285	1,285
15	1,285		7,273	2,546	2,546	1,285	-
Total		160,000	109,095	38,190	198,190	100,000	

1. Beginning-of-year investment for a 5 percent limited partnership interest in the project.

2. Eight percent tax credit on $200,000 tax basis of the underlying assets.

3. Tax Loss = Tax Depreciation (assumption 7) - $200,000 tax basis of the underlying assets using the straight-line method over 27.5 years.

4. Column (3) × 35% tax rate).

5. Column (2) + column (4)

6. Proportional amortization - $100,000 x column 5 / column 5 total

7. Beginning-of-year investment for a 5 percent limited partnership interest in the project (column 1) net of amortization in column 6.

APPENDIX A – ACCOUNTING FOR TRANSFERABLE STATE TAX CREDITS **6**

APPENDIX B – ACCOUNTING FOR NON-TRANSFERABLE STATE TAX CREDITS **7**

This page intentionally left blank.

Accounting for Transferable and Non-Transferable State Tax Credits

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for transferable and non-transferable state tax credits that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

2. Investments in Low Income Housing Tax Credits as discussed in *SSAP No. 93—Accounting for Low Income Housing Tax Credit Property Investments*, which involve an investment by a reporting entity in a limited liability company or similar entity that earns tax credits as a consequence of its operating activities involving low income housing developments and passes those tax credits to its investors, are not within the scope of this statement.

3. Investments in a CAPCO (Certified Capital Company), organized as a partnership or an LLC, which is a company, authorized by state statute that borrows from investors (insurance companies), in order to make venture capital investments in "qualified" businesses, are not within the scope of this statement. Although associated with tax credits, the insurance company is paid principal and interest on its investment with the CAPCO. Depending upon the terms of the CAPCO offering, principal and interest payments to the insurance company will come from the CAPCO and/or the state. The CAPCO will make cash payments directly to the insurance company while the state will make payments in the form of premium or income tax credits.

SUMMARY CONCLUSION

4. The criteria in paragraphs 5 and 6 are for transferable state tax credits (i.e., credits which may be sold or assigned). The criteria in paragraphs 7 and 8 are for non-transferable state tax credits (i.e., those which cannot be sold or assigned to other parties).

Transferable State Tax Credits

5. Some states have enacted laws that create programs by which transferable state tax credits are granted to entities under certain specified conditions (e.g., an entity makes an investment in a particular industry). The terms of these state tax credits vary from state to state and, within a state, from program to program. However, many of these transferable state tax credit programs share the following four characteristics:

a. The tax credit is nonrefundable;

b. The holder of the transferable state tax credit may sell or otherwise transfer the transferable state tax credit to another entity, which can likewise resell or transfer the credit;

c. The transferable state tax credit will expire if not used by a predetermined date; and

d. The transferable state tax credit can be applied against either state income tax or state premium tax.

6. For purposes of this statement, such programs will be referred to as "transferable state tax credits." The criteria in paragraphs 5.b., 5.c. and 5.d. must be present in order for the transferable state tax credit to receive the accounting treatment described in this statement. When a reporting entity purchases a transferable state tax credit from another entity, the transaction does not result in a continuing investment in a business entity (i.e. limited partnership).

Non-Transferable State Tax Credits

7. If the original or subsequent holder of the transferable tax credit is not able to transfer the tax credit, then the admissibility criteria in paragraph 8 for non-transferable tax credits apply. These non-transferable state tax credits share the following characteristics:

a. The tax credit is nonrefundable;

b. The successive holder of a state tax credit must redeem the credit by April 15 of the subsequent year to the entity's acquisition of the state tax credit and is not permitted to carry-over, carry-back, obtain a refund, sell or assign the credit;

c. The non-transferable state tax credit will expire if not used by the predetermined date; and

d. The non-transferable state tax credit can be applied against either state income tax or state premium tax.

8. The criteria in paragraphs 7.b., 7.c. and 7.d. must be present in order for the non-transferable state tax credit to receive the accounting treatment described in this statement.

9. Transferable and non-transferable state tax credits as defined within this SSAP held by reporting entities meet the definition of assets as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admissible assets to the extent that they comply with the requirements of this statement. If the criteria in paragraphs 6 or 8 are not met, the tax credits are nonadmitted.

Acquisition

10. Transferable and non-transferable state tax credits are recorded at cost at the date of acquisition.

Balance Sheet Treatment

11. Transferable and non-transferable state tax credits expected to be realized are initially recorded at cost.

12. Transferable and non-transferable state tax credits shall be established gross of any related state tax liabilities and reported in the category of other-than-invested assets (not reported net).

13. As transferable and non-transferable state tax credits are redeemed, the carrying value of the tax credits is reduced dollar for dollar by the amount of state tax credits applied toward the reporting entity's applicable state tax liability.

Income Statement Treatment

14. Gains on transferable and non-transferable state tax credits are deferred until the value of the state tax credits utilized exceeds the cost of the state tax credits or until the state tax credits are sold to other entities and the payment received is greater than the book value.

15. Losses on transferable and non-transferable state tax credits are recognized when known.

16. Gains and losses on transferable and non-transferable state tax credits are reflected in other income.

Impairment

17. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the transferable or non-transferable state tax credits. State tax credits should be evaluated for impairment at each reporting date.

18. When there is a decline in the realizability of a transferable or non-transferable state tax credit owned by the reporting entity that is other than temporary, the asset shall be written down to the expected realizable amount and the amount of the write down shall be accounted for as a realized loss. The expected realizable value is the new cost basis.

19. The new cost basis shall not be changed for subsequent recoveries in realizability.

Disclosures

20. The following disclosures shall be made in the financial statements. For purposes of this disclosure, total unused transferable and non-transferable state tax credits represent the entire transferable and non-transferable state tax credits available:

a. Carrying value of transferable and non-transferable state tax credits gross of any related state tax liabilities by state and in total,

b. Total unused transferable and non-transferable state tax credits by state;

c. Method of estimating utilization of remaining transferable and non-transferable state tax credits or other projected recovery of the current carrying value.

d. Impairment amount recognized in the reporting period, if any.

e. Identify state tax credits by transferable and non-transferable classifications, and identify the admitted and Nonadmitted portions of each classification.

Effective Date and Transition

21. This statement is effective for reporting periods ending on or after December 31, 2006. Early adoption is permitted. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. Substantive revisions to 1) revising the title; 2) incorporating the criteria for non-transferable state tax credits as described in paragraphs 7 and 8; 3) adding a disclosure; and 4) updating terminology throughout the document as appropriate, are effective for reporting periods ending on or after December 31, 2011.

- *Issue Paper No. 145—Accounting for Transferable and Non-Transferable State Tax Credits*

APPENDIX A – ACCOUNTING FOR TRANSFERABLE STATE TAX CREDITS

On 1/1/X1 SAM Insurance Company purchased transferable state tax credits for a cost of $100,000. The transferable state tax credits are redeemable for $160,000 and expire at the end of 12/31/X4. SAM initially expects to utilize the tax credits before expiration in their state of domicile in the amount of $40,000 per year. In year X4, SAM sells the remaining $30,000 in transferable state tax credits for $20,000

1/1/x1	Transferable state tax credits	100,000	
	Cash		100,000
	To record the purchase of the tax credits		
6/30/x1	Premium tax expense	40,000	
	Premium taxes payable to domiciliary state		40,000
	To record premium tax expense and accrue the liability in Year 1.		
10/1/x1	Premium tax payable	40,000	
	Transferable state tax credits		40,000
	To record the use of tax credits in Year 1. The reporting entity expects to be able to utilize remaining tax credits before expiration.		
6/30/x2	Premium tax expense	60,000	
	Premium taxes payable to domiciliary state		60,000
	To record premium tax expense and accrue the liability in Year 2.		
9/30/x2	Premium tax payable	60,000	
	Transferable state tax credits		60,000
	To record the use of taxes credits in Year 2. The reporting entity expects to be able to utilize remaining tax credits before expiration.		
6/30/x3	Premium tax expense	30,000	
	Premium taxes payable to domiciliary state		30,000
	To record premium tax expense and accrue the liability in Year 3.		
9/30/x3	Premium tax payable	30,000	
	Other income		30,000
	To record the use of premium tax credits in excess of cost and recognize a gain on premium tax credits in other income. The Company intends to sell the remaining tax credits in year 4.		
6/30/x4	Cash	20,000	
	Other income		20,000
	To record the sale of the remaining tax credits.		

APPENDIX B – ACCOUNTING FOR NON-TRANSFERABLE STATE TAX CREDITS

On 7/1/X1 LJW Insurance Company purchased non-transferable state tax credits for a cost of $100,000. The state tax credits are redeemable for $110,000, are not transferable and expire on, April 15, 20x2. LJW expects to utilize the tax credits before expiration in their state of domicile in the amount of $110,000.

7/1/x1	State tax credits	100,000	
	Cash		100,000
	To record the purchase of the tax credits		
9/30/x1	Premium tax expense	200,000	
	Premium taxes payable to domiciliary state		200,000
	To record premium tax expense and accrue the liability.		
3/15/x2	Premium tax payable	110,000	
	Other Income		10,000
	State tax credits		100,000
	To record the use of premium tax credits in excess of cost and recognize a gain on premium tax credits in other income. (The additional $90,000 of premium taxes payable would still be due.)

Exchange of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions

SCOPE OF STATEMENT

1. The statement establishes statutory accounting principles for nonmonetary transactions. Specific statutory requirements for certain types of nonmonetary transactions are addressed in other statements.

2. This statement supersedes the conclusions reached in *SSAP No. 28—Nonmonetary Transactions* (SSAP No. 28) by updating conclusions reached in SSAP No. 28 related to APB 29 with those included in FAS 153. Consequently, this statement adopts with modification FAS 153 to change GAAP references to those applicable to statutory accounting. In addition, references made to APB 29 within SSAP No. 28 will be replaced with the actual amended guidance resulting from FAS 153.

SUMMARY CONCLUSION

Definitions

3. The definitions of certain terms used in this statement are:

   a. Monetary assets and liabilities are assets and liabilities whose amounts are fixed in terms of units of currency by contract or otherwise. Examples are cash; amounts due from agents, brokers, and intermediaries; policy loans; accounts payable; and other amounts receivable or payable in cash;

   b. Nonmonetary assets and liabilities are assets and liabilities other than monetary ones. Examples are common stocks; furniture, fixtures, and equipment; real estate and liabilities for rent collected in advance;

   c. Exchange (or exchange transaction) is a reciprocal transfer between a reporting entity and another entity that results in the reporting entity acquiring assets or services or satisfying liabilities by surrendering other assets or services or incurring other obligations. A reciprocal transfer of a nonmonetary asset shall be deemed an exchange only if the transferor has no substantial continuing involvement in the transferred asset such that the usual risks and rewards of ownership of the asset are transferred.

   d. Nonreciprocal transfer is a transfer of assets or services in one direction, either from a reporting entity to its owners (whether or not in exchange for their ownership interests) or another entity, or from owners or another entity, to the reporting entity. An insurance company's reacquisition of its outstanding stock is an example of a nonreciprocal transfer.

4. Nonmonetary transactions shall be accounted for in accordance with this statement, except as addressed by other statements or interpretations including but not limited to *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12), *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25), *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68), *SSAP No. 72—Surplus and Quasi-Reorganizations* (SSAP No. 72), *SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 103), *SSAP No. 104R—Share-Based Payments* (SSAP No. 104R), and *INT 00-26: EITF 98-3: Determining Whether a Nonmonetary Transactions Involves Receipt of Productive Assets or of a Business* (INT 00-26).

Basic Principle

5. Accounting for nonmonetary transactions shall generally be based on the fair values of the assets (or services) involved, as defined in paragraph 13, which is the same basis as that used in monetary transactions. Thus, the cost of a nonmonetary asset acquired in exchange for another nonmonetary asset (reciprocal transactions) is the fair value of the asset surrendered to obtain it, and a gain or loss should be recognized on the exchange. The fair value of the asset received should be used to measure the cost if it is more clearly evident than the fair value of the asset surrendered. Similarly, a nonmonetary asset received in a nonreciprocal transfer should be recorded at the fair value of the asset received as defined in paragraph 6. A transfer of a nonmonetary asset to a stockholder or to another entity in a nonreciprocal transfer should be recorded at the fair value of the asset transferred, and a gain or loss should be recognized on the disposition of the asset. The fair value of a reporting entity's own stock reacquired may be a more clearly evident measure of the fair value of the asset distributed in a nonreciprocal transfer if the transaction involves distribution of a nonmonetary asset to eliminate a disproportionate part of owners' interests (that is, to acquire stock for the treasury or for retirement).

6. Fair value of assets received or transferred in a nonreciprocal transfer shall be measured based on statutory accounting principles for the type of asset transferred. Accordingly, the value shall be determined in accordance with *SSAP No. 26—Bonds, Excluding Loan-Backed and Structured Securities* (SSAP No. 26), *SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)* (SSAP No. 30), *SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities)* (SSAP No. 32), SSAP No. 37*—Mortgage Loans* (SSAP No. 37), *SSAP No. 39—Reverse Mortgages* (SSAP No. 39), *SSAP No. 40R—Real Estate Investments* (SSAP No. 40R), *SSAP No. 43R—Loan-Backed and Structured Securities* (SSAP No. 43R), *SSAP No. 90—Accounting for the impairment or Disposal or Real Estate Investments* (SSAP No. 90) or other applicable statements. The guidance provided in SSAP No. 25 shall be followed in accounting for nonreciprocal transactions with affiliates and other related parties as defined in that statement.

Modifications of the Basic Principle

7. A nonmonetary exchange shall be measured based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) of the nonmonetary asset(s) relinquished, and not on the fair values of the exchanged assets, if any of the following conditions apply:

a. *Fair Value Not Determinable*. The fair value of neither the asset(s) received nor the asset(s) relinquished is determinable within reasonable limits (paragraph 14)

b. *Exchange Transaction to Facilitate Sales to Customers*. The transaction is an exchange of a product or property held for sale in the ordinary course of business for a product or property to be sold in the same line of business to facilitate sales to customers other than the parties to the exchange.

c. *Exchange Transaction That Lacks Commercial Substance*. The transaction lacks commercial substance (paragraph 8)

Commercial Substance

8. A nonmonetary exchange has commercial substance if the entity's future cash flows are expected to significantly change as a result of the exchange. The entity's future cash flows are expected to significantly change if either of the following criteria is met:

a. The configuration (risk, timing, and amount)[1] of the future cash flows of the asset(s) received differs significantly from the configuration of the future cash flows of the asset(s) transferred.

b. The entity-specific value[2] of the asset(s) received differs from the entity-specific value of the asset(s) transferred, and the difference is significant in relation to the fair values of the assets exchanged.

A qualitative assessment will, in some cases, be conclusive in determining that the estimated cash flows of the entity are expected to significantly change as a result of the exchange.

9. In the United States and some other tax jurisdictions, a transaction is not given effect for tax purposes unless it serves a legitimate business purpose other than tax avoidance. In assessing the commercial substance of an exchange, tax cash flows that arise solely because the tax business purpose is based on achieving a specified financial reporting result shall not be considered.

Additional Guidance

10. Stock received in the form of a stock dividend or stock split shall not result in the recognition of income. The cost basis of stock held shall be reallocated ratably to the total shares held after receipt of the stock dividend or stock split.

11. The exchanges of nonmonetary assets that would otherwise be based on recorded amounts (paragraphs 7 and 8) may include an amount of monetary consideration. The recipient of the monetary consideration has realized gain on the exchange to the extent that the amount of the monetary receipt exceeds a proportionate share of the recorded amount of the asset surrendered. The portion of the cost applicable to the realized amount should be based on the ratio of the monetary consideration to the total consideration received (monetary consideration plus the estimated fair value of the nonmonetary asset received) or, if more clearly evident, the fair value of the nonmonetary asset transferred. However, the entity paying the monetary consideration should not recognize any gain on a transaction covered in paragraphs 7 and 8, but should record the asset received at the amount of the monetary consideration paid plus the recorded amount of the nonmonetary asset surrendered. If a loss is indicated by the terms of a transaction described in this paragraph or in paragraphs 7 and 8, the entire indicated loss on the exchange should be recognized.

12. *Nonreciprocal Transfers to Owners*. Accounting for the distribution of nonmonetary assets to owners of an enterprise in a spin-off (INT 06-13 and INT 08-05) or other form of reorganization or liquidation or in a plan that is in substance the rescission of a prior business combination should be based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) (An indicated impairment of value of a long-lived asset covered by SSAP No. 90 shall be determined in accordance with paragraph 4 of SSAP No. 90) of the nonmonetary assets distributed. A pro rata distribution to owners of an enterprise of shares of a subsidiary or other investee company that has been or is being controlled or that has been or is being accounted for under the equity method is to be considered to be equivalent to a spin-off. Other nonreciprocal transfers of nonmonetary assets to owners should be accounted for at fair value if the fair

[1] The configuration of future cash flows is composed of the risk, timing, and amount of the cash flows. A change in any one of those elements would be a change in configuration.

[2] An entity-specific value (referred to as an entity-specific measurement in Concepts Statement 7) is different from a fair value measurement. As described in paragraph 24.b. of Concepts Statement 7, an entity-specific value attempts to capture the value of an asset or liability in the context of a particular entity. For example, an entity computing an entity-specific value of an asset would use its expectations about its use of that asset rather than the use assumed by marketplace participants. If it is determined that the transaction has commercial substance, the exchange would be measured at fair value, rather than at the entity-specific value.

value of the nonmonetary asset distributed is objectively measurable and would be clearly realizable to the distributing entity in an outright sale at or near the time of the distribution

Applying the Basic Principle

13. Fair value of a nonmonetary asset transferred to or from a reporting entity in a nonmonetary transaction should be determined in accordance with *SSAP No. 100—Fair Value Measurements*. If one of the parties in a nonmonetary transaction could have elected to receive cash instead of the nonmonetary asset, the amount of cash that could have been received may be evidence of the fair value of the nonmonetary assets exchanged.

14. Fair value should be regarded as not determinable within reasonable limits if major uncertainties exist about the realizability of the value that would be assigned to an asset received in a nonmonetary transaction accounted for at fair value. An exchange involving parties with essentially opposing interests is not considered a prerequisite to determining a fair value of a nonmonetary asset transferred; nor does an exchange insure that a fair value for accounting purposes can be ascertained within reasonable limits. If neither the fair value of a nonmonetary asset transferred nor the fair value of a nonmonetary asset received in exchange is determinable within reasonable limits, the book adjusted carrying value of the nonmonetary asset transferred from the enterprise may be the only available measure of the transaction.

15. A difference between the amount of gain or loss recognized for tax purposes and that recognized for accounting purposes may constitute a temporary difference to be accounted for according to *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10*.

16. Involuntary conversions of nonmonetary assets to monetary assets (for example, as a result of total or partial destruction, theft, seizure, or condemnation) are monetary transactions for which gain or loss shall be recognized even though a reporting entity reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets. In some cases, a nonmonetary asset may be destroyed or damaged in one accounting period, and the amount of monetary assets to be received is not determinable until a subsequent accounting period. In those cases, gain or loss shall be recognized in accordance with the conclusions in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R). Gain or loss resulting from an involuntary conversion of a nonmonetary asset to monetary assets shall be reported consistently with the reporting entity's reporting of continuing operations and disclosed in the notes to financial statements in accordance with *SSAP No. 24—Discontinued Operations and Extraordinary Items* (SSAP No. 24).

Accounting for a Convertible Instrument Granted or Issued to a Nonemployee for Goods or Services or a Combination of Goods or Services and Cash

17. If a convertible instrument is issued in exchange for goods or services, the measurement date should be used both to measure the fair value of the convertible instrument and to measure the intrinsic value, if any, of the conversion option. The measurement date is the earlier of either of the following:

a. The date at which a commitment for performance by the counter party to earn the convertible instrument is reached (a “performance commitment”)

b. The date at which the counter party’s performance is complete

18. If a convertible instrument is issued in exchange for goods or services (or a combination of goods or services and cash), the following guidelines shall be used to measure the fair value of that instrument:

a. Consistent with this SSAP, the fair value of an equity instrument shall be determined based on either the fair value of the consideration received or the fair value of the equity instruments issued, whichever is more reliably measurable. Accordingly, if the fair value of the goods or services received is reliably determinable, and the issuer has not recently issued similar convertible instruments, the fair value of the goods or services should be used to measure the transaction.

b. Recent issuances of similar convertible instruments for cash to parties that only have an investor relationship with the issuer may provide the best evidence of fair value of the convertible instrument.

c. If reliable information about (a) or (b), above, is not available, the fair value of the convertible instrument should be deemed to be no less than the fair value of the equity shares into which it can be converted.

19. Whether distributions paid or payable on a convertible instrument issued or granted in exchange for goods or services (or a combination of goods or services and cash) should be recognized as a financing cost (that is, interest expense or dividends) or as a cost of the goods or services received or receivable from the counterparty.

20. Once an instrument is considered "issued" for accounting purposes, distributions paid or payable should be characterized as financing costs. Prior to that time, distributions paid or payable under the instrument should be characterized as a cost of the underlying goods or services. the accretion of a discount on a convertible instrument resulting from a beneficial conversion option does not begin until the instrument is issued for accounting purposes.

21. In cases where a company issues a convertible instrument for cash proceeds that indicate that the instrument includes a beneficial conversion option, and the purchaser of the instrument provides (receives) goods or services to (from) the issuer that are the subject of a separate contract, the terms of both the agreement for goods or services and the convertible instrument should be evaluated to determine whether their separately stated pricing is equal to the fair value of the goods or services and convertible instrument. If that is not the case, the terms of the respective transactions should be adjusted. The convertible instrument should be recognized at its fair value with a corresponding increase or decrease in the purchase or sales price of the goods or services. If an instrument issued to a goods or services provider (or purchaser) is part of a larger issuance, a substantive investment in the issuance by unrelated investors (who are not also providers or purchasers of goods or services) may provide evidence that the price charged to the goods or services provider represents the fair value of the convertible instrument.

Disclosures

22. A reporting entity that engages in a nonmonetary transaction during a period shall disclose the following in the financial statements:

a. The nature of the transaction;

b. The basis of accounting for the assets transferred; and

c. Gains or losses recognized on transfers.

23. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure in paragraph 22 shall be included in the annual audited statutory financial reports only.

24. Entities shall disclose the amount of revenue and expense recognized from advertising barter transactions for each income statement period presented. In addition, if an entity engages in advertising barter transactions for which the fair value is not determinable within the limits of this Issue, information regarding the volume and type of advertising surrendered and received (such as the number of equivalent

pages, the number of minutes, or the overall percentage of advertising volume) shall be disclosed for each income statement period presented.

Relevant Literature

25. Although not meant to be all inclusive, accounting for specific nonmonetary transactions and unique circumstances is addressed in the following statements of statutory accounting principles:

- *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12),
- *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25),
- *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68),
- *SSAP No. 72—Surplus and Quasi-Reorganizations* (SSAP No. 72),
- *SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 103),
- *SSAP No. 104R—Share-Based Payments* (SSAP No. 104R),
- *INT 00-26: EITF 98-3: Determining Whether a Nonmonetary Transactions Involves Receipt of Productive Assets or of a Business (INT 00-26),*

26. This statement updates general statutory guidance for accounting for nonmonetary transactions not specifically addressed in the statements of statutory accounting principles noted above and carries forward current statutory guidance for stock dividends and stock splits received, other types of nonmonetary transactions and involuntary conversions of nonmonetary assets to monetary assets. The guidance in this statement remains consistent with the guidance provided in SSAP No. 30, which addresses cash dividends and requires that dividends on common stock be recorded as investment income when declared with a corresponding receivable to be extinguished upon receipt of cash. This statement carries forward the disclosure requirements related to nonmonetary transactions from SSAP No. 28.

27. This statement adopts *Accounting Principles Board Opinion No. 29, Accounting for Nonmonetary Transactions* (APB 29) as modified by *FASB No. 153: Exchanges of Nonmonetary Assets, an amendment of APB Opinion No. 29* (FAS 153).

28. This statement adopts FAS 153 with modifications for references to statements of statutory accounting principles.

29. This statement continues the adoption of *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins* (ARB 43), Chapter 7, Section B, *Stock Dividends and Stock Split-ups* paragraphs 1-9 as such relates to the receipt of stock in the form of a stock in the form of a stock dividend or stock split. This conclusion is consistent with the recognition concept included in the Statement of Concepts, which states, “Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed”.

30. This statement continues the adoption of *FASB Interpretation No. 30, Accounting for Involuntary Conversions of Nonmonetary Assets to Monetary Assets* (FIN 30) with modification to provide that gain or loss contingencies be recognized in accordance with the conclusion in SSAP No. 5R and that gain or loss resulting from an involuntary conversion of nonmonetary assets to monetary assets be accounted for in continuing operations and disclosed in accordance with SSAP No. 24.

31. This statement continues the adoption of *FASB Emerging Issues Task Force Issue No. 86-29: Nonmonetary Transactions: Magnitude of Boot and the Exceptions to the Use of Fair Value* (EITF 86-29) and *FASB Emerging Issues Task Force Issue No. 93-11: Accounting for Barter Transactions Involving Barter Credits* (EITF 93-11) consistent with the general rule discussed in paragraph 26. This statement also adopts with modification *FASB Emerging Issues Task Force Issue No. 99-17, Accounting for Advertising Barter Transactions*.

32. This statement continues the rejection of paragraph 16 of *Accounting Principles Board Opinion No. 6, Status of Accounting Research Bulletins* and *Emerging Issues Task Force No. 96-4, Accounting for Reorganizations Involving a Non-Pro Rata Split-off of Certain Nonmonetary Assets to Owners*.

Effective Date and Transition

33. The provisions of this statement shall be effective for nonmonetary asset exchanges occurring in fiscal periods beginning after January 1, 2007. Earlier application is permitted for nonmonetary asset exchanges occurring in fiscal periods beginning after the date this statement is issued. The provisions of this statement shall be applied prospectively. The guidance in paragraphs 18, 19 and 20 related to long-lived assets to be disposed of other than by sale was previously included within *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments* (SSAP No. 90). In 2012, the guidance from SSAP No. 95 was incorporated within SSAP No. 90, with those paragraphs in SSAP No. 95 being nullified. The original guidance included in this statement, as well as the original guidance adopted in SSAP No. 90 for long-lived assets to be disposed of other than by sale, are retained for historical purposes in Issue Paper No. 127.

34. This statement adopts the consensus positions of *EITF 01-1: Accounting for a Convertible Instrument Granted or Issued to a Nonemployee for Goods or Services or a Combination of Goods or Services and Cash* with certain modifications to incorporate guidance in EITF 96-18 regarding the measurement date. EITF 96-18 was previously rejected by the working group in *INT 99-13: EITF 96-18: Accounting for Equity Instruments That Are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods or Services* in the context of *SSAP No. 13—Stock Options and Stock Purchase Plans*; however, the measurement guidance included in Issue 1 of EITF 96-18 is adopted in this statement. The reference in paragraph 4 to *INT 03-16: Contribution of Stock*, was deleted as guidance was incorporated into SSAP No. 25 and SSAP No. 68. The guidance in paragraph 24 was originally contained within *INT 00-29: EITF 99-17: Accounting for Advertising Barter Transactions* and was effective June 12, 2000. The guidance in paragraphs 17-21 was originally contained within *INT 02-19: EITF 01-1: Accounting for a Convertible Instrument Granted or Issued to a Nonemployee for Goods or Services or a Combination of Goods or Services and Cash* and was effective December 8, 2002.

Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investments in subsidiaries, controlled and affiliated entities, hereinafter referred to as SCA entities.

2. This statement supersedes the conclusions reached in *SSAP No. 88—Investments in Subsidiary, Controlled, and Affiliated Entities* (SSAP No. 88).

SUMMARY CONCLUSION

Definitions

3. Parent and subsidiary are defined as follows:

a. Parent—An entity that directly or indirectly owns and controls the reporting entity;

b. Subsidiary—An entity that is, directly or indirectly, owned and controlled by the reporting entity.

4. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48). Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments.

5. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by common management, or (d) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

6. Control as defined in paragraph 5 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13% and therefore each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18.* The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.

b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.

c. An entity where the insurer has given up participating rights[1] as a shareholder to the investee.

7. Investments in SCA entities meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

Applying the Market Valuation, Audited Statutory Equity and Audited GAAP Equity Methods

8. The admitted investments in SCA entities shall be valued using either the market valuation approach (as described in paragraph 8.a.), or one of the equity methods (as described in paragraph 8.b.).

a. In order to use the market valuation approach for SCA entities, the following requirements apply:

i. The subsidiary must be traded on one of the following major exchanges: (1) the New York Stock Exchange, (2) the American Stock Exchange, (3) the NASDAQ National exchange, or (4) the Tokyo Stock Exchange;

ii. The reporting entity must submit subsidiary information to the Securities Valuation Office (SVO) for its calculation of the subsidiary's market value. Such calculation could result in further discounts in market value above the established base discounts based on ownership percentages detailed below;

iii. Ownership percentages for determining the discount rate shall be measured at the holding company level;

iv. If an investment in a SCA results in an ownership percentage between 10% and 50%, a base discount percentage between 0% and 20% on a sliding scale basis is required;

v. If an investment in a SCA results in an ownership percentage greater than 50% up to and including 80%, a base discount percentage between 20% and 30% on a sliding scale basis is required;

vi. If an investment in a SCA results in an ownership percentage greater than 80% up to and including 85%, a minimum base discount percentage of 30% is required.

vii. Further, the SCA must have at least two million shares outstanding, with a total market value of at least $50 million in the public's control; and

viii. Any ownership percentages exceeding 85% will result in the SCA being recorded on an equity method.

b. If a SCA investment does not meet the requirements for the market valuation approach in paragraph 8.a. or, if the requirements are met, but a reporting entity elects not to use that

[1] The term "participating rights" refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee's ordinary course of business and is distinguished from the more limited type of rights referred to as "protective rights". Refer to the sections entitled: "Protective Rights" and "Substantive Participating Rights" in EITF 96-16, *Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term "participating rights" shall be used consistent with the discussion of substantive participating rights in this EITF.

approach, the reporting entity's proportionate share of its investments in SCAs shall be recorded as follows:

i. Investments in U.S. insurance SCA entities shall be recorded based on the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68). Reporting entities shall record investments in U.S. insurance SCA entities on at least a quarterly basis, and shall base the investment value on the most recent quarterly information available from the SCA. Entities may recognize their investment in U.S. insurance SCA entities based on the unaudited statutory equity in the SCAs year-end Annual Statement if the annual SCA audited financial statements are not complete as of the filing deadline. The recorded statutory equity shall be adjusted for audit adjustments, if any, as soon as the annual audited financial statements have been completed. Annual consolidated or combined audits are allowed if completed in accordance with the Model Regulation Requiring Annual Audited Financial Reports as adopted by the SCA's domiciliary state;

ii. Investments in both U.S. and foreign noninsurance SCA entities that are engaged in the following transactions or activities:

(a) Collection of balances as described in *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*

(b) Sale/lease or rental of EDP Equipment and Software as described in *SSAP No. 16R—Electronic Data Processing Equipment and Accounting for Software*

(c) Sale/lease or rental of furniture, fixtures, equipment or leasehold improvements as described in *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*

(d) Loans to employees, agents, brokers, representatives of the reporting entity or SCA as described in *SSAP No. 20—Nonadmitted Assets*

(e) Sale/lease or rental of automobiles, airplanes and other vehicles as described in *SSAP No. 20—Nonadmitted Assets*

(f) Providing insurance services on behalf of the reporting entity including but not limited to accounting, actuarial, auditing, data processing, underwriting, collection of premiums, payment of claims and benefits, policyowner services

(g) Acting as an insurance or administrative agent or an agent for a government instrumentality performing an insurance function (e.g. processing of state workers compensations plans, managing assigned risk plans, Medicaid processing etc).

(h) Purchase or securitization of acquisition costs and if 20% or more of the SCA's revenue is generated from the reporting entity and its affiliates, then the underlying equity of the respective entity's audited U.S. Generally Accepted Accounting Principles (GAAP) financial statements shall be adjusted to a statutory basis of accounting in accordance with paragraph 9. For purposes of this section, revenue means GAAP revenue reported in the audited U.S. GAAP financial statements excluding realized and unrealized capital gains/losses. Foreign SCA entities are defined as those entities incorporated or otherwise legally formed under the laws of a foreign country. Paragraphs 21-26 provide guidance for investments in holding companies;

iii. Investments in both U.S. and foreign noninsurance SCA entities that do not qualify under paragraph 8.b.ii., shall be recorded based on the audited U.S. GAAP equity of the investee. Foreign SCA entities are defined as those entities incorporated or otherwise legally formed under the laws of a foreign country. Additional guidance on investments in downstream holding companies is included in paragraphs 21-26. Additional guidance on the use of audited foreign GAAP basis financial statements for the U.S. GAAP equity valuation amount is included in paragraph 22.b.

iv. Investments in foreign insurance SCA entities shall be recorded based on the underlying U.S. GAAP equity from the audited U.S. GAAP basis financial statements, if available, or the audited foreign statutory basis financial statements of the respective entity adjusted to a statutory basis of accounting in accordance with paragraph 9 and adjusted for reserves of the foreign insurance SCA with respect to the business it assumes directly and indirectly from a U.S. insurer using the statutory accounting principles promulgated by the NAIC in the *Accounting Practices and Procedures Manual*. The audited foreign statutory basis financial statements must include an audited footnote that reconciles net income and equity on the foreign statutory basis of accounting to the U.S. GAAP basis. Foreign insurance SCA entities are defined as alien insurers formed according to the legal requirements of a foreign country.

c. The following provides guidance regarding the audits for entities covered under paragraph 8.b.:

i. The recorded GAAP equity shall be adjusted for any audit adjustments resulting from either the annual audited GAAP financial statements of the respective entity or, if the entity is a member of a consolidated or combined group of insurers, the annual audited GAAP financial statements of the consolidated or combined group of companies, as soon as determined. GAAP is defined as those pronouncements included in the FASB codification.

ii. Annual consolidated or combined audits are allowed for the valuation of U.S. insurance entities if completed in accordance with the Model Regulation Requiring Annual Audited Reports as adopted by the SCA's domiciliary state.

iii. Consolidated or combined financial statements are allowed for the valuation of downstream SCA entities, including downstream SCA entities, that directly or indirectly own U.S. insurance entities, provided that the statutory financial statements of such U.S. insurance entities are audited. The audited financial statements of the downstream SCA entities shall include, as other financial information, consolidating or combining balance sheet schedule(s) showing the equity of all relevant SCA entities, non SCA SSAP No. 48 entities, and any required intercompany eliminations. The consolidating or combining balance sheet of the downstream SCA entities shall then be adjusted for GAAP to SAP differences of the insurance entities and paragraph 8.b.ii. and 8.b.iv. entities owned directly and indirectly by the downstream SCA entities.

iv. Investments in foreign SCA entities shall follow the guidance in paragraphs 8.b.ii., 8.b.iii. and 8.b.iv. based upon the nature of the SCA as described in the respective paragraphs. To fulfill the requirement for audited U.S. GAAP basis financial statements, the value of foreign SCA investments may be based on the GAAP equity from audited financial statements prepared on a foreign GAAP basis. The audited foreign GAAP basis financial statements must include an audited footnote that reconciles net income and equity on the foreign GAAP basis of accounting to the U.S. GAAP basis. The statutory carrying value of foreign insurance SCA entities (i.e., 8.b.iv. entities) and foreign noninsurance 8.b.ii. SCA entities shall include the additional adjustments as described in paragraph 9.

9. The statutory basis of accounting for investments in noninsurance SCA entities, subject to paragraph 8.b.ii. and foreign insurance SCA entities, subject to paragraph 8.b.iv., shall be based on the underlying audited U.S. GAAP equity of the respective entity with the following adjustments:

a. Nonadmit assets pursuant to the following statutory accounting principles as promulgated by the NAIC in the *Accounting Practices and Procedures Manual*;

i. *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*

ii. *SSAP No. 16R—Electronic Data Processing Equipment and Accounting for Software*

iii. *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*

iv. *SSAP No. 20—Nonadmitted Assets*

v. *SSAP No. 29—Prepaid Expenses*

b. Expense costs that are capitalized in accordance with GAAP but are expensed pursuant to statutory accounting as promulgated by the NAIC in the *Accounting Practices and Procedures Manual* (e.g., deferred policy acquisition costs);

c. Adjust depreciation for certain assets in accordance with the following statutory accounting principles:

i. *SSAP No. 16R—Electronic Data Processing Equipment and Accounting for Software*

ii. *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*

d. Nonadmit the amount of goodwill of the SCA in excess of 10% of the audited U.S. GAAP equity of the SCA's last audited financial statements.

e. Nonadmit amount of the net deferred tax assets (DTAs) of the SCA in excess of 10% of the audited U.S. GAAP equity of the SCA's last audited financial statements.

f. Adjust the U.S. GAAP annuity account value reserves of a foreign insurance SCA, with respect to the business it wrote directly, using the commissioners' annuity reserve valuation method (CARVM) as defined in paragraphs 12 and 13 of Appendix A-820 (including the reserving provisions in the various Actuarial Guidelines which support CARVM). The valuation interest rate and mortality tables to be used in applying CARVM should be that prescribed by the foreign insurance SCA's country of domicile. If the Foreign SCA's country of domicile does not prescribe the necessary tables and/or rates, no reserve adjustment shall be made.

Note that the outcome of these adjustments, as well as guarantees or commitments of the parent entity to provide additional funding, can result in a negative equity valuation of the investment.

10. The audited statutory equity method as described in paragraph 8.b.i. and 8.b.ii. shall be applied by recording an initial and subsequent investment in an investee at cost (excluding any investment in an investee's preferred stock and/or surplus notes), which is defined in SSAP No. 68 as the sum of (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition. Investments in an SCA's preferred stock and /or surplus notes are addressed in paragraphs 27-31. After the date of acquisition, the investment amount shall be adjusted for the amortization of goodwill and the reporting entity's share of the change in special surplus funds, other than special surplus funds and unassigned funds (surplus), as defined in *SSAP No. 72—Surplus and Quasi-Reorganizations*, and as adjusted appropriately for the items in paragraph 9. This represents the carrying amount of the investment.

11. If the reporting entity is using an equity method (as described in paragraphs 8.b.i. through 8.b.iv.), the reporting entity's share of undistributed earnings and losses of the investee shall be included in unrealized gains and losses of the reporting entity. The reporting entity's share of other changes in the investee's surplus (e.g., the change in the investee's nonadmitted assets) shall be recorded by the investor as a component of unrealized capital gains and losses on investments. If the reporting entity uses the market valuation approach outlined in paragraph 8.a., changes in that valuation shall be included in unrealized gains and losses. Dividends or distributions received from an investee shall be recognized in investment income when declared to the extent that they are not in excess of the undistributed accumulated earnings attributable to the investee. Dividends or distributions declared in excess of the undistributed accumulated earnings attributable to the investee shall reduce the carrying amount of the investment.

12. For investments in entities recorded based on the underlying audited GAAP equity of the investee, the amount to be recorded shall be defined as the initial investment in an investee at cost (excluding any investments in an investee's preferred stock), which is defined in SSAP No. 68. Investments in an SCA's preferred stock are addressed in paragraphs 27-31. The carrying amount of the investment shall be adjusted for the amortization of goodwill, as well as to recognize the reporting entity's share of the audited GAAP basis earnings or losses of the investee after the date of acquisition, adjusted for any dividends received. A reporting entity's share of adjustments that are recorded directly to the investee's stockholder's equity under GAAP shall also be recorded as adjustments to the carrying value of the investment with a corresponding amount recorded directly to unrealized capital gains and losses on investments. For entities subject to paragraphs 8.b.ii. or 8.b.iv. additional adjustments are required in accordance with paragraph 9.

13. On at least a quarterly basis, the procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 8.b.i. through 8.b.iv.), as applicable, to investments in SCA entities:

a. A difference between the cost of an investment and the underlying equity in the statutory or GAAP book value, as applicable, of the acquired company at the date of acquisition shall be accounted for in accordance with SSAP No. 68 however, positive goodwill for noninsurance SCA entities subject to paragraph 8.b.ii. and foreign insurance SCA entities subject to paragraph 8.b.iv. shall be subject to the admissibility criteria in paragraph 9.d. rather than the admissibility criteria of paragraph 7 of SSAP No. 68.

b. A transaction of an investee of a capital nature that affects the reporting entity's share of stockholders' equity of the investee shall be reflected as an unrealized gain or loss (e.g., where the investee issues additional stock or a new class of stock that impacts the reporting entity's equity ownership in the investee, the reporting entity's recorded investment shall be adjusted to reflect the transaction);

c. Realized gains or losses on the sale of an investment in a SCA entity shall be recorded in an amount equal to the difference at the time of sale between the selling price and carrying amount of the investment plus any previously recorded unrealized gain or loss;

d. If financial statements of an investee are not sufficiently timely for the reporting entity to apply an equity method to the investee's current results of operations, the reporting entity shall record its share of the earnings or losses of an investee from the most recent available financial statements. A lag in reporting shall be consistent from period to period. This paragraph does not apply to a SCA valued under paragraph 8.b.i.;

e. For entities subject to 8.b.i., 8.b.iii. and 8.b.iv. a reporting entity's share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero[2] and shall not provide for additional losses unless the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee (guaranteed obligations meeting the definition of liabilities in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* shall be recorded as liabilities). If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended;

f. When an investee has outstanding cumulative preferred stock, the reporting entity shall compute its share of earnings (losses) after deducting the investee's preferred dividends, whether or not such dividends are declared;

g. An investment in a SCA entity may fall below the level of ownership described in paragraph 5 from the sale of a portion of an investment by the reporting entity, the sale of additional interests by an investee, or other transactions. The reporting entity shall discontinue accruing its share of the earnings or losses of the investee for an investment that no longer qualifies for an equity method. The earnings or losses that relate to the investment interests retained by the reporting entity and that were previously accrued shall remain as a part of the carrying amount of the investment. The investment account shall not be adjusted retroactively under the conditions described in this subparagraph. However, dividends received by the investor in subsequent periods which exceed the

[2] Refer to the additional guidance related to discontinuance of an equity method in paragraphs 15-17 and *INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses.*

reporting entity's share of earnings for such periods shall be applied as a reduction of the carrying amount of the investment.

14. Once the reporting entity elects to use a valuation approach for a particular subsidiary, the reporting entity may not change the valuation method to another method without the approval of the domiciliary commissioner. For instance, if an entity selects the market valuation method, it may not change to an equity method or vice versa without approval from the domiciliary commissioner. Further, in order for an entity to transfer from a paragraph 8.a., or 8.b.ii. valuation to a paragraph 8.b.iii. valuation, the SCA shall not exceed the 20% threshold (as defined in paragraphs 8.b.ii.) for three consecutive years prior to making the change. When an investment qualifies for use of another method of accounting, the reporting entity shall adopt the new method of accounting and the investment shall be adjusted to reflect the reporting entity's equity interest in the SCA entity under the new method. A corresponding amount shall be recorded as an unrealized gain or loss.

15. If an additional investment, in whole or in part, represents, in substance, the funding of prior losses, the entity should recognize previously suspended losses only up to the amount of the additional investment determined to represent the funding of prior losses. Whether the investment represents the funding of prior losses depends on the facts and circumstances.

16. Judgment is required in determining whether prior losses are being funded and that all available information should be considered in performing the related analysis. The following are certain factors to consider in that regard. However, no one factor should be considered presumptive or determinative.

a. Whether the additional investment is acquired from a third party or directly from the investee. When the additional investment is purchased from a third party and the investee does not obtain additional funds either from the investor or the third party, it is unlikely that, in the absence of other factors, prior losses are being funded.

b. The fair value of the consideration received in relation to the value of the consideration paid for the additional investment. For example, if the fair value of the consideration received is less than the fair value of the consideration paid, it may indicate that prior losses are being funded to the extent that there is disparity in the value of the exchange.

c. Whether the additional investment results in an increase in ownership percentage of the investee. In instances in which the investment is made directly with the investee, the investor should consider the form of the investment and whether other investors are making simultaneous investments proportionate to their interests. Investments made without a corresponding increase in ownership or other interests, or a pro rata equity investment made by all existing investors, may indicate that prior losses are being funded.

d. The seniority of the additional investment relative to existing equity of the investee. An investment in an instrument that is subordinate to other equity of the investee may indicate that prior losses are being funded.

17. Upon making the additional investment, the investor should evaluate whether it has become otherwise committed to provide financial support to the investee.

18. A reporting entity that owns an interest in itself via direct ownership of shares of an upstream intermediate or ultimate parent shall reduce the value of such shares for the reciprocal ownership. If the shares of the parent are owned indirectly by a reporting entity, via a downstream SCA entity, the directly held entity, which owns the parent's shares, shall have its value reduced for the reciprocal ownership.

19. Any parent reporting entity that owns an interest in itself via either direct or indirect ownership of a down-stream affiliate, which in turn owns shares of the parent reporting entity, shall eliminate its interest in these shares from the valuation of such affiliate.

Qualified Versus Unqualified Opinions

20. Various opinions can be issued in which an entity can record certain investments under the GAAP Equity method of accounting. The reporting entity shall record investments that require audited GAAP equity in the manner described below when the audit opinion on the GAAP financial statements contains the following language:

a. The investment shall be nonadmitted if the audit opinion contains a disclaimer of opinion for the most recent statement of financial position presented in the financial statements.

b. The investment shall be nonadmitted if the audit opinion contains a qualified opinion due to a scope limitation that impacts the most recent statement of financial position presented in the financial statements and the impact of the scope limitation cannot be quantified. However, if the impact of the scope limitation is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity's valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified scope limitation.

c. The investment shall be nonadmitted if the audit opinion contains a qualified opinion due to a departure from GAAP that impacts the most recent statement of financial position presented in the financial statements and the impact of such departure is not quantified in either the auditor's report or the footnotes to the financial statements (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). However, if the impact of the departure from GAAP is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity's valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified departure from GAAP. EXCEPTION: There is no need to quantify the impact of a departure from GAAP in either the auditor's report or the footnotes to the financial statements if a qualified audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles. In such cases, the investment shall be admitted without quantifying the departure.

d. The investment shall be nonadmitted if the audit opinion contains an adverse opinion due to a departure from GAAP that impacts the most recent statement of financial position presented in the financial statements and the impact of such departure is not quantified in either the auditor's report or the footnotes to the financial statements (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). However, if the impact of the departure from GAAP is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity's valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified departure from GAAP. EXCEPTION: There is no need to quantify the impact of a departure from GAAP in either the auditor's report or the footnotes to the financial statements if an adverse audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles. In such cases, the investment shall be admitted without quantifying the departure.

e. The investment shall be nonadmitted if the audit opinion contains explanatory language indicating that there is substantial doubt about the investee's ability to continue as a going concern.

Valuation of Investments in Downstream Holding Companies

21. SSAP No. 48 requires the financial statements of joint ventures, partnerships, and/or limited liability companies in which the downstream noninsurance holding company has a minor ownership interest or otherwise lacks control, i.e., ownership interest is less than 10% (hereinafter referred to as "non SCA SSAP No. 48 entities"), to be valued using U.S. GAAP basis financial statements. Valuation of a downstream holding company, including its investments in SCA entities, depends upon the nature of the SCA entities and non SCA SSAP No. 48 entities it holds in accordance with paragraph 8 of this statement. All liabilities, commitments, contingencies, guarantees or obligations of the downstream noninsurance holding company, which are required to be recorded under applicable statutory accounting guidance, shall be reflected in the parent insurance reporting entity's determination of the carrying value of the investment in the downstream noninsurance holding company, if not already recorded in the financial statements of the downstream noninsurance holding company. If an SCA investment of the downstream holding company does not meet the provisions of paragraph 8.a. or if it elects not to use the guidance in paragraph 8.a., and instead uses the guidance in paragraph 8.b., the downstream holding company would be valued as the sum of the following (if applicable):

a. Investments by a downstream holding company in U.S. insurance SCA entities are recorded based upon the guidance in paragraph 8.b.i.;

b. Investments by a downstream holding company in noninsurance SCA entities that are engaged in transactions or activities described in paragraph 8.b.ii., are recorded based upon the guidance in paragraph 8.b.ii.;

c. Investments by a downstream holding company in noninsurance SCA entities that do not qualify under paragraph 21.b. shall be recorded based upon the guidance in paragraph 8.b.iii.;

d. Investments by a downstream holding company in foreign insurance SCA entities shall be recorded based upon the guidance in paragraph 8.b.iv.; and

e. Any other assets and/or liabilities of the downstream holding company (not addressed in paragraphs 21.a. through 21.d.) shall be valued in accordance with the applicable SSAP.

For purposes of applying paragraphs 21-26 of this statement, a downstream holding company shall be considered to be the parent reporting entity's investment in a SCA entity. See paragraphs 25 and 26 for a limited exception to the audited financial statements requirement for downstream noninsurance holding companies which meet specified conditions.

Admissibility Requirements of Investments in Downstream Holding Companies

22. To meet the admissibility requirements of this statement, unless the limited exception to the audited financial statements requirement discussed in paragraphs 25 and 26 applies, an annual audit of the financial statements of SCA entities, including the downstream holding company valued under paragraphs 8.b.i through 8.b.iv. must be obtained. The requirement for audited financial statements may be met by utilizing any one of the following methods:

a. Audited US GAAP financial statements of the downstream SCA holding company. (Consolidated or combined financial statements are allowed encompassing one or more downstream holding companies, including such holding companies that directly own U.S.

insurance entities, provided that the statutory financial statements of such U.S. insurance entities are audited. Annual consolidated or combined audits are allowed for insurance entities if completed in accordance with the Model Regulation Requiring Annual Audited Reports as adopted by the SCA's domiciliary state.) The audited financial statements of the downstream holding company shall include as other financial information, consolidating or combining balance sheet schedule(s) showing the equity of all relevant SCA entities and non-SCA SSAP No. 48 entities, and any required intercompany eliminations. The consolidating or combining balance sheet schedule shall separately present those entities owned directly by the downstream holding company. The consolidating or combining balance sheet shall then be adjusted for GAAP to SAP differences for paragraph 8.b.i., 8. b. ii. and 8.b.iv. entities owned directly or indirectly by the downstream holding company. The adjusted amount would then be the reported value of the investment in the downstream holding company at the higher-level reporting entity; or

b. Audited foreign GAAP-basis financial statements of the downstream SCA holding company. (Consolidated or combined financial statements are allowed encompassing one or more downstream holding companies, including such holding companies that directly own U.S. insurance entities, provided that the statutory financial statements of such U.S. insurance entities are audited. Annual consolidated or combined audits are allowed for insurance entities if completed in accordance with the Model Regulation Requiring Annual Audited Reports as adopted by the SCA's domiciliary state.) The audited foreign GAAP basis financial statements shall include an audited footnote disclosure within the financial statements that reconciles each consolidated entity's net income and equity on a foreign basis of accounting to a U.S. GAAP basis. The audited financial statements of the downstream holding company shall include as other financial information, consolidating or combining balance sheet schedule(s) showing the equity of all relevant SCA entities non SCA SSAP No. 48 entities, and any required intercompany eliminations. The consolidating or combining balance sheet schedule shall separately present those entities owned directly by the downstream holding company. The consolidating or combining balance sheet shall then be adjusted for GAAP to SAP differences of the insurance entities and paragraph 8.b.ii., and 8.b.iv. entities owned directly or indirectly by the downstream holding company. The adjusted amount would then be the reported value of the investment in the downstream holding company at the higher-level reporting entity; or

c. Individual audits of the downstream holding company and the downstream holding company's investments in individual SCA entities.

23. If the downstream noninsurance holding company does not meet the requirements of paragraph 25, audited GAAP financial statements, as described in paragraph 22, are required for the downstream noninsurance holding company and its SCA and non SCA investments in order for the investment in the downstream noninsurance holding company to be classified as an admitted asset.

24. A purchased downstream holding company is valued in accordance with the provisions of paragraphs 21-24 and the provisions of SSAP No. 68.

Limited Exceptions to the Audit Requirements for Downstream Noninsurance Holding Companies

25. This statement requires that investments in SCA entities be recorded using one of the valuation methods described in paragraph 8 in order to be admitted assets. Each of the paragraph 8.b. valuation methods require the financial statements of SCA entities, including downstream noninsurance holding companies, to be audited in order for the investments in SCA entities to be admitted assets. Likewise,

SSAP No. 48 requires the financial statements of joint ventures, partnerships, and/or limited liability companies in which the downstream noninsurance holding company has a minor ownership interest or otherwise lacks control, i.e., ownership interest is less than 10% to be audited (U.S. GAAP) in order to be admitted assets. There is a limited exception to the requirement to have audited financial statements of a downstream noninsurance holding company, provided that the entities owned by the downstream noninsurance holding company (8.b.iii. entity) have audited financial statements as described in paragraphs 25 and 26.

26. The process of admitting audited investments in entities owned by an unaudited downstream noninsurance holding company SCA entity will be known as a “look through.” In order to admit the investments in audited SCAs or the audited non SCA SSAP No. 48 entities owned by an unaudited downstream noninsurance holding company, a reporting entity may apply the look through approach, provided all of the following conditions are met:

a. The downstream noninsurance holding company is an 8.b.iii entity, and

b. The downstream noninsurance holding company does not own any other assets which are material to the downstream holding company other than the audited SCA entities and/or audited non SCA SSAP No. 48 entities, and

c. The downstream noninsurance holding company is not subject to liabilities, commitments, contingencies, guarantees or obligations which are material to the downstream noninsurance holding company.

If an investment in a downstream noninsurance holding company meets the requirements set forth above, the reporting entity can admit the individual audited SCA entities and/or audited non SCA SSAP No. 48 entities; however, unaudited immaterial assets of the downstream noninsurance holding company are to be carried at the lesser of the paragraph 8 valuation or nonadmitted (e.g. some equity method investments are required to be carried at a negative value due to either statutory adjustments or to parental obligations to keep funding the subsidiary).

Investment in Preferred Stock or Surplus Notes of a Subsidiary, Controlled and Affiliated Entity

27. Investments in common stock, preferred stock and surplus notes are reported separately. Care should be taken to avoid double counting of the separate investments. When the SCA investee has issued multiple equity components such as common stock, preferred stock and/or surplus note(s) the total reported equity of the SCA investee must be separated into the respective components in order to determine the equity attributable to each class.

28. In order to establish the equity value of the common stock investment in an SCA, the reporting entity reduces the total equity of the SCA by the SCA's (issuer’s) value of the preferred stock and/or surplus notes on the issuer’s balance sheet (not the reporting entity's book/adjusted carrying value for the SCA’s preferred stock and/or surplus notes held).

29. Investments in the preferred stock of an SCA shall be accounted for and reported in accordance with the provisions of *SSAP No. 32—Investments in Preferred Stock (including investments in common stock of subsidiary, controlled or affiliated entities)* (SSAP No. 32).

30. Investments in the surplus notes of an SCA shall be accounted for and reported in accordance with the provisions of *SSAP No. 41—Surplus Notes.*

31. The following example is provided to illustrate the accounting and reporting. The reporting entity holds 100% of the preferred stock. The SCA issued the preferred stock for $50,000. The investment in the SCA, measured in accordance with this SSAP is $250,000 including the preferred stock of the SCA. The

investment in the SCA is $200,000 ($250,000-50,000) and the preferred stock is measured and reported in accordance with SSAP No. 32.

Impairment

32. For any decline in the fair value of an investment in a SCA entity that is other than temporary(INT 06-07), the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings, which would justify the carrying amount of the investment. A fair value of an investment that is below the carrying amount based on the statutory equity method or the existence of investee operating losses may indicate a loss in value, however, they are not necessarily indicative of a loss in value that is other than temporary.

Consolidation

33. Majority-owned subsidiaries shall not be consolidated for individual entity statutory reporting. This does not exempt certain reporting entities that are members of an affiliated group from the requirement to issue consolidated or combined annual statements as supplemental information in accordance with NAIC guidelines.

Disclosures

34. The significance of an investment to the reporting entity's financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investee. The following disclosures shall be made for all investments in SCA entities that exceed 10% of the total admitted assets of the reporting entity:

a. Financial statements of a reporting entity shall disclose (i) the name of each SCA entity and percentage of ownership of common stock, (ii) the accounting policies of the reporting entity with respect to investments in SCA entities, and (iii) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., goodwill, other nonadmitted assets, fair value or discounted fair value adjustments) and the accounting treatment of the difference;

b. For those SCA entities for which a quoted market price is available, the aggregate value of each SCA investment based on the quoted price and the difference, if any, between the amount at which the investment is carried and the quoted price shall be disclosed;

c. Summarized information as to assets, liabilities and results of operations shall be presented for SCA entities, either individually or in groups;

d. Conversion of outstanding convertible securities, exercise of outstanding options and warrants and other contingent issuances of an investee may have a significant effect on an investor's share of reported earnings or losses. Accordingly, material effects of possible conversions, exercises or contingent issuances shall be disclosed in notes to the financial statements of the reporting entity; and

e. For those SCA entities in which the reporting entity elected, or was required, to change its valuation method as described in paragraph 14, a description of the reason for the change and the amount of adjustment recorded as unrealized gains or losses shall be disclosed. The entity shall also disclose whether commissioner approval was obtained in accordance with paragraph 14.

35. A reporting entity that calculates its investment in a foreign insurance subsidiary by adjusting annuity GAAP account value reserves using CARVM and the related Actuarial Guidelines shall disclose the interest rates and mortality assumptions used in the calculation as prescribed by the insurance department of the foreign country.

36. Any commitment or contingent commitment to a SCA entity shall be disclosed (e.g., guarantees or commitments to provide additional capital contributions).

37. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment; and

b. The amount of the impairment and how fair value was determined.

38. If a reporting entity holds an investment in a downstream noninsurance holding company, the reporting entity may look-through the downstream noninsurance holding company to the value of (i) SCA entities having audited financial statements and/or (ii) joint ventures, partnerships, and/or limited liability companies having audited financial statements in which the downstream noninsurance holding company has a minor ownership interest or otherwise lacks control, i.e., ownership interest is less than 10% in lieu of obtaining an audit of the financial statements of the downstream noninsurance holding company (provided the limited exception to the audited financial statements requirement contained in paragraphs 25-26 applies).

39. If a reporting entity utilizes the look-through approach for the valuation of the downstream noninsurance holding company instead of obtaining audited financial statements of the downstream noninsurance holding company, the financial statements of the reporting entity shall include the following disclosures:

a. The name of the downstream noninsurance holding company;

b. The carrying value of the investment in the downstream non insurance holding company;

c. The fact that the financial statements of the downstream noninsurance company are not audited;

d. The fact that the reporting entity has limited the value of its investment in the downstream noninsurance holding company to the value contained in the audited financial statements, including adjustments required by this statement, of SCA entities and/or non-SCA SSAP No. 48 entities owned by the downstream noninsurance holding company and valued in accordance with paragraphs 21-24;

e. The fact that all liabilities, commitments, contingencies, guarantees or obligations of the downstream noninsurance holding company, which are required to be recorded as liabilities, commitments, contingencies, guarantees or obligations under applicable accounting guidance, are reflected in the reporting entity's determination of the carrying value of the investment in the downstream noninsurance holding company, if not already recorded in the financial statements of the downstream noninsurance holding company.

40. Investments reported using an equity method from paragraph 8.b.ii. through 8.b.iv. may have fiscal year ends, not calendar year ends. To recognize a change to the reporting year-end of an equity method investee, including changes in, or the elimination of, previously existing differences (lag period) due to the reporting entity's ability to obtain financial results from a reporting period that is more consistent with, or the same as, that of the reporting entity, the guidance included in *FASB Emerging Issues Task Force 06-9: Reporting a Change in (or the elimination of) a Previously Existing Difference between the fiscal Year-End of a Parent Company and That of a Consolidated Entity or between the Reporting Period of an Investor and That of an Equity Method Investee* that defines such reporting period changes as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3) shall be followed. For instances in which this change in accounting principle occurs, disclosure requirements of SSAP No. 3 shall be followed.

41. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 34.d. shall be included in the annual audited statutory financial reports only.

Relevant Literature

42. This statement adopts the *Purposes and Procedures Manual of the NAIC ~~Securities Valuation~~Investment Analysis Office*.

43. This statement adopts *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18* as guidance to be considered in determining the existence of control.

44. This statement adopts with modification EITF 06-9 to include:

a. Adopt the guidance that defines such reporting period changes as a change in accounting principle in accordance with SSAP No. 3, modified to apply only to equity method investments. For instances in which this change in accounting principle occurs, disclosure requirements of SSAP No. 3 shall be followed.

b. The consolidation guidance in EITF 06-9 is rejected.

c. Changes affecting companies reporting investments in SCA entities using the equity method: Investments in paragraph 8.b.i. entities are required to be calendar year-end. Investments in paragraphs 8.b.ii. through 8.b.iv. entities may have other fiscal year ends, thus this issue could apply to equity method investments under 8.b.ii. through 8.b.iv. or under equity method valued investments that fall within the scope of SSAP No. 48.

45. This statement rejects *APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock, AICPA Accounting Interpretations APB 18, The Equity Method of Accounting for Investments in Common Stock:* Accounting Interpretations of *APB Opinion No. 18, FASB Technical Bulletin No. 79-19, Investor's Accounting for Unrealized Losses on Marketable Securities Owned by an Equity Method Investee, FASB Emerging Issues Task Force No. 87-21, Change of Accounting Basis in Master Limited Partnership Transactions, FASB Emerging Issues Task Force No. 96-16, Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*, *FASB Emerging Issues Task Force No. 98-2: Accounting by a Subsidiary or Joint Venture for an Investment in the stock of Its Parent Company or Joint Venture Partner* and *FASB Staff Position No. APB 18-1*, *Accounting by an Investor for Its Proportionate Share of Accumulated Other Comprehensive Income of an Investee Accounted for under the Equity Method in Accordance with APB Opinion No. 18 upon a Loss of Significant Influence.*

Effective Date and Transition

46. This statement is effective for reporting periods ending on and after December 31, 2007. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance previously in paragraph 29 of this SSAP amended the title and paragraphs 2 and 3 *of SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities*) (SSAP No. 32). In 2011, this guidance was moved to SSAP No. 32 and deleted from this SSAP. The original guidance included in this standard is retained for historical purposes in Issue Paper No. 118. The guidance previously in paragraph 34 of this SSAP amended paragraphs 4-6 of *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68). In 2011, this guidance was moved to SSAP No. 68 and deleted from this SSAP. The original guidance included in this standard is retained for historical purposes in *SSAP No. 88—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 46*. Guidance reflected in paragraph 20, incorporated from *INT 03-03: Admissibility of Investments Recorded Based on the Audited GAAP Equity of the Investee when a Qualified Opinion is Provided* was originally effective December 7, 2003. Guidance reflected in paragraphs 15-17 incorporated from *INT 04-10: Accounting for Subsequent Investments in an Investee after Suspension of Equity Method Loss Recognition* was originally effective December 5, 2004. Guidance in paragraph 40 was previously included within *INT 08-03: EITF 06-9: Reporting a Change in (or the elimination of) a Previously Existing Difference between the fiscal Year-End of a Parent Company and That of a Consolidated Entity or between the Reporting Period of an Investor and That of an Equity Method Investee* and was effective for periods beginning May 31, 2008.

ILLUSTRATION OF ACCOUNTING FOR SCAS

This illustration, accompanying this Statement, is intended to provide an example of the application of paragraphs 8.b.ii. and 8.b.iii. Where an SCA meets the criteria of 8.b.ii., the illustration further demonstrates the necessary adjustments described in paragraph 9. While not all inclusive, the illustration is representative of the process and adjustments necessary to comply with this Statement. That is, the reporting entity must, first, determine which sub-section of paragraph 8 applies with respect to each SCA. Secondly, where the reporting entity has determined that an SCA meets the criteria of section 8.b.ii. or 8.b.iv., then the carrying amount is adjusted in accordance with the sub-section, which includes adjustments contained in the provisions of paragraph 9.

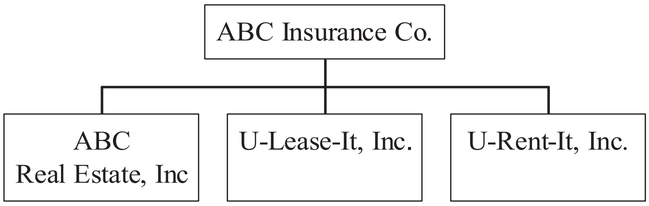
The ABC Insurance Company owns 100% of three subsidiaries:

1. ABC Real Estate, Inc. – owns and manages real estate properties and has no inter-company transactions

2. U-Lease-It, Inc. – leases furniture and equipment to local businesses including the insurance company. Lease fees received from ABC were $10 million each in 20x2 and 20x1.

3. U-Rent-It, Inc. – leases EDP equipment to local businesses including the insurance company. Lease fees received from ABC were $2 million each in 20x2 and 20x1.

ABC Insurance Company



Determination and application of adjustments to audited GAAP equity methods (paragraph 8.b. of SSAP No. 97)

ABC Real Estate, Inc.-the company is not engaged in any activities described in 8b.ii. No adjustments are made and ABC Insurance Company records its investment based upon audited GAAP equity in accordance with 8b.iii.

U-Lease-It, Inc.-the company is engaged in activities described in 8b.ii., leasing furniture and equipment. The fees paid by ABC and reflected in income of U-Lease-It, Inc. exceed 20% of GAAP revenue calculated as follows:

U-Lease-It, Inc.	(Millions)	
	20x1	**20x2**
GAAP revenue	46.5	46.4
Less:		
Realized capital gains/(losses)	6	(.2)
Adjusted GAAP revenue	45.9	46.6
Lease fees from ABC	10.0	10.0
Fees/adjusted GAAP revenue	21.8%	21.5%

U-Rent-It, Inc.-the company is engaged in activities described in 8b.ii., leasing EDP equipment. The fees paid by ABC and reflected in income of U-Rent-It, Inc. do not exceed 20% of GAAP revenue. No adjustments are made and ABC Insurance Company records its investment based upon audited GAAP equity in accordance with 8b.iii. The calculation test is as follows:

U-Rent-It, Inc.	(Millions)	
	20x2	**20x1**
GAAP revenue	32.6	30.5
Lease fees from ABC	2.0	2.0
Fees/GAAP revenue	6.1%	6.6%

Adjustments to audited GAAP equity for U-Lease-It, Inc.

	(Millions)	
	20x2	**20x1**
Audited GAAP equity	129	130
Nonadmit furniture & equipment	(250)	(260)
Nonadmit excess goodwill *	(2)	(2)
Adjusted GAAP equity	(123)	(132)

*Goodwill adjustment - 20x2=$15- (10% x $130[20x1GAAP equity] and 20x1=$15-(10% x $129.9 [20x0 GAAP equity])

Note: No DTA adjustment since the amount is less that 10% of GAAP equity

Schedule D affiliated common stocks for ABC Insurance Company

Unrealized capital gains/losses	0.4	0.6

APPENDIX A – IMPLEMENTATION QUESTIONS AND ANSWERS

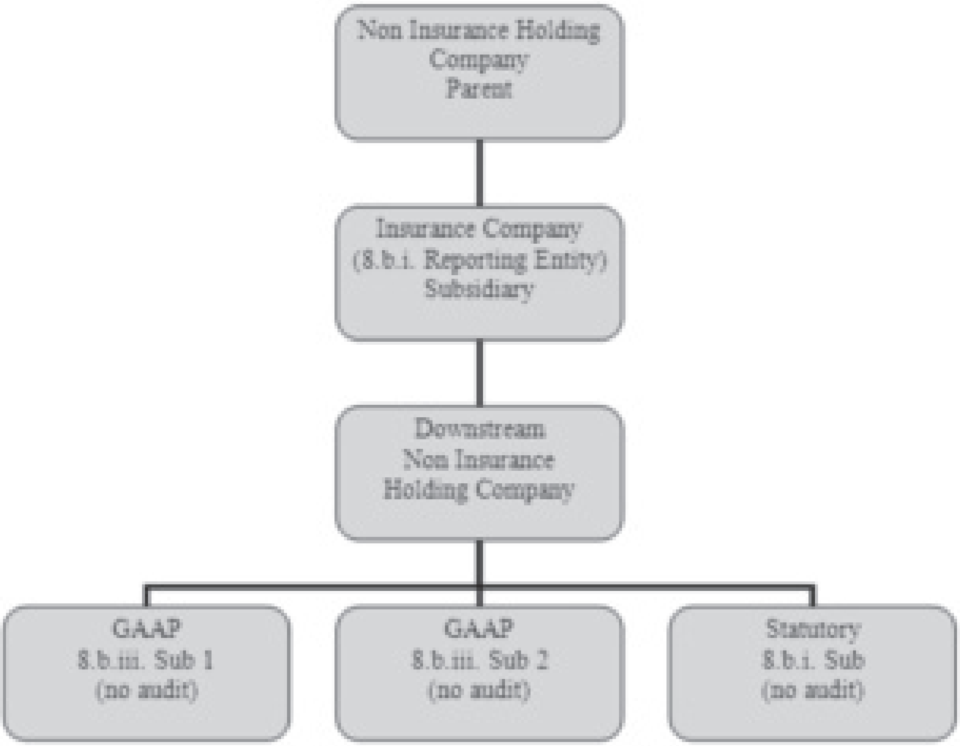
1. **Q – Is the list of activities listed in paragraph 8.b.ii. (f) meant to be all-inclusive? The guidance is as follows:**

> 8.b.ii. (f) Providing insurance services on behalf of the reporting entity including but not limited to accounting, actuarial, auditing, data processing, underwriting, collection of premiums, payment of claims and benefits, policyowner services

1.1 **A –** No, the Working Group did not intend for this list to be all-inclusive, but rather to be used as examples of the types of functions that can be performed by non-insurance companies. The purpose of the list is to set forth examples of activities that are often performed by an insurer directly that can result in less conservative values if performed by an entity that is not required to utilize statutory accounting as defined within the NAIC *Accounting Practices and Procedures Manual*. Therefore, the reporting entity, the auditor, and the regulator should consider whether the purpose of having the subsidiary is to avoid statutory accounting principles as discussed in *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*, paragraph 16.d., which reads as follows:

> 16.d. Transactions which are designed to avoid statutory accounting practices shall be reported as if the reporting entity continued to own the assets or to be obligated for a liability directly instead of through a subsidiary.

2. **Q – As illustrated below, would an audit of the upstream holding company with consolidating balance sheets of the insurance company meet the requirements for auditing the subsidiaries under SSAP No. 97?**



Non Insurance Holding Company Parent
Insurance Company (8.b.i. Reporting Entity) Subsidiary
Downstream Non Insurance Holding Company
GAAP 8.b.iii. Sub 1 (no audit)
GAAP 8.b.iii. Sub 2 (no audit)
Statutory 8.b.i. Sub (no audit)

2.1 **A -** No, SSAP No. 97 is specific in that it only allows audited GAAP financial statements of the downstream holding company level (See paragraph 22).

2.2 So, in the example provided above, the reporting entity cannot use an audit of the upstream holding company as the basis for complying with the audit requirements of SSAP No. 97. The primary purpose of the audit is to provide assurance that the valuation of the entity being considered is not materially misstated. Although assurance of this type would be provided for within an unqualified opinion of an upstream holding company, it would only be provided for in the context of the entity being audited. Since the materiality level for an upstream holding company is likely to be set at a higher level, the potential for material misstatement for the reporting entity's subsidiary(ies) could still exist within that unqualified opinion. It should also be noted, however, that individual state insurance holding company laws would still require an audit of the ultimate controlling entity.

3. **Q - Are consolidated, consolidating or combined audited financial statements allowed to meet the requirements for SSAP No. 97? Definitions of these types of audited financial statements are presented below:**

- Consolidated Audited Financial Statements (*ARB 51: Consolidated Financial Statements*, paragraph 1)

> 1. The purpose of consolidated statements is to present, primarily for the benefit of the shareholders and creditors of the parent company, the results of operations and the financial position of a parent company and its subsidiaries essentially as if the group were a single company with one or more branches or divisions. There is a presumption that consolidated statements are more meaningful than separate statements and that they are usually necessary for a fair presentation when one of the companies in the group directly or indirectly has a controlling financial interest in the other companies.

- Consolidating Audited Financial Statements (*ARB 51: Consolidated Financial Statements*, paragraph 24)

> 24. In some cases parent-company statements may be needed, in addition to consolidated statements, to indicate adequately the position of bondholders and other creditors or preferred stockholders of the parent. Consolidating statements, in which one column is used for the parent company and other columns for particular subsidiaries or groups of subsidiaries, often are an effective means of presenting the pertinent information.

- Combined Audited Financial Statements (*ARB 51: Consolidated Financial Statements*, paragraphs 22 and 23)

> 23. To justify the preparation of consolidated statements, the controlling financial interest should rest directly or indirectly in one of the companies included in the consolidation. There are circumstances, however, where combined financial statements (as distinguished from consolidated statements) of commonly controlled companies are likely to be more meaningful than their separate statements. For example, combined financial statements would be useful where one individual owns a controlling interest in several corporations which are related in their operations. Combined statements would also be used to present the financial position and the results of operations of a group of unconsolidated subsidiaries. They might also be used to combine the financial statements of companies under common management.
>
> 24. Where combined statements are prepared for a group of related companies, such as a group of unconsolidated subsidiaries or a group of commonly controlled companies, intercompany transactions and profits or losses should be eliminated, and if there are problems in connection with such matters as minority interests, foreign operations, different fiscal periods, or income taxes, they should be treated in the same manner as in consolidated statements.

3.1 **A -** In this example, only consolidating and combined financial statements are allowed under SSAP No. 97. Combined audited financial statements are used to present the financial position and results of operations of a group of unconsolidated commonly controlled enterprises. Although U.S. Generally Accepted Auditing Standards requirements for combined statements are similar to those required for consolidated financial statements, combined statements are allowed for purposes of meeting the requirements of this statement. (Consolidated or combined financial statements are allowed encompassing one or more downstream SCA entities, including downstream SCA entities that directly or indirectly own U.S. insurance entities provided that the statutory financial statements of such U.S. insurance entities are audited. Annual consolidated or combined audits are allowed for insurance entities if completed in accordance with the Model Regulation Requiring Annual Audited Reports as adopted by the SCA's domiciliary state.)

4. **Q - Does a balance sheet audit meet the admissibility test within SSAP No. 97, or would a full audit be required?**

4.1 **A -** The Working Group intended for a full financial statement audit to be performed, rather than a limited reporting engagement, in accordance with AU Section 508, paragraph 33 which states:

> ***Limited reporting engagements.*** The auditor may be asked to report on one basic financial statement and not on the others. For example, he or she may be asked to report on the balance sheet and not on the statements of income, retained earnings or cash flows. These engagements do not involve scope limitations if the auditor's access to information underlying the basic financial statements is not limited and if the auditor applies all the procedures he considers necessary in the circumstances; rather, such engagements involve limited reporting objectives. [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

4.2 In addition, within SSAP No. 97, paragraph 8.c.i. (line 1) there is a reference to the "annual GAAP audit," which indicates a full audit. A limited engagement audit was not the intent when SSAP No. 97 or its predecessors, were developed.

4.3 Therefore, SSAP No. 97 requires the presentation of the balance sheet, income statement, statement of surplus and cash flows of each admitted entity to be presented, along with the corresponding notes to the financial statements (which can be accomplished as a whole).

5. **Q - Does the audit opinion provided on the subsidiaries financial statements have to be clean or unqualified in order for the SCA investment to be admitted?**

5.1 **A –** Paragraph 20 addresses various opinions that can be issued in which an entity can record certain investments under the GAAP Equity method of accounting. In certain cases, such as when the audit opinion is a disclaimer of opinion or there is indication that there is substantial doubt about the entity's ability to continue as a going concern, the guidance states the investment shall be nonadmitted. In addition, if there is a qualified opinion due to a departure from GAAP (or an adverse opinion) or due to a scope limitation, the investment shall be nonadmitted unless the impact of the departure is quantified within the audit **opinion** (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). In cases where the departure is quantified, the reporting entity would admit the amount after adjusting for the quantified departure from GAAP. An audit report that contains a qualified or adverse opinion for any other reason than for what is stated within paragraph 20 would result in the nonadmissibility of the investment within that subsidiary. There is no need to quantify the impact of a departure from GAAP in either the auditor's report or the footnotes to the financial statements if a qualified audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles. In such cases, the investment shall be admitted without quantifying the departure.

6. **Q - Do GAAP audits for non-insurance entities need to be completed before the annual statement or audited financial statements are filed? They are required to be completed annually, but should there be clarification on when the audits are due?**

6.1 **A -** Paragraph 13.d. allows for a lag time if the audits of the investees are not completed as of the reporting date, as long as the lag is on a consistent annual basis and the SCA is not valued under paragraph 8.b.i. The following is an excerpt from paragraph 13.d. (bolded for emphasis). The SCA entity is still required to be audited annually.

> 13.d. If financial statements of an investee are not sufficiently timely for the reporting entity to apply an equity method to the investee's current results of operations, the reporting entity shall record its share of the earnings or losses of an investee from the **most recent available financial statements. A lag in reporting shall be consistent from period to period.** This paragraph does not apply to a SCA valued under paragraph 8.b.i.

7. **Q - Is it possible for an SCA investment valued using an equity method to be reported as a negative value?**

7.1 **A -** Yes, the equity method noninsurance SCA could have a negative equity. SSAP No. 97 paragraph 8.b.ii. relating to noninsurance SCA entities requires some assets to be reported as a negative value (nonadmitted) in paragraph 9. For example an 8.b.ii. SCA subsidiary that is only holding furniture, which is nonadmitted, would be reflected with negative equity to the extent the value of the nonadmitted asset(s) exceed(s) reported equity. It should be noted that although SSAP No. 97, paragraph 13.e. discusses some situations in which the equity method should be discontinued, this does not apply to SCA entities, which meet the requirements of paragraph 8.b.ii. In addition, SSAP No. 97, paragraph 13.e. lists some situations where the equity method would result in a valuation that is less than zero; examples are if reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee, in these cases, the valuation of the investment in subsidiary could be a negative value.

8. **Q - Paragraph 13.e. of SSAP No. 97, lists some situations where the equity method should be discontinued. If the equity method is discontinued, does the reporting entity cease tracking equity losses?**

8.1 **A -** No, the reporting entity does not cease tracking losses related to the investment in the SCA if an equity method is discontinued. If the equity method is discontinued, follow the guidance in paragraphs 15-17 and *INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses* (INT 00-24).

8.2 INT 00-24 lists situations that might require the reporting entity to write down other investments in the SCA subsidiary, such as loans, because of continuing losses in the SCA investment. Paragraphs 15-17 provides guidance to assist in determining whether prior losses are being funded if the reporting entity purchases additional stock, etc. after suspending the equity method. Paragraphs 15-17 in INT 00-24 note that even if the equity method is not being applied, the investment should be tracked to determine if additional losses have to be applied to other items and to determine if the investment in the SCA has a future recovery.

9. **Q - SSAP No. 97, paragraphs 27-31 provide guidance on segregating the equity from common stock from the equity in the form of preferred stock and surplus notes. This guidance is required for reporting reasons and to prevent double counting of these items in the SCA equity. This section indicates that preferred stock is deducted from the total equity. The guidance notes that reporting entities report their investments in preferred stock in accordance with *SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities*), which requires reporting at book value, fair value, or the lower of book value or fair value. When deducting the preferred stock from the equity of the SCA, which measure of**

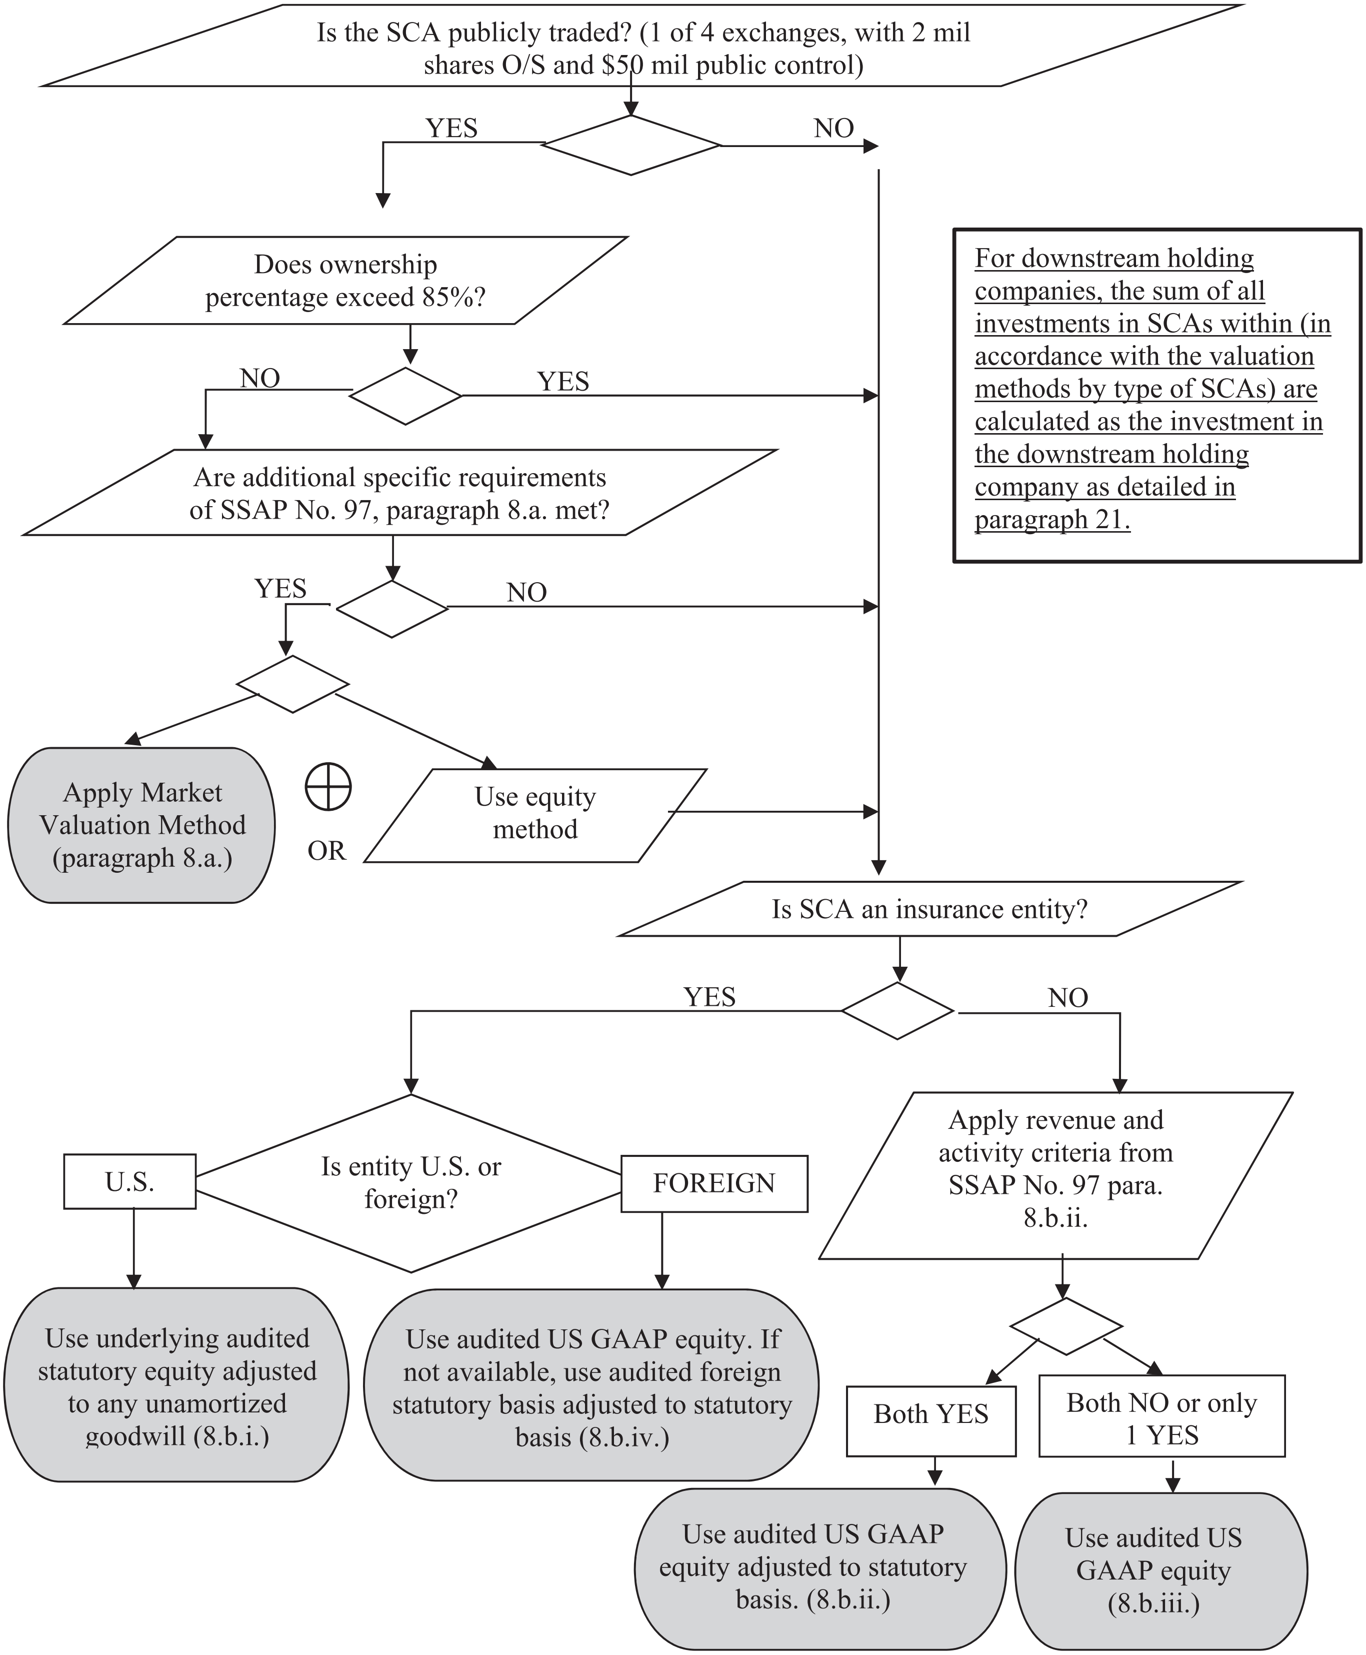
preferred stock is to be utilized; the investor's reporting valuation or the Issuer's value in the equity section of their balance sheet?

9.1 **A -** In order to establish the equity value of the common stock investment in an SCA, the reporting entity reduces the total equity of the SCA by the SCA's (Issuer's) value of the preferred stock on the issuer's balance sheet (not the reporting entity's Book/Adjusted Carrying Value for the SCA's preferred stock held). Continuing from the example in paragraph 31, if the reporting entity's Book/Adjusted Carrying Value for the SCA preferred stock is currently $40,000, the SCA's issuing value of the preferred stock ($50,000) would still be used to calculate the total equity of the SCA ($250,000 - $50,000 = $200,000). It should be noted this calculation does not affect the preferred stock valuation of $40,000 on the books of the investor.

10. **Q - If a parent reporting entity owns another insurance company that has obtained a permitted practice, or exemption or waiver from its state of domicile from the annual statutory audit requirement, would the parent be automatically allowed to admit the investment in the unaudited subsidiary?**

10.1 **A -** No, the parent would need to obtain a permitted practice allowing the parent reporting entity to admit the non-audited insurance company due to the admissibility requirements of SSAP No. 97.

APPENDIX B – DETERMINING THE VALUATION METHOD UNDER SSAP NO. 97



Is the SCA publicly traded? (1 of 4 exchanges, with 2 mil shares O/S and $50 mil public control)
YES
NO
Does ownership percentage exceed 85%?
NO
YES
Are additional specific requirements of SSAP No. 97, paragraph 8.a. met?
YES
NO
Apply Market Valuation Method (paragraph 8.a.)
OR
Use equity method
Is SCA an insurance entity?
YES
NO
Is entity U.S. or foreign?
U.S.
FOREIGN
Use underlying audited statutory equity adjusted to any unamortized goodwill (8.b.i.)
Use audited US GAAP equity. If not available, use audited foreign statutory basis adjusted to statutory basis (8.b.iv.)
Apply revenue and activity criteria from SSAP No. 97 para. 8.b.ii.
Both YES
Both NO or only 1 YES
Use audited US GAAP equity adjusted to statutory basis. (8.b.ii.)
Use audited US GAAP equity (8.b.iii.)

For downstream holding companies, the sum of all investments in SCAs within (in accordance with the valuation methods by type of SCAs) are calculated as the investment in the downstream holding company as detailed in paragraph 21.

APPENDIX C – SLIDING SCALE DISCOUNTING OF SCA ENTITIES USING THE MARKET VALUATION APPROACH

This chart illustrates the sliding scale discounting by ownership percentage that is described in paragraphs 8.a.iv., 8.a.v. and 8.a.vi. for investments in subsidiary controlled or affiliated entities which are carried using the market valuation approach.

Ownership Percentage	Discount Percentage	Ownership Percentage	Discount Percentage
10%	0.00%	48%	19.00%
11%	0.50%	49%	19.50%
12%	1.00%	50%	20.00%
13%	1.50%	51%	20.33%
14%	2.00%	52%	20.67%
15%	2.50%	53%	21.00%
16%	3.00%	54%	21.33%
17%	3.50%	55%	21.67%
18%	4.00%	56%	22.00%
19%	4.50%	57%	22.33%
20%	5.00%	58%	22.67%
21%	5.50%	59%	23.00%
22%	6.00%	60%	23.33%
23%	6.50%	61%	23.67%
24%	7.00%	62%	24.00%
25%	7.50%	63%	24.33%
26%	8.00%	64%	24.67%
27%	8.50%	65%	25.00%
28%	9.00%	66%	25.33%
29%	9.50%	67%	25.67%
30%	10.00%	68%	26.00%
31%	10.50%	69%	26.33%
32%	11.00%	70%	26.67%
33%	11.50%	71%	27.00%
34%	12.00%	72%	27.33%
35%	12.50%	73%	27.67%
36%	13.00%	74%	28.00%
37%	13.50%	75%	28.33%
38%	14.00%	76%	28.67%
39%	14.50%	77%	29.00%
40%	15.00%	78%	29.33%
41%	15.50%	79%	29.67%
42%	16.00%	80%	30.00%
43%	16.50%	81%	30.00%
44%	17.00%	82%	30.00%
45%	17.50%	83%	30.00%
46%	18.00%	84%	30.00%
47%	18.50%	85%	30.00%

Fair Value Measurements

SCOPE OF STATEMENT

1. This statement defines fair value, establishes a framework for measuring fair value and establishes disclosure requirements about fair value.

SUMMARY CONCLUSION

2. This standard applies under other accounting pronouncements that require or permit fair value measurements, but this standard does not require any new fair value amendments. However, the application of this standard may change current practice. This standard does not eliminate the practicability exceptions to fair value measurements in accounting pronouncements within the scope of this standard.

Scope

3. This standard applies under other statutory accounting pronouncements that require or permit fair value measurements, except as follows:

a. This standard does not eliminate the practicality exceptions to fair value measurements in accounting pronouncements within the scope of this standard.

b. This standard does not apply under *SSAP No. 22—Leases* (SSAP No. 22) and other accounting pronouncements that address fair value measurements for purposes of lease classification to measurement under SSAP No. 22. This scope exception does not apply to assets acquired or liabilities assumed in a business combination that are required to be measured at fair value under *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68), regardless of whether those assets and liabilities are related to leases. This standard does not apply to share-based payment transactions captured within *SSAP No. 104R—Share-Based Payments* (SSAP No. 104R).

Definition of Fair Value

4. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Components of the Fair Value Definition

5. Asset/Liability - A fair value measurement is for a particular asset or liability. Therefore, the measurement should consider attributes specific to the asset or liability, for example, the condition and/or location of the asset or liability and restrictions, if any, on the sale or use of the asset at the measurement date. The asset or liability might be a standalone asset or liability (for example, a financial instrument or an operating asset) or a group of assets and/or liabilities (for example, an asset group, a reporting unit, or a business).

6. Price - A fair value measurement assumes that the asset or liability is exchanged in an orderly transaction between market participants to sell the asset or transfer the liability at the measurement date. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities; it is not a forced transaction (for example, a forced liquidation or distress sale). The transaction to sell the asset or transfer the liability is a hypothetical transaction at the measurement date, considered from the perspective of a market participant that holds the asset or owes the liability. Therefore, the objective of a fair value measurement is to determine the price that would be received to sell the asset or paid to transfer the liability at the measurement date (an exit price).

7. Principal (or Most Advantageous) Market - A fair value measurement assumes that the transaction to sell the asset or transfer the liability occurs in the principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability. The principal market is the market in which the reporting entity would sell the asset or transfer the liability with the greatest volume and level of activity for the asset or liability. The most advantageous market is the market in which the reporting entity would sell the asset or transfer the liability with the price that maximizes the amount that would be received for the asset or minimizes the amount that would be paid to transfer the liability, considering transaction costs in the respective market(s). In either case, the principal (or most advantageous) market (and thus, market participants) should be considered from the perspective of the reporting entity, thereby allowing for differences between and among entities with different activities. If there is a principal market for the asset or liability, the fair value measurement shall represent the price in that market (whether that price is directly observable or otherwise determined using a valuation technique), even if the price in a different market is potentially more advantageous at the measurement date.

8. The price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall not be adjusted for transaction costs. Transaction costs represent the incremental direct costs to sell the asset or transfer the liability in the principal (or most advantageous) market for the asset or liability. Transaction costs are not an attribute of the asset or liability; rather, they are specific to the transaction and will differ depending on how the reporting entity transacts. However, transaction costs do not include the costs that would be incurred to transport the asset or liability to (or from) its principal (or most advantageous) market. If location is an attribute of the asset or liability (as might be the case for a commodity), the price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall be adjusted for the costs, if any, that would be incurred to transport the asset or liability to (or from) its principal (or most advantageous) market.

9. Market Participants - Market participants are buyers and sellers in the principal (or most advantageous) market for the asset or liability that are:

a. Independent of the reporting entity; that is, they are not related parties;

b. Knowledgeable, having a reasonable understanding about the asset or liability and the transaction based on all available information, including information that might be obtained through due diligence efforts that are usual and customary;

c. Able to transact for the asset or liability; and

d. Willing to transact for the asset or liability; that is, they are motivated but not forced or otherwise compelled to do so.

10. The fair value of the asset or liability shall be determined based on the assumptions that market participants would use in pricing the asset or liability. In developing those assumptions, the reporting entity need not identify specific market participants. Rather, the reporting entity should identify characteristics that distinguish market participants generally, considering factors specific to (a) the asset or liability, (b) the principal (or most advantageous) market for the asset or liability, and (c) market participants with whom the reporting entity would transact in that market.

11. *Application to Assets* - A fair value measurement assumes the highest and best use of the asset by market participants, considering the use of the asset that is physically possible, legally permissible, and financially feasible at the measurement date. In broad terms, highest and best use refers to the use of an asset by market participants that would maximize the value of the asset or the group of assets within which the asset would be used. Highest and best use is determined based on the use of the asset by market participants, even if the intended use of the asset by the reporting entity is different.

12. The highest and best use of the asset establishes the valuation premise used to measure the fair value of the asset. Specifically:

a. In-use – The highest and best use of the asset is in-use if the asset would provide maximum value to market participants principally through its use in combination with other assets as a group (as installed or otherwise configured for use). For example, that might be the case for certain nonfinancial assets. If the highest and best use of the asset is in-use, the fair value of the asset shall be measured using an in-use valuation premise. When using an in-use valuation premise, the fair value of the asset is determined based on the price that would be received in a current transaction to sell the asset assuming that the asset would be used with other assets as a group and that those assets would be available to market participants. Generally, assumptions about the highest and best use of the asset should be consistent for all of the assets of the group within which it would be used.

b. In-exchange – The highest and best use of the asset is in-exchange if the asset would provide maximum value to market participants principally on a standalone basis. For example, that might be the case for a financial asset. If the highest and best use of the asset is in-exchange, the fair value of the asset shall be measured using an in-exchange valuation premise. When using an in-exchange valuation premise, the fair value of the asset is determined based on the price that would be received in a current transaction to sell the asset standalone.

13. Because the highest and best use of the asset is determined based on its use by market participants, the fair value measurement considers the assumptions that market participants would use in pricing the asset, whether using an in-use or an in-exchange valuation premise.

14. *Application to Liabilities* - Consideration of non-performance risk (own credit-risk) should not be reflected in the fair value calculation for liabilities (including derivative liabilities) at subsequent measurement. At initial recognition, it is perceived that the consideration of own-credit risk may be inherent in the contractual negotiations resulting in the liability. The consideration of non-performance risk for subsequent measurement is inconsistent with the conservatism and recognition concepts as well as the assessment of financial solvency for insurers, as a decrease in credit standing would effectively decrease reported liabilities and thus seemingly increase the appearance of solvency. Furthermore, liabilities reported or disclosed at “fair value” shall not reflect any third-party credit guarantee of debt.

Fair Value at Initial Recognition

15. When an asset is acquired or a liability is assumed in an exchange transaction for that asset or liability, the transaction price represents the price paid to acquire the asset or received to assume the liability (an entry price). In contrast, the fair value of the asset or liability represents the price that would be received to sell the asset or paid to transfer the liability (an exit price). Conceptually, entry prices and exit prices are different. Entities do not necessarily sell assets at the prices paid to acquire them. Similarly, entities do not necessarily transfer liabilities at the prices received to assume them.

16. In many cases, the transaction price will equal the exit price and, therefore, represent the fair value of the asset or liability at initial recognition. In determining whether a transaction price represents the fair value of the asset or liability at initial recognition, the reporting entity shall consider factors specific to the transaction and the asset or liability. For example, a transaction price might not represent the fair value of an asset or liability at initial recognition if:

a. The transaction is between related parties.

b. The transaction occurs under duress or the seller is forced to accept the price in the transaction. For example, that might be the case if the seller is experiencing financial difficulty.

c. The market in which the transaction occurs is different from the market in which the reporting entity would sell the asset or transfer the liability, that is, the principal or most advantageous market. For example, those markets might be different if the reporting entity is a securities dealer that transacts in different markets, depending on whether the counterparty is a retail customer (retail market) or another securities dealer (inter-dealer market).

d. For liabilities, differences may exist as non-performance risk (own credit risk) is not reflected in the fair value (i.e., exit price) determination of all liabilities (including derivatives).

Valuation Techniques

17. Valuation techniques consistent with the market approach, income approach, and/or cost approach shall be used to measure fair value. Key aspects of those approaches are summarized below:

a. Market approach. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities (including a business). For example, valuation techniques consistent with the market approach often use market multiples derived from a set of comparables. Multiples might lie in ranges with a different multiple for each comparable. The selection of where within the range the appropriate multiple falls requires judgment, considering factors specific to the measurement (qualitative and quantitative). Valuation techniques consistent with the market approach include matrix pricing. Matrix pricing is a mathematical technique used principally to value debt securities without relying exclusively on quoted prices for the specific securities, but rather by relying on the securities' relationship to other benchmark quoted securities.

b. Income approach. The income approach uses valuation techniques to convert future amounts (for example, cash flows or earnings) to a single present amount (discounted). The measurement is based on the value indicated by current market expectations about those future amounts. Those valuation techniques include present value techniques; option-pricing models, such as the Black-Scholes-Merton formula (a closed-form model) and a binomial model (a lattice model), which incorporate present value techniques; and the multiperiod excess earnings method, which is used to measure the fair value of certain intangible assets.

c. Cost approach. The cost approach is based on the amount that currently would be required to replace the service capacity of an asset (often referred to as current replacement cost). From the perspective of a market participant (seller), the price that would be received for the asset is determined based on the cost to a market participant (buyer) to acquire or construct a substitute asset of comparable utility, adjusted for obsolescence. Obsolescence encompasses physical deterioration, functional (technological) obsolescence, and economic (external) obsolescence and is broader than depreciation for financial reporting purposes (an allocation of historical cost) or tax purposes (based on specified service lives).

18. Valuation techniques that are appropriate in the circumstances and for which sufficient data are available shall be used to measure fair value. In some cases, a single valuation technique will be appropriate (for example, when valuing an asset or liability using quoted prices in an active market for

identical assets or liabilities). In other cases, multiple valuation techniques will be appropriate (for example, as might be the case when valuing a reporting unit). If multiple valuation techniques are used to measure fair value, the results (respective indications of fair value) shall be evaluated and weighted, as appropriate, considering the reasonableness of the range indicated by those results. A fair value measurement is the point within that range that is most representative of fair value in the circumstances.

19. Valuation techniques used to measure fair value shall be consistently applied. However, a change in a valuation technique or its application (for example, a change in its weighting when multiple valuation techniques are used) is appropriate if the change results in a measurement that is equally or more representative of fair value in the circumstances. That might be the case if, for example, new markets develop, new information becomes available, information previously used is no longer available, or valuation techniques improve. Revisions resulting from a change in the valuation technique or its application shall be accounted for as a change in accounting estimate pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). The disclosure provisions of SSAP No. 3 for a change in accounting estimate are not required for revisions resulting from a change in a valuation technique or its application.

Inputs to Valuation Techniques

20. In this standard, inputs refer broadly to the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk, for example, the risk inherent in a particular valuation technique used to measure fair value (such as a pricing model) and/or the risk inherent in the inputs to the valuation technique. Inputs may be observable or unobservable:

a. Observable inputs are inputs that reflect the assumptions market participants would use in pricing the asset or liability developed based on market data obtained from sources independent of the reporting entity.

b. Unobservable inputs are inputs that reflect the reporting entity's own assumptions about the assumptions market participants would use in pricing the asset or liability developed based on the best information available in the circumstances.

Valuation techniques used to measure fair value shall maximize the use of observable inputs and minimize the use of unobservable inputs.

Fair Value Hierarchy

21. To increase consistency and comparability in fair value measurements and related disclosures, the fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels. The fair value hierarchy gives the highest priority to quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest level input that is significant to the fair value measurement in its entirety. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, considering factors specific to the asset or liability.

22. The availability of inputs relevant to the asset or liability and the relative reliability of the inputs might affect the selection of appropriate valuation techniques. However, the fair value hierarchy prioritizes the inputs to valuation techniques, not the valuation techniques. For example, a fair value measurement using a present value technique might fall within Level 2 or Level 3, depending on the inputs that are significant to the measurement in its entirety and the level in the fair value hierarchy within which those inputs fall.

Level 1 Inputs

23. Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis. A quoted price in an active market provides the most reliable evidence of fair value and shall be used to measure fair value whenever available, except as discussed in paragraphs 24 and 25.

24. If the reporting entity holds a large number of similar assets or liabilities (for example, debt securities) that are required to be measured at fair value, a quoted price in an active market might be available but not readily accessible for each of those assets or liabilities individually. In that case, fair value may be measured using an alternative pricing method that does not rely exclusively on quoted prices (for example, matrix pricing) as a practical expedient. However, the use of an alternative pricing method renders the fair value measurement a lower level measurement.

25. In some situations, a quoted price in an active market might not represent fair value at the measurement date. That might be the case if, for example, significant events (principal-to-principal transactions, brokered trades, or announcements) occur after the close of a market but before the measurement date. The reporting entity should establish and consistently apply a policy for identifying those events that might affect fair value measurements. However, if the quoted price is adjusted for new information, the adjustment renders the fair value measurement a lower level measurement.

26. If the reporting entity holds a position in a single financial instrument (including a block) and the instrument is traded in an active market, the fair value of the position shall be measured within Level 1 as the product of the quoted price for the individual instrument times the quantity held. The quoted price shall not be adjusted because of the size of the position relative to trading volume (blockage factor). The use of a blockage factor is prohibited, even if a market's normal daily trading volume is not sufficient to absorb the quantity held and placing orders to sell the position in a single transaction might affect the quoted price.

Level 2 Inputs

27. Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly. If the asset or liability has a specified (contractual) term, a Level 2 input must be observable for substantially the full term of the asset or liability. Level 2 inputs include the following:

a. Quoted prices for similar assets or liabilities in active markets

b. Quoted prices for identical or similar assets or liabilities in markets that are not active, that is, markets in which there are few transactions for the asset or liability, the prices are not current, or price quotations vary substantially either over time or among market makers (for example, some brokered markets), or in which little information is released publicly (for example, a principal-to-principal market)

c. Inputs other than quoted prices that are observable for the asset or liability (for example, interest rates and yield curves observable at commonly quoted intervals, volatilities, prepayment speeds, loss severities, credit risks, and default rates)

d. Inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

28. Adjustments to Level 2 inputs will vary depending on factors specific to the asset or liability. Those factors include the condition and/or location of the asset or liability, the extent to which the inputs relate to items that are comparable to the asset or liability, and the volume and level of activity in the markets within which the inputs are observed. An adjustment that is significant to the fair value measurement in its entirety might render the measurement a Level 3 measurement, depending on the level in the fair value hierarchy within which the inputs used to determine the adjustment fall.

29. The reporting entity should evaluate the following factors to determine whether there has been a significant decrease in the volume and level of activity for the asset or liability when compared with normal market activity for the asset or liability (or similar assets or liabilities). The factors include, but are not limited to:

a. There are few recent transactions.

b. Price quotations are not based on current information.

c. Price quotations vary substantially either over time or among market makers (for example, some brokered markets).

d. Indexes that previously were highly correlated with the fair values of the asset or liability are demonstrably uncorrelated with recent indications of fair value for that asset or liability.

e. There is a significant increase in implied liquidity risk premiums, yields, or performance indicators (such as delinquency rates or loss severities) for observed transactions or quoted prices when compared with the reporting entity's estimate of expected cash flows, considering all available market data about credit and other nonperformance risk for the asset or liability.

f. There is a wide bid-ask spread or significant increase in the bid-ask spread.

g. There is a significant decline or absence of a market for new issuances (that is, a primary market) for the asset or liability or similar assets or liabilities.

h. Little information is released publicly (for example, a principal-to-principal market).

The reporting entity shall evaluate the significance and relevance of the factors to determine whether, based on the weight of the evidence, there has been a significant decrease in the volume and level of activity for the asset or liability.

30. If the reporting entity concludes there has been a significant decrease in the volume and level of activity for the asset or liability in relation to normal market activity for the asset or liability (or similar assets or liabilities), transactions or quoted prices may not be determinative of fair value (for example, there may be increased instances of transactions that are not orderly). Further analysis of the transactions or quoted prices is needed, and a significant adjustment to the transactions or quoted prices may be necessary to estimate fair value in accordance with this standard. Significant adjustments also may be necessary in other circumstances (for example, when a price for a similar asset requires significant adjustment to make it more comparable to the asset being measured or when the price is stale).

31. This standard does not prescribe a methodology for making significant adjustments to transactions or quoted prices when estimating fair value. Paragraphs 17-19 discuss the use of valuation techniques in estimating fair value. If there has been a significant decrease in the volume and level of activity for the asset or liability, a change in valuation technique or the use of multiple valuation techniques may be appropriate (for example, the use of a market approach and a present value technique). When weighting indications of fair value resulting from the use of multiple valuation techniques, the

reporting entity shall consider the reasonableness of the range of fair value estimates. The objective is to determine the point within that range that is most representative of fair value under current market conditions. A wide range of fair value estimates may be an indication that further analysis is needed.

32. Even in circumstances where there has been a significant decrease in the volume and level of activity for the asset or liability and regardless of the valuation technique(s) used, the objective of a fair value measurement remains the same. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions. Determining the price at which willing market participants would transact at the measurement date under current market conditions if there has been a significant decrease in the volume and level of activity for the asset or liability depends on the facts and circumstances and requires the use of significant judgment. However, the reporting entity's intention to hold the asset or liability is not relevant in estimating fair value. Fair value is a market-based measurement, not an entity-specific measurement.

33. Even if there has been a significant decrease in the volume and level of activity for the asset or liability, it is not appropriate to conclude that all transactions are not orderly (that is, distressed or forced). Circumstances that may indicate that a transaction is not orderly include, but are not limited to:

a. There was not adequate exposure to the market for a period before the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities under current market conditions.

b. There was a usual and customary marketing period, but the seller marketed the asset or liability to a single market participant.

c. The seller is in or near bankruptcy or receivership (that is, distressed), or the seller was required to sell to meet regulatory or legal requirements (that is, forced).

d. The transaction price is an outlier when compared with other recent transactions for the same or similar asset or liability.

The reporting entity shall evaluate the circumstances to determine whether the transaction is orderly based on the weight of the evidence.

34. The determination of whether a transaction is orderly (or not orderly) is more difficult if there has been a significant decrease in the volume and level of activity for the asset or liability. Accordingly, the reporting entity shall consider the following guidance:

a. If the weight of the evidence indicates the transaction is not orderly, the reporting entity shall place little, if any, weight (compared with other indications of fair value) on that transaction price when estimating fair value or market risk premiums.

b. If the weight of the evidence indicates the transaction is orderly, the reporting entity shall consider that transaction price when estimating fair value or market risk premiums. The amount of weight placed on that transaction price when compared with other indications of fair value will depend on the facts and circumstances such as the volume of the transaction, the comparability of the transaction to the asset or liability being measured at fair value, and the proximity of the transaction to the measurement date.

c. If the reporting entity does not have sufficient information to conclude that the transaction is orderly or that the transaction is not orderly, it shall consider that transaction price when estimating fair value or market risk premiums. However, that transaction price may not be determinative of fair value (that is, that transaction price may not be the sole or primary basis for estimating fair value or market risk premiums). The reporting entity shall place less weight on transactions on which the reporting entity does not have sufficient information to conclude whether the transaction is orderly when compared with other transactions that are known to be orderly.

In its determinations, the reporting entity need not undertake all possible efforts, but shall not ignore information that is available without undue cost and effort. The reporting entity would be expected to have sufficient information to conclude whether a transaction is orderly when it is party to the transaction.

35. Regardless of the valuation technique(s) used, the reporting entity shall include appropriate risk adjustments. Risk-averse market participants generally seek compensation for bearing the uncertainty inherent in the cash flows of an asset or liability (risk premium). A fair value measurement should include a risk premium reflecting the amount market participants would demand because of the risk (uncertainty) in the cash flows. Otherwise, the measurement would not faithfully represent fair value. In some cases, determining the appropriate risk premium might be difficult. However, the degree of difficulty alone is not a sufficient basis on which to exclude a risk adjustment. Risk premiums should be reflective of an orderly transaction (that is, not a forced or distressed sale) between market participants at the measurement date under current market conditions.

36. When estimating fair value, this standard does not preclude the use of quoted prices provided by third parties, such as pricing services or brokers, when the reporting entity has determined that the quoted prices provided by those parties are determined in accordance with this standard. However, when there has been a significant decrease in the Volume or level of activity for the asset or liability, the reporting entity should evaluate whether those quoted prices are based on current information that reflects orderly transactions or a valuation technique that reflects market participant assumptions (including assumptions about risks). In weighting a quoted price as an input to a fair value measurement, the reporting entity should place less weight (when compared with other indications of fair value that are based on transactions) on quotes that do not reflect the result of transactions. Furthermore, the nature of the quote (for example, whether the quote is an indicative price or a binding offer) should be considered when weighting the available evidence, with more weight given to quotes based on binding offers.

Level 3 Inputs

37. Level 3 inputs are unobservable inputs for the asset or liability. Unobservable inputs shall be used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. However, the fair value measurement objective remains the same, that is, an exit price from the perspective of a market participant that holds the asset or owes the liability. Therefore, unobservable inputs shall reflect the reporting entity's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). Unobservable inputs shall be developed based on the best information available in the circumstances, which might include the reporting entity's own data. In developing unobservable inputs, the reporting entity need not undertake all possible efforts to obtain information about market participant assumptions. However, the reporting entity shall not ignore information about market participant assumptions that is reasonably available without undue cost and effort. Therefore, the reporting entity's own data used to develop unobservable inputs shall be adjusted if information is reasonably available without undue cost and effort that indicates that market participants would use different assumptions.

Inputs Based on Bid and Ask Prices

38. If an input used to measure fair value is based on bid and ask prices (for example, in a dealer market), the price within the bid-ask spread that is most representative of fair value in the circumstances shall be used to measure fair value, regardless of where in the fair value hierarchy the input falls (Level 1,

2, or 3). This standard does not preclude the use of mid-market pricing or other pricing conventions as a practical expedient for fair value measurements within a bid-ask spread.

Disclosures

39. A reporting entity shall disclose information that helps users of the financial statements to assess both of the following: (1) For assets and liabilities that are measured and reported[1] at fair value in the statement of financial position after initial recognition, the valuation techniques and inputs used to develop those measurements; (2) For fair value measurements in the statement of financial position determined using significant unobservable inputs (Level 3), the effect of the measurements on earnings (or changes in net assets) for the period. To meet these objectives, the reporting entity shall disclose the information in paragraphs 39.a. through 39.f. for each class of assets and liabilities measured and reported[2] at fair value in the statement of financial position after initial recognition. The reporting entity shall determine appropriate classes of assets and liabilities in accordance with the annual statement instructions.

a. The fair value measurements at the reporting date.

b. The level of the fair value hierarchy within which the fair value measurements are categorized in their entirety (Level 1, 2 or 3).

c. For assets and liabilities held at the reporting date, the amounts of any transfers between Level 1 and Level 2 of the fair value hierarchy, the reasons for the transfers, and the reporting entity's policy for determining when transfers between levels are recognized. Transfers into each level shall be disclosed and discussed separately from transfers out of each level.

d. For fair value measurements categorized within Level 2 and Level 3 of the fair value hierarchy, a description of the valuation technique(s) and the inputs used in the fair value measurement. If there has been a change in the valuation technique (for example, changing from a market approach to an income approach or the use of an additional valuation technique), the reporting entity shall disclose that change and the reason(s) for making it.

e. For fair value measurements categorized within Level 3 of the fair value hierarchy a reconciliation from the opening balances to the closing balances disclosing separately changes during the period attributable to the following:

i. Total gains or losses for the period recognized in income or surplus.

ii. Purchases, sales, issues, and settlements (each type disclosed separately)

iii. The amounts of any transfers into or out of Level 3, the reasons for those transfers, and the reporting entity's policy for determining when transfers between levels are recognized. Transfers into Level 3 shall be disclosed and discussed separately from transfers out of Level 3.

[1] The term "reported" is intended to reflect the measurement basis for which the asset or liability is classified within its underlying SSAP. For example, a bond with an NAIC designation of 2 is considered an amortized cost measurement and is not included within this disclosure even if the amortized cost and fair value measurement are the same. An example of when such a situation may occur includes a bond that is written down as other-then-temporarily impaired as of the date of financial position. The amortized cost of the bond after the recognition of the other-than-temporary impairment may agree to fair value, but under SSAP No. 26 this security is considered to still be reported at amortized cost.

[2] See footnote 1

f. A reporting entity shall disclose and consistently follow its policy for determining when transfers between levels are recognized. The policy about the timing of recognizing transfers shall be the same for transfers into Level 3 as that for transfers out of Level 3. Examples of policies for when to recognize the transfers are as follows:

i. The actual date of the event or change in circumstances that caused the transfer

ii. The beginning of the reporting period

iii. The end of the reporting period.

40. For derivative assets and liabilities, the reporting entity shall present both of the following:

a. The fair value disclosures required by paragraph 39.a., 39.b. and 39.c. on a gross basis

b. The reconciliation disclosures required by paragraph 39.d., 39.e. and 39.f. on either a gross or net basis

41. The quantitative disclosures required in paragraphs 39-40 of this standard shall be presented using a tabular format. (See Exhibit A.)

42. The reporting entity shall disclose the fair value hierarchy and the method used to obtain the fair value measurement for all items in which fair value is disclosed within the annual statement investment schedules. This disclosure is satisfied by the completion of the investment schedules in the Annual statement and is not required quarterly.

43. The reporting entity is encouraged, but not required, to combine the fair value information disclosed under this standard with the fair value information disclosed under other accounting pronouncements (for example, disclosures about fair value of financial instruments) in the periods in which those disclosures are required, if practicable. The reporting entity also is encouraged, but not required, to disclose information about other similar measurements, if practicable.

Disclosures about Fair Value of Financial Instruments

44. A reporting entity shall disclose in the notes to the financial statements, as of each date for which a statement of financial position is presented in the quarterly or annual financial statements, the aggregate fair value for all financial instruments and the level within the fair value hierarchy in which the fair value measurements in their entirety fall. This disclosure shall be summarized by type of financial instrument, for which it is practicable to estimate fair value, except for certain financial instruments identified in paragraph 45. Fair value disclosed in the notes shall be presented together with the related admitted values in a form that makes it clear whether the fair values and admitted values represent assets or liabilities and to which line items in the Statement of Assets, Liabilities, Surplus and Other Funds they relate. Unless specified otherwise in another SSAP, the disclosures may be made net of encumbrances, if the asset or liability is so reported. A reporting entity shall also disclose the method(s) and significant assumptions used to estimate the fair value of financial instruments.

	Aggregate Fair Value	Admitted Assets	Level 1	Level 2	Level 3	Not Practicable (Carrying Value)
Type of Financial Instrument:						
Bonds						
Common Stock						
Perpetual Preferred Stock						
Mortgage Loans						
Etc.						

If it is not practicable for an entity to estimate the fair value of the financial instrument or a class of financial instruments, the aggregate carrying amount for those items shall be reported in the "not practicable" column with additional disclosure as required in paragraph 46 of SSAP No. 100.

Not Practicable to Estimate FV	Carrying Value	Effective Interest Rate	Maturity	Explanation
Individual Security Reporting by Type or Class of Financial Instrument:				
Mortgage Loans:				
Description 1				A
Description 2				A
Etc.				

A – It was not practicable to determine the fair value of these financial instruments as a quoted market price was not available and the cost of obtaining an independent appraisal appears excessive considering the materiality of the instruments to the reporting entity.

45. The disclosures about fair value prescribed in paragraph 44 are not required for the following:

a. Employers' and plans' obligations for pension benefits, other postretirement benefits including health care and life insurance benefits, postemployment benefits, employee stock option and stock purchase plans, and other forms of deferred compensation arrangements, as defined in *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12), *SSAP No. 92—Accounting for Postretirement Benefits Other Than Pensions, A Replacement of SSAP No. 14* (SSAP No. 92), *SSAP No. 102—Accounting for Pensions, A Replacement of SSAP No. 89* (SSAP No. 102) and *SSAP No. 104R—Share-Based Payments* (SSAP No. 104R).

b. Substantively extinguished debt subject to the disclosure requirements of *SSAP No. 103—Accounting for Transfer and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 103)

c. Insurance contracts, other than financial guarantees and deposit-type contracts

d. Lease contracts as defined in *SSAP No. 22—Leases* (SSAP No. 22)

e. Warranty obligations and rights

f. Investments accounted for under the equity method

g. Equity instruments issued by the entity

46. If it is not practicable for an entity to estimate the fair value of a financial instrument or a class of financial instruments, the following shall be disclosed:

a. Information pertinent to estimating the fair value of that financial instrument or class of financial instruments, such as the carrying amount, effective interest rate, and maturity; and

b. The reasons why it is not practicable to estimate fair value.

47. In the context of this standard, practicable means that an estimate of fair value can be made without incurring excessive costs. It is a dynamic concept: what is practicable for one entity might not be for another; what is not practicable in one year might be in another. For example, it might not be practicable for an entity to estimate the fair value of a class of financial instruments for which a quoted market price is not available because it has not yet obtained or developed the valuation model necessary to make the estimate, and the cost of obtaining an independent valuation appears excessive considering the materiality of the instruments to the entity. Practicability, that is, cost considerations, also may affect the required precision of the estimate; for example, while in many cases it might seem impracticable to estimate fair value on an individual instrument basis, it may be practicable for a class of financial instruments in a portfolio or on a portfolio basis. In those cases, the fair value of that class or of the portfolio should be disclosed. Finally, it might be practicable for an entity to estimate the fair value only of a subset of a class of financial instruments; the fair value of that subset should be disclosed.

Relevant Literature

48. This standard adopts with modification *FAS 157, Fair Value Measurements*; (FAS 157) *FSP FAS 157-1, Application of FASB Statement No. 157 to FASB Statement No. 13 and Other Accounting* Pronouncements *That Address Fair Value Measurements for Purposes of Lease Classification or Measurement Under Statement 13*, (FSP FAS 157-1) and *FSP FAS 157-4, Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly* (FSP FAS 157-4). Modifications from FAS 157, FSP FAS 157-1 and FSP FAS 157-4 include:

a. See revision to paragraph 3.b. from adoption of *SSAP No. 104R—Share-Based Payments* (SSAP No. 104R).

b. This standard does not adopt the scope exclusions within paragraph 3 of FAS 157 for accounting pronouncements that require or permit measurements that are similar to fair value but that are not intended to measure fair value, including (a) accounting pronouncements that permit measurements that are based on, or otherwise use, vendor-specific objective evidence of fair value and (b) inventory pricing. These items are excluded as they are not prevalent within statutory accounting.

c. This standard does not adopt guidance from FAS 157 regarding the consideration of non-performance risk (own credit risk) in determining the fair value measurement of liabilities. The consideration of own credit-risk in the measurement of fair value liabilities is inconsistent with the statutory accounting concept of conservatism and the assessment of financial solvency for insurers. The fair value determination for liabilities should follow the guidance adopted from FAS 157, with the exception of the consideration of own-performance risk.

d. This standard includes revisions to reference statutory standards or terms instead of GAAP standards or terms.

e. This standard incorporates the guidance from SSAP No. 27 regarding disclosures about fair value of financial instruments. This incorporated SSAP No. 27 guidance was adopted from *FAS 107, Disclosures about Fair Value of Financial Instruments* (FAS 107) and was revised to adopt *FSP FAS 107-1 and APB-1, Interim Disclosures about Fair Value of Financial Instruments* (FSP FAS 107-1 and APB-1). For statutory purposes, the incorporation of this guidance within one standard results in having one comprehensive standard addressing fair value measurements and disclosures.

49. In August 2010, this statement adopted with modification the new and revised disclosure requirements within *ASU 2010-06, Fair Value Measurements and Disclosures – (Topic 820) – Improving Disclosures about Fair Value Measurements* (ASU 2010-06). GAAP revisions within ASU 2010-06 that modify the FASB Codification on aspects originally added by *ASU 2009-05, Fair Value Measurements and Disclosures, Measuring Liabilities at Fair Value* (ASU 2009-05) and *ASU 2009-12, Fair Value Measurements and Disclosures, Investment in Certain Entities that Calculate Net Asset Value per Share (or its equivalent)* (ASU 2009-12) are not adopted, as the underlying GAAP guidance within ASU 2009-05 and ASU 2009-12 has not been considered for statutory accounting. When ASU 2009-05 and ASU 2009-12 are reviewed for statutory accounting, the GAAP guidance considered will reflect the revisions from ASU 2010-06. Subsequent nonsubstantive revisions to the guidance adopted from ASU 2010-06 were incorporated within this Statement in November 2010 to clarify the disclosure requirements for statutory accounting. These revisions removed the distinction between recurring and non-recurring fair value measurements and clarified disclosure requirements for assets and liabilities measured and reported at fair value in the statement of financial position.

50. Paragraphs 44-47 adopt FAS 107 as amended by *FASB Statement No. 119, Disclosure about Derivative* Financial *Instruments and Fair Value of Financial Instruments* (FAS 119), except that paragraph 15(c) of FAS 119 relating to disclosure of financial instruments held or issued for trading is rejected and *FASB Emerging Issues Task Force No. 85-20, Recognition of Fees for Guaranteeing a Loan*. Financial instruments named within paragraph 8 of FAS 107 that are exempt from disclosure are adopted to the extent applicable for statutory accounting and are reflected in paragraph 45. This standard also adopts revisions to FAS 107 reflected in *FSP FAS 107-1 and APB-1, Interim Disclosures about Fair Value of Financial Instruments* (FSP FAS 107-1 and APB-1), and thus requires disclosure in both annual and quarterly financial statements. In addition, this standard rejects FASB Statement No. 126, Exemptions from Certain Required Disclosures about Financial Instruments for Certain Nonpublic Entities, an amendment of FAS 107. FAS 119 is addressed in SSAP No. 31.

51. This standard rejects *ASU 2013-03, Financial Instruments – Clarifying the Scope and Applicability of a Particular Disclosure to Nonpublic Entities* (ASU 2013-03), *FSP FAS 157-2: Effective Date of FASB Statement No. 157* (FSP FAS 157-2) and *FSP FAS 157-3: Determining the Fair Value of a Financial Asset When the Market for That Asset is Not Active* (FSP FAS 157-3).

Effective Date and Transition

52. This standard shall be effective for December 31, 2010, annual financial statements, with interim and annual financial statement reporting thereafter. Early adoption is permitted for December 31, 2009, annual financial statements, with interim and annual reporting thereafter. Nonsubstantive disclosure revisions adopted in August and November 2010 to paragraphs 39-40 and the corresponding disclosure illustrations are initially effective for year-end 2010 financial statements, with interim and annual reporting thereafter. Nonsubstantive revisions adopted March 2011 to paragraphs 39.a., 39.e.ii., 42 and 44 are effective January 1, 2012, with interim and annual reporting thereafter as required in the SSAP. (Paragraph 42 is satisfied by the annual statement investment schedules and is not required quarterly.)

EXHIBIT A - IMPLEMENTATION GUIDANCE AND DISCLOSURE ILLUSTRATIONS

53. For fair value measurements categorized within Level 2 and Level 3 of the fair value hierarchy, this Standard requires a reporting entity to disclose a description of the valuation techniques(s) and the inputs used in the fair value measurement. A reporting entity might disclose the following to comply with the input disclosure requirement of paragraph 39.d.:

a. Quantitative information about the input, for example, for certain debt securities or derivatives, information such as, but not limited to, prepayment rates, rates of estimated credit losses, interest rates (for example the LIBOR swap rate) or discount rates and volatilities.

b. The nature of the item being measured at fair value, including the characteristics of the item being measured that are considered in the determination of relevant inputs. For example, for residential mortgage-backed securities, a reporting entity might disclose the following:

i. The types of underlying loans (for example, prime loans or subprime loans)

ii. Collateral

iii. Guarantees or other credit enhancements

iv. Seniority level of the tranches of securities

v. The year of issue

vi. The weighted-average coupon rate of the underlying loans and the securities

vii. The weighted-average maturity of the underlying loans and the securities

viii. The geographical concentration of the underlying loans

ix. Information about the credit ratings of the securities

c. How third-party information such as broker quotes, pricing services, net asset values and relevant market data was considered in measuring fair value.

54. In addition, a reporting entity should provide any other information that will help users of its financial statements to evaluate the qualitative information disclosed. For example, a reporting entity might disclose the following with respect to its investment in a class of residential-mortgage backed securities:

> As of December 31, 20X1, the reported fair value of the reporting entity’s investments in Level 3, NAIC rated 6, residential mortgage-backed securities was $XXXX. These securities are senior tranches in a securitization trust and have a weighted-average coupon rate of XX percent and a weighted-average maturity of XX years. The underlying loans for these securities are residential subprime mortgages that originated in California in 2006. The underlying loans have a weighted-average coupon rate of XX percent and a weighted-average maturity of XX years. These securities are currently rated below investment grade. To measure their fair value, the reporting entity used an industry standard pricing model, which uses an income approach. The significant inputs for the pricing model include the following weighted averages:

a. Yield: XX percent

b. Probability of default; XX percent constant default rate

c. Loss severity; XX percent

d. Prepayment: XX percent constant prepayment rate

55. **Fair Value Measurements at Reporting Date:** For assets and liabilities measured and reported[3] at fair value at the reporting date, this Statement requires quantitative disclosures about the fair value measurements for each class of assets and liabilities. For assets, that information might be presented as follows. (This chart is an example, and the categories utilized by a reporting entity shall reflect the investments held by the reporting entity.)

(Paragraph 39.c. also requires that the reporting entity also disclose any significant transfers to or from Levels 1 and 2 and the reasons for those transfers. This disclosure requirement is not satisfied by the disclosure below and shall be reflected separately within the notes to financial statements.)

(In millions)	Level 1	Level 2	Level 3	Total

56. **Fair Value Measurements in Level 3 of the Fair Value Hierarchy:** For assets and liabilities measured and reported[4] at fair value categorized within Level 3 of the fair value hierarchy, this Statement requires a reconciliation from the opening balances to the closing balances for each class of assets and liabilities, except for derivative assets and liabilities, which may be presented net. For assets, the reconciliation may be presented as follows: (This chart is an example, and the categories provided will be revised in accordance with the investments held by the reporting entity.)

(Paragraph 39.e.iii. requires disclosures on the transfers in and/or out of Level 3. This disclosure requirement is satisfied by the following table.)

	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
	Balance 01/01/20XX	Transfers into Level 3	Transfers out of Level 3	Total gains and (losses) included in Net Income	Total gains and (losses) included in Surplus	Purchases	Issues	Sales	Settlement s	Balance at 12/31/20XX

Income Taxes

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for current and deferred federal and foreign income taxes and current state income taxes. This statement supersedes conclusions reached in *SSAP No. 10—Income Taxes* and *SSAP No. 10R—Income Taxes, A Temporary Replacement of SSAP No. 10*.

SUMMARY CONCLUSION

2. For purposes of accounting for federal and foreign income taxes, reporting entities shall adopt *FASB Statement No. 109, Accounting for Income Taxes* (FAS 109) with modifications for state income taxes, the realization criteria for deferred tax assets, and the recording of the impact of changes in deferred tax balances. One objective of accounting for income taxes is to recognize the estimated amount of taxes payable or refundable for the current year as a tax liability or asset. A second objective is to recognize deferred tax liabilities and assets for the future tax consequences of events that have been recognized in a reporting entity's statutory financial statements or tax returns. However, the second objective is realistically constrained because (a) the tax payment or refund that results from a particular tax return is a joint result of all the items included in that return, (b) taxes that will be paid or refunded in future years are the joint result of events of the current or prior years and events of future years, and (c) information available about the future is limited. As a result, financial statements will recognize current and deferred income tax assets and liabilities in accordance with the provisions of this statement based upon estimates and approximations. For purposes of this statement, only adjusted gross deferred tax assets that are more likely than not (a likelihood of more than 50 percent) to be realized shall be considered in determining admitted adjusted gross deferred tax assets.

Current Income Taxes

3. "Income taxes incurred" shall include current income taxes, the amount of federal and foreign income taxes paid (recovered) or payable (recoverable) for the current year. Current income taxes are defined as:

a. Current year estimates (including quarterly estimates) of federal and foreign income taxes payable or refundable, based on tax returns for the current and prior years, except as addressed in paragraph 3.b., and tax loss contingencies (including related interest and penalties) for current and all prior years, computed in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) with the following modifications:

i. The term "probable" as used in SSAP No. 5R shall be replaced by the term "more likely than not (a likelihood of more than 50 percent)" for federal and foreign income tax loss contingencies only.

ii. For purposes of the determination of a federal and foreign income tax loss contingency, it shall be presumed that the reporting entity will be examined by the relevant taxing authority that has full knowledge of all relevant information.

iii. If the estimated tax loss contingency is greater than 50% of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% of the original tax benefit recognized.

b. Amounts incurred or received during the current year relating to prior periods, to the extent not previously provided, as such amounts are deemed to be changes in accounting estimates as defined in *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3).

c. In determining when tax loss contingencies associated with temporary differences should be included in current income taxes under paragraph 3.a., and therefore included in deferred taxes under paragraph 7, a reporting entity is not required to "gross-up" its current and deferred taxes until such time as an event has occurred that would cause a re-evaluation of the contingency and its probability of assessment, e.g., the IRS has identified the item as one which may be adjusted upon audit. Such an event could be the reporting entity's (or its affiliate or parent in a consolidated income tax return) receipt of a Form 5701, Proposed Audit Adjustment, or could occur earlier upon receipt of an Information Document Request. At such time, the company must reassess the probability of an adjustment, reasonably re-estimate the amount of tax contingency as determined in accordance with paragraph 3.a., make any necessary adjustment to deferred taxes, and re-determine the admissibility of any adjusted gross deferred tax asset as provided in paragraph 11.

4. State taxes (including premium, income and franchise taxes) shall be computed in accordance with SSAP No. 5R and shall be limited to (a) taxes due as a result of the current year's taxable basis calculated in accordance with state laws and regulations and (b) amounts incurred or received during the current year relating to prior periods, to the extent not previously provided as such amounts are deemed to be changes in accounting estimates. Property and casualty insurance companies shall report state taxes as other underwriting expenses under the caption "Taxes, licenses, and fees." Life and accident and health insurance companies shall report such amounts as general expenses under the caption "Insurance taxes, licenses, and fees, excluding federal income taxes." Other health entities shall report such amounts as general administration expenses under the caption "Taxes, licenses, and fees." State tax recoverables that are reasonably expected to be recovered in a subsequent accounting period are admitted assets. State taxes are reasonably expected to be recovered if the refund is attributable to overpayment of estimated tax payments, errors, carrybacks, or items for which the reporting entity has authority to recover under a state regulation or statute.

Deferred Income Taxes

5. Because tax laws and statutory accounting principles differ in their recognition and measurement of assets, liabilities, equity, revenues, expenses, gains, and losses, differences arise between:

a. The amount of taxable income and pretax statutory financial income for a year, and

b. The tax bases of assets or liabilities and their reported amounts in statutory financial statements.

6. A reporting entity's balance sheet shall include deferred income tax assets (DTAs) and liabilities (DTLs) related to the estimated future tax consequences of temporary differences and carryforwards, generated by statutory accounting, as defined in paragraph 11 of FAS 109.

7. A reporting entity's deferred tax assets and liabilities are computed as follows:

a. Temporary differences are identified and measured using a "balance sheet" approach whereby statutory and tax basis balance sheets are compared;

b. Temporary differences include unrealized gains and losses and nonadmitted assets but do not include asset valuation reserve (AVR), interest maintenance reserve (IMR), Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased;

c. Total DTAs and DTLs are computed using enacted tax rates;

d. A DTL is not recognized for amounts described in paragraph 31 of FAS 109; and

e. Gross DTAs are reduced by a statutory valuation allowance adjustment if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50 percent) that some portion or all of the gross DTAs will not be realized. The statutory valuation allowance adjustment[1], determined in a manner consistent with paragraphs 20-25 of FAS 109[2], shall reduce the gross DTAs to the amount that is more likely than not to be realized (the adjusted gross deferred tax assets).

8. Changes in DTAs and DTLs, including changes attributable to changes in tax rates and changes in tax status, if any, shall be recognized as a separate component of gains and losses in unassigned funds (surplus). Admitted adjusted gross DTAs and DTLs shall be offset and presented as a single amount on the statement of financial position.

Admissibility of Income Tax Assets

9. Current income tax recoverables shall include all current income taxes, including interest, reasonably expected to be recovered in a subsequent accounting period, whether or not a return or claim has been filed with the taxing authorities. Current income tax recoverables are reasonably expected to be recovered if the refund is attributable to overpayment of estimated tax payments, errors, carrybacks, as defined in paragraph 289 of FAS 109, or items for which the reporting entity has substantial authority, as that term is defined in Federal Income Tax Regulations.$^{(\text{INT 06-12})}$

10. Current income tax recoverables meet the definition of assets as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

[1] The statutory valuation allowance adjustment is utilized strictly to calculate the "adjusted gross DTA". (Admittance criteria in paragraph 11 are applied to the "adjusted gross DTA".) In determining the amount of adjusted gross DTA, the reporting entity shall consider reversal patterns of temporary differences to the extent necessary to support establishing or not establishing a valuation allowance adjustment, determined in accordance with paragraphs 228 and 229 of FAS 109. For purposes of this accounting statement, consideration of reversal patterns does not require scheduling beyond that necessary to support establishing or not establishing a valuation allowance adjustment. The application of the statutory valuation allowance adjustment in this statement shall not result in a statutory valuation allowance reserve within the statutory financial statements, but rather should result in a reduction of the gross DTA.

[2] For purposes of determining the amount of adjusted gross DTA and the amount admitted under paragraph 11, the admission calculation shall be made on a separate company, reporting entity basis. A reporting entity that files a consolidated federal income tax return with its parent should look to the amount of taxes it paid (or were allocated to it) as a separate legal entity in determining the admitted DTA under paragraph 11.a. Furthermore, the DTA under this paragraph may not exceed the amount that the reporting entity could reasonably expect to have refunded by its parent. The taxes paid by the reporting entity represent the maximum DTA that may be admitted under paragraph 11.a., although the amount could be reduced pursuant to the group's tax allocation agreement. The amount of admitted adjusted gross DTA under paragraph 11.b.i. is limited to the amount that the reporting entity expects to realize within the applicable realization period, on a separate company basis. The reporting entity must estimate its separate company taxable income and the tax benefit that it expects to receive from reversing deductible temporary differences in the form of lower tax payments to its parent. A reporting entity that projects a tax loss in the applicable realization period cannot admit a DTA related to the loss under paragraph 11.b., even if the loss could offset taxable income of other members in the consolidated group and the reporting entity could expect to be paid for the tax benefit pursuant to its tax allocation agreement.

11. The net admitted DTA shall not exceed the excess of the adjusted gross DTA, as determined under paragraph 7.e., over gross DTL. Adjusted gross DTAs shall be admitted based upon the three-component admission calculation at an amount equal to the sum of paragraphs 11.a., 11.b., and 11.c.:

a. Federal income taxes paid in prior years that can be recovered through loss carrybacks for existing temporary differences that reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years, including any amounts established in accordance with the provision of SSAP No. 5R as described in paragraph 3.a. of this statement related to those periods.

b. If the reporting entity is subject to risk-based capital requirements or is required to file a Risk-Based Capital Report with the domiciliary state, the reporting entity shall use the *Realization Threshold Limitation Table – RBC Reporting Entities* (RBC Reporting Entity Table) in this component of the admission calculation. The RBC Reporting Entity Table's threshold limitations are contingent upon the ExDTA ACL RBC ~~ACL~~ Ratio[3].

If the reporting entity is either a mortgage guaranty insurer or financial guaranty insurer that is not subject to risk-based capital requirements and is not required to file a Risk-Based Capital Report with the domiciliary state and the reporting entity meets the minimum capital and reserve requirements for the state of domicile, then the reporting entity shall use the *Realization Threshold Limitation Table – Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entities* (Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table) in this component of the admission calculation. The Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table's threshold limitations are contingent upon the following ratio: the numerator is equal to the sum of 1) surplus to policyholders, 2) less the amount of the admitted DTA in paragraph 11.a. (ExDTA Surplus) plus, 3) contingency reserves. The denominator is equal to the required amount of minimum aggregate capital required to be maintained under the applicable NAIC model law or state variation thereof based on the risk characteristics and the amount of insurance in force (Required Aggregate Risk Capital)[4].

If the reporting entity (1) is not subject to risk-based capital requirements, (2) is not required to file a Risk-Based Capital Report with the domiciliary state, (3) is not a mortgage guaranty or financial guaranty insurer, and (4) meets the minimum capital and reserve requirements, then the reporting entity shall use the *Realization Threshold Limitation Table – Other Non-RBC Reporting Entities* (Other Non-RBC Reporting Entity Table). The Other Non-RBC Reporting Entity Table's threshold limitations are

[3] The December 31 Risk-Based Capital ratio is calculated based on the Authorized Control Level RBC for the current reporting period, which is in the process of being filed with the state of domicile, and computed without net deferred tax assets (ExDTA ACL RBC). The interim period (March 31, June 30, and September 30) ExDTA ACL RBC ratio numerator shall use the Total Adjusted Capital (TAC) with current quarter surplus ExDTA and current quarter TAC adjustments. The interim period denominator shall use the Authorized Control Level RBC as filed for the most recent calendar year.

[4] If the reporting entity is a mortgage guaranty insurer, this ratio is based on the requirements of Section 12 of the NAIC Mortgage Guaranty Insurance Model Law and state laws that, based on the risk characteristics and amount of insurance in force, require aggregate capital to be maintained in a risk-to-capital ratio of not less than 25 to 1. If the reporting entity is a financial guaranty insurer, this ratio is based on the requirements of Section 4C of the NAIC Financial Guaranty Insurance Model Guideline 1626 and state laws that require aggregate capital to be maintained based on the risk characteristics and amount of insurance in force.

contingent upon the ratio of adjusted gross DTA (Adjusted gross DTA less the amount of DTA admitted in paragraph 11.a.) to adjusted capital and surplus[5].

Realization Threshold Limitation Table – RBC Reporting Entities

ExDTA ACL RBC (%)	11.b.i.	11.b.ii.
Greater than 300%	3 years	15%
200 – 300%	1 year	10%
Less than 200%	0 years	0%

Realization Threshold Limitation Table – Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entities

(See paragraph 11.b.) Ex DTA Surplus plus Contingency Reserves/Required Aggregate Risk Capital (%)	11.b.i.	11.b.ii.
Greater than 115%	3 years	15%
100% to 115%	1 year	10%
Less than 100%	0 years	0%

Realization Threshold Limitation Table – Other Non-RBC Reporting Entities

Adjusted Gross DTA / Adjusted Capital & Surplus (%)	11.b.i.	11.b.ii.
Less than 50%	3 years	15%
50% to 75%	1 year	10%
Greater than 75%	0 years	0%

The reporting entity shall admit:

[5] Consistent with the requirements of paragraph 11.b.ii., adjusted statutory capital and surplus used in this calculation component is based on statutory capital and surplus for the current reporting period excluding any net DTA, EDP equipment and operating system software and any net positive goodwill.

i. The amount of adjusted gross DTAs, after the application of paragraph 11.a., expected to be realized within the applicable period (refer to the 11.b.i. column of the applicable Realization Threshold Limitation Table above; the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table, or the Other Non-RBC Reporting Entity Table) following the balance sheet date limited to the amount determined in paragraph 11.b.ii.

ii. An amount that is no greater than the applicable percentage (refer to the 11.b.ii. column of the applicable Realization Threshold Limitation Table above: the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table, or the Other Non-RBC Reporting Entity Table) of statutory capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for the current reporting period's statement filed with the domiciliary state commissioner adjusted to exclude any net DTAs, EDP equipment and operating system software and any net positive goodwill.(INT 01-18) For financial guaranty or mortgage guaranty non-RBC reporting entities, the amount of statutory capital and surplus utilized for this part of the calculation does not include contingency reserves.

c. The amount of adjusted gross DTAs, after application of paragraphs 11.a. and 11.b. that can be offset against existing gross DTLs. The reporting entity shall consider the character (i.e., ordinary versus capital) of the DTAs and DTLs such that offsetting would be permitted in the tax return under existing enacted federal income tax laws and regulations. Additionally, for purposes of this component, the reporting entity shall consider the reversal patterns of temporary differences; however, this consideration does not require scheduling beyond that required in paragraph 7.e.

12. In computing a reporting entity's admitted adjusted gross DTA pursuant to paragraph 11;

a. For purposes of paragraph 11.a., existing temporary differences that reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years, shall be determined in accordance with paragraphs 228 and 229 of FAS 109;

b. In determining the amount of federal income taxes that can be recovered through loss carrybacks, the amount and character (i.e., ordinary versus capital) of the loss carrybacks and the impact, if any, of the Alternative Minimum Tax shall be determined in accordance with the provisions of the Internal Revenue Code, and regulations thereunder;

c. The amount of carryback potential that may be considered in calculating the admitted adjusted gross DTAs of a reporting entity in paragraph 11.a. that files a consolidated income tax return with one or more affiliates, may not exceed the amount that the reporting entity could reasonably expect to have refunded by its parent; and

d. The phrases "reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years," "realized within one year of the balance sheet date" and "realized within three years of the balance sheet date" are intended to accommodate interim reporting dates and reporting entities that file on an other than calendar year basis for federal income tax purposes.

Realization of Tax Benefits and Tax-Planning Strategies

13. Future realization of the tax benefit of an existing deductible temporary difference or carryforward ultimately depends on the existence of sufficient taxable income of the appropriate character (for example, ordinary income or capital gain) within the carryback, carryforward period available under

the tax law. The following four possible sources of taxable income may be available under the tax law to realize a tax benefit for deductible temporary differences and carryforwards:

a. Future reversals of existing taxable temporary differences

b. Future taxable income exclusive of reversing temporary differences and carryforwards

c. Taxable income in prior carryback year(s) if carryback is permitted under the tax law

d. Tax-planning strategies in paragraph 14 that would, if necessary, be implemented to, for example:

  i. Accelerate taxable amounts to utilize expiring carryforwards

  ii. Change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss

  iii. Switch from tax-exempt to taxable investments.

Evidence available about each of those possible sources of taxable income will vary for different tax jurisdictions and, and possibly, from year to year. To the extent evidence about one or more sources of taxable income is sufficient to support a conclusion that the reporting entity will realize the full or a partial amount of its adjusted gross deferred tax assets, other sources need not be considered. Consideration of each source is required, however, to determine the amount of the statutory valuation allowance adjustment that is recognized for gross deferred tax assets under paragraph 7.e.

14. In some circumstances, there are tax-planning strategies (including elections for tax purposes) that (a) are prudent and feasible, (b) a reporting entity ordinarily might not take, but would take to prevent an operating loss or tax credit carryforward from expiring unused, and (c) would result in realization of deferred tax assets. A reporting entity shall consider tax-planning strategies in determining the amount of the statutory valuation allowance adjustment necessary under paragraph 7.e. Consideration of tax planning strategies for the realization of deferred tax assets when determining admission under paragraph 11 is not required; however, such strategies shall not conflict with the tax planning strategies used when computing the statutory valuation allowance. Any significant potential expenses to implement a tax-planning strategy or any significant losses that would be recognized if that strategy were implemented (net of any recognizable tax benefits associated with those expenses or losses) shall reduce the amount of admission under paragraph 11.

15. When a prudent and feasible tax-planning strategy is contemplated, and management determines this strategy would more likely than not enable the reporting entity to realize the full or a partial amount of its adjusted gross deferred tax assets, paragraph 3 of this statement related to tax loss contingencies shall be applied in determining admissibility of deferred tax assets under paragraph 11 of this statement.

Intercompany Income Tax Transactions

16. In the case of a reporting entity that files a consolidated income tax return with one or more affiliates, income tax transactions (including payment of tax contingencies to its parent) between the affiliated parties shall be recognized if:

a. Such transactions are economic transactions as defined in *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25);

b. Are pursuant to a written income tax allocation agreement; and

c. Income taxes incurred are accounted for in a manner consistent with the principles of FAS 109, as modified by this statement.

17. Amounts owed to a reporting entity pursuant to a recognized transaction shall be treated as a loan or advance, and nonadmitted, pursuant to SSAP No. 25, to the extent that the recoverable is not settled within 90 days of the filing of a consolidated income tax return, or where a refund is due the reporting entity's parent, within 90 days of the receipt of such refund.

Intraperiod Tax Allocation

18. In accordance with paragraph 35 of FAS 109, a reporting entity's unrealized gains and losses shall be recorded net of any allocated DTA or DTL. The amount allocated shall be computed in a manner consistent with paragraph 38 of FAS 109.

19. Income taxes incurred shall be allocated to net income and realized capital gains or losses in a manner consistent with paragraph 38 of FAS 109. Furthermore, income taxes incurred or received during the current year attributable to prior years shall be allocated, to the extent not previously provided, to net income in accordance with SSAP No. 3 unless attributable, in whole or in part, to realized capital gains or losses, in which case, such amounts shall be apportioned between net income and realized capital gains and losses, as appropriate.

Interim Periods

20. Income taxes incurred in interim periods shall be computed using an estimated annual effective current tax rate for the annual period in accordance with the methodology described in paragraphs 19 and 20 of *Accounting Principles Board Opinion No. 28, Interim Financial Reporting*. Estimates of the annual effective tax rate at the end of interim periods are, of necessity, based on estimates and are subject to subsequent refinement or revision. If a reliable estimate cannot be made, the actual effective tax rate for the year-to-date may be the best estimate of the annual effective tax rate. If a reporting entity is unable to estimate a part of its "ordinary" income (or loss) or the related tax (or benefit) but is otherwise able to make a reliable estimate, the tax (or benefit) applicable to the item that cannot be estimated shall be reported in the interim period in which the item is reported.

Disclosures

21. Statutory financial statement disclosures shall be made in a manner consistent with the provisions of paragraphs 43-45 and 48 of FAS 109. However, required disclosures with regard to a reporting entity's GAAP valuation allowance shall be replaced with disclosures relating to the statutory valuation allowance adjustment and the nonadmittance of some portion or all of a reporting entity's DTAs. The financial statements shall include the disclosures required by paragraph 47 of FAS 109 for non-public companies. Paragraphs 22-28 describe the disclosure requirements as modified for the difference between the requirements of FAS 109 and those prescribed by this statement.

22. The components of the net DTA or DTL recognized in a reporting entity's financial statements shall be disclosed as follows:

a. The total of all DTAs (gross, adjusted gross, admitted and nonadmitted) by tax character;

b. The total of all DTLs by tax character;

c. The total DTAs nonadmitted as the result of the application of paragraph 11;

d. The net change during the year in the total DTAs nonadmitted;

e. The amount of each result or component of the calculation, by tax character of paragraphs 11.a., 11.b.i., 11.b.ii., and 11.c., and the ExDTA ACL RBC Ratio, the ExDTA Surplus plus Contingency Reserves/Required Aggregate Risk Capital Ratio, or the Adjusted Gross DTA/Adjusted Capital and Surplus Ratio used in the applicable *Realization Threshold Limitation Table* (the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table, or the Other Non-RBC Reporting Entity Table) in paragraph 11.b., as applicable; and

f. The impact of tax-planning strategies on the determination of adjusted gross DTAs and the determination of net admitted DTAs, by percentage and by tax character, and whether the tax-planning strategies include the use of reinsurance-related tax planning strategies.

23. To the extent that DTLs are not recognized for amounts described in paragraph 31 of FAS 109, the following shall be disclosed:

a. A description of the types of temporary differences for which a DTL has not been recognized and the types of events that would cause those temporary differences to become taxable;

b. The cumulative amount of each type of temporary difference;

c. The amount of the unrecognized DTL for temporary differences related to investments in foreign subsidiaries and foreign corporate joint ventures that are essentially permanent in duration if determination of that liability is practicable or a statement that determination is not practicable; and

d. The amount of the DTL for temporary differences other than those in paragraph 23.c. that is not recognized in accordance with the provisions of paragraphs 31 of FAS 109.

24. The significant components of income taxes incurred (i.e., current income tax expense) and the changes in DTAs and DTLs shall be disclosed. Those components would include, for example:

a. Current tax expense or benefit;

b. The change in DTAs and DTLs (exclusive of the effects of other components listed below);

c. Investment tax credits;

d. The benefits of operating loss carryforwards;

e. Adjustments of a DTA or DTL for enacted changes in tax laws or rates or a change in the tax status of the reporting entity; and

f. Adjustments to gross deferred tax assets because of a change in circumstances that causes a change in judgment about the realizability of the related deferred tax asset, and the reason for the adjustment and change in judgment.

25. Additionally, to the extent that the sum of a reporting entity's income taxes incurred and the change in its DTAs and DTLs is different from the result obtained by applying the federal statutory rate to its pretax net income, a reporting entity shall disclose the nature of the significant reconciling items.

26. A reporting entity shall also disclose the following:

a. The amounts, origination dates and expiration dates of operating loss and tax credit carryforwards available for tax purposes;

b. The amount of federal income taxes incurred in the current year and each preceding year, which are available for recoupment in the event of future net losses; and

c. The aggregate amount of deposits admitted under Section 6603 of the Internal Revenue Service Code.

27. For any federal or foreign income tax loss contingencies as determined in accordance with paragraph 3.a. for which it is reasonably possible that the total liability will significantly increase within 12 months of the reporting date, the reporting entity shall disclose an estimate of the range of the reasonably possible increase or a statement that an estimate of the range cannot be made.

28. If a reporting entity's federal income tax return is consolidated with those of any other entity or entities, the following shall be disclosed:

a. A list of names of the entities with whom the reporting entity's federal income tax return is consolidated for the current year; and

b. The substance of the written agreement, approved by the reporting entity's Board of Directors, which sets forth the manner in which the total combined federal income tax for all entities is allocated to each entity which is a party to the consolidation. (If no written agreement has been executed, give an explanation of why such an agreement has not been executed.) Additionally, the disclosure shall include the manner in which the entity has an enforceable right to recoup federal income taxes in the event of future net losses which it may incur or to recoup its net losses carried forward as an offset to future net income subject to federal income taxes.

29. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

30. This statement adopts the provisions of FAS 109 except as modified in paragraph 2 of this statement which results in paragraphs 29-30, 36-37, 39, 41-42, 46, and 49-59 of FAS 109 being rejected, inasmuch as they are not applicable to reporting entities subject to this statement or are inconsistent with other statutory accounting principles. Paragraph 47 of FAS 109 is adopted with modification to provide for the disclosures required for non public reporting entities.

EXHIBIT A – IMPLEMENTATION QUESTIONS AND ANSWERS

The National Association of Insurance Commissioners issued *SSAP No. 101—Income Taxes* (SSAP No. 101) with an effective date of January 1, 2012.

This Q&A is effective for reporting periods ending on or after January 1, 2012.

Index to Questions:

Question No.	Question	SSAP No. 101 Paragraph Reference	Page Number
1	What are the primary differences between the accounting for income taxes pursuant to FAS 109 and SSAP No. 101?	-	16
2	How should an entity measure its adjusted gross deferred tax assets and gross deferred tax liabilities?	7	19
3	What is the meaning of the term "enacted tax rates"?	7.c.	23
4a	How should a reporting entity calculate the amount of its admitted adjusted gross DTAs?	11	25
4b	How is the ExDTA ACL RBC ratio calculated?	11.b.	34
4c	What is meant by the phrase "an amount no greater than"?	11.b.ii.	37
5a	How is the timing of reversals of temporary differences and carryforwards determined for SSAP No. 101 purposes?	7, 11.a., 11.b.i. and 12.a.	37
5b	How should future originating differences impact the scheduling of temporary difference reversals during the applicable period?	11.a., 11.b.i., 11.c. and 12.a.	41
6	What is meant by the phrase "expected to be realized"?	11.b.i.	41
7	What is the meaning of the term "taxes paid"?	11.a.	45
8	How is a company's computation of adjusted gross and admitted adjusted gross deferred taxes impacted if it joins in the filing of a consolidated federal income tax return?	7, 11, 12.c. and 16	46
9a	How does the modification provided in paragraph 3.a.iii. impact the calculation of the tax contingencies recorded?	3.a.iii.	48
9b	What impact, if any, does the inclusion of tax contingencies as a component of current income taxes have on the determination of deferred income taxes?	3.a. and 3.c.	48
10a	If the reporting entity adjusts the amount of regular taxable income and capital gains reported on a prior year income tax return from the amount originally determined for financial reporting purposes, how is the effect of the change reported in the current year?	19	49
10b	What is meant by the phrase in paragraph 18 "a reporting entity's unrealized gains and losses shall be recorded net of any allocated DTA or DTL"?	18	50
11	How are current and deferred income taxes to be accounted for in interim periods?	12.d. and 20	51
12	How do you present deferred taxes in the Annual Statement?	8, 18 and 21-28	55
13	How are tax-planning strategies to be considered in determining adjusted gross DTAs and admitted adjusted gross DTAs?	11.a., 11.b.i., 14 and 15	65

1. Q – What are the primary differences between the accounting for income taxes pursuant to FAS 109 and SSAP No. 101? [No specific paragraph reference]

1.1 A – SSAP No. 101 establishes statutory accounting principles for current and deferred federal and foreign income taxes and current state income taxes. In general, SSAP No. 101 adopts the concepts of FAS 109, with modifications. The primary differences and modifications are summarized below:

1.2 State Income Tax

- FAS 109 – State income taxes should be included as "income taxes incurred." Deferred state income taxes are recognized.

- SSAP No. 101 – State income taxes should be included as "Taxes, Licenses, and Fees" by property and casualty insurers and as "Insurance taxes, licenses, and fees, excluding federal income taxes" by life and accident and health insurers. No deferred state income taxes are recognized.

1.3 Valuation Allowance

- FAS 109 – Gross deferred tax assets (DTAs) are reduced by a valuation allowance if it is more likely than not that some portion or all of the DTAs will not be realized. The valuation allowance should be sufficient to reduce the DTA to the amount that is more likely than not to be realized.

- SSAP No. 101 – Gross DTAs are reduced by a statutory valuation allowance adjustment that is determined on a separate company, reporting entity basis. Pursuant to paragraphs 2 and 7.e. of SSAP No. 101, gross DTAs are adjusted to an amount that is more likely than not to be realized (a likelihood of more than 50 percent). Only adjusted gross DTAs shall be considered in determining admitted adjusted gross DTAs. See Question 2 for further discussion of the statutory valuation allowance adjustment. See Question 4 for a further discussion of the admissibility test. See Question 12 for further discussion of presentation and disclosure of the statutory valuation allowance adjustment.

1.4 Unique Statutory Accounting Items

- FAS 109 – In general, the effects of all temporary differences must be reflected with limited exceptions provided in FAS 109 paragraphs 31-34 (relating to items specified in Accounting Principles Board Opinion No. 23) and for temporary differences related to goodwill for which amortization is not deductible for tax purposes.

- SSAP No. 101 – In addition to the exceptions provided in FAS 109, temporary differences do not include asset valuation reserve (AVR), interest maintenance reserve (IMR), Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased.

1.5 Changes in Deferred Tax Assets and Liabilities

- FAS 109 – Changes in DTAs and deferred tax liabilities (DTLs) are included in income tax expense or benefit and are allocated to continuing operations, discontinued operations, extraordinary items and items charged directly to shareholders' equity.

- SSAP No. 101 – Changes in DTAs and DTLs are recognized as a separate component of gains and losses in surplus, except to the extent allocated to changes in unrealized gains and losses.

1.6 Regulated Enterprises

- FAS 109 – Regulated enterprises that meet the criteria for application of FAS 71, *Accounting for* the *Effects of Certain Types of Regulation*, are not exempt from the requirements of FAS 109. However, assets are reported on a net-of-tax basis (see paragraphs 29, 57, 58 and 59 of FAS 109).

- SSAP No. 101 – These special paragraphs do not apply pursuant to paragraph 30 of SSAP No. 101.

1.7 Business Combinations

- FAS 109 – Paragraphs 30 and 53-56 of FAS 109 provide certain guidance regarding the treatment of business combinations. In general, a deferred tax asset or liability is recognized for the differences between the assigned values and the tax bases of the assets and liabilities recognized in a purchased business combination. If financial statements for prior years are restated, all purchase business combinations that were consummated in those prior years shall be remeasured in accordance with FAS 109.

- SSAP No. 101 – These special paragraphs do not apply pursuant to paragraph 30 of SSAP No. 101.

1.8 Intraperiod Tax Allocation

- FAS 109 – Income tax expense or benefit is allocated among continuing operations, discontinued operations, extraordinary items, and items charged or credited directly to shareholders' equity pursuant to paragraphs 36 and 37 of FAS 109.

- SSAP No. 101 – These paragraphs of FAS 109 do not apply pursuant to paragraph 30 of SSAP No. 101. Instead, paragraphs 18 and 19 of SSAP No. 101 provide special rules for statutory accounting. See Question 10 for a further discussion of these rules.

1.9 Certain Quasi-Reorganizations

- FAS 109 – Paragraph 39 provides special rules relating to the treatment of deductible temporary differences and carryforwards as of the date of a quasi-reorganization.

- SSAP No. 101 – Paragraph 39 of FAS 109 does not apply pursuant to paragraph 30 of SSAP No. 101.

1.10 Financial Statement Classification of DTAs and DTLs

- FAS 109 – Pursuant to paragraphs 41 and 42 of FAS 109, DTAs and DTLs are to be classified separately as either current or noncurrent, depending on the classification of the related asset or liability. Furthermore, current DTAs and DTLs and noncurrent DTAs and DTLs are netted within the classification and with the net amount reported.

- SSAP No. 101 – These paragraphs do not apply to statutory accounting pursuant to paragraph 30 of SSAP No. 101. The net admitted DTA, or the net DTL, should be reported in the statutory financial statements.

1.11 Accounting for Uncertainty in Income Taxes

- FAS 109 – Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109 (FIN 48) provides accounting and reporting guidance for uncertain tax positions under GAAP.

- SSAP No. 101 – FIN 48 is rejected for statutory accounting pursuant to paragraph 31 of SSAP No. 101. *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) provides guidance in determining the amount of federal and foreign income tax loss contingencies with the following modifications. The term "probable" as used in SSAP No. 5R is replaced by the term "more likely than not (a likelihood of more than 50 percent)". In determining the amount of a federal or foreign income tax loss contingency, it shall be assumed that the reporting entity will be examined by the tax authority that has full knowledge of all relevant information. If the estimated tax loss contingency is greater than 50% of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% of the original tax benefit recognized. See Question 9 for further discussion of income tax loss contingencies.

1.12 Classification of Interest and Penalties

- FAS 109 – FIN 48 allows interest on tax assessments to be reported as either income taxes or interest expense and penalties to be reported as either income taxes or another expense classification, based on the accounting policy election of the enterprise.

- SSAP No. 101 – Interest and penalties related to foreign or federal income tax are included in income taxes pursuant to paragraph 3.a. of SSAP No. 101.

1.13 Financial Statement Disclosures

- FAS 109 – Paragraphs 43-45 and 47-48 of FAS 109 provide various requirements for providing information in the financial statements regarding the income taxes of the reporting entity. In general, the reporting entity is to provide certain information regarding the components of its DTAs and DTLs, the amount of and changes in its valuation allowance, significant components of income tax expense, differences between the expected amount of income tax expense using current tax rates and the amount of reported income tax expense, and tax attributes being carried over. In addition, FIN 48 includes specific disclosures related to uncertain tax positions.

- SSAP No. 101 – In general, paragraphs 21-29 of SSAP No. 101 follow the disclosure requirements provided by FAS 109, but with the following modifications and additions:

  - The disclosures regarding valuation allowance are replaced with disclosures relating to the statutory valuation allowance adjustment and the nonadmitted portion of the DTA.

  - The amount of the gross DTA, adjusted gross DTA, DTL, admitted and nonadmitted DTA is required to be separately disclosed, by tax character (ordinary or capital).

  - Disclose the amount of each result or component of the admission calculation, by tax character, for paragraphs 11.a, 11.b.i, 11.b.ii, and 11.c. In addition, disclose the ExDTA Authorized Control Level (ACL) RBC Ratio, the ExDTA Surplus plus Contingency Reserves/Required Aggregate Risk Capital Ratio (see paragraph 11.b.), or the Adjusted Gross DTA/Adjusted Capital and Surplus Ratio used in the applicable Realization Threshold Limitation Table (the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table, or the Other Non-RBC Reporting Entity Table) in paragraph 11.b., as applicable.

- The impact of tax-planning strategies on the determination of adjusted gross DTAs and the determination of net admitted adjusted gross DTAs, by percentage and by tax character, must be disclosed. In addition, disclose whether tax-planning strategies include the use of reinsurance-related tax planning strategies.

- FIN 48 and the associated disclosure requirements are rejected for statutory accounting purposes and replaced with the following disclosure. For any federal or foreign income tax loss contingencies for which it is reasonably possible that the total liability will significantly increase within 12 months of the reporting date, a disclosure of an estimate of the range of the reasonably possible increase is required. If determination of a reasonable range of the significant increase is not possible, the reporting entity is to provide a statement that an estimate cannot be made.

- The disclosures relating to deferred income tax expense or benefit are replaced with certain disclosures relating to the reporting entity's "change in DTAs and DTLs."

- Only the nature of significant reconciling items between the reported amount and "expected" amount of income tax expense and change in DTAs and DTLs are to be disclosed. This generally follows the disclosure requirements of FAS 109 for nonpublic entities.

- See Question 12 for a more detailed discussion of the disclosure requirements of SSAP No. 101.

2. Q – How should an entity measure its adjusted gross deferred tax assets and its gross deferred tax liabilities? [Paragraph 7]

2.1 A – An enterprise shall record a gross deferred tax liability or asset for all temporary differences and operating loss, capital loss and tax credit carryforwards. Temporary differences include unrealized gains and losses and nonadmitted assets but do not include AVR, IMR, Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased. In general, temporary differences produce taxable income or result in tax deductions when the related asset is recovered or the related liability is settled. A deferred tax asset or liability represents the increase or decrease in taxes payable or refundable in future years as a result of temporary differences and carryforwards at the end of the current year. Additionally, gross DTAs are reduced by a statutory valuation allowance adjustment if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50 percent) that some portion or all of the gross DTAs will not be realized. The statutory valuation allowance adjustment, determined in a manner consistent with paragraphs 20-25 of FAS 109, shall reduce gross DTAs to the amount that is more likely than not to be realized (the adjusted gross deferred tax assets).[6] This answer only addresses the recognition of adjusted gross DTAs and gross DTLs and does not address the admissibility of such amounts. See Question 4 for a discussion of the admissibility criteria of SSAP No. 101.

2.2 Paragraph 7 of SSAP No. 101 states that temporary differences are identified and measured using a "balance sheet" approach whereby the statutory balance sheet and the tax basis balance sheet are compared. Operating loss, capital loss and tax credit carryforwards are computed in accordance with the applicable Internal Revenue Code.

2.3 The following illustrates the recognition and measurement of a typical book to tax difference for an insurance company:

[6] SSAP No. 101 requires the statutory valuation allowance adjustment to be presented in the annual statement as a direct reduction in the gross DTA. It is not included in non-admitted DTA.

Illustration

Assumptions:

1/1/X2	Purchase 100 shares of Darby/Allyn Corp. stock for $25 a share
3/31/X2	Fair Value of Darby/Allyn Corp. stock has increased to $35 a share
3/31/X2	Tax basis reserves are computed and determined to be 80% of the statutory basis reserves

Balance Sheet at 3/31/X2:

				Tax Effect
			Basis	DTA (DTL)
	Statutory Basis	**Tax Basis**	**Difference**	**(35%)**[7]
Common Stock	$3,500	$2,500	($1,000) [8]	($350)
Reserves	$100,000	$80,000	$20,000 [9]	$7,000

Journal Entries:

1/1/X2	DR	Common stock	$2,500
	CR	Cash	($2,500)
		Acquisition of common stock at $25 per share	

3/31/X2	DR	Common stock	$1,000
	CR	Change in unrealized capital gains and losses	($1,000)
		Adjust carrying value to FV of $35 per share at end of quarter	

3/31/X2	DR	Change in reserves or unpaid losses	$100,000
	CR	Reserves or Unpaid losses	($100,000)
		Recognition of reserves computed on a statutory basis	
3/31/X2	DR	Deferred tax asset	$7,000
	CR	Change in deferred income taxes	($6,650)
	CR	Deferred tax liability	($350)
		Recognition of deferred taxes	

NOTE: Presentation of deferred tax amounts and unrealized gain or losses net of tax is addressed in Question 12.

2.4 As depicted in the Illustration, the deferred tax assets and liabilities are tracked gross in the entity's ledger and not netted until after consideration of the statutory valuation allowance adjustment, if any (see below), and the admissibility of deferred tax assets.

[7] See Question 3 for a discussion of "enacted rates."

[8] The carrying value of the stock on the statutory balance sheet reflects the fair value of the common stock per SSAP No. 30—*Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)* whereas the carrying value of the stock for tax purposes is its original cost. This difference is defined as temporary in that the $1,000 appreciation in value will be recognized in the tax return when the stock is disposed of. The difference is a deferred tax liability in that the reversal of this temporary difference will increase future taxable income.

[9] The reserve difference is due to the fact that statutory reserves are computed on a more conservative set of assumptions than for tax (life and health entities) or the tax reserves are discounted (property and casualty and other health entities). This amount is a temporary difference in that the entity will recognize the difference between statutory and tax carrying values over the life of the reserve or upon settlement of the claim or payment of the reserve. The difference is a deferred tax asset in that the reversal of this temporary difference will decrease future taxable income.

Statutory Valuation Allowance Adjustment

2.5 SSAP No. 101 paragraph 7.e. provides that gross DTAs are reduced by a statutory valuation allowance *adjustment* if, based on the weight of available evidence, it is more likely than not that some portion or all of the gross DTAs will not be realized. The statutory valuation allowance adjustment is determined on a separate company, reporting entity basis. The determination of whether gross DTAs will be realized is based on the existence of sufficient taxable income of the appropriate character (ordinary income or capital gain) within the carryback, carryover period available under the tax law. Paragraph 13.a. through 13.d. of SSAP No. 101 identifies four sources of taxable income to be considered in evaluating the existence of sufficient taxable income. These sources are identical to those to be considered under FAS 109 paragraph 21. FAS 109 paragraph 20 provides that "all available evidence, both positive and negative, should be considered to determine whether, based on the weight of that evidence, a valuation allowance is needed. Information about an enterprise's current financial position and its results of operations for the current and preceding years ordinarily is readily available. That historical information is supplemented by all currently available information about future years. Sometimes, however, historical information may not be available (for example, start-up operations) or it may not be as relevant (for example, if there has been a significant, recent change in circumstances) and special attention is required." A reporting entity is not required to consider all four sources of taxable income in determining the need for a statutory valuation allowance adjustment if one or more sources are alone sufficient to support the conclusion that the entity will realize the tax benefits of its gross deferred tax assets (i.e., a conclusion that no valuation allowance is necessary). However, the reporting entity is required to consider all of the potential sources of taxable income to determine the amount of the adjustment if a conclusion is reached that a statutory valuation allowance adjustment is necessary. Historical and/or currently available information may exist that is also significant and relevant in determining the amount of the DTAs admitted under paragraph 11 of SSAP No. 101. This historical and/or currently available information must also be considered when determining the amount of DTAs admitted under paragraph 11 of SSAP No. 101, irrespective of the conclusion reached in establishing or not establishing a statutory valuation allowance adjustment. See Question 4.13 for specific guidance on the admissibility of DTAs under paragraph 11.c. of SSAP No. 101.

2.6 Footnote 1 to paragraph 7.e. of SSAP No. 101 indicates that a reporting entity shall consider reversal *patterns* of temporary differences, and might be required to schedule such differences:

> …to the extent necessary to support establishing or not establishing a valuation allowance adjustment, determined in accordance with paragraphs 228 and 229 of FAS 109. For purposes of this accounting statement, consideration of reversal patterns does not require scheduling beyond that necessary to support establishing or not establishing a valuation allowance adjustment.

Paragraph 228 of FAS 109 generally holds that a company may need to schedule its temporary *differences* to determine the particular years in which the reversal of temporary differences is expected to occur. As discussed in Question 5b, paragraph 229 of FAS 109 indicates that future originating temporary differences and their subsequent reversal should be considered in determining the existence of future taxable income.

2.7 Although a reporting entity may need to consider the reversal pattern of temporary differences in evaluating the need for a statutory valuation allowance adjustment, scheduling the reversal pattern of such differences is not required in every instance. Under SSAP No. 101 and consistent with FAS 109, a general understanding of reversal patterns is, in many cases, relevant in assessing the need for a valuation allowance. Judgment is crucial in making this assessment. The amount of scheduling, if any, that will be required will depend on the facts and circumstances of each situation. For example, a reporting entity which relies upon future taxable income exclusive of reversing temporary differences and carryforwards[10] for realization of DTAs is not required to schedule the reversal pattern of its existing temporary differences. This is consistent with guidance provided by the Financial Accounting Standards Board (FASB) in its answer to question 2 of *A Guide to Implementation of Statement 109 on Accounting for Income Taxes: Question and Answers* (Special Report on Statement 109) which states that scheduling of existing temporary differences is unnecessary for purposes of determining the need for a valuation allowance "where it can be easily demonstrated that future taxable income will more likely than not be adequate to realize future tax benefits of existing deferred tax assets." In contrast, a reporting entity which relies upon the future reversal of existing taxable temporary differences to realize the tax benefits of its deductible temporary differences and carryforwards may be required to consider the reversal patterns of its taxable temporary differences.[11] The degree of scheduling required, however, depends on the facts and circumstances of each situation and the relative magnitude of the taxable and deductible temporary differences. In certain situations, the ability to reasonably conclude that reversing taxable temporary differences will more likely than not create sufficient taxable income to realize reversing deductible temporary differences can be done without detailed scheduling.[12]

2.8 If scheduling is considered necessary, the amount of scheduling required will depend on the particular facts and circumstances and be subject to judgment. There may be more than one acceptable approach. The FASB's answer to question 1 of the Special Report on Statement 109 indicates that the following concepts underlie the determination of reversal patterns under Statement 109:

a. The particular years in which temporary differences result in taxable or deductible amounts generally are determined by the timing of the recovery of the related asset or settlement of the related liability' (paragraph 228).

b. The tax law determines whether future reversals of temporary differences will result in taxable and deductible amounts that offset each other in future years' (paragraph 227).

In addition, the FASB noted that "minimizing complexity is an appropriate consideration in selecting a method for determining reversal patterns"[13], but that the methods used must be systematic and logical and should be consistently applied for all similarly categorized temporary differences and from year to year. Furthermore, the same method should be utilized in determining the reversal patterns in every taxing jurisdiction for which the temporary difference exists.

Grouping of Assets and Liabilities for Measurement

2.9 The manner in which an entity groups its assets and liabilities for measurement shall be conducted in a reasonable and consistent manner. For instance, an entity may group its invested assets into Annual Statement classifications (stocks, bonds, preferred stocks, etc.) or other reasonable groupings (lines of business for grouping its reserves). Entities have the option of recognizing the DTA and DTL

[10] One of the four possible sources of taxable income that can be used to realize a tax benefit. See paragraph 13.b. of SSAP No. 101.

[11] For example, due to the relatively short loss carryback periods under existing tax law, such consideration may be appropriate when taxable temporary differences are expected to reverse in a short number of future years while the deductible temporary differences are expected to reverse over a long number of future years. In addition, for "indefinite-lived" intangible assets (i.e., intangible assets like those discussed in paragraph 11 of FAS 142 for which no legal, regulatory, contractual, competitive, economic, or other factors limit their useful lives), predicting reversal of temporary differences related to such assets would be inconsistent with financial reporting assertions that the assets are indefinite-lived. In such a case, the reversal of taxable temporary differences with respect to such indefinite-lived intangible assets should not be considered a source of future taxable income when determining the statutory valuation allowance adjustment.

[12] Q&A 2 from the Special Report on Statement 109 published by the FASB.

[13] Q&A 1 from the Special Report on Statement 109 published by the FASB.

within each grouping on a net or gross basis. For instance, a portfolio of common stocks will have both unrealized gain and unrealized losses associated with them. The reporting entity may elect to combine the unrealized gains and losses and compute a single DTA or DTL or it may elect to segregate the unrealized gains from the unrealized losses and compute separate DTAs and DTLs. This option might also arise with respect to depreciable assets. Regardless of which method an entity elects, it is crucial that consistency is maintained to and within each grouping from period to period. An entity shall retain internal documentation to support its grouping in addition to the methodologies employed to arrive at such. An entity is permitted to modify its groupings should events or circumstances change from a previous period. Examples include a change in materiality of underlying assets and liabilities, administrative costs associated with detailing groupings increases or changes in the computer systems that allow more specificity. Entities that modify their groupings should be prepared to rationalize these changes. These entities should also disclose that a modification was made and general reason for such in the notes to the financial statements.

Measurement of Nonadmitted Assets

2.10 As noted in paragraph 7.b. of SSAP No. 101, temporary differences include nonadmitted assets. The measurement of these types of assets is not addressed in FAS 109 in that the concept of nonadmission is unique to statutory accounting. For assets that are nonadmitted for statutory accounting purposes, DTAs and DTLs should be measured after nonadmission.

Illustration:

	Statutory Before Nonadmit (Info Purpose)	**Statutory After Nonadmit**	**Tax**	**Basis Difference**[14]	**Tax Effect DTA (DTL) (35%)**
Furniture Fixtures and Equipment	$1,000	0	$1,000		
Accumulated Depreciation	200	0	400		
Basis	$800	0	$600	$600	$210

2.11 The effect of this illustration is a reduction of surplus by $590 ($800 decrease for nonadmitted asset and $210 increase for DTA), provided the resulting DTA meets the admissibility test in paragraph 11 of SSAP No. 101.

3. Q – A reporting entity's deferred tax assets and liabilities are computed using "enacted tax rates." What is the meaning of the term "enacted tax rates"? [Paragraph 7.c.]

3.1 A – Paragraph 7.c. of SSAP No.101 provides that total DTAs and DTLs are computed using enacted tax rates.

3.2 Consistent with FAS 109, SSAP No. 101 further requires that deferred tax assets and liabilities be measured using the enacted tax rate that is expected to apply to taxable income in the periods in which the deferred tax asset or liability is expected to be settled or realized. The effects of future changes in tax rates are not anticipated in the measurement of deferred tax assets and liabilities. Deferred tax assets and liabilities are adjusted for changes in tax rates and other changes in the tax law, and the effects of those changes are recognized at the time the change is enacted.

[14] Difference is computed from the "Statutory After Nonadmit" balance.

3.3 Tax laws may apply different tax rates to ordinary income and capital gains. In instances where the enacted tax law provides for different rates on income of different character, deferred tax assets and liabilities should be measured by applying the appropriate enacted tax rate based on the type of taxable or deductible amounts expected to be realized from the reversal of existing temporary differences.

3.4 Currently, under U.S. federal tax law, if taxable income (both ordinary and capital gain) exceeds a specified amount, all taxable income is taxed at a single flat tax rate, 35%. Unless graduated tax rates are a significant factor, (i.e., unless the company's taxable income frequently falls below the specified amount), the enacted tax rate is 35% for both ordinary income and capital gain. Alternative minimum tax and the effect of special deductions, such as the small life deduction, are ignored, except to the extent necessary to estimate future taxable income and therefore the enacted rate applicable to that level of taxable income is used.

3.5 If graduated tax rates are expected to be a significant factor in the determination of taxes payable or refundable in future years, deferred tax assets and liabilities should be measured using the average tax rate (based on currently enacted graduated rates) that is expected to apply to estimated average annual taxable income in the period in which the deferred tax asset or liability is expected to be settled or realized. For example, assume a property and casualty insurance company consistently has taxable income less than $10 million, but in excess of $1 million. The enacted graduated rate applicable to that level of taxable income is 34%. Therefore, the reporting entity should use 34% for the determination of its taxes payable or refundable.

3.6 As a reference, FAS 109 paragraphs 18 and 236 provide the following:

> 18. The objective is to measure a deferred tax liability or asset using the enacted tax rate(s) expected to apply to taxable income in the periods in which the deferred tax liability or asset is expected to be settled or realized. Under current U.S. federal tax law, if taxable income exceeds a specified amount, all taxable income is taxed, in substance, at a single flat tax rate. That tax rate shall be used for measurement of a deferred tax liability or asset by enterprises for which graduated tax rates are not a significant factor. Enterprises for which graduated tax rates are a significant factor shall measure a deferred tax liability or asset using the average graduated tax rate applicable to the amount of estimated annual taxable income in the periods in which the deferred tax liability or asset is estimated to be settled or realized (paragraph 236). Other provisions of enacted tax laws should be considered when determining the tax rate to apply to certain types of temporary differences and carryforwards (for example, the tax law may provide for different tax rates on ordinary income and capital gains). If there is a phased-in change in tax rates, determination of the applicable tax rate requires knowledge about when deferred tax liabilities and assets will be settled and realized.
>
> 236. The following example illustrates determination of the average graduated tax rate for measurement of deferred tax liabilities and assets by an enterprise for which graduated tax rates ordinarily are a significant factor. At the end of year 3 (the current year), an enterprise has $1,500 of taxable temporary differences and $900 of deductible temporary differences, which are expected to result in net taxable amounts of approximately $200 on the future tax returns for each of years 4-6. Enacted tax rates are 15 percent for the first $500 of taxable income, 25 percent for the next $500, and 40 percent for taxable income over $1,000. This example assumes that there is no income (for example, capital gains) subject to special tax rates.
>
> The deferred tax liability and asset for those reversing taxable and deductible temporary differences in years 4-6 are measured using the average graduated tax rate for the estimated amount of annual taxable income in future years. Thus, the average graduated tax rate will differ depending on the expected level of annual taxable income (including reversing temporary differences) in years 4-6. The average tax rate will be:
>
> a. 15 percent if the estimated annual level of taxable income in years 4-6 is $500 or less
>
> b. 20 percent if the estimated annual level of taxable income in years 4-6 is $1,000

c. 30 percent if the estimated annual level of taxable income in years 4-6 is $2,000.

Temporary differences usually do not reverse in equal annual amounts as in the example above, and a different average graduated tax rate might apply to reversals in different future years. However, a detailed analysis to determine the net reversals of temporary differences in each future year usually is not warranted. It is not warranted because the other variable (that is, taxable income or losses exclusive of reversing temporary differences in each of those future years) for determination of the average graduated tax rate in each future year is no more than an estimate. For that reason, an aggregate calculation using a single estimated average graduated tax rate based on estimated average annual taxable income in future years is sufficient. Judgment is permitted, however, to deal with unusual situations, for example, an abnormally large temporary difference that will reverse in a single future year, or an abnormal level of taxable income that is expected for a single future year. The lowest graduated tax rate should be used whenever the estimated average graduated tax rate otherwise would be zero.

4a. Q – How should a reporting entity calculate the amount of its admitted adjusted gross DTAs? [Paragraph 11]

4.1 A – After a reporting entity has calculated the amount of its adjusted gross DTAs and gross DTLs pursuant to paragraph 7, it must determine the amount of its adjusted gross DTAs that can be admitted under paragraph 11. The amount of adjusted gross DTAs is not recalculated under paragraph 11; rather, some or all of the adjusted gross DTA may not be currently admitted.

4.2 Paragraphs 11.a., 11.b. and 11.c. require three interdependent calculations or components that when added together equals the amount of the reporting entity's admitted adjusted gross DTAs. Each of the calculations starts with the total of the reporting entity's adjusted gross DTAs, and determines the amount of such adjusted gross DTAs that can be admitted under that part. For example, the consideration of existing temporary differences in the calculation of admitted adjusted gross DTAs under paragraph 11.a., does not prevent the reconsideration of the same temporary differences in the paragraph 11.b.i. calculation. However, to avoid duplication of admitted adjusted gross DTAs when adding the three parts together, the amount of admitted adjusted gross DTAs under paragraph 11.a. must be subtracted from the amount of adjusted gross DTAs in the paragraph 11.b.i. calculation. Similarly, the amount of admitted adjusted gross DTAs under paragraphs 11.a. and 11.b. must be subtracted from the total adjusted gross DTAs in the paragraph 11.c. calculation.

First Component – Admission Based On Previously Paid Taxes [Paragraph 11.a.]

4.3 Under paragraphs 11.a. and 12.b., a reporting entity can admit adjusted gross DTAs to the extent that it would be able to recover federal income taxes paid in the carryback period, by treating existing temporary differences that reverse during a timeframe corresponding with Internal Revenue Code tax loss carryback provisions[15], not to exceed three years as ordinary or capital losses that originated in each such subsequent year. The reversing temporary differences are specific to each year in which they reverse, and in turn, to the specific year(s) to which they can be carried back corresponding with tax loss carryback provisions. Reversing temporary differences for unrealized losses and nonadmitted assets are treated as capital or ordinary losses depending on their character for tax purposes. The entity is not required to project an actual net operating loss in future periods. This first component of admission is available to all entities, regardless of whether they meet any of the threshold limitations in paragraph 11.b. for reversals expected to be realized against future taxable income.

[15] For example, Federal Internal Revenue Code tax loss carryback provisions in effect as of January 1, 2012, ordinary losses can be carried back two years for nonlife insurance companies and three years for life insurance companies, while capital losses for both nonlife and life companies can be carried back three years.

4.4 Paragraph 12.b. limits the amount of federal income taxes recoverable under paragraph 11.a. to the amount that would be refunded to the reporting entity if a carryback claim was filed with the Internal Revenue Service (IRS). If some amount of taxes paid in the carryback period is not recovered because of limitations imposed by the Alternative Minimum Tax system, the resulting AMT credit is not treated as a newly created DTA. Paragraph 12.c. further limits the amount of federal income taxes recoverable under paragraph 11.a. for a reporting entity that files a consolidated income tax return with one or more affiliates, to the amount that the reporting entity could reasonably expect to have refunded by its parent. See Question 8 for a further discussion of the impact of filing a consolidated federal income tax return.

Second Component – Admission Based On Projected Future Tax Savings [Paragraph 11.b.]

4.5 The amount of a reporting entity's adjusted gross DTAs that can be admitted pursuant to paragraph 11.b. is in part, dependent on the amount of the reporting entity's adjusted capital and surplus. Accordingly, a reporting entity must determine which Realization Threshold Limitation Table set forth in paragraph 11.b. is applicable to the reporting entity and then, based on its respective facts, determine what applicable period to apply under paragraph 11.b.i. and applicable percentage to use under paragraph 11.b.ii.

4.6 If the reporting entity is subject to risk-based capital requirements or is required to file a Risk-Based Capital Report with the domiciliary state, it should use the RBC Reporting Entity Table set forth in paragraph 11.b. Threshold limitations for this table are contingent upon the ExDTA ACL RBC ratio. See Question 4b for a discussion on the ExDTA ACL RBC ratio.

4.7 If the reporting entity is (1) either a mortgage guaranty insurer or financial guaranty insurer that is not subject to risk-based capital requirements, (2) is not required to file a Risk-Based Capital Report with the domiciliary state, and (3) the reporting entity meets the minimum capital and reserve requirements[16] for the state of domicile, then it should use the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table set forth in paragraph 11.b. Threshold limitations for this table are contingent upon the ratio of ExDTA Surplus plus contingency reserves divided by the minimum aggregate capital required (see further detail in paragraph 11.b.).

4.8 If the reporting entity (1) is not subject to risk-based capital requirements, (2) is not required to file a Risk-Based Capital Report with the domiciliary state, (3) is not a mortgage guaranty or financial guaranty insurer, and (4) meets the minimum capital and reserve requirements[17], it should use the Other Non-RBC Reporting Entity Table set forth in paragraph 11.b. Threshold limitations for this table are contingent upon the ratio of adjusted gross DTA less the amount of adjusted gross DTA admitted in paragraph 11.a. to adjusted capital and surplus.

4.9 The amount of admitted adjusted gross DTAs under paragraph 11.b.i., is limited to the amount that the reporting entity expects to realize within the applicable period as determined using the applicable *Realization Threshold Limitation Table* following the balance sheet date. See Question 6 for a further discussion of the meaning of "expected to be realized." The amount of admitted adjusted gross DTAs under the paragraph 11.a. calculation is subtracted from the amount of adjusted gross DTAs under paragraph 11.b.i., to prevent the counting of the same admitted adjusted gross DTAs more than once. If the reporting entity expects to realize an amount of adjusted gross DTAs under paragraph 11.b.i. that is equal to or less than the admitted adjusted gross DTAs calculated under paragraph 11.a., then the resulting admitted adjusted gross DTAs under paragraph 11.b.i. will be zero.

[16] If a reporting entity is not at the minimum capital and reserve requirements, the admitted adjusted gross DTA for this component is zero.

[17] See Footnote 16

4.10 The reference to applicable period following the balance sheet date in 4.9 refers to the paragraph 11.b.i. column of the applicable Realization Threshold Limitation Table, the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table or the Other Non-RBC Reporting Entity Table.

4.11 The amount of admitted adjusted gross DTAs under paragraph 11.b.i. is also limited to an amount that is no greater than the applicable percentage of adjusted statutory capital and surplus specified in paragraph 11.b.ii. See Question 4c for a discussion of the meaning of "an amount that is no greater than".

4.12 The reference to an amount no greater than the applicable percentage of statutory capital and surplus in 4.11 refers to the 11.b.ii. column of the applicable Realization Threshold Limitation Table; the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table or the Other Non-RBC Reporting Entity Table.

Third Component – Admission Based On Offset Against DTL [Paragraph 11.c.]

4.13 Under paragraph 11.c., a reporting entity can admit adjusted gross DTAs as an offset against gross DTLs in an amount equal to the lesser of: (1) its adjusted gross DTAs, after subtracting the amount of admitted adjusted gross DTAs under paragraphs 11.a. and 11.b., or (2) its gross DTLs. In determining the amount of adjusted gross DTAs that can be offset against existing gross DTLs in the paragraph 11.c. calculation, the character (i.e., ordinary versus capital) of the DTAs and DTLs must be taken into consideration such that offsetting would be permitted in the tax return under existing enacted federal income tax laws and regulations. For example, an adjusted gross DTA related to unrealized capital losses could not be offset against an ordinary income DTL. Ordinary DTAs can be admitted by offset with ordinary DTLs and/or capital DTLs. However, capital DTAs can only be admitted by offset with capital DTLs. In addition to consideration of the character of the DTAs and DTLs, significant and relevant historical and/or currently available information may exist specific to the remaining adjusted gross DTAs and gross DTLs. This information must also be taken into consideration when determining admission by offset with gross DTLs. As stated in paragraph 11.c., "for purposes of this component, the reporting entity shall consider the reversal patterns of temporary differences; however, this consideration does not require scheduling beyond that required in paragraph 7.e." This consideration requires a scheduling exercise if scheduling is needed for determination of the statutory valuation allowance adjustment and, as a result, should be consistent with the determination of any statutory valuation allowance adjustment, which occurs prior to performing the admissibility calculations.[18] As noted in Question 2.7, scheduling reversal patterns of temporary differences in evaluating the need for a statutory valuation allowance adjustment where a reporting entity relies on sources of future taxable income, exclusive of reversals of temporary differences, is not required. In such case, that reporting entity is not required to schedule reversal patterns of temporary differences for purposes of paragraph 11.c. of SSAP No. 101. However, the significant and relevant historical and/or currently available information noted above must be considered and be consistent with the conclusion to admit or nonadmit adjusted gross DTAs under paragraph 11.c. without additional detailed scheduling. See Question 2.5 through 2.8 for further discussion of scheduling for purposes of determining the reporting entity's statutory valuation allowance adjustment.

Other Considerations

4.14 In certain situations, a reporting entity's expected federal income tax rate on its reversing temporary differences will be less than the enacted tax rate used in the determination of its gross DTAs and DTLs. Examples of such entities include: property/casualty insurance companies with large municipal bond portfolios that are AMT taxpayers, Blue Cross-Blue Shield Organizations with section 833(b) deductions, small life insurance companies, reporting entities projecting a tax loss, and entities that

[18] Footnote 1 of SSAP No. 101 provides that a reporting entity "shall consider reversal patterns of temporary differences *to the extent necessary* to support establishing or not establishing a valuation allowance adjustment." (Emphasis added).

file in a consolidated federal income tax return that cannot realize the full amount of their adjusted gross DTAs under the existing intercompany tax sharing or tax allocation agreement. Pursuant to paragraphs 231, 232 and 238 of FAS 109, such entities are required to report their gross DTLs at the enacted tax rate, and cannot take into consideration the impact of the AMT, section 833(b) deduction, or the small life insurance company deduction to reduce their gross DTLs.

4.15 For those entities, the amount of admitted adjusted gross DTAs calculated under paragraphs 11.a. and 11.b. will reflect the actual tax rate in the carryback period under paragraph 11.a. and the expected tax rate in the applicable period as discussed in 4.10 above under paragraph 11.b., which takes into consideration the impact of the AMT, special deductions, and the provisions of the intercompany tax sharing or allocation agreement. See Question 6 for further discussion of this issue. As such, the entity's admitted adjusted gross DTAs under paragraphs 11.a. and 11.b. may be less than its adjusted gross DTAs on temporary differences at the enacted rate. Any unused amount of DTAs resulting from a rate differential under paragraphs 11.a. and 11.b. can be used under paragraph 11.c. to offset existing DTLs.

4.16 The above principles can be illustrated by the following examples:

4.17 Facts:

RBC Reporting Entity Example

1. Life Insurance Company ABC[19] has $12,500,000 of deductible temporary differences at 12-31-20X2 that generate $4,375,000 of gross DTAs ($2,100,000 Ordinary, $2,275,000 Capital), at the enacted federal income tax rate of 35%. Management has concluded that ABC will more likely than not realize gross DTAs of $4,100,000 ($2,100,000 Ordinary, $2,000,000 Capital) related to its $12.5 million of deductible temporary differences. Based on management's conclusion, a statutory valuation allowance adjustment was recognized for $275,000 reducing capital DTAs from $2,275,000 to $2,000,000. ABC also has $4,000,000 of taxable temporary differences resulting in $1,400,000 ($1,000,000 Ordinary, $400,000 Capital) of gross DTLs.

2. ABC has determined that $2,000,000 of its $6,000,000 existing deductible ordinary temporary differences will reverse in 12-31-20X3, another $1,500,000 will reverse in 12-31-20X4, and another $2,000,000 will reverse in 12-31-20X5. The remaining $500,000 of ABC's existing deductible ordinary temporary differences will reverse in years 20X6 or later. None of ABC's deductible capital temporary differences are expected to reverse within the applicable period.

3. ABC reported $400,000 and $600,000 of taxable income in 20X0 and 20X1, respectively. ABC reported $140,000 and $210,000 of tax expense on its 20X0 and 20X1 federal income tax returns, respectively. It has also projected taxable income of $1,200,000 and $420,000 of federal income taxes for 20X2 that have been reflected in its current statutory income tax provision calculation. There are no differences between its regular and alternative minimum taxable income during 20X0 through 20X2.

4. ABC is projecting an income tax rate of 35% in 20X3, as well as in years 20X4 and 20X5 based on its estimated taxable income and federal income tax liability. ABC expects to realize[20] a federal income tax benefit of 35% from 20X3 through 20X5 related to reversing ordinary temporary differences. ABC does not anticipate any capital gain income in 20X3 through 20X5.

[19] ABC does not qualify for the small life insurance company deduction. Please note the results in this example may be different due to differences in the applicable carryback periods if ABC was a P&C company.

[20] See Question 6 for discussion on the admittance calculation under paragraph 11.b.i. and what is meant by the phrase: "expected to be realized."

5. ABC has an ExDTA ACL RBC Ratio at 12-31-20X2 of 600%. Adjusted statutory capital and surplus under paragraph 11.b.ii. is $7,000,000 at 12-31-20X2, and was computed by subtracting the admitted balances of net DTA's, goodwill and EDP from the current period statutory surplus. Statutory surplus is defined in paragraph 2 of SSAP No. 72.

4.18 Calculation of ABC's Admitted Adjusted Gross DTAs:

1. ABC can admit $726,000 ($132,000 + $198,000 + $396,000) of adjusted gross DTAs under paragraph 11.a., all of which are ordinary in tax character.
