GC = Provision for the costs of providing the GMDB less net available spread-based charges determined by the formula $F \times GV - G \times AV \times R$, where GV and AV are as defined in section A4.3)A);

R = A scaling factor that is a linear function of the ratio of the margin offset to Total Account Charges (*W*) and takes the form $R(\beta_0, \beta_1) = \beta_0 + \beta_1 \times W$. The intercept and slope factors for this linear function vary according to:

a) Product type,
b) Pro-rata or dollar-for-dollar reductions in guaranteed value following partial withdrawals,
c) Fund class,
d) Attained age,
e) Contract duration,
f) Asset-based charges, and
g) 90% of the ratio of account value to guaranteed value, determined in the aggregate for all contracts sharing the same product characteristics.

Tables of factors for *F*, *G*, β_0, and β_1 values, reflecting a 65% confidence level and ignoring Federal Income Tax, are available from the National Association of Insurance Commissioners. In calculating $R(\beta_0, \beta_1)$ directly from the linear function provided above, the margin ratio *W* must be constrained to values greater than or equal to 0.2 and less than or equal to 0.6.

Interpolated values of F, *G* and *R* (calculated using the linear function described above) for all contracts having the same product characteristics and asset class shall be derived from the pre-calculated values using multi-point linear interpolation over the following four contract-level attributes:

1) Attained age,

2) Contract duration,

3) Ratio of account value to GMDB, and

4) The total of all asset based charges, including any fund management fees or allowances based on the underlying variable annuity funds received by the insurer.

The gross asset-based charges for a product shall equal the sum of all contractual asset-based charges plus fund management fees or allowances based on the underlying variable annuity funds received by the insurer determined by complying with the requirements for Prudent Estimate described in Section III)B)8) and Revenue Sharing described in section A1.1)E). Net asset-based charges equal gross asset-based charges less any company expenses assumed to be incurred expressed as a percentage of account value. All expenses that would be assumed if the Conditional Tail Expectation Amount were being computed as described in section A1.1)A) should be reflected either in the calculation of the net asset based charges or in the expenses reflected in the calculation of the amount *FE*.

No adjustment is made for Federal Income Taxes in any of the components listed above.

For purposes of determining the Conditional Tail Expectation Amount using the Alternative Methodology, any interpretation and application of the requirements of the Guideline shall follow the principles discussed in the Section I) Background.

A4.2) Calculation of *CA* and *FE*

A) General Description. Components *CA* and *FE* shall be calculated for each contract, thus reflecting the actual account value and GMDB, as of the valuation date, which is unique to each contract.

Components *CA* and *FE* are defined by deterministic "single-scenario" calculations that account for asset growth, interest and inflation at prescribed rates. Mortality is ignored for these two components. Lapse rates shall be determined on a Prudent Estimate basis as described in Section III)B)8). Lapse rates shall be adjusted by the formula shown below (the Dynamic Lapse Multiplier, λ), which bases the relationship of the GMDB (denoted as GV in the formula) to the account value (denoted as AV in the formula) on the valuation date. Thus, projected lapse rates are smaller when the GMDB is greater than the account value and larger when the GMDB is less than the account value.

$$\lambda = MIN\left[U, MAX\left[L, 1 - M \times \left(\frac{GV}{AV} - D\right)\right]\right],$$

where U=1, L=0.5, M=1.25, and D=1.1.

Present values shall be computed over the period from the valuation date to contract maturity at a discount rate of 5.75%.

Projected fund performance underlying the account values is as shown in the table below. Unlike the *GC* component, which requires the entire account value to be mapped, using the Fund Categorization Rules set forth in section A4.4, to a single "equivalent" asset class (as described in A4.4)C)), the *CA* and *FE* calculation separately projects each variable subaccount (as mapped to the 8 prescribed categories shown in section A4.4)) using the net asset returns shown in the following table. If surrender charges are based wholly on deposits or premiums as opposed to account value, use of this table may not be necessary.

Asset Class / Fund	Net Annualized Return
Fixed Account	Guaranteed Rate
Money Market	0%
Fixed Income (Bond)	0%
Balanced	–1%
Diversified Equity	–2%
Diversified International Equity	–3%
Intermediate Risk Equity	–5%
Aggressive or Exotic Equity	–8%

B) Component *CA*. Component *CA* is computed as the present value of the projected change in surrender charges plus the present value of an implied borrowing cost of 25 basis points at the beginning of each future period applied to the surrender charge at such time.

This component can be interpreted as the "amount needed to amortize the unamortized surrender charge allowance for the *persisting* policies plus the implied borrowing cost." By definition, the amortization for non-persisting lives in each time period is exactly offset by the collected surrender charge revenue (ignoring timing differences and any waiver upon death). The unamortized balance must be projected to the end of the surrender charge period using the net asset returns and Dynamic Lapse Multiplier, λ, both as described above and the year-by-year amortization discounted also as described above. For simplicity, mortality is ignored in the calculations. Surrender charges and free partial withdrawal provisions are as specified in the contract. Lapse and withdrawal rates are determined on a Prudent Estimate basis, and may vary according to the attributes of the business being valued, including, but not limited to, attained age, contract duration, etc.

C) Component *FE*. Component *FE* establishes a provision for fixed dollar expenses (e.g., allocated costs, including overhead expressed as "per contract" *and* those expenses defined on a "per contract" basis) less any fixed dollar revenue (e.g., annual administrative charges or contract fees) through the earlier of contract maturity or 30 years. *FE* is computed as the present value of the company's assumed fixed expenses projected at an assumed annual rate of inflation starting in the second projection year. This rate grades uniformly from the current inflation rate ("CIR") into an ultimate inflation rate of 3% per annum in the 8th year after the valuation date. The CIR is the greater of 3% and the inflation rate assumed for expenses in the company's most recent asset adequacy analysis for similar business.

A4.3) Calculation of the *GC* Component

A) *GC* Factors. *GC* is calculated as $F \times GV - G \times AV \times R$, where GV is the amount of GMDB and AV is the contract account value, both as of the valuation date. *F*, *G* and the slope and intercept for the linear function used to determine *R* (identified symbolically as β_0 and β_1) are pre-calculated factors available from the National Association of Insurance Commissioners and known herein as the "Pre-Calculated Factors." These factors shall be interpolated as described in subsection F), below, and modified as necessary as described in sections A4.3)G) and A4.3)H).

B) Five Steps. There are five major steps in determining the *GC* component for a given contract:

1) Classifying the asset exposure (as specified in subparagraph C), below);

2) Determining the risk attributes (as specified in subparagraphs D) and E), below);

3) Retrieving the appropriate nodal factors from the factor grid (as described in subparagraph F) below;

4) Interpolating the nodal factors, where applicable (optional) also as described in subparagraph F), below; and

5) Applying the factors to the contract values.

C) Classifying Asset Exposure. For purposes of calculating *GC* (unlike what is done for components *CA* and *FE*), the entire account value for each contract must be assigned to one of the eight prescribed fund classes shown in section A4.4), using the Fund Categorization rules in section A4.4).

D) Product Designs. Factors *F*, *G* and $R(\beta_1, \beta_2)$ are available within the Pre-Calculated Factors for the following GMDB product designs:

1) Return of Premium ("ROP"),

2) Premiums less withdrawals accumulated at 3% per annum, capped at 2.5 times premiums less withdrawals, with no further increase beyond age 80 ("ROLL3"),

3) Premiums less withdrawals accumulated at 5% per annum, capped at 2.5 times premiums less withdrawals, with no further increase beyond age 80 ("ROLL5"),

4) An annual ratchet design (maximum anniversary value), for which the guaranteed benefit never decreases and is increased to equal the previous contract anniversary account value, if larger, with no further increases beyond age 80 ("MAV"),

5) A design having a guaranteed benefit equal to the larger of the benefits in designs 3 and 4, above ("HIGH"),

6) An enhanced death benefit ("EDB") equal to 40% of the net earnings on the account (i.e., 40% of account value less total premiums paid plus withdrawals made) with this latter benefit capped at 40% of premiums less withdrawals ("EDB"),

E) Other Attributes. Factors F, G and $R(\beta_1, \beta_2)$ are available within the Pre-Calculated Factors for the following set of attributes:

1) Two Partial Withdrawal Rules – one for contracts having a pro-rata reduction in the GMDB and another for contracts having a dollar-for-dollar reduction,

2) The eight asset classes described in section A4.4)B),

3) Eight attained ages, with a 5-year age setback for females,

4) Five contract durations,

5) Seven values of GV/AV, and

6) Three levels of asset-based income.

F) Interpolation of F, G and $R(\beta_1, \beta_2)$.

1) Values of F, G and $R(\beta_1, \beta_2)$ apply to a contract having the product characteristics listed in section A4.5)A) and shall be determined by selecting values for the appropriate partial withdrawal rule and asset class and then using multi-point linear interpolation among published values for the last four attributes shown in section A4.3)E).

2) Interpolation over all four dimensions is not required, but if not performed over one or more dimensions, the factor used must result in a conservative (higher) value of GC. However, simple linear interpolation using the $AV \div GV$ ratio is mandatory. In this case, the company must choose nodes for the other three dimensions according to the following rules: next highest attained age, nearest duration, and nearest Annualized Account Charge Differential, as listed in A4.5)C) (i.e., capped at +100 and floored at –100 bps).

3) For $R(\beta_1, \beta_2)$, the interpolation should be performed on the Scaling Factors R calculated using β_1, β_2, using the ratio of Margin Offset to Total Asset Charges (W), not on the factors β_1 and β_2 themselves.

4) An Excel® workbook, Excel® add-in and companion dynamic link library (.dll) program is available from the National Association of Insurance Commissioners that can be used to determine the correct values and perform the multi-point linear interpolation.

5) Alternatively, published documentation can be referenced on performing multi-point linear interpolation and the required sixteen values determined using a key that is documented in the table "*Components of Key Used for GC Factor Look-Up*" located in section A4.5)C).

G) Adjustments to *GC* for Product Variations & Risk Mitigation/Transfer. In some cases, it may be necessary to make adjustments to the published factors due to:

1) A variation in product form wherein the definition of the guaranteed benefit is materially different from those for which factors are available (see section A4.3)H)); and/or

2) A risk mitigation or other management strategy, other than a hedging strategy, that cannot be accommodated through a straightforward and direct adjustment to the published values.

Adjustments may not be made to *GC* for hedging strategies.

Any adjustments to the published factors must be fully documented and supported through stochastic analysis. Such analysis may require stochastic simulations, but would not ordinarily be based on full inforce projections. Instead, a representative "model office" should be sufficient. Use of these adjusted factors must be supported by a periodic review of the appropriateness of the assumptions and methods used to perform the adjustments, with changes made to the adjustments when deemed necessary by such review.

Note that minor variations in product design do not necessarily require additional effort. In some cases, it may be reasonable to use the factors/formulas for a different product form (e.g., for a roll-up GMDB near or beyond the maximum reset age or amount, the ROP GMDB factors/formulas shall be used, possibly adjusting the guaranteed value to reflect further resets, if any). In other cases, the reserves may be based on two different guarantee definitions and the results interpolated to obtain an appropriate value for the given contract/cell. Likewise, it may be possible to adjust the Alternative Methodology results for certain risk transfer arrangements without significant additional work (e.g., quota-share reinsurance without caps, floors or sliding scales would normally be reflected by a simple pro-rata adjustment to the "gross" *GC* results).

However, if the contract design is sufficiently different from those provided and/or the risk mitigation strategy is non-linear in its impact on the Conditional Tail Expectation Amount, and there is no practical or obvious way to obtain a good result from the prescribed factors/formulas, any adjustments or approximations must be supported using stochastic modeling. Notably this modeling need not be performed on the whole portfolio, but can be undertaken on an appropriate set of representative policies.

H) Adjusting *F* and *G* for Product Design Variations. This subsection describes the typical process for adjusting *F* and *G* factors due to a variation in product design. Note that *R* (as determined by the slope and intercept terms in the factor table) would not be adjusted.

1) Select a contract design among those described in section A4.3)D) that is similar to the product being valued. Execute cash flow projections using the documented assumptions (see table of *Liability Modeling Assumptions & Product Characteristics* in section A4.5)A) and table of *Asset Based Fund Charges* in section A4.5)B)) and the pre-packaged scenarios for a set of representative cells (combinations of attained age, contract duration, asset class, AV/GMDB ratio and asset-based charges). These cells should correspond to nodes in the table of pre-calculated factors. Rank (order) the sample distribution of results for the present value of net cost.[22] Determine those scenarios that comprise CTE (65).

2) Using the results from step 1, average the present value of cost for the CTE (65) scenarios and divide by the current guaranteed value. For the J^{th} cell, denote this value by F_J. Similarly, average the present value of margin offset revenue for the same subset of scenarios and divide by account value. For the J^{th} cell, denote this value by G_J.

3) Extract the corresponding pre-calculated factors. For each cell, calibrate to the published tables by defining a "model adjustment factor" (denoted by asterisk) separately for the "cost" and "margin offset" components:

$$F_J^* = \frac{f\left(\tilde{\theta}\right)}{F_J} \text{ and } G_J^* = \frac{\hat{g}\left(\tilde{\theta}\right)}{G_J}$$

4) Execute "product specific" cash flow projections using the documented assumptions and pre-packaged scenarios for the same set of representative cells. Here, the company should model the actual product design. Rank (order) the sample distribution of results for the present value of net cost. Determine those scenarios that comprise CTE (65).

5) Using the results from step 4, average the present value of cost for the CTE (65) scenarios and divide by the current guaranteed value. For the J^{th} cell, denote this value by $\overline{F}_J$. Similarly, average the present value of margin offset revenue for the same subset of scenarios and divide by account value. For the J^{th} cell, denote this value by $\overline{G}_J$.

6) To calculate the Conditional Tail Expectation Amount for the specific product in question, the company should implement the Alternative Methodology as documented, but use $\overline{F}_J \times F_J^*$ in place of F and $\overline{G}_J \times G_J^*$ instead of G. The same R factors as appropriate for the product evaluated in step 1 shall be used for this step (i.e., the product used to calibrate the cash flow model).

I) Adjusting *GC* for Mortality Experience. The factors that have been developed for use in determining *GC* assume male mortality at 100% of the 1994 Variable Annuity MGDB ALB Mortality Table. Companies electing to use the Alternative Methodology that have not conducted an evaluation of their mortality experience shall use these factors. Other companies should use the procedure described below to adjust for the actuary's Prudent Estimate of mortality. The development of Prudent Estimate mortality shall follow the requirements and guidance of Appendix 10. Once a company uses the modified method for a block of business, the option to use the unadjusted factors is no longer available for that part of its business. In applying the factors to actual inforce business, a 5-year age setback should be used for female annuitants.

[22] Present value of net cost = PV[guaranteed benefit claims in excess of account value] – PV[margin offset]. The discounting includes cash flows in all future years (i.e., to the earlier of contract maturity and the end of the horizon).

1) Develop a set of mortality assumptions based on Prudent Estimate. In setting these assumptions, the actuary shall be guided by the definition of Prudent Estimate and the principles discussed in Appendices 9 and 10 of the Guideline.

2) Calculate two sets of net single premiums (NSP) at each attained age: one valued using 100% of the 1994 Variable Annuity MGDB ALB Mortality Table (with the aforementioned 5-year age setback for females) and the other using Prudent Estimate mortality. These calculations shall assume an interest rate of 3.75% and a lapse rate of 7% per year.

3) The *GC* factor is multiplied by the ratio, for the specific attained age being valued, of the NSP calculated using the Prudent Estimate mortality to the NSP calculated using the 1994 Variable Annuity MGDB ALB Mortality Table (with the aforementioned 5-year age setback for females).

A4.4) Fund Categorization

A) Criteria. The following criteria should be used to select the appropriate factors, parameters and formulas for the exposure represented by a specified guaranteed benefit. When available, the volatility of the long-term annualized total return for the fund(s) – or an appropriate benchmark – should conform to the limits presented. For this purpose, “long-term” is defined as twice the average projection period that would be applied to test the product in a stochastic model (generally, at least 30 years).

Where data for the fund or benchmark are too sparse or unreliable, the fund exposure should be moved to the next higher volatility class than otherwise indicated. In reviewing the asset classifications, care should be taken to reflect any additional volatility of returns added by the presence of currency risk, liquidity (bid-ask) effects, short selling and speculative positions.

B) Asset Classes. Variable subaccounts must be categorized into one of the following eight (8) asset classes. For purposes of calculating *CA* or *FE*, each contract will have one or more of the following asset classes represented, whereas for component *GC*, all subaccounts will be mapped into a single asset class.

1) Fixed Account. This class is credited interest at guaranteed rates for a specified term or according to a ‘portfolio rate’ or ‘benchmark’ index. This class offers a minimum positive guaranteed rate that is periodically adjusted according to company policy and market conditions.

2) Money Market/Short-Term. This class is invested in money market instruments with an average remaining term-to-maturity of less than 365 days.

3) Fixed Income. This class is invested primarily in investment grade fixed income securities. Up to 25% of the funds within this class may be invested in diversified equities or high-yield bonds. The expected volatility of the returns for this class will be lower than the Balanced fund class.

4) Balanced. This class is a combination of fixed income securities with a larger equity component. The fixed income component should exceed 25% of the portfolio. Additionally, any aggressive or ‘specialized’ equity component should not exceed one-third (33.3%) of the total equities held. Should the fund violate either of these constraints, it should be categorized as an equity fund. This class usually has a long-term volatility in the range of 8% – 13%.

5) Diversified Equity. This class is invested in a broad-based mix of U.S. and foreign equities. The foreign equity component (maximum 25% of total holdings) must be comprised of liquid securities in well-developed markets. Funds in this class would exhibit long-term volatility comparable to that of the S&P500. These funds should usually have a long-term volatility in the range of 13% – 18%.

6) Diversified International Equity. This class is similar to the Diversified Equity class, except that the majority of fund holdings are in foreign securities. This class should usually have a long-term volatility in the range of 14% – 19%.

7) Intermediate Risk Equity. This class has a mix of characteristics from both the Diversified and Aggressive Equity Classes. This class has a long-term volatility in the range of 19% – 25%.

8) Aggressive or Exotic Equity. This class comprises more volatile funds where risk can arise from: underdeveloped markets, uncertain markets, high volatility of returns, narrow focus (e.g., specific market sector), etc. This class (or market benchmark) either does not have sufficient history to allow for the calculation of a long-term expected volatility, or the volatility is very high. This class would be used whenever the long-term expected annualized volatility is indeterminable or exceeds 25%.

C) Selecting Appropriate Investment Classes. The selection of an appropriate investment type should be done at the level for which the guarantee applies. For guarantees applying on a deposit-by-deposit basis, the fund selection is straightforward. However, where the guarantee applies across deposits or for an entire contract, the approach can be more complicated. In such instances, the approach is to identify for each contract where the "grouped holdings" fit within the categories listed and to classify the associated assets on this basis.

A seriatim process is used to identify the "grouped" fund holdings, to assess the risk profile of the current fund holdings (possibly calculating the expected long-term volatility of the funds held with reference to the indicated market proxies), and to classify the entire 'asset exposure' into one of the specified choices. Here, 'asset exposure' refers to the underlying assets (separate and/or general account investment options) on which the guarantee will be determined. For example, if the guarantee applies separately for each deposit year within the contract, then the classification process would be applied separately for the exposure of each deposit year.

In summary, mapping the benefit exposure (i.e., the asset exposure that applies to the calculation of the guaranteed minimum death benefits) to one of the prescribed asset classes is a multi-step process:

1) Map each separate and/or general account investment option to one of the prescribed asset classes. For some funds, this mapping will be obvious, but for others it will involve a review of the fund's investment policy, performance benchmarks, composition and expected long-term volatility.

2) Combine the mapped exposure to determine the expected long-term "volatility of current fund holdings." This will require a calculation based on the expected long-term volatility for each fund and the correlations between the prescribed asset classes as given in the table "*Correlation Matrix for Prescribed Asset Classes*," in section A4.4)D).

3) Evaluate the asset composition and expected volatility (as calculated in step 2) of current holdings to determine the single asset class that best represents the exposure, with due consideration to the constraints and guidelines presented earlier in this section.

In step 1, the company should use the fund's actual experience (i.e., historical performance, inclusive of reinvestment) only as a guide in determining the expected long-term volatility. Due to limited data and changes in investment objectives, style and/or management (e.g., fund mergers, revised investment policy, different fund managers, etc.); the company may need to give more weight to the expected long-term volatility of the fund's benchmarks. In general, the company should exercise caution and not be overly optimistic in assuming that future returns will consistently be less volatile than the underlying markets.

In step 2, the company should calculate the "volatility of current fund holdings" (for the exposure being categorized) by the following formula

$$\sigma = \sqrt{\sum_{i=1}^{n}\sum_{j=1}^{n} w_i w_j \rho_{ij} \sigma_i \sigma_j}$$

using the volatilities and correlations in the following table where $w_i = \frac{AV_i}{\sum_k AV_k}$ is the relative value of fund i expressed as a proportion of total contract value, ρ_{ij} is the correlation between asset classes i and j and σ_i is the volatility of asset class i. An example is provided after the table.

D) Correlation Matrix for Prescribed Asset Classes.

ANNUAL VOLATILITY		FIXED ACCOUNT	MONEY MARKET	FIXED INCOME	BALANCED	DIVERSE EQUITY	INTL EQUITY	INTERM EQUITY	AGGR EQUITY
1.0%	FIXED ACCOUNT	**1**	0.50	0.15	0	0	0	0	0
1.5%	MONEY MARKET	0.50	**1**	0.20	0	0	0	0	0
5.0%	FIXED INCOME	0.15	0.20	**1**	0.30	0.10	0.10	0.10	0.05
10.0%	BALANCED	0	0	0.30	**1**	0.95	0.60	0.75	0.60
15.5%	DIVERSE EQUITY	0	0	0.10	0.95	**1**	0.60	0.80	0.70
17.5%	INTL EQUITY	0	0	0.10	0.60	0.60	**1**	0.50	0.60
21.5%	INTERM EQUITY	0	0	0.10	0.75	0.80	0.50	**1**	0.70
26.0%	AGGR EQUITY	0	0	0.05	0.60	0.70	0.60	0.70	**1**

E) Fund Categorization Example. As an example, suppose three funds (Fixed Income, diversified U.S. Equity and Aggressive Equity) are offered to clients on a product with a contract level guarantee (i.e., across all funds held within the contract). The current fund holdings (in dollars) for five sample contracts are shown in the following table.

	1	**2**	**3**	**4**	**5**
MV Fund X (Fixed Income):	5,000	4,000	8,000	-	5,000
MV Fund Y (Diversified Equity):	9,000	7,000	2,000	6,000	-
MV Fund Z (Aggressive Equity):	1,000	4,000	-	4,000	5,000
Total Market Value:	15,000	15,000	10,000	10,000	10,000
Total Equity Market Value:	10,000	11,000	2,000	10,000	5,000
Fixed Income % (*A*):	33%	27%	80%	0%	50%
Fixed Income Test (*A*>75%):	No	No	Yes	No	No
Aggressive % of Equity (B):	10%	36%	n/a	40%	100%
Balanced Test (*A*>25% & *B*<33.3%):	Yes	No	n/a	No	No
Volatility of Current Fund Holdings:	10.9%	13.2%	5.3%	19.2%	13.4%
Fund Classification:	**Balanced**	**Diversified***[23]	**Fixed Income**	**Intermediate**	**Diversified**

[23] Although the volatility suggests "Balanced Fund," the Balanced Fund criteria were not met. Therefore, this 'exposure' is moved "up" to Diversified Equity. For those funds classified as Diversified Equity, additional analysis would be required to assess whether they should be instead designated as "Diversified International Equity."

As an example, the "Volatility of Current Fund Holdings" for contract #1 is calculated as $\sqrt{A+B}$ where:

$$A = \left(\frac{5}{15}\times 0.05\right)^2 + \left(\frac{9}{15}\times 0.155\right)^2 + \left(\frac{1}{15}\times 0.26\right)^2$$

$$B = 2\cdot\left(\frac{5}{15}\cdot\frac{9}{15}\right)(0.1\times 0.05\times 0.155) + 2\cdot\left(\frac{5}{15}\cdot\frac{1}{15}\right)(0.05\times 0.05\times 0.26) + 2\cdot\left(\frac{9}{15}\cdot\frac{1}{15}\right)(0.7\times 0.155\times 0.26)$$

So the volatility for contract #1 = $\sqrt{0.0092+0.0026}$ = 0.109 or 10.9%.

A4.5) Tables

A) Liability Modeling Assumptions & Product Characteristics used for *GC* Factors.

Asset Based Charges (MER)	Vary by fund class. See section A4.5)B).
Base Margin Offset	100 basis points per annum.
GMDB Description	1. ROP = return of premium ROP. 2. ROLL3 = 3% roll-up, capped at 2.5 × premium, frozen at age 80. 3. ROLL5 = 5% roll-up, capped at 2.5 × premium, frozen at age 80. 4. MAV = annual ratchet (maximum anniversary value), frozen at age 80. 5. HIGH = Higher of 5% roll-up and annual ratchet. 6. EDB = 40% Enhanced Death Benefit (capped at 40% of deposit). Note that the Pre-Calculated Factors were originally calculated with a combined ROP benefit, but they have been adjusted to remove the effect of the ROP. Thus, the factors for this benefit 5 are solely for the Enhanced Death Benefit.
Adjustment to GMDB Upon Partial Withdrawal	Separate factors for "Pro-Rata by Market Value" and "Dollar-for-Dollar."
Surrender Charges	Ignored (i.e., zero). Included in the *CA* component.
Single Premium / Deposit	$100,000. No future deposits; no intra-contract fund rebalancing.
Base Contract Lapse Rate (Total Surrenders)	• Pro-rata by MV: 10% p.a. at all contact durations (before dynamics) • Dollar-for-dollar: 2% p.a. at all contract durations (no dynamics)
Partial Withdrawals	• Pro-rata by MV: None (i.e., zero) • Dollar-for-dollar: Flat 8% p.a. at all contract durations (as a % of AV). No dynamics or anti-selective behavior.
Mortality	100% of the 1994 Variable Annuity MGDB Mortality Table (MGDB 94 ALB). For reference, 1000 × q_x rates at ages 65 and 70 for 100% of MGDB 94 ALB Male are 18.191 and 29.363 respectively. Note that section A4.3)I) allows modification to this assumption.
Gender /Age Distribution	100% male. Methodology accommodates different attained ages. A 5-year age setback will be used for female annuitants.
Max. Annuitization Age	All policies terminate at age 95.
Fixed Expenses	Ignored (i.e., zero). Included in the *FE* component.
Annual Fee and Waiver	Ignored (i.e., zero). Included in the *FE* component.

Discount Rate	5.75% pre-tax.
Dynamic Lapse Multiplier (Applies only to policies where GMDB is adjusted "pro-rata by MV" upon withdrawal)	$\lambda = MIN\left[U, MAX\left[L, 1 - M \times \left(\frac{GV}{AV} - D\right)\right]\right]$ U=1, L=0.5, M=1.25, D=1.1 ▪ Applied to the 'Base Contract Lapse Rate' ▪ Does not apply to partial withdrawals.

B) Asset-Based Fund Charges (bps per annum).

Asset Class / Fund	**Account Value Charge**
Fixed Account	0
Money Market	110
Fixed Income (Bond)	200
Balanced	250
Diversified Equity	250
Diversified International Equity	250
Intermediate Risk Equity	265
Aggressive or Exotic Equity	275

C) Components of Key Used for *GC* Factor Look-Up.

(First Digit Always "1")

Contract Attribute	Key : Possible Values & Description	
Product Definition, P	0 : 0	Return-of-premium.
	1 : 1	Roll-up (3% per annum).
	2 : 2	Roll-up (5% per annum).
	3 : 3	Maximum Anniversary Value (MAV).

APPENDIX 5 - Scenario Calibration Criteria

A5.1) General

This Appendix outlines the requirements for the stochastic models used to simulate fund performance.[24] Specifically, it sets certain standards that must be satisfied and offers guidance to the actuary in the development and validation of the scenario models. Background material and analysis are presented to support the recommendation. The Appendix focuses on the S&P 500 as a proxy for returns on a broadly diversified U.S. equity fund, but there is also advice on how the techniques and requirements would apply to other types of funds. General modeling considerations such as the number of scenarios and projection frequency are also discussed.

The calibration points given in this Appendix are applicable to gross returns (before the deduction of any fees or charges). To determine the net returns appropriate for the projections required by the Guideline, the actuary shall reflect applicable fees and contractholder charges in the development of projected account values. The projections shall also include the costs of managing the investments and converting the assets into cash when necessary.

As a general rule, funds with higher expected returns should have higher expected volatilities and in the absence of well-documented mitigating factors (e.g., a highly reliable and favorable correlation to other fund returns), should lead to higher reserve requirements.[25]

State or path dependent models are not prohibited, but must be justified by the historic data and meet the calibration criteria. To the degree that the model uses mean-reversion or path-dependent dynamics, this must be well supported by research and clearly documented in the Memorandum supporting the required actuarial certification.

The equity scenarios used to determine reserves must be available in an electronic format to facilitate any regulatory review.

A5.2) Gross Wealth Ratios

Gross Wealth Ratios derived from the stochastic return scenarios for use with a Separate Account variable fund category for diversified U.S. equities must satisfy calibration criteria consistent with that for the S&P 500 shown in the following table. Under these calibration criteria, Gross Wealth Ratios for quantiles less than 50 percent may not exceed the value from the table corresponding to the quantile, while at quantiles greater than 50 percent; Gross Wealth Ratios may not be less than the corresponding value for the quantile from the table. Gross Wealth Ratios must be tested for holding period 1, 5, 10 and 20 years throughout the projections, except as noted in section A5.3).

The “wealth factors” are defined as gross accumulated values (i.e., before the deduction of fees and charges) with complete reinvestment of income and maturities, starting with a unit investment. These can be less than 1, with “1” meaning a zero return over the holding period.

[24] For more details on the development of these requirements, including the development of the calibration points, see the American Academy of Actuaries recommendation on C-3 Phase II risk-based capital.

[25] While the model need not strictly adhere to ‘mean-variance efficiency,’ prudence dictates some form of consistent risk/return relationship between the proxy investment funds. In general, it would be inappropriate to assume consistently ‘superior’ expected returns (i.e., risk/return point above the frontier).

S&P 500 Total Return Gross Wealth Ratios at the Calibration Points

Calibration Point	One Year	Five Year	Ten Year	Twenty Year
2.5%	0.78	0.72	0.79	▨
5.0%	0.84	0.81	0.94	1.51
10.0%	0.90	0.94	1.16	2.10
90.0%	1.28	2.17	3.63	9.02
95.0%	1.35	2.45	4.36	11.70
97.5%	1.42	2.72	5.12	▨

The scenarios need not strictly satisfy all calibration points, but the actuary should be satisfied that any differences do not materially reduce the resulting reserves.[26] In particular, the actuary should be mindful of which tail most affects the business being valued. If reserves are less dependent on the right (left) tail for all products under consideration (e.g., a return of premium guarantee would primarily depend on the left tail, an enhanced death benefit equal to a percentage of the gain would be most sensitive to the right tail, etc.), it is not necessary to meet the right (left) calibration points.

For models that require starting values for certain state variables,[27] long-term ('average' or 'neutral') values should be used for calibration. The same values should normally be used to initialize the models for generating the actual projection scenarios unless an alternative assumption can be clearly justified.[28] It should be noted that a different set of initialization parameters might produce scenarios that do not satisfy all the calibration points shown in the above table. However, the S&P 500 scenarios used to determine reserves must meet the calibration criteria.

A5.3) Calibration Requirements Beyond Twenty Years

It is possible to parameterize some path and/or state dependent models to produce higher volatility (and/or lower expected returns) in the first 20 years in order to meet the calibration criteria, but with lower volatility (and/or higher expected returns) for other periods during the forecast horizon. While this property may occur for certain scenarios (e.g., the state variables would evolve over the course of the projection and thereby affect future returns), it would be inappropriate and unacceptable for a company to alter the model parameters and/or its characteristics for periods beyond year 20 in a fashion not contemplated at the start of the projection and primarily for the purpose(s) of reducing the volatility and/or severity of ultimate returns.[29]

A5.4) Other Funds

Calibration of other markets (funds) is left to the judgment of the actuary, but the scenarios so generated must be consistent with the calibration points in the table in section A5.2). This does not imply a strict functional relationship between the model parameters for various markets/funds, but it would generally be inappropriate to assume that a market or fund consistently "outperforms" (lower risk, higher expected return relative to the efficient frontier) over the long term.

[26] See the Preamble to the Accounting Practices and Procedures Manual for an explanation of materiality.

[27] For example, a stochastic log volatility ("SLV") model requires the starting volatility. Also, the regime-switching lognormal model requires an assumption about the starting regime.

[28] A clear justification exists when state variables are observable or "known" to a high degree of certainty and not merely estimated or inferred based on a "balance of probabilities."

[29] Such adjustments must be clearly documented and justified by the historic data.

The actuary shall document the actual 1-, 5-, 10- and 20-year wealth factors of the scenarios at the same frequencies as in the "S&P 500 Total Return Gross Wealth Ratios at the Calibration Points" table in section A5.2). The annualized mean and standard deviation of the wealth factors for the 1-, 5-, 10- and 20-year holding periods must also be provided. For equity funds, the actuary shall explain the reasonableness of any significant differences from the S&P500 calibration points.

When parameters are fit to historic data without consideration of the economic setting in which the historic data emerged, the market price of risk may not be consistent with a reasonable long-term model of market equilibrium. One possibility for establishing 'consistent' parameters (or scenarios) across all funds would be to assume that the market price of risk is constant (or nearly constant) and governed by some functional (e.g., linear) relationship. That is, higher expected returns can only be garnered by assuming greater risk.[30]

Specifically, two return distributions *X* and *Y* would satisfy the following relationship:

$$\text{Market Price of Risk} = \left(\frac{\mathrm{E}[\mathrm{R}_X] - \mathrm{r}}{\sigma_X} \right) = \left(\frac{E[R_Y] - \mathrm{r}}{\sigma_Y} \right)$$

where $E[R]$ and σ are respectively the (unconditional) expected returns and volatilities and *r* is the expected risk-free rate over a suitably long holding period commensurate with the projection horizon. One approach to establish consistent scenarios would set the model parameters to maintain a near-constant market price of risk.

A closely related method would assume some form of 'mean-variance' efficiency to establish consistent model parameters. Using the historic data, the mean-variance (alternatively, 'drift-volatility') frontier could be a constructed from a plot of (mean, variance) pairs from a collection of world market indices. The frontier could be assumed to follow some functional form,[31] with the coefficients determined by standard curve fitting or regression techniques. Recognizing the uncertainty in the data, a 'corridor' could be established for the frontier. Model parameters would then be adjusted to move the proxy market (fund) inside the corridor.

Clearly, there are many other techniques that could be used to establishing consistency between the scenarios. While appealing, the above approaches do have drawbacks[32] and the actuary should not be overly optimistic in constructing the model parameters or the scenarios.

Funds can be grouped and projected as a single fund if such grouping is not anticipated to materially reduce reserves. However, care should be taken to avoid exaggerating the benefits of diversification. The actuary must document the development of the investment return scenarios and be able to justify the mapping of the company's variable accounts to the proxy funds used in the modeling.

[30] As an example, the standard deviation of log returns is often used as a measure of risk.

[31] Quadratic polynomials and logarithmic functions tend to work well.

[32] For example, mean-variance measures ignore the asymmetric and fat-tailed profile of most equity market returns.

A5.5) Correlation of Fund Returns

In constructing the scenarios for the proxy funds, the company may require parameter estimates for a number of different market indices. When more than one index is projected, it is generally necessary to allow for correlations in the simulations. It is not necessary to assume that all markets are perfectly positively correlated, but an assumption of independence (zero correlation) between the equity markets would inappropriately exaggerate the benefits of diversification. An examination of the historic data suggests that correlations are not stationary and that they tend to increase during times of high volatility or negative returns. As such, the actuary should take care not to underestimate the correlations in those scenarios used for the reserve calculations.

If the projections include the simulation of interest rates (other than for discounting surplus strain) as well as equity returns, the processes may be independent provided that the actuary can demonstrate that this assumption (i.e., zero correlation) does not materially underestimate the resulting reserves.

A5.6) Number of Scenarios and Efficiency in Estimation

For straight Monte Carlo simulation (with equally probable "paths" of fund returns), the number of scenarios should typically equal or exceed 1000. The appropriate number will depend on how the scenarios will be used and the materiality of the results. The actuary should use a number of scenarios that will provide an acceptable level of precision.

Fewer than 1000 scenarios may be used provided that the actuary has determined through prior testing (perhaps on a subset of the portfolio) that the CTE values so obtained materially reproduce the results from running a larger scenario set.

Variance reduction and other sampling techniques are intended to improve the accuracy of an estimate more efficiently than simply increasing the number of simulations. Such methods can be used provided the actuary can demonstrate that they do not lead to a material understatement of results. Many of the techniques are specifically designed for estimating means, not tail measures, and could in fact reduce accuracy (and efficiency) relative to straight Monte Carlo simulation.[33]

The above requirements and warnings are not meant to preclude or discourage the use of valid and appropriate sampling methods, such as Quasi Random Monte Carlo (QRMC), importance sampling or other techniques designed to improve the efficiency of the simulations (relative to pseudo-random Monte Carlo methods). However, the actuary should maintain documentation that adequately describes any such techniques used in the projections. Specifically, the documentation should include the reasons why such methods can be expected not to result in systematic or material under-statement of the resulting reserves compared to using pseudo-random Monte Carlo numbers.

A5.7) Frequency of Projection and Time Horizon

Use of an annual cashflow frequency ("timestep") is generally acceptable for benefits/features that are not sensitive to projection frequency. The lack of sensitivity to projection frequency should be validated by testing wherein the actuary should determine that the use of a more frequent (i.e., shorter) time step does not materially increase reserves. A more frequent time increment should always be used when the product features are sensitive to projection period frequency.

[33] However, with careful implementation, many variance reduction techniques can work well for CTE estimators. For example, see Manistre, B.J. and Hancock, G. (2003), "Variance of the CTE Estimator," 2003 Stochastic Modeling Symposium, Toronto, ON, September 2003.

Care must be taken in simulating fee income and expenses when using an annual time step. For example, recognizing fee income at the end of each period after market movements, but prior to persistency decrements, would normally be an inappropriate assumption. It is also important that the frequency of the investment return model be linked appropriately to the projection horizon in the liability model. In particular, the horizon should be sufficiently long so as to capture the vast majority of costs (on a present value basis) from the scenarios.[34]

A5.8) Pre-Packaged Scenarios

The American Academy of Actuaries has provided 10,000 scenarios on its website[35] for the following nineteen asset classes.[36]

1) 3-month U.S. Treasury yields

2) 6-month U.S. Treasury yields

3) 1-year U.S. Treasury yields

4) 2-year U.S. Treasury yields

5) 3-year U.S. Treasury yields

6) 5-year U.S. Treasury yields

7) 7-year U.S. Treasury yields

8) 10-year U.S. Treasury yields

9) 20-year U.S. Treasury yields

10) 30-year U.S. Treasury yields

11) Money Market / Short-Term

12) U.S. Intermediate Term Government Bonds

13) U.S. Long Term Corporate Bonds

14) Diversified Fixed Income

15) Diversified Balanced Allocation

16) Diversified Large Capitalized U.S. Equity

[34] As a general guide, the forecast horizon should not be less than 20 years.

[35] The pre-packaged scenarios can be found at http://www.actuary.org/life/phase2.asp and are fully documented at http://www.actuary.org/pdf/life/c3supp_march05.pdf.

[36] Because the reserves calculated using projections involve cash flow projections, the pre-packaged scenarios were developed under the "real world" probability measure (as opposed to a "risk-neutral" basis). Therefore, the pre-packaged scenarios may not be appropriate for purposes of projecting the market value of future hedge instruments within a projection (to the extent such instruments are used in the projections). For this purpose, it may be more appropriate to use risk neutral scenarios to determine the market value of hedge instruments in the cash flow projections that are based on real world scenarios.

17) Diversified International Equity

18) Intermediate Risk Equity

19) Aggressive or Specialized Equity

The scenarios are available as gross monthly accumulation factors (or U.S. Treasury yields) over a 30-year horizon in comma-separated value format (*.*csv*). These scenarios have been appropriately correlated so that the K^{th} scenario for each asset class must be used together and considered one 'future investment return scenario.'[37] Hence, the scenarios can be combined (by blending the accumulation factors[38]) to create additional 'proxy' scenarios for the company's funds.

For example, suppose the actuary wanted to construct scenarios for a 'balanced fund' that targets a 60/40 allocation between bonds and U.S. equities. If we denote [AF^{X}] as the matrix of accumulation factors for asset class X, then the balanced scenarios would be defined by [AF^{BAL}] = 0.60 × [AF^{BOND}] + 0.40 × [$\text{AF}^{S\&P500}$]. Care should be taken to avoid exaggerating the benefits of diversification. The actuary shall document the development of the investment return scenarios and be able to justify the mapping of the company's variable accounts to the proxy funds used in the modeling.

The U.S. Treasury yields are expressed as nominal semi-annual bond equivalent yields in decimal format. All other returns are expressed as periodic (not cumulative) market accumulation factors (i.e., monthly "gross wealth ratios"). Interest rates are assumed to change at the start of each month, hence the value in column T applies for month T-1. The market accumulation factor in column T represents the growth in month T-1.

If all or a portion of these scenarios are used, then the actuary shall verify that the scenario calibration criteria are met.

[37] It is inappropriate to misalign the ordering of scenarios (e.g., scenario J for "Diversified U.S. Equity" cannot be combined with scenario K for "Diversified International Equity," where J ≠ K).

[38] It is important to blend the accumulation factors (not the returns) in order to achieve the desired asset mix.

APPENDIX 6 - Allocation of the Aggregate Reserves to the Contract Level

Section IV states that the Aggregate Reserve shall be allocated to the contracts falling within the scope of the Guideline. When the Conditional Tail Expectation Amount is greater that the Standard Scenario Amount, this allocation requires that the excess be allocated to the contracts falling within the scope of the Guideline.

A6.1) Allocation when the Aggregate Reserve equals the Conditional Tail Expectation Amount

A) Single sub-grouping. When the Aggregate Reserve is equal to the Conditional Tail Expectation Amount and the Conditional Tail Expectation Amount is determined in aggregate for all contracts falling within the scope of the Guideline (i.e., a single grouping), as described in Section IV)D), the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount shall be allocated to each contract on the basis of the difference between the Standard Scenario Reserve and the Cash Surrender Value[39] on the valuation date for the contract. If the cash surrender value is not defined or not available, the Standard Scenario Amount will be the basis of allocation.

B) Multiple sub-groupings. When the Aggregate Reserve is equal to the Conditional Tail Expectation Amount and the Conditional Tail Expectation Amount is determined using more than one sub-grouping, as described in Section IV)D), the allocation of the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount and shall reflect that sub-grouping of contracts used to determine the Conditional Tail Expectation Amount, as described in Section IV)D).

For example, when the Conditional Tail Expectation Amount is determined using sub-grouping, the excess of the aggregate (i.e., the total for all contracts within the scope of the Guideline) Conditional Tail Expectation Amount over the aggregate Standard Scenario Amount shall be allocated only to those contracts that are part of sub-groupings whose contributions to the Conditional Tail Expectation Amount exceed their contribution to the Standard Scenario Amount.

In the case of such sub-groupings, the excess of the aggregate Conditional Tail Expectation Amount over the aggregate Standard Scenario Amount shall be allocated to each sub-grouping in proportion to the difference between the Conditional Tail Expectation and the Standard Scenario Reserve for each sub-grouping for which that excess is positive.

Once the allocation to each sub-grouping is determined, the excess of the reserve allocated to such sub-grouping over the Standard Scenario Amount determined for that sub-grouping shall be allocated to each contract within that sub-grouping on the basis of the difference between the Standard Scenario Reserve and the Cash Surrender Value on the valuation date for the contracts. If the cash surrender value is not defined or not available, the Standard Scenario Amount will be the basis of allocation.

[39] Note that since the Standard Scenario Reserve for a contract is, by definition, greater than or equal to the Cash Surrender Value, it is understood that the difference between the Standard Scenario Reserve and the Cash Surrender Value for each contract will never be less than zero.

As an example, consider a company with the results of the following three sub-groupings:

Sub-grouping	A	B	C	Total
Conditional Tail Expectation Amount	28	40	52	120
Standard Scenario Amount	20	45	30	95
Aggregate Reserve				**120**
(1) – (2)	8	-5	22	25
Allocation	6.67	0	18.33	25

In this example, the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount, in aggregate, equals 25 (i.e., the "Total" column of row 1 less row 2, or 120 – 95). This excess of 25 would be allocated only to those contracts that are part of sub-groupings whose contributions to the Conditional Tail Expectation Amount exceed their contributions to the Standard Scenario Amount. In this example, that would be contracts in sub-groupings A and C (since in sub-grouping B, the contribution to the Standard Scenario Amount exceeds the contribution to the Conditional Tail Expectation Amount). Therefore, the excess of 25 would be allocated to the contracts in sub-groupings A and C in proportion to the difference between the Conditional Tail Expectation Amount and the Standard Scenario Reserve for those sub-groupings (i.e. row 4). In this example, the total difference between the Conditional Tail Expectation Amount and the Standard Scenario Reserve for the contracts in sub-groupings A and C equals 8 + 22, or 30. This would result in 8/30 of the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount (or 6.67) to be allocated to the contracts in sub-groupings A and 22/30 of the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount (or 18.33) to be allocated to the contracts in sub-groupings C as shown on line (5) above.

In this example, the allocation of the Aggregate Reserve to contracts within sub-grouping B would equal the Standard Scenario Reserve for those contracts (as described in section A6.2) below). For sub-groupings A and C, the difference between the allocation of the Aggregate Reserve to each of those sub-grouping and the Standard Scenario Amount determined for each of those sub-grouping would be allocated to each contract within each of those sub-groupings based on the difference between the Standard Scenario Reserve and the Cash Surrender Value for each of the contracts within the relevant sub-group. The result would be an allocated Aggregate Reserve for a given contract that would be equal to the Standard Scenario Reserve for that contract plus the amount of the difference between 1) and 2) below that is allocated to that contract, where:

1) Equals the allocation of the Aggregate Reserve to that contract's sub-grouping; and

2) Equals the Standard Scenario Amount determined for that contract's sub-grouping.

A6.2) Allocation when the Aggregate Reserve equals the Standard Scenario Amount

The Standard Scenario Amount, as required by Section IV)C), is calculated on a contract-by-contract basis, as described in Appendix 3. Therefore, when the Aggregate Reserve is equal to the Standard Scenario Amount, the reserve allocated to each contract shall be the reserve calculated for each contract under the Standard Scenario method.

APPENDIX 7 – Modeling of Hedges

A7.1) Initial Considerations

The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of the Guideline (excluding those that involve the offsetting of the risks associated with variable annuity guarantees with other products outside of the scope of the Guideline, such as equity-indexed annuities) shall be included in the calculation of the Conditional Tail Expectation Amount, determined in accordance with Section IV)D) and section A1.4) of the Guideline (i.e., Conditional Tail Expectation Amount using projections). If the company is following a Clearly Defined Hedging Strategy ("hedging strategy"), as defined in Section III, in accordance with an investment policy adopted by the Board of Directors, or a committee of Board members, the company is eligible to reduce the amount of the Conditional Tail Expectation Amount using projections otherwise calculated. The investment policy must clearly articulate the company's hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.

For this purpose, the investment assets refer to all the assets including derivatives supporting covered products and guarantees. This is also referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which is also referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this Appendix. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this Appendix, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.

This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

The cost and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of the Guideline shall be included in the stochastic cash flow model used to calculate the Conditional Tail Expectation Amount in accordance with Section IV)D) (the "model"). If the company is following a Clearly Defined Hedging Strategy, the model shall take into account the cost and benefits of hedge positions expected to be held by the company in the future based on the operation of the hedging strategy.

Before either a new or revised hedging strategy can be used to reduce the amount of the Conditional Tail Expectation Amount otherwise calculated, the hedging strategy should be in place (i.e., effectively implemented by the company) for at least three months. The company may meet the time requirement by having evaluated the effective implementation of the hedging strategy for at least three months without actually having executed the trades indicated by the hedging strategy (e.g., mock testing or by having effectively implemented the strategy with similar annuity products for at least three months).

These requirements do not supersede any statutes, laws, or regulations of any state or jurisdiction related to the use of derivative instruments for hedging purposes and should not be used in determining whether a company is permitted to use such instruments in any state or jurisdiction.

A7.2) Background

The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two methods as described below. Although a hedging strategy would normally be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in an increase in the amount of the Conditional Tail Expectation Amount otherwise calculated.

The fundamental characteristic of the first method is that all hedging positions, both the currently held positions and those expected to be held in the future, are included in the stochastic cash flow model used to determine the Scenario Greatest Present Value, as discussed in Section IV)D), for each scenario.

The fundamental characteristic of the second method is that the effectiveness of the current hedging strategy (including currently held hedge positions) on future cash flows is evaluated, in part or in whole, outside of the stochastic cash flow model. In this case, the reduction to the Conditional Tail Expectation Amount otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.

Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions), on the Conditional Tail Expectation Amount needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation, and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the Conditional Tail Expectation Amount attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company's ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transforms some risks into others, introduces new risks or has other imperfections. For example, a delta-only hedging strategy does not adequately hedge the risks measured by the "Greeks" other than delta. Another example is that financial indices underlying typical hedging instruments typically do not perform exactly like the separate account funds, and hence the use of hedging instruments has the potential for introducing basis risk.

A7.3) Calculation of CTE Amount (reported)

The company should begin by calculating "CTE Amount(best efforts)" – the results obtained when the Conditional Tail Expectation Amount (or "CTE Amount") is based on incorporating the hedging strategy (including currently held hedge positions) into the stochastic cash flow model, including all of the factors and assumptions needed to execute the hedging strategy (e.g., stochastic implied volatility).

Because most models will include at least some approximations or idealistic assumptions, CTE Amount(best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the company shall recalculate the Conditional Tail Expectation Amount assuming the company has no dynamic hedging strategy (i.e., reflect only hedge positions held by the company on the valuation date. The result so obtained is called "CTE Amount(adjusted)." In some situations the determination of CTE Amount(adjusted) may include both direct and indirect techniques.

Finally, the reported value for the Conditional Tail Expectation Amount is given by:
CTE Amount(reported) = E x CTE Amount(best efforts) +
(1 – E) × CTE Amount(adjusted)

The value for E (an "effectiveness factor") reflects the actuary's view as to the level of sophistication of the stochastic cash flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the "Greeks" being covered by the strategy) as well as the associated costs, risks, and benefits E will be no greater than 0.70. As the sophistication of the stochastic cash flow model increases, the value for E increases (i.e., the greater the ability of the CTE Amount(best efforts) model to capture all risks and uncertainties, the higher the value of E). If the model used to determine the "CTE Amount(best efforts)" effectively reflects all of the parameters used in the hedging strategy, the value of E may be up to 0.70. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, E must be in the lower end of the range. If hedge cash flows are not modeled directly, E will be no greater than 0.30. Simplistic hedge cash flow models will have a value of E in the low range between 0.00 and 0.70.

Additionally, the company shall demonstrate that, based on an analysis of at least the most recent 12 months, the model is able to replicate the hedging strategy in a way that justifies the value used for E. A company that does not have 12 months of experience to date shall set E to a value no greater than 0.30.

A7.4) Specific Considerations and Requirements

As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for purposes of reducing the Conditional Tail Expectation Amount, the actuary should review actual historical hedging effectiveness. The actuary shall evaluate the appropriateness of the assumptions on future trading, transaction costs, and other elements of the model, the strategy, the mix of business, and other items that are likely to result in materially adverse results. This includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either Anticipated Experience or adverse estimates of the parameters.

A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contractholder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contractholder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the Conditional Tail Expectation Amount, the actuary must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.

Implementing a strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.

The combination of elements of the stochastic cash flow model, including the initial actual market asset prices, prices for trading at future dates, transaction costs, and other assumptions should be analyzed by the actuary as to whether the stochastic cash flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:

A) Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money; or

B) Hedging strategies that with a given amount of initial money never make less than accumulation at the one-period risk free rates in any scenario but make more than this in one or more scenarios.

If the stochastic cash flow model allows for such situations, the actuary should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. In addition, the actuary should disclose the situations and provide supporting documentation as to why the actuary believes the situations are not material for determining the Conditional Tail Expectation Amount. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the Conditional Tail Expectation Amount otherwise calculated.

In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. If there are substantial discrepancies, the actuary should disclose the substantial discrepancies and provide supporting documentation as to why the model-based prices are appropriate for determining the Conditional Tail Expectation Amount. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.

A7.5) Certification and Documentation

The actuary must provide a certification that the values for E, CTE Amount(adjusted) and CTE Amount(best efforts) were calculated using the process discussed above and the assumptions used in the calculations were reasonable for the purpose of determining the Conditional Tail Expectation Amount. The actuary shall document the method(s) and assumptions (including data) used to determine CTE Amount(adjusted) and CTE Amount(best efforts) and maintain adequate documentation as to the methods, procedures and assumptions used to determine the value of E.

The actuary must provide a certification as to whether the Clearly Defined Hedging Strategy is fully incorporated into the stochastic cash flow model and any supplementary analysis of the impact of the hedging strategy on the Conditional Tail Expectation Amount. The actuary must document the extent to which elements of the hedging strategy (e.g., time between portfolio rebalancing) are not fully incorporated into the stochastic cash flow model and any supplementary analysis to determine the impact, if any. In addition, the actuary must provide a certification and maintain documentation to support the certification that the hedging strategy designated as the Clearly Defined Hedging Strategy meets the requirements of a Clearly Defined Hedging Strategy including that the implementation of the hedging strategy in the stochastic cash flow model and any supplementary analysis does not include knowledge of events that occur after any action dictated by the hedging strategy (i.e. the model cannot use information about the future that would not be known in actual practice).

A financial officer of the company (e.g., Chief Financial Officer, Treasurer or Chief Investment Officer) or a person designated by them who has direct or indirect supervisory authority over the actual trading of assets and derivatives must certify that the hedging strategy meets the definition of a Clearly Defined Hedging Strategy and that the Clearly Defined Hedging Strategy is the hedging strategy being used by the company in its actual day to day risk mitigation efforts.

APPENDIX 8 – Certification Requirements

A8.1) Management Certification

Management must provide signed and dated written representations as part of the valuation documentation that the valuation appropriately reflects management's intent and ability to carry out specific courses of actions on behalf of the entity where such is relevant to the valuation. This certification will be submitted no later than March 1. Upon written request by the company, the commissioner may grant an extension of the date for submission of the certification.

A8.2) Actuarial Certification

A) General Description. The certification shall be provided by a qualified actuary and consist of at least the following:

1) A paragraph identifying the actuary and his or her qualifications;

2) A scope paragraph identifying the reserves as of the valuation date for contracts included in the certification categorized by the approaches used to determine the reserves (e.g., Alternative Methodology, Projections, Standard Scenario);

3) A reliance paragraph describing those areas, if any, where the certifying actuary has relied on other experts;
   a) A reliance statement from each of those relied on should accompany the certification.
   b) The reliance statements should note the information being provided and a statement as to the accuracy, completeness or reasonableness, as applicable, of the information.

4) A paragraph certifying that the reserve was calculated in accordance with the principles and requirements of the Guideline;

5) A paragraph certifying that the assumptions used for these calculations are Prudent Estimate assumptions for the products, scenarios, and purpose being tested; and

6) A paragraph stating that the qualified actuary is not opining on the adequacy of the company's surplus or its future financial condition.

7) This certification will be submitted no later than March 1. Upon written request by the company, the commissioner may grant an extension of the date for submission of the certification.

A8.3) Supporting Memorandum

A) General Description. A supporting memorandum shall be created to document the methodology and assumptions used to determine the Aggregate Reserve. The information shall include the comparison of the Standard Scenario Amount to the Conditional Tail Expectation Amount required by Section IV)A) in the determination of the Aggregate Reserve.

B) Alternative Methodology using Published Factors.

1) If a seriatim approach was not used, disclose how contracts were grouped.

2) Disclosure of assumptions to include:
   a) Component CA
      (i) Mapping to prescribed asset categories
      (ii) Lapse and withdrawal rates
   b) Component FE
      (i) Determination of fixed dollar costs and revenues
      (ii) Lapse and withdrawal rates
      (iii) Inflation rates
   c) Component GC
      (i) Disclosure of contract features and how the company mapped the contract form to those forms covered by the Alternative Methodology factors
         - Product Definition - If not conservatively assigned to a published factor, company specific factors or stochastic modeling is required.
         - Partial Withdrawal Provision
         - Fund Class - Disclose the process used to determine the single asset class that best represents the exposure for a contract. If individual funds are mapped into prescribed categories, the process used to map the individual funds should be disclosed.
         - Attained Age
         - Contract Duration
         - Ratio of Account Value to Guaranteed Value
         - Annualized Account Charge Differential from Base Assumption
      (ii) Derivation of Equivalent Account Charges
      (iii) Derivation of margin offset
      (iv) Disclosure of interpolation procedures and confirmation of node determination

3) Disclosure, if applicable, of reinsurance that exists and how it was handled in applying published factors (For some reinsurance, creation of company-specific factors or stochastic modeling may be required.).
   a) Discuss how reserves before reinsurance were determined.

C) Alternative Factors based on Company-Specific Factors.

1) Disclosure of requirements consistent with Published Factors, as noted in subsection B) above.

2) Stochastic analysis supporting adjustments to published factors should be fully documented. This analysis needs to be submitted when initially used and be available upon request in subsequent years. Adjustments may include:
   a) Contract design;
   b) Risk mitigation strategy (excluding hedging); and
   c) Reinsurance.

D) Stochastic Modeling.

1) Assets
   a) Description including type and quality
   b) Investment & disinvestment assumptions
   c) Describe assets used at the start of the projection
   d) Source of asset data

e) Asset valuation basis

f) Documentation of assumptions
   (i) Default costs
   (ii) Prepayment functions
   (iii) Market value determination
   (iv) Yield on assets acquired
   (v) Mapping and grouping of funds to modeled asset classes

g) Hedging Strategy
   (i) Documentation of strategy
   (ii) Identification of current positions
   (iii) Description on how strategy was incorporated into modeling
      - Basis risk, gap risk, price risk, assumption risk
      - Document the methods and criterion used to estimate the a priori effectiveness of the hedging strategy
   (iv) Documentation required for specific consideration raised in section A7.4).
   (v) Documentation and certification required by section A7.5).

2) Liabilities

a) Product descriptions

b) Source of Liabilities

c) Grouping of contracts

d) Reserve method and modeling (e.g., Working Reserves were set to CSV)

e) Investment Reserves

f) Describe how reinsurance was handled in the models, including how reserves gross of reinsurance were modeled.

g) Documentation of assumptions (i.e., list assumptions, discuss the sources and the rationale for using the assumptions).
   (i) Premiums and subsequent deposits
   (ii) Withdrawal, Lapse and Termination Rates
      - Partial Withdrawal (including treatment of dollar-for-dollar offsets on GMDBs and VAGLBs, and Required Minimum Distributions
      - Lapses / Surrenders
   (iii) Crediting Strategy
   (iv) Mortality
   (v) Annuitization rates
   (vi) Income Purchase rates
   (vii) GMIB and GMWB Utilization rates
   (viii) Commissions
   (ix) Expenses
   (x) Persistency Bonuses
   (xi) Investment / Fund Choice
   (xii) Revenue Sharing
   (xiii) Asset Allocation, Rebalancing and Transfer Assumptions
      - Dollar Cost Averaging

h) The section showing the assumptions used for lapse and utilization assumptions for contracts with guaranteed living benefits in the development of the Conditional Tail Expectation Amount, as described in section A9.7).

3) Scenarios

a) Description of scenario generation for interest rates and equity returns

(i) Disclose the number "n" of scenarios used and the methods used to determine the sampling error of the CTE(70) statistic when using "n" scenarios.

(ii) Time step of model (e.g., monthly, quarterly, annual)

(iii) Correlation of fund returns

b) Calibration

(i) Gross Wealth Ratios for equity funds

- Disclosure of adjustments to model parameters, if any.
- Disclosure of 1-year, 5-year and 10-year wealth factors, as well as mean and standard deviation.

(ii) Consistency of other funds to equity funds

(iii) Correlation between all funds

(iv) Estimate of market return volatility assumptions underlying the generated scenarios compared to actual observed volatility underlying market values.

c) Extent of use of pre-packaged scenarios and support for mapping variable accounts to proxy funds

4) Description and results of sensitivity tests performed. At the request of the domiciliary commissioner, the company shall provide a sensitivity test showing an estimate of the impact of the market return volatility assumption when market volatility is materially higher than assumed in the generated scenarios.

5) Documentation of all material changes in the model or assumptions from that used previously and the estimated impact of such changes. This documentation, or a summary of this documentation, shall be included in an executive summary or some other prominent place in the memorandum.

6) A description of the methods used to validate the model and a summary of the results of the validation testing.

E) Standard Scenario.

1) For the amounts in 2), 3) and 4) below report the Basic Reserve in A3.3)B)2)a), the projection requirements in A3.3)B)2)b), the value of Aggregate reinsurance in A3.3)D)1), the value of hedges in A3.3)D)2), the total allocation of the value of hedges and Aggregate reinsurance in A3.3)B)2)c) and the Standard Scenario Reserve.

2) Report the Standard Scenario Amount as of the valuation date.

3) If applicable, report the Standard Scenario Amount on the inforce prior to the valuation date that was used to project the reserve requirements to the valuation date.

4) If applicable, report the Standard Scenario Amount on the model office used to represent the inforce.

5) Discuss modifications, if any, in the application of the standard scenario requirements to produce the amounts in 2), 3) and 4) above.

6) Document any assumptions, judgments or procedures not prescribed in the Standard Scenario Method or in the Guideline that are used to produce the Standard Scenario Amount.

7) If applicable, documentation of approval by the commissioner to use the Basic Reserve as the Standard Scenario Amount.

8) Document the company's calculation of DR.

9) Document the allocation of funds to Equity, Bond, Balanced and Fixed classes.

10) A statement by the actuary that none of the reinsurance treaties included in the Standard Scenario serve solely to reduce the calculated Standard Scenario Reserve without also reducing risk on scenarios similar to those used to determine the Conditional Tail Expectation Reserve. This should be accompanied by a description of any reinsurance treaties that have been excluded from the Standard Scenario along with an explanation of why the treaty was excluded.

F) The memorandum shall be made available for examination by the commissioner upon his or her request but shall be returned to the company after such examination and shall not be considered a record of the insurance department or subject to automatic filing with the commissioner.

APPENDIX 9 – Contractholder Behavior

A9.1) General

Contractholder behavior assumptions encompass actions such as lapses, withdrawals, transfers, recurring deposits, benefit utilization, option election, etc. Contractholder behavior is difficult to predict and behavior assumptions can significantly impact the results. In the absence of relevant and fully credible empirical data, the actuary should set behavior assumptions on the conservative end of the plausible spectrum (consistent with the definition of Prudent Estimate).

In setting behavior assumptions, the actuary should examine, but not be limited by, the following considerations:

1) Behavior can vary by product, market, distribution channel, fund performance, time/product duration, etc.

2) Options embedded in the product may impact behavior.

3) Options may be elective or non-elective in nature. Living benefits are often elective and death benefit options are generally non-elective.

4) Elective contractholder options may be more driven by economic conditions than non-elective options.

5) As the value of a product option increases, there is an increased likelihood that contractholders will behave in a manner that maximizes their financial interest (e.g., lower lapses, higher benefit utilization, etc.).

6) Behavior formulas may have both rational and irrational components (irrational behavior is defined as situations where some contractholders may not always act in their best financial interest). The rational component should be dynamic but the concept of rationality need not be interpreted in strict financial terms and might change over time in response to observed trends in contractholder behavior based on increased or decreased financial efficiency in exercising their contractual options.

7) Options that are ancillary to the primary product features may not be significant drivers of behavior. Whether an option is ancillary to the primary product features depends on many things such as:
    a) For what purpose was the product purchased?
    b) Is the option elective or non-elective?
    c) Is the value of the option well known?

8) External influences, including emergence of viatical / life settlement companies, may impact behavior.

A9.2) Aggregate vs. Individual Margins

As noted in Section III)B)8), Prudent Estimate assumptions are developed by applying a margin for uncertainty to the Anticipated Experience assumption. The issue of whether the level of the margin applied to the Anticipated Experience assumption is determined in aggregate or independently for each and every behavior assumption is discussed in Principle 3 in Section II) of this Guideline, which states:

> The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually, the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the Conditional Tail Expectation Amount at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the Conditional Tail Expectation Amount, the actuary should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Although this Principle discusses the concept of determining the level of margins in aggregate, it notes that the application of this concept shall be guided by evolving practice and expanding knowledge. From a practical standpoint, it may not always be possible to completely apply this concept to determine the level of margins in aggregate for all behavior assumptions.

Therefore, the actuary shall determine Prudent Estimate assumptions independently for each behavior (e.g., mortality lapses, and benefit utilization), using the requirements and guidance in this Appendix and throughout the guideline, unless the actuary can demonstrate that an appropriate method was used to determine the level of margin in aggregate for two or more behaviors.

A9.3) Sensitivity Testing

The impact of behavior can vary by product, time period, etc. Sensitivity testing of assumptions is required and shall be more complex than e.g., base lapse assumption minus 1% across all contracts. A more appropriate sensitivity test in this example might be to devise parameters in a dynamic lapse formula to reflect more out-of-the-money contracts lapsing and/or more holders of in-the-money contracts persisting and eventually utilizing the guarantee. The actuary should apply more caution in setting assumptions for behaviors where testing suggests that stochastic modeling results are sensitive to small changes in such assumptions. For such sensitive behaviors, the actuary shall use higher margins when the underlying experience is less than fully relevant and credible.

A9.4) Specific Considerations and Requirements

Within materiality considerations, the actuary should consider all relevant forms of contractholder behavior and persistency, including but not limited to the following:

1) Mortality (additional guidance and requirements regarding mortality is contained in Appendix 10)

2) Surrenders

3) Partial Withdrawals (Systematic and Elective)

4) Fund Transfers (Switching/Exchanges)

5) Resets/Ratchets of the Guaranteed Amounts (Automatic and Elective)

6) Future Deposits

It may be acceptable to ignore certain items that might otherwise be explicitly modeled in an ideal world, particularly if the inclusion of such items reduces the calculated provisions. For example:

1) The impact of fund transfers (intra-contract fund "switching") might be ignored, unless required under the terms of the contract (e.g., automatic asset re-allocation/rebalancing, dollar cost averaging accounts, etc.)

2) Future deposits might be excluded from the model, unless required by the terms of the contracts under consideration and then only in such cases where future premiums can reasonably be anticipated (e.g., with respect to timing and amount).

However, the actuary should exercise caution in assuming that current behavior will be indefinitely maintained. For example, it might be appropriate to test the impact of a shifting asset mix and/or consider future deposits to the extent they can reasonably be anticipated and increase the calculated amounts.

Normally, the underlying model assumptions would differ according to the attributes of the contract being valued. This would typically mean that contractholder behavior and persistency may be expected to vary according to such characteristics as (this is not an exhaustive list):

1) Gender

2) Attained age

3) Issue age

4) Contract duration

5) Time to maturity

6) Tax status

7) Fund value

8) Investment option

9) Guaranteed benefit amounts

10) Surrender charges, transaction fees or other contract charges

11) Distribution channel

Unless there is clear evidence to the contrary, behavior assumptions should be no less conservative than past experience. Margins for contractholder behavior assumptions shall assume, without relevant and credible experience or clear evidence to the contrary, that contractholders' efficiency will increase over time.

In determining contractholder behavior assumptions, the company shall use actual experience data directly applicable to the business segment (i.e., direct data) if it is available. In the absence of direct data, the company should then look to use data from a segment that are similar to the business segment (i.e., other than direct experience), whether or not the segment is directly written by the company. If data from a similar business segment are used, the assumption shall be adjusted to reflect differences between the two segments. Margins shall reflect the data uncertainty associated with using data from a similar but not identical business segment. The actuary shall document any significant similarities or differences between the two business segments, the data quality of the similar business segment and the adjustments and the margins applied.

Where relevant and fully credible empirical data do not exist for a given contractholder behavior assumption, the actuary shall set the contractholder behavior assumption to reflect the increased uncertainty such that the contractholder behavior assumption is shifted towards the conservative end of the plausible range of expected experience that serves to increase the Aggregate Reserve. If there are no relevant data, the actuary shall set the contractholder behavior assumption to reflect the increased uncertainty such that the contractholder behavior assumption is at the conservative end of the range. Such adjustments shall be consistent with the definition of Prudent Estimate, with the Principles described in Section I, and with the guidance and requirements in this Appendix.

Ideally, contractholder behavior would be modeled dynamically according to the simulated economic environment and/or other conditions. It is important to note, however, that contractholder behavior should neither assume that all contractholders act with 100% efficiency in a financially rational manner nor assume that contractholders will always act irrationally.

A9.5) Dynamic Assumptions

Consistent with the concept of Prudent Estimate assumptions described earlier, the liability model should incorporate margins for uncertainty for all risk factors which are not dynamic (i.e., the non-scenario tested assumptions) and are assumed not to vary according to the financial interest of the contractholder.

The actuary should exercise care in using static assumptions when it would be more natural and reasonable to use a dynamic model or other scenario-dependent formulation for behavior. With due regard to considerations of materiality and practicality, the use of dynamic models is encouraged, but not mandatory. Risk factors which are not scenario tested, but could reasonably be expected to vary according to a stochastic process, or future states of the world (especially in response to economic drivers) may require higher margins and/or signal a need for higher margins for certain other assumptions.

Risk factors that are modeled dynamically should encompass the plausible range of behavior consistent with the economic scenarios and other variables in the model, including the non-scenario tested assumptions. The actuary shall test the sensitivity of results to understand the materiality of making alternate assumptions and follow the guidance discussed above on setting assumptions for sensitive behaviors.

A9.6) Consistency with the CTE Level

All behaviors (i.e., dynamic, formulaic and non-scenario tested) should be consistent with the scenarios used in the CTE calculations (generally, the approximately top 1/3 of the loss distribution). To maintain such consistency, it is not necessary to iterate (i.e., successive runs of the model) in order to determine exactly which scenario results are included in the CTE measure. Rather, in light of the products being valued, the actuary should be mindful of the general characteristics of those scenarios likely to represent the tail of the loss distribution and consequently use Prudent Estimate assumptions for behavior that are reasonable and appropriate in such scenarios. For variable annuities, these "valuation" scenarios would typically display one or more of the following attributes:

1) Declining and/or volatile separate account asset values;

2) Market index volatility, price gaps and/or liquidity constraints;

3) Rapidly changing interest rates.

The behavior assumptions should be logical and consistent both individually and in aggregate, especially in the scenarios that govern the results. In other words, the actuary should not set behavior assumptions in isolation, but give due consideration to other elements of the model. The interdependence of assumptions (particularly those governing customer behaviors) makes this task difficult and by definition requires professional judgment, but it is important that the model risk factors and assumptions:

1) Remain logically and internally consistent across the scenarios tested;

2) Represent plausible outcomes; and

3) Lead to appropriate, but not excessive, asset requirements.

The actuary should remember that the continuum of "plausibility" should not be confined or constrained to the outcomes and events exhibited by historic experience.

Companies should attempt to track experience for all assumptions that materially affect their risk profiles by collecting and maintaining the data required to conduct credible and meaningful studies of contractholder behavior.

A9.7) Additional Considerations and Requirements for Assumptions Applicable to Guaranteed Living Benefits

Experience for contracts without guaranteed living benefits may be of limited use in setting a lapse assumption for contracts with in-the-money or at-the-money guaranteed living benefits. Such experience may only be used if it is appropriate (e.g., lapse experience on contracts without a living benefit may have relevance to the early durations of contracts with living benefits) and relevant to the business and is accompanied by documentation that clearly demonstrates the relevance of the experience, as discussed in the following paragraph.

The supporting memorandum required by Appendix 8 of this Guideline, shall include a separately identifiable section showing the assumptions used for lapse and utilization assumptions for contracts with guaranteed living benefits in the development of the Conditional Tail Expectation Amount. This section shall be considered part of the supporting memorandum and shall show the formulas used to set the assumptions and describe the key parameters affecting the level of the assumption (e.g., age, duration, in-the-moneyness, during and after the surrender charge period). The section shall include a summary that shows the lapse and utilization rates that result from various combinations of the key parameters. The section shall show any experience data used to develop the assumptions and describe the source, relevance and credibility of that data. If relevant and credible data were not available, the section should discuss how the assumption is consistent with the requirement that the assumption is to be on the conservative end of the plausible range of expected experience. The section shall also discuss the sensitivity tests performed to support the assumption. This separately identifiable section shall be made available on a standalone basis if requested by the Domiciliary Commissioner. If it is requested, the section shall have the same confidential status as the supporting memorandum and the actuarial memorandum supporting the actuarial opinion, as discussed in section A2.3)B).

Regarding lapse assumptions for contracts with guaranteed living benefits, the section shall include, at a minimum, the following:

1) Actual to expected lapses on two bases, where "expected" equals one of the following:
   a) Prudent estimate assumptions used in the development of the Conditional Tail Expectation Amount;
   b) The assumptions used in the Standard Scenario;

2) The lapse assumptions used in the development of Conditional Tail Expectation Amount and corresponding actual experience separated by:

a) Logical blocks of business (based on company's assessment);
b) Duration (at a minimum this should show during the surrender charge period vs. after the surrender charge period);
c) In-the-moneyness (consistent with how dynamic assumptions are determined); and
d) Age (to the extent age impacts the election of benefits lapse).

This data shall be separated by experience incurred in the following periods:
a) In the past year;
b) In the past three years; and
c) All years.

APPENDIX 10 – Specific Guidance and Requirements for Setting Prudent Estimate Mortality Assumptions

A10.1) Overview

A) Intent. The guidance and requirements in this Appendix apply for setting Prudent Estimate mortality assumptions when determining the Conditional Tail Expectation Amount (whether using projections or the Alternative Methodology). The intent is for Prudent Estimate mortality assumptions to be based on facts, circumstances and appropriate actuarial practice (where more than one approach to appropriate actuarial practice exists, the actuary should select the practice that the actuary deems most appropriate under the circumstances) with only a limited role for unsupported actuarial judgment.

B) Description. Prudent Estimate mortality assumptions are determined by first developing expected mortality curves based on either available experience or published tables. Where necessary, margins are applied to the experience to reflect data uncertainty. The expected mortality curves are then adjusted based on the credibility of the experience used to determine the expected mortality curve. Section A10.2) addresses guidance and requirements for determining expected mortality curves and section A10.3) addresses guidance and requirements for adjusting the expected mortality curves to determine Prudent Estimate mortality.

Finally, the credibility-adjusted tables shall be adjusted for mortality improvement (where such adjustment is permitted or required) using the guidance and requirements in section A10.4).

C) Business Segments. For purposes of setting Prudent Estimate mortality assumptions, the products falling under the scope of the Guideline shall be grouped into business segments with different mortality assumptions. The grouping should generally follow the pricing, marketing, management and/or reinsurance programs of the company. Where less refined segments are used for setting the mortality assumption than is used in business management the documentation should address the impact, if material, of the less refined segmentation on the resulting reserves.

D) Margin for Data Uncertainty. The expected mortality curves that are determined in section A10.2) may need to include a margin for data uncertainty. The margin could be in the form of an increase or a decrease in mortality, depending on the business segment under consideration. The margin shall be applied in a direction (i.e., increase or decrease in mortality) that results in a higher reserve. A sensitivity test may be needed to determine the appropriate direction of the provision for uncertainty to mortality. The test could be a prior year mortality sensitivity analysis of the business segment or an examination of current representative cells of the segment.

For purposes of this Appendix, if mortality must be increased (decreased) to provide for uncertainty the business segment is referred to as a plus (minus) segment.

It may be necessary, because of a change in the mortality risk profile of the segment, to reclassify a business segment from a plus (minus) segment to a minus (plus) segment to the extent compliance with this subsection requires such a reclassification.

A10.2) Determination of Expected Mortality Curves

A) Experience Data. In determining expected mortality curves the company shall use actual experience data directly applicable to the business segment (i.e., direct data) if it is available. In the absence of direct data, the company should then look to use data from a segment that is similar to the business segment (i.e., other than direct experience). See section B) below for additional considerations. Finally, if there is no data, the company shall use the applicable table, as required in subsection C) below.

B) Data Other than Direct Experience. If expected mortality curves for a segment are being determined using data from a similar business segment (whether or not directly written by the company), the actuary shall document any similarities or differences between the two business segments (e.g., type of underwriting, marketing channel, average policy size, etc.). The actuary shall also document the data quality of the mortality experience of the similar business. Adjustments shall be applied to the data to reflect differences between the business segments and margins shall be applied to the adjusted expected mortality curves to reflect the data uncertainty associated with using data from a similar but not identical business segment. The actuary shall document the adjustments and the margins applied.

To the extent the mortality of a business segment is reinsured, any mortality charges that are consistent with the company's own pricing and applicable to a substantial portion of the mortality risk may also be a reasonable starting point for the determination of the company's expected mortality curves. The actuary shall document the application of such reinsurance charges and how they were used to set the company's expected mortality curves for the segment.

C) No Data Requirements. When little or no experience or information is available on a business segment, the company shall use expected mortality curves that would produce expected deaths no less than using 100% of the 1994 Variable Annuity MGDB mortality table for a plus segment and expected deaths no greater than 100% of the Annuity 2000 table for a minus segment. If mortality experience on the business segment is expected to be atypical (e.g., demographics of target markets are known to have higher (lower) mortality than typical), these "no data" mortality requirements may not be adequate.

D) Additional Considerations Involving Data. The following considerations shall apply to mortality data specific to the business segment for which assumptions are being determined (i.e., direct data discussed in subsection A) above or other than direct data discussed in subsection B) above).

1) Underreporting of deaths. Mortality data shall be examined for possible underreporting of deaths. Adjustments shall be made to the data if there is any evidence of underreporting. Alternatively, exposure by lives or amounts on contracts for which death benefits were in the money may be used to determine expected mortality curves. Underreporting on such exposures should be minimal; however, this reduced subset of data will have less credibility.

2) Experience by contract duration. Experience of a plus segment shall be examined to determine if mortality by contract duration increases materially due to selection at issue. In the absence of information, the actuary shall assume that expected mortality will increase by contract duration for an appropriate select period. As an alternative, if the actuary determines that mortality is impacted by selection, the actuary could apply margins to the expected mortality in such a way that the actual mortality modeled does not depend on contract duration.

3) Modification and Relevance of data. Even for a large company the quantity of life exposures and deaths are such that a significant amount of smoothing may be required to determine expected mortality curves from mortality experience. Expected mortality curves, when applied to the recent historic exposures (e.g., 3 to 7 years), should not result in an estimate of aggregate number of deaths less (greater) than the actual number deaths during the exposure period for plus (minus) segments. If this condition is not satisfied,

the actuary must document the rationale in support of using expected mortality that differs from recent mortality experience.

In determining expected mortality curves (and the credibility of the underlying data), older data may no longer be relevant. The "age" of the experience data used to determine expected mortality curves should be documented. There should be commentary in the documentation on the relevance of the data (e.g., any actual and expected changes in markets, products and economic conditions over the historic and projected experience).

4) Other considerations. In determining expected mortality curves, consideration should be given to factors that include, but are not limited to, trends in mortality experience, trends in exposure, volatility in year-to-year A/E mortality ratios, mortality by lives relative to mortality by amounts, changes in the mix of business and product features that could lead to mortality selection.

E) Documentation Requirements.

1) All Segments. The documentation should include any material considerations necessary to understand the development of mortality assumptions for the statutory valuation even if such considerations are not explicitly mentioned in this section. The documentation should be explicit when material judgments were required and such judgments had to be made without supporting historic experience.

The documentation shall:

a) Explain the rationale for the grouping of contracts into different segments for the determination of mortality assumptions and characterize the type and quantity of business that constitute each segment.

b) Describe how each segment was determined to be a plus or minus segment.

c) Summarize any mortality studies used to support mortality assumptions, quantify the exposures and corresponding deaths, describe the important characteristics of the exposures and comment on unusual data points or trends.

d) Document the age of the experience data used to determine expected mortality curves and comment on the relevance of the data.

e) Document the mathematics used to adjust mortality based on credibility and summarize the result of applying credibility to the mortality segments.

f) Discuss any assumptions made on mortality improvements, the support for such assumptions and how such assumptions adjusted the modeled mortality.

g) Describe how the expected mortality curves compare to recent historic experience and comment on any differences.

h) Discuss how the mortality assumptions are consistent with the goal of achieving the required CTE level over the joint distribution of all future outcomes, in keeping with Principle #3 and Appendix 9.

If the study was done on a similar business segment, identify the differences in the business segment on which the data were gathered and the business segment on which the data were used to determine mortality assumptions for the statutory valuation. Describe how these differences were reflected in the mortality used in modeling.

If mortality assumptions for the statutory valuation were based in part on reinsurance rates, document how the rates were used to set expected mortality (e.g., assumptions made on loadings in the rates and/or whether the assuming company provided their expected mortality and the rationale for their assumptions).

2) Plus Segments. For a plus segment, the documentation shall also discuss the examination of the mortality data for the underreporting of deaths and experience by duration, and describe any adjustments that were made as a result of the examination.

3) Minus Segments. For a minus segment the documentation shall also discuss how the mortality deviations on minus segments compare to those on any plus segments. To the extent the overall margin is reduced, the documentation should include support for this assumption.

A10.3) Adjustment for Credibility to Determine Prudent Estimate Mortality

A) Adjustment for Credibility. The expected mortality curves determined in section A10.2) shall be adjusted based on the credibility of the experience used to determine the curves in order to arrive at Prudent Estimate mortality. The adjustment for credibility shall result in blending the expected mortality curves with a mortality table consistent with a statutory valuation mortality table. For a plus segment, the table shall be consistent with 100% of the 1994 Variable Annuity MGDB table (or a more recent mortality table adopted by the NAIC to replace this table). For a minus segment, the table shall be consistent with 100% of the 2000 Annuity table (or a more recent mortality table adopted by the NAIC to replace that table). The approach used to adjust the curves shall suitably account for credibility.[40]

B) Adjustment of Statutory Valuation Mortality for Improvement. For purposes of the adjustment for credibility, the statutory valuation mortality table for a plus segment may be and the statutory valuation mortality table for a minus segment must be adjusted for mortality improvement. Such adjustment shall reflect applicable published industrywide experience from the effective date of the respective statutory valuation mortality table to the experience weighted average date underlying the data used to develop the expected mortality curves (discussed in section A10.2)).

C) Credibility Procedure. The credibility procedure used shall:

1) Produce results that are reasonable in the professional judgment of the actuary,

2) Not tend to bias the results in any material way,

3) Be practical to implement,

4) Give consideration to the need to balance responsiveness and stability,

5) Take into account not only the level of aggregate claims but the shape of the mortality curve, and

6) Contain criteria for full credibility and partial credibility that have a sound statistical basis and be appropriately applied.

Documentation of the credibility procedure used shall include a description of the procedure, the statistical basis for the specific elements of the credibility procedure, and any material changes from prior credibility procedures.

D) Further Adjustment of the Credibility-adjusted Table for Mortality Improvement. The credibility-adjusted table used for plus segments may be and the credibility adjusted date used for minus

[40] For example, when credibility is zero, an appropriate approach should result in a mortality assumption consistent with 100% of the statutory valuation mortality table used in the blending.

segments must be adjusted for applicable published industrywide experience from the experience weighted average date underlying the company experience used in the credibility process to the valuation date.

Any adjustment for mortality improvement beyond the valuation date is discussed in section A10.4).

A10.4) Future Mortality Improvement

The mortality assumption resulting from the requirements of section A10.3) shall be adjusted for mortality improvements beyond the valuation date if such an adjustment would serve to increase the resulting Conditional Tail Expectation Amount. If such an adjustment would reduce the Conditional Tail Expectation Amount, such assumptions are permitted, but not required. In either case, the assumption must be based on current relevant data with a margin for uncertainty (increasing assumed rates of improvement if that results in a higher reserve, reducing them otherwise).

Actuarial Guideline XLIV

GROUP TERM LIFE WAIVER OF PREMIUM DISABLED LIFE RESERVES

I. Background

Section 4.G. of the Standard Valuation Law establishes tables approved by the commissioner as the minimum standard for computing reserves for group life insurance and special benefits. The purpose of this Actuarial Guideline (Guideline) is to determine the minimum standard of valuation for group term life waiver of premium disabled life benefits and to recognize the 2005 Group Term Life Waiver (GTLW) Mortality and Recovery Tables.

Group term life policies do not maintain contract reserves beyond the duration of the policy issued to the group policyholder. However, some policies guarantee an extended death benefit to an individual insured who is disabled according to the terms of the policy. Thus, to the extent such guarantees are made, a disabled life reserve must be maintained for each individual that is so disabled. However, prior to the creation of this guideline, there has been no formal guidance regarding the calculation of these disabled life reserves.

II. Scope

This guideline applies to group term life certificates on individuals who become disabled on or after January 1, 2009. Based on the provisions of Section 4.G. of the Standard Valuation Law, companies may apply this to group term life certificates on individuals who became disabled prior to January 1, 2009, provided they obtain permission from the commissioner.

III. Definitions

"2005 GTLW Mortality Tables" means the mortality rate tables shown in Attachments A and B.

"2005 GTLW Recovery Tables" means the recovery rate tables shown in Attachments C and D.

IV. Text

A. Group Waiver of Premium Reserve Calculation

1. The minimum standard of valuation for group term life waiver of premium disabled life benefits shall be the present value of the death benefit payable discounted for interest and recovery. Since there is not a contract reserve based upon an aggregate table, the discounted value of waived premiums is inadequate to support this liability.

2. Except as provided in Section B, the 2005 GTLW Mortality and Recovery Tables shall be used for determining the minimum standard of valuation for any group term life waiver of premium disabled life benefit incurred on or after the effective date of this guideline. The valuation tables were derived from employer-employee group life experience. Other forms of group term life insurance are also subject to the same requirements if they contain similar extended death benefit provisions. Section B offers ways to modify the underlying rates of mortality or recovery if they differ from those associated with the underlying experience in the valuation table.

3. The maximum interest rate shall be the maximum rate permitted by law in the valuation of life insurance of the same guaranteed duration issued on the same date as the claim incurral date of disability. This maximum interest rate shall be used for determining the minimum standard of valuation for any group term life waiver of premium disabled life benefit incurred on or after the effective date of this guideline. The guaranteed duration used to determine the life insurance rate of interest is equal to the largest term in years between the point at which any individual in the group may become disabled and the point at which no death benefit is available. Thus, if a person could become disabled at age 20, and remain disabled, and receive a benefit upon death before age 65, the guaranteed duration would be 45 years. For most groups and companies this would mean the maximum interest rate shall be the rate for life insurance with duration greater than 20 years.

B. Use of Company Experience

1. The Appointed Actuary shall review company experience at least once every five years. The review of company experience can range from a detailed experience study to a high level analysis. The extent of the review must be sufficient to enable the Appointed Actuary to defend any conclusion reached. Company experience shall:

i. Be segmented into policies with similar benefits, on individuals of each gender;

ii. Be experience-specific to the company;

iii. Include all relevant experience in the past three most recent years;

iv. Exclude experience that is not in the past six most recent years;

v. Otherwise be relevant, in accordance with the professional judgment of the Appointed Actuary; and

vi. Not be deemed irrelevant by the commissioner.

2. The commissioner may require a company to use its experience based upon the most recent review referenced in Section B.1 to establish its specific valuation tables if:

i. Actual mortality experience is reasonably expected to be greater than 90% of the 2005 GTLW Mortality Tables; or

ii. Actual recovery experience is reasonably expected to be less than 125% of the 2005 GTLW Recovery Tables.

Under these circumstances, the commissioner may require a company to use the process set out in Section B.4 and establish for the company a minimum value for Z.

3. A company may use its experience exclusively without reference to the standard tabular mortality expected experience or to the standard tabular recovery expected experience to create its specific valuation tables if:

i. The Appointed Actuary can demonstrate and certify the following:

a) The company-specific valuation tables are based on company experience with allowances for graduation and margins for adverse experience;

b) The company-specific mortality valuation tables used for computing minimum reserves for group term life waiver of premium benefits are such that there is at least an 85% statistical confidence that the actual annual aggregate mortality will be less than the mortality in the company-specific-mortality valuation tables; and

c) The company-specific recovery valuation tables used for computing minimum reserves for group term life waiver of premium benefits are such that there is at least an 85% statistical confidence that the actual annual aggregate recoveries will be greater than the recoveries in the company-specific recovery valuation tables.

ii. The company has written permission from the domiciliary commissioner to use the company-specific valuation tables.

iii. Unless otherwise exempted or required, the specific valuation tables shall apply to the computation of minimum reserves for group term life waiver of premium disabled life benefits for claims incurred during or after the calendar year in which the study was performed.

iv. The company shall not use mortality and recovery tables with rates that produce reserves less than the reserves produced by using 75% of the 2005 GTLW Mortality Tables and 160% of the 2005 GTLW Recovery Tables for all durations of disability combined.

4. If not invoking Section B.3, a company may use a credibility-weighted combination of company mortality experience with the 2005 GTLW Mortality Tables and/or of company recovery experience with the 2005 GTLW Recovery Tables to create its specific valuation tables.

i. The blended tables for each gender and type of experience (mortality and recovery) shall be computed using the formula Blended Table = T x S, where:

a) Z shall be a credibility weighting factor, between 0 and 1, developed by the Appointed Actuary using credibility theory methods not unacceptable to the commissioner;

b) F shall be the ratio of the company's actual experience to the expected experience for the 2005 GTLW Mortality and Recovery Tables for each gender and type of experience (mortality and recovery);

c) M shall be 1.12 for mortality tables and 0.80 for recovery tables. The values provide a smooth transition between the 2005 tables and company experience when Z = 1;

d) S shall be the 2005 GTLW Mortality and Recovery Tables; and

e) T shall be computed using the following steps:

Step 1: Compute the raw value of T = [Z x (F x M) + (1 – Z)].

Step 2: Round T to the nearest 5%.

Step 3: If the absolute difference between the T produced in step 2 and the value of T utilized immediately prior to the study is less than 10%, then set T equal to the value of T utilized immediately prior to the study.

Step 4: For all durations of disability, combined for each gender, set the value of T to the greater of 75% and the T resulting from step 3 for mortality and set the value of T to the lesser of 160% and the T resulting from step 3 for recovery.

ii. The company has written permission from the domiciliary commissioner to use the blended valuation tables.

iii. Unless otherwise exempted or required, the specific valuation tables shall apply to the computation of minimum reserves for group term life waiver of premium disabled life benefits for claims incurred during or after the calendar year in which the study was performed.

Actuarial Guideline XLV

THE APPLICATION OF THE STANDARD NONFORFEITURE LAW FOR LIFE INSURANCE TO CERTAIN POLICIES HAVING INTERMEDIATE CASH BENEFITS

Scope

This Guideline applies to individual life insurance policies, other than variable and non-variable adjustable life policies and current assumption whole life policies, that provide for an endowment benefit, materially less than the policy face amount, at a specified intermediate duration during a longer period of life insurance protection. The payment of such endowment benefit does not alter or eliminate any premiums or benefits scheduled for the period subsequent to the endowment date, nor does the policy automatically terminate upon payment of the endowment benefit. Policies that offer a return of premium endowment benefit may be considered a special case of the policies subject to this Guideline.

Background

In recent years a new category of life insurance products has emerged in the life insurance marketplace. These products offer a cash benefit at a specified time, typically many years prior to the coverage expiry date of the policy, conditioned on the insured being alive and the policy being in force at that time. The cash benefit has often taken the form of an intermediate period endowment that is either built into the policy or is provided through a rider or an endorsement. When the amount of the cash benefit is based upon the premiums paid into the policy, the benefit is often referred to as a return of premium benefit.

The straightforward application of Sections 3 and 5c of the Standard Nonforfeiture Law For Life Insurance (the Law), considering guaranteed benefits and premiums (whether guaranteed or indeterminate) during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums, can result in negative or very low cash values at all durations for these products. This is caused by high premiums assumed applicable in the later durations. This application of the Law produces unacceptable results, as it fails to recognize that the cash benefit should be prefunded with the premiums that fall due prior to the time the benefit becomes available.

The intent of this Guideline is to provide guidance with respect to the required minimum cash values for some of the products described in the Scope section. However, other products within the scope designed to provide similar benefits, and having similar premium structures (for example products having a cash value at the end of an initial level premium period equal to the total premiums paid) would be expected to provide minimum cash values that are determined in a manner consistent with this Guideline. For products with multiple endowment benefits, the minimum cash values should be determined in accordance with the principles of this Guideline.

Text

A. The following methodology shall be used in the determination of minimum cash surrender values for policies subject to this Guideline in accordance with the requirements of the Law.

   1. The endowment period shall be that period of time measured from the issue date of the policy to the date when the endowment benefit becomes payable (the endowment date) under the terms of the policy.

   2. If the endowment benefit is added by rider to a policy, then for minimum cash value determination purposes the base policy and the endowment benefit are to be treated as integrated.

3. Premiums under the policy may be provided through a scale of guaranteed rates for the term of the policy or through a scale of current rates that are subject to a scale of guaranteed maximum premiums; if rates are subject to a scale of guaranteed maximum premiums, the minimum cash values shall be the greater of those produced under this Guideline using the guaranteed maximum rates and current rate scale applicable at issue of the policy.

4. Any cash surrender value available under the policy in the event of default in a premium payment due on any policy anniversary during the endowment period shall be an amount not less than the excess, if any, of the present value, on the anniversary, of the endowment benefit and any future incremental death benefits during the endowment period which would have been provided for by the policy if there had been no default, over the sum of:

   (i) The then present value of the adjusted premiums as defined below corresponding to premiums which would have fallen due on and after the anniversary during the endowment period; and

   (ii) The amount of any indebtedness to the company on the policy.

5. Incremental death benefits are death benefits during the endowment period in excess of the lowest death benefit provided under the policy during the endowment period.

6. The adjusted premiums for the policy shall be calculated on an annual basis and shall be such uniform percentage of the respective premiums specified in the policy for each policy year during the endowment period, excluding amounts payable as extra premiums to cover impairments or special hazards and also excluding any uniform annual contract charge or policy fee specified in the policy in a statement of the method to be used in calculating the cash surrender value and paid-up nonforfeiture benefits, that the present value, at the date of issue of the policy, of all adjusted premiums shall be equal to the sum of:

   (i) The present value of the endowment benefit and any incremental death benefits provided for by the policy during the endowment period;

   (ii) One percent (1%) of the average amount of insurance (total death benefit under the policy, including any incremental death benefits) at the beginning of each of the first ten policy years; and

   (iii) One hundred twenty-five percent (125%) of the nonforfeiture net level premium as defined below, provided however, that no nonforfeiture net level premium shall be considered to exceed 4% of the average amount of insurance (total death benefit under the policy, including any incremental death benefits) at the beginning of each of the first ten policy years.

7. The nonforfeiture net level premium for the policy shall be equal to the present value, at the date of issue of the policy, of the endowment benefit and any incremental death benefits provided for by the policy during the endowment period, divided by the present value, at the date of issue of the policy, of an annuity of one per annum payable on the date of issue of the policy and on each anniversary of such policy on which a premium falls due prior to the endowment date.

8. The mortality rates and interest rate used in the determination of the minimum cash values for the policy shall be those applicable under the Law considering during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums.

B. In no event can the cash surrender value under the policy at any duration be less than the greater of:

1. The minimum cash value calculated according to Section A of this Guideline; and

2. The minimum cash value at the same duration resulting from the application of the methods described in Sections 3 and 5c of the Law considering guaranteed benefits and premiums (whether guaranteed or indeterminate) during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums. In performing this calculation, no annual premium at any duration after the endowment period shall exceed the difference between the death benefit and the cash value at that duration.

C. The cash surrender values for the policy must also satisfy the consistency of progression of cash values test contained in Section 8 of the Law, considering guaranteed benefits and premiums (whether guaranteed or indeterminate) during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums.

D. For policies where the benefit is defined in more general terms as providing for a return of premiums paid or a portion of premiums paid, the procedures of Subsection 5c C of the Law and the requirements of Section A above shall be applied in the determination of a revised set of minimum cash values in the event the value of the endowment benefit of the policy changes due to a change made to the premium schedule provided at issue.

Applicability

This Guideline is effective for all policy forms filed on or after January 1, 2009, and affects all contracts issued on or after January 1, 2010.

Actuarial Guideline XLVI

INTERPRETATION OF THE CALCULATION OF THE SEGMENT LENGTH WITH RESPECT TO THE LIFE INSURANCE POLICIES MODEL REGULATION UPON A CHANGE IN THE VALUATION MORTALITY RATES SUBSEQUENT TO ISSUE

I. Background

Some states have revised their regulation permitting the use of the 2001 CSO Preferred Class Structure Mortality Table so that at the company's option it might be used to value a policy on a plan which was previously approved for issue based on valuation using the 2001 CSO Mortality Table. A company making this election would be changing the valuation mortality rates. It is also the case that use of the 2001 CSO Preferred Class Structure Mortality Table is predicated upon the block of policies initially, and annually thereafter, satisfying certain requirements with respect to the present value of death benefits over certain future periods. If these requirements are not satisfied at some point in the future, the company must change to a table for which the requirements are satisfied. For example, this could mean changing from the super preferred nonsmoker table to the preferred nonsmoker table or maybe from the preferred smoker table to the smoker table. Although a non-elective change, this is also a change in the valuation mortality rates.

Section 4B of the Valuation of Life Insurance Policies Model Regulation defines the "Contract Segmentation Method" in which segments are to be calculated using the valuation mortality rates for deficiency reserves. Thus, potentially either of the two examples given above could trigger a recalculation of the valuation segments at the time the valuation mortality rates are changed. The purpose of this guideline is to prescribe which circumstances involving a change to the valuation mortality rates, require a recalculation of the segments and which do not.

The Valuation of Life Insurance Policies Model Regulation was adopted, in part, to stop the use of high net premiums late in the policy's life from unduly influencing the level of reserves early in the policy's life ("postfunding"). The contract segmentation method was the answer devised to control this. After the adoption of this regulation, companies incorporated the establishment of the segment lengths into the policy design process based on the valuation mortality expected to be used. Now it is seen that there are circumstances in which it may be necessary or desirable to change valuation mortality after issue. But if it triggers a segment recalculation then there could be unintended, undesirable results.

This guideline classifies the circumstances involved in changes to valuation mortality rates into two categories: those where deliberately designed postfunding is less likely so no segment recalculation is prescribed, and those where such postfunding is more possible so segment recalculation is required. In general, non-elective valuation mortality changes require no segment recalculation, while elective valuation mortality changes are divided into those on plans filed for approval before the adoption of this guideline and those filed after adoption. To preclude enhancing postfunding by changing valuation mortality after a plan is approved, recalculation of segments is required if the change is elected on plans filed after adoption of this guideline, but is not required for plans filed before.

II. Scope

This guideline is effective December 31, 2008.

III. Text

A. For policies subject to a non-elective change in valuation mortality rates:

For policies which were the subject of a non-elective change in valuation mortality rates because the requirements for continued use of the prior rates were no longer satisfied, Section 4B of the Valuation of Life Insurance Policies Model Regulation shall be interpreted so that the segments need not be recalculated.

B. For policies subject to a company election to substitute the 2001 Preferred Class Structure Table for the 2001 CSO Mortality Table:

1. For policies issued on a policy form filed for approval prior to January 1, 2009, Section 4B of the Valuation of Life Insurance Policies Model Regulation shall be interpreted so that the segments need not be recalculated.

2. For policies issued on a policy form filed for approval after January 1, 2009, Section 4B of the Valuation of Life Insurance Policies Model Regulation shall be interpreted to require that the segments be recalculated using the new valuation mortality rates.

Actuarial Guideline XLVII

THE APPLICATION OF COMPANY EXPERIENCE IN THE CALCULATION OF CLAIM RESERVES UNDER THE 2012 GROUP LONG-TERM DISABILITY VALUATION TABLE

I. Background

The 2012 Group Long-Term Disability (GLTD) Valuation Table, as included in the *Health Insurance Reserves Model Regulation* (#10), is the valuation standard to replace the Commissioner's Group Disability Table 1987 (CGDT87 Table) with a new one based on the GLTD 2008 Table. This table is referred to as the GLTD 2012 Valuation Table and can be found at the following location:

http://www.naic.org/documents/01_naic_2012_group_long-term_disability_valuation_table.xls

An actuarial guideline is more appropriate to handle the multiple segments of the 2012 GLTD Valuation Table, the computations of own experience and the application of credibility which are not normally found in model regulations.

II. Purpose

The purpose of this Actuarial Guideline is to provide an instruction for the use of the 2012 GLTD Valuation Table that is referenced in the *Health Insurance Reserves Model Regulation* (#10). This guideline pertains to Group Long-Term Disability claims consistent with the conditions defined in the model regulation, and governs the selection of claim termination rates for the purpose of calculating GLTD claim reserves. This guideline does not address reserve adequacy, which remains the concern of the insurer according to the terms expressed in the model regulation.

Although the various detailed formulas in this guideline do not directly address or define reserve adequacy, it is assumed that appropriate adequacy tests will be made periodically. Such adequacy testing is considered to be an additional tool for the actuary to make appropriate choices where leeway from any prescription made herein is allowed (A/E calculation, margin, etc.) so that the calculation of the reserve will generally be adequate and the actuary does not need to continually rely on other measures to achieve adequacy. In addition to the few times that leeway from prescription is mentioned below, nothing in this guideline should be assumed to prohibit the actuary from building a case and requesting permission from the state insurance commissioner for other appropriate variations. Many such situations, because they would apply to fully credible blocks of business and are intended for continual use, should be considered for approval by the commissioner for a period tied to the updates required by Section C.vi and not approved on an annual basis.

III. Text

A. When the insurer follows the instructions provided in this guideline, the selected claim termination rates automatically meet the minimum valuation standard defined in the model regulation.

B. Valuation Table Modifications

If not invoking the small company exception specified in Section D, a company must use a credibility-weighted combination of its own claim termination experience with the 2012 GLTD Valuation Table to create its specific valuation table.

i. For claims in Duration Group 1 (duration ≤ 3 months), termination rates may be developed as below consistent with other Duration Groups or in any other manner deemed appropriate by the actuary. With respect to credibility, any value between 0 and 1.0 that the actuary deems appropriate for the block may be used.

ii. For claims beyond 3 months, the valuation termination rates shall be computed using the termination rates from the 2012 GLTD Valuation Table (S) multiplied by experience adjustment factors (T) that are calculated separately for four different duration groups.

Valuation Termination Rate = $T \times S$

The duration groups are defined as follows:
Group 2: duration > 3 months and duration ≤ 24 months
Group 3 duration > 24 months and duration ≤ 60 months
Group 4: duration > 60 months and duration ≤ 120 months
Group 5: duration > 120 months

a) S shall be the sum of recovery and death rates from the 2012 GLTD Valuation Table.

b) T shall be computed as $T = [Z \times F * (1 - M) + (1 - Z)]$.

1) Z shall be a credibility weighting factor, between 0 and 1, developed for each duration group according to the following specifications:
Groups 2–5: $Z = Min\left(\sqrt{N/_K}, 1\right)$ N is the number of expected recovery and death counts from the 2012 GLTD Valuation Table.

2) K is a set of constants defined by duration group as follows:

Group 2: K = 3,300	Group 4: K = 2,100
Group 3: K = 2,500	Group 5: K = 1,700

3) F shall be the ratio of the company's actual total of recovery and death counts to the expected recovery and death counts for the 2012 GLTD Valuation Table for each duration group specified above.

If the actuary has reserve adequacy or other significant analysis that demonstrates in the development and use of Company Specific Experience (see Section C below) that an alternative measurement is deemed appropriate, such as:

I. Use of some other weighting of claims (gross benefit, net benefit, etc.) that is not only appropriate for measuring A/E, but also is expected to generally produce reserves not less than those produced by using a claim count measurement.

II. Use of an increased credibility factor Z if F is less than 1 to give the company experience more weight.

Then, a basis other than claim count may be used.

4) *M* is the company experience margin, determined for each duration group according to the following formula:

$$M = Min\left(15\%, Max\left(5\%, 3\% + 1.65 * \sqrt{A/C}\right)\right)$$

This is the minimum value for the definition of *M* prior to any reserve adequacy analysis. Adequacy tests and analysis of experience (sharpness of fluctuations, trends over the period of the termination rate study, changing claims practices, etc.) may indicate that a larger value of *M* may be more appropriate. If so, such a value is deemed appropriate.

5) *A* is a set of constants defined by duration group as follows:

Group 2: $A = 4.0$	Group 4: $A = 2.5$
Group 3: $A = 3.0$	Group 5: $A = 2.0$

6) *C* shall be the company's actual number of total recovery and death counts by duration group.

iii. The company shall not use termination rates that produce total reserves for claims disabled for more than two years that are less than the reserves produced for these claims by computing *T* as $\underline{T} = 1.30$. If the Company Specific Experience, determined in Section C below, for Duration Group 3 includes at least 5,000 claim terminations, the value of *T* for that Duration Group shall not be limited to ≤ 1.30

C. Company Specific Experience—Own Experience Measurement
In computing values *F* and *S* to comply with Section B above, the appointed actuary shall:

i. Segment the company claim termination experience into any major subgroups that may produce significantly different results (e.g., market niches, claims operations, unique benefit designs, etc.).

ii. Combine affiliated statutory entities and assumed reinsurance, where claim management is under a common structure, when considering company experience. It is also appropriate to evaluate experience separately when specific blocks of company business have distinct claim management practices or significantly different risk characteristics.

iii. Include all relevant experience the company is capable of providing for as many of the last five years as possible (not including the lag period described below). However, there are two situations where using other than a five-year period may be more appropriate. The first is when a company's experience in a longer period not only increases credibility but is still relevant and appropriate for the company's products and claim management practices. The second is for a company that has had significant changes in product and/or claim management practices within the past five years that has diminished the relevance of the company's experience early in the five-year period. In this second situation, less than five years of experience may be used for any duration band for which there is compelling logic and when either the company's experience to be used is at least 90% credible, or the shorter experience period produces higher reserves than using five years.

iv. Recognize a suitable lag period to allow for a full resolution of claim status. The lag period used in the 2008 GLTD Study was 12 months. However, the appointed actuary may use a different lag period based on his or her company experience. For example, company experience indicates that all changes after the selected lag period are negligible.

v. Measure actual (A) to expected (E) terminations based on claim count (unless another weighting is deemed more appropriate, as mentioned in Section B(ii)(b)4), where the E is based on monthly expected recoveries and deaths from the 2012 GLTD Valuation Table. Claim count is also used in the measurement of credibility.

vi. Update the minimum valuation basis in accordance with Section B above at least once every five years. In addition, the valuation basis also must be updated whenever the company's annual own experience study produces, in accordance with Section B, a value *T* that changes by more than 10% from the one used in the current valuation basis for any of the five duration groups.

vii. Recognize where appropriate any flexibility built into the 2012 GLTD Valuation Table, such as not utilizing diagnosis-specific termination rates when the information is deemed unreliable.

viii. Do not count as terminations those claims that are closed due to settlement (i.e., a lump sum replacing a series of potential future payments), or that have reached the end of the maximum benefit duration, or that are closed due to a contractual limit, such as a mental and nervous limit. For this purpose, a closure due to a change in definition of disability should be considered an actual termination and not a termination due to reaching the maximum benefit duration.

ix. Use experience that is otherwise relevant in accordance with the professional judgment of the appointed actuary.

x. Do not use experience that the commissioner has deemed inappropriate or likely to produce significantly inadequate reserves.

In the above paragraphs, the expression term "company" refers to a single company or a group of legally related companies subject to the same claim management.

D. Own Experience Measurement Exemption

If, at the time of valuation, a company has fewer than 50 open claims disabled within two years of the effective date of the valuation, and fewer than 200 open claims disabled more than two years prior to the effective date of the valuation, the carrier is exempt from the requirement that the 2012 GLTD Valuation Table be modified by the company's own experience. Said company will use 100% of the 2012 Valuation Table for calculating claims termination rates in order to comply with the minimum valuation standard.

Actuarial Guideline XLVIII

ACTUARIAL OPINION AND MEMORANDUM REQUIREMENTS FOR THE REINSURANCE OF POLICIES REQUIRED TO BE VALUED UNDER SECTIONS 6 AND 7 OF THE NAIC VALUATION OF LIFE INSURANCE POLICIES MODEL REGULATION (MODEL 830)

Background

The NAIC Principle-Based Reserving Implementation (EX) Task Force ("PBRI Task Force") serves as the coordinating body for all NAIC technical groups involved with projects related to the Principle-Based Reserves (PBR) initiative for life and health policies. The PBRI Task Force was also charged with further assessing, and making recommendations regarding, the solvency implications of life insurance reserve financing mechanisms addressed in the June 6, 2013 NAIC White Paper of the Captives and Special Purpose Vehicle Use (E) Subgroup of the Financial Condition (E) Committee. Some of these reinsurance arrangements have been referred to as "XXX / AXXX Captive arrangements," although not all such arrangements actually involve reinsurers organized as captives. On June 30, 2014, the PBRI Task Force adopted a framework as found in Exhibits 1 and 2 of the June 4, 2014 report from Rector & Associates, Inc. (the "June 2014 Rector Report"). Exhibit 2 of the report included a charge to the Life Actuarial (A) Task Force (LATF) to develop a level of reserves (the "Required Level of Primary Security") that must be supported by certain defined assets ("Primary Security"). The level of reserves is to be calculated by a method referred to as the "Actuarial Method." Another charge to LATF is to promulgate an actuarial guideline specifying that, in order to comply with the Actuarial Opinion Memorandum Regulation as it relates to XXX/AXXX reinsurance arrangements, the opining actuary must issue a qualified opinion as to the ceding insurer's reserves if the ceding insurer or any insurer in its holding company system has engaged in a XXX/AXXX reserve financing arrangement that does not adhere to the Actuarial Method and Primary Security forms adopted by the NAIC. This Actuarial Guideline is responsive to that charge.

The requirements in this Actuarial Guideline derive authority from Section 3 of the NAIC *Actuarial Opinion and Memorandum Regulation*, Model 822 "(AOMR"). Section 3 provides, the commissioner "shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items." This Actuarial Guideline defines new terms, such as Primary Security and Required Level of Primary Security, specifies the Actuarial Method used to calculate the Required Level of Primary Security, and specifies other requirements that must be followed when reinsurance is involved in order for the appointed actuary to render an actuarial opinion that is not qualified.

No statute, regulation or guideline can anticipate every potential XXX/AXXX captive arrangement. Common sense and professional responsibility are needed to assure not only that the text of this Actuarial Guideline is strictly observed, but also that its purpose and intent are honored scrupulously. To that end, and to provide documentation to the appointed actuary as to the arrangements that are subject to review under this Actuarial Guideline, the appointed actuary may request from each ceding insurer, and may rely upon, the certification by the Chief Financial Officer or other responsible officer of each ceding insurer filed with the insurer's domiciliary regulator that the insurer has not engaged in any arrangement or series of arrangements involving XXX or AXXX reserves that are designed to exploit a perceived ambiguity in, or to violate the purpose and intent of, this Actuarial Guideline.

The purpose and intent of this Actuarial Guideline are to establish uniform, national standards governing XXX or AXXX reserve financing arrangements[1] and, in connection with such arrangements, to ensure that Primary Security, in an amount at least equal to the Required Level of Primary Security, is held by or on behalf of the ceding insurer. As described further in Section 4.B., the provisions of this Actuarial Guideline are not intended to apply to policies that were issued prior to 1/1/2015 if those policies were included in a captive reserve financing arrangement as of 12/31/2014. Further, the requirements of this Actuarial Guideline should be viewed as minimum standards and are not a substitute for the diligent analysis of reserve financing arrangements by regulators. A regulator should impose requirements in addition to those set out in this Actuarial Guideline if the facts and circumstances warrant such action.

Text

1. Authority

Pursuant to Section 3 of the NAIC *Actuarial Opinion and Memorandum Regulation*, Model 822 ("AOMR"), the commissioner shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

2. Scope

This Actuarial Guideline applies to Covered Policies as that term is defined in Section 4.

3. Exemptions

This Actuarial Guideline does not apply to:

A. Risks ceded to an assuming insurer for policies eligible for exemption under Section 6.F or Section 6.G. of Model 830 or the portion of the reserve pursuant to Yearly Renewable Term ("YRT") Reinsurance under Section 6.E. of Model 830; or

B. Risks ceded to an assuming insurer that meets the applicable requirements of (1) Section 2.E. of the NAIC *Credit for Reinsurance Model Act*, Model 785 ("Model 785") and has been certified in the ceding insurer's domiciliary state or, if that state has not adopted a provision equivalent to Section 2.E., in a minimum of five states, or (2) Section 2.D. of Model 785; or

C. Risks ceded to an assuming insurer that meets the applicable requirements of Sections 2.A., 2.B. or 2.C., of Model 785, and that, in addition:

1. prepares its statutory financial statements in compliance with the NAIC *Accounting Practices and Procedures Manual*, without any departures from NAIC statutory accounting practices and procedures pertaining to the

[1] In general, reserve financing arrangements are those where the security/assets backing part or all of the reserves have one or more of the following characteristics: such security/assets (1) are issued by the ceding insurer or its affiliates; and/or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; and/or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any if its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance arrangement).

admissibility or valuation of assets or liabilities that increase the assuming insurer's reported surplus and are material enough that they would need to be disclosed in the financial statement of the assuming insurer pursuant to Statement of Statutory Accounting Principles No. 1 ("SSAP 1"), paragraph 7, if the assuming insurer were required to comply with SSAP 1; and

2. is not in a Company Action Level Event, Regulatory Action Level Event, Authorized Control Level Event, or Mandatory Control Level Event as those terms are defined in the NAIC *Risk-Based Capital (RBC) for Insurers Model Act*, Model 312 when its RBC is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation.

D. Risks ceded to an assuming insurer if the ceding insurer's domiciliary regulator, after consulting with the NAIC Financial Analysis (E) Working Group (FAWG) or other group of regulators designated by the NAIC, as applicable, determines that all of the following apply: (1) such risks are clearly outside of the intent and purpose of this Actuarial Guideline (as described in the Background section above); (2) such risks are included within the scope of this Actuarial Guideline only as a technicality; and (3) the application of this Actuarial Guideline to such risks is not necessary to provide appropriate protection to policyholders under all the facts and circumstances. The domiciliary regulator shall publicly disclose any decision made pursuant to this Section 3.D. to exempt a reinsurance arrangement from this Actuarial Guideline, as well as the general basis therefor (including a summary description of the arrangement), although the domiciliary regulator may choose not to disclose the names of the parties to the arrangement.

4. Definitions

A. Actuarial Method: The methodology used to determine the Required Level of Primary Security, as described in Section 5 of this Actuarial Guideline.

B. Covered Policies: Subject to the exemptions described in Section 3 of this Actuarial Guideline, Covered Policies are those policies that are required to be valued under Sections 6 or 7 of the NAIC Valuation of Life Insurance Policies Model Regulation Model 830 ("Model 830") and that have risk ceded to an assuming insurer; provided, however, that Covered Policies shall not include policies that were both (1) issued prior to 1/1/2015 and (2) ceded so that they were part of a reinsurance arrangement, as of 12/31/2014, that would not qualify for exemption as described in Section 3 of this Actuarial Guideline.

C. Required Level of Primary Security: The dollar amount determined by applying the Actuarial Method to the risks ceded with respect to Covered Policies.

D. Primary Security: The following forms of security:

1. Cash meeting the requirements of Section 3.A. of Model 785;

2. SVO-listed securities meeting the requirements of Section 3.B. of Model 785, but excluding any synthetic letter of credit, contingent note, credit-linked note or other similar security that operates in a manner similar to a letter of credit; and

3. For security held in connection with funds-withheld and modified coinsurance reinsurance arrangements:

   a. Commercial loans in good standing of CM3 quality and higher;

   b. Policy Loans; and

   c. Derivatives acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance arrangement.

E. Other Security: Any asset, including any asset meeting the definition of Primary Security, acceptable to the Commissioner of the ceding insurer's domiciliary state.

NOTE: The Capital Adequacy Task Force has been charged with the development of RBC asset risk charges for assets that may be held as "Other Security."

F. Section 8 Effective Date: The operative date of the Valuation Manual under the Standard Valuation Law.

G. Trust: A reinsurance credit trust as defined by Section 11 of the Credit for Reinsurance Model Regulation (Model 786); provided, that notwithstanding Section 11(B)(13) of Model 786, (i) funds consisting of Primary Security or Other Security held in trust, shall for the purposes identified in Section 5.C. hereof, be valued according to the valuation rules set forth in Section 5.C., as applicable; and (ii) there are no affiliate investment limitations with respect to funds consisting of Other Security held in such trust.

5. Required Actuarial Analysis

As to each reinsurance arrangement in which Covered Policies have been ceded, the appointed actuary must perform an analysis, on a treaty by treaty basis, of such Covered Policies to determine whether:

(i) funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance contract within the meaning of Section 3 of Model 785, on a funds withheld, Trust, or modified coinsurance basis; and

(ii) funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to subsection (i) above, are held by or on behalf of the ceding insurer as security under the reinsurance contract within the meaning of Section 3 of Model 785.

A. Actuarial Method

The Actuarial Method to establish the amount of the Required Level of Primary Security shall be "Requirements for Principle-Based Reserves for Life Products," including all relevant definitions, from the NAIC Valuation Manual ("VM-20") with the modifications as provided below:

1. For Covered Policies required to be valued under section 6 of Model 830, the Actuarial Method is the greater of the Deterministic Reserve or the applicable

percentage of the Net Premium Reserve (NPR) from Table 1 below based on the issue age range, sex and smoking status, subject to any additional modifications below. No exemption testing is allowed.

2. For Covered Policies required to be valued under section 7 of Model 830, the Actuarial Method is the greater of the Deterministic Reserve, the Stochastic Reserve, or the applicable percentage of the NPR from Table 2 below based on the issue age range, sex and smoking status, subject to any additional modifications below. No exemption testing is allowed.

3. Except as provided in paragraph 4 below, the Actuarial Method is to be applied on a gross basis to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer.

4. If the ceding insurer cedes less than 100% of its risk with respect to Covered Policies in a reinsurance arrangement that is subject to this Actuarial Guideline, and (x) retains a portion of the risk for its own account or (y) cedes a portion of the risk in an arrangement that qualifies for exemption pursuant to Section 3 of this Actuarial Guideline, then the Actuarial Method will be applied in the following manner:

   a. Prior to the Section 8 Effective Date, the Actuarial Method will be applied to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer and the resulting Required Level of Primary Security will be adjusted using the following methodology:

      (i) For a quota share retained by the ceding insurer for its own account, the Required Level of Primary Security will be reduced by at most a percentage equal to the excess of 100% over the quota share ceded in the non-exempt reinsurance arrangement;

      (ii) For a non-exempt reinsurance arrangement in which only a secondary guarantee rider is ceded:

         (a) the Required Level of Primary Security will be calculated as the excess of (1) over (2), where (1) is the Required Level of Primary Security using the Actuarial Method applied to all risks under the Covered Policies including the ceded secondary guarantee rider (reduced by the amount specified pursuant to subsection (iv) below in the event any risk is ceded on a yearly renewable term basis in an exempt arrangement) and (2) is the statutory reserve retained by the ceding insurer on the Covered Policies (reduced by the amount specified pursuant to subsection (iv) below in the event any risk is ceded on a yearly renewable term basis in an exempt arrangement);

(b) if the ceding insurer cedes risks with respect to Covered Policies in more than one non-exempt reinsurance arrangement, in no event will the aggregate amount of Primary Security held with respect to the Covered Policies including all riders be less than the Required Level of Primary Security calculated using the Actuarial Method as if all risks ceded in non-exempt reinsurance arrangements were ceded in a single non-exempt reinsurance arrangement.

(iii) For risks ceded on a coinsurance basis in an exempt arrangement, the Required Level of Primary Security will be reduced by at most a percentage equal to the quota share ceded in the exempt coinsurance arrangement;

(iv) For risks ceded on a yearly renewable term basis in an exempt arrangement, the Required Level of Primary Security will be reduced by at most [(1 / (2 * number of reinsurance premiums per year)) * cx], calculated using the mortality defined in the NPR; and

(v) For all other exempt arrangements, including but not limited to stop loss, excess of loss and other non-proportional reinsurance arrangements, there will be no reduction in the Required Level of Primary Security.

NOTE: It is possible for any combination of (i), (ii), (iii), (iv) and (v) above to apply.

The adjustments outlined in (ii), (iii) and (iv) above will be made only with respect to exempt arrangements entered into directly by the ceding insurer. The ceding insurer will make no adjustments as a result of retrocession arrangements entered into by any of its assuming insurers.

Section 8 of VM-20 (Reinsurance) in the Valuation Manual shall not be used in applying the Actuarial Method, except that Section 8.C.11. shall apply when some of the assets supporting the gross reserve are held by the counterparty or by another party. In no event will the Required Level of Primary Security resulting from application of the Actuarial Method exceed the amount of statutory reserves ceded.

b. On and after the Section 8 Effective Date, in lieu of the methodologies set forth in subsections 4.a(iii) and (iv), Section 8 of VM-20 (Reinsurance) in the Valuation Manual will be used to apply the Actuarial Method to risks ceded in an exempt arrangement to an assuming insurer, including risks written prior to the Section 8 Effective Date. The methodologies set forth in subsections 4.a(i), (ii) and (v) above will continue to apply.

Percentages Applicable to the NPR in Determination of the Actuarial Method

Table 1

(Derived From 2014 VBT / 2001 VBT Term Net Level Premium Mortality Ratios)

Issue Age	Male Non-Smoker	Female Non-Smoker	Male Smoker	Female Smoker
< 25	55%	60%	65%	70%
25 – 34	55%	60%	65%	70%
35 – 44	55%	60%	65%	70%
45 – 54	55%	60%	70%	70%
55 – 64	60%	60%	85%	80%
65 – 74	70%	70%	90%	100%
75 - 84	75%	80%	90%	100%
85 +	75%	80%	75%	100%

Table 2

(Derived From 2014 VBT / 2001 VBT Whole Life Net Level Premium Mortality Ratios)

Issue Age	Male Non-Smoker	Female Non-Smoker	Male Smoker	Female Smoker
< 25	80%	80%	85%	85%
25 - 34	80%	80%	85%	85%
35 – 44	80%	80%	85%	85%
45 – 54	80%	80%	85%	90%
55 – 64	80%	85%	90%	90%
65 – 74	85%	90%	90%	100%
75 - 84	85%	95%	95%	100%
85 +	85%	95%	85%	100%

B. Additional Modifications to Actuarial Method

Prior to implementation of PBR, the Actuarial Method shall include any amendments to VM-20 adopted by the Life Actuarial (A) Task Force (LATF) no later than the September 30th immediately preceding the year-end analysis required by this Actuarial Guideline. Notwithstanding, the asset spread tables and asset default cost tables required by VM-20 shall be included in the Actuarial Method if adopted by LATF no later than the December 31st of such year. The rules for incorporating the tables of asset spreads and asset default costs into the Actuarial Method should follow the same rules for incorporating those tables as set forth in VM-20.

After implementation of PBR, the Actuarial Method shall be the version of VM-20 included in the Valuation Manual applicable to such year, without modification.

NOTE: As provided in Section 5.A. above, a percentage of NPR is incorporated into the Actuarial Method initially to allow time for necessary calibrations to NPR to be made. From and after January 1, 2016, it is anticipated that this Actuarial Guideline will be amended to use 100% of the "recalibrated" NPR for the purposes of the Actuarial Method (including, for the avoidance of doubt, any reserves in-force as of such date pertaining to Covered Policies written in 2015 and certain policies written prior to 1/1/2015, as noted in Section 4.B).

C. Valuations Used for Purposes of the Required Actuarial Analysis

For the purposes of both (a) calculating the Required Level of Primary Security pursuant to the Actuarial Method and (b) determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply: (i) for assets, including any such assets held in Trust, that would be admitted under the NAIC *Accounting Practices and Procedures Manual* if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer's general account and without taking into consideration the effect of any prescribed or permitted practices; and (ii) for all other assets, the valuations are to be those that were assigned to the assets for the purpose of determining the amount of reserve credit taken.

6. Actuarial Opinion and Memorandum Requirements

A. Qualified Actuarial Opinion

The appointed actuary must render a qualified actuarial opinion as described in Section 6.D. of the AOMR if:

1. As of the valuation date, and as to any reinsurance arrangement as to which the actuarial analysis required by Section 5 must be made:

(i) funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are not held by or on behalf of the ceding insurer, as security under the reinsurance contract within the meaning of Section 3 of Model 785, on a funds withheld, Trust, or modified coinsurance basis, unless the ceding insurer complies with one of the Remediation Options listed below; or

(ii) funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to subsection (i) above, are not held by or on behalf of the ceding insurer as security under the reinsurance arrangement within the meaning of Section 3 of Model 785, unless the ceding insurer complies with one of the Remediation Options listed below; or

2. The appointed actuary for any affiliated reinsurer of the ceding insurer issues a qualified actuarial opinion with respect to such an affiliated reinsurer where (i) the affiliate reinsures Covered Policies of the ceding insurer and (ii) the qualified actuarial opinion pertaining to the affiliated reinsurer results, in whole or in part, from the analysis required by this Actuarial Guideline.

3. Remediation Options:

(i) In the case of Section 6.A.1.(i):

(1) Add additional Primary Security on or before March 1 of the year in which the actuarial opinion is being filed in an amount that would have caused the Primary Security held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, Trust, or modified coinsurance basis, to equal or exceed the Required Level of Primary Security on the valuation date; or

(2) Establish a liability equal to the difference between the Primary Security held pursuant to Section 6.A.1(i) and the Required Level of Primary Security.

(ii) In the case of Section 6.A.1.(ii):

(1) Add additional Other Security on or before March 1 of the year in which the actuarial opinion is being filed in an amount that would have caused Other Security held by or on behalf of the ceding insurer, as security under the reinsurance contract, to be at least equal to the portion of the statutory reserve as to which Primary Security is not held pursuant to Section 6.A.(1)(i) (including any funds added pursuant to Section 6.A.3.(i)), on the valuation date.

(2) Establish a liability equal to the difference between (a) the portion of the statutory reserves that exceed the Primary Security held pursuant to Section 6.A.1.(i) (including any funds added pursuant to Section 6.A.3.(i)); and (b) Other Security held by or on behalf of the ceding insurer as security under the reinsurance contract.

B. Additional Requirements for the Actuarial Opinion and Memorandum for Companies that have Covered Policies Requiring the Analysis Pursuant to this Actuarial Guideline

1. In the statement of actuarial opinion, the appointed actuary must state whether (i) the appointed actuary has performed an analysis, as to each reinsurance arrangement under which Covered Policies have been ceded, of the security supporting the Covered Policies and whether funds consisting of Primary Security in an amount at least equal to the Required Level of Primary Security are held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, Trust, or modified coinsurance basis and (ii) funds consisting of Primary Security or Other Security in an amount equal to the statutory reserves are held by or on behalf of the ceding insurer as security under the reinsurance arrangement.

2. In the actuarial memorandum as described by Section 7 of the AOMR, the appointed actuary must document the analysis and requirements applied by this Actuarial Guideline as to each reinsurance arrangement under which Covered Policies are ceded.

7. Effective Date

This Actuarial Guideline shall become effective as of January 1, 2015 to all Covered Policies.

8. Sunset Provision

This Actuarial Guideline shall cease to apply as to ceding insurers domiciled in a jurisdiction that has in effect, as of January 1st of the calendar year immediately preceding the year in which the actuarial opinion is to be filed, a law and regulation substantially similar to the amendment to the Credit for Reinsurance Model Law and new Model Regulation adopted by the NAIC pursuant to Recommendation #5 of the June 2014 Rector Report.

ACTUARIAL GUIDELINES – APPENDICES

Appendix C-1

Provides maximum reserve valuation and maximum life policy nonforfeiture interest rates for new issues, new purchases or changes in fund (as defined) under Section 4217, 4218, and 4221(k) of the New York Insurance Law as amended in 1982, 1983, 1985, 1986, 1987, 1988, 1990 and 1994. This information is provided for informational purposes and to aid compliance with the New York law.

Appendix C-2

Includes interpretations from the Emerging Actuarial Issues (E) Working Group adopted by the Financial Condition (E) Committee. The Financial Analysis (E) Working Group follows these interpretations in performing its reviews of the reserving methodologies under AG 38.

NEW YORK STATE DEPARTMENT OF FINANCIAL SERVICES
Maximum Reserve Valuation and Maximum Life Policy
Nonforfeiture Interest Rates

The maximum reserve valuation and nonforfeiture interest rates, prescribed by Sections 4217 and 4221(k) of the New York Insurance Law, are specified in "Table A through Table H Rates" noted below. Such rates vary from year to year based on Moody's corporate bond yield averages for 12 and 36 months ending on June 30, and weighting factors prescribed by Section 4217. The Moody's averages are provided for years 1981 to present in the attached Appendix.

Clarification on Fixed Annuity Reserves Interest Rates

We note that there has been some concern over the appropriate maximum valuation interest rate for flexible premium deferred annuities (FPDA). Section 4217(c)(4)(D)(iii) of the New York Insurance Law does not allow the use of the additional .05 weighting factor for annuities that guarantee interest rates on future considerations received more than twelve months beyond the valuation date. Accordingly, for flexible premium deferred annuities the weighting factors shown in Section 4217(c)(4)(D)(iii)(I) or 4217(c)(4)(D)(iii)(II) should be used. For convenience, maximum valuation interest rates for such FPDAs are shown in Table D (issue year basis) and Table G (change in fund basis). The rates shown in Table E and Table H are not appropriate for FPDAs.

- **General Information**
- **Table A through Table H Rates**
- **Appendix (Moody's Averages)**

Regulation 128 and Discontinued 30-year US Treasury Bond

To the extent Regulation 128 references the 30-year spot rate, the spot rate associated with the longest available Treasury bond (e.g., that maturing 2/15/31) should be used.

August 15, 2014

TO: ALL AUTHORIZED LIFE INSURANCE COMPANIES, ACCREDITED LIFE REINSURERS, FRATERNAL BENEFIT SOCIETIES AND CHARITABLE ANNUITY SOCIETIES

SUBJECT: MAXIMUM RESERVE VALUATION AND MAXIMUM LIFE POLICY NONFORFEITURE INTEREST RATES

Attached hereto is an outline providing maximum reserve valuation and maximum life policy non-forfeiture interest rates for new issues, new purchases or changes in fund (as defined) for years 1982 through 2013 (and other years where shown), under Sections 4217, 4218 and 4221(k) of the New York Insurance Law, as amended in 1982, 1983, 1985, 1986, 1987, 1988, 1990, and 1994.

The maximum valuation and non-forfeiture interest rates, prescribed by Sections 4217 and 4221(k) of the New York Insurance Law for future years, will vary from year to year depending on Moody's corporate bond yield averages.

The maximum valuation interest rates for issues, purchases and changes-in-fund of years 1982 through 2014 (and other years where shown) are outlined below. The maximum valuation and non-forfeiture interest rates for Ordinary Life Insurance are shown in Category A of page 1, except for Single Premium Life Insurance, as defined in Section 4217(c)(4)(B)(vi), the maximum valuation interest rates for which are shown in Category B on pages 2-3.

Please refer to Sections 4217 and 4221 of NY Insurance Law, Regulation 147 and Regulation 151 for definitions and explanations of valuation interest rate, guarantee duration, plan type and product category. Regulation 151 has been effective since February 28, 2001 and is available on our web site.

This notice is to be used for informational purposes, as an aid in complying with the law.

Should any person have any question or comment in regard to this information, please contact Mr. John Karwatowski of the Life Bureau at (518) 474-7929.

A. ORDINARY LIFE INSURANCE (Except as covered in B.)

APPENDIX

The maximum reserve valuation interest rates are based on reference interest rates, which are averages of corporate bond earnings published by Moody’s Investors Service, Inc., and weighting factors prescribed by Section 4217, which defines running averages of the published monthly yield rates for 12-month and 36-month periods.

The following table shows the 12-month and 36-month yield averages for recent years:

TABLE 1

	12-Month	36-Month	
For Period Ending	Running	Running	Lesser of
June 30 of Year	Average	Average	Two Averages
	(1)	(2)	(3)
1981	13.71%	11.57%	11.57%
1982	15.70	13.64	13.64
1983	13.39%	14.26%	13.39%
1984	13.22	14.10	13.22
1985	13.01%	13.21%	13.01%
1986	10.75	12.33	10.75
1987	9.40%	11.05%	9.40%
1988	10.32	10.15	10.15
1989	10.09%	9.93%	9.93%
1990	9.52	9.97	9.52
1991	9.63%	9.74%	9.63%
1992	8.88	9.34	8.88
1993	8.13%	8.88%	8.13%
1994	7.52	8.18	7.52
1995	8.42%	8.03%	8.03%
1996	7.55	7.83	7.55
1997	7.74%	7.90%	7.74%
1998	7.11	7.47	7.11
1999	6.96%	7.27%	6.96%
2000	7.93	7.33	7.33
2001	7.72%	7.54%	7.54%
2002	7.44	7.70	7.44
2003	6.71%	7.29%	6.71%
2004	6.26	6.80	6.26
2005	5.78%	6.25%	5.78%
2006	5.87	5.97	5.87
2007	6.00%	5.88%	5.88%
2008	6.21	6.02	6.02
2009	6.79%	6.33%	6.33%
2010	5.75%	6.25%	5.75%
2011	5.37%	5.97%	5.37%
2012	4.55%	5.22%	4.55%
2013	4.15 %	4.69 %	4.15 %
2014	4.72 %	4.48 %	4.48 %

The maximum nonforfeiture interest rate for Life Insurance, under Section 4221(k), for a particular issue year, is equal to 125% of the maximum reserve valuation interest rate for the same issue year, rounded to the nearer 1/4%.

Should the computed maximum reserve valuation interest rate for Life Insurance (other than Single Premium Life Insurance covered in Category B on pages 2-3) for a particular issue year be different from the actual maximum reserve valuation interest rate for the next previous issue year by less than 1/2%, then the maximum reserve valuation interest rate for such particular issue year will be the same as that for such next previous issue year.

Appendix C-2

Interpretations of the Emerging Actuarial Issues (E) Working Group

Introduction

The Emerging Actuarial Issues (E) Working Group responds to questions of application, interpretation and clarification with respect to *Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation* (AG 38). Following an abbreviated public comment and review period of no less than 7 days, the Working Group will adopt by consensus formal interpretations on issues presented before it. These interpretations will then be reported to the Financial Condition (E) Committee, which, after adopting, will direct the Financial Analysis (E) Working Group to follow the interpretations in performing its reviews of the reserving methodologies under AG 38. These interpretations will not become effective until formally adopted by the Financial Condition (E) Committee. In no event shall a consensus opinion of the Working Group supersede or otherwise conflict with AG 38.

Interpretation of the Emerging Actuarial Issues (E) Working Group

November 20, 2012

Date Adopted by Financial Condition (E) Committee

December 1, 2012

Reference

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation, Section *8D(b)*

Issue / Question

1. The Guideline does not seem to preclude a company from using the Alternative Reserve Methodology for yearend 2012, thus avoiding the Primary Reserve Methodology calculations, even if in prior valuations their total reserve held was not at least as great as the total reserve determined in accordance with the November 1, 2011 Life Actuarial (A) Task Force (LATF) statement. In other words, at yearend 2012 a company can switch to any alternative reserve methodology as long as the total reserve held is at least as great as the total reserve determined in accordance with the November 1, 2011 LATF statement using the required lapses and mortality. Is that a correct interpretation?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Yes. The requirements as written provide for use of either 8D(a) or 8D(b) for the 12/31/12 valuation.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Reference

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation Section 8D(b)

Issue / Question

1. If a company uses the Alternative Reserve Methodology for yearend 2012, can they switch to the Primary Reserve Methodology for future valuations? What, if anything, should be reported in Exhibit 5A-Changes in Basis of Valuation for yearend 2012 or in future years as a result of these AG 38 revisions and any switch to the Primary Reserve Methodology or to the Alternative Reserve Methodology?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. A company, pursuant to the requirements of AG 38, 8D, may switch between the Primary Reserve Methodology and the Alternative Reserve Methodology.

3. For 12/31/12 or subsequent reserve valuations any change to or from the Primary or Alternative reserve methodologies should be reported in Exhibit 5A.

4. The company should check with their domestic state whether approval is required for any subsequent change to or from the Primary or Alternative reserve methodologies for reserves after 12/31/12.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D(b)

Issue / Question

1. The Alternative Reserve Methodology calls for deficiency reserve mortality to be based on the VM-20 deterministic reserve mortality. Since XXX calls for segments to be based on deficiency reserve mortality this could affect segment lengths. However, at least the spirit of AG46, which came out when the 2001 CSO Preferred Risk tables came out, seems to allow for segments to continue to be based on the mortality table in use when the policy was issued. Does AG46 apply here and thus the original mortality basis for the segment lengths can continue to be used?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The original mortality basis for determining the segment length can continue to be used. 8D is not intended to be more restrictive in determination of segments.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Actuarial Guideline 38-The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. The Guideline states "The requirements of this Section 8D apply to a company on December 31, 2012, and on any subsequent valuation date if (1) on the applicable date, the in force face amount (direct plus assumed) of universal life insurance to which this Section 8D would otherwise apply exceeds 2% of the company's face amount of individual permanent life insurance in force…". Does the referenced individual permanent life insurance exclude term insurance?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Yes. Term is excluded.

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation Section 8D

Issue / Question

1. Subsection 8Da states that the Primary Reserve is determined by adding any excess of (2) over (1), where (1) is the reserve according to the methodology and assumptions used to calculate the reserves reported as of December 31, 2011. In the following three scenarios, what is the basis for the determination of (1)? Assume that scenarios 1 and 2 involve universal life with secondary guarantees (ULSG) policies issued between July 1, 2005 and December 31, 2006, with a higher set of cost of insurance (COI) charges being triggered if the shadow account value ever becomes 0 after issue:

a. Issue 1) Reserves have always been calculated using the wrong methodology for determining the ratio in the fourth step of Section 8B. In applying Section 8D, would the reserves for 8Da1 be based on the correct methodology or on the methodology actually used by the company for year-end 2011?

b. Issue 2) A policy has a negative account value but has not lapsed due to the secondary guarantee. The shadow account value eventually drops to 0 and then becomes negative, and the policyholder pays a premium during the grace period intended on keeping the policy in force. The company invokes the higher secondary guarantee charges to calculate the shadow account value, but the policyholder argues that the lower shadow account COI charges apply due to the premium being paid during the state required grace period; i.e. that during the grace period the policyholder has the opportunity to pay a premium based on the lower COI charges rather than based on the much higher set of COI charges. This is litigated, and a ruling is made that the higher COI rates cannot be charged unless the shadow account value has not been positive for a period of time greater than the grace period. Based on this ruling, the assumption in the AG38 calculation that the higher set of COI charges would be triggered at the end of the first policy year would not be valid. Would the reserves for 8Da1 continue to be based on the assumption that the higher COI charges would be triggered after the first policy year, or would they be modified to reflect the lower COI charges?

c. Issue 3) Policies with multiple sets of COI charges have only been issued in 2012. What is the basis for the value of (1)?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Issue 1) The reserves determined by the company under 8D(a)(1) are intended to be consistent with the methodology used by the company for the 12/31/2011 valuation. If a calculation error has been made in applying the 2011 methodology, this error should not be repeated in applying this methodology for the 2012 year-end valuation.

3. Issue 2) Where a valid court decision has interpreted the provisions of a policy, those interpretations should be reflected in future reserve calculations. In effect, the court ruled that the company made a mistake in applying certain policy provisions. Therefore, the 2012 reserve calculations should incorporate the correct view of the affected policies' provisions as determined by the court. As in 1) above, any error in the 2011 reserve calculations due to this company mistake should not be perpetuated in the 2012 reserve calculations.

4. Issue 3) In this case, the value of (1) would be based on the company's methodology for reserving these policies for 2012 quarterly reporting.

Issue / Question

1. If all of a company's universal life with secondary guarantees (ULSG) policies subject to Section 8D are the same identical policies that are subject to Section 8C, are they still required to perform the separate Section 8C stand-alone asset adequacy analysis or does the Section 8D Primary Reserve Methodology calculation suffice?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Such policies are still required to perform the separate Section 8C stand-alone asset adequacy analysis. Section 8D, second paragraph, clarifies that Section 8D is "in addition to any testing that may be required under Section 8C."

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. My question is on section 8E, regarding when a product would fall under method 1 or method 2. If you have a shadow account product that has either a single set of charges, or multiple sets of charges, and the product meets the crediting rate limitations defined in method 1, is there anything that could cause the product to be deemed to be subject to method 2? To put it another way, when I read section 8E, it seems that any shadow account product meeting the interest crediting limits would fall under method 1. This is because all shadow accounts have either a single set of charges or multiple sets of charges, so all shadow account products that meet the interest crediting limitation would fall under policy design 1 or policy design 3. Is this a correct interpretation, or if not, why?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. This interpretation is not completely correct. In drafting the revisions to AG 38, regulators were aware of the possibility that all existing and future product designs might not fit the three generic product designs noted in AG 38, independent of the crediting rate limitation. Method II was intended to provide a default reserve methodology for these other product designs, together with the more generic product designs containing interest crediting guarantees higher than the company-selected interest index plus 3 percent. The considerations in satisfying the actuarial opinion requirements contained in Section 8E should enable the opining actuary to determine the appropriate reserving methodology for a particular universal life with secondary guarantees (ULSG) product design.

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation Section 8D(b)

Issue / Question

1. Section 8D(b), Alternate Methodology, requires the company to determine its deficiency reserve under Model 830 using mortality and lapse assumptions according to the same requirements for determining the deterministic reserve in the Valuation Manual. Does this require the company to determine its Triple-X segments (under the segmentation method) using the qx and lapse rates of the VM, or simply use these qx and lapse rates in calculating the deficiency reserve once the segments are determined using the company's current approach for determining such segments?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The original mortality basis for determining the segment length can continue to be used. 8D is not intended to be more restrictive in determination of segments.

Note: This response is similar to that for question Actuarial INT 03.

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. Given all of the focus that the Guideline places on what premiums to use for these universal life with secondary guarantees (ULSG) reserve calculations, we are having unexpected difficulty finding published guidance on what premiums to assume in the deterministic reserve calculations for the Primary Reserve Methodology. Does such guidance exist and if so, where can we find it?

2. This question specifically asks for published guidance, but if none exists perhaps, the Working Group could provide such guidance or at least common practices/approaches they are aware of. Guidance is needed to create consistency amongst how companies are approaching this step of the calculation.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. For 8D(a)(2) reserve calculations, the company should use the expected premium to be paid by the policyholder, determined either policy by policy or by appropriate policy groupings. The Valuation Manual adopted by the A Committee on 8/17/12 provides requirements regarding premiums for the deterministic reserve calculation. Such requirements include those in Section 4(A), Section 7(B), and Sections 9(A) and 9(D).

Issue / Question

1. Is the greatest deficiency reserve test to be performed on a seriatim or product level basis? What if we see mixed results (For example, 70% pattern 1 and 30% pattern 2)

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The test should be performed on a seriatim basis, except to the extent it may be practical to group policies with identical attributes. It is possible that several combination premium patterns will be identified as having broad applicability. Regardless, each policy should assume a premium pattern that produces the greatest deficiency reserve as of the issue date consistent with good faith testing and review.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Issue / Question

1. For the combination premium patterns, what does it mean "...to have access to better charges and credits...."? Can this be ignored it if the product only has one set of charges?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Better charges and credits can be understood as lower charges and/or higher credits that may be triggered based on the magnitude of the premium paid, the shadow account or other measures generally dependent on policyholder behavior. For example, a higher interest rate might apply to amounts above or below some defined premium dollar limit in particular policy years or based simply on the level of the shadow account. Higher or lower premium payments could lead directly to the most favorable interest rate (or weighted average interest rate) accessible within product design constraints. Better charges and credits would generally lead to lower minimum gross premiums and potentially greater deficiency reserves. For purposes of this question this requirement cannot be ignored, particularly if there are multiple sets of credits in addition to the assumed single set of charges.

Issue / Question

1. When testing combination premium patterns, do premium patterns that break segments need to be considered?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. It is not necessary to reverse engineer premium patterns solely to create unfavorable segment breaks. However, segment breaks that result from premium patterns consistent with the applicability of favorable charges and credits must be considered.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D (a)(2a)

Issue / Question

1. Should the VM-20 deterministic reserve starting asset requirement related to the 2% collar be applied before or after the Primary Reserve Methodology caps on starting and reinvestment assets are applied?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Subsection a.2.a) (I) of Section 8D requires the determination of one of two portfolios of existing assets to support the initial reserve estimate for the block. Once this initial asset portfolio is determined, the deterministic gross premium reserve is determined using as the discount rates the net investment returns generated by the future projected cash flows calculated using the selected initial portfolio and future net reinvestment rates established according to subsection a.2.a) (II) of Section 8D.

3. If the resulting reserve falls within the +/- 2% collar (referenced in VM-20) relative to the initial reserve estimate (and corresponding level of initial assets), the calculated reserve is the final reserve. If the calculated reserve breaches the +/- 2% collar, the actuary must either provide a detailed rationale as to why the calculated reserve is appropriate or redo the reserve calculation assuming revised initial reserve and asset levels.

4. In performing the additional reserve calculation(s), use the same asset portfolio (adjusted upward or downward as below based on the results of the deterministic reserve calculation), either that of subsection a.2.a) (I) (i) or a.2.a) (I) (ii), as chosen for the initial reserve calculation.

5. If the initial or subsequently determined reserve is greater than the prior reserve estimate and the asset portfolio used in the deterministic reserve calculation is:

a. as described in subsection a.2.a)(I)(i), then the prior asset portfolio shall be adjusted upward using assets as described in subsection a.2.a)(I)(i) to the extent such assets remain available in the company's portfolio after which such assets shall be adjusted upward as needed using assets as described in subsection a.2.a)(I)(ii). The recommended method for adjusting the prior asset portfolio upward is to do so in a pro rata fashion. Any other method proposed for adjusting the prior asset portfolio upward must be clearly documented in the Actuarial Memorandum and shall not involve changing the asset composition of the prior asset portfolio but shall constitute only additions to that portfolio.

b. as described in subsection a.2.a)(I)(ii), then the prior asset portfolio shall be adjusted upward as needed in a pro rata fashion using assets as described in subsection a.2.a)(I)(ii).

6. Regardless of which portfolio is chosen for the initial deterministic reserve calculation, if the initial or subsequently determined, reserve is less than the prior reserve estimate, then the prior asset portfolio shall be adjusted downward as needed in a pro rata fashion.

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation Section 8E/8D

Issue / Question

1. Consider the following: A universal life policy with a secondary guarantee requires that a shadow account be maintained at a positive level for the secondary guarantee to remain in effect. Once the shadow account value goes down to zero, the secondary guarantee terminates and cannot be reactivated. There is only one set of charges and credits that apply to the shadow account. In determining reserves for this policy under section 8E, would the assumption be made that the secondary guarantee terminates at the end of the first policy year since, if only the minimum premium is paid, the shadow account value would be zero at the end of the first policy year?

2. If the policy was written before 2012, would it be subject to section 8D?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. For issues in or after January 1, 2013, 8E would be applicable. But the policy, as described, would not fit into Method I because the minimum premium derived according to Method I would not satisfy the secondary guarantee requirements. Calculation of the reserve using Method I requires that the minimum premium keep the secondary guarantee in effect. Therefore, it must be reserved according to Method II.

4. For issues between July 1, 2005 and December 31, 2012 (inclusive), any regulatory response regarding applicability of Section 8D would require analysis of the policy form and dialog with the valuation actuary.

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation Section 8E

Issue / Question

1. Under 8E, Method I, Policy Design #1 applies for policies containing a secondary guarantee that uses a shadow account with a single set of charges and credits. For those policies, the minimum gross premium for any policy year is the premium that, when paid into a policy with a zero shadow account value at the beginning of the policy year, produces a zero shadow account value at the end of the policy year, using the guaranteed shadow account charges and credits specified under the secondary guarantee. Presumably, this will result in a yearly renewable term (YRT)-like pattern for the minimum premium.

2. The actuarial opinion required by 8E includes the statement "the minimum gross premiums determined under Policy Design # ___ are not inconsistent with the minimum premiums, charges and credits that are expected to apply under the policy." What is meant by "expected to apply"?

3. Since it is not likely that the policyholder will fund the policy using the YRT-like pattern that is the minimum premium, it does not seem as if "expected to apply" means "expected to be paid." It appears that "expected to apply" should be interpreted to mean that the YRT-type pattern will either fund the secondary guarantee or it is less than the minimum amount necessary to fund the guarantee.

Interpretation of Emerging Actuarial Issues (E) Working Group

4. The phrase "expected to apply" is intended to mean that the minimum premiums determined ($0-to-$0) are based on charges/credits generally consistent with those expected to apply to premium scales likely to be received from policyholders. For example, high premium loads at later durations would not be expected to apply for products with charges and credits that encourage a limited-pay or single-pay premium pattern. Other design features that should give the opining actuary pause, and could draw regulatory scrutiny, include negative charges and credits or unusual patterns of charges and credits. In addition, the actuary should not favorably opine on a product for Method I reserves with variables resulting in minimum gross premiums that would be inconsistent with the premiums a reasonable person would pay to limit advance funding. If the actuary is unable to opine favorably, the reserves should be calculated under Method II.

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. A shadow account has a product design feature where the premium load is expressed as a fixed percentage of premium up to the target premium, and the target premium is reasonably consistent with level premium funding of the lifetime guarantee. In effect, there is a fixed dollar cap on the annual premium charge. The literal form of the charge is simply a specified percentage of premiums up the target premium and 0% thereafter. This will always mathematically produce the same result as the capped charge described above. Please clarify that a fixed dollar cap for the premium load, regardless of how the cap is expressed, does not make such a product incompatible with Policy Design # 1.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. A flat percentage of premium charge, subject to an annual maximum, would be compatible with Policy Design (PD) #1 provided the actuary is able to issue an unqualified actuarial opinion. The specified percentage rate subject to an annual maximum may be construed as a single rate even though an alternative expression of this charge could be viewed as involving a second rate equal to zero. However, it should be noted that the actuary might be unable to opine favorably in the case of designs with credit/charge structures that encourage limited-pay premium schedules.

3. The above interpretation does not extend to designs using a flat percentage load for premiums up to a break point and a different (non 0%) load for premiums above that. Such a design should be considered as PD#3, as would any design with tiered interest rate credits or other tiered credits/charges.

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. Section 8D(a) references the deterministic reserve calculation in the VM20 valuation manual in the definition of the Primary Reserve Methodology. As part of the asset assumptions used in the deterministic reserve calculation, page 82 of the VM20 manual describes the derivation of the Illustrative Current Market Benchmark Spreads. We have reviewed the JP Morgan US Liquid Index data referenced, and the final published values appear to be derived from the underlying data for the index as opposed to referencing published table views. Does the Working Group agree that using an updated table would be preferred? Would the Working Group consider publishing an updated table as of 9/30 or providing additional details on how the table values (shown on page 89) were derived? The values for Table G (page 90) for the below investment grade bonds were taken directly from the source index so they are easy to replicate.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. For the 12/31/12 AG 38, 8D valuation it may be assumed that the 9/30/09 Tables H & I approximate both Tables F & G and Tables H & I as of 12/31/12. This assumption is based on benchmarking with current spread information from other sources as of 12/31/12. It is understood that strict technical compliance for each and every asset may not be possible due to modeling limitations. Professional judgment should be used to produce results that comply with the spirit of this standard, i.e., no lessening of conservatism. For example, if a company has access to current data sources and can reconstruct Tables F and G as of 12/31/12 then this would be an acceptable approach. In any event, appropriate explanation and justification should be provided for the methodology that was employed and the results that were obtained. The NAIC intends to provide updated tables for future year end AG 38, 8D, valuations.

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. A product has a shadow account product design feature where, in addition to the fixed charges and credits associated with the policy, there is a shadow account premium charge in the event that the policyholder underfunds the policy. This premium charge is expressed as a fixed percentage of the premium shortfall when compared to a given level premium.

2. Please clarify whether a shadow account charge expressed as a fixed percentage of the premium shortfall is regarded as "multiple sets of charges" or as a "single set of charges" and thus whether such a product is compatible with Policy Design # 1 or Policy Design # 3.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. This charge and treatment as Policy Design 1 does not appear consistent with the type of charge and treatment addressed by adopted INT 24 (formerly referred to as Pending Submission 6 prior to its adoption).

4. INT 24 deals with a single charge that all policyholders will incur which stops after a certain level of premiums have been paid. The charge described here is not incurred by all policyholders and provides the potential for a reserve premium being subject to the full impact of this charge whereas the premiums actually expected to be paid would not incur this charge.

5. More information is needed to fully assess the applicable Policy Design but based on the information provided Policy Design 3 appears appropriate.

Actuarial Guideline 38- The Application of the Valuation of Life Insurance Policies Model Regulation

Section 8E I) 3 Actuarial Opinion and Company Representation section

Issue / Question

1. A company currently issues a ULSG product that is clearly a Policy Design #3. Two hypothetical examples of the charge/credit structure are shown in Tables 1 and 2 below. Under either structure, the policy form:

- Is clearly Policy Design #3
- Does not run afoul of the "Index plus 3%" of 8E

2. The purpose of the bifurcated cost of insurance charge structure in Table 1 or bifurcated premium charge structure in Table 2 is to optimize management of policyholder premium paying pattern behavior. The exact insurance charge for any given policy under the Table 1 design is either COI 1 or COI 2, where the rate is determined by comparing the actual fund value to a pre-defined fund value. If the actual fund value is in excess of the pre-defined fund value, COI 1 is used, otherwise COI 2 is used. Similarly, the exact premium charge amount for any given policy under the Table 2 design is PremPct1 for amounts paid up to a target amount plus PremPct2 for amounts paid in excess of the target amount.

3. The company's approach to establishing statutory reserves has always been to determine AG XXXVIII Step 1 minimum premiums based on the lowest charges from Table 1 (or Table 2). The actuary concludes that everything in the reserving practices of the company with respect to this policy form is in compliance with the letter and spirit of AG XXXVIII, and except for the third statement in the Actuarial Opinion (of Section E), the actuary feels s/he could sign such an attestation. The third statement declares "the minimum gross premiums determined under Policy Design #3 are not inconsistent with the minimum premiums, charges and credits that are expected to apply".

4. What is the actuary expected to do in such a situation?

TABLE 1

Section 7 of AG38 and Steps 1, 2, and 8 of Section 8E of AG38

Issue / Question

1. Does the language "This result may be negative." occurring twice in Step 3 of Section 8E of Actuarial Guideline 38 (AG 38) apply only to the Method II reserve approach in AG 38 or to both Method I and Method II reserve approaches? Step 3 of Section 8E of AG 38 provides for the determination of the amount of actual premium payments (or shadow account) greater than or less than the minimum gross premiums (or shadow account based on minimum premiums), as defined in Section 8E.

2. The issue regarding the referenced language relates to the interpretation of Step 3 as it applies particularly to (i) cumulative premium secondary guarantee designs with a "premium catch-up provision" or (ii) shadow account secondary guarantee designs where, if the shadow account is below the level necessary to maintain the secondary guarantee, there is a "catch-up provision" where the shadow account may be reinstated prior to the end of the secondary guarantee period.

3. In addition to Section 8E of AG 38, it appears that Section 7 of AG 38 applies in this situation. For Section 8E Method I reserve calculations, the language of Section 7 appears to deal with any deficiency indicated in Step 3 of Section 8E satisfactorily since that deficiency is measured relative to the guarantees (cumulative premium or shadow account). In this case, the value of the numerator in Step 3 of Section 8E would be zero and the floor basic and deficiency reserve would be set at the minimums defined in Section 7.

4. However, for Section 8E Method II reserve calculations, for purposes of applying Section 8E, the deficiency in Step 3 is measured relative to the premium defined in Step 1 which is the schedule of minimum gross premiums that create the greatest deficiency reserve rather than the schedule of minimum gross premiums based on the policy guarantees. This is inconsistent with the requirements and intent of Section 7 and therefore would allow for the ratio in Step 4 of Section 8E to be negative.

Interpretation of Emerging Actuarial Issues (E) Working Group

5. The recommended response is essentially correct. The phrase, "This result may be negative" applies only to Method II policies in Section 8E, Step 3. This phrase does not apply to the Step 3 amount for Method I policies given the requirements of AG 38, Section 7. Method I policies that would otherwise have a negative Step 3 amount were it not for Section 7 are those policies that are underfunded but provide for a catch up provision as addressed by Section 7. The Step 2 basic and deficiency reserves for such policies, used to calculate the "reserve floor" in Step 8 (c), must be adjusted as provided by Section 7 prior to calculating the "reserve floor" in Step 8 (c).

Actuarial Guideline 38 Section 8D.a.2(a)

Issue / Question

1. Section 8D directs companies to use "…the same requirements for determining the deterministic reserve in the version of the valuation manual specified…but with two modifications…" In determining future Treasury yield rates used in calculating the sale price of any asset existing on the valuation date, this language in Section 8D of AG38 can be interpreted in one of two ways:

a. Assuming a level series of future Treasury yield curves for all future years of the model projection period. In this case, any gains or losses arising from the sale of existing assets during the projection period would be determined using a level Treasury yield curve scenario prospectively, and a spread applicable to the asset, as determined on the valuation date.

b. Assuming the series of future Treasury yield curves is that described under Scenario 12 from the prescribed set of interest rate scenarios used in the stochastic exclusion test in VM-20. To these Treasury rates is added a spread to determine the yield rate to be used on the sale of an existing asset during the model projection period.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. It is recommended that the approach outlined in paragraph 1.a. be the interpretation of the relevant language of Actuarial Guideline 38 Section 8D.a.2(a).

Actuarial Guideline 38 Section 8D.A.2(a)(I)

Issue / Question

1. Section 8.D.A.2(a)(I) states, "net investment returns based on a portfolio of A-rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue of those bonds" shall be calculated.

2. A possible interpretation of this language is that a company may be permitted to determine this hypothetical portfolio book yield for each year using their actual A-rated bonds purchased in that year, i.e. their own A-rated bonds. Is this approach acceptable?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. It was the intent of this provision that a company use a hypothetical portfolio composed of A-rated corporate bonds with yields commensurate with the A-rated corporate bond yields available in the year of issue. If the yields associated with the company's actual A-rated bonds purchased in the year of issue are commensurate with A-rated corporate bond yields available in the year of issue, then the company's approach is acceptable. If the yields associated with the company's bonds are significantly higher than A-rated corporate bond yields available in the year of issue, then the approach is unacceptable.

4. If such an approach was used, the appointed actuary should address this question in the memorandum. Reasonable approaches for comparison to a company's assets include using a published index of A-rated corporate bond yields such as Moody's at an appropriate point in the year of issue or an average over the course of the year. Another reasonable approach would be to use a Treasury yield curve at an appropriate point in the year of issue or an average over the course of the year plus an appropriate published spread of A-rated corporate bond yields over Treasuries. An appropriate point in time would be June 30 of that year if the business was sold uniformly throughout the year. If the comparison does not show the yields from company's assets to be commensurate with the published index or adjusted yield curve rate, then (a) the sample size of the company's own A-rated portfolio relative to the total portfolio backing the liabilities, and (b) the year to year consistency of asset allocation become major items to be addressed in the memorandum.

Actuarial Guideline 38 Section 8D.a

Issue / Question

1. Section 8D.a. applies to a company's aggregate gross reserve before reinsurance. The reserve calculation requires a projection of future year-by-year cash flows, which includes such items as investment earnings and general insurance expenses. If a company has ceded 100% of the business to an authorized reinsurer by use of coinsurance, the assets and net liabilities are no longer on the ceding company's books. Additionally, the administration is also generally transferred to the reinsurer. In such circumstances, the projection of future cash flows is "hypothetical" in that one must assume a starting asset portfolio, future investment strategy, future general insurance expenses, and so on. Furthermore, the ceding company generally does not have the data or systems to determine the reserves and must rely on the assuming company.

2. Since the assuming company is required to calculate the reserves on both direct and assumed business, may the ceding company use the reserves as reported by the reinsurer in the reinsurer's annual statement?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. Under 100% coinsurance agreements with an authorized reinsurer, the ceding company is permitted to report reserves equal to those calculated by the reinsurer in the reinsurer's Exhibit 5/Schedule S.

4. Note that this interpretation was not being requested for coinsurance with funds withheld, modified coinsurance, or agreements where the reinsurer is unauthorized.

5. The Working Group recommends the above interpretation as guidance for yearend 2013, provided there is no conflict with the accounting requirements in the Accounting Practices and Procedures Manual. The issue/question will be submitted to the Life Actuarial (A) Task Force for broader consideration and possible amendment to the valuation manual.

Actuarial Guideline 38 Sections 8B and 8C

Issue / Question

1. Step 4 of Section 8E says "…determine the minimum amount of shadow account required to fully fund the guarantee." Should this determination take into account actual history, or is this a purely theoretical value?

2. Consider a hypothetical policy valued on its 5th anniversary. It has a shadow fund value of $12,000. Premiums of $2,500 were paid on each anniversary. If the policyholder paid an additional $63,000 (net of premium loads) on the valuation date, the guarantee would be fully funded. However, due to the product design, if the $12,000 shadow fund value resulted from a single premium of $10,000 at issue, the guarantee would be fully funded by payment of an additional $60,000 (net) at the valuation date. Is the "minimum amount" $75,000 or $72,000?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. Step 4 of Section 8E states that the determination is to be made as of "the valuation date for the policy being valued…", indicative of a seriatim calculation that considers the actual circumstances of the policy. If on the valuation date a specific set of charges and credits are applicable for future shadow account calculations, such charges and credits should be used in the determination regardless of any more favorable charges and credits that may have been available as of the issue date.

4. Given the information that the policyholder has no control over the future charges and credits to be applied in fully funding the guarantee, it is presumed that a single set of charges/credits (with no caps or floors) is operative as of the valuation date. While an unqualified response is not possible in the absence of a full understanding of the policy design, the minimum amount appears to be $75,000 rather than $72,000.

5. Also, per AG38, Section 8E, the actuary must ensure that the methodology is compatible with the intent that the funding ratio (Step 3 result divided by the Step 4 result) measures the level of prefunding.

Actuarial Guideline 38 Section 8D

Issue / Question

1. Actuarial INT 27 clarifies that AG38, Section 8D, addresses the gross reserve requirements and required documentation regarding reinsurance. In reviewing the AG 38, Section 8D Actuarial Memorandum and reinsurance information, it appears that guidance is needed to address situations where the YRT reinsurance agreement reserve credit taken may be significantly different than the reserve an assuming company has set up. Such a significant difference can be due to a larger credit being calculated under VM-20 assumptions versus that set up by an assuming company. Additionally, in some cases the higher gross reserve required under the AG 38, Section 8D modified deterministic reserve, was not reported in the statutory blank prior to the reinsurance credit being taken.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The reserve established pursuant to AG 38, Section 8D (AG38-8D), should be reported on a gross basis prior to any adjustment for reinsurance. In addition, the reserve credit for reinsurance on policies subject to AG38-8D should be calculated using current statutory requirements and mortality and interest applicable under the AG38-8D.a.1. calculation.

3. Since AG38-8D does not address credit for reinsurance and only addresses calculation of the gross reserve, any determination of such credit would be outside of AG38-8D and, therefore, based on current statutory requirements and accepted practices. For example, for the calculation of the ceding credit to be posted in the statutory statement, current accounting guidance (including SSAP No. 61R, paragraph 37) should be followed. And for asset adequacy analysis, both for general testing of aggregate reserves and for the standalone analysis required by AG38-8C, currently accepted actuarial practice should be followed. AG38-8D does not incorporate VM-20 directly into either of these.

Actuarial Guideline 38 Section 8D. a.2.a)(I), Section 7.D. of VM-20

Issue / Question

1. Subsection a.2. of Section 8D provides for two exceptions to the usual deterministic reserve requirements of VM-20 in calculating the gross premium reserve in Section 8D.a.2. One of these exceptions, in subsection a.2.a)(I), relates to net investment earnings on starting assets and limits those earnings to "…the lesser of (i) the actual portfolio net investment returns and (ii) the net investment returns based on a portfolio of A-rated corporate bonds…".

2. The language of Section 8D.a.2.a)(I) is not prescriptive as to the process for determining this net investment earnings comparison. One option is to compare actual portfolio yields to hypothetical portfolio yields as of a single point in time, most logically the valuation date. Another option is to develop both an actual and hypothetical portfolio as of the valuation date and project future asset cash flows and net investment returns prospectively and then use the lesser earning portfolio net investment return in each future year. Other prospective-type approaches to determining the Section 8D.a.2.a)(I) lesser net investment return portfolio are also possible. These lesser returns are then combined, in some fashion, with the net reinvestment return prescribed in Section 8D.a.2.a)(II) to develop the final path of discount rates used in the final Section 8D.a.2.c) reserve calculation.

3. In determining an appropriate interpretation of the language of Section 8D.a.2.a)(I) an important question to ask is: Is a prospective-type interpretation and approach illustrated above, or something similar, consistent with the determination of a single starting asset portfolio as described in Section 7.D. ofVM-20? The objective of the requirement in Section 8D.a.2.a)(I) is to impose a restriction on the determination of the starting asset portfolio required under VM-20 for the deterministic reserve calculation, not to anticipate the use of multiple portfolios prospectively. The use of future year-by-year net investment returns from multiple portfolios (actual and hypothetical) would appear to be inconsistent with the starting asset portfolio requirement of VM-20.

4. The issues at hand are twofold:

   a. Does a prospective future net investment return comparison interpretation of the language of Section 8D.a.2.a)(I) create an inconsistency with the language of Section 7.D. of VM-20 with respect to the requirements for utilizing a single starting asset portfolio in the deterministic reserve calculation?

   b. Given the multitude of possible approaches that might be used, does a prospective future net investment return comparison interpretation of the language of Section 8D.a.2.a)(I) lead to the creation of a non-level playing field beyond the range of approaches available in interpreting Section 8D.a.2.a)(I) in a manner that is consistent with VM-20?

Interpretation of Emerging Actuarial Issues (E) Working Group

5. For 12/31/2014 and later Section 8D submissions, for purposes of determining the starting asset portfolio, the language of Section 8D.a.2.a)(I) is interpreted such that the actual/hypothetical starting asset portfolio net investment return comparison is made as of the valuation date and not prospectively. Examples of how the comparison may be made include (i) a comparison of the weighted average hypothetical portfolio versus actual portfolio net investment returns as of the valuation date or (ii) a historical issue-year-by-issue-year hypothetical versus actual portfolio net investment return comparison, perhaps resulting in a starting asset portfolio as of the valuation date that is a hybrid of the company's actual portfolio assets for certain issue years and a hypothetical asset portfolio for other issue years.

Actuarial Guideline 38 Section 8D.a.2.c) and Section 7.C.4. of VM-20

Issue / Question

1. Subsection a.2.c) of Section 8D provides for the calculation of gross premium Primary Reserve to be performed using the path of net investment returns determined in Section 8D.a.2.b) "…to discount the cash flows applicable to those policies.", i.e. those policies subject to Section 8D. The cash flows referenced in Section 8D.a.2.c) are to include, as per Section 4.A.3. of VM-20, death and cash surrender benefits. For the ULSG policy types subject to the requirements of Section 8D, if the interest rate credited to the policy account value is a non-guaranteed element (NGE), the value of the benefits be directly impacted by the net investment earnings of the assets used to back the reserves held in support of the risks assumed under the policies. In addition, lapse rates for these ULSG policy types also may vary depending on the net investment earnings of the assets used to back the reserves held in support of the risks assumed under the policies.

2. Section 7.C. of VM-20, covering NGE cash flows, requires, in subsection 4. that:

   a. "Projected levels of NGE in the cash flow model must be consistent with the experience assumptions used in each scenario. Policyholder behavior assumptions in the model must be consistent with the NGE assumed in the model."

   b. There is only a single (level) interest rate scenario applicable for the Section 8D.a.2. reserve gross premium reserve calculation so the issue centers on whether the NGE and policyholder behavior assumptions are "consistent" with the experience assumptions and NGE respectively.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. This interpretation permits the delinking of the liability cash flows used in the Section 8D.a.2.c) gross premium reserve calculation from the net investment returns determined as in Section 8D.a.2.b) provided the actuary can provide justification that the impact of such delinkage on the Section 8D.a.2. reserve calculation is consistent with the requirements of Section 7.C.4 and Section 2G of VM-20.

4. The information required to support the delinked approach would need to present reasonable justification and reflect the consistency of the assumptions used with the particular company's anticipated experience and ULSG product structures. The information provided should be adequate to support the assertion that the requirements of Section 2.G. and Section 7.C.4. of VM-20 have been achieved.

Interpretation of the Emerging Actuarial Issues (E) Working Group

December 11, 2014

Date Adopted by Financial Condition (E) Committee

December 12, 2014

Reference

Actuarial Guideline 38 Section 8D. a.2.a)(I)

Issue / Question

1. Section 8D directs companies to test: "The company's aggregate gross reserve before reinsurance for the business subject to this Section 8D to be reported in the December 31, 2012, and subsequent annual statutory financial statements of the company will be the aggregate reserve under 1 below, plus any excess of the aggregate reserve determined as defined in 2 below, over 1".

2. Furthermore Section 8D requires that for existing assets: "The projected net investment earnings from the starting assets shall be the lesser of (i) the actual portfolio net investment returns and (ii) net investment returns based on a portfolio of A-rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue for those bonds."

3. Is it required to test reinsurance assumed?

   a. Some companies only test at the direct writer level (using hypothetical portfolios) while other companies test the reinsurance assumed against actual assets.

4. Is it appropriate to use hypothetical portfolios for testing?

   a. Assuming a company where the reserves are 100% ceded (all but an insignificant amount was coinsurance) and no assets remain. May the company test on the basis of a hypothetical portfolio of A rated bonds described above? While this may be the only interpretation available, there is no connection between the assets and the liabilities or any company investment policy.

   b. When the existing asset yield is below that of the hypothetical portfolio, is it required to take a hair-cut on the yields of the existing assets or is it acceptable to use a hypothetical portfolio of just one bond per issue year instead?

Interpretation of Emerging Actuarial Issues (E) Working Group

5. Do the requirements of AG38-8D apply to applicable reinsurance assumed?

   a. Yes. It is required to apply the requirements of AG38-8D to include reinsurance assumed on risks that are within its scope. AG38-8D(a) includes the company's "aggregate gross reserve before reinsurance…". This is interpreted, for applicable business, to be the company's direct written business plus coinsurance reinsurance assumed and prior to any reinsurance ceded. Only this interpretation is consistent with the scope of AG38-8D and the reporting of reserves in Exhibit 5 of the annual statement.

6. Is it appropriate to use hypothetical portfolios for testing?

   a. There are two types of hypothetical portfolios possible for this question.

      i. The first type of hypothetical portfolio is required by AG-38, 8D(a)(2)(a)(I)(ii). This citation provides for a derivation of a hypothetical "portfolio of A rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue for those bonds."

      ii. There may be a second type of hypothetical portfolio to use in place of the actual portfolio pursuant to AG38, 8D(a)(2)(a)(I)(i) if that actual portfolio is incomplete or unavailable for a company that has ceded some or all of the risk through coinsurance. In this case the company may coordinate with and make use of the reserve calculations of the assuming reinsurer, as provided in VM-20 Section 8.A.1. However, the ceding company, in calculating the pre-reinsurance ceded reserve or gross reserve required by AG-38 Section 8D, must assure that such modeling and assumptions are appropriate as provided by the first paragraph of VM-20 Section 8.D.2 and as provided by VM-20 Section 8.D.2.b.

Appendix D
GAAP Cross-Reference to SAP
as of December 2014

Introduction

As expressed in the Statement of Concepts, Statutory Accounting Principles (SAP) utilizes the framework established by Generally Accepted Accounting Principles (GAAP). Appendix D includes GAAP pronouncements that have been considered or are pending consideration in the development of SAP.

The NAIC Codification of Statutory Accounting Principles by the Statutory Accounting Principles (E) Working Group (SAPWG) (Statutory Accounting Principles as of January 1, 2000) addressed all GAAP pronouncements included in categories a, b, and c issued through 1996, during the initial drafting of the SSAPs, as well as the AICPA Accounting Interpretations included in Category D:

- Category A - FASB Statements and Interpretations, APB Opinions, and AICPA Accounting Research Bulletins

- Category B - FASB Technical Bulletins, Board-Directed FASB Staff Positions, AICPA Industry Audit and Accounting Guides, and AICPA Statements of Position

- Category C - Consensus positions of the FASB Emerging Issues Task Force (EITF) and AICPA Practice Bulletins

- Category D - AICPA Accounting Interpretations

Subsequent to the NAIC codification of statutory accounting principles, as documented in the Policy Statement on the Maintenance of Statutory Accounting Principles (included in Appendix F), the SAPWG continued to review new GAAP guidance for applicability to SAP. Beginning January 1, 1999, the NAIC Emerging Accounting Issues (E) Working Group (EAIWG) was formed and began addressing FASB EITF opinions issued subsequent to 1996. The positions of the EAIWG are documented in an interpretation (INT) as indicated by reference in the applicable column of the GAAP Cross-Reference to SAP chart. Appendix B includes the full text of EAIWG INTs issued before December 31, 2014. In October 2010, the SAPWG undertook a project to incorporate authoritative guidance related to specific topics in one location. This means that guidance within INTs has been incorporated into the applicable SSAPs, where possible. Appendix D now references the applicable SSAP, not the nullified INT. Therefore, completely superseded SSAPs and nullified interpretations (INTs) are removed from the printed Manual and are included on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage. Under this approach, only current authoritative guidance is located in Volume I of this Manual, while preserving the historical reference of previous authoritative SSAPs and INTs for accounting purposes. Completely superseded SSAPs and nullified INTs are also included in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

In June 2009, the FASB issued *FASB Statement 168, FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles (FAS 168)*, effective for interim and annual periods ending after Sept. 15, 2009. FAS 168 (Topic 105 of the FASB Codification) identified the sources of accounting principles and the framework for selecting the principles used in the preparation of the financial statements of nongovernmental entities that are presented in conformity with generally accepted accounting principles (GAAP) in the United States. Pursuant to this standard:

- FASB Accounting Standards Codification was established as the source of authoritative accounting principles recognized by the FASB to be applied by nongovernmental entities. (SEC guidance included within the FASB Codification is provided for convenience and relates only to SEC entities.)

- Accounting Standards Updates issued after the effective date of FAS 168 are not considered authoritative in their own right. Such standards serve only to update the FASB Codification, provide background information, and provide the bases of conclusions on the changes to the FASB Codification.

- Effective September 15, 2009, all non-SEC accounting and reporting standards were superseded. Additionally, all nongrandfathered, non-SEC accounting literature not included in the Codification was deemed nonauthoritative. As of September 15, 2009, AICPA Statements of Position are no longer reviewed as part of the statutory maintenance process as they are no longer considered authoritative GAAP literature. If the AICPA were to address an issue that affects the FASB Codification, an accounting standard update (ASU) would be issued and reviewed for applicability to statutory accounting.

As a result of FAS 168, Appendix D – GAAP Cross Reference to SAP has been revised to include reference of FASB Accounting Standards Updates, as well as the Accounting Standards Codification Reference (Topic and Subtopic) for pre-codification GAAP guidance. Pre-codification GAAP guidance that has been superseded as a result of exclusion from the GAAP Codification has been identified within Appendix D. **Users of the NAIC *Accounting Practices and Procedures Manual* shall continue to refer to the FASB pre-codification standards, and the applicable references to such standards, to determine the GAAP guidance that has been adopted, adopted with modification, or rejected for statutory accounting.**

To assist users in tracing pre-codification GAAP standards to the FASB Codification, Appendix D – GAAP Cross-Reference to SAP includes the Topic and Subtopic for all pre-codification GAAP standards that have been included in the FASB Codification. **This FASB Codification reference does not reflect GAAP guidance adopted for statutory accounting.** Only the guidance detailed in specific SSAPs or Interpretations shall be utilized in determining the GAAP guidance adopted, adopted with modification, or rejected for statutory accounting. Items noted with "Not Explicitly Included in Codification" are no longer included in the FASB Cross Reference tool. The information may have been included in a subsequent revision or removed.

Information Provided in Appendix D – GAAP Cross-Reference to SSAP:

- Status - This column includes the SAPWG/EAIWG status of review. A "Pending" status indicates that the SAPWG or EAIWG has not completed deliberation of the GAAP pronouncement. Items noted as "Not Board-Directed or SEC Update" will not be reviewed by the Working Group unless specifically requested for review.

- Disposition - This column represents the general conclusion of the SAPWG/EAIWG for the stated GAAP pronouncement. This information is included in Appendix D as a reference tool, however, the guidance in the specific SSAP or Interpretation shall be the authoritative source in determining the GAAP guidance adopted, adopted with modification, or rejected for statutory accounting.

- SSAP or INT Number – This column provides the authoritative statutory accounting source addressing the GAAP pronouncement.

- Accounting Standards Codification Topic and Subtopic – This column provides a reference guide to trace pre-codification GAAP standards to the new FASB Codification.

In addition to the "GAAP Cross Reference to SSAP," Appendix D includes the "FASB Codification to Pre-Codification GAAP" supplement. This supplement serves as a reference tool in tracing the FASB Codification to pre-codification GAAP standards that have been reviewed, or are pending review as part of the current NAIC statutory accounting maintenance process. This supplement does not indicate which GAAP standards have been adopted, adopted with modification or rejected for statutory accounting. Pre-codification GAAP guidance not captured as part of the statutory accounting maintenance process, but that has been incorporated in the FASB Codification, has not been referenced within this Supplement. Future consideration will occur on whether this pre-codification GAAP guidance will be reviewed for statutory accounting. Pre-codification GAAP included in the FASB codification, but not referenced within this supplement includes: FASB Derivative Implementation Group Issues; EITF Appendix D Topics; FASB Statement No. 138 Examples; FASB Staff Implementation Guides; AICPA Technical Inquiry Service and Audit and Accounting Guides. (The Audit and Accounting Guides (AAG) related to insurance have been reviewed for statutory accounting and are referenced in this supplement – HCO: Health Care Organizations, LHI: Life and Health Insurance and PLI: Property and Liability Insurance Companies. This supplement also does not include reference to the SEC standards incorporated within the FASB Codification: SEC Financial Reporting Releases; SEC Interpretive Releases; SEC Staff Accounting Bulletins; and SEC Regulation S-X.

[2] On December 5, 2009, the Statutory Accounting Principles (E) Working Group adopted revisions to the NAIC *Accounting Practices and Procedures Manual* to refer to the FASB Accounting Standards Codification as prescribed in *FAS 168, FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles* (FAS 168). With the issuance of FAS 168, and the establishment of the FASB Codification, the previous GAAP hierarchy established in *FAS 162, The Hierarchy of Generally Accepted Accounting Principles* (FAS 162) has been eliminated. As a result of FAS 168, the FASB Accounting Standards Codification is the source of authoritative accounting principles recognized by the FASB. (SEC guidance included within the codification is provided for convenience and relates only to SEC entities.) Pursuant to previous decisions by the Statutory Accounting Principles (E) Working Group, FASB Staff Positions (FSPs) issued after May 9, 2008, will be reviewed as part of the statutory accounting maintenance review process. FSPs issued prior to May 9, 2008, will be reviewed as part of the maintenance process if considered to be "Board-directed". (Board-directed FSPs were issued to provide narrow and limited revisions to the FASB statements or FASB interpretations formerly provided in FASB Technical Bulletins.) FSPs that were not considered "Board-directed" were considered to provide application guidance similar to that found in FASB Staff Implementation Guides and Staff Announcements and were previously classified (pre-FAS 162) as NAIC Level 5 guidance. Due to this Level 5 classification, these FSPs were not reviewed as part of the statutory accounting maintenance review process.

[3] As of September 15, 2009, AICPA Statements of Position are no longer reviewed as part of the statutory maintenance process as they are no longer considered authoritative GAAP literature. If the AICPA were to address an issue that affects the FASB Codification, an accounting standard update (ASU) would be issued and reviewed for applicability to statutory accounting. Therefore, this table will no longer be updated after SOP 09-1.

Note: SSAP No. 24 adopts guidance related to the definition of extraordinary items and terminology relevant to the disposal of a segment and the criteria for recording a related loss. It rejects all interpretations related to the accounting and reporting of discontinued operations, extraordinary items, and unusual or infrequently occurring events and transactions.

Appendix D
FASB Codification to Pre-Codification GAAP
as of December 2014

Information provided within this Appendix D supplement has been obtained from the FASB Cross-Reference Tool. This supplement serves as a reference tool in tracing the FASB Codification to pre-codification GAAP standards that have been reviewed, or are pending review as part of the current NAIC statutory accounting maintenance process. This supplement does not indicate which GAAP standards have been adopted, adopted with modification or rejected for statutory accounting. Pre-codification GAAP guidance not captured as part of the statutory accounting maintenance process, but that has been incorporated in the FASB Codification, has not been referenced within this Supplement. Future consideration will occur on whether this pre-codification GAAP guidance will be reviewed for statutory accounting. Pre-codification GAAP included in the FASB codification, but not referenced within this supplement includes: FASB Derivative Implementation Group Issues; EITF Appendix D Topics; FASB Statement No. 138 Examples; FASB Staff Implementation Guides; AICPA Technical Inquiry Service and Audit and Accounting Guides. The Audit and Accounting Guides (AAG) related to insurance have been reviewed for statutory accounting and are referenced in this supplement – HCO: Health Care Organizations, LHI: Life and Health Insurance and PLI: Property and Liability Insurance Companies. This supplement also does not include reference to the SEC standards incorporated within the FASB Codification: SEC Financial Reporting Releases; SEC Interpretive Releases; SEC Staff Accounting Bulletins; and SEC Regulation S-X.

***Indicates that the guidance that comprises this FASB Codification section was not previously part of the statutory maintenance process (i.e., below category "c" of the pre-codification GAAP hierarchy or SEC) or that no reference to previous GAAP guidance was reflected in the FASB Cross-Reference Tool.

Appendix E
Statutory Issue Papers

Introduction

Appendix E includes all of the issue papers associated with SSAPs adopted through December 2014. The issue papers are used as the first step in developing new or substantively revised SSAPs and contain a recommended conclusion, discussion, and relevant literature section. While the issue papers do not constitute an authoritative level of statutory accounting guidance, as defined by the statutory hierarchy, they are an important part of this Manual because they reference the history and discussion of the related SSAP.

Table of Contents

Volume II includes Issue Paper Nos. 1–75
Volume III includes Issue Paper Nos. 76–150

No.	Title	Page
	Vol. II	
1	Consolidation of Majority-Owned Subsidiaries	IP 1-1
2	Definition of Cash	IP 2-1
3	Accounting Changes	IP 3-1
4	Definition of Assets and Nonadmitted Assets	IP 4-1

Statutory Issue Paper No. 1

Consolidation of Majority-Owned Subsidiaries

STATUS
Finalized March 16, 1998

Current Authoritative Guidance for Consolidation of Majority-Owned Subsidiaries: SSAP No. 3 and SSAP No. 97

This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 3

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Currently, statutory reporting entities do not consolidate the financial statements of a majority-owned subsidiary in their annual statement filing. Investments in majority-owned subsidiaries are reported in Schedule D of the Annual Statement as other investments of a similar type (e.g., common stock and preferred stock) and are valued in accordance with the procedures outlined in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* (SVO Purposes and Procedures). Current GAAP guidance is not consistent with this position and requires consolidation of majority-owned subsidiaries.

SUMMARY CONCLUSION

2. The policy of not consolidating majority owned subsidiaries for individual entity statutory reporting is consistent with the recognition concept included in the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts), therefore formal codification of such practice is recommended. The current statutory practice for recording the investment in majority-owned subsidiaries is also an accepted statutory accounting practice by all states.

3. Certain reporting entities who are members of an affiliated group may be required to prepare and issue consolidated or combined annual statements as supplemental information. These statements shall be prepared in accordance with NAIC guidelines.

DISCUSSION

4. The policy of not consolidating majority-owned subsidiaries is consistent with the *Recognition* concept included in the Statement of Concepts. This concept states that one objective of statutory reporting is to reflect an entity's ability to meet its policyholder obligations with the existence of readily marketable assets available when both current and future obligations are due. With an investment in subsidiaries, the cash flow generated by the investee may not be available to satisfy policyholder obligations. Therefore the asset that is readily marketable is the shares of ownership (e.g., common or preferred stock).

5. Other issue papers address specific statutory accounting principles which will be used in recording a reporting entity's investment in insurance and non-insurance affiliates.

Drafting Notes/Comments

- Valuation of the investment in subsidiaries and the reporting of the related income or loss as described in Chapter 6 of the Life APP and Chapter 5b in the SVO Purposes and Procedures is addressed in another issues paper.
- Subsidiary is defined in *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

6. Statutory accounting guidance defines a subsidiary, controlled, or affiliated ("SCA") entity in terms of controlling ownership in an entity's voting capital stock. Ownership of more than 50% provides "undisputed control" and when 50% or less of the outstanding stock is owned, "control is dependent upon the influence that the owner of that block of stock may have on the other holders of outstanding capital stock." Relevant guidance states that *"Investments in SCA companies include debt security loans and preferred and common stock. In general, the accounting for each type of investment is the same as it would be for any other bond, preferred stock, or common stock investment except that there are some special valuation considerations.*" This precludes consolidation of subsidiaries for individual entity statutory reporting purposes.

Generally Accepted Accounting Principles

7. FAS 94 paragraph 13 (amending ARB 51 paragraphs 2 and 3), states:

> 2. The usual condition for a controlling financial interest is ownership of a majority voting interest, and, therefore, as a general rule ownership by one company, directly or indirectly, of over fifty percent of the outstanding voting shares of another company is a condition pointing toward consolidation. However, there are exceptions to this general rule. A majority-owned subsidiary shall not be consolidated if control is likely to be temporary or if it does not rest with the majority owner (as, for instance, if the subsidiary is in legal reorganization or in bankruptcy or operates under foreign exchange restrictions, controls, or other governmental imposed uncertainties so severe that they cast significant doubt on the parent's ability to control the subsidiary).
>
> 3. All majority-owned subsidiaries--all companies in which a parent has a controlling financial interest through direct or indirect ownership of a majority voting interest--shall be consolidated except those described in the last sentence of paragraph 2.

Statutory Issue Paper No. 2

Definition of Cash

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 2

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance limits the classification of cash to include only *"a medium of exchange that a bank will accept for deposit and allow an immediate credit to the depositor's account."* The statutory guidance also allows *"temporary investments in the form of saving accounts and nonnegotiable certificates of deposit in qualified banks and trust companies"* to be classified as cash. Nonnegotiable certificates of deposit are instruments whose title may only be transferred upon the agreement of the affected parties to the terms and conditions of the transfer and not upon endorsement and delivery or delivery alone.

2. Additionally, current statutory practice allows reporting of negative cash as a negative asset. This treatment is consistent with the conservatism concept discussed in the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Cash Definition

3. Cash constitutes a medium of exchange that a bank or other similar financial institution will accept for deposit and allow an immediate credit to the depositor's account. Also classified as cash for financial statement purposes, although not falling within the above definition of cash, are savings accounts and certificates of deposit in banks or other similar financial institutions with maturity dates in one year or less from the acquisition date and cash equivalents. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities of three months or less qualify under this definition.

Treatment of Negative Cash Balances

4. If a reporting entity has multiple cash accounts, the net amount of all such accounts shall be reported jointly. Cash accounts with positive balances shall not be reported separately from cash accounts with negative balances. If in the aggregate, the reporting entity has a net negative cash balance, this amount shall be reported as such in the annual statement and shall not be recorded as a liability.

DISCUSSION

5. As stated in the Statement of Concepts, *"the cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders." Additionally, it states "the ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due."* The definition of cash is consistent with the Statement of Concepts. Those instruments not included in the definition of cash (e.g., commercial paper and overnight repurchase agreements in excess of 3 months) shall be shown separately as short-term investments.

6. Treating all certificates of deposit with maturity dates in one year or less from the financial statement date as cash is a change from current statutory accounting. This change was made to address inconsistencies in the guidance between the Accounting Practices and Procedures Manuals for Property and Casualty Insurance Companies and Life and Accident and Health Insurance Companies (P&C and Life/A&H Accounting Practices and Procedures Manuals) and the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* (SVO Purposes and Procedures). The P&C and Life/A&H Accounting Practices and Procedures Manuals require all nonnegotiable certificates of deposit to be classified as cash and negotiable certificates of deposit to be classified as short-term investments or bonds depending on the length to maturity at acquisition. The SVO Purposes and Procedures requires both negotiable and nonnegotiable certificates of deposit to be submitted to the SVO and valued under the general provisions for valuing bonds.

7. The treatment of recording negative cash as a negative asset in the statutory balance sheet follows the concept of conservatism as many regulatory limitations are calculated based upon total admitted assets.

Drafting Notes/Comments

- Funds classified as cash which are not immediately available for the benefit of policyholders (i.e., restricted cash, trust accounts, etc.) is addressed in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*.
- Treatment of drafts issued and drafts honored will be addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. Existing statutory accounting guidance specifically addresses assets qualifying for treatment and classification as cash. Statutory accounting classifies certain assets as being either cash, short-term or long-term investments. The P&C Accounting Practices and Procedures Manual defines cash as follows:

> The asset must be a medium of exchange that a bank will accept for deposit and allow an immediate credit to the depositor's account. Also classified for financial statement purposes, although not falling within the above description of cash, are temporary investments in the form of saving accounts and nonnegotiable certificates of deposit in qualified banks and trust companies.

There is a similar definition of cash in the Life/A&H Accounting Practices and Procedures Manual.

9. Section 2(C)(7) of the SVO Purposes and Procedures indicates the following requirements for certificates of deposit: "Certificates of Deposit (negotiable and non-negotiable) will be considered under the general provisions of Section 2(B)."

Generally Accepted Accounting Principles

10. GAAP adds a "cash equivalent" category for instruments classified as cash. GAAP literature defines a cash equivalent to be short-term, highly liquid investments that are readily convertible to known amounts of cash and are so near their maturity that they present insignificant risk of changes in value because of changes in interest rates.

Statutory Issue Paper No. 3

Accounting Changes

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 3

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Statutory accounting and GAAP differ in accounting for corrections of errors and certain changes in accounting. Statutory accounting and GAAP are similar in their treatment of mergers and changes in reporting entities. The purpose of this issue paper is to codify statutory guidance and to expand disclosure requirements for changes in accounting, which include changes in accounting principle, estimate, and reporting entity, and for correction of an error in previously issued financial statements in order to achieve the concept of consistency/comparability as defined in the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. The term accounting change means a change in an accounting principle, an accounting estimate or the reporting entity. The correction of an error in previously issued financial statements is not deemed to be an accounting change.

Accounting Principle

3. A change in accounting principle results from the adoption of an accepted accounting principle different from the one previously used for reporting purposes. An accounting principle includes not only accounting principles and practices but also the methods of applying them.

4. A characteristic of a change in accounting principle is that it concerns a choice from among two or more accounting principles. However, neither (a) initial adoption of an accounting principle in recognition of events or transactions occurring for the first time or that previously were immaterial in their effect nor (b) adoption or modification of an accounting principle necessitated by transactions or events that are clearly different in substance from those previously occurring is a change in accounting principle.

Accounting Estimate

5. Changes in estimates used in accounting are necessary consequences of periodic presentations of financial statements which require estimating the effects of future events. Examples of items for which estimates are necessary include service lives of depreciable assets and uncollectible receivables. Accounting estimates change as new events occur, as more experience is acquired, or as additional information is obtained.

Correction of an Error

6. Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles or oversight or misuse of facts that existed at the time the financial statements were prepared. In contrast, a change in accounting estimate results from new information or subsequent developments and accordingly from better insight or improved judgment. Thus an error is distinguished from a change in estimate.

7. Current statutory treatment shall be retained as follows:

- Changes in accounting principles and corrections of errors in previously reported financial statements shall be reported as adjustments to surplus in the period of the change in accounting principle or the period an error is detected.
- A change in the method of applying an accounting principle shall be considered as a change in accounting principle for purposes of applying the accounting principles set forth in this paper.
- A change in accounting estimate shall be included in the statement of income in the period when the change becomes known.

8. If the effect of a change in accounting principle is inseparable from the effect of a change in accounting estimate, then the change shall be considered as a change in accounting estimate for purposes of applying the accounting principles set forth in this paper. The treatment of a change resulting from an insurance department examination will depend on whether the change resulted from a correction of an error, a change in accounting principle or a change in estimate.

9. Material changes which do not affect assets, liabilities, revenues, expenses or surplus but which do affect historical information in the financial statement supplemental schedules (e.g., Schedule P) shall be reflected in the current years' schedules with appropriate notations made directly to the affected schedules and in the notes to the financial statement.

10. For mergers, restatement of prior years' amounts in the Annual Statement shall be required. Additionally, restatement shall be required for the two most recent years' included in the Five Year Historical Summary. The Five Year Historical Summary shall include a footnote that the other three years have not been restated. A company that merges with an entity which effectively is a shell company (i.e., the other entity has no outstanding underwriting liabilities), shall be exempt from the above requirements.

Disclosures

11. Disclosure of material changes in accounting and correction of errors shall include:

- a brief description of the change, encompassing a general disclosure of the reason and justification for change or correction.
- the impact of the change or correction on net income, surplus, total assets and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations).
- the effect on net income of the current period shall be disclosed for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material.

DISCUSSION

12. *Accounting Principles Board Opinion No. 9*, *Reporting the Results of Operations* (APB 9) and *Accounting Principles Board Opinion No. 20*, *Accounting Changes* (APB 20) address GAAP accounting and reporting for accounting changes. Portions of these pronouncements are not applicable to statutory accounting and some of the guidance is not consistent with statutory objectives. Therefore, rejection of APB 20 in its entirety and the portions of APB 9 that address the treatment of extraordinary items and prior period adjustments is recommended.

13. The consistency concept within the Statement of Concepts is concerned with the regulator's need for meaningful, comparable financial information to determine an entity's financial condition through

consistency in the development and application of statutory accounting principles. In keeping with the Statement of Concepts, comparability of financial information would be best served by the restatement of prior year financial information for certain changes in accounting principle as well as the correction of an error in the previous year. However, existing statutory accounting guidance and practice requires such an item to be shown as an adjustment to surplus. In order to bridge the gap between current statutory accounting guidance and the achievement of comparability sought by the Statement of Concepts, additional disclosure as to the general description and the effect of such changes on income and surplus for all periods presented would provide the financial statement reader enough information to understand the effect of such change on consistency between periods.

14. The modification of existing statutory accounting for additional disclosure relating to changes between years and correction of prior errors bridges the gap between GAAP accounting as required by APB 20 and APB 9. More importantly, the added disclosure bridges the gap between current statutory procedures and the concept of consistency/ comparability required by the Statement of Concepts.

Drafting Notes/Comments

- Accounting for Consolidations of Majority-owned Subsidiaries is addressed in a separate issue paper (see Issue Paper No. 1).
- Accounting for mergers is addressed in a separate issue paper. This may include an expansion of the traditional definition of a merger to include all combinations or assumptions which, in substance, are mergers.
- Extraordinary items are discussed in a separate issue paper.
- Specific discussion regarding reserve changes including a change in valuation basis is addressed in a separate paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

15. Statutory accounting is specific as to the treatment of accounting changes. The primary statutory accounting guidance is the NAIC Annual Statement Instructions (Annual Statement Instructions). Summarized, the Annual Statement Instructions specify that a change in accounting principle or the correction of an error is to be reported as an adjustment to surplus. Changes in accounting estimates are to be included in the statement of income for the current period. The treatment for a merger requires that prior year's amounts be restated and reported on a merged basis consistent with the current year's post-merger reporting basis.

16. The issues of changes in accounting principles and estimates are not specifically addressed in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies.

17. Chapter 10 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, in a discussion on recoveries from salvage and subrogation, states that:

> Companies which have previously reported reserves gross of salvage and subrogation should report the change to the net method as a change in accounting principle. The cumulative effect on prior years of this change should be reported as a write-in item in the surplus section of the annual statement. The change in the reserve calculated using the net method should be included in net income for the year of the change and all future years.

18. The Annual Statement Instructions (which documents the conclusions reached by the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force in meeting 92-1) addresses accounting changes. The instructions state that:

Amounts reported in prior years may need to be adjusted in the current year as a result of the following:

Changes in accounting principles or practices or changes in the methods of applying accounting principles or practices.

Changes in accounting estimates as a result of new events or new information.

Corrections of errors in previously filed information.

A merger.

If changes are required for amounts reported in prior years, such changes should be included in the amounts reported for the current year and the effects of such changes should be reported as follows, unless these Instructions or the NAIC Accounting Practices and Procedures manual specifically provide for a different treatment:

(1) The cumulative effect of a change in accounting principles or practices or a change in the method of applying accounting principles or practices should be reported with an appropriate identifying title as a write-in item for gains and losses in surplus. The cumulative effect of changing to a new accounting principle is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods. An example of a change in accounting principles would be a change in the method of accounting for pensions or other post-employment benefits.

(2) The effects of changes in accounting estimates are included in income and expenses in the Statement of Income for the current year. For example, a change in the estimate of loss reserves for losses related to prior years should be included in the Statement of Income in losses incurred for the current year.

(3) The effects of changes resulting from corrections of errors in previously filed information (for example, mathematical mistakes, misapplication of accounting principles, or oversight or misuse of facts) should be reported as an adjustment to surplus in the current year. Such adjustments to surplus should be reported with an appropriate identifying title as a write-in item for gains and losses in surplus.

(4) In the case of a merger, prior years' amounts reported for assets, liabilities, surplus, revenues and expenses, as well as those amounts reflected in supporting Annual Statement schedules, should be reported on a merged basis consistent with the current year's post-merger reporting basis. A footnote should be inserted on each page of the Annual Statement which contains such merged amounts clearly detailing the circumstances.

If one of the above described adjustments is required that does not affect assets, liabilities, revenues or expenses but which does adjust historical information, such as that found in Schedule P, the change may be made in the currently filed annual statements; however, appropriate notations of such adjustments should be made directly on the schedules affected and in the notes to the Financial Statements.

Generally Accepted Accounting Principles

19. Statutory accounting treatment is similar to GAAP except for the following:

- when reporting changes in accounting principles, GAAP accounting requires that the cumulative effect of a change be reported in the statement of income as a separate line item. Statutory accounting requires this to be shown as a separate component of surplus.
- GAAP accounting requires that corrections of errors be reported as prior period adjustments with adjustment to the prior year income and surplus.
- accounting for changes in a reporting entity includes several circumstances in which there may be a change in reporting entity. The only relevant area as it applies to Statutory Accounting is that of a merger. As such, this is the only area which Statutory Accounting specifically addresses.

20. The primary GAAP accounting guidance with respect to accounting changes comes from APB 20, paragraph 19, which states that changes in accounting principles are to be reported as follows:

a. Financial statements for prior periods included for comparative purposes should be presented as previously reported.

b. The cumulative effect of changing to a new accounting principle on the amount of retained earnings at the beginning of the period in which the change is made should be included in net income of the period of the change.

c. The effect of adopting the new accounting principle on income before extraordinary items and on net income of the period of the change should be disclosed.

d. Income before extraordinary items and net income computed on a pro forma basis should be shown on the face of the income statements for all periods presented as if the newly adopted accounting principle had been applied during all periods affected.

21. APB 20 also states that changes in accounting estimates are to be accounted for as follows:

> ...the effect of a change in accounting estimate should be accounted for in
> a. the period of change if the change affects that period only or
> b. the period of change and future periods if the change affects both.
>
> A change in an estimate should not be accounted for by restating amounts reported in financial statements of prior periods or by reporting pro forma amounts for prior periods.

22. For changes in the reporting entity (e.g., a merger), APB 20 states the following:

> ...accounting changes which result in financial statements that are in effect the statements of a different reporting entity should be reported by restating the financial statements of all prior periods presented in order to show financial information for the new reporting entity for all periods.

23. For changes in accounting principles inseparable from changes in accounting estimates, APB 20 states:

> Changes of this type are often related to the continuing process of obtaining additional information and revising estimates and are therefore considered as changes in estimates for purposes of applying this Opinion.

24. Lastly, according to APB 20, corrections of errors are to be accounted for as follows:

> Correction of an error in the financial statements of a prior period discovered subsequent to their issuance should be reported as a prior period adjustment.

25. GAAP accounting provides guidance with respect to the accounting for prior period adjustments in APB 9, paragraph 18. APB 9 states that *"When comparative statements are presented corresponding adjustments should be made of the amounts of net income (and the components thereof) and retained earnings balances (as well as of other affected balances) for all of the periods reported therein, to reflect the retroactive application of the prior period adjustments."* Additionally, APB 9 requires footnote disclosures regarding such changes.

Statutory Issue Paper No. 4

Definition of Assets and Nonadmitted Assets

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 4

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. One of the cornerstones of the statutory accounting model is the use of nonadmitted assets. This concept interjects a level of conservatism in the reporting of an insurance enterprise's statutory financial position and is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). Currently, statutory accounting does not address the general definition of assets as used in the statutory accounting model. Furthermore, statutory accounting is not explicit and is sometimes inconsistent with regard to the guidelines for accounting for nonadmitted assets. Current guidance allows the establishment of an asset. This asset is charged against surplus as a nonadmitted asset, and is also depreciated or amortized against net income as its estimated economic benefit expires. Current guidance also allows in limited circumstances for a nonadmitted asset to be charged through operations when acquired.

The purpose of this issue paper is to provide a definition of an "asset" for use in statutory accounting and establish consistent treatment of nonadmitted assets.

SUMMARY CONCLUSION

2. For purposes of statutory accounting, an asset shall be defined as: probable[1] future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3 below.

[1] *FASB Statement of Financial Accounting Concepts No. 6*, *Elements of Financial Statements* (CON 6), states:

Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement No. 5, *Accounting for Contingencies*, par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved...

3. As stated in the Statement of Concepts, *"The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party*

interests should not be recognized on the balance sheet", and are, therefore, considered nonadmitted. For purposes of the Codification, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting and is one which is:

a. Specifically identified within the Codification as a nonadmitted asset or

b. Not specifically identified within the Codification as an admitted asset.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Codification. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's capitalization policy, immaterial amounts of furniture, fixtures, and equipment, or supplies, can be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of an asset, but are specifically identified within the Codification as not giving rise to assets (e.g., policy acquisition cost), shall also be charged to operations in the period the transactions occur.

DISCUSSION

5. The Accounting Practices and Procedures Manuals for Property and Casualty and for Life and Accident and Health Insurance Companies define the term nonadmitted asset as an asset that has been *"accorded limited or no value in statutory reporting"*. Chapter 9 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies further elaborates by saying, *"Some assets may be nonadmitted because they do not conform to the laws and regulations of the various states and other assets may be nonadmitted because they are not readily convertible to liquid assets."* Chapter 9 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies includes a similar discussion.

6. The concept of nonadmitted assets can be traced back to the 1874 Association Blank, thus establishing general acceptance through universal use. Statutory accounting does not specifically address the general definition of an asset. CON 6, which was adopted as part of the framework to be utilized in the Codification, does provide a general definition of assets. This provides an appropriate measure for statutory assets.

7. The adoption of the above accounting principles will be consistent with the recognition concept within the Statement of Concepts (i.e., the ability to meet policyholder obligations as predicated on the existence of readily marketable assets available when both current and future obligations are due).

Drafting Notes/Comments

- Accounting Practices and Procedures manual states that non-admittance of accrued investment income is to be recorded as a reduction of investment income. This is specifically addressed in a separate issue paper.
- Deferred premiums is addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. Statutory accounting in this area is general and somewhat inconsistent. The prefaces to the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies state:

> State statutes and accompanying regulations generally define what may be included as assets on a balance sheet, i.e., admitted assets. Because of the conservatism intrinsic to insurance accounting, certain assets may be accorded limited or no value in statutory reporting, i.e., nonadmitted assets. The investments a company is permitted to make and the limitations and methods of valuation for inclusion as admitted assets are usually specified. Also, because of the nature of the calculation of certain liabilities, offsetting of assets is permitted in order to maintain consistency. The discussion of assets in Part One includes certain nonadmitted as well as admitted assets.

9. Chapter 9 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies discusses the accounting for periodic transactions for nonadmitted assets as follows:

> Some assets or portions thereof may be nonadmitted because they do not conform to the laws and regulations of the various states. As a result, certain assets which normally would be accorded value in noninsurance corporations are accorded no value and thus reduce the reported surplus of the insurance company. In addition, state regulations require that certain expenditures which could normally be capitalized by a non-insurance company be charged as an expense.
>
> Changes between years in nonadmitted assets are usually charged directly to surplus. The change between years in nonadmitted investment income due or accrued, though, is reported as a component of investment income in the summary of operations.
>
> Even though a state insurance code may prohibit or limit certain assets, these assets are generally carried in the company's general ledger. Depreciable assets are depreciated in a systematic and rational manner over their estimated useful lives.

10. Chapter 9 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies states:

> Because, in many respects, the statutory balance sheet is presented on a conservative basis, certain assets (which may have a recognized value in noninsurance corporations) are accorded no value and thus reduce the reported surplus of the insurance company. Some assets may be nonadmitted because they do not conform to the laws and regulations of the various states and other assets may be nonadmitted because they are not readily convertible to liquid assets. Changes in the amount of nonadmitted assets are charged or credited directly to surplus.
>
> Each chapter in this book relating to investments discusses the limitations in amount and quality of investments that are treated as admitted. In general, authorized investments that are within the limitations of the laws and regulations of the various states are considered to be admitted assets. Investments exceeding the limitations, or those of questionable quality, may be nonadmitted.

11. Chapter 9 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies also provides some general guidance on certain nonadmitted assets. A sample follows:

> Electronic Data Processing Equipment: Application systems software may be expensed when purchased or established as a nonadmitted asset and written off over a period of years not to exceed the software's expected useful life.
>
> Equipment, Furniture and Supplies: The company may record furniture and equipment as a ledger asset, depreciate it, and nonadmit it in the exhibit of assets in the statutory financial statements, or the company may expense the furniture and equipment when it is purchased. Supplies are normally expensed when purchased.

Generally Accepted Accounting Principles

12. Asset recognition is governed by *FASB Statement of Financial Accounting Concepts No. 6*, *Elements of Financial Statements* (CON 6), paragraphs 25-34. An asset is defined in paragraph 25 of CON 6 as follows:

> Assets are probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

13. Paragraph 26 of CON 6, further defines the characteristics of an asset as follows:

> An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.

Statutory Issue Paper No. 5

Definition of Liabilities, Loss Contingencies and Impairments of Assets

STATUS
Finalized March 16, 1998

Original SSAP: SSAP No. 5; Current Authoritative Guidance: SSAP No. 5R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Statutory accounting currently does not define the term liability for use in preparation of statutory financial statements. Statutory accounting does address the accounting for certain liabilities within the statutory framework. The current statutory accounting guidance results in some confusion about when the recording of a liability, loss contingency or impairment of an asset is required outside the specific guidance prescribed by statutory accounting. The purpose of this issue paper is to provide a definition of a "liability" for statutory accounting purposes and to provide the accounting principles to be followed when recording such a liability in statutory financial statements. This paper also establishes the criteria for recording loss contingencies and impairments of assets.

SUMMARY CONCLUSION

Liabilities

2. For purposes of statutory accounting, a "liability" shall be defined as certain or probable[1] future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transaction(s) or event(s). A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable[1] future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes but is not limited to liabilities arising from policyholder obligations (e.g. policyholders benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a Company's financial statements when incurred.

3. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

[1] *FASB Statement of Financial Accounting Concepts No. 6*, *Elements of Financial Statements* (CON 6), states:

> Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies,* par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved...

Loss Contingencies or Impairments of Assets

4. For purposes of implementing the statutory accounting principles of loss contingency or impairment of an asset described below the following additional definitions shall apply:

> **Probable -** The future event or events are likely to occur.
>
> **Reasonably Possible -** The chance of the future event or events occurring is more than remote but less than probable.
>
> **Remote -** The chance of the future event or events occurring is slight.

5. A "loss contingency" or "impairment of an asset" is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible loss to an enterprise that will ultimately be resolved when one or more future event(s) occur or fail to occur (e.g., collection of receivables).

6. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability, and

b. The amount of loss can be reasonably estimated.

7. This accounting shall be followed even though the application of other prescribed statutory accounting principles or valuation criteria may not require, or does not address, the recording of a particular liability or impairment of an asset (e.g., known impairment of an invested asset even though published VOS manual has not recognized impairment).

8. Additionally, in instances where a judgment, assessment or fine has been rendered against a company, there is a presumption that the criteria in paragraph 6.a. and 6.b. have been met. The amount of the liability shall include the anticipated settlement amount, legal costs, insurance recoveries and other related amounts and shall take into account factors such as the nature of the litigation, progress of the case, opinions of legal counsel, and management's intended response to the litigation, claim, or assessment.

9. When condition 6 a. above is met with respect to a particular loss contingency, and the reasonable estimate of the loss is a range, which meets condition 6 b. above, an amount shall be accrued for the loss. When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be accrued. When no amount within the range is a better estimate than any other amount, however, the midpoint (mean) in the range shall be accrued. For purposes of this paragraph, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be used.

Disclosure

10. If a loss contingency or impairment of an asset is not recorded because only one of the conditions 6 a. or 6 b. is met, or if exposure to a loss exists in excess of the amount accrued pursuant to the provisions described above, disclosure of the loss contingency or impairment of the asset shall be made in the notes to the financial statements when there is at least a reasonable possibility that a loss or an additional loss may have been incurred. The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made.

11. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

12. Certain loss contingencies, the common characteristic of each being a guarantee, shall be disclosed in financial statements even though the possibility of loss may be remote. Examples include (a) guarantees of indebtedness of others, and (b) guarantees to repurchase receivables (or, in some cases, to repurchase related properties) that have been sold or otherwise assigned. The disclosure of those loss contingencies, and others that in substance have the same characteristics, shall be applied to statutory financial statements. The disclosure shall include the nature and amount of the guarantee. Consideration shall be given to disclosing, if estimable, the value of any recovery that could be expected to result, such as from the guarantor's right to proceed against an outside party.

DISCUSSION

13. The Conclusion above adopts certain principles in *FASB Statement No. 5*, *Accounting for Contingencies* (FAS 5), *FASB Statement No. 114*, *Accounting by Creditors for Impairment of a Loan* (FAS 114) – only as it amends in part FAS 5, and paragraphs 35 and 36 of *FASB Statement of Concepts No. 6—Elements of Financial Statements. FASB Interpretation No. 14, Reasonable Estimation of Amounts of a Loss*, *An Interpretation of FASB Statement No.* 5 is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum. This issue paper also adopts *FASB Interpretation No. 34*, *Disclosure of Indirect Guarantees of Indebtedness of Others, An interpretation of FASB Statement No. 5,*and *Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967, paragraphs 2 and 3.*

14. Although the above accounting principles are not specifically discussed in current statutory accounting literature, these principles are well established in the determination of policy reserves in the life insurance and property and casualty accounting models. Both models use actuarial methods to establish the accounting estimates recorded. Obligations incurred in the normal conduct of business (e.g., obligations to pay employees, obligations to pay for assets or services acquired, etc.) represent other examples of applying the accounting principles described above.

15. Consistent with the solvency and conservatism concepts in the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy, the statutory accounting model uses numerous accounting methods to accomplish the objective of reporting a company's statutory financial position to demonstrate solvency. These accounting methods (nonadmitted assets, Asset Valuation Reserves, etc.) normally do not meet the criteria required in applying the accounting principles described in the Conclusion above. Therefore, such accounting methods should be applied by direct charges to or appropriation of a Company's surplus. Notwithstanding the application of these statutory accounting methods, when an event, situation, transaction or other information comes to the financial statement preparer's attention that indicates a liability or loss has been incurred or that an asset has been impaired, the accounting principles described in the Conclusion above should be followed.

16. Paragraph 9 provides guidance on recording an estimate which lies within an estimated range. It is anticipated that using the midpoint in a range will be applicable only in the rare instance where there is a continuous range of possible values, and no amount within that range is any more probable than any other. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine their best estimate of the liability.

17. Disclosure of the nature of accruals made in applying the above statutory accounting principle and in some circumstances the amount accrued may be necessary for the fair presentation of the statutory financial statements.

Drafting Notes/Comments

- Appropriation of retained earnings and gain contingencies (e.g., paragraphs 15 and 17 of FAS 5) are covered in separate issue papers.
- *FASB Statement No. 114*, *Accounting by Creditors for Impairment of a Loan*, is addressed in its entirety in a separate issue paper.
- Impairment of mortgage loans, real estate investments and other invested assets are addressed in separate issue papers.
- Policy, loss and claim reserves are addressed in separate issue papers.
- Surplus notes is addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

18. As discussed above, current statutory accounting is limited to dealing with specific asset and liability captions included on a company's statement of financial position.

Generally Accepted Accounting Principles

19. Relevant sections of GAAP literature follow:

FASB Statement of Concepts No. 6*, *Elements of Financial Statements

> 35. Liabilities are probable[21] future sacrifices of economic benefits arising from obligations[22] of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.
>
> [21] Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in Statement 5, par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved (Webster's New World Dictionary, p. 1132). Its inclusion in the definition is intended to acknowledge that business and other economic activities occur in an environment characterized by uncertainty in which few outcomes are certain (pars. 44-48).
>
> [22] Obligations in the definition is broader than legal obligations. It is used with its usual general meaning to refer to duties imposed legally or socially; to that which one is bound to do by contract, promise, moral responsibility, and so forth (Webster's New World Dictionary, p. 981). It includes equitable and constructive obligations as well as legal obligations (pars. 37-40).
>
> 36. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. Liabilities commonly have other features that help identify them - for example, most liabilities require the obligated entity to pay cash to one or more identified other entities and are legally enforceable. However, those features are not essential characteristics of liabilities. Their absence, by itself, is not sufficient to preclude an item's qualifying as a liability. That is, liabilities may not require an entity to pay cash but to convey other assets, to provide or stand ready to provide services, or to use assets. And the identity of the recipient need not be known to the obligated entity before the time of settlement. Similarly, although most liabilities rest generally on a foundation of legal rights and duties, existence of a legally enforceable claim is not a prerequisite for an obligation to qualify as a liability if for other reasons the entity has the duty or responsibility to pay cash, to transfer other assets, or to provide services to another entity.

FASB Statement No. 5, Loss Contingencies

1. For the purpose of this Statement, a contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a "gain contingency") or loss[1] (hereinafter a "loss contingency") to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.

[1] The term loss is used for convenience to include many charges against income that are commonly referred to as expenses and others that are commonly referred to as losses.

2. Not all uncertainties inherent in the accounting process give rise to contingencies as that term is used in this Statement. Estimates are required in financial statements for many on-going and recurring activities of an enterprises. The mere fact that an estimate is involved does not of itself constitute the type of uncertainty referred to in the definition in paragraph 1. For example, the fact that estimates are used to allocate the known cost of a depreciable asset over the period of use by an enterprise does not make depreciation a contingency; the eventual expiration of the utility of the asset is not uncertain. Thus, depreciation of assets is not a contingency as defined in paragraph 1, nor are such matters as recurring repairs, maintenance, and overhauls, which interrelate with depreciation. Also, amounts owed for services received, such as advertising and utilities, are not contingencies even though the accrued amounts may have been estimated; there is nothing uncertain about the fact that those obligations have been incurred.

3. When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms *probable, reasonably possible*, and *remote* to identify three areas within that range, as follows:

   a. *Probable*. The future event or events are likely to occur.

   b. *Reasonably possible*. The chance of the future event or events occurring is more than remote but less than likely.

   c. *Remote*. The chance of the future event or events occurring is slight.

Accrual of Loss Contingencies

8. An estimated loss from a loss contingency (as defined in paragraph 1) shall be accrued by a charge to income[3] if both of the following conditions are met:

   a) Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements.[4] It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.

[3] Paragraphs 23-24 of APB Opinion No. 9, "Reporting the Results of Operations," describe the "rare" circumstances in which a prior period adjustment is appropriate. Those paragraphs are not amended by this Statement.

[4] Date of the financial statements means the end of the most recent accounting period for which financial statements are being presented.

   b) The amount of loss can be reasonably estimated.

Disclosure of Loss Contingencies

9. Disclosure of the nature of an accrual[5] made pursuant to the provisions of paragraph 8, and in some circumstances the amount accrued, may be necessary for the financial statements not to be misleading.

10. If no accrual is made for a loss contingency because one or both of the conditions in paragraph 8 are not met, or if an exposure to loss exists in excess of the amount accrued pursuant to the provisions of paragraph 8, disclosure of the contingency shall be made when there is at least a reasonable possibility that a loss or an additional loss may have been incurred.[6] The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

[5] Terminology used shall be descriptive of the nature of the accrual (see paragraphs 57-64 of Accounting Terminology Bulletin No. 1, “Review and Resume”).

[6] For example, disclosure shall be made of any loss contingency that meets the condition in paragraph 8.a. but that is not accrued because the amount of loss cannot be reasonably estimated (paragraph 8(b)). Disclosure is also required of some loss contingencies that do not meet the condition in paragraph 8.a. - namely, those contingencies for which there is a reasonable possibility that a loss may have been incurred even though information may not indicate that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements.

FASB Interpretation No. 14, Reasonable Estimation of the Amount of Loss, An Interpretation of FASB Statement No. 5

3. When condition (a) in paragraph 8 is met with respect to a particular loss contingency and the reasonable estimate of the loss is a range, condition (b) in paragraph 8 is met and an amount shall be accrued for the loss. When some amount within the range appears at the time to be a better estimate than any other amount within the range, that amount shall be accrued. When no amount within the range is a better estimate than any other amount, however, the minimum amount in the range shall be accrued.[1] In addition, paragraph 9 of the Statement may require disclosure of the nature and, in some circumstances, the amount accrued, and paragraph 10 requires disclosure of the nature of the contingency and the additional exposure to loss if there is at least a reasonable possibility of loss in excess of the amount accrued.

[1] Even though the minimum amount in the range is not necessarily the amount of loss that will be ultimately determined, it is not likely that the ultimate loss will be less than the minimum amount.

Statutory Issue Paper No. 6

Amounts Due From Agents and Brokers

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 6

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Some reporting entities conduct a significant amount of their business through insurance agents and brokers. For purposes of this issue paper the term agent will be used as reference to both entities. In the ordinary course of business, amounts may be due from or payable to agents by a reporting entity. Business reasons for these transactions vary between each type of entity transacting business with the reporting entity. These variations may be the result of formal contractual requirements, the nature of the insurance products being sold or the services being performed. Statutory accounting for amounts due from agents is not addressed in sufficient detail in either the Accounting Practices and Procedures Manuals for Life and Accident and Health or for Property and Casualty Insurance Companies. Additionally, interpretation and application of accounting practices dealing with amounts due from agents are inconsistent among states. This issue paper establishes a framework for the accounting and reporting of amounts due from agents and brokers (collectively referred to as "agents") that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. Amounts due from agents can result from various insurance transactions ranging from premiums collected on behalf of the reporting entity to amounts advanced to the agent by the reporting entity to finance agency operations. Premiums owed by the agent shall be reflected net of commissions, if permitted by the contract. In almost all cases these transactions result in an amount due to the reporting entity that meets the definition of an asset as set forth in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*. First, an evaluation shall be made to determine nonadmitted amounts. Next, an evaluation shall be made of such assets in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5), to determine whether there is an impairment. This two-step process is set forth below:

a. The uncollected agent's receivable which is over ninety days due shall be accounted for as a nonadmitted asset regardless of any offsetting amount (e.g., unearned premium).

b. Remaining amounts determined to be uncollectible shall be written off: If, in accordance with Issue Paper No. 5, it is probable the agent's receivable is uncollectible, any uncollectible agent's receivable shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible and is therefore not written off, disclosure requirements outlined in Issue Paper No. 5 shall be followed.

3. Advances to agents - All such balances, which are primarily encountered in the life insurance industry, are nonadmitted if a) the amounts are in the form of unsecured loans or advances, or b) the contractual terms for repayment are through application of future renewal commissions and/or other credits, or c) the terms of repayment do not provide readily available cash for the satisfaction of policyholder liabilities.

4. The following situations provide additional guidance in determining the nonadmitted portion of agent's balances as discussed above:

a. Amounts payable to agents under the same contractual agreement - If amounts are both payable to and receivable from an agent, and the contractual agreements between the agent and the reporting entity permit offsetting, then the nonadmitted portion of amounts due from that agent should be calculated on the net balance due.

b. Amounts due from agents (affiliated or nonaffiliated) paid prior to the date of the financial statements and repaid to the agent by the reporting entity or one of the reporting entity's affiliates subsequent to the date of the financial statements - Such amounts should be accounted for in accordance with the substance of the transaction (a "wash" transaction) and not its form. Accordingly, the amounts due should be reestablished as an asset and subjected to asset collectibility and nonadmitted asset calculations using the original due date of the receivable. Short-term financing by third parties should also be considered "wash" transactions if the substance of the transaction is to avoid the nonadmitted asset principle set forth above.

c. Amounts classified as nonadmitted assets collected subsequent to date of the statutory financial statements - Such amounts shall not be used to adjust the nonadmitted asset otherwise calculated.

d. Determination of the Due Date -

i. The due date for original and deposit premiums is governed by the effective date of the underlying insurance contract and not the agent/reporting entity contractual relationship.

ii. The due date for endorsement and installment premiums is governed by the effective date of the endorsement and the contractual due date of the installment.

iii. The due date for audit premiums and retrospective premiums is governed by policy or contract provisions. If the due date for receivables relating to these policies is not addressed by policy provisions or contract provisions, any uncollected premium (either accrued or billed) is nonadmitted.

iv. These provisions are to be applied to all balances due except those arising from force placed insurance obtained by a lender for collateral protection, certain policies, known as a Trustee Sales Guarantees (TSGs), issued by title insurance companies to lenders on defaulted real estate loans and crop/hail policies. For forced placed insurance, the due date for purposes of applying paragraph 2 shall be the date of billing. For TSG policies, the due date for purposes of applying paragraph 2 shall be at the expiration of the grace period given to the defaulted debtor, which is provided by statute. Crop/hail premiums are considered installment premiums in accordance with paragraph 4.d.ii. and accordingly, the due date for purposes of applying paragraph 2 shall be governed by the contractual due date of the installment.

e. Reconciling items between a Reporting Entity's Account and Agent's Account - If such amounts are over ninety days due, the amounts shall be nonadmitted.

DISCUSSION

5. The Statement of Concepts states:

> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

6. Based upon the above concept, agents' balances should reflect only amounts that are available to meet both current and future policyholder obligations when the obligations are due. Therefore, amounts determined to be impaired, regardless of aging, should be charged to operations. The adoption of a write-off/allowance methodology will provide a more appropriate measure of those assets available to meet policyholder obligations.

7. Under the conservatism concept of statutory accounting, premiums and other amounts collected by the agents on behalf of the reporting entity, which are over 90 days due and advances made to an agent, should be treated as nonadmitted assets and charged to surplus. In keeping with the concept of conservatism, subsequent collection of nonadmitted assets should not be considered in the determining period-end nonadmitted assets. These recoveries should be accounted for in the period received.

8. The draft discussion materials from previous Property/Casualty codification projects suggested aging of all original or renewal premiums receivable to begin as of the effective date of the policy regardless of whether the reporting entity is using a direct bill or account current system. In addition, the proposed version requires endorsement premiums and installment premiums to begin aging from the effective date of the endorsement and from the due date of the installment. An exception is provided for force placed insurance and for certain title insurance policies known as TSGs. Force placed insurance is a type of collateral protection insurance typically offered to financial institutions and other lenders that make loans secured by collateral. Coverage is obtained by the lender when the collateral securing a loan becomes uninsured by the borrower. Due to the nature of this specific type of insurance most policies or certificates are not issued, and consequently not billed, until after the effective date of coverage. As a result, the due date for purposes of paragraph 2 is the date of billing. TSGs are title insurance policies issued to lending institutions during the foreclosure process on defaulted real estate loans. TSGs are requested by the lending institution, and premium is booked by the reporting entity at the notice of default date. There is, typically by law, a grace period given to the defaulted debtor to bring the loan current. Since the premium is remitted to the reporting entity from the proceeds of the foreclosed property this grace period results in a lag period before the premium could be collected. As a result, the due date for purposes of paragraph 2 is the date at which the grace period expires.

9. Current statutory accounting for life and accident and health companies generally requires agents' balances to be nonadmitted. This is not consistent with the treatment of such balances for property and casualty companies. The majority of agents' balances for life and accident and health companies consist of advances to agents under agents' contracts. This paper does not recommend a change for these types of balances. Advances to agents under agents' contracts would follow the treatment outlined in the Summary Conclusion above. To the extent the agents' balance consists of amounts other than advances to agents under agents' contracts, the recommended treatment outlined in this paper is theoretically different from existing practice. Adoption of the principles outlined in the Summary Conclusion above for life and accident and health and property and casualty companies will provide necessary consistency without having a significant impact on the conservatism of the statutory financial statements.

Drafting Notes/Comments

- This issue paper does not address nonadmitted assets for retrospective premiums on direct or assumed business as this issue was addressed and codified by the NAIC in 1993. Current guidance is included in Chapter 22 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies. This is addressed in a separate issue paper.
- Reinsurance premiums payable, reinsurance commissions receivable, etc., which are currently reported on the same line in the Annual Statement, are addressed in a separate issue paper.
- In preparing this paper, the following issues were identified as future potential issue paper topics:
- Right of Offset - (agent commissions, reinsurance premiums payable and receivable, etc.)
- Aging/nonadmitting of reinsurance premiums due (governed by Chapter 22)
- Premiums sold with recourse (premium finance company)
- Accounting/aging of retrospective premiums currently reported on line 9.2 or line 9.3 is addressed in a separate issue paper.
- Accounting for uncollected premium balances is addressed in *Issue Paper No. 10—Uncollected Premium Balances.*
- Accounting for bills receivable is addressed in *Issue Paper No. 21—Bills Receivable for Premiums.*
- Sale of premium receivables will be addressed in *Issue Paper No. 42—Sale of Premium Receivables*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting

10. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 7, *Agents' Balances or Uncollected Premiums*, page 2, paragraph 2, provides the following guidance:

> To satisfy the requirements of the annual statement blank, agents' balances or uncollected premiums over three months due are nonadmitted assets. (See Chapter 9 - Nonadmitted Assets, see excerpt below.)

11. Chapter 9, *Nonadmitted Assets*, page 1, point 3, reinforces Chapter 7 by stating the following:

> Agents' Balances or Uncollected Premiums Over Three Months Due: The statutes of most states require that agents' balances or uncollected premiums over three months due be nonadmitted because of the uncertainty of collection.

12. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies is silent with respect to when the aging of agents' balances and uncollected premiums is to commence, however, the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force (Emerging Accounting Issues Working Group) reached a consensus in the 89-2 session which states the following:

> Aging of Agents' Balances
>
> The issues considered were:
>
> 1. In computing the non-admitted portion of agents' balances, should an agents' account current be aged from the dates of the account current statement or from the effective dates of the individual policies billed in the statements?
>
>   The consensus of the group was that accounts current should be aged from the dates of the statements.

2. How should balances be aged when the account current system is not used?

   The balance should be aged from the effective date of the policy.

13. Chapter 9 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies discusses the nonadmitting of certain assets as follows:

> Some examples of assets which are nonadmitted due to either an uncertainty as to their collectibility or an insufficient basis for determining their valuation or other reasons are:
>
> 1. deposits in suspended depositories;
>
> 2. agents' debit balances;
>
> 3. bills receivable which are not properly secured by collateral;
>
> 4. loans on personal security (endorsed or not) which are not properly secured by collateral;
>
> 5. cash advanced to or in the hands of officers or agents;
>
> 6. travel advances.

Generally Accepted Accounting Principles

14. GAAP accounting for agent balances or uncollectible premiums/receivables is governed by *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), paragraphs 1, 3 and 8:

> 1. For the purpose of this Statement, a contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a "gain contingency") or loss[1] (hereinafter a "loss contingency") to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.
>
> [1] The term loss is used for convenience to include many charges against income that are commonly referred to as expenses and others that are commonly referred to as losses.
>
> 3. When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms probable, reasonably possible, and remote to identify three areas within that range, as follows:
>
>   a) Probable. The future event or events are likely to occur.
>
>   b) Reasonably possible. The chance of the future event or events occurring is more than remote but less than likely.
>
>   c) Remote. The chance of the future event or events occurring is slight.
>
> 8. An estimated loss from a loss contingency (as defined in paragraph 1) shall be accrued by a charge to income[3] if both of the following conditions are met:
>
>   a) Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements.[4] It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.

b) The amount of loss can be reasonably estimated.

[3] Paragraphs 23-24 of *APB Opinion No. 9*, “Reporting the Results of Operations,” describe the “rare” circumstances in which a prior period adjustment is appropriate. Those paragraphs are not amended by this statement.

[4] Date of the financial statements means the end of the most recent accounting period for which financial statements are being presented.

15. The FAS 5 criteria above, is used in interpreting information such as historical trending and general information about the stability of the agents\insured in an effort to evaluate the adequacy of a premium receivable allowance. Accounting for contingencies is discussed in more detail in Issue Paper No. 5.

16. GAAP accounting requires the aging of agents’ balances or uncollected premiums to begin from the effective date of the policy. Aging for endorsement premiums should begin from the endorsement’s effective date and installment premiums should begin from the installment’s due date. Although not specifically stated, this guidance can be deduced through review of *FASB Statement of Financial Accounting Concepts No. 5*, *Recognition and Measurement in Financial Statements of Business Enterprises*, paragraph 83, as follows:

> 83. Further guidance for recognition of revenues and gains is intended to provide an acceptable level of assurance of the existence and amounts of revenues and gains before they are recognized. Revenues and gains of an enterprise during a period are generally measured by the exchange values of the assets (goods or services) or liabilities involved, and recognition involves consideration of two factors (a) being realized or realizable and (b) being earned, with sometimes one and sometimes the other being the more important consideration.
>
> a. Realized or realizable. Revenues and gains generally are not recognized until realized or realizable.[50]Revenues and gains are realized when products (goods or services), merchandise, or other assets are exchanged for cash or claims to cash. Revenues and gains are realizable when related assets received or held are readily convertible to known amounts of cash or claims to cash. Readily convertible assets have (i) interchangeable (fungible) units and (ii) quoted prices available in an active market that can rapidly absorb the quantity held by the entity without significantly affecting the price.
>
> b. Earned. Revenues are not recognized until earned. An entity's revenue earning activities involve delivering or producing goods, rendering services, or other activities that constitute its ongoing major or central operations,[51] and revenues are considered to have been earned when the entity has substantially accomplished what it must do to be entitled to the benefits represented by the revenues. Gains commonly result from transactions and other events that involve no “earning process,” and for recognizing gains, being earned is generally less significant than being realized or realizable.

[50] The terms realized and realizable are used in the Boards conceptual framework in precise scenes, focusing on conversion or convertibility of noncash assets into cash or claims to cash (Concepts Statement 3, par. 83). Realized has sometimes been used in a different, broader sense: for example, some have used that term to include realizable or to include certain conversions of noncash assets into other assets that are also not cash or claims to cash. APB Statement 4, paragraphs 148-153, used the term realization even more broadly as a synonym for recognition.

[51]"Most types of revenue are the joint result of many profit-directed activities of an enterprise and revenue is often described as being 'earned' gradually and continuously by the whole of enterprise activities. Earning in this sense is a technical term that refers to the activities that give rise to the revenue-purchasing, manufacturing, selling, rendering service, delivering goods, allowing other entities to use enterprise assets, the occurrence of an event specified in a contract, and so forth. All of the profit-directed activities of an enterprise that comprise the process by which revenue is earned may be called the earning process" (APB Statement 4, par. 149). Concepts Statement 3, paragraph 64, footnote 31, contains the same concept.

17. The renewal or establishment of an insurance policy in exchange for a claim to cash (premium receivable) triggers the realization characteristic of revenue recognition, therefore, the aging of the agents' balance or uncollected premium should commence on the effective date of the new or renewed policy. Endorsement premiums will trigger the realization characteristic on the effective date of the endorsement, while installment premiums will trigger the realization characteristic on the due date of the installment.

18. Although the realization characteristic of revenue recognition may have been triggered, the more important characteristic of earned may not have been, hence, the recording of an unearned premium.

19. *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60), also provides some indirect guidance. FAS 60, paragraph 13, requires revenue on short-duration contracts to be recognized over the period of the contract in proportion to the amount of insurance protection provided. The contract period starts with the policy effective date. Therefore, it is reasonable to begin aging from the policy effective date as this is the date when revenue recognition begins.

OTHER SOURCES OF INFORMATION

20. The draft discussion materials from previous Property/Casualty codification projects proposed extensive modifications to the accounting for agents' balances and uncollected premiums. The following represents a summary of those modifications:

> When the original or deposit premium are more than ninety days past due based on an aging referenced to effective date and therefore, not admitted, all premiums subsequently charged on the same policies or bonds are similarly not admitted, except that if the amount of such original or deposit premiums does not exceed 20% of the subsequently charged premiums in the same policies of bonds, such subsequently charged premiums, if otherwise not themselves more than ninety days overdue, shall be allowed as admitted assets.

21. The same basic concept was also discussed for endorsement premiums and installment premiums. In addition, this version discussed certain parameters where a greater than ninety day nonadmitted premium could be accounted for as an admitted asset. The modification was stated as follows:

> A premium which has been determined to be not admitted may be treated as admitted if it has been collected within forty-five days of the date of determination and not more than ninety days had elapsed from the billing date to the date of determination and further, that not more than one hundred thirty-five days had elapsed from the effective date of the premium to the date of determination.

22. The draft discussion materials from previous Property/Casualty codification projects contradicted the Emerging Accounting Issues Working Group's consensus by proposing the following:

> Original or deposit premiums
>
> > Aging is always based on the effective date of the policy or bond regardless of whether the insurer is using a direct billing system or an account current system.

Endorsement

Aging is always based on the effective dates of the endorsements.

Installments

Aging is always based on the due date of the installment.

Statutory Issue Paper No. 7

Asset Valuation Reserve and Interest Maintenance Reserve

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 7

Type of Issue:
Life and Accident and Health Insurance Companies

SUMMARY OF ISSUE

1. Current statutory accounting guidance requires life and accident and health insurance companies to recognize liabilities for an asset valuation reserve (AVR) and an interest maintenance reserve (IMR). There is no such requirement for property and casualty insurance companies. The AVR is intended to establish a reserve to offset potential credit-related investment losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable. The IMR captures the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the liability released.

2. The purpose of this issue paper is to establish statutory accounting principles for AVR and IMR that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. The IMR and AVR shall be calculated and reported in accordance with Section 6. Interest Maintenance Reserve and Asset Valuation Reserve for Life Insurance Companies and Fraternal Benefit Societies of the Purposes and Procedures of the Securities Valuation Office of the NAIC (*Purposes and Procedures Manual of the NAIC Securities Valuation Office*).

DISCUSSION

4. This issue paper adopts current statutory guidance for AVR and IMR for Life and Accident and Health insurance companies.

5. This issue paper rejects paragraph 28 (subtitled, Reporting of Realized Investment Gains and Losses of Investments) of *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments* (FAS 97), as amended by *FASB Statement No. 115*, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115), for Life and Accident and Health Insurance Companies.

6. As stated in the draft discussion material from previous Life Codification projects, Chapter 16B, *Asset Valuation Reserve, "The purpose of the AVR is to establish a provision for the volatile incidence of asset losses and recognize appropriately the long term return expectations for equity type investments. The AVR provides a mechanism to absorb unrealized and credit-related realized gains and losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable."*

7. Chapter 16 A *Interest Maintenance Reserve*, in the draft discussion material from previous Life Codification projects states, “The purpose of the IMR is to protect surplus from investment transactions that are entered into as a reaction to interest rate movements. The IMR minimizes the effect that realized gains and losses attributable to interest rate movement have on current year operations by deferring and amortizing such capital gains and losses, net of tax, over the approximate remaining life of the investments sold.” These reserves serve to stabilize statutory surplus against fluctuations in the market value of securities and provide an extra layer of protection for policyholders. Furthermore, gains trading (i.e., selectively selling securities to include realized gains in earnings) opportunities are reduced by reporting an IMR. This is consistent with the Conservatism concept included in the Statement of Concepts, which states, “valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.”

8. The accounting policy to record AVR and IMR also is consistent with the “*ultimate objective of solvency regulations*” as stated in the Statement of Concepts. This states, “*the ultimate objective of solvency regulation is to ensure that policyholder, contract holder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety.”*

9. Because AVR and IMR only pertain to life and accident and health insurance companies, there is a difference in how Life and Accident and Health Insurance Companies and how Property and Casualty Insurance Companies account for investments. Property and Casualty Insurance Companies are required to record bonds and preferred stock with a NAIC designation of 3 through 6 at the lower of amortized cost or market. This provides a conservative measure of such securities in accordance with the conservatism concept in the Statement of Concepts.

Drafting Notes/Comments

- Realized gains and losses for insurers not maintaining an IMR are addressed in specific invested asset issue papers.
- This issue paper references the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*. The guidance for AVR/IMR was subsequently moved to the Annual Statement Instructions for Life and Accident and Health Insurance Companies. SSAP No. 7 references the Annual Statement Instructions.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

10. Chapter 16, *Asset Valuation Reserve and Interest Maintenance Reserve*, in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies states the instructions for calculating the AVR and IMR are contained in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*.

11. Section 6. Interest Maintenance Reserve and Asset Valuation Reserve for Life Insurance Companies and Fraternal Benefit Societies of the Purposes and Procedures of the Securities Valuation Office of the NAIC contains the following excerpts (note that this is not quoted in its entirety):

> This Section applies to all life insurance companies and fraternal benefit societies. The Section describes in general terms, principles of the calculation for Interest Maintenance Reserve (IMR) for realized gains and losses from fixed income investments and the Asset Valuation Reserve (AVR) on all invested assets held by a company. [Refer to the NAIC’s Life and Health Annual Statement Instructions published July 28, 1994 for specific accounting and reporting guidance.] The IMR is a single component reserve. The AVR breaks down into two major components and each component has two subcomponents:

The Default Component--

(i) The Bond and Preferred Stock Subcomponent
(ii) The Mortgage Subcomponent

The Equity Component--

(i) The Common Stock Subcomponent
(ii) The Real Estate and Other Invested Assets Subcomponent

(A) **Interest Maintenance Reserve (IMR)**. This reserve applies to realized capital gains and losses net of tax on short-term and long-term fixed income investments. These gains and losses are from the disposal of investments as reported in Schedule D, Part 4 for long-term bonds and preferred stock; Schedule DA, short-term bonds; Schedule DB, interest rate hedges; Schedule B, mortgage loans; or Schedule BA for other fixed income investments. The reserve captures the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the liability released.

The current year's IMR is equal to:

The beginning balance
plus (minus) the realized capital gains (losses) net of tax attributed to interest rate changes
plus (minus) realized liability gains (losses) net of tax attributed to interest rate changes
less an amortization amount

(a) Interest Related Realized Capital Gains and Losses:

The gains and losses are to be reported net of applicable capital gains taxes allocated in accordance with an insurers established policy.

A realized gain or loss on each debt security and mortgage backed security will be an interest related gain or loss if the debt security's beginning NAIC rating did not change by more than one classification at the end of the holding period. The holding period is defined as the period from the date of purchase to the date of sale. For debt securities acquired before January 1, 1991, the debt security's rating as of December 31, 1990 should be the beginning rating used for this purpose. A debt security's gain or loss should not be included in this reserve if the debt security rating was ever a "6" during the holding period.

Preferred stock that did not have an NAIC/SVO rating classification of "PSF-4", "PSF-5", "PSF-6" or "P-4", "P-5" or "P-6" at any time during the holding period should be reported as interest related gains and (losses) in the Interest Maintenance Reserve if the stock's beginning NAIC/SVO rating did not change by more than one classification at the end of the holding period.

For preferred stocks acquired before January 1, 1993, the holding period is assumed to have begun in December 31, 1992.

Losses recognized on loan-backed bonds and other structured securities that have a negative effective yield at the date of valuation should be treated as realized losses and included in the reserve as if the security had been sold and the loss considered an interest rate loss. If the security is valued using the prospective adjustment methodology, a negative effective yield occurs when the net undiscounted sum of anticipated future cash flows of the security is less than the current book value of the security at the date of valuation. If the security is valued using the retrospective adjustment methodology, a negative effective yield occurs when the net undiscounted sum of actual and anticipated cash flows is less than the original cost of the investment.

Capital gains and losses net of capital gains tax on mortgage loans, where interest is not more than 90 days past due, not in process of foreclosure, not in course of voluntary conveyance, or have not had restructured terms over the prior two years will be classified as an interest rate gain or loss. Prepayment penalties recorded as capital gains on mortgage securities are also considered to be due to interest rate changes.

Capital gains or (losses) due to interest rate changes on fixed income investments with less than one year to expected maturity should be captured in the IMR. Gains or (losses), net of capital gains tax, in the remaining categories are amortized according to the Group Amortization Schedule Section 6(B)(j) or the seriatim method.

Realized gains and losses on fixed income investments recorded on Schedule BA should be classified as an interest gain or loss if they are in the nature of those defined for bonds, preferred stocks and mortgages.

Realized gains and losses, net of capital gains tax, on derivative investments arising out of transactions entered into solely for the purpose of altering the interest rate characteristics of the company's assets and/or liabilities should be allocated to the IMR and amortized into income over the remaining life of the assets or liabilities associated with the derivative instruments.

(b) Liability gains/(losses) Subject to IMR Amortization

1) Reinsurance -

The interest rate related gain or loss (net of taxes) associated with the sale, transfer or reinsurance of a block of liabilities must be credited or charged to the IMR and then amortized into income provided:

1. the portion of the block reinsured represents more than 5% of a company's general account liabilities (Page 3, Line 26),

2. the transaction is irrevocable and is to a non-affiliate and

3. the transaction was completed in the current year.

The amount of the gain or loss that is interest rate related and its IMR amortization should be determined using the following procedure for the portion of the block sold, transferred or reinsured.

1. Identify the IMR balance and future amortization arising from the past and present dispositions of the assets associated with the block of liabilities.

2. Identify the IMR balance and future amortization that would result if the remaining assets associated with the block of liabilities were to be sold.

3. Define the interest rate related gain or (loss) net of taxes to be the negative of the sum of the IMR balances determined in steps 1 and 2. The future amortization of the gain or loss is the negative of the sum of the amortization determined in steps 1 and 2.

The associated assets are the assets allocable to the reinsured block of business for the purposes of investment income allocation. If the company has not been tracking the investment income of the block, it should retrospectively identify the assets using procedures consistent with its usual investment income allocation procedures. The associated assets are not necessarily the same as the assets transferred as part of the transaction.

2) Market Value Adjustments

Material gains or losses resulting from market value adjustments on policies and contracts backed by assets that are valued at book, including the marginal tax impact, should be captured by the IMR and amortized in the same manner as capital gains and losses on fixed income investments. A gain or loss is considered material if it is in excess of both .01% of liabilities and $1,000,000. The amortization schedules should be determined in a manner consistent with the determination of associated market value adjustment.

(d) Amortization into income:

There are two acceptable methods for accumulating and calculating the amortization schedule:

1. Seriatim Method— The amount of each capital gain or (loss), net of capital gains tax, amortized in a given year using the seriatim method is the excess of the amount of income that would have been reported in that year, had the asset not been disposed of, over the amount of income that would have been reported had the asset been repurchased at its sale price. The capital gains tax associated with or allocated to each gain or (loss) should be amortized in proportion to the amortization of the gain or (loss).

For loan-backed bonds and structured securities that are valued using currently anticipated prepayments use an amortization schedule developed using the anticipated future cash flows of the security sold consistent with the prepayment assumptions that would have been used to value the security had the security been purchased at its sale price.

For the year ending December 31, 1994, only loan-backed and structured securities that meet the following definition are required to be valued using currently anticipated prepayments:

Loan-backed and structured securities that have potential for loss of a significant portion of the original investment due to changes in interest rates or the prepayment rate of the underlying loans supporting the security. These securities should include, but are not limited to, interest-only structured securities and structured securities purchased at a significant premium over par value.

The seriatim calculation on an asset by asset basis is the desired approach, but since a seriatim approach may impose an administrative burden on some companies, each company may use the method employed by that company to amortize interest related capital gains and losses among lines of business and policyholders in accordance with the investment income allocation process as approved by the state insurance department.

2. Grouped Method— A company may use a standard “simplified method” by which the capital gains and (losses), net of capital gains tax, are grouped according to the number of calendar years to expected maturity.

The groupings are based on the years to expected maturity as of the date of sale.

a. less than 1 calendar year to expected maturity
b. 1 to 5 calendar years to expected maturity
c. 6 to 10 calendar years to expected maturity

d. 11 to 15 calendar years to expected maturity
e. 16 to 20 calendar years to expected maturity
f. 21 to 25 calendar years to expected maturity
g. over 25 calendar years to expected maturity.

The amortization schedule for the current year is the sum of the gains and losses by maturity groupings times the appropriate factor for the current and future years. The maturity groupings and factors are found in 6(B)(j).

The presence of sinking fund payments, amortization schedules, expected prepayments, and adjustable interest rates complicate the determination of the number of calendar years to expected maturity. The expected maturity date is:

For fixed income instruments with fixed contractual repayment dates and amounts (including bonds, preferred stock, callable or convertible bonds and preferreds), the expected maturity is defined as the contractual retirement date that produces the lowest amortization value for Annual Statement purposes (lowest internal rate of return or “yield to worst”). Potential retirement dates include all possible call dates, and the contractual maturity date. When the instrument’s contractual terms include scheduled sinking fund payments of fixed amounts, an additional calculation of yield to average life should be included in the analysis where average life is defined as the date at which the instrument is 50% repaid. For puttable instruments, where the exercise option rests with the investor, expected maturity is the put or maturity date that produces the highest internal rate of return. For perpetual instruments, the expected maturity is 30 years from the current date.

However, where a callable bond purchased at a premium is called or sold after the expected maturity date, there should be no amortization of the call premium or interest rate related gain or loss and the gain or loss should be taken into income immediately. Similarly there should be no amortization of any interest rate related gain or loss arising if a convertible bond or preferred stock is disposed of after the expected maturity date.

For liability gains and losses included in the IMR, amortization should be determined in a manner consistent with the determination of associated market value adjustment or assets transferred.

“Calendar years to expected maturity” means the calendar year of expected maturity minus the calendar year of sale date.

For purposes of the grouped method, the following additional assumptions are applicable:

- For fixed income investments, other than residential mortgages and residential mortgage pass-throughs, without a maturity date or sinking fund schedule, a maturity date 30 years from the current year should be used.

- For loan-backed bonds and other structured securities that are valued using currently anticipated prepayments use the remaining weighted average life of principal and interest payments consistent with the prepayment assumptions that would have been used to value the security had the security been repurchased at its sale price.

- For the year ending December 31, 1994, only loan-backed and structured securities that meet the following definition are required to be valued using currently anticipated prepayments:

  Loan-backed and structured securities that have potential for loss of a significant portion of the original investment due to changes in interest rates or the prepayment rate of the underlying loans supporting the security. These securities should include, but are not limited to, interest-only structured securities and structured securities purchased at a significant premium over pay value.

- For residential mortgages and residential mortgage pass-throughs other than Real Estate Mortgage Investment Conduits (REMICs), not valued using currently anticipated prepayments, the number of calendar years to expected maturity is defined to be one half of the number of calendar years to final maturity.

- For REMICs and other asset backed investments not valued using currently anticipated prepayments, purchased at the time of original issuance, the calendar year of expected maturity is the calendar year of issue plus the weighted average life (rounded to the nearest whole number) as stated in the Offering Circular, using the prepayment assumption stated in the Circular to be used for Federal Income Taxation.

- For REMICs and other asset-backed investments not valued using currently anticipated prepayments, purchased after the original issuance, it is permissible for the Company to re-compute the weighted average life of the investment based on the same prepayment assumptions used to compute the purchase price, provided that this re-computation is done in a consistent manner for all similar asset-backed investments.

(e) Separate Accounts

Interest Maintenance Reserve (IMR) requirements for investments reported in the separate accounts statement are applied on an account by account basis. If an IMR is required for a separate account, all of the investments in the separate account are subject to the requirement. If an IMR is not required for a separate account, none of the investments in that separate account are subject to the requirement.

An IMR is required for separate accounts valued at book, but is not required for separate accounts valued at market. For example, separate accounts for traditional variable annuities, or variable life insurance do not require an IMR because assets and liabilities are valued at market.

If an IMR is required for investments in the separate accounts statement, it is kept separate from the general accounts IMR and accounted for in the separate accounts statement. For further details see rules as explained in Sec (6) (A) (f).

(f) Negative IMR

A negative IMR balance may be recorded as a negative liability in either the general account or the separate accounts statements of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

The following information is presented to assist in determining the proper accounting:

General Account IMR Balance	Separate Accounting IMR Balance	Net IMR Balance
Positive	Positive	Positive (See rule a)
Negative	Negative	Negative (See rule b)
Positive	Negative	Positive (See rule c)
Positive	Negative	Negative (See rule d)
Negative	Positive	Positive (See rule e)
Negative	Positive	Negative (See rule f)

Rules:

a) If both balances are positive, then report each as a liability in its respective statement.

b) If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement. If there is any disallowed negative IMR balance in the general account statement, record the disallowed portion as a positive amount for Disallowed IMR in a write-in line for assets not admitted in Exhibit 14. If there is any disallowed negative IMR balance in the separate accounts statement, determine the change in the disallowed portion and make a direct charge or credit to the surplus account for the Change in Disallowed IMR.

c) If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the separate accounts statement.

d) If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the separate accounts statement, and follow the instructions in b) above for handling the disallowed portion of negative IMR balances in the separate accounts statement.

e) If the general account balances is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the general account statement.

f) If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the general account statement, and follow the instructions in b) above for handling the disallowed portion of negative IMR balances in the general account statement.

(B) **Asset Valuation Reserve (AVR)**. This reserve shall apply to the specific risk characteristics of all the invested asset categories excluding cash, policy loans, premium notes, collateral loans and income receivables. The specific assets to be included in each subcomponent are:

The Default Component

The Bond and Preferred Stock Component shall include all fixed income investments that are corporate or governmental unit obligations, excepting those listed in subsection (g) as exempt from the AVR reserve, preferred stock and loan backed securities as reported in Schedule D, Part 1 and Part 2--Section 1 and Schedule DA, and counterparty exposure arising from derivative transactions as reported in Schedule DB, Part E, Section 1.

The Mortgage Subcomponent shall include all farm, commercial, residential mortgages as reported in Schedule B and Schedule DA.

The Equity Component

The Common Stock Subcomponent shall include all affiliated and unaffiliated common stock investments as reported in Schedule D, Part 2--Section 2.

The Real Estate and Other Invested Asset Subcomponent shall include all real estate reported on Schedule A and all Other Invested Assets as reported on Schedule BA and DA.

(a) Calculation of the AVR:

The current year’s AVR by subcomponent is equal to:

The beginning balance
plus (minus) the realized capital gains (losses) net of tax as allocated by the company on assets corresponding to the subcomponent
plus (minus) unrealized capital gains (losses) on assets corresponding to the subcomponent
plus (minus) transfers between components
plus an annual contribution
plus any voluntary contribution
plus (minus) an adjustment up to zero or down to maximum.

(b) Realized Capital Gains and Losses:

Report all realized credit-related (default) and equity capital gains and (losses), net of capital gains tax applicable to the assets in each component and subcomponent including those realized capital gains and (losses) that are incurred on Separate Accounts assets for which AVR treatment is required. Exclude all interest rate related capital gains and (losses) from the AVR.

A realized gain or loss on a debt security will be a credit related gain or loss if the debt security's beginning NAIC/SVO rating changed by more than one classification at the end of the holding period. The holding period is defined as the period from the date of purchase to the date of sale. For debt securities acquired before January 1, 1991 the debt securities rating as of December 31, 1990 should be the beginning rating used for this purpose. A debt security gain or loss should always be included in this reserve if the bond rating was ever a "6" during the holding period.

Preferred stock that had an NAIC/SVO rating classification of "PSF-4", "PSF-5", "PSF-6", "P-4", "P-5" or "P-6" at any time during the holding period shall be reported as credit related gains and (losses) in the Asset Valuation Reserve.

For preferred stocks acquired before January 1, 1993 the holding period is presumed to have begun on December 31, 1992.

In addition, all gains or losses, net of capital gains taxes, on mortgage loans, where interest is more than 90 days past due, in the process of foreclosure in course of voluntary conveyance, or have had restructured terms over the prior two years, would be classified as credit related gains or losses. Permanent impairment writedowns are also treated as credit losses.

Realized gains or losses net of capital gains tax on portfolio or general hedging instruments should be included with the hedged assets. Gains or losses net of capital gains tax on hedges used as specific hedges should be included only if the specific hedged asset is sold or disposed.

Realized gains or losses on derivative instruments not accounted for as specific (as opposed to general) hedge transactions should be allocated to the component and subcomponent of the assets associated with the derivative instruments used in the general hedge.

Realized gains or losses, net of capital gains resulting from the sale of U.S. Government Securities and the direct or guaranteed securities of agencies which are backed by the full faith and credit of the U.S. Government are exempt from the AVR. This category is detailed in Section 6(B)(g)(i).

The gains or (losses) are to be reported net of applicable capital gains taxes as allocated by the company.

(c) Unrealized Capital Gains and Losses:

Unrealized gains and losses should be summarized by subcomponent asset type and included in the reserve computation including those unrealized capital gains and (losses) that are incurred on Separate Account assets for which AVR treatment is required. The equity method of accounting is allowed in accounting for the operating results of subsidiary, controlled or affiliated companies. If the equity accounting method is used, the amount of the undistributed income or loss reported in Exhibit 2 of the Annual Statement less the amount of any dividends received is to be included as an unrealized capital gain or loss when computing the Common Stock Subcomponent. Unrealized gains and (losses) for Affiliated Life Insurance Companies which are maintaining their own AVR are excluded since the maximum reserve factor for such companies is 0%.

Unrealized gains or losses on derivative instruments not accounted for as hedging transactions should be allocated to the component and subcomponent of the assets associated with the derivative instruments.

(d) Transfers Between Components:

If the sum of a subcomponent’s beginning balance, realized gains and losses and unrealized gains and losses is greater than the ending maximum of the subcomponent, and the balance of its sister subcomponent is below its maximum reserve, the excess must be transferred to the other subcomponent of the Default or Equity components up to that subcomponent’s maximum.

If after the above transfers, the Equity or Default component is greater than total maximum for the component, the excess may be transferred to the other component or may be released to surplus.

If the balance before transfers of any of the four sub-components is negative, and the balance before transfers of its “sister” subcomponent within the same component is positive, the negative amount should be transferred to the “sister” sub-component to the extent that the transfer does not reduce the positive balance before transfers of the “sister” sub-component to less than 50% of its balance prior to the transfer.

No other transfers may be made without Commissioner approval.

(e) Annual Contribution:

The formula for the annual contribution to a subcomponent is as follows:

The amortization rate times the subcomponent maximum amount minus the accumulated balance. (Accumulated balance is shown on Page 49, Line 6 of the Annual Statement).

(f) Contribution Rate:

The contribution rate is 20% per year.

(h) Voluntary Contribution to the Reserves:

Companies may make voluntary contributions to the subcomponents. Voluntary contributions will become a permanent part of the AVR once they have been reported and may not be removed in subsequent years.

12. Most state regulations refer to the literature of the NAIC for guidance on the calculation of AVR and IMR. An example is the Texas Administration Code, Title 28 - Insurance, Chapter 7, *Corporate and Finance*, which states:

> (4) Asset valuation reserve (AVR) -- A reserve applied to the specific risk characteristics of all the invested asset categories except cash, policy loans, premium notes, collateral loans, and income receivables. Asset valuation reserves shall be calculated as prescribed by the NAIC and adopted from time to time by the State Board of Insurance under the Texas Administrative Code, Title 28, Chapter 7.
>
> (12) Interest maintenance reserve (IMR) -- A reserve applied to realized capital gains and losses on short-term and long-term fixed investments. These gains and losses are from the disposal of investments as reported in Schedule D, part 1 -- Bonds, or Schedule B -- Mortgage Loans of the current annual statement. The reserve captures the realized capital gains and losses resulting from changes in the general level of interest rates as prescribed by the NAIC and adopted from time to time by the State Board of Insurance under the Texas Administrative Code, Title 28, Chapter 7.

Generally Accepted Accounting Principles

13. AVR and IMR are not addressed in current GAAP literature.

14. Paragraph 28 of FAS 97, as amended by FAS 115, addresses the GAAP accounting for realized gains and losses. It states:

> Reporting of Realized Investment Gains and Losses of Investments
>
> 28. Statement 60 required that insurance enterprises report realized gains and losses in the statement of earnings below operating earnings and net of applicable income taxes. This Statement precludes that practice. Realized gains and losses shall be reported in the statement of earnings as a component of other income, on a pretax basis, and shall not be deferred to future periods either directly or indirectly. The first sentence of paragraph 50 of Statement 60 is superseded by the following: Realized gains and losses on all investments (except investments that are classified as trading securities and those that are accounted for as hedges as described in FASB Statements No. 52, Foreign Currency Translation, and No. 80, Accounting for Futures Contracts) shall be reported in the statement of earnings as a component of other income, on a pretax basis. Realized gains and losses shall be presented as a separate item in the statement of earnings or disclosed in the notes to the financial statements. Realized gains and losses shall not be deferred, either directly or indirectly.

OTHER SOURCES OF INFORMATION

15. The draft discussion material from previous Life Codification projects contains the following excerpts:

> Chapter 16A - Interest Maintenance Reserve
>
> All U.S. life insurance companies and fraternal benefit societies are required to establish an Interest Maintenance Reserve (IMR) for realized gains and losses resulting from changes in the overall level of interest rates on fixed income investments. The IMR is calculated in accordance with instructions promulgated by the Valuation of Securities (EX4) Task Force of the National Association of Insurance Commissioners and contained in the Life Accident and Health Annual Statement Instructions and the Valuation of Securities manual. Because the instructions for the calculation of the IMR are periodically revised, the current publications should be consulted.
>
> The purpose of the IMR is to protect surplus from investment transactions that are entered into as a reaction to interest rate movements. The IMR minimizes the effect that realized capital gains and losses attributable to interest rate movement have on current year operations by deferring and amortizing such capital gains and losses, net of tax, over the approximate remaining life of the investments sold. The IMR applies to realized capital gains and losses, net of tax, on short-term and long-term fixed income securities, including bonds, notes, preferred stock and mortgages.

Chapter 16B - Asset Valuation Reserve

All U.S. life insurance companies and fraternal benefit societies must include as a liability in their statutory financial statement an Asset Valuation Reserve (AVR) on fixed income and equity investments. The AVR is calculated in accordance with instructions promulgated by the Valuation of Securities (EX4) Task Force of the National Association of Insurance Commissioners and contained in the Life, Accident and Health Annual Statement Instructions and the Valuation of Securities manual. Because the instructions for the calculation of the AVR are periodically revised, the current publications should be consulted.

The purpose of the AVR is to establish a provision for the volatile incidence of asset losses and recognize appropriately the long term return expectations for equity type investments. The AVR provides a mechanism to absorb unrealized and credit-related realized gains and losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable.

The AVR contains two components, default and equity, each designed to address specific asset risk areas. The default component is further divided into the bond and preferred stock subcomponent and the mortgage subcomponent; the equity component is comprised of the common stock subcomponent and the real estate and other invested asset subcomponent. Increases or decreases to the reserve are charged or credited directly to surplus. The AVR is limited to maximums by subcomponent, and no subcomponent of the AVR may be less than zero. Transfers between subcomponents or between components may be required or may be allowed without commissioner approval when negative or certain maximum subcomponent balances occur.

Statutory Issue Paper No. 8

Accounting for Pensions

STATUS
Finalized December 6, 1999

Current Authoritative Guidance for Pensions: SSAP No. 102
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 8

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The current Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies do not address employers' accounting for pension plans. However, a position paper was prepared by the Study Group of EX4 on Accounting for Insurance Company-Funded Pensions and was adopted by the NAIC. The adopted position does not mandate a specific accounting method but calls for expanded disclosures with regard to pension accounting and is documented in the September 15, 1987 Accounting Practices and Procedures (EX4) Task Force minutes. Under this existing guidance, reporting entities have the option of continuing to recognize pension costs on the pay-as-you-go (Employee Retirement Income Security Act funding) method or adopting the provisions of *FASB Statement No. 87*, *Employers' Accounting for Pensions* (FAS 87), which requires recognition of pension costs over the period a participant renders service to the reporting entity and recognition of a liability for unfunded costs.

2. FAS 87 requires recognition of pension costs over the period a participant renders service to the reporting entity and recognition of a liability for unfunded costs. It also permits the recognition of an asset when the pension plan is over funded (i.e., plan assets exceed plan liabilities). *FASB Statement No. 88, Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits* (FAS 88), requires recognition of previously unrecognized amounts when a reporting entity settles or curtails a defined benefit plan or provides benefits in connection with the termination of an employee. *FASB Statement No. 132, Employers' Disclosures about Pensions and Other Postretirement Benefits* (FAS 132), specifies disclosure requirements for pension and other postretirement benefit plans.

3. The purpose of this issue paper is to establish statutory accounting principles for an employer's pension obligations that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Defined Benefit Plans

4. A defined benefit plan defines the amount of the pension benefit that will be provided to the plan participant at retirement or termination. For such benefit plans, reporting entities shall adopt FAS 87 with a modification to exclude non-vested employees. Therefore, the cost related to services rendered prior to becoming eligible and vested in the plan are recognized as a component of the net periodic pension cost in the period the employee becomes vested. Any intangible asset or prepaid expense resulting from adoption of the provisions of this issue paper shall be considered a nonadmitted asset, as such an asset cannot be readily converted to cash to satisfy policyholder obligations. This is consistent with the

definition of assets and nonadmitted assets set forth in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*.

5. If a reporting entity settles or curtails a defined benefit plan, the reporting entity shall immediately recognize all previously unrecognized amounts as discussed below. A settlement is a transaction which is irrevocable and releases the employer from responsibility for the pension obligation by eliminating the risks relative to the obligation and the assets associated with the plan (e.g., making lump-sum cash payments to plan participants in exchange for their rights to receive specified pension benefits or purchasing nonparticipating annuity contracts to cover vested benefits). If a settlement occurs and the net result is a loss, such loss is recognized at the time of the settlement. If the net result is a gain, such gain is not recognized until the proceeds are received by the reporting entity. A curtailment is an event which significantly alters the make up of the pension plan (e.g., a reduction in the years of service required or the employees covered). If a curtailment occurs, there are generally two components to any gain or loss. Any unrecognized prior service cost shall be recognized as a loss. An increase or decrease in pension benefit obligations due to the curtailment will also result in a gain or loss, and is combined with the prior service cost loss. If the net result of the curtailment is a loss, such loss shall be recognized when it is probable that the curtailment will occur and that the effects can be reasonably estimated. If the net result is a gain, such gain shall not be recognized in earnings until the employees terminate or the plan suspension or amendment is adopted and the proceeds are received by the reporting entity. When such gains are recognized, any excess tax surcharges shall also be recognized.

Defined Contribution Plans

6. A defined contribution plan defines the amount of the employer's contributions to the plan and its allocation to plan participants. The pension benefit provided to the plan participant at retirement or termination depends on the amount of employer and employee contributions, earnings on plan investments and, in some plans, other participant forfeitures.

7. For defined contribution plans, the reporting entity shall expense contributions required by the plan over the period in which the employee vests in those contributions. Contributions to plan participants' accounts made prior to vesting shall be treated as prepaid expenses, and shall be nonadmitted. Contributions required after participants terminate or retire shall be accrued and an expense shall be recorded over the working lives of the participants beginning at the date the participant initially vests in plan contributions.

8. Certain defined contribution plans may define the employer’s contribution as a percentage of the plan participants’ individual compensation rather than as a specific dollar amount which is allocated among the plan participants. If an employer's contributions to a defined contribution plan are in excess of those required under the plan and required to be allocated to individual participants, such amounts are recorded as a prepaid expense and nonadmitted under statutory accounting principles.

Disclosures

9. The disclosures required by paragraph 5 of FAS 132 shall be included in the notes to the statutory financial statements considering the modification in this issue paper to include only vested employees. Paragraph 5 of FAS 132 is included in the Relevant GAAP Guidance section of this issue paper.

10. The disclosures required by paragraph 5 of FAS 132 shall be made when an employer recognizes a gain or loss related to a settlement or curtailment of a defined benefit plan or when providing termination benefits.

Transition

11. At the effective date of Codification, the transition obligation or asset shall be determined as the difference between the vested projected benefit obligation and the fair value of plan assets. If prior to the effective date of Codification, the reporting entity has adopted FAS 87 for statutory accounting purposes,

the transition obligation or asset calculated above shall be compared to those amounts previously recorded under FAS 87. The difference between these amounts represents an incremental asset or liability. If the reporting entity has not previously adopted FAS 87 for statutory accounting purposes, the entire transition asset or obligation represents the incremental asset or liability.

12. At the effective date of Codification, if the reporting entity calculates an incremental liability, this liability shall be recognized according to one of the two following methods:

a. The reporting entity may elect to record the entire incremental liability as a direct charge to surplus;

b. Alternatively, the reporting entity may elect to amortize the incremental liability as a component of net periodic pension cost over a period not to exceed 20 years.

13. At the effective date of Codification, if the reporting entity calculates an incremental asset, this asset shall be recognized according to one of the two following methods:

a. The reporting entity may elect to record the entire incremental asset as a direct credit to surplus;

b. Alternatively, the reporting entity may elect to accrue the incremental asset as a component of net periodic pension cost in an amount each period such that total net periodic pension cost may be reduced to an amount not less than zero (i.e., the accrual of the incremental asset may be used to offset current period net periodic pension cost).

An incremental asset resulting from a transition obligation that is less than an amount previously recorded under FAS 87 should first reduce the recorded liability. Any remaining incremental asset shall be recorded as nonadmitted.

Consolidated/Holding Company Plans

14. The employees of many reporting entities are members of a plan sponsored by a parent company or holding company. A reporting entity who participates in these plans and is not directly liable for obligations under the plan shall recognize pension expense equal to its allocation from the holding company or parent company of the required contribution to the plan for the period. A liability shall be established for any such contributions due and unpaid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for obligations under the plan, then the requirements outlined above in paragraphs 4 to 13 of this issue paper shall be applied.

DISCUSSION

15. The conclusions in paragraphs 4 to 13 above adopt FAS 87, FAS 88, and FAS 132 with the following modifications:

a. Calculation of the pension obligation shall exclude non-vested employees. Partially vested employees are included only to the extent of their vested amounts.

b. Any asset which results from an excess of the fair value of plan assets over the pension obligation shall be recorded as a nonadmitted asset.

c. At the date of adoption of this accounting principle, the pension obligation or asset not previously recognized related to vested employees may be recorded immediately or may be amortized over future periods.

d. A net gain (net of excess tax surcharge) resulting from the settlement or curtailment of a pension plan is not recognized until the proceeds are received by the reporting entity.

e. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132 are rejected. All reporting entities shall follow the disclosure requirements included in paragraph 5 of FAS 132.

f. Disclosures relating to other comprehensive income in paragraph 5 of FAS 132 shall be made for income on a statutory basis.

This is consistent with the definition of liabilities as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets.*

16. This issue paper also adopts *FASB Emerging Issues Task Force No. 88-1, Determination of Vested Benefit Obligation for a Defined Benefit Pension Plan*, *FASB Emerging Issues Task Force No. 90-3, Accounting for Employers' Obligations for Future Contributions to a Mutliemployer Pension Plan*, *FASB Emerging Issues Task Force No. 91-7*, *Accounting for Pension Benefits Paid by Employers after Insurance Companies Fail to Provide Annuity Benefits*, and *FASB Emerging Issues Task Force No 96-5*, *Recognition of Liabilities for Contractual Termination Benefits or Changing Benefit Plan Assumptions in Anticipation of a Business Combination*.

17. Accounting for any intangible asset or prepaid expense resulting from application of the provisions of this issue paper as a nonadmitted asset is consistent with the recognition concept in the Statement of Concepts which states that:

> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

18. The transition rules have been modified from FAS 87. For an incremental asset or liability which is not recorded immediately upon adoption of the above provisions, an employer is permitted to amortize the incremental asset or liability as a component of net periodic pension cost over future periods in accordance with paragraphs 12 and 13. FAS 87 requires that any transition amount be amortized on a straight-line basis over the average remaining service period of employees expected to receive benefits (except for employers with all or nearly all inactive employees or those with an average remaining service period of less than 15 years).

19. The guidance as discussed in paragraph 1 above, requires expanded disclosures rather than mandating a specific accounting method. However, this adopted position is inconsistent with the concept of recognition outlined in the Statutory Statement of Concepts which states: *"Liabilities require recognition as they are incurred."* Therefore, adoption of FAS 87, with modifications, will be required for statutory accounting and reporting.

Drafting Notes/Comments

- Postemployment benefits are addressed in *Issue Paper No. 13—Employers' Accounting for Postemployment Benefits*.

- Postretirement benefits other than pensions are addressed in *Issue Paper No. 14—Employers' Accounting for Postretirement Benefits Other Than Pensions*.
- Other deferred compensation plans, such as Rabbi Trusts and ESOPs, are addressed in a separate issue paper.
- The tax attributes associated with the accounting principles discussed in this paper (i.e., deferred income taxes) are not currently recognized in existing statutory accounting guidance. Accounting principles for federal income taxes are addressed in a separate issue paper.
- Holding company obligations are addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

20. The position adopted by the Accounting Practices and Procedures (EX4) Task Force is summarized in the minutes from its September 15, 1987 meeting. Key points are paraphrased below:

> For multi-company plans sponsored by a parent company, the pension expenses would be the amount contributed by the company to the parent company related to the pension plan. This is comparable to the treatment of multi-employer and similar plans under FAS 87.
>
> For plans sponsored by the reporting company, pension expense is the amount to be funded for the period. If the company chooses to adopt FAS 87 and 88, any resulting intangible or prepaid asset would be considered nonadmitted unless approved by the insurer's state of domicile as appropriate. For self-funded plans, i.e. where the company reflects the assets of the pension plan among its own assets, the amount of accrued pension costs and its location in the balance sheet should be disclosed. Accrued pension costs related to the pension plan would be determined in accordance with accepted actuarial methods.
>
> For companies which report on a GAAP basis, but choose to retain statutory accounting methods for state regulatory reporting, additional footnote disclosures supplementing those outlined below are encouraged but not required.

21. The following observations, among others, were made by the Study Group of EX4:

> One of the principal reasons that FAS 87 and 88 were adopted under GAAP was to improve income statement comparability. This comparability has a stronger emphasis on a GAAP income statement than is typical for statutory reporting which is balance sheet oriented.
>
> The liquidation priority of a pension plan liability appears to be behind policyholder liabilities. It appears that unless there is a perfected interest by the pension plan participants or the Pension Benefit Guaranty Corp., that the pension plan stands as a general creditor behind the policyholder. The FASB is less interested in this aspect since the thrust of its position was one of economic over legal substance. However, statutory accounting is on a modified going-concern basis. In addition, the interest of the policyholder is of utmost importance and is primarily responsible for the rationale used in statutory reporting. Nevertheless, the responsibility of the insurance company to live up to its pension plan obligations on an ongoing basis must be recognized.
>
> If FAS 87 were adopted for SAP, certain issues would need to be addressed such as whether the assets (prepaid pension cost and an intangible asset) and liabilities (accrued pension cost) that may arise should be permitted or required to be reported in the financial statements. It would appear that the prepaid and intangible assets would be considered nonadmitted assets since they represent assets, potential or otherwise, not available to satisfy policyholder obligations. Furthermore, companies with unfunded pension plans could be impaired or rendered insolvent by implementing GAAP basis accounting for pensions.

22. The NAIC Annual Statement Instructions for Life and Accident and Health and for Property and Casualty Insurance Companies specify the required disclosures developed by the Study Group of EX4 and adopted by EX4 which include:

a. a description of the plan's funding policy,
b. the method of determination and the amount of pension expense,
c. the amount of the accumulated benefit obligation, the amount of vested benefits and the fair value of the plan assets valued as of the most recent actuarial valuation date,
d. any funding waiver requested or obtained from the IRS,
e. for an unfunded plan, the method of funding the obligation and how the deficiency will be met,
f. significant matters affecting the year-to-year comparability of the pension information and
g. the location(s) and amount(s) of liabilities for benefits.

Illustrations of sample disclosures are also provided in the Annual Statement Instructions.

23. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 17, Other Liabilities, contains the following with respect to pension plans:

> Liabilities for Benefits for Employees and Agents
>
> A company may be required or desire to establish a liability for certain benefits to employees and agents which are not provided for in other accounts. Examples include: 1. It may be desirable to hold the liability for a nonqualified pension plan in this category in order to assist the tax department in adjusting their tax deductions.

Generally Accepted Accounting Principles

24. FAS 87 focuses primarily on single-employer defined benefit plans and requires:

a. a standardized method for measuring net periodic pension cost (unit credit actuarial method or projected unit credit actuarial method depending on the type of plan),
b. immediate recognition of a liability (the minimum liability) when the accumulated benefit obligation exceeds the fair value of plan assets with delayed recognition of the offsetting amount as an increase in net periodic pension cost, and
c. various disclosures about the plan including the components of net pension cost and of the projected benefit obligation in the financial statements. (Paraphrased from the "Fundamentals of Pension Accounting" section of the "Summary" section immediately preceding the FAS 87 statement.)

25. The following is a brief paraphrased summary of the key provisions under FAS 87:

> FAS 87 requires the recognition of a liability (unfunded accrued pension cost) if net periodic pension cost as determined under FAS 87 exceeds amounts the employer has contributed to the plan. An asset (prepaid pension cost) is recognized if net periodic pension cost is less than amounts the employer has contributed to the plan.
>
> For defined benefit pension plans, an additional pension liability (referred to as the minimum liability) must be recognized when the accumulated benefit obligation (defined in FAS 87) for plan participants exceeds the fair value of the plan assets plus or minus any accrued or prepaid pension expense. If an additional liability is recognized, an equal amount shall be recognized as an intangible asset, provided that the asset recognized shall not exceed the amount of unrecognized prior service cost (defined in FAS 87). If an additional liability required to be recognized exceeds unrecognized prior service cost, the excess (which would represent a net loss not yet recognized as net periodic pension cost) is reported as a reduction in equity, net of

any tax benefits that result from considering such losses as temporary differences for purposes of applying the provisions of FASB Statement No. 109, Accounting for Income Taxes.

The intangible asset representing the unrecognized prior service cost (which at the date of initial adoption would be the unrecognized net obligation) is amortized as a component of the net periodic pension cost on a straight-line basis over the average remaining service period of employees expected to receive benefits under the plan, except that, (a) if the average remaining service period is less than 15 years, the employer may elect to use a 15-year period, and (b) if all or almost all of a plan's participants are inactive, the employer shall use the inactive participants' average remaining life expectancy period.

26. FAS 88 prescribes a method for determining the amount to be recognized in earnings when a pension obligation is settled, a plan is curtailed or benefits are provided to employees in connection with their termination of employment. A settlement is a transaction which is irrevocable and releases the employer from responsibility for the pension obligation by eliminating the risks relative to the obligation and the assets associated with the plan. A curtailment is an event which significantly alters the make up of the pension plan (e.g., a reduction in the years of service required or the employees covered).

27. FAS 88 requires recognition of certain previously unrecognized amounts when certain transactions or events occur, the source and timing of the amount to be recognized in earnings will vary with the nature of the transaction. Generally, if a settlement occurs, a gain or loss is recognized related to previously unrecognized gains or losses from either changes in assumptions or actual results which were different from that assumed. In addition, any unamortized net asset from the implementation of FAS 87 is recognized as a gain. If a curtailment occurs, there are generally two components to any gain or loss. Any unrecognized prior service cost is recognized as a loss. An increase or decrease in pension benefit obligations due to the curtailment will also result in a gain or a loss, and is combined with the prior service cost loss. If the net result of the curtailment is a loss, it is recognized when it is probable that the curtailment will occur and that the effects are reasonably estimable. If the net result is a gain, it is not recognized in earnings until the employees terminate or the plan suspension or amendment is adopted.

28. FAS 132 requires the following disclosures:

Disclosures about Pensions and Other Postretirement Benefits

5. An employer that sponsors one or more defined benefit pension plans or one or more defined benefit postretirement plans shall provide the following information:

a. A reconciliation of beginning and ending balances of the benefit obligation[2] showing separately, if applicable, the effects during the period attributable to each of the following: service cost, interest cost, contributions by plan participants, actuarial gains and losses, foreign currency exchange rate changes[3], benefits paid, plan amendments, business combinations, divestitures, curtailments, settlements, and special termination benefits

[2] For defined benefit pension plans, the benefit obligation is the projected benefit obligation—the actuarial present value as of a date of all benefits attributed by the pension benefit formula to employee service rendered prior to that date. For defined benefit postretirement plans, the benefit obligation is the accumulated postretirement benefit obligation—the actuarial present value of benefits attributed to employee service rendered to a particular date.

[3] The effects of foreign currency exchange rate changes that are to be disclosed are those applicable to plans of a foreign operation whose functional currency is not the reporting currency pursuant to *FASB Statement No. 52*, *Foreign Currency Translation*.

b. A reconciliation of beginning and ending balances of the fair value of plan assets showing separately, if applicable, the effects during the period attributable to each of the following: actual return on plan assets, foreign currency exchange rate changes[4], contributions by the employer, contributions by plan participants, benefits paid, business combinations, divestitures, and settlements

[4] Refer to footnote 3.

c. The funded status of the plans, the amounts not recognized in the statement of financial position, and the amounts recognized in the statement of financial position, including:
   (1) The amount of any unamortized prior service cost
   (2) The amount of any unrecognized net gain or loss (including asset gains and losses not yet reflected in market-related value)
   (3) The amount of any remaining unamortized, unrecognized net obligation or net asset existing at the initial date of application of Statement 87 or 106
   (4) The net pension or other postretirement benefit prepaid assets or accrued liabilities
   (5) Any intangible asset and the amount of accumulated other comprehensive income recognized pursuant to paragraph 37 of Statement 87, as amended

d. The amount of net periodic benefit cost recognized, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the amortization of the unrecognized transition obligation or transition asset, the amount of recognized gains and losses, the amount of prior service cost recognized, and the amount of gain or loss recognized due to a settlement or curtailment

e. The amount included within other comprehensive income for the period arising from a change in the additional minimum pension liability recognized pursuant to paragraph 37 of Statement 87, as amended

f. On a weighted-average basis, the following assumptions used in the accounting for the plans: assumed discount rate, rate of compensation increase (for pay-related plans), and expected long-term rate of return on plan assets

g. The assumed health care cost trend rate(s) for the next year used to measure the expected cost of benefits covered by the plan (gross eligible charges) and a general description of the direction and pattern of change in the assumed trend rates thereafter, together with the ultimate trend rate(s) and when that rate is expected to be achieved

h. The effect of a one-percentage-point increase and the effect of a one-percentage point decrease in the assumed health care cost trend rates on (1) the aggregate of the service and interest cost components of net periodic postretirement health care benefit cost and (2) the accumulated postretirement benefit obligation for health care benefits (For purposes of this disclosure, all other assumptions shall be held constant, and the effects shall be measured based on the substantive plan that is the basis for the accounting.)

i. If applicable, the amounts and types of securities of the employer and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer or related parties, and any significant transactions between the employer or related parties and the plan during the period

j. If applicable, any alternative amortization method used to amortize prior service amounts or unrecognized net gains and losses pursuant to paragraphs 26 and 33 of Statement 87 or paragraphs 53 and 60 of Statement 106

k. If applicable, any substantive commitment, such as past practice or a history of regular benefit increases, used as the basis for accounting for the benefit obligation

l. If applicable, the cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event

m. An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this Statement.

Amounts related to the employer's results of operations shall be disclosed for each period for which an income statement is presented. Amounts related to the employer's statement of financial position shall be disclosed for each balance sheet presented.

Employers with Two or More Plans

6. The disclosures required by this Statement may be aggregated for all of an employer's defined benefit pension plans and may be aggregated for all of an employer's defined benefit postretirement plans or may be disaggregated in groups if that is considered to provide the most useful information or is otherwise required by paragraph 7. Disclosures about pension plans with assets in excess of the accumulated benefit obligation generally may be aggregated with disclosures about pension plans with accumulated benefit obligations in excess of assets. The same aggregation is permitted for postretirement plans. However, if those disclosures are combined, an employer shall disclose the aggregate benefit obligation and aggregate fair value of plan assets for plans with benefit obligations in excess of plan assets. The aggregate pension accumulated benefit obligation and aggregate fair value of plan assets for pension plans with accumulated benefit obligations in excess of plan assets also shall be disclosed. Disclosure of amounts recognized in the statement of financial position shall present prepaid benefit costs and accrued benefit liabilities separately.

7. An employer may combine disclosures about pension or postretirement benefit plans outside the United States with those for U.S. plans unless the benefit obligations of the plans outside the United States are significant relative to the total benefit obligation and those plans use significantly different assumptions.

Reduced Disclosure Requirements for Nonpublic Entities

8. A nonpublic entity[5] may elect to disclose the following for its pension and other postretirement benefit plans in lieu of the disclosures required by paragraph 5 of this Statement:

a. The benefit obligation, fair value of plan assets, and funded status of the plan
b. Employer contributions, participant contributions, and benefits paid
c. The amounts recognized in the statement of financial position, including the net pension and other postretirement benefit prepaid assets or accrued liabilities and any intangible asset and the amount of accumulated other comprehensive income recognized pursuant to paragraph 37 of Statement 87, as amended
d. The amount of net periodic benefit cost recognized and the amount included within other comprehensive income arising from a change in the minimum pension liability recognized pursuant to paragraph 37 of Statement 87, as amended
e. On a weighted-average basis, the following assumptions used in the accounting for the plans: assumed discount rate, rate of compensation increase (for pay-related plans), and expected long-term rate of return on plan assets
f. The assumed health care cost trend rate(s) for the next year used to measure the expected cost of benefits covered by the plan (gross eligible charges) and a general description of the direction and pattern of change in the assumed trend rates thereafter, together with the ultimate trend rate(s) and when that rate is expected to be achieved

[5] A nonpublic entity is any entity other than one (a) whose debt or equity securities trade in a public market either on a stock exchange (domestic or foreign) or in the over-the-counter market, including securities quoted only locally or regionally, (b) that makes a filing with a regulatory agency in preparation for the sale of any class of debt or equity securities in a public market, or (c) that is controlled by an entity covered by (a) or (b).

g. If applicable, the amounts and types of securities of the employer and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer or related parties, and any significant transactions between the employer or related parties and the plan during the period

h. The nature and effect of significant nonroutine events, such as amendments, combinations, divestitures, curtailments, and settlements.

Defined Contribution Plans

9. An employer shall disclose the amount of cost recognized for defined contribution pension or other postretirement benefit plans during the period separately from the amount of cost recognized for defined benefit plans. The disclosures shall include a description of the nature and effect of any significant changes during the period affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

Multiemployer Plans

10. An employer shall disclose the amount of contributions to multiemployer plans during the period. An employer may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pensions and other postretirement benefits. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

11. Paragraph 70 of Statement 87 and paragraph 83 of Statement 106 are carried forward without reconsideration. Paragraphs 70 and 83 read as follows:

> In some situations, withdrawal from a multiemployer plan may result in an employer's having an obligation to the plan for a portion of its unfunded benefit obligations. If withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions of FASB Statement No. 5, *Accounting for Contingencies*, shall apply.
>
> In some situations, withdrawal from a multiemployer plan may result in an employer's having an obligation to the plan for a portion of the plan's unfunded accumulated postretirement benefit obligation. If it is either probable or reasonably possible that (a) an employer would withdraw from the plan under circumstances that would give rise to an obligation or (b) an employer's contribution to the fund would be increased during the remainder of the contract period to make up a shortfall in the funds necessary to maintain the negotiated level of benefit coverage (a "maintenance of benefits" clause), the employer shall apply the provisions of *FASB Statement No. 5*, *Accounting for Contingencies*.

OTHER SOURCES OF INFORMATION

29. The NAIC Technical Resource Group Proposed Draft Life Codification, Chapter 23, General Expenses and Taxes, Licenses and Fees, contains the following language:

> Pension Costs
>
> Many insurance companies offer their employees' pension plans as part of the compensation package for service rendered. Pension plans include defined contribution or defined benefit pension plans. The accounting for each of these types differs.
>
> For defined benefit pension plans, an insurance company is responsible for providing a specified benefit to the plan participants at retirement. The insurance company has the option of recognizing the benefit costs by adoption Financial Accounting Standards Board Statement of

> Financial Accounting Standard (FAS) No. 87, “Employers' Accounting for Pensions,” or based upon funding required under the Employee Retirement Income Security Act (ERISA).
>
> If FAS 87 is adopted, pension service costs must be recognized over the period a participant renders service to the company for qualified and non-qualified (e.g. Top Hat Plans) defined benefit pension plans.
>
> If the ERISA funding method is elected, an insurance company will record the pension service costs for defined benefit pension plans based upon requirements of ERISA for qualified pension plans. Pension service costs will then be recorded in conjunction with funding required by ERISA for such qualified plans on a pay-as-you-go basis. When ERISA dictates additional funding is required, the employer will recognize this funding as a corresponding expense.
>
> If the ERISA funding method is elected for qualified defined benefit pension plans, pension service costs associated with any non-qualified plans must be accrued as earned. Those service costs must be accrued over the working lives of the participants covered under the non-qualified plan.
>
> For defined contribution benefit plans, the insurance company is responsible for making specific contributions to a participant's pension plan account. The insurance company must accrue the contributions required by the plan in the period in which those contributions are earned. Contributions to plan participants' accounts required during the participants' working lives must be expensed over that period. The contributions required after participants terminate or retire require an expense be accrued and a liability established over the working lives of the participants.
>
> If a company makes contributions to the defined contribution plan in excess of those allocated to individual participants, the excess is recorded as a prepaid asset.
>
> Settlements and Curtailments of Pension Plans
>
> Companies that offer their employees defined benefit pension plans periodically settle or curtail the plan.
>
> A settlement is a transaction which is irrevocable, releases the employer from responsibility for the pension, and eliminates the risks relative to the obligation and the assets associated with the plan. For example, lump-sum cash payout to the employees in lieu of their pension rights.
>
> A curtailment is an event which significantly alters the make up of the pension plan. For example, the years of service required is reduced or the employees covered under the plan is decreased.
>
> Settlements and curtailments of pension plans should be accounted for using generally accepted accounting principles.

30. The chapter on Non-Claim Operating Expenses included in the draft discussion material from previous Property/Casualty codification projects contains the following language which contradicts some of the Life Codification language:

> Statement of the Financial Accounting Standards Board (“FASB”) No. 87, “Employers' Accounting for Pensions” was issued in December 1985 and superseded Accounting Principles Board (“APB”) Opinion 8 “Accounting for the Cost of Pension Plans”. FASB 87 should be followed in accounting for pension plans. FASB 87 requires that pension plans be accounted for on the accrual basis of accounting and any difference between “Net Period Pension Cost” incurred and the amount actually funded is accrued. GAAP permits the recognition of an asset for the excess of any pension funds over the plan's liabilities. SAP, however, does not permit the recognition of any prepaid pension expense. “Net Periodic Pension Cost” includes the following components:

1. Current service cost. (The present value of future benefits earned for the employee's current service.)

2. Amortization of unrecognized prior service or retroactive benefit costs over the future service periods of those employees active at the inception or plan amendment date. (The present value of future benefits credited for an employee's prior service at the inception or amendment of the plan should be ratably accrued over his remaining service life.)

3. “Gains and losses are changes in the amount of either the projected benefit obligation or plan assets resulting from experience different from that assumed and changes in assumptions.” “Because gains and losses may reflect refinements in estimates as well as real changes in economic values and because some gains in one period may be offset by losses in another or vice versa, ... ”such gains and losses are not recognized as part of “net pension cost in the period in which they arise”. FASB 87 sets forth the minimum and alternative methods of amortizing net gains and losses.

FASB 88 “Employers’ Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits” should be followed when such plans are terminated.

Statutory Issue Paper No. 9

Subsequent Events

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 9

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The Accounting Practices and Procedures Manuals for Life and Accident and Health Insurance Companies and for Property and Casualty Insurance Companies do not address the accounting treatment for events occurring subsequent to the period covered by statutory financial statements but prior to their issuance. Although general guidance for disclosing material subsequent events is found in the NAIC Annual Statement Instructions (Annual Statement Instructions) and guidance for identifying and disclosing material subsequent events is found in the NAIC *Financial Condition Examiners Handbook*, specific criteria as to whether a material subsequent event should be recorded in the current financial statements or simply disclosed in the notes to the financial statements is not defined. The purpose of this issue paper is to define "subsequent events" for statutory accounting purposes and to establish the criteria for recording such events in the financial statements and/or disclosing them in the notes to the financial statements.

SUMMARY CONCLUSION

2. For purposes of statutory accounting, "subsequent events" shall be defined as events or transactions that occur subsequent to the balance sheet date, but prior to the issuance of the statutory financial statements. For purposes of this paper, the issuance of the statutory financial statements includes not only the submission of the Quarterly and Annual Statement but also the issuance of the audit opinion by the reporting entity's certified public accountant.

3. Material subsequent events shall be considered either:

   a. Type I. Events that provide additional evidence with respect to conditions that existed at the date of the balance sheet and affect the estimates inherent in the process of preparing financial statements.

   b. Type II. Events that provide evidence with respect to conditions that did not exist at the balance sheet date but arose subsequent to that date.

4. All information that becomes available prior to the issuance of the financial statements relating to a material Type I subsequent event shall be used by management to determine a related accounting estimate (see *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets*). Any changes in estimates resulting from the use of such evidence shall be recorded in the financial statements unless specifically prohibited (e.g., subsequent collection of agents balances over 90 days due when determining nonadmitted agents balances as prohibited by *Issue Paper No. 6—Amounts Due from Agents and Brokers*). For material Type I subsequent events, the nature and the amount of the adjustment shall be disclosed in the notes to the financial statements only if necessary to keep the financial statements from being misleading.

5. Information that becomes available prior to the issuance of the financial statements relating to a material Type II subsequent event shall not be recorded in the financial statements, but shall be disclosed in the notes to the financial statements. If an event is of such a nature that pro forma disclosures are necessary to keep the financial statements from being misleading, disclosure of supplemental pro forma financial data shall be made including the impact on net income, surplus, total assets and total liabilities giving effect to the event as if it had occurred on the date of the balance sheet.

6. The conclusions in this issue paper, including the disclosures in paragraph 5, shall also apply to quarterly statement filings.

DISCUSSION

7. The above conclusion expands and clarifies the guidance provided in the NAIC *Financial Condition Examiners Handbook* and the Annual Statement Instructions by requiring that Type I subsequent events be recorded in the financial statements.

8. The Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts) states that *"the cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders."* The recording of Type I subsequent events provides the regulator relevant information to evaluate the financial condition of an entity. However, in some circumstances, the recording of Type I subsequent events is specifically prohibited within Codification (e.g., subsequent collection of agents balances over 90 days due when determining nonadmitted agents balances).

9. Identifying events that require adjustment of the financial statements under the criteria stated in the conclusion calls for the management of the entity to exercise judgment and accumulate knowledge of the facts and circumstances surrounding the event. For example, a loss on an uncollectible agent's balance as a result of an agent's deteriorating financial condition leading to bankruptcy subsequent to the balance sheet date would be indicative of conditions existing at the balance sheet date, thereby requiring the recording of such event to the financial statements before their issuance. On the other hand, a similar loss resulting from an agent's major casualty loss such as a fire or flood subsequent to the balance sheet date would not be indicative of conditions existing at the balance sheet date and recording of the event to the financial statements would not be appropriate. However, this is a Type II subsequent event which would require disclosure in the notes to the financial statements as described in paragraph 5 above.

10. Additionally, the Statement of Concepts states that *"Because these basic financial statements cannot be expected to provide all of the information necessary to evaluate an entity's short-term and long-term stability, management must supplement the financial statements with sufficient disclosures (e.g., notes to the financial statements, management's discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided."* Disclosure of Type II subsequent events meets this objective. Examples of Type II events that require disclosure to the financial statements (but should not result in adjustment) are: i) sale of a bond or capital stock issue, ii) purchase of a business, iii) settlement of litigation when the event giving rise to the claim took place subsequent to the balance sheet date and iv) casualty losses resulting from a hurricane or earthquake subsequent to the balance sheet date.

Drafting Notes/Comments
None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

11. The Annual Statement Instructions for Life and Accident and Health Insurance Companies require disclosure of subsequent events in the notes to the financial statements as follows:

> Events Subsequent
> Instruction:
>
> Describe any events occurring subsequent to the close of the books or accounts for this statement which may have a material effect on the financial condition of the company.
>
> Illustration:
>
> On February 1, 19__, the Board of Directors adopted a plan for recapitalization subject to shareholder approval, which would effect an amendment to the Certificate of Incorporation to increase the authorized common shares from _________to_____________.

12. The Annual Statement Instructions for Property and Casualty Insurance Companies is similar to the Life and Accident and Health instructions above.

13. Part 1, Section 5, *Report on Full Scope Examination*, of the NAIC *Financial Condition Examiners Handbook* discusses reporting of transactions consummated subsequent to the effective date of the examination as follows:

> Any transaction consummated by a company subsequent to the effective date of an examination, which is for the purpose of adjusting the company's previously reported financial condition, shall not be recognized in the preparation of the examiner's financial statement in the report of examination.
>
> Such transaction may be described by a qualifying statement, or statements, when supported by a reference to the original minutes or document evidencing such subsequent transaction or transactions. Such supporting data shall be set forth in a clearly captioned appendix or appendices to the report.

14. Exhibit G to Part 1 (General) of the NAIC *Financial Condition Examiners Handbook* provides a list of procedures to assist in identifying subsequent events but does not provide guidance as to the treatment of the events once identified. A list of the procedures are as follows:

> EXHIBIT G--
> REVIEW OF EVENTS SUBSEQUENT TO THE BALANCE SHEET DATE
>
> Company ___________ Examination Date ___________ Approved By ___________
>
> Generally, the period of review of post-balance sheet events extends from the date of the balance sheet to the date of the examination report, which in most cases is the date of substantial completion of the fieldwork. It is usually not possible, however, to extend all procedures to the same date. If delivery of the examination report is unduly delayed, consideration should be given to extending the review to a later date.
>
> The workpaper should contain specific information as to the scope of investigation of subsequent events and the consideration given to each of them. Procedures related to subsequent events that extend into the subsequent period include, but are not necessarily limited to, the items described below.

1. Scan cash receipts records for evidence of proceeds of loans, significant sales of productive assets or other unusual items.

   Amounts over $ ____________Date through _______________

2. Scan cash disbursements records for unusual payments and payment of liabilities not recorded as of balance-sheet date.

   Amounts over $ ___________Date through _______________

3. Review general journal entries for entries that would have a material effect upon the financial statement as of balance sheet date.

   Amounts over $ ___________ Date through ________________

4. Read minutes of meetings to directors, stockholders and important committees up to the report date. If minutes have not been prepared, obtain a written representation from the secretary about matters dealt with at such meetings. Review draft (if any) or proxy statement to be issued to shareholders for matters that may affect the financial statements.

5. Read latest available interim financial statements. Compare them with the financial statements being reported on and obtain explanations for any unusual items noted as a result of the comparison.

   Amounts over $ _____________ Date through ______________

6. Inquire of officers and other executives having responsibility for financial and accounting matters as to whether the interim statements have been prepared on the same basis as that used for the statements under examination. (Indicate identity of statements and periods covered.)

   Amounts over $ _____________ Date through ____________

7. Inquire of officers and other executives having responsibility for financial and accounting matters (limited where appropriate to major locations) as to: (NOTE: Indicate persons with whom discussions were held and date and attach memoranda or comments regarding significant matters discussed. Corporate office inquiries should extend to the report date.)

   a. Whether any substantial contingent liabilities or commitments existed at the balance-sheet date or at the date of inquiry.

   b. Whether there was any significant change in the capital stock or debt to the date of inquiry.

   c. The current status of items in the financial statements being reported on that were accounted for on the basis of tentative, preliminary, or inconclusive data.

   d. Whether any other matters had occurred that would materially affect the financial statements or operations of the company. This includes appropriate inquiries as to subsequent events of material affiliates accounted for by the equity method.

      Amounts over $ __________________ Date through ____________

8. If the above procedures produce responses that significantly affect the financial statements, they should be confirmed in writing. This may be done in the letter of representations.

   Amounts over $ __________________ Date through _____________

Generally Accepted Accounting Principles

15. The primary source of GAAP authoritative guidance for the treatment of subsequent events is *AICPA Statement on Auditing Standards No. 1, Section 560*, *Subsequent Events*, which states the following:

> .01 An independent auditor's report ordinarily is issued in connection with historical financial statements that purport to present financial position at a stated date and results of operations and cash flows for a period ended on that date. However, events or transactions sometimes occur subsequent to the balance sheet date, but prior to the issuance of the financial statements and auditor's report, that have a material effect on the financial statements and therefore require adjustment or disclosure in the statements. These occurrences hereinafter are referred to as "subsequent events."
>
> .02 Two types of subsequent events require consideration by management and evaluation by the independent auditor.
>
> .03 The first type consists of those events that provide additional evidence with respect to conditions that existed at the date of the balance sheet and affect the estimates inherent in the process of preparing financial statements. All information that becomes available prior to the issuance of the financial statements should be used by management in its evaluation of the conditions on which the estimates were based. The financial statements should be adjusted for any changes in estimates resulting from the use of such evidence.
>
> .04 Identifying events that require adjustment of the financial statements under the criteria stated above calls for the exercise of judgment and knowledge of the facts and circumstances. For example, a loss on an uncollectible trade account receivable as a result of a customer's deteriorating financial condition leading to bankruptcy subsequent to the balance-sheet date would be indicative of conditions existing at the balance-sheet date, thereby calling for adjustment of the financial statements before their issuance. On the other hand, a similar loss resulting from a customer's major casualty such as a fire or flood subsequent to the balance-sheet date would not be indicative of conditions existing at the balance-sheet date and adjustment of the financial statements would not be appropriate. The settlement of litigation for an amount different from the liability recorded in the accounts would require adjustment of the financial statements if the events, such as personal injury or patent infringement, that gave rise to the litigation had taken place prior to the balance-sheet date.
>
> .05 The second type consists of those events that provide evidence with respect to conditions that did not exist at the date of the balance sheet being reported on but arose subsequent to that date. These events should not result in adjustment of the financial statements.[1] Some of these events, however, may be of such a nature that disclosure of them is required to keep the financial statements from being misleading. Occasionally such an event may be so significant that disclosure can best be made by supplementing the historical financial statements with pro forma financial data giving effect to the event as if it had occurred on the date of the balance sheet. It may be desirable to present pro forma statements, usually a balance sheet only, in columnar form on the face of the historical statements.

[1] This paragraph is not intended to preclude giving effect in the balance sheet, with appropriate disclosure, to stock dividends or stock splits or reverse splits consummated after the balance-sheet date but before issuance of the financial statements.

.06 Examples of events of the second type that require disclosure to the financial statements (but should not result in adjustment) are:

a. Sale of a bond or capital stock issue.

b. Purchase of a business.

c. Settlement of litigation when the event giving rise to the claim took place subsequent to the balance-sheet date.

d. Loss of plant or inventories as a result of fire or flood.

e. Losses on receivables resulting from conditions (such as a customer's major casualty) arising subsequent to the balance-sheet date.

.07 Subsequent events affecting the realization of assets such as receivables and inventories or the settlement of estimated liabilities ordinarily will require adjustment of the financial statements (see paragraph .03) because such events typically represent the culmination of conditions that existed over a relatively long period of time. Subsequent events such as changes in the quoted market prices of securities ordinarily should not result in adjustment of the financial statements (see paragraph .05) because such changes typically reflect a concurrent evaluation of new conditions.

.08 When financial statements are reissued, for example, in reports filed with the Securities and Exchange Commission or other regulatory agencies, events that require disclosure in the reissued financial statements to keep them from being misleading may have occurred subsequent to the original issuance of the financial statements. Events occurring between the time of original issuance and reissuance of financial statements should not result in adjustment of the financial statements[2] unless the adjustment meets the criteria for the correction of an error or the criteria for prior period adjustments set forth in Opinions of the Accounting Principles Board.* Similarly, financial statements reissued in comparative form with financial statements of subsequent periods should not be adjusted for events occurring subsequent to the original issuance unless the adjustment meets the criteria stated above.

[2] However, see paragraph .05 as to the desirability of presenting pro forma financial statements to supplement the historical financial statements in certain circumstances.

Statutory Issue Paper No. 10

Uncollected Premium Balances

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 6

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper addresses direct and group billed uncollected premiums for Property and Casualty and Accident and Health policies. It does not address uncollected and deferred premiums for life considerations, which are addressed in a separate issue paper. The Accounting Practices and Procedures Manuals for Property and Casualty Insurance Companies and for Life and Accident and Health Insurance Companies (the Manuals) do not provide definitive guidance on when to begin aging premiums. This issue paper puts forth a framework for the accounting and reporting of uncollected premium balances that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. Premium transactions result in amounts due to the reporting entity that meet the definition of an asset as set forth in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets.* First, an evaluation shall be made to determine nonadmitted amounts. Next an evaluation shall be made of the remaining admitted assets in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5), to determine whether there is an impairment. This two step process is set forth below:

a. To the extent that there is no related unearned premium, any uncollected premium balances which are over ninety days due shall be accounted for as a nonadmitted asset. If an installment premium is over ninety days due, the amount over ninety days due plus all future installments that have been recorded on that policy shall be accounted for as nonadmitted assets.

b. Amounts determined to be uncollectible shall be written off: If, in accordance with Issue Paper No. 5, it is probable the uncollected premium balance is uncollectible, any uncollectible premiums receivable shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible and is therefore not written off, disclosure requirements outlined in Issue Paper No. 5 shall be followed.

3. The following provides additional guidance in determining the nonadmitted portion of uncollected premiums:

a. Amounts classified as nonadmitted assets collected subsequent to date of the statutory financial statements - Such amounts should not be used to adjust the nonadmitted asset otherwise calculated.

b. Determination of the Due Date -

i. The due date for original and deposit premiums is governed by the effective date of the underlying insurance contract and not the agent/reporting entity contractual relationship.

ii. The due date for endorsement and installment premiums is governed by the effective date of the endorsement and the contractual due date of the installment.

iii. The due date for audit premiums and retrospective premiums is governed by policy provisions or contract provisions. If the due date for receivables relating to audits is not addressed by policy provisions or contract provisions, any uncollected premium (either accrued or billed) is nonadmitted.

iv. These provisions are to be applied to all premium receivables except those arising from force placed insurance obtained by a lender for collateral protection, certain policies, known as a Trustee Sales Guarantees (TSGs), issued by title insurance companies to lenders on defaulted real estate loans and crop/hail policies. For forced placed insurance, the due date for purposes of applying paragraph 2 shall be the date of billing. For TSG policies, the due date for purposes of applying paragraph 2 shall be at the expiration of the grace period given to the defaulted debtor, which is provided by statute. Crop/hail premiums are considered installment premiums in accordance with paragraph 3.b.ii. and accordingly, the due date for purposes of applying paragraph 2 shall be governed by the contractual due date of the installment.

DISCUSSION

4. The Statement of Concepts states:

> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

5. Based upon the above concept, uncollected premium balances should reflect only amounts that are available to meet both current and future policyholder obligations when the obligations are due. Therefore, amounts determined to be impaired, regardless of aging, should be charged to income in the period such determination is made. Short-term policies shall also be subject to this collectibility analysis. The adoption of this methodology will more appropriately provide the statutory financial statement reader with an indication of those assets available to meet policyholder obligations. Under the conservatism concept of statutory accounting, uncollected premiums over ninety days due, even if they are determined to be collectible, should be nonadmitted and charged to surplus. Uncollected installment premiums over ninety days due, even if they are determined to be collectible, should be nonadmitted along with all future installments. Additionally, the conservatism concept of statutory accounting will not allow subsequent collection of amounts charged to surplus as nonadmitted assets to reduce the nonadmitted asset. These recoveries will be accounted for in the period received.

6. An exception to the due date guidance is provided for force placed insurance and for certain title insurance policies known as TSGs. Force placed insurance is a type of collateral protection insurance typically offered to financial institutions and other lenders that make loans secured by collateral. Coverage is obtained by the lender when the collateral securing a loan becomes uninsured by the borrower. Due to the nature of this specific type of insurance, most policies or certificates are not issued, and consequently not billed, until after the effective date of coverage. As a result, the due date for purposes of paragraph 2 is the date of billing. TSGs are title insurance policies issued to lending

institutions during the foreclosure process on defaulted real estate loans. TSGs are requested by the lending institution, and premium is booked by the reporting entity at the notice of default date. There is, typically by law, a grace period given to the defaulted debtor to bring the loan current. Since the premium is remitted to the reporting entity from the proceeds of the foreclosed property, this grace period results in a lag period before the premium could be collected. As a result, the due date for purposes of paragraph 2 is the date at which the grace period expires.

Drafting Notes/Comments

- A separate issue paper addresses deferred and uncollected life and annuity premiums.
- A separate issue paper addresses nonadmitted assets for retrospective premiums on direct or assumed business; this issue was addressed and codified by the NAIC in 1993. Guidance is included in Chapter 22 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies.
- A separate issue paper addresses premiums sold with recourse (premium finance company).
- Reinsurance premiums payable, reinsurance commissions receivable, etc., which are currently reported on the same line item in the Annual Statement are addressed in a separate issue paper.
- Accounting for uncollected agents' balances is addressed in *Issue Paper No. 6—Amounts Due From Agents and Brokers*.
- Accounting for bills receivable is addressed in *Issue Paper No. 21—Bills Receivable For Premiums*.
- Accounting/aging of retrospective premiums currently reported on line 9.2 or 9.3 is addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

7. The draft discussion material from previous Property/Casualty codification projects suggested aging of all original or renewal premiums receivable to begin as of the effective date of the policy. In addition, the proposed version suggests endorsement premiums begin aging from the effective date of the endorsement and installment premiums begin aging from the contractual due date of the installment. This presentation is consistent with GAAP and provides for a conservative aging process.

8. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 7, *Agents' Balances or Uncollected Premiums*, page 2, paragraph 2, provides the following guidance:

> To satisfy the requirements of the annual statement blank, agents' balances or uncollected premiums over three months due are nonadmitted assets. (See Chapter 9 – Nonadmitted Assets, see excerpt below.)

9. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 9, *Nonadmitted Assets*, page 1, point 3, reinforces Chapter 7 by stating the following:

> Agents Balances or Uncollected Premiums Over Three Months Due: The statutes of most states require that agents' balances or uncollected premiums over three months due be nonadmitted because of the uncertainty of collection.

10. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies, Exhibit 2 - Analysis of Nonadmitted Assets, Line 24.2 - Premiums, Agents' Balances and Installments Booked but Deferred and Not Yet Due, provides additional guidance for nonadmitting installment premiums as follows:

> This item should include all future installments on all policies for which one or more installments are over three months past due.

11. The Accounting Practices and Procedures Manuals for Property and Casualty and for Life and Accident and Health Insurance Companies do not address when the aging of uncollected premiums is to commence; however, the draft discussion material from previous Property/Casualty codification projects suggested the following:

> Original or deposit premiums
>
> Aging is always based on the effective date of the policy or bond regardless of whether the insurer is using a direct billing system or an account current system.
>
> Endorsement
>
> Aging is always based on the effective dates of the endorsements.
>
> Installments
>
> Aging is always based on the due date of the installment.

12. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 18, pages 3 and 4, discusses uncollected premiums as follows:

> Accident and Health Policies
>
> Accident and health insurance policies typically provide a grace period after the due date for the premium to be received before the policy is terminated. If the company is relatively assured of collecting the late premium, and has established an appropriate unearned premium reserve, it is permitted to record such due and uncollected premium as an admitted asset.
>
> On accident and health policies, other than group, with premiums payable more frequently than quarterly, all due and unpaid premiums are not admitted if more than one period premium is overdue. Group premiums more than 90 days overdue also are disallowed as an admitted asset.
>
> Because the policyholder can terminate the policy at any time simply by not paying the premium, the company should consider its lapse experience in determining the amount it records as uncollected premiums. Recording older due premiums (although not more than 90 days past due), which have little or no unearned premium reserve, may overstate the company's financial condition.

Generally Accepted Accounting Principles

13. GAAP accounting for uncollectible premiums/receivables is governed by *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), paragraphs 1, 3 and 8:

> 1. For the purpose of this Statement, a contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a “gain contingency”) or loss[1] (hereinafter a “loss contingency”) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.
>
> [1] The term loss is used for convenience to include many charges against income that are commonly referred to as expenses and others that are commonly referred to as losses.
>
> 3. When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable

to remote. This Statement uses the terms probable, reasonably possible, and remote to identify three areas within that range, as follows:

a) Probable. The future event or events are likely to occur.

b) Reasonably possible. The chance of the future event or events occurring is more than remote but less than likely.

c) Remote. The chance of the future event or events occurring is slight.

8. An estimated loss from a loss contingency (as defined in paragraph 1) shall be accrued by a charge to income[3] if both of the following conditions are met:

a) Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements.[4] It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.

b) The amount of loss can be reasonably estimated.

[3] Paragraphs 23-24 of APB Opinion No. 9, Reporting the Results of Operations, describe the rare circumstances in which a prior period adjustment is appropriate. Those paragraphs are not amended by this Statement.

[4] Date of the financial statements means the end of the most recent accounting period for which financial statements are being presented.

14. The FAS 5 criteria above is used in interpreting information such as historical trending and general information about the stability of the insureds in an effort to evaluate the collectibility of the receivable balance. Accounting for contingencies is discussed in more detail in Issue Paper No. 5.

15. GAAP accounting requires the aging of direct billed premiums to begin from the effective date of the policy. Aging for endorsement premiums should begin from the endorsement's effective date and installment premiums should begin from the installment's contractual due date. Although not specifically stated, this guidance can be deduced through review of *FASB Statement of Concepts No. 5*, *Recognition and Measurement in Financial Statements of Business Enterprises*, paragraph 83, as follows:

83. Further guidance for recognition of revenues and gains is intended to provide an acceptable level of assurance of the existence and amounts of revenues and gains before they are recognized. Revenues and gains of an enterprise during a period are generally measured by the exchange values of the assets (goods or services) or liabilities involved, and recognition involves consideration of two factors (a) being realized or realizable and (b) being earned, with sometimes one and sometimes the other being the more important consideration.

a. Realized or realizable. Revenues and gains generally are not recognized until realized or realizable. Revenues and gains are realized when products (goods or services), merchandise, or other assets are exchanged for cash or claims to cash. Revenues and gains are realizable when related assets received or held are readily convertible to known amounts of cash or claims to cash. Readily convertible assets have (i) interchangeable (fungible) units and (ii) quoted prices available in an active market that can rapidly absorb the quantity held by the entity without significantly affecting the price.

> b. Earned. Revenues are not recognized until earned. An entity's revenue-earning activities involve delivering or producing goods, rendering services, or other activities that constitute its ongoing major or central operations, and revenues are considered to have been earned when the entity has substantially accomplished what it must do to be entitled to the benefits represented by the revenues. Gains commonly result from transactions and other events that involve no "earning process," and for recognizing gains, being earned is generally less significant than being realized or realizable.

16. The renewal or establishment of an insurance policy in exchange for a claim to cash (premium receivable) triggers the realization characteristic of revenue recognition, therefore, the aging of the uncollected premium should commence on the effective date of the new or renewed policy. Endorsement premiums will trigger the realization characteristic on the effective date of the endorsement, while installment premiums will trigger the realization characteristic on the contractual due date of the installment.

17. *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60), also provides some indirect guidance. FAS 60, paragraph 13, requires revenue on short-duration contracts to be recognized over the period of the contract in proportion to the amount of insurance protection provided. The contract period starts with the policy effective date. Therefore, it is reasonable to begin aging from the policy effective date, as this is the date when revenue recognition begins.

OTHER SOURCES OF INFORMATION

18. The draft discussion material from previous Property/Casualty codification projects proposed extensive modifications to the accounting for agents' balances and uncollected premiums. The following represents a summary of those modifications:

> When the original or deposit premium is more than ninety days past due based on an aging referenced to effective date and therefore, not admitted, all premiums subsequently charged on the same policies or bonds are similarly not admitted, except that if the amount of such original or deposit premiums does not exceed 20% of the subsequently charged premiums in the same policies or bonds, such subsequently charged premiums, if otherwise not themselves more than ninety days overdue, shall be allowed as admitted assets.

19. The same basic concept was also discussed for endorsement premiums and installment premiums. In addition, it discussed certain parameters where a greater than ninety day nonadmitted premium could be accounted for as an admitted asset. The modification was stated as follows:

> A premium which has been determined to be not admitted may be treated as admitted if it has been collected within forty-five days of the date of determination and not more than ninety days had elapsed from the billing date to the date of determination and further, that not more than one hundred thirty-five days had elapsed from the effective date of the premium to the date of determination.

Statutory Issue Paper No. 11

Compensated Absences

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 11
This issue paper may not be directly related to the current authoritative statement.

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance does not specifically address the accounting for compensated absences (i.e., vested vacation benefits, vested sick pay benefits, and holidays) in either the Accounting Practices and Procedures manuals for Life and Accident and Health or for the Property and Casualty Insurance Companies. The purpose of this issue paper is to establish statutory accounting principles for compensated absences that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. A reporting entity shall accrue a liability for employees' compensation for future absences if all of the following conditions are met:

a. The reporting entity's obligation relating to employees' rights to receive compensation for future absences is attributable to employees' services already rendered,

b. The obligation relates to rights that vest[1] or accumulate[2],

c. Payment of the compensation is probable, and

d. The amount can be reasonably estimated.

3. In the unlikely situation in which a reporting entity does not accrue a liability in accordance with paragraph 2 only because the amount cannot be reasonably estimated (i.e., condition d. is not met), that fact and the reasons therefore shall be disclosed in a note to the financial statements. An employer is not required to accrue a liability for nonvesting accumulating rights for compensated absences as the right to receive these benefits is contingent upon future events and continued employment.

4. A reporting entity shall accrue a liability for employees' compensated absences or, for services reimbursable under service agreements with an affiliate, if all of the above conditions are met.

[1] In this issue paper, vested rights are those for which the reporting entity has an obligation to make payment even if an employee terminates; thus, they are not contingent on an employee's future service.

[2] For purposes of this issue paper, accumulate means that earned but unused rights to compensated absences may be carried forward to one or more periods subsequent to that in which they are earned, even though there may be a limit to the amount that can be carried forward.

5. Accounting changes adopted to conform to the provisions of this issue paper shall be accounted for in accordance with *Issue Paper No. 3—Accounting Changes*. In the year the principle is adopted, recognition of the liability for compensated absences at the time of adoption that has not previously been recorded shall be recognized through a direct charge to surplus.

Consolidated/Holding Company Plans

6. The employees of many reporting entities are eligible for certain compensated absence benefits granted by a parent company or holding company. An entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation from the parent company or holding company of the benefits earned during the period. A liability shall be established for any such amounts due, but not yet paid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for compensated absence benefits, then the requirements outlined above in paragraphs 2 - 5 shall be applied.

DISCUSSION

7. Paragraphs 2-5 of the Summary Conclusion above adopt *FASB Statement No. 43*, *Accounting for Compensated Absences* (FAS 43) with certain modifications to paragraphs 8 and 9. Paragraphs 8 and 9 discuss the effective date and the accounting for the retroactive adoption of FAS 43. This issue paper modifies these paragraphs by requiring the initial adoption of this accounting principle to be recorded as a change in accounting principle consistent with Issue Paper No. 3 (i.e., the cumulative effect of the change will be charged to surplus in the year of adoption).

8. Liability, as defined by *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets,* is a probable future sacrifice of economic benefit arising from the present obligation of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transactions or events. Compensated absences, which meet the criteria discussed in the conclusion above, meet this definition of a liability. The recording of a liability for compensated absences is also consistent with presenting financial statements which support the Solvency and Conservatism concepts within the Statement of Concepts.

Drafting Notes/Comments

- Holding company obligations are addressed in a separate issue paper.
- Accounting for pensions is addressed in *Issue Paper No. 8—Accounting for Pensions*.
- Employers' accounting for postemployment benefits is addressed in *Issue Paper No. 13—Employers' Accounting for Postemployment Benefits*.
- Employers' accounting for postretirement benefits other than pensions is addressed in *Issue Paper No. 14—Employers' Accounting for Postretirement Benefits Other Than Pensions.*

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting Principles

9. Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 17, *Other Liabilities*, provides general guidance on the accrual of compensated absences as follows:

> Liabilities for Benefits for Employees and Agents
>
> A company may be required or desire to establish a liability for certain benefits to employees and agents which are not provided for in other accounts. Examples include:

The company may wish to set up a liability for the salary for accrued but unused vacation hours since vacation hours can legitimately be viewed as "earned" at the end of the work periods for which they are granted.

10. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies does not provide specific guidance on accounting for compensated absences.

Generally Accepted Accounting Principles

11. The accrual for compensated absences is governed by FAS 43, *Accounting for Compensated Absences*. Paragraphs 6, 7, 8 and 9 provide for the determination and treatment of compensated absences.

6. An employer shall accrue a liability for employees' compensation for future absences if all of the following conditions are met:

a. The employer's obligation relating to employees' rights to receive compensation for future absences is attributable to employees' services already rendered,

b. The obligation relates to rights that vest[1] or accumulate[2],

[1] In this Statement, vested rights are those for which the employer has an obligation to make payment even if an employee terminates; thus, they are not contingent on an employee's future service.

[2] For purposes of this Statement, accumulate means that earned but unused rights to compensated absences may be carried forward to one or more periods subsequent to that in which they are earned, even though there may be a limit to the amount that can be carried forward.

c. Payment of the compensation is probable, and

d. The amount can be reasonably estimated.

If an employer meets conditions (a), (b), and (c) and does not accrue a liability because condition (d) is not met, that fact shall be disclosed.

7. Notwithstanding the conditions specified in paragraph 6, an employer is not required to accrue a liability for nonvesting accumulating rights to receive sick pay benefits[3] (that is, compensation for an employee's absence due to illness) for the reasons stated in paragraph 15.

[3] In accounting for compensated absences, the form of an employer's policy for compensated absences should not prevail over actual practices. For example, if employees are customarily paid "sick pay" benefits even though their absences from work are not actually the result of illness or if employees are routinely allowed to take compensated "terminal leave" for accumulated unused sick pay benefits prior to retirement, such benefits shall not be considered sick pay benefits for purposes of applying the provisions of paragraph 7 but rather should be accounted for in accordance with paragraph 6.

Effective Date and Transition

8. This Statement shall be effective for fiscal years beginning after December 15, 1980, with earlier application encouraged. Accounting changes adopted to conform to the provisions of this Statement shall be applied retroactively. In the year that this Statement is first applied, the financial statements shall disclose the nature of any restatement and its effect on income before extraordinary items, net income, and related per share amounts for each year restated.

9. If retroactive restatement of all years presented is not practicable, the financial statements presented shall be restated for as many consecutive years as practicable and the cumulative effect of applying the Statement shall be included in determining net income of the earliest year restated (not necessarily the earliest year presented). If it is not practicable to restate any prior year, the cumulative effect shall be included in net income in the year in which the Statement is first applied. (See paragraph 20 of *APB Opinion No. 20, Accounting Changes*.) The effect on income before extraordinary items, net income, and related per share amounts of applying this Statement in a year in which the cumulative effect is included in determining that year's net income shall be disclosed for that year.

OTHER SOURCES OF INFORMATION

12. Chapter 22 of the NAIC Technical Resource Group Proposed Draft Life Codification suggested the recording of a compensated absence liability under the following circumstances:

> Compensated Absences
>
> Employers pay their employees for absences due to vacations, sick time and holidays. Compensated absences must be accrued if all of the following criteria are met:
>
> a. the employees have rendered services which obligate the employer to pay for future absences;
>
> b. the employees are entitled to compensation even if employment is terminated;
>
> c. payment of the compensation is probable; and
>
> d. the amount can be reasonably estimated.
>
> Salary advances to an employee can be used to reduce the liability for that employee's compensated absences.

Statutory Issue Paper No. 12

Accounting for Drafts Issued and Outstanding

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 2

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting, as documented in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, provides guidance on the accounting for drafts but does not provide a definition of a draft. This issue paper will establish a definition for "draft" and will codify statutory accounting relating to drafts.

SUMMARY CONCLUSION

2. For purposes of statutory accounting, a "draft" is defined as an order to pay a sum certain in money, which is signed by the drawer (e.g., the insurance company or its agent), and payable to order or bearer (policyholder) by the drawee (bank) only upon approval by the insurance company once the draft has been presented to the drawee.

3. A reporting entity that utilizes instruments that meet the above definition of drafts shall elect one of the following accounting methods:

a. **Draft Issued Method** - When a draft is issued, an increase in paid losses and a related decrease in loss reserves is recorded. Drafts that have not been presented for payment and remain outstanding at the balance sheet date are reflected as a liability.

b. **Draft Honored Method** - An increase in paid losses and a related decrease in loss reserves is recorded when the draft is cashed and presented by the bank to the reporting entity for reimbursement. Consequently, under a draft honored method there is no liability for outstanding drafts.

The method elected by a reporting entity to account for drafts issued and outstanding shall remain consistent from year to year. Procedures for changes in the accounting method shall be governed by *Issue Paper No. 3—Accounting Changes*.

DISCUSSION

4. Statutory accounting does not address the characteristics of a draft, however, Chapter 13*, Other Liabilities*, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies does provide specific guidance on how to account for drafts. This guidance is consistent with GAAP accounting procedures for outstanding drafts as discussed in *AICPA Statement of Position 92-4, Auditing Insurance Entities' Loss Reserves.*

5. Drafts and checks have different legal characteristics. A check is payable on demand, whereas a draft must be approved for payment by the issuer (the reporting entity) before it is honored by the bank. Because of these different characteristics, a draft meets the definition of a liability as defined by NAIC

Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets. Outstanding checks are accounted for as a reduction of cash.

Drafting Notes/Comments
None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting
6. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 13, *Other Liabilities*, discusses the accounting for drafts as follows:

> Companies may record loss and loss expense drafts written to claimants and policyholders on either a draft issued or a draft honored basis. On an issued system, paid losses and appropriate loss reserve releases are recorded when the draft is issued. Drafts that have not been presented for payment and remain outstanding at the balance sheet date are reflected as a liability under this caption.
>
> Companies on a draft honored system do not record paid losses or release loss reserves until the drafts are cashed and presented by the bank to the company for reimbursement. Consequently, under a draft honored system there is no liability for outstanding drafts.

Generally Accepted Accounting Principles
7. *AICPA Statement of Position 92-4, Auditing Insurance Entities' Loss Reserves* as incorporated through Appendix L of the AICPA Audit and Accounting Guide: Audits of Property and Liability Insurance Companies, discusses the accounting for drafts as follows:

> Drafts outstanding - Some insurance companies may elect to pay claims by draft rather than by check and may not record the drafts as cash disbursed until the drafts are presented to the insurer by the bank. A liability for drafts outstanding is required only if cash disbursements and claim statistical information are not recorded concurrently, thereby creating a timing difference. Because the claim statistical information is updated to reflect the payment, no loss reserve is recorded for the claim; however, because the draft has not been presented, a drafts outstanding liability is required.

Statutory Issue Paper No. 13

Employers' Accounting for Postemployment Benefits

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 11

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory practices and procedures do not address accounting for the estimated cost of benefits provided by an employer to former or inactive employees or agents after employment but before retirement (referred to as "postemployment benefits"). Postemployment benefits are all types of benefits provided to former or inactive employees or agents, their beneficiaries, and covered dependents. Those benefits include, but are not limited to, salary continuation, supplemental unemployment benefits, severance benefits, disability-related benefits (including workers' compensation), job training and counseling, and continuation of benefits such as health care benefits and life insurance coverage.

2. The purpose of this issue paper is to establish statutory accounting principles for postemployment benefits that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Employers shall accrue a liability for the reporting entity's obligation to provide postemployment benefits if all of the following conditions are met:

a. The obligation is attributable to employees' or agents' services already rendered,
b. The obligation relates to rights that vest or accumulate,
c. Payment of the benefits is probable, and
d. The amount of the benefits can be reasonably estimated.

4. If those four conditions are not met, the employer must account for postemployment benefits when it is probable that a liability has been incurred and the amount can be reasonably estimated. In the unlikely situation in which a reporting entity does not accrue a liability in accordance with paragraph 3 only because the amount cannot be reasonably estimated, that fact and the reasons therefore shall be disclosed in the notes to the financial statements.

5. Postemployment benefits provided to employees or agents in connection with their termination can include special termination benefits and contractual termination benefits. Special termination benefits are defined as those that are offered only for a short period of time; contractual termination benefits are defined as those required by the terms of a plan only if a specified event, such as a facility closing, occurs. An employer that offers special termination benefits to employees or agents shall recognize a liability and an expense when the employees or agents accept the offer and the amount can be reasonably estimated. An employer that provides contractual termination benefits shall recognize a liability and an expense when it is probable that employees or agents will be entitled to benefits and the amount can be reasonably estimated. The cost of such termination benefits shall include the amount of any lump-sum payments and the present value of any expected future payments.

6. Accounting changes adopted to conform to the provisions of this issue paper shall be accounted for in accordance with *Issue Paper No. 3—Accounting Changes*. In the year the principle is adopted, recognition of the liability for postemployment benefits at the time of adoption that has not previously been recorded shall be recognized through a direct charge to surplus.

Consolidated/Holding Company Plans

7. The employees of many reporting entities are eligible for certain postemployment benefits granted by a parent company or holding company. An entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation from the parent company or holding company of the benefits earned during the period. A liability shall be established for any such amounts due, but not yet paid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for postemployment benefit obligations, then the requirements outlined in paragraphs 3 to 6 above shall be applied.

DISCUSSION

8. Paragraphs 3 - 6 of the Summary Conclusion above adopt *FASB Statement No. 112*, *Employers' Accounting for Postemployment Benefits: an amendment of FASB Statements No. 5 and 43* (FAS 112), and the provisions of *FASB Statement No. 88*, *Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits* (FAS 88), that address termination benefits, both with a modification to adopt the principles in accordance with *Issue Paper No. 3—Accounting Changes.*

9. The Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts) states under the concept of recognition that *"Liabilities require recognition as they are incurred"* and *"Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment"*. In addition, the Statement of Concepts states under the concept of conservatism that *"In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting"*. Requiring reporting entities to follow the guidance in FAS 112 and the termination benefit provisions of FAS 88 is consistent with the recognition and conservatism concepts in the Statement of Concepts.

10. Without guidance on accounting for the cost of postemployment benefits, reporting entities' accounting for such benefits can vary. FAS 112 notes in paragraph 2 that:

> Some employers accrued the estimated cost of those benefits over the related service periods of active employees. Other employers applied a terminal accrual approach and recognized the estimated cost of those benefits at the date of the event giving rise to the payment of the benefits (for example, the death of an active employee, the temporary or permanent disability of an active employee, or the layoff of an employee). Still other employers recognized the cost of postemployment benefits when they were paid (cash basis). Some employers may have used different methods of accounting for different types of benefits.

11. FAS 112 does not provide employers with an option to recognize the effect of adoption over future periods. Paragraph 25 of FAS 112 includes the following statements:

> The Board considered whether a provision for delayed recognition of the transition amount was needed. A major objective of transition is to minimize implementation costs and mitigate disruption without unduly compromising the ability of financial statements to provide useful information. An important factor considered by the Board was the potential magnitude of the unrecorded postemployment benefit obligation. Information made available to the Board indicated

> that postemployment benefits are generally not as significant as pension or other postretirement benefits. The Board concluded that a provision for delayed recognition was not needed to mitigate the financial statement impact of immediately recognizing the transition amount when this Statement is adopted. That provision would have added unnecessary complexity to the application of this Statement, reduced financial statement comparability, and been inconsistent with Statements 5 and 43, which do not provide for delayed recognition at transition.

This issue paper adopts this immediate recognition concept.

Drafting Notes/Comments

- Accounting for postemployment benefits incurred in connection with a restructuring is addressed in a separate issue paper addressing restructuring costs and EITF 94-3.
- Accounting for pensions is discussed in *Issue Paper No. 8—Accounting for Pensions*.
- Accounting for compensated absences is addressed in *Issue Paper No. 11—Compensated Absences*.
- Accounting for postretirement benefits other than pensions is addressed in *Issue Paper No. 14—Employers' Accounting for Postretirement Benefits Other Than Pensions.*
- Holding company obligations are addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

12. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 17, *Other Liabilities*, contains the following with respect to liabilities for benefits for employees and agents:

> Liabilities for Benefits for Employees and Agents
>
> A company may be required or desire to establish a liability for certain benefits to employees and agents which are not provided for in other accounts. Examples include:
>
> 1. It may be desirable to hold the liability or a nonqualified pension plan in this category in order to assist the tax department in adjusting their tax deductions.
>
> 2. The company may wish to set up a liability for the salary for accrued but unused vacation hours since vacation hours can legitimately be viewed as "earned" at the end of the work periods for which they are granted.

Generally Accepted Accounting Principles

13. FAS 112, requires employers to recognize the obligation to provide postemployment benefits in accordance with *FASB Statement No. 43, Accounting for Compensated Absences* (FAS 43), if the obligation is attributable to employees' services already rendered, employees' rights to those benefits accumulate or vest, payment of the benefits is probable, and the amount of the benefits can be reasonably estimated. If those four conditions are not met, the employer should account for postemployment benefits when it is probable that a liability has been incurred and the amount can be reasonably estimated in accordance with *FASB Statement No. 5*, *Accounting for Contingencies* (FAS 5). If an obligation for postemployment benefits is not accrued in accordance with FAS 5 or FAS 43 only because the amount cannot be reasonably estimated, the financial statements shall disclose that fact.

14. FAS 88 has provisions that address accounting for benefits provided to employees in connection with their termination of employment. Special termination benefits are defined as those that are offered only for a short period of time and contractual termination benefits are defined as those required by the terms of a plan only if a specified event, such as a plant closing, occurs. FAS 88 requires an employer that offers special termination benefits to employees to recognize a liability and a loss when the employees accept the offer and the amount can be reasonably estimated. It also requires an employer that provides

contractual termination benefits to recognize a liability and loss when it is probable that employees will be entitled to benefits and the amount can be reasonably estimated. The cost of the termination benefits recognized shall include the amount of any lump-sum payments and the present value of any expected future payments.

OTHER SOURCES OF INFORMATION

15. The draft discussion material from previous Life codification projects, Chapter 17, *Other Liabilities*, modified the above language:

> Liabilities for Benefits for Employees and Agents
>
> A company must establish a liability for certain benefits to employees and agents which are not provided for in other accounts. Examples include deferred compensation and nonqualified benefit plans for employees and agents.

16. The NAIC Technical Resource Group proposed draft Life codification Chapter 22, *General Expenses and Taxes, Licenses and Fees*, contains the following guidance:

> Employee Termination Benefits
>
> For a variety of reasons, companies pay compensation to employees at termination. Such benefits include disability benefits, death benefits, severance payments, unemployment benefits, etc. These benefits are paid after an employee terminates but are typically based on service previously rendered.
>
> The cost of such post-employment benefits must be spread over the working lives of those expected to receive the benefit. These benefits include all benefits paid to or for former or inactive employees (including their beneficiaries and/or dependents) after employment.
>
> Such compensation must be accrued during an employee's working life if:
>
> a. the benefit to be paid is earned for service previously rendered;
> b. the right to those benefits accumulates, vests or;
> c. the payment of the benefits is probable; and
> d. the amount can be reasonably estimated.

17. The draft discussion material from previous Property/Casualty codification projects, Chapter 23, *Non-Claim Operating Expenses*, contains the following language:

> Salaries, and Employee Relations and Welfare (Including Post Employment Retirement and Other Benefits)
>
> Salaries and payroll related expenses are usually the second largest expense for most insurance companies. SAP requires that salaries and related expenses be accounted for under the accrual basis of accounting (i.e., expense recorded when incurred and not when paid). Pensions and other post retirement benefit plans for which there is no promulgated SAP should be accounted for in accordance with GAAP as promulgated by the Financial Accounting Standards Board (FASB). (The preceding may need revision based on final outcome of the FASB 106 Task Force.)
>
> Employee compensation and post retirement benefits include, among other things, the following:
>
> 1. Salaries and wages
> 2. Pension plans.
> 3. Post retirement benefits other than pensions.
> 4. Compensated absences.
> 5. Stock purchase and option plans.
> 6. Other deferred compensation

18. In addition, the draft discussion materials from previous Property/Casualty codification projects discusses deferred compensation and special termination benefits specifically and states the following:

> Other Deferred Compensation
>
> The accounting for other deferred compensation arrangements, which do not constitute pension plans is governed by APB Opinion No. 12, "Omnibus Opinion." APB 12 provides that deferred compensation contracts should be accounted separately for each employee on the accrual basis. The amount of each accrual cannot be less than the present value of the benefits to be provided (including benefits to beneficiaries) by the terms of the contract. The accruals should be made over the employee's employment period.
>
> Special Termination Benefits
>
> FASB 74 "Accounting for Special Termination Benefits Paid to Employees" [FAS 74] provides that,
>
>> ... an employer that offers for a short period of time special termination benefits to employees shall recognize a liability and an expense when the employees accept the offer and the amount can be reasonable estimated. The amount shall include any lump sum payments and the present value of any expected future payments.
>
> These arrangements may also effect the estimated costs of pension benefits.

19. It should be noted that although FAS 74 has been superseded by FAS 88, the conclusions reached in FAS 74 were incorporated into FAS 88 (i.e., the cost of special termination benefits should be recognized as a liability and a loss when the employees accept the offer and the amount can be reasonable estimated). See paraphrasing from FAS 88 in the Generally Accepted Accounting Principles section of this paper.

Statutory Issue Paper No. 14

Employers' Accounting for Postretirement Benefits Other Than Pensions

STATUS
Finalized December 6, 1999

Current Authoritative Guidance for Postretirement Benefits Other Than Pensions: SSAP No. 92
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 14

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Postretirement benefits include all forms of benefits, other than retirement income, provided by an employer to retirees. Those benefits may be defined in terms of specified benefits that are provided to retirees as the need for those benefits arises, such as certain health care benefits, or they may be defined in terms of monetary amounts that become payable on the occurrence of a specified event, such as life insurance benefits. Current statutory accounting addresses employers' accounting for postretirement benefits other than pensions.

2. GAAP guidance has been established by *FASB Statement No. 106*, *Employers' Accounting for Postretirement Benefits Other Than Pensions* (FAS 106), and differs from the current statutory guidance. *FASB Statement No. 132*, *Employers' Disclosures about Pensions and Other Postretirement Benefits* (FAS 132), specifies disclosure requirements for pension and other postretirement benefit plans.

3. The purpose of this issue paper is to establish statutory accounting principles for postretirement benefits other than pensions that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. Employers' accounting for postretirement benefits other than pensions under statutory accounting shall be consistent with existing statutory guidance in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. The principles contained therein shall apply to postretirement benefits other than pensions for all eligible and vested employees and vested former employees including their beneficiaries and covered dependents, pursuant to the terms of an employer's undertaking to provide those benefits. Any asset resulting from an overfunding of the plan shall be recorded as a nonadmitted asset.

Disclosure

5. The disclosures required by paragraph 5 of FAS 132 shall be included in the notes to the statutory financial statements considering the modification in this issue paper to include only vested employees. Paragraph 5 of FAS 132 is included in the Relevant GAAP Guidance section of this issue paper. The disclosures required by paragraph 5 of FAS 132 shall be made when an employer recognizes a gain or loss related to a settlement or curtailment of a defined benefit plan or when providing termination benefits.

Consolidated/Holding Company Plans

6. The employees of many reporting entities are eligible for certain postretirement benefits other than pensions provided by a parent company or holding company. A reporting entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation of the benefits earned during the period. A liability shall be established for any such amounts due, but not yet paid. The reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of the postretirement benefit expense incurred and the allocation methodology shall also be disclosed in the financial statements. If the reporting entity is directly liable for certain postretirement benefits other than pensions, then the requirements outlined in paragraphs 4 and 5 of this issue paper shall be applied.

DISCUSSION

7. Current statutory accounting and the accounting codified within this issue paper adopt FAS 106, FAS 132 and *Accounting Principles Board Opinion No. 12*, *Omnibus Opinion–1967*, paragraphs 6 through 8 with the following modifications:

a. Any asset which results from an excess of the fair value of plan assets over the postretirement benefit obligation shall be recorded as a nonadmitted asset.

b. Calculation of the postretirement benefit obligation shall exclude non-vested employees. Partially vested employees are included only to the extent of their vested amounts.

c. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132 are rejected. All reporting entities shall follow the disclosure requirements included in paragraph 5 of FAS 132.

d. Disclosures relating to other comprehensive income in paragraph 5 of FAS 132 shall be made for income on a statutory basis.

8. This issue paper adopts *FASB Emerging Issues Task Force No. 93-3*, *Plan Assets under FASB Statement No. 106.*

9. The Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies address employers’ accounting for postretirement benefits other than pensions and require that the obligation for such benefits be recognized on an accrual basis for current retirees and fully eligible or vested employees. If the fair value of plan assets exceeds the postretirement obligation and a transition asset results, the asset is considered a nonadmitted asset. At transition, the employer may elect to recognize the unfunded postretirement benefit obligation as a charge to statutory surplus in the period of adoption or amortize it as a component of net periodic postretirement benefit cost over a period of up to twenty years.

10. GAAP guidance is established by FAS 106 and differs from the current statutory guidance in that it requires the accrual of expected postretirement benefits for all current and former employees (including retirees, disabled employees, and other former employees who are expected to receive postretirement benefits), their beneficiaries, and covered dependents, pursuant to the terms of an employer's undertaking to provide those benefits. Two options are provided for recognizing the transition obligation. An employer may choose to immediately recognize the transition obligation as the effect of a change in accounting principle, subject to certain limitations. Alternatively, an employer may choose to recognize the transition obligation on a delayed basis over the plan participants' future service periods, with disclosure of the unrecognized amount. However, that delayed recognition cannot result in less rapid recognition than accounting for the transition obligation on a pay-as-you-go basis.

11. The Statement of Concepts states under the recognition concept that *"Liabilities require recognition as they are incurred" and "Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment."* In addition, the Statement of Concepts states under the concept of conservatism that *"In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting."* Requiring reporting entities to follow the existing statutory guidance relative to accounting for postretirement benefits other than pensions is consistent with the recognition and conservatism concepts in the Statement of Concepts.

Drafting Notes/Comments

- Federal income taxes are addressed in a separate issue paper.
- Holding company obligations are addressed in a separate issue paper.
- Accounting for pensions is addressed in *Issue Paper No. 8—Accounting for Pensions*.
- Accounting for postemployment benefits is addressed in *Issue Paper No. 13—Employers' Accounting for Postemployment Benefits*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

12. The following is an excerpt from the Accounting Practices and Procedures Manuals for Life and Accident and Health [Chapter 17] and for Property and Casualty [Chapter 13] Insurance Companies:

> Postretirement Benefits Other Than Pensions
>
> Postretirement benefits are all forms of benefits, other than retirement income, provided by an employer to retirees. Those benefits may be defined in terms of specified benefits that are provided to retirees as the need for those benefits arises, such as certain health care benefits, or they may be defined in terms of monetary amounts that become payable on the occurrence of a specified event, such as life insurance benefits.
>
> An employer shall account for its postretirement benefits on an accrual basis. The postretirement benefit obligation for current retirees and fully eligible or vested employees at transition (initial adoption date*) is measured by estimating the actuarial present value of benefits expected to be received at retirement using explicit assumptions. A health care cost trend rate assumption is used in the estimation. A health care cost trend rate is an assumption about the annual rate(s) of change in the cost of health care benefits currently provided by the postretirement benefit plan, due to factors other than changes in the composition of the plan population by age and dependency status, for each year from the measurement date until the end of the period in which benefits are expected to be paid. The health care cost trend rates implicitly consider estimates of health care inflation, changes in health care utilization or status of the plan participants.
>
> * For most companies, the transition or initial adoption date is January 1, 1993. For companies whose plans are outside the United States and for defined benefits of employers with no more than 500 plan participants in the aggregate, the transition or initial adoption is January 1, 1995.
>
> Plan assets, if any, shall be segregated or restricted, and measured at fair value.
>
> At transition, an employer may elect to recognize the unfunded postretirement benefit obligation immediately in statutory surplus or amortize it as a component of net periodic postretirement benefit cost over a period of up to twenty years.
>
> In each period, estimated postretirement benefits for newly eligible or vested employees shall be accrued at eligibility date ("estimated eligibility cost"). Interest cost on the postretirement benefit obligation at the beginning of the period shall be recognized during the period. Actuarial gains

and losses (other than plan asset gains and losses) arising from differences between assumptions and actual experience upon subsequent remeasurement of the obligation may be recognized as a component of the net periodic postretirement benefit cost in the current period or amortized. The net actuarial gain or loss shall be included as a component of the net periodic postretirement benefit cost for a year, if, as of the beginning of the year, that unrecognized net gain or loss exceeds 10 percent of the greater of the postretirement benefit obligation or the fair value of plan assets. That gain or loss, if not recognized immediately, shall be amortized over the average life expectancy of the employer's fully vested and retiree group. The method elected must be consistently applied.

Gains or Losses On Plan Assets:

Plan asset gains and losses are differences between the actual return on plan assets (including changes in the fair values of plan assets) during a period and the expected return on plan assets for that period. Amortization of an unrecognized net asset gain or loss shall be included as a component of net postretirement benefit cost for a year if, as of the beginning of the year, that unrecognized net gain or loss exceeds 10 percent of the greater of the postretirement benefit obligation or the fair value of plan assets. That excess shall be amortized over the average life expectancy of the employer's fully vested and retiree group.

Plan amendments:

Plan amendments may include provisions that increase or reduce benefits to retirees and fully eligible employees. The cost of benefit improvements is the increase in the postretirement benefit obligation as a result of the plan amendment, measured at the date of the amendment. That increase shall be amortized over the average life expectancy of the employer's fully vested and retiree group.

A plan amendment can reduce, rather than increase, the postretirement benefit obligation. A reduction in that obligation shall first reduce any existing unrecognized plan amendment cost, and then, reduce any remaining unrecognized transition obligation. The excess, if any, shall be amortized on the same basis as plan amendments that increase benefits.

Financial Statement Presentation:

The net periodic postretirement benefit cost (i.e., the estimated eligibility cost, interest cost, actuarial gains or losses, and any amortization costs) shall be reflected in the income statement. If an employer elects immediate recognition of the initial transition obligation, it shall be accounted for as a change of accounting method (i.e., the initial transition obligation is recorded as an adjustment to statutory surplus).

Transition Asset:

If the fair value of plan assets exceeds the postretirement obligation and a transition asset results, the asset shall be considered a nonadmitted asset.

Defined Contribution Plans:

A defined contribution postretirement benefit plan is a plan that provides postretirement benefits by establishing an individual account for each participant and has terms that specify how contributions to the individual's account are to be determined rather than the amount of postretirement benefits the individual is to receive. Under a defined contribution plan, postretirement benefits a plan participant will receive are limited to the amount contributed to the plan participant's account, the returns earned on investments of these contributions, and forfeitures of other plan participants' benefits that may be allocated to the plan participant's account.

To the extent that an employer's defined contributions to an individual's account are vested or irrevocable, the net postretirement benefit cost for a period shall be the contribution called for in that period. If a plan calls for contributions for periods after an individual retires, the estimated costs shall be accrued at retirement date.

Effective Date:

This policy shall be effective for the first quarter financial statements dated March 31, 1993, except that plans outside the United States and for defined benefit plans of employees with no more than 500 plan participants in the aggregate, this policy shall be effective for 1st quarter financial statements dated March 31, 1995.

13. The NAIC Annual Statement Instructions (Annual Statement Instructions) for Life and Accident and Health Insurance Companies contain the following language related to Liabilities, Surplus and Other Funds:

Line 13 - General Expenses Due or Accrued

Include: Expenses not yet incurred but which it is anticipated will be incurred in connection with accident and health claims at the year-end.

Unfunded postretirement benefit obligation.

14. The Annual Statement Instructions also include the following language with respect to Capital and Surplus Account:

Details of Write-ins Aggregated at Line 46 for Gains and Losses in Surplus

Report separately any other changes to Capital and Surplus, not included above, including amounts received for subordinated surplus debentures.

Include: The initial transition obligation for unfunded postretirement benefit obligation if a company elects to immediately recognize such obligation.

(Charges) or credits for extraordinary amounts of taxes (including interest) paid or accrued in prior years.

(Charges) or credits for extraordinary amounts of expenses paid or accrued in prior years.

(See Item 7 on Page d of these instructions.)

15. In addition, the Annual Statement Instructions for Exhibit 5 - General Expenses state:

Line 3.31- Other Employee Welfare
Line 3.32- Other Agent Welfare

Expenses included in this line may be reported on a functional basis.

Include: The net periodic postretirement benefit cost.

Meals to employees. (Companies so desiring may exclude this item from Other Employee Welfare or Other Agent Welfare and include it under Details Aggregated on Line 9.3 for Expenses.)

Contributions to employee associations or clubs.

16. The Annual Statement Instructions also provide guidance on information to be included in the notes to the financial statements:

> 6. Retirement Plans, Deferred Compensation and Other Postretirement Benefit Plans Instruction:
>
> c. Postretirement Benefit Plans
> Include the following:
>
> A description of the plan(s).
>
> A description of the plan's policy.
>
> The method of determination and the amount of postretirement benefit expense.
>
> The amount of the postretirement benefit obligation for retirees and fully eligible or vested employees and the fair value of the plan assets valued as of the most recent actuarial valuation date.
>
> The amount of the postretirement benefit obligation included on Page 3, Line 13 [Life and Accident and Health] or Lines 2 and 4 [Property and Casualty].
>
> The amount of the postretirement obligation for non vested employees as of the most recent actuarial date.
>
> The discount and health care cost trend rate used in the estimations.
>
> The effect of a one-percentage-point increase in the assumed health care cost trend rates for each future year on (1) the aggregate of the estimated eligibility and interest cost components of net periodic postretirement benefit cost and (2) the postretirement benefit obligation for health care benefits (for purposes of this disclosure, all other assumptions shall be held constant and the effects shall be measured based upon the substantive plan that is the basis of accounting).
>
> Significant matters affecting the year-to-year comparability of the plan information.
>
> An employer who is a member of a multi-employer plan shall disclose a description of the plan(s), the method of determination and the amount of postretirement benefit expense for the employer/member and the unfunded postretirement benefit obligation.
>
> Postretirement Defined Contribution Plans
> Include the following:
>
> A description of the plans, including employee groups covered.
>
> The basis for determining contributions.
>
> The nature and effect of significant matters affecting comparability of information for all periods presented.
>
> The amount of cost recognized during the period.

Sample disclosure is also provided.

17. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies includes the following language with respect to Underwriting and Investment Exhibit - Part 4 - Expenses:

> The total management fees and the method(s) used for allocation shall be disclosed in the Notes to Financial Statements. The company shall use the same allocation method(s) on a consistent basis.
>
> Line 9 - Employee Relations and Welfare
>
> Include: The net periodic postretirement benefit cost.

Generally Accepted Accounting Principles

18. The following summary from FAS 106, describes the GAAP methodology and concepts:

> Summary
>
> This Statement establishes accounting standards for employers' accounting for postretirement benefits other than pensions (hereinafter referred to as postretirement benefits). Although it applies to all forms of postretirement benefits, this Statement focuses principally on postretirement health care benefits. It will significantly change the prevalent current practice of accounting for postretirement benefits on a pay-as-you-go (cash) basis by requiring accrual, during the years that the employee renders the necessary service, of the expected cost of providing those benefits to an employee and the employee's beneficiaries and covered dependents.
>
> The Board's conclusions in this Statement result from the view that a defined postretirement benefit plan sets forth the terms of an exchange between the employer and the employee. In exchange for the current services provided by the employee, the employer promises to provide, in addition to current wages and other benefits, health and other welfare benefits after the employee retires. It follows from that view that postretirement benefits are not gratuities but are part of an employee's compensation for services rendered. Since payment is deferred, the benefits are a type of deferred compensation. The employer's obligation for that compensation is incurred as employees render the services necessary to earn their postretirement benefits.
>
> The ability to measure the obligation for postretirement health care benefits and the recognition of that obligation have been the subject of controversy. The Board believes that measurement of the obligation and accrual of the cost based on best estimates are superior to implying, by a failure to accrue, that no obligation exists prior to the payment of benefits. The Board believes that failure to recognize an obligation prior to its payment impairs the usefulness and integrity of the employer's financial statements.
>
> The Board's objectives in issuing this Statement are to improve employers' financial reporting for postretirement benefits in the following manner:
>
> a. To enhance the relevance and representational faithfulness of the employer's reported results of operations by recognizing net periodic postretirement benefit cost as employees render the services necessary to earn their postretirement benefits
>
> b. To enhance the relevance and representational faithfulness of the employer's statement of financial position by including a measure of the obligation to provide postretirement benefits based on a mutual understanding between the employer and its employees of the terms of the underlying plan
>
> c. To enhance the ability of users of the employer's financial statements to understand the extent and effects of the employer's undertaking to provide postretirement benefits to its employees by disclosing relevant information about the obligation and cost of the postretirement benefit plan and how those amounts are measured

d. To improve the understandability and comparability of amounts reported by requiring employers with similar plans to use the same method to measure their accumulated postretirement benefit obligations and the related costs of the postretirement benefits.

Similarity to Pension Accounting

The provisions of this Statement are similar, in many respects, to those in *FASB Statements No. 87, Employers' Accounting for Pensions*, and *No. 88, Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits*. To the extent the promise to provide pension benefits and the promise to provide postretirement benefits are similar, the provisions of this Statement are similar to those prescribed by Statements 87 and 88; different accounting treatment is prescribed only when the Board has concluded that there is a compelling reason for different treatment. Appendix B identifies the major similarities and differences between this Statement and employers' accounting for pensions.

Basic Tenets

This Statement relies on a basic premise of generally accepted accounting principles that accrual accounting provides more relevant and useful information than does cash basis accounting. The importance of information about cash flows or the funding of the postretirement benefit plan is not ignored. Amounts funded or paid are given accounting recognition as uses of cash, but the Board believes that information about cash flows alone is insufficient. Accrual accounting goes beyond cash transactions and attempts to recognize the financial effects of noncash transactions and events as they occur. Recognition and measurement of the accrued obligation to provide postretirement benefits will provide users of financial statements with the opportunity to assess the financial consequences of employers' compensation decisions.

In applying accrual accounting to postretirement benefits, this Statement adopts three fundamental aspects of pension accounting: delayed recognition of certain events, reporting net cost, and offsetting liabilities and related assets.

Delayed recognition means that certain changes in the obligation for postretirement benefits, including those changes arising as a result of a plan initiation or amendment, and certain changes in the value of plan assets set aside to meet that obligation are not recognized as they occur. Rather, those changes are recognized systematically over future periods. All changes in the obligation and plan assets ultimately are recognized unless they are first reduced by other changes. The changes that have been identified and quantified but not yet recognized in the employer's financial statements as components of net periodic postretirement benefit cost and as a liability or asset are disclosed.

Net cost means that the recognized consequences of events and transactions affecting a postretirement benefit plan are reported as a single amount in the employer's financial statements. That single amount includes at least three types of events or transactions that might otherwise be reported separately. Those events or transactions -- exchanging a promise of deferred compensation in the form of postretirement benefits for employee service, the interest cost arising from the passage of time until those benefits are paid, and the returns from the investment of plan assets -- are disclosed separately as components of net periodic postretirement benefit cost.

Offsetting means that plan assets restricted for the payment of postretirement benefits offset the accumulated postretirement benefit obligation in determining amounts recognized in the employer's statement of financial position and that the return on those plan assets offsets postretirement benefit cost in the employer's statement of income. That offsetting is reflected even though the obligation has not been settled, the investment of the plan assets may be largely controlled by the employer, and substantial risks and rewards associated with both the obligation and the plan assets are borne by the employer.

Recognition and Measurement

The Board is sensitive to concerns about the reliability of measurements of the postretirement health care benefit obligation. The Board recognizes that limited historical data about per capita claims costs are available and that actuarial practice in this area is still developing. The Board has taken those factors into consideration in its decisions to delay the effective date for this Statement, to emphasize disclosure, and to permit employers to phase in recognition of the transition obligation in their statements of financial position. However, the Board believes that those factors are insufficient reason not to use accrual accounting for postretirement benefits in financial reporting. With increased experience, the reliability of measures of the obligation and cost should improve.

An objective of this Statement is that the accounting reflect the terms of the exchange transaction that takes place between an employer that provides postretirement benefits and the employees who render services in exchange for those benefits. Generally the extant written plan provides the best evidence of that exchange transaction. However, in some situations, an employer's cost-sharing policy, as evidenced by past practice or by communication of intended changes to a plan's cost-sharing provisions, or a past practice of regular increases in certain monetary benefits may indicate that the substantive plan -- the plan as understood by the parties to the exchange transaction -- differs from the extant written plan. The substantive plan is the basis for the accounting.

This Statement requires that an employer's obligation for postretirement benefits expected to be provided to or for an employee be fully accrued by the date that employee attains full eligibility for all of the benefits expected to be received by that employee, any beneficiaries, and covered dependents (the full eligibility date), even if the employee is expected to render additional service beyond that date. That accounting reflects the fact that at the full eligibility date the employee has provided all of the service necessary to earn the right to receive all of the benefits that employee is expected to receive under the plan.

The beginning of the attribution (accrual) period is the employee's date of hire unless the plan only grants credit for service from a later date, in which case benefits are generally attributed from the beginning of that credited service period. An equal amount of the expected postretirement benefit obligation is attributed to each year of service in the attribution period unless the plan attributes a disproportionate share of the expected benefits to employees' early years of service. The Board concluded that, like accounting for other deferred compensation agreements, accounting for postretirement benefits should reflect the explicit or implicit contract between the employer and its employees.

Single Method

The Board believes that understandability, comparability, and usefulness of financial information are improved by narrowing the use of alternative accounting methods that do not reflect different facts and circumstances. The Board has been unable to identify circumstances that would make it appropriate for different employers to use fundamentally different accounting methods or measurement techniques for similar postretirement benefit plans or for a single employer to use fundamentally different methods or measurement techniques for different plans. As a result, a single method is prescribed for measuring and recognizing an employer's accumulated postretirement benefit obligation.

Amendment to Opinion 12

An employer's practice of providing postretirement benefits to selected employees under individual contracts, with specific terms determined on an individual-by-individual basis, does not constitute a postretirement benefit plan under this Statement. This Statement amends APB Opinion No. 12, Omnibus Opinion--1967, to explicitly require that an employer's obligation under deferred compensation contracts be accrued following the terms of the individual contract over the required service periods to the date the employee is fully eligible for the benefits.

Transition

Unlike the effects of most other accounting changes, a transition obligation for postretirement benefits generally reflects, to a considerable extent, the failure to accrue the accumulated postretirement benefit obligation in earlier periods as it arose rather than the effects of a change from one acceptable accrual method of accounting to another. The Board believes that accounting for transition from one method of accounting to another is a practical matter and that a major objective of that accounting is to minimize the cost and mitigate the disruption to the extent possible without unduly compromising the ability of financial statements to provide useful information.

This Statement measures the transition obligation as the unfunded and unrecognized accumulated postretirement benefit obligation for all plan participants. Two options are provided for recognizing that transition obligation. An employer can choose to immediately recognize the transition obligation as the effect of an accounting change, subject to certain limitations. Alternatively, an employer can choose to recognize the transition obligation in the statement of financial position and statement of income on a delayed basis over the plan participants' future service periods, with disclosure of the unrecognized amount. However, that delayed recognition cannot result in less rapid recognition than accounting for the transition obligation on a pay-as-you-go basis.

Effective Dates

This Statement generally is effective for fiscal years beginning after December 15, 1992, except that the application of this Statement to plans outside the United States and certain small, nonpublic employers is delayed to fiscal years beginning after December 15, 1994. The amendment of Opinion 12 is effective for fiscal years beginning after March 15, 1991.

19. FAS 132 sets forth disclosure requirements:

Disclosures about Pensions and Other Postretirement Benefits

5. An employer that sponsors one or more defined benefit pension plans or one or more defined benefit postretirement plans shall provide the following information:

a. A reconciliation of beginning and ending balances of the benefit obligation[2] showing separately, if applicable, the effects during the period attributable to each of the following: service cost, interest cost, contributions by plan participants, actuarial gains and losses, foreign currency exchange rate changes[3], benefits paid, plan amendments, business combinations, divestitures, curtailments, settlements, and special termination benefits

[2] For defined benefit pension plans, the benefit obligation is the projected benefit obligation—the actuarial present value as of a date of all benefits attributed by the pension benefit formula to employee service rendered prior to that date. For defined benefit postretirement plans, the benefit obligation is the accumulated postretirement benefit obligation—the actuarial present value of benefits attributed to employee service rendered to a particular date.

[3] The effects of foreign currency exchange rate changes that are to be disclosed are those applicable to plans of a foreign operation whose functional currency is not the reporting currency pursuant to *FASB Statement No. 52, Foreign Currency Translation*.

b. A reconciliation of beginning and ending balances of the fair value of plan assets showing separately, if applicable, the effects during the period attributable to each of the following: actual return on plan assets, foreign currency exchange rate changes[4], contributions by the employer, contributions by plan participants, benefits paid, business combinations, divestitures, and settlements

[4] Refer to footnote 3.

c. The funded status of the plans, the amounts not recognized in the statement of financial position, and the amounts recognized in the statement of financial position, including:
   (1) The amount of any unamortized prior service cost
   (2) The amount of any unrecognized net gain or loss (including asset gains and losses not yet reflected in market-related value)
   (3) The amount of any remaining unamortized, unrecognized net obligation or net asset existing at the initial date of application of Statement 87 or 106
   (4) The net pension or other postretirement benefit prepaid assets or accrued liabilities
   (5) Any intangible asset and the amount of accumulated other comprehensive income recognized pursuant to paragraph 37 of Statement 87, as amended

d. The amount of net periodic benefit cost recognized, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the amortization of the unrecognized transition obligation or transition asset, the amount of recognized gains and losses, the amount of prior service cost recognized, and the amount of gain or loss recognized due to a settlement or curtailment
e. The amount included within other comprehensive income for the period arising from a change in the additional minimum pension liability recognized pursuant to paragraph 37 of Statement 87, as amended
f. On a weighted-average basis, the following assumptions used in the accounting for the plans: assumed discount rate, rate of compensation increase (for pay-related plans), and expected long-term rate of return on plan assets
g. The assumed health care cost trend rate(s) for the next year used to measure the expected cost of benefits covered by the plan (gross eligible charges) and a general description of the direction and pattern of change in the assumed trend rates thereafter, together with the ultimate trend rate(s) and when that rate is expected to be achieved
h. The effect of a one-percentage-point increase and the effect of a one-percentage- point decrease in the assumed health care cost trend rates on (1) the aggregate of the service and interest cost components of net periodic postretirement health care benefit cost and (2) the accumulated postretirement benefit obligation for health care benefits (For purposes of this disclosure, all other assumptions shall be held constant, and the effects shall be measured based on the substantive plan that is the basis for the accounting.)
i. If applicable, the amounts and types of securities of the employer and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer or related parties, and any significant transactions between the employer or related parties and the plan during the period
j. If applicable, any alternative amortization method used to amortize prior service amounts or unrecognized net gains and losses pursuant to paragraphs 26 and 33 of Statement 87 or paragraphs 53 and 60 of Statement 106
k. If applicable, any substantive commitment, such as past practice or a history of regular benefit increases, used as the basis for accounting for the benefit obligation
l. If applicable, the cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event
m. An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this Statement.

Amounts related to the employer's results of operations shall be disclosed for each period for which an income statement is presented. Amounts related to the employer's statement of financial position shall be disclosed for each balance sheet presented.

Employers with Two or More Plans

6. The disclosures required by this Statement may be aggregated for all of an employer's defined benefit pension plans and may be aggregated for all of an employer's defined benefit postretirement plans or may be disaggregated in groups if that is considered to provide the most useful information or is otherwise required by paragraph 7. Disclosures about pension plans with

assets in excess of the accumulated benefit obligation generally may be aggregated with disclosures about pension plans with accumulated benefit obligations in excess of assets. The same aggregation is permitted for postretirement plans. However, if those disclosures are combined, an employer shall disclose the aggregate benefit obligation and aggregate fair value of plan assets for plans with benefit obligations in excess of plan assets. The aggregate pension accumulated benefit obligation and aggregate fair value of plan assets for pension plans with accumulated benefit obligations in excess of plan assets also shall be disclosed. Disclosure of amounts recognized in the statement of financial position shall present prepaid benefit costs and accrued benefit liabilities separately.

7. An employer may combine disclosures about pension or postretirement benefit plans outside the United States with those for U.S. plans unless the benefit obligations of the plans outside the United States are significant relative to the total benefit obligation and those plans use significantly different assumptions.

Reduced Disclosure Requirements for Nonpublic Entities

8. A nonpublic entity[5] may elect to disclose the following for its pension and other postretirement benefit plans in lieu of the disclosures required by paragraph 5 of this Statement:

a. The benefit obligation, fair value of plan assets, and funded status of the plan
b. Employer contributions, participant contributions, and benefits paid
c. The amounts recognized in the statement of financial position, including the net pension and other postretirement benefit prepaid assets or accrued liabilities and any intangible asset and the amount of accumulated other comprehensive income recognized pursuant to paragraph 37 of Statement 87, as amended
d. The amount of net periodic benefit cost recognized and the amount included within other comprehensive income arising from a change in the minimum pension liability recognized pursuant to paragraph 37 of Statement 87, as amended
e. On a weighted-average basis, the following assumptions used in the accounting for the plans: assumed discount rate, rate of compensation increase (for pay-related plans), and expected long-term rate of return on plan assets
f. The assumed health care cost trend rate(s) for the next year used to measure the expected cost of benefits covered by the plan (gross eligible charges) and a general description of the direction and pattern of change in the assumed trend rates thereafter, together with the ultimate trend rate(s) and when that rate is expected to be achieved
g. If applicable, the amounts and types of securities of the employer and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer or related parties, and any significant transactions between the employer or related parties and the plan during the period
h. The nature and effect of significant nonroutine events, such as amendments, combinations, divestitures, curtailments, and settlements.

Defined Contribution Plans

9. An employer shall disclose the amount of cost recognized for defined contribution pension or other postretirement benefit plans during the period separately from the amount of cost recognized for defined benefit plans. The disclosures shall include a description of the nature and effect of any significant changes during the period affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

[5] A nonpublic entity is any entity other than one (a) whose debt or equity securities trade in a public market either on a stock exchange (domestic or foreign) or in the over-the-counter market, including securities quoted only locally or regionally, (b) that makes a filing with a regulatory agency in preparation for the sale of any class of debt or equity securities in a public market, or (c) that is controlled by an entity covered by (a) or (b).

Multiemployer Plans

10. An employer shall disclose the amount of contributions to multiemployer plans during the period. An employer may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pensions and other postretirement benefits. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

11. Paragraph 70 of Statement 87 and paragraph 83 of Statement 106 are carried forward without reconsideration. Paragraphs 70 and 83 read as follows:

> In some situations, withdrawal from a multiemployer plan may result in an employer's having an obligation to the plan for a portion of its unfunded benefit obligations. If withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions of FASB Statement No. 5, *Accounting for Contingencies*, shall apply.
>
> In some situations, withdrawal from a multiemployer plan may result in an employer's having an obligation to the plan for a portion of the plan's unfunded accumulated postretirement benefit obligation. If it is either probable or reasonably possible that (a) an employer would withdraw from the plan under circumstances that would give rise to an obligation or (b) an employer's contribution to the fund would be increased during the remainder of the contract period to make up a shortfall in the funds necessary to maintain the negotiated level of benefit coverage (a "maintenance of benefits" clause), the employer shall apply the provisions of *FASB Statement No. 5, Accounting for Contingencies*.

Statutory Issue Paper No. 16

Electronic Data Processing Equipment and Software

STATUS
Finalized March 16, 1998

Original SSAP: SSAP No. 16; Current Authoritative Guidance: SSAP No. 16R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The current statutory guidance provides that some states permit recording electronic data processing (EDP) equipment and operating system software as admitted assets. This is subject to limitations such as a percentage of total assets, minimum purchase price, and period of depreciation. Application system software may be expensed when purchased, or established as a nonadmitted asset and written off over a period of years not to exceed the software's expected useful life.

2. GAAP requires purchases of EDP equipment and software to be capitalized and depreciated over the expected useful lives of the assets, except for software purchased or leased for research and development purposes, which is required to be expensed at acquisition. There is no authoritative literature in GAAP that addresses capitalization of software developed for internal use, and industry practice is mixed. This issue paper establishes a framework for the accounting and reporting of EDP equipment and software that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. EDP equipment and software generally meet the definition of an asset in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*. EDP equipment and operating system software are admitted assets to the extent they conform to the requirements of this issue paper. Nonoperating system software meet the criteria defining nonadmitted assets; accordingly, such assets shall be reported as nonadmitted assets and charged against surplus.

4. EDP equipment and software shall be depreciated for a period not to exceed three years using methods detailed in *Issue Paper No. 67—Depreciation of Property and Amortization of Leasehold Improvements*.

5. The aggregate amount of admitted EDP equipment and operating system software (net of accumulated depreciation) shall be limited to three percent of the reporting entity's capital and surplus, excluding from capital and surplus any EDP equipment and operating system software, net deferred tax assets and net positive goodwill, as of the financial statement date.

6. The following disclosures shall be made in the financial statements:

   a. Depreciation and amortization expense for the period;

   b. For EDP equipment and operating system software, balances of major classes of depreciable assets, by nature or function, at the balance sheet date;

c. For EDP equipment and operating system software, accumulated depreciation and amortization, either by major classes of depreciable assets or in total, at the balance sheet date; and

d. A general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets.

DISCUSSION

7. *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* states that an asset not readily available to satisfy policyholder obligations *"shall be recorded as a nonadmitted asset and charged against surplus."* This is consistent with the Statement of Concepts, which states that a reporting entity's *"ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due*."

8. EDP equipment and operating system software meet the criteria defining admitted assets because they generally have a resale value. The limitation of the depreciation period to three years is deemed appropriate due to the current evolutionary period for such equipment and software. Additionally, the limitation on the amount of EDP equipment and operating system software which may be admitted in an amount not to exceed three percent of capital and surplus (as adjusted by EDP equipment and operating system software, net deferred tax assets and net positive goodwill) is consistent with the conservatism concept of the Statement of Concepts.

9. Nonoperating system software is not considered readily available to satisfy policyholder obligations, particularly due to the nature of internally developed EDP software and the modifications made to purchased EDP software, that make it tailored for use only on the owner's computer system, thereby rendering it unable to be readily resold. Nonadmitting nonoperating software is also consistent with the conservatism concept of the Statement of Concepts.

Drafting Notes/Comments

- *FASB Statement No. 2*, *Accounting for Research and Development Costs* (FAS 2), FASB Interpretation No. 6, *Applicability of FASB Statement No. 2 to Computer Software* (FIN 6) and *FASB Statement No. 86, Accounting for the Costs of Computer Software to be Sold, Leased, or Otherwise Marketed* (FAS 86) are addressed in *Issue Paper No. 17—Preoperating and Research and Development Costs*.
- Furniture, fixtures & equipment are addressed in *Issue Paper No. 19—Furniture, Fixtures and Equipment*.
- Leases and sale-leaseback transactions are addressed in *Issue Paper No. 22—Leases*

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

10. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 8, *Other Admitted Assets,* differentiates between operating software and applications software as follows:

> 1. Various states permit showing the depreciated value of electronic data processing apparatus and related equipment constituting a data processing record keeping or accounting system as an asset. This is subject to limitations such as a percentage of total assets, minimum purchase price and period of depreciation. Operating system software may also qualify as an asset. The operating system is a program or series of programs controlling the data job and task management operations of a computer or a computer network through executive scheduling and monitoring. It increases the productivity of a computer installation by managing the allocation of all available computer resources including the control processing unit, main storage and input/output devices. Applications systems software such as language processors, library

routines and debugging aides and other computer software are not considered operating system software and may not be recognized as admitted assets.

11. Chapter 9, Nonadmitted Assets, states: *"application systems software may be expensed when purchased or established as a nonadmitted asset and written off over a period of years not to exceed the software's expected useful life."*

12. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies contains similar guidance.

13. In most states the depreciated value of EDP equipment and its related operating software is an admitted asset, generally subject to several restrictions. The restrictions could include the following: requiring permission from the insurance commissioner of the state of domicile, setting a minimum amount that can be capitalized as an asset, establishing a maximum depreciable life (such as 10 years for hardware and five years for software) and limiting the amount that may be admitted to a percentage of total admitted assets or capital and surplus. Applications software is typically nonadmitted.

Generally Accepted Accounting Principles

14. GAAP requires purchases of long-lived equipment to be capitalized at their historical cost and depreciated over the expected useful life of the assets by recording a monthly charge against current income, in accordance with *Accounting Research Bulletin No. 43*, *Restatement and Revision of Accounting Research Bulletins* (ARB 43), Chapter 9, *Depreciation*. This treatment is consistent with the matching concept of GAAP, which requires revenues and expenses to be recognized over the period in which they are earned or incurred.

Statutory Issue Paper No. 17

Preoperating and Research and Development Costs

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 17

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper addresses organizational costs, research and development costs and start-up costs for new and existing entities. Current statutory accounting guidance does not specifically address the treatment of such costs. Standard statutory practice is to expense these costs as incurred. GAAP specifically addresses the treatment of research and development costs and costs of development stage enterprises. GAAP provides limited guidance on the treatment of other organizational costs resulting in varied practices.

2. The purpose of this issue paper is to establish specific statutory accounting principles related to preoperating and research and development costs that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Preoperating, including organization and start up costs, and research and development costs shall be expensed as incurred. Preoperating and research and development costs are incurred for such new projects as: (1) arranging operations for a new company (e.g., legal, actuarial and accounting costs associated with regulatory approval and licensing and issuance of stock); (2) establishing production, sales or service facilities at a new site; (3) changing operations or production significantly; or (4) developing and producing a new product, adopting a new process or offering a new service. Preoperating, including organization and start up costs, and research and development costs specifically exclude tangible assets acquired in connection with such activities.

DISCUSSION

4. This issue paper adopts *FASB Statement No. 2*, *Accounting for Research and Development Costs* (FAS 2) and the related *FASB Interpretation No. 6*, *Applicability of FASB Statement No. 2 To Computer Software* (FIN 6) and rejects *FASB Statement No. 7*, *Accounting and Reporting by Development Stage Enterprises* (FAS 7). This issue paper also adopts *FASB Statement No. 86*, *Accounting for the Costs of Computer Software to be Sold, Leased or Otherwise Marketed* (FAS 86), with the exception of paragraphs 5 and 6 and paragraphs 8 through 11, which are rejected.

5. *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4) defines an asset as *"probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events*." Although in some instances preoperating and research and development costs may appear to comply with the definition of an asset established by Issue Paper No. 4, it is not consistent with the Conservatism concept included in the Statement of Concepts to estimate that it is "probable" that an entity in a preoperating phase or a new product still being developed will generate future economic benefits. Preoperating and research and development costs, therefore, do not meet the definition of an asset for statutory accounting purposes and as such should be expensed as incurred. This

is consistent with the Recognition concept included in the Statement of Concepts, which states that a reporting entity's *"ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due."*

6. FAS 2 requires research and development costs (e.g., costs related to the development of an insurance product providing a new form of coverage or modifications to an existing insurance product) to be expensed as incurred. FAS 7 specifies that the accounting of the cost of a development stage enterprise should be no different than the accounting for similar costs of a mature enterprise. FAS 7 requires that the recoverability of costs incurred by a development stage enterprise be assessed in order to identify which costs qualify for capitalization or deferral. It permits recognition of these costs as an asset if they meet the GAAP criteria for capitalization. Other organizational costs are not specifically addressed in GAAP literature resulting in varied practices. Companies which have capitalized these costs do so under the matching concept of relating costs to revenue. Under this theory, revenue will be realized through future operations and therefore the costs should be deferred and expensed in the future when the revenue is recognized. Because the future benefit is rarely certain or measurable and the future period over which deferred costs might be allocated is usually arbitrary, deferral is not consistent with the Conservatism and Recognition concepts included in the Statement of Concepts.

7. FAS 86 reaffirms the provisions of FAS 2 for the treatment of software developed to be sold, leased or otherwise marketed by requiring the related software development costs to be expensed as incurred, with the exception of software costs incurred subsequent to the research and development phase but prior to making the software available to the public. Paragraphs 5, 6 and 8 through 11 of FAS 86 allow these costs to be capitalized. For the purposes of this paper, these costs are not considered to be different from the other costs incurred during a preoperating or research and development period and are included in the conclusion to expense these costs as incurred.

Drafting Notes/Comments

- Accounting treatment of goodwill, real estate, EDP equipment and software and furniture and equipment are addressed in separate issue papers.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. The majority of states do not specifically address the admission of preoperating costs in their insurance regulations and statutes. Typically, a reference is made to the treatment of goodwill and all other intangible assets. An example of this type of state guidance is New York Statutes - Insurance Laws, Chapter 28 of the Consolidated Insurance Laws, Article 13, *Assets and Deposits*, which states:

> The following shall not be allowed as admitted assets of a domestic or foreign insurer or the United States branch of an alien insurer in any determination of its financial condition:
>
> (1) Goodwill, trade names, agency plants and other like intangible assets.

9. Several states do make specific reference to organization costs in their insurance regulations and statutes. For example, Maryland Insurance Statutes - Insurance Laws, Article 48A -- Insurance Code, Subtitle 5, *Assets and Liabilities,* explicitly requires the nonadmission of organization costs, as opposed to expensing them as incurred.

Generally Accepted Accounting Principles

10. FAS 2, paragraph 12, states that "*All research and development costs encompassed by this Statement shall be charged to expense when incurred.*"

11. FAS 2 contains the following definitions:

> 8. For purposes of this Statement, research and development is defined as follows:
>
> a) Research is planned search or critical investigation aimed at discovery of new knowledge with the hope that such knowledge will be useful in developing a new product or service (hereinafter "product") or a new process or technique (hereinafter "process") or in bringing about a significant improvement to an existing product or process.
>
> b) Development is the translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use. It includes the conceptual formulation, design, and testing of product alternatives, construction of prototypes, and operation of pilot plants. It does not include routine or periodic alterations to existing products, production lines, manufacturing processes, and other on-going operations even though those alterations may represent improvements and it does not include market research or market testing activities.

12. FIN 6, paragraph 5, states:

> When software for use in research and development activities is purchased or leased, its cost shall be accounted for as specified by paragraphs 11(c) and 12 of *Statement No. 2.* That is, the cost shall be charged to expense as incurred unless the software has alternative future uses (in research and development or otherwise).

13. FAS 86 amends FAS 2 and FIN 6 to provide guidance on accounting for software developed internally for sale, lease or other marketing. FAS 86, paragraph 3, states:

> All costs incurred to establish the technological feasibility of a computer software product to be sold, leased, or otherwise marketed are research and development costs. These costs shall be charged to expense when incurred as required by FASB Statement No. 2, *Accounting for Research and Development Costs.*

14. FAS 86, paragraphs 5 and 6, addresses the treatment of the costs of internally developed software that has completed the research and development phase but has not been made available to the public. FAS 86, paragraph 5, states:

> Costs of producing product masters incurred subsequent to establishing technological feasibility shall be capitalized. Those costs include coding and testing performed subsequent to establishing technological feasibility. Software production costs for computer software that is to be used as an integral part of a product or process shall not be capitalized until both (a) technological feasibility of the product has been established for the software and (b) all research and development activities for the other components of the product or process have been completed.

15. FAS 86, paragraph 6, states:

> Capitalization of computer software costs shall cease when the product is available for general release to customers. Costs of maintenance and customer support shall be charged to expense when related revenue is recognized or when those costs are incurred, whichever occurs first.

16. Paragraphs 8 through 11 of FAS 86 address the accounting and disclosure requirements for software costs capitalized under the provisions of paragraph 5 above.

17. FAS 7 states:

> Generally accepted accounting principles that apply to established operating enterprises shall govern the recognition of revenue by a development stage enterprise and shall determine whether a cost incurred by a development stage enterprise is to be charged to expense when incurred or is to be capitalized or deferred. Accordingly, capitalization or deferral of costs shall be subject to the same assessment of recoverability that would be applicable in an established operating enterprise.

Statutory Issue Paper No. 19

Furniture, Fixtures and Equipment

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 19

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The current statutory accounting guidance allows reporting entities to record furniture and equipment as assets, depreciate those assets, and nonadmit the undepreciated balance in the statutory financial statements. Alternatively, reporting entities may expense furniture and equipment when purchased. Guidance found in state statutes varies widely on the treatment of furniture, fixtures and equipment. GAAP requires purchases of furniture, fixture and equipment to be capitalized and depreciated over the expected useful lives of the assets. This issue paper establishes a framework for the accounting and reporting of furniture and equipment that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. Furniture, fixtures and equipment generally meet the definition of assets established in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4). Within that definition, such items also meet the criteria defining nonadmitted assets. As such, the undepreciated portion of these assets shall be reported as nonadmitted assets and charged against surplus. These nonadmitted assets shall be depreciated against net income as the estimated economic benefit expires. This conclusion is a change from current statutory guidance because an acquisition which meets the definition of an asset established in Issue Paper No. 4 may no longer be expensed. This change will promote uniformity in the accounting for furniture, fixtures and equipment.

3. In accordance with the reporting entity's capitalization policy, immaterial amounts of furniture, fixtures, and equipment, or supplies, can be expensed when purchased.

DISCUSSION

4. Issue Paper No. 4 defines an asset as *"probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events."* Issue Paper No. 4 also states that an asset not readily available to satisfy policyholder obligations *"shall be recorded as a nonadmitted asset and charged against surplus."* This is consistent with the Statement of Concepts, which states that a reporting entity's *"ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due."* Furniture, fixtures and equipment meet the definition of an asset but are not considered readily available to satisfy policyholder obligations. Therefore, it is in conformity with the above guidance to nonadmit these assets. This is also consistent with the concept of conservatism included in the Statement of Concepts.

Drafting Notes/Comments

- EDP equipment is addressed in *Issue Paper No. 16—Electronic Data Processing Equipment and Software*

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

5. The Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies (Chapter 9, *Nonadmitted Assets*, in both manuals) require the nonadmission of furniture and equipment via one of two accounting methods:

1. The reporting entity may record furniture and equipment as an asset, depreciate it through the Summary of Operations and record the change in the nonadmitted amount through Exhibit 14 for Life and Accident and Health Insurance Companies or Exhibit 2 for Property and Casualty Insurance Companies, which directly affects surplus.

2. The reporting entity may expense furniture and equipment when purchased.

6. Guidance found in state statutes is not consistent on this issue. Some states allow the undepreciated balances of furniture and equipment over a specified cost threshold to be treated as admitted assets, in amounts up to stipulated percentages of the aggregate of all other assets. The threshold for capitalization and the percentage of admitted asset limits permitted vary widely. An example is the Texas Statutes - Insurance Laws, Texas Insurance Code, Chapter 3, *Life, Health and Accident Insurance*, subchapter A. Terms Defined; Domestic Companies*,* which allows furniture, fixtures and equipment, including a data processing system, used in connection with the business of an insurance company to be admitted if the total value of the property exceeds $2,000 and constitutes less than 10% of the aggregate other admitted assets of the company. Assets which do not meet the threshold for capitalization (i.e., supplies) are expensed when purchased. Other states place no capitalization threshold on furniture, fixtures and equipment but require the assets to be amortized over a period not to exceed a specified number of years. For example, Florida Administrative Code, Title 38, Chapter 38F-5, *Self-Insurers Funds*, allows all furniture, fixtures and equipment of self insurers to be admitted as long as the assets are depreciated over a five-year useful life. Some states waive both the threshold for capitalization and the useful life requirement and only place limits on the percentage of admitted assets that the undepreciated balance of furniture, fixtures and equipment may comprise. An example is the Idaho statutes, Insurance Laws, Title 41, *Insurance*, Chapter 6, *Assets and Liabilities,* which states, “ All office equipment, office furniture, private passenger automobiles, deemed necessary for conduct of insurance business, the aggregate amount of which shall not at any one time exceed one percent (1%) of the other assets of the insurer.”

Generally Accepted Accounting Principles

7. GAAP requires purchases of furniture, fixtures and equipment to be capitalized at their historical cost and depreciated over the expected useful life of the assets by recording a monthly charge against current income, in accordance with *Accounting Research Bulletin No. 43*, *Restatement on Revision of Accounting Research Bulletins*, Chapter 9, *Depreciation*. This treatment is consistent with the matching concept of GAAP, which requires revenues and expenses to be recognized in income over the period in which they are earned or incurred. Furniture, fixtures and equipment are reported in the balance sheet at their historical cost net of accumulated depreciation.

Statutory Issue Paper No. 20

Gain Contingencies

STATUS
Finalized March 16, 1998

Original SSAP: SSAP No. 5; Current Authoritative Guidance: SSAP No. 5R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance does not address accounting for gain contingencies. GAAP requires contingencies that may result in gains to be disclosed but not recorded in current year income.

2. This issue paper establishes the statutory accounting for gain contingencies that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. For purposes of applying this statutory accounting principle, a "gain" shall be defined as an increase in surplus (net assets) which results from peripheral or incidental transactions of a reporting entity and from all other transactions and other events and circumstances affecting the reporting entity except those that result from revenues or investments by owners. If, on or before the balance sheet date, (a) the transaction or event has been fully completed, and (b) the amount of the gain is determinable, then the transaction or event is considered a gain, and is recognized in the financial statements. This definition excludes increases in surplus that result from activities that constitute a reporting entity's ongoing major or central operations or activities. Because investment activities are central to an insurer's operations, increases in surplus that result from such investment activities are excluded from the definition of gains. Revenues are inflows or other enhancements of assets of a reporting entity or settlements of its liabilities (or a combination of both) from providing products, rendering services, or other activities that constitute the reporting entity's ongoing major or central operations. Investments by owners include any type of capital infused into the surplus of the reporting entity.

4. A "gain contingency" shall be defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible "gain" (as defined in the preceding paragraph) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur (e.g., a plaintiff has filed suit for damages associated with an event occurring prior to the balance sheet, but the outcome of the suit is not known as of the balance sheet date). Gain contingencies shall not be recognized in a reporting entity's financial statements. However, if subsequent to the balance sheet date but prior to the issuance of the financial statements, the gain contingency is realized, the gain shall be disclosed in the notes to financial statements and the unissued financial statements should not be adjusted to record the gain. A gain is generally considered realizable when noncash resources or rights are readily convertible to known amounts of cash or claims to cash.

5. Gain contingencies shall not be recorded in a reporting entity's financial statements. The notes to the financial statements shall contain adequate disclosure about the nature of the gain contingency. However, care should be exercised to avoid misleading implications as to the likelihood of realization.

DISCUSSION

6. This issue paper adopts paragraph 17 of *FASB Statement No. 5*, *Accounting for Contingencies* (FAS 5), which provides guidance with respect to the accounting and reporting of gain contingencies.

7. The definition of a "gain," as stated in paragraph 3 above, is consistent with that of *FASB Statement of Financial Accounting Concepts No. 6*, *Elements of Financial Statements* (CON 6). This definition of gains excludes investment activities of insurance companies.

8. Disclosure in a note to the financial statements but not recording a gain contingency is consistent with the conservatism and recognition concepts included in the Statement of Concepts. In addition, it prevents the recognition of transactions before the earnings process is completed (as prescribed in the recognition concept in the Statement of Concepts).

Drafting Notes/Comments

- Accounting for loss contingencies is addressed in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets*
- Revenue recognition issues are addressed in separate issue papers
- Income taxes are addressed in a separate issue paper
- Reinsurance agreements are addressed in a separate issue paper

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

9. As noted above, current statutory guidance does not address gain contingencies. However, the conservatism and recognition concepts of the Statement of Concepts provide guidance which can be applied to the accounting treatment of gain contingencies. The conservatism concept of the Statement of Concepts states the following:

> To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting. Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results.

10. The recognition concept of the Statement of Concepts states that "*Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed*."

Generally Accepted Accounting Principles

11. *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements* (CON 6), paragraphs 78 and 82, defines revenues and gains as follows:

> Revenues are inflows or other enhancements of assets of an entity or settlements of its liabilities (or a combination of both) from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.
>
> Gains are increases in equity (net assets) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity except those that result from revenues or investments by owners.

12. Additionally, paragraph 88 states the following:

> Items that are revenues for one kind of entity may be gains for another, and items that are expenses for one kind of entity may be losses for another. For example, investments in securities

> that may be sources of revenues and expenses for insurance or investment companies may be sources of gains and losses in manufacturing or merchandising companies.

13. GAAP literature addresses accounting for gain contingencies in both general terms and in the event of gain contingencies which result from specific accounting treatments required by GAAP. FAS 5 provides general guidance for the treatment of gain contingencies. FAS 5, paragraph 17, states the following:

> Contingencies that might result in gains usually are not reflected in the accounts since to do so might be to recognize revenue prior to its realization.
>
> Adequate disclosure shall be made of contingencies that might result in gains, but care shall be exercised to avoid misleading implications as to the likelihood of realization.

14. Examples of GAAP literature which require a conservative treatment of gain recognition in specific accounting situations include:

1. *FASB Statement No. 88, Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits*, paragraph 14, which requires gains due to the curtailment of all or a portion of a defined benefit pension plan to be recognized in income only when the related employee terminations occur, as opposed to curtailment losses which must be recognized in income when it is probable that the curtailment will occur and the effects are reasonably estimable.

2. *Accounting Principles Board Opinion No. 30, Reporting the Results of Operations--Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions*, paragraph 15, which requires gains from the disposal of a segment of a business to be recognized in income at the actual disposal date, as opposed to losses from the disposal of a segment of a business which must be recognized in income at the measurement date (i.e. the date at which management commits to a formal plan to dispose the segment).

Statutory Issue Paper No. 21

Bills Receivable For Premiums

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 6

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Bills receivable, which are generally interest bearing, are used by reporting entities as methods of financing premiums. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies provides guidance on the accounting for bills receivable taken for premiums. However, the guidance for bills receivable in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies relates to non-premium loans (which will be addressed in a separate issue paper). This issue paper establishes statutory accounting for bills receivable for premiums that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. Bills receivable for premiums meet the definition of assets as set forth in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*. First, an evaluation shall be made to determine nonadmitted amounts. Next, an evaluation shall be made of such assets in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5) to determine whether there is an impairment. This two step process is set forth below:

1. Bills receivable shall be accounted for as a nonadmitted asset if either of the following conditions are present:

    a. Past due installment: If any installment is past due, the entire bills receivable balance from that policy is nonadmitted; or

    b. Aggregate bills receivable balance due in excess of the unearned premium on the policy for which the note was accepted: If the aggregate bills receivable balance due exceeds the policy's unearned premium, the amount in excess of the unearned premium is nonadmitted.

3. Amounts determined to be uncollectible shall be written off: If, in accordance with Issue Paper No. 5, it is probable a portion of the bills receivable is uncollectible, any uncollectible bills receivable shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible, disclosure requirements outlined in Issue Paper No. 5 shall be followed.

4. The following shall provide additional guidance in determining the nonadmitted portion of bills receivable:

a. Amounts classified as nonadmitted assets collected subsequent to the date of the statutory financial statements - Such amounts shall not be used to decrease the nonadmitted asset otherwise calculated.

b. Determination of the Due Date - The due date is governed by the contractual due date of the installment.

DISCUSSION

5. The Statement of Concepts states:

> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

6. Based upon the above concept, bills receivable should reflect only amounts that are available to meet both current and future policyholder obligations when the obligations are due. Therefore, amounts determined to be impaired (i.e., uncollectible), regardless of aging, should be charged to operations in the period such determination is made.

7. Under the conservatism concept of statutory accounting and consistent with current statutory accounting guidance, the entire bill receivable is nonadmitted if the related premium installment is past due. In addition, any excess of the aggregate bill receivable over the unearned premium amount on the policy of any performing bill receivable is nonadmitted. In accordance with the concept of conservatism, subsequent collection of nonadmitted assets should not be considered in the determining period-end nonadmitted assets. These recoveries should be accounted for in the period received.

Drafting Notes/Comments

- Accounting/aging of retrospective premiums currently reported on line 9.2 or line 9.3 is addressed in a separate issue paper.
- Accounting for uncollected agents' balances is addressed in *Issue Paper No 6—Amounts Due From Agents and Brokers.*
- A separate issue paper addresses unearned and unbilled premiums.
- Accounting for uncollected premium balances is addressed in *Issue Paper No. 10—Uncollected Premium Balances*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. Chapter 8, *Other Admitted Assets*, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies discusses bills receivable as follows:

> (g) Bills receivable taken for premiums are admitted assets provided that the current installment is not past due, and the balance due does not exceed the unearned premium on the policy for which the note was accepted.

9. Chapter 9, *Nonadmitted Assets,* of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies discusses bills receivable as follows:

> 6. Bills Receivable, Taken for Premiums: Bills or notes receivable are used as methods of financing premiums usually in states where installment premiums are not permitted or customary. If any portion of a bill or note receivable is unpaid past the due date of an installment, the entire bill or note is classified as nonadmitted. Also, on bills or notes not past due, the excess of the balance due over the unearned premium on the underlying policy or policies is classified as a nonadmitted asset. To the extent bills receivable are taken for premium for retrospectively rated policies, such bills must meet the same criteria required of accrued retrospective premiums to be reported as an admitted asset.

Generally Accepted Accounting Principles

10. GAAP addresses collectibility issues related to bills receivable in FASB Statement No. 5, *Accounting for Contingencies* (FAS 5), paragraphs 1, 3 and 8:

> 1. For the purpose of this Statement (FAS 5), a contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a "gain contingency") or loss[1] (hereinafter a "loss contingency") to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.
>
> [1] The term loss is used for convenience to include many charges against income that are commonly referred to as expenses and others that are commonly referred to as losses.
>
> 3. When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms probable, reasonably possible, and remote to identify three areas within that range, as follows:
>
> a) Probable. The future event or events are likely to occur.
>
> b) Reasonably possible. The chance of the future event or events occurring is more than remote but less than likely.
>
> c) Remote. The chance of the future event or events occurring is slight.
>
> 8. An estimated loss from a loss contingency (as defined in paragraph 1) shall be accrued by a charge to income[3] if both of the following conditions are met:
>
> a) Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements.[4] It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.
>
> b) The amount of loss can be reasonably estimated.
>
> [3] Paragraphs 23-24 of APB Opinion No. 9, Reporting the Results of Operations, describe the rare circumstances in which a prior period adjustment is appropriate. Those paragraphs are not amended by this Statement.
>
> [4] Date of the financial statements means the end of the most recent accounting period for which financial statements are being presented.

---

11. The FAS 5 criteria above is used in interpreting information such as historical trending and general information about the financial condition of the insureds in an effort to evaluate the collectibility of a receivable balance. Accounting for contingencies is discussed in more detail in Issue Paper No. 5.

Statutory Issue Paper No. 22

Leases

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 22

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance provides only limited guidance on the accounting for leases and does not clearly differentiate capital and financing leases from operating leases. The Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies state that the form of lease agreements should determine the accounting. However, the manuals also state that lease-purchase transactions should be accounted for in accordance with their substance. Both sections state that GAAP is commonly used as a guideline where not in conflict with statutory accounting principles. This guidance generally has been interpreted to prescribe operating lease treatment for all leases, but to allow sales-type lease treatment by lessors if the criteria established in GAAP are met.

2. The purpose of this issue paper is to establish statutory accounting principles for leases by lessors and lessees that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). It addresses:

- Accounting and reporting by lessees
- Accounting and reporting by lessors
- Sale-leaseback transactions
- Leveraged leases for lessors
- Related party leases
- Disclosures

SUMMARY CONCLUSION

3. For purposes of statutory accounting principles, a lease is defined as an agreement conveying the right to use property, plant, or equipment (land and/or depreciable assets) usually for a stated period of time. This definition does not include agreements that are contracts for services that do not transfer the right to use property, plant, or equipment from one contracting party to the other (i.e., employee lease contracts). On the other hand, agreements that do transfer the right to use property, plant, or equipment meet the definition of a lease for purposes of statutory accounting principles even though substantial services by the contractor (lessor) may be called for in connection with the operation or maintenance of such assets.

Accounting and Reporting by Lessees

4. All leases shall be considered operating leases. Rent on an operating lease shall be charged to expense over the lease term as it becomes payable, except as provided in paragraphs 5 and 6.

5. As discussed in *FASB Technical Bulletin 85-3*, *Accounting for Operating Leases with Scheduled Rent Increases,* the effects of scheduled rent increases normally shall be recognized on a straight-line basis over the lease term.

6. Lease agreements may also include incentives for the lessee to sign the lease, such as an up-front cash payment to the lessee, payment of costs for the lessee (such as moving expenses), or the assumption by the lessor of the lessee's preexisting lease. As discussed in *FASB Technical Bulletin 88-1*, *Issues Relating to Accounting for Leases: Time Pattern of the Physical Use of the Property in an Operating Lease; Lease Incentives in an Operating Lease; Applicability of Leveraged Lease Accounting to Existing Assets of the Lessor; Money-Over-Money Lease Transactions; Wrap Lease Transactions,* incentives paid to or payments made on behalf of the lessee shall be considered reductions of minimum lease payments (i.e., the payments that the lessee is obligated to make or can be required to make in connection with the leased properties.) These incentives shall be recognized over the lease term on a straight-line basis unless the use of another systematic and rational allocation basis is more representative of the time pattern in which the leased property is physically employed. (The lessee's immediate recognition of expenses or losses (e.g., moving costs, losses on subleases, write-offs of leasehold improvements) shall not be changed by this guidance.)

Accounting and Reporting by Lessors

7. All leases, except leveraged leases as defined in paragraph 14, shall be considered operating leases and accounted for by the lessor as follows:

a. The leased property shall be included in the same balance sheet category it would be had the property not been leased. The property shall be depreciated following the lessor's normal depreciation policies for such assets.

b. Rental income shall be reported as investment income as it becomes receivable according to the provisions of the lease. However, as discussed in paragraphs 5 and 6 of this issue paper, rentals may be recognized before they become due, if rentals vary from the straight-line basis. The guidance in *Issue Paper No. 34—Investment Income Due and Accrued* shall be applied to the receivable balance.

c. Initial direct costs shall be charged to expense when incurred, and shall not be deferred and allocated over the lease term. Initial direct costs are those incremental costs that the lessor has incurred in directly evaluating, negotiating, administering, and closing a lease transaction.

8. The sale of property subject to an operating lease, or of property that is leased by or intended to be leased by the third-party purchaser to another party, shall not be treated as a sale if the seller or any party related to the seller (related party is defined in *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (Issue Paper No. 25) retains substantial risks of ownership in the leased property.

Sale-Leaseback Transactions

9. Sale-leaseback transactions involve the sale of property, plant, or equipment by the owner and a lease of the asset back to the seller. Sale-leaseback accounting, whereby the seller-lessee records the sale, removes the assets and related liabilities from its balance sheet, and accounts for the lease in accordance with the guidance in paragraphs 4-6 of this issue paper, shall be used by the seller-lessee for sale-leaseback transactions only if the transaction includes all of the following:

a. A normal leaseback (see paragraph 11)

b. Payment terms and provisions that adequately demonstrate the buyer-lessor's initial and continuing investment in the property (see paragraph 12)

c. Payment terms and provisions that transfer all of the other risks and rewards of ownership as demonstrated by the absence of any other continuing involvement by the seller-lessee (see paragraph 12)

d. Admitted assets, if the buyer-lessor is a related party, or either admitted or nonadmitted assets if the buyer-lessor is not a related party. For purposes of this paragraph, related parties include those identified in Issue Paper No. 25 and entities created for the purpose of buying and leasing nonadmitted assets for the reporting entity and/or its affiliates.

When applying sale-leaseback accounting, the sale, and gains or losses thereon, shall be recognized in accordance with the relevant statutory guidance for the asset being sold. For example, sales of real estate shall be accounted for in accordance with *Issue Paper No. 40—Real Estate Investments* (Issue Paper No. 40), which adopts *FASB Statement No. 66*, *Accounting for Sales of Real Estate* (FAS 66).

10. If criteria a., b., or c. in paragraph 9 are not met the sale of the asset shall be accounted for as a financing or deposit in accordance with FAS 66, which was adopted in Issue Paper No. 40. If criteria 9 d. is not met, the deposit method shall be used. Under the deposit method, the seller recognizes no profit or loss on the sale, does not record notes receivable, continues to report in its financial statements the property and the related existing debt even if it has been assumed by the buyer. Lease payments decrease and collections on the buyer-lessors note, if any, increase the seller-lessees deposit account. The property and related debt continue to be in the seller-lessees balance sheet, and the seller-lessee continues to depreciate the property. Also, a loss shall be recognized by the seller-lessee, if, at any reporting date, the net admitted value of the leased asset exceeds the sum of the balance in the deposit account, the fair value of the unrecorded note receivable, and any debt assumed by the buyer. Under the financing method, the asset will continue to be carried as an admitted asset. The proceeds from the sale are recognized as a borrowing (liability) and equated to the present value of the leaseback rents to determine the interest rate to use to accrue interest on the debt. If there is a change in lease terms such that the sale-leaseback transaction subsequently qualifies for sale-leaseback accounting recognition, sale-leaseback accounting as described in paragraph 9 shall be applied as if the sale had been recognized at the inception of the lease. Otherwise at the end of the lease term any deferred profit shall be recognized.

11. A normal leaseback in the context of a real estate sale-leaseback shall be defined as a lessee-lessor relationship that involves the active use of the property by the seller-lessee in consideration for payment of rent, including contingent rentals that are based on the future operations of the seller-lessee, and excludes other continuing involvement provisions.

12. A continuing involvement provision shall be defined as involvement by the seller-lessee with the leased property that result in the seller-lessee not transferring the risks or rewards of ownership to the buyer-lessor. Examples of continuing involvement are as follows:

a. The seller-lessee has an obligation or an option to repurchase the property or the buyer-lessor can compel the seller-lessee to repurchase the property.

b. The seller-lessee guarantees the buyer-lessor’s investment or a return on that investment for a limited or extended period of time.

c. The seller-lessee is required to pay the buyer-lessor at the end of the lease term for a decline in the fair value of the property below the estimated residual value on some basis other than excess wear and tear of the property levied on inspection of the property at the termination of the lease.

d. The seller-lessee provides nonrecourse financing to the buyer-lessor for any portion of the sales proceeds or provides recourse financing in which the only recourse is to the leased asset.

e. The seller-lessee is not relieved of the obligation under any existing debt related to the property.

f. The seller-lessee provides collateral on behalf of the buyer-lessor other than the property directly involved in the sale-leaseback transaction, the seller-lessee or a related party to the seller-lessee guarantees the buyer-lessor's debt, or a related party to the seller-lessee guarantees a return of or on the buyer-lessor's investment.

g. The seller-lessee's rental payment is contingent on some predetermined or determinable level of future operations of the buyer-lessor.

h. The buyer-lessor is obligated to share with the seller-lessee any portion of the appreciation of the property.

13. The buyer-lessor shall account for the purchase in accordance with applicable statutory guidance for the asset acquired and lease in accordance with paragraphs 7-8 of this issue paper.

Leveraged Leases for Lessors

14. Generally, leveraged leases are those in which the lessor acquires, through the incurrence of debt (such that the lessor is substantially "leveraged" in the transaction), property, plant or equipment with the intentions to lease the asset(s) to the lessee. Leveraged leases shall be defined as those leases that meet the criteria set forth in paragraph 42.a. through 42.d. (and the related paragraphs to which 42 refers) of *FASB Statement No. 13*, *Accounting for Leases* (FAS 13) as amended and interpreted. Leases which meet the preceding definition shall be accounted for in accordance with paragraphs 43-47 (and the related paragraphs to which 43-47 refer) of FAS 13. The lessor shall record its investment net of the nonrecourse debt. In cases where the asset being leased is a nonadmitted asset, any net leveraged lease asset shall be nonadmitted.

Related-Party Leases

15. This issue paper applies to arms-length transactions. To the extent that leases between related parties are, in substance, arms-length transactions the guidance in this issue paper shall be applied. The determination of whether related party leases qualify as arms length transactions will be addressed in Issue Paper No. 25.

Disclosures

16. The following disclosures shall be made in the notes to the financial statements of lessees:

- A general description of the lessee's leasing arrangements including, but not limited to, the following:

(1) Rental expense for each period for which an income statement is presented, with separate amounts for minimum rentals, contingent rentals, and sublease rentals. Rental payments under leases with terms of a month or less that were not renewed need not be included.

(2) The basis on which contingent rental payments are determined.

(3) The existence and terms of renewal or purchase options and escalation clauses.

(4) Restrictions imposed by lease agreements, such as those concerning dividends, additional debt, and further leasing.

- Additionally, for leases having initial or remaining noncancelable lease terms in excess of one year:

(1) Future minimum rental payments required as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding fiscal years.

(2) The total of minimum rentals to be received in the future under noncancelable subleases as of the date of the latest balance sheet presented.

- For sale-leaseback transactions:

(1) A description of the terms of the sale-leaseback transaction, including future commitments, obligations, provisions, or circumstances that require or result in the seller-lessee's continuing involvement.

(2) For those accounted for as deposits, (a) the obligation for future minimum lease payments as of the date of the latest balance sheet presented in the aggregate and for each of the five succeeding fiscal years and (b) the total of minimum sublease rentals, if any, to be received in the future under noncancelable subleases in the aggregate and for each of the five succeeding years.

When leasing is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the following information with respect to leases shall be disclosed in the financial statements:

- For operating leases:

(1) The cost and carrying amount, if different, of property on lease or held for leasing by major classes of property according to nature or function, and the amount of accumulated depreciation in total as of the date of the latest balance sheet presented;

(2) Minimum future rentals on noncancelable leases as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding years;

(3) Total contingent rentals included in income for each period for which an income statement is presented; and

(4) A general description of the lessor's leasing arrangements.

- For leveraged leases:

(1) a description of the terms including the pretax income from the leveraged leases shall be disclosed in the notes to the financial statements. For purposes of presenting the investment in a leveraged lease in the lessor's balance sheet, the amount of related deferred taxes shall be presented separately (from the remainder of the net investment).

(2) In the notes to the financial statements, separate presentation (from each other) shall be made of pretax income from the leveraged lease, the tax effect of pretax income, and the amount of investment tax credit recognized as income during the period.

(3) When leveraged leasing is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the components of the net investment balance in leveraged leases shall be disclosed in the notes to the financial statements.

DISCUSSION

17. This issue paper provides more comprehensive guidance on accounting for leases than exists in the current statutory accounting literature. Nevertheless, the principles established are generally consistent with current statutory accounting principles.

18. This issue paper rejects FAS 13, as amended and interpreted, except for certain of the guidance on operating leases, sale-leaseback transactions and leveraged leases (i.e., paragraphs 15, 16.(b., c., d.), 19.(a., b.), 23.(b., c.), 36, 37, 38.b., 39.c. and, 42-47). A complete list of all FASB Statements, Interpretations and Technical Bulletins adopted and rejected by this issue paper is included in the Relevant GAAP Literature section of this paper. FAS 13 was rejected because this issue paper provides that all leases except for leveraged leases, are accounted for as operating leases, whereas the essence of FAS 13 is to classify and account for leases as either capital or operating.

19. The statutory accounting principles differ from GAAP as follows:

- All leases except for leveraged leases for lessors are accounted for as operating leases. Under GAAP, leases are treated as operating or capital by lessees and as operating, sales-type, direct financing or leveraged leases by lessors.

- No distinction is made between current and long term classifications on the balance sheet.

- Sale-leaseback transactions involving related parties and nonadmitted assets are accounted for by the seller-lessee as deposits.

20. In rejecting the FAS 13 guidance on capital and financing leases for all leases other than leveraged leases, the financial statement impact of classification and accounting for the different types of leases under GAAP was considered and is explained and described below for both lessees and lessors:

Lessee

Capital lease - A capital lease is reflected on the lessee's balance sheet as both an asset and a corresponding liability. A capital lease generally produces a declining income statement charge over the term of the lease, represented by the sum of amortization of the capitalized asset, usually straight-line, and a declining interest expense element on the lease obligation balance. The effect is similar to that which would result if the lessee borrowed money and purchased the asset outright instead of leasing it.

Operating lease - An operating lease does not result in an asset or liability being reflected on the lessee's balance sheet. An operating lease normally results in a level income statement charge over the term of the lease reflecting the rent payments required by the lease agreement.

Lessor

Direct financing lease - A direct financing lease is treated as in effect a loan, producing declining revenue similar to interest over the term of the lease. Under the accelerated pattern of revenue recognition provided by a direct financing lease, revenue declines relative to the lessor's declining investment and thus matches the pattern of the lessor's interest carrying costs, either explicit or implicit. The balance sheet effect of the accounting for a direct financing lease is that the lessor's asset is effectively converted from a property classification to a receivable (net investment in the lease).

Sales-type lease - In addition to the effects of the direct financing lease described above, in a sales-type lease the manufacturer or dealer records a sale and the related cost of sales and gross profit at the beginning of the lease. In the balance sheet the treatment converts leased property carried at manufacturing or wholesale cost to a receivable equal to the normal selling price (i.e., the price the asset would sell for in an arms-length transaction).

Leveraged Leases - Generally, leveraged leases are those in which the lessor acquires, through the incurrence of debt (such that the lessor is substantially "leveraged" in the transaction), property, plant or equipment with the intentions to lease the asset(s) to the lessee. Except for the exclusion of leveraged leases from the definition of a direct financing leases, it otherwise meets the definition of a direct financing lease. A leveraged lease involves at least three parties: the lessee, a long-term creditor, and a lessor. The long-term creditor provides financing, which is a significant percentage of the cost of the property, to the lessor which is nonrecourse as to the general credit of the lessor. The lessor's investment in the property declines after the original investment has been made, often turns negative, and then increases during later years of the lease before it finally is realized. The lessor records the investment in a leveraged lease net of the nonrecourse debt. Income is recognized only in periods in which the net investment is positive.

Operating lease - An operating lease generally produces a level income effect over the term of the lease, represented by the excess of the level rent payments called for by the lease agreement over straight-line depreciation of the leased asset. (This level income from the lease would compare to a generally declining pattern of either explicit or implicit interest carrying costs.) Depreciable life would extend beyond the initial lease term. The rental income and depreciation are shown broad in the income statement as revenue and expense, respectively. For balance sheet purposes, the leased asset is classified with or near property, plant and equipment.

21. Since (a) statutory accounting principles provide for offsetting of obligations against real estate assets, (b) certain assets would be considered nonadmitted assets if capitalized, (c) most leases are considered operating leases under GAAP and (d) leasing is not a significant part of insurance companies business the objectives of statutory accounting would not be appreciably enhanced by adopting the GAAP guidance.

22. In addition, the statutory accounting principles established in this issue paper provide for the deferral of any gains on sales of property with a leaseback, except if certain strict criteria are met. Such accounting meets the conservatism objective in the Statement of Concepts. Furthermore, the statutory accounting principles established for sale-leaseback transactions of nonadmitted assets with related parties meet the conservatism objective by eliminating the possibility of surplus enhancement through sale-leaseback transactions involving nonadmitted assets.

Drafting Notes/Comments

- Accounting for real estate, including sales of real estate, is addressed in *Issue Paper No. 40—Real Estate Investments.*
- Accounting for related party transactions is addressed in *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*.
- *Issue Paper No. 34—Investment Income Due and Accrued* allows investment income not yet due to be considered an admitted asset. Under this issue paper rental income may be recognized before it is due.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

23. Chapter 8 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies discusses accounting for leases as follows:

> Investments in Real Estate, Equipment and Other Assets Involving Leases
>
> The statutory method of accounting for lease and sale leaseback arrangements is governed largely by the form of the agreement to which the insurance company is party. Life insurance companies are encouraged to account for lease purchase transactions with the same objectives in mind as in accounting for all transactions, conservatism and policyholder protection. Financial Accounting Standards Board Statements 13, 28, and 66 are commonly used as guidelines where not in conflict with statutory accounting principles.

24. The accounting treatment as stated in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies is similar to the treatment stated in the preceding paragraph.

25. In the August 5, 1987 meeting of the Emerging Accounting Issues Working Group, a consensus was reached as to the accounting for free rent. The minutes read as follows:

> Accounting for Free Rent
>
> The recent soft real estate market has given rise to the unusual situation of new tenants receiving "free rent" during initial periods of tenancy. An insurer requested direction as to the appropriate statutory accounting treatment during the term of the lease.
>
> Two alternatives were considered by the working group:
>
> 1. A "cash basis" method reflecting no payments during the "free rent" period and then accounting for the monthly rentals as payments are made.
>
> 2. A method based on GAAP treatment which would require the spreading of the actual rent to be paid over the full lease period. The "free rent" period would reflect monthly rent expense on an accrual basis. The accrued rent liability would increase during the "free rent" period and be reduced monthly with the cash payment of rent after the initial period.
>
> The working group concluded that the second method was preferable.

26. The Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force discussed the issue of a sale and leaseback of home office buildings in their May 7, 1986 meeting. The minutes are as follows:

> Sale and Leaseback of Home Office Buildings
>
> The third area of discussion was the sale and leaseback of home office buildings where notes are taken back as part of the purchase price and the result is an increase to the insurers surplus through recognition of gain on the sale.
>
> The issues discussed and the consensus reached were:
>
> 1. Should FASB 66 be applicable for statutory purposes?
>
> 2. Is there a need for special statutory accounting direction or should each situation be treated individually?
>
> Present statutory accounting probably permits recognition of the gain. The group believes, however, that FASB 66 should be used for guidance by regulators, if not contrary to law, and, at a commissioners discretion.

27. The Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force discussed the issue of a sale and leaseback of furniture and equipment in their September 11, 1989, meeting. The minutes are as follows:

> Accounting for Sale and Leaseback of Furniture and Equipment
>
> Mr. Robert Solitro, Director of Examinations for the State of New Hampshire Insurance Department, had requested that this item be placed on the agenda of the working group. His request included an issue summary (Attachment A).
>
> In the situation described, an insurance company would enter into a sale and lease-back agreement with a third party, non-affiliate, in which nonadmitted furniture is sold and then leased-back. As described, the terms of the agreement would provide that future payments to be made

by the insurance company would be equal to or greater than the proceeds to be received from the original sale.

The issue identified and addressed by the working group at this meeting was as follows:

> Should the transaction be accounted for as an operating lease or a capital lease?
>
> > The working group reached the consensus that for sale and leaseback transactions involving furniture and non-EDP equipment guidance should be obtained form FASB No. 13 and related amendments. In a case where it is determined that the transaction results in a capital lease, no surplus enhancement should be recorded.

28. The Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force discussed the issue of capital gains and increased real estate valuation through sale-leaseback and repurchase transactions in their December 4, 1989, meeting. The minutes are as follows:

> Capital Gains and Increased Real Estate Valuation Through Sale-Leaseback and Repurchase Transactions
>
> This topic was raised by Hyrum Gentner, Chief Insurance Examiner of the Utah Insurance Department and John Kay, Senior Examiner in that department (Attachment G). The situation described involved the sale and lease-back of an insurers real estate with the insurer accepting a note for most of the proceeds of the sale. The lease-back was for 12 months with an option for an additional 19 years. The insurer paid for an option to repurchase the property. A significant gain was realized on the sale. The insurer repurchased the property and used the repurchase cost plus the cost of the repurchase option to determine the book value of the real estate. The result was an increased valuation, slightly less than the realized capital gain on the sale.
>
> Mr. Gentner and Mr. Kay had also indicated that the Utah Department had been faced with three alternatives: (1) to recognize the gain and increased asset valuation, (2) to not recognize the gain and increased asset valuation, and (3) to recognize both and make full disclosure including a comment expressing the Insurance Department concern regarding the nature of the transactions. In connection with the last option, regulations would then be implemented requiring prior written departmental approval for such transactions and specifying the Commissioners authority to establish investment valuation reserves.
>
> After a general discussion of the subject, Norris Clark, chair of the working group was authorized to respond to the Utah Insurance Department stating that the issue had been discussed at the January 22, 1986 (86-1) and May 7, 1986 (86-3) meetings of the working group and that the transactions discussed by Mr. Gentner and Mr. Kay appeared to be of the kind in which no gain should be recognized.

Generally Accepted Accounting Principles

29. Accounting for leases is governed by *FASB Statement No. 13, Accounting for Leases,* as amended and interpreted by incorporating FASB Statements, Interpretations, and Technical Bulletins. Some key paragraphs of the FASB Current Text, Section L10, Leases, follow (note that the Current Text is an integration of currently effective accounting and reporting standards and that the authority of the Current Text is derived from the underlying pronouncements, which remain in force):

> .102 For purposes of applying the accounting and reporting standards [herein], leases are classified as follows:
>
> a. Classifications from the standpoint of the lessee:
> (1) Capital leases. Leases that meet one or more of the criteria in paragraph .103.
> (2) Operating leases. All other leases.
> b. Classifications from the standpoint of the lessor: [FAS 13, ¶6]

(1) Sales-type leases. Leases that give rise to manufacturer's or dealer's profit (or loss) to the lessor (that is, the fair value of the leased property at the inception of the lease is greater or less than its cost or carrying amount, if different) and that meet one or more of the criteria in paragraph .103 and both of the criteria in paragraph .104, except as indicated in the following sentence. A lease involving real estate shall be classified as a sales-type lease only if it meets the criterion in paragraph .103(a), in which case the criteria in paragraph .104 do not apply. [FAS 98, ¶22c] Normally, sales-type leases will arise when manufacturers or dealers use leasing as a means of marketing their products. Leases involving lessors that are primarily engaged in financing operations normally will not be sales-type leases if they qualify under paragraphs .103 and .104, but will most often be direct financing leases, described in paragraph .102(b)(2) below. However, a lessor need not be a dealer to realize dealer's profit (or loss) on a transaction, for example, if a lessor, not a dealer, leases an asset that at the inception of the lease has a fair value that is greater or less than its cost or carrying amount, if different, such a transaction is a sales-type lease, assuming the criteria referred to are met. [FAS13, ¶6] Leases of a manufacturing company's equipment sold to a leasing subsidiary that are accounted for as direct financing leases on the subsidiary's financial statements normally would be sales-type capital leases in the consolidated financial statements. [FAS94, ¶52] A renewal or extension of an existing sales-type or direct financing lease that otherwise qualifies as a sales-type lease shall be classified as a direct financing lease unless the renewal or extension occurs at or near the end of the original term 3 specified in the existing lease, in which case it shall be classified as a sales-type lease (refer to paragraph .113(f)). [FAS27, ¶6]

(2) Direct financing leases. Leases other than leveraged leases that do not give rise to manufacturer's or dealer's profit (or loss) to the lessor but that meet one or more of the criteria in paragraph .103 and both of the criteria in paragraph .104. In such leases, the cost or carrying amount, if different, and fair value of the leased property are the same at the inception of the lease. [FAS13, ¶6] An exception arises when an existing sales-type or direct financing lease is renewed or extended during the term of the existing lease. [FAS27, ¶7] In such cases, the fact that the carrying amount of the property at the end of the original lease term is different from its fair value at that date shall not preclude the classification of the renewal or extension as a direct financing lease (refer to paragraph .113(f)).

(3) Leveraged leases. Leases that meet the criteria of paragraph .144. [FAS13, ¶6]

(4) Operating leases. All other leases, including leases that involve real estate and give rise to manufacturer's or dealer's profit (or loss) to the lessor but do not meet the criterion in paragraph .103(a). [FAS98, ¶22d]Criteria for Classifying Leases (Other Than Leveraged Leases)

.103 The criteria for classifying leases set forth in this paragraph and in paragraph .104 derive from the concept [FAS 13, paragraph 7] that a lease that transfers substantially all of the benefits and risks incident to the ownership of property should be accounted for as the acquisition of an asset and the incurrence of an obligation by the lessee and as a sale or financing by the lessor. All other leases should be accounted for as operating leases. In a lease that transfers substantially all of the benefits and risks of ownership, the economic effect on the parties is similar, in many respects, to that of an installment purchase. [FAS 13, paragraph 60] If at its inception a lease meets one or more of the following four criteria, the lease shall be classified as a capital lease by the lessee. Otherwise, it shall be classified as an operating lease. (Refer to paragraph .150 and Exhibit 150C for an illustration of the application of these criteria.)

a. The lease transfers ownership of the property to the lessee by the end of the lease term.[4a]

b. The lease contains a bargain purchase option.

c. The lease term is equal to 75 percent or more of the estimated economic life of the leased property. However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease.

d. The present value[5] at the beginning of the lease term of the minimum lease payments, excluding that portion of the payments representing executory costs, to be paid by the lessor, including any profit thereon, equals or exceeds 90 percent of the excess of the fair value of the leased property to the lessor at the inception of the lease over any related investment tax credit retained by the lessor and expected to be realized by him.[6] However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease. A lessor shall compute the present value of the minimum lease payments using the interest rate implicit in the lease. A lessee shall compute the present value of the minimum lease payments using its incremental borrowing rate unless (1) it is practicable for him to learn the implicit rate computed by the lessor and (2) the implicit rate computed by the lessor is less than the lessee's incremental borrowing rate. If both of those conditions are met, the lessee shall use the implicit rate. [FAS 13, paragraph 7]

[4a] This criterion is met in situations in which the lease agreement provides for the transfer of title at or shortly after the end of the lease term in exchange for the payment of a nominal fee, for example, the minimum required by statutory regulation to transfer title. [FAS 98, paragraph 22.e.]

[5] Refer to paragraphs .509 through .511 for supplemental guidance on the interest rate to be used in calculating the present value of minimum lease payments.

[6] The 90-percent test is stated as a lower limit rather than as a guideline. [FIN 19, paragraph 4]

.104 From the standpoint of the lessor, a lease involving real estate shall be classified as a sales-type lease only if it meets the criterion in paragraph .103(a) as appropriate under paragraph .102(b)(1). Otherwise, if the lease at inception meets any one of the four criteria in paragraph .103 and in addition meets both of the following criteria, it shall be classified as a sales-type lease, a direct financing lease, a leveraged lease, or an operating lease as appropriate under paragraph .102(b). If the lease does not meet any of the criteria of paragraph .103 or both of the following criteria, the lease shall be classified as an operating lease.

a. Collectibility of the minimum lease payments is reasonably predictable. A lessor shall not be precluded from classifying a lease as a sales-type lease, a direct financing lease, or a leveraged lease simply because the receivable is subject to an estimate of uncollectibility based on experience with groups of similar receivables. [FAS98, ¶22f]

b. No important uncertainties surround the amount of unreimbursable costs yet to be incurred by the lessor under the lease.[7] Important uncertainties might include commitments by the lessor to guarantee performance of the leased property in a manner more extensive than the typical product warranty or to effectively protect the lessee from obsolescence of the leased property. However, the necessity of estimating executory costs to be paid by the lessor (refer to paragraphs .113(a) and .114(a)) shall not by itself constitute an important uncertainty as referred to herein. [FAS13, ¶8]

[7] If the property covered by the lease is yet to be constructed or has not been acquired by the lessor at the inception of the lease, the classification criteria of paragraph .104(b) shall be applied at the date that construction of the property is completed or the property is acquired by the lessor. [FAS23, ¶ 7]

.105 If at any time the lessee and lessor agree to change the provisions of the lease, other than by renewing the lease or extending its term, in a manner that would have resulted in a different classification of the lease under the criteria in paragraphs .103 and .104 had the changed terms been in effect at the inception of the lease, the revised agreement shall be considered as a new agreement over its term, and the criteria in paragraphs .103 and .104 shall be applied for purposes of classifying the new lease. Likewise, except when a guarantee or penalty is rendered inoperative as described in paragraphs .108 and .113(e), any action that extends the lease beyond the expiration of the existing lease term, such as the exercise of a lease renewal option other than those already included in the lease term, shall be considered as a new agreement, which shall be classified according to the provisions of paragraphs .102 through .104. Changes in estimates (for example, changes in estimates of the economic life or of the residual value of the leased property) or changes in circumstances (for example, default by the lessee), however, shall not give rise to a new classification of a lease for accounting purposes. [FAS13, ¶9]

Accounting and Reporting by Lessees

Operating Leases

.111 Normally, rental on an operating lease shall be charged to expense over the lease term as it becomes payable. If rental payments are not made on a straight-line basis,[13a] rental expense nevertheless shall be recognized on a straight-line basis unless another systematic and rational basis is more representative of the time pattern in which use benefit is derived from the leased property, in which case that basis shall be used. [FAS 13, paragraph 15]

[13a] Refer to paragraphs .525 through .527F for supplemental guidance on accounting for operating leases with scheduled rent increases and lease incentives.

.112 The following information with respect to leases shall be disclosed in the lessees financial statements or the footnotes thereto. (Refer to paragraphs .151 and .152 for illustrations.)

b. For operating leases having initial or remaining noncancelable lease terms in excess of one year:

(1) Future minimum rental payments required as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding fiscal years.

(2) The total of minimum rentals to be received in the future under noncancelable subleases as of the date of the latest balance sheet presented.

c. For all operating leases, rental expense for each period for which an income statement is presented, with separate amounts for minimum rentals, contingent rentals, and sublease rentals. Rental payments under leases with terms of a month or less that were not renewed need not be included.

d. A general description of the lessees leasing arrangements including, but not limited to, the following:

(1) The basis on which contingent rental payments are determined.

(2) The existence and terms of renewal or purchase options and escalation clauses.

(3) Restrictions imposed by lease agreements, such as those concerning dividends, additional debt, and further leasing. [FAS 13, paragraph 16]

Sales-Type Leases

.113 Sales-type leases shall be accounted for by the lessor as follows:

a. The minimum lease payments (net of amounts, if any, included therein with respect to executory costs to be paid by the lessor, together with any profit thereon) plus the unguaranteed residual value accruing to the benefit of the lessor shall be recorded as the gross investment in the lease.[13b] [FAS13, ¶17] The estimated residual value used to compute the unguaranteed residual value accruing to the benefit of the lessor shall not exceed the amount estimated at the inception of the lease.[14] [FAS23, ¶9] However, if the sales-type lease involves real estate, the lessor shall account for the transaction under the provisions of Section R10, "Real Estate," in the same manner as a seller of the same property. [FAS98, ¶22g]

[13b] Paragraphs .536 and .537 further discuss residual value retained by a lessor that sells rental payment.

[14] If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or preacquisition period, the effect of any increases that have occurred shall be considered in the determination of "the estimated residual value of the leased property at the inception of the lease" for purposes of the paragraph. [FAS23, ¶9]

b. The difference between the gross investment in the lease in (a) above and the sum of the present values of the two components of the gross investment shall be recorded as unearned income. The discount rate to be used in determining the present values shall be the interest rate implicit in the lease. The net investment in the lease shall consist of the gross investment less the unearned income. The unearned income shall be amortized to income over the lease term so as to produce a constant periodic rate of return on the net investment in the lease.[15] However, other methods of income recognition may be used if the results obtained are not materially different from those which would result from the prescribed method. The net investment in the lease shall be subject to the same considerations as other assets in classification as current or noncurrent assets in a classified balance sheet. [FAS13, ¶17] Contingent rentals shall be included in the determination of income as accruable. [FAS29, ¶13] [(Refer to paragraph .165 for an illustration involving contingent rentals.)]

[15] This is the interest method described in Section 169, paragraph .108 and footnote 4. [FAS13, ¶12, fn 11]

c. The present value of the minimum lease payments (net of executory costs, including any profit thereon), computed at the interest rate implicit in the lease, shall be recorded as the sales price. The cost or carrying amount, if different, of the leased property, plus any initial direct costs, less the present value of the unguaranteed residual value accruing to the benefit of the lessor, computed at the interest rate implicit in the lease, shall be charged against income in the same period.

d. The estimated residual value shall be reviewed at least annually.[16] If the review results in a lower estimate than had been previously established, a determination must be made as to whether the decline in estimated residual value is other than temporary. If the decline in estimated residual value is judged to be other than temporary, the accounting for the transaction shall be revised using the changed estimate. The resulting reduction in the net investment shall be recognized as a loss in the period in which the estimate is changed. An upward adjustment of the estimated residual value shall not be made.

[16] Paragraphs .514 through .517 discuss upward adjustment of guaranteed residential values.

e. In leases containing a residual guarantee or a penalty for failure to renew the lease at the end of the lease term,[17] following the method of amortization described in (b) above will result in a balance of minimum lease payments receivable at the end of the lease term that will equal the amount of the guarantee or penalty at that date. In the event that a renewal or other extension of the lease term renders the guarantee or penalty inoperative, the existing balances of the minimum lease payments receivable and the estimated residual value shall be adjusted for the changes resulting from the revised agreement (subject to the limitation on the residual value imposed by subparagraph (d) above) and the net adjustment shall be charged or credited to unearned income. [FAS13, ¶17]

[17] Residual guarantees and termination penalties that serve to extend the lease term are excluded from minimum lease payments and are thus distinguished from those guarantees and penalties referred to in this paragraph. [FAS13, ¶17 fn 17]

f. Except for a change in the provisions of a lease that results from a refunding by the lessor of tax-exempt debt, including an advance refunding, in which the perceived economic advantages of the refunding are passed through to the lessee by a change in the provisions of the lease agreement and the revised agreement is classified as a direct financing lease (refer to paragraph .110), a change in the provisions of a lease, a renewal or extension of an existing lease, and a termination of a lease prior to the expiration of the lease term shall be accounted for as follows: [FAS22, 15]

(1) If the provisions of a lease are changed in a way that changes the amount of the remaining minimum lease payments and the change either (a) does not give rise to a new agreement under the provisions of paragraph .105 or (b) does give rise to a new agreement but such agreement is classified as a direct financing lease, the balance of the minimum lease payments receivable and the estimated residual value, if affected, shall be adjusted to reflect the change (subject to the limitation on the residual value imposed by subparagraph (d) above), and the net adjustment shall be charged or credited to unearned income. If the change in the lease provisions gives rise to a new agreement classified as an operating lease, the remaining net investment shall be removed from the accounts, the leased asset shall be recorded as an asset at the lower of its original cost, present fair value, or present carrying amount, and the net adjustment shall be charged to income of the period. The new lease shall thereafter be accounted for as any other operating lease.

(2) Except when a guarantee or penalty is rendered inoperative as described in subparagraph (e) above, a renewal or an extension of an existing lease shall be accounted for as follows:

(a) If the renewal or extension is classified as a direct financing lease, it shall be accounted for as described in subparagraph (f)(1) above.

(b) If the renewal or extension is classified as an operating lease, the existing lease shall continue to be accounted for as a sales-type lease to the end of its original term, and the renewal or extension shall be accounted for as any other operating lease. [FAS13, ¶17]

(c) If a renewal or extension that occurs at or near the end of the term[18] of the existing lease is classified as a sales-type lease, the renewal or extension shall be accounted for as a sales-type lease. [FAS27, ¶8]

[18] A renewal or extension that occurs in the last few months of an existing lease is considered to have occurred at or near the end of the existing lease term. [FAS27, ¶8]

(3) A termination of the lease shall be accounted for by removing the net investment from the accounts, recording the leased asset at the lower of its original cost, present fair value, or present carrying amount, and the net adjustment shall be charged to income of the period. [FAS13, ¶17]

g. If prior to the expiration of the lease term a change in the provisions of a lease results from a refunding by the lessor of tax-exempt debt, including an advance refunding,[19] in which the perceived economic advantages of the refunding are passed through to the lessee and the revised agreement is classified as a direct financing lease by the lessor, the change shall be accounted for as follows:[20]

(1) If a change in the provisions of a lease results from a refunding of tax-exempt debt, including an advance refunding that is accounted for as an early extinguishment of debt, the lessor shall adjust the balance of the minimum lease payments receivable and the estimated residual value, if affected (that is, the gross investment in the lease), in accordance with the requirements of paragraphs .114(c) and .113(f)(1). The adjustment of unearned income shall be the amount required to adjust the net investment in the lease to the sum of the present values of the two components of the gross investment based on the interest rate applicable to the revised lease agreement. The combined adjustment resulting from applying the two preceding sentences shall be recognized as a gain or loss in the current period. [Paragraphs .162 and .163 illustrate the accounting prescribed by this paragraph.]

(2) If a change in the provisions of the lease results from an advance refunding that is not accounted for as an early extinguishment of debt at the date of the advance refunding, the lessor shall systematically recognize, as revenue, any reimbursements to be received from the lessee for costs related to the debt to be refunded, such as unamortized discount or issue costs or a call premium, over the period from the date of the advance refunding to the call date of debt to be refunded. [FAS22, ¶12]

[19] An advance refunding involves the issuance of new debt to replace existing debt with the proceeds from the new debt placed in trust or otherwise restricted to retire the existing debt at a determinable future date or dates. [FAS22, ¶1, fn1] Section D14, "Debt: Extinguishments," provides criteria for determining whether the advance refunding should be recognized as an extinguishment of the existing debt at the date of the advance refunding. FAS76, ¶10]

[20] This paragraph prescribes the accounting for a direct financing lease by governmental units that classify and account for leases of that kind [FAS22, ¶12, fn4]

Accounting and Reporting by Lessors

Operating Leases

.115. Operating leases shall be accounted for by the lessor as follows:

a. The leased property shall be included with or near property, plant, and equipment in the balance sheet. The property shall be depreciated following the lessor's normal depreciation policy, and in the balance sheet the accumulated depreciation shall be deducted from the investment in the leased property.

b. Rent shall be reported as income over the lease term as it becomes receivable according to the provisions of the lease. However, if the rentals vary from a straight-line basis,[24a] the income shall be recognized on a straight-line basis unless another systematic and rational basis is more representative of the time pattern in which use benefit from the leased property is diminished, in which case that basis shall be used.

[24a] Refer to paragraphs .525 through .527F for supplemental guidance on accounting for operating leases with scheduled rent increases and lease incentives.

c. Initial direct costs shall be deferred and allocated over the lease term in proportion to the recognition of rental income. However, initial direct costs may be charged to expense as incurred if the effect is not materially different from that which would have resulted from the use of the method prescribed in the preceding sentence. [FAS 13, paragraph 19]

d. If, at the inception of the lease, the fair value of the property in an operating ease involving real estate that would have been classified as a sales-type lease except that it did not meet the criterion in paragraph .103(a) is less than its cost or carrying amount, if different, then a loss equal to that difference shall be recognized at the inception of the lease. [FAS 98, paragraph 22.j.]

Sale-Leaseback Transactions

.128 Sale-leaseback transactions involve the sale of property by the owner and a lease of the property back to the seller. A sale of property that is accompanied by a leaseback of all or any part of the property for all or part of its remaining economic life shall be accounted for by the seller-lessee in accordance with the provisions of paragraph .129 [except that a sale-leaseback involving real estate, property improvements, or integral equipment[27a] shall be accounted for in accordance with the provisions of paragraphs .130A through .130M]. A sale of property that is accompanied by a leaseback of all or any part of the property for all or part of its remaining economic life shall be accounted for by the [buyer-lessor] in accordance with the provisions of paragraph .130. [FAS28, paragraph 2] [See paragraphs .544 through .545 for supplemental guidance in accounting for sale-leaseback transactions when nonrecourse debt is obtained using the lease rentals or lease rentals and the leased asset as collateral and the nonrecourse debt is sold with the asset to a third party investor (a wrap lease transaction).]

[27a] The terms *property improvements* and *integral equipment* are discussed in paragraph .130A and footnote 32a.

.129 If the lease meets one of the criteria for treatment as a capital lease (refer to paragraph .103), the seller-lessee shall account for the lease as a capital lease; otherwise, as an operating lease. Any profit or loss on the sale[28] shall be deferred and amortized in proportion to the amortization of the lease asset[29], if a capital lease, or in proportion to the related gross rental charged to expense over the lease term, if an operating lease, unless:

a. The seller-lessee relinquishes the right to substantially all of the remaining use of the property sold (retaining only a minor portion of such use),[30] in which case the sale and the leaseback shall be accounted for as saeparate transactions based on their respective terms. However, if the amount of rentals called for by the lease is unreasonable under market conditions at the inception of the lease, an appropriate amount shall be deferred or accrued, by adjusting the profit or loss on the sale, and amortized as specified in the introduction of this paragraph to adjust those rentals to a reasonable amount.

[28] *Profit or loss on the sale* is used in this paragraph to refer to the profit or loss that would be recognized on the sale if there were no leaseback. For example, on a sale of real estate subject to Section R10, the profit on the sale to be deferred and amortized in proportion to the leaseback would be the profit that could otherwise be recognized in accordance with that section. [FAS28, ¶3]

[29] If the leased asset is land only, the amortization shall be on a straight-line basis over the lease term. [FAS13, ¶33, fn23]

[30] *Substantially all* and *minor* are used here in the context of the concepts underlying the classification criteria of this section. In that context, a test based on the 90-percent recovery criterion of paragraph .103(d) could be used as a guideline; that is, if the present value of a reasonable amount of rental for the leaseback represents 10 percent or less of the fair value of the asset sold, the seller-lessee could be presumed to have transferred to the [buyer-lessor] the right to substantially all of the remaining use of the property sold, and the seller-lessee could be presumed to have retained only a minor portion of such use. [FAS28, ¶3a]

b. The seller-lessee retains more than a minor part but less than substantially all[31] of the use of the property through the leaseback and realizes a profit on the sale[32] in excess of (1) the present value of the minimum lease payments over the lease term, if the leaseback is classified as an operating lease, or (2) the recorded amount of the leased asset, if the leaseback is classified as a capital lease. In that case, the profit on the sale in excess of either the present value of the minimum lease payments or the recorded amount of the leased asset, whichever is appropriate, shall be recognized at the date of the sale. For purposes of applying this provision, the present value of the minimum lease payments for an operating lease shall be computed using the interest rate that would be used to apply the 90 percent recovery criterion of paragraph .103(d).

c. If the lease meets the criteria in paragraphs .103 and .104, the [buyer-lessor] shall record the transaction as a purchase and a direct financing lease; otherwise, the [buyer-lessor] shall record the transaction as a purchase and an operating lease. [FAS 13, paragraph 34]

[31] *Substantially all* is used here in the context of the concepts underlying the classification criteria of this section. In that context, if a leaseback of *the entire property sold* meets the criteria of this section for classification as a capital lease, the seller-lessee would be presumed to have retained substantially all of the remaining use of the property sold. [FAS28, ¶3b]

[32] *Profit or loss on the sale* is used in this paragraph to refer to the profit or loss that would be recognized on the sale if there were no leaseback. For example, on a sale of real estate subject to Section R10, the profit on the sale to be deferred and amortized in proportion to the leaseback would be the profit that could otherwise be recognized in accordance with that section. [FAS28, ¶3]

Sale-Leaseback Transactions Involving Real Estate

.130A Paragraphs .130A through .130M [present] standards of financial accounting and reporting by a seller-lessee for sale-leaseback transactions involving real estate, including real estate with equipment, such as manufacturing facilities, power plants, and office buildings with furniture and fixtures. A sale-leaseback transaction involving real estate with equipment includes any sale-leaseback transaction in which the equipment and the real estate are sold and leased back as a package, irrespective of the relative value of the equipment and the real estate. Those paragraphs also address sale-leaseback transactions in which the seller-lessee sells property improvements or integral equipment[32a] to a buyer-lessor and leases them back while retaining the underlying land.[32b]

[32a] The terms *property improvements* or *integral equipment* as used in paragraphs .130A through .130M of this section refer to any physical structure or equipment attached to the real estate, or other parts thereof, that cannot be removed and used separately without incurring significant cost. Examples include an office building, a manufacturing facility, a power plant, and a refinery. [FAS98, ¶6, fn2]

[32b] Paragraphs .141 and .142 of Section R10 address transactions in which the seller sells property improvements to a buyer and leases the underlying land to the buyer of the improvements. Under certain circumstances, paragraph .141 of Section R10 precludes sales recognition for such transactions and requires that they be accounted for as leases of both the land and improvements. Paragraphs .130A through .130M of this section are not intended to modify paragraph .141 of Section R10; thus, they do not address a sale-leaseback transaction that does not qualify for sales recognition under the provisions of paragraph .141 of Section R10. However, those paragraphs do address a sale-leaseback transaction that qualifies for sales recognition under the provisions of paragraph .142 of Section R10. [FAS98, ¶6, fn3]

Sale-Leaseback Accounting

.130B Sale-leaseback accounting is a method of accounting for a sale-leaseback transaction in which the seller-lessee records the sale, removes all property and related liabilities from its balance sheet, recognizes gain or loss from the sale in accordance with [paragraphs .129 and .130A through .130M] and Section R10, and classifies the leaseback in accordance with this section. [FAS98, paragraph 70]

Criteria for Sale-Leaseback Accounting

.130C Sale-leaseback accounting shall be used by a seller-lessee only if a sale-leaseback transaction includes all of the following:

a. A normal leaseback as described in paragraph .130D
b. Payment terms and provisions that adequately demonstrate the buyer-lessor's initial and continuing investment in the property (refer to paragraphs .111 through .119 of Section R10)
c. Payment terms and provisions that transfer *all* of the other risks and rewards of ownership as demonstrated by the absence of *any* other continuing involvement by the seller-lessee described in paragraphs .130G through .130I of this section and paragraphs .128 through .142 and .144 through .146 of Section R10. [FAS98, paragraph 7]

.130D A *normal leaseback* is a lessee-lessor relationship that involves the active use of the property by the seller-lessee in consideration for payment of rent, including contingent rentals that are based on the future operations of the seller-lessee,[32c] and excludes other continuing involvement provisions or conditions described in paragraphs .130G through .130I of this section. The phrase *active use of the property by the seller-lessee* refers to the use of the property during the lease term in the seller-lessee's trade or business, provided that subleasing of the leased back property is minor.[32d] If the present value of a reasonable amount of rental for that portion of the leaseback that is subleased is not more than 10 percent of the fair value of the asset sold, the leased back property under sublease is considered minor. Active use of the property may involve the providing of services where the occupancy of the property is generally transient or short-term and is integral to the ancillary services being provided. Those ancillary services include, but are not limited to, housekeeping, inventory control, entertainment, bookkeeping, and food services. Thus, the use of property by a seller-lessee engaged in the hotel or bonded warehouse business or the operation of a golf course or a parking lot, for example, is considered active use. [FAS98, paragraph 8]

[32c] Paragraphs .130A through .130M distinguish between contingent rentals that are based on the future operations of the seller-lessee and those that are based on some predetermined or determinable level of future operations of the buyer-lessor. The latter type of contingent rental is addressed in paragraph .130H(e) of this section. [FAS98, ¶8, fn4]

[32d] The term] *minor* is used here in the context of the definition in footnote 30 to paragraph .129. [FAS98, ¶8, fn6]

Terms of the Sale-Leaseback Transaction

.130E Terms of the sale-leaseback transaction that are substantially different from terms that an independent third-party lessor or lessee would accept represent an exchange of some stated or unstated rights or privileges. Those rights or privileges shall be considered in evaluating the continuing involvement provisions in paragraphs .130G thorough .130I of this section. Those terms or conditions include, but are not limited to, the sales price, the interest rate, and other terms of any loan from the seller-lessee to the buyer-lessor. The fair value of the property used in making that evaluation shall be based on objective evidence, for example, an independent third-party appraisal or recent sales of comparable property. [FAS98, ¶9]

Continuing Involvement

.130F A sale-leaseback transaction that does not qualify for sale-leaseback accounting because of any form of continuing involvement by the seller-lessee other than a normal leaseback shall be accounted for by the deposit method or as a financing, whichever is appropriate under Section R10. The provisions or conditions described in paragraphs .130G through .130I of this section are examples of continuing involvement for the purpose of applying paragraphs .130A through .130M. [FAS98, ¶10]

.130G Paragraphs .128 thorough .142 and .144 thorough .146 of Section R10 describe forms of continuing involvement by the seller-lessee with the leased property that result in the seller-lessee not transferring the risks or rewards of ownership to the buyer-lessor. Two examples of continuing involvement specified in those paragraphs that are frequently found in sale-leaseback transactions are provisions or conditions in which:

a. The seller-lessee has an obligation or an option[32e] to repurchase the property or the buyer-lessor can compel the seller-lessee to repurchase the property.
b. The seller-lessee guarantees the buyer-lessor's investment or a return on that investment for a limited or extended period of time. [FAS98, ¶11]

[32e] A right of first refusal based on a bona fide offer by a third party ordinarily is not an obligation or an option to repurchase. An agreement that allows the seller-lessee to repurchase the asset in the event no third-party offer is made is an option to repurchase. [FAS98, ¶11, fn7]

.130H Other provisions or conditions that are guarantees and that do not transfer all of the risks of ownership shall constitute continuing involvement for the purpose of applying paragraphs .130A through .130M to sale-leaseback transactions and include, but are not limited to, the following:

a. The seller-lessee is required to pay the buyer-lessor at the end of the lease terms for a decline in the fair value of the property below the estimated residual value on some basis other than excess wear and tear of the property levied on inspection of the property at the termination of the lease.

b. The seller-lessee provides nonrecourse financing to the buyer-lessor for any portion of the sales proceeds or provides recourse financing in which the only recourse is to the leased asset.

c. The seller-lessee is not relieved of the obligation under any existing debt related to the property.

d. The seller-lessee provides collateral on behalf of the buyer-lessor other than the property directly involved in the sale-leaseback transaction, the seller-lessee or a related party to the seller-lessee guarantees the buyer-lessor's debt, or a related party to the seller-lessee guarantees a return of or on the buyer-lessor's investment.

e. The seller-lessee's rental payment is contingent on some predetermined or determinable level of future operations of the buyer-lessor.[32f] [FAS98, ¶12]

[32f] Paragraphs .130A through .130M distinguish between contingent rentals that are based on the future operations of the seller-lessee and those that are based on some predetermined or determinable level of future operations of the buyer-lessor. [FAS98, ¶8, fn4]

.130I The following provisions or conditions also shall be considered examples of continuing involvement for the purpose of applying paragraphs. 130A through .130M to sale-leaseback transactions:

a. The seller-lessee enters into a sale-leaseback transaction involving property improvements or integral equipment[32g] without leasing the underlying land to the buyer-lessor.[32h]

b. The buyer-lessor is obligated to share with the seller-lessee any portion of the appreciation of the property.

c. Any other provision or circumstance that allows the seller-lessee to participate in any future profits of the buyer-lessor or the appreciation of the leased property, for example, a situation in which the seller-lessee owns or has an option to acquire any interest in the buyer-lessor. [FAS98, ¶13]

[32g] The terms *property improvements* or *integral equipment* as used in paragraphs .130A through .130M refer to any physical structure or equipment attached to the real estate, or other parts thereof, that cannot be removed and used separately without incurring significant cost. Examples include an office building, a manufacturing facility, a power plant, and a refinery. [FAS98, ¶6, fn2]

[32h] Paragraphs .141 and .142 of Section R10 address transactions in which the seller sells property improvements to a buyer and leases the underlying land to the buyer of the improvements. Under certain circumstances, paragraph .141 of Section R10 precludes sales recognition for such transactions and requires that they be accounted for as leases of both the land and improvements. Paragraph .130A through .130M of this section are not intended to modify paragraph .141 of Section R10; thus, they do not address a sale-leaseback transaction that does not qualify for sales recognition under the provisions of paragraph .141 of Section R10. However, those paragraphs do address a sale-leaseback transaction that qualifies for sales recognition under the provisions of paragraph .142 of Section R10. [FAS98, ¶6, fn3]

Financial Statement Presentation and Disclosure

.130K In addition to the [other] disclosure requirements of this section and Section R10, the financial statements of a seller-lessee shall include a description of the terms of the sale-leaseback transaction, including future commitments, obligations, provisions, or circumstances that require or result in the seller-lessee's continuing involvement. [FAS98, ¶17]

.130L The financial statements of a seller-lessee that has accounted for a sale-leaseback transaction by the deposit method or as a financing according to the provisions of this section and Section R10 also shall disclose:

a. The obligation for future minimum lease payments as of the date of the latest balance sheet presented in the aggregate and for each of the five succeeding fiscal years.
b. The total of minimum sublease rentals, if any, to be received in the future under noncancelable subleases in the aggregate and for each of the five succeeding fiscal years. [FAS98, ¶18]

Accounting for and Reporting for Leveraged Leases

.143 From the standpoint of the lessee, leveraged leases shall be classified and accounted for in the same manner as nonleveraged leases. The balance of this section deals with leveraged leases from the standpoint of the lessor. [FAS13, paragraph 41]

.144 For the purposes of this section, a leveraged lease is defined as one having all the following characteristics:

a. Except for the exclusion of leveraged leases from the definition of a direct financing lease as set forth in paragraph .102(b)(2), it otherwise meets that definition. Leases that meet the definition of sales-type leases set forth in paragraph .102 (b)(1) shall not be accounted for as leveraged leases but shall be accounted for as prescribed in paragraph .113.
b. It involves at least three parties: a lessee, a long-term creditor, and a lessor (commonly called an equity participant).
c. The financing provided by the long-term creditor is nonrecourse as to the general credit of the lessor (although the creditor may have recourse to the specific property leased and the unremitted rentals relating to it). The amount of financing is sufficient to provide the lessor with substantial l*everage* in the transaction.
d. The lessor's net investment, as defined in paragraph .145, declines during the early years once the investment has been completed and rises during the later years of the lease before its final elimination. Such decreases and increases in the net investment balance may occur more than once.

A lease meeting the preceding definition shall be accounted for by the lessor using the method prescribed in paragraphs .145 through .149[36a]. An exception arises if the investment tax credit is accounted for other than stated in paragraphs .145 and .146,[37] in which case the lease shall be classified as a direct financing lease and accounted for in accordance with paragraph .114. A lease not meeting the definition of a leveraged lease shall be accounted for in accordance with its classification under paragraph .102(b). [FAS 13, ¶42]

[36a] Paragraphs .536 and .537 further discuss residual value retained by a lessor that sells rental payments.]

[37] It is recognized that the investment tax credit may be accounted for other than as prescribed here, as provided by Congress in the Revenue Act of 1971. [FAS13, ¶42, fn24]

.145 The lessor shall record its investment in a leveraged lease net of the nonrecourse debt. [37a]. The net of the balances of the following accounts shall represent the initial and continuing investment in leveraged leases:

a. Rentals receivable, net of that portion of the rental applicable to principal and interest on the nonrecourse debt.
b. A receivable for the amount of investment tax credit to be realized on the transaction.

c. The estimated residual value of the lease asset. The estimated residual value shall not exceed the amount estimated at the inception of the lease except as provided in footnote 38 [38][FAS23, ¶10]

d. Unearned and deferred income consisting of (1) the estimated pretax lease income (or loss), after deducting the initial direct costs, remaining to be allocated to income over the lease term and (2) the investment tax credit remaining to be allocated to income over the lease term.

[37a] Footnote 502 further discusses nonrecourse debt collateralized by a lease receivable

[38] If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or preacquisition period, the effect of any increases that have occurred shall be considered in the determination of "the estimated residual value of the leased property at the inception of the lease" for purposes of this paragraph. [FAS23, ¶10]

The investment in leveraged leases less deferred taxes arising from differences between the pretax accounting income and taxable income shall represent the lessor's net investment in leveraged leases for purposes of computing periodic net income from the lease as described in paragraph .146. [FAS13, ¶43]

.146 Given the original investment and using the projected cash receipts and disbursements over the term of the lease, the rate of return on the net investment in the years[39] in which it is positive shall be computed. The rate is that rate which when applied to the net investment in the years in which the net investment is positive will distribute the net income to those years (refer to Exhibit 154C) and is distinct from the interest rate implicit in the lease. In each year whether positive or not, the difference between the net cash flow and the amount of income recognized, if any, shall serve to increase or reduce the net investment balance. The net income recognized shall be composed of three elements: two, pretax lease income (or loss) and investment tax credit, shall be allocated in proportionate amounts from the unearned and deferred income included in net investment, as described in paragraph .145; the third element is the tax effect of the pretax lease income (or loss) recognized, which shall be reflected in tax expense for the year. The tax effect of the difference between pretax accounting income (or loss) and taxable income (or loss) for the year shall be charged or credited to deferred taxes. The accounting prescribed in paragraph .145 and in this paragraph is illustrated in paragraph .154. [FAS13, ¶44]

[39] The use of the term *years* is not intended to preclude application of the accounting prescribed in this paragraph to shorter accounting periods. [FAS13, ¶44, fn 25]

.147 If the projected net cash receipts[40] over the term of the lease are less than the lessor's initial investment, the deficiency shall be recognized as a loss at the inception of the lease. Likewise, if at any time during the lease term the application of the method prescribed in paragraphs .145 and .146 would result in a loss being allocated to future years, that loss shall be recognized immediately. This situation might arise in cases in which one of the important assumptions affecting net income is revised (refer to paragraph .148). . [FAS13, ¶45]

[40] For purposes of this paragraph, net cash shall be gross cash receipts less gross cash disbursement s exclusive of the lessor's initial investment. [FAS13, ¶44, fn 26]

.148 Any estimated residual value and all other important assumptions affecting estimated total net income from the lease shall be reviewed at lease annually.[41] If during the lease term the estimate of the residual value is determined to be excessive and the decline in the residual value is judged to be other than temporary or if the revision of another important assumption changes the estimated total net income from the lease, the rate of return and the allocation of income to positive investment years shall be recalculated from the inception of the lease following the method described in paragraph .146 and using the revised assumption. The accounts constituting the net investment balance shall be adjusted to conform to the recalculated balances, and the change in the net investment shall be recognized as a gain or loss in the year in which the assumption is changed. An upward adjustment of the estimated residual value shall not be made.[41a] The accounting prescribed in this paragraph is illustrated in paragraph .154. [FAS13, ¶46]

[41] Refer to paragraphs .521 through .524 for supplemental guidance on the effect of a change in income tax rate on the accounting for leveraged leases.

[41a] Paragraphs .536 and .537 further discuss residual value retained by a lessor that sells rental payments.]

Accounting for Income Taxes

.148A Section I27, "Income Taxes," does not change (a) the pattern of recognition of after-tax income for leveraged leases as required by this section or (b) the allocation of the purchase price in a purchase business combination to acquired leveraged leases as required by paragraphs .140 through .142. Integration[41b] of the results of income tax accounting for leveraged leases with the other results of accounting for income taxes under Section I27 is required when deferred tax credits related to leveraged leases are the only source (refer to paragraph .120 of Section I27) for recognition of a tax benefit for deductible temporary differences and carryforwards not related to leveraged leases. A valuation allowance is not necessary if deductible temporary differences and carryforwards will offset taxable amounts from future recovery of the net investment in the leveraged lease. However, to the extent that the amount of deferred tax credits for a leveraged lease as determined under this section differs from the amount of the deferred tax liability related to the leveraged lease that would otherwise result from applying the requirements of Section I27, that difference is preserved and is not a source of taxable income for recognition of the tax benefit of deductible temporary differences and operating loss or tax credit carryforwards. [FAS109, ¶256]

[41b] Integration is an issue when all of the following exist:

a. The accounting for a leveraged lease requires recognition of deferred tax credits.
b. The requirements of Section 127 limit the recognition of a tax benefit for deductible temporary differences and carryforwards not related to the leveraged lease.
c. Unrecognized tax benefits could offset taxable amounts that result form future recovery of the net investment in the leveraged lease.

In those circumstances, integration shall be required. However, integration should not override any results that are unique to income tax accounting for leveraged leases, for example, the manner of recognizing the tax effect of an enacted change in tax rates. [FAS109, ¶126]

.148B Paragraph .141 requires that the tax effect of any difference between the assigned value and the tax basis of a leveraged lease at the date of a business combination not be accounted for as a deferred tax credit. Section I27 does not change that requirement. Any tax effects included in unearned and deferred income as required by this section are not offset by the deferred tax consequences of other temporary differences or by the tax benefit of operating loss or tax credit carryforwards. However, deferred tax credits that arise after the date of a business combination are accounted for in the same manner as described above for leveraged leases that were not acquired in a purchase business combination. [FAS109, ¶257] [Exhibit 185A in Section I27 presents an example that integrates the] accounting for leveraged leases [as required by this section] and the accounting for income taxes required by Section I27. [FAS109, ¶258]

Disclosures

.149 For purposes of presenting the investment in a leveraged lease in the lessor's balance sheet, the amount of related deferred taxes shall be presented separately (from the remainder of the net investment). In the income statement or the notes thereto, separate presentation (from each other) shall be made of pretax income from the leveraged lease, the tax effect of pretax income, and the amount of investment tax credit recognized as income during the period. When leveraged leasing is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the components of the net investment balance in leveraged leases as set forth in paragraph .145 shall be disclosed in the footnotes to the financial statements. Paragraph .154 contains an illustration of the balance sheet, income statement and footnote presentation for a leveraged lease. [FAS13, ¶47]

.401 Bargain purchase option. A provision allowing the lessee, at his option, to purchase the leased property for a price that is sufficiently lower than the expected fair value of the property at the date the option becomes exercisable that exercise of the option appears, at the inception of the lease, to be reasonably assured. [FAS 13, paragraph 5.d.].

.402 Bargain renewal option. A provision allowing the lessee, at [the lessee's] option, to renew the lease for a rental[401] sufficiently lower than the fair rental of the property at the date the option becomes exercisable that exercise of the option appears, at the inception of the lease, to be reasonably assured. [FAS13, ¶5e]

[401] *Fair Rental* in this context shall mean the expected rental for equivalent property under similar terms and conditions. [FAS13, ¶5, fn 2]

.404 Contingent rentals. The increases or decreases in lease payments that result from changes occurring subsequent to the inception of the lease in the factors (other than the passage of time) on which lease payments are based, except as provided in the following sentence. Any escalation of minimum lease payments relating to increases in construction or acquisition cost of the leased property or for increases in some measure of cost or value during the construction or preconstruction period, as discussed in footnote 13, shall be excluded from contingent rentals. Lease payments that depend on a factor directly related to the future use of the leased property, such as machine hours of use or sales volume during the lease term, are contingent rentals and, accordingly, are excluded from minimum lease payments in their entirety. However, lease payments that depend on an existing index or rate, such as the consumer price index or the prime interest rate, shall be included in minimum lease payments based on the index or rate existing at the inception of the lease; any increases or decreases in lease payments that result from subsequent changes in the index or rate are contingent rentals and thus affect the determination of income as accruable. [FAS29, ¶11]

.406 Estimated economic life of leased property. The estimated remaining period during which the property is expected to be economically usable by one or more users, with normal repairs and maintenance, for the purpose for which it was intended at the inception of the lease, without limitation by the lease term. [FAS 13, paragraph 5.g.].

.409 Fair value of the leased property. The price for which the property could be sold in an arms-length transaction between unrelated parties. The following are examples of the determination of fair value:

a. When the lessor is a manufacturer or dealer, the fair value of the property at the inception of the lease will ordinarily be its normal selling price, reflecting any volume or trade discounts that may be applicable. However, the determination of fair value shall be made in light of market conditions prevailing at the time, which may indicate that the fair value of the property is less than the normal selling price and, in some instances, less than the cost of the property.

b. When the lessor is not a manufacturer or dealer, the fair value of the property at the inception of the lease will ordinarily be its cost, reflecting any volume or trade discounts that may be applicable. However, when there has been a significant lapse of time between the acquisition of the property by the lessor and the inception of the lease, the determination of fair value shall be made in light of market conditions prevailing at the inception of the lease, which may indicate that the fair value of the property is greater or less than its cost or carrying amount, if different, (refer to paragraph .102). [FAS 13, paragraph 5.c.].

.412 Interest rate implicit in the lease. The discount rate that, when applied to (a) the minimum lease payments, excluding that portion of the payments representing executory costs to be paid by the lessor, together with any profit thereon, and (b) the unguaranteed residual value accruing to the benefit of the lessor[403] causes the aggregate present value at the beginning of the lease term to be equal to the fair value of the leased property to the lessor at the inception of the lease, minus any investment tax credit retained by the lessor and expected to be realized by him. (This definition does not necessarily purport to include all factors that a lessor might recognize in determining his rate of return, for example, see paragraph .146.) [FAS 13, paragraph 5.k.]

[403] If the lessor is not entitled to any excess of the amount realized on disposition of the property over a guaranteed amount, no unguaranteed residual value would accrue to the lessors benefit. [FAS 13, paragraph 5.k., footnote 8]

.413 Lease. An agreement conveying the right to use property, plant, or equipment (land or depreciable assets or both) usually for a stated period of time. [FAS 13, paragraph 1].

.414 Lease term. The fixed noncancelable term of the lease plus (a) all periods, if any, covered by bargain renewal options (as defined paragraph .402), (b) all periods, if any, for which failure to renew the lease imposes a penalty (as defined in paragraph .418A) on the lessee in such amount that a renewal appears, at the inception of the lease, to be reasonably assured, (c) all periods, if any, covered by ordinary renewal options[405] during which a guarantee by the lessee of the lessors debt directly or indirectly related to the leased property[405a] is expected to be in effect or a loan from the lessee to the lessor directly or indirectly related to the leased property is expected to be outstanding, (d) all periods, if any, covered by ordinary renewal options preceding the date as of which a bargain purchase option (as defined in paragraph .401) is exercisable, and (e) all periods, if any, representing renewals or extensions of the lease at the lessors option; however, in no case shall the lease term be assumed to extend beyond the date a bargain purchase option becomes exercisable. A lease that is cancelable (1) only upon the occurrence of some remote contingency, (2) only with the permission of the lessor, (3) only if the lessee enters into a new lease with the same lessor, or (4) only if the lessee incurs a penalty in such amount that continuation of the lease appears, at inception, reasonably assured shall be noncancelable for purposes of this definition.[FAS 98, paragraph 22.a.]

[405] Paragraphs .501 through .505 address fiscal funding clauses in lease agreements.

[405a] The phrase indirectly related to the leased property is used in this paragraph to describe provisions or conditions that in substance are guarantees of the lessors debt or loans to the lessor by the lessee that are related to the leased property but are structured in such a manner that they do not represent a direct guarantee or loan. Examples include a party related to the lessee guaranteeing the lessors debt on behalf of the lessee, or the lessee financing the lessors purchase of the leased asset using collateral other than the leased property. [FAS 98, paragraph 22.a.]

.415 Lessees incremental borrowing rate. The rate that, at the inception of the lease, the lessee would have incurred to borrow over a similar term the funds necessary to purchase the leased asset.[406]

[406] Paragraphs .509 through .511 further discuss the interest rate used in calculating the present value of the minimum lease payments.

.417 Minimum lease payments.

(a) From the standpoint of the lessee: The payments that the lessee is obligated to make or can be required to make in connection with the leased property. [FAS 13, paragraph 5.j.], (Contingent rentals, as defined in paragraph .404, shall be excluded from minimum lease payments.) [FAS 29, paragraph 10] However, a guarantee by the lessee of the lessors debt and the lessees obligation to pay (apart from the rental payments) executory costs in connection with the leased property shall be excluded. If the lease contains a bargain purchase option, only the minimum rental payments over the lease term (as defined in paragraph .413) and the payment called for by the bargain purchase option shall be included in the minimum lease payments. Otherwise, minimum lease payments include the following:

(1) The minimum rental payments called for by the lease over the lease term.

(2) Any guarantee by the lessee or any party related to the lessee of the residual value at the expiration of the lease term, whether or not payment of the guarantee constitutes a purchase of the leased property.[407] When the lessor has the right to require the lessee to purchase the property at termination of the lease for a certain or determinable amount, that amount shall be considered a lessee guarantee. When the lessee agrees to make up any deficiency[408] below a stated amount in the lessors realization of the residual value, the guarantee to be included in the minimum lease payments shall be the stated amount,[409] rather than an estimate of the deficiency to be made up.

[407] A guarantee of the residual value obtained by the lessee from an unrelated third party for the benefit of the lessor shall not be used to reduce the amount of the lessees minimum lease payments except to the extent that the lessor explicitly releases the lessee from obligation, including secondary obligation if the guarantor defaults, to make up a residual value deficiency. Amounts paid in consideration for a guarantee by an unrelated third party are executory costs and are not included in the lessees minimum lease payments.

[408] A lease provision requiring the lessee to make up a residual value deficiency that is attributable to damage, extraordinary wear and tear, or excessive usage is similar to contingent rentals in that the amount is not determinable at the inception of the lease. Such a provision does not constitute a lessee guarantee of the residual value.

[409] If a lease limits the amount of the lessees obligation to make up a residual value deficiency to an amount less than the stipulated residual value of the leased property at the end of the lease term, the amount of the lessees guarantee to be included in minimum lease payments shall be limited to the specified maximum deficiency the lessee can be required to make up. The *stated amount* is the specified maximum deficiency that the lessee is obligated to make up. If that maximum deficiency clearly exceeds any reasonable estimate of a deficiency that might be expected to arise in normal circumstances, the lessors risk associated with the portion of the residual in excess of the maximum may appear to be negligible. However, the fact remains that the lessor must look to the resale market or elsewhere rather than to the lessee to recover the unguaranteed portion of the stipulated residual value of the leased property. The lessee has not guaranteed full recovery of the residual value, and the parties should not base their accounting on the assumption that the lessee has guaranteed it.

(3) Any payment that the lessee must make or can be required to make upon failure to renew or extend the lease at the expiration of the lease term, whether or not the payment would constitute a purchase of the lease property. In this connection, it should be noted that the definition of lease term (refer to paragraph .413) includes all periods, if any, for which failure to renew the lease imposes a penalty on the lessee in an amount such that renewal appears, at the inception of the lease, to be reasonably assured. If the lease term has been extended because of that provision, the related penalty shall not be included in the minimum lease payments.

(b) From the standpoint of the lessor: The payments described above plus any guarantee of the residual value or of rental payments beyond the lease term by a third party unrelated to either the lessee of the lessor,[410] provided the third party is financially capable of discharging the obligations that may arise from the guarantee. [FAS 13, paragraph 5.j.]

[410] If the guarantor is related to the lessor, the residual value shall be considered as unguaranteed.

.418A Penalty. Any requirement that is imposed or can be imposed on the lessee by the lease agreement or by factors outside the lease agreement to disburse cash, incur or assume a liability, perform services, surrender or transfer an asset or rights to an asset or otherwise forego an economic benefit, or suffer an economic detriment. Factors to consider when determining if an economic detriment may be incurred include, but are not limited to, the uniqueness of purpose or location of the property, the availability of a comparable replacement property, the relative importance or significance of the property to the continuation of the lessee's line of business or service to its customers, the existence of leasehold improvements or other assets whose value would be impaired by the lessee vacating or discontinuing use of the leased property, adverse tax consequences, and the ability or willingness of the lessee to bear the cost associated with relocation or replacement of the leased property at market rental rates or to tolerate other parties using the leased property. [FAS98, ¶22b]

.419 Related parties. A parent company and its subsidiaries, an owner company and its joint ventures (corporate or otherwise) and partnerships, and an investor (including a natural person) and its investees, provided that the parent company, owner enterprise, or investor has the ability to exercise significant influence over operating and financial policies of the related party, as significant influence is defined in section I82, paragraph 104. In addition to the examples of significant influence set forth in that paragraph, significant influence may be exercised through guarantees of indebtedness, extensions of credit, or through ownership of warrants, debt obligations, or other securities. If two or more enterprises are subject to the significant influence of a parent company, owner enterprise, investor (including a natural person), or common officers or directors, those enterprises shall be considered related parties with respect to each other. [FAS 13, paragraph 5.a.].

30. *FAS 66*, *Accounting for Sales of Real Estate,* defines the deposit method of accounting as follows:

Deposit Method

65. Under the deposit method, the seller does not recognize any profit, does not record notes receivable, continues to report in its financial statements the property and the related existing debt even if it has been assumed by the buyer, and discloses that those items are subject to a sales contract. The seller continues to charge depreciation to expense as a period cost for the property for which deposits have been received. Cash received from the buyer, including the initial investment and subsequent collections of principal and interest, is reported as a deposit on the contract except that, for sales that are not retail land sales, portions of cash received that are designated by the contract as interest and are not subject to refund offset carrying charges (property taxes and interest on existing debt) on the property. Interest collected that is subject to

refund and is included in the deposit account before a sale is consummated is accounted for as part of the buyer's initial investment at the time the sale is consummated.[FAS66, ¶7]

66. When a contract is canceled without a refund, deposits forfeited are recognized as income. When deposits on retail land sales are ultimately recognized as sales, the interest portion is recognized as interest income.

67. The seller's balance sheet presents nonrecourse debt assumed by the buyer among the liabilities; the debt assumed is not offset against the related property. The seller reports the buyer's principal payments on mortgage debt assumed as additional deposits with corresponding reductions of the carrying amount of the mortgage debt.

31. *FASB Technical Bulletin 85-3*, *Accounting for Operating Leases with Scheduled Rent Increases*, provides the following guidance:

Question

1. Certain operating lease agreements specify scheduled rent increases over the lease term. Such scheduled rent increases may, for example, be designed to provide an inducement or “rent holiday” for the lessee, to reflect the anticipated effects of inflation, to ease the lessee's near-term cash flow requirements, or to acknowledge the time value of money. For operating leases that include scheduled rent increases, is it ever appropriate for lessees or lessors to recognize rent expense or rental income on a basis other than the straight-line basis required by Statement 13?

Response

2. The effects of those scheduled rent increases, which are included in minimum lease payments under Statement 13, should be recognized by lessors and lessees on a straight-line basis over the lease term unless another systematic and rational allocation basis is more representative of the time pattern in which the leased property is physically employed. Using factors such as the time value of money, anticipated inflation, or expected future revenues to allocate scheduled rent increases is inappropriate because these factors do not relate to the time pattern of the physical usage of the leased property. However, such factors may affect the periodic reported rental income or expense if the lease agreement involves contingent rentals, which are excluded from minimum lease payments and accounted for separately under Statement 13, as amended by Statement 29.

32. *FASB Technical Bulletin 88-1*, *Issues relating to Accounting for Leases: Time Pattern of the Physical Use of the Property in an Operating Lease, Lease Incentives in an Operating Lease, Applicability of Leveraged Lease Accounting to Existing Assets of the Lessor, Money-Over-Money Lease Transactions, Wrap Lease Transactions*, provides the following guidance on operating leases:

TIME PATTERN OF THE PHYSICAL USE OF THE PROPERTY IN AN OPERATING LEASE

References: *FASB Statement No. 13, Accounting for Leases*, paragraph 15

FASB Technical Bulletin No. 85-3, Accounting for Operating Leases with Scheduled Rent Increases

Question 1

1. A lease agreement may include scheduled rent increases designed to accommodate the lessee's projected physical use of the property. For example, rents may escalate in contemplation of the lessee's physical use of the property even though the lessee takes possession of or controls the physical use of the property at the inception of the lease, or rents may escalate under a master lease agreement as the lessee adds additional equipment to the leased property or requires additional space or capacity (hereinafter referred to as additional leased property).

For operating leases that include those provisions, how should the rental payment obligation be recognized by the lessee and lessor in accordance with paragraph 15 of Statement 13 and Technical Bulletin 85-3?

Response

2. Both the lessee and the lessor should recognize the lease payments under Statement 13 and Technical Bulletin 85-3 as follows:

a. If rents escalate in contemplation of the lessee's physical use of the leased property, including equipment, but the lessee takes possession of or controls the physical use of the property at the beginning of the lease term, all rental payments, including the escalated rents, should be recognized as rental expense or rental revenue on a straight-line basis in accordance with paragraph 15 of Statement 13 and Technical Bulletin 85-3 starting with the beginning of the lease term.

b. If rents escalate under a master lease agreement because the lessee gains access to and control over additional leased property at the time of the escalation, the escalated rents should be considered rental expense or rental revenue attributable to the leased property and recognized in proportion to the additional leased property in the years that the lessee has control over the use of the additional leased property. The amount of rental expense or rental revenue attributed to the additional leased property should be proportionate to the relative fair value of the additional property, as determined at the inception of the lease, in the applicable time periods during which the lessee controls its use.

Background

3. This issue involves how to apply Technical Bulletin 85-3 to lease agreements that escalate rents in contemplation of the lessee's projected use of the property. The issue arises from paragraph 2 of Technical Bulletin 85-3, which states ". . . scheduled rent increases, which are included in minimum lease payments under Statement 13, should be recognized by lessors and lessees on a straight-line basis over the lease term UNLESS ANOTHER SYSTEMATIC AND RATIONAL ALLOCATION BASIS IS MORE REPRESENTATIVE OF THE TIME PATTERN IN WHICH THE LEASED PROPERTY IS PHYSICALLY EMPLOYED" (emphasis added).

4. This Technical Bulletin considers the right to control the use of the leased property as the equivalent of physical use. When the lessee controls the use of the leased property, recognition of rental expense or rental revenue should not be affected by the extent to which the lessee utilizes that property.

5. This Technical Bulletin makes a distinction between agreements that give the lessee the right to control the use of the leased property at the beginning of the lease term and those that do not. Escalated rents under agreements that give the lessee the right to control the use of the entire leased property at the beginning of the lease term should be included in the minimum lease payments and recognized on a straight-line basis over the lease term. When the agreement provides that the lessee gains control over additional leased property, rental expense or rental revenue should be recognized based on the relative fair value of the additional property leased and the period during which the lessee has the right to control the use of the additional property. This is the intent of Statement 13 and Technical Bulletin 85-3.

LEASE INCENTIVES IN AN OPERATING LEASE

References: *FASB Statement No. 13, Accounting for Leases*, paragraphs 15, 19, and 35-40

FASB Technical Bulletin No. 79-15, Accounting for Loss on a Sublease Not Involving the Disposal of a Segment

FASB Technical Bulletin No. 85-3, Accounting for Operating Leases with Scheduled Rent Increases

Question 2

6. An operating lease agreement with a new lessor may include incentives for the lessee to sign the lease, such as an up-front cash payment to the lessee, payment of costs for the lessee (such as moving expenses), or the assumption by the lessor of the lessee's preexisting lease with a third party. For operating leases that include such incentives, should lessees or lessors ever recognize those incentives as rental expense or rental revenue other than on a straight-line basis in accordance with paragraph 15 of Statement 13 and Technical Bulletin 85-3?

Response

7. Payments made to or on behalf of the lessee represent incentives that should be considered reductions of rental expense by the lessee and reductions of rental revenue by the lessor over the term of the new lease. Similarly, losses incurred by the lessor as a result of assuming a lessee's preexisting lease with a third party should be considered an incentive by both the lessor and the lessee. Incentives should be recognized on a straight-line basis over the term of the new lease in accordance with paragraph 15 of Statement 13, Technical Bulletin 85-3, and paragraphs 1-5 above.

8. The lessee's immediate recognition of expenses or losses, such as moving expenses, losses on subleases, or the write-off of abandoned leasehold improvements, is not changed by this Technical Bulletin. Rather, this Technical Bulletin addresses the question of when to recognize the incentive related to the new lessor's assumption of that expense or loss. The new lessor and the lessee should independently estimate any loss attributable to the assumption of a preexisting lease with a third party. For example, the lessee's estimate of the incentive could be based on a comparison of the new lease with the market rental rate available for similar lease property or the market rental rate from the same lessor without the lease assumption, and the lessor should estimate any loss based on the total remaining costs reduced by the expected benefits from the sublease or use of the assumed leased property.

9. For example, in conjunction with an operating lease of property for eight years, the lessor assumes the lessee's preexisting lease with a third party that has four years remaining. Assume that the old lease payment is $800 per year and the new lease payment is $1,200 per year. Also assume that the lessor estimates the loss on the assumed lease of $1,000 over its remaining term based on the ability to sublease the property for $550 per year. The lessee estimates the incentive as $960 based on a comparison of the preexisting lease rate to current rates for similar property. The accounting for that incentive is as follows:

Lessor Accounting

At inception:

Incentive to lessee	1,000	
Liability on sublease assumed		1,000

To record deferred cost and liability related to loss on assumption of remaining lease

Recurring journal entries in years 1-4:

Liability on sublease assumed (1,000/ 4 years)	250	
Sublease expense	550	
Cash		800

To record cash payment on sublease assumed and amortization of the liability on the sublease assumed

Cash	550	
Sublease revenue		550

To record cash received from sublease of the property

Recurring journal entries in years 1-8:

Cash	1,200	
Rental revenue		1,075
Incentive to lessee (1,000/ 8 years)		125

To record cash received on new lease and amortization of incentive over new lease term

Lessee Accounting

At inception:

Loss on sublease assumed by lessor	960	
Incentive from lessor		960

To record loss on sublease assumed in conjunction with new lease agreement

Recurring journal entries in years 1-8:

Lease expense	1,080	
Incentive from lessor (960/ 8 years)	120	
Cash		1,200

To record cash payment on new lease and amortization of incentive over the new lease term

Background

10. Some have suggested that incentives paid to or incurred on behalf of the lessee by the lessor are not part of the normal lessee-lessor relationship and should be recognized in income by the lessee in the period paid or incurred by the lessor. This Technical Bulletin views those incentives as an inseparable part of the new lease agreement that must be recognized as reductions to rental expense and rental revenue on a straight-line basis over the term of the new lease in accordance with paragraph 15 of Statement 13, Technical Bulletin 85-3, and paragraph 2 above.

Statutory Issue Paper No. 23

Property Occupied by the Company

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 40

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. A reporting entity is required to record its investment in real estate that is occupied by the company as a separate line item in the Invested Asset section of the statutory balance sheet. Additionally, a reporting entity is required to record rental income and expense related occupancy of its own building. Under GAAP, property used predominantly in a reporting entity's operations is classified as an asset outside of invested assets. Additionally, GAAP prohibits the recognition of imputed investment income and rental expense for real estate used in the business.

2. The purpose of the issue paper is to establish statutory accounting principles for home office that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. For statutory accounting purposes, any real estate which is owned by and is more than 50% occupied by the reporting entity and its affiliates shall be considered "real estate occupied by the company." "More than 50% occupied" shall mean that the square footage occupied by the reporting entity and its affiliates totals more than 50% of the rentable square footage of the property, including common areas. This shall include property occupied by the reporting entity which is not necessarily home office (e.g. claims processing, data processing and branch centers). Property which does not meet this 50% requirement shall be classified as property held for the production of income or property held for sale.

4. A reporting entity's investment in property occupied by the company meets the definition of an asset as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4) and is an admitted asset to the extent it conforms to the requirements of this issue paper. The asset shall be recorded in accordance with *Issue Paper No. 40—Real Estate Investments* (Issue Paper No. 40) (e.g., initial capitalization, valuation, including impairments of value, depreciation, interest expense on encumbrances, etc.). A reporting entity shall include in both its income and expenses an amount for rent relating to its occupancy of its own buildings. The amount recorded shall be at a rate comparable to rent received from others and/or rental rates of like property in the same area. If this is unavailable, it shall be derived from consideration of the repairs, expenses, taxes, and depreciation incurred, plus interest added at an average fair rate on the book value of the reporting entity's investment in its home office building.

DISCUSSION

5. The conclusion above clarifies current statutory accounting to include specific guidance on the definition of property occupied by the company. Additionally, the conclusion above changes current guidance to require property occupied by the reporting entity to be evaluated for impairment as specified in accordance with Issue Paper No. 40. Current statutory guidance requires property occupied by the company to be valued at depreciated cost (net of any encumbrances). *FASB Statement No. 121*,

Accounting for the Impairment of Long-Lived Assets and Long-Lived Assets to Be Disposed Of (FAS 121), is adopted in Issue Paper No. 40. The conclusion above rejects paragraph 52 of *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60).

6. Recording property occupied by the company, net of any encumbrances, as an admitted asset is consistent with the Recognition Concept included in the Statement of Concepts. The Recognition Concept states,

> The ability to meet policyholder obligations as predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

Though in a depressed market it may take longer to liquidate than other invested assets, it is generally accepted that real estate is a marketable asset which is available to meet policyholder obligations.

7. So that the statement of operations and yield on invested assets of a reporting entity occupying its own real estate are comparable with a reporting entity that leases its offices under operating leases, rental income and expense are reported for the real estate occupied by the reporting entity. The rent charged should be comparable to the income that would be produced if the reporting entity was renting the real estate to a third party.

Drafting Notes/Comments

- Accounting for real estate is addressed in *Issue Paper No. 40—Real Estate Investments*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. Chapter 4, Real Estate, in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual) contains the following guidance on reporting for real estate occupied by the reporting entity:

> Directly-owned real estate is reported separately in the statutory financial statement. Holdings so reported are classified as properties (a) occupied by the company, (b) acquired in satisfaction of debt, and (c) investments in real estate. These classes may include real estate owned under contract of sale.
>
> In the statutory financial statement, a company must include in both its income and expenses an amount for rent relating to its occupancy of its own buildings. This amount can be the estimate current market rental value of the space involved, or it can be the amount derived from consideration of the repairs, expenses, taxes, and depreciation incurred, plus interest added at an average fair rate on the book value of the company's investment in its home office building. The figure thus determined, being both charged to expenses and credited to income, has no effect either on the company's overall net income or surplus.

9. Chapter 4, Real Estate, in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P & C Accounting Practices and Procedures Manual) contains similar wording related to the reporting of real estate occupied by the reporting entity.

10. Chapter 19, Investment Income and Net Realized Gains, in the Life/A&H Accounting Practices and Procedures Manual states:

> Rent on Company-Owned Office Building
>
> Real estate income from company-owned property includes rent received from the leasing of space to others and also an imputed rental charge for the portion of the building occupied by the company. This rental charge is made on the theory that such space can be rented to others; therefore, the company is entitled to income on its investment. Some states requires that this rent be comparable to rent received from others and/or rental rates of like property in the same area. It should be noted that an offsetting charge is made to rent expense.

11. Chapter 15, Investment Income and Net Realized Gains, in the P & C Accounting Practices and Procedures Manual contains similar wording related to recording rent on real estate occupied by the reporting entity.

Generally Accepted Accounting Principles

12. *FAS 60*, *Accounting and Reporting by Insurance Enterprises*, contains the guidance relating to real estate occupied by the reporting entity. It states:

> Real Estate Used in the Business
>
> 52. Real estate shall be classified either as an investment or as real estate used in the enterprise's operations, depending on its predominant use. Depreciation and other real estate operating costs shall be classified as investment expenses or operating expenses consistent with the balance sheet classification of the related asset. Imputed investment income and rental expense shall not be recognized for real estate used in the business.

13. FAS 121 contains the following guidance for real estate occupied by the reporting entity:

> Assets to Be Held and Used
>
> Recognition and Measurement of Impairment
>
> 4. An entity shall review long-lived assets and certain identifiable intangibles to be held and used for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable.
>
> 5. The following are examples of events or changes in circumstances that indicate that the recoverability of the carrying amount of an asset should be assessed:
>
> a. A significant decrease in the market value of an asset
>
> b. A significant change in the extent or manner in which an asset is used or a significant physical change in an asset
>
> c. A significant adverse change in legal factors or in the business climate that could affect the value of an asset or an adverse action or assessment by a regulator
>
> d. An accumulation of costs significantly in excess of the amount originally expected to acquire or construct an asset
>
> e. A current period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with an asset used for the purpose of producing revenue.
>
> 6. If the examples of events or changes in circumstances set forth in paragraph 5 are present or if other events or changes in circumstances indicate that the carrying amount of an

asset that an entity expects to hold and use may not be recoverable, the entity shall estimate the future cash flows expected to result from the use of the asset and its eventual disposition. Future cash flows are the future cash inflows expected to be generated by an asset less the future cash outflows expected to be necessary to obtain those inflows. If the sum of the expected future cash flows (undiscounted and without interest charges) is less than the carrying amount of the asset, the entity shall recognize an impairment loss in accordance with this Statement. Otherwise, an impairment loss shall not be recognized; however, a review of depreciation policies may be appropriate.[1]

[1] Paragraph 10 of *APB Opinion No. 20, Accounting Changes,* addresses the accounting for changes in depreciation estimates, and paragraph 32 addresses the accounting for changes in the method of depreciation. Whenever there is reason to assess the recoverability of the carrying amount of an asset under paragraphs 4 and 5 of this Statement, there may be reason to review the depreciation estimates and method under paragraphs 10 and 32 of Opinion 20. However, an impairment loss that results from applying this Statement should be recognized prior to performing that review. The provisions of Opinion 20 apply to the reporting of changes in the depreciation estimates and method regardless of whether an impairment loss is recognized under paragraph 6 of this Statement.

7. An impairment loss recognized in accordance with paragraph 6 shall be measured as the amount by which the carrying amount of the asset exceeds the fair value of the asset. The fair value of an asset is the amount at which the asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information available in the circumstances. The estimate of fair value shall consider prices for similar assets and the results of valuation techniques to the extent available in the circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis.

8. In estimating expected future cash flows for determining whether an asset is impaired (paragraph 6), and if expected future cash flows are used in measuring assets that are impaired (paragraph 7), assets shall be grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets.

9. Estimates of expected future cash flows shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence should be considered in developing estimates of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.

10. In limited circumstances, the test specified in paragraph 6 will be applicable at only the entity level because the asset being tested for recoverability does not have identifiable cash flows that are largely independent of other asset groupings. In those instances, if the asset is not expected to provide any service potential to the entity, the asset shall be accounted for as if abandoned or held for disposal in accordance with the provisions of paragraph 15 of this Statement. If the asset is expected to provide service potential, an impairment loss shall be recognized if the sum of the expected future cash flows (undiscounted and without interest charges) for the entity is less than the carrying amounts of the entity's assets covered by this Statement.

11. After an impairment is recognized, the reduced carrying amount of the asset shall be accounted for as its new cost. For a depreciable asset, the new cost shall be depreciated over the asset's remaining useful life. Restoration of previously recognized impairment losses is prohibited.

Statutory Issue Paper No. 24

Discontinued Operations and Extraordinary Items

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 24

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance does not define nor does it address the accounting treatment for the disposal of a segment of a business or extraordinary items.

2. GAAP guidance contained in Accounting Principles Board Opinion No. 30, *Reporting the Results of Operations - Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions, as amended* (APB 30) defines discontinued operations, requires accrual of losses associated with the disposal of a segment of a business and states that results of operations of discontinued operations should be disclosed as a separate line item in the balance sheet and in the income statement after income from the on-going operations of the reporting entity, net of applicable income taxes. It also contains guidance on the calculation of the gain or loss on the disposal of a segment of the business. Gains on the disposal of a segment of the business are not to be recorded until realized.

3. APB 30 also defines extraordinary items and requires extraordinary items to be disclosed as a separate line item in the income statement after income from the on-going operation of the reporting entity, net of applicable income taxes.

4. The purpose of this issue paper is to establish statutory accounting principles related to the accounting and reporting for the effects of the disposal of a segment of a business and extraordinary items that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Discontinued Operations

5. If a loss is expected from the proposed sale or abandonment of a segment of business, the estimated loss shall be accrued at the measurement date, as defined in paragraph 13 below, in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets*. If a gain is expected, it shall be recognized when realized, in accordance with *Issue Paper No. 20—Gain Contingencies*, which ordinarily is the disposal date.

6. The determination of whether a gain or loss results from the disposal should be made at the measurement date based on estimates at that date of the net realizable value of the segment after giving consideration to any estimated costs and expenses directly associated with the disposal and, if a plan of disposal is to be carried out over a period of time and contemplates continuing operations during that period, to any estimated income or losses from operations. If it is expected that net losses from operations will be incurred between the measurement date and the expected disposal date, the computation of the gain or loss on disposal should also include an estimate of such amounts. If it is expected that net income will be generated from operations during that period the computation should include the estimated net

income, limited however to the amount of any loss otherwise recognizable for the disposal, with any remainder accounted for when realized. Any changes in the original estimate shall be accounted for in accordance with *Issue Paper No. 3—Accounting Changes*.

7. The results of a reporting entity's discontinued operations shall be reported consistently with the entity's reporting of continuing operations (i.e. no separate line item presentation in the balance sheet or statement of operations aggregating current and future losses from the measurement date).

8. Additionally, the notes to the financial statements for the period encompassing the measurement date and the year subsequent shall contain the following:

a. The identity of the segment of business that has been or will be discontinued,
b. The expected disposal date, if known (see definition in paragraph 13 below),
c. The expected manner of disposal,
d. A description of the remaining assets and liabilities of the segment at the balance sheet date and the estimated payout pattern,
e. The amounts related to the discontinued operations and the effect on the statement of operations including the balance sheet and income statement line items which have been affected.

9. If material revisions are made to the estimates of the cost to dispose of a segment in years subsequent to the disclosure required in paragraph 8 above, the nature and the effect of the revisions to the estimates shall be disclosed for the period in which the revision was made including the effect on income or loss from operations and the effect on the carrying amount of the remaining assets and liabilities of the segment at the balance sheet date.

Extraordinary Items

10. Extraordinary items, as defined in paragraph 13 below, shall be reported consistently with the reporting entity's reporting of continuing operations (i.e. no separate line item presentation in the balance sheet or statement of operations). Such items shall not be charged directly to surplus unless specifically addressed elsewhere within the codification.

11. The nature of an extraordinary event or transaction and the principle items entering into the determination of an extraordinary gain or loss shall be disclosed in the notes to the financial statements. This disclosure shall include the line items which have been affected by the estimate of the extraordinary item.

12. Material events or transactions that are either unusual or occur infrequently, but not both, are not considered extraordinary items. However, such material events or transactions shall be disclosed in the notes to the financial statements.

Definitions

13. For purposes of statutory accounting, the following definitions shall apply:

"Discontinued operations" shall be defined as the operations of a segment of a business that has been sold, abandoned, spun off, or otherwise disposed of or, although still operating, is the subject of a formal plan for disposal.

A "segment" of a business shall be defined as a component of an entity, likely in the form of a subsidiary, whose activities represent a separate major type of business or class of customer. The assets, results of operations, and activities of a segment must be clearly distinguished, physically and operationally and for financial reporting purposes, from the other assets, results of operations, and activities of the entity. The fact that the results of operations of the segment being sold or abandoned cannot be separately identified strongly suggests that the transaction should not be classified as the disposal of a segment of the business. The disposal of a segment of a business should be distinguished from other disposals of assets incident to the evolution of the entity's business, such as the disposal of a line of business or the shifting of marketing activities from one location to another.

"Measurement date" shall be defined as the date on which management having authority to approve the action commits itself to a formal plan to dispose of a segment of the business, whether by sale or abandonment. The plan, at a minimum, should include identification of the major assets to be disposed of, the expected method of disposal, the period expected to be required for completion of the disposal, an active program to find a buyer if disposal is to be by sale, the estimated results of operations of the segment from the measurement date to the disposal date (defined below), and the estimated proceeds or salvage to be realized by disposal.

"Disposal date" shall be defined as the date of closing the sale if the disposal is by sale or the date that operations cease if the disposal is by abandonment.

"Extraordinary items" shall be defined as those events or transactions which meet both of the following criteria:

(a) Unusual nature - the underlying event or transaction possesses a high degree of abnormality and is clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the reporting entity, taking into account the environment in which the reporting entity operates.

(b) Infrequency of occurrence - the underlying event or transaction would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the reporting entity operates.

DISCUSSION

14. The conclusion above adopts the accounting principles relating to the accounting for the disposal of a segment of a business included in APB No. 30, paragraphs 13 through 18. These paragraphs define certain terminology relevant to the disposal of a segment and set forth criteria for recording a related loss. The conclusion above also adopts the definition of an extraordinary item included in paragraph 20 of APB 30. It rejects all other paragraphs relating to the accounting and reporting of discontinued operations, extraordinary items and unusual or infrequently occurring events and transactions. The conclusion above adopts the interpretations of APB 30 included in Accounting Interpretation of Accounting Principles Board Opinion 30, Reporting the Results of Operations (AIN-APB 30), relating to the definition of extraordinary items and terminology relevant to the disposal of a segment and the criteria for recording a related loss. It rejects all other interpretations of APB 30 relating to the accounting and reporting of discontinued operations, extraordinary items and unusual or infrequently occurring events and transactions. This statement also adopts *FASB Emerging Issues Task Force No. 85-36, Discontinued Operations with Expected Gain and Interim Operating Losses.*

15. This issue paper rejects *FASB Emerging Issues Task Force No. 94-3*, *Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs Incurred in a Restructuring)*, and *FASB Emerging Issues Task Force No. 95-18, Accounting and Reporting for a Discontinued Business Segment When the Measurement Date Occurs after the Balance Sheet Date but before the Issuance of Financial Statements*.

16. As stated above, statutory accounting guidance does not address the accounting and reporting for discontinued operations and extraordinary items and industry practice is varied. Predominant practice has been to accrue losses resulting from discontinued operations, however, practice varies as to the

presentation of the loss. Some entities record extraordinary items as a charge directly to surplus; other entities do not separate extraordinary items from the results of continuing operations.

17. The conclusion above requires a loss associated with discontinued operations to be recorded at the measurement date. This is consistent with the conservatism concept in the Statement of Concepts. *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* requires an estimated loss from a loss contingency to be recorded when (a) it is probable that a loss will be incurred and (b) the amount of the loss can be reasonably estimated.

Drafting Notes/Comments

None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

18. Statutory guidance does not address the accounting treatment for the disposal of a segment or extraordinary items.

Generally Accepted Accounting Principles

19. *Accounting Principles Board Opinion No. 30, Reporting the Results of Operations - Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions* (APB 30), discusses discontinued operations and extraordinary items in the following excerpts:

> Income Statement Presentation and Disclosure
>
> 8. Discontinued Operations of a Segment of a Business. For purposes of this Opinion, the term discontinued operations refers to the operations of a segment of a business as defined in paragraph 13 that has been sold, abandoned, spun off, or otherwise disposed of or, although still operating, is the subject of a formal plan for disposal (see paragraph 14). The Board concludes that the results of continuing operations should be reported separately from discontinued operations and that any gain or loss from disposal of a segment of a business (determined in accordance with paragraphs 15 and 16) should be reported in conjunction with the related results of discontinued operations and not as an extraordinary item. Accordingly, operations of a segment that has been or will be discontinued should be reported separately as a component of income before extraordinary items and the cumulative effect of accounting changes (if applicable) in the following manner:

Income from continuing operations before income taxes[2]	$XXXX
Provision for income taxes	XXX
Income from continuing operations[2]	$XXXX
Discontinued operations(Note_____):	
Income (loss) from operations of discontinued Division X (less applicable income taxes of $_____)	$XXXX
Loss on disposal of Division X, including provision of $_____ for operating losses during phase-out period (less applicable income taxes of $_____)	XXXX
Net Income	$XXXX ====

Amounts of income taxes applicable to the results of discontinued operations and the gain or loss from disposal of the segment should be disclosed on the face of the income statement or in related notes. Revenues applicable to the discontinued operations should be separately disclosed in the related notes.

11. In the absence of discontinued operations and changes in accounting principles, the following main captions should appear in an income statement if extraordinary items are reported (paragraphs 17-19 of APB Opinion No. 9):

Income before extraordinary items[4]	$XXXX
Extraordinary items of less applicable income taxes of $_____) (Note_____)	XXX
Net income	$XXXX
	====

The caption extraordinary items should be used to identify separately the effects of events and transactions, other than the disposal of a segment of a business, that meet the criteria for classification as extraordinary as discussed in paragraphs 19-24. Descriptive captions and the amounts for individual extraordinary events or transactions should be presented, preferably on the face of the income statement, if practicable; otherwise disclosure in related notes is acceptable. The nature of an extraordinary event or transaction and the principal items entering into the determination of an extraordinary gain or loss should be described. The income taxes applicable to extraordinary items should be disclosed on the face of the income statement; alternatively disclosure in the related notes is acceptable. The caption net income should replace the three captions shown above if the income statement includes no extraordinary items.

Accounting for the Disposal of a Segment of a Business

13. For purposes of this Opinion, the term *segment of a business* refers to a component of an entity whose activities represent a separate major line of business or class of customer. A segment may be in the form of a subsidiary, a division, or a department, and in some cases a joint venture or other nonsubsidiary investee, provided that its assets, results of operations, and activities can be clearly distinguished, physically and operationally and for financial reporting purposes, from the other assets, results of operations, and activities of the entity. Financial statements of current and prior periods that include results of operations prior to the measurement date (as defined in paragraph 14) should disclose the results of operations of the disposed segment, less applicable income taxes, as a separate component of income before extraordinary items (see paragraph 8). The fact that the results of operations of the segment being sold or abandoned cannot be separately identified strongly suggests that the transaction should not be classified as the disposal of a segment of the business. The disposal of a segment of a business should be distinguished from other disposals of assets incident to the evolution of the entity's business, such as the disposal of part of a line of business, the shifting of production or marketing activities for a particular line of business from one location to another, the phasing out of a product line or class of service, and other changes occasioned by technological

[2] These captions should be modified appropriately when an entity reports an extraordinary item and/or the cumulative effect of a change in accounting principle in accordance with APB Opinion No. 20, *Accounting Changes*. The presentation of per share data will need similar modification.

[4] This caption should be modified appropriately when an entity reports the cumulative effect of an accounting change.

improvements. The disposal of two or more unrelated assets that individually do not constitute a segment of a business should not be combined and accounted for as a disposal of a segment of business.

14. **Definition of Measurement and Disposal Dates**. For purposes of applying the provisions of this Opinion, the measurement date of a disposal is the date on which the management having authority to approve the action commits itself to a formal plan to dispose of a segment of the business, whether by sale or abandonment. The plan of disposal should include, as a minimum, identification of the major assets to be disposed of, the expected method of disposal, the period expected to be required for completion of the disposal, an active program to find a buyer if disposal is to be by sale, the estimated results of operations of the segment from the measurement date to the disposal date, and the estimated proceeds or salvage to be realized by disposal. For purposes of applying this Opinion, the disposal date is the date of closing the sale if the disposal is by sale or the date that operations cease if the disposal is by abandonment.

15. **Determination of Gain or Loss on Disposal of a Segment of a Business.** If a loss is expected from the proposed sale or abandonment of a segment, the estimated loss should be provided for at the measurement date.[5] If a gain is expected, it should be recognized when realized, which ordinarily is the disposal date. The determination of whether a gain or a loss results from the disposal of a segment of a business should be made at the measurement date based on estimates at that date of the net realizable value of the segment after giving consideration to any estimated costs and expenses directly associated with the disposal and, if a plan of disposal is to be carried out over a period of time and contemplates continuing operations during that period, to any estimated income or losses from operations. If it is expected that net losses from operations will be incurred between the measurement date and the expected disposal date, the computation of the gain or loss on disposal should also include an estimate of such amounts. If it is expected that income will be generated from operations during that period the computation of the gain or loss should include the estimated income, limited however to the amount of any loss otherwise recognizable from the disposal; any remainder should be accounted for as income when realized. The Board believes that the estimated amounts of income or loss from operations of a segment between measurement date and disposal date included in the determination of loss on disposal should be limited to those amounts that can be projected with reasonable accuracy. In the usual circumstance, it would be expected that the plan of disposal would be carried out within a period of one year from the measurement date and that such projections of operating income or loss would not cover a period exceeding approximately one year.[6]

[5] If financial statements for a date prior to the measurement date have not been issued, and the expected loss provides evidence of conditions that existed at the date of such statements and affects estimates inherent in the process of preparing them, the financial statements should be adjusted for any change in estimates resulting from the use of such evidence. (See Statement on Auditing Standards No. 1, Codification of Auditing Standards and Procedures, paragraph 560.03.)

[6] When disposal is estimated to be completed within one year and subsequently is revised to a longer period of time, any revision of the net realizable value of the segment should be treated as a change in estimate (see paragraph 25).

16. Gain or loss from the disposal of a segment of a business should not include adjustments, costs, and expenses associated with normal business activities that should have been recognized on a going-concern basis up to the measurement date, such as adjustments of accruals on long-term contracts or write-down or write-off of receivables, inventories, property, plant, and equipment used in the business, equipment leased to others, deferred research and development costs, or other intangible assets. However, such adjustments, costs, and expenses which (a) are clearly a direct result of the decision to dispose of the segment and (b) are clearly not the adjustments of carrying amounts or costs, or expenses that should have been recognized on a going-concern basis prior to the measurement date should be included in determining the

gain or loss on disposal. Results of operations before the measurement date should not be included in the gain or loss on disposal.

17. Costs and expenses directly associated with the decision to dispose include items such as severance pay, additional pension costs, employee relocation expenses, and future rentals on long-term leases to the extent they are not offset by sub-lease rentals.

18. Disclosure. In addition to the amounts that should be disclosed in the financial statements (paragraph 8), the notes to financial statements for the period encompassing the measurement date should disclose:

a. the identity of the segment of business that has been or will be discontinued,
b. the expected disposal date, if known (see paragraph 14),
c. the expected manner of disposal,
d. a description of the remaining assets and liabilities of the segment at the balance sheet date,[7] and
e. the income or loss from operations and any proceeds from disposal of the segment during the period from the measurement date to the date of the balance sheet.

For periods subsequent to the measurement date and including the period of disposal, notes to the financial statements should disclose the information listed in (a), (b), (c), and (d) above and also the information listed in (e) above compared with the prior estimates.

[7] Consideration should be given to disclosing this information by segregation in the balance sheet of the net assets and liabilities (current and noncurrent) of the discontinued segment. Only liabilities which will be assumed by others should be designated as liabilities of the discontinued segment. If the loss on disposal cannot be estimated within reasonable limits, this fact should be disclosed.

20. Extraordinary items are events and transactions that are distinguished by their unusual nature and by the infrequency of their occurrence. Thus, both of the following criteria should be met to classify an event or transaction as an extraordinary item:

a. Unusual nature-the underlying event or transaction should possess a high degree of abnormality and be of a type clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the entity, taking into account the environment in which the entity operates. (See discussion in paragraph 21.)

b. Infrequency of occurrence-the underlying event or transaction should be of a type that would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the entity operates. (See discussion in paragraph 22.)

21. Unusual Nature. The specific characteristics of the entity, such as type and scope of operations, lines of business, and operating policies should be considered in determining ordinary and typical activities of an entity. The environment in which an entity operates is a primary consideration in determining whether an underlying event or transaction is abnormal and significantly different from the ordinary and typical activities of the entity. The environment of an entity includes such factors as the characteristics of the industry or industries in which it operates, the geographical location of its operations, and the nature and extent of governmental regulation. Thus, an event or transaction may be unusual in nature for one entity but not for another because of differences in their respective environments. Unusual nature is not established by the fact that an event or transaction is beyond the control of management.

22. Infrequency of Occurrence. For purposes of this Opinion, an event or transaction of a type not reasonably expected to recur in the foreseeable future is considered to occur

infrequently. Determining the probability of recurrence of a particular event or transaction in the foreseeable future should take into account the environment in which an entity operates. Accordingly, a specific transaction of one entity might meet that criterion and a similar transaction of another entity might not because of different probabilities of recurrence. The past occurrence of an event or transaction for a particular entity provides evidence to assess the probability of recurrence of that type of event or transaction in the foreseeable future. By definition, extraordinary items occur infrequently. However, mere infrequency of occurrence of a particular event or transaction does not alone imply that its effects should be classified as extraordinary. An event or transaction of a type that occurs frequently in the environment in which the entity operates cannot, by definition, be considered as extraordinary, regardless of its financial effect.

23. Certain gains and losses should not be reported as extraordinary items because they are usual in nature or may be expected to recur as a consequence of customary and continuing business activities. Examples include:

a. Write down or write-off of receivables, inventories, equipment leased to others, deferred research and development costs, or other intangible assets.
b. Gains or losses from exchange or translation of foreign currencies, including those relating to major devaluations and revaluations.
c. Gains or losses on disposal of a segment of a business.
d. Other gains or losses from sale or abandonment of property, plant, or equipment used in the business.
e. Effects of a strike, including those against competitors and major suppliers.
f. Adjustment of accruals on long-term contracts.

In rare situations, an event or transaction may occur that clearly meets both criteria specified in paragraph 20 of this Opinion and thus gives rise to an extraordinary gain or loss that includes one or more of the gains or losses enumerated above. In these circumstances, gains or losses such as (a) and (d) above should be included in the extraordinary item if they are a direct result of a major casualty (such as an earthquake), an expropriation, or a prohibition under a newly enacted law or regulation that clearly meets both criteria specified in paragraph 20. However, any portion of such losses which would have resulted from a valuation of assets on a going concern basis should not be included in the extraordinary items. Disposals of a segment of a business should be accounted for pursuant to paragraph 13 and presented in the income statement pursuant to paragraph 8 even though the circumstances of the disposal meet the criteria specified in paragraph 20.

Adjustment of Amounts Reported in Prior Periods

25. Circumstances attendant to disposals of a segment of a business and extraordinary items frequently require estimates, for example, of associated costs and occasionally of associated revenue, based on judgment and evaluation of the facts known at the time of first accounting for the event. Each adjustment in the current period of a loss on disposal of a business segment or of an element of an extraordinary item that was reported in a prior period [should not be reported as a prior period adjustment unless it meets the criteria for a prior period adjustment as defined in paragraph 23 of APB Opinion No. 9. An adjustment that does not meet such criteria] should be separately disclosed as to year of origin, nature, and amount and classified separately in the current period in the same manner as the original item. If the adjustment is the correction of an error, the provisions of *APB Opinion No. 20, Accounting Changes*, paragraphs 36 and 37 should be applied.

Disclosure of Unusual or Infrequently Occurring Items

26. A material event or transaction that is unusual in nature or occurs infrequently but not both, and therefore does not meet both criteria for classification as an extraordinary item, should be reported as a separate component of income from continuing operations. The nature and financial effects of each event or transaction should be disclosed on the face of the income statement or, alternatively, in notes to the financial statements. Gains or losses of a similar nature

that are not individually material should be aggregated. Such items should not be reported on the face of the income statement net of income taxes or in any manner inconsistent with the provisions of paragraphs 8 and 11 of this Opinion or in any other manner that may imply that they are extraordinary items. Similarly, the earnings per share effects of those items should not be disclosed on the face of the income statement.[8]

[8] Exceptions to the final two sentences of this paragraph are specified in the following AICPA industry audit guides: Audits of Banks, p. 36; Audits of Fire and Casualty Insurance Company, p. 66; and Audits of Stock Life Insurance Companies, p. 89.

20. Note that the bracketed section of APB 30, paragraph 25 was amended by *FASB Statement No. 16, Prior Period Adjustments.*

OTHER SOURCES OF INFORMATION

21. The NAIC Technical Resource Group proposed draft life codification, Chapter 28, *Unassigned Surplus*, includes the following:

Extraordinary Items

Extraordinary items are events and transactions that are distinguished by their unusual nature and by the infrequency of their occurrence. Both of the following criteria should be met to classify an event or transaction as an extraordinary item:

a. Unusual nature - the underlying event or transaction should possess a high degree of abnormality and be of a type clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the entity, taking into consideration the environment in which the entity operates.

b. Infrequency of occurrence - the underlying event or transaction should be of a type that would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the entity operates.

Unusual Nature. The specific characteristics of the entity, such as type and scope of operations, lines of business, and operating policies should be considered in determining ordinary and typical activities of an entity. The environment in which an entity operates is a primary consideration in determining whether an underlying event or transaction is abnormal and significantly different from the ordinary and typical activities of the entity. The environment of an entity includes such factors as the characteristics of its products and the geographic location of its operations. Thus, an event or transaction may be unusual in nature for one entity but not for another because of differences in their respective environments. Unusual nature is not established by the fact that an event or transaction is beyond the control of management.

Infrequency of Occurrence. An event or transaction of a type not reasonably expected to recur in the foreseeable future is considered to occur infrequently. Determining the probability of recurrence of a particular event or transaction in the foreseeable future should take into account the environment in which the entity operates. Accordingly, a specific transaction of one entity might meet that criterion and a similar transaction of another entity might not because of different probabilities of recurrence. The past occurrence of an event or transaction for a particular entity provides evidence to assess the probability of recurrence of that type of event or transaction in the foreseeable future. By definition, extraordinary items occur infrequently. However, mere infrequency of occurrence of a particular event or transaction does not alone imply that its effects should be classified as extraordinary. An event or transaction of a type that occurs frequently in the environment in which the entity operates cannot, by definition, be considered as extraordinary, regardless of the financial effect.

Materiality. An extraordinary event or transaction, if material, shall be classified separately in the Summary of Operations. Items shall be evaluated individually and not in the aggregate in determining whether an event or transaction is material.

Even though they do not meet the criteria for an extraordinary item, if material, gains and losses from extinguishment of debt, significant asset disposition after a pooling, discontinuation of accounting for the effects of certain types of regulation, shall be classified as an extraordinary item.

Statutory Issue Paper No. 25

Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties

STATUS
Finalized June 23, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 25

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Transactions with affiliates and other related parties are entered into in the ordinary course of business by reporting entities. Transactions may involve an exchange of assets and liabilities between the related parties or the performance of services. Such transactions may not necessarily be on an arm's length basis. Current statutory literature provides guidance on accounting for certain transactions between affiliates, which is based on whether the transactions are considered economic or non-economic transactions. It also requires reporting entities to disclose transactions with affiliates in the notes to the financial statements.

2. GAAP provides limited guidance on accounting for related party transactions, and there is no discussion regarding accounting for economic versus non-economic transactions with related parties. Rather, existing GAAP guidance focuses on disclosure of related party transactions with specific GAAP literature dealing with related party issues where there is a perceived potential for abusive accounting practices (e.g. sale lease-back transactions, equity accounting, nonmonetary transactions, etc.).

3. The purpose of this issue paper is to establish statutory accounting principles and disclosure requirements for related party transactions that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. Related parties are defined as entities that have common interests as a result of ownership, control, or affiliation or by contract. Related parties shall include but are not limited to the following:

a. Affiliates of the reporting entity, as defined in paragraph 5;

b. Trusts for the benefit of employees, such as pension and profit-sharing trusts and Employee Stock Ownership Plans that are managed by or under the trusteeship of management of the reporting entity, its parent or affiliates;

c. The principal owners of the reporting entity;

d. The management of the reporting entity, its parent or affiliates (including directors);

e. Members of the immediate families of principal owners and management of the reporting entity**,** its parent or affiliates and their management;

f. Parties with which the reporting entity may deal if either party directly or indirectly controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interest;

g. A party which can directly or indirectly significantly influence the management or operating policies of the reporting entity, which may include a provider who is contracting with the reporting entity. This is not intended to suggest that all provider contracts create related party relationships;

h. A party which has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests;

i. Attorney-in-fact of a reciprocal reporting entity or any affiliate of the attorney-in-fact; and

j. A U.S. manager of a U.S. Branch or any affiliate of the U.S. manager of a U.S. Branch.

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and partnerships, joint ventures and limited liability companies. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of a person or entity, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship, (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. The 10% ownership threshold shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in a company and a second member of the group has an 8% interest in the same company the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. These presumptions can be overcome by predominant evidence to the contrary, however, they shall stand until overcome by such predominant contradictory evidence. A reporting entity with 10% or more of the voting interest shall evaluate all facts and circumstances relating to the investment and reach a judgment about whether the presumption of control is overcome. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting interest of an investee.

8. Related party transactions are subject to abuses because reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair and reasonable to the reporting entity or its policyholders. As such, related party transactions require specialized accounting rules and increased regulatory scrutiny.

Related Party Loans

9. Loans or advances (including debt, public or private) made by a reporting entity to its parent or principal owner shall be admitted if approval for the transaction has been obtained from the domiciliary commissioner and the loan or advance is determined to be collectible based on the parent or principal owner's independent payment ability. An affiliate's ability to pay shall be determined after consideration of the liquid assets or revenues available from external sources (i.e. determination shall not include dividend paying ability of the subsidiary making the loan or advance) which are available to repay the

balance and/or maintain its account on a current basis. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5), it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

10. Loans or advances by a reporting entity to all other related parties shall be evaluated by management and nonadmitted if they do not constitute arm's-length transactions as defined in paragraph 13. Loans or advances made by a reporting entity to related parties (other than its parent or principal owner) that are economic transactions as defined in paragraph 13 shall be admitted. This includes financing arrangements with providers of health care services with whom the reporting entity contracts with from time to time. Such arrangements can include both loans and advances to these providers. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with Issue Paper No. 5 it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

11. Any advances under capitation arrangements made directly to providers, or to intermediaries that represent providers, that exceed one month's payment shall be nonadmitted assets.

12. Indirect loans are loans or extensions of credit to any person who is not an affiliate, where the reporting entity makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the reporting entity making the loans or extensions of credit. The admissibility of indirect loans made by a reporting entity for the benefit of its parent or principal owner shall be determined in accordance with the guidelines in paragraph 9. Indirect loans made for the benefit of all other related parties shall be evaluated and accounted for consistent with loans and advances to related parties as described in paragraphs 10 and 11.

Transactions Involving the Exchange of Assets or Liabilities

13. An arm's length transaction is defined as a transaction in which willing parties, each being reasonably aware of all relevant facts and neither under compulsion to buy, sell or loan, would be willing to participate. A transaction between related parties involving the exchange of assets or liabilities shall be designated as either an economic transaction or non-economic transaction. An economic transaction shall be defined as an arm's length transaction which results in the transfer of risks and rewards of ownership and represents a consummated act thereof, i.e. "permanence." The appearance of permanence is also an important criterion in assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed. If subsequent events or transactions reverse the effect of an earlier transaction prior to the issuance of the financial statements, the reversal shall be considered in determining whether economic substance existed in the case of the original transaction. Subsequent events are addressed in *Issue Paper No. 9—Subsequent Events*. An economic transaction must represent a bonafide business purpose demonstrable in measurable terms. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction. The statutory accounting shall follow the substance of the transaction and not the form of the transaction.

14. In determining whether there has been a transfer of the risks and rewards of ownership in the transfer of assets or liabilities between related parties, the following—and any other relevant facts and circumstances related to the transaction—shall be considered:

a. Whether the seller has a continuing involvement in the transaction or in the financial interest transferred, such as through the exercise of managerial authority to a degree usually associated with ownership;

b. Whether there is an absence of significant financial investment by the buyer in the financial interest transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer;

c. Whether repayment of debt that constitutes the principal consideration in the transaction is dependent on the generation of sufficient funds from the asset transferred;

d. Whether limitations or restrictions exist on the buyer's use of the financial interest transferred or on the profits arising from it;

e. Whether there is retention of effective control of the financial interest by the seller.

15. A transaction between related parties may meet the criteria for treatment as an economic transaction at one level of financial reporting but may not meet such criteria at another level of financial reporting. An example of such a transaction is a reporting entity purchasing securities at market value from an affiliated reporting entity that carried the securities at amortized cost. This transaction meets the criteria of an economic transaction at this level of financial reporting and therefore the selling reporting entity would record a gain and the acquiring reporting entity would record the securities at their cost (market value on the transaction date). At the common parent level of reporting, this transaction has resulted in the mere inflation of surplus, and therefore, is a non-economic transaction. The parent reporting entity shall defer the net effects of any gain or increase in surplus resulting from such transactions by recording a deferred gain and an unrealized loss. The deferred gain shall not be recognized by the parent reporting entity unless and until arms-length transaction(s) with independent third parties give rise to appropriate recognition of the gain.

16. A non-economic transaction shall be defined as any transaction that does not meet the criteria of an economic transaction. Similar to the situation described in paragraph 15, transfers of assets from a parent reporting entity to a subsidiary, controlled or affiliated entity shall be treated as non-economic transactions at the parent reporting level because the parent has continuing indirect involvement in the assets.

17. When accounting for a specific transaction reporting entities shall use the following valuation methods:

a. Economic transactions between related parties shall be recorded at fair value at the date of the transaction. To the extent that the related parties are affiliates under common control, the controlling reporting entity shall defer the effects of such transactions that result in gains or increases in surplus (see paragraph 15);

b. Non-economic transactions between reporting entities, which meet the definition of related parties above, shall be recorded at the lower of existing book values or fair values at the date of the transaction;

c. Non-economic transactions between a reporting entity and an entity that has no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates, shall be recorded at the fair value at the date of the transaction; however, to the extent that the transaction results in a gain, that gain shall be deferred until such time as permanence can be verified;

d. Transactions which are designed to avoid statutory accounting practices shall be included as if the reporting entity continued to own the assets or be obligated for a liability directly instead of through a subsidiary.

Examples of transactions that would be deemed to be non-economic include, security swaps of similar issues between or among affiliated companies, and swaps of dissimilar issues accompanied by exchanges of liabilities between or among affiliates.

Transactions Involving Services

18. Transactions involving services being provided by a related party may not be arm's-length. Amounts charged for services provided may not be at current market rates for such services or may be based on allocations of costs. Determining market rates for services is difficult because the circumstances surrounding each transaction are unique. Unlike transactions involving the exchange of assets and liabilities between related parties, transactions for services create income on one party's books and expense on the second party's books and therefore do not lend themselves to the mere inflation of surplus. These arrangements may be subject to regulatory approval.

19. Transactions involving services provided between related parties shall be recorded at the amount charged. Regulatory scrutiny of related party transactions where amounts charged for services do not meet the fair and reasonable standard established by Appendix A-440, may result in (a) amounts charged being recharacterized as dividends or capital contributions, (b) transactions being reversed, (c) receivable balances being nonadmitted, (d) or other regulatory action. Expenses that result from cost allocations shall be allocated subject to the same fair and reasonable standards, and the books and records of each party shall disclose clearly and accurately the precise nature and details of the transaction. See *Issue Paper No. 94—Allocation of Expenses* for additional discussion regarding the allocation of expenses.

Disclosure

20. The financial statements shall include disclosures of all material related party transactions. In some cases, aggregation of similar transactions by type of related party may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm's length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

a. The nature of the relationships involved;

b. A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, and any non-insurance transactions which involve less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:

1. Date of transaction,
2. Explanation of transaction,
3. Name of reporting entity,
4. Name of affiliate,
5. Description of assets received by reporting entity,
6. Statement value of assets received by reporting entity,
7. Description of assets transferred by reporting entity, and
8. Statement value of assets transferred by reporting entity.

c. The dollar amounts of transactions for each of the periods for which financial statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period;

d. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement;

e. Any guarantees or undertakings, written or otherwise, for the benefit of an affiliate or related party which result in a material contingent exposure of the reporting entity's or any related party's assets or liabilities;

f. A description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party. This shall include, but is not limited to, sale lease-back arrangements, computer or fixed asset leasing arrangements and agency contracts, which remove assets otherwise recordable (and potentially nonadmitted) on the reporting entity's financial statements;

g. The nature of the control relationship whereby the reporting entity and one or more other enterprises are under common ownership or control and the existence of that control could result in operating results or financial position of the reporting entity significantly different from those that would have been obtained if the enterprises were autonomous. The relationship shall be disclosed even though there are no transactions between the enterprises.

h. The amount deducted from the value of an upstream intermediate company or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated company, in accordance with the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, "Procedures for Valuing Common Stocks and Stock Warrants."

DISCUSSION

21. This issue paper adopts *FASB Statement No. 57*, *Related Party Disclosures* (FAS 57) with a modification to paragraph 2, to require disclosure of compensation arrangements, expense allowances, and other similar items in the ordinary course of business. It expands the current statutory guidance on accounting and disclosure of transactions with affiliates to include all material related party transactions whereas current statutory guidance requires disclosures for transactions with affiliates, a more narrowly defined group. This modification was made because the nature of dealings with any related party can not be assumed to be at arm's length. The current statutory guidance with respect to accounting for transfers of assets between affiliates that are considered to be non-economic transactions (generally at lower of cost or market) differs from the GAAP guidance for accounting for transfers and exchanges between companies under common control. Current statutory guidance is considered appropriate because of the need to focus on individual reporting entities and the needs of individual states to monitor the obligations of individual reporting entities. GAAP guidance is established in Accounting Interpretations of *APB Opinion No. 16, #39*, *Transfers and Exchanges Between Companies Under Common Control* (AIN-APB 16, #39), which requires transfers and exchanges to be at historical cost similar to that in pooling of interests accounting. As a result, this issue paper rejects AIN-APB 16, #39. The complete requirements under current statutory guidance and FAS 57 are included in the Relevant Statutory Accounting and GAAP Guidance section below.

22. This issue paper adopts the current statutory guidance with respect to accounting for transfers of assets between affiliates and further expands that guidance to include all transactions (including transactions which relate to the transfer of liabilities) with related parties. It also replaces the 30 day rule by requiring the reversal of any gain or loss recognized on a transaction that subsequently does not meet the appearance of permanence. This issue paper also requires any net increase in the surplus of a parent reporting entity that results from transactions between affiliates where there is no demonstrable and measurable betterment to the parent company reporting entity other than the mere inflation of surplus to be reported as a deferred gain and shall not be recognized by the parent reporting entity until an arms length transaction with a third party gives rise to the recognition.

23. This issue paper adopts current statutory guidance with modification to recognize loans made to a reporting entity's parent or principal owner as an admitted asset if regulatory approval for the transaction has been obtained and the loan appears to be collectible based on the parent's independent ability to pay. Commissioner approval is considered necessary as an additional independent evaluation of such loans or advances due to the highly sensitive nature of such transactions and the significant potential for abuse. This independent evaluation is considered necessary to determine the admissibility of such loans or advances because a reporting entity could be induced by its parent or principal owner to enter into a loan or advance that it would not otherwise consider. Additionally, advances to providers under capitation arrangements that exceed one month's payment shall be nonadmitted. Loans to all other related parties shall be nonadmitted if they do not meet the criteria of an arm's length transaction. Current statutory accounting requires disclosures to include a description of related party transactions as well as other information necessary to obtain an understanding of the transaction. Subparagraph 20 b amends the exclusion to this requirement from non-insurance transactions which involve less than 1/2% of 1% of the total assets of the largest affiliated reporting entity to non-insurance transactions which involve less than 1/2% of 1% of the total admitted assets of the reporting entity.

24. The accounting and disclosure requirements adopted by the conclusion above are consistent with the Statement of Concepts which states:

> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.
>
> Because these basic financial statements cannot be expected to provide all of the information necessary to evaluate an entity's short-term and long-term stability, management must supplement the financial statements with sufficient disclosures (e.g. notes to financial statements, management's discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided.

25. Additionally, such disclosures provide the statutory financial statement user information necessary in evaluating a reporting entity's statutory financial position and results of operations and in assessing the reporting entity's dependence on such relationships to continue operations.

Drafting Notes/Comments

- Accounting for investments in subsidiaries is addressed in *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities*.
- Accounting for business combinations is addressed in *Issue Paper No. 68—Business Combinations and Goodwill*.
- Accounting for holding company obligations are addressed in *Issue Paper No. 95—Holding Company Obligations*.
- Accounting and disclosures for related party reinsurance transactions are addressed in *Issue Paper No. 74—Life, Deposit-Type and Accident and Health Reinsurance* and *Issue Paper No. 75—Property and Casualty Reinsurance*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

26. The NAIC Annual Statement Instructions for Life and Accident and Health Insurance Companies (Annual Statement Instructions) provide the following guidance with respect to reporting information on transactions with affiliates in the notes to the financial statements:

> 5. Information Concerning Parent, Subsidiaries and Affiliates

Instruction:

a. If the company is directly or indirectly owned or controlled by any other company, corporation, group of companies, partnership or individual, give full particulars.

b. List and describe transactions by the company or any affiliated insurer with any affiliate. Exclude reinsurance transactions, any non-insurance transactions which involve less than ½ of 1% of the total assets of the largest affiliated insurer, and cost allocation transactions that are based upon generally accepted accounting principles. The following information should be provided:

1. Date of transaction
2. Explanation of transaction
3. Name of insurer
4. Name of affiliate
5. Description of assets received by insurer
6. Statement value of assets received by insurer
7. Description of assets transferred by insurer
8. Statement value of assets transferred by insurer

c. If the company holds investments in its parent, affiliates, or subsidiaries, disclose the total statement value for each such asset category not included in Schedule D, Summary By Country.

d. If the Company owns shares of an upstream intermediate or ultimate parent, either directly or indirectly via a downstream subsidiary, controlled or affiliated company, disclose the amount deducted from the value of such company or companies, in accordance with the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*.

e. Describe any guarantees or undertakings for the benefit of an affiliate which result in a material contingent exposure of the company's or any affiliated insurer's assets to liability, if not disclosed in Note 15. Report the total amount of guarantees for affiliates.

f. Describe management or service contracts and all cost-sharing arrangements, other than cost allocation arrangements based upon generally accepted accounting principles, involving the company or any affiliated insurer.

27. The Annual Statement Instructions provide illustrations for the above required disclosures.

28. The Annual Statement Instructions also require the preparation of Schedule Y - Information Concerning Activities of Insurer Members of a Holding Company Group. Part 2 of this schedule—Summary of Insurer's Transactions with Any Affiliates—was designed to provide an overview of transactions among holding company system members. A common schedule is prepared for inclusion in each of the individual annual statements and the consolidated annual statement. The intent of the schedule is to demonstrate the scope and direction of major fund and/or surplus flows throughout the holding company system. The instructions to the schedule provide detailed guidance on a column by column basis. This schedule requires additional disclosures that are not required or are in more detail than the information contained in the notes to the financial statements. The instructions for the schedule include the following guidance:

> Include the aggregate transactions, for the reporting period, within each category involving the parent company (companies), all insurance companies in the Holding Company System, and all other companies in the system with which an insurance company member had a transaction. Exclude: transactions of a non-insurer with an insurance company that are of a routine nature (i.e., the purchase of insurance coverage) and cost allocation transactions that are based upon generally accepted principles of accounting.

> If the insurer is both a payor and a recipient of amounts in any category, the net of these amounts should be reported on one line. Amounts of transactions that result in an increase in surplus should be shown as positive figures and transactions that result in a decrease in surplus should be reported enclosed in parentheses.
>
> If the nature of the transactions reported in Part 2 require explanation, report such in an explanatory note immediately following Part 2.

29. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies contain guidance substantially consistent with paragraphs 26 to 28 above.

30. The NAIC Annual Statement Instructions for Health Maintenance Organizations contain guidance substantially consistent with paragraphs 26 to 28 above.

31. The Introduction to the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies provides the following definition of terms used in connection with transactions with affiliates:

> “Arm's-length” Transactions
>
> An “arm's-length” transaction can be defined as a transaction in which a willing buyer and a willing seller, each being reasonably aware of all relevant facts and neither under compulsion to buy or sell, would be willing to participate.
>
> “Affiliate”
>
> An “affiliate” of, or person “affiliated” with a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.
>
> “Control”
>
> The term “control” (including the terms “controlling by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or non-management services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies, representing 10% or more of the voting securities of any other person.

32. The Introduction to the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies provides the following guidance with respect to accounting for assets transferred between affiliates:

> Accounting for Assets Transferred Between Affiliates
>
> Economic vs. Non-economic Gains
>
> An economic transaction is an arm's-length transaction which results in the transfer of risks and rewards of ownership and represents a consummated act thereof, i.e. “permanence.” Such a transaction must represent a bona fide business purpose demonstrable in measurable terms, such as the creation of a tax benefit, a betterment in cash flow position, etc. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction.
>
> A bona fide business purpose would exist, for example, if an asset was transferred in order to create a specific advantage/benefit. The advantage/benefit must inure to the benefit of the insurance company. A bona fide business purpose would not exist if the transaction was initiated

for the purpose of the inflation (deflation) of a particular company's financial statements including effects on the balance sheet or income statement.

Transfer of risks and rewards of ownership - “determining that the risks and other incidents of ownership have been transferred to the buyer requires an examination of the underlying facts and circumstances. The following circumstances may raise the question about the transfer of risks:

1. A continuing involvement by the seller in the transaction or in the assets transferred, such as through the exercise of managerial authority to a degree usually associated with ownership, perhaps in the form of a remarketing agreement or a commitment to operate the property.

2. Absence of significant financial investment by the buyer in the asset transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer.

3. Repayment of debt that constitutes the principal consideration in the transaction dependent on the generation of sufficient funds from the asset transferred.

4. Limitations or restrictions on the purchaser's use of the asset transferred or on the profits from it.

5. Retention of effective control of the asset by the seller.

   The first three items on the list are suggested by the Securities Exchange Commission Staff Accounting Bulletin 30; the last two are found in SEC Accounting Series Release No. 95, “Accounting for Real Estate Transactions where circumstances indicate that profits were not earned at the time the transactions were recorded” .*

   *(Note: From the Accountants' Handbook, 6th edition, Vol. 1, edited by Lee J. Seidler and D. R. Carmichael)

Security swaps of similar issues between or amongst affiliated companies would be considered as a non-economic transaction. Swaps of dissimilar issues accompanied by exchanges of liabilities between or amongst affiliates are considered non-economic transactions.

The appearance of permanence is also an important criterion in establishing the economic substance of a transaction. If subsequent events or transactions reverse the effect of an earlier transaction, the question is raised as to whether economic substance existed in the case of the original transaction. Basically, in order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed.

It is important to note that in today's environment, where many of the transactions are complex and involve great uncertainty, it will be necessary to exercise professional judgment in the evaluation of whether economic substance exists as it is not possible to establish detailed guidelines sufficient to cover the realm of all possible transactions.

In the case of any gain from transfer of securities or other assets to an affiliate where it appears that, within a period beginning 30 days before the date of such transfer and ending 30 days after such date, the company has acquired by transfer from an affiliate, or has entered into a contract or option to acquire, substantially identical securities or assets, then no gain on the transfer to the affiliate shall be recognized in the Annual Statement.

The following is the exception to the 30-day rule:

1. Swaps of repurchased securities. The agreements must be formalized in writing and provide adequate collateral as defined by either statute or security valuation manual.

2. Gains on transfers which involve real estate will not be recognized if transferred back or repurchased within an 18-month period.

General Accounting Guidelines

When accounting for a specific transaction, the following valuation methods should be used. If the transaction involves the transfer of assets not covered by the attached [table] then the following general guidelines should be used:

- Economic based transfers between affiliates should be recorded at prevailing fair market values at the date of the transfer.

- Non-economic based transfers between affiliated insurers should be recorded at the lower of existing book values or prevailing fair market values at the date of transfer.

- Non-economic based transfers between an insurer and a non-insurance affiliate should be recorded at the prevailing fair market value at the date of transfer; however, to the extent that the transfer results in a gain, that gain should be deferred until such time as permanence can be verified.

- Transactions which are designed to avoid statutory accounting practices shall be included as if the insurer continued to own the assets directly instead of through a subsidiary. Therefore, the assets of a subsidiary will be valued as they would constitute lawful investments for the insurer if acquired or held by the insurer. (e.g., transaction dealing with agents' balances, furniture and equipment.)

- Assets may be valued on a different basis if held by a life insurer versus a property and casualty insurer; therefore, a regulator must take this into consideration when using the general guidelines.

- In the absence of specific guidelines or where doubt exists as to the propriety of a special accounting method the Insurance Department of the state of domicile should be consulted.

		TRANSACTION	VALUATION METHOD AFFILIATE NON-ECONOMIC TRANSACTION	ECONOMIC TRANSACTION
1.	Transfer of Bonds			
	a.	Appreciated	Cost (1)/Amortized	Market
	b.	Depreciated	LCM (1)	Market
2.	Transfer of Preferred Stock			
	a.	Sinking Fund	Cost (1)	Market
	b.	Perpetual Preferred Held by Life Co.	Cost (1)	Market
	c.	All others	Market	Market
3.	Transfer of Common Stock		Market	Market
4.	Transfer of Real Estate		Cost	Market

5.	Transfer of Loans or Loan Participations		
	a. Appreciated	Cost	Market
	b. Depreciated	LCM	Market
6.	Intercompany Loans	LCM (2)	Market (2)
7.	Sale/Leaseback	Cost/LCM (3)	Market
8.	Reverse Repurchase Agreements	LCM (2)	Market (2)
9.	Transfer of nonadmitted assets from an insurer to a non-insurer subsidiary	The value of the subsidiary must be adjusted and revalued as if the insurer held the assets.	Market (2)
10.	Transfer of Schedule BA asset	LCM	Market

NOTE: Cost = Book Value

(1) Assumes securities are in good standing or eligible for amortization, otherwise at market.
(2) Based on current market interest rates.
(3) LCM (Lower of Cost or Market) would apply under scenario involving depreciated assets.

33. The Insurance Holding Company System Model Laws, Regulations and Guidelines, which has been adopted by various states, specifies that certain disclosures be made in Form B of an insurer's registration statement (insurers required to file registration statements with the NAIC do so on the format prescribed by the NAIC). Form B instructions are as follows:

> ITEM 5. TRANSACTIONS AND AGREEMENTS
>
> Briefly describe the following agreements in force, and transactions currently outstanding or which have occurred during the last calendar year between the registrant and its affiliates:
>
> a. Loans, other investments, or purchases, sales or exchanges of securities of the affiliates by the Registrant or of the Registrant by its affiliates;
> b. Purchases, sales or exchanges of assets;
> c. Transactions not in the ordinary course of business;
> d. Guarantees or undertakings for the benefit of an affiliate which result in an actual contingent exposure of the Registrant's assets to liability, other than insurance contracts entered into in the ordinary course of the registrant's business;
> e. All management agreements, service contracts and all cost-sharing arrangements;
> f. Reinsurance agreements;
> g. Dividends and other distributions to shareholders;
> h. Consolidated tax allocation agreements; and
> i. Any pledge of the registrant's stock and/or of the stock of any subsidiary or controlling affiliate, for a loan made to any member of the insurance holding company system.
>
> No information need be disclosed if such information is not material for purposes of Section 4 of the Act.
>
> Sales, purchases, exchanges, loans or extensions of credit, investments or guarantees involving one-half of 1% or less of the registrant's admitted assets as of the 31st day of December next preceding shall not be deemed material.
>
> Note: Commissioner may by rule, regulation or order provide otherwise.

The description shall be in a manner as to permit the proper evaluation thereof by the Commissioner, and shall include at least the following: the nature and purpose of the transaction, the nature and amounts of any payments or transfers of assets between the parties, the identity of all parties to the transaction, and relationship of the affiliated parties to the registrant.

34. Section 5 of the Insurance Holding Company System Regulatory Act also contains the following guidance:

(2) The following transactions involving a domestic insurer and any person in its holding company system may not be entered into unless the insurer has notified the commissioner in writing of its intention to enter into the transaction at least thirty (30) days prior thereto, or such shorter period as the commissioner may permit, and the commissioner has not disapproved it within that period.

(a) Sales, purchases, exchanges, loans, extensions of credit, or investments, provided the transactions are equal to or exceed:

(i) With respect to nonlife insurers, the lesser of three percent (3%) of the insurer's admitted assets or twenty-five percent (25%) of surplus as regards policyholders as of the 31st day of December next preceding;

(ii) With respect to life insurers, three percent (3%) of the insurer's admitted assets as of the 31st day of December next preceding;

(b) Loans or extensions of credit to any person who is not an affiliate, where the insurer makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the insurer making the loans or extensions of credit.

35. The NAIC Model Law for HMO Investment Guidelines, contains the following:

Section 3. Excessive Commissions Prohibited—Interest of Officers and Directors.

(2) No such HMO shall knowingly invest in or loan upon any property, directly or indirectly, whether real or personal, in which any officer or director of such HMO has a financial interest, nor shall any such HMO make a loan of any kind to any officer or director of such HMO, except that this Section shall not apply in circumstances where the financial interest of such officer or director is only nominal, trifling or so remote as not to give rise to a conflict of interest. In any case, the Director may approve a transaction between an HMO and its officers or directors under this Section if he is satisfied that (a) the transaction is entered into in good faith for the advantage and benefit of the company, and (b) the amount of the proposed investment or loan does not violate any other provision of this Article nor exceed the reasonable, normal value of the property or the interest which the HMO proposed to acquire, and that the transaction is otherwise fair and reasonable, and (c) the transaction will not adversely affect, to any substantial degree, the liquidity of the company's investments or its ability thereafter to comply with requirements of this Article or the payment of its claims and obligations.

36. The NAIC *Financial Condition Examiners Handbook*, Section I, Part IV, Conducting Examinations*,* contains the following guidance:

a. Affiliates Defined

Affiliates exist when there is a relationship that offers the potential for self-dealing, transactions at less than arm's length, favorable treatment, or the ability to direct the outcome of events differently from what might result in the absence of that relationship.

Some examples of affiliates are:

- A company's affiliates
- Principal owners
- Management (including directors)
- Entities for which investments are accounted for by the equity method
- Pension and profit-sharing trusts managed by or under the trusteeship of management

An affiliate also includes any other person with which the reporting entity may deal if one party controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interests. A third person also is affiliated if it can significantly influence the management or operating policies of the transacting parties or if it has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests.

b. Affiliated Transactions Defined

An affiliated transaction is any direct or indirect transaction between the reporting entity and an affiliate. Affiliated Transactions include transactions between:

- A parent company and its subsidiaries
- Subsidiaries of a common parent
- The reporting entity and:
  (1) Other affiliated businesses
  (2) Management (including directors)
  (3) Principal owners
  (4) Pension and profit-sharing trusts managed by or under the trusteeship of management
  (5) Other parties having the ability to exert significant influence

Generally Accepted Accounting Principles

37. FAS 57 provides the following guidance:

INTRODUCTION

1. The FASB has been asked to provide guidance on disclosures of transactions between related parties.[1] Examples of related party transactions include transactions between (a) a parent company and its subsidiaries; (b) subsidiaries of a common parent; (c) an enterprise and trusts for the benefit of employees, such as pension and profit-sharing trusts that are managed by or under the trusteeship of the enterprise's management; (d) an enterprise and its principal owners, management, or members of their immediate families; and (e) affiliates. Transactions between related parties commonly occur in the normal course of business. Some examples of common types of transactions with related parties are: sales, purchases, and transfers of realty and personal property; services received or furnished, for example, accounting, management, engineering, and legal services; use of property and equipment by lease or otherwise; borrowings and lendings; guarantees; maintenance of bank balances as compensating balances for the benefit of another; intercompany billings based on allocations of common costs; and filings of consolidated tax returns. Transactions between related parties are considered to be related party transactions even though they may not be given accounting recognition. For example, an enterprise may receive services from a related party without charge and not record receipt of the services.

[1] Terms defined in the glossary (Appendix B) are in boldface type the first time they appear in this Statement.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Disclosures

2. Financial statements shall include disclosures of material related party transactions, other than compensation arrangements, expense allowances, and other similar items in the ordinary course of business. However, disclosure of transactions that are eliminated in the preparation of consolidated or combined financial statements is not required in those statements.[2] The disclosures shall include:[3]

a. The nature of the relationship(s) involved

b. A description of the transactions, including transactions to which no amounts or nominal amounts were ascribed, for each of the periods for which income statements are presented, and such other information deemed necessary to an understanding of the effects of the transactions on the financial statements

c. The dollar amounts of transactions for each of the periods for which income statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period

d. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement

3. Transactions involving related parties cannot be presumed to be carried out on an arm's length basis, as the requisite conditions of competitive, free-market dealings may not exist. Representations about transactions with related parties, if made, shall not imply that the related party transactions were consummated on terms equivalent to those that prevail in arm's length transactions unless such representations can be substantiated.

4. If the reporting enterprise and one or more other enterprises are under common ownership or management control and the existence of that control could result in operating results or financial position of the reporting enterprise significantly different from those that would have been obtained if the enterprises were autonomous, the nature of the control relationship shall be disclosed even though there are no transactions between the enterprises.

38. For purposes of FAS 57, certain terms are defined as follows:

a. Affiliate. A party that, directly or indirectly through one or more intermediaries, controls, is controlled by, or is under common control with an enterprise.

b. Control. The possession, direct or indirect, of the power to direct or cause the direction of the management and policies of an enterprise through ownership, by contract, or otherwise.

[2] The requirements of this Statement are applicable to separate financial statements of each or combined groups of each of the following: a parent company, a subsidiary, a corporate joint venture, or a 50-percent-or-less owned investee. However, it is not necessary to duplicate disclosures in a set of separate financial statements that is presented in the financial report of another enterprise (the primary reporting enterprise) if those separate financial statements also are consolidated or combined in a complete set of financial statements and both sets of financial statements are presented in the same financial report.

[3] In some cases, aggregation of similar transactions by type of related party may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed.

c. Immediate family. Family members whom a principal owner or a member of management might control or influence or by whom they might be controlled or influenced because of the family relationship.

d. Management. Persons who are responsible for achieving the objectives of the enterprise and who have the authority to establish policies and make decisions by which those objectives are to be pursued. Management normally includes members of the board of directors, the chief executive officer, chief operating officer, vice presidents in charge of principal business functions (such as sales, administration, or finance), and other persons who perform similar policy making functions. Persons without formal titles also may be members of management.

e. Principal owners. Owners of record or known beneficial owners of more than 10 percent of the voting interests of the enterprise.

f. Related parties. Affiliates of the enterprise; entities for which investments are accounted for by the equity method by the enterprise; trusts for the benefit of employees, such as pension and profit-sharing trusts that are managed by or under the trusteeship of management; principal owners of the enterprise; its management; members of the immediate families of principal owners of the enterprise and its management; and other parties with which the enterprise may deal if one party controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interests. Another party also is a related party if it can significantly influence the management or operating policies of the transacting parties or if it has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests.

39. GAAP literature acknowledges the basic problem of when to use predecessor basis vs. fair value or exchange price in accounting for transfers of noncash assets between related parties. Guidance on accounting for transfers of assets between affiliated companies includes the discussion section of EITF 85-21. This indicates that the SEC staff require transfers of assets between companies under common control or between a parent and its subsidiary be valued at their historical cost in the separate statements of each entity that is a party to the transaction. These views relate primarily to transfers of net assets (as in a business combination) or long-lived assets. The form of consideration, whether cash or other, does not change the method of accounting. Any excess paid over the historical cost is treated as a reduction of equity. Certain excerpts follows:

> The SEC Observer stated that the SEC staff's views on carrying over historical cost to record, in the separate financial statements of each entity, transfers between companies under common control or between a parent and its subsidiary run primarily to transfers of net assets (as in business combination) or long-lived assets. Those views would not normally apply to recurring transactions for which valuation is not in question (such as routine transfers of inventory) in the separate financial statements of each entity that is a party to the transaction.
>
> The Task Force members were not in agreement as to whether new basis accounting is acceptable for privately held companies. One Task Force member indicated that the authoritative literature could be read to support the practice. One Task Force member indicated that a concept of the reporting entity would be helpful. Some Task Force members indicated a need for FASB guidance.

40. EITF 84-39 discusses the transfer of monetary and nonmonetary assets among individuals and entities under common control. Certain excerpts follow:

> ISSUE
> When an asset (for example, real estate) is transferred from an individual to a corporation controlled by that individual in exchange for cash of stock, should the corporation record the transferred property at it fair value at the date of transfer or at its cost to the individual.
>
> EITF DISCUSSION
> The Task Force did not reach a consensus on this issue.
>
> Task Force members noted that diversity in practice in certain specific types of transactions, with some members starting from a presumption that carrying amounts should be adjusted to fair value at the date of transfer, while others preferred no change in carrying amount until an asset leaves the controlled group.

41. Accounting Interpretations of APB Opinion No. 16 (AIN-APB 16, #39) discusses transfers and exchanges between companies under common control:

> Question - Paragraph 5 of APB Opinion No. 16 states the Opinion does not apply to a transfer of net assets or to an exchange of shares between companies under common control. What are some examples of the types of transactions excluded from the Opinion by this provision and what accounting should be applied?
>
> Interpretation - In general, paragraph 5 excludes transfers and exchanges that do not involve outsiders. For example, a parent company may transfer the net assets of a wholly owned subsidiary into the parent company and liquidate the subsidiary, which is a change in legal organization but not a change in the entity. Likewise, a parent may transfer its interest in several partially owned subsidiaries to a new wholly owned subsidiary, which is again a change in legal organization but not in the entity. Also, a parent may exchange its ownership or the net assets of a wholly owned subsidiary for additional shares issued by the parent's partially owned subsidiary, thereby increasing the parent's percentage of ownership in the partially owned subsidiary but leaving all of the existing minority interest outstanding.
>
> None of the above transfers or exchanges is covered by APB Opinion No. 16. The assets and liabilities so transferred would be accounted for at historical cost in a manner similar to that in pooling of interests accounting.
>
> It should be noted, however, that purchase accounting applies when the effect of a transfer or exchange is to acquire all or part of the outstanding shares held by the minority interest of a subsidiary (see paragraph 43). The acquisition of all or part of a minority interest, however acquired, is never considered a transfer or exchange by companies under common control. (See Interpretation No. 26 of APB No. 16, “ Acquisition of Minority Interest.”)

Statutory Issue Paper No. 26

Bonds, Excluding Loan-Backed and Structured Securities

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 26

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance for bonds is contained in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. That guidance also establishes the NAIC's Securities Valuation Office (SVO) as an authority for the valuation of bonds.

2. The purpose of this paper is to establish statutory accounting principles for bonds, excluding loan-backed and structured securities (which are covered in *Issue Paper No. 43—Loan-Backed and Structured Securities* (Issue Paper No. 43)) that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Bonds shall be defined as any securities representing a creditor relationship, whereby there is a fixed schedule for one or more future payments. This definition includes U.S. Treasury securities, U.S. government agency securities, municipal securities, corporate bonds, bank participations, convertible debt, certificates of deposit and commercial paper that have a fixed schedule of payments and a maturity date in excess of one year from the date of acquisition. Loan-backed and structured securities meet this definition, but are excluded from the scope of this issue paper, and are addressed in Issue Paper No. 43. Securities which meet the definition above, but have a maturity date of one year or less from the date of acquisition are addressed in *Issue Paper No. 28—Short-term Investments*. Mortgage loans and other real estate lending activities made in the ordinary course of business meet the definition above, but are not addressed in this issue paper. These types of transactions are addressed in issue papers 37 and 39.

4. Bonds meet the definition of assets as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*, and are admitted assets to the extent they conform to the requirements of this paper.

Acquisitions and Sales

5. A bond acquisition or disposal shall be recorded on the trade date, not the settlement date except for the acquisition of private placement bonds which shall be recorded on the funding date. At acquisition, bonds shall be reported at their cost, including brokerage and other related fees, which cannot exceed the fair market value at the date of acquisition.

6. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses on sales of bonds shall be in accordance with *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized gains and losses on sales of bonds shall be recorded on the trade date, and shall be reported on the net realized capital gains or losses line of the Investment Income section of the Underwriting and Investment Exhibit.

Amortized Cost

7. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond. Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion) shall be amortized to the call or maturity value/date which produces the lowest asset value (yield to worst).

Balance Sheet Amount

8. Bonds shall be valued and reported in accordance with the NAIC Valuations of Securities manual prepared by the Securities Valuation Office (Valuations of Securities manual). For reporting entities that maintain an Asset Valuation Reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair market value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair market value.

Impairment

9. If it is determined that a decline in the fair market value of a bond is other than temporary, the cost basis of the bond shall be written down to fair market value as a new cost basis and the amount of the write down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in fair market value. Future declines in market value which are determined to be other than temporary, shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition. A decline in fair market value which is other than temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value (i.e., amortized cost). This is consistent with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets.*

Income

10. Interest income for any period consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of bonds, and the addition of discount accrual. In accordance with *Issue Paper No. 34—Investment Income Due and Accrued*, investment income shall be reduced for amounts which have been determined to be uncollectible. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

11. A bond may provide for a prepayment penalty or acceleration fee in the event the bond is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

Origination Fees

12. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction such as the private placement of bonds. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the bond consistent with paragraph 7 of this issue paper. Other origination fees shall be recorded in income immediately.

Origination, Acquisition, and Commitment Costs

13. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the bond, consistent with paragraph 5 of this issue paper. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase or commitment to purchase bonds shall be charged to expense when incurred.

Commitment Fees

14. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the bond is issued. If the bond is not issued then the fees shall be recorded as investment income by the reporting entity when the commitment expires. A fee paid to the reporting entity to obtain a commitment to be able to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 7 of this issue paper over the life of the bond as an adjustment to the investment income on the bond. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Loaned Bonds

15. When bonds are loaned, they remain assets of the reporting entity and are not removed from the accounting records as the reporting entity remains the owner of the bonds. When collateral is provided for the general use of the reporting entity, the asset is recorded and the admissibility of the asset is determined as if the reporting entity owned the collateral asset. A liability for the return of that collateral must be established. When collateral not available for the general use of the reporting entity is provided, it should not be recognized as an asset of the reporting entity. When non-cash collateral is provided, the current market value of that collateral must be used to determine adequacy of the collateral held relative to the current market value of the loaned bonds/securities.

Wash Sales

16. When a bond is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales, and shall be accounted for as sales and disclosed as required by paragraph 19. Unless there is a concurrent contract to repurchase or redeem the transferred bond from the transferee, the transferor does not maintain effective control over the bond.

17. For the securities to be substantially the same, the criteria set forth in paragraph 28 of *FASB Statement No. 125*, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125) must be met.

Exchanges and Conversions

18. If a bond is exchanged or converted into other securities, the fair value of the bond surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. If the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the bond surrendered then it shall become the cost basis for the new securities. This is consistent with *Issue Paper No. 73—Nonmonetary Transactions*.

Disclosures

19. The following disclosures shall be made for bonds in the notes to the financial statements:

- Fair values in accordance with *Issue Paper No. 33—Disclosures about Fair Value of Financial Instruments;*

- Concentrations of credit risk in accordance with *Issue Paper No. 27—Disclosures of Information about Financial Instruments with Concentrations of Credit Risk*;
- The basis at which the bonds are stated;
- Amortization method;

  Description of any loaned bonds, including the amount, description of the collateral and whether or not the collateral is restricted;
- Reporting entities shall disclose the following information for wash sales, as defined in paragraph 16, involving transactions for securities with a NAIC designation of 3 or below, or unrated:
  a. A description of the reporting entity's objectives regarding these transactions;
  b. An aggregation of transactions by NAIC Designation 3 or below, or unrated;
  c. The number of transactions involved during the reporting period;
  d. The book value of securities sold;
  e. The cost of securities repurchased;
  f. The realized gains/losses associated with the securities involved.

DISCUSSION

20. The statutory accounting principles described in the summary conclusion section are consistent with current statutory accounting guidance for bonds, except as follows:

- Paragraphs 5 and 6 require bond acquisitions and dispositions to be recorded on the trade date, whereas current statutory guidance is silent.

- Paragraph 9 contains an impairment test that is not contained in the current statutory guidance, but which is considered consistent with the conservatism concept in the Statement of Concepts.

- Paragraph 11 requires that prepayment penalties and acceleration fees received from the liquidation of an investment prior to its maturity date be recorded as investment income. Current statutory accounting guidance allows for prepayment penalties and acceleration fees to be recorded as either capital gains or investment income.

- Paragraph 16 provides guidance on sales and subsequent repurchases of bonds which is intended to prevent "window dressing."

21. This issue paper adopts *AICPA Statement of Position 90-11, Disclosure of Certain Information by Financial Institutions About Debt Securities Held as Assets* and *AICPA Practice Bulletin No. 4*, *Accounting for Foreign Debt/Equity Swaps*. This issue paper rejects the GAAP guidance for debt securities, which is contained in *FASB Statement No. 115*, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115), *FASB Statement No. 91*, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases* (FAS 91), *FASB Emerging Issues Task Force No. 89-18, Divestitures of Certain Investment Securities to an Unregulated Commonly Controlled Entity under FIRREA*, and *FASB Emerging Issues Task Force No. 96-10*, *Impact of Certain Transactions on Held-to-Maturity Classifications Under FASB Statement No. 115*. The primary differences between the statutory accounting principles established in this issue paper and GAAP are as follows:

- FAS 115 requires investments in debt securities to be classified into three categories: held-to-maturity, available-for-sale and trading. Held-to-maturity securities are reported at amortized cost. Available-for-sale are reported at fair value, with unrealized gains or losses reported as a separate component of shareholders' equity. Trading securities are reported at fair value, with unrealized gains or losses included in earnings.

- GAAP does not require reporting of AVR or IMR and requires that realized gains and losses be included in income when realized.

- FAS 91 generally requires amortization of the security premium or discount over the remaining life of the security.

- FAS 91 allows deferral of certain origination costs.

22. This paper is consistent with *Issue Paper No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements* (Issue Paper No. 45), in defining what criteria must be met in order for securities to be considered substantially the same. Issue Paper No. 45 adopts paragraph 28 of FAS 125 and *AICPA Statement of Position 90-3*, *Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position* (SOP 90-3).

23. The statutory accounting principles established in this issue paper, attempt to smooth the effect upon a reporting entity's surplus of fair market value fluctuation of investments held by the reporting entity. This is consistent with the Statement of Concepts which states *"conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results."* Statutory accounting principles for life insurance companies also use the concept of AVR and IMR adjustments to compensate for fair market value fluctuations over time.

Drafting Notes/Comments

- Loan-backed and structured securities are addressed in *Issue Paper No. 43—Loan-Backed and Structured Securities*.
- Repurchase and reverse repurchase agreements are addressed in *Issue Paper No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements*.
- AVR and IMR are addressed in *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.
- Short-term investments are addressed in *Issue Paper No. 28—Short-Term Investments*.
- The value of a CMO special purpose subsidiary is addressed in Issue Paper No. 86 - Securitization.
- Investment income due and accrued is addressed in *Issue Paper No. 34—Investment Income Due and Accrued*.
- Securities not yet valued by the SVO will follow SVO procedures for valuing such securities as being drafted by the SVO as directed by the Invested Asset Working Group of the Valuation of Securities (EX4) Task Force.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

24. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 1, Bonds and Loaned Backed and Structured Securities, states:

> Bonds are obligations issued by business units, governmental units, and certain nonprofit units, and having a fixed schedule for one or more future payments of money. This definition includes commercial paper, negotiable certificates of deposit, repurchase agreements, collateralized mortgage obligations (CMOs), mortgage participation certificates (MPCs), interest-only and principal-only certificates (IOs and POs), and equipment trust certificates. Governmental bonds may be classified as general obligation bonds secured by revenue from a restricted source. Corporate bonds are either secured by a claim to mortgage assets or other specific collateral, or by the general credit of the corporation, i.e., debentures. Such investments may be public issues or private placements. Bonds held for investment generate interest income to the investor. Their sale may result in capital gain or loss.

Bonds that pay interest at a rate greater than that which the market requires of similarly rated securities will sell at a “premium" above the face amount of the bond. Bonds with interest rates below the current market will sell at a "discount" from the face amount.

Authorizations and Limitations

Bonds may be subject to qualitative limitations determined by state regulations. For example, a U.S. Treasury Note may have no investment limitations while a railroad bond may have stringent restrictions, both individual (one particular railroad corporation) and in the aggregate (all railroad bonds).

Valuation

Bonds are generally valued at cost adjusted, i.e., amortized, to bring the value to par at maturity. Except for privately placed issues, cost cannot exceed the market value at the date of acquisition, including brokerage and other related fees. Carrying value should not exceed the call price for any particular issue.

Most bond holdings are subject to amortization under the valuation standards of the National Association of Insurance Commissioners and are to be carried at amortized cost. Bonds that do not qualify for amortization according to the NAIC Valuations of Securities manual are to be carried at the value contained in the manual or at book value, whichever is lower. Bonds not listed in the manual, or obligations listed with no value, require the determination of an acceptable value that can be justified to the appropriate regulatory agency.

The Valuation of Securities Task Force has classified bonds into six categories according to whether the bond can be amortized for establishing the investment value to be used in financial statements. A complete description of the NAIC s classification system, valuation bases to be applied, and the requirements and tests used in the classification of bonds may be obtained by reference to the Valuations of Securities manual, produced by the NAIC.

Most regulatory agencies reserve the privilege of directing the valuation of a specific obligation either not listed in the Valuations of Securities manual or affected by a material financial disclosure subsequent to the annual publication. Investments in foreign securities are accounted for in much the same manner. Procedures for valuation and conversion into U.S. currency are prescribed in the Valuations of Securities manual.

Nonadmitted Bonds

Bond classification as admitted assets varies at the discretion of the states. A bond may be classified as a nonadmitted asset to the extent that it fails a qualitative or quantitative limitation test or is otherwise unauthorized as outlined by the applicable state code. A certain percentage of such investments otherwise not qualifying for investment is commonly permitted by the state codes under a blanket clause or "basket provision" limiting the total quantity of these and other similar investments as a function of net admitted assets or surplus, or both.

For bonds not eligible for amortization, the difference between the amortized (book) value and the association (market) value is treated as a nonadmitted asset.

Premium and Discount

On acquisition, bonds are recorded in the general ledger at their cost. For bonds purchased at a premium, there is to be an annual amortization to reduce the recorded cost to par value. In the case of a bond with a call privilege, the amortized value used should be the lowest value produced by using the maturity date or the call features. The annual amortization of premium is normally accounted for as reduction to interest that has been collected during the year.

For bonds purchased at a discount, where cost is less than par value, there is to be an annual accrual of this discount to increase the ledger value to par value at maturity. The annual accrual of discount is generally accounted for as an addition to interest that has been collected during the year.

For bonds secured by U.S. governmental entities, amortization of premium and accrual of discount may require special handling, and the Valuations of Securities manual should be consulted.

Interest Income

If interest (including contingent interest) on a bond is recorded when received, an adjustment must be made to recognize due and accrued interest as of the reporting date. Interest income for any period consists of interest collected during the period and the change in the due and accrued interest between the beginning and end of the period, plus the adjustments for the accrual of discount, minus adjustment for the amortization of premium, and minus adjustment for interest paid on acquisition of bonds.

Contingent interest represents bondholder income generated through the occurrence of specific economic events in relation to the issuer. For example, contingent interest may become payable upon the attainment by the issuer of a given level of cash flow or income. In may respects, bonds with contingent interest provisions are similar to income bonds. Due and unpaid contingent interest may be recorded as income. The proper accrual of such income does, however, require an analysis of the applicable provisions in the underlying agreement and the verification that the prerequisite conditions have been met.

Commitment and Other Origination Fees

Commitment and other origination fees may arise from the private placement of bonds. Commitment fees are charged by the company to the borrower for promising to make available funds for future borrowing at currently specified interest rates. If the fee is not returnable to the borrower and the bond is not issued, the fee should be taken into income immediately. If the fee is returnable only if the bond is issued, it should not be considered income until it is determined that the bond will not be placed. If it is determined that the bond will be issued, the fee should be deferred and amortized using the interest method over the life of the loan. Other fees intended to compensate the company for interest rate risks associated with the commitment may be built into the interest rates specified and thus, if collected, would be amortized into income over the term of the bond.

Fees charged to borrowers for providing services related to the origination of a private placement should be taken into income immediately only if no portion of the loan is retained by the company. Otherwise, recognition of any fees related to the portion of the loan retained for investment purposes should be deferred until issue and amortized into income using the interest method over the life of the loan. Deferred fee income related to loans originated and retained for resale should be recognized upon sale.

Loaned Bonds or Bonds Subject to Reverse Repurchase Agreements

Where the state of domicile permits such activity, bonds may be loaned or placed under reverse repurchase arrangements with authorized brokers or dealers in securities.

When a bond is loaned, collateral consisting of cash and/or cash equivalent is pledged. The pledged collateral is maintained in an escrow account. The statement will continue to report the insurance company as owner of the bond.

The valuation of this bond will remain unaffected by the loan as long as the amount of the collateral is at least equal to the required amount specified in the Valuations of Securities manual. Failure to hold sufficient collateral may result in the admitted asset value being decreased.

25. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies contains similar guidance.

26. The *Purposes and Procedures Manual of the NAIC Securities Valuation Office* contains the following guidance:

> (B) Corporate Bonds--General Procedure. The analysis to determine an NAIC designation will be made in one of two ways. The first will be the direct use of ratings performed by other recognized rating agencies or organizations. The second will be the use of various security analysis techniques, both quantitative and subjective in nature.
>
> (1) Issuers That Have Securities Rated by Other Recognized Rating Agencies or Organizations.
>
> Ratings of other recognized rating organizations will be translated directly into an NAIC Designation. The SVO staff will have discretionary authority to downgrade ratings of other organizations but not to upgrade. If there are multiple differing ratings the SVO may use the highest rating but may also go lower where indicated. Where one issue of an issuer has a rating, this rating will be used as a benchmark in determining the ratings of other non-rated issues of the same issuer.
>
> A list of the approved agencies and the translation of their ratings into NAIC Designations is presented in Appendix B. To become an NAIC approved rating organization the candidate must submit to the NAIC's Securities Valuation Office proof that it has been designated a "Nationally Recognized Statistical Rating Organization" (NRSRO) by the Securities and Exchange Commission (SEC) of the Government of the United States of America. Such proof will be acceptable to the NAIC for designation as an NAIC approved rating organization. Rating organizations not so recognized by the SEC may be used by the SVO in its day to day operation when rated entities are not rated by an NAIC approved NRSRO and the quality of such ratings is determined to be substantially similar in quality to those of an NAIC approved NRSRO by SVO staff. The SVO may request whatever documentation deemed necessary to make such a determination. Such rating organizations will not, however, be granted NAIC approved rating organization status.
>
> (2) Issuers of Securities That are Not Rated by Any Other Recognized Rating Organization.
>
> The analysis to determine an NAIC Designation will generally be made up of three segments.
>
> (1) The SVO will apply a quantitative financial model to current and past financial statement data to determine a preliminary measure of the relative financial soundness of the issuer. The result should be expressed as a numeric score which can be ranked against other similar scores and these then related to the various NAIC Designations. It is important to emphasize that the result obtained from the model will not be the sole determinant of an NAIC Designation which determination will be subject to the second and third parts of the analysis which follow.
>
> (2) In the second segment of its analysis the SVO staff will review five years of historical financial data (when available), and any projected data made available to it. This review will cover the balance sheet, the income statement, and the statement of cash flows as obtained from the issuer's financial statements as well as the notes thereto. The staff will also review various standard financial ratios. In addition, the analyst will review the auditors opinion. Furthermore, the SVO analyst is expected to review any news media articles relating to the issuer or research reports that are available. The analysis would also include but is not limited to, a detailed review of the issuer's industry and operating environment as

well as the issuer's management/sponsorship, marketing capabilities, and cost structure to determine the extent of the issuer's competitive edge, if any. These characteristics, when viewed in context with the issuer's financial profile, will determine the ability of the company to respond to varying economic scenarios.

The result of the first two foregoing steps will be a judgment by the SVO analyst of the issuer's implied senior unsecured debt paying ability or rating expressed as an NAIC Designation. The ratings of all other securities of the same issuer (including preferred stocks) can be scaled either upwards or downwards based on that securities' relationship to senior unsecured debt in the capital structure as well as the strength of the credit.

(3) The final part of the analysis will focus on factors that are specific to the security under review as opposed to those relevant to the issuer. This will include a review of:

(a) Covenants
(b) Structure
(c) Collateral
(d) Third party financial support or other credit enhancements
(e) Any other factor specific to the security under review

At all times during the analysis the SVO analyst will have complete discretion to extend the investigation to whatever extent deemed necessary in order to arrive at an appropriate NAIC Designation

(C) Corporate Bonds--Special Factors. All bonds of the following types will be subject to the review procedures of Section 2(B), but the following special factors and statement value considerations will be addressed additionally as indicated.

(1) Collateralized Obligations. The ability of any type of collateral to enhance or fully support the contractual provisions of any security will be taken into account by the SVO only if acceptable documentary evidence is provided. This might include, but is not limited to the filing of the SVO's Collateral Loan form where appropriate, the original due diligence package, appraisal reports, valuations of business entities reports or any other relevant supporting information.

(2) Income Bonds that have paid contingent interest in full for the three most recent years and otherwise meeting the standards of review of Section 2(B) shall be valued on the Annual Statement at amortized cost. The method of amortization shall be straight line. Income bonds not meeting these requirements shall be valued on the Annual Statement at market value.

(3) Perpetual Bonds and Demand Notes not in default and otherwise meeting the requirements of Section 2(B) shall be valued on the Annual Statement at original cost by those insurers maintaining an AVR (see Section 6). All other insurers must value these bonds at market value. Any such bond or note will have its normal NAIC Designation followed by the letter C if the security is eligible for cost treatment.

(4) Church Bonds secured by a mortgage on the church property will have an NAIC Designation determined based on the requirements of Section 2(B) and the appraised value of such property. All others will be reviewed on the basis of sufficient cash flow to meet obligations as they mature.

(5) Oil and Gas Loans. Loans made on the basis of collateralized oil and gas revenues will be reviewed taking into account a reputable petroleum engineer's or geologist's estimates of existing reserves and the related oil and gas pay out and loan payment schedules.

(6) Equipment Trust Certificates will be reviewed first on the basis of an annually submitted SVO collateral valuation form and if that is not submitted then on the credit standing of the certificate issuer.

(7) Certificates of Deposit (negotiable and non-negotiable) will be considered under the general provisions of Section 2(B).

(8) Repurchase Agreements. Securities subject to repurchase agreements will have an NAIC Designation determined in accordance with Section 2(B).

(9) Reverse Repurchase Agreements. Securities subject to reverse repurchase agreements will have an NAIC Designation determined in accordance with Section 2(B) if the cash and/or cash equivalents pledged as collateral is equal to 100% or more of the market value of the financed securities as of the date of the statement. If other than identical securities are returned, the transaction is to be treated as an ordinary purchase and sale.

(10) Commercial Paper will be valued under the general procedures of Section 2(B).

(11) Convertible Bonds. Bonds eligible for amortized value will be so valued while bonds not eligible will be valued at the lower of market value or the then existing amortized value.

(12) New Enterprises created either as startup companies or as business combinations of pre-existing business units will be evaluated on the basis of projected income statements and balance sheets since prior figures are either not available or not meaningful. Insurers must submit such projections in order to justify ratings higher than the lowest quality category.

(13) Loaned Securities. Where permitted by an insurer's state of domicile, bonds loaned to others shall be valued in accordance with Section 2(B) if (i) Acceptable Collateral, as hereinafter defined, is pledged as security for the loan and (ii) except as set forth in the following sentence, the Acceptable Collateral pledged as security is, at the inception of the loan, in an amount equal to 102% of the market value of the loaned bonds. In the event that foreign bonds are the subject of the loan and the denomination of the currency of the Acceptable Collateral is other than the denomination of the currency of the loaned foreign bonds, the amount of Acceptable Collateral that shall be pledged shall be an amount equal to 105% of the market value of the loaned bonds. A decline in value of the acceptable collateral or an increase in the value of the loaned bonds during the term of the loan shall not result in the disqualification from valuation in accordance with Section 2(B) if, during the term the loan is outstanding, additional Acceptable Collateral is posted any time the amount of Acceptable Collateral declines to 100% of the market value of the loaned bonds (or 102% of the market value of the loaned bonds if Acceptable Collateral in an amount equal to 105% was required to be posted at the inception of the loan) in an amount equal to the difference between the 102% and 105%, respectively. For purposes of this provision, Acceptable Collateral shall mean cash and cash equivalents and shall also include securities issued by the U.S. Government or its agencies. The market value of loaned bonds shall include accrued interest on such loaned bonds. Any shortfall in the amount of the actual Acceptable Collateral posted and the required 102% or 105%, as applicable, shall be deducted from the otherwise determined statement value.

(14) Debtor in Possession (DIP) Financing. Such financing will not be considered to be equivalent to the prior existing debt of a bankrupt and reorganizing entity. Instead it will be considered for valuation based on its superior claim position,

collateral coverage, cash flow coverage of debt service and other strengths inherent in the structural factors unique to the DIP lending process.

(15) Bonds of Liquidating Corporations. Securities of such entities will be marked to market by all insurers and accorded on NAIC rating of "6". In the absence of an active market or a reliable quotation, the value of such securities will be analytically determined by the SVO staff, or the SVO, at its discretion, may accept a value determined by an independent organization approved by the SVO.

(16) Distressed Bonds trading at less than 25% of par at the date of valuation and which are not original issue deep discount bonds. Such securities will be marked to market by all insurers regardless of whether they are current as to all contractual provisions at the date of valuation.

(17) Pricing of Privately Placed and Illiquid Publicly Traded Bonds In or Near Default. The pricing of privately placed and illiquid publicly traded bonds will be analytically determined by the SVO staff, or the SVO, at its discretion, may accept a value determined by an independent organization approved by the SVO. The pricing of these securities will be dependent on three primary factors: (1) the ultimate recovery value in cents per dollar of par value expected to be received net of all reasonable costs of a workout or bankruptcy proceeding such as fees for accountants, lawyers, bankers, etc. (2) the expected timing of the receipt of such recovery value and (3) a discount rate to be applied to factors one and two that reflects market rates of discount for defaulted bonds in general adjusted for the current degree of uncertainty existing in the recovery amount.

Four states of recovery are generally recognized by the SVO and different discount rates reflecting more or less uncertainty will be used for securities in each state. These rates will vary with market conditions. The states are:

(a) Newly defaulted bonds where maximum uncertainty as to recovery exists.

(b) Defaulted securities where a preliminary plan of reorganization has been put forth for discussion.

(c) Defaulted securities where a generally agreed to but unsigned plan is on the table.

(d) Defaulted securities where a plan has been agreed to by all parties and a payout date has been set. This is the only case in which estimated value close to 100% of par will be achievable.

(18) Loan-backed and Structured Securities. The SVO encourages insurers to obtain ratings for loan-backed and structured securities submitted for an NAIC designation from an NAIC approved NRSRO. For unrated structured securities acquired by conversion i.e., securitization, refer to Section 6(B)(g)(i) for instructions.

(E) Instructions for Completing Schedule D of the NAIC Annual Statement

The following table indicates the appropriate entries to be made in Schedule D of the NAIC Annual Statement for all bonds except income bonds (see Section 2(C)(1)) and perpetual bonds and demand notes (see Section 2(C)(2)).

(1) For Insurers Maintaining an Asset Valuation Reserve (AVR) (see Section 6)

NAIC DESIGNATION COLUMN	AMORTIZED OR INVESTMENT VALUE COLUMN	MARKET VALUE COLUMNS	
		RATE	AMOUNT
1	Amortized Cost	SVO	
2	Amortized Cost	Market	Par Value X Rate
		Rate	or
3	Amortized Cost	if shown	Amortized Cost
		or	if No Rate
4	Amortized Cost	A.V.	Available
5	Amortized Cost	if No Rate	______________

A.V. = Bond has been valued at amortized value and that value should appear in the Market Value Amount Column.

27. The NAIC Annual Statement Instructions require that the notes to the financial statements of the Annual Statements include the following information to be disclosed about invested assets:

2. Basis of Valuation of Invested Assets

   a. Provide a statement of the valuation basis for invested assets, including bonds, stocks, derivative instruments, etc. State the method of amortization of bonds not backed by other loans, loan-backed bonds and structured securities.

Generally Accepted Accounting Principles

28. GAAP guidance is promulgated by FAS 115. Pertinent excerpts are as follows:

Accounting for Certain Investments in Debt and Equity Securities

6. At acquisition, an enterprise shall classify debt and equity securities into one of three categories: held-to-maturity, available-for-sale, or trading. At each reporting date, the appropriateness of the classification shall be reassessed.

Held-to-Maturity Securities

7. Investments in debt securities shall be classified as held-to-maturity and measured at amortized cost in the statement of financial position only if the reporting enterprise has the positive intent and ability to hold those securities to maturity.

Trading Securities and Available-for-Sale Securities

12. Investments in debt securities that are not classified as held-to-maturity and equity securities that have readily determinable fair values shall be classified in one of the following categories and measured at fair value in the statement of financial position:

   a. Trading securities. Securities that are bought and held principally for the purpose of selling them in the near term (thus held for only a short period of time) shall be classified as trading securities. Trading generally reflects active and frequent buying and selling, and trading securities are generally used with the objective of generating profits on short-term differences in price. Mortgage-backed securities that are held for sale in conjunction with mortgage banking activities, as described in FASB Statement No. 65, Accounting for Certain Mortgage Banking Activities, shall be classified as trading securities. (Other mortgage-backed securities not held for sale in conjunction with mortgage banking activities shall be classified based on the criteria in this paragraph and paragraph 7.)

   b. Available-for-sale securities. Investments not classified as trading securities (nor as held-to-maturity securities) shall be classified as available-for-sale securities.

Reporting Changes in Fair Value

13. Unrealized holding gains and losses for trading securities shall be included in earnings. Unrealized holding gains and losses for available-for-sale securities (including those classified as current assets) shall be excluded from earnings and reported as a net amount in a separate component of shareholders' equity until realized. Paragraph 36 of FASB Statement No. 109, Accounting for Income Taxes, provides guidance on reporting the tax effects of unrealized holding gains and losses reported in a separate component of shareholders' equity.

14. Dividend and interest income, including amortization of the premium and discount arising at acquisition, for all three categories of investments in securities shall continue to be included in earnings. This Statement does not affect the methods used for recognizing and measuring the amount of dividend and interest income. Realized gains and losses for securities classified as either available-for-sale or held-to-maturity also shall continue to be reported in earnings.

Impairment of Securities

16. For individual securities classified as either available-for-sale or held-to-maturity, an enterprise shall determine whether a decline in fair value below the amortized cost basis is other than temporary. For example, if it is probable that the investor will be unable to collect all amounts due according to the contractual terms of a debt security not impaired at acquisition, an other-than-temporary impairment shall be considered to have occurred.[4] If the decline in fair value is judged to be other than temporary, the cost basis of the individual security shall be written down to fair value as a new cost basis and the amount of the write-down shall be included in earnings (that is, accounted for as a realized loss). The new cost basis shall not be changed for subsequent recoveries in fair value. Subsequent increases in the fair value of available-for-sale securities shall be included in the separate component of equity pursuant to paragraph 13; subsequent decreases in fair value, if not an other-than-temporary impairment, also shall be included in the separate component of equity.

[4] A decline in the value of a security that is other than temporary is also discussed in AICPA Auditing Interpretation, Evidential Matter for the Carrying Amount of Marketable Securities, which was issued in 1975 and incorporated in Statement on Auditing Standards No. 1, Codification of Auditing Standards and Procedures, as Interpretation 20, and in SEC Staff Accounting Bulletin No.59, Accounting for Noncurrent Marketable Equity Securities.

29. The guidance for the accounting for loan origination costs and commitment fees is contained in FAS 91. Pertinent excerpts are as follows:

Loan Origination Fees and Costs

5. Loan origination fees shall be deferred and recognized over the life of the loan as an adjustment of yield[2] (interest income). Likewise, direct loan origination costs defined in paragraph 6 shall be deferred and recognized as a reduction in the yield of the loan except as set forth in paragraph 14 (for a troubled debt restructuring). Loan origination fees and related direct loan origination costs for a given loan shall be offset and only the net amount shall be deferred and amortized. The practice of recognizing a portion of loan origination fees as revenue in a period to offset all or part of the costs of origination shall no longer be acceptable.

[2] Methods for recognition of deferred fees and direct loan origination costs over the life of the loan as an adjustment of yield are set forth in paragraphs 18-20.

6. Direct loan origination costs of a completed loan shall include only (a) incremental direct costs of loan origination incurred in transactions with independent third parties for that loan and (b) certain costs directly related to specified activities performed by the lender for that loan. Those activities are: evaluating the prospective borrower's financial condition; evaluating and recording guarantees, collateral, and other security arrangements; negotiating loan terms; preparing and processing loan documents; and closing the transaction. The costs directly related to those activities shall include only that portion of the employees' total compensation and payroll-related fringe benefits directly related to time spent performing those activities for that loan and other costs related to those activities that would not have been incurred but for that loan.

7. All other lending-related costs, including costs related to activities performed by the lender for advertising, soliciting potential borrowers, servicing existing loans, and other

ancillary activities related to establishing and monitoring credit policies, supervision, and administration, shall be charged to expense as incurred. Employees' compensation and fringe benefits related to those activities, unsuccessful loan origination efforts, and idle time shall be charged to expense as incurred. Administrative costs, rent, depreciation, and all other occupancy and equipment costs are considered indirect costs and shall be charged to expense as incurred.

Commitment Fees and Costs

8. Except as set forth in subparagraphs (a) and (b) below, fees received for a commitment to originate or purchase a loan or group of loans shall be deferred and, if the commitment is exercised, recognized over the life of the loan as an adjustment of yield or, if the commitment expires unexercised, recognized in income upon expiration of the commitment

   a. If the enterprise's experience with similar arrangements indicates that the likelihood that the commitment will be exercised is remote,[3] the commitment fee shall be recognized over the commitment period on a straight-line basis as service fee income. If the commitment is subsequently exercised during the commitment period, the remaining unamortized commitment fee at the time of exercise shall be recognized over the life of the loan as an adjustment of yield.

   b. If the amount of the commitment fee is determined retrospectively as a percentage of the line of credit available but unused in a previous period, if that percentage nominal in relation to the stated interest rate on any related borrowing, and if that borrowing will bear a market interest rate at the date the loan is made, the commitment fee shall be recognized as service fee income as of the determination date.

9. Direct loan origination costs (described in paragraph 6) incurred to make a commitment to originate a loan shall be offset against any related commitment fee and the net amount recognized as set forth in paragraph 8.

Purchase of a Loan or Group of Loans

15. The initial investment in a purchased loan or group of loans shall include the amount paid to the seller plus any fees paid or less any fees received. The initial investment frequently differs from the related loan's principal amount at the date of purchase. This difference shall be recognized as an adjustment of yield over the life of the loan. All other costs incurred in connection with acquiring purchased loans or committing to purchase loans shall be charged to expense as incurred.

Other

17. Deferred net fees or costs shall not be amortized during periods in which interest income on a loan is not being recognized because of concerns about the realization of loan principal or interest.

Application of the Interest Method and Other Amortization Matters

18. Net fees or costs that are required to be recognized as yield adjustments over the life of the related loan(s) shall be recognized by the interest method except as set forth in

[3] The term remote is used here, consistent with its use in *FASB Statement No. 5, Accounting for Contingencies*, to mean that the likelihood is slight that a loan commitment will be exercised prior to its expiration.

paragraph 20. The objective of the interest method is to arrive at periodic interest income (including recognition of fees and costs) at a constant effective yield on the net investment in the receivable (that is, the principal amount of the receivable adjusted by unamortized fees or costs and purchase premium or discount). The difference between the periodic interest income so determined and the stated interest on the outstanding principal amount of the receivable is the amount of periodic amortization. [6] Under the provisions of this statement, the interest method shall be applied as follows when the stated interest rate is not constant throughout the term of the loan:

a. If the loan's stated interest rate increases during the term of the loan (so that interest accrued under the interest method in early periods would exceed interest at the stated rate), interest income shall not be recognized to the extent that the net investment in the loan would increase to an amount greater than the amount at which the borrower could settle the obligation. Prepayment penalties shall be considered in determining the amount at which the borrower could settle the obligation only to the extent that such penalties are imposed throughout the loan term. (Refer to Appendix B.)

b. If the loan's stated interest rate decreases during the term of the loan, the stated periodic interest received early in the term of the loan would exceed the periodic interest income that is calculated under the interest method. In that circumstance, the excess shall be deferred and recognized in those future periods when the constant effective yield under the interest method exceeds the stated interest rate. (Refer to Appendix B.)

c. If the loan's stated interest rate varies based on future changes in an independent factor, such as an index or rate (for example, the prime rate, the London Interbank Offered Rate (LIBOR), or the U.S. Treasury bill weekly average rate), the calculation of the constant effective yield necessary to recognize fees and costs shall be based either on the factor (the index or rate) that is in effect at the inception of the loan or on the factor as it changes over the life of the loan. [7] (Refer to Appendix B.)

[6] The "interest" method is also described in paragraph 16 *of APB Opinion No. 12, Omnibus Opinion--1967*, in the first sentence of paragraph 15 of *APB Opinion No. 21, Interest on Receivables and Payables*, and in paragraphs 235-239 of FASB Concepts Statement No. 6, Elements of Financial Statements.

[7] A variable rate loan whose initial rate differs from the rate its base factor would produce is also subject to the provisions of paragraphs 18(a) and (b).

19. Except as stated in the following sentence, the calculation of the constant effective yield necessary to apply the interest method shall use the payment terms required by the loan contract, and prepayments of principal shall not be anticipated to shorten the loan term. If the enterprise holds a large number of similar loans for which prepayments are probable and the timing and amount of prepayments can be reasonably estimated, the enterprise may consider estimates of future principal prepayments in the calculation of the constant effective yield necessary to apply the interest method. If the enterprise anticipates prepayments in applying the interest method and a difference arises between the prepayments anticipated and actual prepayments received, the enterprise shall recalculate the effective yield to reflect actual payments to date and anticipated future payments. The net investment in the loans shall be adjusted to the amount that would have existed had the new effective yield been applied since the acquisition of the loans. The investment in the loans shall be adjusted to the new balance with a corresponding charge or credit to interest income. Enterprises that anticipate prepayments shall disclose that policy and the significant assumptions underlying the prepayment

estimates. The practice of recognizing net fees over the estimated average life of a group of loans shall no longer be acceptable. (Refer to Appendix B.)

20. Certain loan agreements provide no scheduled payment terms (demand loans); others provide the borrower with the option to make multiple borrowings up to a specified maximum amount, to repay portions of previous borrowings, and then reborrow under the same contract (revolving lines of credit).

a. For a loan that is payable at the lender's demand, any net fees or costs may be recognized as an adjustment of yield on a straight-line basis over a period that is consistent with (1) the understanding between the borrower and lender or (2) if no understanding exists, the lender's estimate of the period of time over which the loan will remain outstanding; any unamortized amount shall be recognized when the loan is paid in full.

b. For revolving lines of credit (or similar loan arrangements), the net fees or costs shall be recognized in income on a straight-line basis over the period the revolving line of credit is active, assuming that borrowings are outstanding for the maximum term provided in the loan contract.

If the borrower pays all borrowings and cannot reborrow under the contract, any unamortized net fees or costs shall be recognized in income upon payment. The interest method shall be applied to recognize net unamortized fees or costs when the loan agreement provides a schedule for payment and no additional borrowings are provided for under the agreement.[8]

[8] For example, if the loan agreement provides the borrower with the option to convert a one-year revolving line of credit to a five-year term loan, during the term of the revolving line of credit the lender would recognize the net fees or costs as income on a straight-line basis using the combined life of the revolving line of credit and term loan. If the borrower elects to convert the line of credit to a term loan, the lender would recognize the unamortized net fees or costs as an adjustment of yield using the interest method. If the revolving line of credit expires and borrowings are extinguished, the unamortized net fees or costs would be recognized in income upon payment.

30. FAS 125 provides the following guidance:

28. To be substantially the same,[9] the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same)
b. Identical form and type so as to provide the same risks and rights
c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield)
d. Identical contractual interest rates
e. Similar assets as collateral
f. The same aggregate unpaid principal amount or principal amounts within accepted "good delivery" standards for the type of security involved.

[9] In this Statement, the term substantially the same is used consistently with the usage of that term in the *AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position*.

31. *AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position* (SOP 90-3) provides the following guidance:

> .13 To minimize diversity in practice, the AICPA Banking Committee, Savings and Loan Associations Committee, and Stockbrokerage and Investment Banking Committee believe the definition of substantially the same should be narrow. Therefore, the committees have concluded that for debt instruments, including mortgage-backed securities, to be substantially the same, all the following criteria must be met:
>
> a. The debt instruments must have the same primary obligor, except for debt instruments guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and terms of the guarantee must be the same.[1]
>
> b. The debt instruments must be identical in form and type so as to give the same risks and rights to the holder.[2]
>
> c. The debt instruments must bear the identical contractual interest rate.
>
> d. The debt instruments must have the same maturity except for mortgage-backed pass-through and pay-through securities for which the mortgages collateralizing the securities must have similar remaining weighted average maturities (WAMs) that result in approximately the same market yield.[3]
>
> e. Mortgage-backed pass-through and pay through securities must be collateralized by a similar pool of mortgages, such as single-family residential mortgages.
>
> f. The debt instruments must have the same aggregate unpaid principal amounts, except for mortgage-backed pass-through and pay-through securities, where the aggregate principal amounts of the mortgage-backed securities given up and the mortgage-backed securities reacquired must be within the accepted "good delivery" standard for the type of mortgage-backed security involved.[4]
>
> [1] The exchange of pools of single-family loans would not meet this criterion because the mortgages comprising the pool do not have the same primary obligor, and would therefore not be considered substantially the same.
>
> [2] For example, the following exchanges would not meet this criterion: GNMA I securities for GNMA II securities; loans to foreign debtors that are otherwise the same except for different U.S. foreign tax credit benefits (because such differences in the tax receipts associated with the loans result in instruments that vary "in form and type"); commercial paper for redeemable preferred stock.
>
> [3] For example, the exchange of a "fast-pay" GNMA certificate (that is, a certificate with underlying mortgage loans that have a high prepayment record) for a "slow-pay" GNMA certificate would not meet this criterion because differences in the expected remaining lives of the certificates result in different market yields.

[4] Participants in the mortgage-backed securities market have established parameters for what is considered acceptable delivery. These specific standards are defined by the Public Securities Association (PSA) and can be found in Uniform Practices for the Clearance and Settlement of Mortgage-Backed Securities and Other Related Securities, which is published by PSA.

Statutory Issue Paper No. 27

Disclosure of Information about Financial Instruments with Concentration of Credit Risk

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 27

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. In the normal course of business, insurance enterprises enter into transactions involving investment contractual relationships which include but are not limited to time deposits, short-term investments, bonds, preferred stocks, mortgage loans, deposit accounts and notes payable, collectively called financial instruments. Many of these transactions can result in concentrations of credit risks in that significant fluctuations in one area of a financial market could result in material adverse financial consequences to an insurance enterprise. With certain exceptions, current statutory guidance does not require financial statement disclosure of financial instruments with concentration of credit risk. GAAP has specific disclosure requirements for financial instruments which have concentration of credit risk. This issue paper establishes statutory accounting principles for disclosure of financial instruments with concentration of credit risk that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. Except as noted in paragraph 14 of *FASB Statement No. 105*, *Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk* (FAS 105), (included in the Relevant GAAP Guidance section of this Issue Paper), a reporting entity shall disclose all significant concentrations of credit risk arising from all financial instruments whether from an individual or group. Group concentrations of credit risk exist if a number of individuals or groups are engaged in similar activities and have similar economic characteristics that would cause their ability to meet contractual obligations to be similarly affected by changes in economic or other conditions. The following shall be disclosed in the notes to the financial statements about each significant concentration:

a. Information about the (shared) activity, region, or economic characteristic that identifies the concentration

b. The amount of the accounting loss due to credit risk the entity would incur if parties to the financial instruments that make up the concentration failed completely to perform according to the terms of the contracts and the collateral or other security, if any, for the amount due proved to be of no value to the entity

c. The entity's policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity's access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments.

DISCUSSION

3. The conclusion above adopts the provisions of FAS 105 as its relates to financial instruments with concentrations of credit risk (paragraphs 14 and 20). Disclosure of information about financial instruments with off-balance-sheet risk relating to derivative financial instruments is covered in *Issue Paper No. 85—Derivative Instruments* (Issue Paper No. 85) which contains all of the disclosure requirements for derivatives.

4. The Statement of Concepts states that *"Because these basic financial statements cannot be expected to provide all of the information necessary to evaluate an entity's short-term and long-term stability, management must supplement the financial statements with sufficient disclosures (e.g., notes to the financial statements, management's discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided."* Disclosures of financial instruments with concentration of credit risk is consistent with that objective.

5. The following represent examples where disclosure of concentration of credit risk may be warranted. These examples are not intended to be all inclusive.

a. Entities which invest in mortgage loans wherein a substantial portion of the loans are in farms and the debtors' ability to honor the contract is dependent upon the agribusiness economic sector.

b. Entities investing in mortgage loans wherein a substantial portion of the loans are located in one geographic region and the debtors' ability to honor the contract is dependent upon the economic stability of that region.

Drafting Notes/Comments

- Disclosure of information about financial instruments with off-balance-sheet risk is covered in *Issue Paper No. 85—Derivative Instruments*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

6. There is no statutory guidance on disclosures about concentrations of credit risk. However, the NAIC Annual Statement Instructions for Life and Accident and Health and for Property and Casualty Insurance Companies require information about the geographic location of certain investments which provides some information about concentrations of credit risk (e.g. Schedule B on mortgage).

Generally Accepted Accounting Principles

7. FAS 105 discusses disclosure of concentration of credit risk as follows:

> 6. A financial instrument is cash, evidence of an ownership interest in an entity, or a contract that both:
>
> a. Imposes on one entity a contractual obligation[1] (1) to deliver cash or another financial instrument[2] to a second entity or (2) to exchange financial instruments on potentially unfavorable terms with the second entity

[1] Contractual obligations encompass both those that are conditioned on the occurrence of a specified event and those that are not. All contractual obligations that are financial instruments meet the definition of liability set forth in *FASB Concepts Statement No. 6, Elements of Financial Statements*, although some may not be recognized as liabilities in financial statements—may be "off-balance-sheet" —because they fail to meet some other criterion for recognition. For some financial instruments, the obligation is owed to or by a group of entities rather than a single entity.

[2] The use of the term financial instrument in this definition is recursive (because the term financial instrument is included in it), but it is not circular. It requires a chain of contractual obligations that ends with the delivery of cash or an ownership interest in an entity. Any number of obligations to deliver financial instruments can be links in a chain that qualifies a particular contract as a financial instrument.

b. Conveys to that second entity a contractual right[3] (1) to receive cash or another financial instrument from the first entity or (2) to exchange other financial instruments on potentially favorable terms with the first entity.

[3] Contractual rights encompass both those that are conditioned on the occurrence of a specified event and those that are not. All contractual rights that are financial instruments meet the definition of asset set forth in Concepts Statement 6, although some may not be recognized as assets in financial statements—may be "off-balance-sheet"--because they fail to meet some other criterion for recognition. For some financial instruments, the obligation is held by or due from a group of entities rather than a single entity.

7. The risk of accounting loss[4] from a financial instrument includes (a) the possibility that a loss may occur from the failure of another party to perform according to the terms of a contract (credit risk), (b) the possibility that future changes in market prices may make a financial instrument less valuable or more onerous (market risk),[5] and (c) the risk of theft or physical loss. This statement addresses credit and market risk only.

[4] Accounting loss refers to the loss that may have to be recognized due to credit and market risk as a direct result of the rights and obligations of a financial instrument.

[5] A change in market price may occur (for example, for interest-bearing financial instruments) because of changes in general interest rates (interest rate risk), changes in the relationship between general and specific market interest rates (an aspect of credit risk), or changes in the rates of exchange between currencies (foreign exchange risk).

8. Some financial instruments are recognized as assets, and the amount recognized reflects the risk of accounting loss to the entity. A receivable that is recognized and measured at the present value of future cash inflows, discounted at the historical interest rate (often termed amortized cost), is an example: the accounting loss that might arise from that account receivable cannot exceed the amount recognized as an asset in the statement of financial position.[6]

[6] It is possible that an economic loss could exceed that amount if, for example, the current market value of an asset was higher than the amount recognized in the statement of financial position. This Statement, however, does not address that economic loss.

12. This Statement requires disclosure of information about financial instruments that have off-balance-sheet risk and about financial instruments with concentrations of credit risk except as specifically modified by paragraphs 14 and 15. It does not change any requirements for recognition, measurement, or classification of financial instruments in financial statements.

14. The requirements of paragraphs 17, 18, and 20 do not apply to the following financial instruments, whether written or held:

a. Insurance contracts, other than financial guarantees and investment contracts, as discussed in *FASB Statements No. 60, Accounting and Reporting by*

Insurance Enterprises, and *No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*

b. Unconditional purchase obligations subject to the disclosure requirements of *FASB Statement No. 47, Disclosure of Long-Term Obligations*[9]

[9] Unconditional purchase obligations not subject to the requirements of Statement 47 are included in the scope of this Statement. That is, unconditional purchase obligations that require the purchaser to make payment without regard to delivery of the goods or receipt of benefit of the services specified by the contract and are not within the scope of Statement 47 (because they were not negotiated as part of a financing arrangement, for example) are included in the scope of this Statement.

c. Employers' and plans' obligations for pension benefits, postretirement health care and life insurance benefits, employee stock option and stock purchase plans, and other forms of deferred compensation arrangements, as defined in *FASB Statements No. 35, Accounting and Reporting by Defined Benefit Pension Plans, No. 87, Employers' Accounting for Pensions, No. 81, Disclosure of Postretirement Health Care and Life Insurance Benefits, No.43, Accounting for Compensated Absences,* as well as *APB Opinions No. 25, Accounting for Stock Issued to Employees*, and *No. 12, Omnibus Opinion--1967*

d. Financial instruments of a pension plan, including plan assets, when subject to the accounting and reporting requirements of Statement 87.[10]

[10] Financial instruments of a pension plan, other than the obligations for pension benefits, when subject to the accounting and reporting requirements of Statement 35 are included in the scope of this Statement.

e. Substantively extinguished debt subject to the disclosure requirements of *FASB Statement No. 76, Extinguishment of Debt*, and any assets held in trust in connection with an in-substance defeasance of that debt.

16. Generally accepted accounting principles contain specific requirements to disclose information about the financial instruments noted in paragraphs 14 and 15, and this Statement does not change those requirements. For all other financial instruments, the requirements in this Statement are in addition to other disclosure requirements prescribed by generally accepted accounting principles.

Disclosure of Concentrations of Credit Risk of All Financial Instruments

20. Except as noted in paragraph 14, an entity shall disclose all significant concentrations of credit risk arising from all financial instruments, whether from an individual counterparty or groups of counterparties. Group concentrations of credit risk exist if a number of counterparties are engaged in similar activities and have similar economic characteristics that would cause their ability to meet contractual obligations to be similarly affected by changes in economic or other conditions. The following shall be disclosed about each significant concentration:

a. Information about the (shared) activity, region, or economic characteristic that identifies the concentration.

b. The amount of the accounting loss due to credit risk the entity would incur if parties to the financial instruments that make up the concentration failed completely to perform according to the terms of the contracts and the collateral or other security, if any, for the amount due proved to be of no value to the entity.

c. The entity's policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity's access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments.

8. Paragraphs 9, 10, 11, 13, 15, 17, 18, and 19 of FAS 105 have been deleted from this section as they deal with Off-Balance sheet risk which will be addressed in Issue Paper No. 85.

Statutory Issue Paper No. 28

Short-Term Investments

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 2

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Short-term investments are investments which generally are in the form of bonds, commercial paper, money market instruments, repurchase agreements, and collateral and mortgage loans, whose maturity dates (or repurchase dates) at the time of acquisition were one year or less. Current statutory accounting guidance requires short-term investments to be carried in the same manner as similar long-term investments. Any premium or discount is amortized on a straight-line basis through the maturity date of the investment. This is different from GAAP which does not have the classification of short-term investments.

2. The purpose of this issue paper is to define short-term investments and to establish statutory accounting principles and related reporting that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. All investments with remaining maturities (or repurchase dates under repurchase agreements) of one year or less at the time of acquisition (excluding those investments classified as cash equivalents as defined in *Issue Paper No. 2—Definition of Cash* (Issue Paper No. 2)) shall be considered short-term investments. Short-term investments include, but are not limited to, bonds, commercial paper, money market instruments, repurchase agreements, and collateral and mortgage loans which meet the above criteria. Short-term investments shall not include certificates of deposit with contractual maturities of one year or less at the time of acquisition. In accordance with Issue Paper No. 2, these investments shall be classified as cash.

4. All short-term investments shall be accounted for in the same manner as similar long-term investments. Investments in money market funds shall be reported in accordance with the guidance in the Procedures for Valuing Common Stocks and Stock Warrants section of the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*.

5. The following disclosures shall be made for short-term investments in the notes to the financial statements:

a. Fair values in accordance with *Issue Paper No. 33—Disclosures about Fair Value of Financial Instruments;*

b. Concentrations of credit risk in accordance with *Issue Paper No. 27—Disclosure of Information about Financial Instruments with Concentration of Credit Risk*;

c. Basis at which the short-term investments are stated.

DISCUSSION

6. The conclusion above rejects *FASB Statement No. 115*, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115), for those securities which have maturities of one year or less from the date of acquisition. The conclusion above is consistent with existing statutory guidance.

7. The above conclusion requires separate classification of those investments held by a reporting entity which have maturity dates of one year or less at the time of their acquisition from those with maturity dates of over one year at acquisition. The Statement of Concepts states that "*the cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders.*"

8. GAAP classifies securities with original maturities of ninety days or less as cash equivalents and those over ninety days in one of the following categories in accordance with FAS 115: 1) trading; 2) available-for-sale; 3) held-to-maturity. Issue Paper No. 2 defines cash as "*a medium of exchange that a bank will accept for deposit and allow an immediate credit to the depositor's account*." Moreover, statutory accounting guidance does not recognize the GAAP classification of investments contained in FAS 115.

9. Negotiable certificates of deposit with a contractual maturity of one year or less at acquisition will no longer be classified as short-term investments. This change was made to address inconsistencies in the guidance between the Accounting Practices and Procedures Manuals for Property and Casualty Insurance Companies and Life and Accident and Health Insurance Companies (P&C and Life/A&H Accounting Practices and Procedures Manuals) and the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* (SVO Purposes and Procedures). The P&C and Life/A&H Accounting Practices and Procedures Manuals require all nonnegotiable certificates of deposit to be classified as cash and negotiable certificates of deposit to be classified as short-term investments or bonds depending on the length to maturity at acquisition. The SVO Purposes and Procedures requires both negotiable and nonnegotiable certificates of deposit to be submitted to the SVO and valued under the general provisions for valuing bonds.

Drafting Notes/Comments

- Bonds and other long-term investments are addressed in separate issue papers.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

10. Statutory accounting guidance is contained in the P&C and Life/A&H Accounting Practices and Procedures Manuals, Chapter 5, *Cash and Short-term Investments*. Chapter 5 states:

> Short-term Investments
>
> Short-term investments are generally in the form of bonds, commercial paper, money market instruments, repurchase agreements, or collateral and mortgage loans whose maturities (or repurchase dates under repurchase agreements) at time of acquisition were one year or less.
>
> The accounting for short-term investments is the same as for similar long-term investments except that the method of accrual and amortization is always straight line and the assets are always valued at book value or market value.

11. Guidance for investments in money market funds is contained in the SVO Purposes and Procedures. Section 5(A) - Procedures for Valuing Common Stocks and Stock Warrants, states:

Shares of mutual funds, except for certain money market funds as defined by 17 CFR 270.2a-7 under the Investment Company Act of 1940 (15 U.S.C. 80a-1 et seq.) and further defined in section 5(A)(a)(i) and 5(A)(a)(ii), regardless of the types or mix of securities owned (bonds, stock, money market instruments, or other type of investments) by the fund, are considered to be common shares which should be reported on Schedule D-Part 2-Section 2.

(i) A money market fund shall not require a reserve if the fund meets all of the following conditions:

(1) The fund shall maintain a money market fund rating in the highest category from an SVO recognized rating agency; and

(2) The fund shall maintain a constant net asset value per share at all times; and

(3) The Fund shall allow a maximum of seven day redemption of proceeds; and

(4) (a) The fund shall invest 100% of its total assets in U.S. treasury bills, notes, and bonds and collateralized repurchase agreements comprised of those obligations at all times (see Section 5(F) for a list of qualifying Funds), or

(b) The fund shall invest 100% of its total assets in certain securities listed in Section 6(B)(g)(i) and collateralized repurchase agreements comprised of those obligations at all times (see Section 5(G) for a list of qualifying Funds).

(ii) A money market fund shall establish a reserve using the bond class one reserve factor if the fund meets all of the following conditions:

(1) The fund shall invest at least 95% of its total assets in exempt securities listed in Section 6A(a), short-term debt instruments with a maturity of 397 days or less, class one bonds, and collateralized repurchase agreements comprised of those securities at all times (see Section 5(H) for a list of qualifying Funds): and

(2) The fund shall maintain a money market fund rating in the highest category by an SVO approved rating agency: and

(3) The fund shall maintain a constant net asset value per share at all times: and

(4) The fund shall allow a maximum of seven day redemption of proceeds:

(iii) A money market fund which qualifies for reserve exemption pursuant to Section 5(A)(a)(i) or inclusion in the bond class one reserve category pursuant to Section 5(A)(a)(ii) shall be reported on Schedule DA-Part 1.

(iv) In order to qualify for a reserve exemption pursuant to Section 5(A)(a)(i) or inclusion in the bond class one reserve category pursuant to Section 5(A)(a)(ii), a money market fund shall submit documentation on forms provided by the SVO staff. The forms shall include sufficient information to demonstrate compliance with the above requirements.

(v) In order to maintain the qualifications for exemption or inclusion in the bond class one reserve category, the fund shall report annually, current fund information to the SVO staff by November 15. In addition, the fund shall report to the SVO any change in investment policy which requires notice to shareholders.

12. Section 2(C)(7) of the SVO Purposes and Procedures indicates the following requirements for certificates of deposit: "Certificates of Deposit (negotiable and non-negotiable) will be considered under the general provisions of Section 2(B)."

Generally Accepted Accounting Principles

13. GAAP does not make the distinction between short-term and long-term investments. All investments in equity securities that have readily determinable fair values and all investments in debt securities follow FAS 115, which states:

a. Debt and equity securities that the enterprise has the positive intent and ability to hold to maturity are classified as held-to-maturity securities and reported at amortized cost.

b. Debt and equity securities that are bought and held principally for the purpose of selling them in the near term are classified as trading securities and reported at fair value, with unrealized gains and losses included in earnings.

c. Debt and equity securities not classified as either held-to-maturity securities or trading securities are classified as available-for-sale securities and reported at fair value, with unrealized gains and losses excluded from earnings and reported in a separate component of shareholders' equity.

Statutory Issue Paper No. 29

Prepaid Expenses (excluding deferred policy acquisition costs and other underwriting expenses, income taxes and guaranty fund assessments)

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 29

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. A prepaid expense is an amount which has been paid in advance of receiving future economic benefits anticipated by the payment. Current statutory accounting guidance requires prepaid expenses to be recorded as nonadmitted assets. This conflicts with the GAAP treatment which states that prepaid expenses are to be recorded as assets and expensed over the period that the benefits are received from the payment.

2. The purpose of this paper is to establish statutory accounting principles for the accounting for prepaid expenses that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Prepaid expenses generally meet the definition of an asset in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4). Such expenditures also meet the criteria defining nonadmitted assets as specified in Issue Paper No. 4 (i.e. the assets are not readily available to satisfy policyholder obligations). Prepaid expenses shall be reported as nonadmitted assets and charged against unassigned funds (surplus). They shall be amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's capitalization policy, immaterial prepaid expenses may be expensed when purchased.

DISCUSSION

4. The conclusion above is consistent with the definition of nonadmitted assets as noted in Issue Paper No. 4. which defines an asset as "*probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.*" Issue Paper No. 4 further states that an asset that is not readily available to satisfy policyholder obligations shall be reported as a nonadmitted asset. Prepaid expenses meet the definition of a assets as they represent future economic benefits obtained as a result of past transactions. Additionally, prepaid expenses meet the definition of nonadmitted assets because they are not readily available to satisfy policyholder obligations.

Drafting Notes/Comments

- Guaranty fund assessments are addressed in *Issue Paper No. 35—Accounting for Guaranty Fund and Other Assessments.*
- Accounting for income taxes is addressed in *Issue Paper No. 83—Accounting for Income Taxes*.
- Deferred policy acquisition costs and other underwriting expenses are addressed in *Issue Paper No. 71—Policy Acquisition Costs and Commissions*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

5. Chapter 9, *Nonadmitted Assets*, in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies includes "other prepaid expenses" in its list of "Common Examples" of nonadmitted assets. Chapter 9, *Nonadmitted Assets*, in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies contains similar wording.

6. Many states also include prepaid expenses as nonadmitted assets. An example is the Regulations of the Alabama Insurance Department, Regulation No. 18, *Admissibility of Assets*, which states "*Admitted assets, for example, will not include such items as furniture and fixtures, automobiles, supplies, prepaid expenses...*".

7. Some states nonadmit most prepaid expenses but allow particular prepaid expenses to be recorded as admitted assets. An example is the Virginia Insurance Laws, Title 38.2 - Insurance, Chapter 13, *Reports, Reserves and Examination, Insurance Holding Companies*, Article 2. Valuation and Admissibility of Assets which nonadmits "*prepaid and deferred expenses except prepaid property taxes*."

Generally Accepted Accounting Principles

8. *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, Chapter 3, Working Capital*, states:

> 4. For accounting purposes, the term current assets is used to designate cash and other assets or resources commonly identified as those which are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business. Thus the term comprehends in general such resources as...(g) prepaid expenses such as insurance, interest, rents, taxes, unused royalties, current paid advertising service not yet received, and operating supplies.

Statutory Issue Paper No. 30

Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 30

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance pertaining to the valuation of and accounting for common stock is contained in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. That guidance also established the NAIC's Securities Valuation Office (SVO) as the primary authority for the valuation of common stocks. The purpose of this issue paper is to establish statutory accounting principles for common stocks, including those loaned under a securities lending agreement, which are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

2. Accounting for investments in common stock of subsidiaries, controlled or affiliated entities (investments in affiliates) will be addressed in a separate issue paper.

SUMMARY CONCLUSION

3. For purposes of statutory accounting, common stocks (excluding investments in affiliates) are securities which represent a residual ownership in a corporation and shall include:

a. Publicly traded common stocks.

b. Master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York, American, or NASDAQ exchanges.

c. Publicly traded common stock warrants.

d. Shares of mutual funds, except for certain money market funds and Class 1 Bond Funds as designated in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, regardless of the types or mix securities owned by the fund (e.g., bonds, stock, money market instruments, or other type of investments).

e. Common stocks that are not publicly traded.

f. Common stocks that are restricted as to transfer of ownership. Restricted stock shall be defined as a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.

4. Common stocks meet the definition of assets as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this paper.

5. Common stock acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.

6. Dividends on common stock shall be recorded as investment income on the ex-dividend date with a corresponding receivable to be extinguished upon receipt of cash (i.e., dividend income shall be recorded on stocks declared to be ex-dividends on or prior to the statement date). For reporting entities required to maintain an Asset Valuation Reserve (AVR), the accounting for realized capital gains and losses on sales of common stock shall be in accordance with *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (Issue Paper No. 7). For reporting entities not required to maintain an AVR, realized gains and losses on sales of common stock shall be reported as realized gains/losses in the statement of operations.

7. At acquisition, common stocks shall be reported at their cost, including brokerage and other related fees. At each reporting date, investments in common stocks shall be valued and reported in accordance with the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*. In those instances where fair market value is not available from the SVO, it is the responsibility of management to determine market value based on analytical or pricing mechanisms. For reporting entities required to maintain an AVR, the accounting for unrealized capital gains and losses shall be in accordance with Issue Paper No. 7. For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus.

8. For any decline in the fair value of a common stock which is determined to be other than temporary, the common stock shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. For those reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with Issue Paper No. 7. Subsequent fluctuations in market value shall be recorded as unrealized gains or losses. Future declines in market value which are determined to be other than temporary, shall be recorded as realized losses. A decline in fair value which is other than temporary includes situations where a reporting entity has made a decision to sell a security at an amount below its carrying value (association value). This is consistent with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets.*

9. An investor can subscribe for the purchase of stock, but not be required to make payment until a later time. Transactions of this nature are common in the formation of corporations. Common stock acquired under a subscription represents a conditional transaction in a security authorized for issuance but not yet actually issued. Such transactions are settled if and when the actual security is issued and the exchange or National Association of Securities Dealers (NASD) rules that the transactions are to be settled. Common stock acquired under a subscription shall be recorded as an admitted asset when the reporting entity or its designated custodian or transfer agent takes delivery of the security and the security is recorded in the name of the reporting entity or its nominee (i.e., the accounting for such common stock acquisitions shall be on the settlement date).

Loaned Stock

10. When stocks are loaned, they remain assets of the reporting entity and are not removed from the accounting records as the reporting entity remains the owner of the stocks. When collateral is provided for the general use of the reporting entity, the asset is recorded and the admissibility of the asset is determined as if the reporting entity owned the collateral asset. A liability for the return of that collateral must be established. When collateral not available for the general use of the reporting entity is provided, it should not be recognized as an asset of the reporting entity. When non-cash collateral is provided, the

current market value of that collateral must be used to determine adequacy of the collateral held relative to the current market value of the loaned stocks/securities.

Stock Splits, Stock Dividends, Payment in Kind Dividends, and Stock Exchanges

11. Stock splits, stock dividends, payment in kind dividends and stock exchanges shall be accounted for in accordance with *Issue Paper No. 73—Nonmonetary Transactions*.

Disclosures

12. The following disclosures shall be made for common stocks in the notes to the financial statements.

a. Basis at which the common stocks are stated.

b. If the reporting entity has entered into securities lending transactions, its policy for requiring collateral, a description of any loaned common stocks, including the amount, description of the collateral and whether or not the collateral is restricted.

c. A description, as well as the amount, of common stock that is restricted and the nature of the restriction.

DISCUSSION

13. The statutory accounting principles described in paragraphs 3-7 and in paragraph 10 above are consistent with current statutory accounting guidance for common stocks. This issue paper rejects the accounting principles set forth in *FASB Statement No. 115*, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115). The statutory accounting principles described above add additional conservatism to existing statutory guidance by adopting the concept of other than temporary declines and requiring those be charged to realized losses (paragraph 8) and requiring that certain common stock transactions not be recorded until settlement date (paragraph 9).

14. This issue paper adopts paragraphs 9-12, 15, 17, 23-31 and 61-65 of *FASB Statement No. 125*, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125*)* as they relate to common stock. The guidance on loaned securities in this issue paper is drafted under the general rule that securities lending transactions do not meet the criteria for surrender of control necessary to classify the transaction as a sale. If the criteria in paragraph 9 of FAS 125 regarding surrender of control are met, the transaction shall be accounted for by the transferor as a sale of the "loaned" securities.

15. Paragraph 14 of FAS 125 is rejected as it relates to the classifications of securities under FAS 115. FAS 115 was rejected in *Issue Paper No. 26—Bonds, excluding Loan-Backed and Structured Securities*.

16. The statutory accounting principles outlined in the conclusion above are consistent with the concept of recognition in the Statement of Concepts. Pertinent excerpts follow:

> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability becomes questionable.

Drafting Notes/Comments

- Accounting for common stock holdings of subsidiary, controlled and affiliated entities is addressed in *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities*.
- Investment income due and accrued is addressed in *Issue Paper No. 34—Investment Income Due and Accrued*.
- Accounting for the Asset Valuation Reserve (AVR) equity component required for common stock holdings will be addressed in *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.
- Securities not yet valued by the SVO will follow SVO procedures for valuing such securities as being drafted by the SVO as directed by the Invested Asset Working Group of the Valuation of Securities (EX4) Task Force.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

17. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides guidance with respect to common stock (similar guidance is also in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies). Pertinent excerpts are as follows:

> Shares of capital stock represent units of ownership in a corporation, including common and preferred stock, mutual fund shares, transferable savings and loan association shares, warrants, and options to purchase stock. A return on stock held for investment is generally in the form of cash dividends which are paid to the owner. Occasionally, dividends are paid in the form of additional shares of stock. Liquidation of stock investments may give rise to capital gains or losses. (Investment in stock of parents, subsidiaries or affiliates is discussed in Chapter 6.)
>
> Common stockholders are the residual owners of the corporation and assume the ultimate risk associated with ownership up to the limit of their investment. They are usually entitled to voting powers of ownership. At liquidation, their claim to assets is after those of creditors and preferred stockholders. Common stockholders may liquidate their ownership rights in a corporation by selling their shares in the secondary market.
>
> Valuation
>
> Common and preferred stocks are generally required to be reported at the value published in the Valuations of Securities manual published by the NAICs Valuation of Securities Task Force at the end of each year. This value is the subcommittee's determination of "market" for each listed stock.
>
> The valuation of stock purchase warrants, stock purchase options that may be exercised on December 31 of the year for which the annual statement is being prepared, loaned securities, and investments in subsidiaries shall be in accordance with the practices and procedures prescribed by the NAIC and the state of domicile.
>
> Securities not listed in the manual, securities listed with no value because insufficient information for valuation was submitted to the Valuation of Securities Task Force, and restricted stock require the determination of an acceptable value. Insurance companies are required to submit sufficient information on these securities to the NAIC Securities Valuation Office to permit them to determine market value.

Dividends

Dividends are usually recorded in the general ledger on a cash basis. Dividends receivable on qualified shares of stock are generally permitted as admitted assets to the extent that the dividend has been excluded from the determination of the market price of the holding (i.e., on stock selling ex-dividend). Dividends receivable are included in "Investment Income Due and Accrued" in the annual statement. The asset is developed by a determination of the dividend status of each stock investment at the balance sheet date. Thus, dividend income on stock for any period consists of dividends collected during the year and the change in the declared but unpaid dividends between the beginning and end of the period.

The *Valuations of Securities* manual has a complete listing of all stocks that are traded "ex-dividend" at the end of the year. An ex-dividend stock is one in which the issuing company has closed its stock ledger on a certain date and has declared a dividend payable to the stockholder of record, even though the stock may have been sold after the record date but prior to the payment date. The association value of ex-dividend stock includes no value for the dividend since the unpaid dividend does not transfer with ownership of the stock. The listing of ex-dividend stock contains the declared dividend rate for calculating the declared but unpaid dividends that are allowable for each stock owned by the company on the dividend record date.

Loaned Stock

Where the law or regulation of the insurer's state of domicile does not prohibit such activity, stock may be loaned to authorized securities broker/dealer or to authorized financial institutions.

Securities lending is conducted through open-ended agreements, which may be terminated on short notice by the lender or borrower. Securities loans are collateralized by cash and/or cash equivalents, and securities issued by the U.S. Government or its agencies. Securities lending transactions may be negotiated directly between an insurer and a borrower, or indirectly through an insurer's custodian/agent and a borrower.

When stocks are loaned, they remain assets of the insurance company and are not removed from the accounting records as the insurance company remains the owner of the stocks. When cash collateral is provided and it is deposited for the general use of the company, it becomes an asset of the company, and a liability for the return of that collateral must be established.

When non-cash collateral not available for the general use of the company is provided, it should not be recognized as an asset of the company. If balance sheet accounts are used for non-cash collateral control purposes, a contra account should be used to neutralize or zero out the balance sheet account so that no net asset value is reported in the assets of the insurance company. When non-cash collateral is used, current market value of that collateral must be used to determine adequacy of the collateral held relative to the current market value of the loaned stocks/securities.

As stated in the NAIC Valuations of Securities manual, the minimum collateral on securities loaned is 102% of the market value of loaned stocks. The value of collateral will at times exceed or go below 102% of the market value of securities loaned due to daily market fluctuations in both the stocks loaned and collateral. A daily "mark to market" or valuation procedure must be in place to ensure that the market value of the collateral never goes below 100% of the market value of securities loaned and that calls for additional collateral to maintain the 102% minimum which should be made on a timely basis.

If the collateral on stocks is denominated in a different currency than the stocks being loaned, the minimum collateral on these securities loaned is 105% of the market value of loaned stocks as noted in the NAIC Valuations of Securities manual. Again, the same daily valuation procedures noted above must be in place to ensure adequate collateral for stocks loaned.

The valuation of the stocks remain unaffected by the loan as long as the amount of collateral is at least equal to the minimum amounts specified above. Failure to hold sufficient collateral may result in the admitted assets value being decreased by the amount of insufficient collateral.

18. The *Purposes and Procedures Manual of the NAIC Securities Valuation Office* - Section 5 - *Procedures for Valuing Common Stocks and Stock Warrants* contains the following guidance:

(A) Common Stocks of Companies Not Classified as Being Subsidiaries, Controlled or Affiliated, Under Section 5(B).

(a) Association values for publicly traded common stocks and warrants, including, where permitted by law or regulation of an insurer's state of domicile, shares against which exchange traded call options are outstanding, and where the requirements of Section 5(C)(1) are met, shall be equal to market value at date of statement, excepting that, where permitted by law or regulation of an insurer's state of domicile, shares loaned to others shall be valued at the market value at date of statement if the Acceptable Collateral, as hereinafter defined, is pledged as security for the loan and except as set forth in the following sentence, the Acceptable Collateral pledged as security is, at the inception of the loan, in an amount equal to 102% of the market value of the loaned shares. In event that foreign shares are the subject of the loan and the denomination of the currency of the Acceptable Collateral is other than the denomination of the currency of the loaned foreign shares, the amount of Acceptable Collateral which shall be pledged shall be an amount equal to 105% of the market value of the loaned shares. A decline in value of the Acceptable Collateral or an increase in the value of the loaned shares during the term of the loan shall not result in disqualification from valuation in accordance with the above if, during the term the loan is outstanding, additional Acceptable Collateral is posted any time the amount of Acceptable Collateral declines to 100% of the market value of the loaned shares (or 102% of the market value or the loaned shares if Acceptable Collateral in an amount equal to 105% was required to be posted at the inception of the loan) in an amount equal to the difference between the 102% or 105% initially required to be posted and 100% or 102%, respectively. For purpose of this provision, Acceptable Collateral shall mean cash and cash equivalents and shall include securities issued by the U.S. Government or its agencies. Any shortfall in the amount of the actual Acceptable Collateral posted and the required 102% or 105%, as applicable, shall be deducted from the otherwise determined statement value.

Shares of mutual funds, except for certain money market funds as defined by 17 CFR 270.2a-7 under the Investment Company Act of 1940 (15 U.S.C. 80a-1 et seq.) and further defined in section 5(A)(a)(i) and 5(A)(ii), regardless of the types or mix of securities owned (bonds, stock, money market instruments, or other type of investments) by the fund, are considered to be common shares which should be reported on Schedule D-Part 2-Section 2.

(i) A money market fund shall not require a reserve if the fund meets all of the following conditions:

(1) The fund shall maintain a money market fund rating in the highest category from an SVO recognized rating agency; and

(2) The fund shall maintain a constant net asset value per share at all times; and

(3) The Fund shall allow a maximum of seven day redemption of proceeds; and

(4) (a) The fund shall invest 100% of its total assets in U.S. treasury bills, notes, and bonds and collateralized repurchase agreements comprised of those obligations at all times (see Section 5(F) for a list of qualifying Funds), or

(b) The fund shall invest 100% of its total assets in certain securities listed in Section 6(B)(g)(i) and collateralized repurchase agreements comprised of those obligations at all times (see Section 5(G) for a list of qualifying Funds).

(ii) A money market fund shall establish a reserve using the bond class one reserve factor if the fund meets all of the following conditions:

(1) The fund shall invest at least 95% of its total assets in exempt securities listed in Section 6A(a), short-term debt instruments with a maturity of 397 days or less, class one bonds, and collateralized repurchase agreements comprised of those securities at all times (see Section 5(H) for a list of qualifying Funds): and

(2) The fund shall maintain a money market fund rating in the highest category by an SVO approved rating agency: and

(3) The fund shall maintain a constant net asset value per share at all times: and

(4) The fund shall allow a maximum of seven day redemption of proceeds:

(iii) A money market fund which qualifies for reserve exemption pursuant to Section 5(A)(a)(i) or inclusion in the bond class one reserve category pursuant to Section 5(A)(a)(ii) shall be reported on Schedule DA-Part 1.

(iv) In order to qualify for a reserve exemption pursuant to Section 5(A)(a)(i) or inclusion in the bond class one reserve category pursuant to Section 5(A)(a)(ii), a money market fund shall submit documentation on forms provided by the SVO staff. The forms shall include sufficient information to demonstrate compliance with the above requirements.

(v) In order to maintain the qualifications for exemption or inclusion in the bond class one reserve category, the fund shall report annually, current fund information to the SVO staff by November 15. In addition, the fund shall report to the SVO any change in investment policy which requires notice to shareholders.

(b) Association Values for common stocks which are not publicly traded, other than those issued by insurance companies (for which see Section (c) hereunder), shall be determined by the SVO Staff.

(c) Association Values for common stocks which are not publicly traded which are issued by insurance companies will be equal to book value, which shall be calculated as follows: by dividing the amount of its capital and surplus as shown in its last annual statement or subsequent report of examination (excluding from surplus, reserves required by statute and any portion of surplus properly allocable to policyholders, rather than stockholders) less the value (par or redemption value, whichever is the greater) of all of its preferred stock, if any, outstanding, by the number of shares of its common stock issued and outstanding.

(d) The foregoing provisions shall in all cases be subject to the procedures prescribed by state insurance department practices or laws concerning the use of acquisition cost or any other basis for the valuation of stocks of insurance companies.

(B) Common Stocks of Subsidiary, Controlled or Affiliated Companies (*section not included as not relevant to this issue paper*)

(C) Stock Warrants.

(1) Stock Warrants.

All warrants which are exercisable on the date of the Statement shall be valued at Association Value as defined below whether or not physically attached to any other security (See (D), hereunder, for the valuation of warrants exercisable into securities which are restricted as to transferability.)

(a) For publicly traded warrants (other than exchange traded) the Association Value shall be equal to market value.

(b) The Association Value for a warrant having no public market which is currently exercisable into shares of common stock which have no public market shall be the difference resulting from the subtraction from the analytically determined Association Value of the stock of the exercise price for the warrant.

(c) The Association Value for a warrant having no public market which is currently exercisable into shares of common stock which have a counterpart public market but which are themselves restricted shall be the difference resulting from the subtraction from the value of the common shares as determined under the procedures of Section 5(D) below of the exercise price for the warrant.

(d) Warrants having no public market and for which the first exercise date is subsequent to the date of the statement shall have no value for statement purposes.

(D) Common Stocks Having a Public Market Which Are Issued Under an Investment Letter or Are Otherwise Restricted as to Transferability.

Restricted common stocks (which for purposes of this section, are defined as restricted shares of an unaffiliated issuer held for a period of less than three years prior to the date of valuation) shall be valued by insurers in their Annual Statements on a basis which they are prepared to justify to the SVO staff. (Restrictions shall be considered to have expired for common stocks held at least three years prior to the date of valuation, and the regular valuation basis shall apply.) Such values shall be reviewed by the SVO staff as to the reasonableness of the valuation basis used. The results of the SVO staff's review will be made available to insurance departments and upon request to insurers holding said restricted common stocks.

Warrants exercisable into such restricted common stocks will be valued on the same special basis.

All restricted common stocks and warrants exercisable into the same should be appropriately noted in the Annual Statement, as required, in Schedule D- Part 2-Section 2.

Market values, where used in the determination of Association Values carried in the SVO manual, are not intended for use in valuing restricted common stocks, warrants as described in this section. Values for such restricted common stocks, warrants will not be carried in the SVO publication.

(E) Exceptions.

Where required by special conditions the foregoing standards may be varied by the Task Force.

(F) Money Market Funds Filed With The SVO Which Qualify Under Section 5(A)(a)(i)(4)(a)

(listing not included for purposes of this issue paper)

19. Several states have statutes that address valuation of common stocks not listed in the Valuations of Securities manual. In addition, one state clarifies the definition of common stock. See excerpts below:

- Delaware Statutes - Insurance Laws, Title 18 Insurance Code, Part I, Chapter 13 - Investments, Section 1311:

  As used in this section the term "common stock" includes transferable certificates of participation in business trusts.

- Utah Regulations - Utah Administrative Rules, Insurance, R590 Administration, Rule R590-116--Valuation of Assets

  6. Common Stocks.

     a. Common stocks are to be valued at market value. Market value as used for valuation of common stocks means in accordance with the values listed in "Valuation of Securities." For securities which are traded on a registered national securities exchange, but are not listed in that publication, market value may be established at the most recent published trade value. Securities not listed in and not actively traded on a registered national securities exchange shall have a market value in an amount that the insurer can justify to the commissioner.

- Massachusetts Statutes - Insurance Laws, PART I. -- Administration of the Government, TITLE XXII-- Corporations, Chapter 175 -- INSURANCE, Powers and Duties of Commissioner of Insurance, 175:11A - Valuation of securities and other investments

  (A)(1) Investments, shall be valued in accordance with the published valuation standards of the National Association of Insurance Commissioners. Securities investments as to which the National Association of Insurance Commissioners has not published valuation standards in its Valuation of Securities Manual or its successor publication shall be valued as follows:

  (a) All obligations having a fixed term and rate shall, if not in default as to principal and interest, be valued as follows: (i) if purchased at par, at par value; (ii) if purchased above or below par, on the basis of the purchase price adjusted so as to bring the value to par at maturity and so as to yield in the meantime the effective rate of interest at which the purchase was made; or in lieu of such method, according to such accepted method of valuation as is approved by the commissioner, but no such method shall be inconsistent with valuation methods used by insurers in general, or any method currently formulated or approved by the National Association of Insurance Commissioners.

(b) Purchase price shall in no case be taken at a higher figure than the actual market value at the time of purchase, plus actual brokerage, transfer, postage or express charges paid in the acquisition of such securities.

(c) Common, preferred or guaranteed stocks shall be valued at their market value or at the option of the company, they may be valued at purchase price if purchase price is less than market value.

- Florida Statutes - Insurance Laws, TITLE XXXVII-- INSURANCE, Chapter 625 -- Accounting, Investments, and Deposits by Insurers, Part I. Assets and Liabilities, 625.151- Securities valuation

(1) Securities, other than those referred to in §§ 625.141, held by an insurer shall be valued, in the discretion of the department, at their market value, or at their appraised value, or at prices determined by it as representing their fair market value.

- Georgia Regulations, Rules and Regulations of the State of Georgia, TITLE 120. -- Rules of the Comptroller General, 120-2. Insurance Department, Chapter 120-2-5 -- Valuation Procedures and Instructions for Bonds and Stocks, 120-2-5-.01 Establishing Values

(1) Each insurer reporting stocks and bonds as admitted assets in its annual statement shall be responsible for establishing a value for such securities. Except as otherwise provided by law, the procedures for establishing such values where applicable shall be as follows:

(a) Other than the nonadmissible exceptions listed in paragraph (2) of this Rule, values must comply with the rules for valuation contained in the National Association of Insurance Commissioners' Valuation of Securities Task Force publication, Valuations of Securities, for the applicable year.

(b) Securities not listed in the National Association of Insurance Commissioners' Committee on Valuation of Securities publication Valuation of Securities shall have no value, unless, upon application to such Committee on Valuation of Securities and submission of all relevant material required by the committee, and such committee establishes a value for the securities.

Generally Accepted Accounting Principles

20. FAS 115, paragraph 12, provides the following guidance with respect to common stocks:

Investments in debt securities that are not classified as held-to-maturity and equity securities that have readily determinable fair values shall be classified in one of the following categories and measured at fair value in the statement of financial position:

a. Trading securities. Securities that are bought and held principally for the purpose of selling them in the near term (thus held for only a short period of time) shall be classified as trading securities. Trading generally reflects active and frequent buying and selling, and trading securities are generally used with the objective of generating profits on short-term differences in price. (Note: remainder of paragraph not reproduced as not applicable to equity securities)

b. Available-for-sale securities. Investments not classified as trading securities (nor as held-to-maturity securities) shall be classified as available-for-sale securities.

21. Paragraph 13 of FAS 115 discusses reporting changes in fair value and states the following:

Unrealized holding gains and losses for trading securities shall be included in earnings. Unrealized holding gains and losses for available-for-sale securities (including those classified as current assets) shall be excluded from earnings and reported as a net amount in a separate component of shareholders' equity until realized. Paragraph 36 of FASB Statement No. 109, Accounting for Income Taxes, provides guidance on reporting the tax effects of unrealized holding gains and losses reported in a separate component of shareholders' equity.

22. Paragraph 14 of FAS 115 discusses income recognition and states the following:

Dividend and interest income, including amortization of the premium and discount arising at acquisition, for all three categories of investments in securities shall continue to be included in earnings. This Statement does not affect the methods used for recognizing and measuring the amount of dividend and interest income. Realized gains and losses for securities classified as either available-for-sale or held-to-maturity also shall continue to be reported in earnings.

23. Paragraph 16 of FAS 115 discusses impairment of securities and states the following:

For individual securities classified as either available-for-sale or held-to-maturity, an enterprise shall determine whether a decline in fair value below the amortized cost basis is other than temporary. For example, if it is probable that the investor will be unable to collect all amounts due accounting to the contractual terms of a debt security not impaired at acquisition, an other-than-temporary impairment shall be considered to have occurred.[4] If the decline in the fair value is judged to be other than temporary, the cost basis of the individual security shall be written down to fair value as a new cost basis and the amount of the write-down shall be included in earnings (that is, accounted for as a realized loss). The new cost basis shall not be changed for subsequent recoveries in fair value. Subsequent increases in the fair value of available-for-sale securities shall be included in the separate component of equity pursuant to paragraph 13; subsequent decreases in fair value, if not an other-than-temporary impairment, also shall be included in the separate component of equity.

[4] A decline in the value of a security that is other than temporary is also discussed in AICPA Auditing Interpretation, Evidential Matter for the Carrying Amount of Marketable Securities, which was issued in 1975 and incorporated in Statement on Auditing Standards No. 1, Codification of Auditing Standards and Procedures, as Interpretation 20, and in *SEC Staff Accounting Bulletin No. 59, Accounting for Noncurrent Marketable Equity Securities*.

24. FAS 125 provides the following guidance:

Accounting for Transfers and Servicing of Financial Assets

9. A transfer of financial assets (or all or a portion of a financial asset) in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if and only if all of the following conditions are met:

a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (paragraphs 23 and 24).

b. Either (1) each transferee obtains the right—free of conditions that constrain it from taking advantage of that right (paragraph 25)—to pledge or exchange the transferred assets or (2) the transferee is a qualifying special-purpose entity (paragraph 26) and the holders of beneficial interests in that entity have the right—free of conditions that constrain them from taking advantage of that right (paragraph 25)—to pledge or exchange those interests.

c. The transferor does not maintain effective control over the transferred assets through (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 27-29) or (2) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable (paragraph 30).

10. Upon completion of any transfer of financial assets, the transferor shall:

a. Continue to carry in its statement of financial position any retained interest in the transferred assets, including, if applicable, servicing assets (paragraphs 35-41), beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization (paragraphs 47-58), and retained undivided interests (paragraph 33)

b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (paragraphs 31-34).

11. Upon completion[3] of a transfer of assets that satisfies the conditions to be accounted for as a sale (paragraph 9), the transferor (seller) shall:

a. Derecognize all assets sold

b. Recognize all assets obtained and liabilities incurred in consideration as proceeds of the sale, including cash, put or call options held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations), swaps (for example, provisions that convert interest rates from fixed to variable), and servicing liabilities, if applicable (paragraphs 31, 32, and 35-41)

c. Initially measure at fair value assets obtained and liabilities incurred in a sale (paragraphs 42-44) or, if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraphs 45 and 46)

d. Recognize in earnings any gain or loss on the sale.

The transferee shall recognize all assets obtained and any liabilities incurred and initially measure them at fair value (in aggregate, presumptively the price paid).

[3] Although a transfer of securities may not be considered to have reached completion until the settlement date, this Statement does not modify other generally accepted accounting principles, including *FASB Statement No. 35*, *Accounting and Reporting by Defined Benefit Pension Plans*, and AICPA Statements of Position and audit and accounting Guides for certain industries, that require accounting at the trade date for certain contracts to purchase or sell securities.

12. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) does not meet the criteria for a sale in paragraph 9, the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (paragraph 15).

Secured Borrowings and Collateral

15. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (paragraph 12). The accounting for collateral by the debtor (or obligor) and the secured party depends on whether the secured party has taken control over the collateral and on the rights and obligations that result from the collateral arrangement:

a. If (1) the secured party is permitted by contract or custom to sell or repledge the collateral and (2) the debtor does not have the right and ability to redeem the collateral on short notice, for example, by substituting other collateral or terminating the contract, then

(i) The debtor shall reclassify that asset and report that asset in its statement of financial position separately (for example, as securities receivable from broker) from other assets not so encumbered.

(ii) The secured party shall recognize that collateral as its asset, initially measure it at fair value, and also recognize its obligation to return it.

b. If the secured party sells or repledges collateral on terms that do not give it the right and ability to repurchase or redeem the collateral from the transferee on short notice and thus may impair the debtor's right to redeem it, the secured party shall recognize the proceeds from the sale or the asset repledged and its obligation to return the asset to the extent that it has not already recognized them. The sale or repledging of the asset is a transfer subject to the provisions of this Statement.

c. If the debtor defaults under the terms of the secured contract and is no longer entitled to redeem the collateral, it shall derecognize the collateral, and the secured party shall recognize the collateral as its asset to the extent it has not already recognized it and initially measure it at fair value.

d. Otherwise, the debtor shall continue to carry the collateral as its asset, and the secured party shall not recognize the pledged asset.

Disclosures

17. An entity shall disclose the following:

a. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security

b. If debt was considered to be extinguished by in-substance defeasance under the provisions of FASB Statement No. 76, Extinguishment of Debt, prior to the effective date of this Statement, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period so long as that debt remains outstanding

c. If assets are set aside after the effective date of this Statement solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets

d. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value

e. For all servicing assets and servicing liabilities:

(1) The amounts of servicing assets or liabilities recognized and amortized during the period

(2) The fair value of recognized servicing assets and liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value

(3) The risk characteristics of the underlying financial assets used to stratify recognized servicing assets for purposes of measuring impairment in accordance with paragraph 37

(4) The activity in any valuation allowance for impairment of recognized servicing assets—including beginning and ending balances, aggregate additions charged and reductions credited to operations, and aggregate direct write-downs charged against the allowances—for each period for which results of operations are presented.

Isolation beyond the Reach of the Transferor and Its Creditors

23. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its affiliates, except for an affiliate that is a qualifying special-purpose entity designed to make remote the possibility that it would enter bankruptcy or other receivership (paragraph 57.c.).

24. Whether securitizations isolate transferred assets may depend on such factors as whether the securitization is accomplished in one step or two steps (paragraphs 54-58). Many common financial transactions, for example, typical repurchase agreements and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

25. Many transferor-imposed or other conditions on a transferee's contractual right to pledge or exchange a transferred asset constrain a transferee from taking advantage of that right. However, a transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission to sell or pledge that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor generally does not constrain a transferee from pledging or exchanging the asset and, therefore, presumptively does not preclude a transfer containing such a condition from being accounted for as a sale. For example, a prohibition on sale to the transferor's competitor would not constrain the transferee if it were able to sell the transferred assets to a number of other parties; however, it would be a constraint if that competitor were the only potential willing buyer.

Qualifying Special-Purpose Entity

26. A qualifying special-purpose entity[7] must meet both of the following conditions:

a. It is a trust, corporation, or other legal vehicle whose activities are permanently limited by the legal documents establishing the special-purpose entity to:
   (1) Holding title to transferred financial assets
   (2) Issuing beneficial interests (If some of the beneficial interests are in the form of debt securities or equity securities, the transfer of assets is a securitization.)
   (3) Collecting cash proceeds from assets held, reinvesting proceeds in financial instruments pending distribution to holders of beneficial interests, and otherwise servicing the assets held
   (4) Distributing proceeds to the holders of its beneficial interests.

b. It has standing at law distinct from the transferor. Having standing at law depends in part on the nature of the special-purpose entity. For example, generally, under U.S. law, if a transferor of assets to a special-purpose trust holds all of the beneficial interests, it can unilaterally dissolve the trust and thereby reassume control over the individual assets held in the trust, and the transferor "can effectively assign his interest and his creditors can reach it."[8] In that circumstance, the trust has no standing at law, is not distinct, and thus is not a qualifying special-purpose entity.

[7] The description of a special-purpose entity is restrictive. The accounting for transfers of financial assets to special-purpose entities should not be extended to any entity that does not satisfy all of the conditions articulated in this paragraph.

[8] *Scott's Abridgment of the Law on Trusts,* §156 (Little, Brown and Company, 1960), 296.

Agreements That Maintain Effective Control over Transferred Assets

27. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor's effective control over those assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 28).
b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 29).
c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price.
d. The agreement is entered into concurrently with the transfer.

28. To be substantially the same,[9] the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same)
b. Identical form and type so as to provide the same risks and rights
c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield)
d. Identical contractual interest rates
e. Similar assets as collateral
f. The same aggregate unpaid principal amount or principal amounts within accepted "good delivery" standards for the type of security involved.

[9] In this Statement, the term substantially the same is used consistently with the usage of that term in the *AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position*.

29. To be able to repurchase or redeem assets on substantially the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

30. A call option or forward contract that entitles the transferor to repurchase, prior to maturity, transferred assets not readily obtainable elsewhere maintains the transferor's effective control, because it would constrain the transferee from exchanging those assets, unless it is only a cleanup call.

Measurement of Interests Held after a Transfer of Financial Assets

Assets Obtained and Liabilities Incurred as Proceeds

31. The proceeds from a sale of financial assets consist of the cash and any other assets obtained in the transfer less any liabilities incurred. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value, if practicable.

Securities Lending Transactions

61. Securities lending transactions are initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver securities sold. Transferees ("borrowers") of securities generally are required to provide "collateral" to the transferor ("lender") of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities "borrowed." If the "collateral" is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or "rebated" to the transferee. If the "collateral" is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of "collateral" (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash "collateral" impose market and credit risks on the transferor.

62. In some securities lending transactions, the criteria in paragraph 9 are met, including the third criterion. Those transactions shall be accounted for (a) by the transferor as a sale of the "loaned" securities for proceeds consisting of the "collateral"[11] and a forward repurchase commitment and (b) by the transferee as a purchase of the "borrowed" securities in exchange for the "collateral" and a forward resale commitment. During the term of that agreement, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the "collateral" and the forward repurchase commitment.

63. However, many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred assets before their maturity under which the transferor maintains effective control over those assets (paragraphs 27-30). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder is permitted by contract or custom to sell or repledge) received as "collateral" is considered the amount borrowed, the securities "loaned" are considered pledged as collateral against the cash borrowed, and any "rebate" paid to the transferee of securities is interest on the cash the transferor is considered to have borrowed. Collateral provided in securities lending transactions that are accounted for as secured borrowings shall be reported in the statement of financial position like other collateral, as set forth in paragraph 15.

[11] If the “collateral” is a financial asset that the holder is permitted by contract or custom to sell or repledge and the debtor does not have the right and ability to redeem the collateral on short notice, for example, by substituting other collateral or terminating the contract, that financial asset is proceeds of the sale of the “loaned” securities. To the extent that the “collateral” consists of letters of credit or other financial instruments that the holder is not permitted by contract or custom to sell or pledge, a securities lending does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee.

64. The transferor of securities being "loaned" accounts for cash received (or for securities received that may be sold or repledged and were obtained under agreements that are not subject to repurchase or redemption on short notice, for example, by substitution of other collateral or termination of the contract) in the same way whether the transfer is accounted for as a sale or a secured borrowing. The cash (or securities) received shall be recognized as the transferor's asset—as shall investments made with that cash, even if made by agents or in pools with other securities lenders—along with the obligation to return the cash (or securities).

Illustration—Securities Lending Transaction Treated as a Secured Borrowing

65. Accounting for a securities lending transaction treated as a secured borrowing:

Facts

Transferor's carrying amount and fair value of security loaned	$1,000
Cash "Collateral"	1,020
Transferor's return from investing cash collateral at a 5 percent annual rate	5
Transferor's rebate to the borrower at a 4 percent annual rate	4

The loaned securities cannot be redeemed on short notice, for example, by substitution of other collateral. For simplicity, the fair value of the security is assumed not to change during the 35-day term of the transaction.

Journal Entries for the Transferor

At inception:

Cash	1,020	
Payable under securities loan agreements		1,020
To record the receipt of cash collateral		

Securities loaned to broker	1,000	
Securities		1,000
To reclassify loaned securities that cannot be redeemed on short notice		

Money market instrument	1,020	
Cash		1,020
To record investment of cash collateral		

At conclusion:

Cash	1,025	
Interest		5
Money market instrument		1,020
To record results of investment		

Securities	1,000	
Securities loaned to broker		1,000
To record return of security		

Payable under securities loan agreements	1,020	
Interest ("rebate")	4	
Cash		1,024
To record repayment of cash collateral plus interest		

Journal Entries for the Transferee

At inception:

Receivable under securities loan agreements	1,020	
Cash		1,020
To record transfer of cash collateral		

Securities	1,000	
Obligation to return borrowed securities		1,000
To record receipt of borrowed securities that cannot be redeemed on short notice		

At conclusion:

Obligation to return borrowed securities	1,000	
Securities		1,000
To record the return of securities		

Cash	1,024	
Receivable under securities loan agreements		1,020
Interest revenue ("rebate")		4
To record the receipt of cash collateral and rebate interest		

Repurchase Agreements and "Wash Sales"

69. Furthermore, "wash sales" that previously were not recognized if the same financial asset was purchased soon before or after the sale shall be accounted for as sales under this Statement. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

Statutory Issue Paper No. 31

Leasehold Improvements Paid by the Reporting Entity as Lessee

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 19

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance for leasehold improvements is limited and does not give specific guidance as to admissibility. Leasehold improvements are referred to in the real estate section of the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. GAAP guidance allows leasehold improvements to be recorded as assets.

2. This issue paper establishes statutory accounting principles for leasehold improvements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. For statutory accounting purposes, leasehold improvements shall be defined as lessee expenditures that are permanently attached to an asset a reporting entity is leasing under an operating lease.

4. Leasehold improvements that increase the value and enhance the usefulness of the leased asset meet the definition of assets defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted* Assets (Issue Paper No. 4). Such expenditures also meet the criteria defining nonadmitted assets in that same paper (i.e., the asset is not readily marketable and available to satisfy policyholder obligations). Accordingly, such assets shall be reported as nonadmitted assets and charged against surplus and shall be amortized against net income over the shorter of their estimated useful life or the remaining life of the original lease excluding renewal or option periods as defined in *Issue Paper No. 67—Depreciation of Property and Amortization of Leasehold Improvements.* Leasehold improvements that do not meet the definition of an asset shall be charged to expense when acquired.

DISCUSSION

5. Issue Paper No. 4 defines an asset as "*probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events*." Issue Paper No. 4 also states that an asset not readily marketable and available to satisfy policyholder obligations *"shall be recorded as a nonadmitted asset and charged against surplus."* This is consistent with the Statement of Concepts, which states that a reporting entity's "*ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due."* Leasehold improvements meet the definition of an asset in that they provide future economic benefit to the reporting entity. However, because such assets are not readily available to satisfy policyholder obligations (i.e., they will revert to the lessor at the end of the lease term) they are considered nonadmitted assets. This is also consistent with the concept of conservatism included in the Statement of Concepts.

Drafting Notes/Comments

- Accounting for leases is addressed in *Issue Paper No. 22—Leases*.
- Lessors often provide or pay for improvements to leased property; Issue Paper No. 22 requires lessees to consider the value of such concessions and normalize rent revenue and rent expense on operating leases.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

6. Current statutory guidance is in the Accounting Practices and Procedures Manual for Life and Accident and Health and for Property and Casualty Insurance Companies, Chapter 4, Real Estate. Chapter 4 states:

> Because real estate leasehold improvements revert to the lessor at the end of the lease and the lessee receives benefits from the improvements only during the life of the lease, a leasehold improvement is subject to amortization over the lease life.

Generally Accepted Accounting Principles

7. GAAP guidance is very limited other than in *FASB Statement of Financial Accounting Concept No. 6*, *Elements of Financial Statements* (CON 6), which states:

> Most assets presently included in financial statements qualify as assets under the definition in paragraph 25 because they have future economic benefits... Inventories of raw materials, supplies, partially completed products, finished goods, and merchandise likewise obviously fit the definition as do productive resources, such as property, plant, equipment, tools, furnishings, leasehold improvements, natural resource deposits, and patents.

State Regulations

- No additional guidance obtained from state statutes or regulations.

Statutory Issue Paper No. 32

Investments in Preferred Stock (excluding investments in preferred stock of subsidiary, controlled, or affiliated entities)

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 32

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance pertaining to the valuation of and accounting for preferred stock is contained in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. That guidance also established the NAIC's Securities Valuation Office (SVO) as the primary authority for the valuation of preferred stocks. The purpose of this issue paper is to establish statutory accounting principles for preferred stocks, including those loaned under a securities lending agreement, which are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

2. Accounting for investments in preferred stock of subsidiaries, controlled or affiliated entities (investments in affiliates) will be addressed in *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities.*

SUMMARY CONCLUSION

3. For purposes of statutory accounting, preferred stocks (excluding investments in affiliates), which may or may not be publicly traded and may include shares against which exchange traded call options are outstanding, shall include:

a. Redeemable preferred stocks (including mandatory sinking fund preferred stocks and preferred stocks redeemable at the option of the holder).

b. Perpetual preferred stocks including nonredeemable preferred stocks and preferred stock redeemable at the option of the issuer.

Redeemable preferred stock shall be defined as preferred stock that by its terms must be redeemed by the issuing enterprise or is redeemable at the option of the investor. They include mandatory sinking fund preferred stock and payment-in-kind (PIK) preferred stock. Mandatory sinking fund preferred stocks shall be defined as redeemable preferred stock subject to a 100% mandatory sinking fund, annual installments of which will (1) commence not more than 10 years from the date of issue or December 31, 1978, if outstanding on that date; (2) be not less than 2% of the number of shares issued (or outstanding on December 31, 1978, if issued prior to that date); (3) provide for the redemption of the entire issue over a period not longer than 40 years from the date of issue, or December 31, 1978, if outstanding on that date. Redeemable preferred stock which is subject to a 100% mandatory sinking fund, but which do not at date of issue, or December 31, 1978 if outstanding at that time, meet one or more of the other requirements above, shall be considered as mandatory sinking fund preferred stock at the time the deficiency is cured through the passage of time or otherwise. Payment-in-kind (PIK) preferred stocks shall be defined as redeemable preferred stocks on which dividends can be paid in additional securities rather than cash at the option of the issuer. Perpetual preferred stock shall be defined as preferred stock with no redemption or sinking fund features and preferred stock redeemable at the option of the issuer.

4. Preferred stock meets the definition of an asset as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and is an admitted asset to the extent it conforms to the requirements of this paper.

5. At acquisition, preferred stocks shall be reported at their cost, including brokerage and other related fees. Cost shall not exceed market value. Preferred stock acquisitions and dispositions shall be recorded on the trade date, not the settlement date except for private placement preferred stocks which shall be recorded on the funding date.

6. Redeemable preferred stock purchased at a premium shall be amortized to reduce the carrying value to the call or redemption value over the period to the call or earliest redemption date, whichever produces the lowest asset value. Redeemable preferred stock purchased at a discount shall be amortized to increase the carrying value to par value over the period to maturity or the latest redemption date. Amortization shall be calculated using the interest method and shall be reported as increases or decreases in dividends collected during the year.

7. Dividends on preferred stock (whether cumulative or noncumulative) other than mandatorily redeemable preferred stock shall be recorded as investment income on the ex-dividend date with a corresponding receivable to be extinguished upon receipt of cash (i.e., dividend income shall be recorded on preferred stocks declared to be ex-dividend on or prior to the statement date). Dividends on mandatorily redeemable preferred stock shall be accrued, even if not declared, using the interest method to the redemption price over the period ending on the redemption date.

8. For purposes of statutory accounting, preferred stocks shall be valued based on a) the underlying characteristics of the security, b) the quality rating of the security as defined in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* (SVO Purposes and Procedures) and reported in the Valuations of Securities manual published by the NAIC's Valuation of Securities Task Force at the end of each year and c) whether an Asset Valuation Reserve (AVR) is maintained by the reporting entity.

Reporting Entities That Do Not Maintain An AVR

9. Highest-quality or high-quality redeemable preferred stocks (which have characteristics of a debt security) shall be valued at cost or amortized cost. Other redeemable preferred stocks shall be valued at the lower of cost, amortized cost or market value. Highest-quality or high-quality perpetual preferred stocks (which have characteristics of an equity security) shall be valued at market value as reported in Valuations of Securities manual. Other perpetual preferred stock shall be valued at lower of cost or market value.

Reporting Entities That Do Maintain An AVR

10. Highest-quality, high-quality or medium quality redeemable preferred stocks (which have characteristics of a debt security) shall be valued at cost or amortized cost. Other redeemable preferred stocks shall be valued at the lower of cost, amortized cost or market value. Highest-quality, high-quality or medium quality perpetual preferred stocks (which have characteristics of an equity security) shall be valued at cost. Other perpetual preferred stock shall be valued at the lower of cost or market value.

Additional Valuation Guidance Applicable To All Reporting Entities

11. The SVO Purposes and Procedures classifies preferred stocks into six redeemable preferred stock quality categories and into six perpetual preferred stock quality categories. Preferred stocks shall be classified in accordance with the Valuations of Securities manual published by the NAIC's Valuation of Securities Task Force each reporting date. Unrealized gains and losses on perpetual preferred stocks shall be included as a direct credit or charge to surplus.

12. Restricted preferred stock shall be defined as a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the security that can be reasonable expected to qualify for sale within one year is not considered restricted.

13. PIK preferred stocks are considered redeemable preferred stock and shall be recorded initially at cost and accreted to the lower of (1) the call price or (2) par value, measured in either case at the end of the stock dividend period and based on all of the shares expected to be held at the end of that period, including those received as dividends. PIK stocks received as dividends should be recorded at market value. Any cash dividends paid during the stock dividend period on PIK stocks shall be accounted for as a reduction in the investment.

14. For any decline in the fair value of a preferred stock which is determined to be other than temporary, the cost basis of the preferred stock shall be written down to fair market value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. For those reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For perpetual preferred stock, subsequent fluctuations in market value shall be recorded as unrealized gains or losses. Subsequent fluctuations in market value shall be recorded as unrealized gains and losses to the extent that they do not bring the investment above its new cost basis. Future declines in market value which are determined to be other than temporary, shall be recorded as realized losses. For perpetual preferred stock, a decline in fair value which is other than temporary includes situations where an investor has made a decision to sell a security at an amount below its carrying value. This is consistent with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets.* For redeemable preferred stock, when a decline in fair value is determined to be other than temporary, the investment should be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. For redeemable preferred stock, an impairment shall be considered to have occurred if it is probable that the investor will be unable to collect all amounts due according to the contractual terms of the security in effect at the date of acquisition. A decline in fair value which is other than temporary includes situations where an investor has made a decision to sell a security prior to its maturity at an amount below its carrying value (i.e., amortized cost).

15. A reporting entity can subscribe for the purchase of stock, but not be required to make payment until a later time. Transactions of this nature are common in the formation of corporations. Preferred stock acquired under a subscription represents a conditional transaction in a security authorized for issuance but not yet actually issued. Such transactions are settled if and when the actual security is issued and the exchange or National Association of Securities Dealers (NASD) rules that the transactions are to be settled. Preferred stock acquired under a subscription shall be recorded as an admitted asset when the reporting entity or its designated custodian or transfer agent takes delivery of the security and the security is recorded in the name of the reporting entity or its nominee, (i.e., the accounting for such preferred stock acquisitions shall be on the settlement date).

Loaned Preferred Stock

16. When preferred stocks are loaned, they remain assets of the reporting entity and are not removed from the accounting records as the reporting entity remains the owner of the stocks. When collateral is provided for the general use of the reporting entity, the asset is recorded and the admissibility of the asset is determined as if the reporting entity owned the collateral asset. A liability for the return of that collateral must be established. When collateral not available for the general use of the reporting entity is provided, it should not be recognized as an asset of the reporting entity. When non-cash collateral is provided, the current market value of that collateral must be used to determine adequacy of the collateral held relative to the current market value of the loaned stocks/securities.

Wash Sales

17. When preferred stock is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales, and shall be accounted for as sales and disclosed as required by paragraph 20. Unless there is a concurrent contract to repurchase or redeem the transferred preferred stock from the transferee, the transferor does not maintain effective control over the preferred stock.

18. For the securities to be substantially the same, the criteria set forth in paragraph 28 of *FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125) must be met.

Exchanges and Conversions

19. If preferred stock is exchanged or converted into other securities, the fair value of the preferred stock surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. If the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the preferred stock surrendered then it shall become the cost basis for the new securities. This treatment is consistent with *Issue Paper No. 73—Nonmonetary Transactions*.

Disclosures

20. The following disclosures shall be made for all preferred stocks in the notes to the financial statements:

a. Fair values in accordance with *Issue Paper No. 33—Disclosures about Fair Value of Financial Instruments;*

b. Concentrations of credit risk in accordance with *Issue Paper No. 27—Disclosure of Information about Financial Instruments with Concentrations of Credit Risk*;

c. Basis at which the preferred stocks are stated;

d. Description of any loaned preferred stock, including the amount, description of the collateral and whether or not the collateral is restricted;

e. A description, as well as the amount, of preferred stock that is restricted and the nature of the restriction.

f. Reporting entities shall disclose the following information for wash sales, as defined in paragraph 17, involving transactions for securities with a NAIC designation of 3 or below, or unrated:

1. A description of the reporting entity's objectives regarding these transactions;
2. An aggregation of transactions by NAIC Designation 3 or below, or unrated;
3. The number of transactions involved during the reporting period;
4. The book value of securities sold;
5. The cost of securities repurchased;
6. The realized gains/losses associated with the securities involved.

DISCUSSION

21. The statutory accounting principles described above do not recognize the GAAP accounting principles for valuation set forth in *FASB Statement No. 115*, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115); therefore, this issue paper rejects FAS 115.

22. The statutory accounting principles described above are consistent with current statutory accounting guidance for preferred stocks except as follows:

a. Specific guidelines for PIK preferred stocks are not included in current statutory guidance.

b. Specific guidelines for stock subscriptions are not included in current statutory guidance.

c. Specific guidelines for collateral deposited related to restricted stock that has been loaned are not included in current statutory guidance.

d. Specific guidelines for wash sales, other than transactions between affiliates, are not included in current statutory guidance.

23. This issue paper adopts paragraphs 9-12, 15, 17, 23-31 and 61-65 of *FASB Statement No. 125*, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125*)* as they relate to preferred stock. The guidance on loaned securities in this issue paper is drafted under the general rule that securities lending transactions do not meet the criteria for surrender of control necessary to classify the transaction as a sale. If the criteria in paragraph 9 of FAS 125 regarding surrender of control are met, the transaction shall be accounted for by the transferor as a sale of the "loaned" securities.

24. Paragraph 14 of FAS 125 is rejected as it relates to classifications of securities under FAS 115. FAS 115 was rejected in *Issue Paper No. 26—Bonds, excluding Loan-Backed and Structured Securities* (Issue Paper No. 26). This issue paper rejects *FASB Emerging Issues Task Force No. 86-32, Early Extinguishment of a Subsidiary's Mandatorily Redeemable Preferred Stock.*

25. The statutory accounting principle outlined in the conclusion above accounts for preferred stocks based on the underlying characteristics of the securities and takes into consideration whether an Asset Valuation Reserve is maintained. This is consistent with the statutory accounting principles established in Issue Paper No. 26 and *Issue Paper No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities).* Under the statutory principles outlined in the conclusion above, preferred stocks with underlying characteristics of a debt security are valued similar to bonds and preferred stocks with underlying characteristics of an equity instrument are valued similar to common stocks (except for reporting entities that maintain an AVR, where they are valued at cost). This is consistent with the Statement of Concepts which states that *"The regulator's need for meaningful,*

comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles."

Drafting Notes/Comments

- Accounting for preferred stock holdings of subsidiary, controlled and affiliated companies is addressed in *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities*.
- Investment income due and accrued is addressed in *Issue Paper No. 34—Investment Income Due and Accrued*.
- Accounting for the Asset Valuation Reserve (AVR) default component required for preferred stock holdings is addressed in *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.
- Securities not yet valued by the SVO will follow SVO procedures for valuing such securities as being drafted by the SVO as directed by the Invested Asset Working Group of the Valuation of Securities (EX4) Task Force.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

26. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides guidance with respect to preferred stock (similar guidance is also in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies). Pertinent excerpts are as follows:

> Shares of capital stock represent units of ownership in a corporation, including common and preferred stock, mutual fund shares, transferable savings and loan association shares, warrants, and options to purchase stock. A return on stock held for investment is generally in the form of cash dividends which are paid to the owner. Occasionally, dividends are paid in the form of additional shares of stock. Liquidation of stock investments may give rise to capital gains or losses. (Investment in stock of parents, subsidiaries or affiliates is discussed in Chapter 6.)
>
> Common stockholders are the residual owners of the corporation and assume the ultimate risk associated with ownership up to the limit of their investment. They are usually entitled to voting powers of ownership. At liquidation, their claim to assets is after those of creditors and preferred stockholders. Common stockholders may liquidate their ownership rights in a corporation by selling their shares in the secondary market.
>
> Preferred stock is a corporate financing method embodying features of common stock and debt. Preferred stockholders have a prior claim to common stockholders on income and assets, but rank below creditors. Ownership of preferred stock usually does not include voting privileges. Numerous options may be designed into the issue including call features, cumulative dividend entitlements, and earnings participation. Generally the dividend rate on preferred stock is determined at issue and does not reflect variations in earnings of the issuer.
>
> Valuation
> Common and preferred stocks are generally required to be reported at the value published in the Valuations of Securities manual published by the NAIC's Valuation of Securities Task Force at the end of each year. This value is the subcommittee's determination of "market" for each listed stock.
>
> Preferred stocks in good standing subject to a 100% mandatory sinking fund shall be carried at cost, unless the company owned the preferred stock on Dec, 31, 1964, in which case the company may have the option of reporting them either at the association value on that date or at company cost. Preferred stock that is not in good standing is to be reported at the lower of cost or association value.

The valuation of stock purchase warrants, stock purchase options that may be exercised on December 31 of the year for which the annual statement is being prepared, loaned securities, and investments in subsidiaries shall be in accordance with the practices and procedures prescribed by the NAIC and the state of domicile.

Securities not listed in the manual, securities listed with no value because insufficient information for valuation was submitted to the Valuation of Securities Task Force, and restricted stock require the determination of an acceptable value. Insurance companies are required to submit sufficient information on these securities to the NAIC Securities Valuation Office to permit them to determine market value.

Dividends
Dividends are usually recorded in the general ledger on a cash basis. Dividends receivable on qualified shares of stock are generally permitted as admitted assets to the extent that the dividend has been excluded from the determination of the market price of the holding (i.e., on stock selling ex-dividend). Dividends receivable are included in "Investment Income Due and Accrued" in the annual statement. The asset is developed by a determination of the dividend status of each stock investment at the balance sheet date. Thus, dividend income on stock for any period consists of dividends collected during the year and the change in the declared but unpaid dividends between the beginning and end of the period.

The *Valuation of Securities* manual has a complete listing of all stocks that are traded "ex-dividend" at the end of the year. An ex-dividend stock is one in which the issuing company has closed its stock ledger on a certain date and has declared a dividend payable to the stockholder of record, even though the stock may have been sold after the record date but prior to the payment date. The association value of ex-dividend stock includes no value for the dividend since the unpaid dividend does not transfer with ownership of the stock. The listing of ex-dividend stock contains the declared dividend rate for calculating the declared but unpaid dividends that are allowable for each stock owned by the company on the dividend record date.

Loaned Stock
Where the law or regulation of the insurer's state of domicile does not prohibit such activity, stock may be loaned to authorized securities broker/dealers or to authorized financial institutions.

Securities lending is conducted through open-ended agreements, which may be terminated on short notice by the lender or borrower. Securities loans are collateralized by cash and/or cash equivalents, and securities issued by the U.S. Government or its agencies. Securities lending transactions may be negotiated directly between an insurer and a borrower, or indirectly through an insurer's custodian/agent and a borrower.

When stocks are loaned, they remain assets of the insurance company and are not removed from the accounting records as the insurance company remains the owner of the stocks. When cash collateral is provided and it is deposited for the general use of the company, it becomes an asset of the company, and a liability for the return of that collateral must be established.

When non-cash collateral not available for the general use of the company is provided, it should not be recognized as an asset of the company. If balance sheet accounts are used for non-cash collateral control purposes, a contra account should be used to neutralize or zero out the balance sheet account so that no net asset value is reported in the assets of the insurance company. When non-cash collateral is used, current market value of that collateral must be used to determine adequacy of the collateral held relative to the current market value of the loaned stocks/securities.

As stated in the NAIC Valuations of Securities manual, the minimum collateral on securities loaned is 102% of the market value of loaned stocks. The value of collateral will at times exceed or go below 102% of the market value of securities loaned due to daily market fluctuations in both the stocks loaned and collateral. A daily "mark to market" or valuation procedure must be in place to ensure that the market value of the collateral never goes below 100% of the market value of securities loaned and that calls for additional collateral to maintain the 102% minimum which should be made on a timely basis.

If the collateral on stocks is denominated in a different currency than the stocks being loaned, the minimum collateral on these securities loaned is 105% of the market value of loaned stocks as noted in the NAIC Valuations of Securities manual. Again, the same daily valuation procedures noted above must be in place to ensure adequate collateral for stocks loaned.

The valuation of the stocks remain unaffected by the loan as long as the amount of collateral is at least equal to the minimum amounts specified above. Failure to hold sufficient collateral may result in the admitted assets value being decreased by the amount of insufficient collateral.

27. The *Purposes and Procedures Manual of the NAIC Securities Valuation Office* - Section 3 - Procedures for Determining NAIC Designations for Preferred Stocks contains the following guidance:

(A) **Purpose** The purpose of assigning an NAIC Designations P1-6 and PSF 1-6 is to determine the appropriate values to be entered in Schedule D and the AVR.

(B) **General Procedures** For the purpose of analysis, preferred stocks are divided into two categories, perpetual and mandatory sinking fund preferred stocks. Perpetual preferreds are those which do not have any sinking fund provisions. Mandatory sinking fund preferred stock shall include those issues subject to a 100% mandatory sinking fund, annual installments of which will: (1) commence not more than 10 years from the date of issue or December 31, 1978, if outstanding on that date; (2) be not less than 2½% of the number of shares issued (or outstanding on December 31, 1978, if issued prior to that date); (3) provide for the redemption of the entire issue over a period not longer than 40 years from the date of issue, or December 31, 1978, if outstanding on that date. “Mandatory sinking fund preferred stock” that is subject to a 100% mandatory sinking fund, but that does not at date of issue, or December 31, 1978 if outstanding at that time, meet one or more of the other requirements of this Section, may qualify at such time as the deficiency is cured through the passage of time, or otherwise.

The analysis to determine an NAIC designation will be made in one of two ways. The first will be the direct use of ratings performed by other recognized rating agencies or organizations. The second will be the use of various security analysis techniques, both quantitative and subjective in nature.

(1) Issuers Which Have Securities Rated by Other Recognized Rating Agencies or Organizations.

Ratings of other recognized organizations will be translated directly into an NAIC Designation. The SVO staff will have discretionary authority to downgrade ratings of other organizations but not to upgrade. If there are multiple differing ratings the SVO may use the highest rating but may also go lower where indicated. Where one issue of an issuer has a rating, this rating will be used as a benchmark in determining the ratings of other non rated issues of the same issuer.

A list of the approved agencies and the translation of their rating into NAIC Designations is presented in Appendix B. To become an NAIC approved rating organization the candidate must apply to the NAIC’s Securities Valuation Office and file written documentation similar to that detailed in Section 2(B)(1) and an explanation of how their rating scale translates into the NAIC rating system.

(2) Issuers of Securities Which are Not Rated by Any Other Recognized Rating Organization.

The implied senior unsecured debt rating of any issuer will be used to determine how an issuer's preferred stock will be rated. Preferreds will in general be given a rating grade equal to that of the real or implied most junior level of debt. For example, if senior unsecured debt is rated or has an implied rating of 3 then the subordinated debt of this issuer would be rated 4 and the preferred stock would also be rated a 4. Whether a preferred will be rated high quality or not will depend upon how much debt precedes it in the capital structure and how well both interest and preferred dividends are covered by earnings. All preferred dividends and sinking fund requirements must have been paid for the last three years for any preferred to be rated P-5, PSF-5 or higher.

(C) Special Factors.

(1) Market Values for Privately Placed Preferred Stock. In determining a price for a directly placed preferred, the SVO staff will first look for a publicly traded comparable preferred stock. (i.e. one with similar basic characteristics) of the same issuer and use the yield from that issue to price the private issue. If no comparable issues are available, the staff will use the yields from Moody's Investors Services indices of preferred yields as of the close of the week preceding December 31.

(2) Preferred stocks of 100% owned insurance subsidiaries will be valued in the same manner as common stock of subsidiaries.

(3) Loaned Securities.

Where permitted by law or regulation of an insurer's state of domicile, preferred stocks loaned to others shall be valued in accordance with Section 3(B) at date of statement if the Acceptable Collateral, as hereinafter defined, is pledged as security for the loan and except as set forth in the following sentence, the Acceptable Collateral pledged as security is, at the inception of the loan, in an amount equal to 102% of the market value of the loaned shares. In event that foreign shares are the subject of the loan and the denomination of the currency of the Acceptable Collateral is other than the denomination of the currency of the loaned foreign shares, the amount of Acceptable Collateral which shall be pledged shall be an amount equal to 105% of the market value of the loaned shares. A decline in value of the Acceptable Collateral or an increase in the value of the loaned shares during the term of the loan shall not result in disqualification from valuation in accordance with the above if, during the term the loan is outstanding, additional Acceptable Collateral is posted any time the amount of Acceptable Collateral declines to 100% of the market value of the loaned shares (or 102% of the market value or the loaned shares if Acceptable Collateral in an amount equal to 105% was required to be posted at the inception of the loan) in an amount equal to the difference between the 102% or 105% initially required to be posted and 100% or 102%, respectively. For purpose of this provision, Acceptable Collateral shall mean cash and cash equivalents and shall include securities issued by the U.S. Government or its agencies. Any shortfall in the amount of the actual Acceptable Collateral posted and the required 102% or 105%, as applicable, shall be deducted from the otherwise determined statement value.

(4) Other Limited Life Preferred Shares.

Some examples of these are: Dutch Auction Rate Preferred Shares (DARTS), Fixed Rate Adjustable Preferred Stock (FRAPS), Stated Term Auction Preferred Shares (STRAPS), Fixed Rate Exchangeable Preferred Stock (FREPS), Marketed Auction Preferred Shares (MAPS), Stated Rate Auction Preferred

Shares (STAR), Share Adjusted Broker Remarketed Shares (SABRES). These shares will qualify to be valued at cost for companies maintaining an Asset Valuation Reserve and cost or amortized cost for all others as long as an “PSF 1 or 2,” “High Quality” designation, is maintained in both cases.

(D) Instructions for Completing Schedule D of the NAIC Year End Annual Statement.

The following tables indicate the appropriate entries to be entered in Schedule D Part 2-Section 1 of the NAIC Annual Statement for all preferred stocks.

(1) For Insurers Maintaining an Asset Valuation Reserve (AVR) (See Section 5)

NAIC DESIGNATION COLUMN	STATEMENT VALUE COLUMN	MARKET VALUE COLUMNS	
		RATE	AMOUNT
PSF-1 Thru PSF-3	Cost or Amortized Cost	SVO Market Rate	Par Value X Rate
PSF-4 Thru PSF6	Lower of Cost, Amortized Cost, or Market Value	SVO Market Rate	Par Value X Rate
P-1 Thru P-3	Cost	SVO Market Rate	Par Value X Rate
P-4 Thru P-6	Lower of Cost or Market Value	SVO Market Rate	Par Value X Rate

(2) For Insurers Not Maintaining an Asset Valuation Reserve (AVR)

NAIC DESIGNATION COLUMN	STATEMENT VALUE COLUMN	MARKET VALUE COLUMNS	
		RATE	AMOUNT
PSF-1 Thru PSF-2	Cost or Amortized Cost	SVO Market Rate	Par Value X Rate
PSF-3 Thru PSF6	Lower of Cost, Amortized Cost, or Market Value	SVO Market Rate	Par Value X Rate
P-1 Thru P-2	Market Value	SVO Market Rate	Par Value X Rate
P-3 Thru P-6	Lower of Cost or Market Value	SVO Market Rate	Par Value X Rate

Note: The quality ratings are defined in the SVO Purpose and Procedures as follows:

P-1	Highest quality perpetual preferred stock
P-2	High quality perpetual preferred stock
P-3	Medium quality perpetual preferred stock
P-4	Low quality perpetual preferred stock
P-5	Lower quality perpetual preferred stock
P-6	Lowest quality perpetual preferred stock

PSF1	Highest quality sinking fund or limited life preferred stock
PSF2	High quality sinking fund or limited life preferred stock
PSF3	Medium quality sinking fund or limited life preferred stock
PSF4	Low quality sinking fund or limited life preferred stock
PSF5	Lower quality sinking fund or limited life preferred stock
PSF6	Lowest quality sinking fund or limited life preferred stock

28. Several states have statutes that address valuation of preferred stocks. See excerpts below:

- Utah Regulations - Utah Administrative Rules, Insurance, R590 Administration, Rule R590-116--Valuation of Assets

  5. Preferred and Guaranteed Stocks.

     a. Preferred or guaranteed stocks in good standing are to be valued at cost by companies which are maintaining a mandatory securities valuation reserve. Companies not maintaining a mandatory securities valuation reserve shall value such stocks at market value.

     b. Preferred or guaranteed stocks not in good standing are to be valued at market value.

     c. Market value as used for valuation of preferred or guaranteed stocks means in accordance with the values listed in "Valuation of Securities." For securities which are traded on a registered national securities exchange, but are not listed in that publication, market value may be established at the most recent published trade value. Securities not listed and not actively traded on a major stock exchange shall have a market value in an amount that the insurer can justify to the commissioner.

     d. Preferred or guaranteed stocks of insurance subsidiaries are to be valued in accordance with the requirements of Section 31A-17-401(3)(a), U.C.A., and Section (4)(B) of this rule.

- Massachusetts Statutes - Insurance Laws, PART I. -- Administration of the Government, TITLE XXII-- Corporations, Chapter 175 -- INSURANCE, Powers and Duties of Commissioner of Insurance, 175:11A - Valuation of securities and other investments

  (A)(1) Investments, shall be valued in accordance with the published valuation standards of the National Association of Insurance Commissioners. Securities investments as to which the National Association of Insurance Commissioners has not published valuation standards in its Valuation of Securities Manual or its successor publication shall be valued as follows:

  (a) All obligations having a fixed term and rate shall, if not in default as to principal and interest, be valued as follows: (I) if purchased at par, at par value; (ii) if purchased above or below par, on the basis of the purchase price adjusted so as to bring the value to par at maturity and so as to yield in the meantime the effective rate of interest at which the purchase was made; or in lieu of such method, according to such accepted method of valuation as is approved by the commissioner, but no such method shall be inconsistent with valuation methods used by insurers in general, or any method currently formulated or approved by the National Association of Insurance Commissioners.

  (b) Purchase price shall in no case be taken at a higher figure than the actual market value at the time of purchase, plus actual brokerage, transfer, postage or express charges paid in the acquisition of such securities.

  (c) Common, preferred or guaranteed stocks shall be valued at their market value or at the option of the company, they may be valued at purchase price if purchase price is less than market value.

- Florida Statutes - Insurance Laws, TITLE XXXVII-- INSURANCE, Chapter 625 -- Accounting, Investments, and Deposits by Insurers, Part I. Assets and Liabilities, 625.151- Securities valuation

(1) Securities, other than those referred to in º 625.141, held by an insurer shall be valued, in the discretion of the department, at their market value, or at their appraised value, or at prices determined by it as representing their fair market value.

- Georgia Regulations, Rules and Regulations of the State of Georgia, TITLE 120. -- Rules of the Comptroller General, 120-2. Insurance Department, Chapter 120-2-5 -- Valuation Procedures and Instructions for Bonds and Stocks, 120-2-5-.01 Establishing Values

  (1) Each insurer reporting stocks and bonds as admitted assets in its annual statement shall be responsible for establishing a value for such securities. Except as otherwise provided by law, the procedures for establishing such values where applicable shall be as follows:

  (a) Other than the nonadmissible exceptions listed in paragraph 2 of this Rule, values must comply with the rules for valuation contained in the National Association of Insurance Commissioners' Valuation of Securities Task Force publication, Valuation of Securities, for the applicable year.

  (b) Securities not listed in the National Association of Insurance Commissioners' Committee on Valuation of Securities publication Valuation of Securities shall have no value, unless, upon application to such Committee on Valuation of Securities and submission of all relevant material required by the committee, and such committee establishes a value for the securities.

Generally Accepted Accounting Principles

29. GAAP guidance is promulgated by FAS 115. Pertinent excerpts are as follows:

Accounting for Certain Investments in Debt and Equity Securities

6. At acquisition, an enterprise shall classify debt and equity securities into one of three categories: held-to-maturity, available-for-sale, or trading. At each reporting date, the appropriateness of the classification shall be reassessed.

Held-to-Maturity Securities

7. Investments in debt securities shall be classified as held-to-maturity and measured at amortized cost in the statement of financial position only if the reporting enterprise has the positive intent and ability to hold those securities to maturity.

12. Investments in debt securities that are not classified as held-to-maturity and equity securities that have readily determinable fair values shall be classified in one of the following categories and measured at fair value in the statement of financial position:

a. Trading securities. Securities that are bought and held principally for the purpose of selling them in the near term (thus held for only a short period of time) shall be classified as trading securities. Trading generally reflects active and frequent buying and selling, and trading securities are generally used with the objective of generating profits on short-term differences in price. (Note: remainder of paragraph not reproduced as not applicable to preferred stock)

b. Available-for-sale securities. Investments not classified as trading securities (nor as held-to-maturity securities) shall be classified as available-for-sale securities.

13. Unrealized holding gains and losses for trading securities shall be included in earnings. Unrealized holding gains and losses for available-for-sale securities (including those classified as current assets) shall be excluded from earnings and reported as a net amount in a separate component of shareholders' equity until realized. Paragraph 36 of FASB Statement No. 109, Accounting for Income Taxes, provides guidance on reporting the tax effects of unrealized holding gains and losses reported in a separate component of shareholders' equity.

14. Dividend and interest income, including amortization of the premium and discount arising at acquisition, for all three categories of investments in securities shall continue to be included in earnings. This Statement does not affect the methods used for recognizing and measuring the amount of dividend and interest income. Realized gains and losses for securities classified as either available-for-sale or held-to-maturity also shall continue to be reported in earnings.

16. For individual securities classified as either available-for-sale or held-to-maturity, an enterprise shall determine whether a decline in fair value below the amortized cost basis is other than temporary. For example, if it is probable that the investor will be unable to collect all amounts due accounting to the contractual terms of a debt security not impaired at acquisition, an other-than-temporary impairment shall be considered to have occurred.[4] If the decline in the fair value is judged to be other than temporary, the cost basis of the individual security shall be written down to fair value as a new cost basis and the amount of the write-down shall be included in earnings (that is, accounted for as a realized loss). The new cost basis shall not be changed for subsequent recoveries in fair value. Subsequent increases in the fair value of available-for-sale securities shall be included in the separate component of equity pursuant to paragraph 13; subsequent decreases in fair value, if not an other-than-temporary impairment, also shall be included in the separate component of equity.

----

[4] A decline in the value of a security that is other than temporary is also discussed in AICPA Auditing Interpretation, Evidential Matter for the Carrying Amount of Marketable Securities, which was issued in 1975 and incorporated in Statement on Auditing Standards No. 1, Codification of Auditing Standards and Procedures, as Interpretation 20, and in SEC Staff Accounting Bulletin No. 59, Accounting for Noncurrent Marketable Equity Securities.

----

30. FAS 125 provides the following guidance:

Accounting for Transfers and Servicing of Financial Assets

9. A transfer of financial assets (or all or a portion of a financial asset) in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if and only if all of the following conditions are met:

a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (paragraphs 23 and 24).

b. Either (1) each transferee obtains the right—free of conditions that constrain it from taking advantage of that right (paragraph 25)—to pledge or exchange the transferred assets or (2) the transferee is a qualifying special-purpose entity (paragraph 26) and the holders of beneficial interests in that entity have the right—free of conditions that constrain them from taking advantage of that right (paragraph 25)—to pledge or exchange those interests.

c. The transferor does not maintain effective control over the transferred assets through (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 27-29) or (2) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable (paragraph 30).

10. Upon completion of any transfer of financial assets, the transferor shall:

a. Continue to carry in its statement of financial position any retained interest in the transferred assets, including, if applicable, servicing assets (paragraphs 35-41), beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization (paragraphs 47-58), and retained undivided interests (paragraph 33)

b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (paragraphs 31-34).

11. Upon completion[3] of a transfer of assets that satisfies the conditions to be accounted for as a sale (paragraph 9), the transferor (seller) shall:

a. Derecognize all assets sold

b. Recognize all assets obtained and liabilities incurred in consideration as proceeds of the sale, including cash, put or call options held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations), swaps (for example, provisions that convert interest rates from fixed to variable), and servicing liabilities, if applicable (paragraphs 31, 32, and 35-41)

c. Initially measure at fair value assets obtained and liabilities incurred in a sale (paragraphs 42-44) or, if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraphs 45 and 46)

d . Recognize in earnings any gain or loss on the sale.

The transferee shall recognize all assets obtained and any liabilities incurred and initially measure them at fair value (in aggregate, presumptively the price paid).

----

[3] Although a transfer of securities may not be considered to have reached completion until the settlement date, this Statement does not modify other generally accepted accounting principles, including *FASB Statement No. 35, Accounting and Reporting by Defined Benefit Pension Plans*, and AICPA Statements of Position and audit and accounting Guides for certain industries, that require accounting at the trade date for certain contracts to purchase or sell securities.

----

12. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) does not meet the criteria for a sale in paragraph 9, the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (paragraph 15).

Secured Borrowings and Collateral

15. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (paragraph 12). The accounting for collateral by the debtor (or obligor) and the secured party depends on whether the secured party has taken control over the collateral and on the rights and obligations that result from the collateral arrangement:

a. If (1) the secured party is permitted by contract or custom to sell or repledge the collateral and (2) the debtor does not have the right and ability to redeem the collateral on short notice, for example, by substituting other collateral or terminating the contract, then

(i) The debtor shall reclassify that asset and report that asset in its statement of financial position separately (for example, as securities receivable from broker) from other assets not so encumbered.

(ii) The secured party shall recognize that collateral as its asset, initially measure it at fair value, and also recognize its obligation to return it.

b. If the secured party sells or repledges collateral on terms that do not give it the right and ability to repurchase or redeem the collateral from the transferee on short notice and thus may impair the debtor's right to redeem it, the secured party shall recognize the proceeds from the sale or the asset repledged and its obligation to return the asset to the extent that it has not already recognized them. The sale or repledging of the asset is a transfer subject to the provisions of this Statement.

c. If the debtor defaults under the terms of the secured contract and is no longer entitled to redeem the collateral, it shall derecognize the collateral, and the secured party shall recognize the collateral as its asset to the extent it has not already recognized it and initially measure it at fair value.

d. Otherwise, the debtor shall continue to carry the collateral as its asset, and the secured party shall not recognize the pledged asset.

Disclosures

17. An entity shall disclose the following:

a. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security

b. If debt was considered to be extinguished by in-substance defeasance under the provisions of FASB Statement No. 76, Extinguishment of Debt, prior to the effective date of this Statement, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period so long as that debt remains outstanding

c. If assets are set aside after the effective date of this Statement solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets

d. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value

e. For all servicing assets and servicing liabilities:

(1) The amounts of servicing assets or liabilities recognized and amortized during the period

(2) The fair value of recognized servicing assets and liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value

(3) The risk characteristics of the underlying financial assets used to stratify recognized servicing assets for purposes of measuring impairment in accordance with paragraph 37

(4) The activity in any valuation allowance for impairment of recognized servicing assets—including beginning and ending balances, aggregate additions charged and reductions credited to operations, and aggregate direct write-downs charged against the allowances—for each period for which results of operations are presented.

Isolation beyond the Reach of the Transferor and Its Creditors

23. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the

transferor or any of its affiliates, except for an affiliate that is a qualifying special-purpose entity designed to make remote the possibility that it would enter bankruptcy or other receivership (paragraph 57.c.).

24. Whether securitizations isolate transferred assets may depend on such factors as whether the securitization is accomplished in one step or two steps (paragraphs 54-58). Many common financial transactions, for example, typical repurchase agreements and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

25. Many transferor-imposed or other conditions on a transferee's contractual right to pledge or exchange a transferred asset constrain a transferee from taking advantage of that right. However, a transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission to sell or pledge that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor generally does not constrain a transferee from pledging or exchanging the asset and, therefore, presumptively does not preclude a transfer containing such a condition from being accounted for as a sale. For example, a prohibition on sale to the transferor’s competitor would not constrain the transferee if it were able to sell the transferred assets to a number of other parties; however, it would be a constraint if that competitor were the only potential willing buyer.

Qualifying Special-Purpose Entity

26. A qualifying special-purpose entity[7] must meet both of the following conditions:

a. It is a trust, corporation, or other legal vehicle whose activities are permanently limited by the legal documents establishing the special-purpose entity to:

(1) Holding title to transferred financial assets

(2) Issuing beneficial interests (If some of the beneficial interests are in the form of debt securities or equity securities, the transfer of assets is a securitization.)

(3) Collecting cash proceeds from assets held, reinvesting proceeds in financial instruments pending distribution to holders of beneficial interests, and otherwise servicing the assets held

(4) Distributing proceeds to the holders of its beneficial interests.

b. It has standing at law distinct from the transferor. Having standing at law depends in part on the nature of the special-purpose entity. For example, generally, under U.S. law, if a transferor of assets to a special-purpose trust holds all of the beneficial interests, it can unilaterally dissolve the trust and thereby reassume control over the individual assets held in the trust, and the transferor "can effectively assign his interest and his creditors can reach it."[8] In that circumstance, the trust has no standing at law, is not distinct, and thus is not a qualifying special-purpose entity.

----

[7] The description of a special-purpose entity is restrictive. The accounting for transfers of financial assets to special-purpose entities should not be extended to any entity that does not satisfy all of the conditions articulated in this paragraph.

[8] *Scott’s Abridgment of the Law on Trusts,* §156 (Little, Brown and Company, 1960), 296.

Agreements That Maintain Effective Control over Transferred Assets

27. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor’s effective control over those

assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 28).
b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 29).
c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price.
d. The agreement is entered into concurrently with the transfer.

28. To be substantially the same,[9] the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same)
b. Identical form and type so as to provide the same risks and rights
c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield)
d. Identical contractual interest rates
e. Similar assets as collateral
f. The same aggregate unpaid principal amount or principal amounts within accepted “good delivery” standards for the type of security involved.

----

[9] In this Statement, the term *substantially the same* is used consistently with the usage of that term in the AICPA Statement of Position 90-3, *Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position.*

----

29. To be able to repurchase or redeem assets on substantially the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

30. A call option or forward contract that entitles the transferor to repurchase, prior to maturity, transferred assets not readily obtainable elsewhere maintains the transferor's effective control, because it would constrain the transferee from exchanging those assets, unless it is only a cleanup call.

Measurement of Interests Held after a Transfer of Financial Assets

Assets Obtained and Liabilities Incurred as Proceeds

31. The proceeds from a sale of financial assets consist of the cash and any other assets obtained in the transfer less any liabilities incurred. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value, if practicable.

Securities Lending Transactions

61. Securities lending transactions are initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver

securities sold. Transferees ("borrowers") of securities generally are required to provide "collateral" to the transferor ("lender") of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities "borrowed." If the "collateral" is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or "rebated" to the transferee. If the "collateral" is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of "collateral" (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash "collateral" impose market and credit risks on the transferor.

62. In some securities lending transactions, the criteria in paragraph 9 are met, including the third criterion. Those transactions shall be accounted for (a) by the transferor as a sale of the "loaned" securities for proceeds consisting of the "collateral"[11] and a forward repurchase commitment and (b) by the transferee as a purchase of the "borrowed" securities in exchange for the "collateral" and a forward resale commitment. During the term of that agreement, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the "collateral" and the forward repurchase commitment.

----

[11] If the “collateral” is a financial asset that the holder is permitted by contract or custom to sell or repledge and the debtor does not have the right and ability to redeem the collateral on short notice, for example, by substituting other collateral or terminating the contract, that financial asset is proceeds of the sale of the “loaned” securities. To the extent that the “collateral” consists of letters of credit or other financial instruments that the holder is not permitted by contract or custom to sell or pledge, a securities lending does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee

----

63. However, many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred assets before their maturity under which the transferor maintains effective control over those assets (paragraphs 27-30). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder is permitted by contract or custom to sell or repledge) received as "collateral" is considered the amount borrowed, the securities "loaned" are considered pledged as collateral against the cash borrowed, and any "rebate" paid to the transferee of securities is interest on the cash the transferor is considered to have borrowed. Collateral provided in securities lending transactions that are accounted for as secured borrowings shall be reported in the statement of financial position like other collateral, as set forth in paragraph 15.

64. The transferor of securities being “loaned” accounts for cash received (or for securities received that may be sold or repledged and were obtained under agreements that are not subject to repurchase or redemption on short notice, for example, by substitution of other collateral or termination of the contract) in the same way whether the transfer is accounted for as a sale or a secured borrowing. The cash (or securities) received shall be recognized as the transferor's asset—as shall investments made with that cash, even if made by agents or in pools with other securities lenders—along with the obligation to return the cash (or securities).

Illustration—Securities Lending Transaction Treated as a Secured Borrowing

65. Accounting for a securities lending transaction treated as a secured borrowing:

Facts

Transferor's carrying amount and fair value of security loaned	$1,000
Cash "collateral"	1,020
Transferor's return from investing cash collateral at a 5 percent annual rate	5
Transferor's rebate to the borrower at a 4 percent annual rate	4

The loaned securities cannot be redeemed on short notice, for example, by substitution of other collateral. For simplicity, the fair value of the security is assumed not to change during the 35-day term of the transaction.

Journal Entries for the Transferor

At inception:

Cash	1,020	
Payable under securities loan agreements		1,020

To record the receipt of cash collateral

Securities loaned to broker	1,000	
Securities		1,000

To reclassify loaned securities that cannot be redeemed on short notice

Money market instrument	1,020	
Cash		1,020

To record investment of cash collateral

At conclusion:

Cash	1,025	
Interest		5
Money market instrument		1,020

To record results of investment

Securities	1,000	
Securities loaned to broker		1,000

To record return of security

Payable under securities loan agreements	1,020	
Interest ("rebate")	4	
Cash		1,024

To record repayment of cash collateral plus interest

Journal Entries for the Transferee

At inception:

Receivable under securities loan agreements	1,020	
Cash		1,020

To record transfer of cash collateral

Securities	1,000	
Obligation to return borrowed securities		1,000

To record receipt of borrowed securities that cannot be redeemed on short notice

At conclusion:

Obligation to return borrowed securities	1,000	
Securities		1,000

To record the return of securities

Cash	1,024	
Receivable under securities loan agreements		1,020
Interest revenue ("rebate")		4

To record the receipt of cash collateral and rebate interest

Repurchase Agreements and "Wash Sales"

69. Furthermore, "wash sales" that previously were not recognized if the same financial asset was purchased soon before or after the sale shall be accounted for as sales under this Statement. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

OTHER SOURCES OF INFORMATION:

31. Accounting for Paid in Kind (PIK) Preferred Stocks (a form of redeemable preferred stock) is addressed in the NAIC Technical Resource Group Proposed Draft Life Codification:

> PIK stocks are redeemable issues of preferred stock which have been used frequently in the financing of leveraged acquisitions because the dividends are payable either in cash or in additional shares of the identical securities for a specified period, typically three to five years (the “stock dividend period”). The choice of paying cash or securities is the election of the issuer; however, it is assumed that in most instances dividends will be paid in securities as a means of preserving cash after the leveraged acquisition. PIKs are redeemable after a fixed period, typically, 15 to 20 years, and a sinking fund may be used to fund redemption after the tenth. PIKs are typically callable; however, the call provisions vary. Some issues are callable at any time at par; others have call protection under which the issues are not callable until the fifth year, either at par or at a premium. PIKs typically are exchangeable at the issuer’s election, either immediately or after a stated period, into junior subordinated debt or other securities of the issuer.
>
> PIK bonds typically have the option at each interest payment date of making interest payments in cash or in additional debt securities. These additional debt securities are referred to as baby or bunny bonds. Baby bonds generally have the same terms, including maturity dates and interest rates, as the original bonds. Interest on baby bonds may also be paid in cash or in additional like-kind debt securities at the option of the issuer.
>
> The method used by investors to account for investments in PIKs stocks and bonds should conform with the method used for investments in bonds and redeemable preferred stock. Therefore, the bond accounting method is appropriate because it is anticipated that dividends on PIKs will be paid in additional securities rather than cash (PIKs resemble zero coupon bonds). Accordingly, a form of level yield accounting similar to that used for zero coupons bonds is the preferable approach to recording income. Income under the level yield method is recognized by multiplying the level yield implicit in the PIK by the most recent balance sheet carrying amount.
>
> Specifically, investments in PIK stocks should be recorded initially at cost and accreted to the lower of (1) the call price or (2) par value, measured in either case at the end of the stock

dividend period and based on all of the shares expected to be held at the end of that period, including those received as dividends.

Investments in PIK bonds should be recorded initially at cost and accreted to the lower of (1) the call price or (2) par value so that at final maturity the bond's carrying amount will be equal to the aggregate principal amount of the original bonds and all baby bonds received.

Any cash dividends paid during the stock dividend period on PIK stocks are accounted for as a reduction in the investment. Any interest paid on PIK bonds are accounted for as a reduction in the investment.

At no time should PIK securities be carried on the balance sheet in excess of the current call price. In addition, in the event of impairment in the value of the PIK, losses should be recognized immediately to the extent of the impairment.

If the PIKs are exchanged for other securities of the issuer, the carrying amount of the PIKs at the date of exchange becomes the cost basis of the new securities.

Statutory Issue Paper No. 33

Disclosures about Fair Value of Financial Instruments

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 27

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Though disclosures about market values of certain investments are currently made in schedules included in the Annual Statements for Property and Casualty Insurance Companies and for Life and Accident and Health Insurance Companies, the annual statements contain no disclosures of fair values of other financial instruments. Furthermore, there are no specific disclosure requirements in the current statutory guidance requiring fair value disclosures in the financial statements. GAAP has specific disclosure requirements for the fair value of financial instruments. This issue paper establishes statutory accounting principles for disclosures about fair value of financial instruments that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. A financial instrument shall be defined as cash, evidence of an ownership interest in an entity, or a contract that both:

a. Imposes on one entity a contractual obligation (1) to deliver cash or another financial instrument to a second entity or (2) to exchange other financial instruments on potentially unfavorable terms with the second entity;

b. Conveys to that second entity a contractual right (1) to receive cash or another financial instrument from the first entity or (2) to exchange other financial instruments on potentially favorable terms with the first entity.

3. Examples of the financial instruments, which encompass both assets and liabilities recognized and not recognized in the statement of financial position, to which this issue paper apply include but are not limited to short-term investments, bonds, common stock, preferred stocks, mortgage loans, derivatives, financial guarantees written, standby letters of credit, notes payable and deposit-type contracts.

4. A reporting entity shall disclose in the notes to the financial statements the fair value of all financial instruments, summarized by type of financial instrument, for which it is practicable to estimate fair value, except for certain financial instruments named in paragraph 8 of *FASB Statement No. 107*, *Disclosure about Fair Value of Financial Instruments* (FAS 107), (which is excerpted in the Relevant GAAP Guidance section in paragraph 14 below). Fair value disclosed in the notes shall be presented together with the related admitted values in a form that makes it clear whether the fair values and admitted values represent assets or liabilities and to which line items in the Statement of Assets, Liabilities, Surplus and Other Funds they relate. Separate disclosure of this information in the notes is required even if such information is presented elsewhere in the financial statements. Unless specified otherwise in another issue paper the disclosures may be made net of encumbrances, if the asset or liability is so reported. A reporting entity shall also disclose the method(s) and significant assumptions used to

estimate the fair value of financial instruments. For example, the notes should specify the reported value of investments using market prices published by the Securities Valuation Office of the NAIC (SVO) investments.

5. For purposes of this issue paper, the fair value of a financial instrument is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. Market values published by the SVO, if available, shall always be the fair value amount disclosed. In the absence of SVO published market values or when amortized cost is used by the SVO as market value, quoted market prices by other third party organizations, if available, shall be used as the fair value of financial instruments. If neither SVO published market values nor quoted market prices are available, management's best estimate of fair value shall be based on the quoted market price of a financial instrument with similar characteristics or on industry recognized valuation techniques (for example, the present value of estimated future cash flows using a discount rate commensurate with the risks involved).

6. If it is not practicable for an entity to estimate the fair value of a financial instrument or a class of financial instruments, the following shall be disclosed:

a. Information pertinent to estimating the fair value of that financial instrument or class of financial instruments, such as the carrying amount, effective interest rate, and maturity

b. The reasons why it is not practicable to estimate fair value.

DISCUSSION

7. The conclusion above adopts FAS 107 as amended by *FASB Statement No. 119*, *Disclosure about Derivative Financial Instruments and Fair Value of Financial Instruments* (FAS 119), except that paragraph 15.c. of FAS 119 relating to disclosure of financial instruments held or issued for trading is rejected. This is consistent with the conclusions in *Issue Paper No. 26—Bonds, Excluding Loan-Backed and Structured Securities* (CMOs), *Issue Paper No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled or affiliated entities)*, and *Issue Paper No. 32—Investments in Preferred Stock (including investments in common stock of subsidiary, controlled or affiliated entities)*, in which FASB Statement No. 115, is rejected. This issue paper adopts *FASB Emerging Issues Task Force No. 85-20*, *Recognition of Fees for Guaranteeing a Loan.* Furthermore, this issue paper requires that if the SVO publishes a market value, that amount should be used in the fair value disclosures required by this issue paper.

8. This issue paper rejects *FASB Statement No. 126, Exemptions from Certain Required Disclosures about Financial Instruments for Certain Nonpublic Entities, an amendment of FAS 107.*

9. The Statement of Concepts states that:

> Because these basic financial statements cannot be expected to provide all of the information necessary to evaluate an entity's short-term and long-term stability, management must supplement the financial statements with sufficient disclosures (e.g., notes to the financial statements, management's discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided.

Disclosures about fair values of financial instruments is consistent with that objective.

10. Current statutory accounting already recognizes the usefulness of fair value disclosures, and requires that disclosure of amounts for certain financial instruments in the Annual Statement schedules. The conclusion above expands this requirement to include disclosure in the notes to the financial statements of all financial instruments.

11. Paragraph 4 above requires the disclosure of the fair value of all financial instruments if it is practicable to estimate those values. In the context of this issue paper, practicable means that an estimate of fair value can be made without incurring excessive costs. It is a dynamic concept: what is practicable for one entity might not be for another; what is not practicable in one year might be in another. For example, it might not be practicable for an entity to estimate the fair value of a class of financial instruments for which a quoted market price is not available because it has not yet obtained or developed the valuation model necessary to make the estimate, and the cost of obtaining an independent valuation appears excessive considering the materiality of the instruments to the entity. Practicability, that is, cost considerations, also may affect the required precision of the estimate; for example, while in many cases it might seem impracticable to estimate fair value on an individual instrument basis, it may be practicable for a class of financial instruments in a portfolio or on a portfolio basis. In those cases, the fair value of that class or of the portfolio should be disclosed. Finally, it might be practicable for an entity to estimate the fair value only of a subset of a class of financial instruments; the fair value of that subset should be disclosed.

12. Paragraph 8 of FAS 107, which is included in the Relevant GAAP Guidance section, discusses financial instruments which are exempt from fair value disclosure. Included as exempt instruments are insurance contracts, except for financial guaranty and investment contracts. Accordingly, the fair value disclosures should be made for guaranteed interest contracts (GICs), and liabilities associated with certain annuities and deposit accounts.

Drafting Notes/Comments

- Disclosure of concentration of credit risk is addressed in *Issue Paper No. 27—Disclosure of Information about Financial Instruments with Concentration of Credit Risk.*

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

13. The NAIC Annual Statement Instructions for Life and Accident and Health and for Property and Casualty Insurance Companies require market values to be included in several invested asset schedules (e.g. Schedule A on real estate, Schedule BA on other long term assets, Schedule C on collateral loans, Schedule D on bonds, Schedule DB on options, caps and floors and Schedule DC on futures options). The schedules and the notes to the financial statement, however, do not contain market values for all investments or other financial instruments that are required by this issue paper.

Generally Accepted Accounting Principles

14. FAS 107 discusses fair value disclosures as follows:

> 3. A financial instrument is defined as cash, evidence of an ownership interest in an entity, or a contract that both:
>
> a. Imposes on one entity a contractual obligation[1] (1) to deliver cash or another financial instrument[2] to a second entity or (2) to exchange other financial instruments on potentially unfavorable terms with the second entity

[1] Contractual obligations encompass both those that are conditioned on the occurrence of a specified event and those that are not. All contractual obligations that are financial instruments meet the definition of liability set forth in *FASB Concepts Statement No. 6, Elements of Financial Statements*, although some may not be recognized as liabilities in financial statements—may be "off-balance-sheet" —because they fail to meet some other criterion for recognition. For some financial instruments, the obligation is owed to or by a group of entities rather than a single entity.

[2] The use of the term financial instrument in this definition is recursive (because the term financial instrument is included in it), though it is not circular. The definition requires a chain of contractual

obligations that ends with the delivery of cash or an ownership interest in an entity. Any number of obligations to deliver financial instruments can be links in a chain that qualifies a particular contract as a financial instrument.

b. Conveys to that second entity a contractual right[3] (1) to receive cash or another financial instrument from the first entity or (2) to exchange other financial instruments on potentially favorable terms with the first entity.

[3] Contractual rights encompass both those that are conditioned on the occurrence of a specified event and those that are not. All contractual rights that are financial instruments meet the definition of asset set forth in Concepts Statement 6, although some may not be recognized as assets in financial statements—may be "off-balance-sheet" —because they fail to meet some other criterion for recognition. For some financial instruments, the right is held by or the obligation is due from a group of entities rather than a single entity.

4. The definition in paragraph 3 is essentially the same as that in paragraph 6 of Statement 105, which is hereby amended to conform to this Statement. Appendix A of Statement 105 provides examples of instruments that are included in and excluded from the definition of a financial instrument.

5. For purposes of this Statement, the fair value of a financial instrument is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. If a quoted market price is available for an instrument, the fair value to be disclosed for that instrument is the product of the number of trading units of the instrument times that market price.

6. Under the definition of fair value in paragraph 5, the quoted price for a single trading unit in the most active market is the basis for determining market price and reporting fair value. This is the case even if placing orders to sell all of an entity's holdings of an asset or to buy back all of a liability might affect the price, or if a market's normal volume for one day might not be sufficient to absorb the quantity held or owed by an entity.

7. This Statement requires disclosures about fair value for all financial instruments, whether recognized or not recognized in the statement of financial position, except for those specifically listed in paragraph 8. It applies to all entities. It does not change any requirements for recognition, measurement, or classification of financial instruments in financial statements.

8. The disclosures about fair value prescribed in paragraphs 10-14 are not required for the following:

a. Employers' and plans' obligations for pension benefits, other postretirement benefits including health care and life insurance benefits, employee stock option and stock purchase plans, and other forms of deferred compensation arrangements, as defined in *FASB Statements No. 35, Accounting and Reporting by Defined Benefit Pension Plans, No. 87, Employers' Accounting for Pensions, No. 106, Employers' Accounting for Postretirement Benefits Other Than Pensions*, and *No. 43, Accounting for Compensated Absences*, and *APB Opinions No. 25, Accounting for Stock Issued to Employees*, and *No. 12, Omnibus Opinion -- 1967*

b. Substantively extinguished debt subject to the disclosure requirements of *FASB Statement No. 76, Extinguishment of Debt*, and assets held in trust in connection with an in-substance defeasance of that debt.

c. Insurance contracts, other than financial guarantees and investment contracts, as discussed in *FASB Statements No. 60, Accounting and Reporting by*

Insurance Enterprises, and *No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*

d. Lease contracts as defined in *FASB Statement No. 13, Accounting for Leases* (a contingent obligation arising out of a canceled lease and a guarantee of a third-party lease obligation are not lease contracts and are included in the scope of this Statement)

e. Warranty obligations and rights

f. Unconditional purchase obligations as defined in paragraph 6 of *FASB Statement No. 47, Disclosure of Long-Term Obligations*

g. Investments accounted for under the equity method in accordance with the requirements of *APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock*

h. Minority interests in consolidated subsidiaries

i. Equity investments in consolidated subsidiaries

j. Equity instruments issued by the entity and classified in stockholders' equity in the statement of financial position.

9. Generally accepted accounting principles already require disclosure of or subsequent measurement at fair value for many classes of financial instruments. Although the definitions or the methods of estimation of fair value vary to some extent, and various terms such as market value, current value, or mark-to-market are used, the amounts computed under those requirements satisfy the requirements of this Statement and those requirements are not superseded or modified by this Statement.

Disclosures about Fair Value of Financial Instruments

10. An entity shall disclose, either in the body of the financial statements or in the accompanying notes, the fair value of financial instruments for which it is practicable to estimate that value. An entity also shall disclose the method(s) and significant assumptions used to estimate the fair value of financial instruments.

11. Quoted market prices, if available, are the best evidence of the fair value of financial instruments. If quoted market prices are not available, management's best estimate of fair value may be based on the quoted market price of a financial instrument with similar characteristics or on valuation techniques (for example, the present value of estimated future cash flows using a discount rate commensurate with the risks involved, option pricing models, or matrix pricing models).

12. In estimating the fair value of deposit liabilities, a financial entity shall not take into account the value of its long-term relationships with depositors, commonly known as core deposit intangibles, which are separate intangible assets, not financial instruments. For deposit liabilities with no defined maturities, the fair value to be disclosed under this Statement is the amount payable on demand at the reporting date. This Statement does not prohibit an entity from disclosing separately the estimated fair value of any of its nonfinancial intangible and tangible assets and nonfinancial liabilities.

13. For trade receivables and payables, no disclosure is required under this Statement when the carrying amount approximates fair value.

14. If it is not practicable for an entity to estimate the fair value of a financial instrument or a class of financial instruments, the following shall be disclosed:

> a. Information pertinent to estimating the fair value of that financial instrument or class of financial instruments, such as the carrying amount, effective interest rate, and maturity
>
> b. The reasons why it is not practicable to estimate fair value.
>
> 15. In the context of this Statement, practicable means that an estimate of fair value can be made without incurring excessive costs. It is a dynamic concept: what is practicable for one entity might not be for another; what is not practicable in one year might be in another. For example, it might not be practicable for an entity to estimate the fair value of a class of financial instruments for which a quoted market price is not available because it has not yet obtained or developed the valuation model necessary to make the estimate, and the cost of obtaining an independent valuation appears excessive considering the materiality of the instruments to the entity. Practicability, that is, cost considerations, also may affect the required precision of the estimate; for example, while in many cases it might seem impracticable to estimate fair value on an individual instrument basis, it may be practicable for a class of financial instruments in a portfolio or on a portfolio basis. In those cases, the fair value of that class or of the portfolio should be disclosed. Finally, it might be practicable for an entity to estimate the fair value only of a subset of a class of financial instruments; the fair value of that subset should be disclosed.

15. During 1994, the FASB issued FAS 119 which amended FAS 107 as follows:

> 15. Statement 107 is amended as follows:
>
> a. In paragraph 10, the following footnote is added after either in the body of the financial statements or in the accompanying notes:
>
> * If disclosed in more than a single note, one of the notes shall include a summary table. The summary table shall contain the fair value and related carrying amounts and cross-references to the location(s) of the remaining disclosures required by this Statement, as amended.
>
> b. In paragraph 10, the following is added after the first sentence:
>
> Fair value disclosed in the notes shall be presented together with the related carrying amount in a form that makes it clear whether the fair value and carrying amount represent assets or liabilities and how the carrying amounts relate to what is reported in the statement of financial position.
>
> c. The following is added to the end of paragraph 10:
>
> The disclosures shall distinguish between financial instruments held or issued for trading purposes, including dealing and other trading activities measured at fair value with gains and losses recognized in earnings, and financial instruments held or issued for purposes other than trading.
>
> d. The following paragraph and footnote are added after paragraph 13:
>
> In disclosing the fair value of a derivative financial instrument,** an entity shall not (a) combine, aggregate, or net that fair value with the fair value of nonderivative financial instruments or (b) net that fair value with the fair value of other derivative financial instruments -- even if those nonderivative or derivative financial instruments are considered to be related, for example, by a risk management strategy -- except to the extent that the offsetting of carrying amounts in the statement of financial position is permitted under the general principle in paragraphs 5 and 6 of FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts, or the exception for master netting arrangements in paragraph 10 of Interpretation 39.

** For purposes of this Statement, derivative financial instrument is used in the same sense as in paragraph 5 of *FASB Statement No. 119, Disclosure about Derivative Financial Instruments and Fair Value of Financial Instruments.*

Statutory Issue Paper No. 34

Investment Income Due and Accrued

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 34

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance pertaining to accounting for investment income due and accrued is contained in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. The purpose of this paper is to establish statutory accounting principles for investment income due and accrued which are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. Investment income due shall be defined as investment income earned and legally due to be paid to the reporting entity (i.e., receivable) as of the reporting date. Investment income accrued shall be defined as investment income earned as of the reporting date but not legally due to be paid to the reporting entity until subsequent to the reporting date.

3. In general, gross investment income shall be recorded as earned and shall include investment income collected during the period, the change in investment income due and accrued, the change in unearned investment income plus any amortization (e.g., discounts or premiums on bonds, origination fees on mortgage loans, etc.). Additional guidance on investment income recognition relative to specific types of investments is provided in issue papers on each specific type of investment.

4. Investment income due and accrued shall be recorded as an asset in accordance with *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4). An evaluation shall be made of such assets in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5), to determine whether an impairment exists. Amounts determined to be uncollectible shall be written off through the statement of operations. Then an evaluation shall be made to determine nonadmitted amounts.

This two step process is set forth below.

> a) Investment income due and accrued shall be assessed for collectibility. If, in accordance with Issue Paper No. 5, it is probable the investment income due and accrued balance is uncollectible, the amount shall be written off and shall be charged against investment income in the period such determination is made.
>
> b) Any remaining investment income due and accrued (i.e., amounts considered probable of collection) representing either (1) amounts that are over 90 days past due (generated by any invested asset except mortgage loans in default), or (2) amounts designated elsewhere in the codification as nonadmitted shall be considered nonadmitted assets and recognized through a direct charge to surplus in accordance with Issue Paper No. 4. These nonadmitted amounts shall be subject to continuing assessments of collectibility and, if determined to be uncollectible, a

write-off shall be recorded in the period such determination is made in accordance with subparagraph (a) above.

5. Accrued interest on mortgage loans that are in default (as defined in *Issue Paper No. 37—Mortgage Loans*) shall be recorded as Investment Income Due and Accrued when such interest is deemed collectible. Interest can be accrued on mortgage loans in default if deemed collectible; if interest is deemed uncollectible, it shall not be accrued and any previously accrued amounts are to be written off in accordance with the guidelines in paragraph 4.a. above. If a loan in default has interest 180 days past due which has been assessed as collectible, all interest shall be considered a non-admitted asset and recognized through a direct charge to surplus as outlined in paragraph 4.b. above.

6. The following disclosures shall be made for investment income due and accrued in the notes to the financial statements.

- The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued
- Disclose total amount excluded.

DISCUSSION

7. The Statutory Accounting Principles outlined in the conclusion above are consistent with current statutory accounting guidance for investment income due and accrued, except for the following:

- Current statutory accounting states that "*Income due, which is doubtful collectibility, should either not be accrued or should be treated as nonadmitted"*. However, the conclusion above requires that such amounts be accrued as earned and then written off in the period in which the determination is made that the amounts are uncollectible.

- Current statutory guidance states that accrued rent on real estate three months or more be treated as a nonadmitted asset. The conclusion above requires that accrued rent be assessed for collectibility and any uncollectible amounts written off in the period in which the determination is made that the amounts are uncollectible. Any remaining accrued rent past due three months or more (but determined to be collectible) shall be treated as a nonadmitted asset.

- Current statutory guidance states that accrued interest on mortgage loans past due twelve months or more be treated as a nonadmitted asset and accrued interest on loans in default, being voluntarily conveyed, or being foreclosed be added to the carrying value if such amounts are deemed to be recoverable from the ultimate disposition of the property. The conclusion above requires an assessment of the collectibility of the interest to determine if such should be accrued or written off. If the loan in default has interest which is 180 days past due and deemed to be collectible, all interest on the defaulted loan shall be considered a nonadmitted asset.

8. The statutory accounting principle outlined in the conclusion above accounts for investment income due and accrued in a manner consistent with the Statement of Concepts recognition concept which states that "*Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed*". It recognizes any impairment (i.e., doubtful collection) of the asset in the period in which such a determination occurs in accordance with Issue Paper No. 5.

9. The Statement of Concepts also states:

> Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interest should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

10. Based on the above concept, investment income due and accrued should reflect only amounts that are available to meet policyholder obligations. Consistent with the conservatism concept, amounts for which collection is past due by a specified number of months, but for which the ultimate collection is not considered doubtful, should be recognized as nonadmitted assets through a direct charge against surplus in accordance with Issue Paper No. 4.

Drafting Notes/Comments

- Accounting for common and preferred stock holdings of subsidiary, controlled and affiliated entities will be addressed in *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities*.
- Accounting for joint ventures and partnerships will be addressed in *Issue Paper No. 48—Investments in Joint Ventures, Partnerships and Limited Liability Companies*.
- Accounting for recognition of investment income is addressed in separate issue papers on each type of investment.
- Accounting for investments in surplus notes is addressed in a separate issue paper.
- Accounting for mortgage loans, including valuation, is addressed in *Issue Paper No. 37—Mortgage Loans*.
- Accounting for policy loans is addressed in *Issue Paper No. 49—Policy Loans*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

11. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides guidance with respect to unearned investment income and investment income due and accrued. Similar guidance is found in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies. Pertinent excerpts from the Life and Accident and Health manual are as follows:

> CHAPTER 19
> INVESTMENT INCOME AND NET REALIZED GAINS
>
> Investment Income Due
>
> Income due represents certain amounts of income which are legally owed to the company as of the statement date but have not yet been received. Income due, which is doubtful collectibility, should either not be accrued or should be treated as nonadmitted. On certain bonds in default, the company should not report interest due because the association value of the bond includes such interest.
>
> Accrued Investment Income
>
> Income accrued represents interest that would be collectible if the obligation were to mature as of the statement date. The amounts that are shown as accrued for preferred stocks and common stocks are dividends on stocks declared to be ex-dividend on or prior to the statement date and payable after that date.

> Nonadmitted Investment Income
>
> Nonadmitted income represents any of the above-noted types of investment income reported as due or accrued if it is of doubtful collectibility. The company should not take credit for this as income. This is of particular importance regarding mortgage loans with interest that is past due twelve months or more and real estate with rents past due three months or more. These receivables should be deducted as nonadmitted.

12. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides additional guidance with respect to interest income on bonds and loan-backed and structured securities. Pertinent excerpts are as follows:

> CHAPTER 1
>
> Bonds and Loaned Backed and Structured Securities
> Interest income
>
> If interest (including contingent interest) on a bond is recorded when received, an adjustment must be made to recognize due and accrued interest as of the reporting date. Interest income for any period consists of interest collected during the period and the change in the due and accrued interest between the beginning and end of the period, plus the adjustments for the accrual of discount, minus adjustment for the amortization of premium, and minus adjustment for interest paid on acquisition of bonds.
>
> Contingent interest represents bondholder income generated through the occurrence of specific economic events in relation to the issuer. For example, contingent interest may become payable upon the attainment by the issuer of a given level of cash flow or income. In many respects, bonds with contingent interest provisions are similar to income bonds. Due and unpaid contingent interest may be recorded as income. The proper accrual of such income does, however, require an analysis of the applicable provisions in the underlying agreement and the verification that the prerequisite conditions have been met.

13. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies contains similar guidance.

14. The Accounting Practices and Procedures Manual for Life and Accident and Health and Property and Casualty Insurance Companies provides additional guidance with respect to dividends. Pertinent excerpts are as follows:

> CHAPTER 2
> STOCKS
>
> Dividends
>
> Dividends are usually recorded in the general ledger on a cash basis. Dividends receivable on qualified shares of stock are generally permitted as admitted assets to the extent that the dividend has been excluded from the determination of the market price of the holding (i.e., on stock selling ex-dividend). Dividends receivable are included in “Investment Income Due and Accrued” in the annual statement. The asset is developed by a determination of the dividend status of each stock investment at the balance sheet date. Thus, dividend income on stock for any period consists of dividends collected during the year and the change in the declared but unpaid dividends between the beginning and end of the period.
>
> The Valuation of Securities manual has a complete listing of all stocks that are traded “ex-dividend” at the end of the year. An ex-dividend stock is one in which the issuing company has closed its stock ledger on a certain date and has declared a dividend payable to the stockholder of record, even though the stock may have been sold after the record date but prior to the payment date. The association value of ex-dividend stock includes no value for the dividend

> since the unpaid dividend does not transfer with ownership of the stock. The listing of ex-dividend stock contains the declared dividend rate for calculating the declared but unpaid dividends that are allowable for each stock owned by the company on the dividend record date.

15. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides guidance with respect to mortgage loan interest income. Pertinent excerpts are as follows:

> CHAPTER 3
> MORTGAGE LOANS
>
> Interest
>
> Interest income on mortgage loans is recorded when earned during the any reporting period. An "inventory" of due and accrued interest must be determined at the end of each reporting period. Interest income includes adjustments for amortization or the accrual of discount.
>
> A portion of the interest due and accrued on mortgage loans may require treatment as a nonadmitted asset for reporting purposes. In general, amounts over one year past due are nonadmitted. In practice, some companies consider that interest past due for periods of less than one year indicates future uncollectibility, and may make a provision against operations for such amounts to establish an appropriate reserve. Alternatively, some companies may cease accrual of interest on loans that default on any payment. Therefore, the amount of due and accrued interest that is considered to be a nonadmitted asset depends on the policy regarding accrual determination, and whether reserves have been established by charges to operations. In the case of mortgage loans on which foreclosure action is pursued, delinquent interest may be recovered from the amount, if any, by which the proceeds on the eventual sale of the property exceed the unpaid principal balance.
>
> Contingent interest represents income generated through the occurrence of specific economic events in relation to the borrower. For example, contingent interest may become payable upon the attainment of a given level of cash flow or income. Contingent interest may be reported as income when received or accrued. The proper accrual of such income does, however, require an analysis of the applicable provisions in the underlying agreement and the verification that the prerequisite conditions have been met.
>
> Payments
>
> Payments on mortgage loans may be received in advance of due dates. Such payments may produce prepaid interest which is considered unearned and is recorded as a liability in the annual statement.
>
> Companies that use servicing agents for their mortgage loans should report the "Interest Due and Accrued" asset on the balance sheet consistently with the income statement treatment of the charge for servicing costs. If interest income is reported net of servicing costs, which is usual when the servicing agent fee is based on a percentage retention of each interest payment, then the interest receivable in the balance sheet should be net of the related servicing costs. If interest is reported gross, with the servicing costs reported as an expense item, then interest due and accrued should be reflected as an asset at the gross amount, with an appropriate liability to reflect the related servicing cost accrual.

16. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies contains similar guidance.

17. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides guidance with respect to real estate investment income. Pertinent excerpts are as follows:

> CHAPTER 4
> REAL ESTATE
>
> Income Derived from Real Estate
>
> Income on real estate, or on space in buildings owned and occupied by the company, usually is received periodically and in advance and any amount not received at the end of an accounting period should be set up as investment income due and unpaid to the extent that the amount applies to that accounting period. If the collectibility of unpaid rent is in doubt, or if the amount due exceeds a period specified by statute or regulation, most jurisdictions require that the entire amount be nonadmitted. Rental income paid in advance of the accounting period for which it is payable in whole or in part should be included in the liability for unearned investment income to the extent it applies to the succeeding accounting period. If rental income is to be received over a period shorter than the full lease period, the total rent to be received should be accrued periodically as if the rent were received over the total lease period. Interest expense on a mortgage is netted against the rental income for the period.

18. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies contains similar guidance.

19. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides guidance with respect to interest income on cash on deposit. Pertinent excerpts are as follows:

> CHAPTER 5
> CASH AND SHORT-TERM INVESTMENTS
>
> Income from Bank Deposits
>
> Income consists of the interest that is earned on interest-bearing bank deposits and on demand certificates of deposit. Earned interest consists of interest that is collected during the period, plus due or accrued interest at the end of the period, minus any unearned interest, and minus due or accrued interest, plus any unearned interest at the beginning of the period.
>
> The amount allowed as an admitted asset for due or accrued interest is the interest or dividends due and payable, but not credited, on deposits in banks and trust companies or on accounts with savings and loans associations.
>
> The accrued interest on savings accounts is admissible because, if the deposit was withdrawn at the statement date, interest would be paid to the date of withdrawal. Accrued interest on demand CD's may be wholly or partially not admitted in some states, as interest is payable at maturity and, if the certificates are redeemed early, an interest penalty may be assessed. The certificate must be examined to determine the status of accrued interest. If the certificate were to be redeemed before maturity, and the interest would be payable, the accrued interest may be admitted but not in an amount that exceeds that amount receivable if redeemed prior to maturity. The maximum amount of accrued interest that may be admitted on a certificate which provides for an interest penalty for early redemption is based upon a reduced interest rate.

20. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies contains similar guidance.

21. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides guidance with respect to interest income on policy loans. Pertinent excerpts are as follows:

> CHAPTER 7
> POLICY LOANS
>
> Interest
>
> Interest on a policy loan may be payable at either the beginning or end of the policy loan interest period. Where it is payable at the beginning of the period, appropriate balance sheet provision should be established for any unearned policy loan interest. Where it is payable at the end of the period, appropriate provision should be established for any accrued interest. Interest earned is reported as investment income.
>
> The calculation of investment income from a company's policy loans requires a determination of unearned or accrued interest. These are included in their respective accounts in the balance sheet as unearned or accrued investment income and not with the balance of policy loans. The calculation of accrued and unearned interest usually is made on a policy-by-policy basis, or for policies grouped by interest rate and policy anniversary or interest paid-to-date.
>
> Past-due interest normally is capitalized as an addition to the loan balance with the interest recorded as received.

22. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies provides the following in its list of admitted assets in Chapter 8:

> (k) Interest, Dividends and Real Estate Income Due and Accrued
>
> 1. The rents accrued and owing to the company on real and personal property, directly or beneficially owned
>
> 2. Interest or rents accrued on conditional sales agreements, chattel mortgages and real or personal property under lease to other corporations
>
> 3. The fixed and required interest due and accrued on bonds and other like evidences of indebtedness, not in default
>
> 4. Dividends receivable on shares of stock, provided that the market price taken for valuation purposes does not include the value of the dividend
>
> 5. The interest or dividends due and accrued, but not credited, on deposits in banks and trust companies or on accounts with savings and loan associations
>
> 6. Interest accrued on tax anticipation warrants
>
> 7. Interest accrued on secured loans

23. The Iowa state regulations provide the following guidance:

> In estimating the profits, a reserve for unearned premiums as set out in section 515.47, also a reserve for unpaid losses, expenses, and taxes which have been incurred shall be set up; and there shall also be held as nonadmitted assets all sums due the corporation on bonds and mortgages, bonds, stocks, and book accounts, of which no part of the principal or interest thereon has been paid during the year preceding such estimate of profits, and upon which suit for foreclosure or collection has not been commenced, or which, after judgment has been obtained thereon, shall have remained more than two years unsatisfied, and on which interest has not

been paid; and such judgment with the interest due or accrued thereon and remaining unpaid, shall also be so held.

Generally Accepted Accounting Principles

24. There is no specific GAAP guidance that addresses unearned investment income or investment income due and accrued.

SUMMARY OF ISSUE

1. Guaranty fund assessments represent a funding mechanism employed by state insurance departments to provide funds to cover policyholder obligations of insolvent reporting entities. Most states have enacted legislation establishing guaranty funds for both life and health insurance and for property and casualty insurance to provide for covered claims or to meet other insurance obligations of insolvent insurers in the state. Guaranty funds generally make assessments after an insolvency based upon retrospective premium writings for Life and Accident and Health Insurance Companies or prospective premium writings for Property and Casualty Insurance Companies. However, a small number of states have guaranty funds that prefund, that is they assess members before an insolvency occurs. Reporting entities are subject to a variety of other assessments, such as workers' compensation second-injury funds and funds that pay operating costs of the insurance department, health related assessments, or the workers' compensation board.

2. State laws often allow for recoveries of guaranty fund assessments through refunds from the guaranty fund, premium tax credits, policy surcharges, and future premium rate structures.

3. Current statutory accounting provides only limited guidance on accounting for guaranty fund and other assessments; requiring that assessments be charged to taxes, licenses and fees, but not addressing when to recognize liabilities for assessments. *SOP 97-3*, *Accounting by Insurance and Other Enterprises for Insurance-Related Assessments* (SOP 97-3) dictates GAAP guidance. This issue paper establishes statutory accounting principles for guaranty fund and other assessments that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of* Assets (Issue Paper No. 5), requires accrual of a liability when both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability, and

b. The amount of loss can be reasonably estimated.

For purposes of subparagraph 4 b., loss generally means assessment or assessment rate. Guaranty fund and other assessments shall be charged to expense (Taxes, Licenses and Fees) and a liability shall be accrued when those criteria are met except for certain health related assessments which shall be reported as a part of claims. Health related assessments that are reported as a part of claims instead of taxes, licenses and fees are those assessments that are designed for the purpose of spreading the risk of severe claims or adverse enrollment selection among all participating entities, and where the funds collected via the assessment are re-distributed back to the participating entities based upon the cost of specific claims, enrollment demographics, or other criteria affecting health care expenses.

5. For refunded guaranty fund assessments and assessments used to fund state operating expenses, reporting entities shall credit the refund or charge the assessment to expense when notification of the refund or assessment is made.

6. For guaranty fund assessments, subparagraph 4a is met when the insolvency has occurred, regardless of whether the assessments are based on premiums written before or after the insolvency. For purposes of applying this guidance, the insolvency shall be considered to have occurred when a reporting entity meets a state's (ordinarily the state of domicile of the insolvent reporting entity) statutory definition of an insolvent reporting entity. In most states, the reporting entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation. Loss-based administrative-type and second injury fund assessments are presumed probable when the losses on which the assessments are expected to be based are incurred.

7. Subparagraph 4b requires that the amounts can be reasonably estimated. For guaranty fund or other assessments, a reporting entity's estimate of the liability shall reflect an estimate of its share of the ultimate loss expected from the insolvency. The reporting entity shall also estimate any applicable premium tax credits and policy surcharges. An entity need not be able to compute the exact amounts of the assessments or be formally notified of such assessments by a guaranty fund to make a reasonable estimate of its liability. Entities subject to assessments may have to make assumptions about future events, such as when the fund making the assessment will incur costs and pay claims to determine the amounts and the timing of assessments. The best available information about market share or premiums by state and premiums by line of business generally should be used to estimate the amount of future assessments. Estimates of loss-based assessments should be consistent with estimates of the underlying incurred losses and should be developed based upon enacted laws or regulations and expected assessment rates. Premium tax credits or policy surcharges may only be considered in the estimate if it is probable they will be realized. Changes in the amount of the liability (or asset) as a result of the passage of time and revisions to estimates in the amount or timing of the payments shall be recorded in taxes, licenses and fees.

8. In accordance with Issue Paper No. 5, when the reasonable estimate of the loss is a range, the amount in the range that is considered the best estimate shall be accrued. When, in management’s opinion, no amount within management’s estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of within management’s estimate in the range shall be accrued. For purposes of this issue paper, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management’s best estimate shall be accrued.

9. The liability for assessments shall be established gross of any probable and estimable recoveries from premium tax credits and premium surcharges. Because assessments are generally paid before premium tax credits are realized or policy surcharges are collected, an asset may result, which represents a receivable for premium tax credits that will be taken and policy surcharges which will be collected in the future. These amounts, to the extent it is probable they will be realized, meet the definition of assets, as specified in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4), and are admitted assets to the extent they conform to the requirements of this issue paper. The asset shall be established and reported independent from the liability (not reported net).

10. In certain circumstances, a reporting entity acts as an agent for certain state agencies in the collection and remittance of fees or assessments. In these circumstances, the liability for the fees and

assessments rests with the policyholder rather than with the reporting entity. The reporting entity's obligation is to collect and subsequently remit the fee or assessment. When both the following conditions are met, an assessment should not be reported in the statement of operations of a reporting entity:

a. The assessment is reflected as a separately identifiable item on the billing to the policyholder; and

b. Remittance of the assessment by the reporting entity to the state is contingent upon collection from the insured.

Disclosure

11. In the event that the criteria in paragraph 4 are not met, the notes to the financial statements shall include the disclosure required by Issue Paper No. 5 which, indicates the nature of the assessments and states that an estimate of the liability cannot be made.

DISCUSSION

12. This issue paper applies Issue Paper No. 5 to guaranty fund and other assessments.

13. Current statutory practice is that assessments for life guaranty fund obligations (which are based on premiums written prior to the insolvency) are accrued at the time of the insolvency. Current statutory practice for property and casualty guaranty fund assessments varies. Not all property and casualty guaranty fund obligations are accrued at the time of the insolvency. Those that have not accrued the obligation believe that guaranty fund assessments that are based on premiums written after an insolvency should be accrued when the premiums are written, because the event that obligates the company is the writing of the premiums. This issue paper rejects that point of view, because it is inconsistent with the concepts of conservatism and recognition outlined in the Statement of Concepts. It is also inconsistent with the accounting principles set forth in Issue Paper No. 5. With respect to conservatism, the Statement of Concepts states that:

> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management ... In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.

With respect to recognition, the Statement of Concepts states that:

> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies... Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

Drafting Notes/Comments

- Voluntary Guaranty Funds should be accounted for in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

14. The Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies mention guaranty fund surplus in their respective chapters on surplus. Both state that "Guaranty fund surplus for mutual companies" should be considered as part of surplus, for purposes of meeting the minimum surplus requirements.

15. The NAIC Annual Statement Instructions indicate that Taxes, Licenses & Fees should include guaranty fund assessments.

16. Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force discussed the accounting for guaranty fund and other assessments in Issues 91-1 through 91-4 and 92-1. The discussion focused around whether guaranty fund assessments could be reported as loss payments. The consensus reached was that guaranty fund assessments should be reported as expense items through Taxes, Licenses and Fees.

17. The Life and Health Insurance Guaranty Association Model Act provides the following guidance:

Section 9. Assessments

A. For the purpose of providing the funds necessary to carry out the powers and duties of the Association, the board of directors shall assess the member insurers, separately for each account, at such time and for such amounts as the board finds necessary. Assessments shall be due not less than thirty (30) days after prior written notice to the member insurers and shall accrue interest at [insert amount] percent per annum on and after the due date.

B. There shall be two (2) assessments, as follows:

(1) Class A assessments shall be made for the purpose of meeting administrative and legal costs and other expenses and examinations conducted under the authority of Section 12E. Class A assessments may be made whether or not related to a particular impaired or insolvent insurer.

(2) Class B assessments shall be made to the extent necessary to carry out the powers and duties of the Association under Section 8 with regard to an impaired or an insolvent insurer.

C. (1) The amount of any Class A assessment shall be determined by the board and may be made on a pro rata or non-pro rata basis. If pro rata, the board may provide that it be credited against future Class B assessments. A non-pro rata assessment shall not exceed $150 per member insurer in any one calendar year. The amount of any Class B assessment shall be allocated for assessment purposes among the accounts pursuant to an allocation formula which may be based on the premiums or reserves of the impaired or insolvent insurer or any other standard deemed by the board in its sole discretion as being fair and reasonable under the circumstances.

(2) Class B assessments against member insurers for each account and subaccount shall be in the proportion that the premiums received on business in this state by each assessed member insurer or policies or contracts covered by each account for the three (3) most recent calendar years for which information is available preceding the year in which the insurer became impaired or insolvent, as the case may be, bears to such premiums received on business in this state for such calendar years by all assessed member insurers.

(3) Assessments for funds to meet the requirements of the Association with respect to an impaired or insolvent insurer shall not be made until necessary to implement the purposes of this Act. Classification of assessments under Subsection B and computation of assessments under this subsection shall be made with a reasonable degree of accuracy, recognizing that exact determinations may not always be possible.

D. The Association may abate or defer, in whole or in part, the assessment of a member insurer if, in the opinion of the board, payment of the assessment would endanger the ability of the member insurer to fulfill its contractual obligations. In the event an assessment against a member insurer is abated, or deferred in whole or in part, the amount by which the assessment is abated or deferred may be assessed against the other member insurers in a manner consistent with the basis for assessments set forth in this section.

E. (1) The total of all assessments upon a member insurer for the life and annuity account and for each subaccount thereunder shall not in any one calendar year exceed two percent (2%) and for the health account shall not in any one calendar year exceed two percent (2%) of the insurer's average premiums received in this state on the policies and contracts covered by the account during the three (3) calendar years preceding the year in which the insurer became an impaired or insolvent insurer. If the maximum assessment, together with the other assets of the Association in any account, does not provide in any one year in either account an amount sufficient to carry out the responsibilities of the Association, the necessary additional funds shall be assessed as soon thereafter as permitted by this Act.

(2) The board may provide in the plan of operation a method of allocating funds among claims, whether relating to one or more impaired or insolvent insurers, when the maximum assessment will be insufficient to cover anticipated claims.

(3) If a one percent (1%) assessment for any subaccount of the life and annuity account in any one year does not provide an amount sufficient to carry out the responsibilities of the Association, then pursuant to Subsection C(2), the board shall access all subaccounts of the life and annuity account for the necessary additional amount, subject to the maximum stated in Subsection E(1) above.

Editor's Note: For interpretation of this section, see Guaranty Fund (EX4) Task Force minutes in 1988 Proceedings of the NAIC, Volume II, page 335.

F. The board may, by an equitable method as established in the plan of operation, refund to member insurers, in proportion to the contribution of each insurer to that account, the amount by which the assets of the account exceed the amount the board finds is necessary to carry out during the coming year the obligations of the Association with regard to that account, including assets accruing from assignment, subrogation, net realized gains and income from investments. A reasonable amount may be retained in any account to provide funds for the continuing expenses of the Association and for future losses.

G. It shall be proper for any member insurer, in determining its premium rates and policyowner dividends as to any kind of insurance within the scope of this Act, to consider the amount reasonably necessary to meet its assessment obligations under this Act.

H. The Association shall issue to each insurer paying an assessment under this Act, other than Class A assessment, a certificate of contribution, in a form prescribed by the Commissioner for the amount of the assessment so paid. All outstanding certificates shall be of equal dignity and priority without reference to amounts or dates of issue. A certificate of contribution may be shown by the insurer in its financial statement as an asset in such form and for such amount, if any, and period of time as the Commissioner may approve.

Comment: When an insurer is impaired or insolvent the member insurers will be assessed on the basis of the premiums they write in the state. This corresponds to the Association's liability which, in most cases, is limited to covered policies of residents. This assessment system provides a base broad enough to meet fairly large demands on the Association. Equally important, since it reflects the market share of each member in the state considered, it is an equitable method of apportioning the burden of the assessments.

The maximum assessment per year may be varied from state to state depending on the size of the base and the concentration of the business. The two percent maximum assessment per year should produce an adequate amount while at the same time not impose an undue strain in any given year on the assessed companies and their policyholders.

In order to prevent further financial difficulties caused by an assessment, Subsection D permits abatement of assessments when such financial difficulties might result. Subsections D and E provide some limitation on the amounts which can be assessed in any given year. If these limits are reached, to fulfill its responsibilities the Association is empowered to borrow funds which later can be repaid out of future assessments.

Subsection G provides that a member insurer may consider in its premium rates and dividend scale an amount reasonably necessary to meet its assessment obligations. This makes it clear that the cost can be ultimately passed on to the policyowners - i.e., to persons who enjoy the protection provided by the Act.

Subsection H provides that the Association shall issue to assessed insurers certificates of contribution in the amount levied. The certificates may be carried by an insurer in its annual statement as an asset in such form, amount and period as may be approved by the Commissioner. By permitting the companies to carry these certificates as an asset, to the extent of their estimated value, the impact on member insurers will be lessened.

18. The Post-Assessment Property and Liability Insurance Guaranty Association Model Act provides the following guidance:

Section 8. Powers and Duties of the Association

A. The Association shall:

(1) Be obligated to pay covered claims existing prior to the determination of the insolvency arising within thirty (30) days after the determination of insolvency, or before the policy expiration date if less than thirty (30) days after the determination of insolvency, or before the insured replaces the policy or causes its cancellation, if he does so within thirty (30) days of the determination. The obligation shall be satisfied by paying to the claimant an amount as follows:

(a) The full amount of a covered claim for benefits under a workers' compensation insurance coverage;

(b) An amount not exceeding $10,000 per policy for a covered claim for the return of unearned premium;

(c) An amount not exceeding $300,000 per claimant for all other covered claims.

In no event shall the Association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under the policy or coverage from which the claim arises. Notwithstanding any other provisions of this Act, a covered claim shall not include any claim filed with the Guaranty Fund after the final date set by the court for the filing of claims against the liquidator or receiver of an insolvent insurer. The Association shall pay only that amount of each unearned premium which is in excess of $100.

Comment: The obligation of the Association is limited to covered claims unpaid prior to insolvency, and to claims arising within thirty days after the insolvency, or until the policy is canceled or replaced by the insured, or it expires, whichever is earlier. The basic principle is to permit policyholders to make an orderly transition to other companies. There appears to be no reason why the Association should become in effect an insurer in competition with member insurers by continuing existing policies, possibly for several years. It is also felt that the control of the policies is properly in the hands of the liquidator. Finally, one of the major objections of the public to rapid termination, loss of unearned premiums with no corresponding coverage, is ameliorated by this bill since unearned premiums are permissible claims, up to $10,000, against the Association. The deductible amount ($100) and the maximums ($10,000 for the return of unearned premium; $300,000 for all other covered claims) represent the subcommittee's concept of practical limitations, but each state will wish to evaluate these figures.

[Alternate Section 8A(1)

A. The Association shall:

(1) Be obligated to pay covered claims existing prior to the determination of the insolvency arising within thirty (30) days after the determination of insolvency, or before the policy expiration date if less than thirty (30) days after the determination of insolvency, or before the insured replaces the policy or causes its cancellation, if he does so within thirty (30) days of the determination. The obligation shall extend to covered claims reported pursuant to an optional extended period to report claims sold to the insured by the liquidator. The obligation as to covered claims shall be satisfied by paying to the claimant an amount as follows:

(a) The full amount of a covered claim for benefits under a workers' compensation insurance coverage;

(b) An amount not exceeding $10,000 per policy for a covered claim for the return of unearned premium;

(c) An amount not exceeding $300,000 per claimant for all other covered claims.

In no event shall the Association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under the policy from which the claim arises. Notwithstanding any other provision of this Act, a covered claim shall not include any claim filed with the Guaranty Fund after the earlier of the final date for the filing of claims against the liquidator or receiver of an insolvent insurer or eighteen (18) months after the order of liquidation. The Association shall pay only that amount of each unearned premium which is in excess of $100.]

Comment: The Alternate Section 8A(1) should be used if the state includes a provision in its liquidation law giving the liquidator authority to sell a limited extended reporting period for claims-made policies.

(2) Be deemed the insurer to the extent of its obligation on the covered claims and to that extent shall have all rights, duties and obligations of the insolvent insurer as if the insurer had not become insolvent.

(3) Assess insurers amounts necessary to pay the obligations of the Association under Section 8A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due.

No member insurer may be assessed in any year an amount greater than two percent (2%) of that member insurer's net direct written premiums for the calendar year preceding the assessment. If the maximum assessment, together with the other assets of the Association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon thereafter as funds become available. The Association shall pay claims in any order which it may deem reasonable, including the payment of claims as they are received from the claimants or in groups or categories of claims. The Association may exempt or defer, in whole or in part, the assessment of any member insurer, if the assessment would cause the member insurers financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by any jurisdiction in which the member insurer is authorized to transact insurance; provided, however, that during the period of deferment, no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of such deferment, or at the election of the company, credited against future assessments.

[Alternate Section 8A(3)

(3) Allocate claims paid and expenses incurred among the three (3) accounts separately, and assess member insurers separately for each account, amounts necessary to pay the obligations of the Association under Section 8A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the calendar year preceding the assessment on the kinds of insurance in the account bears to the net direct written premiums of all member insurer's for the calendar year preceding the assessment on the kinds of insurance in the account. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. No member insurer may be assessed in any one year on any account an amount greater than two percent (2%) of that member insurer's net direct written premiums for the calendar year preceding the assessment on the kinds of insurance in the account. If the maximum assessment, together with the other assets of the Association in any account, does not provide in any one year in any account an amount sufficient to make all necessary payments from that account, the funds available shall be pro-rated and the unpaid portion shall be paid as soon thereafter as funds become available. The Association shall pay claims in any order which it deems reasonable, including the payment of claims as they are received from the claimants or in groups or categories of claims. The Association may exempt or defer, in whole or in part, the assessment of any member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by any jurisdiction in which the member insurer is authorized to transact insurance; provided, however, that during the period of deferment, no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of such deferment, or at the election of the company, credited against future assessments. Each member insurer may set off against any assessment, authorized payments made on covered claims and expenses incurred in the payment of claims by the member insurer if they are chargeable to the account for which the assessment is made.]

Comment: The maximum assessment per year may be varied from state to state depending on the size of the base. The figure used should produce sufficient funds to handle any possible insolvency, keeping in mind that the total amount may not be needed in one year. The two percent maximum used here would have produced in 1968 on a nationwide basis, from the kinds of insurance to which this Act applies, approximately $500,000,000.

(4) Investigate claims brought against the Association and adjust, compromise, settle and pay covered claims to the extent of the Association's obligation and deny all other claims and may review settlements, releases and judgments to which the insolvent insurer or its insureds were parties to determine the extent to which such settlements, releases and judgments may be properly contested.

(5) Notify such persons as the Commissioner directs under Section 10B(1).

Comment: The liquidation statutes of the state may describe the persons to be notified by the liquidator, but since this Association provides a distinctive service, the Commissioner may wish to require a separate notification by it.

(6) Handle claims through its employees or through one or more insurers or other persons designated as servicing facilities. Designation of a servicing facility is subject to the approval of the Commissioner, but the designation may be declined by a member insurer.

(7) Reimburse each servicing facility for obligations of the Association paid by the facility and for expenses incurred by the facility while handling claims on behalf of the Association and shall pay the other expenses of the Association authorized by this Act.

B. The Association may:

(1) Employ or retain such persons as are necessary to handle claims and perform other duties of the Association;

(2) Borrow funds necessary to effect the purposes of this Act in accordance with the plan of operation;

(3) Sue or be sued;

(4) Negotiate and become a party to such contracts as are necessary to carry out the purpose of this Act;

(5) Perform such other acts as are necessary or proper to effectuate the purpose of this Act;

(6) Refund to the member insurers in proportion to the contribution of each member insurer to the Association that amount by which the assets of the Association exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the Association exceed the liabilities of the Association as estimated by the board of directors for the coming year.

[Alternate Section 8B(6)

(6) Refund to the member insurers in proportion to the contribution of each member insurer to that account that amount by which the assets of the account exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the Association in any account exceed the liabilities of that account as estimated by the board of directors for the coming year.]

Comment: The subcommittee feels that the board of directors should determine the amount of the refunds to members when the assets of the Association exceed its liabilities. However, since this excess may be quite small, the board is given the option of retaining all or part of it to pay expenses and possibly remove the need for a relatively small assessment at a later time.

19. The 24-Hour Coverage Pilot Project Model Act provides the following discussion of guaranty fund assessments:

Section 15. Guaranty Fund Participation

The twenty-four hour medical insurance policy shall be classified as property and casualty coverage regardless of the carrier approved to provide the coverage. As such, the carrier shall be obligated to participate in the property and casualty guaranty association specified in [insert applicable section providing for participation in the property and casualty insurance guaranty association]. All premiums collected for the twenty-four hour medical insurance policy shall be considered assessable premiums for purposes of participation in the guaranty association. In the event of insolvency of the carrier, the guaranty association shall honor the full extent of the contractual obligation assumed by the carrier under the twenty-four hour medical insurance policy.

Section 16. Special Assessments

A carrier providing coverage to an employer through the twenty-four hour medical insurance policy is obligated to participate in the [insert reference to residual market mechanism, second injury fund or other fund that relies on assessments from workers' compensation insurance premiums]. For purposes of calculation of this special assessment, the commissioner shall establish by rule, or order, the amount of premium generated under the twenty-four hour medical insurance policy which shall be considered assessable premium.

Drafting Note: A state should consider the ratio of the workers' compensation standard premium to the total premium for both workers' compensation and the health insurance plan used by the employer in choosing an appropriate amount. States with relatively small residual market shares for workers' compensation may choose to exclude this section. States should consider loss based assessments, if applicable.

20. The Health Maintenance Organization Model Act contains the following:

Section 33. Insolvency Protection; Assessment

A. When a health maintenance organization in this state is declared insolvent by a court of competent jurisdiction, the [commissioner] may levy an assessment on health maintenance organizations doing business in this state to pay claims for uncovered expenditures for enrollees who are residents of this state and to provide continuation of coverage for subscribers or enrollees not covered under Section 15. The [commissioner] may not assess in any one calendar year more than two percent (2%) of the aggregate premium written by each health maintenance organization in this state the prior calendar year.

B. The [commissioner] may use funds obtained under Subsection A to pay claims for uncovered expenditures for subscribers or enrollees of an insolvent health maintenance organization who are residents of this state, provide for continuation of coverage for subscribers or enrollees who are residents of this state and are not covered under Section 15, and administrative costs. The [commissioner] may by regulation prescribe the time, manner and form for filing claims under this section or may require claims to be allowed by an ancillary receiver or the domestic liquidator or receiver.

C. (1) A receiver or liquidator of an insolvent health maintenance organization shall allow a claim in the proceeding in an amount equal to administrative and uncovered expenditures paid under this section.

(2) Any person receiving benefits under this section for uncovered expenditures is deemed to have assigned the rights under the covered health care plan certificates to the [commissioner] to the extent of the benefits received. The [commissioner] may require an assignment to it of such rights by any payee, enrollee, or beneficiary as a condition precedent to the receipt of any rights or benefits conferred by this section upon that person. The [commissioner] is subrogated to these rights against the assets of an insolvent health maintenance organization held by a receiver or liquidator of another jurisdiction.

(3) The assignment of subrogation rights of the [commissioner] and allowed claim under this subsection have the same priority against the assets of the insolvent health maintenance organization as those possessed by the person entitled to receive benefits under this section or for similar expenses in the receivership or liquidation.

D. When assessed funds are unused following the completion of the liquidation of a health maintenance organization, the [commissioner] will distribute on a pro rata basis any amounts received under Subsection A which are not *de minimis* to the health maintenance organizations that have been assessed under this section.

E. The aggregate coverage of uncovered expenditures under this section shall not exceed $300,000 with respect to one individual. Continuation of coverage shall not continue for more than the lesser of one year after the health maintenance organization coverage is terminated by insolvency or the remaining term of the contract. The [commissioner] may provide continuation of coverage on any reasonable basis; including, but not limited to, continuation of the health maintenance organization contract or substitution of indemnity coverage in a form determined by the [commissioner].

F. The [commissioner] may waive an assessment of a health maintenance organization if it would be or is impaired or placed in financially hazardous condition. A health maintenance organization which fails to pay an assessment within thirty (30) days after notice is subject to a civil forfeiture of not more than $1,000 per day and suspension or revocation of its certificate of authority. An action taken by the [commissioner] in enforcing the provisions of this section may be appealed by the health maintenance organization in accordance with [the administrative procedures act].

Drafting Comment: Section 33 is not recommended for all states. A state should carefully review its health maintenance organization market to determine whether the assessment procedure under this section is feasible. If health maintenance organization premium volume is small or dominated by a few organizations, a state may wish to rely solely on the protections provided under Section 14 and 15.

For those states where an assessment is feasible, this section provides assurance that funds will be available to pay uncovered expenditures even if those liabilities have been underestimated by the organization or have significantly escalated as the financial condition of the organization deteriorated. In addition, an assessment provides a means for continued coverage for those subscribers or enrollees who are not protected under Section 15.

Generally Accepted Accounting Principles

21. The *AICPA Audit and Accounting Guide: Stock Life Insurance* Companies contains the following in Chapter 7, *Capital and Surplus*:

> In lieu of capital stock, mutual companies are organized with prescribed minimum surplus which varies among states. Such surplus may take the form of guaranty funds, guaranty capital, or

other permanently designated funds subject to the payment of interest and subject to repayment under conditions prescribed by the respective state laws.

22. *AICPA Statement of Position 97-3, Accounting by Insurance and Other Enterprises for Insurance-Related Assessments* contains the following guidance (only pertinent sections included):

> Reporting Liabilities
>
> 10. Entities subject to assessments should recognize liabilities for insurance-related assessments when all of the following conditions are met:
>
> a. An assessment has been imposed or information available prior to the issuance of the financial statements indicates it is probable that an assessment will be imposed.
>
> b. The event obligating an entity to pay (underlying cause of) an imposed or probable assessment has occurred on or before the date of the financial statements.
>
> c. The amount of the assessment can be reasonably estimated.
>
> Probability of Assessment
>
> 11. Premium-based guaranty-fund assessments, expect those that are prefunded, are presumed probable when a formal determination of insolvency occurs, and presumed not probable prior to formal determination of insolvency. Prefunded guaranty-fund assessments and premium-based administrative-type assessments (as defined in paragraph 4), are presumed probable when the premiums on which the assessments are expected to be based are written. Loss-based administrative-type and second-injury fund assessments are presumed probable when the loss on which the assessments are expected to be based are incurred.
>
> Obligating Event
>
> 12. Because of the fundamental differences in how assessment mechanisms operate, the event that makes an assessment probable (for example, an insolvency) may not be the event that obligates the entity. The following defines the event that obligates an entity to pay an assessment for each kind of assessment defined in this SOP.
>
> 13. For premium-based assessments, the event that obligates the entity is generally writing the premium or becoming obligated to write or renew (such as multiple-year, noncancelable policies) the premiums on which the assessments are expected to be based. Some states, through law or regulatory practice, provide that an insurance enterprise cannot avoid paying a particular assessment even if that insurance enterprise reduces its premium writing in the future. In such circumstances, the event that obligates the entity is a formal determination of insolvency or similar triggering event. Regulatory practice would be determined based on the stated intentions or prior history of the insurance regulators.
>
> 14. For loss-based assessments, the event that obligates an entity is an entity's incurring the losses on which the assessments are expected to be based.

The SOP defines the condition of obligation differently than the issue paper. This issue paper indicates that the conditions of probability and obligation have been satisfied when insolvency has occurred, regardless of whether the assessment is based upon premiums or losses written, incurred or paid before or after the insolvency. This issue paper rejects SOP 97-3 because it is inconsistent with the concepts of conservatism and recognition outlined in the Statement of Concepts. It is also inconsistent with the accounting principles set forth in Issue Paper No. 5. This issue paper has incorporated language from the Ability to Reasonably Estimate the Liability section of the SOP in paragraph 7.

OTHER SOURCES OF INFORMATION

23. The draft discussion material from previous Property/Casualty codification projects provides the following guidance:

> CHAPTER X
> GUARANTEE FUND AND OTHER ASSESSMENTS
>
> The expense for guarantee fund and other assessments should be reported as taxes, licenses and fees in the annual statement (and not as loss payments) when incurred. Specific assessment practices differ from state to state. In general, however, when an assessment is made, in addition to the amount requested, an estimate of the ultimate range of assessment may be indicated. Experience has shown that these ranges may change dramatically within a short time frame. The expense is incurred when an insolvency has occurred, an assessment is probable, and the amount can be reasonably estimated.
>
> Accounting for Guarantee Fund and Other Assessments
>
> Guarantee fund and other assessments are incurred, must be expensed, and a liability established when the following criteria are met:
>
> a. An insolvency has occurred which creates an obligation for a state guarantee fund. This obligation will usually be evident when a company receives a court order for liquidation.
>
> b. Information available indicates that it is probable that a liability has been incurred.
>
> c. The amount of the liability can be reasonable estimated.
>
> The amount accrued must reflect the ultimate liability expected from the insolvency. The accrual will be determined net of anticipated premium tax offsets.
>
> If it is probable that a liability has been incurred from an insolvency, but it can not be reasonable estimate, a footnote should disclose the nature of the contingent liability and shall express the potential range of the anticipated loss exposure, when the potential liability is deemed material.
>
> Reporting for Guarantee Fund and Other Assessments
>
> The expense for guarantee fund and other assessments should be reported as taxes, licenses and fees in the annual statement (and not as loss payments) when incurred.
>
> Assessment for which the Insurance company acts as Agent for the State
>
> In certain circumstances, an insurance company acts as an agent for certain state agencies in the collection and remittance of fees or assessments. In these circumstances, the liability for the fees and assessments rests with the policyholder rather than with the insurance company. The insurance company's obligation is to collect and subsequently remit the fee or assessment. These situations differ from a premium tax liability whereby the insurance company is required to remit the premium tax whether or not the premium has been collected.
>
> When both the following conditions are met, an assessment should not be reported in the statement of operations of an insurance company:
>
> - The assessment is reflected as a separately identifiable item on the billing to the policyholder; and

> - Remittance of the assessment by the insurance company to the state is contingent upon collection from the insured.

24. NAIC Technical Resource Group Proposed Draft Life Codification provides the following guidance in Chapter 22, *General Expenses and Taxes, Licenses and Fees*:

> 6. All other taxes will include guaranty fund assessments and taxes of Canada or of any other foreign country not specifically provided for elsewhere. Guaranty fund and other assessments must be expended and a liability established when the following criteria are met:
>
> - An insolvency has occurred which creates an obligation for a state guaranty fund; this obligation will usually be evident when a company receives a court order for liquidation;
>
> - Information available indicates it is probable that a liability has been incurred; and
>
> - The amount of the loss can be reasonably estimated using the risk free investment rate of a bond having a duration equivalent to the duration of the liability.
>
> The amount accrued must reflect the ultimate loss exposure expected from the insolvency. The accrual will be determined net of estimated premium tax offsets and will reflect the present value of the anticipated payments.
>
> If it is probable a liability has been incurred from an insolvency, but it cannot be reasonably estimated, the nature of the contingent liability and the potential range of the anticipated loss exposure must be disclosed in the notes to the financial statements, when the potential liability is deemed material.

Statutory Issue Paper No. 36

Troubled Debt Restructurings

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 36

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. A troubled debt restructuring exists when a creditor, for economic or legal reasons related to the debtor's financial difficulties, grants a concession to the debtor that it would not otherwise grant. A troubled debt restructuring may include, but is not necessarily limited to, one or a combination of the following:

a. Transfer of assets to the creditor by the debtor, including a transfer resulting from foreclosure or repossession.

b. Transfer of an equity interest in the debtor to the creditor.

c. Modification of the terms of the debt, such as a reduction in the principal amount, interest rate or an extension of payment due dates.

Current statutory guidance on troubled debt restructurings is limited to guidance on accounting for loans that are in the process of foreclosure and real estate obtained through foreclosure.

2. GAAP guidance has established more comprehensive accounting principles in *FASB Statement No. 15*, *Accounting by Debtors and Creditors for Troubled Debt Restructurings* (FAS 15), as amended by *FASB Statement No. 114*, *Accounting by Creditors for Impairment of a Loan* (FAS 114), and *FASB Statement No. 118*, *Accounting by Creditors for Impairment of a Loan - Income Recognition and Disclosures* (FAS 118*).*

3. The purpose of this issue paper is to establish statutory accounting principles for troubled debt restructurings that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Definition of Troubled Debt Restructuring

4. A troubled debt restructuring shall be defined as a debt restructuring whereby the creditor, for economic or legal reasons related to the debtor's financial difficulties, grants a concession to the debtor that it would not otherwise grant. That concession either stems from an agreement between the creditor and the debtor or is imposed by law or a court. For example, a creditor may restructure the terms of a debt to alleviate the burden of the debtor's near-term cash requirements, and many troubled debt restructurings involve modifying terms to reduce or defer cash payments required of the debtor in the near future to help the debtor attempt to improve its financial condition and eventually be able to pay the creditor. The creditor, for example, may accept cash, other assets, or an equity interest in the debtor in satisfaction of the debt though the value received is less than the amount of the debt because the creditor concludes that

step will maximize recovery of its investment. A troubled debt restructuring shall include debt that is fully satisfied by foreclosure, repossession, or other transfer of assets or by grant of equity securities by the debtor that is, in a technical sense, not restructured. The determination of whether a debt restructuring is considered a troubled debt restructuring, as defined above, shall be made independently for the debtor and the creditor.

5. A debt restructuring shall not necessarily be considered a troubled debt restructuring for purposes of this issue paper even if the debtor is experiencing some financial difficulties. For example, a troubled debt restructuring is not involved if

a. the fair value of cash, other assets, or an equity interest accepted by a creditor from a debtor in full satisfaction of its receivable at least equals the creditor's recorded investment in the receivable;

b. the fair value of cash, other assets, or an equity interest transferred by a debtor to a creditor in full settlement of its payable at least equals the debtor's carrying amount of the payable;

c. the creditor reduces the effective interest rate on the debt primarily to reflect a decrease in market interest rates in general or a decrease in the risk so as to maintain a relationship with a debtor that can readily obtain funds from other sources at the current market interest rate;

d. the debtor issues in exchange for its debt new marketable debt having an effective interest rate based on its market price that is at or near the current market interest rates of debt with similar maturity dates and stated interest rates issued by nontroubled debtors; or

e. the debtor, in connection with bankruptcy proceedings, enters into debt restructuring that results in a general restatement of most of the debtor's liabilities.

In general, a debtor that can obtain funds from sources other than the existing creditor at market interest rates at or near those for nontroubled debt is not involved in a troubled debt restructuring. A debtor in a troubled debt restructuring can obtain funds from sources other than the existing creditor, if at all, only at effective interest rates (based on market prices) so high that it cannot afford to pay them. Thus, in an attempt to protect as much of its investment as possible, the creditor in a troubled debt restructuring grants a concession to the debtor that it would not otherwise consider.

Accounting by Debtors

6. A debtor shall account for a troubled debt restructuring according to the type of the restructuring (transfer of assets in full settlement, grant of equity interest in full settlement, modification of terms or combination of types). Generally, troubled debt restructurings involving the transfer of assets or the grant of an equity interest shall be accounted for at the fair value of the assets transferred or the equity interest granted, as outlined in paragraph 20 of this issue paper. Troubled debt restructurings involving a modification of terms shall be accounted for prospectively, as outlined in paragraph 20 of this issue paper.

Accounting by Creditors

7. A creditor shall account for a troubled debt restructuring according to the type of the restructuring (receipt of assets in full satisfaction, modification of terms, combination of types). Generally, troubled debt restructurings involving the transfer of assets shall be accounted for at the fair value of the assets received, as outlined in paragraph 20 of this issue paper. Troubled debt restructurings involving modification of terms shall be accounted for at fair value (as determined by acceptable appraisal methodologies or, if applicable, the value determined in accordance with the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* (SVO Purposes and Procedures). If the restructured loan is collateral dependent, fair value shall be the fair value of the collateral. If the restructured loan is not

collateral dependent, fair value shall be determined in accordance with the SVO Purposes and Procedures, if applicable, or at the present value of expected future cash flows, as discussed in paragraph 21 of this issue paper. If the determined fair value of the loan is less than the recorded investment in the loan (including accrued interest, net deferred loan fees or costs, and unamortized premium or discount), a new cost basis shall be established at the fair value with the difference being recorded as a realized loss in the statement of operations.

8. A creditor shall account for assets, including foreclosed property and equity interests in corporations, joint ventures, or partnerships, received in satisfaction of the loan at their fair value (as determined by acceptable appraisal methodologies or, if applicable, the value determined in accordance with the SVO Purposes and Procedures) at the time of restructuring or at the book value of the loan if lower. If the fair value is less than the book value, the required writedown shall be recognized as a realized capital loss. The creditor shall reclassify the asset from loans to the appropriate asset account, such as real estate or other invested assets, at the time that the creditor obtains clear title to the asset except for mortgage loans which shall be reclassified at the beginning of the redemption period unless it is probable that the mortgage loan will be redeemed. After the troubled debt restructuring, a creditor shall account for the assets received in satisfaction of the loan consistent with the statutory guidance for similar assets.

9. A creditor shall account for a modification of terms in accordance with paragraphs 20 and 21 of this issue paper. Any fees received in connection with a modification of terms of a troubled debt restructuring shall be applied as a reduction of the recorded investment in the loan. All costs associated with the restructuring, including direct loan origination costs, shall be charged to expense as incurred.

Disclosure

10. A debtor in a troubled debt restructuring shall follow the disclosure requirements described in paragraph 20 of this issue paper. A creditor in a troubled debt restructuring shall follow the disclosure requirements described in paragraph 22 of this issue paper except the requirement to record the activity in an allowance account, which is required in *Issue Paper No. 37—Mortgage Loans*.

DISCUSSION

11. This issue paper adopts FAS 15 with modification to specify that creditors shall reclassify assets obtained in a troubled debt restructuring from loans to the appropriate asset account at the time the creditor obtains clear title to the asset except for mortgage loans which shall be reclassified at the beginning of the redemption period unless it is probable that the mortgage loan will be redeemed (see paragraph 15 below for justification). It also adopts paragraphs 9, 22 and 25 of FAS 114 which require creditors to measure all loans that are restructured in a troubled debt restructuring involving a modification of terms in accordance with FAS 114. FAS 114 requires that impaired loans be measured based on the present value of expected future cash flows discounted at the loan's effective interest rate or, as a practical expedient, at the loan's observable market price or the fair value of the collateral if the loan is collateral dependent. The values determined in accordance with the SVO Purposes and Procedures are used as a loan's observable market price or fair value. It also adopts FAS 118 (i.e., when the provisions of FAS 114 are applied in accounting for a troubled debt restructuring that involves a modification of terms, the provisions of FAS 118 apply). FAS 118 amends certain income recognition provisions previously required by FAS 114 as well as exempts troubled debt restructurings accounted for under FAS 114 from certain disclosure requirements. It also adopts *FASB Technical Bulletin 81-6*, *Applicability of Statement 15 to Debtors in Bankruptcy Situations* (FTB 81-6), which states that FAS 15 does not apply to debtors who, in connection with bankruptcy proceedings, enter into a troubled debt restructuring that results in a general restatement of the debtor's liabilities. It also adopts *FASB Technical Bulletin 80-2*, *Classification of Debt Restructuring by Debtors and Creditors* (FTB 80-2), which states that a debtor may have a troubled debt restructuring under FAS 15 even though the related creditor does not. *FASB Emerging Issue*

Task Force Issue No. 87-18, *Use of Zero Coupon Bonds in a Troubled Debt Restructuring* (EITF 87-18), *FASB Emerging Issue Task Force Issue No. 87-19, Substituted Debtors in a Troubled Debt Restructuring* (EITF 87-19), and *FASB Emerging Issue Task Force Issue No. 89-15*, *Accounting for a Modification of Debt Terms When the Debtor is Experiencing Financial Difficulties* (EITF 89-15), provide guidance on the application of FAS 15 and are adopted in this issue paper consistent with the modifications to FAS 15 discussed in this issue paper. This issue paper also adopts *FASB Emerging Issue Task Force Issue No. 96-22, Applicability of the Disclosures Required by FASB Statement No. 114 When a Loan Is Restructured in a Troubled Debt Restructuring into Two (or More) Loans.*

12. This issue paper is consistent with paragraph 14 of *FASB Statement No. 91*, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loan and Initial Direct Costs of Leases* (FAS 91), which requires that fees received in connection with a modification of terms of a troubled debt restructuring be applied as a reduction of the recorded investment in the loan and that all related costs be charged to expense as incurred. FAS 91 was rejected in Issue Paper Nos. 26, 37, and 43.

13. This issue paper rejects the GAAP guidance set forth in *FASB Emerging Issues Task Force Issue No. 94-8*, *Accounting for Conversion of a Loan into a Security in a Troubled Debt Restructuring* (EITF 94-8), which states that *FASB Statement No. 115*, *Accounting for Certain Investment in Debt and Equity Securities* (FAS 115), applies to securities received in connection with a loan restructuring. It also rejects the GAAP guidance set forth in *FASB Technical Bulletin 94-1*, *Application of Statement 115 to Debt Securities Restructured in a Troubled Debt Restructuring* (FTB 94-1), which states that FAS 115 applies to any loan that was restructured in a troubled debt restructuring involving a modification of terms that meets the definition of a security (as defined in FAS 115). It also rejects paragraph 6.d. of FAS 114 by requiring that the requirements of FAS 114 be applied to debt securities. This is consistent with the rejection of FAS 115 in *Issue Paper No. 26—Bonds, Excluding Loan-Backed and Structured Securities*, *Issue Paper No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated companies)* and *Issue Paper No. 32—Investments in Preferred Stock (excluding investments in preferred stock of subsidiary, controlled, or affiliated companies).* Paragraph 13 of FAS 114 which requires impairment to be recognized through a valuation allowance is rejected. Paragraph 7 of this issue paper requires the difference between the fair value and the recorded value to be recorded as a realized loss in the statement of operations which is consistent with the rejection of the utilization of valuation allowances in statutory accounting. This issue paper requires assets to be recorded at the lower of fair value or book value. Practically speaking, this is no different from the FAS 114 requirement to record at fair value. In a troubled debt restructuring situation, it will be unusual for the fair value to exceed the book value.

14. The conclusions above are consistent with the accounting for impaired mortgage loans in *Issue Paper No. 37—Mortgage Loans* (Issue Paper No. 37) which adopts FAS 114 for accounting for collateral dependent loans.

15. Current statutory guidance does not specifically address accounting and disclosure by debtors and creditors for troubled debt restructuring. The SVO Purposes and Procedures provides a designation for “Bonds and Counterparties In or Near Default”. The accounting for such bonds is addressed in Issue Paper No. 26 which requires that such bonds be written down to fair market value, is consistent with this issue paper. The statutory literature also provides guidance on the reclassification of foreclosed mortgage loans to real estate. The guidance states that loans for which foreclosure proceedings have been completed, and where there are debtor redemption privileges, may temporarily retain their status as mortgage loans until the insurance company obtains clear title. This issue paper rejects this concept and allows the creditor to reclassify the asset at the beginning of the redemption period unless it is probable that the mortgage loan will be redeemed. This revision to current statutory accounting is justified because the nature of the asset has effectively changed when the foreclosure process has been substantially completed. This is also consistent with current industry practice.

16. The adoption of the statutory accounting principles specified in the conclusion above are consistent with the Statement of Concepts which states *"In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting"* and *"Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency*".

Drafting Notes/Comments

- Accounting for mortgage loan impairments is addressed in *Issue Paper No. 37—Mortgage Loans*.
- Accounting for real estate is addressed in *Issue Paper No. 40—Real Estate Investments*.
- Accounting for collateral dependent loans is addressed in *Issue Paper No. 37—Mortgage Loans*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

17. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual) and the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P & C Accounting Practices and Procedures Manual) each include the following in Chapter 3, Mortgage Loans (only the pertinent excerpts are included below):

> Valuation
>
> For loans that are in default, being voluntarily conveyed, or being foreclosed, the carrying value may be adjusted for unpaid interest and additional expenses, such as insurance, taxes and legal fees that have been incurred to protect the investment or to obtain clear title to the property to the extent that such amounts are deemed to be recoverable from the ultimate disposition of the property. However, if such interest and costs cannot reasonably be expected to be recovered, they should not be added to the carrying value, and the cost should be expensed.
>
> If, when reporting mortgage loans in default, the values of real estate have declined to less than the unpaid principal balances, an appropriate valuation reserve should be established to reflect the expected uncollectible amount.
>
> Mortgage loans that are in default, or which are under foreclosure proceedings, continue to be classified as mortgage loans. Loans for which foreclosure proceedings have been completed, even to the extent of the court granting title to the mortgages, may temporarily retain their status as mortgage loans, since in some states the mortgagor still has the privilege of redeeming the mortgage during a stated redemption period. During this period, the loan may remain classified as a mortgage loan until the insurance company obtains clear title. The asset is then transferred to the real estate account.

18. The Life/A&H Accounting Practices and Procedures Manual includes the following in Chapter 4, Real Estate (only the pertinent excerpts are included below):

> Cost
>
> The cost of real estate acquired through foreclosure or voluntary conveyance is recorded at the lower of fair market value at acquisition or cost. Cost includes the outstanding principal balance of the mortgage loan at the date of foreclosure or conveyance plus foreclosure costs, real estate taxes, insurance premiums and all other costs necessary to obtain clear title and to place the property in good repair. Uncollected interest or unrecovered advances made before foreclosure should also be included in cost.

> Statement Value
>
> Generally, the value of investment real estate and property acquired in satisfaction of debt may not exceed the lower of current market value or cost, plus capitalized improvements, less normal depreciation. In lieu of writing down investment real estate or taking part of the value as nonadmitted when market value is less than book value, an insurer may establish a reserve for specific properties as a liability.

19. The P & C Accounting Practices and Procedures Manual includes the following in Chapter 4, Real Estate (only the pertinent excerpts are included below):

> Cost
>
> The cost of real estate acquired through foreclosure generally includes the outstanding principal balance of the mortgage loan at the date of foreclosure, plus foreclosure costs, real estate taxes, insurance premiums, and all other costs necessary to obtain clear title and to place the property in good repair. Unrecovered advances made before foreclosure should also be included in cost. The total cost should not exceed the realizable value.
>
> Statement Value
>
> Generally, the value of investment real estate and property acquired in satisfaction of debt may not exceed the lower of current market value or cost, plus capitalized improvements, less normal depreciation. In lieu of writing down investment real estate or taking part of the value as nonadmitted when market value is less than book value, an insurer may establish a reserve for specific properties as a liability.

Generally Accepted Accounting Principles

20. FAS 15 provides the following definition and guidance for troubled debt restructuring:

> INTRODUCTION
>
> 2. A restructuring of a debt constitutes a troubled debt restructuring for purposes of this Statement if the creditor for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not otherwise consider. That concession either stems from an agreement between the creditor and the debtor or is imposed by law or a court. For example, a creditor may restructure the terms of a debt to alleviate the burden of the debtor's near-term cash requirements, and many troubled debt restructuring involve modifying terms to reduce or defer cash payments required of the debtor in the near future to help the debtor attempt to improve its financial condition and eventually be able to pay the creditor. Or, for example, the creditor may accept cash, other assets, or an equity interest in the debtor in satisfaction of the debt though the value received is less than the amount of the debt because the creditor concludes that step will maximize recovery of its investment.[1]
>
> [1] Although troubled debt that is fully satisfied by foreclosure, repossession, or other transfer of assets or by grant of equity securities by the debtor is, in a technical sense, not restructured, that kind of event is included in the term troubled debt restructuring in this Statement.
>
> 3. Whatever the form of concession granted by the creditor to the debtor in a troubled debt restructuring, the creditor's objective is to make the best of a difficult situation. That is, the creditor expects to obtain more cash or other value from the debtor, or to increase the probability of receipt, by granting the concession than by not granting it.

4. In this Statement, a receivable or payable (collectively referred to as debt) represents a contractual right to receive money or a contractual obligation to pay money on demand or on fixed or determinable dates that is already included as an asset or liability in the creditor's or debtor's balance sheet at the time of the restructuring. Receivables or payables that may be involved in troubled debt restructuring commonly result from lending or borrowing of cash, investing in debt securities that were previously issued, or selling or purchasing goods or services on credit. Examples are accounts receivable or payable, notes, debentures and bonds (whether those receivables or payables are secured or unsecured and whether they are convertible or nonconvertible), and related accrued interest, if any. Typically, each receivable or payable is negotiated separately, but sometimes two or more receivables or payables are negotiated together. For example, a debtor may negotiate with a group of creditors but sign separate debt instruments with each creditor. For purposes of this Statement, restructuring of each receivable or payable, including those negotiated and restructured jointly, shall be accounted for individually. The substance rather than the form of the receivable or payable shall govern. For example, to a debtor, a bond constitutes one payable even though there are many bondholders.

5. A troubled debt restructuring may include, but is not necessarily limited to, one or a combination of the following:

a. Transfer from the debtor to the creditor of receivables from third parties, real estate, or other assets to satisfy fully or partially a debt (including a transfer resulting from foreclosure or repossession).

b. Issuance or other granting of an equity interest to the creditor by the debtor to satisfy fully or partially a debt unless the equity interest is granted pursuant to existing terms for converting the debt into an equity interest.

c. Modification of terms of a debt, such as one or a combination of:

1. Reduction (absolute or contingent) of the stated interest rate for the remaining original life of the debt.

2. Extension of the maturity date or dates at a stated interest rate lower than the current market rate for new debt with similar risk.

3. Reduction (absolute or contingent) of the face amount or maturity amount of the debt as stated in the instrument or other agreement.

4. Reduction (absolute or contingent) of accrued interest.

6. Troubled debt restructuring may occur before, at, or after the stated maturity of debt, and time may elapse between the agreement, court order, etc. and the transfer of assets or equity interest, the effective date of new terms, or the occurrence of another event that constitutes consummation of the restructuring. The date of consummation is the time of the restructuring in this Statement.

7. A debt restructuring is not necessarily a troubled debt restructuring for purposes of this Statement even if the debtor is experiencing some financial difficulties. For example, a troubled debt restructuring is not involved if (a) the fair value[2] of cash, other assets, or an equity interest accepted by a creditor from a debtor in full satisfaction of its receivable at least equals the creditor's recorded investment in the receivable;[3] (b) the fair value of cash, other assets, or an equity interest transferred by a debtor to a creditor in full settlement of its payable at least equals the debtor's carrying amount of the payable; (c) the creditor reduces the effective interest rate on the debt primarily to reflect a decrease in market interest rates in general or a decrease in the risk so as to maintain a relationship with a debtor that can readily obtain funds from other sources at

the current market interest rate; or (d) the debtor issues in exchange for its debt new marketable debt having an effective interest rate based on its market price that is at or near the current market interest rates of debt with similar maturity dates and stated interest rates issued by nontroubled debtors. In general, a debtor that can obtain funds from sources other than the existing creditor at market interest rates at or near those for nontroubled debt is not involved in a troubled debt restructuring. A debtor in a troubled debt restructuring can obtain funds from sources other than the existing creditor in the troubled debt restructuring, if at all, only at effective interest rates (based on market prices) so high that it cannot afford to pay them. Thus, in an attempt to protect as much of its investment as possible, the creditor in a troubled debt restructuring grants a concession to the debtor that it would not otherwise consider.

[2] Defined in paragraph 13.

[3] Defined in footnote 17.

8. For purposes of this Statement, troubled debt restructurings do not include changes in lease agreements (the accounting is prescribed by *FASB Statement No. 13, Accounting for Leases*) or employment-related agreements (for example, pension plans and deferred compensation contracts). Nor do troubled debt restructuring include debtors' failures to pay trade accounts according to their terms or creditors' delays in taking legal action to collect overdue amounts of interest and principal, unless they involve an agreement between debtor and creditor to restructure.

(Note: Paragraph 9 not included as deleted or superseded)

10. This Statement supersedes *FASB Interpretation No. 2, Imputing Interest on Debt Arrangements Made under the Federal Bankruptcy Act*, and shall be applied to the types of situations that were covered by that Interpretation. Thus, it shall be applied to troubled debt restructuring consummated under reorganization, arrangement, or other provisions of the Federal Bankruptcy Act or other Federal statutes related thereto.[4] It also amends *APB Opinion No. 26, Early Extinguishment of Debt*, to the extent needed to exclude from that Opinion's scope early extinguishments of debt through troubled debt restructuring.

[4] This Statement does not apply, however, if under provisions of those Federal statutes or in a quasi-reorganization or corporate readjustment (*ARB No. 43, Chapter 7, Section A, Quasi-Reorganization or Corporate Readjustment*...) with which a troubled debt restructuring coincides, the debtor restates its liabilities generally.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Accounting by Debtors

12. A debtor shall account for a troubled debt restructuring according to the type of the restructuring as prescribed in the following paragraphs.

Transfer of Assets in Full Settlement

13. A debtor that transfers its receivables from third parties, real estate, or other assets to a creditor to settle fully a payable shall recognize a gain on restructuring of payables (see paragraph 21). The gain shall be measured by the excess of (i) the carrying amount of the payable settled (the face amount increased or decreased by applicable accrued interest and

applicable unamortized premium, discount, finance charges, or issue costs) over (ii) the fair value of the assets transferred to the creditor.[5] The fair value of the assets transferred is the amount that the debtor could reasonably expect to receive for them in a current sale between a willing buyer and a willing seller, that is, other than in a forced or liquidation sale. Fair value of assets shall be measured by their market value if an active market for them exists. If no active market exists for the assets transferred but exists for similar assets, the selling prices in that market may be helpful in estimating the fair value of the assets transferred. If no market price is available, a forecast of expected cash flows may aid in estimating the fair value of assets transferred, provided the expected cash flows are discounted at a rate commensurate with the risk involved.[6]

[5] Paragraphs 13, 15, and 19 indicate that the fair value of assets transferred or the fair value of an equity interest granted shall be used in accounting for a settlement of a payable in a troubled debt restructuring. That guidance is not intended to preclude using the fair value of the payable settled if more clearly evident than the fair value of the assets transferred or of the equity interest granted in a full settlement of a payable (paragraphs 13 and 15). (See paragraph 67 of *APB Opinion No. 16, Business Combinations*.) However, in a partial settlement of a payable (paragraph 19), the fair value of the assets transferred or of the equity interest granted shall be used in all cases to avoid the need to allocate the fair value of the payable between the part settled and the part still outstanding.

[6] Some factors that may be relevant in estimating the fair value of various kinds of assets are described in paragraphs 88 and 89 of APB Opinion No. 16, paragraphs 12-14 of *APB Opinion No. 21, Interest on Receivables and Payables*, and paragraph 25 of *APB Opinion No. 29, Accounting for Nonmonetary Transactions.*

14. A difference between the fair value and the carrying amount of assets transferred to a creditor to settle a payable is a gain or loss on transfer of assets.[7] The debtor shall include that gain or loss in measuring net income for the period of transfer, reported as provided in *APB Opinion No. 30, Reporting the Results of Operations*.

[7] The carrying amount of a receivable encompasses not only unamortized premium, discount, acquisition costs, and the like but also an allowance for uncollectible amounts and other “valuation” accounts, if any. A loss on transferring receivables to creditors may therefore have been wholly or partially recognized in measuring net income before the transfer and be wholly or partly a reduction of a valuation account rather than a gain or loss in measuring net income for the period of the transfer.

Grant of Equity Interest in Full Settlement

15. A debtor that issues or otherwise grants an equity interest to a creditor to settle fully a payable shall account for the equity interest at its fair value.[8] The difference between the fair value of the equity interest granted and the carrying amount of the payable settled shall be recognized as a gain on restructuring of payables (see paragraph 21).

[8] See footnote 5.

Modification of Terms

16. A debtor in a troubled debt restructuring involving only modification of terms of a payable--that is, not involving a transfer of assets or grant of an equity interest--shall account for the

effects of the restructuring prospectively from the time of restructuring, and shall not change the carrying amount of the payable at the time of the restructuring unless the carrying amount exceeds the total future cash payments specified by the new terms.[9] That is, the effects of changes in the amounts or timing (or both) of future cash payments designated as either interest or face amount shall be reflected in future periods.[10] Interest expense shall be computed in a way that a constant effective interest rate is applied to the carrying amount of the payable at the beginning of each period between restructuring and maturity (in substance the "interest" method prescribed by paragraph 15 of APB Opinion No. 21). The new effective interest rate shall be the discount rate that equates the present value of the future cash payments specified by the new terms (excluding amounts contingently payable) with the carrying amount of the payable.

[9] In this Statement, total future cash payments includes related accrued interest, if any, at the time of the restructuring that continues to be payable under the new terms.

[10] All or a portion of the carrying amount of the payable at the time of the restructuring may need to be reclassified in the balance sheet because of changes in the terms, for example, a change in the amount of the payable due within one year after the date of the debtor's balance sheet. A troubled debt restructuring of a short-term obligation after the date of a debtor's balance sheet but before that balance sheet is issued may affect the classification of that obligation in accordance with *FASB Statement No. 6, Classification of Short-Term Obligations Expected to Be Refinanced.*

17. If, however, the total future cash payments specified by the new terms of a payable, including both payments designated as interest and those designated as face amount, are less than the carrying amount of the payable, the debtor shall reduce the carrying amount to an amount equal to the total future cash payments specified by the new terms and shall recognize a gain on restructuring of payables equal to the amount of the reduction (see paragraph 21).[11] Thereafter, all cash payments under the terms of the payable shall be accounted for as reductions of the carrying amount of the payable, and no interest expense shall be recognized on the payable for any period between the restructuring and maturity of the payable.[12]

[11] If the carrying amount of the payable comprises several accounts (for example, face amount, accrued interest, and unamortized premium, discount, finance charges, and issue costs) that are to be continued after the restructuring, some possibly being combined, the reduction in carrying amount may need to be allocated among the remaining accounts in proportion to the previous balances. However, the debtor may choose to carry the amount designated as face amount by the new terms in a separate account and adjust another account accordingly.

[12] The only exception is to recognize interest expense according to paragraph 22.

18. A debtor shall not recognize a gain on a restructured payable involving indeterminate future cash payments as long as the maximum total future cash payments may exceed the carrying amount of the payable. Amounts designated either as interest or as face amount by the new terms may be payable contingent on a specified event or circumstance (for example, the debtor may be required to pay specified amounts if its financial condition improves to a specified degree within a specified period). To determine whether the debtor shall recognize a gain according to the provisions of paragraphs 16 and 17, those contingent amounts shall be included in the "total future cash payments specified by the new terms" to the extent necessary to prevent recognizing a gain at the time of restructuring that may be offset by future interest expense. Thus, the debtor shall apply paragraph 17 of *FASB Statement No. 5, Accounting for Contingencies*, in which probability of occurrence of a gain contingency is not a factor, and shall assume that

contingent future payments will have to be paid. The same principle applies to amounts of future cash payments that must sometimes be estimated to apply the provisions of paragraphs 16 and 17. For example, if the number of future interest payments is flexible because the face amount and accrued interest is payable on demand or becomes payable on demand, estimates of total future cash payments shall be based on the maximum number of periods possible under the restructured terms.

Combination of Types

19. A troubled debt restructuring may involve partial settlement of a payable by the debtor's transferring assets or granting an equity interest (or both) to the creditor and modification of terms of the remaining payable.[13] A debtor shall account for a troubled debt restructuring involving a partial settlement and a modification of terms as prescribed in paragraphs 16-18 except that, first, assets transferred or an equity interest granted in that partial settlement shall be measured as prescribed in paragraphs 13 and 15, respectively, and the carrying amount of the payable shall be reduced by the total fair value of those assets or equity interest.[14] A difference between the fair value and the carrying amount of assets transferred to the creditor shall be recognized as a gain or loss on transfer of assets. No gain on restructuring of payables shall be recognized unless the remaining carrying amount of the payable exceeds the total future cash payments (including amounts contingently payable) specified by the terms of the debt remaining unsettled after the restructuring. Future interest expense, if any, shall be determined according to the provisions of paragraphs 16-18.

[13] Even if the stated terms of the remaining payable, for example, the stated interest rate and the maturity date or dates, are not changed in connection with the transfer of assets or grant of an equity interest, the restructuring shall be accounted for as prescribed by paragraph 19.

[14] If cash is paid in a partial settlement of a payable in a troubled debt restructuring, the carrying amount of the payable shall be reduced by the amount of cash paid.

Related Matters

20. A troubled debt restructuring that is in substance a repossession or foreclosure by the creditor or other transfer of assets to the creditor shall be accounted for according to the provisions of paragraphs 13, 14, and 19.

21. Gains on restructuring of payables determined by applying the provisions of paragraphs 13-20 of this Statement shall be aggregated, included in measuring net income for the period of restructuring, and, if material, classified as an extraordinary item, net of related income tax effect, in accordance with paragraph 8 of *FASB Statement No. 4, Reporting Gains and Losses from Extinguishment of Debt*.

22. If a troubled debt restructuring involves amounts contingently payable, those contingent amounts shall be recognized as a payable and as interest expense in future periods in accordance with paragraph 8 of FASB Statement No. 5. Thus, in general, interest expense for contingent payments shall be recognized in each period in which (a) it is probable that a liability has been incurred and (b) the amount of that liability can be reasonably estimated. Before recognizing a payable and interest expense for amounts contingently payable, however, accrual or payment of those amounts shall be deducted from the carrying amount of the restructured payable to the extent that contingent payments included in “total future cash payments specified by the new terms” prevented recognition of a gain at the time of restructuring (paragraph 18).

23. If amounts of future cash payments must be estimated to apply the provisions of paragraphs 16-18 because future interest payments are expected to fluctuate--for example, the restructured terms may specify the stated interest rate to be the prime interest rate increased by a specified amount or proportion--estimates of maximum total future payments shall be based on the interest rate in effect at the time of the restructuring. Fluctuations in the effective interest rate after the restructuring from changes in the prime rate or other causes shall be accounted for as changes in estimates in the periods the changes occur. However, the accounting for those fluctuations shall not result in recognizing a gain on restructuring that may be offset by future cash payments (paragraphs 18 and 22). Rather, the carrying amount of the restructured payable shall remain unchanged, and future cash payments shall reduce the carrying amount until the time that any gain recognized cannot be offset by future cash payments.

24. Legal fees and other direct costs that a debtor incurs in granting an equity interest to a creditor in a troubled debt restructuring shall reduce the amount otherwise recorded for that equity interest according to paragraphs 15 and 19. All other direct costs that a debtor incurs to effect a troubled debt restructuring shall be deducted in measuring gain on restructuring of payables or shall be included in expense for the period if no gain on restructuring is recognized.

Disclosure by Debtors

25. A debtor shall disclose, either in the body of the financial statements or in the accompanying notes, the following information about troubled debt restructurings that have occurred during a period for which financial statements are presented:

a. For each restructuring: [15] a description of the principal changes in terms, the major features of settlement, or both.

b. Aggregate gain on restructuring of payables and the related income tax effect (paragraph 21).

c. Aggregate net gain or loss on transfers of assets recognized during the period (paragraphs 14 and 19).

d. Per share amount of the aggregate gain on restructuring of payables, net of related income tax effect.

26. A debtor shall disclose in financial statements for periods after a troubled debt restructuring the extent to which amounts contingently payable are included in the carrying amount of restructured payables pursuant to the provisions of paragraph 18. If required by paragraphs 9-13 of FASB Statement No. 5, a debtor shall also disclose in those financial statements total amounts that are contingently payable on restructured payables and the conditions under which those amounts would become payable or would be forgiven.

Accounting by Creditors

27. A creditor shall account for a troubled debt restructuring according to the type of the restructuring as prescribed in the following paragraphs. Paragraphs 28-42 do not apply to a receivable that the creditor is accounting for at market value in accordance with the specialized industry practice (for example, a marketable debt security accounted for at market value by a mutual fund). Estimated cash expected to be received less estimated costs expected to be

[15] Separate restructurings within a fiscal period for the same category of payables (for example, accounts payable or subordinated debentures) may be grouped for disclosure purposes.

incurred is not market value in accordance with specialized industry practice as that term is used in this paragraph.

Receipt of Assets in Full Satisfaction

28. A creditor that receives from a debtor in full satisfaction of a receivable either (i) receivables from third parties, real estate, or other assets or (ii) shares of stock or other evidence of an equity interest in the debtor, or both, shall account for those assets (including an equity interest) at their fair value at the time of the restructuring (see paragraph 13 for how to measure fair value).[16] The excess of (i) the recorded investment in the receivable[17] satisfied over (ii) the fair value of assets received is a loss to be recognized according to paragraph 35.

[16] Paragraphs 28 and 33 indicate that the fair value of assets received shall be used in accounting for satisfaction of a receivable in a troubled debt restructuring. That guidance is not intended to preclude using the fair value of the receivable satisfied if more clearly evident than the fair value of the assets received in full satisfaction of a receivable (paragraph 28). (See paragraph 67 of APB Opinion No. 16.) However, in a partial satisfaction of a receivable (paragraph 33), the fair value of the assets received shall be used in all cases to avoid the need to allocate the fair value of the receivable between the part satisfied and the part still outstanding.

[17] Recorded investment in the receivable is used in paragraphs 28-41 instead of carrying amount of the receivable because the latter is net of an allowance for estimated uncollectible amounts or other “valuation” account, if any, while the former is not. The recorded investment in the receivable is the face amount increased or decreased by applicable accrued interest and unamortized premium, discount, finance charges, or acquisition costs and may also reflect a previous direct write-down of the investment.

29. After a troubled debt restructuring, a creditor shall account for assets received in satisfaction of a receivable the same as if the assets had been acquired for cash.

Modification of Terms

(Note: Paragraphs 30-32 not included as superseded by FAS 114)

Combination of Types

33. A troubled debt restructuring may involve receipt of assets (including an equity interest in the debtor) in partial satisfaction of a receivable and a modification of terms of the remaining receivable.[22] A creditor shall account for a troubled debt restructuring involving a partial satisfaction and modification of terms as prescribed in paragraphs 30-32 (note: paragraphs 30-32 superseded by FAS 114) except that, first, the assets received shall be accounted for at their fair values as prescribed in paragraph 28 and the recorded investment in the receivable shall be reduced by the fair value of the assets received.[23]

[22] Even if the stated terms of the remaining receivable, for example, the stated interest rate and the maturity date or dates, are not changed in connection with the receipt of assets (including an equity interest in the debtor), the restructuring shall be accounted for as prescribed by paragraph 33.

[23] If cash is received in a partial satisfaction of a receivable, the recorded investment in the receivable shall be reduced by the amount of cash received.

Related Matters

34. A troubled debt restructuring that is in substance a repossession or foreclosure by the creditor, or in which the creditor otherwise obtains one or more of the debtor's assets in place of all or part of the receivable, shall be accounted for according to the provisions of paragraphs 28 and 33 and, if appropriate, 39.

(Note: Paragraphs 35-37 not included as superseded by FAS 114)

38. Legal fees and other direct costs incurred by a creditor to effect a troubled debt restructuring shall be included in expense when incurred.

39. A receivable from the sale of assets previously obtained in a troubled debt restructuring shall be accounted for according to APB Opinion No. 21 regardless of whether the assets were obtained in satisfaction (full or partial) of a receivable to which that Opinion was not intended to apply. A difference, if any, between the amount of the new receivable and the carrying amount of the assets sold is a gain or loss on sale of assets.

Disclosure by Creditors

40. A creditor shall disclose, either in the body of the financial statements or in the accompanying notes, the following information about troubled debt restructuring as of the date of each balance sheet presented:

a. (Note: not included as superseded by FAS 114)

b. The amount of commitments, if any, to lend additional funds to debtors owing receivables whose terms have been modified in troubled debt restructuring.

(Note: Paragraph 41 not included as superseded by FAS 114)

Substitution or Addition of Debtors

42. A troubled debt restructuring may involve substituting debt of another business enterprise, individual, or government unit[26] for that of the troubled debtor or adding another debtor (for example, as a joint debtor). That kind of restructuring should be accounted for according to its substance. For example, a restructuring in which, after the restructuring, the substitute or additional debtor controls, is controlled by, or is under common control[27] with the original debtor is an example of one that shall be accounted for by the creditor according to the provisions of paragraphs 30-32 (note: paragraphs 30-32 superseded by FAS 114). Those paragraphs shall also apply to a restructuring in which the substitute or additional debtor and original debtor are related after the restructuring by an agency, trust, or other relationship that in substance earmarks certain of the original debtor's funds or funds flows for the creditor although payments to the creditor may be made by the substitute or additional debtor. In contrast, a restructuring in which the substitute or additional debtor and the original debtor do not have any of the relationships described above after the restructuring shall be accounted for by the creditor according to the provisions of paragraphs 28 and 33.

[26] Government units include, but are not limited to, states, counties, townships, municipalities, school districts, authorities, and commissions.

[27] "Control" in this paragraph has the meaning described in paragraph 3 (c) of *APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock*, "The usual condition for control is ownership of a majority (over 50%) of the outstanding voting stock. The power to control may also exist with a lesser

percentage of ownership, for example, by contract, lease, agreement with other stockholders or by court decree."

21. FAS 114 modified certain provisions of FAS 15 to require creditors to measure all loans that are restructured in a troubled debt restructuring involving a modification of terms in accordance with FAS 114 which requires that impaired loans be measured based on the present value of expected future cash flows discounted at the loan's effective interest rate or, as a practical expedient, at the loan's observable market price or the fair value of the collateral if the loan is collateral dependent. FAS 114 provides the following guidance:

> Definitions and Scope
>
> 4. For purposes of this Statement, a loan is a contractual right to receive money on demand or on fixed or determinable dates that is recognized as an asset in the creditor's statement of financial position. Examples include but are not limited to accounts receivable (with terms exceeding one year) and notes receivable.
>
> 5. This Statement applies to all creditors. It addresses the accounting by creditors for impairment of a loan by specifying how allowances for credit losses related to certain loans should be determined. This Statement also addresses the accounting by creditors for all loans that are restructured in a troubled debt restructuring involving a modification of terms of a receivable, except restructuring of loans excluded from the scope of this Statement in paragraph 6.b.-6.d., including those involving a receipt of assets in partial satisfaction of a receivable. The term troubled debt restructuring is used in this Statement consistent with its use in Statement 15.
>
> 6. This Statement applies to all loans that are identified for evaluation, uncollateralized as well as collateralized, except:
>
> a. Large groups of smaller-balance homogeneous loans that are collectively evaluated for impairment. Those loans may include but are not limited to credit card, residential mortgage, and consumer installment loans.
>
> b. Loans that are measured at fair value or at the lower of cost or fair value, for example, in accordance with *FASB Statement No. 65, Accounting for Certain Mortgage Banking Activities*, or other specialized industry practice.
>
> c. Leases as defined in *FASB Statement No. 13, Accounting for Leases*.
>
> d. Debt securities as defined in *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities*.
>
> 7. This Statement does not specify how a creditor should identify loans that are to be evaluated for collectibility.[1] A creditor should apply its normal loan review procedures in making that judgment. This Statement does not address when a creditor should record a direct write-down of an impaired loan, nor does it address how a creditor should assess the overall adequacy of the allowance for credit losses. In addition to the allowance calculated in accordance with this Statement, a creditor should continue to recognize an allowance for credit losses necessary to comply with Statement 5.

[1] Sources of information useful in identifying loans for evaluation that are listed in the AICPA's Auditing Procedure Study, Auditing the Allowance for Credit Losses of Banks, include a specific materiality criterion; regulatory reports of examination; internally generated listings such as "watch lists," past due reports, overdraft

listings, and listings of loans to insiders; management reports of total loan amounts by borrower; historical loss experience by type of loan; loan files lacking current financial data related to borrowers and guarantors; borrowers experiencing problems such as operating losses, marginal working capital, inadequate cash flow, or business interruptions; loans secured by collateral that is not readily marketable or that is susceptible to deterioration in realizable value; loans to borrowers in industries or countries experiencing economic instability; and loan documentation and compliance exception reports.

Recognition of Impairment

8. A loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. As used in this Statement and in Statement 5, as amended, all amounts due according to the contractual terms means that both the contractual interest payments and the contractual principal payments of a loan will be collected as scheduled in the loan agreement. This Statement does not specify how a creditor should determine that it is probable that it will be unable to collect all amounts due according to the contractual terms of a loan. A creditor should apply its normal loan review procedures in making that judgment. An insignificant delay or insignificant shortfall in amount of payments does not require application of this Statement. A loan is not impaired during a period of delay in payment if the creditor expects to collect all amounts due including interest accrued at the contractual interest rate for the period of delay. Thus, a demand loan or other loan with no stated maturity is not impaired if the creditor expects to collect all amounts due including interest accrued at the contractual interest rate during the period the loan is outstanding.

9. Usually, a loan whose terms are modified in a troubled debt restructuring already will have been identified as impaired because the condition specified in paragraph 8 will have existed before a formal restructuring. However, if a loan is excluded from the scope of this Statement under paragraph 6.a., a creditor may not have accounted for that loan in accordance with this Statement before the loan was restructured. The creditor shall apply the provisions of this Statement to that loan when it is restructured.

10. The term probable is used in this Statement consistent with its use in Statement 5, which defines probable as an area within a range of the likelihood that a future event or events will occur confirming the fact of the loss. That range is from probable to remote, as follows:

Probable. The future event or events are likely to occur.

Reasonably possible. The chance of the future event or events occurring is more than remote but less than likely.

Remote. The chance of the future event or events occurring is slight.

The term probable is further described in paragraph 84 of Statement 5, which states:

The conditions for accrual in paragraph 8 [of Statement 5] are not inconsistent with the accounting concept of conservatism. Those conditions are not intended to be so rigid that they require virtual certainty before a loss is accrued. They require only that it be probable that an asset has been impaired or a liability has been incurred and that the amount of loss be reasonably estimable.

Measurement of Impairment

11. Measuring impaired loans requires judgment and estimates, and the eventual outcomes may differ from those estimates. Creditors should have latitude to develop measurement

methods that are practical in their circumstances. Paragraphs 12-16 address those measurement methods.

12. Some impaired loans have risk characteristics that are unique to an individual borrower, and the creditor will apply the measurement methods described in paragraphs 13-16 on a loan-by-loan basis. However, some impaired loans may have risk characteristics in common with other impaired loans. A creditor may aggregate those loans and may use historical statistics, such as average recovery period and average amount recovered, along with a composite effective interest rate as a means of measuring those impaired loans.

13. When a loan is impaired as defined in paragraph 8 of this Statement, a creditor shall measure impairment based on the present value of expected future cash flows discounted at the loan's effective interest rate, except that as a practical expedient, a creditor may measure impairment based on a loan's observable market price, or the fair value of the collateral if the loan is collateral dependent. Regardless of the measurement method, a creditor shall measure impairment based on the fair value of the collateral when the creditor determines that foreclosure is probable. A loan is collateral dependent if the repayment of the loan is expected to be provided solely by the underlying collateral. The creditor may choose a measurement method on a loan-by-loan basis. A creditor shall consider estimated costs to sell, on a discounted basis, in the measure of impairment if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan. If the measure of the impaired loan is less than the recorded investment in the loan[2] (including accrued interest, net deferred loan fees or costs, and unamortized premium or discount), a creditor shall recognize an impairment by creating a valuation allowance with a corresponding charge to bad-debt expense or by adjusting an existing valuation allowance for the impaired loan with a corresponding charge or credit to bad-debt expense.

[2] The term recorded investment in the loan is distinguished from net carrying amount of the loan because the latter term is net of a valuation allowance, while the former term is not. The recorded investment in the loan does, however, reflect any direct write-down of the investment.

14. If a creditor measures an impaired loan using a present value amount, the creditor shall calculate that present value amount based on an estimate of the expected future cash flows of the impaired loan, discounted at the loan's effective interest rate. The effective interest rate of a loan is the rate of return implicit in the loan (that is, the contractual interest rate adjusted for any net deferred loan fees or costs, premium, or discount existing at the origination or acquisition of the loan).[3] The effective interest rate for a loan restructured in a troubled debt restructuring is based on the original contractual rate, not the rate specified in the restructuring agreement. If the loan's contractual interest rate varies based on subsequent changes in an independent factor, such as an index or rate (for example, the prime rate, the London interbank offered rate, or the U.S. Treasury bill weekly average), that loan's effective interest rate may be calculated based on the factor as it changes over the life of the loan or may be fixed at the rate in effect at the date the loan meets the impairment criterion in paragraph 8. The creditor's choice shall be applied consistently for all loans whose contractual interest rate varies based on subsequent changes in an independent factor. Projections of changes in the factor should not be made for purposes of determining the effective interest rate or estimating expected future cash flows.

[3] A loan may be acquired at a discount because of a change in credit quality or rate or both. When a loan is acquired at a discount that relates, at least in part, to the loan's credit quality, the effective interest rate is the

discount rate that equates the present value of the investor's estimate of the loan's future cash flows with the purchase price of the loan.

15. If a creditor measures an impaired loan using a present value calculation, the estimates of expected future cash flows shall be the creditor's best estimate based on reasonable and supportable assumptions and projections. All available evidence, including estimated costs to sell if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan, should be considered in developing the estimate of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. If a creditor estimates a range for either the amount or timing of possible cash flows, the likelihood of the possible outcomes shall be considered in determining the best estimate of expected future cash flows.

16. Subsequent to the initial measurement of impairment, if there is a significant change (increase or decrease) in the amount or timing of an impaired loan's expected future cash flows, or if actual cash flows are significantly different from the cash flows previously projected, a creditor shall recalculate the impairment by applying the procedures specified in paragraphs 12-15 and by adjusting the valuation allowance. Similarly, a creditor that measures impairment based on the observable market price of an impaired loan or the fair value of the collateral of an impaired collateral-dependent loan shall adjust the valuation allowance if there is a significant change (increase or decrease) in either of those bases. However, the net carrying amount of the loan shall at no time exceed the recorded investment in the loan.

(Note: Paragraphs 17-19 are not included as they are superseded or deleted by FAS 118)

Disclosures

20. A creditor shall disclose, either in the body of the financial statements or in the accompanying notes, the following information:

a. As of the date of each statement of financial position presented, the recorded investment in the loans for which impairment has been recognized in accordance with this Statement and the total allowance for credit losses related to those impaired loans

b. For each period for which results of operations are presented, the activity in the allowance for credit losses account, including the balance in the allowance for credit losses account at the beginning and end of each period, additions charged to operations, direct write-downs charged against the allowance, and recoveries of amounts previously charged off

c. The creditor's income recognition policy (paragraph 17.a. or 17.b.). A creditor that recognizes income in accordance with paragraph 17.a. also shall disclose the amount of interest income recognized in accordance with that paragraph.

Amendments to Existing Pronouncements

21. The first sentence of paragraph 23 of Statement 5 is replaced by the following:

If, based on current information and events, it is probable that the enterprise will be unable to collect all amounts due according to the contractual terms of the receivable, the condition in paragraph 8.a. is met. As used here, all amounts due according to the contractual terms means that both the contractual interest payments and the contractual principal payments will be collected as scheduled according to the receivable's contractual terms. However, a creditor need not consider an insignificant delay or insignificant shortfall in amount of payments as meeting the condition in paragraph 8.a.

22. Statement 15 is amended prospectively as follows:

a. The second sentence in paragraph 1 is replaced by:

A creditor in a troubled debt restructuring involving a modification of terms shall account for the restructured loan in accordance with the provisions of *FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan,* except that a troubled debt restructuring involving a modification of terms before the effective date of Statement 114 may continue to be accounted for and disclosed in accordance with this Statement as long as the restructured loan is not impaired based on the terms of the restructuring agreement.

b. Paragraph 30 is replaced by the following:

A creditor in a troubled debt restructuring involving only a modification of terms of a receivable—that is, not involving receipt of assets (including an equity interest in the debtor) —shall account for the troubled debt restructuring in accordance with the provisions of Statement 114.

c. In the second sentence of paragraph 33, paragraphs 30-32 is deleted and replaced by Statement 114. The third and fourth sentences are deleted.

d. In paragraph 34, the following is added after “foreclosure by the creditor,”: that is, the creditor receives physical possession of the debtor's assets regardless of whether formal foreclosure proceedings take place,

e. In the third sentence of paragraph 42, according to the provisions of paragraphs 30-32 is replaced by as prescribed in Statement 114. In the fourth sentence, those paragraphs are replaced by that Statement.

f. Paragraphs 31, 32, 35-37, 40.a., 41, and footnotes 18, 19, 21, 24, and 25 are superseded prospectively. (Refer to paragraph 27 of this Statement.)

23. In the last sentence of paragraph 47 of *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*, the phrase realized gains and losses is replaced by income as prescribed in *FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan*.

24. In the first sentence of paragraph 14 of *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, the phrase for purposes of applying paragraph 30 of that Statement is deleted.

25. *FASB Technical Bulletins No. 79-6, Valuation Allowances Following Debt Restructuring, and No. 79-7, Recoveries of a Previous Writedown under a Troubled Debt Restructuring Involving a Modification of Terms*, are superseded by this Statement.

Effective Date and Transition

26. This Statement shall be effective for financial statements for fiscal years beginning after December 15, 1994. Earlier application is encouraged. Previously issued annual financial statements shall not be restated. Initial application of this Statement shall be as of the beginning of an enterprise's fiscal year (that is, if the Statement is adopted prior to the effective date and during an interim period other than the first interim period, all prior interim periods of that fiscal year shall be restated).

27. This Statement applies to all troubled debt restructurings involving a modification of terms. However, if a loan that was restructured in a troubled debt restructuring involving a modification of terms before the effective date of this Statement is not impaired based on the terms specified by the restructuring agreement, a creditor may continue to account for the loan in accordance with the provisions of Statement 15 prior to its amendment by this Statement.

22. FAS 118 provides the following guidance:

Introduction and Background

1. *FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan*, was issued in May 1993 and addresses the accounting by creditors for impairment of certain loans. Statement 114 is effective for financial statements for fiscal years beginning after December 15, 1994.

2. The Board received several requests to delay the effective date of Statement 114 and to clarify how that Statement should be implemented. A delay was requested to allow more time to resolve implementation questions about the application of the income recognition provisions in paragraphs 17-19 of Statement 114 and to make the necessary changes to accounting systems.

3. This Statement amends Statement 114 to allow a creditor to use existing methods for recognizing interest income on impaired loans. To accomplish this, it eliminates the income recognition provisions in paragraphs 17-19 of Statement 114. As amended, Statement 114 does not address how a creditor should recognize, measure, or display interest income on an impaired loan. This Statement amends the disclosure requirements in Statement 114 to require information about the recorded investment in certain impaired loans and about how a creditor recognizes interest income related to those impaired loans.

4. Prior to the issuance of this Statement, Statement 114 provided for two alternative income recognition methods to be used to account for changes in the net carrying amount of an impaired loan subsequent to the initial measure of impairment. Under the first income recognition method, a creditor would accrue interest on the net carrying amount of the impaired loan and report other changes in the net carrying amount of the loan as an adjustment to bad-debt expense. Under the second income recognition method, a creditor would recognize all changes in the net carrying amount of the loan as an adjustment to bad-debt expense. While those income recognition methods are no longer required, this Statement does not preclude a creditor from using either of those methods.

5. Statement 114 requires that a creditor recognize impairment of a loan if the present value of expected future cash flows discounted at the loan's effective interest rate (or, alternatively, the observable market price of the loan or the fair value of the collateral) is less than the recorded investment in the impaired loan. If the present value of expected future cash flows (or, alternatively, the observable market price of the loan or the fair value of the collateral) is equal to or greater than the recorded investment in the impaired loan, no impairment is recognized. This Statement does not change those requirements. When the net carrying amount of an impaired loan equals the present value of expected future cash flows (or, alternatively, the observable market price of the loan or the fair value of the collateral), this Statement will affect only the classification of income (or expense) that results from changes in the measure of an impaired loan, not the total amount of income (or expense) recognized within a given reporting period. However, when a creditor's policies for recognizing interest income and for charging off loans result in a recorded investment in an impaired loan that is less than the present value of expected future cash flows discounted at the loan's effective interest rate (or, alternatively, the observable market price of the loan or the fair value of the collateral), this Statement will cause both the classification and the total amount of income (or expense) recognized within a given reporting period to be different from that which would have been determined in accordance with paragraphs 17-19 of Statement 114.

Standards of Financial Accounting and Reporting

Amendments to Statement 114

6. Statement 114 is amended as follows:

a. The following sentence is added after the second sentence of paragraph 8:

   For a loan that has been restructured in a troubled debt restructuring, the contractual terms of the loan agreement refers to the contractual terms specified by the original loan agreement, not the contractual terms specified by the restructuring agreement.

b. In the first sentence of paragraph 11, impaired loans is replaced by impairment of a loan.

c. In the last sentence of paragraph 12, those impaired loans is replaced by impairment of those loans.

d. In the last sentence of paragraph 13, measure of the impaired loan is replaced by present value of expected future cash flows (or, alternatively, the observable market price of the loan or the fair value of the collateral).

e. In the first sentence of paragraph 14, measures an impaired loan using is replaced by bases its measure of loan impairment on.

f. In the first sentence of paragraph 15, measures an impaired loan using is replaced by bases its measure of loan impairment on.

g. Paragraph 17 is replaced by the following:

   This Statement does not address how a creditor should recognize, measure, or display interest income on an impaired loan. Some accounting methods for recognizing income may result in a recorded investment in an impaired loan that is less than the present value of expected future cash flows (or, alternatively, the observable market price of the loan or the fair value of the collateral). In that case, while the loan would meet the definition of an impaired loan in paragraph 8, no additional impairment would be recognized. Those accounting methods include recognition of interest income using a cost-recovery method, a cash-basis method, or some combination of those methods. The recorded investment in an impaired loan also may be less than the present value of expected future cash flows (or, alternatively, the observable market price of the loan or the fair value of the collateral) because the creditor has charged off part of the loan.

h. Paragraphs 18 and 19 are deleted.

i. Paragraph 20 is replaced by the following paragraphs:

   A creditor shall disclose, either in the body of the financial statements or in the accompanying notes, the following information about loans that meet the definition of an impaired loan in paragraph 8 of this Statement:

   a. As of the date of each statement of financial position presented, the total recorded investment in the impaired loans at the end of each period and (1) the amount of that recorded investment for which there is a related allowance for credit losses determined in accordance with this Statement and the amount of that allowance and (2) the amount of that recorded investment for which there is no related allowance for credit losses determined in accordance with this Statement

b. The creditor's policy for recognizing interest income on impaired loans, including how cash receipts are recorded

c. For each period for which results of operations are presented, the average recorded investment in the impaired loans during each period, the related amount of interest income recognized during the time within that period that the loans were impaired, and, unless not practicable, the amount of interest income recognized using a cash-basis method of accounting during the time within that period that the loans were impaired.

Information about an impaired loan that has been restructured in a troubled debt restructuring involving a modification of terms need not be included in the disclosures required by paragraphs 20.a. and 20.c. in years after the restructuring if (i) the restructuring agreement specifies an interest rate equal to or greater than the rate that the creditor was willing to accept at the time of the restructuring for a new loan with comparable risk and (ii) the loan is not impaired based on the terms specified by the restructuring agreement. That exception shall be applied consistently for paragraphs 20.a. and 20.c. to all loans restructured in a troubled debt restructuring that meet the criteria in (i) and (ii).

For each period for which results of operations are presented, a creditor also shall disclose the activity in the total allowance for credit losses related to loans, including the balance in the allowance at the beginning and end of each period, additions charged to operations, direct write-downs charged against the allowance, and recoveries of amounts previously charged off. The total allowance for credit losses related to loans includes those amounts that have been determined in accordance with *FASB Statement No. 5, Accounting for Contingencies, and with this Statement.*

j. Paragraph 65 is deleted.

Effective Date and Transition

7. This Statement is effective concurrent with the effective date of Statement 114. Statement 114 is effective for financial statements for fiscal years beginning after December 15, 1994, with earlier application encouraged.

The provisions of this Statement need not be applied to immaterial items.

23. FTB 81-6 provides the following guidance:

Question

1. Does Statement 15 apply to troubled debt restructurings of debtors involved in bankruptcy proceedings?

Background

2. Some confusion has arisen about the interaction of paragraph 10 and footnote 4 of Statement 15. Paragraph 10 indicates that the Statement applies to troubled debt restructuring consummated under reorganization, arrangement, or other provisions of the Federal Bankruptcy Act or other federal statutes related thereto. However, footnote 4 to that paragraph states that the Statement does not apply ". . .if, under provisions of those Federal statutes or in a quasi-reorganization or corporate readjustment (ARB No. 43, Chapter 7, Section A, 'Quasi-

Reorganization or Corporate Readjustment . . .') with which a troubled debt restructuring coincides, the debtor restates its liabilities generally."

Response

3. Statement 15 does not apply to debtors who, in connection with bankruptcy proceedings, enter into troubled debt restructuring that result in a general restatement of the debtor's liabilities, that is, when such restructuring or modifications accomplished under purview of the bankruptcy court encompass most of the amount of the debtor's liabilities.

4. For example, companies involved with Chapter XI bankruptcy proceedings frequently reduce all or most of their indebtedness with the approval of their creditors and the court in order to provide an opportunity for the company to have a fresh start. Such reductions are usually by a stated percentage so that, for example, the debtor owes only 60 cents on the dollar. Because the debtor would be restating its liabilities generally, Statement 15 would not apply to the debtor's accounting for such reduction of liabilities.

5. On the other hand, Statement 15 would apply to an isolated troubled debt restructuring by a debtor involved in bankruptcy proceedings if such restructuring did not result in a general restatement of the debtor's liabilities.

24. FTB 80-2 provides the following guidance:

Question

1. In applying Statement 15, can a debt restructuring be a troubled debt restructuring for a debtor but not for the creditor?

Background

2. Paragraph 2 of Statement 15 states that "a restructuring of a debt constitutes a troubled debt restructuring for purposes of this Statement if the creditor for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not otherwise consider." Paragraph 7 points out that a debt restructuring is not necessarily a troubled debt restructuring simply because the debtor is experiencing some financial difficulties. That paragraph states in part:

> For example, a troubled debt restructuring is not involved if (a) the fair value[2] of cash, other assets, or an equity interest accepted by a creditor from a debtor in full satisfaction of its receivable at least equals the creditor's recorded investment in the receivable;[3] (b) the fair value of cash, other assets, or an equity interest transferred by a debtor to a creditor in full settlement of its payable at least equals the debtor's carrying amount of the payable; (c) the creditor reduces the effective interest rate on the debt primarily to reflect a decrease in market interest rates in general or a decrease in the risk so as to maintain a relationship with a debtor that can readily obtain funds from other sources at the current market interest rate; or (d) the debtor issues in exchange for its debt new marketable debt having an effective interest rate based on its market price that is at or near the current market interest rates of debt with similar maturity dates and stated interest rates issued by nontroubled debtors. [Emphasis added.]

[2] Defined in paragraph 13 [of Statement 15].

[3] Defined in footnote 17 [of Statement 15].

Response

3. Yes, a debtor may have a troubled debt restructuring under Statement 15 even though the related creditor does not have a troubled debt restructuring. The debtor and creditor must individually apply Statement 15 to the specific facts and circumstances to determine whether a troubled debt restructuring has occurred. Example (a) in paragraph 7 of Statement 15 identifies a type of debt restructuring that is not a troubled debt restructuring for purposes of the creditor's application of Statement 15; similarly, example (b) in paragraph 7 identifies a type of debt restructuring that is not a troubled debt restructuring for purposes of the debtor's application of Statement 15. Thus, Statement 15 establishes tests for applicability that are not symmetrical as between the debtor and the creditor when the debtor's carrying amount and the creditor's recorded investment differ.

Illustration

4. Creditor A makes a $10,000 interest-bearing loan to Debtor X and, when Debtor X later encounters financial difficulties, sells its receivable from Debtor X to Creditor B for $4,000 on a nonrecourse basis. Following the sale, the carrying amount of the loan payable by Debtor X would still be $10,000 and the recorded investment of the loan by Creditor B would be $4,000. If Debtor X subsequently transfers to Creditor B assets with a fair value of $5,500 in full settlement of the loan, that transaction would be a troubled debt restructuring for Debtor X because the fair value of the assets is less than the carrying amount of the loan, whereas Creditor B would not have a troubled debt restructuring because the fair value of the assets received exceeds its recorded investment in the loan.

25. FAS 91 provides the following guidance:

Fees and Costs in Refinancings or Restructuring

12. If the terms of the new loan resulting from a loan refinancing or restructuring other than a troubled debt restructuring are at least as favorable to the lender as the terms for comparable loans to other customers with similar collection risks who are not refinancing or restructuring a loan with the lender, the refinanced loan shall be accounted for as a new loan. This condition would be met if the new loan's effective yield is at least equal to the effective yield for such loans.[4] Any unamortized net fees or costs and any prepayment penalties from the original loan shall be recognized in interest income when the new loan is granted.

13. If the refinancing or restructuring does not meet the condition set forth in paragraph 12 or if only minor modifications are made to the original loan contract, the unamortized net fees or costs from the original loan and any prepayment penalties shall be carried forward as a part of the net investment in the new loan. In this case, the investment in the new loan shall consist of the remaining net investment in the original loan,[5] any additional amounts loaned, any fees received, and direct loan origination costs set forth in paragraph 6 associated with the refinancing or restructuring.

[4] The effective yield comparison considers the level of nominal interest rate, commitment and origination fees, and direct loan origination costs and would also consider comparison of other factors where appropriate, such as compensating balance arrangements.

[5] The net investment in the original loan includes the unpaid loan principal, any remaining unamortized net fees or costs, any remaining unamortized purchase premium or discount, and any accrued interest receivable.

14. Fees received in connection with a modification of terms of a troubled debt restructuring as defined in *FASB Statement No. 15, Accounting by Debtors and Creditors for Troubled Debt Restructurings*, shall be applied as a reduction of the recorded investment in the loan. All related costs, including direct loan origination costs, shall be charged to expense as incurred.

26. EITF 94-8 provides the following guidance, as summarized in the *EITF Abstracts*:

ISSUE

Statement 115 applies to marketable equity securities and to all debt securities. Technical Bulletin 94-1 clarifies that securities received in connection with a debt restructuring are subject to Statement 115.

In a debt restructuring, the creditor may receive a debt security issued by the original debtor with a fair value that differs from the creditor's basis in the loan at the date of the debt restructuring.

The issues are (1) what the initial cost basis of a debt security of the original debtor received in the restructuring of a loan should be and (2) how the creditor should account for any difference between the creditor's basis in the loan and the fair value of the security at the date of the restructuring.

EITF DISCUSSION

The Task Force reached a consensus that the initial cost basis of a debt security of the original debtor received as part of a debt restructuring should be the security's fair value at the date of the restructuring. Any excess of the fair value of the security received over the net carrying amount of the loan should be recorded as a recovery on the loan. Any excess of the net carrying amount of the loan over the fair value of the security received should be recorded as a charge-off to the allowance for credit losses. Subsequent to the restructuring, the security should be accounted for according to the provisions of Statement 115.

The Task Force also reached a consensus that a security received in a restructuring in settlement of a claim for only the past-due interest on a loan should be measured at the security's fair value at the date of the restructuring and accounted for in a manner consistent with the entity's policy for recognizing cash received for past-due interest. Subsequent to the restructuring, the security should be accounted for according to the provisions of Statement 115.

27. FTB 94-1 provides the following guidance:

References:

FASB Statement No. 15, Accounting by Debtors and Creditors for Troubled Debt Restructuring

FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan, paragraph 27

FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities, paragraph 3

Question

1. For a loan that was restructured in a troubled debt restructuring involving a modification of terms, does Statement 115 apply to the accounting by the creditor (that is, investor) if the restructured loan meets the definition of a security in Statement 115?

Background

2. Statement 15 specifies the accounting for troubled debt restructuring and has been amended by Statement 114, which has changed a creditor's accounting for troubled debt restructuring involving a modification of terms. However, Statement 114 grandfathered certain previous troubled debt restructuring; that is, it does not require loans restructured prior to its effective date to be retroactively remeasured upon adoption of that Statement. Paragraph 27 of Statement 114 states that "if a loan that was restructured in a troubled debt restructuring involving a modification of terms before the effective date of this Statement is not impaired based on the terms specified by the restructuring agreement, a creditor may continue to account for the loan in accordance with the provisions of Statement 15 prior to its amendment by this Statement." (Although the term loan is defined in Statement 114 to encompass both loans that are securities and loans that are not, paragraph 6.d. of Statement 114 excludes all debt securities from the scope of that pronouncement.) Some have perceived an inconsistency between paragraph 27 of Statement 114 and paragraph 3 of Statement 115, which indicates that Statement 115 applies to all investments in debt securities.

Response

3. Statement 115 applies to all loans that meet the definition of a security in that Statement. Thus, any loan that was restructured in a troubled debt restructuring involving a modification of terms, including those restructured before the effective date of Statement 114, would be subject to the provisions of Statement 115 if the debt instrument meets the definition of a security. Paragraph 137 of Statement 115 defines a security as follows:

> A share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer that (a) either is represented by an instrument issued in bearer or registered form or, if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer, (b) is of a type commonly dealt in on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment, and (c) either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations.

Effective Date and Transition

4. The provisions of this Technical Bulletin are effective for financial statements issued after April 30, 1994.

Appendix

BACKGROUND INFORMATION AND CONSIDERATION OF COMMENTS RECEIVED ON THE PROPOSED TECHNICAL BULLETIN

5. The perceived inconsistency between paragraph 27 of Statement 114 and paragraph 3 of Statement 115 was identified during the Board's discussion of the applicability of Statement 115 to "Brady bonds" that were received in a troubled debt restructuring. The phrase Brady bonds

refers to bonds issued to financial institutions by foreign governments (such as Mexico and Venezuela) under a program designed by Treasury Secretary Nicholas Brady in the late 1980s to help developing countries refinance their debt to those institutions.

6. If Statement 115 were not to apply to a debt security that was restructured in a troubled debt restructuring involving a modification of terms prior to the effective date of Statement 114, then the impairment provisions of neither Statement 114 nor Statement 115 would apply. Instead, the security would be accounted for under the provisions of Statement 15, which do not recognize the relevance of the time value of money or the security's fair value. For example, restructured securities that otherwise would be classified as available-for-sale would be accounted for at amortized cost.

7. Proposed *FASB Technical Bulletin No. 94-a, Application of Statement 115 to Debt Securities Restructured in a Troubled Debt Restructuring*, was released for comment on January 4, 1994. Twelve comment letters were received on the proposed Technical Bulletin. Most of the comment letters expressed support for issuing the Technical Bulletin; a few suggested clarifications, which have been implemented.

28. EITF 87-18 provides the following guidance:

ISSUE

In connection with a troubled debt restructuring, a debtor, with the creditor's approval, sells the collateral, which has a fair value less than the creditor's net investment in the related loan, and invests the proceeds in a series of zero coupon bonds that are received and held by the creditor as collateral for the newly restructured loan. The bonds will mature at a value equal to each year's debt service requirement under the newly restructured terms.

The issue is whether the sale of collateral, the purchase of the zero coupon bonds, and their receipt by the creditor as collateral require the creditor to recognize a loss equal to the amount by which the net investment in the loan exceeds the fair value of the zero coupon bonds.

EITF DISCUSSION

The Task Force reached a consensus that the creditor should recognize a loss on the satisfaction of the loan and record an asset for the fair value of the zero coupon bonds. Under paragraph 28 of Statement 15, the loss would be measured as the amount by which the creditor's net investment in the loan exceeds the fair value of the assets received in full satisfaction of the debt. Most Task Force members considered the transaction to be an in-substance foreclosure or settlement of the loan pursuant to paragraph 34 of Statement 15. Some Task Force members commented that the creditor should not be able to avoid loss recognition by refraining from legal foreclosure even though the creditor has effectively acknowledged accepting possession of what is designated to be the collateral.

29. EITF 87-19 provides the following guidance:

ISSUE

In connection with a troubled debt restructuring, a debtor, with the creditor's approval, sells the collateral (real estate) on a contract for deed for a purchase price, the present value of which is less than the creditor's net investment in the related loan. The creditor does not release its lien on the property. The seller-debtor provides 100 percent financing for the third-party purchaser, with payment terms identical to the seller-debtor's obligation under the restructured terms. The third-party purchaser must make the monthly payments directly to the creditor and not to the seller-debtor.

The issue is whether the sale of collateral and related requirement for the purchaser to make payments directly to the creditor warrant the creditor's recognition of a loss related to the amount by which the net investment in the loan exceeds the fair value of the payments to be received from the purchaser.

EITF DISCUSSION

The Task Force reached a consensus that the creditor should recognize a loss on the disposition of the original loan and record an asset for the fair value of the payments to be received from the purchaser. Under paragraph 28 of Statement 15, the loss would be measured as the amount by which the creditor's net investment in the loan exceeds the fair value of the assets received in full satisfaction of the debt. Some Task Force members considered the transaction to be an in-substance foreclosure or settlement of the loan pursuant to paragraph 34 of Statement 15. Others viewed it as the addition or substitution of a debtor pursuant to paragraph 42 of Statement 15. Some Task Force members commented that the creditor should not be able to avoid loss recognition by refraining from legal foreclosure even though the creditor has effectively repossessed the original collateral by approving its sale and requiring the purchaser's payments to be made directly to the creditor.

30. EITF 89-15 provides the following guidance:

ISSUE

An enterprise that is experiencing financial difficulties proposes to exchange new debt for existing debt with the same creditor or creditors. Although the terms of the new debt are more favorable to the creditor than the terms of the existing debt, the new debt terms are not representative of and are less favorable to the creditor than prevailing terms for new borrowings by enterprises with similar credit ratings. This transaction may occur, for example, when an enterprise operating in a regulated environment wishes to increase its capital.

The issue is whether an exchange of new debt for existing debt under the circumstances described above should be considered an extinguishment of debt as described in Opinion 26 resulting in recognition of a gain by the debtor in the period of the exchange.

EITF DISCUSSION

The Task Force reached a consensus that no gain should be recognized in the circumstances described above. The Task Force concluded that an exchange of existing debt for new debt with the same creditor, the terms of which are not representative of and are less favorable to the creditor than prevailing terms for new borrowings by enterprises with similar credit ratings, results in a concession to the debtor by the creditor and should be accounted for by both parties as a modification of an existing obligation under the provisions of Statement 15. The Task Force agreed that the consensus reached regarding this Issue applies from the date of the September 21, 1989 meeting.

Statutory Issue Paper No. 37

Mortgage Loans

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 37

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance requires mortgage loans to be recorded on a reporting entity's balance sheet at the unpaid principal balance plus any unamortized premium or origination fees or less any unaccreted discount. The carrying value of loans that are in default may be adjusted for unpaid interest and additional expenses incurred to protect the investment, providing that such amounts are deemed to be recoverable from the ultimate disposition of the asset. Costs to acquire or originate mortgage loans are expensed as incurred. Origination fees, including points, are deferred.

2. The purpose of this issue paper is to establish statutory accounting principles for the accounting and reporting of mortgage loans and related fees that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. For statutory accounting purposes, a mortgage loan shall be defined as a debt obligation that is not a security, which is secured by a mortgage on real estate. (A security is a share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer that (a) either is represented by an instrument issued in bearer or registered form, or if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer, (b) is of a type commonly dealt in on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment, and (c) either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations.) Mortgage loans meet the definition of assets as specified in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this issue paper.

Initial Investment

4. For mortgage loans originated by the reporting entity, the initial investment in mortgage loans shall be recorded at the principal amount of the loan net of any amounts deferred under the provisions of paragraphs 5 and 7 below. For mortgage loans purchased by a reporting entity, the initial investment shall be recorded as the amount paid to the seller. Accordingly, there may be a premium or discount on such loans resulting from a difference between the amount paid and the principal amount.

Loan Origination Fees

5. Loan origination fees shall be defined as fees charged to the borrower in connection with the process of originating, refinancing, or restructuring a loan. The term includes, but is not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to a lending transaction. Nonrefundable loan origination fees shall not be recorded until received in cash. Nonrefundable fees representing points shall be deferred as part of the loan balance and amortized over

the life of the loan in accordance with paragraph 8 of this issue paper. Nonrefundable fees other than points shall be recorded in the income statement upon receipt.

Loan Origination, Acquisition, and Commitment Costs

6. All costs incurred in connection with originating a loan, acquiring purchased loans or committing to purchase loans shall be charged to expense as incurred.

Commitment Fees

7. Commitment (or commitment standby) fees are fees paid to the reporting entity that obligate the reporting entity to make or acquire a loan or to satisfy an obligation of another party under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the loan is granted. If the loan is not granted, then the fees shall be recorded as investment income by the reporting entity when the commitment is no longer available. A fee paid to the reporting entity to obtain a commitment to be able to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 8 of this issue paper over the life of the loan as an adjustment to the investment income on the loan. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Amortization

8. Premiums and discounts on acquired loans, and mortgage interest points and commitment fees (if such qualify for amortization as described in the previous paragraph) shall be recognized as an adjustment of yield over the life of the loan (i.e., the period of time until total principal proceeds of the loan are received in cash) so as to produce a constant effective yield each year to maturity. If the reporting entity holds a large number of similar loans for which the prepayments of principal are probable, (probable is used in the same context as in paragraph 4 in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets*, which defines probable as the future event or events are likely to occur), and the timing and amount can be reasonably estimated, the reporting entity shall include estimates of future principal prepayments in the calculation of the constant effective yield necessary to apply the interest method. The amount recognized as an adjustment of yield shall be credited or charged to interest income in the calculation of net investment income.

Prepayments

9. Payments received in advance of due dates may produce prepaid interest which shall be recorded as a liability, Unearned Investment Income, on the reporting entity's balance sheet. The portion of the payments received in advance of due dates that represent prepayments of principal shall be recorded as a reduction in the mortgage loan balance.

10. A mortgage loan may provide for a prepayment penalty or acceleration fee in the event the loan is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

Interest Income

11. Interest income shall be recorded as earned and shall be included in investment income in the Summary of Operations. Interest income shall include interest collected, the change in interest income due and accrued and the change in unearned interest income as well as amortization of premiums, discounts and deferred fees as specified in paragraph 8.

Accrued Interest

12. When a loan is determined to be in default (per the contractual terms of the loan), the accrued interest on the loan shall be recorded as investment income due and accrued if deemed collectible. If a loan in default has any investment income due and accrued which is 180 days past due and collectible, the investment income shall continue to accrue, but all interest related to the loan is to be reported as a nonadmitted asset. If accrued interest on a mortgage loan in default is not collectible, the accrued interest shall be written off immediately and no further interest accrued.

Impairments

13. A mortgage loan shall be considered to be impaired when, based on current information and events, it is probable that a reporting entity will be unable to collect all amounts due according to the contractual terms of the mortgage agreement. According to the contractual terms means that both the contractual principal payments and contractual interest payments of the mortgage loan will be collected as scheduled in the mortgage agreement. A reporting entity shall measure impairment based on the fair value (as determined by acceptable appraisal methodologies) of the collateral less estimated costs to obtain and sell. The difference between the net value of the collateral and the recorded investment in the mortgage loan shall be recognized as an impairment by creating a valuation allowance with a corresponding charge to unrealized loss or by adjusting an existing valuation allowance for the impaired loan with a corresponding charge or credit to unrealized gain or loss. Subsequent to the initial measurement of the impairment, if there is a significant change (increase or decrease) in the net value of the collateral, the reporting entity shall adjust the valuation allowance; however, the net carrying amount of the loan shall at no time exceed the recorded investment in the loan. For reporting entities required to maintain an asset valuation reserve (AVR), the unrealized gain or loss on impairments shall be included in the calculation of the AVR. If the impairment is other than temporary, a direct write down shall be recognized as a realized loss, and a new cost basis is established. This new cost basis shall not be changed for subsequent recoveries in value. Mortgage loans for which foreclosure is probable shall be considered permanently impaired.

Construction Loans

14. A construction loan shall be defined as a mortgage loan of less than three years in term, made for financing the cost of construction of a building or other improvement to real estate, which is secured by the real estate. The principal amount of a construction loan shall be the amount of funds disbursed to the borrower. If, in accordance with the terms of the contract, interest is deferred until the maturity of the loan, the accrued interest shall be included in the balance of the loan outstanding. The impairment test in paragraph 13 should be applied to all construction loans, regardless of whether there are any actual or anticipated defaults. Accordingly, construction loans shall not be reported at an amount greater than the fair value of the property. The percentage of completion of the property shall be considered in determining fair values of property securing construction loans.

Disclosures

15. The reporting entity shall make the disclosures for impaired loans as required by paragraph 20 of *FASB Statement No. 114*, *Accounting by Creditors for Impairment of a Loan* (FAS 114), as amended by paragraph 6(1) of *FASB Statement No. 118, Accounting by Creditors for Impairment of a Loan - Income Recognition and Disclosures, an amendment of FASB Statement No. 114* (FAS 118) in the annual audited statutory financial reports only. This is included in the Relevant GAAP Guidance section below.

16. The following additional disclosures shall also be made in the financial statements:

a. Fair values in accordance with *Issue Paper No. 27—Disclosure of Information about Financial Instruments with Concentration of Credit Risk* (Issue Paper No. 27), *Issue Paper No. 33—Disclosures about Fair Value of Financial Instruments and Issue Paper No. 85—*

Derivative Financial Instruments (as it relates to disclosure about financial instruments with off-balance-sheet risk),
b. Concentrations of credit risk in accordance with Issue Paper No. 27,
c. Description of the valuation basis of the mortgage loans,
d. Information on the minimum and maximum rates of interest received for new loans made by category,
e. Maximum percentage of any one loan to the value of security at the time of the loan,
f. Total carrying amount of mortgages with interest 180 days past due and the amount of interest past due thereon. Disclose the carrying amount and number of mortgage loans where interest has been reduced, by percent reduced and
g. Taxes, assessments, and amounts advanced not included in the mortgage loan total.

DISCUSSION

17. The conclusion differs with current statutory guidance in that loan origination fees shall be recorded in the income statement, except for points which will be deferred as part of the loan balance. Also, prepayment penalties are to be recorded as investment income. It rejects *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring and Initial Direct Costs or Leases* (FAS 91) and *FASB Emerging Issues Task Force Issue No. 88-17*, *Accounting for Fees and Costs Associated with Loan Syndications and Loan Participations,* which provides that certain origination costs be deferred. It adopts FAS 114 and 118 for collateral dependent loans (FAS 114 and FAS 118 apply to loans other than mortgage loans), with the following modifications:

a. Impairment to be measured based on the fair value of the collateral less costs to obtain and sell, whereas that is just one option under FAS 114; and

b. The reporting entity is required to record any other than temporary impairment as a realized loss and shall not record subsequent recoveries in fair value.

The conclusion also adopts *FASB Emerging Issue Task Force Issue No. 84-19*, *Mortgage Loan Payment Modifications*, which considers the effects of accelerated payments. The conclusion rejects *AICPA Practice Bulletin 6, Amortization of Discounts on Certain Acquired Loans,* which provides alternative accounting for the loan balance under the cost recovery method in circumstances where the amounts, and timing of collections and the ultimate collectibility of the acquisition amount of the loan are not probable. This method is not consistent with the impairment provisions established by paragraph 13 of this issue paper.

18. Recording mortgage loans as admitted assets is consistent with the recognition concept in the Statement of Concepts (i.e., the existence of readily marketable assets available when both current and future obligations are due). Due to their similar nature to bonds, recording the mortgage loans at amortized cost is consistent with the principles used to record bonds at amortized cost.

19. Requiring reporting entities to defer commitment fees until the loan commitment terminates is more conservative than the GAAP treatment which allows for income recognition during the commitment period if the likelihood that the commitment will be exercised is remote.

20. Prepayment penalties represent consideration for interest income not received on a loan due to the prepayment. If that interest had been received it would have been recorded as investment income, therefore, it is appropriate to record the prepayment penalties as investment income. This is different from the current statutory guidance which allows a reporting entity to record the penalties as either investment income or realized capital gains.

21. By requiring reporting entities to reflect impairments in the value of a loan, the conclusion above is consistent with other issue papers on invested assets (e.g., bonds, common stock, preferred stock), which also require a reporting entity to record any impairment of an invested asset. It is also more conservative than allowing the reporting entity to continue to carry the impaired loan at amortized cost, when it is probable that the reporting entity will not receive the invested funds in accordance with the terms of the original agreement.

Drafting Notes/Comments

- Investment income due and accrued is addressed in *Issue Paper No. 34—Investment Income Due and Accrued*.
- Accounting for foreclosed assets is addressed in *Issue Paper No. 36—Troubled Debt Restructurings*.
- Loan-backed and structured securities are addressed in *Issue Paper No. 43—Loan-Backed and Structured Securities*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

22. The Accounting Practices and Procedures Manual for Life and Accident and Health contains the statutory guidance for the accounting for mortgage loans. Excerpts from Chapter 3, Mortgage Loans, are as follows:

> Valuation
>
> Mortgage loans when acquired are recorded in the general ledger at the amount of unpaid principal balance. However, if they are acquired at a discount or premium, entries for the amount of such discount or premium may be made in separate ledger accounts. If so, the net book value of mortgage loans consists of the unpaid balances plus any unamortized premium balances and less any unamortized discount.
>
> Requirements for valuation of investments for reporting purposes indicate that mortgage loans that are not in default (regarding either principal or interest) should be valued at the unpaid principal balance. Further, mortgage loans acquired at a premium or at a discount are to be valued at amortized cost (i.e., net book value).
>
> Premium amortization or discount accretion over the full term of a loan normally implies the use of a method that produces a constant effective yield each year to maturity. However, if the period of amortization of accretion is relatively short, a straight-line method may be used.
>
> For loans that are in default, being voluntarily conveyed, or being foreclosed, the carrying value may be adjusted for unpaid interest and additional expenses, such as insurance, taxes and legal fees that have been incurred to protect the investment or to obtain clear title to the property to the extent that such amounts are deemed to be recoverable from the ultimate disposition of the property. However, if such interest and costs cannot reasonably be expected to be recovered, they should not be added to the carrying value, and the cost should be expensed.
>
> If, when reporting mortgage loans in default, the values of real estate have declined to less than the unpaid principal balances, an appropriate valuation reserve should be established to reflect the expected uncollectible amount.
>
> Mortgage loans that are in default, or which are under foreclosure proceedings, continue to be classified as mortgage loans. Loans for which foreclosure proceedings have been completed, even to the extent of the court granting title to the mortgages, may temporarily retain their status as mortgage loans, since in some states the mortgagor still has the privilege of redeeming the

mortgage during a stated redemption period. During this period, the loan may remain classified as a mortgage loan until the insurance company obtains clear title. The asset is then transferred to the real estate account.

Interest

Interest income on mortgage loans is recorded when earned during any reporting period. An "inventory" of due and accrued interest must be determined at the end of each reporting period. Interest income includes adjustments for amortization or the accrual of discount.

A portion of the interest due and accrued on mortgage loans may require treatment as a nonadmitted asset for reporting purposes. In general, amounts over one year past due are nonadmitted. In practice, some companies consider that interest past due for periods of less than one year indicates future uncollectibility, and may make a provision against operations for such amounts to establish an appropriate reserve. Alternatively, some companies may cease accrual of interest on loans that default on any payment. Therefore, the amount of due and accrued interest that is considered to be a nonadmitted asset depends on the policy regarding accrual determination, and whether reserves have been established by charges to operations. In the case of mortgage loans on which foreclosure action is pursued, delinquent interest may be recovered from the amount, if any, by which the proceeds on the eventual sale of the property exceed the unpaid principal balance.

Contingent interest represents income generated through the occurrence of specific economic events in relation to the borrower. For example, contingent interest may become payable upon the attainment of a given level of cash flow or income. Contingent interest may be reported as income when received or accrued. The proper accrual of such income does, however, require an analysis of the applicable provisions in the underlying agreement and the verification that the prerequisite conditions have been met.

Payments

Payments on mortgage loans may be received in advance of due dates. Such payments may produce prepaid interest which is considered unearned and is recorded as a liability in the annual statement.

Companies that use servicing agents for their mortgage loans should report the "Interest Due and Accrued" asset on the balance sheet consistently with the income statement treatment of the charge for servicing costs. If interest income is reported net of servicing costs, which is usual when the servicing agent fee is based on a percentage retention of each interest payment, then the interest receivable in the balance sheet should be net of the related servicing costs. If interest is reported gross, with the servicing costs reported as an expense item, then interest due and accrued should be reflected as an asset at the gross amount, with an appropriate liability to reflect the related servicing cost accrual.

Amounts paid to the insurance company by the mortgagor to cover future tax payments, insurance premiums, and other costs related to the property requires the creation of escrow accounts in the general ledger to record these liabilities. If such amounts are held by the servicing agents, they should be reported on the insurance company's balance sheet both as an asset and as a liability when they produce income for the insurance company. This may occur if the servicing agent invests the escrow funds and is required to remit the income (or portion thereof) to the insurance company.

> Prepayment penalties
>
> Some mortgage loans provide for a prepayment penalty or acceleration fee in the event the loan is liquidated prior to its scheduled termination date. Prepayment charges are intended to compensate the lender for expenses incurred in granting the loan as well as the potential loss of future earnings. Prepayment penalties may be reported as realized capital gains or investment income.
>
> Loan origination fees and costs
>
> Brokerage commissions, finders' fees, fees to cover loan processing and the like that are paid when acquiring mortgage loans usually are not significant and may be charged to operations when incurred. Points are additional fees and usually are expressed as a percentage of the funds disbursed. Points represent an adjustment of the loan interest rate to the current market. They should be deferred and amortized in the same manner as a premium paid on the mortgage.
>
> Commitment fees
>
> To obtain a commitment from the mortgage to make funds available at some time in the future, an applicant may pay a "commitment standby" fee to the mortgagee (e.g., an insurance company). This fee is returnable to the applicant if the loan is closed in accordance with the commitment. If the loan is not closed in accordance with the commitment, the fee becomes income to the mortgagee to cover the costs involved in making the funds available at the time the applicant requires the funds.
>
> The applicant also may pay a commitment fee to a mortgagee to obtain a commitment to be able to borrow funds at a specified rate and with specific terms quoted in the commitment. As this commitment has value to the applicant, and the mortgagee has incurred costs in reviewing the applicant's proposal, this fee is not returnable to the applicant unless the commitment is refused.
>
> The commitment fee should be deferred and, if the commitment is exercised, recognized over the life of the loan as an adjustment of yield. If the commitment expires unexercised, the commitment fee should be recognized in income on the commitment expiration date. If the commitment fee is an insignificant adjustment to the yield, the commitment fee may be recognized in income at the time of the funding of the loan.

23. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 3, Mortgage Loans, contains similar wording.

Generally Accepted Accounting Principles

24. GAAP guidance pertaining to a reporting entity's accounting for mortgage loans is contained in *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60), as amended by FAS 114. Paragraph 47 of FAS 60, as amended by paragraph 23 of FAS 114 states:

> Mortgage loans shall be reported at outstanding principal balances if acquired at par value, or at amortized cost if purchased at a discount or premium, with an allowance for estimated uncollectible amounts, if any. Amortization and other related charges or credits shall be charged or credited to investment income. Changes in the allowance for estimated uncollectible amounts relating to mortgage loans shall be included in income as prescribed in *FASB Statement 114, Accounting by Creditors for Impairment of a Loan*.

25. The guidance for the accounting for loan origination costs and commitment fees is contained in FAS 91. Pertinent excerpts are as follows:

> Loan Origination Fees and Costs
>
> 5. Loan origination fees shall be deferred and recognized over the life of the loan as an adjustment of yield[2] (interest income). Likewise, direct loan origination costs defined in paragraph 6 shall be deferred and recognized as a reduction in the yield of the loan except as set forth in paragraph 14 (for a troubled debt restructuring). Loan origination fees and related direct loan origination costs for a given loan shall be offset and only the net amount shall be deferred and amortized. The practice of recognizing a portion of loan origination fees as revenue in a period to offset all or part of the costs of origination shall no longer be acceptable.
>
> [2] Methods for recognition of deferred fees and direct loan origination costs over the life of the loan as an adjustment of yield are set forth in paragraphs 18-20.
>
> 6. Direct loan origination costs of a completed loan shall include only (a) incremental direct costs of loan origination incurred in transactions with independent third parties for that loan and (b) certain costs directly related to specified activities performed by the lender for that loan. Those activities are: evaluating the prospective borrower's financial condition; evaluating and recording guarantees, collateral, and other security arrangements; negotiating loan terms; preparing and processing loan documents; and closing the transaction. The costs directly related to those activities shall include only that portion of the employees' total compensation and payroll-related fringe benefits directly related to time spent performing those activities for that loan and other costs related to those activities that would not have been incurred but for that loan.
>
> 7. All other lending-related costs, including costs related to activities performed by the lender for advertising, soliciting potential borrowers, servicing existing loans, and other ancillary activities related to establishing and monitoring credit policies, supervision, and administration, shall be charged to expense as incurred. Employees' compensation and fringe benefits related to those activities, unsuccessful loan origination efforts, and idle time shall be charged to expense as incurred. Administrative costs, rent, depreciation, and all other occupancy and equipment costs are considered indirect costs and shall be charged to expense as incurred.
>
> Commitment Fees and Costs
>
> 8. Except as set forth in subparagraphs (a) and (b) below, fees received for a commitment to originate or purchase a loan or group of loans shall be deferred and, if the commitment is exercised, recognized over the life of the loan as an adjustment of yield or, if the commitment expires unexercised, recognized in income upon expiration of the commitment:
>
> a. If the enterprise's experience with similar arrangements indicates that the likelihood that the commitment will be exercised is remote,[3] the commitment fee shall be recognized over the commitment period on a straight-line basis as service fee income. If the commitment is subsequently exercised during the commitment period, the remaining unamortized commitment fee at the time of exercise shall be recognized over the life of the loan as an adjustment of yield.

[3] The term remote is used here, consistent with its use in *FASB Statement No. 5, Accounting for Contingencies*, to mean that the likelihood is slight that a loan commitment will be exercised prior to its expiration.

b. If the amount of the commitment fee is determined retrospectively as a percentage of the line of credit available but unused in a previous period, if that percentage is nominal in relation to the stated interest rate on any related borrowing, and if that borrowing will bear a market interest rate at the date the loan is made, the commitment fee shall be recognized as service fee income as of the determination date.

9. Direct loan origination costs (described in paragraph 6) incurred to make a commitment to originate a loan shall be offset against any related commitment fee and the net amount recognized as set forth in paragraph 8.

Purchase of a Loan or Group of Loans

15. The initial investment in a purchased loan or group of loans shall include the amount paid to the seller plus any fees paid or less any fees received. The initial investment frequently differs from the related loan's principal amount at the date of purchase. This difference shall be recognized as an adjustment of yield over the life of the loan. All other costs incurred in connection with acquiring purchased loans or committing to purchase loans shall be charged to expense as incurred.

16. In applying the provisions of this Statement to loans purchased as a group, the purchaser may allocate the initial investment to the individual loans or may account for the initial investment in the aggregate. The cash flows provided by the underlying loan contracts shall be used to apply the interest method, except as set forth in paragraph 19. If prepayments are not anticipated pursuant to paragraph 19 and prepayments occur or a portion of the purchased loans is sold, a proportionate amount of the related deferred fees and purchase premium or discount shall be recognized in income so that the effective interest rate on the remaining portion of loans continues unchanged.

Other

17. Deferred net fees or costs shall not be amortized during periods in which interest income on a loan is not being recognized because of concerns about the realization of loan principal or interest.

Application of the Interest Method and Other Amortization Matters

18. Net fees or costs that are required to be recognized as yield adjustments over the life of the related loan(s) shall be recognized by the interest method except as set forth in paragraph 20. The objective of the interest method is to arrive at periodic interest income (including recognition of fees and costs) at a constant effective yield on the net investment in the receivable (that is, the principal amount of the receivable adjusted by unamortized fees or costs and purchase premium or discount). The difference between the periodic interest income so determined and the stated interest on the outstanding principal amount of the receivable is the amount of periodic amortization.[6] Under the provisions of this statement, the interest method shall be applied as follows when the stated interest rate is not constant throughout the term of the loan:

a. If the loan's stated interest rate increases during the term of the loan (so that interest accrued under the interest method in early periods would exceed interest at the stated rate), interest income shall not be recognized to the extent that the net investment in the loan would increase to an amount greater than the amount at which the borrower could settle the obligation. Prepayment penalties shall be considered in determining the amount at which the borrower could settle the obligation only to the extent that such penalties are imposed throughout the loan term. (Refer to Appendix B.)

b. If the loan's stated interest rate decreases during the term of the loan, the stated periodic interest received early in the term of the loan would exceed the periodic interest income that is calculated under the interest method. In that circumstance, the excess shall be deferred and recognized in those future periods when the constant effective yield under the interest method exceeds the stated interest rate. (Refer to Appendix B.)

c. If the loan's stated interest rate varies based on future changes in an independent factor, such as an index or rate (for example, the prime rate, the London Interbank Offered Rate (LIBOR), or the U.S. Treasury bill weekly average rate), the calculation of the constant effective yield necessary to recognize fees and costs shall be based either on the factor (the index or rate) that is in effect at the inception of the loan or on the factor as it changes over the life of the loan.[7] (Refer to Appendix B.)

[6] The "interest" method is also described in paragraph 16 of *APB Opinion No. 12, Omnibus Opinion--1967*, in the first sentence of paragraph 15 of *APB Opinion No. 21, Interest on Receivables and Payables,* and in paragraphs 235-239 of *FASB Concepts Statement No. 6, Elements of Financial Statements*.

[7] A variable rate loan whose initial rate differs from the rate its base factor would produce is also subject to the provisions of paragraphs 18(a) and (b).

19. Except as stated in the following sentence, the calculation of the constant effective yield necessary to apply the interest method shall use the payment terms required by the loan contract, and prepayments of principal shall not be anticipated to shorten the loan term. If the enterprise holds a large number of similar loans for which prepayments are probable and the timing and amount of prepayments can be reasonably estimated, the enterprise may consider estimates of future principal prepayments in the calculation of the constant effective yield necessary to apply the interest method. If the enterprise anticipates prepayments in applying the interest method and a difference arises between the prepayments anticipated and actual prepayments received, the enterprise shall recalculate the effective yield to reflect actual payments to date and anticipated future payments. The net investment in the loans shall be adjusted to the amount that would have existed had the new effective yield been applied since the acquisition of the loans. The investment in the loans shall be adjusted to the new balance with a corresponding charge or credit to interest income. Enterprises that anticipate prepayments shall disclose that policy and the significant assumptions underlying the prepayment estimates. The practice of recognizing net fees over the estimated average life of a group of loans shall no longer be acceptable. (Refer to Appendix B.)

20. Certain loan agreements provide no scheduled payment terms (demand loans); others provide the borrower with the option to make multiple borrowings up to a specified maximum amount, to repay portions of previous borrowings, and then reborrow under the same contract (revolving lines of credit).

a. For a loan that is payable at the lender's demand, any net fees or costs may be recognized as an adjustment of yield on a straight-line basis over a period that is consistent with (1) the understanding between the borrower and lender or (2) if no understanding exists, the lender's estimate of the period of time over which the loan will remain outstanding; any unamortized amount shall be recognized when the loan is paid in full.

> b. For revolving lines of credit (or similar loan arrangements), the net fees or costs shall be recognized in income on a straight-line basis over the period the revolving line of credit is active, assuming that borrowings are outstanding for the maximum term provided in the loan contract.
>
> If the borrower pays all borrowings and cannot reborrow under the contract, any unamortized net fees or costs shall be recognized in income upon payment. The interest method shall be applied to recognize net unamortized fees or costs when the loan agreement provides a schedule for payment and no additional borrowings are provided for under the agreement.[8]
>
> [8] For example, if the loan agreement provides the borrower with the option to convert a one-year revolving line of credit to a five-year term loan, during the term of the revolving line of credit the lender would recognize the net fees or costs as income on a straight-line basis using the combined life of the revolving line of credit and term loan. If the borrower elects to convert the line of credit to a term loan, the lender would recognize the unamortized net fees or costs as an adjustment of yield using the interest method. If the revolving line of credit expires and borrowings are extinguished, the unamortized net fees or costs would be recognized in income upon payment.
>
> Balance Sheet Classification
>
> 21. The unamortized balance of loan origination, commitment, and other fees and costs and purchase premiums and discounts that is being recognized as an adjustment of yield pursuant to this Statement shall be reported on the enterprise's balance sheet as part of the loan balance to which it relates.

26. GAAP guidance on the accounting for the impairment of a loan is contained in FAS 114, as amended by FAS 118. Pertinent excerpts, as amended, are as follows:

> 8. A loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. For a loan that has been restructured in a troubled debt restructuring, the contractual terms of the loan agreement refers to the contractual terms specified by the original agreement, not the restructuring agreement.
>
> 13. When a loan is impaired as defined in paragraph 8 of this Statement, a creditor shall measure impairment based on the present value of expected future cash flows discounted at the loan's effective interest rate, except that as a practical expedient, a creditor may measure impairment based on a loan's observable market price, or the fair value of the collateral if the loan is collateral dependent. Regardless of the measurement method, a creditor shall measure impairment based on the fair value of the collateral when the creditor determines that foreclosure is probable. A loan is collateral dependent if the repayment of the loan is expected to be provided solely by the underlying collateral. The creditor may choose a measurement method on a loan-by-loan basis. A creditor shall consider estimated costs to sell, on a discounted basis, in the measure of impairment if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan. If the present value of expected future cash flows (or, alternatively, the observable market price of the loan or the fair value of the collateral) is less than the recorded investment in the loan[2] (including accrued interest, net deferred loan fees or costs, and unamortized premium or discount), a creditor shall recognize an impairment by creating a valuation allowance with a corresponding charge to bad-debt expense or by adjusting an existing valuation allowance for the impaired loan with a corresponding charge or credit to bad-debt expense.

[2] The term recorded investment in the loan is distinguished from net carrying amount of the loan because the latter term is net of a valuation allowance, while the former term is not. The recorded investment in the loan does, however, reflect any direct write-down of the investment.

14. If a creditor bases its measure of loan impairment on a present value amount, the creditor shall calculate that present value amount based on an estimate of the expected future cash flows of the impaired loan, discounted at the loan's effective interest rate. The effective interest rate of a loan is the rate of return implicit in the loan (that is, the contractual interest rate adjusted for any net deferred loan fees or costs, premium, or discount existing at the origination or acquisition of the loan).[3] The effective interest rate for a loan restructured in a troubled debt restructuring is based on the original contractual rate, not the rate specified in the restructuring agreement. If the loan's contractual interest rate varies based on subsequent changes in an independent factor, such as an index or rate (for example, the prime rate, the London interbank offered rate, or the U.S. Treasury bill weekly average), that loan's effective interest rate may be calculated based on the factor as it changes over the life of the loan or may be fixed at the rate in effect at the date the loan meets the impairment criterion in paragraph 8. The creditor's choice shall be applied consistently for all loans whose contractual interest rate varies based on subsequent changes in an independent factor. Projections of changes in the factor should not be made for purposes of determining the effective interest rate or estimating expected future cash flows.

[3] A loan may be acquired at a discount because of a change in credit quality or rate or both. When a loan is acquired at a discount that relates, at least in part, to the loan's credit quality, the effective interest rate is the discount rate that equates the present value of the investor's estimate of the loan's future cash flows with the purchase price of the loan.

15. If a creditor bases its measure of loan impairment on a present value calculation, the estimates of expected future cash flows shall be the creditor's best estimate based on reasonable and supportable assumptions and projections. All available evidence, including estimated costs to sell if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan, should be considered in developing the estimate of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. If a creditor estimates a range for either the amount or timing of possible cash flows, the likelihood of the possible outcomes shall be considered in determining the best estimate of expected future cash flows.

16. Subsequent to the initial measurement of impairment, if there is a significant change (increase or decrease) in the amount or timing of an impaired loan's expected future cash flows, or if actual cash flows are significantly different from the cash flows previously projected, a creditor shall recalculate the impairment by applying the procedures specified in paragraphs 12-15 and by adjusting the valuation allowance. Similarly, a creditor that measures impairment based on the observable market price of an impaired loan or the fair value of the collateral of an impaired collateral-dependent loan shall adjust the valuation allowance if there is a significant change (increase or decrease) in either of those bases. However, the net carrying amount of the loan shall at no time exceed the recorded investment in the loan.

Disclosures

20. A creditor shall disclose, either in the body of the financial statements or in the accompanying notes, the following information about loans that meet the definition of an impaired loan in paragraph 8 of this Statement:

a. As of the date of each statement of financial position presented, the total recorded investment in the impaired loans at the end of each period and (1) the amount of that recorded investment for which there is a related allowance for credit losses determined in accordance with this Statement and the amount of that allowance and (2) the amount of that recorded investment for which there is no related allowance for credit losses determined in accordance with this Statement

b. The creditor's policy for recognizing interest income on impaired loans, including how cash receipts are recorded

c. For each period for which results of operations are presented, the average recorded investment in the impaired loans during each period, the related amount of interest income recognized during the time within that period that the loans were impaired, and, unless not practicable, the amount of interest income recognized using a cash-basis method of accounting during the time within that period that the loans were impaired.

Information about an impaired loan that has been restructured in a troubled debt restructuring involving a modification of terms need not be included in the disclosures required by paragraphs 20(a) and 20(c) in years after the restructuring if (i) the restructuring agreement specifies an interest rate equal to or greater than the rate that the creditor was willing to accept at the time of the restructuring for a new loan with comparable risk and (ii) the loan is not impaired based on the terms specified by the restructuring agreement. That exception shall be applied consistently for paragraphs 20(a) and 20(c) to all loans restructured in a troubled debt restructuring that meet the criteria in (i) and (ii).

For each period for which results of operations are presented, a creditor also shall disclose the activity in the total allowance for credit losses related to loans, including the balance in the allowance at the beginning and end of each period, additions charged to operations, direct write-downs charged against the allowance, and recoveries of amounts previously charged off. The total allowance for credit losses related to loans includes those amounts that have been determined in accordance with FASB No. 5, Accounting for Contingencies, and with this Statement.

27. *FASB Emerging Issue Task Force Issue No. 84-19, Mortgage Loan Payment Modifications* is adopted. Pertinent excerpts are as follows:

EITF 84-19 ISSUE
The borrower and lender enter into an agreement whereby the borrower increases his mortgage payments for a specified period, at the conclusion of which the lender forgives a portion of the remaining principal on the loan. The borrower may terminate the arrangement at any time but receives no principal reduction if he makes less than 12 consecutive increased payments.
The issue is how the lender should account for the portion of principal that may be forgiven.
1. Should the lender assume that the accelerated payments will be made to maturity and discount such accelerated payments using the current interest rate, thus recording a loss?
2. Should the lender assume that only 12 consecutive increased payments will be made and that other payments to maturity will be at the original rate and discount all payments using the current interest rate, thus recording a smaller loss?

3. Should the discount only be recorded as a loss when the borrower has made all the payments required or should the discount be accrued as a loss pro rata over the 12-month period?

EITF 84-19 DISCUSSION
The Task Force reached a consensus that, assuming it is probable that the borrower will continue to make the increased payments for the specified period, the expense relating to the partial forgiveness should be accrued over the period of increased payments. Task Force members indicated that this approach to the accounting has already been consistently applied in practice.

Statutory Issue Paper No. 38

Acquisition, Development and Construction Arrangements

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 38

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Reporting entities may enter into real estate acquisition, development and construction (ADC) arrangements to finance the construction costs in which they have virtually the same risks and potential rewards as those of owners or joint venturers. In some instances, it may be inappropriate to account for such arrangements as loans. Current statutory accounting provides no specific guidance on the accounting for ADC arrangements. GAAP provides specific guidance for when to treat such arrangements as real estate/joint venture investments rather than as loans. This issue paper establishes statutory accounting principles for ADC arrangements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. This paper provides guidance on when to account for ADC arrangements as mortgage loans and when to account for ADC arrangements as investments in real estate or real estate joint ventures. ADC arrangements shall be defined as lending agreements that are made to the owner of property to finance the acquisition, development and construction of real estate projects on the property in which the lender participates in expected residual profits. Expected residual profit is the amount of profit, whether called interest or another name (e.g., equity kicker) above a reasonable amount of interest and fees expected to be earned by the lender. ADC arrangements shall include participations in loans and purchased loans that meet that definition of ADC arrangements.

3. If the lender is expected to receive over 50% of the expected residual profits of the project, the ADC arrangement shall be classified and accounted for as an investment in real estate in accordance with *Issue Paper No. 40—Real Estate Investments*.

4. If the lender is expected to receive 50% or less of the expected residual profits, the ADC arrangement shall be classified and accounted for as a loan or as a real estate joint venture, depending on the circumstances. If any of the characteristics in paragraph 9.b. through 9.e. of AcSEC Practice Bulletin 1, Exhibit I, *ADC Arrangements* (PB1), which is excerpted in the Relevant GAAP Guidance section in paragraph 10 below, or if a qualifying personal guarantee (as defined in PB1) is present, the ADC arrangement shall be classified and accounted for as a construction loan in accordance with Issue Paper No. 37—Mortgage Loans. Otherwise, the ADC arrangement shall be classified and accounted for as a real estate joint venture in accordance with *Issue Paper No. 48—Investments in Joint Ventures, Partnerships and Limited Liability Companies.*

5. The factors that are evaluated in determining the accounting treatment at inception may subsequently change for some ADC arrangements, for example, as a result of a renegotiation of the terms. Consequently, the accounting treatment for an ADC arrangement shall be periodically reassessed, as described in paragraph 20 of PB1 contained in paragraph 10 below. Any changes in classification shall result in a reclassification of the asset at the amount the asset should be reported at under its new

classification with the net effect, if any, charged to income in the period that the change in classification is made.

6. Regardless of whether an ADC arrangement is accounted for as an investment in real estate, a joint venture, or a mortgage loan, the ADC arrangement meets the definition of an asset as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted* Assets and is an admitted asset to the extent it conforms to the requirements of this issue paper.

DISCUSSION

7. The conclusion above adopts PB1. Classifying and accounting for ADC arrangements in accordance with their economic substance rather than their form is consistent with a regulator's need for meaningful and comparable financial information, as stated in the Statement of Concepts. Furthermore, the conclusion is consistent with the conservatism concept in the Statement of Concepts in as much as certain ADC arrangements that otherwise would be accounted for as loans will be accounted for as investments in real estate. Accordingly, to the extent that the ADC project is expected to incur a loss, the lender shall recognize its share of those losses. The conclusion above also adopts *FASB Emerging Issues Task Force No. 86-21*, *Application of the AICPA Notice to Practitioners regarding Acquisition, Development, and Construction Arrangements to Acquisition of an Operating Property*.

Drafting Notes/Comments

- ADC arrangements may involve related parties, in which case Issue Paper No. 25 - Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties should also be followed.
- *Issue Paper No. 37—Mortgage Loans* addresses accounting for mortgage loans, including construction loans, and addresses impairment and disclosures.
- *Issue Paper No. 40—Real Estate Investments* addresses accounting for real estate investments, including how to account for sales of real estate, construction of real estate, impairment and disclosures.
- *Issue Paper No. 48—Investments in Joint Ventures, Partnerships and Limited Liability Companies* addresses accounting for joint ventures.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. Statutory literature does not specifically address ADC arrangements.

9. Some states specifically prohibit the investment in construction/developmental real estate. For example, Texas Insurance Code Chapter 3, *Life, Health and Accident Insurance,* Subchapter C, Reserves and Investments, Art. 3.33 Sec. 4 (1)(2) states:

> ... nothing in this article shall allow ownership of, development of, or equity interest in any residential property or subdivision, single or multiunit family dwelling property, or undeveloped real estate for the purpose of subdivision for or development of residential, single, or multiunit family dwellings, except acquisitions as provided in Subdivision (4) below, and such ownership, development, or equity interests shall be specifically prohibited;

Generally Accepted Accounting Principles

10. The accounting for ADC arrangements under GAAP is governed by PB1 as follows:

> 1. Financial institutions may enter into ADC arrangements in which they have virtually the same risks and potential rewards as those of owners or joint venturers. AcSEC believes that, in some instances, accounting for such arrangements as loans would not be appropriate and thus is providing this guidance in determining the proper accounting.

Scope

2. This notice applies only to those ADC arrangements in which the lender participates in expected residual profit, as further described below.

Expected Residual Profit

3. Expected residual profit is the amount of profit, whether called interest or another name, such as equity kicker, above a reasonable amount of interest and fees expected to be earned by the lender.

4. The extent of such profit participation and its forms may vary. An example of a simple form might be one in which the contractual interest and fees, if any, on a condominium project are considered to be at fair market rates; the expected sales prices are sufficient to cover at least principal, interest, and fees; and the lender shares in an agreed proportion, for example, 20 percent, 50 percent, or 90 percent, of any profit on sale of the units.

5. A slightly different form of arrangement may produce approximately the same result. For example, the interest rate and/or fees may be set at a level higher than in the preceding example, and the lender may receive a smaller percentage of any profit on sale of the units. Thus, a greater portion of the expected sales price is required to cover the contractual interest and/or fees, leaving a smaller amount to be allocated between the lender and the borrower. The lender’s share of expected residual profit in such an arrangement may be approximately the same as in the preceding example. A different arrangement may cause the same result if the interest rate and/or fees are set at a sufficiently high level and the lender does not share in any proportion of profit on sale of the units. Another variation is one in which the lender shares in gross rents or net cash flow from a commercial project, for example, an office building or an apartment complex.

6. The profit participation agreement may or may not be part of the mortgage loan agreement. Consequently, the auditor should be aware of the possibility that such agreements may exist and should design audit procedures accordingly. Those procedures could include inquiries to, and requests for written representation from, both the lender and the borrower.

7. The accounting guidance in paragraphs 16 and 17 is based on a consideration of the following characteristics of ADC arrangements. A particular ADC arrangement may have one or more of these characteristics.

Characteristics of ADC Arrangements Implying Investments in Real Estate or Joint Ventures

8. As stated in the “Scope” section, this notice applies to an ADC arrangement in which the lender participates in expected residual profit. In addition to the lender’s participation in expected residual profit, the following characteristics suggest that the risks and rewards of an ADC arrangement are similar to those associated with an investment in real estate or joint venture:

a. The financial institution agrees to provide all or substantially all necessary funds to acquire, develop, or construct the property. The borrower has title to but little or no equity in the underlying property.

b. The financial institution funds the commitment or origination fees or both by including them in the amount of the loan.

c. The financial institution funds all or substantially all interest and fees during the term of the loan by adding them to the loan balance.

d. The financial institution’s only security is the ADC project. The financial institution has no recourse to other assets of the borrower, and the borrower does not guarantee the debt.

e. In order for the financial institution to recover the investment in the project, the property must be sold to independent third parties, the borrower must obtain refinancing from another source, or the property must be placed in service and generate sufficient net cash flow to service debt principal and interest.

f. The arrangement is structured so that foreclosure during the project's development as a result of delinquency is unlikely because the borrower is not required to make any payments until the project is complete, and, therefore, the loan normally cannot become delinquent.

Characteristics of ADC Arrangements Implying Loans

9. Even though the lender participates in expected residual profit, the following characteristics suggest that the risks and rewards of an ADC arrangement are similar to those associated with a loan:

a. The lender participates in less than a majority of the expected residual profit.

b. The borrower has an equity investment, substantial to the project, not funded by the lender. The investment may be in the form of cash payments by the borrower or contribution by the borrower of land (without considering value expected to be added by future development or construction) or other assets. The value attributed to the land or other assets should be net of encumbrances. There may be little value to assets with substantial prior liens that make foreclosure to collect less likely. Recently acquired property generally should be valued at no higher than cost.

c. The lender has 1) recourse to substantial tangible, salable assets of the borrower, with a determinable sales value, other than the ADC project that are not pledged as collateral under other loans; or 2) the borrower has provided an irrevocable letter of credit from a creditworthy, independent third party to the lender for a substantial amount of the loan over the entire term of the loan.

d. A take-out commitment for the full amount of the financial institution's loans has been obtained from a creditworthy, independent third party. Take-out commitments often are conditional. If so, the conditions should be reasonable and their attainment probable.

e. Noncancelable sales contracts or lease commitments from creditworthy, independent third parties are currently in effect that will provide sufficient net cash flow on completion of the project to service normal loan amortization, that is, principal and interest. Any associated conditions should be probable of attainment.

Personal Guarantees

10. Some ADC arrangements include personal guarantees of the borrower and/or a third party. AcSEC believes that the existence of a personal guarantee alone rarely provides a sufficient basis for concluding that an ADC arrangement should be accounted for as a loan. In instances where the substance of the guarantee and the ability of the guarantor to perform can be reliably measured, and the guarantee covers a substantial amount of the loan, concluding that an ADC arrangement supported by a personal guarantee should be accounted for as a loan may be justified.

11. The substance of a personal guarantee depends on a) the ability of the guarantor to perform under the guarantee, b) the practicality of enforcing the guarantee in the applicable jurisdiction, and c) a demonstrated intent to enforce the guarantee.

12. Examples of personal guarantees that have the ability to perform would include those supported by liquid assets placed in escrow, pledged marketable securities, or irrevocable letters of credit from a creditworthy, independent third party[ies] in amounts sufficient to provide necessary equity support for an ADC arrangement to be considered a loan. In the absence of such support for the guarantee, the financial statements and other information of the guarantor may be considered to determine the guarantor's ability to perform. Due to the high-risk nature of many ADC arrangements, AcSEC believes financial statements that are current, complete, and include appropriate disclosures and that are reviewed or audited by independent CPAs are the most helpful in this determination.

13. Particular emphasis should be placed on the following factors when considering the financial statements of the guarantor:

a. Liquidity as well as net worth of the guarantor--There should be evidence of sufficient liquidity to perform under the guarantee. There may be little substance to a personal guarantee if the guarantor's net worth consists primarily of assets pledged to secure other debt.

b. Guarantees provided by the guarantor to other projects--If the financial statements do not disclose and quantify such information, inquiries should be made as to other guarantees. Also, it may be appropriate to obtain written representation from the guarantor regarding other contingent liabilities.

14. The enforceability of the guarantee in the applicable jurisdiction should also be determined. Even if the guarantee is legally enforceable, business reasons that might preclude the financial institution from pursuing the guarantee should be assessed. Those business reasons could include the length of time required to enforce a personal guarantee, whether it is normal business practice in that jurisdiction to enforce guarantees on similar transactions, and whether the lender must choose between pursuing the guarantee or the project's assets, but cannot pursue both. The auditor should consider obtaining written representation from management regarding its intent to enforce personal guarantees.

Sweat Equity

15. Some ADC arrangements recognize value, not funded by the lender, for the builder's efforts after inception of the arrangement, sometimes referred to as sweat equity. AcSEC believes that sweat equity is not at risk by the borrower at the inception of an ADC project. Consequently, AcSEC believes sweat equity should not be considered a substantial equity investment on the part of the borrower in determining whether the ADC arrangement should be treated as a loan.

Accounting Guidance

16. In the interest of more uniformity in accounting for ADC arrangements, AcSEC believes the following guidance is appropriate:

a. If the lender is expected to receive over 50 percent of the expected residual profit, as previously defined, from the project, the lender should account for income or loss from the arrangement as a real estate investment as specified by Statement of Financial Accounting Standards (SFAS) no. 67, Accounting for Costs and Initial Rental Operations of Real Estate Projects,[N1] and SFAS no. 66, Accounting for Sales of Real Estate.[N2]

[N1] Statement of Financial Accounting Standards (SFAS) no. 67, Accounting for Costs and Initial Rental Operations of Real Estate Projects (Stamford: FASB, 1982).

[N2] SFAS no. 66, Accounting for Sales of Real Estate (Stamford: FASB, 1982).

b. If the lender is expected to receive 50 percent or less of the expected residual profit, the entire arrangement should be accounted for either as a loan or a real estate joint venture, depending on the circumstances. At least one of the characteristics identified in paragraph 9.b.-9.e., or a qualifying personal guarantee should be present for the arrangement to be accounted for as a loan. Otherwise, real estate joint venture accounting would be appropriate.

1. In the case of a loan, interest and fees may be appropriately recognized as income subject to recoverability. Statement of Position SOP no. 75-2, Accounting Practices of Real Estate Investment Trusts,[N3] and the AICPA audit and accounting guide entitled, Savings and Loan Associations,[N4] provide guidance that may be relevant in those industries in assessing the recoverability of such loan amounts and accrued interest.

[N3] Statement of Position SOP no. 75-2, Accounting Practices of Real Estate Investment Trusts (New York: AICPA, 1975).

[N4] Committee on Savings and Loan Associations, Savings and Loan Associations (New York: AICPA, 1979).

2. In the case of a real estate joint venture, the provisions of SOP no. 78-9, Accounting for Investments in Real Estate Ventures,[N5] and SFAS no. 34, Capitalization of Interest Cost,[N6] as amended by SFAS no. 58, Capitalization of Interest Cost in Financial Statements That Include Investments Accounted for by the Equity Method,[N7] provide guidance for such accounting. In particular, paragraph 34 of SOP no. 78-9 provides guidance on the circumstances under which interest income should not be recognized.

[N5] SOP no. 78-9, Accounting for Investments in Real Estate Ventures (New York: AICPA, 1978).

[N6] SFAS no. 34, Capitalization of Interest Cost (Stamford: FASB, 1979).

[N7] SFAS no. 58, Capitalization of Interest Cost in Financial Statements That Include Investments Accounted for by the Equity Method (Stamford: FASB, 1982).

17. ADC arrangements accounted for as investments in real estate or joint ventures should be combined and reported in the balance sheet separately from those ADC arrangements accounted for as loans.

Other Considerations

18. Transactions have occurred in which the lender's share of the expected residual profit in a project is sold to the borrower or a third party for cash or other consideration. If the expected residual profit in an ADC arrangement accounted for as a loan is sold, AcSEC believes the proceeds from the sale should be recognized prospectively as additional interest over the remaining term of the loan. The expected residual profit is considered additional compensation to the lender, and the sale results in a quantification of the profit. When an ADC arrangement is

accounted for as an investment in real estate or joint venture and the expected residual profit is sold, gain recognition, if any, is appropriate only if the criteria of SFAS No. 66 are met after giving consideration to the entire ADC arrangement including the continuing relationship between the financial institution and the project.

19. If the financial institution was the seller of the property at the initiation of the project, gain recognition, if any, should be determined by reference to SFAS No. 66.

20. The factors that were evaluated in determining the accounting treatment at inception subsequently change for some ADC arrangements, for example, as a result of a renegotiation of the terms. Consequently, the accounting treatment for an ADC arrangement should be periodically reassessed. An ADC arrangement originally classified as an investment or joint venture could subsequently be treated as a loan if the risk to the lender diminishes significantly, and the lender will not be receiving over 50 percent of the expected residual profit in the project. The lender must demonstrate a change in the facts relied upon when initially making the accounting decision, not just the absence of, or reduced participation in, the expected residual profit. For instance, risk may be reduced if a valid take-out commitment from another lender who has the capability to perform under the commitment is obtained and all conditions affecting the take-out have been met, thus assuring the primary lender recovery of its funds. If the lender on the other hand assumes further risks and/or rewards in an ADC arrangement by, for example, releasing collateral supporting a guarantee and/or increasing its percentage of profit participation to over 50 percent, the lender's position may change to that of an investor in real estate. Neither an improvement in the economic prospects for the project or successful, on-going development of the project nor a deterioration in the economic prospects for the project justifies a change in classification of an ADC arrangement. A change in classification is expected to occur infrequently and should be supported by appropriate documentation. The change in factors in an ADC arrangement should be evaluated based on the guidance in this notice and accounted for prospectively.

21. If an ADC arrangement accounted for as a real estate joint venture continues into a permanent phase with the project generating a positive cash flow and paying debt service currently, income should be recognized in accordance with SOP No. 78-9.

22. Regardless of the accounting treatment for an ADC arrangement, management has a continuing responsibility to review the collectibility of uncollected principal, accrued interest, and fees and provide for appropriate allowances. The auditor should determine whether the allowances provided by management are adequate. In connection with this determination, the auditor should review relevant evidential matter including feasibility studies, appraisals, forecasts, non-cancelable sales contracts or lease commitments and information concerning the track record of the developer. In addition, ADC arrangements may involve related parties and the auditor should be aware of such a possibility and design procedures accordingly. Progress information may be less than desirable for the auditor's purpose and may require supplemental procedures. Additional procedures might include on-site inspection of projects or the independent use of experts such as property appraisers or construction consultants to assist in the assessment of the collateral value.

23. Many participations in loans or whole loans are bought and sold by other financial institutions. The accounting treatment for a purchase that involves ADC arrangements should be based on a review of the transaction at the time of purchase in accordance with the guidance in this notice. In applying this guidance, a participant would look to its individual percentage of expected residual profit; for example, a participant who will not share in any of the expected residual profit is not subject to this notice. However, the responsibility to review collectibility and provide allowances applies equally to purchased ADC arrangements. Any reciprocal transactions between institutions, including multi-party transactions, should be viewed in their entirety and accounted for in accordance with their combined effects.

Statutory Issue Paper No. 39

Reverse Mortgages

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 39

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. A reverse mortgage is a loan against home equity that guarantees cash advances to the homeowner and requires no repayment until a future time, usually when the borrower dies, sells the property or permanently moves. The term reverse mortgage is used to describe the timing of repayment of the mortgage obligation which is at the end of the contractual period (i.e., the mortgagee does not repay the obligation until the underlying collateral is liquidated). The proceeds from the sale of the property are used to pay off the balance of the loan. The borrower's obligation is limited to the value of the home at the time of sale and the lender has no recourse to other assets of the borrower or the borrower's estate. Usually, the borrower receives an annuity payment either (a) for as long as the borrower lives or (b) until a set percentage of the value of the collateral is reached. In the first type, there is mortality risk, as well as the collateral, interest rate, and credit risk found in traditional mortgage loans.

2. Current statutory guidance is contained in the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force minutes of the March 13, 1995 meeting. GAAP does not specifically address reverse mortgages.

3. The purpose of this issue paper is to establish statutory accounting principles for the accounting and reporting of reverse mortgages that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. For purposes of this issue paper, a reverse mortgage loan shall be defined as a non-recourse loan with the following characteristics:

a. It is secured by a mortgage against the primary residence of the borrower;

b. It guarantees a stream of cash disbursements to the borrower, either for the life of the borrower with no limit or up to a set percentage of the value of the residence or is a line of credit which the borrower can draw upon as needed; and

c. It has no maturity date and requires no repayment until one of the following events occur:

i. The borrower dies,

ii. The borrower sells the residence,

iii. The residence ceases to be the borrower's primary residence, or

iv. The borrower terminates the loan by paying back the outstanding balance.

5. A reverse mortgage meets the definition of an asset as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and is an admitted asset to the extent it conforms to the requirements of this issue paper. As such, it shall be recorded as an other invested asset on the reporting entity's balance sheet and Schedule BA, Other Long-Term Invested Assets, of the Annual Statement.

6. The accounting and reporting requirements for reverse mortgages shall be the same as those contained in paragraph 10 below. A reverse mortgage shall be considered to be impaired when, based on current information and events, it is probable that a reporting entity will be unable to collect all amounts due according to the contractual terms of the reverse mortgage. "According to the contractual terms" means that both the contractual principal payments and contractual interest payments of the loan will be collected as specified in the reverse mortgage agreement. The three major categories of risk affecting reverse mortgages are described in paragraph 10. Reverse mortgages subject to these risks shall be reported net of an appropriate actuarial reserve. The assumptions, cash flow projections, and evaluation of risk are to be reviewed and updated at least annually with any resulting adjustment made to the valuation allowance (contra-asset) and unrealized gains and losses, if the impairment is temporary. Subsequent to the initial measurement of impairment, if there is a significant change (increase or decrease) in the risk factors affecting the value of the mortgage, the reporting entity shall adjust the valuation allowance; however, the net carrying amount of the loan shall at no time exceed the recorded investment in the loan. The term recorded investment in the loan is distinguished from net carrying amount of the loan because the latter term is net of the valuation allowance, while the former term is not. The recorded investment (including accrued interest, net deferred loan fees, and unamortized premium or discount) in the loan does, however, reflect any direct write down of the investment. If the impairment is other than temporary, a direct write down (charge-off) shall be recognized and a new cost basis is established. Direct write-downs for other than temporary impairments of reverse mortgages shall also be included in realized losses. This new basis shall not be changed for subsequent recoveries in fair value.

7. The following disclosures shall be made for reverse mortgages in the financial statements:

a. A description of the reporting entity's accounting policies and methods, including the statistical methods and assumptions used in calculating the reserve,

b. The reserve amount which is netted against the asset value,

c. Investment income or loss recognized in the period as a result of the re-estimated cash flows, and

d. General information regarding the reporting entity's commitment under the agreement.

DISCUSSION

8. This issue paper adopts current statutory guidance.

9. Though, at the time a reverse mortgage agreement is ratified, the reporting entity has agreed to make payments to the borrower, this does not meet the definition of a liability, as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5). Issue Paper No. 5 defines a liability as certain or probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transaction(s) or event(s). By making payments to the borrower, the reporting entity is converting one asset (cash) to another (an outstanding reverse mortgage). It is, therefore, not sacrificing any economic benefit and is not incurring a liability up to the amount that the reporting entity can record as an asset (i.e., the value of the collateral).

Drafting Notes/Comments

- Accounting for real estate acquired in satisfaction of debt is addressed in *Issue Paper No. 40—Real Estate Investments.*
- Accounting for Mortgage Loans is addressed in *Issue Paper No. 37—Mortgage Loans*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

10. The Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force minutes of the March 13, 1995 meeting contained the following to be added to the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies:

> Description
>
> Reverse mortgages are primarily designed to allow senior citizens to convert home equity into cash without selling their home. A reverse mortgage is a non-recourse loan secured by the borrower's owner occupied principal residence. Loan proceeds are based on the current fair market value of the home and the age of the borrower and may be disbursed in a lump sum or periodically to provide cash flow to the borrower. In consideration of those payments, the borrower exchanges all or part of a claim to home equity.
>
> Principal and interest payments on the loan are deferred until the borrower moves, sells the property or dies. The loan is then repaid in a lump sum with proceeds from the sale of the property. The borrower's obligation is limited to the value of the home at the time of sale and the lender has no recourse to other assets of the borrower or the borrowers estate.
>
> Reverse mortgages are reported on Schedule BA of the Annual Statement as "Investment in Reverse Mortgages."
>
> Payments can be structured in many different ways to fit the financial needs of the borrower. In some contracts the borrower shares a percentage of the home appreciation with the lender. Three common types of payment plans are:
>
> 1. Tenure plan - borrower receives fixed monthly payments until the borrower permanently moves, sells the property or dies.
>
> 2. Term plan - borrower receives fixed monthly payments for a specified period of time.
>
> 3. Line of Credit - borrower draws upon a pre-determined line of credit as needed.
>
> Authorization and Limitation
>
> To be considered admitted assets, investments in reverse mortgages are limited to first lien mortgages only. Reverse mortgages also may be subject to mortgage loan limitations established by the state of domicile, including loan to value limitations. Loan to value calculations will be based on the most current appraisal of the collateral. Reappraisal of the collateral is required when existing reverse mortgages are purchased by an insurer.
>
> Origination Expenses and Fees
>
> All expenses associated with entering into reverse mortgages shall be recognized immediately as investment expense.
>
> Revenue associated with originating or otherwise acquiring reverse mortgages, including non-refundable fees, shall be amortized to investment income on a straight line basis over the period from inception to the expected maturity date.

Generally, fees are not paid by the borrower at the time of closing but become payable when the outstanding balance of the reverse mortgage becomes due. In these situations, no accounting entries are recorded at the time of closing. Investment income will be recognized and the outstanding balance of the loan will increase as the fees are amortized.

If fees are paid by the borrower at the time of closing, a liability should be established. Investment income will be recognized and the liability will decrease as the fees are amortized.

Interest Income and Accrued Interest Receivable

Interest is payable by the borrower when the outstanding balance of the reverse mortgage becomes due. Accrued interest should be calculated on the outstanding balance of the loan on a monthly basis. As it is earned, accrued interest should be recorded to investment income and added to the outstanding balance of the loan.

Valuation

The outstanding balance of the reverse mortgage will include the accumulation of amounts disbursed, accrued interest and amortized origination fees (origination fees not paid by the borrower at the time of closing). Neither the fair market value of the underlying collateral nor the liability for future cash payments guaranteed by the lender are recorded. They are, however, considered in cash flow projections and to the extent that estimated future cash payments exceed estimated future cash receipts, a valuation reserve is established. Future appreciation in property value beyond the valuation date is not included in the projection of cash receipts.

The lender's equity in the appreciation of the property, if any, is not recorded until realized upon the sale of the home.

The three major categories of risk affecting reverse mortgages are described below:

1. Mortality risk - risk of loan payments extending beyond the borrowers original projected life expectancy.

   Since most reverse mortgages guarantee a continuing monthly payment to the borrower, there is the possibility that the borrower will collect cash payments and accrue interest exceeding the appreciated value of the collateral. In situations where loan payments extend beyond the borrower's original projected life expectancy, the insurance company will experience a diminished yield, and may experience a loss. Reverse mortgage contracts should be combined into groups which are of sufficient size to provide an actuarially and statistically credible basis for estimating life expectancy to project future cash flows.

2. Collateral Risk - risk of deterioration in the value of the collateral such that it is insufficient to cover the loan balance. This risk must be evaluated loan-by-loan and is based on information obtained from periodic real estate appraisals, as required by the state of domicile, and other pertinent information.

3. Interest Rate Risk - risk of interest rates rising on adjustable rate reverse mortgages to the extent that accrued interest creates a collateral risk.

   Reverse mortgages subject to these risks shall be reported net of an appropriate actuarial reserve. The assumptions, cash flow projections and evaluation of risk are to be reviewed and updated at least annually, with any resulting adjustment made to the reserve. Assumptions should be applied consistently to similar loans.

Disclosure Requirements

The following should be disclosed in footnote 2, Basis of Valuation of Invested Assets:

1. A description of the company's accounting policies and methods, including the statistical methods and assumptions used in calculating the reserve.
2. The reserve amount which is netted against the asset value.
3. Investment income or loss recognized in the period as a result of the re-estimated cash flows.
4. General information regarding the insurer's commitment under the agreement.

Effective Date

These accounting and reporting guidelines are effective for the year ending December 31, 1995.

Generally Accepted Accounting Principles

11. GAAP does not specifically address reverse mortgages. GAAP guidance addressing mortgage loans is contained in *Issue Paper No. 37—Mortgage Loans*.

Real Estate Investments

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 40

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for real estate investments is provided in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. However, the Accounting Practices and Procedures Manuals contain no comprehensive guidance on accounting for sale of real estate or for real estate construction projects.

2. GAAP guidance for real estate is established in *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60), *FASB Statement No. 66*, *Accounting for Sales of Real Estate* (FAS 66), *FASB Statement No. 67*, *Accounting for Costs and Initial Rental Operations of Real Estate Projects* (FAS 67), *FASB Statement No. 121*, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to be Disposed Of*, and *AICPA Statement of Position 92-3*, *Accounting for Foreclosed Assets* (SOP 92-3). Current statutory guidance is similar to GAAP, except that GAAP requires recognition of impairment in the value of the investments through a writedown to the appropriate basis with a charge to realized gains and losses. Current statutory accounting guidance states that "Generally, the value of investment real estate and property acquired in satisfaction of debt may not exceed the lower of current market value or cost plus capitalized improvements, less normal depreciation." The current statutory guidance gives reporting entities three options when an impairment is recognized: a) write down the investment real estate, b) nonadmit part of the value, or c) establish a reserve for specific properties as a liability.

3. The purpose of this issue paper is to establish statutory accounting principles for real estate investments that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. Real estate investments shall be defined as direct-owned real estate properties acquired in exchange for consideration (including but not limited to cash, a contract for deed or mortgage, or other non-cash consideration), obtained through foreclosure or voluntary conveyance in satisfaction of a mortgage loan, or received as contributed surplus. Real estate investments meet the definition of assets defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted* Assets and are admitted assets to the extent they conform to the requirements of this issue paper.

5. Real estate investments include real estate occupied by the company, which is defined in *Issue Paper No. 23—Property Occupied by the Company*, and certain acquisition, development and construction arrangements (ADC) as defined in *Issue Paper No. 38—Acquisition, Development and Construction Arrangements* (Issue Paper No. 38).

6. Real estate investments shall be reported net of encumbrances in the following balance sheet categories, with parenthetical disclosure of the amount of related encumbrances:

- Properties occupied by the company
- Properties held for the production of income
- Properties held for sale

7. Encumbrances represent outstanding mortgages or other debt related to the real estate investment and any unpaid accrued acquisition or construction costs. Interest expense shall be included in investment expenses.

8. The cost of real estate represents the fair market value of the consideration exchanged plus any costs incurred to place the real estate asset in usable condition, including but not limited to, brokerage fees, legal fees, demolition, clearing and grading, fees of architects and engineers, any additional expenditures made for equipment and fixtures that are made a permanent part of the structure and certain interest costs as provided for in *Issue Paper No. 44—Capitalization of Interest*. Where cost includes both land and building, the cost shall be allocated among the assets purchased based on the relative values determined using appraisals, as described in paragraph 12 below. The cost shall be reduced by any amounts received for sales of rights or privileges in connection with the property or by any cash recoveries received after acquiring title to the property. The cost of real estate which has been foreclosed upon shall be initially established in accordance with *Issue Paper No. 36—Troubled Debt* Restructurings. The cost of contributed real estate shall be initially established in accordance with *Issue Paper No. 73—Transactions* as a nonreciprocal transfer.

9. The cost of property included in real estate investments, other than land, shall be depreciated over the estimated useful life, not to exceed fifty years. Depreciation expense shall be included in investment expenses.

10. Properties occupied by the reporting entity and properties held for the production of income shall be carried at depreciated cost less encumbrances unless events or circumstances indicate the carrying amount of the asset (amount prior to reduction for encumbrances) may not be recoverable. Paragraph 5 of FAS 121 provides examples of events or changes in circumstances which indicate that the recoverability of the carrying amount of properties occupied by the reporting entity or properties held for the production of income should be assessed. If the events or changes in circumstances set forth in paragraph 5 of FAS 121 are present or if other events or changes in circumstances indicate that the carrying amount of properties occupied by the company or properties held for the production of income may not be recoverable, the reporting entity shall determine whether an impairment loss must be recognized in accordance with paragraph 6 of FAS 121. Property occupied by the reporting entity shall be evaluated using the asset grouping approach of paragraph 8 of FAS 121. FAS 121 is excerpted in paragraph 37 of this issue paper. An impairment loss is measured as the amount by which the individual carrying amounts exceed the fair value of properties occupied by the company or properties held for the production of income. Fair value is determined in accordance with paragraph 12 of this issue paper. If the fair value of the asset is less than the carrying value, the asset shall be written down to the fair value thereby establishing a new cost basis. The new cost basis shall not be changed for subsequent recoveries in fair value. The adjustment shall be recorded in the statement of operations as a realized loss.

11. Properties that the reporting entity has the intent to sell or is required to sell shall be classified as properties held for sale and carried at the lower of depreciated cost or fair value less encumbrances and estimated costs to sell the property consistent with paragraph 16 of FAS 121. The intent to sell a property exists when management, having the authority to approve the action, has committed to a plan to dispose of the asset, either by sale or abandonment. Fair value of the asset shall be determined in accordance with

paragraph 12 of this issue paper. Subsequent revisions to the fair value of the asset shall be accounted for in accordance with paragraph 17 of FAS 121.

12. The current fair value of real estate shall be determined on a property by property basis (i.e., increases in the fair value of one property shall not be used to offset declines in fair value of another) and shall be defined as the price that a property would bring in a competitive and open market under all conditions requisite to a fair sale (i.e., the buyer and seller acting prudently and knowledgeably with the price not affected by any undue stimulus). If market quotes are unavailable, estimates of fair value shall be determined by an appraisal (internal or third party), which is based upon an evaluation of all relevant data about the market, considering the following:

a. A physical inspection of the premises,

b. The present value of future cash flows generated by the property (Discounted Cash Flows), or capitalization of stabilized net operating income (Direct Capitalization),

c. current sales prices of similar properties with adjustments for differences in the properties (Sales Comparison Approach),

d. costs to sell the property if the reporting entity does not have the intent or ability to hold the real estate as an investment,

e. replacement costs of the improvements, less depreciation, plus the value of the land (Cost Approach).

All appraisals obtained to determine fair market value of real estate investments shall be no more than five years old. However, if conditions indicate there has been a significant decrease in the fair market value of a property, then a current appraisal shall be obtained. Additionally, appraisals shall be obtained for real estate investments at the time of foreclosure or contribution. Contributed real estate shall be supported by an independent third party appraisal at the date of contribution. If either of the previous conditions exist but an appraisal has not been obtained, the related property shall be considered a nonadmitted asset until the required appraisals are obtained.

Income, Expenses, and Capital Improvements

13. Rental income on real estate leased is addressed in *Issue Paper No. 22—Leases,* which requires that rental income be included in investment income. Expenses incurred in operating the real estate investment, including but not limited to, real estate taxes, utilities, and ordinary repair and maintenance, shall be charged to expense as incurred and included in investment expenses.

14. Expenditures that are necessary to put the asset back into good operating condition or to keep it in good operating condition, shall be charged to expense as incurred. Expenditures that add to or prolong the life of the property shall be added to the cost of the real estate (capitalized) and depreciated over the remaining estimated useful life of the property.

Sale of Real Estate

15. Recognition of profit on sales of real estate investments shall be accounted for in accordance with paragraphs 29, 33 and 34 below. Profit shall be recognized in full when real estate is sold, provided (a) the profit is determinable, that is, the collectibility of the sales price is reasonably assured or the amount that will not be collectible can be estimated, and (b) the earnings process is virtually complete, that is, the seller is not obliged to perform significant activities after the sale to earn the profit. Unless both conditions exist, recognition of all or part of the profit shall be postponed. Profit shall not be recognized by the full accrual method until all of the following criteria are met:

a. A sale is consummated,

b. The buyer's initial and continuing investments are adequate to demonstrate a commitment to pay for the property,

c. The seller's receivable is not subject to future subordination, and

d. The seller has transferred to the buyer the usual risks and rewards of ownership in a transaction that is in substance a sale and does not have a substantial continuing involvement with the property after the sale.

DISCUSSION

The calculation of the buyer's initial investment specified in subparagraph 9 of paragraph 29 below shall be modified to reflect that buyer's notes must be supported by letters of credit from institutions that are listed by the Securities Valuation Office of the National Association of Insurance Commissioners as meeting credit standards to be included in determining the buyer's initial investment. Any profit or loss is considered a realized gain or loss in the year of the sale in accordance with FAS 66.

Real Estate Projects Under Development

16. Costs and initial rental operations of real estate projects under development, which include ADC arrangements accounted for as real estate under the provisions of paragraph 3 of Issue Paper No. 38, shall be accounted for in accordance with paragraph 30 below. Costs incurred in connection with real estate projects shall be expensed as incurred unless the criteria established in paragraph 30 are met. The admitted value of a real estate project, or parts thereof, held for sale or development and sale shall not exceed the estimated selling price in the ordinary course of business less estimated costs of completion (to stage of completion assumed in determining the selling price), holding, and disposal (net realizable value). If costs exceed net realizable value, capitalization of eligible costs shall continue, however, an allowance shall be provided to reduce the admitted value to estimated net realizable value.

17. The statutory principles in this issue paper are consistent with the current statutory guidance except as follows:

- Paragraph 11 requires real estate held for sale to be carried at the lower of fair value less estimated costs to sell or depreciated cost. There are at least two states, Nevada and Arizona, which allow real property to be carried in excess of depreciated cost if supported by an appraisal.

- Paragraphs 10 and 11 distinguish between real estate held for sale and real estate not held for sale. Paragraph 11 requires the fair market value of real estate held for sale to be reduced by estimated selling costs in determining admitted value.

- Paragraph 10 provides that impairments for properties occupied by the company and properties held for the production of income shall be recorded as a realized loss. After an impairment is recognized, the carrying amount of the asset shall be accounted for as its new cost. Current statutory guidance provides three options for recording valuation adjustments: (a) direct write-down of asset, (b) nonadmit part of the asset, or (c) establish a reserve liability.

- Paragraph 12 provides for the utilization of appraisals in determining fair market value. The Accounting Practices and Procedures Manual for Life and Accident and Health and for Property and Casualty Insurance Companies define the term “appraised value” but do not require the use of an appraisal to support valuation allowances. At least two states, Minnesota and Missouri, have regulations that require the use of appraisals for certain real estate properties.

- Paragraph 6 conforms the balance sheet categories to be consistent with FAS 121. These differ from those required on the Property and Casualty Annual Statement and those required on the Life and Accident and Health Annual Statement. Real estate currently reported as "Other Properties" on the Property and Casualty Annual Statement shall be reported as "Properties held for the production of income" or "Properties held for sale." Real estate currently reported as "Properties Acquired in the Satisfaction of Debt" on the Life and Accident and Health Annual Statement shall be reported as "Properties held for the production of income" or "Properties held for sale."

- Paragraph 15 adopts the GAAP guidance for sales of real estate, which augments and clarifies the current statutory guidance on sales of real estate.

- Paragraph 16 adopts GAAP guidance for real estate construction projects; no current statutory guidance exists.

18. The statutory accounting principles established in this issue paper:

- Adopt *FASB Statement No. 66*, *Accounting for Sales of Real Estate,* with modification to paragraph 9 to indicate that only letters of credit from institutions listed by the Securities Valuation Office shall be included in determining the buyer's initial investment. Additionally, as they relate to FASB Statement 66, the following are adopted: *FASB Emerging Issues Task Force Issue No. 87-29*, *Exchange of Real Estate Involving Boot* (EITF 87-29), *FASB Emerging Issues Task Force Issue No. 86-6*, *Antispeculation Clauses in Real Estate Sales Contracts*, *FASB Emerging Issues Task Force Issue No. 88-12*, *Transfer of Ownership Interest as Part of Down Payment under FASB Statement No. 66*, *FASB Emerging Issues Task Force Issue No. 88-24*, *Effect of Various Forms of Financing under FASB Statement No. 66* and *FASB Emerging Issues Task Force Issue No. 87-9*, *Profit Recognition on Sales of Real Estate with Insured Mortgages or Surety Bonds* (EITF 87-9).

- This issue paper adopts *FASB Emerging Issues Task Force No. 84-17*, *Profit Recognition on Sales of Real Estate with Graduated Payment Mortgages or Insured Mortgages*, *FASB Emerging Issues Task Force No 89-13*, *Accounting for the Cost of Asbestos Removal*, *FASB Emerging Issues Task Force No. 89-14, Valuation of Repossessed Real Estate*, *FASB Emerging Issues Task Force No. 90-8*, *Capitalization of Costs to Treat Environmental Contamination*, and *FASB Emerging Issues Task Force No. 95-23, The Treatment of Certain Site Restoration /Environmental Exit Costs When Testing a Long-Lived Assets for Impairment*.

- Adopt *FASB Statement No. 67*, *Accounting for Costs and Initial Rental Operations of Real Estate Projects*. Foreclosed real estate held for sale should be valued as described within *SOP 92-3*, *Accounting for Foreclosed Assets*.

- Adopt *SOP 92-1*, *Accounting for Real Estate Syndication Income* and *SOP 92-3*, *Accounting for Foreclosed Assets*.

- Adopt *FASB Statement No. 121*, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of,* for real estate investments except for paragraphs 13, 14.c. and 14.d. which were rejected in *Issue Paper No. 68—Business Combinations and Goodwill*.

- Reject *Accounting Research Bulletin No. 43*, *Restatement and Revision of Accounting Research Bulletins, "Chapter 10, Taxes, Section A-Real Estate and Personal Property Taxes*"

19. The statutory accounting principles outlined in the conclusion above are consistent with the conservatism and recognition concepts in the Statement of Concepts. Pertinent excerpts follow:

> Conservatism
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.
>
> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.
>
> Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

Drafting Notes/Comments

- Accounting for investments in real estate ventures are addressed in *Issue Paper No. 48—Investments in Joint Ventures, Partnerships and Limited Liability Companies*.
- Accounting for leases and sale-leaseback transactions involving real estate transactions are addressed in *Issue Paper No. 22—Leases*.
- *Issue Paper No. 36—Troubled Debt Restructurings* addresses accounting for the foreclosure of real estate; this paper addresses how to account for foreclosed real estate after foreclosure.
- *Issue Paper No. 34—Investment Income Due and Accrued* addresses requirements related to nonadmitted rental income due and accrued.
- Accounting for real estate occupied by the company is addressed in *Issue Paper No. 23—Property Occupied by the Company*.
- Accounting for leasehold improvements is addressed in *Issue Paper No. 31—Leasehold Improvements Paid by the Reporting Entity as Lessee.*
- *Issue Paper No. 44—Capitalization of Interest* addresses capitalization of interest.
- Accounting for real estate property acquired by mortgage guaranty insurers in settlement of a claim is addressed in *Issue Paper No. 88—Mortgage Guaranty Insurance*.
- Depreciation of assets, including acceptable and unacceptable methods and maximum lives and disclosures, will be addressed in *Issue Paper No. 67—Depreciation of Property and Amortization of Leasehold Improvements.*

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

20. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies includes the following guidance in Chapter 4, Real Estate:

> Directly-owned real estate is reported separately in the statutory financial statement. Holdings so reported are classified as properties (a) occupied by the company, (b) acquired in satisfaction of debt, and (c) investments in real estate. These classes may include real estate owned under contract of sale.
>
> When real estate is owned indirectly through partnerships or joint ventures, it is reported as “Other Invested Assets” in the statutory financial statement.
>
> Authorization and Limitations
>
> Statutes and regulations promulgated by the states concerning limitations on investments in real property are widely divergent. Generally speaking, the thrust of these limitations is to provide an aggregate maximum investment value on holdings of real property. A typical example would be that real estate investments not exceed a stipulated percentage of total admitted assets or surplus. Also common among these limitations are provisions requiring the disposal of foreclosed properties within a certain period of time.
>
> Cost
>
> The cost of real estate acquired by purchase is the actual amount paid upon purchase, plus the costs incurred to place the real estate asset in usable condition. Elements of cost should also include brokerage fees, legal fees, demolition, clearing and grading, fees of architects and engineers, and any additional expenditures made for equipment and fixtures that are made a permanent part of the structure. Cost should be reduced by any amounts received for sales of rights or privileges in connection with the property or by any cash recoveries received after acquiring title to the property.
>
> Where more than one property is acquired at a group price, or where the cost includes both land and building, the price paid must be allocated among the assets purchased. This normally is done on the basis of relative values, which may be determined by appraisals made for insurance purposes, by assessed valuations made for property tax purposes, by independent appraisal, or by some other reasonable method such as the previous owner's percentage allocation or underwriting estimates.
>
> If property is acquired in a non-cash transaction, the acquired property should be recorded at the fair market value of the property or other asset given if the market value of the property acquired cannot reasonably be determined.
>
> In determining the cost of investment real estate, an insurer should include the cost of personal property necessary to the income generating operations of the investment property. Furniture, fixtures, and equipment so capitalized should be depreciated over their useful lives.
>
> Real estate acquired in satisfaction of debt includes property acquired through foreclosure and through voluntary conveyance.
>
> The cost of real estate acquired through foreclosure or voluntary conveyance is recorded at the lower of fair market value at acquisition or cost. Cost includes the outstanding principal balance of the mortgage loan at the date of foreclosure or conveyance plus foreclosure costs, real estate taxes, insurance premiums, and all other costs necessary to obtain clear title and to place the property in good repair. Uncollected interest or unrecovered advances made before foreclosure should also be included in cost.

Book Value

For real estate that is occupied by the company and for investment real estate, book value would be the cost or other basic value, stated net of any encumbrance, plus additions and increases by adjustments, less retirements and decreases by adjustments, including depreciation. Encumbrances include mortgages and other related debt and may also include accrued costs of acquisition or construction.

The book value of real estate sold under contract of sale is the balance resulting from the cost of the property, less reductions for cash received on account and for any purchase money mortgage that may have been accepted.

Market Value

Market value is the price that a property would bring in a competitive and open market under all conditions requisite to a fair sale the buyer and seller acting prudently and knowledgeably with the price not affected by any undue stimulus.

Appraised Value

An appraisal is an opinion of estimated market value for an adequately described property, as of a specified date, supported by the analysis of relevant data. To arrive at this value, three methods are used:

1. Market Data Approach - a comparative analysis of current sales prices of similar properties, after making necessary adjustments for any difference in the properties.

2. Cost Approach - an estimated value based on the cost of reproduction or replacement of the improvements, less depreciation, plus the value of the land. (Land value is usually determined by the market data approach.)

3. Income Approach - an estimated value based on the capitalization of income and productivity. It is concerned with the present value of future income.

In most appraisals, all three approaches ordinarily will have something to contribute. Each is used independently to reach an estimated value. Then, by applying to each separate value a weight proportionate to its merits in that particular instance, a conclusion is reached concerning one appropriate value. This procedure is known as correlation.

Statement Value

The instructions for the annual statement require that the admitted value of properties occupied by the company (home office real estate) shall not exceed actual cost, plus capitalized improvements, less normal depreciation. This formula is to apply whether the property is held directly or indirectly by the company.

Generally, the value of investment real estate and property acquired in satisfaction of debt may not exceed the lower of current market value or cost plus capitalized improvements, less normal depreciation. In lieu of writing down investment real estate or taking part of the value as nonadmitted when market value is less than book value, an insurer may establish a reserve for specific properties as a liability.

Income Derived from Real Estate

Income on real estate, or on space in buildings owned and occupied by the company, usually is received periodically and in advance and any amount not received at the end of an accounting period should be set up as investment income due and unpaid to the extent that the amount applies to that accounting period. If the collectibility of unpaid rent is in doubt, or if the amount due exceeds a period specified by statute or regulation, most jurisdictions require that the entire amount be nonadmitted. Rental income paid in advance of the accounting period for which it is payable in whole or in part should be included in the liability for unearned investment income to the extent it applies to the succeeding accounting period. If rental income is to be received over a period shorter than the full lease period, the total rent to be received should be accrued periodically as if the rent were received over the total lease period. Interest expense on a mortgage is netted against the rental income for the period.

In the statutory financial statement, a company must include in both its income and expenses an amount for rent relating to its occupancy of its own buildings.

This amount can be the estimated current market rental value of the space involved, or it can be the amount derived from consideration of the repairs, expenses, taxes, and depreciation incurred, plus interest added at an average fair rate on the book value of the company's investment in its home office building. The figure thus determined, being both charged to expenses and credited to income, has no effect either on the company's overall net income or surplus.

Sale of Real Estate

A company can recognize the sale of any real estate that it owns as an immediate cash sale or as a contract of sale. In a sale for cash and/or mortgage, title transfers to the buyer when the sale is consummated. Any profit or loss on the sale is considered to be realized in the year of sale. In a sale involving an installment contract, often referred to as land contracts, title is retained by the seller and transferred to the buyer only when he has paid the entire sales price, or a substantial portion of it.

If the sale of real estate, including real estate occupied by the Company, includes a mortgage or other note from the Company, some states may require the transaction be reported as a financing transaction using the deposit method of accounting for sale-leaseback transaction.

An insurer does not take credit for any profit from the sale or exchange of its assets when the consideration received and otherwise properly reported as an admitted asset is in the form of an installment contract, unless such profit is fully reserved by a liability established which is equal to the portion of such profit which is unrealized. In computing the realized portion of the profit on installment contracts, payments are allocated at the rate the principal is reduced by said payments.

Depreciation and Amortization

The cost of property, other than land, should be depreciated over its estimated useful life. Useful lives for buildings and improvements can best be obtained from contractors, appraisers, engineers, and manufacturers. Estimates published by the Internal Revenue Service can be helpful in the selection of useful lives for specific assets. Depreciable life may at times be fixed by contract, such as in a leasehold investment.

A variety of depreciation methods is available and a company should select the method that is most appropriate provided, however, that the method is both systematic and rational. Depreciation methods in use include the straight-line method, and accelerated methods, such as sum-of-the-years digits and various declining balance methods.

Because real estate leasehold improvements revert to the lessor at the end of the lease and the lessee receives benefits from the improvements only during the life of the lease, a leasehold improvement is subject to amortization over the lease life.

> Expenses and Capital Improvements
>
> Repairs and maintenance expenditures may be classified as ordinary or extraordinary. As a general rule, expenditures for ordinary repairs that are necessary to put assets back into good operating condition, and for maintenance to keep them that way, are expensed as they are incurred.
>
> Extraordinary expenditures which add to or prolong the life of the property should be capitalized. In practice, most organizations establish a minimum capitalization amount. Individual expenditures below this minimum are expensed rather than capitalized to avoid capitalization of immaterial amounts. Other expenses in operating real estate are expensed as incurred.
>
> Other Real Estate Taxes
>
> Except for the development phase of a project, real and personal property taxes are charged against income. Real and personal property taxes are based upon the assessed valuation of property, as of a given date, as determined by the laws of a state or other taxing authority. The proper accounting treatment must determine when the liability for real and personal property taxes should be accrued. Consistency of application from year to year in establishing this liability is the most important consideration.
>
> The preferred basis for determining the liability and charges for real and personal property taxes should be established at the time of purchase. A practical aspect of the legal liability for these taxes must be considered when title to property is transferred during the taxable year, whereby the date of personal obligation generally controls. Adjustments for property taxes paid or accrued are frequently incorporated in agreements covering the sale of the real estate and determined between the buyer's and seller's obligations. Once established, this liability can be applied consistently throughout the ownership of the property.

21. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies provides similar guidance to the above paragraph.

22. The Accounting Practice and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 22, *General Expenses and Taxes, Licenses and Fees*, includes the following guidance:

> 11. Real estate expenses include all costs except salaries and wages of company employees that relate to real estate, whether occupied by the company or not.

23. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 19, *Expenses*, contains the following pertinent excerpts:

> 3. Taxes, Licenses, and Fees
>
> These are state and local insurance taxes, insurance department licenses and fees, allocable payroll taxes, and all other taxes excluding federal and foreign income and real estate taxes.
>
> Real estate taxes on investment properties are generally included with investment expenses, and capital stock taxes and apportioned payroll taxes may be reported as investment expenses.

24. Minnesota state regulations include the following specific guidelines related to valuation of real estate investments:

> 60A.122 Mortgage and real estate valuation
>
> An insurer shall establish written procedures, approved by the company's board of directors, for the valuation of commercial mortgage loans and real estate owned. The procedures must be made available to the commissioner upon request. The commissioner shall review the insurer's compliance with the procedures in any examination of the insurer under section 60A.031.
>
> 60A.123 Valuation of foreclosures; reserves
>
> Subdivision 1. Requirement. An insurer shall value its commercial mortgage loans and real estate acquired through foreclosure of commercial mortgage loans as provided in this section for the purpose of establishing reserves or carrying values of the investments and for statutory accounting purposes.
>
> Subdivision 2. Performing mortgage loan. A performing mortgage loan must be carried at its amortized cost.
>
> Subdivision 3. Distressed mortgage loan.
>
> (a) The insurer shall make an evaluation of the appropriate carrying value of its commercial mortgage loans which it classifies as distressed mortgage loans. The carrying value must be based upon one or more of the following procedures:
>
> (1) an internal appraisal;
>
> (2) an appraisal made by an independent appraiser;
>
> (3) the value of guarantees or other credit enhancements related to the loan.
>
> (b) The insurer may determine the carrying value of its distressed mortgage loans through either an evaluation of each specific distressed mortgage loan or by a sampling methodology. Insurers using a sampling methodology shall identify a sampling of its distressed mortgage loans that represents a cross section of all of its distressed mortgage loans. The insurer shall make an evaluation of the appropriate carrying value for each sample loan. The carrying value of all of the insurer's distressed mortgage loans must be the same percentage of their amortized acquisition cost as the sample loans. The carrying value must be based upon an internal appraisal or an appraisal conducted by an independent appraiser.
>
> (c) The insurer shall either take a charge against its surplus or establish a reserve for the difference between the carrying value and the amortized acquisition cost of its distressed mortgage loans.
>
> Subdivision 4. Delinquent mortgage loan.
>
> (a) The insurer shall make an evaluation of the appropriate carrying value of each delinquent mortgage loan. The carrying value must be based upon one or more of the following procedures:
>
> (1) an internal appraisal;
>
> (2) an appraisal by an independent appraiser;
>
> (3) the value of guarantees or other credit enhancements related to the loan.

(b) The insurer shall either take a charge against its surplus or establish a reserve for the difference between the carrying value and the amortized acquisition cost of its delinquent mortgage loans.

Subdivision 5. Restructured mortgage loan.

(a) The insurer shall make an evaluation of the appropriate carrying value of each restructured mortgage loan. The carrying value must be based upon one or more of the following procedures:

(1) an internal appraisal;

(2) an appraisal by an independent appraiser;

(3) the value of guarantees or other credit enhancements related to the loan.

(b) The insurer shall either take a charge against its surplus or establish a reserve for the difference between the carrying value and the amortized acquisition cost of its restructured mortgage loans.

Subdivision 6. Mortgage loan in foreclosure.

(a) The insurer shall make an evaluation of the appropriate carrying value of each mortgage loan in foreclosure. The carrying value must be based upon an appraisal made by an independent appraiser.

(b) The insurer shall take a charge against its surplus for the difference between the carrying value and the amortized acquisition cost of its mortgage loans in the process of foreclosure.

Subdivision 7. Real estate owned.

(a) The insurer shall make an evaluation of the appropriate carrying value of real estate owned. The carrying value must be based upon an appraisal made by an independent appraiser.

(b) The insurer shall take a charge against its surplus for the difference between the carrying value and the amortized acquisition cost of real estate owned.

60A.125 Property and mortgage loan appraisal

Subdivision 1. Mortgage loans in the process of foreclosure. An insurer may rely upon an appraisal by an independent appraiser to determine the carrying value of mortgage loans in the process of foreclosure only if the date of the appraisal is within six months of the date the foreclosure procedure is begun. If no appraisal exists, the insurer shall acquire an appraisal within six months after the foreclosure proceeding has begun.

Subdivision 2. Real estate owned. An insurer may rely upon an appraisal by an independent appraiser to determine the carrying value of real estate owned only if the date of the appraisal is within six months of the date when title to the property was acquired. If no appraisal exists, the insurer shall acquire an appraisal within six months after title to the property is acquired.

Subdivision 3. Charge taken. An insurer shall take a charge against the surplus for mortgage loans in the process of foreclosure and real estate owned in the first calendar year in which it holds a current appraisal made by an independent appraiser as provided in this section.

25. Missouri state regulations also include specific guidelines related to valuation of real estate investments:

> 20 CSR 200-13.100 Appraisal requirements
>
> Purpose: This rule upgrades the quality of real estate appraisals used by insurers by requiring appraisals meet the same standards as those applicable to federally-regulated financial institutions. This rule effectuates or aids in the interpretation of sections 375.330, 376.300 and 379.080, RSMo.
>
> Editor's Note: The secretary of state has determined that the publication of this rule in its entirety would be unduly cumbersome or expensive. The entire text of the material referenced has been filed with the secretary of state. This material may be found at the Office of the Secretary of State or at the headquarters of the agency and is available to any interested person at a cost established by state law.
>
> (1) Any real estate held as an investment for the production of income pursuant to section 375.330.1(7), RSMo, or any mortgage loan made pursuant to section 376.300.1(9) or 379.080.1(2)(f), RSMo, excluding purchase money mortgages as identified in section 376.300.1(9), RSMo, may be held as an admissible asset only if the appraisal --
>
> (A) Is made of real estate no more than one hundred twenty (120) days before the date the deed or mortgage is recorded in the appropriate public records;
>
> (B) Is a written statement that is independently and impartially prepared by a licensed or certified appraiser setting forth an opinion of defined value of an adequately described property as of a specific date, supported by presentation and analysis of relevant market information;
>
> (C) Provides the current market value of the real estate, that is the value of the real estate in an arms-length sale as of the date of the appraisal; and
>
> (D) Is made by an individual who is --
>
> 1. On the national registry of state-certified and licensed appraisers who are eligible to perform appraisals in federally related transactions, which national registry is maintained pursuant to United States P.L. 101-73, Title XI, Section 1103 (12 USC Section 3332); and
>
> 2. Certified or licensed to make the appraisal by the state in which the real estate is located.
>
> (2) Notwithstanding any provision of section (1) of this rule to the contrary, no appraisal is necessary in order to admit as an asset the holding of any debt or security issued, assumed or guaranteed by the United States, any state, territory or possession of the United States, the District of Columbia or any administration, agency, authority or instrumentality of them, but only to the extent that the debit or security is issued, assumed insured or guaranteed by any such entity.
>
> (3) Notwithstanding any provision of section (1) of this rule to the contrary, an insurer may establish written procedures, approved by the company's board of directors, for the valuation of its real estate and mortgage loans, which shall exempt the insurer from all of the provisions of section (1). The written procedures must be approved by the director. The director may review the insurer's compliance with these procedures. The director must be notified of any material changes to the written procedures. To be exempt under this section, an insurer's mortgage loan and real estate operations shall meet the following minimum standards:
>
> (A) The insurer shall hold a combined mortgage loan and real estate portfolio valued at three hundred (300) million dollars or more;

(B) The insurer shall establish written procedures and obtain board approval and approval by the director within one hundred twenty (120) days (August 6, 1993) of the effective date of this rule (April 8, 1993);

(C) The insurer, as part of the written procedures, shall establish a reasonable system of valuation of its mortgage loans and real estate which includes the following elements:

1. A system to value its real estate acquired through foreclosure for the purpose of establishing reserves or carrying values of the investments and for statutory accounting purposes;

2. A program for the training, education and certification of employees, at least one (1) of whom must be certified as described in paragraph (1)(D)1. of this rule, who conducts internal appraisals of investments, or a system involving the use of independent certified appraisers as described in paragraph (1)(D)1. of this rule. Any internal appraiser shall not be compensated, directly or indirectly, on the basis of the outcome of appraisals performed and shall have direct reporting access to the chief investment officer of the insurer; and

3. Carrying values for the foreclosed real estate shall be based upon the internal appraisal or an independent appraisal and the value of the guarantees or other credit enhancements related to the investment; and

(D) The audit report of the independent certified public accountant which prepares the audit of the insurer's annual statement shall contain findings by the auditor that --

1. The insurer has adopted valuation procedures meeting the requirements of section (3) of this rule;

2. The procedures adopted by the board of directors have been uniformly applied by the insurer in conformance with section (3) of this rule; and

3. The management of the insurer has an adequate system of internal controls.

26. Nevada Statutes - Insurance Laws, TITLE 57 --- INSURANCE - Chapter 681B - ASSETS AND LIABILITIES provides the following guidance on real estate valuation:

681B.180 Real property

1. Real property acquired pursuant to a mortgage loan or contract for sale, in the absence of a recent appraisal deemed by the commissioner to be reliable, shall not be valued at an amount greater than the unpaid principal of the defaulted loan or contract plus interest due and accrued at the date of such acquisition, together with any taxes and expenses paid or incurred in connection with such acquisition, and the cost of improvements thereafter made by the insurer and any amounts thereafter paid by the insurer on assessments levied for improvements in connection with the property.

2. Other real property held by an insurer shall not be valued at an amount in excess of fair value as determined by recent appraisal. If valuation is based on an appraisal more than 3 years old, the commissioner may, at his discretion, call for and require a new appraisal in order to determine fair value.

27. Arizona Statutes - Insurance Laws, TITLE 20-- INSURANCE, Chapter 3 FINANCIAL PROVISIONS AND PROCEDURES, Article 1. Assets and Liabilities provides similar guidance:

> 20-513 Real and personal property valuation
>
> A. Real property acquired pursuant to a mortgage loan or contract for sale, in the absence of a recent appraisal deemed by the director to be reliable, shall not be valued at an amount greater than the unpaid principal of the defaulted loan or contract at the date of such acquisition, together with any taxes and expenses paid or incurred in connection with such acquisition, and the cost of improvements thereafter made by the insurer and any amounts thereafter paid by the insurer on assessments levied for improvements in connection with the property.
>
> B. Other real property held by an insurer shall not be valued at an amount in excess of fair value as determined by recent appraisal. If valuation is based on an appraisal more than three years old, the director may at his discretion call for and require a new appraisal in order to determine fair value.
>
> C. Personal property acquired pursuant to chattel mortgages made in accordance with section 20-555 shall not be valued at an amount greater than the unpaid balance of principal on the defaulted loan at the date of acquisition, together with taxes and expenses incurred in connection with the acquisition, or the fair value of the property, whichever amount is the lesser.

Generally Accepted Accounting Principles

28. *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises*, provides the following guidance:

> 48. Real estate investments shall be reported at cost less accumulated depreciation and an allowance for any impairment in value. Depreciation and other related charges or credits shall be charged or credited to investment income. Changes in the allowance for any impairment in value relating to real estate investments shall be included in realized gains and losses.

29. *FASB Statement No. 66*, *Accounting for Sales of Real Estate,* provides the following guidance:

> INTRODUCTION
>
> 1. This Statement establishes standards for recognition of profit on all real estate sales transactions without regard to the nature of the seller's business. The Statement distinguishes between retail land sales and other sales of real estate because differences in terms of sales and selling procedures lead to different profit recognition criteria and methods. Accounting for real estate sales transactions that are not retail land sales is specified in paragraphs 3-43. Accounting for retail land sales transactions is specified in paragraphs 44-50. This Statement does not cover exchanges of real estate for other real estate, the accounting for which is covered in *APB Opinion No. 29, Accounting for Nonmonetary Transactions*.
>
> 2. Although this Statement applies to all sales of real estate, many of the extensive provisions were developed over several years to deal with complex transactions that are frequently encountered in enterprises that specialize in real estate transactions. The decision trees on pages 75-79 highlight the major provisions of the Statement and will help a user of the Statement identify criteria that determine when and how profit is recognized. Those using this Statement to determine the accounting for relatively simple real estate sales transactions will need to apply only limited portions of the Statement. The general requirements for recognizing all of the profit on a nonretail land sale at the date of sale are set forth in paragraphs 3-5 and are highlighted on the decision tree on page 75. Paragraphs 6-18 elaborate on those general provisions. Paragraphs 19-43 provide more detailed guidance for a variety of more complex transactions.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Real Estate Sales Other Than Retail Land Sales

Recognition of Profit by the Full Accrual Method

3. Profit shall be recognized in full when real estate is sold, provided (a) the profit is determinable, that is, the collectibility of the sales price is reasonably assured or the amount that will not be collectible can be estimated, and (b) the earnings process is virtually complete, that is, the seller is not obliged to perform significant activities after the sale to earn the profit. Unless both conditions exist, recognition of all or part of the profit shall be postponed. Recognition of all of the profit at the time of sale or at some later date when both conditions exist is referred to as the full accrual method in this Statement.

4. In accounting for sales of real estate, collectibility of the sales price is demonstrated by the buyer's commitment to pay, which in turn is supported by substantial initial and continuing investments that give the buyer a stake in the property sufficient that the risk of loss through default motivates the buyer to honor its obligation to the seller. Collectibility shall also be assessed by considering factors such as the credit standing of the buyer, age and location of the property, and adequacy of cash flow from the property.

5. Profit on real estate sales transactions[1] shall not be recognized by the full accrual method until all of the following criteria are met:

a. A sale is consummated (paragraph 6).

b. The buyer's initial and continuing investments are adequate to demonstrate a commitment to pay for the property (paragraphs 8-16).

c. The seller's receivable is not subject to future subordination (paragraph 17).

d. The seller has transferred to the buyer the usual risks and rewards of ownership in a transaction that is in substance a sale and does not have a substantial continuing involvement with the property (paragraph 18).

Paragraphs 19-43 describe appropriate accounting if the above criteria are not met.

Consummation of a Sale

6. A sale shall not be considered consummated until (a) the parties are bound by the terms of a contract, (b) all consideration has been exchanged, (c) any permanent financing for which the seller is responsible has been arranged, and (d) all conditions[2] precedent to closing have been performed. Usually, those four conditions are met at the time of closing or after closing, not when an agreement to sell is signed or at a preclosing.

[1] Profit on a sale of a partial interest in real estate shall be subject to the same criteria for profit recognition as a sale of a whole interest.

[2] Paragraph 20 provides an exception to this requirement if the seller is constructing office buildings, condominiums, shopping centers, or similar structures.

Buyer's Initial and Continuing Investment

7. “Sales value” shall be determined by:

   a. Adding to the stated sales price the proceeds from the issuance of a real estate option that is exercised and other payments that are in substance additional sales proceeds. These nominally may be management fees, points, or prepaid interest or fees that are required to be maintained in an advance status and applied against the amounts due to the seller at a later date.

   b. Subtracting from the sale price a discount to reduce the receivable to its present value and by the net present value of services that the seller commits to perform without compensation or by the net present value of the services in excess of the compensation that will be received. Paragraph 31 specifies appropriate accounting if services are to be provided by the seller without compensation or at less than prevailing rates.

8. Adequacy of a buyer's initial investment shall be measured by (a) its composition (paragraphs 9-10) and (b) its size compared with the sales value of the property (paragraph 11).

9. The buyer's initial investment shall include only: (a) cash paid as a down payment, (b) the buyer's notes supported by irrevocable letters of credit from an independent established lending institution,[3] (c) payments by the buyer to third parties to reduce existing indebtedness on the property, and (d) other amounts paid by the buyer that are part of the sales value. Other consideration received by the seller, including other notes of the buyer, shall be included as part of the buyer's initial investment only when that consideration is sold or otherwise converted to cash without recourse to the seller.

[3] An “independent established lending institution” is an unrelated institution such as a commercial bank unaffiliated with the seller.

10. The initial investment shall not include:

   a. Payments by the buyer to third parties for improvements to the property

   b. A permanent loan commitment by an independent third party to replace a loan made by the seller

   c. Any funds that have been or will be loaned, refunded, or directly or indirectly provided to the buyer by the seller or loans guaranteed or collateralized by the seller for the buyer[4]

[4] As an example, if unimproved land is sold for $100,000, with a down payment of $50,000 in cash, and the seller plans to loan the buyer $35,000 at some future date, the initial investment is $50,000 minus $35,000, or $15,000.

11. The buyer's initial investment shall be adequate to demonstrate the buyer's commitment to pay for the property and shall indicate a reasonable likelihood that the seller will collect the receivable. Lending practices of independent established lending institutions provide a reasonable basis for assessing the collectibility of receivables from buyers of real estate. Therefore, to qualify, the initial investment shall be equal to at least a major part of the difference between usual loan limits and the sales value of the property. Guidance on minimum initial investments in various types of real estate is provided in paragraphs 53 and 54.

12. The buyer's continuing investment in a real estate transaction shall not qualify unless the buyer is contractually required to pay each year on its total debt for the purchase price of the property an amount at least equal to the level annual payment that would be needed to pay that

debt and interest on the unpaid balance over no more than (a) 20 years for debt for land and (b) the customary amortization term of a first mortgage loan by an independent established lending institution for other real estate. For this purpose, contractually required payments by the buyer on its debt shall be in the forms specified in paragraph 9 as acceptable for an initial investment. Except as indicated in the following sentence, funds to be provided directly or indirectly by the seller (paragraph 10.c.) shall be subtracted from the buyer's contractually required payments in determining whether the initial and continuing investments are adequate. If a future loan on normal terms from an established lending institution bears a fair market interest rate and the proceeds of the loan are conditional on use for specified development of or construction on the property, the loan need not be subtracted in determining the buyer's investment.

Release Provisions

13. An agreement to sell property (usually land) may provide that part or all of the property may be released from liens securing related debt by payment of a release price or that payments by the buyer may be assigned first to released property. If either of those conditions is present, a buyer's initial investment shall be sufficient both to pay release prices on property released at the date of sale and to constitute an adequate initial investment on property not released or not subject to release at that time in order to meet the criterion of an adequate initial investment for the property as a whole.

14. If the release conditions described in paragraph 13 are present, the buyer's investment shall be sufficient, after the released property is paid for, to constitute an adequate continuing investment on property not released in order to meet the criterion of an adequate continuing investment for the property as a whole (paragraph 12).

15. If the amounts applied to unreleased portions do not meet the initial and continuing-investment criteria as applied to the sales value of those unreleased portions, profit shall be recognized on each released portion when it meets the criteria in paragraph 5 as if each release were a separate sale.

16. Tests of adequacy of a buyer's initial and continuing investments described in paragraphs 8-15 shall be applied cumulatively when the sale is consummated and annually afterward. If the initial investment exceeds the minimum prescribed, the excess shall be applied toward the required annual increases in the buyer's investment.

Future Subordination

17. The seller's receivable shall not be subject to future subordination. This restriction shall not apply if (a) a receivable is subordinate to a first mortgage on the property existing at the time of sale or (b) a future loan, including an existing permanent loan commitment, is provided for by the terms of the sale and the proceeds of the loan will be applied first to the payment of the seller's receivable.

Continuing Involvement without Transfer of Risks and Rewards

18. If a seller is involved with a property after it is sold in any way that results in retention of substantial risks or rewards of ownership, except as indicated in paragraph 43, the absence-of-continuing-involvement criterion has not been met. Forms of involvement that result in retention of substantial risks or rewards by the seller, and accounting therefore, are described in paragraphs 25-42.

Recognition of Profit When the Full Accrual Method Is Not Appropriate

19. If a real estate sales transaction does not satisfy the criteria in paragraphs 3-18 for recognition of profit by the full accrual method, the transaction shall be accounted for as specified in the following paragraphs.

Sale Not Consummated

20. The deposit method of accounting described in paragraphs 65-67 shall be used until a sale has been consummated (paragraph 6). "Consummation" usually requires that all conditions precedent to closing have been performed, including that the building be certified for occupancy. However, because of the length of the construction period of office buildings, apartments, condominiums, shopping centers, and similar structures, such sales and the related income may be recognized during the process of construction, subject to the criteria in paragraphs 41 and 42, even though a certificate of occupancy, which is a condition precedent to closing, has not been obtained.

21. If the net carrying amount of the property exceeds the sum of the deposit received, the fair value of the unrecorded note receivable, and the debt assumed by the buyer, the seller shall recognize the loss at the date the agreement to sell is signed.[5] If a buyer defaults, or if circumstances after the transaction indicate that it is probable the buyer will default and the property will revert to the seller, the seller shall evaluate whether the circumstances indicate a decline in the value of the property for which an allowance for loss should be provided.

[5] Paragraph 24 *of FASB Statement No. 67, Accounting for Costs and Initial Rental Operations of Real Estate Projects*, specifies the accounting for an excess of costs over net realizable value for property that has not yet been sold.

Initial or Continuing Investments Do Not Qualify

22. If the buyer's initial investment does not meet the criteria specified in paragraphs 8-11 for recognition of profit by the full accrual method and if recovery of the cost of the property is reasonably assured if the buyer defaults, the installment method described in paragraphs 56-61 shall be used. If recovery of the cost of the property is not reasonably assured if the buyer defaults or if cost has already been recovered and collection of additional amounts is uncertain, the cost recovery method (described in paragraphs 62-64) or the deposit method (described in paragraphs 65-67) shall be used. The cost recovery method may be used to account for sales of real estate for which the installment method would be appropriate.

23. If the initial investment meets the criteria in paragraphs 8-11 but the continuing investment by the buyer does not meet the criteria in paragraphs 12 and 16, the seller shall recognize profit by the reduced profit method described in paragraphs 68 and 69 at the time of sale if payments by the buyer each year will at least cover both of the following:

a. The interest and principal amortization on the maximum first mortgage loan that could be obtained on the property

b. Interest, at an appropriate rate,[6] on the excess of the aggregate actual debt on the property over such a maximum first mortgage loan

[6] Paragraphs 13 and 14 of APB Opinion No. 21, Interest on Receivables and Payables, provide criteria for selecting an appropriate rate for present-value calculations.

If the criteria specified in this paragraph for use of the reduced profit method are not met, the seller may recognize profit by the installment method (paragraphs 56-61) or the cost recovery method (paragraphs 62-64).

Receivable Subject to Future Subordination

24. If the seller's receivable is subject to future subordination as described in paragraph 17, profit shall be recognized by the cost recovery method (paragraphs 62-64).

Continuing Involvement without Transfer of Risks and Rewards

25. If the seller has some continuing involvement with the property and does not transfer substantially all of the risks and rewards of ownership, profit shall be recognized by a method determined by the nature and extent of the seller's continuing involvement. Generally, profit shall be recognized at the time of sale if the amount of the seller's loss of profit because of continued involvement with the property is limited by the terms of the sales contract. The profit recognized shall be reduced by the maximum exposure to loss. Paragraphs 26-43 describe some common forms of continuing involvement and specify appropriate accounting if those forms of involvement are present. If the seller has some other form of continuing involvement with the property, the transaction shall be accounted for according to the nature of the involvement.

26. The seller has an obligation to repurchase the property, or the terms of the transaction allow the buyer to compel the seller or give an option[7] to the seller to repurchase the property. The transaction shall be accounted for as a financing, leasing, or profit-sharing arrangement rather than as a sale.

27. The seller is a general partner in a limited partnership that acquires an interest in the property sold (or has an extended, noncancelable management contract requiring similar obligations) and holds a receivable from the buyer for a significant[8] part of the sales price. The transaction shall be accounted for as a financing, leasing, or profit-sharing arrangement.

28. The seller guarantees[9] the return of the buyer's investment or a return on that investment for a limited or extended period. For example, the seller guarantees cash flows, subsidies, or net tax benefits. If the seller guarantees return of the buyer's investment or if the seller guarantees a return on the investment for an extended period, the transaction shall be accounted for as a financing, leasing, or profit-sharing arrangement. If the guarantee of a return on the investment is for a limited period, the deposit method shall be used until operations of the property cover all operating expenses, debt service, and contractual payments. At that time, profit shall be recognized on the basis of performance of the services required, as illustrated in paragraphs 84-88.

[7] A right of first refusal based on a bona fide offer by a third party ordinarily is not an obligation or an option to repurchase.

[8] For this purpose, a significant receivable is a receivable in excess of 15 percent of the maximum first-lien financing that could be obtained from an independent established lending institution for the property. It would include:

a. A construction loan made or to be made by the seller to the extent that it exceeds the minimum funding commitment for permanent financing from a third party that the seller will not be liable for
b. An all-inclusive or wraparound receivable held by the seller to the extent that it exceeds prior-lien financing for which the seller has no personal liability
c. Other funds provided or to be provided directly or indirectly by the seller to the buyer
d. The present value of a land lease when the seller is the lessor (footnote 15)

[9] Guarantees by the seller may be limited to a specified period of time.

29. The seller is required to initiate or support operations or continue to operate the property at its own risk, or may be presumed to have such a risk, for an extended period, for a specified limited period, or until a specified level of operations has been obtained, for example, until rentals of a property are sufficient to cover operating expenses and debt service. If support is required or presumed to be required[10] for an extended period of time, the transaction shall be accounted for as a financing, leasing, or profit-sharing arrangement. If support is required or presumed to be required for a limited time, profit on the sale shall be recognized on the basis of performance of the services required. Performance of those services shall be measured by the costs incurred and to be incurred over the period during which the services are performed. Profit shall begin to be recognized when there is reasonable assurance that future rent receipts will cover operating expenses and debt service including payments due the seller under the terms of the transaction. Reasonable assurance that rentals will be adequate would be indicated by objective information regarding occupancy levels and rental rates in the immediate area. In assessing whether rentals will be adequate to justify recognition of profit, total estimated future rent receipts of the property shall be reduced by one-third as a reasonable safety factor unless the amount so computed is less than the rents to be received from signed leases. In this event, the rents from signed leases shall be substituted for the computed amount. Application of this method is illustrated in paragraphs 84-89.

[10] Support shall be presumed to be required if: (a) a seller obtains an interest as a general partner in a limited partnership that acquires an interest in the property sold; (b) a seller retains an equity interest in the property, such as an undivided interest or an equity interest in a joint venture that holds an interest in the property; (c) a seller holds a receivable from a buyer for a significant part of the sales price and collection of the receivable depends on the operation of the property; or (d) a seller agrees to manage the property for the buyer on terms not usual for the services to be rendered, and the agreement is not terminable by either the seller or the buyer.

30. If the sales contract does not stipulate the period during which the seller is obligated to support operations of the property, support shall be presumed for at least two years from the time of initial rental unless actual rental operations cover operating expenses, debt service, and other contractual commitments before that time. If the seller is contractually obligated for a longer time, profit recognition shall continue on the basis of performance until the obligation expires. Calculation of profits on the basis of performance of services is illustrated in paragraphs 84-89.

31. If the sales contract requires the seller to provide management services relating to the property after the sale without compensation or at compensation less than prevailing rates for the service required (paragraph 7) or on terms not usual for the services to be rendered (footnote 10(d)), compensation shall be imputed when the sale is recognized and shall be recognized in income as the services are performed over the term of the management contract.

32. The transaction is merely an option to purchase the property. For example, undeveloped land may be “sold” under terms that call for a very small initial investment by the buyer (substantially less than the percentages specified in paragraph 54) and postponement of additional payments until the buyer obtains zoning changes or building permits or other contingencies specified in the sales agreement are satisfactorily resolved. Proceeds from the issuance of the option by a property owner shall be accounted for as a deposit (paragraphs 65-67). Profit shall not be recognized until the option either expires or is exercised. When an option to purchase real estate is sold by an option holder,[11] the seller of the option shall recognize income by the cost recovery method (paragraphs 62-64) to the extent nonrefundable cash proceeds exceed the seller's cost of the option if the buyer's initial and continuing investments are not adequate for profit recognition by the full accrual method (paragraphs 7-16).

[11] When an option to purchase real estate is sold by an option holder, the sales value includes the exercise price of the option and the sales price of the option. For example, if the option is sold for $150,000 ($50,000 cash and a $100,000 note) and the exercise price is $500,000, the sales value is $650,000.

33. The seller has made a partial sale. A sale is a partial sale if the seller retains an equity interest in the property or has an equity interest in the buyer. Profit (the difference between the sales value and the proportionate cost of the partial interest sold) shall be recognized at the date of sale if:

a. The buyer is independent of the seller.
b. Collection of the sales price is reasonably assured (paragraph 4).
c. The seller will not be required to support the operations of the property or its related obligations to an extent greater than its proportionate interest.

34. If the buyer is not independent of the seller, for example, if the seller holds or acquires an equity interest in the buyer, the seller shall recognize the part of the profit proportionate to the outside interests in the buyer at the date of sale. If the seller controls the buyer, no profit on the sale shall be recognized until it is realized from transactions with outside parties through sale or operations of the property.

35. If collection of the sales price is not reasonably assured, the cost recovery or installment method of recognizing profit shall be used.

36. If the seller is required to support the operations of the property after the sale, the accounting shall be based on the nature of the support obligation. For example, the seller may retain an interest in the property sold and the buyer may receive preferences as to profits, cash flows, return on investment, and so forth. If the transaction is in substance a sale, the seller shall recognize profit to the extent that proceeds from the sale, including receivables from the buyer, exceed all of the seller's costs related to the entire property. Other examples of support obligations are described in paragraphs 29-31.

37. If individual units in condominium projects[12] or time-sharing interests are being sold separately and all the following criteria are met, profit shall be recognized by the percentage-of-completion method on the sale of individual units or interests:

a. Construction is beyond a preliminary stage.[13]

b. The buyer is committed to the extent of being unable to require a refund except for nondelivery of the unit or interest.[14]

c. Sufficient units have already been sold to assure that the entire property will not revert to rental property. In determining whether this condition has been met, the seller shall consider the requirements of state laws, the condominium or time-sharing contract, and the terms of the financing agreements.

[12] A condominium project may be a building, a group of buildings, or a complete project.

[13] Construction is not beyond a preliminary stage if engineering and design work, execution of construction contracts, site clearance and preparation, excavation, and completion of the building foundation are incomplete.

[14] The buyer may be able to require a refund, for example, if a minimum status of completion of the project is required by state law and that status has not been attained; if state law requires that a "Declaration of Condominium" be filed and it has not been filed, except that in some states the filing of the declaration is a routine matter and the lack of such filing may not make the sales contract voidable; if the sales contract provides that permanent financing at an acceptable cost must be available to the buyer at the time of closing and it is not available; or if the condominium units must be registered with either the Office of Interstate Land Sales Registration of the Department of Housing and Urban Development or the Securities and Exchange Commission, and they are not so registered.

d. Sales prices are collectible (paragraph 4).

e. Aggregate sales proceeds and costs can be reasonably estimated. Consideration shall be given to sales volume, trends of unit prices, demand for the units including seasonal factors, developer's experience, geographical location, and environmental factors.

If any of the above criteria is not met, proceeds shall be accounted for as deposits until the criteria are met.

38. The seller sells property improvements and leases the underlying land to the buyer of the improvements. In these circumstances, the transactions are interdependent and it is impracticable to distinguish between profits on the sale of the improvements and profits under the related lease. The transaction shall be accounted for as a lease of both the land and improvements if the term of the land lease to the buyer from the seller of the improvements either (a) does not cover substantially all of the economic life of the property improvements, thus strongly implying that the transaction is in substance a lease of both land and improvements, or (b) is not for a substantial period, for example, 20 years.

39. If the land lease described in paragraph 38 covers substantially all of the economic life of the improvements and extends for at least 20 years, the profit to be recognized on the sale of the improvements at the time of sale shall be (a) the present value of the rental payments[15] not in excess of the seller's cost of the land plus (b) the sales value of the improvements minus (c) the carrying value of the improvements and the land. Profit on (1) the buyer's rental payments on the land in excess of the seller's cost of the land and (2) the rent to be received on the land after the maturity of the primary indebtedness on the improvements or other customary amortization term shall be recognized when the land is sold or the rents in excess of the seller's cost of the land are accrued under the lease. Calculations of profit in those circumstances are illustrated in paragraphs 82 and 83.

[15] The present value of the specified rental payments is the present value of the lease payments specified in the lease over the term of the primary indebtedness, if any, on the improvements, or over the customary amortization term of primary debt instruments on the type of improvements involved. The present value is computed at an interest rate appropriate for (a) primary debt if the lease is not subordinated or (b) secondary debt if the lease is subordinated to loans with prior liens.

40. The sale of the property is accompanied by a leaseback to the seller of all or any part of the property for all or part of its remaining economic life. Real estate sale and leaseback transactions shall be accounted for in accordance with the provisions of this Statement and *FASB Statement No. 13, Accounting for Leases*, and *FASB Statement No. 28, Accounting for Sales with Leasebacks*. Statement 13 as amended by Statement 28 provides criteria for determining if a leaseback is a capital lease or an operating lease. If the leaseback is a capital lease, the seller-lessee shall record an asset and an obligation as prescribed by Statement 13. Regardless of whether the leaseback is a capital lease or an operating lease, a sale shall be recorded, and the property sold and any related debt assumed by the buyer shall be removed from the seller-lessee's balance sheet. The criteria in this Statement then shall be used to determine the amount of profit that would be recognized at the date of sale, absent the leaseback provisions. The profit so determined shall be accounted for in accordance with the provisions of Statements 13 and 28 (usually deferred and amortized over the term of the lease) unless other provisions of this Statement require postponement of profit recognition until a later event.

41. The sales contract or an accompanying agreement requires the seller to develop the property in the future, to construct facilities on the land, or to provide off-site improvements or amenities. The seller is involved with future development or construction work if the buyer is unable to pay amounts due for that work or has the right under the terms of the arrangement to defer payment until the work is done. If future costs of development can be reasonably estimated at the time of sale, profit allocable to (a) performance before the sale of the land and (b) the sale of the land shall be recognized when the sale of the land meets the criteria in paragraph 5. Profit allocable to

performance after the sale shall be recognized by the percentage-of-completion method as development and construction proceed, provided that cost and profit can be reasonably estimated from the seller's previous experience.

42. The profit shall be allocated to the sale of the land and the later development or construction work on the basis of estimated costs of each activity; the same rate of profit shall be attributed to each activity. No profit shall be recognized at the time of sale if future costs of development cannot be reasonably estimated at that time.

43. The seller will participate in future profit from the property without risk of loss (such as participation in operating profits or residual values without further obligation). If the transaction otherwise qualifies for recognition of profit by the full accrual method, the transfer of risks and rewards of ownership and absence of continuing involvement criterion shall be considered met. The contingent future profits shall be recognized when they are realized.[16] All the costs of the sale shall be recognized at the time of sale; none shall be deferred to periods when the contingent profits are recognized.

[16] Paragraph 17 of *FASB Statement No. 5, Accounting for Contingencies*, addresses accounting for gain contingencies.

Retail Land Sales

44. A single method of recognizing profit shall be applied to all sales transactions within a project[17] that have been consummated.[18] That method of recognizing profit shall be changed when certain conditions are met for the entire project (paragraph 49).

[17] A retail land sales "project" is a homogeneous, reasonably contiguous area of land that may, for development and marketing, be subdivided in accordance with a master plan.

[18] Retail land sales shall be considered consummated when all of the criteria in paragraph 47 are met.

Recognition of Profit

45. The full accrual method of accounting described in paragraphs 70-72 shall be applied to a sale if all of the following conditions are met:

a. Expiration of refund period. The buyer has made the down payment and each required subsequent payment until the period of cancellation with refund has expired. That period shall be the longest period of those required by local law, established by the seller's policy, or specified in the contract.

b. Sufficient cumulative payments. The cumulative payments of principal and interest equal or exceed 10 percent of the contract sales price.

c. Collectibility of receivables. Collection experience for the project in which the sale is made or for the seller's prior projects indicates that at least 90 percent of the contracts in the project in which the sale is made that are in force 6 months after the criteria in paragraph 46 are met will be collected in full.[19] The collection experience with the seller's prior projects may be applied to a new project if the prior projects:

[19] The six-month period is solely a test of eligibility for the accrual method and is not intended to restrict the recognition of profit before the six-month period expires.

(1) Had predominantly the same characteristics (type of land, environment, clientele, contract terms, sales methods)[20] as the new project.

(2) Had a sufficiently long collection period to indicate the percentage of current sales of the new project that will be collected to maturity. A down payment of at least 20 percent shall be an acceptable indication of collectibility.

d. Nonsubordination of receivables. The receivable from the sale is not subject to subordination to new loans on the property except that subordination by an individual lot buyer for home construction purposes is permissible if the collection experience on those contracts is the same as on contracts not subordinated.

e. Completion of development. The seller is not obligated to complete improvements of lots sold or to construct amenities or other facilities applicable to lots sold. Paragraphs 6-49 specify accounting methods that shall be used if the above criteria are not met.

46. The percentage-of-completion method of accounting [21] described in paragraphs 73-75 shall be applied to a sale that meets all of the following criteria:

a. The period of cancellation with refund has expired (paragraph 45.a.).

b. Cumulative payments equal or exceed l0 percent (paragraph 45.b.).

c. Receivables are collectible (paragraph 45.c.).

d. Receivables are not subject to subordination (paragraph 45.d.).

e. There has been progress on improvements. The project's improvements have progressed beyond preliminary stages, and there are indications that the work will be completed according to plan. Some indications of progress are:

(1) The expenditure of funds on the proposed improvements.
(2) Initiation of work on the improvements.
(3) Existence of engineering plans and work commitments relating to lots sold.
(4) Completion of access roads and amenities such as golf courses, clubs, and swimming pools.

In addition, there shall be no indication of significant delaying factors, such as the inability to obtain permits, contractors, personnel, or equipment, and estimates of costs to complete and extent of progress toward completion shall be reasonably dependable.

f. Development is practical. There is a reasonable expectation that the land can be developed for the purposes represented and the properties will be useful for those purposes at the end of the normal payment period. For example, it should be expected that legal restrictions, including environmental restrictions, will not seriously hamper development and that improvements such as access roads, water supply, and sewage treatment or removal are feasible within a reasonable time. Paragraphs 47 and 48 specify accounting methods that shall be used if the above criteria are not met.

[20] Examples of sales methods include telephone sales, broker sales, and site-visitation sales.

[21] In the AICPA Guide, Accounting for Retail Land Sales, this was called the “accrual method.”

47. The installment method of accounting described in paragraphs 56-61 shall be applied to a sale that meets all of the following criteria:

a. The period of cancellation with refund has expired (paragraph 45.a.).

b. Cumulative payments equal or exceed l0 percent (paragraph 45.b.).

c. The seller is financially capable. The seller is clearly capable of providing both land improvements and off-site facilities promised in the contract and of meeting all other representations it has made. It is financially capable of funding or bonding the planned improvements in the project when required. That capability may be indicated by the seller's equity capitalization, its borrowing capacity, or its positive cash flow from operations.

48. If a retail land sale transaction does not meet the criteria for accounting by the methods described in paragraphs 45-47, that transaction shall be accounted for as a deposit as described in paragraphs 65-67.

Change from Installment to Percentage-of-Completion Method

49. When all of the conditions in paragraph 46 are satisfied on a retail land sales project originally reported by the installment method, the percentage-of-completion method of accounting may be adopted for the entire project (current and prior sales) and the effect accounted for as a change in accounting estimate.[22]

Financial Statement Presentation and Disclosures

50. In addition to disclosures otherwise required by generally accepted accounting principles, the financial statements of enterprises with retail land sales operations shall disclose:

a. Maturities of accounts receivable for each of the five years following the date of the financial statements
b. Delinquent accounts receivable and the method(s) for determining delinquency
c. The weighted average and range of stated interest rates of receivables
d. Estimated total costs and estimated dates of expenditures for improvements for major areas from which sales are being made over each of the five years following the date of the financial statements
e. Recorded obligations for improvements

Financial statement presentations of retail land sales transactions are illustrated in paragraphs 95-97.

Amendments to Other Pronouncements

51. The references to the AICPA Industry Accounting Guides, Accounting for Profit Recognition on Sales of Real Estate and Accounting for Retail Land Sales, and the AICPA Statements of Position (SOPs) 75-6, Questions Concerning Profit Recognition on Sales of Real Estate and 78-4, Application of the Deposit, Installment, and Cost Recovery Methods in Accounting for Sales of Real Estate, are deleted from Appendix A of *FASB Statement No. 32, Specialized Accounting and Reporting Principles and Practices in AICPA Statements of Position and Guides on Accounting and Auditing Matters*. The references to the profit recognition Guide in paragraph 7 of

[22] The credit to income resulting from the change is the profit not yet recognized less (a) a discount, if required, to reduce the receivable balances to their present values at the date of change to the percentage-of-completion method (using the appropriate interest rates, as specified in paragraphs 13 and 14 of Opinion 21, in effect at the time of the original sales) and (b) the liability (also discounted) for remaining future performance. The computation is illustrated in paragraph 97.

FASB Statement No. 26, Profit Recognition on Sales-Type Leases of Real Estate, and in footnote "*" and paragraphs 23-25 of Statement 28 are amended to refer to *Statement No. 66, Accounting for Sales of Real Estate*.

Effective Date and Transition

52. This Statement shall be applied to real estate sales transactions entered into after December 31, 1982 and to changes in methods of accounting for real estate sales transactions made after that date. Earlier application is encouraged but not required. The disclosures required by paragraph 50 shall be provided in financial statements for periods ending after December 15, 1982.

Appendix A:
MINIMUM INITIAL INVESTMENTS

53. Minimum initial investment requirements for sales, other than retail land sales, that are to be accounted for by the full accrual method are specified in paragraph 11. The table of minimum initial investments in paragraph 54 is based on usual loan limits for various types of properties. However, lenders' appraisals of specific properties may differ. Therefore, if a recently placed permanent loan or firm permanent loan commitment for maximum financing of the property exists with an independent established lending institution, the minimum initial investment should be whichever of the following is greater:

a. The minimum percentage of the sales value (paragraph 7) of the property specified in paragraph 54

b. The lesser of:

   (1) The amount of the sales value of the property in excess of 115 percent of the amount of a newly placed permanent loan or firm permanent loan commitment from a primary lender that is an independent established lending institution
   (2) Twenty-five percent of the sales value

54. This table does not cover every type of real estate property. To evaluate initial investments on other types of property, enterprises may make analogies to the types of properties specified, or the risks of a particular property can be related to the risks of the properties specified. Use of this table is illustrated in paragraphs 77-83.

	Minimum Initial Investment Expressed as a Percentage of Sales Value
Land	
Held for commercial, industrial, or residential development to commence within two years after sale	20
Held for commercial, industrial, or residential development to commence after two years	25
Commercial and Industrial Property	
Office and industrial buildings, shopping centers, and so forth:	
Properties subject to lease on a long-term lease basis to parties with satisfactory credit rating; cash flow currently sufficient to service all indebtedness	10
Single-tenancy properties sold to a buyer with a satisfactory credit rating	15
All other	20
Other income-producing properties (hotels, motels, marinas, mobile home parks, and so forth):	

Cash flow currently sufficient to service all indebtedness	15
Start-up situations or current deficiencies in cash flow	25
Multifamily Residential Property	
Primary residence:	
Cash flow currently sufficient to service all indebtedness	10
Start-up situations or current deficiencies in cash flow	15
Secondary or recreational residence:	
Cash flow currently sufficient to service all indebtedness	15
Start-up situations or current deficiencies in cash flow	25
Single-Family Residential Property (including condominium or cooperative housing)	
Primary residence of the buyer	5[a]
Secondary or recreational residence	10[a]

[a] If collectibility of the remaining portion of the sales price cannot be supported by reliable evidence of collection experience, the minimum initial investment shall be at least 60 percent of the difference between the sales value and the financing available from loans guaranteed by regulatory bodies such as the Federal Housing Authority (FHA) or the Veterans Administration (VA), or from independent, established lending institutions. This 60-percent test applies when the independent first-mortgage financing is not utilized and the seller takes a receivable from the buyer for the difference between the sales value and the initial investment. If independent first mortgage financing is utilized, the adequacy of the initial investment on sales of single-family residential property should be determined in accordance with paragraph 53.

Appendix B:
DESCRIPTION OF CERTAIN METHODS OF ACCOUNTING FOR REAL ESTATE SALES TRANSACTIONS

55. This appendix describes several of the methods of profit recognition that are provided for by this Statement.

Installment Method

56. The installment method apportions each cash receipt and principal payment by the buyer on debt assumed between cost recovered and profit. The apportionment is in the same ratio as total cost and total profit bear to the sales value. The calculation is illustrated in paragraph 90.

57. If the stated interest rate is equal to or less than an appropriate interest rate, it is acceptable not to reduce the receivable to its present value. This ordinarily results in reducing profit recognized in the earlier years.

58. Under the installment method, the receivable less profits not recognized does not exceed what the property value would have been if the property had not been sold.

59. The income statement, or related footnotes, for the period including the date of sale presents the sales value, the gross profit that has not yet been recognized, and the total cost of the sale. Revenue and cost of sales (or gross profit) are presented as separate items on the income statement or are disclosed in the footnotes when profit is recognized as earned. This presentation is illustrated in paragraph 96.

60. Paragraph 75 describes accounting for obligations for future improvement costs under the percentage-of-completion method. That description applies as well to accounting for those obligations under the installment method.

61. If after adoption of the installment method the transaction meets the requirements for the full accrual method (specified in paragraphs 3-18) of recognizing profit for real estate sales other than retail land sales, the seller may then change to the full accrual method. The remaining profit that was not recognized is recognized in income at that time.

Cost Recovery Method

62. Under the cost recovery method, no profit is recognized until cash payments by the buyer, including principal and interest on debt due to the seller and on existing debt assumed by the buyer, exceed the seller's cost of the property sold.[23] The receivable less profits not recognized, if any, does not exceed what the depreciated property value would have been if the property had not been sold.

[23] For an all-inclusive or "wrap-around" receivable held by the seller, interest collected is recognized as income to the extent of, and as an appropriate offset to, interest expense on prior-lien financing for which the seller remains responsible.

63. The income statement for the period including the date of sale presents the sales value, the gross profit that has not yet been recognized, and the total cost of the sale. Gross profit not yet recognized is offset against the related receivable on the balance sheet. Principal collections reduce the related receivable, and interest collections on such receivables increase the unrecognized gross profit on the balance sheet. Gross profit is presented as a separate item of revenue on the income statement when it is recognized as earned.

64. If, after the adoption of the cost recovery method, the transaction meets the requirements for the full accrual method (specified in paragraphs 3-18), the seller may then change to the full accrual method. The remaining profit that was not recognized is recognized in income at that time.

Deposit Method

65. Under the deposit method, the seller does not recognize any profit, does not record notes receivable, continues to report in its financial statements the property and the related existing debt even if it has been assumed by the buyer, and discloses that those items are subject to a sales contract. The seller continues to charge depreciation to expense as a period cost for the property for which deposits have been received. Cash received from the buyer, including the initial investment and subsequent collections of principal and interest, is reported as a deposit on the contract except that, for sales that are not retail land sales, portions of cash received that are designated by the contract as interest and are not subject to refund offset carrying charges (property taxes and interest on existing debt) on the property. Interest collected that is subject to refund and is included in the deposit account before a sale is consummated is accounted for as part of the buyer's initial investment (paragraph 7) at the time the sale is consummated.

66. When a contract is canceled without a refund, deposits forfeited are recognized as income. When deposits on retail land sales are ultimately recognized as sales, the interest portion is recognized as interest income.

67. The seller's balance sheet presents nonrecourse debt assumed by the buyer among the liabilities; the debt assumed is not offset against the related property. The seller reports the buyer's principal payments on mortgage debt assumed as additional deposits with corresponding reductions of the carrying amount of the mortgage debt.

Reduced-Profit Method

68. A reduced profit is determined by discounting the receivable from the buyer to the present value of the lowest level of annual payments required by the sales contract over the maximum period specified in paragraph 12 and excluding requirements to pay lump sums. The present value is calculated using an appropriate interest rate, [24] but not less than the rate stated in the sales contract. This method permits profit to be recognized from level payments on the buyer's debt over the maximum term established in paragraph 12 and postpones recognition of other profits until lump sum or other payments are made.

[24] Paragraphs 13 and 14 of Opinion 21 provide criteria for selecting an appropriate rate for present value calculations.

69. To illustrate, assume a sale of land that cost the seller $800,000 and is being sold for $1,000,000 with the following financing:

Buyer's initial investment	$ 250,000
First mortgage note payable to an independent lending institution (Terms--15 percent interest payable annually over 20 years: $79,881 per year including principal and interest)	500,000
Second mortgage note payable to seller (Terms--12 percent interest payable annually over 25 years: $31,875 per year including principal and interest)	250,000
Total selling price	$1,000,000 ========

The amortization term of the second mortgage (25 years) exceeds the term permitted by paragraph 12 (20 years for sales of land). It is assumed that the payments by the buyer each year will meet the requirement in paragraph 23, that the reduced-profit method is to be applied, and that the market interest rate is 16 percent.

The present value of $31,875 per year for 20 years at a market rate of 16 percent is $31,875 x 5.92884 = $188,982.

The profit to be recognized at the time of sale is reduced by the difference between the face amount of the seller's receivable ($250,000) and the reduced amount ($188,982), or $61,018. The profit recognized at the time of sale is $1,000,000 (sales price) minus $800,000 (cost) minus $61,018, or $138,982. Additional profit of $61,018 is recognized as the second mortgage payments are received in years 21 through 25.

Full Accrual Method--Retail Land Sales

70. Revenues and costs are accounted for under the accrual method as follows:

a. The net receivable is discounted to the present value of the payments required. The present value is determined using an appropriate interest rate, [25] not less than the rate stated in the sales contract. The objective is to value the net receivable at the amount at which it could be sold without recourse to the seller at the date of the sales contract.

[25] Paragraphs 13 and 14 of Opinion 21 provide criteria for selecting an appropriate rate for present value calculations.

b. An allowance is provided for receivables that are not expected to be collected because of cancellation in subsequent periods. Receivable balances applicable to canceled contracts are charged in their entirety to the allowance for contract cancellations when those contracts are canceled.

c. Costs of sales (land and improvement costs incurred, carrying costs, and so forth) are based on sales net of those sales expected to be canceled in future periods.

71. Historical data is evaluated to predict the collection of receivables from current sales. The historical data is selected from a representative sample of receivables that reflect the latest available collection data and cover an adequate period of time. The receivables in the sample are considered uncollectible and the allowance for contract cancellations provided for previously recognized sales (paragraph 70.b.) is appropriately adjusted if payments due are unpaid at the end of the sample period selected for the following delinquency periods:

Percent of Contract Price Paid	Delinquency Period
Less than 25 percent	90 days
25 percent but less than 50 percent	120 days
50 percent and over	150 days

The specified delinquency periods may be extended if the seller's recent experience has been better or if the buyer has accepted, or is willing to accept, personal liability on its debt, provided that the buyer's ability to complete payment on the contract can be determined.

72. Many sellers have programs to accelerate collections of receivables or contract provisions that encourage prepayment with a reduction of the principal as the major incentive for prepayment. If a seller expects to institute those or similar programs in the future, the amount of profit recognized at the date of sale is reduced through charges to income for anticipated discounts not otherwise recognized. Reductions that are given sporadically are charged to income in the period they occur.

Percentage-of-Completion Method--Retail Land Sales

73. The earnings process is not complete if a seller is obliged to complete improvements of lots sold or to construct amenities and other facilities applicable to lots sold, if those obligations are significant in relation to total costs, and if they remain unperformed at the time the sale is recognized. Therefore, the amount of revenue recognized (the discounted contract price) at the time a sale is recognized is measured by the relationship of costs already incurred to total estimated costs to be incurred, including costs of the marketing effort. If performance [26] is incomplete, the portion of revenue related to costs not yet incurred is recognized as the costs are incurred.

[26] *Performance* means completion of the improvements required under the sales contract by either the seller or contractors retained by the seller. However, payments made to municipalities or other governmental organizations not under the direct or joint control of the seller constitute performance by the seller if those organizations are not financed solely by liens on property in the project and they undertake to complete the improvements without further risk or obligation of the seller.

74. The costs already incurred and total costs to be incurred include land cost, costs previously charged to expense, such as interest and project carrying costs incurred prior to sale, and selling costs [27] directly associated with a project. The accounting described in this paragraph and paragraph 73 is illustrated in paragraphs 91-95.

[27] Accounting for selling costs is addressed in *FASB Statement No. 67, Accounting for Costs and Initial Rental Operations of Real Estate Projects.*

75. If there is an obligation for future improvement costs that is recognized under the percentage-of-completion method:

a. Estimates are based on costs generally expected in the construction industry locally.

b. Unrecoverable costs of off-site improvements, utilities, and amenities are provided for. In determining the amount of unrecoverable costs, estimates of amounts to be recovered from future sale of the improvements, utilities, and amenities are discounted to present value as of the date the net unrecoverable costs are recognized.

76. Estimates of future improvement costs are reviewed at least annually. Changes in those estimates do not lead to adjustment of revenue applicable to future improvements that has been previously recorded unless the adjusted total estimated cost exceeds the applicable revenue. When cost estimates are revised, the relationship of the two elements included in the revenue not yet recognized--costs and profit--is recalculated on a cumulative basis to determine future income recognition as performance takes place. If the adjusted total estimated cost exceeds the applicable revenue previously recognized, the total anticipated loss is charged to income when it meets the criteria in paragraph 8 of Statement 5. When anticipated losses on lots sold are recognized, the enterprise also considers recognizing a loss on land and improvements not yet sold.

Appendix C:
ILLUSTRATIONS OF CALCULATIONS FOR RECOGNITION OF PROFIT ON SALES OF REAL ESTATE OTHER THAN RETAIL LAND SALES [28]

Exhibits

	Paragraph Numbers
I. Illustration of Effect of Land Lease--New Multifamily Residential Property	77-83
II. Illustration of Profit Recognition--Sale of Property with Construction and Support Obligations by Seller	84-89
Schedule A: Example of Profit Calculation (assuming actual rental revenue equals adjusted projection)	87
Schedule B: Example of Profit Calculation (assuming actual rental revenue equals unadjusted projection)	88
Schedule C: Calculation of Adjusted Projected Rental Revenue	89
III. Illustration of Profit Recognition--Installment Method, with Debt Assumed by Buyer	90

Exhibit I--Illustration of Effect of Land Lease--New Multifamily Residential Property

77. Land improvements may be sold and concurrently the land under the improvements may be leased to the buyer of the improvements.

78. This exhibit illustrates the effect of loans issued in connection with long-term land leases on evaluations of the adequacy of a buyer's initial investment if improvements on the land are sold separately. In addition, it demonstrates the limit that a lease places on profit recognition if the leased land is owned by the seller of the improvements, making the lease of land and sale of improvements interdependent transactions.

79. The calculations are illustrated for four different circumstances: two examples with a primary land lease and two with a subordinated land lease.

[28] The financing and interest rate assumptions in this appendix are based on conditions at the time the profit recognition Guide was issued. They should not be considered as indicative of financing and interest rate assumptions that would be appropriate under different circumstances and at different times.

80. Primary Land Lease: Land Owned by Third Party Lessor--Nonqualifying

Assumptions:	
Sales price of improvements	$ 875,000
	========
Represented by proceeds of:	
Cash down payment	$ 125,000
Loan by insurance company: lien on leasehold improvements, 28-year term, 8 1/2%, payable in equal monthly installments of principal and interest	657,000
Note received by seller from buyer: 12-year term, 9 1/2%, payable in equal monthly installments of principal and interest	93,000
	$ 875,000
	========

Land lease for 99 years @ $19,000/year, net, payable monthly in advance
Cost of constructing improvements--$750,000
No continuing involvement by seller

Computations:	
Present value of 336 monthly payments on land lease of $1,583.33 discounted at 8 1/2% (interest rate on loan from insurance company): $1,583.33 + ($1,583.33 x 127.9071)	$ 204,000
Loan from insurance company	657,000
Equivalent primary debt	861,000
Note receivable from buyer	93,000
Total debt or equivalent	954,000
Down payment	125,000
Sales value	$1,079,000
	========

Because 15% of the sales value of the improvements is $161,850, the initial investment of $125,000 (about 12% of adjusted sales value) is inadequate to recognize profit on the sale of improvements. The second test is therefore irrelevant.

81. Primary Land Lease: Land Owned by Third Party Lessor--Qualifying

Assumptions:

Sales price of improvements	$ 875,000
	========

Represented by proceeds of:

Cash down payment	$ 165,000
Loan by insurance company: lien on leasehold improvements, 28-year term, 8 1/2%, payable in equal monthly installments of principal and interest	657,000
Note received by seller from buyer: 12-year term, 9 1/2%, payable in equal monthly installments of principal and interest	53,000
	$ 875,000
	========

Land lease for 99 years @ $17,880/year, net, payable monthly in advance
Cost of constructing improvements--$750,000
No continuing involvement by seller

Computations:

Present value of 336 monthly payments on land lease of $1,490 discounted at 8 1/2% (interest rate on loan from insurance company): $1,490 + ($1,490 x 127.9071)	$ 192,000
Loan from insurance company	657,000
Equivalent primary debt	849,000
Note receivable from buyer	53,000
Total debt or equivalent	902,000
Down payment	165,000
Sales value	$1,067,000
	========

Because 15% of the sales value of the improvements is $160,050, the initial investment of $165,000 (15% of the sales value) is adequate to recognize profit on the sale of improvements. However, the second test must also be applied.

The initial investment required by the second test is:

Sales value	$1,067,000
115% of $849,000 (loan from primary lender)	976,350
	$ 90,650
	========

The initial investment of $165,000 exceeds the amount required, so recognition of profit on sale of improvements is appropriate. The second test may alternatively be applied as the ratio of total debt or equivalent to the equivalent primary debt: $902,000/$849,000 = 106%. Because 106% is less than 115%, the initial investment exceeds the difference between the sales value of the property and 115% of the equivalent primary debt.

Profit recognition:

Sales price of improvements	$ 875,000
Less: Cost of improvements	750,000
Profit recognized at time of sale	$ 125,000
	========

82. Subordinated Land Lease: Land Owned by Seller--Qualifying

Assumptions:

Sales price of improvements	$ 914,000
	========

Represented by proceeds of:

Cash down payment	$ 154,000
Loan by insurance company: first lien on the fee or on subordinated leasehold, 28-year term, 8 1/4%, payable in equal monthly installments of principal and interest	760,000
	$ 914,000
	========

Land lease for 99 years @ $11,580/year, net, payable monthly in advance, and 5% of gross rents
Cost of land--$200,000
Cost of constructing improvements--$750,000
No continuing involvement by seller

Computations:

Present value of 336 monthly payments on land lease at $965 discounted at 12% (imputed interest for a second lien receivable): $965 + ($965 x 96.432696)	$ 94,000
Loan from insurance company (primary debt	760,000
Total debt or equivalent	854,000
Down payment	154,000
Sales value	$1,008,000
	========

The initial investment ($154,000) is more than 15% of the sales value. (15% x $1,008,000 = $151,200).

The initial investment is also larger than the excess of the sales value over 115% of the primary debt.

Sales value	$1,008,000
115% of $760,000	874,000
Excess of sales value over 115% of debt	$ 134,000
	========

Therefore, the initial investment of $154,000 is adequate, and recognizing profit on the sale of the improvements is appropriate.

Profit recognition:

Sales value		$1,008,000
Less: Cost of improvements	$750,000	
Cost of land	200,000	950,000
Profit recognized at time of sale		$ 58,000
		========

The effect of including the present value of the lease is to reduce profit recognized by $106,000: $94,000 (present value of the land lease) - $200,000 (cost of land).

83. Subordinated Land Lease: Land Owned by Seller--Nonqualifying

Assumptions:	
Sales price of improvements	$ 875,000
	========
Represented by proceeds of:	
Cash down payment	$ 132,000
Loan by insurance company: first lien on the fee or on subordinated leasehold, 28-year term, 8 1/4%, payable in equal monthly installments of principal and interest	743,000
	$ 875,000
	========

Land lease for 99 years @ $19,332/year, net, payable monthly in advance
Cost of land--$200,000
Cost of improvements--$750,000
No continuing involvement by seller

Computations:	
Present value of 336 monthly payments on land lease of $1,611 discounted at 12% (imputed interest for a second lien receivable): $1,611 + ($1,611 x 96.432696)	$ 157,000
Loan from insurance company (primary debt)	743,000
Total debt or equivalent	900,000
Down payment	132,000
Sales value	$1,032,000
	========

The initial investment ($132,000) is less than 15% of the sales value (15% x $1,032,000 = $154,800), and therefore is inadequate to recognize profit on sale of improvements. Profit recognized at time of sale should not exceed that recognizable under the installment method as if the subordinated lease were an installment receivable.

Profit recognition on installment method:		
Sales value		$1,032,000
Less: Cost of improvements	$750,000	
Cost of land	200,000	950,000
Anticipated profit on sale of improvements		$ 82,000
		========

Cash received or to be received by the seller, other than the proceeds of the primary loan, is:

Down payment	$ 132,000
Present value of land lease payments	157,000
	$ 289,000
	========

The percentage of profit in each collection is therefore:

$$\frac{\$\ 82{,}000}{\$289{,}000} = 28.37\%$$

Profit recognizable in the period of sale is 28.37% of the down payment of $132,000, or $37,450. The remaining profit of $44,550 will be recognized at the rate of 28.37% of the portion of each lease payment that is equivalent to a reduction of principal on a loan of $157,000 for 28 years at 12%.

The effect of including the present value of the lease in the sales value of the improvements is to reduce the profit recognized on the improvements by $43,000: $157,000 (present value of the land lease) - $200,000 (cost of the land).

Exhibit II--Illustration of Profit Recognition--Sale of Property with Construction and Support Obligations by Seller

84. This exhibit illustrates the method of accounting required for a sale of property in which the seller is obligated to construct multifamily units and in which cash flow deficits are anticipated. The example applies to obligations of the seller specified in paragraphs 28-30.
FAS 66, Par. 85

85. Assumptions:

a. Company X develops and sells multifamily residential projects. The Company performs directly all developmental activities, including initial planning, site acquisition, obtaining of financing, and physical construction of the project.
b. During the year ended December 31, 19X1 the Company began a project of 100 units. The project was planned and substantial activity had been performed in 19X1 but physical construction had not started as of December 31, 19X1. However, all contracts had been let, and the Company had obtained construction financing.
c. On December 31, 19X1, the Company sold the project to a limited partnership syndication (fully formed) in which it is the sole general partner:

Sales value	$1,100,000
	========
Represented by proceeds of:	
Cash down payment	$ 165,000
Permanent financing assumed by the buyer, consisting of a 28-year 8 1/2% fully amortizing first mortgage loan by a conventional lender, payable in equal monthly payments of principal and interest to maturity	825,000
Second mortgage note received by the Company payable in equal monthly installments including interest at 9 1/2% over 12 years	110,000
	$1,100,000
	========

d. The closing occurred on December 31, 19X1 and included delivery or performance of the following:
   (1) The Company delivered to the buyer a legal title to the land and all existing improvements.
   (2) The Company delivered to the buyer a firm commitment from an outside lender for permanent financing, and the buyer assumed permanent financing formerly in the name of the Company.
   (3) The Company received from the buyer $165,000 cash and a second mortgage note for $110,000.
   (4) The Company signed a contract to deliver the completed project for a single price of $1,100,000.

e. Costs incurred by the Company and total costs estimated to complete the project, as of December 31, 19X1, were:

	Costs to Date	Estimated Costs to Complete	Total Estimated Costs
Land	$117,000		$117,000
Feasibility, zoning, architectural	35,000		35,000
Finance and other	85,000	$ 10,000	95,000
Site improvements		20,000	20,000
Building construction		571,000	571,000
Total	$237,000	$601,000	$838,000
	=======	=======	=======

f. The Company has completed an extensive market research and feasibility study analyzing its cost estimates, the rent-up incubation period, and subsequent rent levels. The initial rent-up will commence in 19X2. Accordingly, a support period of two years is presumed for 19X3 and 19X4.

g. Based on its market analysis, the projected results are as follows:

	19X2	19X3	19X4
Rental expense	$ 37,000	$ 58,000	$ 58,000
Debt service	93,000	93,000	93,000
Total	130,000	151,000	151,000
Rental revenue	(75,000)	(150,000)	(180,000)*
Anticipated net deficit (surplus)in cash flow	55,000	1,000	(29,000)
Safety factor of 1/3 of rental revenue	25,000	50,000	60,000
Adjusted anticipated net deficit in cash flow	$ 80,000	$ 51,000	$ 31,000
	======	========	========

h. Initial cost estimates by the Company on previous projects have never varied from final costs by more than one-half of one % of total costs.

86. Calculations of Profit to Be Recognized:

Schedules A and B (paragraphs 87 and 88) illustrate calculations of profit to be recognized in the period of sale, in the period of construction, and in each period in which the seller will support operations (19X2 - 19X4). The following features should be noted:

a. The percentage of estimated total profit to be recognized each period is determined by the ratio of gross costs incurred to the end of the period to total estimated gross costs of the project, including gross costs during the period of support of operations. (Construction costs should be included even if construction is performed by parties other than the seller.)

b. The estimated total profit that is the basis of the calculation in each period (that is, the profit to which the percentage in (a) is applied) is determined by adding the sales value and two-thirds of the projected revenue during the period of support of operations and deducting the estimated total costs of the project, including costs of operating the property and debt service.

(1) Actual amounts of revenue and costs are substituted for estimated amounts in the calculation as the actual amounts are known. However, in this illustration, remaining

estimates of future revenue and expense are not changed because of actual results even though experience might indicate that projections of future amounts should be revised.

(2) Projected and actual revenues in the calculation should exclude amounts that accrue to the buyer, for example, revenue in excess of the sum of operating expenses and debt service.

(3) One-third of projected revenue should be excluded from the estimate of profit to provide a margin of safety (refer to paragraph 85.g.). Actual results incorporated in the calculation need not be reduced by a safety factor.

(4) The calculation illustrated should be applied only if objective information is available regarding occupancy levels and rental rates for similar property in the immediate area. This will provide reasonable assurance that rent revenue from the project will be sufficient to cover operating expenses and debt service, including payments due to the seller under the terms of the transaction. Unless that evidence is available, no profit should be recognized on the transaction until rent revenue actually reaches levels that assure coverage of those costs.

c. Schedule A shows calculation of profit to be recognized each period on the assumption that actual revenue and costs are the same as those projected in paragraph 85.g. adjusted for the safety margin of one-third of revenue.

d. Schedule B shows calculation of profit to be recognized each period on the assumption that actual revenue and costs are the same as those projected in paragraph 85.g. before adjustment for safety margin.

e. Schedule C illustrates the calculation of estimated future rent receipts by adjustment for a safety margin.

87. Schedule A

Example of Profit Calculation
(assuming actual rental revenue equals adjusted projection)

REVENUES	
Sales value	$1,100,000
Adjusted--projected rental revenue [29]	
19X2	50,000
19X3	100,000
19X4	120,000
	1,370,000
COSTS	
Total estimated costs of project (paragraph 85.e.)	838,000
Estimated rental expenses and debt service	
19X2	130,000
19X3	151,000
19X4	151,000
	1,270,000
TOTAL PROJECTED PROFIT	$ 100,000
	========

Profit to be recognized:

$$\frac{\text{Cost to date}}{\text{Total costs}} \text{ x projected profit}$$

[29] Two-thirds of projected revenue during periods of support of operations; this can also be calculated as projected rental expenses plus projected service less projected deficit cash flow.

Profit recognized in period of sale:

$$\frac{\$\,237{,}000}{1{,}270{,}000} \times \$100{,}000 = \$18{,}661$$

Total profit to date	$ 18,661
Less profit previously reported	0
Current profit recognition	$ 18,661
	========

Profit recognized in period of construction:

$$\frac{\$\,838{,}000}{1{,}270{,}000} \times \$100{,}000 = \$65{,}984$$

Total profit to date	$ 65,984
Less profit previously recognized	18,661
Current profit recognition	$ 47,323
	========

Profit recognized during support period (19X2):

$$\frac{\$\,968{,}000}{1{,}270{,}000} \times \$100{,}000 = \$76{,}221$$

Total profit to date	$ 76,221
Less profit previously recognized	65,984
Current profit recognition	$ 10,237
	========

Profit recognized during support period (19X3):

$$\frac{\$1{,}119{,}000}{1{,}270{,}000} \times \$100{,}000 = \$88{,}110$$

Total profit to date	$ 88,110
Less profit previously recognized	76,221
Current profit recognition	$ 11,889
	========

Profit recognized during support period (19X4):

$$\frac{\$1{,}270{,}000}{1{,}270{,}000} \times \$100{,}000 = \$100{,}000$$

Total profit to date	$ 100,000
Less profit previously recognized	88,110
Current profit recognition	$ 11,890
	========

88. Schedule B

Example of Profit Calculation
(assuming actual rental revenue equals unadjusted projection)
(in thousands)

	Profit Recognized in Period of Sale	Profit Recognized in Period of Construction	Profit Recognized during Support Period		
			19X2	19X3	19X4

REVENUES					
Sales value	$1,100	$1,100	$1,100	$1,100	$1,100
Adjusted--projected rental revenue)*					
19X2	50	50	75†	75†	75†
19X3	100	100	100	150†	150†
19X4	120	120	120	150§	151‡
	1,370	1,370	1,395	1,475	1,476

Same as Schedule A	1,270	1,270	1,270	1,270	1,270
TOTAL PROJECTED PROFIT	$ 100	$ 100	$ 125	$ 205	$ 206
	=====	=====	=====	=====	=====

Profit to be recognized:

$$\frac{\text{Cost to date}}{\text{Total costs}} \times \text{projected profit}$$

Profit recognized in period of sale:

$$\frac{\$\ 237{,}000}{1{,}270{,}000} \times \$100{,}000 = \$18{,}661$$

Total profit to date	$ 18,661
Less profit previously reported	0
Current profit recognition	$ 18,661
	======

Profit recognized in period of construction:

$$\frac{\$\ 838{,}000}{1{,}270{,}000} \times \$100{,}000 = \$65{,}984$$

Total profit to date	$ 65,984
Less profit previously reported	18,661
Current profit recognition	$ 47,323
	======

Profit recognized during support period (19X2):

$$\frac{\$\ 968{,}000}{1{,}270{,}000} \times \$125{,}000 = \$95{,}276$$

Total profit to date	$ 95,276
Less profit previously reported	65,984
Current profit recognition	$ 29,292
	=======

Profit recognized during support period (19X3):

$$\frac{\$1{,}119{,}000}{1{,}270{,}000} \times \$205{,}000 = \$180{,}626$$

Total profit to date	$180,626
Less profit previously reported	95,276
Current profit recognition	$ 85,350
	=======

Profit recognized during support
period (19X4):

$\frac{\$1,270,000}{1,270,000} \times \$206,000 = \$206,000$

Total profit to date	$206,000
Less profit previously reported	180,626
Current profit recognition	$ 25,374
	=======

*Two-thirds of projected revenue during periods of support of operation; this can also be calculated as projected rental expenses plus projected debt service less projected deficit cash flow.
†Actual rental revenue.
‡Because the property has attained a level of occupancy in excess of the original adjusted projection, and there is no reason to believe that such occupancy level cannot be sustained, the projected 19X4 rental revenue should be adjusted to 19X3 actual rental revenue.
§Actual rental revenue excluding amounts not needed to meet cash flow requirements of the property.

89. Schedule C

Calculation of Adjusted Projected Rental Revenue

Assume an office building under development is sold together with an agreement to support operations of the property for three years. The projected annual rent roll is $1,000,000 of which $350,000 is supported by signed lease agreements. The projected rental revenue for the first year of operation is $600,000; the second year $750,000; and the third year $1,000,000. At the time of sale, the amounts to be included in the calculation would be as follows:

Year	Projected Rental Revenue	Safety Factor (33-1/3%)	Adjusted Projected Rental Revenue
1	$ 600,000	$200,000	$400,000
2	750,000	250,000	500,000
3	1,000,000	333,333	666,667

If at the time of sale there were signed lease agreements for $450,000, then the $450,000 would be used in year 1 because it is greater than the adjusted projected rental revenue. The adjusted projected rental revenue for years 2 and 3 would remain $500,000 and $666,667, respectively.

Exhibit III: Illustration of Profit Recognition--Installment Method, with Debt Assumed by Buyer

90. Assumptions:

Cash down payment	$ 150,000
Second mortgage payable by buyer to seller (10-year amortization of principal plus interest)	350,000
Total cash to be received by seller	500,000
First mortgage assumed by buyer (20-year amortization of principal plus interest)	500,000
Total sales price and sales value	1,000,000
Cost	600,000
Total profit	$ 400,000
	========

The initial investment is assumed to be inadequate for full profit recognition, and the installment method of accounting is assumed to be appropriate. It is also assumed that, after the down payment, the buyer pays $25,000 of principal on the first mortgage and $35,000 of principal on the second mortgage.

Profit recognition: Under the installment method, profit recognition attributable to the down payment is $60,000, representing 40% ($400,000/$1,000,000) of $150,000.

Profit recognition attributable to the principal payments by the buyer on the first and second mortgages is $24,000, representing 40% of $60,000 ($25,000 + $35,000).

Appendix D: Illustrations of Calculations for Recognition of Profit on Retail Land Sales [30]

Exhibits — Paragraph Numbers

I. Initial Measure of Consideration (Percentage-of-Completion Method)....................91-95
Schedule A: Present Value of Sales Contracts Receivable....................92
Schedule B: Computation of Interest Income for Financial Reporting Purposes....................93
Schedule C: Determination of Income Tax Payable....................94
Schedule D: Percentage-of-Completion Method--Illustration of Financial Statement Presentation of Transactions Assumed in Paragraph 91....................95
II. Installment Method....................96-97
Schedule A: Illustration of Financial Statement Presentation Based on Assumptions in Paragraph 91....................96
Schedule B: Installment Method Changed to Percentage-of-Completion Method at Beginning of Year 4....................97

Exhibit I--Initial Measure of Consideration (Percentage-of-Completion Method) (amounts in thousands)

91. Assumptions:

Gross sales contracts recorded in year 1 (stated interest of 6%)	$1,000
Estimated uncollectible principal amount (sales contracts of $200* less estimated down payments to be forfeited of $20)	(180)
Net sales contracts receivable	820
Down payments and collections in year 1 relative to above sales contracts ($80 + $20)	100
Collections projected (principal amounts) for years 2 through 10	$ 720
	=====
Land cost (applicable to sales contracts of $800)	$ 60
Selling expenses in year 1	300

[30] The financing and interest rate assumptions in this appendix are based on conditions at the time the profit recognition Guide was issued. They should not be considered as indicative of financing and interest rate assumptions that would be appropriate under different circumstances and at different times.

Future improvement costs (applicable to sales contracts of $800)	120
Minimum annual yield required on contracts receivable	12%

Discount Required:

Sales contracts receivable in year 1 (see above)	$ 720
Present value of 108 level monthly payments of $8.65 on sales contracts receivable (discounted at 12%) (Schedule A)	570
Discount required	$ 150
	=====

Computation of Revenue Applicable to Future Improvements:

$$\frac{\$120}{\$60 + \$300 + \$120} = 25\%$$

25% x $650($1,000 - $200 - $150) = $163

Profit Recognition in Year 1:

Revenue recognized:

Cash received in year 1	$ 100
Present value of balance of sales contracts receivable	570
(Net sales $820, less discount $150)	670
Less: revenue applicable to future improvements	163
Net revenue	507
Less: Costs and expenses ($60 + $300)	360
Pretax income	$ 147
	=====

*It is assumed that 90% of contracts in force 6 months after sales are recognized will ultimately be collected in full (paragraph 45).

92. Schedule A

Present Value of Sales Contracts Receivable
(amounts in thousands)

	Receivable Collections		Annual	Present Value
Year	Principal	Interest*	Collections	@ 12%
2	$ 62	$ 42	$104	$ 97

8	89	15	104	47
9	95	9	104	43
10	100	4	104	38
	$720	$216	$936	$570
	====	====	====	====

*Assumes no interest for year 1.

93. Schedule B

Computation of Interest Income for Financial Reporting Purposes
(amounts in thousands)

Year	Debit: Cash	Debit: Unamortized Valuation Discount	Credit: Contracts Receivable	Credit: Interest Income*
2	$104	$ 24	$ (62)	$ (66)
3	104	24	(66)	(62)
4	104	22	(70)	(56)
5	104	21	(75)	(50)
6	104	19	(79)	(44)
7	104	16	(84)	(36)
8	104	12	(89)	(27)
9	104	8	(95)	(17)
10	104	4	(100)	(8)
	$936	$150	$(720)	$(366)
	====	====	=====	=====

*Total interest income equals $216 stated interest plus $150 discount, or $366.

94. Schedule C

Determination of Income Tax Payable
(amounts in thousands)

Year	Principal Receipts	Profit from Installment Sale	Interest Income from Receivable	Selling Expense	Taxable Income (Loss)	Tax	Tax Effect of Loss Carry-forward from Year 1	Net Tax
1	$100	$ 82*		$(300)	$(218)			
2	62	48	$ 42		90	$(43)	$ 43	
3	66	51	38		89	(43)	43	
4	70	54	34		88	(42)	19	($ 23)
5	75	58	29		87	(42)		(42)
6	79	61	25		86	(41)		(41)
7	84	65	20		85	(41)		(41)
8	89	69	15		84	(40)		(40)
9	95	74	9		83	(40)		(40)
10	100	78	4		82	(40)		(40)
	$820	$640	$216	$(300)	$556	$(372)	$105†	($ 267)
	====	====	====	=====	====	=====	====	=====

Assumption: The installment method is used for income tax purposes.

* Profit on land sale computed on installment method as follows:

Gross profit = $800 - $180 = $620

Principal payment X profit margin: $80 x $620 = $62
$800

Forfeited down payments 20
$82
===

†Carryforward amount is 48% of $218 = $105.

95. Schedule D

Percentage-of-Completion Method-Illustration of Financial Statement Presentation of Transactions Assumed in Paragraph 91
(amounts in thousands)

30. *FASB Statement No. 67*, *Accounting for Costs and Initial Rental Operations of Real Estate Projects*, provides the following guidance:

> 1. This Statement establishes accounting and reporting standards for acquisition, development, construction, selling, and rental costs associated with real estate projects. It also provides guidance for the accounting for initial rental operations and criteria for determining when the status of a rental project changes from nonoperating to operating.
>
> SCOPE AND APPLICABILITY
>
> 2. This Statement does not apply to:
>
> a. Real estate developed by an enterprise for use in its own operations,[1] other than for sale or rental.
>
> b. "Initial direct costs" of sales-type, operating, and other types of leases, which are defined in *FASB Statement No. 17, Accounting for Leases--Initial Direct Costs*. The accounting for initial direct costs is prescribed in *FASB Statement No. 13, Accounting for Leases*.
>
> c. Costs directly related to manufacturing, merchandising, or service activities as distinguished from real estate activities.
>
> Paragraphs 20-23 of this Statement do not apply to real estate rental activity in which the predominant rental period is less than one month.

[1] In this context, "real estate developed by an enterprise for use in its own operations" includes real estate developed by a member of a consolidated group for use in the operations of another member of the group (for example, a manufacturing facility developed by a subsidiary for use in its parent's operations) when the property is reported in the group's consolidated financial statements. However, such property is not "real estate developed for use in the enterprise's operations" when reported in the separate financial statements of the entity that developed it.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

General

3. Paragraphs 4-25 specify the accounting for the following as they relate to real estate projects: (a) preacquisition costs[2] (b) taxes and insurance, (c) project costs, (d) amenities, (e) incidental operations, (f) allocation of capitalized costs to components of a real estate project, (g) revisions of estimates, (h) abandonments and changes in use, (I) selling costs, (j) rental costs, and (k) costs in excess of estimated net realizable value.

[2] Terms defined in the glossary (Appendix A) are in boldface type the first time they appear in this Statement.

Acquisition, Development, and Construction Costs

Preacquisition Costs

4. Payments to obtain an option to acquire real property shall be capitalized as incurred. All other costs related to a property that are incurred before the enterprise acquires the property, or before the enterprise obtains an option to acquire it, shall be capitalized if all of the following conditions are met and otherwise shall be charged to expense as incurred:

a. The costs are directly identifiable with the specific property.

b. The costs would be capitalized if the property were already acquired.

c. Acquisition of the property or of an option to acquire the property is probable.[3] This condition requires that the prospective purchaser is actively seeking to acquire the property and has the ability to finance or obtain financing for the acquisition and that there is no indication that the property is not available for sale.

[3] Probable is defined in *FASB Statement No. 5, Accounting for Contingencies*, as “likely to occur” and is used in the same sense in this Statement.

5. Capitalized Preacquisition costs (a) shall be included as project costs upon the acquisition of the property or (b) to the extent not recoverable by the sale of the options, plans, etc., shall be charged to expense when it is probable that the property will not be acquired.

Taxes and Insurance

6. Costs incurred on real estate for property taxes and insurance shall be capitalized as property cost only during periods in which activities necessary to get the property ready for its intended use are in progress.[4] Costs incurred for such items after the property is substantially complete and ready for its intended use[5] shall be charged to expense as incurred.

[4] The phrase activities necessary to get the property ready for its intended use are in progress is used here with the same meaning as it has for interest capitalization in paragraph 17 of *FASB Statement No. 34, Capitalization of Interest Cost*.

[5] The phrase substantially complete and ready for its intended use is used here with the same meaning as it has for interest capitalization in paragraph 18 of Statement 34.

Project Costs

7. Project costs clearly associated with the acquisition, development, and construction of a real estate project shall be capitalized as a cost of that project. Indirect project costs that relate to several projects shall be capitalized and allocated to the projects to which the costs relate. Indirect costs that do not clearly relate to projects under development or construction, including general and administrative expenses, shall be charged to expense as incurred.

Amenities

8. Accounting for costs of amenities shall be based on management's plans for the amenities in accordance with the following:

a. If an amenity is to be sold or transferred in connection with the sale of individual units, costs in excess of anticipated proceeds shall be allocated as common costs because the amenity is clearly associated with the development and sale of the project. The common costs include expected future operating costs to be borne by the developer until they are assumed by buyers of units in a project.

b. If an amenity is to be sold separately or retained by the developer, capitalizable costs of the amenity in excess of its estimated fair value as of the expected date of its substantial physical completion shall be allocated as common costs. For the purpose of determining the amount to be capitalized as common costs, the amount of cost previously allocated to the amenity shall not be revised after the amenity is substantially completed and available for use. A later sale of the amenity at more or less than its estimated fair value as of the date of substantial physical completion, less any accumulated depreciation, results in a gain or loss that shall be included in net income in the period in which the sale occurs.

Costs of amenities shall be allocated among land parcels[6] benefited and for which development is probable.

[6] A land parcel may be considered to be an individual lot or unit, an amenity, or a phase.

9. Before an amenity is substantially completed and available for use, operating income (or loss) of the amenity shall be included as a reduction of (or an addition to) common costs. When an amenity to be sold separately or retained by the developer is substantially completed and available for use, current operating income and expenses of the amenity shall be included in current operating results.

Incidental Operations

10. Incremental revenue from incidental operations in excess of incremental costs of incidental operations shall be accounted for as a reduction of capitalized project costs. Incremental costs in excess of incremental revenue shall be charged to expense as incurred, because the incidental operations did not achieve the objective of reducing the costs of developing the property for its intended use.

Allocation of Capitalized Costs to the Components of a Real Estate Project

11. The capitalized costs of real estate projects shall be assigned to individual components of the project based on specific identification. If specific identification is not practicable, capitalized costs shall be allocated as follows:

a. Land cost and all other common costs[7] (prior to construction) shall be allocated to each land parcel benefited. Allocation shall be based on the relative fair value before construction.

[7] Including the costs of amenities to be allocated as common costs (paragraphs 8 and 9).

b. Construction costs shall be allocated to individual units in the phase on the basis of relative sales value of each unit.

If allocation based on relative value also is impracticable, capitalized costs shall be allocated based on area methods (for example, square footage) or other value methods as appropriate under the circumstances.

Revisions of Estimates

12. Estimates and cost allocations shall be reviewed at the end of each financial reporting period until a project is substantially completed and available for sale. Costs shall be revised and reallocated as necessary for material changes on the basis of current estimates.[8] Changes in estimates shall be reported in accordance with paragraph 31 of *APB Opinion No. 20, Accounting Changes*.

[8] Paragraph 76 of *Statement No. 66, Accounting for Sales of Real Estate*, discusses revisions of estimates relating to retail land sales accounted for by the percentage-of-completion method.

Abandonments and Changes in Use

13. If real estate, including rights to real estate, is abandoned (for example, by allowing a mortgage to be foreclosed or a purchase option to lapse), capitalized costs of that real estate shall be expensed. Such costs shall not be allocated to other components of the project or to other projects even if other components or other projects are capable of absorbing the losses.

14. Real estate donated to municipalities or other governmental agencies for uses that will benefit the project are not abandonments. The cost of the real estate donated shall be allocated as a common cost of the project.

15. Changes in the use of real estate comprising a project or a portion of a project may arise after significant development and construction costs have been incurred. If the change in use is made pursuant to a formal plan for a project that is expected to produce a higher economic yield (as compared to its yield based on use before change), the development and construction costs to be charged to expense shall be limited to the amount by which the capitalized costs incurred and to be incurred exceed the estimated value of the revised project when it is substantially complete and ready for its intended use.

16. In the absence of a formal plan for a project that is expected to produce a higher economic yield, the project costs to be charged to expense shall be limited to the amount by which total project costs exceed the estimated net realizable value of the property determined on the assumption it will be sold in its present state.

Costs Incurred to Sell and Rent Real Estate Projects, Including Initial Rental Operations

Costs Incurred to Sell Real Estate Projects

17. Costs incurred to sell real estate projects shall be capitalized if they (a) are reasonably expected to be recovered from the sale of the project or from incidental operations and (b) are incurred for (1) tangible assets that are used directly throughout the selling period to aid in the sale of the project or (2) services that have been performed to obtain regulatory approval of sales. Examples of costs incurred to sell real estate projects that ordinarily meet the criteria for capitalization are costs of model units and their furnishings, sales facilities, legal fees for preparation of prospectuses, and semipermanent signs.

18. Other costs incurred to sell real estate projects shall be capitalized as prepaid costs if they are directly associated with and their recovery is reasonably expected from sales that are being accounted for under a method of accounting other than full accrual.[9] Costs that do not meet the criteria for capitalization shall be expensed as incurred.

[9] FASB Statement 66 discusses the circumstances under which the appropriate accounting methods are to be applied, including the full accrual method.

19. Capitalized selling costs shall be charged to expense in the period in which the related revenue is recognized as earned. When a sales contract is canceled (with or without refund) or the related receivable is written off as uncollectible, the related unrecoverable capitalized selling costs shall be charged to expense or an allowance previously established for that purpose.

Costs Incurred to Rent Real Estate Projects

20. If costs incurred to rent real estate projects, other than initial direct costs,[10] under operating leases are related to and their recovery is reasonably expected from future rental operations, they shall be capitalized. Examples of such costs are costs of model units and their furnishings, rental facilities, semipermanent signs, "grand openings," and unused rental brochures. Costs that do not meet the criteria for capitalization shall be expensed as incurred, for example, rental overhead.

[10] Initial direct costs are defined in Statement 17. The accounting for initial direct costs is prescribed in Statement 13.

21. Capitalized rental costs directly related to revenue from a specific operating lease shall be amortized over the lease term. Capitalized rental costs not directly related to revenue from a specific operating lease shall be amortized over the period of expected benefit. The amortization period shall begin when the project is substantially completed and held available for occupancy.[11] Estimated unrecoverable amounts of unamortized capitalized rental costs associated with a lease or group of leases shall be charged to expense when it becomes probable that the lease(s) will be terminated.

[11] Refer to paragraph 22 for the definition of substantially completed and held available for occupancy.

Initial Rental Operations

22. When a real estate project is substantially completed and held available for occupancy, rental revenues and operating costs shall be recognized in income and expense as they accrue, all carrying costs (such as real estate taxes) shall be charged to expense when incurred, depreciation on the cost of the project shall be provided, and costs to rent the project shall be amortized in accordance with paragraph 21 of this Statement. A real estate project shall be considered substantially completed and held available for occupancy upon completion of tenant improvements by the developer but no later than one year from cessation of major construction activity (as distinguished from activities such as routine maintenance and cleanup).

23. If portions of a rental project are substantially completed and occupied by tenants or held available for occupancy and other portions have not yet reached that stage, the substantially completed portions shall be accounted for as a separate project. Costs incurred shall be allocated between the portions under construction and the portions substantially completed and held available for occupancy.

Recoverability

24. The carrying amount of a real estate project, or parts thereof, held for sale or development and sale shall not exceed net realizable value. If costs exceed net realizable value, capitalization of costs associated with development and construction of a property shall not cease, but rather an allowance shall be provided to reduce the carrying amount to estimated net realizable value, determined on the basis of an evaluation of individual projects. An individual project, for this purpose, consists of components that are relatively homogeneous, integral parts of a whole (for example, individual houses in a residential tract, individual units in a condominium complex, and individual lots in a subdivision and amenities). Therefore, a multi phase development consisting of a tract of single-family houses, a condominium complex, and a lot subdivision generally would be evaluated as three separate projects.

25. Evidence of insufficient rental demand for a rental project currently under construction may indicate an impairment of the carrying value. If it is probable that the insufficient rental demand is other than temporary, an allowance for losses shall be provided, whether or not construction is actually suspended.

Amendments to Other Pronouncement

26. The references to AICPA Statements of Position 78-3, Accounting for Costs to Sell and Rent, and Initial Rental Operations of, Real Estate Projects, and 80-3, Accounting for Real Estate Acquisition, Development, and Construction Costs, are deleted from Appendixes A and B of *FASB Statement No. 32, Specialized Accounting and Reporting Principles and Practices in AICPA Statements of Position and Guides on Accounting and Auditing Matters*, respectively.

Effective Date and Transition

27. This Statement shall be applied to costs of real estate projects incurred in fiscal years beginning after December 31, 1982. Earlier application is encouraged but not required.

31. *AICPA Statement of Position 92-3*, *Accounting for Foreclosed Assets,* provides the following guidance:

Scope

.01 This statement of position (SOP) provides guidance on determining the balance sheet treatment of foreclosed assets[1] after foreclosure. (Paragraphs A-6 and A-7 of the Appendix [paragraph .18] discuss the exclusion from this SOP of conclusions on the accounting treatment of results of operations related to foreclosed assets held for sale.) It applies to all reporting entities except those that account for assets at market value or fair value, such as broker-dealers, futures commission merchants, and investment companies. It applies to all assets obtained through foreclosure or repossession except for (a) inventories that are covered by chapter 4 of Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins; (b) marketable equity securities that are covered by Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards (Statement) No. 12, Accounting for Certain Marketable Securities; and (c) foreclosed real estate previously owned by the lender and accounted for under FASB Statement No. 67, Accounting for Costs and Initial Rental Operations of Real Estate Projects. Except for the requirements in paragraphs .12 and .17, the conclusions of this SOP do not apply to in-substance foreclosed assets (see paragraph A-10 of the Appendix [paragraph .18]).

[1] As used in this SOP, the term foreclosed assets includes all assets received in satisfaction of a receivable in a troubled debt restructuring, as the term is used *in FASB Statement No. 15, Accounting by Debtors and Creditors for Troubled Debt Restructurings*. It includes real property and personal property; equity interests in corporations, partnerships, and joint ventures; and beneficial interests in trusts.

Background

.02 Paragraph 29 of *FASB Statement No. 15, Accounting by Debtors and Creditors for Troubled Debt Restructurings*, issued in 1977, requires the following: “After a troubled debt restructuring, a creditor shall account for assets received in satisfaction of a receivable the same as if the assets had been acquired for cash.” That requirement has been interpreted in diverse ways.

.03 The American Institute of Certified Public Accountants' (AICPA's) Industry Audit Guide Audits of Stock Life Insurance Companies requires that foreclosed real estate be carried at the lower of cost (less accumulated depreciation) or market value, net of any encumbrances. Paragraphs 17 and 21 of SOP 75-2, Accounting Practices of Real Estate Investment Trusts [section 10,060.17 and .21] (as amended by SOP 78-2 [section 10,170]), require that estimated losses on individual loans and properties be based on net realizable value. The guidance in the AICPA Audit and Accounting Guide Audits of Savings Institutions and in the Industry Audit Guide Audits of Finance Companies are consistent with SOPs 75-2 [section 10,060] and 78-2 [section 10,170]. The AICPA Industry Audit Guide Audits of Banks states that subsequent to foreclosure, a loss on foreclosed real estate should be recognized if cost cannot be recovered through sale or use, but it does not indicate how the loss is to be measured. The AICPA Audit and Accounting Guide Audits of Property and Liability Insurance Companies does not address accounting for foreclosed assets. [Revised to reflect the conforming changes necessary due to the issuance of recent authoritative literature.]

.04 In practice, accounting by creditors for foreclosed assets, particularly real estate assets, is diverse. After foreclosure, some enterprises continue to write down the carrying amount of foreclosed assets for subsequent, further declines in fair value; others do not. After foreclosure, some enterprises discount projected cash flows related to foreclosed assets in estimating net realizable value of those assets; others do not.

.08 AcSEC believes that all enterprises, not just financial institutions, should account for foreclosed assets held for sale the same way, except that enterprises that account for assets at market value or fair value should not change their accounting. AcSEC's primary objectives in issuing this statement of position are to reduce the inconsistencies and diversity in accounting for foreclosed assets and to improve the understandability, comparability, and relevance of amounts reported as foreclosed assets in balance sheets. Another objective is to make all of the AICPA Audit and Accounting Guides and SOPs consistent on this matter. Achieving those objectives will also address the needs of Congress and the thrift and banking regulators.

.09 This SOP affects the following AICPA statements of position and industry audit and accounting guides:

a. SOP 75-2, Accounting Practices of Real Estate Investment Trusts, paragraphs 15-23, 25, 27, 28, 29a, 29b , and 29c [section 10,060]
b. SOP 78-2, Accounting Practices of Real Estate Investment Trusts, paragraph 6 [section 10,170.06]
c. Audits of Banks
d. Audits of Savings Institutions
e. Audits of Finance Companies
f. Audits of Property and Liability Insurance Companies
g. Audits of Stock Life Insurance Companies
h. Guide for the Use of Real Estate Appraisal Information

Conclusions

Held-for-Sale Presumption

.10 Most enterprises do not intend to hold foreclosed assets for the production of income but intend to sell them; in fact, some laws and regulations applicable to financial institutions require the sale of foreclosed assets. Therefore, under this SOP, it is presumed that foreclosed assets are held for sale and not for the production of income. That presumption may be rebutted, except for in-substance foreclosed assets, by a preponderance of the evidence. If the held-for-sale presumption is not rebutted, the asset should be classified in the balance sheet as held for sale.

.11 The presumption of sale can be rebutted if (a) management intends to hold a foreclosed asset for the production of income, (b) that intent is not inconsistent with the enterprise's ability to do so or with laws or regulations, including the manner in which the laws or regulations are administered by federal or state regulatory agencies, and (c) that intent is supported by a preponderance of the evidence.

Foreclosed Assets Held for Sale

.12 After foreclosure, foreclosed assets held for sale should be carried at the lower of (a) fair value[2] minus estimated costs to sell or (b) cost[3]. Such determination should be made on an individual asset basis. If the fair value of the asset minus the estimated costs to sell the asset is less than the cost of the asset, the deficiency should be recognized as a valuation allowance. If the fair value of the asset minus the estimated costs to sell the asset subsequently increases and the fair value of the asset minus the estimated costs to sell the asset is more than its carrying amount, the valuation allowance should be reduced, but not below zero. Increases or decreases in the valuation allowance should be charged or credited to income.[4]

[2] Fair value, as used in this SOP, is defined in paragraph 13 of FASB Statement No. 15 as follows:

> The fair value of the assets transferred is the amount that the.[creditor] could reasonably expect to receive for them in a current sale between a willing buyer and a willing seller, that is, other than in a forced or liquidation sale. Fair value of assets shall be measured by their market value if an active market for them exists. If no active market exists for the assets transferred but exists for similar assets, the selling prices in that market may be helpful in estimating the fair value of the assets transferred. If no market price is available, a forecast of expected cash flows may aid in estimating the fair value of assets transferred, provided the expected cash flows are discounted at a rate commensurate with the risk involved.[6]
>
> [6] Some factors that may be relevant in estimating the fair value of various kinds of assets are described in paragraphs 88 and 89 of APB [Accounting Principles Board] Opinion No. 16 ["Business Combinations"], paragraphs 12-14 of APB Opinion No. 21, "Interest on Receivables and Payables," and paragraph 25 of APB Opinion No. 29, "Accounting for Nonmonetary Transactions."

[3] The cost of such assets at the time of foreclosure is the fair value of the asset foreclosed or repossessed. Any specific valuation allowance related to the loan should not be carried forward. This SOP provides no guidance for determining cost subsequent to foreclosure (see paragraphs A-6 and A-7 of the Appendix [paragraph .18]).

[4] Because the allowance is considered a valuation adjustment, insurance enterprises should report changes in the valuation allowance as realized gains and losses in income, not as unrealized gains and losses in equity.

.13 The amount of any senior debt (principal and accrued interest) to which the asset is subject should be reported as a liability at the time of foreclosure and not be deducted from the carrying amount of the asset; payments on such debt should be charged to the liability. Interest that accrues after foreclosure should be recognized as interest expense.

.14 *FASB Statement No. 67, Accounting for Costs and Initial Rental Operations of Real Estate Projects*, was extracted by the FASB from SOP 78-3, Accounting for Costs to Sell and Rent, and Initial Rental Operations of Real Estate Projects; SOP 80-3, Accounting for Real Estate Acquisition, Development, and Construction Costs, and the AICPA Industry Audit Guide Accounting for Retail Land Sales. These documents did not, in the opinion of AcSEC, apply to foreclosed real estate held for sale. AcSEC therefore believes that the fair-value test in this SOP, not the net-realizable-value test in FASB Statement No. 67, should be applied to foreclosed real estate held for sale, except when the foreclosed real estate was previously owned by the lender and accounted for under FASB Statement No. 67, in which case such foreclosed assets should be accounted for under FASB Statement No. 67.

Foreclosed Assets Held for the Production of Income

.15 After foreclosure, assets determined to be held for the production of income (and not held for sale) should be reported and accounted for in the same way that they would be had the assets been acquired other than through foreclosure.

Change in Classification

.16 If it is subsequently decided that a foreclosed asset classified as held for sale will be held for the production of income, the asset should be reclassified from the held-for-sale category. The reclassification should be made at the amount the asset's carrying amount would have been had the asset been held for the production of income since the time of foreclosure. Selling costs included in the valuation allowance should be reversed. The net effect should be reported in income from continuing operations in the period in which the decision not to sell the asset is made.

Effective Date and Transition

.17 This SOP should be applied to foreclosed assets in annual financial statements for periods ending on or after December 15, 1992, with earlier application permitted. On initial application of this SOP, all enterprises should adjust the carrying amount of foreclosed assets held for sale to the lower of (a) the fair value of the asset minus the estimated costs to sell the asset or (b) the cost of the asset as of the date of the initial adoption of this SOP. For many enterprises, adoption of this SOP will result in a change in accounting principle. The nature of the change should be disclosed in the financial statements of the period in which the change is made. Any adjustment arising from the initial application of this SOP should be included in income from continuing operations in the period in which the change is made. No restatement of previously issued financial statements or cumulative effect adjustments as of the beginning of the year this SOP is first applied is permitted.

32. *FASB Emerging Issues Task Force Issue No. 86-6*, *Antispeculation Clauses in Real Estate Sales Contracts* provides the following guidance relating to the use of “antispeculation” clauses:

ISSUE

Land sale agreements sometimes contain “antispeculation” clauses that require the buyer to develop the land in a specific manner or within a stated period of time. Antispeculation clauses may also prohibit certain uses of the property. If the buyer fails to comply with the provisions of the sales contract, the seller has the right, but not the obligation, to reacquire the property. Paragraph 26 of Statement 66 states that, if the terms of a transaction give the seller an option to repurchase the property, then the transaction is accounted for as a financing, leasing, or profit-sharing arrangement rather than as a sale.

The issue is whether Statement 66 precludes the seller from accounting for the transaction as a sale when an antispeculation clause exists.

EITF DISCUSSION

The Task Force reached a consensus that the contingent option described would not preclude recognition of a sale if the probability of the buyer not complying is remote. Task Force members described a number of factors that would lead them to conclude that buyer noncompliance is remote, including the economic loss to the buyer from repurchase and the buyer's perceived ability to comply with the provisions of the sales contract. Task Force members also indicated that a probability test would not be appropriate if the seller's repurchase option is not contingent upon compliance by the buyer.

33. *FASB Emerging Issues Task Force Issue No. 87-9*, *Profit Recognition on Sales of Real Estate with Insured Mortgages or Surety Bonds*, allows the modification of the down payment criteria established in FAS 66. For a seller of owner-occupied single-family residential homes that are financed under a FHA or VA government-insured program, the down payment criteria set forth in paragraphs 53 and 54 of FAS 66 is modified to the normal down payment requirements or loan limits established under those programs and profit may be recorded under the full accrual method provided that the mortgage receivable is insured from loss under the FHA or VA program. EITF 87-9 provides the following guidance:

> ISSUE
>
> Financial institutions and other sellers of real estate may require mortgage insurance on a portion of the financing provided to the buyer by the seller, particularly in transactions involving residential property. In addition, surety bonds may be accepted by sellers of real estate to support the buyer's notes in lieu of an irrevocable letter of credit.
>
> Paragraph 9 of Statement 66 provides that "the buyer's notes supported by irrevocable letters of credit from an independent established lending institution" may be included as part of the buyer's initial and continuing investment in determining whether it is appropriate for a seller of real estate to recognize profit on a transaction under the full accrual method.
> The issues are:
>
> 1. Whether a financial instrument (such as a surety bond) may be considered equivalent to an irrevocable letter of credit in determining whether it is appropriate to recognize income under the full accrual method if (a) the seller's rights of collection, (b) the surety's obligation for payment, and (c) the surety's recourse to the buyer under the instrument in the event of default are the same as for an irrevocable letter of credit.
> 2. Whether government or private mortgage insurance covering a part of the mortgage balance should be considered equivalent to an irrevocable letter of credit and included as part of the buyer's initial and continuing investment in determining whether it is appropriate to recognize profit under the full accrual method.
>
> A related subissue is whether the minimum down payment percentages set forth in Statement 66 apply or whether the loan limits in the government programs may be used if a buyer of single-family residential property qualifies for a Federal Housing Administration (FHA) or Veterans Administration (VA) loan that requires little (less than 5 percent) or no down payment and the principal amount of the mortgage is insured or guaranteed either in full or in part by the FHA or VA. Paragraph 11 of Statement 66 requires an initial investment that is adequate to demonstrate the buyer's commitment to pay for the property and is "equal to at least a major part of the difference between usual loan limits and the sales value of the property." Paragraphs 53 and 54 of Statement 66 provide guidance on the minimum initial investment in the property required by the buyer to demonstrate a commitment to pay for the property that is necessary for the seller to recognize profit under the full accrual method.
>
> EITF DISCUSSION
>
> On the first issue, the Task Force reached a consensus that an irrevocable financial instrument, such as a surety bond, from an established independent insuring institution that includes the preceding characteristics (such that the instrument has all the rights and obligations of an irrevocable letter of credit) may be considered by the seller to be equivalent to an irrevocable letter of credit and included as part of the buyer's initial and continuing investment in determining whether it is appropriate to recognize profit under the full accrual method. The Task Force noted that the requirement in Statement 66 to demonstrate the buyer's commitment to pay is an important criterion that must be met before profit is recognized by the full accrual method.
>
> On the second issue, the Task Force reached a consensus that mortgage insurance should not be considered the equivalent of an irrevocable letter of credit in the determination of whether it is

> appropriate to recognize profit under the full accrual method because the purchase of mortgage insurance is not deemed to demonstrate a commitment by the buyer to honor its obligation to pay for the property.
>
> With respect to the subissue, the Task Force reached a consensus that a seller of owner-occupied single-family residential homes that finances a sale under an FHA or VA government-insured program may use the normal down payment requirements or loan limits established under those programs as a surrogate for the down payment criteria set forth in paragraphs 53 and 54 of Statement 66 and may record profit under the full accrual method provided that the mortgage receivable is fully insured from loss under the FHA or VA program. In that specific circumstance, the Task Force believes that departure from the minimum initial investment criteria of Statement 66 is justified because all of the credit risk associated with the receivable from the sale is transferred to the governmental agency. However, the Task Force emphasized that in all other circumstances (for example, FHA or VA programs that provide for less than full insurance or seller financing using private mortgage insurance) the minimum initial investment criteria set forth in Statement 66 should be followed.
>
> Subsequently, several Task Force members indicated that they did not recall the consensus being limited to transactions that are fully insured under the FHA and VA programs. Some Task Force members indicated their belief that the consensus should be applied to all sales of residential property for which the seller provides financing under the FHA or VA program and the buyer has complied with the normal lending terms for those programs in the specific location of the property, irrespective of whether the mortgage is fully insured. Others suggested that they are uncomfortable addressing transactions that are not fully insured under those programs without a better understanding of how the programs insure the seller in the event of a default by the buyer.
>
> At a subsequent meeting, the Task Force discussed the FHA mortgage insurance program and the VA loan guarantee program with representatives from the FHA and the VA. An FHA representative confirmed that the FHA program normally insures 100 percent of the outstanding mortgage principal, and a VA representative stated that the VA program generally provides first-dollar loss coverage of either 40 or 50 percent of the qualified loan amount, but coverage of not more than $36,000. Coverage under the VA program is reduced on a pro rata basis as the principal of the loan is paid off. Neither program provides for split coverage with private insurers. Also, in the event of a default by the borrower, both the FHA and the VA programs provide for recourse against the borrower.
>
> The Task Force reached a consensus that the term fully should be deleted from the consensus reached above, thus permitting profit recognition under the full accrual method for all loans insured under the current FHA or VA programs. Task Force members noted that the consensus applies only to FHA and VA coverage and not to private mortgage insurance.

34. *FASB Emerging Issues Task Force Issue No. 87-29*, *Exchange of Real Estate Involving Boot* (EITF 87-29), suggests that a seller should follow FAS 66 for the monetary portion of a transaction involving an exchange of real estate involving boot. EITF 87-29 provides the following guidance:

> ISSUE
>
> Statement 66 indicates that the accounting for exchanges of real estate is covered by Opinion 29, which addresses nonmonetary transactions, and not by Statement 66. However, in Issue No. 86-29, "Nonmonetary Transactions: Magnitude of Boot and the Exceptions to the Use of Fair Value," the Task Force reached a consensus that an exchange of nonmonetary assets that would otherwise be based on recorded amounts under paragraph 21 of Opinion 29 but that involves boot should be considered a monetary (rather than nonmonetary) transaction if the boot is at least 25 percent of the fair value of the exchange. As a result of that consensus, an exchange of either (a) real estate held for sale in the ordinary course of business for real estate to be sold in the same line of business or (b) real estate not held for sale in the ordinary course of business for similar real estate would be recorded by both parties based on fair value when the boot is at least 25 percent of the fair value of the exchange. (Those types of exchanges will be referred to in this

Issue as exchanges of similar real estate.) The Task Force acknowledged that the ability to satisfactorily measure fair value is a prerequisite for the use of fair value. If the boot in an exchange of similar real estate is less than 25 percent, the pro rata gain recognition guidance in paragraph 22 of Opinion 29 would be applied by the receiver of boot, and the payer of boot would not recognize a gain.

The issues are:

1. Whether Statement 66 applies to an exchange of similar real estate that is not subject to Opinion 29 because the transaction involves enough boot for the exchange to be considered monetary under the consensus for Issue 86-29
2. If applicable, how Statement 66 should be applied.

EITF DISCUSSION

The Task Force reached a consensus that a transaction involving an exchange of similar real estate that is considered a monetary transaction under Issue 86-29 because boot is at least 25 percent of the fair value of the exchange would be allocated between two components: a monetary portion and a nonmonetary portion. The allocation between the monetary and nonmonetary portions of the transaction should be based on their relative fair values at the time of the transaction. For the receiver of boot, the monetary portion would be accounted for under Statement 66 as the equivalent of a sale of an interest in the underlying real estate, and the nonmonetary portion would be accounted for under paragraph 21 of Opinion 29. For the payer of boot, the monetary portion would be accounted for as an acquisition of real estate, and the nonmonetary portion would be accounted for under paragraph 21 of Opinion 29. Exhibit 87-29A presents an example of the application of this consensus.

35. *FASB Emerging Issues Task Force Issue No. 88-12*, *Transfer of Ownership Interest as Part of Down Payment under FASB Statement No. 66* provides the following guidance on accounting for sales of real estate:

ISSUE

Party A has a 75 percent interest in real estate and Party B has the other 25 percent interest. Party A sells its interest to Party B and receives a 10 percent cash down payment and a note for the balance of the sales price. For this transaction, paragraph 54 of Statement 66 specifies a minimum required initial investment of 15 percent of the sales value. Party B pledges the 100 percent interest in the property as security for the note to Party A; no debt is outstanding on the property.

Under paragraph 9 of Statement 66, only the 10 percent cash down payment of Party B would be included as part of the buyer's initial investment. Paragraph 11 of Statement 66 states that the initial investment should "be adequate to demonstrate the buyer's commitment to pay for the property and shall indicate a reasonable likelihood that the seller will collect the receivable."

The issues are:

1. Whether the buyer's ownership interest in a purchased property that is pledged as security for a note should be included as part of the buyer's initial investment in determining whether profit may be recognized under the full accrual method
2. If so, in other situations in which a note is collateralized by assets other than the purchased property (for example, other real estate properties or marketable securities), whether those assets should be included as part of the buyer's initial investment in determining whether profit may be recognized under the full accrual method.

The Task Force reached a consensus that Statement 66 precludes profit recognition under the full accrual method for this transaction because purchased property or other assets pledged as security for a note should not be included as part of the buyer's initial investment.

36. *FASB Emerging Issues Task Force Issue No. 88-24, Effects of Various Forms of Financing under FASB Statement No. 66* provides the following guidance on how profit should be recognized under FASB Statement No. 66:

ISSUE

The sale of real estate often involves significant financing relative to the sales price. That financing may be provided by independent third parties, the seller, or both. The financing may involve a nonrecourse mortgage (that is, the lender's only recourse upon default of the buyer is to repossess the underlying real estate) and it may involve the buyer's assumption of preexisting recourse or nonrecourse mortgage obligations of the seller.

Paragraph 3 of Statement 66 provides that profit shall be recognized in full when real estate is sold, provided (1) the profit is determinable, that is, the collectibility of the sales price is reasonably assured or the amount that will not be collectible can be estimated, and (2) the earnings process is virtually complete, that is, the seller is not obligated to perform significant activities after the sale to earn the profit. Paragraph 4 of Statement 66 states that collectibility of the sales price is demonstrated by the buyer's commitment to pay, which in turn is supported by substantial initial and continuing investments that give the buyer a stake in the property sufficient that the risk of loss through default motivates the buyer to honor its obligation to the seller. If the full profit is not recognized, Statement 66 requires use of the installment, cost recovery, or reduced-profit recognition methods in certain circumstances.

The issue is how profit should be recognized under Statement 66 when a real estate sales transaction involves various forms of financing.

EITF DISCUSSION

Modifying a previous consensus on this issue, the Task Force reached a consensus that the following guidelines should be applied by the seller to real estate sales transactions. (The requirements for the consummation of a real estate sales transaction and the appropriate accounting when some common forms of continuing involvement exist appear in paragraphs 6 and 25-43, respectively, of Statement 66 and are not affected by this consensus.)

1. The initial and continuing investment requirements for the full accrual method of profit recognition of Statement 66 are applicable unless the seller receives as the full sales value of the property (a) cash, without any seller contingent liability on any debt on the property incurred or assumed by the buyer, (b) the buyer's assumption of the seller's existing nonrecourse debt on the property, (c) the buyer's assumption of all recourse debt on the property with the complete release of the seller from those obligations, or (d) any combination of such cash and debt assumption. When the seller has unconditionally received all amounts it is entitled to from the sale and is not at risk related to the financing, the buyer's commitment to pay for the property is not a factor in the seller's recognition of profit.

2. To recognize profit by the full accrual method, debt incurred by the buyer that is secured by the property, whether incurred directly from the seller or other parties or indirectly through assumption, and payments to the seller from the proceeds of such indebtedness shall not be included as part of the buyer's initial investment. A sufficient amount of the buyer's own cash or other qualifying forms of investment demonstrates the buyer's commitment to pay for the property; however, the buyer's borrowing secured by the property does not demonstrate such a commitment. Paragraphs 9 and 10 of Statement 66 provide additional guidance on what are included in and excluded from initial investment.

3. Under the installment, cost recovery, and reduced-profit recognition methods, debt incurred by the buyer that is secured by the property, whether incurred directly from the seller or other parties or indirectly through assumption, and payments to the seller from the proceeds of such indebtedness are not considered buyer's cash payments. However, if the profit deferred under the applicable method exceeds the outstanding amount of seller financing and the outstanding amount of buyer's debt secured by the property for which the seller is contingently liable, the seller shall recognize the excess in income.

Exhibit 88-24A presents examples of the application of this consensus.

STATUS

No further EITF Discussion is planned

37. *FASB Statement No. 121*, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of*, provides the following guidance:

INTRODUCTION

1. This Statement establishes accounting standard for the impairment of long-lived assets, certain identifiable intangibles, and goodwill related to those assets to be held and used and for long-lived assets and certain identifiable intangibles to be disposed of.

2. Long-lived assets such as plant and equipment generally are recorded at cost, which is usually fair value at the date of acquisition. The original cost usually is reduced over time by depreciation (amortization) so that the cost to the asset is allocated to the periods in which the asset is used. That practice has been modified in some circumstances when an assets has been determined to be impaired, in which case the asset has been written down to a new carrying amount that is less than the remaining cost and a loss has been recognized. Accounting standards generally have not addressed when impairment losses should be recognized or how impairment losses should be measured. As a result, practice has been diverse.

SCOPE

3. This Statement applies to long-lived assets, certain identifiable intangibles, and goodwill related to those assets to be held and used and to long-lived assets and certain identifiable intangibles to be disposed of. The Statement applies to all entities. This Statement does not apply to financial instruments, long-term customer relationships of financial institution (for example, core deposit intangibles and credit cardholder intangibles), mortgage and other servicing rights, deferred policy acquisition costs, or deferred tax assets.

Assets to Be Held and Used

Recognition and Measurement of Impairment

4. An entity shall review long-lived assets and certain identifiable intangibles to be held and used for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable.

5. The following are examples of events or changes in circumstances that indicate that the recoverability of the carrying amount of an asset should be assessed:

a. A significant decrease in the market value of an asset
b. A significant change in the extent or manner in which an asset is used or a significant physical change in an asset
c. A significant adverse change in legal factors or in the business climate that could affect the value of an asset or an adverse action or assessment by a regulator
d. An accumulation of costs significantly in excess of the amount originally expected to acquire or construct an asset

e. A current period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with an asset used for the purpose of producing revenue.

6. If the examples of events or changes in circumstances set forth in paragraph 5 are present or if other events or changes in circumstances indicate that the carrying amount of an asset that an entity expects to hold and use may not be recoverable, the entity shall estimate the future cash flows expected to result from the use of the asset and its eventual disposition. Future cash flows are the future cash inflows expected to be generated by an asset less the future cash outflows expected to be necessary to obtain those inflows. If the sum of the expected future cash flows (undiscounted and without interest charges) is less than the carrying amount of the asset, the entity shall recognize an impairment loss in accordance with this Statement. Otherwise, an impairment loss shall not be recognized; however, a review of depreciation policies may be appropriate.[1]

[1] Paragraph 10 of *APB Opinion No. 20, Accounting Changes*, addresses the accounting for changes in depreciation estimates, and paragraph 32 addresses the accounting for changes in the method of depreciation. Whenever there is reason to assess the recoverability of the carrying amount of an asset under paragraphs 4 and 5 of this Statement, there may be reason to review the depreciation estimates and method under paragraphs 10 and 32 of Opinion 20. However, an impairment loss that results from applying this Statement should be recognized prior to performing that review. The provisions of Opinion 20 apply to the reporting of changes in the depreciation estimates and method regardless of whether an impairment loss is recognized under paragraph 6 of this Statement.

7. An impairment loss recognized in accordance with paragraph 6 shall be measured as the amount by which the carrying amount of the asset exceeds the fair value of the asset. The fair value of an asset is the amount at which the asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information available in the circumstances. The estimate of fair value shall consider prices for similar assets and the results of valuation techniques to the extent available in the circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis.

8. In estimating expected future cash flows for determining whether an asset is impaired (paragraph 6), and if expected future cash flows are used in measuring assets that are impaired (paragraph 7), assets shall be grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets.

9. Estimates of expected future cash flows shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence should be considered in developing estimates of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.

10. In limited circumstances, the test specified in paragraph 6 will be applicable at only the entity level because the asset being tested for recoverability does not have identifiable cash flows that are largely independent of other asset groupings. In those instances, if the asset is not expected to provide any service potential to the entity, the asset shall be accounted for as if abandoned or held for disposal in accordance with the provisions of paragraph 15 of this Statement. If the asset is expected to provide service potential, an impairment loss shall be recognized if the sum of the expected future cash flows (undiscounted and without interest charges) for the entity is less than the carrying amounts of the entity's assets covered by this Statement.

11. After an impairment is recognized, the reduced carrying amount of the asset shall be accounted for as its new cost. For a depreciable asset, the new cost shall be depreciated over the asset's remaining useful life. Restoration of previously recognized impairment losses is prohibited.

Goodwill

12. If an asset being tested for recoverability was acquired in a business combination accounted for using the purchase method, the goodwill that arose in that transaction shall be included as part of the asset grouping (paragraph 8) in determining recoverability. If some but not all of the assets acquired in that transaction are being tested, goodwill shall be allocated to the assets being tested for recoverability on a pro rata basis using the relative fair values of the long-lived assets and identifiable intangibles acquired at the acquisition date unless there is evidence to suggest that some other method of associating the goodwill with those assets is more appropriate. In instances where goodwill is identified with assets that are subject to an impairment loss, the carrying amount of the identified goodwill shall be eliminated before making any reduction of the carrying amounts of impaired long-lived assets and identifiable intangibles.

Reporting and Disclosure

13. An impairment loss for assets to be held and used shall be reported as a component of income from continuing operations before income taxes for entities presenting an income statement and in the statement of activities of a not-for-profit organization. Although there is no requirement to report a subtotal such as “income from operations,” entities that present such a subtotal must include the impairment loss in that subtotal.

14. An entity that recognizes an impairment loss shall disclose all of the following in financial statements that include the period of the impairment write-down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment
b. The amount of the impairment loss and how fair value was determined
c. The caption in the income statement or the statement of activities in which the impairment loss is aggregated if that loss has not been presented as a separate caption or reported parenthetically on the face of the statement
d. If applicable, the business segment(s) affected.

Recognition and Measurement

15. *APB Opinion No. 30, Reporting the Results of Operations--Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions*, requires that certain assets to be disposed of be measured at the lower of carrying amount or net realizable value.[2] All long-lived assets and certain identifiable intangibles to be disposed of that are not covered by that Opinion and for which management, having the authority to approve the action, has committed to a plan to dispose of the assets, whether by sale or abandonment, shall be reported at the lower of carrying amount or fair value less cost to sell. The fair value of the assets to be disposed of shall be measured in accordance with paragraph 7 of this Statement.

[2] Paragraphs 13-16 of Opinion 30 prescribe the accounting for the disposal of a segment of a business. Paragraph 13 defines a segment of a business as “a component of an entity whose activities represent a separate major line of business or class of customer.” Paragraph 15 of that Opinion prescribes the determination of a gain or loss on the disposal of a segment of a business and states:

> In the unusual circumstance, it would be expected that the plan of disposal would be carried out within a period of one year from the measurement date and that such projections of operating income or loss would not cover a period exceeding approximately one year.

16. Cost to sell an asset to be disposed of generally includes the incremental direct costs to transact the sale of the asset such as broker commissions, legal and title transfer fees, and closing costs that must be incurred before legal title can be transferred. Costs generally excluded from cost to sell an asset to be disposed of include insurance, security services, utility expenses, and other costs of protecting or maintaining an asset. However, if a contractual agreement for the sale of an asset obligates an entity to incur costs in the future to effect the ultimate sale, those costs shall be included as adjustments to the cost to sell an asset to be disposed of. If the fair value of an asset is measured by the current market value or by using the current selling price for a similar asset, that fair value shall be considered to be a current amount and that fair value and cost to sell shall not be discounted. If the fair value of an asset is measured by discounting expected future cash flows and if the sale is expected to occur beyond one year, the cost to sell also shall be discounted. Assets to be disposed of covered by this Statement shall not be depreciated (amortized) while they are held for disposal.

17. Subsequent revisions in estimates of fair value less cost to sell shall be reported as adjustments to the carrying amount of an asset to be disposed of, provided that the carrying amount of the asset does not exceed the carrying amount (acquisition cost or other basis less accumulated depreciation or amortization) of the asset before an adjustment was made to reflect the decision to dispose of the asset.

Reporting and Disclosure

18. An entity that holds assets to be disposed of that are accounted for in accordance with paragraphs 15-17 of this Statement shall report gains or losses resulting from the application of those paragraphs as a component of income from continuing operations before income taxes for entities presenting an income statement and in the statement of activities of a not-for-profit organization. Although entities are not required to report a subtotal such as “income from operations,” entities that present such a subtotal must include the gains or losses resulting from the application of paragraphs 15-17 in that subtotal.

19. An entity that accounts for assets to be disposed of in accordance with paragraphs 15-17 shall disclose all of the following in financial statements that include a period during which those assets are held:

a. A description of assets to be disposed of, the facts and circumstances leading to the expected disposal, the expected disposal date, and the carrying amount of those assets
b. If applicable, the business segment(s) in which assets to be disposed of are held
c. The loss, if any, resulting from the application of paragraph 15 of this Statement
d. The gain or loss, if any, resulting from changes in the carrying amounts of assets to be disposed of that arises from application of paragraph 17 of this Statement
e. The caption in the income statement or statement of activities in which the gains or losses in (c) and (d) are aggregated if those gains or losses have not been presented as a separate caption or reported parenthetically on the face of the statement
f. The results of operations for assets to be disposed of to the extent that those results are included in the entity's results of operations for the period and can be identified.

OTHER RELEVANT INFORMATION:

38. The NAIC Technical Resource Group Proposed Draft Life Codification contains proposed revisions to Chapter 4, *Real Estate*, primarily related to statement value and requiring recognition of permanent impairments on real estate investments and adoption of the provisions of FAS 66 for accounting for sales of real estate. Certain other insignificant changes were also made in the text. Sections which contain proposed changes are as follows:

> Authorization and Limitations
>
> Often, statutes and regulations promulgated by the states include limitations on holding investments in real property. These limitations may include provisions requiring the disposal of foreclosed properties within a certain period of time.
>
> Market Value
>
> Market value is the price that a property would bring in a competitive and open market under all conditions requisite to a fair sale--the buyer and seller acting prudently and knowledgeably with the price not affected by any undue stimulus. Estimates of market value are determined by a qualified real estate appraiser.
>
> Appraised Value
>
> An appraisal is an opinion of estimated market value for an adequately described property, as of a specified date, supported by the analysis of relevant data. To arrive at this value, three methods are typically used:
>
> 1. Market Data Approach - a comparative analysis of current sales prices of similar properties, after making necessary and reasonable adjustments for any difference in the properties.
>
> 2. Cost Approach - an estimated value based on the cost of reproduction or replacement of the improvements, less depreciation, plus the value of the land. (Land value is usually determined by the market data approach.)
>
> 3. Income Approach - an estimated value based on the capitalization of income and productivity. It is concerned with the present value of future income future cash flows.
>
> Statement Value
>
> The statement value of all real estate shall be shown net of any encumbrance. The instructions for the annual statement require that the admitted value of properties occupied by the company (home office real estate) shall not exceed actual cost, plus capitalized improvements, less normal depreciation. This formula is to apply whether the property is held directly or indirectly by the company. If home office or investment real estate has been permanently impaired, the asset value must be reduced and a realized loss recorded. If the impairment on the properties is other than permanent, the property is valued at depreciated cost and no loss needs to be recognized. Real estate is considered permanently impaired when caused by obsolescence or condemnation as opposed to temporarily impaired which is caused by temporary market conditions which are expected to reverse themselves. Implicit within the designation “temporarily impaired” is the ability and intent to hold the real estate until such conditions are rectified.
>
> Properties acquired in satisfaction of debt which are held for investment, should be transferred at the lower of cost or current market value, as determined by a qualified appraiser, to the investment real estate category.
>
> The value of the investment real estate and property classified as property acquired in satisfaction of debt may not exceed the lower of current market value as determined by a

qualified appraiser or cost balance transferred from mortgage loan plus capitalized improvements, less normal depreciation. A realized loss is recognized if there is a permanent decrease in the market value of the property subsequent to the date of acquisition. If the decline in value is considered temporary an unrealized loss is recognized. In lieu of writing down investment real estate or taking part of the value as nonadmitted when market value is less than book value, an insurer may establish a reserve for specific properties as a contra-asset. This contra-asset is a specific reserve in addition to the general reserve established under the Asset Valuation Reserve.

Income Derived from Real Estate

Income on real estate usually is received periodically and in advance. Any amount not received at the end of an accounting period should be set up as investment income due and unpaid to the extent that the amount applies to that accounting period. If the collectibility of unpaid rent is in doubt, or if the amount due exceeds a three month period, the entire amount must be nonadmitted. Rental income paid in advance of the accounting period for which it is payable in whole or in part must be included in the liability for unearned investment income to the extent it applies to the succeeding accounting period. If rental income is to be received over a period shorter than the full lease period, the total rent to be received must be accrued periodically as if the rent were received over the total lease period. Interest expense on a mortgage is netted against the investment income for the period.

Sale of Real Estate

Life insurance companies must follow Statement of Financial Accounting Standards (FASB) No. 66 in determining whether a sale has taken place, whether all requirements have been met to recognize profit under the full accrual method, and, if not appropriate, which method of profit recognition should be followed: the deposit, installment or cost recovery method.

Sale of retail land must be accounted for under provisions of FASB #66: (1) by the full accrual method, (2) by the percentage-of-completion method, (3) by the installment sales method, or (4) by the deposit method.

Sale-leaseback transactions involving real estate must be accounted for under the provisions of FASB #98. A sale-leaseback transaction is one in which an owner sells the property and leases back the same property from the purchaser.

A company can recognize the sale of any real estate that it owns as an immediate cash sale or as a contract of sale. In a sale for cash and/or mortgage, title transfers to the buyer when the sale is consummated. Any profit or loss on the sale is considered to be realized in the year of sale. In a sale involving an installment contract, often referred to as land contracts, title is retained by the seller and transferred to the buyer only when he has paid the entire sales price, or a substantial portion of it.

If the sale of real estate, including real estate occupied by the Company, includes a mortgage or other note from the Company, some states may require the transaction be reported as a financing transaction using the deposit method of accounting for sale-leaseback transaction.

An insurer does not take credit for any profit from the sale or exchange of its assets when the consideration received and otherwise properly reported as an admitted asset is in the form of an installment contract, unless such profit is fully reserved by a liability established which is equal to the portion of such profit which is unrealized. In computing the realized portion of the profit on installment contracts, payments are allocated at the rate the principal is reduced by said payments.

39. The draft discussion material from previous Property/Casualty codification projects proposed changes to Chapter 4, *Real Estate*, primarily removing the option to establish a reserve for specific properties in lieu of writing down or nonadmitting part of the investment real estate balance when market

value is less than book value. In addition, it provides guidance on how to determine whether a decrease in market value has occurred and how a writedown would be recorded. Sections which contain proposed revisions are provided below:

> Statement Value
>
> The statement value of all real estate shall be shown net of any encumbrance. The instructions for the annual statement require that the admitted value of properties occupied by the company (home office real estate) shall not exceed actual costs, plus capitalized improvements, less normal depreciation. This formula is to apply whether the property is held directly or indirectly by the company.
>
> The value of all other real estate (investment real estate and property acquired in satisfaction of debt) may not exceed the lower of (a) current market value, or (b) cost plus capitalized improvements less normal depreciation. When market value is less than book value, insurers shall either: (a) write down book value to market value, or (b) nonadmit the excess of book value over market value.
>
> (In determining whether a decrease in the market value of investment real estate has occurred, the net income derived from each investment should be divided by an appropriate capitalization rate, and compared to the book value. If the result of this calculation is less than book value for two consecutive years, there would be a presumption that a decrease in value had occurred, which would indicate that a new appraisal of the real estate is appropriate.)
>
> If the book value is to be written down, it would be recorded as a Decrease by Adjustment in Book Value on Schedule A, carried forward to Part 1A as a Decrease by Adjustment in Book Value, and recorded as an unrealized capital loss on the Underwriting and Investment Exhibit. If the excess value is to be nonadmitted, the aggregate nonadmitted amount for all real estate would be recorded on Exhibit 1, and recorded as a change in nonadmitted assets on the Underwriting and Investment Exhibit.
>
> Sale of Real Estate
>
> A company may sell real estate for cash (and/or a mortgage), or as an installment sale. In a sale for cash (and/or mortgage), where title transfers to the buyer as part of the consummated transaction, any profit or loss on the sale shall be reported in the year of sale. Under installment contracts, the seller retains title until all or a substantial portion of payments have been made. The Seller shall recognize a profit on the sale (under a pro rata method) only to the extent that payments have been received. If the seller records the entire profit at the commencement of the contract, it shall establish a reserve to offset the portion of profits which are unrealized (i.e., not yet paid by the buyer). Losses on installment sales shall be recognized immediately. An insurer may elect to use an accounting method that is more conservative in its recognition of gains, such as the cost-recovery method or the deposit method if the facts of the situation so indicate.

Statutory Issue Paper No. 41

Surplus Notes

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 41

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Reporting entities sometimes issue instruments that have the characteristics of both debt and equity. These instruments are commonly referred to as surplus notes, the term used herein, but are also referred to as surplus debentures or contribution certificates. These instruments are used for various reasons, including but not limited to:

a. Providing regulators with flexibility in dealing with problem situations to attract capital to reporting entities whose surplus levels are deemed inadequate to support their operations.

b. Providing a source of capital to mutual and other types of non-stock reporting entities who do not have access to traditional equity markets for capital needs.

c. Providing alternative source of capital to stock reporting entities, although not for the purpose of initially capitalizing the reporting entity.

Common attributes of surplus notes are that they are only allowable pursuant to the approval of the domiciliary state, the form and content require regulatory approval and interest may be paid and principal may be repaid only with the prior approval of the commissioner of the state of domicile.

2. Current statutory guidance allows that surplus notes may be reported as surplus and not as debt of the reporting entity. Statutory guidance for issuers of surplus notes is found in Chapter 27, Paid-in or Contributed Capital and Organizational Surplus*,* of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual) and Chapter 24, Paid-in or Contributed Capital and Organizational Surplus of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices and Procedures Manual). Statutory guidance for holders of surplus notes is provided in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* (SVO Purposes and Procedures). GAAP does not distinguish surplus notes from other types of subordinated notes and requires them to be recorded as liabilities.

3. The purpose of this issue paper is to establish statutory accounting principles for issuers of surplus notes and holders of surplus notes that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Issuers of Surplus Notes

4. Surplus notes issued by a reporting entity that are subject to strict control by the commissioner of the reporting entity's state of domicile and have been approved as to form and content shall be reported as surplus and not as debt only if the surplus note contains the following provisions:

a. Subordination to policyholders;

b. Subordination to claimant and beneficiary claims;

c. Subordination to all other classes of creditors other than surplus note holders; and

d. Interest payments and principal repayments require prior approval of the commissioner of the state of domicile.

The proceeds received by the issuer must be in the form of cash or other admitted assets having readily determinable values and liquidity satisfactory to the commissioner of the state of domicile.

5. Costs of issuing surplus notes (i.e., loan fees, legal fees, etc.) do not meet the definition of an asset as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4). Accordingly, such costs shall be charged to operations when incurred.

6. Discount or premium, if any, shall be reported in the balance sheet as a direct deduction from or addition to the face amount of the note. Such discount or premium shall be charged or credited to the statement of operations concurrent with approved interest payments on the surplus note and in the same proportion or percentage as the approved interest payment is to the total estimated interest to be paid on the surplus note.

7. Interest shall be not be recorded as a liability nor an expense until approval for payment of such interest has been granted by the commissioner of the state of domicile. All interest, including interest in arrears, shall be expensed in the statement of operations when approved for payment. Unapproved interest:

a. Shall not be reported through operations;

b. Shall not be represented as an addition to the principal or notional amount of the instrument; and

c. Shall not accrue further interest, i.e., interest on interest.

8. As of the date of approval of principal repayment by the commissioner of the state of domicile, the issuer shall reclassify such approved payments from surplus to liabilities.

Disclosures

9. The notes to the financial statements of a reporting entity that issues surplus notes shall disclose the following as long as the surplus notes are outstanding:

a. Date issued,

b. Description of the assets received,

c. Holder of the note or if public the names of the underwriter and trustee,

d. Amount of note,

e. Carrying value of note,

f. The rate at which interest accrues,

g. Maturity dates or repayment schedules, if stated,

h. Unapproved interest and/or principal,

i. Interest and/or principal paid in the current year,

j. Total interest and/or principal paid on surplus notes,

k. Subordination terms,

l. Liquidation preference to the reporting entity's common and preferred shareholders and

m. The repayment conditions and restrictions.

In addition to the above a reporting entity shall identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to rule 144A under the Securities Act of 1933), and any holder of 10% or more of the outstanding amount of any surplus note registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

Holders of Surplus Notes

10. Surplus notes meet the definition of an asset as defined in Issue Paper No. 4. Holders of surplus notes shall follow SVO valuation procedures. The valuation procedures documented in the SVO Purposes and Procedures are detailed in paragraph 17 of this issue paper. Surplus notes shall be accounted for in accordance with *Issue Paper No. 26—Bonds, Excluding Loan-Backed and Structured Securities* (Issue Paper No. 26). The admitted asset value of a surplus note shall not exceed the amount that would be admitted if the instrument was considered an equity instrument and added to any other equity investments in the issuer held directly or indirectly by the holder of the surplus note. Only interest that has been approved by the issuer's domiciliary commissioner shall be accrued as income by a holder of surplus notes in a manner consistent with Issue Paper No. 26.

DISCUSSION

11. The primary concern of regulators is the ability of a reporting entity to meet its obligations to its policyholders. Additionally, surplus notes are subordinated to policyholder, claimant and beneficiary claims, as well as debts owed to all other classes of creditors (other than surplus note holders). For these reasons, they are viewed as surplus by regulators. A reporting entity's ability to pay interest and repay principal on surplus notes is more restrictive than its ability to pay dividends on common stock since most states permit some level of dividends to be paid without prior approval of the commissioner. The restrictive nature and the level of regulatory control over surplus notes coupled with the requirement of surplus notes to be reviewed as to form and content (including approval of the assets received for the surplus notes) provides assurances that adequate surplus exists to meet policyholder obligations.

12. The conclusions reached in this issue paper are consistent with current statutory guidance which requires surplus notes to be reported as surplus. Reporting surplus notes as surplus is consistent with the objectives of statutory financial reporting outlined in the Statement of Concepts which states:

> Objectives of Statutory Financial Reporting
>
> The primary responsibility of each state insurance department is to regulate insurance companies in accordance with state laws with an emphasis on solvency for the protection of policyholders. The ultimate objective of solvency regulation is to ensure that policyholder, contractholder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety. The cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders. An accounting model based on the concepts of conservatism, consistency, and recognition is essential to useful statutory financial reporting.

Existing statutory guidance has been expanded by this issue paper to address the accounting for issuance costs of these instruments and to require the disclosure of unapproved principal, principal paid in the current year and total principal paid on surplus notes. These disclosures are parallel to disclosures required for interest.

13. The conclusions reached in this issue paper vary from GAAP which requires all debt instruments, including surplus notes, to be recorded as liabilities. GAAP does not have the concept of surplus but rather has the concept of stockholders' equity. Stockholders' equity is a measure of the amount of net assets available to stockholders after all other obligations have been satisfied. As a contrast to features of surplus notes that make them policyholders' surplus, certain preferred stocks issued by entities have redemption features or liquidation preferences that provide their holders more favorable treatment than is provided to holders of common stock. GAAP has tended to focus on disclosure of those features and liquidation preferences. The Securities and Exchange Commission has issued guidance that requires equity securities with debt like features, such as mandatorily redeemable preferred stock to be recorded outside of the equity section of the balance sheet because of their liability-like characteristics.

14. Under GAAP, holders of surplus notes are required to account for such investments either at amortized cost or market value depending on their ability and intent with respect to holding the securities to maturity. *FASB Statement No. 115*, *Accounting for Certain Investments in Debt and Equity Securities (FAS 115)* has been rejected in its entirety in Issue Paper No. 26, *Issue Paper No. 28—Short-Term Investments*, *Issue Paper No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)*, *Issue Paper No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities)* and *Issue Paper No. 43—Loan-Backed and Structured Securities*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

Issuers

15. Chapter 24 of the P&C Accounting Practices and Procedures Manual and Chapter 27 of the Life/A&H Accounting Practices and Procedures manual provide the following guidance:

> Subordinated Surplus Debentures and Other Similar Instruments
>
> Insurers sometimes issue instruments that have the characteristics of both debt and equity. These instruments resemble debt inasmuch as they are repayable at interest and sometimes, dependent on the requirements of the domiciliary jurisdiction, include maturity dates and/or schedules of repayment. However, key provisions make these instruments tantamount to equity. These provisions are that they are allowable pursuant to the domiciliary jurisdiction's statutory, or

other regulatory provisions, approval requirements as to form and content and most importantly, interest may be paid and principal may be repaid only with the prior approval of the commissioner of the domiciliary jurisdiction. These instruments are sometimes referred to by other names including "surplus debentures", "contribution certificates", or "capital notes".

This type of funding shall not be used to initially capitalize an insurer other than a mutual or reciprocal insurer. However, this type of instrument provides regulators with flexibility in dealing with problem situations to attract capital to companies whose surplus levels are deemed inadequate to support an insurer's operations. It is noted that various jurisdictions' dividend limitations based on "earned surplus" inhibit possible investors from providing necessary surplus funding. Additionally, mutual and other types of non-stock insurers do not have access to the other forms of capital equity markets.

As noted in the various states' statutes that specifically provide for these types of instruments, these instruments may be reported as surplus and not as debt. This is due to the strict control which inures to the commissioners of those jurisdictions regarding the form and content of the instrument and the payment of interest and the repayment of principal.

The proceeds from this type of surplus acquisition must be in the form of cash, cash equivalents, or other assets having a readily determinable value satisfactory to the domiciliary commissioner. Insurers must clearly report the transaction in its "Notes to the Financial Statements" including the fact that payment of interest and repayment of principal is subject to the domiciliary jurisdiction's approval.

Interest on such instruments is to be reported as an expense and a liability only after payment has been approved. Accrued interest that has not been approved for payment:

1. should not be reported through operations;

2. should not be represented as an addition to the instrument; and,

3. may not accrue further interest, i.e., "interest on interest".

The amount of the accrued unapproved interest should be reflected in the "Notes to the Financial Statements".

When a domiciliary jurisdiction grants an insurer permission to report a surplus note instrument as a component of its surplus account, the surplus note document shall provide that in the event of liquidation, the claims under the instrument are subordinated to policyholder, claimant and beneficiary claims as well as debts owed to all other classes of creditors (creditors other than surplus note holder) and that all payment of principal and interest are not payable and shall not be paid until approved by the domiciliary commissioner. The claims of the holder of a surplus note may be superior to claims of the issuer's common and preferred shareholders if so provided in the instrument itself and duly authorized by the issuer. Such conditions shall also be clearly reported in the "Notes to the Financial Statements".

This section applies to all such above described instruments issued after the date of adoption (December 12, 1991).

16. NAIC Annual Statement Instructions contain the following guidance with respect to disclosure of surplus notes:

6. Capital and Surplus and Shareholders' and Policyholders' Dividend Restrictions

Instruction:

e. For each surplus debenture or similar obligation, except those surplus notes required or which are a prerequisite for purchasing an insurance policy and are held by the policyholder, included on Page 3, Line 24A, furnish the following information: date issued, interest rate, amount of note, carrying value (lower of amortized cost or market value), interest paid current year, total interest paid, accrued interest and date of maturity.

f. For each surplus debenture or similar obligation included in 6e, other than a surplus debenture which is issued in an offering registered under the Securities Act of 1933 or distributed in an underwritten offering pursuant to Rule 144A under the Securities Act of 1933, furnish:

- the name of the holder (indicate if parent or affiliate);
- description of the assets received; and
- the repayment conditions and restrictions.

For each surplus debenture or similar obligation included in 6e which is issued in an offering registered under the Securities Act of 1933 or distributed in an underwritten offering pursuant to Rule 144A under the Securities Act of 1933, furnish:

- the name of the underwriters (indicate if parent or affiliate);
- the name of the registrar/paying agent (indicate if parent or affiliate);
- the description of the assets received; and
- the repayment conditions and restrictions.

In addition to the above, identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933), and any holder of ten percent (10%) or more of the outstanding amount of any surplus debenture registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

Holders

17. The SVO Purposes and Procedures provides the following guidance with respect to investments in surplus notes:

Section 7: Procedures for Valuing Surplus Debentures

(A) An insurance company that owns surplus debenture(s) (notes) issued by another insurance company shall value the surplus debenture(s) as follows:

1. At amortized cost if the notes have been rated by a Nationally Recognized Statistical Rating Organization (NRSRO) and have a NAIC rating equivalent designation of 1. If the notes have been rated by more than one NRSRO, the lowest rating equivalent shall be used for purposes of this valuation procedure.

2. Notes that are not rated or have a NAIC rating equivalent designation of 2 through 6 shall be valued as follows:

   a. At its outstanding face value, notwithstanding the payment of interest and/or principal, when the notes were issued by an insurer whose capital and surplus (excluding the Asset Valuation Reserve and all surplus notes) is greater than or equal to the greater of 5% of its admitted assets (excluding separate accounts) or $6,000,000. The valuation should be calculated using the most recently filed statutory financial statement of the insurer that issued the notes;

   b. By applying the statement value factor to the outstanding face amount of the surplus notes, notwithstanding the payment of interest and/or principal, when the notes were issued by an insurer whose capital and surplus (excluding the Asset Valuation Reserve and all surplus notes) is less than the greater of 5% of admitted assets (excluding separate accounts) or $6,000,000. The statement value factor is equal to total capital and surplus, including surplus notes, less the greater of 5% of admitted assets (excluding separate accounts) or $6,000,000 divided by the surplus notes. The valuation should be calculated using the most recently filed statutory financial statement of the insurer that issued the notes;

3. At zero, notwithstanding any previous payments of interest and/or principal, when the notes are issued by an insurer which is subject to any order of liquidation, conservation, rehabilitation or a company action level event based on its risk-based capital.

Issuers of surplus debentures must obtain the latest rating letters from the NRSROs who rate their notes and file them with the Executive Director of the SVO semiannually on June l and December 1 of each year. If there is a change in the rating, the SVO should be notified immediately.

Surplus debenture(s) must not be valued in excess of the lesser of the value determined above or amortized cost and are to be reported in Schedule BA of the annual statement as other invested assets. For life insurers, the NRSRO rating equivalent may be used to report the surplus note statement value in the fixed income category of the other invested assets maximum reserve calculation. The maximum reserve factor should be the factors used for preferred-stocks not bonds. If no rating from a NRSRO exists, the surplus notes should be reserved on line 43 of the other invested asset maximum reserve calculation. This procedure is effective for all financial statements filed as of December 31, 1994, and thereafter.

(B) Issuers whose Surplus Notes are eligible for amortized value accounting by Holders pursuant to Section 7 (A). To be included on this list insurer holders or issuers must request listing and supply copies of appropriate NRSRO rating documents.

18. Chapter 9 of the Life/A&H Accounting Practices and Procedures Manual provides the following guidance for holders of surplus notes:

Surplus Notes:

Insurers sometimes make subordinated surplus contributions to other insurers via an instrument variously referred to as “surplus notes”, “surplus debentures”, “contribution certificates”, “capital notes”, etc. Generally, these instruments allow for payment of interest and repayment of principal only with the approval of the commissioner of the domiciliary jurisdiction of the insurer receiving the surplus infusion and issuing the instrument. The form and content of such instruments are

> also subject to regulatory approval. Where such approval conditions exist, insurers should report these instruments as admitted assets only in an amount as determined by the Securities Valuation Office (SVO) of the National Association of Insurance Commissioners. The holders of such instruments should never be allowed an admitted asset value more than that which would be allowed by considering the instruments as equity instruments and adding same to any other equity investments in the issuer held directly or indirectly by the holder of the instruments. In addition, such instruments shall be considered in the limitations on investments in affiliates. Investment income on these instruments shall not be reported as accrued until payment by the issuer has been approved by the insurer's domiciliary commissioner.

Generally Accepted Accounting Principles

19. The distinction between a liability and equity instrument in GAAP is found in *FASB Statement of Financial Accounting Concepts No. 6*, *Elements of Financial Statements* (only pertinent excerpts are included):

> 55. Although the line between equity and liabilities is clear in concept, it may be obscured in practice. Applying the definitions to particular situations may involve practical problems because several kinds of securities issued by business enterprises seem to have characteristics of both liabilities and equity in varying degrees or because the names given some securities may not accurately describe their essential characteristics. For example, convertible debt instruments have both liability and residual-interest characteristics, which may create problems in accounting for them. (*APB Opinion No. 14, Accounting for Convertible Debt and Debt Issued with Stock Purchase Warrants*, and *APB Opinion No. 15, Earnings per Share*, both discuss problems of that kind.) Preferred stock also often has both debt and equity characteristics, and some preferred stocks may effectively have maturity amounts and dates at which they must be redeemed for cash.

20. FAS 115 provides the following guidance with respect to investments in surplus notes:

> FAS 115 Summary
> Summary
>
> This Statement addresses the accounting and reporting for investments in equity securities that have readily determinable fair values and for all investments in debt securities. Those investments are to be classified in three categories and accounted for as follows:
>
> - Debt securities that the enterprise has the positive intent and ability to hold to maturity are classified as held-to-maturity securities and reported at amortized cost.
> - Debt and equity securities that are bought and held principally for the purpose of selling them in the near term are classified as trading securities and reported at fair value, with unrealized gains and losses included in earnings.
> - Debt and equity securities not classified as either held-to-maturity securities or trading securities are classified as available-for-sale securities and reported at fair value, with unrealized gains and losses excluded from earnings and reported in a separate component of shareholders' equity.
>
> This Statement does not apply to unsecuritized loans. However, after mortgage loans are converted to mortgage-backed securities, they are subject to its provisions. This Statement supersedes *FASB Statement No. 12, Accounting for Certain Marketable Securities*, and related Interpretations and amends *FASB Statement No. 65, Accounting for Certain Mortgage Banking Activities*, to eliminate mortgage-backed securities from its scope.

OTHER SOURCES OF INFORMATION

21. Article 5 of Regulation S-X of the Securities and Exchange Commission provides the following pertinent guidance:

Redeemable Preferred Stocks

28. Preferred stocks subject to mandatory redemption requirements or whose redemption is outside the control of the issuer. (a) Include under this caption amounts applicable to any class of stock which has any of the following characteristics: (1) it is redeemable at a fixed or determinable price on a fixed or determinable date or dates whether by operation of a sinking fund or otherwise; (2) it is redeemable at the option of the holder; or (3) it has conditions for redemption which are not solely within the control of the issuer, such as stocks which must be redeemed out of future earnings. Amounts attributable to preferred stock which is not redeemable or is redeemable solely at the option of the issuer shall be included under §210.5-02.29 unless it meets one or more of the above criteria.

(b) State on the face of the balance sheet the title of each issue, the carrying amounts and redemption amount. (If there is more than one issue, these amounts may be aggregated on the face of the balance sheet and details concerning each issue may be presented in the note required by paragraph (c) below.) Show also the dollar amount of any shares subscribed but unissued, and show the deduction of subscriptions receivable therefrom. If the carrying value is different from the redemption amount, describe the accounting treatment for such difference in the note required by paragraph (c) below. Also state in this note or on the face of the balance sheet, for each issue, the number of shares authorized and the number of shares issued or outstanding, as appropriate [See §210.4-071]

(c) State in a separate note captioned "Redeemable Preferred Stocks" (1) a general description of each issue, including its redemption features (e.g. sinking fund, at option of holders, out of future earnings) and the rights, if any, of holders in the event of default, including the effect, if any, on junior securities in the event a required dividend, sinking fund, or other redemption payment(s) is not made; (2) the combined aggregate amount of redemption requirements for all issues each year for the five years following the date of the latest balance sheet; and (3) the changes in each issue for each period for which an income statement is required to be filed. [See also § 210.4-08(d).]

(d) Securities reported under this caption are not to be included under a general heading "stockholders' equity" or combined in a total with items described in captions 29, 30 or 31 which follow.

Non-Redeemable Preferred Stocks

29. Preferred stocks which are not redeemable or are redeemable solely at the option of the issuer. State on the face of the balance sheet, or if more than one issue is outstanding state in a note, the title of each issue and the dollar amount thereof. Show also the dollar amount of any shares subscribed but unissued, and show the deduction of subscriptions receivable therefrom. State on the face of the balance sheet or in a note, for each issue, the number of shares authorized and the number of shares issued or outstanding as appropriate [See § 210.4-07l. Show in a note or separate statement the changes in each class of preferred shares reported under this caption for each period for which an income statement is required to be filed. [See also § 210.4-08(d).

Common Stocks

30. Common stocks. For each class of common shares state, on the face of the balance sheet, the number of shares issued or outstanding, as appropriate [see §210.4 07] and the dollar amount thereof. If convertible, this fact should be indicated on the face of the balance sheet. For each class of common shares state, on the face of the balance sheet or in a note, the title of the issue, the number of shares authorized, and, if convertible, the basis of conversion [see also § 210.4-08(d)]. Show also the dollar amount of any common shares subscribed but unissued, and show the deduction of subscriptions receivable therefrom. Show in a note or statement the changes in each class of common shares for each period for which an income statement is required to be filed.

Statutory Issue Paper No. 42

Sale of Premium Receivables

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 42

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance on the transfer or factoring of premium receivables with recourse is limited to the guidance provided in minutes of the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force (Emerging Accounting Issues Working Group). GAAP accounting provides guidance on accounting for sales of receivables with recourse. The purpose of this issue paper is to establish statutory accounting principles for the sale or factoring of premium receivables that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

2. For purposes of this issue paper, receivables shall only include amounts due to the reporting entity for premium receivables (uncollected premium, agent's balance receivables and bills receivables). As used in this paper, receivables do not represent amounts due to the reporting entity generated by the sale of invested assets.

3. A transfer of receivables can take the form of a transfer with recourse or a transfer without recourse:

a. Recourse shall be defined as the right of a transferee of receivables to receive payment from the transferor of those receivables for (i) failure of the debtors to pay when due, (ii) the effects of prepayments, or (iii) adjustments resulting from defects in the eligibility of the transferred receivables, for example defects in the legal title of the transferred receivables. When the transferor has the right to repurchase ("call") or the transferee has the right to require the transferor to repurchase (a "put") the transferred receivables, the transfer shall be considered to have recourse.

b. Without recourse shall be defined as the transferor surrendering all of the future economic implications of the risks and rewards embodied in the transferred receivables.

4. A transfer of receivables with recourse shall not be recognized as a sale. A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received.

5. If a transfer qualifies to be recognized as a sale, the difference between (a) the sales price and (b) the receivables transferred shall be recognized as a gain or loss. If receivables are sold with servicing retained and the stated servicing fee is less than a current (normal) servicing fee rate (a servicing fee rate that is representative of servicing fee rates most commonly used in comparable servicing agreements covering similar types of receivables) or no servicing fee is specified, the gain or loss recognized by the sale of receivables shall be adjusted to recognize the deviation of the stated servicing fee rate from the commonly used servicing fee rate and a liability shall be established to provide for a normal servicing fee

in each subsequent servicing period, which shall not be less than the estimated servicing costs. When the stated servicing fee is greater than a normal servicing fee the gain or loss shall not be adjusted and the excess servicing fee revenues shall not be recorded currently but shall be recorded when realized.

6. If the conditions of subparagraph 3b. are not met, or the transfer is for other than cash, the receivables shall remain on the transferor's financial statements. A liability shall be established in an amount equal to the greater of the carrying amount of the receivables transferred or the amount of the proceeds received. To the extent that the proceeds received are less than the carrying amount of receivables transferred, a loss shall be recorded. The carrying amount of the receivable balance shall be evaluated at each reporting period and adjusted for any uncollectible amounts. The liability shall be relieved as the transferee receives cash. When the proceeds received are greater than the receivables transferred the liability shall be relieved on a pro rata basis as the receivables are collected.

Disclosures

7. For transfers of receivables reported as sales, the transferor's financial statements shall disclose (a) the proceeds to the transferor and (b) the gain or loss recorded on the sale.

DISCUSSION

8. The conclusion above rejects paragraph 83 of *FASB Statement No. 125*, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125) to the extent that it permits sales recognition for sales of receivables with recourse provisions.

9. Deferring the recognition of a gain for transfers of receivables which do not meet the criteria in subparagraph 3b. or are for other than cash is consistent with the conservatism concept in the Statement of Concepts. In addition, it prevents the recognition of income before the earnings process is completed as prescribed in the recognition concept of the Statement of Concepts. The receipt of cash for the transfer of receivables that were either admitted assets or non-admitted assets when there are no recourse provisions involved represents a completed transaction and as such the receivable is deemed to have been collected.

Drafting Notes/Comments

- Securitization of investments is addressed in *Issue Paper No. 86—Securitization*.
- Reinsurance receivables are addressed in *Issue Paper No. 75—Property and Casualty Reinsurance*.
- Related party transactions are addressed in *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

10. Current statutory accounting guidance on the sale or factoring of premium receivables with recourse is limited to the guidance provided in the June 10, 1991 minutes of the Emerging Accounting Issues Working Group. This guidance relates to the accounting for “Intercompany Related Receivable Sales”. The minutes provide guidance as follows: “The working group concluded that, in most instances, this type of transaction should be treated as a loan or financing arrangement and FAS 77 should be used for guidance, particularly as it may relate to affiliates and also to transactions between affiliates.”

Statutory Issue Paper No. 43

Loan-Backed and Structured Securities

STATUS
Finalized March 16, 1998

Original SSAP: SSAP No. 43; Current Authoritative Guidance: SSAP No. 43R
This issue paper may not be directly related to the current authoritative statement.

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for investments in loan-backed and structured securities is contained in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. That guidance also establishes the NAIC's Securities Valuation Office (SVO) as the primary authority for the valuation of such investments.

2. The purpose of this issue paper is to establish statutory accounting principles for investments in loan-backed and structured securities that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Loan-backed securities shall be defined as pass-through certificates, collateralized mortgage obligations (CMOs) and other "securitized" loans not included in structured securities, as defined below, for which the payment of interest and/or principal is directly proportional to the interest and/or principal received by the issuer from the mortgage pool or other underlying securities. Structured securities shall be defined as loan-backed securities which have been divided into two or more classes for which the payment of interest and/or principal of any class of securities has been allocated in a manner which is not proportional to interest and/or principal received by the issuer from the mortgage pool or other underlying securities. Loan-backed securities and structured securities are collectively referred to as loan-backed securities in this issue paper.

4. Loan-backed securities meet the definition of assets as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this issue paper.

5. The acquisitions and dispositions of loan-backed securities shall be recorded on the trade date. At acquisition, loan-backed securities shall be reported at their cost, including brokerage and related fees. For securities where all information is not known as of the trade date (i.e., actual payment factors, specific pools, etc.), a reporting entity shall make its best estimate based on known facts.

6. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses on sales of loan-backed securities shall be in accordance with *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.* For reporting entities not required to maintain an IMR, realized gains and losses on sales of loan-backed securities shall be recorded on the trade date, and shall be reported on the net realized gains or losses line of the Investment Income section of the Statement of Operations.

Origination Fees

7. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the loan-backed security consistent with paragraph 11 of this issue paper. Other origination fees shall be recorded as income upon receipt.

Origination, Acquisition, and Commitment Costs

8. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the loan-backed security, consistent with paragraph 5 of this issue paper. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase, or commitment to purchase loan-backed securities, shall be charged to expense when incurred.

Commitment Fees

9. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the loan-backed security is issued. If the loan-backed security is not issued then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

10. A fee paid to the reporting entity to obtain a commitment to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 11 of this issue paper over the life of the loan-backed security as an adjustment to the investment income on the loan-backed security. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Amortized Cost

11. The purchase discount or premium shall be amortized using the interest method as an adjustment to investment income. The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which redemption of the loan-backed securities is expected to occur, not the stated maturity period.

Balance Sheet Amount

12. Loan-backed securities shall be valued and reported in accordance with the NAIC Valuations of Securities manual prepared by the Securities Valuation Office. For reporting entities that maintain an Asset Valuation Reserve (AVR), the loan-backed securities shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or market value. For reporting entities that do not maintain an AVR, loan-backed securities that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; with all other loan-backed securities (NAIC designations 3 to 6) reported at the lower of amortized cost or market value.

Changes in Valuation

13. Changes in prepayment assumptions and the resulting cash flows shall be reviewed periodically. For securities that have the potential for loss of a portion of the original investment due to changes in interest rates or prepayments, such review shall be performed quarterly. Examples of securities that have the potential for loss of a portion of the original investment include CMO residuals and

mortgage-backed interest-only certificates. For such securities, an effective yield or internal rate of return is calculated at acquisition based on the purchase price and anticipated future cash flows. For other investments, such review may be performed annually. The prepayment rates of the underlying loans shall be used to determine prepayment assumptions. Prepayment assumptions should be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities should also use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine prepayment assumptions should be documented by the reporting entity.

14. Loan-backed securities shall be revalued using the new prepayment assumptions using either the prospective or retrospective adjustment methodologies, as defined in paragraph 31, consistently applied by type of securities. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under this method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the undiscounted anticipated cash flow is less than the carrying amount of the investment. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

Impairment

15. Regardless of whether a reporting entity is using a prospective or retrospective method, if the revaluation based on new prepayment assumptions results in a negative yield (undiscounted estimated future cash flows are less than the current book value), an other than temporary impairment shall be considered to have occurred. Accordingly, the cost basis of the loan-backed security shall be written down to the undiscounted estimated future cash flows and the amount of the write down shall be accounted for as a realized loss (which shall be included in IMR). The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore the prospective adjustment method must be utilized for periods subsequent to the loss recognition.

Income

16. Interest shall be accrued using the interest method using the redemption prices and redemption dates used for amortizing premiums and discounts. Interest income for any period consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of loan-backed securities, and the addition of discount accrual. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

17. A loan-backed security may provide for a prepayment penalty or acceleration fee in the event the investment is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

Loaned Loan-Backed Securities

18. When loan-backed securities are loaned, they remain either admitted or nonadmitted assets of the reporting entity and are not removed from the accounting records as the reporting entity remains the owner of the securities. When collateral is provided and it is deposited for the general use of the reporting entity, it becomes either an admitted or nonadmitted asset of the reporting entity based on its characteristics, and a liability for the return of that collateral must be established. When collateral not available for the general use of the reporting entity is provided, it should not be recognized as an asset of the reporting entity. When non-cash collateral is provided, the current market value of that collateral must be used to determine adequacy of the collateral held relative to the current market value of the loaned securities.

Wash Sales

19. When investments in loan-backed securities are sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales, and shall be accounted for as sales and disclosed as required by paragraph 25. Unless there is a concurrent contract to repurchase or redeem the transferred security from the transferee, the transferor does not maintain effective control over the security.

Giantization/Megatization of FHLMC or FNMA Mortgage Backed Securities

20. Giantization/megatization of mortgage backed securities is defined as existing pools of FHLMC or FNMA mortgage-backed securities (MBS) with like coupon and prefix which are repooled together by the issuing agency creating a new larger security. The new Fannie Mae “Mega” or Freddie Mac “Giant” is a guaranteed MBS pass-through representing an undivided interest in the underlying pools of loans.

21. The benefits derived from giantization/megatization include:

a. Increased liquidity: Smaller MBS pools (particularly those with current face of less than $1 million) are less liquid than mortgage pools with current faces exceeding $5 million. Repooling smaller MBS pools into one, larger pool improves the marketability for the aggregate package;

b. Geographic diversity: Regrouping of multiple pools generally will create greater geographic pool loan diversity resulting in less prepayment variation due to regional economic factors;

c. Reduced administrative expenses: The reduced number of pools lowers bank custodial fees, pricing/factor service fees, and increases efficiency for the accounting and investment departments.

22. Repooled FHLMC and FNMA securities meet the definition of substantially the same as defined in *Issue Paper No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements* (Issue Paper No. 45*)*. The transaction shall not be considered a sale/purchase and no gain or loss shall be recognized. To properly document the repooling, the transaction shall be reported through Schedule D of the Annual Statement as a disposition and an acquisition.

23. Transaction fees charged by the issuing agencies shall be capitalized and amortized over the life of the repooled security.

Disclosures

24. In addition to the disclosures required for invested assets in general, reporting entities shall disclose the following about their loan-backed securities in the notes to the financial statements:

a. Fair values in accordance with *Issue Paper No. 33—Disclosures about Fair Value of Financial Instruments*

b. Concentrations of credit risk in accordance with *Issue Paper No. 27—Disclosure of Information about Financial Instruments with Concentration of Credit Risk*

c. Basis at which the loan-backed securities are stated

d. The adjustment methodology used for each type of security (prospective or retrospective)

e. Changes from the retrospective to the prospective adjustment methodology due to negative yield on specific securities.

f. If a reporting entity elects to use book value as of January 1, 1994 as the cost, for securities purchased prior to January 1, 1994 where historical cash flows are not readily available for applying the retrospective method, that fact shall be disclosed.

g. Descriptions of sources used to determine prepayment assumptions

h. Market value sources (The following sources shall be applied consistently 1) public market quotes, 2) fair value provided by the broker, 3) management estimate, 4) pricing service, 5) pricing matrix).

i. If the reporting entity has entered into securities lending transactions, its policy for requiring collateral and a description, including the amount, of loaned securities.

25. Reporting entities shall disclose the following information for wash sales, as defined in paragraph 19, involving transactions for securities with a NAIC designation of 3 or below, or unrated:

a. A description of the reporting entity's objectives regarding these transactions;

b. An aggregation of transactions by NAIC Designation 3 or below, or unrated;

c. The number of transactions involved during the reporting period;

d. The book value of securities sold;

e. The cost of securities repurchased;

f. The realized gains/losses associated with the securities involved.

DISCUSSION

26. The statutory accounting principles described in the summary conclusion section adopt current statutory accounting guidance, for loan-backed securities, contained in paragraph 32 (which becomes fully effective for 1995), except as follows:

a. Paragraph 5 requires loan-backed securities acquisitions and dispositions to be recorded on the trade date, whereas current statutory guidance is silent.

b. Paragraph 19 provides guidance on wash sales of loan-backed securities.

c. Paragraph 40 provides guidance concerning the criteria which constitutes what are the same or substantially the same investments as defined in conjunction with dollar repurchase agreements. Due to the similarities between the investments discussed herein and the investments which underlie dollar repurchase agreements, the utilization of the same criteria to define "the same and substantially the same" investments appears reasonable and consistent.

27. This issue paper rejects the GAAP guidance for loan-backed securities, which is contained in *FASB Statement No. 115*, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115), *FASB Statement No. 91*, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases* (FAS 91), *FASB Emerging Issues Task Force No. 89-4*, *Accounting for a Purchased Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate, FASB Emerging Issues Task Force No. 90-2, Exchange of Interest-Only and Principal-Only Securities for a Mortgage-Backed Security, FASB Emerging Issues Task Force No. 93-18, Recognition of Impairment for an Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate,* and *FASB Emerging Issues Task Force No. 96-12, Recognition of Interest Income and Balance Sheet Classification of Structured Notes.*. The primary differences between the statutory accounting principles established in this issue paper and GAAP are as follows:

a. FAS 115 requires investments in debt securities to be classified into three categories: held-to-maturity, available-for-sale and trading. Held-to-maturity securities are reported at amortized cost. Available-for-sale are reported at fair value, with unrealized gains or losses reported as a separate component of shareholders' equity. Trading securities are reported at fair value, with unrealized gains or losses included in earnings.

b. GAAP does not require reporting of AVR.

c. FAS 91 and EITF 89-4 require that (1) for other than high-risk loan-backed securities, adjustments to the effective yield be for changes in prepayment assumptions be made on a retrospective basis; (2) for high-risk CMOs, such adjustments be made on a prospective basis.

d. FAS 91 allows deferral of certain origination costs.

e. Under this issue paper, impairment is measured based on nondiscounted estimated cash flows. *Emerging Issues Task Force Issue No. FASB 93-18*, *Recognition of Impairment for an Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate.* (EITF 93-18) requires that impairment be measured based on discounted cash flows.

28. This issue paper adopts paragraphs 9-12, 15, 17, 23-31 and 61-65 of *FASB Statement No. 125*, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125*)* as they relate to loan-backed securities. Paragraph 14 is rejected as it relates to the classifications of securities under FAS 115. FAS 115 was rejected in *Issue Paper No. 26—Bonds, Excluding Loan-Backed and Structured Securities.*

29. The guidance on loaned securities in this issue paper is drafted under the general rule that securities lending transactions do not meet the criteria for surrender of control necessary to classify the transaction as a sale. If the criteria in paragraph 9 of FAS 125 regarding surrender of control are met, the transaction shall be accounted for by the transferor as a sale of the "loaned" securities.

30. *AICPA Statement of Position 90-3*, *Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position* (SOP 90-3) is consistent with paragraph 35 of this issue paper and has been adopted in Issue Paper No. 45.

31. The statutory accounting principles established in this issue paper attempt to smooth the effect upon a reporting entity's surplus of fair value fluctuation of investments held by the reporting entity. This is consistent with the Statement of Concepts which states that *"conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results."* Statutory accounting principles for life insurance companies also use the concept of AVR and Interest Maintenance Reserve (IMR) adjustments to compensate for fair value fluctuations over time.

Drafting Notes/Comments

- Investment income due and accrued is addressed in *Issue Paper No. 34—Investment Income Due and Accrued*.
- Accounting for AVR and IMR is addressed in *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.*
- *Issue Paper No. 26—Bonds, Excluding Loan-Backed and Structured Securities* addresses accounting for bonds.
- Special purpose subsidiaries used to securitize loans are addressed in *Issue Paper No. 86—Securitization*. That issue paper addresses the situation whereby a reporting entity securitizes loans through the special purpose entity, and then purchases the resultant securities as investments

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

32. Chapter 1, *Bonds and Loaned Backed and Structured Securities*, in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies contains the following guidance relating to loan-backed and structured securities:

ACCOUNTING FOR LOAN-BACKED AND STRUCTURED SECURITIES (CMOs)

> Description
>
> Loan-backed and structured securities are financial instruments designed to channel funds from capital markets to mortgage borrowers. The investments are structured so that all or substantially all of the collections of principal and interest from the underlying collateral are paid through to the investor.
>
> Loan-backed securities are defined as pass-through certificates, collateralized mortgage obligations (CMOs) and other securitized loans not included in structured securities as defined in the next paragraph. The payment of interest and/or principal on loan-backed securities is directly proportional to the interest and/or principal received by the issuer from the mortgage pool or other underlying securities.
>
> Structured securities are defined as loan-backed securities which have been divided into two or more classes, where the payment of interest and/or principal of any class of the securities has been allocated in a manner which is not proportional to interest and/or principal received by the

issuer from the mortgage pool or underlying securities. Structured securities have been further defined as collateralized mortgage obligations and other structured securities for Schedule D reporting and disclosures.

These investments are issued by special-purpose corporations or trusts (issuer) established by a sponsoring parent organization. Mortgage loans or other securities securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer's obligation has been fully satisfied. The investor can look only to the issuer's assets (primarily the trusteed assets or third parties such as insurers or guarantors) for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying mortgage loans. Some sponsors do guarantee the performance of the underlying loans.

At purchase, loan-backed and structured securities are recorded at purchase cost. Discount or premium is recorded for the difference between the purchase price and the principal amount. The discount or premium is amortized using the interest method and is recorded as an adjustment to investment income. The interest method results in the recognition of a constant rate of return on the investment equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments of book value.

Prepayment Assumptions

Prepayments are a significant variable element in the cash flow of the investment because they affect the yield and determine the expected maturity against which the yield is evaluated. Falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the insurance company to reinvest assets much sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created by rising interest rates which slow repayment and can significantly lengthen the duration of the security.

Because performance of these securities is highly sensitive to prepayment rates, assumptions must be reviewed at least annually. Assumptions used for securities that have the potential for loss of a portion of the original investment due to changes in interest rates or prepayments should be reviewed quarterly. Changes in prepayment assumptions and the resulting cash flows must be considered when determining the carrying value of the security in periods after purchase.

Securities should be revalued using the new prepayment assumptions resulting from the annual or quarterly review. The effective yield is calculated using anticipated cash flows of the security based on an assumption of prepayment rates of the underlying loans. Variable rate securities or floaters, should use a constant rate of interest determined at the date of the calculation.

Prepayment assumptions should be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Companies should also use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each company may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry.

Relevant sources and rationale used to determine prepayment assumptions should be documented by the company.

Adjustment Methodologies

Both the prospective and retrospective adjustment methodologies are acceptable when revaluing these investments. The methods require that the effective yield be recalculated at each reporting date if there has been a change in the underlying assumptions. A company or a controlled affiliated group must choose a method for each type of security and consistently apply it to the security type. A security type describes the principal payment and interest payment characteristics of the security. For structured securities, the issuing agencies have developed a set of standard definitions for REMIC and CMO bonds describing principal and interest payment types.

Prospective Method

The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all past cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under this method, the recalculated effective yield will equate the carrying amount of the investment to the present value of anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for the subsequent accounting period. No change in the carrying amount is required to be recognized unless the undiscounted anticipated cash flow is less than the carrying amount of the investment.

Retrospective Method

The retrospective method changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance of the investment is increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

Under this method, the adjustment to book value to recognize premium or discount on payments that differed from estimates is called a true-up. Since it is an adjustment to yield, the offset to the book value is a charge or credit to investment income.

Negative Yield

Using either the prospective or retrospective method, if the revaluation based on new prepayment assumptions results in a negative effective yield (estimated future cash flows are less than the current book value), the security should be valued at the undiscounted estimate of anticipated future cash flows. Writedowns representing a loss in value should be treated as a realized capital loss and included in the IMR. The loss should be amortized over the weighted average life consistent with the valuation of the security at the time of the loss recognition.

At the time of recognition, a new cost basis should be established for the security. In future periods, the security cannot be written up and therefore the prospective adjustment methodology must be used for periods subsequent to the loss recognition.

A company should be able to identify those securities for which a negative yield adjustment was taken.

Investment Limitations

Loan-backed securities including CMOs and other structured securities may be subject to limitations established by the state of domicile.

Effective Date

The guidance in this chapter is effective for the year ending December 31, 1994 for loan-backed and structured securities that have the potential for loss of a portion of the original investment, such as losses arising from changes in interest rates or prepayments rates. (These securities should include, but are not limited to, interest-only structured securities and structured securities purchased at a significant premium over par value.) These accounting and reporting principles are effective for all loan-backed and structured securities for the year ending December 31, 1995. Companies may adopt compliance earlier, if desired.

For securities purchased prior to January 1, 1994 where historical cash flows are not readily available for applying the retrospective method, the company may use January 1, 1994 as the acquisition date and the then book value as the cost for purposes of determining yield adjustments in future periods. If this option is selected, a company should disclose that fact in the footnote where it presents the amortization methods used.

33. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies contains similar guidance.

34. The *Purposes and Procedures Manual of the NAIC Securities Valuation Office* - Section 2 - Procedures for Determining NAIC Designations for Bonds contains guidance on loan-backed securities. Pertinent excerpts are as follows:

(1) Collateralized Obligations. The ability of any type of collateral to enhance or fully support the contractual provisions of any security will be taken into account by the SVO only if acceptable documentary evidence is provided. This might include, but is not limited to the filing of the SVO's Collateral Loan form where appropriate, the original due diligence package, appraisal reports, valuations of business entities reports or any other relevant supporting information.

(18) Loan-backed and Structured Securities. The SVO encourages insurers to obtain ratings for loan-backed and structured securities submitted for an NAIC designation from an NAIC approved NRSRO. For unrated structured securities acquired by conversion i.e., securitization, refer to Section 6(B)(g)(i) for instructions.

(E) Instructions for Completing Schedule D of the NAIC Annual Statement

The following table indicates the appropriate entries to be made in Schedule D of the NAIC Annual Statement for all bonds except income bonds (see Section 2(C)(1)) and perpetual bonds and demand notes (see Section 2(C)(2)).

(1) For Insurers Maintaining an Asset Valuation Reserve (AVR) (see Section 6)

NAIC DESIGNATION COLUMN	AMORTIZED OR INVESTMENT VALUE COLUMN	MARKET VALUE COLUMNS	
		RATE	AMOUNT
1	Amortized Cost	SVO Market Rate if shown or A.V. if No Rate shown in VOS Manual	
2	Amortized Cost		Par Value X Rate or Amortized Cost if No Rate Available
3	Amortized Cost		
4	Amortized Cost		
5	Amortized Cost		
6	The lesser of the Market Value Amount or Amortized Cost		Lower of Amortized Cost or Par Value times Market Rate

A.V. = Bond has been valued at amortized value and that value should appear in the Market Value Amount Column.

(2) For Property and Casualty Insurers and All Other Insurers Not Maintaining an Asset Valuation Reserve (AVR)

NAIC DESIGNATION COLUMN	AMORTIZED OR INVESTMENT VALUE COLUMN	MARKET VALUE COLUMNS	
		RATE	MARKET VALUE
1	Amortized Cost		Par Value X Rate or A.V. if no rate available
2	Amortized Cost	SVO Market Rate if shown or A.V. if No Rate shown In VOS Manual	
3	The lesser of the Market Value Amount Or the Amortized Cost		Lower of Amortized Cost or Par Value X Rate
4	The lesser of the Market Value Amount or the Amortized Cost		Lower of Amortized Cost or Par Value X Rate
5	The lesser of the Market Value Amount or the Amortized Cost		Lower of Amortized Cost or Par Value X Rate
6	The lesser of the Market Value Amount or the Amortized Cost		Lower of Amortized Cost or Par Value X Rate

A.V. = Bond has been valued at amortized value and that value should appear in the Market Value Amount Column.

35. Chapter 1, Bonds and Loan Backed and Structured Securities, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, contains the following guidance concerning the criteria which constitutes investments which are "the same or substantially the same" for dollar repurchase agreements:

a. The mortgage-backed securities must have the same primary obligor, except for securities guaranteed by the United States or an agency, thereof, in which case the guarantor must be the same.

b. The mortgage-backed securities must be identical in form and type. For example, the exchange of GNMA I securities for GNMA II securities would not meet the criterion.

c. The mortgage-backed securities must bear the identical contractual interest rate.

d. The mortgage-backed securities must be similar with respect to maturities (expected remaining lives) resulting in approximately the same market yield.

e. The mortgage-backed securities must be collateralized by a similar pool of mortgages, such as single-family residential mortgages.

f. The aggregate principal amounts of the mortgage-backed securities sold and repurchased must be substantially the same. For mortgage-backed securities to meet this criterion, the principal amount of the certificates repurchased must be within 2.5

percent (plus or minus) of the principal amount of the original certificates. For example, if the principal amount of mortgage-backed securities sold is $1,000,000, the principal amount of mortgage-backed securities reacquired must be between $1,025,000 and $975,000 to qualify under this criterion.

Generally Accepted Accounting Principles

36. GAAP guidance is promulgated by FAS 115. Pertinent excerpts are as follows:

> Accounting for Certain Investments in Debt and Equity Securities
>
> 6. At acquisition, an enterprise shall classify debt and equity securities into one of three categories: held-to-maturity, available-for-sale, or trading. At each reporting date, the appropriateness of the classification shall be reassessed.
>
> Held-to-Maturity Securities
>
> 7. Investments in debt securities shall be classified as held-to-maturity and measured at amortized cost in the statement of financial position only if the reporting enterprise has the positive intent and ability to hold those securities to maturity.
>
> Trading Securities and Available-for-Sale Securities
>
> 12. Investments in debt securities that are not classified as held-to-maturity and equity securities that have readily determinable fair values shall be classified in one of the following categories and measured at fair value in the statement of financial position:
>
> a. Trading securities. Securities that are bought and held principally for the purpose of selling them in the near term (thus held for only a short period of time) shall be classified as trading securities. Trading generally reflects active and frequent buying and selling, and trading securities are generally used with the objective of generating profits on short-term differences in price. Mortgage-backed securities that are held for sale in conjunction with mortgage banking activities, as described in *FASB Statement No. 65, Accounting for Certain Mortgage Banking Activities*, shall be classified as trading securities. (Other mortgage-backed securities not held for sale in conjunction with mortgage banking activities shall be classified based on the criteria in this paragraph and paragraph 7.)
>
> b. Available-for-sale securities. Investments not classified as trading securities (nor as held-to-maturity securities) shall be classified as available-for-sale securities.
>
> Reporting Changes in Fair Value
>
> 13. Unrealized holding gains and losses for trading securities shall be included in earnings. Unrealized holding gains and losses for available-for-sale securities (including those classified as current assets) shall be excluded from earnings and reported as a net amount in a separate component of shareholders' equity until realized. Paragraph 36 of *FASB Statement No. 109, Accounting for Income Taxes*, provides guidance on reporting the tax effects of unrealized holding gains and losses reported in a separate component of shareholders' equity.
>
> 14. Dividend and interest income, including amortization of the premium and discount arising at acquisition, for all three categories of investments in securities shall continue to be included in earnings. This Statement does not affect the methods used for recognizing and measuring the amount of dividend and interest income. Realized gains and losses for securities classified as either available-for-sale or held-to-maturity also shall continue to be reported in earnings.

Impairment of Securities

16. For individual securities classified as either available-for-sale or held-to-maturity, an enterprise shall determine whether a decline in fair value below the amortized cost basis is other than temporary. For example, if it is probable that the investor will be unable to collect all amounts due according to the contractual terms of a debt security not impaired at acquisition, an other-than-temporary impairment shall be considered to have occurred.[4] If the decline in fair value is judged to be other than temporary, the cost basis of the individual security shall be written down to fair value as a new cost basis and the amount of the write-down shall be included in earnings (that is, accounted for as a realized loss). The new cost basis shall not be changed for subsequent recoveries in fair value. Subsequent increases in the fair value of available-for-sale securities shall be included in the separate component of equity pursuant to paragraph 13; subsequent decreases in fair value, if not an other-than-temporary impairment, also shall be included in the separate component of equity.

----

[4] A decline in the value of a security that is other than temporary is also discussed in AICPA Auditing Interpretation, Evidential Matter for the Carrying Amount of Marketable Securities, which was issued in 1975 and incorporated in Statement on Auditing Standards No. 1, Codification of Auditing Standards and Procedures, as Interpretation 20, and in SEC Staff Accounting Bulletin No. 59, Accounting for Noncurrent Marketable Equity Securities.

----

37. FAS 91 provides the following guidance:

Purchase of a Loan or Group of Loans

15. The initial investment in a purchased loan or group of loans shall include the amount paid to the seller plus any fees paid or less any fees received. The initial investment frequently differs from the related loan's principal amount at the date of purchase. This difference shall be recognized as an adjustment of yield over the life of the loan. All other costs incurred in connection with acquiring purchased loans or committing to purchase loans shall be charged to expense as incurred.

Application of the Interest Method and Other Amortization Matters

18. Net fees or costs that are required to be recognized as yield adjustments over the life of the related loan(s) shall be recognized by the interest method except as set forth in paragraph 20. The objective of the interest method is to arrive at periodic interest income (including recognition of fees and costs) at a constant effective yield on the net investment in the receivable (that is, the principal amount of the receivable adjusted by unamortized fees or costs and purchase premium or discount). The difference between the periodic interest income so determined and the stated interest on the outstanding principal amount of the receivable is the amount of periodic amortization.[6] Under the provisions of this Statement, the interest method shall be applied as follows when the stated interest rate is not constant throughout the term of the loan:

[6] The “interest” method is also described in paragraph 16 of APB Opinion No. 12, Omnibus Opinion--1967, in the first sentence of paragraph 15 of *APB Opinion No. 21, Interest on Receivables and Payables*, and in paragraphs 235-239 of *FASB Concepts Statement No. 6, Elements of Financial Statements*.

a. If the loan's stated interest rate increases during the term of the loan (so that interest accrued under the interest method in early periods would exceed interest at the stated rate), interest income shall not be recognized to the extent that the net investment in the loan would increase to an amount greater than the amount at which the borrower could settle the obligation. Prepayment penalties shall be considered in determining the amount at which the borrower could settle the obligation only to the extent that such penalties are imposed throughout the loan term. (Refer to Appendix B.)

b. If the loan's stated interest rate decreases during the term of the loan, the stated periodic interest received early in the term of the loan would exceed the periodic interest income that is calculated under the interest method. In that circumstance, the excess shall be deferred and recognized in those future periods when the constant effective yield under the interest method exceeds the stated interest rate. (Refer to Appendix B.)

c. The loan's stated interest rate varies based on future changes in an independent factor, such as an index or rate (for example, the prime rate, the London Interbank Offered Rate (LIBOR), or the U.S. Treasury bill weekly average rate), the calculation of the constant effective yield necessary to recognize fees and costs shall be based either on the factor (the index or rate) that is in effect at the inception of the loan or on the factor as it changes over the life of the loan. [7] (Refer to Appendix B.)

[7] A variable rate loan whose initial rate differs from the rate its base factor would produce is also subject to the provisions of paragraphs 18.a. and 18.b.

19. Except as stated in the following sentence, the calculation of the constant effective yield necessary to apply the interest method shall use the payment terms required by the loan contract, and prepayments of principal shall not be anticipated to shorten the loan term. If the enterprise holds a large number of similar loans for which prepayments are probable and the timing and amount of prepayments can be reasonably estimated, the enterprise may consider estimates of future principal prepayments in the calculation of the constant effective yield necessary to apply the interest method. If the enterprise anticipates prepayments in applying the interest method and a difference arises between the prepayments anticipated and actual prepayments received, the enterprise shall recalculate the effective yield to reflect actual payments to date and anticipated future payments. The net investment in the loans shall be adjusted to the amount that would have existed had the new effective yield been applied since the acquisition of the loans. The investment in the loans shall be adjusted to the amount that would have existed had the new effective yield been applied since the acquisition of the loans. The investment in the loans shall be adjusted to the new balance with a corresponding charge or credit to interest income. Enterprises that anticipate prepayments shall disclose that policy and the significant assumptions underlying the prepayment estimates. The practice of recognizing net fees over the estimated average life of a group of loans shall no longer be acceptable. (Refer to Appendix B.)

38. EITF 89-4 provides the following guidance:

Emerging Issues Task Force No. 89-4, Accounting for a Purchased Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-only Certificate

ISSUE

Collateralized mortgage obligations and certain participating interests in real estate mortgage investment conduits (REMICs) (hereinafter collectively referred to as CMOs) are typically issued by a special-purpose entity (the issuer). The issuer may be organized in a variety of legal forms, such as a trust, a corporation, or a partnership. Accordingly, an investor may purchase a CMO instrument in equity form (for example, trust interests, stock, or partnership interests) or nonequity form (for example, participating debt securities). CMOs are collateralized by mortgage loans or mortgage-backed securities that are transferred to the CMO trust or pool by a sponsor. The issuer is structured so that collections from the underlying collateral provide the cash flow to make principal and interest payments on the obligations, or tranches, of the issuer.

Some CMO instruments, regardless of legal form, are most like debt instruments because those CMO instruments have stated principal amounts and traditional defined interest rate terms. Purchasers of certain other CMO instruments are entitled to the excess, if any, of the issuer's cash inflows, including reinvestment earnings, over the cash outflows for debt service and administrative expenses. Those CMO instruments, regardless of legal form, may include instruments designated as residual interests and are “high-risk” in that these CMO instruments could result in the loss of a portion of the original investment.

When accounting for a purchased investment in a CMO, the issues are:

1. Which factors (legal form, economic substance, or other factors) should be considered in determining whether to account for CMO instruments as equity or nonequity

2. What attribute(s) of nonequity high-risk CMO instruments and mortgage-backed interest-only certificates distinguishes them as a group of instruments that should be accounted for similarly

3. How an investment in a nonequity high-risk CMO instrument or in a mortgage-backed interest-only certificate should be accounted for in subsequent periods; specifically, how current and expected future cash flows should be allocated between income and return of investment in each accounting period.

EITF DISCUSSION

The Task Force reached a consensus as follows:

Issue 1

The Task Force reached a consensus that the accounting for a purchased investment in a CMO instrument should generally be consistent with the form of the investment. However, some CMO instruments issued in the form of equity represent solely the purchase of a stream of future cash flows to be collected under preset terms and conditions. Consequently, a purchased investment in a CMO instrument in equity form meeting all of the following criteria is required to be accounted for as a nonequity investment regardless of the legal form of the instrument (for example, beneficial interest in a trust, common stock, or partnership interest):

1. The assets in the special-purpose entity were not transferred to the special-purpose entity by the purchaser of the CMO instrument. [1]

[1] An investor in a CMO instrument who transferred assets to the related special-purpose entity should follow the accounting established by Statement 77 or Technical Bulletin 85-2, as applicable.

2. The assets of the special-purpose entity consist solely of a large number of similar high-credit-quality monetary assets [2] (or one or more high-credit-quality mortgage-backed securities that provide an undivided interest in a large number of similar mortgage loans) for which prepayments are probable and the timing and amounts of prepayments can be reasonably estimated.

[2] High-credit-quality monetary assets as used herein include only (1) assets guaranteed by the U.S. government, its agencies, or other creditworthy guarantors and (2) mortgage loans or mortgage-backed securities sufficiently collateralized to ensure that the possibility of credit loss is remote.

3. The special-purpose entity is self-liquidating, that is, it will terminate when the existing assets are fully collected and the existing obligations of the special-purpose entity are fully paid.

4. Assets collateralizing the obligations of the special-purpose entity may not be exchanged, sold, or otherwise managed as a portfolio, and the purchaser has neither the right nor the obligation to substitute assets that collateralize the entity's obligations.

5. There is no more than a remote possibility that the purchaser would be required to contribute funds to the special-purpose entity to pay administrative expenses or other costs.

6. No other obligee of the special-purpose entity has recourse to the purchaser of the investment.

The ability of a purchaser of a CMO instrument to call other CMO tranches of the special-purpose entity generally will not preclude treatment of the purchaser's investment as a nonequity instrument provided all the above criteria are met.

CMO instruments issued in the form of equity that do not meet the above criteria should be accounted for under the provisions of Opinion 18 or ARB 51, as amended by Statement 94.

Issue 2

The Task Force reached a consensus that nonequity CMO instruments that have potential for loss of a significant portion of the original investment due to changes in (1) interest rates, (2) the prepayment rate of the assets of the CMO structure, or (3) earnings from the temporary reinvestment of cash collected by the CMO structure but not yet distributed to the holders of its obligations (reinvestment earnings) are high-risk CMO instruments and should be accounted for as described in Issue 3 below. Nonequity CMO instruments include all CMO instruments issued in debt form and those CMO instruments issued in equity form that meet all six criteria listed in Issue 1.

For example, most issuers of CMO obligations have excess cash flows each period after required bond payments and administrative costs have been paid. Typically, the excess cash flows arise primarily from the spread between the interest rate paid on the CMO obligations and the interest rate received on the issuer's assets. The issuer may sell nonequity instruments (often called

CMO residuals) that entitle the purchaser to these excess cash flows. These instruments often have little or no principal component. If mortgage prepayments increase or if the interest rate paid on variable-rate obligations of the issuer increases, or both, the total cash flow to the investor in the CMO residual would significantly decline, possibly leaving the investor unable to recover a significant portion of the initial purchase price. Therefore, these types of CMO instruments are high-risk CMO instruments.

Other mortgage-related instruments entitle an investor to receive cash flows designated as interest from specified mortgages or mortgage-backed securities. These instruments are often called interest-only certificates and are similar to high-risk nonequity CMO instruments due to the potential for loss related to prepayment risk. The Task Force also reached a consensus that mortgage-backed interest-only certificates should be accounted for in the same manner as high-risk nonequity CMO instruments (see Issue 3 below).

Nonequity CMO instruments that do not have the potential for loss of a significant portion of the original investment due to the factors enumerated above, such as principal-only certificates, are not high-risk CMO instruments. Premiums and discounts arising from the purchase of CMO instruments that are not high risk should be amortized in accordance with the provisions of Statement 91.

Issue 3

The Task Force reached a consensus that in accounting for each purchased high-risk nonequity CMO instrument for which it is appropriate to use amortized cost, the investor should allocate the total cash flows expected to be received over the estimated life of the investment between principal and interest in the following manner. [Note: See STATUS section.] At the date of purchase, an effective yield is calculated based on the purchase price and anticipated future cash flows. In the initial accounting period, interest income is accrued on the investment balance using that rate. Cash received on the investment is first applied to accrued interest with any excess reducing the recorded investment balance. At each reporting date, the effective yield is recalculated based on the amortized cost of the investment and the then-current estimate of future cash flows. This recalculated yield is then used to accrue interest income on the investment balance in the subsequent accounting period. This procedure continues until all cash flows from the investment have been received.

The amortized balance of the investment at the end of each period will equal the present value of the estimated future cash flows discounted at the newly calculated effective yield.

The estimated future cash flows at each reporting date should reflect the most current estimate of future prepayments. Prepayment estimates should be made using assumptions that are consistent with assumptions used by marketplace participants for similar instruments, which the Task Force understands may require the use of an estimate of future interest rates implied by the current yield curve. In addition, if future cash flows will be directly affected by changes in interest rates, current interest rates at or near the balance sheet date should be used to estimate those cash flows. [3] Estimates of cash flows from reinvestment earnings also should be based on rates that are not in excess of current interest rates for eligible investments as defined in the CMO instrument.

[3] For example, some CMO instruments have cash flows that are impacted by the interest paid to variable-rate tranche holders in the same CMO structure. Current rates should be used to estimate the amounts to be paid to the variable rate tranche holders and in turn the amount of future cash flows to be collected from the CMO instruments.

Investors in high-risk CMO instruments should evaluate each CMO instrument separately to determine whether expected future cash flows are adequate to recover the recorded investment balance. The recorded balance for each investment should not exceed the undiscounted estimated future cash flows; that is, the effective yield cannot be negative. Any write-down establishes a new cost, which then is used for purposes of calculating effective yields in subsequent periods.

If investments in high-risk CMO instruments are significant, the effective yield calculated at the reporting date, which will be used to accrue income in the following period, should be disclosed in the annual financial statements. Either the effective yield for each CMO instrument or the effective yield for the portfolio of CMO instruments may be disclosed. If significant, the carrying amount and fair value of investments in high-risk CMO instruments also should be disclosed in the annual financial statements. When market quotations are not available for these investments, estimates should be made.

The application of this consensus is limited to circumstances in which the CMO or similar instrument represents an interest in a pool of high-credit-quality monetary assets for which prepayments are probable and the timing and amounts of prepayments can be reasonably estimated.

This consensus supersedes the conclusions expressed by the Task Force in Issue No. 86-38, "Implications of Mortgage Prepayments on Amortization of Servicing Rights," Subissue C, "Unanticipated Prepayments and Interest-Only Certificates," with respect to interest-only certificates.

General Comments

The SEC Observer noted that the method of adopting the consensuses should be disclosed. If adoption of the consensuses materially affects comparability, the nature and effect of adoption (including a quantification of the effects, if practicable) also should be disclosed in the notes to the financial statements.

The SEC Observer expressed concern that the accounting prescribed by these consensuses might be analogized to similar investments in collateralized borrowing structures when (1) the underlying collateral is of a lesser credit quality than that defined in this consensus or (2) the cash flow from the underlying collateral cannot be reasonably estimated. The SEC staff believes that such investments should be accounted for following a conservative method that adequately reflects the nature of those high-risk structures.

The Task Force noted that some CMO instruments and interest-only certificates are economically similar to excess servicing receivables and other mortgage-related investments. Diverse accounting methods for amortizing investments in the various types of mortgage-related instruments have been established in accounting literature. In addition, different interpretations of existing literature have resulted in further diversity in practice. The Task Force acknowledged the need for more comprehensive guidance in this area and authorized the working group to submit a letter to the FASB encouraging the Board to establish uniform guidance through a short-term project separate from the financial instruments project. [Note: See STATUS section.]

STATUS

The methodologies for amortizing and adjusting the carrying value of excess servicing fee assets and investments in interest-only securities or other similar financial instruments will be considered by the FASB staff as part of the project on present-value-based measurements.

In May 1993, the FASB issued Statement 115, which addresses accounting for certain investments in debt and equity securities and supersedes Statement 12. Under Statement 115, a positive intent and ability to hold a debt security to maturity is a prerequisite for using amortized cost. A financial institution must consider whether it has the ability to hold a high-risk CMO instrument to maturity under existing regulatory requirements. (See Topic No. D-39 in Appendix D.)

Paragraph 16 of Statement 115 states that if the decline in fair value of a security is judged to be other than temporary, the cost basis of the individual security should be written down to fair value. That measure of impairment differs from the measure in Issue 3 of the Task Force's consensus. In Issue No. 93-18, "Recognition of Impairment for an Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate," the Task Force reached a consensus that Statement 115 changes the measure of impairment of the instruments addressed in Issue 89-4 from undiscounted cash flows to fair value.

Issue 93-18 also addresses whether Statement 115 changes the consensus on Issue 89-4 with respect to the timing of recognizing impairment of investments in high-risk nonequity collateralized mortgage obligation instruments and interest-only certificates. The Task Force decided to supersede that aspect of the consensus on Issue 89-4 with a new consensus that if the present value of estimated future cash flows discounted at a risk-free rate is less than the amortized cost basis of the instrument, an impairment loss should be recognized.

No further EITF discussion is planned.

39. EITF 93-18 provides the following guidance:

Emerging Issued Task Force No. 93-18 Impairment Recognition for a purchased Investment in a Collateralized Mortgage obligation Instrument or in a Mortgage-Bond Interest-only Certificate

ISSUE

Paragraph 16 of Statement 115 requires that if a decline in fair value of an individual security classified as either available-for-sale or held-to-maturity is judged to be other than temporary, the cost basis shall be written down to fair value. The measure of an impairment loss for the securities discussed in Issue No. 89-4, "Accounting for a Purchased Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate," was based on undiscounted future cash flows. The recognition of an impairment loss under Issue 89-4 occurs when the recalculated effective yield turns negative (that is, when the sum of the newly estimated undiscounted future cash inflows is less than the security's recorded balance) and the impairment recognized was a write-down such that the recalculated effective yield was zero.

The issues are (1) whether Statement 115 changes the measure of an impairment loss for those instruments addressed in Issue 89-4 (that is, investments in high-risk nonequity collateralized mortgage obligation instruments and interest-only certificates), (2) whether Statement 115 changes the consensus on Issue 89-4 about the timing for recognition of an impairment loss for those instruments, and (3) whether previously recognized impairment losses for those instruments should be remeasured at fair value for purposes of determining the cumulative catch-up adjustment upon initial adoption of Statement 115.

EITF DISCUSSION

The Task Force reached a consensus that Statement 115 changes the measure of impairment of the instruments addressed in Issue 89-4 from undiscounted cash flows to fair value.

> The Task Force also reached a consensus that if the present value of estimated future cash flows discounted at a risk-free rate (that is, the rate on monetary assets that are essentially risk free, as described in paragraph 4 of Statement 76) is less than the amortized cost basis of the instrument, an impairment loss should be recognized. That comparison should be made at each reporting date. The excess of the amortized cost basis over the instrument's fair value should be recognized as a realized loss in the income statement, thereby establishing a new cost basis for the security. The rate to be used to determine the present value amount is the risk-free rate for instruments with duration consistent with the security's estimated future cash flows at the time the instrument is tested for impairment. The term duration is used in its technical sense to mean the weighted-average time to receive all cash flows (interest, dividends, and principal), where the weights reflect the relative present values of the cash flows.
>
> The Task Force reiterated the guidance in Issue 89-4 that the estimated future cash flows at each reporting date should reflect the most current estimate of future prepayments and use the same assumptions that are specified by the consensus in Issue 89-4.
>
> The Task Force also reached a consensus that the amortized cost basis of those instruments that are determined to have an other-than-temporary impairment loss at the time of initial adoption of Statement 115 should be written down to fair value. The amount of the write-down should be included as part of the cumulative catch-up adjustment. If an enterprise has initially adopted Statement 115 in a reporting period prior to the period in which this consensus was reached (that is, the reporting period that includes March 24, 1994), an additional adjustment may be necessary to comply with this consensus. That adjustment, which also would be determined as of the date of initial adoption, should be reported as an additional cumulative catch-up adjustment in the reporting period that includes March 24, 1994.
>
> These consensuses are limited to those instruments that are within the scope of Issue 89-4.
>
> STATUS
>
> No further EITF discussion is planned.

40. *AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position* (SOP 90-3) provides the following guidance:

> 13 To minimize diversity in practice, the AICPA Banking Committee, Savings and Loan Associations Committee, and Stockbrokerage and Investment Banking Committee believe the definition of substantially the same should be narrow. Therefore, the committees have concluded that for debt instruments, including mortgage-backed securities, to be substantially the same, all the following criteria must be met:
>
> a. The debt instruments must have the same primary obligor, except for debt instruments guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and terms of the guarantee must be the same.[1]

[1] The exchange of pools of single-family loans would not meet this criterion because the mortgages comprising the pool do not have the same primary obligor, and would therefore not be considered substantially the same.

b. The debt instruments must be identical in form and type so as to give the same risks and rights to the holder.[2]

c. The debt instruments must bear the identical contractual interest rate.

d. The debt instruments must have the same maturity except for mortgage-backed pass-through and pay-through securities for which the mortgages collateralizing the securities must have similar remaining weighted average maturities (WAMs) that result in approximately the same market yield.[3]

e. Mortgage-backed pass-through and pay through securities must be collateralized by a similar pool of mortgages, such as single-family residential mortgages.

f. The debt instruments must have the same aggregate unpaid principal amounts, except for mortgage-backed pass-through and pay-through securities, where the aggregate principal amounts of the mortgage-backed securities given up and the mortgage-backed securities reacquired must be within the accepted "good delivery" standard for the type of mortgage-backed security involved. [4]

41. FAS 125 provides the following guidance:

Accounting for Transfers and Servicing of Financial Assets

9. A transfer of financial assets (or all or a portion of a financial asset) in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if and only if all of the following conditions are met:

a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (paragraphs 23 and 24).

[2] For example, the following exchanges would not meet this criterion: GNMA I securities for GNMA II securities; loans to foreign debtors that are otherwise the same except for different U.S. foreign tax credit benefits (because such differences in the tax receipts associated with the loans result in instruments that vary "in form and type"); commercial paper for redeemable preferred stock.

[3] For example, the exchange of a "fast-pay" GNMA certificate (that is, a certificate with underlying mortgage loans that have a high prepayment record) for a "slow-pay" GNMA certificate would not meet this criterion because differences in the expected remaining lives of the certificates result in different market yields.

[4] Participants in the mortgage-backed securities market have established parameters for what is considered acceptable delivery. These specific standards are defined by the Public Securities Association (PSA) and can be found in Uniform Practices for the Clearance and Settlement of Mortgage-Backed Securities and Other Related Securities, which is published by PSA.

b. Either (1) each transferee obtains the right—free of conditions that constrain it from taking advantage of that right (paragraph 25)—to pledge or exchange the transferred assets or (2) the transferee is a qualifying special-purpose entity (paragraph 26) and the holders of beneficial interests in that entity have the right—free of conditions that constrain them from taking advantage of that right (paragraph 25)—to pledge or exchange those interests.

c. The transferor does not maintain effective control over the transferred assets through (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 27-29) or (2) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable (paragraph 30).

10. Upon completion of any transfer of financial assets, the transferor shall:

a. Continue to carry in its statement of financial position any retained interest in the transferred assets, including, if applicable, servicing assets (paragraphs 35-41), beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization (paragraphs 47-58), and retained undivided interests (paragraph 33)

b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (paragraphs 31-34).

11. Upon completion[3] of a transfer of assets that satisfies the conditions to be accounted for as a sale (paragraph 9), the transferor (seller) shall:

a. Derecognize all assets sold

b. Recognize all assets obtained and liabilities incurred in consideration as proceeds of the sale, including cash, put or call options held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations), swaps (for example, provisions that convert interest rates from fixed to variable), and servicing liabilities, if applicable (paragraphs 31, 32, and 35-41)

c. Initially measure at fair value assets obtained and liabilities incurred in a sale (paragraphs 42-44) or, if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraphs 45 and 46)

d. Recognize in earnings any gain or loss on the sale.

The transferee shall recognize all assets obtained and any liabilities incurred and initially measure them at fair value (in aggregate, presumptively the price paid).

[3] Although a transfer of securities may not be considered to have reached completion until the settlement date, this Statement does not modify other generally accepted accounting principles, including *FASB Statement No. 35, Accounting and Reporting by Defined Benefit Pension Plans*, and AICPA Statements of Position and audit and accounting Guides for certain industries, that require accounting at the trade date for certain contracts to purchase or sell securities.

12. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) does not meet the criteria for a sale in paragraph 9, the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (paragraph 15).

Secured Borrowings and Collateral

15. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (paragraph 12). The accounting for collateral by the debtor (or obligor) and the secured party depends on whether the secured party has taken control over the collateral and on the rights and obligations that result from the collateral arrangement:

a. If (1) the secured party is permitted by contract or custom to sell or repledge the collateral and (2) the debtor does not have the right and ability to redeem the collateral on short notice, for example, by substituting other collateral or terminating the contract, then

(i) The debtor shall reclassify that asset and report that asset in its statement of financial position separately (for example, as securities receivable from broker) from other assets not so encumbered.

(ii) The secured party shall recognize that collateral as its asset, initially measure it at fair value, and also recognize its obligation to return it.

b. If the secured party sells or repledges collateral on terms that do not give it the right and ability to repurchase or redeem the collateral from the transferee on short notice and thus may impair the debtor's right to redeem it, the secured party shall recognize the proceeds from the sale or the asset repledged and its obligation to return the asset to the extent that it has not already recognized them. The sale or repledging of the asset is a transfer subject to the provisions of this Statement.

c. If the debtor defaults under the terms of the secured contract and is no longer entitled to redeem the collateral, it shall derecognize the collateral, and the secured party shall recognize the collateral as its asset to the extent it has not already recognized it and initially measure it at fair value.

d. Otherwise, the debtor shall continue to carry the collateral as its asset, and the secured party shall not recognize the pledged asset.

Disclosures

17. An entity shall disclose the following:

a. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security

b. If debt was considered to be extinguished by in-substance defeasance under the provisions of FASB Statement No. 76, Extinguishment of Debt, prior to the effective date of this Statement, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period so long as that debt remains outstanding

c. If assets are set aside after the effective date of this Statement solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets

d. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value

e. For all servicing assets and servicing liabilities:

(1) The amounts of servicing assets or liabilities recognized and amortized during the period

(2) The fair value of recognized servicing assets and liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value

(3) The risk characteristics of the underlying financial assets used to stratify recognized servicing assets for purposes of measuring impairment in accordance with paragraph 37

(4) The activity in any valuation allowance for impairment of recognized servicing assets—including beginning and ending balances, aggregate additions charged and reductions credited to operations, and aggregate direct write-downs charged against the allowances—for each period for which results of operations are presented.

Isolation beyond the Reach of the Transferor and Its Creditors

23. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its affiliates, except for an affiliate that is a qualifying special-purpose entity designed to make remote the possibility that it would enter bankruptcy or other receivership (paragraph 57.c.).

24. Whether securitizations isolate transferred assets may depend on such factors as whether the securitization is accomplished in one step or two steps (paragraphs 54-58). Many common financial transactions, for example, typical repurchase agreements and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

25. Many transferor-imposed or other conditions on a transferee's contractual right to pledge or exchange a transferred asset constrain a transferee from taking advantage of that right. However, a transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission to sell or pledge that shall not be unreasonably withheld, or a

prohibition on sale to the transferor's competitor generally does not constrain a transferee from pledging or exchanging the asset and, therefore, presumptively does not preclude a transfer containing such a condition from being accounted for as a sale. For example, a prohibition on sale to the transferor's competitor would not constrain the transferee if it were able to sell the transferred assets to a number of other parties; however, it would be a constraint if that competitor were the only potential willing buyer.

Qualifying Special-Purpose Entity

26. A qualifying special-purpose entity[7] must meet both of the following conditions:

a. It is a trust, corporation, or other legal vehicle whose activities are permanently limited by the legal documents establishing the special-purpose entity to:

(1) Holding title to transferred financial assets

(2) Issuing beneficial interests (If some of the beneficial interests are in the form of debt securities or equity securities, the transfer of assets is a securitization.)

(3) Collecting cash proceeds from assets held, reinvesting proceeds in financial instruments pending distribution to holders of beneficial interests, and otherwise servicing the assets held

(4) Distributing proceeds to the holders of its beneficial interests.

b. It has standing at law distinct from the transferor. Having standing at law depends in part on the nature of the special-purpose entity. For example, generally, under U.S. law, if a transferor of assets to a special-purpose trust holds all of the beneficial interests, it can unilaterally dissolve the trust and thereby reassume control over the individual assets held in the trust, and the transferor "can effectively assign his interest and his creditors can reach it."[8] In that circumstance, the trust has no standing at law, is not distinct, and thus is not a qualifying special-purpose entity.

[7] The description of a special-purpose entity is restrictive. The accounting for transfers of financial assets to special-purpose entities should not be extended to any entity that does not satisfy all of the conditions articulated in this paragraph.

[8] *Scott's Abridgment of the Law on Trusts,* §156 (Little, Brown and Company, 1960), 296.

Agreements That Maintain Effective Control over Transferred Assets

27. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor's effective control over those assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 28).

b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 29).

c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price.

d. The agreement is entered into concurrently with the transfer.

28. To be substantially the same,[9] the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same)

b. Identical form and type so as to provide the same risks and rights

c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield)

d. Identical contractual interest rates

e. Similar assets as collateral

f. The same aggregate unpaid principal amount or principal amounts within accepted "good delivery" standards for the type of security involved.

29. To be able to repurchase or redeem assets on substantially the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

30. A call option or forward contract that entitles the transferor to repurchase, prior to maturity, transferred assets not readily obtainable elsewhere maintains the transferor's effective control, because it would constrain the transferee from exchanging those assets, unless it is only a cleanup call.

Measurement of Interests Held after a Transfer of Financial Assets

Assets Obtained and Liabilities Incurred as Proceeds

31. The proceeds from a sale of financial assets consist of the cash and any other assets obtained in the transfer less any liabilities incurred. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value, if practicable.

Securities Lending Transactions

61. Securities lending transactions are initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver securities sold. Transferees ("borrowers") of securities generally are required to provide "collateral" to the transferor ("lender") of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities "borrowed." If the "collateral" is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or "rebated" to the transferee. If the "collateral" is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly

[9] In this Statement, the term *substantially the same* is used consistently with the usage of that term in the *AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position.*

carry out securities lending activities on behalf of clients. Because of the protection of “collateral” (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash “collateral” impose market and credit risks on the transferor.

62. In some securities lending transactions, the criteria in paragraph 9 are met, including the third criterion. Those transactions shall be accounted for (a) by the transferor as a sale of the “loaned” securities for proceeds consisting of the “collateral”[11] and a forward repurchase commitment and (b) by the transferee as a purchase of the “borrowed” securities in exchange for the “collateral” and a forward resale commitment. During the term of that agreement, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the “collateral” and the forward repurchase commitment.

63. However, many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred assets before their maturity under which the transferor maintains effective control over those assets (paragraphs 27-30). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder is permitted by contract or custom to sell or repledge) received as “collateral” is considered the amount borrowed, the securities “loaned” are considered pledged as collateral against the cash borrowed, and any “rebate” paid to the transferee of securities is interest on the cash the transferor is considered to have borrowed. Collateral provided in securities lending transactions that are accounted for as secured borrowings shall be reported in the statement of financial position like other collateral, as set forth in paragraph 15.

64. The transferor of securities being “loaned” accounts for cash received (or for securities received that may be sold or repledged and were obtained under agreements that are not subject to repurchase or redemption on short notice, for example, by substitution of other collateral or termination of the contract) in the same way whether the transfer is accounted for as a sale or a secured borrowing. The cash (or securities) received shall be recognized as the transferor's asset—as shall investments made with that cash, even if made by agents or in pools with other securities lenders—along with the obligation to return the cash (or securities).

Illustration—Securities Lending Transaction Treated as a Secured Borrowing

65. Accounting for a securities lending transaction treated as a secured borrowing:

Facts

Transferor’s carrying amount and fair value of security loaned	$1,000
Cash “collateral”	1,020
Transferor's return from investing cash collateral at a 5 percent annual rate	5
Transferor's rebate to the borrower at a 4 percent annual rate	4

The loaned securities cannot be redeemed on short notice, for example, by substitution of other collateral. For simplicity, the fair value of the security is assumed not to change during the 35-day term of the transaction.

[11] If the “collateral” is a financial asset that the holder is permitted by contract or custom to sell or repledge and the debtor does not have the right and ability to redeem the collateral on short notice, for example, by substituting other collateral or terminating the contract, that financial asset is proceeds of the sale of the “loaned” securities. To the extent that the “collateral” consists of letters of credit or other financial instruments that the holder is not permitted by contract or custom to sell or pledge, a securities lending does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee

Journal Entries for the Transferor

At inception:

Cash	1,020	
Payable under securities loan agreements		1,020

To record the receipt of cash collateral

Securities loaned to broker	1,000	
Securities		1,000

To reclassify loaned securities that cannot be redeemed on short notice

Money market instrument	1,020

Statutory Issue Paper No. 44

Capitalization of Interest

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 44

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance does not address capitalization of interest cost.

2. GAAP guidance allows capitalization of interest as part of the historical cost of acquiring certain assets.

3. The purpose of this issue paper is to establish statutory accounting principles for capitalization of interest cost that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. Under statutory accounting principles, the historical cost of acquiring an asset generally includes the necessary costs incurred to bring it to the condition and location necessary for its intended use. If an asset requires a period of time in which to carry out the activities necessary to bring it to that condition and location, the interest cost incurred during that period as a result of expenditures for the asset shall be included as a part of the historical cost of acquiring the asset.

5. Interest cost shall be capitalized for the following types of assets:

   a. Assets constructed or otherwise produced for an enterprise's own use (including assets constructed or produced for the enterprise by others for which deposits or progress payments have been made);

   b. Assets intended for sale or lease that are constructed or otherwise produced as discrete projects (e.g. real estate developments);

   c. Investments (equity, loans, and advances) accounted for by the equity method while the investee has activities in progress necessary to commence its planned principal operations provided that the investee's activities include the use of funds to acquire qualifying assets for its operations. The equity method is defined in *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities* (Issue Paper No. 46).

6. Interest cost shall not be capitalized for the following types of assets:

   a. Assets that are in use or ready for their intended use in the earning activities of the enterprise;

   b. Assets that are not being used in the earning activities of the enterprise and that are not undergoing the activities necessary to get them ready for use;

c. Investments accounted for by the equity method after the planned principal operations of the investee begin;

d. Investments in regulated investees that are capitalizing both the cost of debt and equity capital;

e. Assets acquired with gifts and grants that are restricted by the donor or grantor to acquisition of those assets to the extent that funds are available from such gifts and grants. Interest earned from temporary investment of those funds that is similarly restricted shall be considered an addition to the gift or grant for this purpose;

f. Nonadmitted assets.

7. The amount of interest cost to be capitalized for qualifying assets shall be determined in accordance with subparagraphs 12-16 of paragraph 14 below and subparagraph 6 of paragraph 17 below.

8. The capitalization period shall be in accordance with subparagraphs 17-19 of paragraph 14 below and subparagraph 7 of paragraph 17 below.

9. Disclosures shall be made in the financial statements or related notes in accordance with subparagraph 21 of paragraph 14 below.

10. Capitalized interest meets the definition of an asset defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and is an admitted asset to the extent it conforms to the requirements of this issue paper. Capitalized interest shall be assessed for impairment in conjunction with the assessment of the related asset. As outlined in paragraph 4 above, the capitalized interest is included as a part of the historical cost of acquiring the asset. Interest capitalization shall not cease when such an assessment requires recognition of a lower value for the asset than acquisition cost; rather the provision required to reduce acquisition cost to such lower value shall be increased appropriately.

DISCUSSION

11. The statutory principles described in the conclusion above adopt the GAAP accounting principles for capitalization of interest cost set forth in *FASB Statement No. 34*, *Capitalization of Interest Cost* (FAS 34), *FASB Statement No. 42*, *Determining Materiality for Capitalization of Interest Cost* (FAS 42), *FASB Statement No. 58*, *Capitalization of Interest Cost in Financial Statements That Include Investments Accounted for by the Equity Method* (FAS 58), and *FASB Statement No. 62*, *Capitalization of Interest Cost in Situations Involving Certain Tax-Exempt Borrowings and Certain Gifts and Grants* (FAS 62), except that nonadmitted assets are ineligible for capitalization of interest.

12. The statutory accounting principles described in the conclusion above are consistent with the recognition concept in the Statement of Concepts, because capitalized interest cost represents a component of the cost of the related asset which would be recoverable and available to fulfill policyholder obligations upon sale of the asset unless an impairment exists. Pertinent excerpts follow:

> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interest should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

Drafting Notes/Comments

- *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities*, addresses the equity method for accounting for investments in subsidiaries, controlled and affiliated companies.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

13. Statutory accounting literature does not address capitalization of interest cost.

Generally Accepted Accounting Principles

14. FAS 34 provides the following guidance:

INTRODUCTION

1. This Statement establishes standards of financial accounting and reporting for capitalizing interest cost as a part of the historical cost of acquiring certain assets. For the purposes of this Statement, interest cost includes interest recognized on obligations having explicit interest rates,[1] interest imputed on certain types of payables in accordance with *APB Opinion No. 21, Interest on Receivables and Payables*, and interest related to a capital lease determined in accordance with *FASB Statement No. 13, Accounting for Leases*.

[1] Interest cost on these obligations includes amounts resulting from periodic amortization of discount or premium and issue costs on debt.

2. Paragraphs 15 and 16 of Opinion 21 provide that the discount or premium that results from imputing interest for certain types of payables should be amortized as interest expense over the life of the payable and reported as such in the statement of income. Paragraph 12 of Statement 13 provides that, during the term of a capital lease, a portion of each minimum lease payment shall be recorded as interest expense. This Statement modifies Opinion 21 and Statement 13 in that the amount chargeable to interest expense under the provisions of those paragraphs is eligible for inclusion in the amount of interest cost capitalizable in accordance with this Statement.

3. Some enterprises now charge all interest cost to expense when incurred; some enterprises capitalize interest cost in some circumstances; and some enterprises, primarily public utilities, also capitalize a cost for equity funds in some circumstances. This diversity of practice and an observation that an increasing number of nonutility registrants were adopting a policy of capitalizing interest led the Securities and Exchange Commission to impose, in November 1974, a moratorium on adoption or extension of such a policy by most nonutility registrants until such time as the FASB established standards in this area.[2]

[2] Securities and Exchange Commission, ASR No. 163, Capitalization of Interest by Companies Other Than Public Utilities (Washington: November 14, 1974).

4. Appendix A provides additional background information. Appendix B sets forth the basis for the Board’s conclusions, including alternatives considered and reasons for accepting some and rejecting others.

5. The Addendum to *APB Opinion No. 2, Accounting for the ‘Investment Credit’*, states that “differences may arise in the application of generally accepted accounting principles as between regulated and nonregulated businesses, because of the effect in regulated businesses of the

rate-making process," and discusses the application of generally accepted accounting principles to regulated industries. Accordingly, the provisions of the Addendum shall govern the application of this Statement to those operations of an enterprise that are regulated for rate-making purposes on an individual-company-cost-of-service basis.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

6. The historical cost of acquiring an asset includes the costs necessarily incurred to bring it to the condition and location necessary for its intended use.[3] If an asset requires a period of time in which to carry out the activities [4] necessary to bring it to that condition and location, the interest cost incurred during that period as a result of expenditures for the asset is a part of the historical cost of acquiring the asset.

[3] The term intended use embraces both readiness for use and readiness for sale, depending on the purpose of acquisition.

[4] See paragraph 17 for a definition of those activities for purposes of this Statement.

7. The objectives of capitalizing interest are (a) to obtain a measure of acquisition cost that more closely reflects the enterprise's total investment in the asset and (b) to charge a cost that relates to the acquisition of a resource that will benefit future periods against the revenues of the periods benefited.

8. In concept, interest cost is capitalizable for all assets that require a period of time to get them ready for their intended use (an "acquisition period"). However, in many cases, the benefit in terms of information about enterprise resources and earnings may not justify the additional accounting and administrative cost involved in providing the information. The benefit may be less than the cost because the effect of interest capitalization and its subsequent amortization or other disposition, compared with the effect of charging it to expense when incurred, would not be material. In that circumstance, interest capitalization is not required by this Statement.

Assets Qualifying for Interest Capitalization

9. Subject to the provisions of paragraph 8, interest shall be capitalized for the following types of assets ("qualifying assets"):

a. Assets that are constructed or otherwise produced for an enterprise's own use (including assets constructed or produced for the enterprise by others for which deposits or progress payments have been made)

b. Assets intended for sale or lease that are constructed or otherwise produced as discrete projects (e.g., ships or real estate developments).

10. However, interest cost shall not be capitalized for inventories that are routinely manufactured or otherwise produced in large quantities on a repetitive basis because, in the Board's judgment, the informational benefit does not justify the cost of so doing. In addition, interest shall not be capitalized for the following types of assets:

a. Assets that are in use or ready for their intended use in the earning activities of the enterprise

b. Assets that are not being used in the earning activities of the enterprise and that are not undergoing the activities necessary to get them ready for use.

11. Land that is not undergoing activities necessary to get it ready for its intended use is not a qualifying asset. If activities are undertaken for the purpose of developing land for a particular

use, the expenditures to acquire the land qualify for interest capitalization while those activities are in progress. The interest cost capitalized on those expenditures is a cost of acquiring the asset that results from those activities. If the resulting asset is a structure, such as a plant or a shopping center, interest capitalized on the land expenditures is part of the acquisition cost of the structure. If the resulting asset is developed land, such as land that is to be sold as developed lots, interest capitalized on the land expenditures is part of the acquisition cost of the developed land.

The Amount of Interest Cost to Be Capitalized

12. The amount of interest cost to be capitalized for qualifying assets is intended to be that portion of the interest cost incurred during the assets' acquisition periods that theoretically could have been avoided (for example, by avoiding additional borrowings or by using the funds expended for the assets to repay existing borrowings) if expenditures for the assets had not been made.
