23. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its affiliates, except for an affiliate that is a qualifying special-purpose entity designed to make remote the possibility that it would enter bankruptcy or other receivership (paragraph 57.c.).

24. Whether securitizations isolate transferred assets may depend on such factors as whether the securitization is accomplished in one step or two steps (paragraphs 54-58). Many common financial transactions, for example, typical repurchase agreements and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

25. Many transferor-imposed or other conditions on a transferee's contractual right to pledge or exchange a transferred asset constrain a transferee from taking advantage of that right. However, a transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission to sell or pledge that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor generally does not constrain a transferee from pledging or exchanging the asset and, therefore, presumptively does not preclude a transfer containing such a condition from being accounted for as a sale. For example, a prohibition on

sale to the transferor's competitor would not constrain the transferee if it were able to sell the transferred assets to a number of other parties; however, it would be a constraint if that competitor were the only potential willing buyer.

Qualifying Special-Purpose Entity

26. A qualifying special-purpose entity[7] must meet both of the following conditions:

a. It is a trust, corporation, or other legal vehicle whose activities are permanently limited by the legal documents establishing the special-purpose entity to:
   (1) Holding title to transferred financial assets
   (2) Issuing beneficial interests (If some of the beneficial interests are in the form of debt securities or equity securities, the transfer of assets is a securitization.)
   (3) Collecting cash proceeds from assets held, reinvesting proceeds in financial instruments pending distribution to holders of beneficial interests, and otherwise servicing the assets held
   (4) Distributing proceeds to the holders of its beneficial interests.

b. It has standing at law distinct from the transferor. Having standing at law depends in part on the nature of the special-purpose entity. For example, generally, under U.S. law, if a transferor of assets to a special-purpose trust holds all of the beneficial interests, it can unilaterally dissolve the trust and thereby reassume control over the individual assets held in the trust, and the transferor "can effectively assign his interest and his creditors can reach it."[8] In that circumstance, the trust has no standing at law, is not distinct, and thus is not a qualifying special-purpose entity.

[7] The description of a special-purpose entity is restrictive. The accounting for transfers of financial assets to special-purpose entities should not be extended to any entity that does not satisfy all of the conditions articulated in this paragraph.

[8] *Scott's Abridgment of the Law on Trusts,* §156 (Little, Brown and Company, 1960), 296.

Agreements That Maintain Effective Control over Transferred Assets

27. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor's effective control over those assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 28).
b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 29).
c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price.
d. The agreement is entered into concurrently with the transfer.

28. To be substantially the same,[9] the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

[9] In this Statement, the term substantially the same is used consistently with the usage of that term in the AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position.

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same)
b. Identical form and type so as to provide the same risks and rights
c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield)
d. Identical contractual interest rates
e. Similar assets as collateral
f. The same aggregate unpaid principal amount or principal amounts within accepted "good delivery" standards for the type of security involved.

29. To be able to repurchase or redeem assets on substantially the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

30. A call option or forward contract that entitles the transferor to repurchase, prior to maturity, transferred assets not readily obtainable elsewhere maintains the transferor's effective control, because it would constrain the transferee from exchanging those assets, unless it is only a cleanup call.

Measurement of Interests Held after a Transfer of Financial Assets

Assets Obtained and Liabilities Incurred as Proceeds

31. The proceeds from a sale of financial assets consist of the cash and any other assets obtained in the transfer less any liabilities incurred. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value, if practicable.

Retained Interests

33. Other interests in transferred assets—those that are not part of the proceeds of the transfer—are retained interests over which the transferor has not relinquished control. They shall be measured at the date of the transfer by allocating the previous carrying amount between the assets sold, if any, and the retained interests, based on their relative fair values. That procedure shall be applied to all transfers in which interests are retained, even those that do not qualify as sales. Examples of retained interests include securities backed by the transferred assets, undivided interests, servicing assets, and cash reserve accounts and residual interests in securitization trusts. If a transferor cannot determine whether an asset is a retained interest or proceeds from the sale, the asset shall be treated as proceeds from the sale and accounted for in accordance with paragraph 31.

Servicing Assets and Liabilities

35. Servicing of mortgage loans, credit card receivables, or other financial assets includes, but is not limited to, collecting principal, interest, and escrow payments from borrowers; paying taxes and insurance from escrowed funds; monitoring delinquencies; executing foreclosure if necessary; temporarily investing funds pending distribution; remitting fees to guarantors, trustees, and others providing services; and accounting for and remitting principal and interest payments to the holders of beneficial interests in the financial assets. Servicing is inherent in all financial assets; it becomes a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or separate purchase or assumption of the servicing.

36. An entity that undertakes a contract to service financial assets shall recognize either a servicing asset or a servicing liability, unless the transferor securitizes the assets, retains all of the resulting securities, and classifies them as debt securities held-to-maturity in accordance with Statement 115, in which case the servicing asset or liability may be reported together with the asset being serviced. Each sale or securitization with servicing retained or separate purchase or assumption of servicing results in a servicing contract. A servicer of financial assets commonly receives the benefits of servicing—revenues from contractually specified servicing fees, late charges, and other ancillary sources, including “float,” all of which it is entitled to receive only if it performs the servicing—and incurs the costs of servicing the assets. Each servicing contract results in a servicing asset or servicing liability. Typically, the benefits of servicing are expected to be more than adequate compensation to the servicer for performing the servicing, and the contract results in a servicing asset. However, if the benefits of servicing are not expected to adequately compensate the servicer for performing the servicing, the contract results in a servicing liability.

37. A servicer that recognizes a servicing asset or servicing liability shall account for the contract to service financial assets separately from those assets, as follows:

a. Report servicing assets separately from servicing liabilities in the statement of financial position (paragraph 13).

b. Initially measure servicing assets retained in a sale or securitization of the assets being serviced at their allocated previous carrying amount based on relative fair values, if practicable, at the date of the sale or securitization (paragraphs 10, 33, 34, and 42-46).

c. Initially measure servicing assets purchased or servicing liabilities assumed at fair value (paragraph 13).

d. Initially measure servicing liabilities undertaken in a sale or securitization at fair value, if practicable (paragraphs 11.b., 11.c., and 42-46).

e. Account separately for rights to future interest income from the serviced assets that exceeds contractually specified servicing fees. Those rights are not servicing assets; they are financial assets, effectively interest-only strips to be accounted for in accordance with paragraph 14 of this Statement.

f. Subsequently measure servicing assets by amortizing the amount recognized in proportion to and over the period of estimated net servicing income—the excess of servicing revenues over servicing costs (paragraph 13).

g. Subsequently evaluate and measure impairment of servicing assets as follows:

(1) Stratify servicing assets based on one or more of the predominant risk characteristics of the underlying financial assets. Those characteristics may include financial asset type,[10] size, interest rate, date of origination, term, and geographic location.

[10] For example, for mortgage loans, financial asset type refers to the various conventional or government guaranteed or insured mortgage loans and adjustable-rate or fixed-rate mortgage loans.

(2) Recognize impairment through a valuation allowance for an individual stratum. The amount of impairment recognized shall be the amount by which the carrying amount of servicing assets for a stratum exceeds their fair value. The fair value of servicing assets that have not been recognized shall not be used in the evaluation of impairment.

(3) Adjust the valuation allowance to reflect changes in the measurement of impairment subsequent to the initial measurement of impairment. Fair value in excess of the carrying amount of servicing assets for that stratum, however, shall not be recognized. This Statement does not address when an entity should record a direct write-down of recognized servicing assets (paragraph 13).

h. Subsequently measure servicing liabilities by amortizing the amount recognized in proportion to and over the period of estimated net servicing loss—the excess of servicing costs over servicing revenues. However, if subsequent events have increased the fair value of the liability above the carrying amount, for example, because of significant changes in the amount or timing of actual or expected future cash flows from the cash flows previously projected, the servicer shall revise its earlier estimates and recognize the increased obligation as a loss in earnings (paragraph 13).

38. As indicated above, transferors sometimes agree to take on servicing responsibilities when the future benefits of servicing are not expected to adequately compensate them for performing that servicing. In that circumstance, the result is a servicing liability rather than a servicing asset.

Fair Value

42. The fair value of an asset (or liability) is the amount at which that asset (or liability) could be bought (or incurred) or sold (or settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If a quoted market price is available, the fair value is the product of the number of trading units times market price.

43. If quoted market prices are not available, the estimate of fair value shall be based on the best information available in the circumstances. The estimate of fair value shall consider prices for similar assets and liabilities and the results of valuation techniques to the extent available in the circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis. Valuation techniques for measuring financial assets and liabilities and servicing assets and liabilities shall be consistent with the objective of measuring fair value. Those techniques shall incorporate assumptions that market participants would use in their estimates of values, future revenues, and future expenses, including assumptions about interest rates, default, prepayment, and volatility. In measuring financial liabilities and servicing liabilities at fair value by discounting estimated future cash flows, an objective is to use discount rates at which those liabilities could be settled in an arm's-length transaction.

44. Estimates of expected future cash flows, if used to estimate fair value, shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence shall be considered in developing estimates of expected future cash flows. The weight given to the evidence shall be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.

If It Is Not Practicable to Estimate Fair Value

45. If it is not practicable to estimate the fair values of assets, the transferor shall record those assets at zero. If it is not practicable to estimate the fair values of liabilities, the transferor shall recognize no gain on the transaction and shall record those liabilities at the greater of:

a. The excess, if any, of (1) the fair values of assets obtained less the fair values of other liabilities incurred, over (2) the sum of the carrying values of the assets transferred

b. The amount that would be recognized in accordance with FASB Statement No. 5, Accounting for Contingencies, as interpreted by FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss.

Securitizations

47. Financial assets such as mortgage loans, automobile loans, trade receivables, credit card receivables, and other revolving charge accounts are assets commonly transferred in securitizations. Securitizations of mortgage loans may include pools of single-family residential mortgages or other types of real estate mortgage loans, for example, multifamily residential mortgages and commercial property mortgages. Securitizations of loans secured by chattel mortgages on automotive vehicles as well as other equipment (including direct financing or sales-type leases) also are common. Both financial and nonfinancial assets can be securitized; life insurance policy loans, patent and copyright royalties, and even taxi medallions also have been securitized. But securitizations of nonfinancial assets are outside the scope of this Statement.

48. An originator of a typical securitization (the transferor) transfers a portfolio of financial assets to a special-purpose entity, commonly a trust. In "pass-through" and "pay-through" securitizations, receivables are transferred to the special-purpose entity at the inception of the securitization, and no further transfers are made; all cash collections are paid to the holders of beneficial interests in the special-purpose entity. In "revolving-period" securitizations, receivables are transferred at the inception and also periodically (daily or monthly) thereafter for a defined period (commonly three to eight years), referred to as the revolving period. During the revolving period, the special-purpose entity uses most of the cash collections to purchase additional receivables from the transferor on prearranged terms.

49. Beneficial interests in the qualifying special-purpose entity are sold to investors and the proceeds are used to pay the transferor for the assets transferred. Those beneficial interests may comprise either a single class having equity characteristics or multiple classes of interests, some having debt characteristics and others having equity characteristics. The cash collected from the portfolio is distributed to the investors and others as specified by the legal documents that established the qualifying special-purpose entity.

50. Pass-through, pay-through, and revolving-period securitizations that meet the criteria in paragraph 9 qualify for sale accounting under this Statement. All financial assets obtained or retained and liabilities incurred by the originator of a securitization that qualifies as a sale shall be recognized and measured as provided in paragraph 11; that includes the implicit forward contract to sell new receivables during a revolving period, which may become valuable or onerous to the transferor as interest rates and other market conditions change.

Revolving-Period Securitizations

51. The value of the forward contract implicit in a revolving-period securitization arises from the difference between the agreed-upon rate of return to investors on their beneficial interests in the trust and current market rates of return on similar investments. For example, if the agreed-upon annual rate of return to investors in a trust is 6 percent, and later market rates of return for those investments increased to 7 percent, the forward contract's value to the transferor (and burden to the investors) would approximate the present value of 1 percent of the amount of the investment for each year remaining in the revolving structure after the receivables already transferred have been collected. If a forward contract to sell receivables is entered into at the market rate, its value at inception may be zero. Changes in the fair value of the forward contract are likely to be greater if the investors receive a fixed rate than if the investors receive a rate that varies based on changes in market rates.

52. Gain or loss recognition for revolving-period receivables sold to a securitization trust is limited to receivables that exist and have been sold. Recognition of servicing assets or liabilities for revolving-period receivables is similarly limited to the servicing for the receivables that exist and have been transferred. As new receivables are sold, rights to service them become assets or liabilities and are recognized.

53. Revolving-period securitizations may use either a discrete trust, used for a single securitization, or a master trust, used for many securitizations. To achieve another securitization

using an existing master trust, a transferor first transfers additional receivables to the trust and then sells additional ownership interests in the trust to investors. Adding receivables to a master trust, in itself, is neither a sale nor a secured borrowing under paragraph 9, because that transfer only increases the transferor's beneficial interest in the trust's assets. A sale does not occur until the transferor receives consideration other than beneficial interests in the transferred assets. Transfers that result in an exchange of cash, that is, either transfers that in essence replace previously transferred receivables that have been collected or sales of beneficial interests to outside investors, are transfers in exchange for consideration other than beneficial interests in the transferred assets and thus are accounted for as sales (if they satisfy all the criteria in paragraph 9) or as secured borrowings.

Isolation of Transferred Assets in Securitizations

54. A securitization, carried out in one transfer or a series of transfers, may or may not isolate the transferred assets beyond the reach of the transferor and its creditors. Whether it does depends on the structure of the securitization transaction taken as a whole, considering such factors as the type and extent of further involvement in arrangements to protect investors from credit and interest rate risks, the availability of other assets, and the powers of bankruptcy courts or other receivers.

55. In certain securitizations, a corporation that, if it failed, would be subject to the U.S. Bankruptcy Code transfers financial assets to a special-purpose trust in exchange for cash. The trust raises that cash by issuing to investors beneficial interests that pass through all cash received from the financial assets, and the transferor has no further involvement with the trust or the transferred assets. The Board understands that those securitizations generally would be judged as having isolated the assets, because in the absence of any continuing involvement there would be reasonable assurance that the transfer would be found to be a true sale at law that places the assets beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership.

56. In other securitizations, a similar corporation transfers financial assets to a special-purpose entity in exchange for cash and beneficial interests in the transferred assets. That entity raises the cash by issuing to investors commercial paper that gives them a senior interest in cash received from the financial assets. The beneficial interests retained by the transferring corporation represent a junior interest to be reduced by any credit losses on the financial assets in trust. The commercial paper interests are highly rated by credit rating agencies largely because the transferor is highly rated. Depending on facts and circumstances, the Board understands that those "single-step" securitizations often would be judged in the United States as not having isolated the assets, because the nature of the continuing involvement may make it difficult to obtain reasonable assurance that the transfer would be found to be a true sale at law that places the assets beyond the reach of the transferor and its creditors in U.S. bankruptcy (paragraph 83). If the transferor fell into bankruptcy and the transfer was found not to be a true sale at law, investors in the transferred assets might be subjected to an automatic stay that would delay payments due them, and they might have to share in bankruptcy expenses and suffer further losses if the transfer was recharacterized as a secured loan.

57. Still other securitizations use two transfers intended to isolate transferred assets beyond the reach of the transferor and its creditors, even in bankruptcy. In those "two-step" structures:

a. First, the corporation transfers financial assets to a special-purpose corporation that, although wholly owned, is so designed that the possibility that the transferor or its creditors could reclaim the assets is remote. This first transfer is designed to be judged to be a true sale at law, in part because the transferor does not provide "excessive" credit or yield protection to the special-purpose corporation, and the Board understands that transferred assets are likely to be judged beyond the reach of the transferor or the transferor's creditors even in bankruptcy.

b. Second, the special-purpose corporation transfers the assets to a trust, with a sufficient increase in the credit or yield protection on the second transfer (provided by a junior retained beneficial interest or other means) to merit the high credit rating sought by third-party investors who buy senior beneficial interests in the trust. Because of that aspect of its design, that second transfer might not be judged to be a true sale at law and, thus, the transferred assets could at least in theory be reached by a bankruptcy trustee for the special-purpose corporation.

c. However, the special-purpose corporation is designed to make remote the possibility that it would enter bankruptcy, either by itself or by substantive consolidation into a bankruptcy of its parent should that occur. For example, its charter forbids it from undertaking any other business or incurring any liabilities, so that there can be no creditors to petition to place it in bankruptcy. Furthermore, its dedication to a single purpose is intended to make it extremely unlikely, even if it somehow entered bankruptcy, that a receiver under the U.S. Bankruptcy Code could reclaim the transferred assets because it has no other assets to substitute for the transferred assets.

The Board understands that the “two-step” securitizations described above, taken as a whole, generally would be judged under present U.S. law as having isolated the assets beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership.

58. A securitization by an entity subject to a possible receivership under procedures different from the U.S. Bankruptcy Code may isolate transferred assets from the transferor and its creditors even though it uses only one transfer directly to a special-purpose entity that issues beneficial interests to investors and the transferor provides credit or yield protection. For example, the Board understands that assets transferred by a U.S. bank are not subject to an automatic stay under Federal Deposit Insurance Corporation (FDIC) receivership and could only be obtained by the receiver if it makes the investors completely whole, that is, the investors must be paid compensation equivalent to all the economic benefits contained in the transferred assets, including bargained-for yield, before the FDIC could obtain those assets. Those limited powers appear insufficient to place the transferred assets within reach of the receiver. The powers of other receivers for entities not subject to the U.S. Bankruptcy Code, and of bankruptcy trustees in other jurisdictions, vary considerably, and therefore some receivers may be able to reach transferred financial assets, and others may not.

Other Admitted Assets

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 21

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4) provides the definition of admitted and nonadmitted assets.

2. Current statutory accounting guidance for admitted assets is provided throughout the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies (Life/A&H and P & C Accounting Practices and Procedures Manuals). Other admitted assets are specifically addressed in Chapter 8 of both manuals.

3. Current GAAP provides guidance relative to asset recognition and certain specific accounting and reporting requirements for assets identified within this issue paper. Such guidance is presented in *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements* (CON 6), *FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan* (FAS 114) and *FASB Technical Bulletin 85-4, Accounting for Purchases of Life Insurance* (FTB 85-4).

4. The purpose of this issue paper is to establish statutory accounting principles for admitted assets which are not specifically addressed in other issue papers.

SUMMARY CONCLUSION

5. The definition and accounting treatment for admitted assets is outlined in paragraphs 2 and 3 of Issue Paper No. 4 as follows:

> For purposes of statutory accounting, an asset shall be defined as: probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted.
>
> As stated in the Statement of Concepts, *"The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet"*, and are, therefore, considered nonadmitted. For purposes of the Codification, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting and is one which is:
>
> a. Specifically identified within the Codification as a nonadmitted asset or
> b. Not specifically identified within the Codification as an admitted asset.

> If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Codification. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's capitalization policy, immaterial amounts of furniture, fixtures, and equipment, or supplies, can be expensed when purchased.

6. Consistent with paragraph 5, the following assets shall be considered admitted and shall be reported in accordance with Issue Paper No. 4. These admitted assets are not addressed in other issue papers.

Collateral Loans

7. Collateral loans are unconditional obligations for the payment of money secured by the pledge of an investment and meet the definition of assets as defined in Issue Paper No. 4, and, are admitted assets to the extent they conform to the requirements of this paper. The outstanding principal balance on the loan and any related accrued interest shall be recorded as an admitted asset subject to the following further limitations:

- Loan Impairment - Determination as to the impairment of a collateral loan shall be based on current information and events. When it is considered probable that any portion of amounts due under the contractual terms of the loan will not be collected the loan is considered impaired. The impairment shall be measured based on the fair value of the collateral less estimated costs to obtain and sell such collateral. The difference between the net value of the collateral and the recorded asset shall be written off in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5).

- Nonadmitted Asset - In accordance with *Issue Paper No. 90—Nonadmitted Assets* (Issue Paper No. 90) collateral loans secured by assets that do not qualify as investments shall be nonadmitted. Further, any amount of the loan outstanding which is in excess of the permitted relationship of fair value of the pledged investment to the collateral loan shall be treated as a nonadmitted asset.

Cash Value of Life Insurance Where the Reporting Entity is Owner and Beneficiary

8. The cash value of life insurance policies where the reporting entity is the owner and beneficiary is similar to a cash deposit that is realizable on demand. As such, the cash value of a life insurance policy as of the date to which premiums have been paid, less any outstanding policy loans and surrender charges, shall be reported as an admitted asset.

Receivables for Securities

9. Sales of securities are recorded as of the trade date. A receivable due from the broker is established in instances when a security has been sold, but the proceeds from the sale have not been received. Unless the receivable for securities, other than a receivable arising from the sale of a security which was acquired on a "To Be Announced" ("TBA") basis and which has yet to be actually received (see paragraph 12), meets the criteria noted in paragraph 11 below, the receivable for securities is an admitted asset to the extent it conforms to the requirements of this paper.

10. An evaluation shall be made in accordance with Issue Paper No. 5, to determine if there is an impairment. If, in accordance with Issue Paper No. 5, it is probable the balance, or any portion thereof, is uncollectible, any uncollectible receivable shall be written off and charged against income in the period the determination is made. If it is reasonably possible, but not probable, the balance or a portion of the balance is uncollectible and is not written off, disclosure requirements outlined in Issue Paper No. 5 shall be followed.

11. Receivables for securities not received within 15 days from the settlement date shall be nonadmitted, and shall be classified as other-than-invested assets.

12. Receivables arising from the secondary sale of securities acquired on a TBA basis which have not yet been received by the seller in the secondary sale transaction, may be admitted until the security is exchanged for payment. TBA securities are originally purchased well in advance of the actual date of security issuance (frequently 90 days or more). Accordingly, secondary sales of securities so acquired may occur before the date of issuance. Sales of securities so acquired always include a provision that requires simultaneous delivery of the security and receipt of consideration. Upon the secondary sale, and prior to the actual receipt, of a security acquired on a TBA basis, the seller in the secondary sale transaction records a liability for the book value of the security thus sold and a receivable for the consideration reflected in the secondary sale transaction. Profits or losses emanating from the secondary sale transaction are recorded in the same manner as profits and losses emanating from any other sale transaction involving an investment.

Other Amounts Receivable Under Reinsurance Contracts

13. Amounts receivable from Servicemen's Group Life Insurance (SGLI) or Federal Employees' Group Life Insurance (FEGLI) pools and Federal Crop Insurance programs shall be reported as admitted assets.

Guaranteed Investment Contracts

14. Guaranteed Investment Contracts (GICs) purchased for investment purposes meet the definition of assets as defined in Issue Paper No. 4, and are admitted assets to the extent they conform to the requirements of this paper.

15. Purchases for which all contractual rights and ownership of the GIC result in an investment similar to a corporate bond shall be accounted for in accordance with the guidance in *Issue Paper No. 26—Bonds, excluding Loan-backed and Structured Securities*.

16. An investment in a GIC payment stream is created when an intermediary purchases individual GICs, pools them, and sells the rights to the payment stream. These investments shall be reported as other long-term invested assets and shall be carried at amortized cost consistent with current statutory accounting.

17. If, in accordance with Issue Paper No. 5, it is probable that the carrying value of a GIC is not fully recoverable the investment shall be considered impaired. Accordingly, the cost basis of the investment shall be written down to the undiscounted estimated cash flows and the amount of the write down shall be accounted for as a capital loss. The new cost basis shall not be changed for subsequent recoveries in fair value.

State Guarantee Association Promissory Notes

18. State guarantee associations have the statutory authority to reinsure any or all of the policies of an impaired or insolvent insurer. When this is done, the assuming carrier receives assets supporting the liabilities from the insolvent company's estate and/or the responsible state guarantee association. If available, the state guarantee association transfers cash at the closing of the transaction. Promissory notes may be utilized in the event a guarantee association does not have the funds on hand or is unable to raise the funds by the closing date. These promissory notes are essentially credit risk free because the notes are backed by all member insurers of an association.

19. Promissory notes issued by state guarantee associations taken by an insurance company in connection with funding an assumption reinsurance agreement meet the definition of assets as defined in Issue Paper No. 4, are admitted assets to the extent they conform to the requirements of this paper, and shall be reported as a note receivable – other-than-invested assets.

DISCUSSION

20. For those items specifically addressed within this issue paper the principles established are consistent with current statutory accounting practices except as follows:

a. With respect to the principles outlined in paragraph 7, collateral loans, the conclusion modifies current statutory accounting to require the evaluation and recording of an impairment in value of collateral loans. The method of evaluating and recording an impairment of value is consistent with FAS 114 which was adopted in *Issue Paper No. 37—Mortgage Loans*.

b. With respect to the principles outlined in paragraph 11, receivables for securities, the conclusion modifies current statutory accounting to require that amounts not received within 15 days from the settlement date be nonadmitted. Issue Paper No. 4 states that an asset not readily available to satisfy policyholder obligations *"shall be recorded as a nonadmitted asset and charged against surplus."* This is consistent with the Statement of Concepts, which states that an insurer's *"ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due*." Receivables for securities not received within 15 days from the settlement date are not considered readily available to satisfy policyholder obligations. Nonadmitting such receivables is also consistent with the conservatism concept of the Statement of Concepts.

c. With respect to the principles outlined in paragraph 17, guaranteed investment contracts, the conclusion modifies current statutory accounting to require the write-off of the portion of the asset not expected to be recoverable in accordance with Issue Paper No. 5.

d. Deposits in suspended depositories are considered nonadmitted assets as provided for in Issue Paper No. 90 as the amounts are not available to satisfy obligations to policyholders.

By requiring reporting entities to reflect impairments in the value of other admitted assets, the conclusions reached above are consistent with other issue papers on invested assets and specifically with Issue Paper No. 5. It is also more conservative than allowing a reporting entity to carry such impaired assets at a value in excess of that which may be realizable.

21. Current statutory accounting, as outlined in Chapter 8 of the P&C Accounting Practices and Procedures Manual, lists certain other assets that may be considered admitted assets should "sufficient subsidiary records to provide detail for the annual statement schedule of other invested assets" exist. The examples provided are investments not considered to be prevalent or significant in industry and as such have not been included in this issue paper.

22. This issue paper adopts FTB 85-4 with modification. FTB 85-4 permits recognition of the cash surrender value of life insurance where the reporting entity is either the owner or beneficiary; whereas this issue paper requires that the reporting entity be both the owner and beneficiary. The cash values of life insurance policies meet the definition of assets defined in Issue Paper No. 4. When the reporting entity is not the owner of the policy, the cash value is not readily available to satisfy policyholder obligations and, therefore, is a nonadmitted asset.

23. The statutory accounting principles discussed above are consistent with the concepts of conservatism and recognition as outlined in the Statement of Concepts.

> Conservatism
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency.
>
> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

Drafting Notes/Comments

- *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets*, discusses and outlines the appropriate treatment for the impairment of assets.
- *Issue Paper No. 26—Bonds, Excluding Loan-Backed and Structured Securities*, discusses and outlines the appropriate recording and valuation of bonds.
- *Issue Paper No. 37—Mortgage Loans*, discusses and outlines the appropriate recording and valuation of mortgage loans.
- *Issue Paper No. 43—Loan-Backed and Structured Securities*, discusses and outlines the appropriate recording and valuation of structured securities.
- Specific other admitted assets discussed in current statutory guidance excerpted below but not addressed in this issue paper are discussed in other issue papers.
- The NAIC Annual Statement Instructions regarding Receivables for Securities were adopted by the Blank's Task Force on October 14 and 15, 1996, to be effective beginning with 1998 Annual Statements.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting Guidance

24. Chapter 8 of the Life/A&H Accounting Practices and Procedures Manual provides the following guidance:

> The various states specify certain assets, all or portions of, which may be admitted in determining statutory unassigned surplus. This chapter discusses some of the more common assets that are not discussed in other chapters. Each company should consult the laws and regulations of their state of domicile regarding other admitted assets.
>
> Other admitted assets not discussed in this chapter include premium notes, reinsurance receivables, deferred and uncollected premiums, tax refunds, investment income due and accrued, and investment settlements pending. In no event should a specifically described nonadmitted asset be recorded as an admitted asset or be used to defer an expense that has been incurred and has no liquidating value, e.g., material used in previous advertising campaigns or supplies that are not resalable.
>
> Collateral Loans
>
> Collateral loans are unconditional obligations for the payment of money secured by the pledge of an investment. The various states regulate a life insurance company's investment in collateral loans. Generally, these regulations deal with the legal form of the assignment and the relationship of the market value of the pledged investment to the collateral loan. The amount of the loan in excess of the permitted relationship is customarily nonadmitted. Also, the collateral loan may be admissible only if the collateral itself is an authorized investment. In some

jurisdictions the collateral must be combined with the like securities held directly in determining if maximum investment limitations are being exceeded.

Guaranteed Investment Contracts (GICs)

Absent specific statutory authority, the purchase of a guaranteed investment contract by an insurer for investment purposes, either directly or in the secondary market, should be considered the purchase of a direct corporate obligation of the issuer and such asset should be considered a bond and should be reported in Schedule D. This treatment applies only when the purchaser acquires all contractual rights and ownership of the guaranteed investment contract.

Absent specific statutory guidance, the purchase by an insurer of a payment stream in the secondary market should be reported in Schedule BA as “Other Long-Term Invested Assets.”

The normal NAIC valuation procedures apply.

State Guarantee Association Promissory Notes

State guarantee associations have the statutory authority to reinsure any or all of the policies of an impaired or insolvent insurer. When this is done, the assuming carrier receives assets supporting the liabilities from the insolvent company’s estate and/or the responsible state guarantee association. If available, the state guarantee association transfers cash at the closing of the transaction. Promissory notes may be utilized in the event a guarantee association does not have the funds on hand or is unable to raise the funds by the closing date.

These promissory notes are essentially credit risk free because the notes are backed by all member insurers of an association. Funds to transfer the obligations via assumption reinsurance are obtained through assessments of solvent companies doing business in the state. If the maximum assessment allowed in any one year does not provide the necessary funds, additional assessments are made as soon thereafter as permitted by the guaranty association act.

Promissory notes issued by state guarantee associations taken by an insurance company in connection with funding an assumption reinsurance agreement shall be reported on the asset page, aggregate write-ins for other-than-invested assets line, as a note receivable–miscellaneous asset. Interest income shall be recorded in the Summary of Operations on the line entitled aggregate write-ins for miscellaneous income.

All promissory notes issued subsequent to the effective date of this guidance are subject to the following condition. The note must contain a clause which stipulates that in the event the state guarantee association fails to fulfill its obligations on the promissory note, the note and the related liabilities assumed by the insurance company will revert back to the state guarantee association.

This guidance is effective June 7, 1995.

The following paragraphs are addressed in other issue papers and as such the Chapter 8 discussion is not excerpted here.

- Partnerships and Joint Ventures
- Amounts Due From Affiliated Companies
- Investments in Real Estate, Equipment and Other Assets Involving Leases
- Electronic Data Processing and Related Equipment
- Foreign Exchange Adjustment
- Deposits on Interest Rate Futures Contracts
- Amounts Receivable Relating to Uninsured Accident and Health Plans
- Derivative Instruments
- Insurance Futures and Insurance Futures Options
- Reverse Mortgages

25. Chapter 8 of the P & C Accounting Practices and Procedures Manual provides the following guidance:

> The various states specify certain assets that may be admitted in determining statutory unassigned surplus. This chapter discusses some of the more common assets that are not discussed in other chapters. Each company should consult the laws and regulations of its state of domicile regarding limitations on admissibility and a more specific description of other admitted assets.
>
> (a) The amount fairly estimated as recoverable on cash deposited in a closed bank or trust company is an admitted asset, if qualifying under the provisions of the various states prior to the suspension of such bank or trust company.
>
> (b) Collateral loans are unconditional obligations for the payment of money secured by the pledge of an investment. The accounting is similar to that for mortgage loans. If the individual loan exceeds the excess of the permitted relationship of the market value of the pledged investment to the collateral loan, the excess is customarily treated as a nonadmitted asset. Also, the collateral loan is admitted only if the collateral itself is an authorized investment.
>
> (c) Guaranteed Investment Contracts (GICs)
>
> Absent specific statutory authority, the purchase of a guaranteed investment contract by an insurer for investment purposes, either directly or in the secondary market, should be considered the purchase of a direct corporate obligation of the issuer and such asset should be considered a bond and should be reported in Schedule D. This treatment applies only when the purchaser acquires all contractual rights and ownership of the guaranteed investment contract.
>
> Absent specific statutory guidance, the purchase by an insurer of a payment stream in the secondary market should be reported in Schedule BA as "Other Long-Term Invested Assets."
>
> (e) Other invested assets that do not fall within the scope of previous chapters require sufficient subsidiary records to provide detail for the annual statement schedule of other invested assets. Examples of such assets which may be admissible:
>
> 1. Loan on or investments in oil and gas production payments, except those considered securities and listed in the schedule of stocks;
> 2. transportation equipment;
> 3. timber deeds;
> 4. mineral rights;
> 5. equipment trusts;
> 6. deposits relating to interest rate futures contracts;
> 7. any other admitted investment not clearly includable in other schedules.
>
> The statutory method for accounting for lease and sale leaseback arrangements is governed largely by the form of the agreement to which the insurance company is party. The Financial Accounting Standards Board statements (FASB) 13, 28 and 66 are commonly used as guidelines where not in conflict with statutory accounting practices. Conservatism and policyholder protection are the objectives.
>
> (o) Cash value of life insurance policies where the company is beneficiary is somewhat analogous to a cash deposit that is realizable on demand. The admissibility of the cash value of life insurance policies is based on general business practice. The admitted amount is the cash value as of the date to which premiums have been paid. (See Chapter 16 Other Income.)

The following paragraphs are addressed in other issue papers and as such the Chapter 8 discussion is not excerpted here.

> (d) Partnerships and Joint Ventures
>
> (f) Funds held by or deposited with reinsured companies
>
> (g) Bills receivable taken for premiums
>
> (h) Reinsurance recoverable on loss payments
>
> (i) Federal income taxes recoverable
>
> (j) Electronic Data Processing Equipment
>
> (k) Interest, Dividends and Real Estate Income Due and Accrued
>
> (l) Amounts due from affiliated companies
>
> (m) Equities and deposits in pools and associations
>
> (n) Amounts Receivable Relating to Uninsured Accident and Health Plans (See Chapter 13 - Other Liabilities.)
>
> (p) lease-purchase transactions
>
> Derivative Instruments
>
> Insurance Futures and Insurance Futures Options
>
> Reverse Mortgages

26. The NAIC Annual Statement Instructions for Life and Accident and Health and for Property and Casualty Insurance Companies specify that the following be classified as Other-Than-Invested Assets:

> Amounts not received within 15 days of the end of the period that are due from brokers when a security has been sold, but the proceeds have not yet been received.

Generally Accepted Accounting Principles

27. Asset recognition is governed by CON 6. An asset is defined in paragraphs 25 and 26 of CON 6 as follows:

> Assets are probable[18] future economic benefits obtained or controlled by particular entity as a result of past transactions or events.
>
> An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others’ access to it, and (c) the transaction or other event giving rise to the entity’s right to or control of the benefit has already occurred.

[18] *Probable* is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement No. 5, *Accounting for Contingencies*, par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved (Webster's *New World Dictionary of the American Language*, 2d college ed. [New York Simon and Schuster 1982], p. 1132). Its inclusion in the definition is intended to acknowledge that business and other economic activities occur in an environment characterized by uncertainty in which few outcomes are certain (pars. 44-48).

28. Accounting for the impairment of a loan is contained in FAS 114, as amended by *FASB Statement No. 118*, *Accounting by Creditors for Impairment of a Loan—Income Recognition and Disclosures* (FAS 118). Pertinent excerpts are as follows:

> 8. A loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement.
>
> 13. When a loan is impaired as defined in paragraph 8 of this statement, a creditor shall measure impairment based on the present value of expected future cash flows discounted at the loan's effective interest rate, except that as a practical expedient, a creditor may measure impairment based on a loan's observable market price, or the fair value of the collateral if the loan is collateral dependent. Regardless of the measurement method, a creditor shall measure impairment based on the fair value of the collateral when the creditor determines that foreclosure is probable. A loan is collateral dependent if the repayment of the loan is expected to be provided solely by the underlying collateral. The creditor may choose a measurement method on a loan by loan basis. A creditor shall consider estimated costs to sell, on a discounted basis, in the measure of impairment if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan. If the present value of expected future cash flows (or, alternatively, the observable market price of the loan or the fair value of collateral) is less than the recorded investment in the loan (including accrued interest, net deferred loan fees or costs, and unamortized premiums or discounts), a creditor shall recognize an impairment by creating a valuation allowance with a corresponding charge to bad-debt expense or by adjusting an existing valuation allowance for the impaired loan with a corresponding charge or credit to bad-debt expense.

29. Accounting for purchases of life insurance is contained in FTB 85-4. Pertinent excerpts are as follows:

> 1. How should an entity[1] account for an investment in life insurance?
>
> [1] The provisions of this Technical Bulletin apply to all entities that purchase life insurance in which the entity is either the owner or beneficiary of the contract, without regard to the funding objective of the purchase. Such purchases would typically include those intended to meet loan covenants or to fund deferred compensation agreements, buy-sell agreements, or postemployment death benefits. Purchases of life insurance by retirement plans that are subject to FASB Statement No. 35, Accounting and Reporting by Defined Benefit Pension Plans, are not addressed by this Technical Bulletin.
>
> Response
>
> 2. The amount that could be realized under the insurance contract as of the date of the statement of financial position should be reported as an asset. The change in cash surrender or contract value during the period is an adjustment of premiums paid in determining the expense or income to be recognized under the contract for the period.
>
> Effective Date And Transition
>
> 3. The provisions of this Technical Bulletin are effective for insurance policies acquired after November 14, 1985.
>
> Appendix
>
> Background
>
> 4. In November 1970, the AICPA issued an Accounting Interpretation entitled "Accounting for Key-Man Life Insurance." That Accounting Interpretation identified the cash surrender value method as generally accepted accounting for purchases of life insurance. New

types of life insurance contracts, new provisions in traditional contracts, and changes in the insurance industry have led some to question the 1970 Accounting Interpretation. In October 1984, the AICPA's Accounting Standards Executive Committee (AcSEC) approved an Issues Paper entitled "Accounting for Key-Person Life Insurance." In the Issues Paper, AcSEC reaffirmed support of the cash surrender value method as the only generally accepted method. The AcSEC position differed from the position of the AICPA Insurance Companies Committee, which supported use of a different method in certain circumstances. AcSEC was concerned that diversity would develop in practice because of the difference between those positions and requested that the FASB consider the matter.

5. A premium paid by a purchaser of life insurance serves a variety of purposes. A portion of the premium pays the insurer for assumption of mortality risk and provides for recovery of the insurer's contract acquisition, initiation, and maintenance costs. Another portion of the premium contributes to the accumulation of contract values. The relative amounts of premium payment credited to various contract attributes change over time as the age of the insured party increases and as earnings are credited to previously established contract values.

6. An insurance contract is significantly different from most investment agreements. The various attributes of the policy could be obtained separately through term insurance and purchase of investment. The combination of benefits and contract values could not, however, typically be acquired absent the insurance contract. Continued protection from mortality risk and realization of scheduled increases in contract accumulation usually requires payment of future premiums.

7. The payment of insurance premiums may take a number of different forms. The insurance contract may be purchased through payment of a single premium, as opposed to the typical series of future premiums. Alternatively, the premium payments may be made through loans from the insurance company that are secured by policy cash surrender values. The pattern of premium payments is a decision that does not alter the underlying nature of the insurance contract.

Consideration of Comments Received on Proposed Technical Bulletin

8. A proposed Technical Bulletin, Accounting for Business-Owned Life Insurance, was released for comment on June 28, 1985. Forty-seven letters of comment were received on the proposed Technical Bulletin. Certain of the comments received and consideration of them are discussed in the following paragraphs.

9. Some respondents view the dominant objective of a life insurance contract to be investment. Subject to certain criteria evidencing an intent to continue the contract, they maintain that the contract meets the definition of an asset established in paragraph 19 of Concepts Statement 3, which states, "Assets are probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events" (footnote reference omitted). Those who hold this view suggested that such contracts should be accounted for using methods that result in reporting the investment in life insurance at amounts different from those stipulated in the contract.

10. This Technical Bulletin does not take that view. The current capacity to realize contract benefits is limited to settlement amounts specified in the contract. Additional amounts in excess of cash surrender value, which would be reported as assets under the various alternative accounting methods suggested, are created by future events, which typically include premium payments and earnings credited to contract amounts.

11. Paragraph 123 of Concepts Statement 3 discusses the occurrence of past events and the role of future events in the recognition of assets.

> Since the transaction or event giving rise to the enterprise's right to the future economic benefit must already have occurred, the definition excludes from assets items that may in the future become an enterprise's assets but have not yet become its assets. An enterprise has no asset for a particular future economic benefit if the transactions or events that give it access to and control of the benefit are yet in the future.

12. Some respondents asserted that reporting an insurance investment at its realizable value represents an accounting based on liquidation values. Those respondents suggested that the entity acquiring an insurance contract is, in many cases, economically or contractually committed to maintain the contract in force. They maintained that such a commitment virtually assures that benefits in excess of premiums paid would be realized and that the policy should be reported on a basis other than its cash surrender value.

13. This Technical Bulletin does not accept that view. The amount realizable under an insurance investment represents settlement values agreed to by an independent buyer and seller. The variety of yields and contract accumulation patterns available in the insurance marketplace provides the buyer and seller a variety of insurance and settlement options. There is no compelling justification to depart from the recording of such contracts based on agreed provisions. The commitment referred to by respondents is, in the staff's view, a commitment to ensure that assets are available to meet contractual obligations. The presence of such a commitment does not change the measurement of the asset that is expected to satisfy the obligation.

14. Some respondents asserted that policy features, most notably the business exchange rider, were significant factors in determining the proper accounting for the policy. The business exchange rider allows a company to use values in an existing policy to insure a different employee when the originally insured employee leaves the company. They maintain that this feature gives the employer the ability to transfer the contract freely and enhances the employer's ability to realize the future value of the investment. They further maintain that the increased probability of realizing future values should lead to the reporting of amounts in excess of cash surrender value.

15. This Technical Bulletin rejects that view. The business exchange rider is a significant development in the design of business insurance products and reduces additional policy costs if a covered employee leaves the company. Such a provision does not affect the realization of future benefits under the insurance contract, nor does it change the traditional underwriting decisions involved in insuring a new life. Instead, the provision only reduces the cost of obtaining those benefits by allowing a new employee to be insured without the costs that are typically associated with obtaining a new policy.

Statutory Issue Paper No. 88

Mortgage Guaranty Insurance

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 58

Type of Issue:
Property and Casualty

SUMMARY OF ISSUE

1. Mortgage guaranty insurance protects a lender against loss of all or a portion of the principal amount of a mortgage loan upon default of the mortgagor. It differs from other types of property and casualty insurance in that coverage is long-term, and in most cases premiums are level and paid monthly. Most states require issuers of mortgage guaranty contracts to be monoline insurers and impose limitations on the aggregate amount of risk insured based on geographic territories. Additionally, states may limit mortgage guaranty insurers to reinsure with only selected reinsurers.

2. Current statutory guidance for issuers of mortgage guaranty insurance contracts is provided in Appendix A of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P & C Accounting Practices and Procedures Manual) and the Mortgage Guaranty Insurance Model Act.

3. Although GAAP guidance for mortgage guaranty insurance is provided in *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60), certain aspects of accounting for mortgage guaranty insurance contracts are specifically excluded from FAS 60. The aspects of FAS 60 not applicable to mortgage guaranty insurance relate to premium revenue, claims cost recognition, and acquisition costs.

4. To fill this void in GAAP, the AICPA exposed a draft statement of position in October 1980. The statement of position proposed that premiums be recognized evenly over the anticipated policy term. Costs of acquiring business such as salaries and commissions, generally would be deferred and amortized as the related premiums were earned. Losses on claims, including expenses of settlement, such as appraisal fees, generally would be recognized as of the initial default date.

5. The statement of position was never issued and there has been no further GAAP guidance relating to accounting for premium revenue and claims cost recognition and acquisition costs relating to mortgage guaranty insurance contracts.

6. Although there is no promulgated GAAP guidance, common practice is to recognize revenue as follows:

   a. For single premium plans, revenues are recognized over the policy life in relation to the expiration of risk;

   b. For annual premium plans, revenues are earned on a pro rata basis over the applicable year;

c. For monthly premium plans, revenues are earned either in the month received or the month due.

7. Losses and loss adjustment expenses are generally recognized on the default date regardless of when claims are reported to the insurer.

8. The purpose of this issue paper is to establish statutory accounting principles for recording premium revenue and the liability for unpaid losses and loss adjustment expenses that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Premium Revenue Recognition

9. Written premium shall be recorded in accordance with *Issue Paper No. 53—Property and Casualty Contracts - Premiums* (Issue Paper No. 53). Premium revenue shall be earned as follows:

a. For single premium plans, revenues shall be earned over the policy life in relation to the expiration of risk;

b. For annual premium plans, revenues shall be earned on a pro rata basis over the applicable year;

c. Additional first year premiums on nonlevel policies shall be deferred and amortized to income over the anticipated premium paying period of the policy in relation to the expiration of risk;

d. Initial renewal premiums that are higher than subsequent renewals shall be deferred and amortized over the remaining anticipated premium paying period in a manner consistent with additional first year premiums (i.e., in relation to the expiration of risk);

e. For monthly premium plans, revenues shall be earned in the month to which they relate.

10. When the anticipated losses, loss adjustment expenses, commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, contingency reserve, and the estimated future renewal premium on existing policies, a premium deficiency reserve shall be recognized by recording an additional liability for the excess deficiency with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis since they have previously been expensed. If an insurer utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the financial statements.

Unpaid Losses and Loss Adjustment Expense Recognition

11. Unpaid losses and loss adjustment expenses shall be recognized in accordance with *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (Issue Paper No. 55). For mortgage guaranty insurance contracts, the date of default shall be considered the incident that gives rise to a claim as discussed in Issue Paper No. 55. If a claim is ultimately presented, the date of default shall be considered the loss incurred date.

12. The process for estimating the liability shall include projections for losses that have been reported as well as those that have been incurred but not reported. The estimates shall be made based on historical data, trends, economic factors, and other statistical information including paid claims, reported losses, insurance in force statistics, and risk statistics.

13. Real estate and mortgages are acquired by mortgage guaranty insurers to mitigate losses. These assets shall be shown on the balance sheet at the lower of cost or net realizable value, net of encumbrances. Any gains or losses from the holding or disposition of these assets shall be recorded as a component of losses incurred. Any rental income or holding expenses shall be included in loss adjustment expenses.

Contingency Reserve

14. In addition to the unearned premium reserve, mortgage guaranty insurers shall maintain a liability referred to as a statutory contingency reserve. The purpose of this reserve is to protect policyholders against loss during periods of extreme economic contraction. The annual addition to the liability shall equal 50% of the earned premium from mortgage guaranty insurance contracts and shall be maintained for ten years regardless of the coverage period for which premiums were paid. With commissioner approval, when required by statute, the contingency reserve may be released in any year in which actual incurred losses exceed 35% of the corresponding earned premiums. Any such reductions shall be made on a first-in first-out basis. Changes in the reserve shall be recorded directly to surplus.

Disclosures

15. Mortgage guaranty insurers shall make all disclosures required by other issue papers within the codification, including but not limited to the requirements of Issue Paper No. 55*,* and *Issue Paper No. 77—Disclosures of Accounting Policies, Risks & Uncertainties, and Other Disclosures.*

DISCUSSION

16. This issue paper is not consistent with current statutory guidance as follows:

a. Premium Recognition

i. The P & C Accounting Practices and Procedures Manual distinguishes premiums for high risk policies from other policies. The conclusions reached in this issue paper make no such distinction because the concept is implicit in the requirement to earn revenues in relation to the expiration of risk.

ii. Certain states dictate by statute that a specific formula, table, or earnings curve be utilized to determine earned premiums. To the extent that the requirements are based on the exposure period and the relative risk during that period, they are consistent with the concepts set forth in this issue paper.

iii. The Mortgage Guaranty Insurance Model Act provides no specific guidance on premium revenue recognition other than the requirement to establish an unearned premium reserve. The method of establishing such reserve is based on regulation of the state of domicile.

iv. Current statutory guidance has no requirement to establish a premium deficiency reserve.

b. Contingency Reserve

The contingency reserve may be recorded through income or directly to surplus. This issue paper requires changes in the reserve to be recorded through surplus.

i. The Model Act requires that the contingency reserve shall be computed as an amount equal to 50% of the unearned premium after the establishment of the unearned premium reserve. This issue paper requires the establishment of a contingency reserve based on earned premium. Consistent with the Model Act, this issue paper provides that reserves can be reduced if Commissioner approval is obtained. However, Commissioner approval of a reserve reduction will only be considered as a viable means of reducing a reserve where the reporting entity can clearly demonstrate to the commissioner that the existing reserves are excessive.

17. Issue Paper No. 53 requires recognition of premium on a pro-rata basis over the period of exposure except when specific issue papers require different methods because the level of risk may vary significantly over the exposure period. Losses related to mortgage guaranty policies can occur over an exposure period which extends for the term of the mortgage. The pattern of normal loss incidence is not uniform over the exposure period and tends to peak in the earlier years. This issue paper provides guidance for premium recognition that is based on the exposure period of the contract and the underlying risk. Recognizing premiums over the exposure period and in relation to the underlying risk allows insurers to determine methods appropriate to the contracts they write versus requiring insurers to use methods that may not appropriately reflect such risks. Premiums collected on an annual payment plan may not be sufficient to cover the risk in early years. Subparagraph 9 b. requires annual premiums to be earned over the applicable year and does not permit an insurer to accrue premiums which may be collected in future years. Additional first year premiums and initial renewal premiums that are higher than subsequent renewals may be front loaded to expedite the collection of premium. Subparagraphs 9 c. and 9 d. require an insurer to defer the revenue and amortize it in relation to the expiration of risk.

18. The changes referred to in paragraph 16 were made to improve consistency in reporting among insurers that offer mortgage guaranty contracts as well as to improve consistency in reporting between reporting periods. This is consistent with the Statement of Concepts which states:

> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.

19. This issue paper expands current statutory guidance with respect to the recognition of losses. The P & C Accounting Practices and Procedures Manual provides guidance that losses shall be recognized when they occur. This issue paper defines the occurrence date as the date of default of a loan.

20. This issue paper is inconsistent with Issue Paper No. 22 which requires rental income on property to be recorded as investment income whereas this issue paper requires recognition of rental income as a reduction of loss adjustment expense.

21. The inconsistency between mortgage guaranty insurers and all other insurers in the reporting of all real estate obtained through foreclosure and in the recognition of rental income is reflective of the nature of the risks underwritten. Losses on real estate incurred by mortgage guaranty insurers can be viewed as resulting from underwriting activities and not investing activities. Because mortgage guaranty insurers are generally required to be monoline companies, and are prohibited from investing in real estate,

the inconsistency with all property casualty insurers will not hinder evaluation of the mortgage guaranty insurers results.

22. The contingency reserve does not meet the definition of a liability which is set forth in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets*. However, it is consistent with the "*ultimate objective of solvency regulations*" as stated in the Statement of Concepts. This states:

> the ultimate objective of solvency regulation is to ensure that policyholder, contract holder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety.

Additionally, recording the contingency reserve as a liability is consistent with the Statement of Concepts which states:

> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., excess of statutory reserves over statement reserves, interest maintenance reserves, asset valuation reserves, and others).

23. This issue paper is inconsistent with the guidance set forth in the AICPA exposure draft for mortgage guaranty insurance for the following reasons:

a. This issue paper requires that acquisition costs shall be accounted for in accordance with *Issue Paper No. 71—Policy Acquisition Costs and Commissions* rather than deferred as indicated in the exposure draft.

b. Paragraph 14 of this issue paper requires insurers to establish a contingency reserve. The AICPA exposure draft has no such requirement.

24. This issue paper is consistent with Issue Paper No. 55 which requires the ultimate cost of all known and unknown claims as well as related settling costs to be recorded when an insured event occurs.

Drafting Notes/Comments

- U.S. Mortgage Guaranty Tax and Loss Bonds and Contingency Reserve (for tax purposes, the Mortgage Guaranty Account) are addressed in *Issue Paper No. 83—Accounting for Income Taxes*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

25. Appendix A, Mortgage Guaranty Insurance Accounting Principles Supplement, of the P & C Accounting Practices and Procedures Manual provides the following guidance with respect to accounting for mortgage guaranty insurance: (only pertinent excerpts are included)

> Insured Risk
>
> The nature of the insured risk is influenced by certain factors which set the mortgage guaranty insurance product in some respects apart from other types of insurance.
>
> 1. Exposure Period

The period of exposure for a particular risk is significantly longer for mortgage insurance than for other property/liability insurance products. The exposure period for mortgage insurance can run for the term of the mortgage; however, the average policy life is seven years. The policy is terminated when the mortgage obligation is satisfied or the lender elects to cancel or not renew the policy.

Mortgage insurance is renewable at the option of the insured and at the renewal rate quoted when the policy commitment was issued. Disability income and certain life and health insurance products are other policies written with similar terms regarding renewal rate and cancellation.

In contrast to mortgage insurance, most property/liability products need not be renewed by the insurer at the expiration of the policy. The fact that mortgage insurance is guaranteed renewable at a definite rate is one of the factors necessitating the establishment of a contingency reserve. In effect, this reserve protects not only against catastrophic economic events, but also against a decrease in the quality of the insurance portfolio because of adverse selection at each renewal period.

2. Losses

The insured peril—the default of a borrower—arises from the credit risk associated with mortgage loans. The frequency of loss is strongly influenced by economic conditions. The likelihood of individual default is further increased if the property has deteriorated since a borrower in financial difficulty will be less able to sell the property at a price sufficient to discharge the mortgage.

Mortgage insurance losses can be divided into three categories:

(a) Normal losses associated with regular business cycles, interruptions in the borrower’s earning power and random errors made in evaluating the insured’s willingness or ability to meet mortgage obligations.

(b) Defaults caused by adverse local economic conditions.

(c) Widespread defaults caused by a severe depression in the U.S. economy.

The possible magnitude of loss contemplated in the last category has no analogy in any other private property/liability line of insurance.

3. Loss Incidence

Losses are incurred over an exposure period which can, as previously discussed, run for the term of the mortgage. The pattern of normal loss incidence is not uniform over the exposure period. The loss incidence peaks in the earlier years.

When a loan has been delinquent two or four months, the mortgage insurance policy requires the lender to notify the insurer. Further, the lender agrees to institute foreclosure proceedings six to nine months from the date of delinquency. Foreclosure can require an additional 18 months which could mean a considerable delay between the delinquency and the date of the claim. Without adverse economic conditions, most delinquencies do not result in a claim. Once a claim is presented, payment normally is made within one or two months and ultimate loss costs can be known relatively quick. An exception is the case where an insurer chooses to take the title to the property and sell it. Thus, reporting of losses and loss payments occur within the period that title is held by the insurer.

Pool Insurance

In addition to insuring mortgage loans on an individual basis (primary insurance), mortgage guaranty insurance is provided on pools of mortgage loans. Typically, such insurance supports mortgage-backed securities or group sales. Unlike other pool or group products, each loan is individually underwritten.

Pool insurance may be provided on loans that are already insured by primary insurance, in which case the pool insurance provides an additional level of coverage, or it may be provided on loans without primary insurance (usually loans with loan-to-value ratios below 80%). Generally, pool insurance provides 100% coverage and includes a stop-loss limit of liability which may range from 5% to 20% of the initial aggregate principal balance. Because of regulatory requirements in some states, pool insurance usually uses participating reinsurance arrangements to limit the exposure of any one mortgage insurer of a pool of loans to 25% of each mortgage insured.

Pool insurance policies are not cancelable by the insurer except for nonpayment of premium. These policies are generally written on mortgage pools having terms of up to 30 years. However, for all practical purposes, it is expected that the life of each pool will be considerably shorter than 30 years and will result in average policy life of 8 to 12 years. This compares to an individual policy which has an average term of 7 years.

In the case of default, the insurer has the same options as with individual insured mortgage loans. However, pool insurance loss payments are reduced by any settlements under primary insurance and subject to the stop-loss limit.

Three kinds of mortgage-backed securities which use pool insurance are described as follows:

1. Mortgage-Backed Bonds

   Issued by banks, savings and loan associations and other mortgage lenders as a general obligation of the issuing institution. These bonds are collateralized by a pool or mortgages and have a stated rate of return and maturity date.

2. Mortgage Revenue Bonds

   Issued by state and local housing authorities to support housing affordability for targeted income groups.

3. Mortgage Pass-Through Certificates

   Issued by banks, savings and loan associations, mortgage bankers and others providing an undivided interest in a pool of mortgages with principal and interest payment passed to the certificate holder as received.

Special Regulatory Requirements for Mortgage Insurers

1. Risk Ratio

   Since the inception of the private mortgage insurance industry in 1957, private mortgage insurers have been required to operate within a 25-to-1 ratio of risk to surplus, a ratio which many state insurance commissioners have determined to be prudent for the protection of lenders. For the purposes of arriving at this risk ratio, the regulatory authorities have defined “risk” as the total amount of exposure (percentage coverage) relating to the insurance in force, and “surplus” as policyholders’ surplus (capital, paid-in surplus, and unassigned surplus) plus the contingency reserve.

2. Statutory Contingency Reserve

   This is a special statutory reserve designed to protect policyholders against loss during a period of extreme economic contraction. By law, insurers must set aside 50 cents of each premium dollar earned and maintain the contingency reserve for a period of ten years, regardless of the length of coverage of the particular policy for which premium was paid. In most states, with the approval of the insurance commissioner, the contingency reserve may be reduced when losses in a calendar year exceed 35% of earned premiums (20% in some states).

REAL ESTATE

Generally, real estate owned by mortgage guaranty insurance companies consists of two types; (a) properties occupied by the company; or (b) real estate owned as a result of claim settlement. Real estate owned and held for use by the company is accounted for in the same manner as other fire and casualty companies.

Claims Settlement Costs

The cost of real estate acquired in the settlement of claims is similar in computation to that acquired by other insurers through a foreclosure process. Generally the cost of real estate acquired through foreclosure or in settlement of claims includes the outstanding principal balance of the mortgage loan on the date of foreclosure, plus accumulated interest, unpaid real estate taxes, insurance premiums, and all other costs necessary to obtain clear title and place the property in good repair.

If a property acquired in settlement of a claim is rented prior to disposal, the rental income received on such property is recorded as a reduction of loss adjustment expenses. Generally, expenditures for ordinary repairs is necessary to maintain the property in good operating condition, utilities, and real estate taxes paid after the acquisition of the property are recorded as loss adjustment expenses. Expenditures for major improvements made to the property are generally capitalized.

Statement Value

The statement value of real estate acquired in settlement of claims is generally accounted for at its net realizable value (the amount of cash, or its equivalent, expected to be realized upon disposal, net of costs such as maintenance and selling expenses required to be incurred prior to sale). In lieu of writing down real estate when realizable value is less than cost, a loss reserve may be established as a liability.

The excess of acquisition cost over realizable value on property disposed of at a later date is recorded to losses paid for the period in which the reduction in realizable value has been determined.

LOSSES

Recognition

The underlying goal of estimating unpaid losses is to have unpaid losses reflect the liability outstanding for losses that have been incurred as of the report date. Losses are recognized as they occur and not as they are reported to the company. Because of this basis of recognition, unpaid losses are grouped as (1) reported and (2) incurred but not reported (IBNR). Reported losses are those incurred losses of which the mortgage insurer has been notified by the lender through delinquent loan reporting and/or filing a claim for payment. The incurred but not reported losses are those losses that have occurred that have not been reported to the company.

Valuation

1. Estimation of Reported Losses Unpaid

   Unpaid losses are estimated based on predictions of loss frequency and loss severity. These estimates are based on historic data, trends, economic information, and other statistical information.

   Loss frequency and loss severity estimates are made for three separate categories:

   (a) Insured loans that have resulted in the conveyance of property which remains unsold

   (b) Insured loans in the process of foreclosure

   (c) Insured loans in default

2. Incurred But Not Reported Losses

   With the reported and unpaid loss category of the reserve representing the liabilities for reported claims and delinquencies, the mortgage insurer must also record a liability for losses that are incurred but not reported.

   Estimates of loss frequency and loss severity for incurred but not reported losses are made based on historic data, trends, economic factors, and other statistical data in relation to paid claims, the reserve for reported losses unpaid, insurance in force statistics, and risk statistics.

CONTINGENCY RESERVE

The contingency reserve, as described in several statutes, is established and maintained for the purpose of protecting insureds against the effect of adverse economic cycles. The reserve is variously described as a premium reserve, or loss reserve, or is not specifically described. The annual contribution to the contingency reserve is deductible in the computation of the federal income tax liability as described in the chapter on “Federal Income Taxes.”

In most jurisdictions, the annual addition to the contingency reserve liability is 50% of earned premium. One jurisdiction requires that the reserve contribution be based upon the loan amount of outstanding mortgages insured or 50% of earned premiums, whichever is higher. In another jurisdiction, the annual addition applicable to the mortgage pool insurance business segment is based upon insured risk. Each annual addition to the contingency reserve must be maintained for 10 years before being released, except that releases are permitted (on a first-in, first-out basis) at an earlier date should actual losses exceed established percentages of earned premiums as set forth in the statutes.

There are two predominant practices being used to report the effect of contingency reserve transactions. “Practice One” is to report changes to the reserve in the income statement; “Practice Two” is to report changes as a direct adjustment to surplus.

Under Practice One, the liability for the contingency reserve is included in loss reserves and the net addition to (or deduction from) the contingency reserve liability is reported as a deduct from (or addition to) underwriting income in the income statement.

Under Practice Two, the liability for contingency reserves is reported as a separate line item among other liabilities. The net addition to (or deduction from) the contingency reserve liability is not recorded in the income statement, but rather it is reported as a direct adjustment to surplus.

Prior to computing financial ratios and results for an insurer: (1) underwriting income comparisons between insurers using the differing practices will require an adjustment to account for the differing treatments of additions to (or deductions from) the contingency reserve, and (2) as with the risk ratio calculation, the contingency reserve must be added to policyholders' surplus. In addition, if appropriate, statutory net income should be adjusted for any federal income tax consequences arising from the purchase of tax and loss bonds (see Federal Income Taxes chapter). These adjustments may require information not found in the annual statement.

UNEARNED PREMIUMS

There are a variety of statutory accounting methods used by mortgage guaranty insurers to determine the earned and unearned portion of premiums written. The rate at which premiums are earned differs based on type of policy, the loan-to-value ratio of the mortgage and the policy term (single premium versus annual renewals).

Certain states dictate through statute or regulation a specific formula or table to be used for the above policy types. Special attention is placed on single premium (multiple year) policies and on the "excess risk" portion of the initial annual premium.

Renewal Premiums, Annual Premiums and Level Premiums

Renewal premiums and annual premiums on policies with a loan-to-value of 90% or less are earned on a monthly pro rata basis using the 13-month method (sometimes called the 1/24 method because 1/24 is earned in each of the first and last months, and 1/12 in each of the other 11 months). This method assumes that the effective dates of policies are spread evenly throughout the month and that the average date is the 15th.

Level premium policies are handled the same as the above. Thus, a three-year policy payable in three equal annual installments is booked the same way as the three successive one-year policies.

Annual Premiums on High-Risk Policies

In some jurisdictions, the portion of the first year's premium which exceeds twice the annual renewal rate is earned on a deferred basis. (These premiums usually relate to mortgages with loan-to-value ratios in excess of 90%.)

Single Premiums

Single premiums are typically recognized on a deferred basis and then earned according to various statutorily mandated earnings curves.

LOSS AND LOSS ADJUSTMENT EXPENSES INCURRED

Mortgage guaranty insurance accounting differs from property insurance accounting in that if real estate is acquired, salvage value is recognized. If a property is in claims settlement, the difference between the cost of the property and its estimated net realizable value is recorded as loss expense at the date of acquisition. Further, in some jurisdictions, net additions to the contingency reserve are reported as part of incurred losses (see chapter on Contingency Reserve).

26. The Mortgage Guaranty Insurance Model Act provides the following guidance: (only pertinent excerpts included)

Section 16. Reserves

A. Unearned Premium Reserves

A mortgage guaranty insurance company shall compute and maintain an unearned premium reserve as set forth by regulation adopted by the commissioner of insurance.

B. Loss Reserve

A mortgage guaranty insurance company shall compute and maintain adequate case basis and other loss reserves which accurately reflect loss frequency and loss severity and shall include components for claims reported and for claims incurred but not reported, including estimated losses on:

(1) Insured loans which have resulted in the conveyance of property which remains unsold;

(2) Insured loans in the process of foreclosure;

(3) Insured loans in default for four (4) months or for any lesser period which is defined as default for such purposes in the policy provisions; and

(4) Insured leases in default for four (4) months or for any lesser period which is defined as default for such purposes in policy provisions.

C. Contingency Reserve

Each mortgage guaranty insurance company shall establish a contingency reserve out of net premium remaining (gross premiums less premiums returned to policyholders net of reinsurance) after establishment of the unearned premium reserve. The mortgage guaranty insurance company shall contribute to the contingency reserve an amount equal to fifty percent (50%) of such remaining unearned premiums. Contributions to the contingency reserve made during each calendar year shall be maintained for a period of one hundred and twenty months (120), except that withdrawals may be made by the company in any year in which the actual incurred losses exceed thirty-five percent (35%) of the corresponding earned premiums, and no such releases shall be made without prior approval by the commissioner of insurance of the insurance company's state of domicile.

If the coverage provided in this act exceeds the limitations set forth herein, the commissioner of insurance shall establish a rate formula factor that will produce a contingency reserve adequate for the added risk assumed. The face amount of an insured mortgage shall be computed before any reduction by the mortgage guaranty insurance company's election to limit its coverage to a portion of the entire indebtedness.

D. Reinsurance

Whenever a mortgage guaranty insurance company obtains reinsurance from an insurance company which is properly licensed to provide such reinsurance or from an appropriate governmental agency, the mortgage guaranty insurer and the reinsurer shall establish and maintain the reserves required in this chapter in appropriate proportions in relation to the risk retained by the original insurer and ceded to the assuming reinsurer so that the total reserves established shall not be less than the reserves required by this chapter.

E. Miscellaneous

(1) Whenever the laws of any other jurisdiction, in which a mortgage guaranty insurance company subject to the requirement of this act, is also licensed to transact mortgage guaranty insurance, require a larger unearned premium reserve or contingency reserve in the aggregate than that set forth herein, the establishment of such larger unearned premium reserve or contingency reserve in the aggregate shall be deemed to be in compliance with this chapter.

(2) Unearned premium reserves and contingency reserves shall be computed and maintained on risks insured after the effective date of this chapter as required by Sections 16A and 16C. Unearned premium reserves and contingency reserves on risks insured before the effective date of this chapter may be computed and maintained as required previously.

Section 17. Regulations

The commissioner shall have the authority to promulgate rules and regulations deemed necessary to effectively implement the requirements of this chapter.

Generally Accepted Accounting Principles

- No specific GAAP guidance obtained.

OTHER SOURCES OF INFORMATION

27. The AICPA Exposure Draft on mortgage guaranty insurance provides the following guidance.

> Conclusions with respect to earning premium
>
> 19. Single premiums should be earned on a pro rata basis throughout the policy term, or on a declining basis if the amount of coverage significantly declines during the policy term. Annual premiums should be earned on the same basis. Level annual premiums should be earned on a pro rata basis over the policy term (usually one year). Additional first-year premiums on nonlevel policies, that is, the difference between first-year and level renewal premiums, should be deferred and amortized to income over the anticipated premium-paying period of the policies in relation to total anticipated premium receipts excluding the additional first-year premiums. If the dollar amount of coverage significantly declines during the anticipated premium-paying period, the additional first-year premium should be amortized to income in relation to anticipated coverage. If the initial renewal premium rate is higher than subsequent renewal premium rates, the excess premiums should be deferred and amortized to income over the remaining anticipated premium paying period of the policies in the same manner as the additional first-year premiums (this does not apply to policies with reduced premiums in later years, such as the tenth year or later). Level renewal premiums and the portion of the first-year premium equal to the level renewal premium should be earned on a pro rata basis over the policy term (generally one year). When significant differences between anticipated and actual renewal premiums occur, the predetermined amortization of additional first-year premiums should be adjusted to reflect actual experience.
>
> Conclusions with respect to premium deficiencies
>
> 36. When anticipated losses and loss adjustment expenses, maintenance expenses and unamortized deferred acquisition costs exceed unearned premiums and estimated renewal premiums on existing policies, a provision for the anticipated premium deficiency should be provided. Premium deficiencies should be determined by reasonable groupings of business based on line of business or geographical area. (Premium deficiencies should be recognized by writing off any unamortized deferred acquisition costs to the extent required. If the deficiencies are more than the unamortized deferred acquisition costs, a separate liability should be provided for the excess deficiency).
>
> 37. In addition, companies that consider anticipated investment income in computing premium deficiencies should disclose the fact in their financial statements, together with the effects on the financial statements.
>
> Conclusions with respect to recording claims

49. Losses should be accrued as of the initial default date, however, if a company can demonstrate that another date is more appropriate, such as 60 or 90 days after the initial default losses may be accrued as of that date.

50. In addition, companies that discount loss or loss adjustment expense reserves (see paragraphs 56 through 59) should disclose that fact in their financial statements, together with the effects on the financial statements.

51. No conclusion has been reached regarding whether loss reserves should be discounted; that is, whether the time value of money should be considered in determining loss reserves. This issue, as it applies to all insurance companies, is being considered separately by the AICPA Insurance Companies Committee.

Statutory Issue Paper No. 89

Separate Accounts

STATUS
Finalized March 13, 2000

Original SSAP and Current Authoritative Guidance: SSAP No. 56

Type of Issue:
Life Specific

SUMMARY OF ISSUE

1. Current statutory accounting guidance for separate accounts is addressed in Chapter 25, Separate Accounts*,* of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). General reserve requirements and accounting for all life and annuity contracts with life contingencies has been established in *Issue Paper No. 51—Life Contracts* (Issue Paper No. 51). Current statutory accounting for separate accounts varies by state.

2. GAAP guidance for separate account contracts requires investments to be reported at market value except for separate account contracts with guaranteed investment returns. For those separate accounts, the related assets are generally reported in accordance with *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60), as amended by *FASB Statement No. 114*, *Accounting by Creditors for Impairment of a Loan* (FAS 114), *FASB Statement No. 115*, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115) and *FASB Statement No. 121*, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to be Disposed Of* (FAS 121). GAAP guidance for separate account contracts requires policy reserves or liabilities to be established using the balance that accrues to the benefit of the policyholder.

3. The purpose of this issue paper is to provide guidance on accounting and reporting for separate accounts in both the general account and separate account statement, consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Introduction

4. Separate accounts are used to fund variable life insurance, variable annuities, modified guaranteed annuities and modified guaranteed life insurance, or various group contracts under pension or other employee benefit plans where funds are held in a separate account to support a liability. When separate accounts are established and filed accordingly, they may be used to fund guaranteed benefits. Separate account contracts may also be used to accumulate funds which are intended to be applied at some later time to provide life insurance or to accumulate proceeds applied under settlement or dividend options.

5. Assets held in separate accounts are owned by the insurer. All investment income and realized and unrealized capital gains and losses from assets allocated to a separate account, net of related investment expenses, are generally reflected in the separate account and, except for modified guaranteed annuities, modified guaranteed life insurance, and separate accounts established and filed to provide guaranteed benefits, investment performance is generally not guaranteed by the insurer. Charges relating to contract guarantees, administration, and investment management are deducted from separate accounts.

General Account Reporting

6. Insurance activities such as sales, underwriting and contract administration, premium collection and payment of premium taxes, claims, and benefits are functions of the insurance company distinct from the separate account and shall be accounted for as transactions of the general account.

7. For those separate account contracts classified as life contracts under *Issue Paper No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force*, premiums and annuity considerations shall be recorded as income in the Summary of Operations of the general account, and as transfers to premiums and considerations in the separate account statement. Deposit-type contracts shall be recorded in the general account in accordance with *Issue Paper No. 52—Deposit-Type Contracts*. Charges (e.g., fees associated with investment management, administration, and contract guarantees) assessed on the separate accounts, as well as the net gain from operations of the separate account shall be recorded as income in the Summary of Operations of the general account. Expenses relating to investment management, administration, and contract guarantees pertaining to separate account operations, as well as benefits and surrenders incurred on behalf of separate account contracts classified as life contracts, net transfers between separate accounts, commissions, and premium taxes (if any) shall be recorded as expenses in the Summary of Operations of the general account.

8. The general account shall include the total assets and liabilities, including transfers due or accrued, of any separate accounts business which it maintains and, therefore, the surplus, if any, of its separate accounts business. Transfers to the general account due or accrued shall be reported on a net basis so that the asset and the liability totals of the general account are not overstated. Changes in the surplus of the separate accounts business of an insurer, except for changes resulting from the net gain from operations of the separate account, shall be charged or credited directly to the unassigned funds (surplus) of the general account.

9. Where a variable annuity contract or variable life insurance contract contains a guaranteed minimum death benefit, any reserve liability for such death benefit provision shall be recorded and held in the general account based on the reserving guidance in paragraphs 24 and 25. Any differences between the benefit paid and the separate account asset value of the contract shall be charged against or credited to the general account in its net gain from operations.

10. Separate account surplus may not become negative. For example, for separate account contracts which have annuitized (i.e., contracts in the payout stage), lower than expected mortality on variable annuity contracts containing mortality guarantees may cause a deficiency in the investment funds underlying the contract reserves. Thus the general account incurs an expense and the separate account realizes revenue to cover this deficiency, if necessary. Conversely, excess funds from higher than expected mortality will result in mortality gains that are included in the Summary of Operations of the separate account and are ultimately recorded as equity in net income from separate account operations as discussed in paragraph 7.

11. For variable products, separate account surplus created through the use of the commissioners' reserve valuation method (CRVM), commissioners' annuity reserve valuation method (CARVM), or other reserving methods, shall be reported by the general account as an unsettled transfer from the separate account. The net change on such transfers shall be included as a part of the net gain from operations in the general account.

12. Surplus funds transferred from the general account to the separate account, commonly referred to as seed money, and earnings accumulated thereon shall be reported as surplus in the separate accounts until transferred or repatriated to the general account. The transfer of such funds between the separate account and the general account shall be reported as surplus contributed or withdrawn during the year.

13. If an Asset Valuation Reserve (AVR) is required for investments held by separate accounts, it is combined with the general account AVR and accounted for in the general account financial statements (see *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (Issue Paper No. 7)). The criteria for determining when an AVR is required for separate accounts are described in paragraph 17 of this issue paper.

Separate Account Reporting

14. The separate accounts annual statement is concerned with the flow of funds related to investment activities and obligations of the separate accounts and with the transfer of funds between the separate account and the general account. As a result, the separate account statement shall report only the assets, liabilities, and operations of the separate account and shall not include general account expenses related to investment management, administration, or contract guarantees pertaining to separate account operations which are recorded in the general account.

15. The separate account records premiums, considerations (net of loading for sales charges such as commissions and premium taxes) and receipts (other than for net investment income and realized capital gains and losses) as income transfers from the general account. Net investment income and realized and unrealized capital gains and losses relating to the investment operations of the separate account are recorded as income in the Summary of Operations. When the contract provides for such, expenses and taxes associated with the separate account investment operations shall be deducted in the determination of net investment income. Deposits and withdrawals on deposit-type contracts shall be recorded in the Summary of Operations. Benefits and surrenders, reserve transfers, policy loans, policyholder charges (e.g., fees associated with investment management, administration, and contract guarantees), and federal income taxes relating to the separate account are recorded as expense transfers to the general account in the Summary of Operations. The net change in aggregate reserves relating to separate account contracts is reported as an expense in the Summary of Operations.

16. Assets supporting fund accumulation contracts (GICs), which do not participate in underlying portfolio experience, with a fixed interest rate guarantee, purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer, will be recorded as if the assets were held in the general account. Assets supporting all other contractual benefits shall be recorded at market value on the date of valuation, or if there is no readily available market, then in accordance with the valuation procedures in the applicable contract.

Separate Account AVR and IMR Reporting

17. An AVR is generally required for separate accounts when the insurer, rather than the policyholder/contractholder, suffers the loss in the event of asset default or market value loss. An AVR is required unless:

a. The asset default or market value risk is borne directly by the policyholders, or

b. The regulatory authority for such separate accounts already explicitly provides for a reserve for asset default risk, where such reserves are essentially equivalent to the AVR.

18. Assets supporting traditional variable annuities and variable life insurance generally do not require an AVR because the policyholders/contractholders bear the risk of change in the value of the assets. However, an AVR is required for that portion of the assets representing the insurer's equity interest in the investments of the separate account (e.g., seed money).

19. Assets supporting typical modified guaranteed contracts, market value adjusted contracts, and contracts with book value guarantees similar to contracts generally found in the general account do require an AVR because the insurer is responsible for credit related asset loss.

20. Certain separate accounts are also required to maintain an Interest Maintenance Reserve (IMR). The IMR requirements for investments held in separate accounts are applied on an account by account basis. If an IMR is required for a separate account, all of the investments in that separate account are subject to the requirement. If an IMR is not required for a separate account, none of the investments in that separate account are subject to the requirement.

21. An IMR is required for separate accounts with assets recorded at book value, but is not required for separate accounts with assets recorded at market value. For example, separate accounts for traditional variable annuities or variable life insurance do not require an IMR because assets and liabilities are valued at market value.

22. If an IMR is required for investments held by separate accounts, it is kept separate from the general account IMR and accounted for in the separate accounts statement.

23. The AVR and IMR shall be calculated and reported in accordance with the Annual Statement Instructions.

Policy Reserves

24. Statutory policy reserves shall be established for all contractual obligations of the insurer arising out of the provisions of the insurance contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. These statutory policy reserves are generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. Statutory policy reserves meet the definition of liabilities as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in Issue Paper No. 5.

25. The reserving methodologies and assumptions used in computation of policy reserves shall also meet the provisions of Appendix A-250, A-270, A-255, A-585, A-588, A-620, A-820 A-822, and the actuarial guidelines found in Part 9 of the NAIC Financial Examiners Handbook. Where separate account contracts have guaranteed elements, the basis for determining the value of the liability shall be consistent with the basis used for asset values (i.e., valuation interest rates as defined in Appendix A-820 shall be used when assets are recorded as if held in the general account and current interest rates based on market rates shall be used when assets are recorded at market.) Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

Other Liabilities

26. The separate account shall accrue as a liability, subject to contractual provisions, amounts payable, including, but not limited to:

- Charges for investment management, administration, and contract guarantees
- Investment expenses
- Investment taxes, licenses, and fees (Investment taxes such as real estate taxes, licenses and fees (excluding federal income taxes) are usually paid directly by the separate account but may be transferred to the general account for payment)
- Federal income taxes
- Unearned investment income
- Net transfer due to (from) the general account
- Remittances and items not allocated
- Payable for investments purchased
- Net adjustments in assets and liabilities due to foreign exchange rates

Seed Money

27. When a new separate account is initiated, the insurer may make a temporary transfer of surplus funds commonly referred to as seed money to the separate account. Such funds and earnings accumulated thereon shall be reported as surplus in the separate accounts statement until transferred or repatriated to the general account. The transfer of such funds to and from the separate account shall be reported as surplus contributed or withdrawn during the year.

Disclosures

28. The general account financial statement shall include a description of the general nature and characteristics of the various kinds of separate accounts business conducted by the company and included in the company's Separate Accounts Statement. For each grouping (as detailed in paragraph 29), the following shall be disclosed:

a. Premiums, considerations or deposits received during the year;

b. Reserves by the valuation basis of the investments supporting the reserves at the financial statement date. List reserves for separate accounts whose assets are carried at market value separately from those whose assets are carried at amortized cost/book value;

c. Reserves by withdrawal characteristics, i.e., whether or not the separate account is subject to discretionary withdrawal or market value adjustment, or to withdrawal at book value with or without surrender charge;

d. Reserves for asset default risk, as described in paragraph 15.b., that are recorded in lieu of AVR.

29. Separate accounts shall be addressed in the following groupings (which are the same as those used for risk-based capital):

a. Separate Accounts with Guarantees:

i. Indexed separate accounts, which are invested to mirror an established index which is the basis of the guarantee;

ii. Nonindexed separate accounts, with reserve interest rate at no greater than 4% and/or fund long-term interest guarantee in excess of a year that does not exceed 4%;

iii. Nonindexed separate accounts, with reserve interest rate at greater than 4% and/or fund long-term interest guarantee in excess of a year that exceeds 4%.

b. Nonguaranteed Separate Accounts—Variable separate accounts, where the benefit is determined by the performance and/or market value of the investments held in the separate account. Include variable accounts with incidental risks, nominal expense, and minimum death benefit guarantees.

30. Provide a reconciliation of the amount reported as transfers to and from separate accounts in the Summary of Operations of the separate accounts statement and the amount reported as net transfers to or from separate accounts in the Summary of Operations of the general accounts statement.

DISCUSSION

Statutory Guidance

31. Consistent with Issue Paper No. 7, this issue paper adopts current statutory guidance for AVR and IMR for Life and Accident and Health insurance companies.

32. The statutory accounting principles outlined in the conclusion above regarding accounting and reporting for separate account life and annuity contracts are consistent with current statutory accounting, except for separate account deposit-type contracts which shall be accounted for consistent with the guidance in *Issue Paper No. 52—Deposit-Type Contracts.* The statutory accounting principles outlined in the conclusion above are consistent with the Statement of Concepts which states:

> Conservatism
>
> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.
>
> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.
>
> Recognition
>
> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).
>
> Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.
>
> SAP income reflects the extent that changes have occurred in SAP assets and liabilities for current period transactions, except changes in capital resulting from receipts or distributions to owners. SAP income also excludes certain other direct charges to surplus which are not directly attributable to the earnings process, (e.g., changes in non-admitted assets).

GAAP Guidance

33. In Issue Paper No. 7, *Issue Paper No. 26—Bonds, Excluding Loan-Backed and Structured Securities, Issue Paper No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (Issue Paper No. 50), and *Issue Paper No. 51—Life Contracts*, the GAAP guidance (principally, FAS 60, *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, FAS 115, *FASB Statement 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts*, and *AICPA Statement of Position 95-1, Accounting for Certain Activities of Mutual Life Insurance Enterprises*) related to insurance contracts and separate account assets and liabilities was rejected for the reasons set forth therein.

Drafting Notes/Comments

- Issue Paper No. 50 addresses Classifications and Definitions of Insurance or Managed Care Contracts In Force.
- Issue Paper No. 51 addresses Life Contracts.
- Issue Paper No. 52 addresses Deposit-Type Contracts.
- This issue paper references the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*. The guidance for AVR/IMR was subsequently moved to the Annual Statement Instructions for Life and Accident and Health Insurance Companies. SSAP No. 56 references the Annual Statement Instructions.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE (ONLY PERTINENT EXCERPTS ARE INCLUDED BELOW)

Statutory Accounting

34. The Life/A&H Accounting Practices and Procedures Manual, Chapter 25, Separate Accounts, provides the following guidance with respect to separate accounts:

SEPARATE ACCOUNTS

> A life insurance company is authorized by state statutes to establish separate accounts and to allocate thereto, pursuant to agreements, amounts paid to it. Separate accounts may be used:
>
> 1. to provide for annuities, whether ultimately payable in guaranteed fixed amounts or variable amounts or both;
>
> 2. to provide life insurance where the benefits, premiums, or both, are payable on a variable basis and for which the reserves vary according to the investment experience of the underlying separate account;
>
> 3. to accumulate funds which are intended to be applied at some later time to provide life insurance, whether fixed or variable or both; or
>
> 4. to accumulate, or hold in a separate account, proceeds applied under settlement or dividend options.
>
> All investment income and capital gains and losses (whether or not realized) from assets allocated to a separate account are, in accordance with applicable agreements, credited to or charged against the separate account policyholders. Investment performance is generally not guaranteed by the insurance company.
>
> Assets allocated to separate accounts are owned by the insurer and the insurer is not a trustee by reason of the separate accounts. However, if permitted or required by state law, a separate agreement may provide that the portion of the assets of the separate account equal to the

reserves and other contract liabilities of the separate account shall not be chargeable with liabilities arising out of any other business of the insurer.

State statutes generally provide that amounts allocated to a separate account and accumulations on those amounts may be invested and reinvested without regard to any requirements or limitations imposed upon an insurer by the investment statutes which apply to insurers generally.

Some statutes provide that to the extent that the insurer's reserve liability, with regard to benefits guaranteed as to dollar amounts and duration and funds guaranteed as to principle amount or stated rate of interest, is maintained in a separate account, a portion of the assets of the account at least equal to the reserve liability with regard to these benefits shall be invested in accordance with the investment statutes of the domiciliary state. These assets shall be reported separately and valued in accordance with the rules otherwise applicable to the insurer generally.

Assets allocated to a separate account, other than those provided for guaranteed benefits as described above, are valued at their market value on the date of valuation, or if there is no readily available market, then in accordance with the applicable contract.

The reserve or liability under a contract with a separate account provision is usually determined on the basis of the market value of the assets in the separate account.

Separate accounts may be used to fund individual variable life insurance, individual variable annuities, group variable life insurance, group variable annuities and various group contracts under pension or other employee benefit plans where funds are held in a separate account essentially as a liability. The financial experience on these separate accounts is reported in the annual statement of separate accounts business.

Relationships of the Separate Accounts Annual Statement and the Life and Accident and Health Annual Statement

Accounting for separate account business involves both the general account of a company and the separate accounts. The separate accounts annual statement is concerned primarily with the investment activities of the separate accounts and with the flow of funds from and to the general account. Insurance activities such as sales, underwriting and contract administration, premium collection and payment of premium taxes, claims, and benefits are functions of the insurance company distinct from the separate account fund and are accounted for as transactions of the general account; the expenses incurred on account of these functions are reported in the life and accident and health annual statement. Thus, premiums and considerations and benefit payments on separate accounts business are reported respectively in the premiums and annuity considerations exhibit and the policy contract claims exhibit of the life and accident and health statement. Similarly the policy exhibit and the exhibit of annuities and supplementary contracts with life contingencies in the life and accident and health statement includes variable annuity contracts.

Expenses incurred on contracts with separate accounts (other than direct investment expenses) are generally reported in the general account. Fees related to these expenses are charged to the separate accounts policyholders. Federal income taxes and taxes incurred on separate account investments are reported in the separate account statement, but other taxes, i.e., taxes on consideration, are reported in the general account. Where a variable annuity contract contains a guaranteed minimum benefit such as return of consideration paid on death within a specified period, any excess of the benefit paid over the separate account asset value of the contract would customarily be a charge against the general account. Any reserve liability for such death benefit provisions is normally carried in the general account.

Under a variable annuity contract containing mortality guarantees which are reserved in the general account, when lighter than expected mortality causes a deficiency in the investment funds underlying the contract reserves, the general account must transfer funds to the separate account. Conversely, excess funds form higher than expected mortality are transferred to the general account. As a general rule, the total statement value of the assets held in a separate account must be equal to (never less than) the total separate account reserve liability of the contracts participating in the separate account. If mortality gains are allowed to accumulate in the separate account, these accumulations may be reported as surplus.

Overview of the Flow of Funds and Accounting

Gross purchase payments received are reported in the life and accident and health statement. In the case of a variable life or variable annuity contract, the net purchase payment is transferred immediately to the separate account. In most cases, the purchase payment transferred will be net (gross minus loading).

If a net purchase payment on a variable annuity is not accounted for as consideration received, it should be transferred to the separate account as an “annuity deposit” or “purchase payment reserve” (or similar term). The loading might be treated as a consideration for accounting purposes. At such time as the accumulation is to be applied to purchase an annuity or supplementary contract, the entire accumulation (net purchase payments plus investment income) is transferred to the general account to be accounted for as consideration received. Appropriate taxes on the total amount of such consideration (including all accumulated investment income) are deducted before the remaining funds are either transferred back to the separate account as consideration for a variable annuity or supplementary contract or used to buy a fixed annuity or supplementary contract in the general account. The return of the fund or surrender or death prior to maturity is generally reported as a return of purchase payments. This is the equivalent of the redemption by the issuer of shares in a mutual fund, which a variable annuity in the accumulation stage closely resembles.

In the employee benefit area, separate accounts may be used to fund part or all of unallocated pension funds during the accumulation phase and group variable annuities in the payout phase. Amounts of consideration or purchase payments are received from the employer through the general account and transferred to the separate account after deducting any loading for expenses, etc. Funds withdrawn for the purchase of fixed or variable annuities are transferred to the general account where they are reported as considerations received. Applicable taxes are deducted prior to purchase of an annuity for a retiring employee.

Under certain arrangements, employee benefit funds may be put into a separate account to be accumulated until withdrawn to be used for various purposes. Such funds would not be reported as income; amounts transferred from the general account are reported net of amount returned.

Generally, considerations, purchase payments, deposits, etc., received by a separate account are recorded on a cash basis.

Life and annuity benefits and payments on supplementary contracts are paid through the general account with funds transferred from the separate account. The liability for any benefits transferred but unpaid at year-end would be carried by the general account.

Some variable annuity contracts, during the accumulation period, permit the contract holder to transfer funds between the separate account and the general account. In order to avoid inflating the income reported in either or both accounts, special provision is made for transferring these reserves between the general account and the separate accounts.

Individual variable annuity contracts usually contain guarantees for mortality and expense assumptions. Charges for these guarantees, and for administrative and investment management expenses, are usually expressed as an annual percentage of the asset value of the contract and may also include an amount per contract. Such charges may be calculated and deducted from the separate account on a daily, weekly, or monthly basis—generally the same interval at which the separate account is valued. Group contracts with separate account provisions may have similar arrangements.

Charges, when deducted from the separate account asset values, are usually transferred to the general account. Charges deducted but not yet transferred are usually carried as a liability in the separate accounts statement. Some companies prefer to accumulate the mortality and expense guarantee charges in the separate account as surplus.

Investment expenses incurred may be payable directly by the separate accounts or may be incurred by the general account to be reimbursed by the separate accounts. Investment expenses incurred by the general account on behalf of the separate accounts may be reported in the life and accident and health statement. These investment expenses may be deducted from this statement, on a line by line basis, and entered in the same way in the separate accounts statement; or they may be deducted as a single negative item in the life and accident and health statement and entered as a summary item in the separate accounts statement.

Investment taxes such as real estate taxes, licenses and fees (excluding federal income taxes) are usually paid directly by the separate accounts but may be transferred to the general account for payment. Federal income taxes are not paid directly by the separate accounts. The amount of federal income tax estimated as incurred is transferred to the general account.

A reserve for future federal income taxes is provided for in the separate accounts statement. The purpose of this item is to recognize that the amount of capital gains credited to contract holders at any time is the net after deducting capital gains taxes which would be payable under the assumption that all assets were disposed of at that point in time. This deduction is reflected in the increase in the liability item, “Reserves for future federal income taxes.” Note that a decrease in unrealized capital gains would cause a decrease in this reserve.

When a new separate account is initiated, the company may make a temporary transfer of surplus funds commonly referred to as “seed money” to the separate account. Such funds are reported as surplus in the separate accounts statement and the transfer of such funds to and from the separate account would be reported as surplus contributed or withdrawn during the year. The rules and regulations of various states restrict the sale, exchange, or transfer of assets between the general and separate accounts.

Separate accounts, as reported in the statement blank, would normally not develop a gain from operations because (a) gains or losses arising from mortality and expenses are reflected in the general account; (b) investment expenses and taxes are deducted from investment gains and losses; and (c) investment gains and losses after expenses and taxes are absorbed in the increase in reserve liabilities. A gain from operations could arise from earnings on contributed surplus maintained in a separate account or when a company does not transfer mortality and expense guarantee charges out of the separate accounts. Note that a separate account surplus can never be permitted to become negative.

Mortality gains and losses can be handled in either of two ways.

1. If the separate accounts are being reported on a zero gain from operations basis, then any net gain from mortality should be transferred to the general account, or, if a loss, a transfer of an offset amount should be made from the general account. In either case, on the aggregate write-in lines under “Other transfers from the separate accounts” in the Summary of Operations page of the separate accounts statement, appropriately captioned, e.g., “Other transfers (net),” may be used. An offset to a mortality loss would be a negative entry.

2. If mortality gains or losses are to be permitted to flow through to the gain from operations and the surplus account is to be kept at zero, then a counterbalancing entry must appear in the surplus account. Since surplus in a separate account cannot be permitted to be negative, a counterbalancing contribution to surplus from the general account must be made whenever surplus would otherwise become negative.

The analysis of increase in reserves illustrates how the year-end reserves reported are developed from the operations of the separate account. It follows in a general way the corresponding analysis in the life and accident and health statement.

Separate Account Reporting in the Life and Accident and Health Statement

Transfer transactions affect both the life and accident and health and the separate accounts statements but to avoid duplicate detailed reporting, and also to avoid complicating the life and accident and health statement, the details of the transfer are shown only in the separate accounts statement. Aggregate transfer items are netted and shown in the inserts on the liabilities page and in the Reconciliation of Cash and Invested Assets in the separate accounts statement. These same net totals would be included as single line entries on appropriate pages of the life and accident and health statement.

The asset page of the life and accident and health statement provides for the entry of the totals from the asset page of the separate accounts statements. The liabilities page of the life and accident and health statement provides for two entries from the separate accounts statements. The first entry shows the amount of transfers to the separate accounts due or accrued. This item is entered on a net basis so that if there is an amount due from the separate accounts to the general accounts, the net of the two will be entered as a negative item. The reason for this treatment is that a more normal treatment, under which an amount due the general account from the separate account is entered as an asset in the life and accident and health statement, would inflate both the assets and the liabilities totals of the life and accident and health annual statement. The second entry on the liabilities page of the life and accident and health statement is for the total liabilities entry from the separate accounts statement.

The Summary of Operations and Analysis of Operations by Lines of Business of the life statement provide for entry of net transfers to separate accounts--there is no one source for this figure in the separate accounts statement. Items relating to separate accounts may also appear as direct entries to surplus.

35. The Separate Accounts Annual Statement Blank Instructions provide the following guidance with respect to separate accounts:

GENERAL

The instructions for completing the general account are to be followed to the extent applicable. This supplement provides additional instructions that are unique to the Separate Accounts Blank as well as some that differ from those for the Life and Accident and Health Blank. Where there is a conflict with the Life Blank's instructions use these instructions. The reporting date must be plainly written or stamped at the top of all pages, exhibits and schedules (and duplicate schedules) and also upon all inserted schedules and loose sheets.

The separate accounts statement reports only the operations of the separate accounts themselves. It assumes that the administration of the contracts is reflected in the general account statement-hence, administrative expense does not appear in the Separate Accounts Statement, premiums and considerations are net of loading, and the expenses and taxes are those associated with the separate account investment operations.

Receipts other than income from investments are handled as a transfer from the general account. Similarly, amounts providing for the payment of benefits, including surrender benefits and various other payments, appear as transfers from the separate account to the general account. When eventually paid, these items are reported in the general account statement. The assets and liabilities are strictly those which arise from the operations of the separate accounts themselves, i.e., policy and contract reserves and items related to the making of investments, including investment expenses and taxes due or accrued. Unpaid transfers due the general account, such as surplus, contractual benefits, or contractual charges, would also appear on the liability page.

36. The June 5, 1995 minutes of the Separate Accounts Working Group of the Accounting Practices and Procedures (EX4) Task Force provide the following guidance with respect to separate accounts:

> 1. Accounting for Separate Account Surplus
>
> Peter Storms (Arthur Andersen) provided a summary of the work accomplished to date relative to accounting for separate account surplus. Mr. Storms noted that the interested parties group continues to support its original recommendation.
>
> Tomoko Stock (Calif.) stated that California opposes the recommendation of the interested parties group. Specifically, they oppose the reporting of fee income, generated through the use of Commissioners Annuity Reserve Valuation Method (CARVM), being allowed to flow through the general account's income statement on an accrual basis. Ms. Stock suggested that this treatment of fee income inflates current income and has a potential impact on stockholder dividends. The California position is to recognize the income as it is realized.
>
> Jack Gies (Conn.) noted that surplus created through the use of CARVM is a book item, not a cash item. He also noted that the income earned from separate account fees is fairly certain to be realized either through mortality and expense charges or through surrender charges.
>
> Working group members noted that the accounting treatment being proposed assumes that CARVM is being applied in an accurate and prudent manner.
>
> Alan Close (Northwestern Mutual Life) stated that his recommendation included a different balance sheet presentation from that recommended by the interested parties group, with an approach that stresses the appropriate measure of assets and liabilities. He noted, however, that his recommendation supported the income statement presentation recommended by the interested parties group.
>
> Bill Carroll (American Council of Life Insurance—ACLI) noted that the ACLI's committee on statutory accounting met in May 1995 and voted to support the recommendation of the interested parties.
>
> After being duly moved and seconded, the working group voted to adopt the accounting treatment for separate account surplus which requires that separate account surplus created through the use of CARVM be recorded as an unsettled transfer from the separate accounts; that separate account seed money and earnings accumulated thereon, be reported in the separate accounts until repatriated; and that the net gain from separate accounts operations be included in the general account summary of operations. Blank proposals to effect this accounting treatment will be prepared for submission prior to July 1, 1995.
>
> Ms. Stock noted that the adopted accounting treatment will include parenthetical entries on the balance sheet to specifically identify amounts in the transfer account that are related to the use of CARVM.
>
> The working group noted, that in adopting this accounting treatment, it will be necessary for the Risk-Based Capital Task Force to revise the life risk-based capital report to include the separate accounts transfer balance with the separate accounts surplus when applying the risk-based capital charge. Blaine Shepherd (Minn.) stated that he would report this issue to the Risk-Based Capital Task Force.

37. Chapter 16, *Asset Valuation Reserve and Interest Maintenance Reserve*, in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies states the instructions for calculating the AVR and IMR are contained in the Annual Statement Instructions for Life and Accident and Health Insurance Companies.

38. Section 6. *Interest Maintenance Reserve and Asset Valuation Reserve for Life Insurance Companies* and *Fraternal Benefit Societies of the Purposes and Procedures Manual of the NAIC Securities Valuation Office* contains the following excerpts (note that this is not quoted in its entirety):

> This Section applies to all life insurance companies and fraternal benefit societies. The Section describes in general terms, principles of the calculation for Interest Maintenance Reserve (IMR) for realized gains and losses from fixed income investments and the Asset Valuation Reserve (AVR) on all invested assets held by a company. [Refer to the NAIC's Life and Health Annual Statement Instructions for specific reporting guidance.] The IMR is a single component reserve. The AVR breaks down into two major components and each component has two subcomponents:
>
> The Default Component--
>
> (i) Other Than Mortgage Subcomponent
> (ii) The Mortgage Subcomponent
>
> The Equity Component--
>
> (i) The Common Stock Subcomponent
> (ii) The Real Estate and Other Invested Assets Subcomponent
>
> (A) Interest Maintenance Reserve (IMR). This reserve applies to realized capital gains and losses net of tax on short-term and long-term fixed income investments. These gains and losses are from the disposal of investments as reported in Schedule D, Part 4 for long-term bonds and preferred stock; Schedule DA, short-term bonds; Schedule DB, interest rate hedges; Schedule B, mortgage loans; or Schedule BA for other fixed income investments. The reserve captures the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the liability released.
>
> The current year's IMR is equal to:
>
> The beginning balance
> plus (minus) the realized capital gains (losses) net of tax attributed to interest rate changes
> plus (minus) realized liability gains (losses) net of tax attributed to interest rate changes
> less an amortization amount
>
> (a) Interest Related Realized Capital Gains and Losses:
>
> The gains and losses are to be reported net of applicable capital gains taxes allocated in accordance with an insurers established policy.
>
> A realized gain or loss on each debt security and mortgage backed security will be an interest related gain or loss if the debt security's beginning NAIC rating did not change by more than one classification at the end of the holding period. The holding period is defined as the period from the date of purchase to the date of sale. With respect to Class One Bond Mutual Funds, "realized capital gains and (losses)" include any capital gains and losses realized by the Company, whether from sale of the Fund or capital gains distributions by the Fund. However, where the gain on a convertible bond or preferred stock sold while "in the money" is included in IMR, the expected maturity date is defined as the next conversion date. "In the money" is defined to mean that the number of shares available currently or at next conversion date, multiplied by their current market price, is greater than the statement value of the convertible asset. However, for a convertible bond or convertible preferred stock purchased while its conversion value exceeds its

par value, any gain or loss realized from its sale before conversion must be excluded from the IMR and included in the AVR. Conversion value is defined to mean the number of shares available currently or at next conversion date, multiplied by the stock's current market price. The holding period is defined as the period from the date of purchase to the date of sale. For end of period classification, the most recent available rating should be used. For debt securities acquired before January 1, 1991, the debt security's rating as of December 31, 1990 should be the beginning rating used for this purpose. A debt security's gain or loss should not be included in this reserve if the debt security rating was ever a "6" during the holding period.

Preferred stock that did not have an NAIC/SVO rating classification of "PSF-4", "PSF-5", "PSF-6" or "P-4", "P-5" or "P-6" at any time during the holding period should be reported as interest related gains and (losses) in the Interest Maintenance Reserve if the stock's beginning NAIC/SVO rating did not change by more than one classification at the end of the holding period.

For preferred stocks acquired before January 1, 1993, the holding period is assumed to have begun in December 31, 1992.

For Class One Bond Mutual Funds, the holding period is defined as one calendar year to expected maturity.

Determination of IMR gain or loss on multiple lots of the same securities should follow the underlying accounting treatment in determining the gain or loss. Thus, the rating classifications, on a purchase lot basis, should be compared to the rating classification at the end of the holding period to determine IMR or AVR gain or loss.

Losses recognized on loan-backed bonds and other structured securities that have a negative effective yield at the date of valuation should be treated as realized losses and included in the reserve as if the security had been sold and the loss considered an interest rate loss. If the security is valued using the prospective adjustment methodology, a negative effective yield occurs when the net undiscounted sum of anticipated future cash flows of the security is less than the current book value of the security at the date of valuation. If the security is valued using the retrospective adjustment methodology, a negative effective yield occurs when the net undiscounted sum of actual and anticipated cash flows is less than the original cost of the investment.

Capital gains and losses net of capital gains tax on mortgage loans, where interest is not more than 90 days past due, not in process of foreclosure, not in course of voluntary conveyance, or have not had restructured terms over the prior two years will be classified as an interest rate gain or loss. Prepayment penalties recorded as capital gains on mortgage securities are also considered to be due to interest rate changes.

Realized gains and losses on fixed income investments recorded on Schedule BA should be classified as an interest gain or loss if they are in the nature of those defined for bonds, preferred stocks and mortgages.

Realized gains and losses, net of capital gains tax, on derivative investments arising out of transactions entered into solely for the purpose of altering the interest rate characteristics of the company's assets and/or liabilities should be allocated to the IMR and amortized into income over the remaining life of the assets or liabilities associated with the derivative instruments. Gains or (losses) on dollar repurchase agreements that are traded for the fee have no IMR (or AVR) impact because they are treated as financings.

If during the course of the year, the SVO removes the classification of "class one" from a Class One Bond Mutual Fund, the company shall not report capital gains or (losses) on this schedule. Any such removal of the "class one" classification will cause the Fund to be reported as common stock on the applicable schedules.

(b) Liability gains/(losses) Subject to IMR Amortization

1) Reinsurance -

The interest rate related gain or loss (net of taxes) associated with the sale, transfer or reinsurance of a block of liabilities must be credited or charged to the IMR and then amortized into income provided:

1. the portion of the block reinsured represents more than 5% of a company's general account liabilities (Page 3, Line 26 of the Annual Statement),

2. the transaction is irrevocable and is to a non-affiliate and

3. the transaction was completed in the current year.

A company may elect to use a lower materiality threshold than the 5% specified in Item 1 above provided that such election is applied consistently to all transactions subsequent to the election, and the election is conveyed to the Insurance Department of the state of domicile. Once a threshold is elected, it can only be changed with the prior approval of the Insurance Department of the state of domicile.

The amount of the gain or loss that is interest rate related and its IMR amortization should be determined using the following procedure for the portion of the block sold, transferred or reinsured.

1. Identify the IMR balance and future amortization arising from the past and present dispositions of the assets associated with the block of liabilities.

2. Identify the IMR balance and future amortization that would result if the remaining assets associated with the block of liabilities were to be sold.

3. Define the interest rate related gain or (loss) net of taxes to be the negative of the sum of the IMR balances determined in steps 1 and 2. The future amortization of the gain or loss is the negative of the sum of the amortization determined in steps 1 and 2.

The associated assets are the assets allocable to the reinsured block of business for the purposes of investment income allocation. If the company has not been tracking the investment income of the block, it should retrospectively identify the assets using procedures consistent with its usual investment income allocation procedures. The associated assets are not necessarily the same as the assets transferred as part of the transaction.

2.) Market Value Adjustments

Material gains or losses resulting from market value adjustments on policies and contracts backed by assets that are valued at book, including the marginal tax impact, should be captured by the IMR and amortized in a manner consistent with the determination of the market value adjustment. A gain or loss is considered material if it is in excess of both .01% of liabilities and $1,000,000. The amortization schedules should be determined in a manner consistent with the determination of associated market value adjustment.

(d) Amortization into income:

There are two acceptable methods for accumulating and calculating the amortization schedule. A company can select either the seriatim method or the grouped method for calculating IMR amortization. Although a company is not precluded from changing methods on a prospective basis, the overriding consideration is the reasonableness of the amortization. However, once a method is selected for a particular year's capital gains, the amortization is locked in and cannot be changed (at least not without the specific approval of the commissioner).

1. Seriatim Method--The amount of each capital gain or (loss), net of capital gains tax, amortized in a given year using the seriatim method is the excess of the amount of income that would have been reported in that year, had the asset not been disposed of, over the amount of income that would have been reported had the asset been repurchased at its sale price. The capital gains tax associated with or allocated to each gain or (loss) should be amortized in proportion to the amortization of the gain or (loss).

For loan-backed bonds and structured securities that are valued using currently anticipated prepayments use an amortization schedule developed using the anticipated future cash flows of the security sold consistent with the prepayment assumptions that would have been used to value the security had the security been purchased at its sale price.

The seriatim calculation on an asset by asset basis is the desired approach, but since a seriatim approach may impose an administrative burden on some companies, each company may use the method employed by that company to amortize interest related capital gains and losses among lines of business and policyholders in accordance with the investment income allocation process as approved by the state insurance department.

2. Grouped Method-- A company may use a standard "simplified method" by which the capital gains and (losses), net of capital gains tax, are grouped according to the number of calendar years to expected maturity.

The groupings are based on the years to expected maturity as of the date of sale.

0 calendar years to expected maturity,
1 calendar year to expected maturity,
2 to 5 calendar years to expected maturity,
6 to 10 calendar years to expected maturity,
11 to 15 calendar years to expected maturity,
16 to 20 calendar years to expected maturity,
21 to 25 calendar years to expected maturity,
over 25 calendar years to expected maturity.

The amortization schedule for the current year is the sum of the gains and losses by maturity groupings times the appropriate factor for the current and future years. The maturity groupings and factors are found in 6(B)(j).

The presence of sinking fund payments, amortization schedules, expected prepayments, and adjustable interest rates complicate the determination of the number of calendar years to expected maturity. The expected maturity date is:

For fixed income instruments with fixed contractual repayment dates and amounts (including bonds, preferred stock, callable or convertible bonds and preferreds), the expected maturity is defined as the contractual retirement date that produces the lowest amortization value for Annual Statement purposes (lowest internal rate of return or "yield to worst"). Potential retirement dates include all possible call dates, and the contractual maturity date where a convertible bond or convertible preferred stock is sold while its conversion value exceeds it statement value and the gain is included in IMR, the expected maturity date is defined as the next conversion date. Conversion value is defined to mean the number of shares of common stock available currently or at the next conversion date, multiplied by the stock's current market price. When the instrument's contractual terms include scheduled sinking fund payments of fixed amounts, an additional calculation of yield to average life should be included in the analysis where average life is defined as the date at which the instrument is 50% repaid. For puttable instruments, where the exercise option rests with the investor, expected maturity is the put or maturity date that produces the highest internal rate of return. For Class One Bond Mutual Funds, use one calendar year to expected maturity. For perpetual instruments, the expected maturity is 30 years from the current date.

However, where a callable bond purchased at a premium is called or sold after the expected maturity date, there should be no amortization of the call premium or interest rate related gain or loss and the gain or loss should be taken into income immediately. Similarly there should be no amortization of any interest rate related gain or loss arising if a convertible bond or preferred stock is disposed of after the expected maturity date.

For liability gains and losses included in the IMR, amortization should be determined in a manner consistent with the determination of associated market value adjustment or assets transferred.

“Calendar years to expected maturity” means the calendar year of expected maturity minus the calendar year of sale date.

For purposes of the grouped method, the following additional assumptions are applicable:

- For fixed income investments, other than residential mortgages and residential mortgage pass-throughs, without a maturity date or sinking fund schedule, a maturity date 30 years from the current year should be used.

- For loan-backed bonds and other structured securities that are valued using currently anticipated prepayments use the remaining weighted average life of principal and interest payments consistent with the prepayment assumptions that would have been used to value the security had the security been repurchased at its sale price.

(e) Separate Accounts

Interest Maintenance Reserve (IMR) requirements for investments reported in the separate accounts statement are applied on an account by account basis. If an IMR is required for a separate account, all of the investments in the separate account are subject to the requirement. If an IMR is not required for a separate account, none of the investments in that separate account are subject to the requirement.

An IMR is required for separate accounts valued at book, but is not required for separate accounts valued at market. For example, separate accounts for traditional variable annuities, or variable life insurance do not require an IMR because assets and liabilities are valued at market.

If an IMR is required for investments in the separate accounts statement, it is kept separate from the general accounts IMR and accounted for in the separate accounts statement. For further details see rules as explained in Sec (6) (A) (f).

(f) Negative IMR

A negative IMR balance may be recorded as a negative liability in either the general account or the separate accounts statements of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

The following information is presented to assist in determining the proper accounting:

General Account IMR Balance	Separate Accounting IMR Balance	Net IMR Balance
Positive	Positive	Positive (See rule a)
Negative	Negative	Negative (See rule b)
Positive	Negative	Positive (See rule c)
Positive	Negative	Negative (See rule d)
Negative	Positive	Positive (See rule e)
Negative	Positive	Negative (See rule f)

Rules:

a) If both balances are positive, then report each as a liability in its respective statement.

b) If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement. If there is any disallowed negative IMR balance in the general account statement, record the disallowed portion as a positive amount for Disallowed IMR in a write-in line for assets not admitted in Exhibit 14. If there is any disallowed negative IMR balance in the separate accounts statement, determine the change in the disallowed portion and make a direct charge or credit to the surplus account for the Change in Disallowed IMR.

c) If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the separate accounts statement.

d) If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the separate accounts statement, and follow the instructions in b) above for handling the disallowed portion of negative IMR balances in the separate accounts statement.

e) If the general account balances is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the general account statement.

f) If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the general account statement, and follow the instructions in b) above for handling the disallowed portion of negative IMR balances in the general account statement.

(B) Asset Valuation Reserve (AVR). This reserve shall apply to the specific risk characteristics of all the invested asset categories excluding cash, policy loans, premium notes, collateral loans and income receivables. The specific assets to be included in each subcomponent are:

The Default Component

The Other Than Mortgage Loans Component shall include all fixed income investments that are corporate or governmental unit obligations, excepting those listed in subsection (g) as exempt from the AVR reserve, preferred stock and loan backed securities as reported in Schedule D - Part 1 and Part 2 -- Section 1, and Schedule DA, and counterparty exposure arising from derivative transactions as reported in Schedule DB - Part E - Section 1.

The Mortgage Loans Subcomponent shall include all farm, commercial, residential mortgages as reported in Schedule B and Schedule DA.

The Equity Component

The Common Stock Subcomponent shall include all affiliated and unaffiliated common stock investments as reported in Schedule D, Part 2--Section 2.

The Real Estate and Other Invested Asset Subcomponent shall include all real estate reported on Schedule A and all Other Invested Assets as reported on Schedule BA and DA.

(a) Calculation of the AVR:

The current year's AVR by subcomponent is equal to:

The beginning balance
plus (minus) the realized capital gains (losses) net of tax as allocated by the company on assets corresponding to the subcomponent
plus (minus) unrealized capital gains (losses) on assets corresponding to the subcomponent
plus (minus) transfers between components
plus an annual contribution
plus any voluntary contribution
plus (minus) an adjustment up to zero or down to maximum.

(b) Realized Capital Gains and Losses:

Report all realized credit-related (default) and equity capital gains and (losses), net of capital gains tax applicable to the assets in each component and subcomponent including those realized capital gains and (losses) that are incurred on Separate Accounts assets for which AVR treatment is required. Exclude all interest rate related capital gains and (losses) from the AVR.

A realized gain or loss on a debt security will be a credit related gain or loss if the debt security's beginning NAIC/SVO rating changed by more than one classification at the end of the holding period. The holding period is defined as the period from the date of purchase to the date of sale. For debt securities acquired before January 1, 1991 the debt securities rating as of December 31, 1990 should be the beginning rating used for this purpose. A debt security gain or loss should always be included in this reserve if the bond rating was ever a "6" during the holding period. Determination of the AVR gain or loss on multiple lots of the same fixed income securities should follow the underlying accounting treatment in determining gain or loss. Thus, the rating classifications, on a purchase lot basis, should be compared to the rating classification at the end of the holding period to determine IMR or AVR gain or loss. Permanent impairment write-downs are treated as credit-related (losses).

Preferred stock that had an NAIC/SVO rating classification of "PSF-4", "PSF-5", "PSF-6", "P-4", "P-5" or "P-6" at any time during the holding period shall be reported as credit related gains and (losses) in the Asset Valuation Reserve.

However, for a convertible bond or preferred stock purchased while its conversion value exceeds its par value, any gain or loss realized from its sale before conversion must be included in the Equity Component of the AVR. Conversion Value is defined to mean the number of share available currently or at next conversion date, multiplied by the stock's current market price.

For preferred stocks acquired before January 1, 1993 the holding period is presumed to have begun on December 31, 1992.

In addition, all gains or losses, net of capital gains taxes, on mortgage loans, where interest is more than 90 days past due, in the process of foreclosure in course of voluntary conveyance, or have had restructured terms over the prior two years, would be classified as credit related gains or losses. Permanent impairment writedowns are also treated as credit losses.

Realized gains or losses net of capital gains tax on portfolio or general hedging instruments should be included with the hedged assets. Gains or losses net of capital gains tax on hedges used as specific hedges should be included only if the specific hedged asset is sold or disposed.

Realized gains or losses on derivative instruments not accounted for as specific (as opposed to general) hedge transactions should be allocated to the component and subcomponent of the assets associated with the derivative instruments used in the general hedge.

Realized gains or losses, net of capital gains resulting from the sale of U.S. Government Securities and the direct or guaranteed securities of agencies which are backed by the full faith and credit of the U.S. Government are exempt from the AVR. This category is detailed in Section 6(B)(g)(i).

The gains or (losses) are to be reported net of applicable capital gains taxes as allocated by the company.

(c) Unrealized Capital Gains and Losses:

Unrealized gains and losses should be summarized by subcomponent asset type and included in the reserve computation including those unrealized capital gains and (losses) that are incurred on Separate Account assets for which AVR treatment is required. The equity method of accounting is allowed in accounting for the operating results of subsidiary, controlled or affiliated companies. If the equity accounting method is used, the amount of the undistributed income or loss reported in Exhibit 2 of the Annual Statement less the amount of any dividends received is to be included as an unrealized capital gain or loss when computing the Common Stock Subcomponent. Unrealized gains and (losses) for Affiliated Life Insurance Companies which are maintaining their own AVR are excluded since the maximum reserve factor for such companies is 0%.

Unrealized gains or losses on hedging instruments should be included with the hedged instruments.

(d) Transfers Between Components:

If the sum of a subcomponent's beginning balance, realized gains and losses and unrealized gains and losses is greater than the ending maximum of the subcomponent, and the balance of its sister subcomponent is below its maximum reserve, the excess must be transferred to the other subcomponent of the Default or Equity components up to that subcomponent's maximum.

If after the above transfers, the Equity or Default component is greater than total maximum for the component, the excess may be transferred to the other component or may be released to surplus.

If the balance before transfers of any of the four sub-components is negative, and the balance before transfers of its “sister” subcomponent within the same component is positive, the negative amount should be transferred to the “sister” sub-component to the extent that the transfer does not reduce the positive balance before transfers of the “sister” sub-component to less than 50% of its balance prior to the transfer.

No other transfers may be made without Commissioner approval. No transfers between the AVR and IMR are allowed.

(e) Annual Contribution:

The formula for the annual contribution to a subcomponent is as follows:

The contribution rate times the difference between the subcomponent maximum amount and the accumulated balance. (Accumulated balance is shown on Page 49, Line 6 of the Annual Statement). This number will be positive when the maximum reserve exceeds the accumulated balance and negative when the accumulated balance is in excess of the maximum reserve.

(f) Contribution Rate:

The contribution rate is 20% per year.

(h) Voluntary Contribution to the Reserves:

Companies may make voluntary contributions to the subcomponents. Voluntary contributions will become a permanent part of the AVR once they have been reported and may not be removed in subsequent years.

39. The NAIC Annual Statement Instructions provide the following guidance (note that this is not quoted in its entirety):

INTEREST MAINTENANCE RESERVE

Interest Maintenance Reserve (IMR) requirements for investments reported in the Separate Accounts Statement are applied on an account by account basis. If an IMR is required for a separate account, all of the investments in that separate account are subject to the requirement. If an IMR is not required for a separate account, none of the investments in that separate account are subject to the requirement.

An IMR is required for separate accounts valued at book but is not required for separate accounts valued at market. For example, separate accounts for traditional variable annuities, or variable life insurance do not require an IMR because assets and liabilities are valued at market.

If an IMR is required for investments in the Separate Accounts Statement, it is kept separate from the General Account IMR and accounted for in the Separate Accounts Statement.

ASSET VALUATION RESERVE

Asset Valuation Reserve (AVR) requirements for investments reported in the Separate Accounts Statement are applied on an account by account basis. If an AVR is required for a separate account, all of the investments in that separate account are subject to the requirement. If an AVR is not required for a separate account, none of the investments in that separate account are subject to the requirement (except to the extent that such investments represent the company’s capital and surplus interest in those investments).

Whether or not an AVR is required for separate account assets depends primarily on whether the insurer or policyholder/contractholder suffers the loss in the event of asset default or market value loss. An important exception to this is when specific state regulation provides an alternative to the AVR.

An AVR is required for separate account investments unless:

1. The asset default or market value risk is essentially borne directly by the policyholders, or

2. The regulatory authority for such separate accounts already explicitly provides for establishment of a reserve for asset default risk where such reserves are essentially equivalent to the AVR.

For example, assets supporting traditional variable annuities, and variable life insurance do not require an AVR because the policyholders/contractholders bear the risk of change in the value of assets. However, an AVR is required for that portion representing the company's equity interest in the investments of such a separate account, (seed money interest, for example). Assets supporting typical modified guaranteed contracts or market value adjusted contracts do require an AVR because the company is responsible for credit related asset loss. Another category of contracts requiring an AVR is contracts with book value guarantees similar to contracts generally found in the general account.

An example of the exception referred to in (2) above are contracts with market value separate accounts funding guaranteed benefits where state regulation provides alternatives to the AVR.

The following criteria are presented to assist in determining when an AVR or an IMR are required for investments in the Separate Accounts Statement:

Assets	Liabilities	Does Co. Suffer Asset Loss?	If Yes, Any Other Provision?	AVR*	IMR	Example Product
Market	Market	No	--	No	No	Variable Annuity
Market	Market**	Yes	No	Yes	No	Modified Gtd. Annuity
Market	Market	Yes	Yes	No***	No	MV S/A funding Gtd. Benefits
Book	Book	No	--	No	No	--
Book	Book	Yes	No	Yes	Yes	GIC in S/A
Book	Book	Yes	Yes	No***	Yes	--

* However, an AVR is required for that portion representing the company's equity interest in the investments of such a separate account.

** But not less than adjusted cash surrender value.

*** You must establish an AVR reserve unless there is a statutory requirement for the equivalent of an AVR reserve for such products.

> If an AVR is required for investments in the Separate Accounts Statement, it is combined with the General Account AVR and accounted for in the General Account Statement. Worksheets supporting the separate accounts portion of the reserve are included in the Separate Accounts Statement.
>
> When the AVR Default Component covers assets valued at market, use one of the following two methods (applied consistently by separate account) to determine when a gain or loss (net of capital gains tax) is credited or charged to the AVR:
>
> 1. A gain or (loss) is recorded as for the general account rules, i.e., upon sale of an asset which has changed more than one rating category or upon asset default. Once an asset is in default, all subsequent market value changes are reflected in the AVR, or
>
> 2. A similar procedure to Method 1 above is followed but, additionally, a gain or (loss) is recorded whenever an asset held changes by more than one rating category. As there might be more than one such event for a particular asset, e.g., a two rating downgrade followed by subsequent sale of the asset, the amount charged the AVR is net of any prior amounts charged for that asset.
>
> When an AVR is required for the company's equity or capital and surplus interest in the investments of a particular separate account that does not otherwise require an AVR, the AVR requirement is based on the company's equity interest as of the statement date, expressed as a percent of total assets of the particular separate account. Once the equity interest percentage has been determined, it is applied to the realized and unrealized capital gains and losses and the investments of that particular separate account to determine the amounts to be included in the separate accounts data used for development of the current AVR. If the company's equity interest in all such separate accounts is less than 1/10th of 1% of the company's total admitted assets, the equity interest in the investments of such separate accounts is exempt from AVR requirements.

40. Most state regulations refer to the literature of the NAIC for guidance on the calculation of AVR and IMR. An example is the Texas Administration Code, Title 28 - Insurance, Chapter 7, *Corporate and Finance*, which states:

> (4) Asset valuation reserve (AVR) -- A reserve applied to the specific risk characteristics of all the invested asset categories except cash, policy loans, premium notes, collateral loans, and income receivables. Asset valuation reserves shall be calculated as prescribed by the NAIC and adopted from time to time by the State Board of Insurance under the Texas Administrative Code, Title 28, Chapter 7.
>
> (12) Interest maintenance reserve (IMR) -- A reserve applied to realized capital gains and losses on short-term and long-term fixed investments. These gains and losses are from the disposal of investments as reported in Schedule D, part 1 -- Bonds, or Schedule B -- Mortgage Loans of the current annual statement. The reserve captures the realized capital gains and losses resulting from changes in the general level of interest rates as prescribed by the NAIC and adopted from time to time by the State Board of Insurance under the Texas Administrative Code, Title 28, Chapter 7.

Generally Accepted Accounting Principles

41. FAS 60 provides the following guidance related to separate accounts:

> Separate Accounts
>
> 53. Separate accounts represent assets and liabilities that are maintained by an insurance enterprise for purposes of funding fixed-benefit or variable annuity contracts, pension plans, and

> similar activities. The contract holder generally assumes the investment risk, and the insurance enterprise receives a fee for investment management, certain administrative expenses, and mortality and expense risks assumed.
>
> 54. Investments in separate accounts shall be reported at market except for separate account contracts with guaranteed investment returns. For those separate accounts, the related assets shall be reported in accordance with paragraphs 45-51. Separate account assets and liabilities ordinarily shall be reported as summary totals in the financial statements of the insurance enterprise.
>
> The reporting requirements of FAS 60, paragraphs 45-51, have been amended by *FASB Statement No. 91*, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, FAS 97, FAS 114, FAS 115, and FAS 121.

42. AVR and IMR are not addressed in current GAAP literature.

43. Paragraph 28 of FAS 97, as amended by FAS 115, addresses the GAAP accounting for realized gains and losses. It states:

> Reporting of Realized Investment Gains and Losses of Investments
>
> 28. Statement 60 required that insurance enterprises report realized gains and losses in the statement of earnings below operating earnings and net of applicable income taxes. This Statement precludes that practice. Realized gains and losses shall be reported in the statement of earnings as a component of other income, on a pretax basis, and shall not be deferred to future periods either directly or indirectly. The first sentence of paragraph 50 of Statement 60 is superseded by the following: Realized gains and losses on all investments (except investments that are classified as trading securities and those that are accounted for as hedges as described in FASB Statements No. 52, Foreign Currency Translation, and No. 80, Accounting for Futures Contracts) shall be reported in the statement of earnings as a component of other income, on a pretax basis. Realized gains and losses shall be presented as a separate item in the statement of earnings or disclosed in the notes to the financial statements. Realized gains and losses shall not be deferred, either directly or indirectly.

OTHER SOURCES OF INFORMATION

44. The draft discussion material from previous Life Codification projects contains the following excerpts:

> Chapter 16A - Interest Maintenance Reserve
>
> All U.S. life insurance companies and fraternal benefit societies are required to establish an Interest Maintenance Reserve (IMR) for realized gains and losses resulting from changes in the overall level of interest rates on fixed income investments. The IMR is calculated in accordance with instructions promulgated by the Valuation of Securities (EX4) Task Force of the National Association of Insurance Commissioners and contained in the Life Accident and Health Annual Statement Instructions and the Valuation of Securities manual. Because the instructions for the calculation of the IMR are periodically revised, the current publications should be consulted.
>
> The purpose of the IMR is to protect surplus from investment transactions that are entered into as a reaction to interest rate movements. The IMR minimizes the effect that realized capital gains and losses attributable to interest rate movement have on current year operations by deferring and amortizing such capital gains and losses, net of tax, over the approximate remaining life of the investments sold. The IMR applies to realized capital gains and losses, net of tax, on short-term and long-term fixed income securities, including bonds, notes, preferred stock and mortgages.

Chapter 16B - Asset Valuation Reserve

All U.S. life insurance companies and fraternal benefit societies must include as a liability in their statutory financial statement an Asset Valuation Reserve (AVR) on fixed income and equity investments. The AVR is calculated in accordance with instructions promulgated by the Valuation of Securities (EX4) Task Force of the National Association of Insurance Commissioners and contained in the Life, Accident and Health Annual Statement Instructions and the Valuation of Securities manual. Because the instructions for the calculation of the AVR are periodically revised, the current publications should be consulted.

The purpose of the AVR is to establish a provision for the volatile incidence of asset losses and recognize appropriately the long term return expectations for equity type investments. The AVR provides a mechanism to absorb unrealized and credit-related realized gains and losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable.

The AVR contains two components, default and equity, each designed to address specific asset risk areas. The default component is further divided into the bond and preferred stock subcomponent and the mortgage subcomponent; the equity component is comprised of the common stock subcomponent and the real estate and other invested asset subcomponent. Increases or decreases to the reserve are charged or credited directly to surplus. The AVR is limited to maximums by subcomponent, and no subcomponent of the AVR may be less than zero. Transfers between subcomponents or between components may be required or may be allowed without commissioner approval when negative or certain maximum subcomponent balances occur.

Statutory Issue Paper No. 90

Nonadmitted Assets

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 20

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. As described in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4), one of the cornerstones of statutory accounting is the use of nonadmitted assets. The use of nonadmitted assets is consistent with the recognition concept in the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

2. Current statutory accounting guidance for nonadmitted assets is provided throughout the Accounting Practices and Procedures Manuals for Life and Accident and Health Insurance Companies and Property and Casualty Insurance Companies (Life/A&H and P&C Accounting Practices and Procedures Manuals).

3. The purpose of this issue paper is to establish statutory accounting principles for nonadmitted assets which are not specifically addressed in other issue papers, consistent with the Statement of Concepts and Issue Paper No. 4.

SUMMARY CONCLUSION

4. The definition and accounting treatment for nonadmitted assets is outlined in paragraph 3 of Issue Paper No. 4 as follows:

> As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet", and are, therefore, considered nonadmitted.

Issue Paper No. 4 defines nonadmitted assets as follows:

> An asset meeting the criteria in paragraph 2 above which is accorded limited or no value in statutory reporting and is one which is:
>
> a. Specifically identified within the Codification as a nonadmitted asset or
>
> b. Not specifically identified within the Codification as an admitted asset.
>
> If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Codification. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires.

5. This paper shall not be considered an all-inclusive list of nonadmitted assets. Certain admitted assets and nonadmitted assets are addressed in other issue papers. Assets not addressed in specific issue papers are nonadmitted until specifically authorized.

6. Consistent with paragraph 4, the following assets shall be nonadmitted and shall be reported in accordance with Issue Paper No. 4.

Deposits in Suspended Depositories

7. Amounts on deposit with suspended depositories may not be fully recoverable. Any amounts not reasonably expected to be recovered shall be written off in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5). Amounts in excess of that written off shall be nonadmitted as they are not available to satisfy obligations to policyholders.

Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Investments

8. In accordance with Issue Paper No. 5, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized as there are no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations.

Loans on Personal Security, Cash Advances To, Or In The Hands Of, Officers Or Agents And Travel Advances

9. In accordance with Issue Paper No. 5, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off typically are unsecured and as such have no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Some of these items may also be considered prepaid expenses which, per *Issue Paper No. 29—Prepaid Expenses (excluding deferred policy acquisition costs and other underwriting expenses, income taxes, and guaranty fund assessments),* are nonadmitted.

All “Non-Bankable” Checks

10. Examples of “non-bankable” checks are NSF (non-sufficient funds) checks, post dated checks, or checks for which payment has been stopped. Although these checks may still maintain probable future benefits (and thus meet the definition of assets), at the date on which they are non-bankable they are not available for policyholder obligations and shall be nonadmitted until the uncertainty related to the probable future benefit is resolved and the checks are converted to available funds.

Trade Names And Other Intangible Assets

11. These assets, by their nature, are not readily marketable and available to satisfy policyholder obligations and shall be nonadmitted.

Automobiles, Airplanes and Other Vehicles

12. Automobiles, airplanes and other vehicles meet the definition of assets established in Issue Paper No. 4. However, they are not readily available to satisfy policyholder obligations and as a result the undepreciated portion shall be nonadmitted. The accounting for these assets shall be consistent with the accounting for equipment provided in *Issue Paper No. 19—Furniture, Fixtures and Equipment*.

Company's Stock as Collateral for Loan

13. When a reporting entity lends money and accepts its own stock as collateral for the loan, it shall report the amount of the loan receivable and any related accrued interest on the loan as a nonadmitted asset. The asset is nonadmitted as the collateral could not be used to satisfy the obligation in the event of default.

DISCUSSION

14. For those items specifically addressed within this issue paper the principles established are consistent with current statutory accounting practices except as follows:

a. With respect to the principles outlined in paragraphs 7, 8 and 9, current statutory accounting nonadmits a portion of or the entire amount of the asset. The conclusion above requires the write-off of the portion not expected to be recoverable in accordance with Issue Paper No. 5 with any remaining amounts being nonadmitted as outlined above.

b. In relation to paragraph 7, such treatment is consistent with current statutory accounting for life and accident and health insurance companies but is a change for property and casualty insurance companies as current statutory accounting requires only "the amounts on deposit in excess of what reasonably can be estimated as recoverable" to be nonadmitted.

c. Paragraphs 12 and 13 identify assets that are to be treated as nonadmitted assets. These assets are generally recognized as nonadmitted assets in current statutory accounting practice although they were not previously specifically stated as such.

15. The statutory accounting principles outlined above are consistent with the conservatism and recognition concepts in the Statement of Concepts, current statutory accounting guidance and Issue Paper No. 4.

> Conservatism
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency.
>
> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.
>
> Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

16. Statutory treatment differs from GAAP in that GAAP does not have a concept of nonadmitted assets and would recognize the items addressed above as assets to the extent they remain collectible or recoverable.

Drafting Notes/Comments

- Issue Paper No. 5 discusses and outlines the appropriate treatment for the impairment of assets.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

17. The Life/A&H and P&C Accounting Practices and Procedures Manuals, page iv and page v, respectively, provide the following guidance:

> ASSETS
>
> paragraph 1
>
> Because of the conservatism intrinsic to insurance accounting, certain assets may be accorded limited or no value in statutory reporting, i.e., nonadmitted assets.

18. Chapter 9, Nonadmitted Assets, of the P&C Accounting Practices and Procedures Manual provides guidance as outlined below. Many of the items given as examples in Chapter 9 have been addressed in separate issue papers and therefore are not addressed in the conclusion of this issue paper. Additionally, the accounting treatment for such items addressed in separate issue papers may no longer be consistent with the accounting treatment outlined in Chapter 9.

> Because, in many respects, the statutory balance sheet is presented on a conservative basis, certain assets (which may have a recognized value in noninsurance corporations) are accorded no value and thus reduce the reported surplus of the insurance company. Some assets may be nonadmitted because they do not conform to the laws and regulations of the various states and other assets may be nonadmitted because they are not readily convertible to liquid assets. Changes in the amount of nonadmitted assets are charged or credited directly to surplus.
>
> The following are examples of nonadmitted assets:
>
> 1. Excess of Book Value over Market Value of Securities: In keeping with the concept of presenting the balance sheet on a conservative basis, the unrealized loss on stocks and impaired bonds reduces the admitted asset value on the annual statement.
>
> 2. Deposits in Suspended Depositories (less the estimated recoverable amount): The amounts on deposit in excess of what reasonably can be estimated as recoverable are nonadmitted.
>
> 3. Agents' Balances or Uncollected Premiums Over Three Months Due: The statutes of most states require that agents' balances or uncollected premiums over three months due be nonadmitted because of the uncertainty of collection. The over three months rule does not apply to ceded reinsurance premiums payable due from solvent insurance companies provided the assuming insurer maintains sufficient reserves as to the ceding insurer to apply the principles of offset accounting or the ceding insurer is licensed and in good standing in the state of the assuming insurer's domicile.
>
> 4. Future installments on all policies for which one or more installments are over three months due.
>
> 5. Accrued retrospective premiums from any person for whom any agents' balances or uncollected premiums are classified as nonadmitted.

6. Bills Receivable, Taken for Premiums: Bills or notes receivable are used as methods of financing premiums usually in states where installment premiums are not permitted or customary. If any portion of a bill or note receivable is unpaid past the due date of the installment, the entire bill or note is classified as nonadmitted. Also, on bills or notes not past due, the excess of the balance due over the unearned premium on the underlying policy or policies is classified as a nonadmitted asset. To the extent bills receivable are taken for premium for retrospectively rated policies, such bills must meet the same criteria required of accrued retrospective premiums to be reported as an admitted asset.

7. Electronic Data Processing Equipment: Application systems software may be expensed when purchased or established as a nonadmitted asset and written off over a period of years not to exceed the software's expected useful life.

8. Equipment, Furniture and Supplies: The company may record furniture and equipment as a ledger asset, depreciate it, and nonadmit it in the exhibit of assets in the statutory financial statements, or the company may expense the furniture and equipment when it is purchased. Supplies are normally expensed when purchased.

9. Bills Receivable, Not Taken for Premiums: All bills or notes receivable - except those from an insured for premiums, or those fully secured by collateral- are classified as nonadmitted.

10. Loans on Personal Security: Loans on personal security by definition are not properly secured by collateral. Therefore, they are classified as nonadmitted.

11. Prepaid Expenses.

12. Cash Advances To, or In the Hands Of, Officers or Agents: These amounts are not secured by collateral and are, therefore, nonadmitted.

13. Travel Advances: Travel advances are nonadmitted since they are unsecured balances due from employees.

14. Surplus Notes: Insurers sometimes make subordinated surplus contributions to other insurers via an instrument variously referred to as "surplus notes", "surplus debentures", "contribution certificates", "capital notes", etc. Generally, these instruments allow for payment of interest and repayment of principal only with the approval of the commissioner of the domiciliary jurisdiction of the insurer receiving the surplus infusion and issuing the instrument. The form and content of such instruments are also subject to regulatory approval. Where such approval conditions exist, insurers should report these instruments as admitted assets only in an amount as determined by the Securities Valuation Office (SVO) of the National Association of Insurance Commissioners. The holders of such instruments should never be allowed an admitted asset value more than that which would be allowed by considering the instruments as equity instruments and adding same to any other equity investments in the issuer held directly or indirectly by the holder of the instruments. In addition, such instruments shall be considered in the limitations on investments in affiliates. Investment income on these instruments shall not be reported as accrued until payment by the issuer has been approved by the insurer's domiciliary commissioner.

19. Chapter 9, Nonadmitted Assets, of the Life/A&H Accounting Practices and Procedures Manual provides the following guidance:

> Some assets or portions thereof may be nonadmitted because they do not conform to the laws and regulations of the various states. As a result, certain assets which normally would be accorded value in noninsurance corporations are accorded no value and thus reduce the reported surplus of the insurance company. In addition, state regulations require that certain

expenditures which could normally be capitalized by a noninsurance company be charged as an expense.

Common Examples
Some examples of assets which are nonadmitted due to either an uncertainty as to their collectibility or an insufficient basis for determining their valuation or other reasons are:

1. deposits in suspended depositories;
2. agents' debit balances;
3. bills receivable which are not properly secured by collateral;
4. loans on personal security (endorsed or not) which are not properly secured by collateral;
5. cash advance to or in the hands of officers or agents;
6. travel advances;
7. depreciated cost of applications software;
8. depreciated cost of equipment and furniture;
9. prepaid loss adjustment expenses;
10. other prepaid expenses;
11. all "NSF", post dated, payment stopped or otherwise non-bankable checks;
12. group accident and health premiums more than 90 days past due;
13. individual accident and health premiums which are more than one modal premium past due;
14. the excess of premium notes over policy reserves on individual policies;
15. collateral loans secured by assets which do not qualify as investments.

Statutory Issue Paper No. 92

Statement of Cash Flow

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 69

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance on the Statement of Cash Flow is contained in the Annual Statement Instructions for Life and Accident and Health Insurance Companies and the Annual Statement Instructions for Property and Casualty Insurance Companies (Annual Statement Instructions).

2. GAAP guidance on the Statement of Cash Flow is primarily contained in *FASB Statement No. 95*, *Statement of Cash Flows* (FAS 95). Under GAAP, cash receipts and payments are classified according to whether they stem from operating, investing, or financing activities. FAS 95 also requires that investing and financing activities not resulting in cash receipts or payments in the period be disclosed separately.

3. The purpose of this issue paper is to establish statutory accounting principles for the Statement of Cash Flow that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. The Statement of Cash Flow shall be prepared using the direct method. Cash from operations shall be reported consistent with the Statement of Income, excluding the effect of current and prior year accruals. Only the cash portion of a transaction shall be reported in the Statement of Cash Flow. For purposes of the Statement of Cash Flow, cash shall include short term investments. Specific instructions for the classification of items are provided in the Annual Statement Instructions.

Disclosures

5. The financial statements shall disclose the following:

a. Transactions considered to be investing and financing activities that affect recognized assets or liabilities but do not result in cash receipts or cash payments in the period (in narrative or schedule form);

b. The cash and noncash aspects of the above transactions identified as investing or financing activities consistent with the classifications provided by the Annual Statement Instructions. Examples of noncash investing and financing transactions include:

i. Converting debt to equity;
ii. Acquiring assets by assuming directly related liabilities, such as purchasing a building by incurring a mortgage to the seller;
iii. Exchanging noncash assets or liabilities for other noncash assets or liabilities.

DISCUSSION

6. This issue paper changes current statutory accounting to require that only cash transactions be included in the Statement of Cash Flow. The current Annual Statement Instructions are unclear and appear to indicate that any amount shown as consideration would be included in the statement.

7. Although the broad categories of cash receipts and disbursements are similar between GAAP and statutory accounting, there are differences in the individual items included in each category. The primary objective of the statutory statement is to enhance the ability to measure and monitor solvency of a reporting entity. The statutory statement is integrated into numerous other exhibits and schedules in the Annual Statement to facilitate preparation of the Statement of Cash Flow and to provide consistent reporting of information.

8. The focus of the GAAP Statement of Cash Flows is on a broad group of users of financial information. Those users include investors and creditors whose focus is assessing financial performance of the company. GAAP also provides for the use of two distinct methods of reporting cash flows known as the direct and indirect methods. Because GAAP is not consistent with the statutory objectives discussed above, FAS 95, *FASB Statement No. 102*, Statement of Cash Flows—*Exemption of Certain Enterprises and Classification of Cash Flows from Certain Securities Acquired for Resale, an amendment of FASB Statement No. 95,* and *FASB Statement No. 104, Statement of Cash Flows—Net Reporting of Certain Cash Receipts and Cash Payments and Classification of Cash Flows from Hedging Transactions, an amendment of FASB Statement No. 95,* are rejected in this issue paper.

9. This issue paper adopts *FASB Emerging Issues Task Force Issue No. 95-13*, *Classification of Debt Issue Costs in the Statement of Cash Flows* which requires that cash payments for debt issue costs shall be classified as a financing activity in the Statement of Cash Flow.

10. Statutory guidance regarding disclosure about noncash investing and financing activities was added to provide users with complete disclosure of the investing and financing activities of a reporting entity.

Drafting Notes/Comments

None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

11. The Annual Statement Instructions for Property and Casualty Insurance Companies include the following guidance for the statement of cash flow. Similar language is provided in the Annual Statement Instructions for Life, Accident and Health Insurance Companies:

> The statement of cash flows is prepared using the direct method. Lines one through nine should be prepared in a manner consistent with the Statement of Income, excluding the effect of current and prior year accruals. The following provides the method of preparing the statement. All revenue, expenditures, purchase and sales items should be entered gross.

The remaining portion of the guidance provided by the Annual Statement Instructions is a cross reference schedule which facilitates the preparation of the statement of cash flow by providing a series of calculations using various exhibits and schedules of a reporting entity's Annual Statement.

Generally Accepted Accounting Principles

12. *FASB Statement No. 95*, *Statement of Cash Flows,* as amended by *FASB Statement No. 102*, *Statement of Cash Flows—Exemption of Certain Enterprises and Classification of Cash Flows from Certain Securities Acquired for Resale, an amendment of FASB Statement No. 95, FASB Statement No. 104, Statement of Cash Flows—Net Reporting of Certain Cash Receipts and Cash Payments and Classification of Cash Flows from Hedging Transactions, an amendment of FASB Statement No. 95* and *FASB Statement No. 117*, *Financial Statements of Not-for-Profit Organizations,* contains the following guidance on the accounting and reporting of cash flows:

> Introduction
>
> 1. This Statement establishes standards for providing a statement of cash flows in general-purpose financial statements. This Statement supersedes *APB Opinion No. 19, Reporting Changes in Financial Position*, and requires a business enterprise to provide a statement of cash flows in place of a statement of changes in financial position. It also requires that specified information about noncash investing and financing transactions and other events be provided separately.
>
> 2. Opinion 19 permitted but did not require enterprises to report cash flow information in the statement of changes in financial position. Since that Opinion was issued, the significance of information about an enterprise's cash flows has increasingly been recognized. In *FASB Concepts Statement No. 5, Recognition and Measurement in Financial Statements of Business Enterprises*, paragraph 13, the Board says, "A full set of financial statements for a period should show: . . . Cash flows during the period." Moreover, certain problems have been identified in current practice, including the ambiguity of terms such as funds, lack of comparability arising from diversity in the focus of the statement (cash, cash and short-term investments, quick assets, or working capital) and the resulting differences in definitions of funds flows from operating activities (cash or working capital), differences in the format of the statement (sources and uses format or activity format), variations in classifications of specific items in an activity format, and the reporting of net changes in amounts of assets and liabilities rather than gross inflows and outflows. The lack of clear objectives for the statement of changes in financial position has been suggested as a major cause of that diversity.
>
> Scope
>
> 3. A business enterprise or not-for-profit organization that provides a set of financial statements that reports both financial position and results of operations shall also provide a statement of cash flows for each period for which results of operations are provided. In this Statement enterprise encompasses both business enterprises and not-for-profit organizations, and the phrase investors, creditors, and others encompasses donors. The terms income statement and net income apply to a business enterprise; the terms statement of activities and change in net assets apply to a not-for-profit organization. A statement of cash flows is not required for defined benefit pension plans and certain other employee benefit plans or for certain investment companies as provided by *FASB Statement No. 102, Statement of Cash Flows--Exemption of Certain Enterprises and Classification of Cash Flows from Certain Securities Acquired for Resale*.
>
> Purpose of a Statement of Cash Flows
>
> 4. The primary purpose of a statement of cash flows is to provide relevant information about the cash receipts and cash payments of an enterprise during a period.
>
> 5. The information provided in a statement of cash flows, if used with related disclosures and information in the other financial statements, should help investors, creditors, and others to (a) assess the enterprise's ability to generate positive future net cash flows; (b) assess the

enterprise's ability to meet its obligations, its ability to pay dividends, and its needs for external financing; (c) assess the reasons for differences between net income and associated cash receipts and payments; and (d) assess the effects on an enterprise's financial position of both its cash and noncash investing and financing transactions during the period.

6. To achieve its purpose of providing information to help investors, creditors, and others in making those assessments, a statement of cash flows should report the cash effects during a period of an enterprise's operations, its investing transactions, and its financing transactions. Related disclosures should report the effects of investing and financing transactions that affect an enterprise's financial position but do not directly affect cash flows during the period. A reconciliation of net income and net cash flow from operating activities, which generally provides information about the net effects of operating transactions and other events that affect net income and operating cash flows in different periods, also should be provided.

Focus on Cash and Cash Equivalents

7. A statement of cash flows shall explain the change during the period in cash and cash equivalents. The statement shall use descriptive terms such as cash or cash and cash equivalents rather than ambiguous terms such as funds. The total amounts of cash and cash equivalents at the beginning and end of the period shown in the statement of cash flows shall be the same amounts as similarly titled line items or subtotals shown in the statements of financial position as of those dates.

8. For purposes of this Statement, cash equivalents are short-term, highly liquid investments that are both:

a. Readily convertible to known amounts of cash
b. So near their maturity that they present insignificant risk of changes in value because of changes in interest rates.

Generally, only investments with original maturities of three months or less qualify under that definition.

9. Examples of items commonly considered to be cash equivalents are Treasury bills, commercial paper, money market funds, and federal funds sold (for an enterprise with banking operations). Cash purchases and sales of those investments generally are part of the enterprise's cash management activities rather than part of its operating, investing, and financing activities, and details of those transactions need not be reported in a statement of cash flows.

10. Not all investments that qualify are required to be treated as cash equivalents. An enterprise shall establish a policy concerning which short-term, highly liquid investments that satisfy the definition in paragraph 9 are treated as cash equivalents. For example, an enterprise having banking operations might decide that all investments that qualify except for those purchased for its trading account will be treated as cash equivalents, while an enterprise whose operations consist largely of investing in short-term, highly liquid investments might decide that all those items will be treated as investments rather than cash equivalents. An enterprise shall disclose its policy for determining which items are treated as cash equivalents. Any change to that policy is a change in accounting principle that shall be effected by restating financial statements for earlier years presented for comparative purposes.

Gross and Net Cash Flows

11. Generally, information about the gross amounts of cash receipts and cash payments during a period is more relevant than information about the net amounts of cash receipts and payments. However, the net amount of related receipts and payments provides sufficient information not only for cash equivalents, as noted in paragraph 9, but also for certain other

classes of cash flows specified in paragraphs 12, 13, and 28.

12. For certain items, the turnover is quick, the amounts are large, and the maturities are short. For certain other items, such as demand deposits of a bank and customer accounts payable of a broker-dealer, the enterprise is substantively holding or disbursing cash on behalf of its customers. Only the net changes during the period in assets and liabilities with those characteristics need be reported because knowledge of the gross cash receipts and payments related to them may not be necessary to understand the enterprise's operating, investing, and financing activities.

13. Items that qualify for net reporting because their turnover is quick, their amounts are large, and their maturities are short are cash receipts and payments pertaining to (a) investments (other than cash equivalents), (b) loans receivable, and (c) debt, providing that the original maturity of the asset or liability is three months or less.

Banks, savings institutions, and credit unions are not required to report gross amounts of cash receipts and cash payments for (a) deposits placed with other financial institutions and withdrawals of deposits, (b) time deposits accepted and repayments of deposits, and (c) loans made to customers and principal collections of loans. When those enterprises constitute part of a consolidated enterprise, net amounts of cash receipts and cash payments for deposit or lending activities of those enterprises shall be reported separate from gross amounts of cash receipts and cash payments for other investing and financing activities of the consolidated enterprise, including those of a subsidiary of a bank, savings institution, or credit union that is not itself a bank, savings institution, or credit union.

Classification of Cash Receipts and Cash Payments

14. A statement of cash flows shall classify cash receipts and cash payments as resulting from investing, financing, or operating activities.

Cash Flows from Investing Activities

15. Investing activities include making and collecting loans and acquiring and disposing of debt or equity instruments and property, plant, and equipment and other productive assets, that is, assets held for or used in the production of goods or services by the enterprise (other than materials that are part of the enterprise's inventory). Investing activities exclude acquiring and disposing of certain loans or other debt or equity instruments that are acquired specifically for resale, as discussed in Statement 102.

16. Cash inflows from investing activities are:

a. Receipts from collections or sales of loans made by the enterprise and of other entities' debt instruments (other than cash equivalents and certain debt instruments that are acquired specifically for resale) that were purchased by the enterprise
b. Receipts from sales of equity instruments of other enterprises (other than certain equity instruments carried in a trading account) and from returns of investment in those instruments
c. Receipts from sales of property, plant, and equipment and other productive assets.

17. Cash outflows for investing activities are:

a. Disbursements for loans made by the enterprise and payments to acquire debt instruments of other entities (other than cash equivalents and certain debt instruments that are acquired specifically for resale)

b. Payments to acquire equity instruments of other enterprises (other than certain equity instruments carried in a trading account)

c. Payments at the time of purchase or soon before or after purchase to acquire property, plant, and equipment and other productive assets.

Cash Flows from Financing Activities

18. Financing activities include obtaining resources from owners and providing them with a return on, and a return of, their investment; receiving restricted resources that by donor stipulation must be used for long-term purposes; borrowing money and repaying amounts borrowed, or otherwise settling the obligation; and obtaining and paying for other resources obtained from creditors on long-term credit.

19. Cash inflows from financing activities are:

a. Proceeds from issuing equity instruments

b. Proceeds from issuing bonds, mortgages, notes, and from other short- or long-term borrowing.

c. Receipts from contributions and investment income that by donor stipulation are restricted for the purposes of acquiring, constructing, or improving property, plant, equipment, or other long-lived assets or establishing or increasing a permanent endowment or term endowment.

20. Cash outflows for financing activities are:

a. Payments of dividends or other distributions to owners, including outlays to reacquire the enterprise’s equity instruments

b. Repayments of amounts borrowed

c. Other principal payments to creditors who have extended long-term credit.

Cash Flows from Operating Activities

21. Operating activities include all transactions and other events that are not defined as investing or financing activities in paragraphs 15-20. Operating activities generally involve producing and delivering goods and providing services. Cash flows from operating activities are generally the cash effects of transactions and other events that enter into the determination of net income.

22. Cash inflows from operating activities are:

a. Cash receipts from sales of goods or services, including receipts from collection or sale of accounts and both short- and long-term notes receivable from customers arising from those sales. The term goods includes certain loans and other debt and equity instruments of other enterprises that are acquired specifically for resale, as discussed in Statement 102.

b. Cash receipts from returns on loans, other debt instruments of other entities, and equity securities--interest and dividends

c. All other cash receipts that do not stem from transactions defined as investing or financing activities, such as amounts received to settle lawsuits; proceeds of insurance settlements except for those that are directly related to investing or financing activities, such as from destruction of a building; and refunds from suppliers.

23. Cash outflows for operating activities are:

a. Cash payments to acquire materials for manufacture or goods for resale, including principal payments on accounts and both short- and long-term notes payable to suppliers for those materials or goods. The term goods includes certain loans and other debt and equity instruments of other enterprises that are acquired specifically for resale, as discussed in Statement 102.

b. Cash payments to other suppliers and employees for other goods or services

c. Cash payments to governments for taxes, duties, fines, and other fees or penalties

d. Cash payments to lenders and other creditors for interest

e. All other cash payments that do not stem from transactions defined as investing or financing activities, such as payments to settle lawsuits, cash contributions to charities, and cash refunds to customers.

24. Certain cash receipts and payments may have aspects of more than one class of cash flows. For example, a cash payment may pertain to an item that could be considered either inventory or a productive asset. If so, the appropriate classification shall depend on the activity that is likely to be the predominant source of cash flows for the item. For example, the acquisition and sale of equipment to be used by the enterprise or rented to others generally are investing activities. However, equipment sometimes is acquired or produced to be used by the enterprise or rented to others for a short period and then sold. In those circumstances, the acquisition or production and subsequent sale of those assets shall be considered operating activities.

Foreign Currency Cash Flows

25. A statement of cash flows of an enterprise with foreign currency transactions or foreign operations shall report the reporting currency equivalent of foreign currency cash flows using the exchange rates in effect at the time of the cash flows. An appropriately weighted average exchange rate for the period may be used for translation if the result is substantially the same as if the rates at the dates of the cash flows were used. The statement shall report the effect of exchange rate changes on cash balances held in foreign currencies as a separate part of the reconciliation of the change in cash and cash equivalents during the period.

Content and Form of the Statement of Cash Flows

26. A statement of cash flows for a period shall report net cash provided or used by operating, investing, and financing activities and the net effect of those flows on cash and cash equivalents during the period in a manner that reconciles beginning and ending cash and cash equivalents.

27. In reporting cash flows from operating activities, enterprises are encouraged to report major classes of gross cash receipts and gross cash payments and their arithmetic sum--the net cash flow from operating activities (the direct method). Enterprises that do so should, at a minimum, separately report the following classes of operating cash receipts and payments:

a. Cash collected from customers, including lessees, licensees, and the like

b. Interest and dividends received. Interest and dividends that are donor restricted for long-term purposes as noted in paragraphs 18 and 19(c) are not part of operating cash receipts.

c. Other operating cash receipts, if any

d. Cash paid to employees and other suppliers of goods or services, including suppliers of insurance, advertising, and the like

e. Interest paid

f. Income taxes paid

g. Other operating cash payments, if any.

Enterprises are encouraged to provide further breakdowns of operating cash receipts and payments that they consider meaningful and feasible. For example, a retailer or manufacturer might decide to further divide cash paid to employees and suppliers (category (d) above) into payments for costs of inventory and payments for selling, general, and administrative expenses.

28. Enterprises that choose not to provide information about major classes of operating cash receipts and payments by the direct method as encouraged in paragraph 27 shall determine and report the same amount for net cash flow from operating activities indirectly by adjusting net income of a business enterprise or change in net assets of a not-for-profit organization to reconcile it to net cash flow from operating activities (the indirect or reconciliation method). That requires adjusting net income of a business enterprise or change in net assets of a not-for-profit organization to remove (a) the effects of all deferrals of past operating cash receipts and payments, such as changes during the period in inventory, deferred income, and the like, and all accruals of expected future operating cash receipts and payments, such as changes during the period in receivables and payables, and (b) the effects of all items whose cash effects are investing or financing cash flows, such as depreciation, amortization of goodwill, and gains or losses on sales of property, plant, and equipment and discontinued operations (which relate to investing activities), and gains or losses on extinguishment of debt (which is a financing activity).

29. The reconciliation of net income of a business enterprise or change in net assets of a not-for-profit organization to net cash flow from operating activities described in paragraph 28 shall be provided regardless of whether the direct or indirect method of reporting net cash flow from operating activities is used. That reconciliation shall separately report all major classes of reconciling items. For example, major classes of deferrals of past operating cash receipts and payments and accruals of expected future operating cash receipts and payments, including at a minimum changes during the period in receivables pertaining to operating activities, in inventory, and in payables pertaining to operating activities, shall be separately reported. Enterprises are encouraged to provide further breakdowns of those categories that they consider meaningful. For example, changes in receivables from customers for an enterprise's sale of goods or services might be reported separately from changes in other operating receivables. In addition, if the indirect method is used, amounts of interest paid (net of amounts capitalized) and income taxes paid during the period shall be provided in related disclosures.

30. If the direct method of reporting net cash flow from operating activities is used, the reconciliation of net income of a business enterprise or change in net assets of a not-for-profit organization to net cash flow from operating activities shall be provided in a separate schedule. If the indirect method is used, the reconciliation may be either reported within the statement of cash flows or provided in a separate schedule, with the statement of cash flows reporting only the net cash flow from operating activities. If the reconciliation is presented in the statement of cash flows, all adjustments to net income of a business enterprise or change in net assets of a not-for-profit organization to determine net cash flow from operating activities shall be clearly identified as reconciling items.

31. Except for items described in paragraphs 12 and 13, both investing cash inflows and outflows and financing cash inflows and outflows shall be reported separately in a statement of cash flows-for example, outlays for acquisitions of property, plant, and equipment shall be reported separately from proceeds from sales of property, plant, and equipment; proceeds of borrowings shall be reported separately from repayments of debt; and proceeds from issuing stock shall be reported separately from outlays to reacquire the enterprise's stock.

Information about Noncash Investing and Financing Activities

32. Information about all investing and financing activities of an enterprise during a period that affect recognized assets or liabilities but that do not result in cash receipts or cash payments in the period shall be reported in related disclosures. Those disclosures may be either narrative or summarized in a schedule, and they shall clearly relate the cash and noncash aspects of transactions involving similar items. Examples of noncash investing and financing transactions are converting debt to equity; acquiring assets by assuming directly related liabilities, such as

> purchasing a building by incurring a mortgage to the seller; obtaining an asset by entering into a capital lease; obtaining a building or investment asset by receiving a gift; and exchanging noncash assets or liabilities for other noncash assets or liabilities. Some transactions are part cash and part noncash; only the cash portion shall be reported in the statement of cash flows.
>
> Cash Flow per Share
>
> 33. Financial statements shall not report an amount of cash flow per share. Neither cash flow nor any component of it is an alternative to net income as an indicator of an enterprise's performance, as reporting per share amounts might imply.

13. *FASB Emerging Issues Task Force Issue No. 95-13, Classification of Debt Issue Costs in the Statement of Cash Flows* contains the following guidance:

> ISSUE
> Debt issue costs generally are incurred in connection with the issuance of debt securities or other short- or long-term borrowings. Opinion 21 requires that debt issue costs be reported in the balance sheet as deferred charges. Generally, debt issue costs are capitalized as an asset and amortized over the term of the debt.
>
> Statement 95 requires that cash receipts and payments in a statement of cash flows be classified as operating, investing, or financing activities. However, some believe that Statement 95 does not provide specific guidance on the classification of debt issue costs in the statement of cash flows. Because debt issue costs have aspects of more than one class of cash flows, diversity in practice has arisen. Some companies have reported the cash outflow for debt issue costs as a financing activity, while others have reported the outflow for those costs as an operating activity.
>
> The issue is how cash payments for debt issue costs should be classified in the statement of cash flows.
>
> EITF DISCUSSION
> The Task Force reached a consensus that cash payments for debt issue costs should be classified in the statement of cash flows as a financing activity.

Statutory Issue Paper No. 94

Allocation of Expenses

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 70

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Expenses involved in acquiring and underwriting policies and servicing policyholders and third-party claimants are important elements of a reporting entity's operations. Uniformity in the classification, allocation and reporting of expenses and expense statistics by reporting entities within the same industry is critical in a regulatory environment and is consistent with both the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts) and the FASB Statements of Financial Accounting Concepts (GAAP Statement of Concepts). Such uniformity is necessary for the effective review of operations of a specific entity, comparisons across the industry and control/regulation of the industry.

2. Current statutory accounting is outlined in the Accounting Practices and Procedures Manuals for Property and Casualty and for Life and Accident and Health Insurance Companies (P&C Accounting Practices and Procedures Manual and Life/A&H Accounting Practices and Procedures Manual) and in the NAIC Annual Statement Instructions (Annual Statement Instructions).

3. This issue paper establishes rules on presentation and allocation of certain expenses of reporting entities into general categories and the apportionment of shared expenses between members of a group of companies. The scope of this issue paper is limited to the general categories. Disclosure in notes or exhibits to the financial statements is required for principal components of those categories.

SUMMARY CONCLUSION

4. This paper establishes uniform expense allocation rules to classify expenses within prescribed principal groupings. It is necessary to allocate those expenses which may contain characteristics of more than one classification, which this issue paper will refer to as allocable expenses.

5. Allocable expenses for property and casualty insurance companies shall be classified into one of three categories on the Underwriting and Investment Exhibit as follows:

- Loss adjustment expenses - Expenses incurred in the adjusting, recording and paying of claims (including expenses associated with commutations).

- Investment expenses - Expenses incurred in the investing of funds and pursuit of investment income. Such expenses include those specifically identifiable and allocated costs related to activities such as initiating and handling orders, researching and recommending investments (i.e., investment strategy), appraising, valuing, disbursing funds and collecting income, securities safekeeping, real estate taxes, records maintenance, data processing, support personnel, postage and supplies, office overhead, management and executive duties and all other functions reasonably associated with the investment of funds.

- Other underwriting expenses - Allocable expenses other than loss expenses and investment related expenses.

6. Similarly for life and accident and health insurers allocable expenses shall be categorized as general insurance expenses; insurance taxes, licenses and fees; or investment expenses which are netted against investment income on the Summary of Operations.

7. Allocation to the above categories should be based on a method that yields the most accurate results. Specific identification of an expense with an activity that is represented by one of the categories above will generally be the most accurate method. Where specific identification is not feasible allocation of expenses should be based upon pertinent factors or ratios such as studies of employee activities, salary ratios or similar analyses.

8. Allocation may be entirely to one expense category based upon the type of expense incurred, for example, premium taxes would be 100% allocated to Other Underwriting Expenses for property and casualty companies. Other expenses may be allocated across several categories, such as salaries, which may be allocated to both general insurance expenses and net investment income of a life and accident and health company.

9. Many entities operate within a group where personnel and facilities are shared. Shared expenses, including expenses under the terms of a management contract, shall be apportioned to the entities incurring the expense as if the expense had been paid solely by the incurring entity. The apportionment shall be completed based upon specific identification to the entity incurring the expense. Where specific identification is not feasible apportionment shall be based upon pertinent factors or ratios. Any basis adopted to apportion expenses shall be that which yields the most accurate results and may result from special studies of employee activities, salary ratios, premium ratios or similar analyses. Expenses that relate solely to the operations of a reporting entity, such as personnel costs associated with the adjusting and paying of claims, must be borne solely by the reporting entity and are not to be apportioned to other entities within a group. Pertinent factors in making this determination shall include which entity has the ultimate obligation to pay the expense. Apportioned expenses are subject to presentation and allocation as provided in paragraphs 5 through 8.

10. Any material individual component of the reported expense categories shall be presented either on the face of the Summary of Operations or within the footnotes or related exhibits to the financial statements.

DISCUSSION

11. The summary conclusions outlined above were formulated based upon, and are consistent with, current statutory accounting practices and procedures as set out in the P&C and Life/A&H Accounting Practices and Procedures Manuals, the Annual Statement Instructions and additional guidance contained in the Financial Condition Examiners Handbook. The conclusions are also consistent with the Statutory Statements of Concepts which states the following:

> SAP utilizes the framework established by GAAP.
>
> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles.

The conclusions are also consistent with the GAAP Statements of Concepts which are excerpted in paragraphs 16 and 17.

12. The exhibits to the annual statement display the effects of allocation of allocable expenses to the various categories as well as provide an appropriate level of detail as to the nature of the classifications of expenses being allocated. The disclosure required by Paragraph 10 provides disclosure as to the nature of the significant allocable expenses in those circumstances where the accompanying exhibits are not part of the company's financial statements (e.g. annual audit report) and is not intended to provide duplicative presentation in the annual statement filings.

Drafting Notes/Comments

- *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses*, defines and discusses losses and loss adjustment expenses.
- Detailed classification tables, which are included in current statutory guidance for property and casualty companies, are not included in this issue paper. Such guidance is not considered necessary for the establishment of accounting standards/policies.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

13. The P&C Accounting Practices and Procedures Manual, Chapter 19, Expenses, provides the following guidance:

> In the insurance industry, there are expenses involved in acquiring and underwriting policies and servicing the policyholders and third party claimants. These expenses will be discussed in this chapter. (Commissions are discussed in Chapter 18.)
>
> Regulation Number 30, called the "Uniform Classification of Expenses of Fire and Marine and Casualty and Surety Insurer," was effective January 1, 1949, for licensed New York companies. The NAIC prescribed similar uniform accounting instructions for expense reporting effective January 1, 1949. These acts brought uniformity to the industry.
>
> This uniformity is helpful since expenses are important elements of the company's operations and accurate statistics are needed for comparisons and control. The instructions for uniform classification of expenses are a part of the NAIC *Examiners Handbook—Volume I*.
>
> Expense Group Classifications
>
> Expenses for fire and casualty insurance companies are allocated to expense groups as follows:
>
> A. Loss Adjustment Expenses
>
> Loss adjustment expenses constitute expenses incurred in connection with the adjusting, recording, and paying of claims. (See Chapter 17-Loss and Loss Adjustment Expenses Incurred.)
>
> B. Other Underwriting Expenses
>
> Other underwriting expenses are classified into three categories as follows:

1. Acquisition, Field Supervision, and Collection Expenses

   Acquisition costs consist of all expenses incurred in relation to the production of new and renewal insurance business. Also included are specifically identifiable and allocated expenses relating to the following activities: commissions, bonuses, allowances, and other compensation paid to agents and brokers; operating costs for agencies or branch offices; training agents and brokers; underwriting new risks; issuing new policies; receiving and paying of premiums and commissions; maintaining general and detailed records; data processing; advertising and publicity; clerical, secretarial, office maintenance, supervisory, and executive duties; postage and supplies; and all other functions reasonably associated with the production of new and renewal insurance business, such as premium collection.

2. General Expenses

   This category includes all expenses not assignable to other expense groups.

3. Taxes, Licenses, and Fees

   These are state and local insurance taxes, insurance department licenses and fees, allocable payroll taxes, and all other taxes excluding federal and foreign income and real estate taxes.

   All other taxes might include: (1) qualifying bond premiums; (2) statement publication fees; (3) advertising required by law; (4) personal property taxes; (5) state income taxes; (6) capital stock taxes; (7) business or corporation licenses or fees; (8) marine profits taxes; (9) documentary stamps on reinsurance; (10) guaranty association assessments; and (11) any other taxes.

   Real estate taxes on investment properties are generally included with investment expenses, and capital stock taxes and apportioned payroll taxes may be reported as investment expenses.

C. Investment Expenses

These comprise expenses incurred in the investing of funds and the pursuit of investment income, including specifically identifiable and allocated expenses related to such activities as: initiating or handling orders and recommendations for investments; research; pricing; appraising and valuing; disbursing funds and collecting income; safekeeping of securities and valuable papers; maintaining general and detailed records; data processing; general clerical, secretarial, office maintenance, supervisory, and executive duties; supplies, postage, and the like; and all other functions reasonably attributable to the investment of funds.

Allocation of Expenses to Expense Groups

Some general guidelines for allocating to expense groups are shown in the following table. The expenses shown are those in the annual statement.

TABLE 19

General Guidelines for Classifying Expenses

Expenses to be Allocated to Expense Groups	Principal Basis for Allocation
Claim adjustment services	Direct charge to loss adjustment expense
Commission and brokerage	Direct charge to other underwriting acquisition
Advertising	Direct charge to other underwriting acquisition
Boards, bureaus, associations	Direct charge to other underwriting - general
Surveys and underwriting reports	Direct charge to other underwriting - general
Audit of insureds' records	Direct charge to other underwriting - general
Salaries	Studies of employee activities
Employee relations and welfare	Pro rate on salary ratios
Insurance	Pro rate on salary ratios
Directors' fees	Pro rate on salary ratios
Travel and travel items	Special studies
Rent and rent items	Pro rate on salary ratios
Equipment	Pro rate on salary ratios
Printing and stationery	Pro rate on salary ratios
Postage, telephone and telegraph, exchange and express	Pro rate on salary ratios
Legal and auditing	Special studies
Taxes, licenses, and fees (Except payroll taxes)	Special studies
Real estate expenses	Investment expenses
Real estate taxes	Investment expenses
Miscellaneous	Special studies

Any other basis of allocation which yields a more accurate result may be used for those expenses being allocated on the basis of salaries. Any basis of allocation which is found to be inappropriate should be discounted.

Apportionment of Joint Expenses

Many insurance companies operate on a group basis, sharing personnel and facilities in conducting business. When this occurs, the expenses involved must be properly apportioned to the company incurring the expenses, and included in the same expense classifications as if originally paid by that company.

Some examples of specifically identifiable expenses that may be incurred solely on behalf of one company, and charged directly to the applicable company are:

1. Advertising;

2. Claims adjustment services;

3. Commissions and brokerages;

4. Taxes and real estate expenses;

5. Employees' salaries;

6. Any other expenses that can be attributed directly in whole or in part to a specific company.

The following table contains some general guidelines for apportioning joint expenses among companies.

TABLE 19-B
General Guidelines for Apportioning Joint Expenses

Expense Item	Basis for Apportionment
Advertising	Percentage of premiums
Boards, bureaus, associations	Special studies
Surveys and underwriting reports	Special studies
Audit of insureds' records	Special studies
Salaries	Studies of employee activities
Employee relations and welfare	Salaries
Insurance	Salaries
Travel and travel items	Special studies
Rent and rent items	Salaries
Equipment	Salaries
Printing and Stationery	Salaries
Postage, telephone and telegraph, exchange and express	Salaries

Legal and auditing	Special studies
Payroll taxes	Salaries
Miscellaneous	Special studies

Any other basis of allocation should be used if it yields more precise results than expenses allocated on the salaries or premium basis. If clearly inappropriate, allocation based on salaries or premium should not be employed.

A company that pays joint expenses, which are ultimately apportioned and charged to other companies in the group, should credit the apportioned expenses to the same expense items charged when the payment was made. Apportionment expenses generally should not be reported as income nor be accumulated in a separate account used to reduce total expenses for the company.

14. The Life/A&H Accounting Practices and Procedures Manual, Chapter 22, General Expenses and Taxes, Licenses and Fees, provides the following guidance:

> General expenses include virtually all of the expenses of a life insurance company other than benefits to policyholders, commissions, and taxes, licenses and fees.
>
> The statutory financial statement provides for two broad categories of general expenses: (1) insurance, which is further subdivided into life insurance, accident and health insurance, and all other lines of business and (2) investment. In addition, general expenses are allocated to more detailed lines of business in the Analysis of Operations by Lines of Business. In the Summary of Operations, the investment expense portion of general expenses is classified as an offset to investment income while general insurance expenses are reported separately in the expense section of the summary.

15. The Annual Statement Instructions for Property and Casualty Companies - Underwriting and Investment Exhibit - Part 4 - Expenses provides the following guidance:

> A company that pays any affiliated entity (including a managing general agent) for the management, administration, or service of all or part of its business or operations shall allocate these costs to the appropriate expense classification items (salaries, rent, postage, etc.) as if these costs had been borne directly by the company. Management, administration, or similar fees should not be reported as a one-line expense. The company may estimate these expense allocations based on a formula or other reasonable basis.
>
> A company that pays any non-affiliated entity (including a managing general agent) for the management, administration, or service of all or part of its business or operations shall allocate these costs to the appropriate expense classification item as follows:
>
> a) Payments for claims handling or adjustment services shall be allocated to “Loss Adjustment Expenses” (Column 1) in the Underwriting and Investment Exhibit–Part 4. If the total of such expenses incurred equals or exceeds 10% of the total incurred “Loss Adjustment Expenses” (Column 1, Line 22), the company shall allocate these costs to the appropriate expense classification items as if these costs had been borne directly by the company. If such expenses are less than 10% of the total, they may be reported on Line 1 of Column 1.
>
> b) Payments for services other than claims handling or adjustment services shall be allocated to the appropriate expense classification items as if these costs had been borne directly by the company, if the total of such fees paid equals or exceeds 10% of the total incurred “Other Underwriting Expenses” (Column 2, Line 22). If the total is less then 10%, the payments may be reported on Line 2 if the fees are calculated as a percentage of premium, or on Line 3 if the fees are not calculated as a percentage of premium.

> The total management and service fees paid to affiliates and non-affiliates shall be reported in the footnote to the Underwriting and Investment Exhibit-Part 4 of the annual statement, and the method(s) used for allocation shall be disclosed in the Notes to the Financial Statements. The company shall use the same allocation method(s) on a consistent basis.

The Annual Statement Instructions for Life and Accident and Health Companies contains similar guidance.

Generally Accepted Accounting Principles

16. *FASB Statement of Financial Accounting Concepts No. 2*, *Summary of Principal Conclusions,* provides the following guidance:

> Comparability and Consistency
>
> Information about a particular enterprise gains greatly in usefulness if it can be compared with similar information about other enterprises and with similar information about the same enterprise for some other period or some other point in time. Comparability between enterprises and consistency in the application of methods over time increases the informational value of comparisons of relative economic opportunities or performance. The significance of information, especially quantitative information, depends to a great extent on the user's ability to relate it to some benchmark.

17. *FASB Statement of Financial Accounting Concepts No. 5*, *Recognition and Measurement in Financial Statements of Business Enterprises,* provides the following guidance:

> paragraph 20
>
> Classification in financial statements facilitates analysis by grouping items with essentially similar characteristics and separating items with essentially different characteristics. Analysis aimed at objectives such as predicting amounts, timing, and uncertainty of future cash flows requires financial information segregated into reasonably homogeneous groups. For example, components of financial statements that consist of items that have similar characteristics in one or more respects, such as continuity or recurrence, stability, risk, and reliability, are likely to have more predictive value than if their characteristics are dissimilar.

OTHER SOURCES OF INFORMATION

18. The Financial Condition Examiners Handbook - Volume 1, Chapter 6 provides the following guidance:

> 22. GENERAL INSTRUCTIONS IN CONNECTION WITH OPERATING EXPENSE CLASSIFICATIONS
>
> A. Joint Expenses
>
> Whenever personnel or facilities are used in common by two or more companies, or whenever the personnel or facilities of one company are used in the activities of two or more companies, the expenses involved shall be apportioned in accordance with the regulations relating to Joint Expenses, and such apportioned expenses shall be allocated by each company to the same operating expense classifications as if the expenses had been borne wholly. Any difference between the actual amount paid, and the amount of such apportioned expenses shall be included in the operating expense classification "Miscellaneous."

PART II
RULES RELATING TO THE ALLOCATION OF JOINT EXPENSES TO COMPANIES

1. JOINT EXPENSES

A. Joint Expenses, as described in Part 1, Sec. 22 (A), shall be allocated to companies as follows:

Expenses To Be Allocated To Companies (as amended)	Bases of Allocation to Companies
Advertising	Premiums
Boards, Bureaus, and Associations	Special Studies
Surveys and Underwriting Reports	Special Studies
Audit of Assureds' Records	Special Studies
Salaries	See Special Instructions Relating to the Allocation of Salaries and Other Expenses (Part V)
Employee Relations and Welfare	Overhead on Salaries
Insurance	Overhead on Salaries
Travel and Travel Items	Special Studies
Rent and Rent Items	Overhead on Salaries
Equipment	Overhead on Salaries
Printing and Stationery	Overhead on Salaries
Postage, Telephone and Telegraph, Exchange and Express	Overhead on Salaries
Legal and Auditing	Special Studies
Payroll Taxes	Overhead on Salaries
Miscellaneous	Special Studies

B. Definitions

The term Premiums used as a basis of allocation means that the allocation of expenses shall follow the percentages of applicable premiums.

The term Special Studies used as a basis of allocation means that expenses shall be analyzed and bases of allocation applied as dictated by that analysis.

The term Overhead on Salaries used as a basis of allocation means that the allocation of expenses shall follow the percentages of the applicable salaries allocation.

C. Other Bases Permitted or Prescribed

For those operating expense classifications permitting the basis, Overhead on Salaries or Premiums, any other basis of allocation may be adopted which yields more accurate results. The bases Overhead on Salaries and Premiums shall not be used if clearly in appropriate.

PART III

RULES RELATING TO THE
COMPOSITION OF, AND ALLOCATION TO, EXPENSE GROUPS

(as amended 1953 Proc. II 643-644)

1. LIST OF EXPENSE GROUPS

Expense reported in the operating expense classifications shall be allocated to the following expense groups:

Investment Expenses
Loss Adjustment Expenses
Acquisition, Field Supervision and Collection Expenses
Taxes
General Expenses

2. COMPOSITION OF THE EXPENSE GROUPS (as amended)

The composition of each group shall be as follows:

A. Investment Expenses

Investment Expenses shall comprise all expenses incurred wholly or partially in connection with the investing of funds and the obtaining of investment income, including related expenses incurred in the following activities: initiating or handling orders and recommendations; doing research; pricing; appraising and valuing; paying and receiving; entering and keeping general and detail records, safe keeping; collecting, recording, calculating and accruing investment income; general clerical, secretarial, office maintenance, supervisory and executive duties; handling personnel, supplies, main, etc.; and all other activities reasonably attributable to the investing of funds and the obtaining of investment income.

B. Loss Adjustment Expenses

Loss Adjustment Expenses shall comprise all expenses incurred wholly or partially in connection with the adjustment and recording of policy claims, including the totals of the operating expense classification, Claim Adjustment Services; the types of expenses included in Claim Adjustment Services, when the activities resulting in such types of expenses are performed by employees; and including related expenses incurred in the following activities: estimating amounts of claims; paying and receiving; entering and keeping general and detail records; general clerical, secretarial, office maintenance, supervisory and executive duties; handling personnel, supplies, mail, etc.; and all other activities reasonably attributable to the adjustment and recording of policy claims in connection with claims reported, paid and outstanding, and reinsurance thereon.

C. Acquisition, Field Supervision, and Collection Expenses

(1) Acquisition, Field Supervision and Collection Expenses shall comprise all expenses incurred wholly or partially in the following activities:

a. Soliciting and procuring business and developing the sales field;

b. Writing policy contracts, and checking and directly supervising the work of policy writers;

c. Receiving and paying of premiums and commissions; entering into or setting up records of premiums and commissions receivable and payable for collection purposes; balancing and maintaining such records; corresponding with and visiting insureds and producers for the purpose of collecting premiums or adjusting differences; checking current accounts from producers; auditing of records of delinquent agents; and services of collection agencies; (Do not include activities in connection with accounts receivable from and payable to branch or other officers within the company.)

d. Compiling and distributing expiration lists, notices of premiums due, lists of premiums or premium balances receivable and payable, contingent and other commission statements, production statements for acquisition and field supervision purposes, and similar data;

e. Maintaining good will of insureds and producers; activities of field men; contact work related to acquisition, field supervision and collection; making contracts and agreements with producers; and activities in connection with agency appointments and replacements; (Do not include: inspections of risks when carried on by personnel employed by the insurance company, engaged full time in physical inspection of risks and activities directly related thereto; audits for the purpose of premium determination; and activities in connection with the adjustment of policy claims.)

f. Rendering service to agents and other producers, such as providing office space, personnel, telephone, etc. and obtaining agents' licenses; (Do not include fees paid for agents' licenses.)

g. Advertising and publicity of every nature related to acquisition, field supervision and collection; (In addition to applicable salaries, etc., include the entire amount shown in the operating expense classification, Advertising.)

h. Miscellaneous activities of agents, brokers and producers other than employees, when performed by them: inspections; quoting premiums; signing policies; examining and mailing policies, applications and daily reports; compiling figures for current account; correspondence and sundry bookkeeping and clerical work;

i. Other activities reasonably attributable to those operations listed in "a" to "h," such as: keeping general and detail records; paying and receiving, general clerical, secretarial, office maintenance, supervisory and executive work; and handling personnel, supplies, mail, etc.

(2) Commission and Allowances: When the whole or a part of any amount in the operating expense classifications Commission and Brokerage—Direct, and Allowances to Managers and Agents is paid specifically for services other than those set forth under "a" to "i," and when such services are not duplicated or otherwise compensated by the company, the amount thereof shall be allocated to expense groups other than Acquisition, Field Supervision and Collection, and such allocations shall be justified by detailed statements and data calculated and prepared in accordance with the methods prescribed in these Rules showing amounts of expenditures, property allocated to expense groups and lines of business.

When Allowances to Managers and Agents represent a division of expenses shared with other companies, the aforementioned statements and data shall show the division of such shared expenses calculated and prepared in accordance with the methods prescribed in these Rules.

The calculation and preparation of the aforementioned statements and data shall be subject to verification and audit by insurance department personnel.

The instructions under the heading Commission and Allowances to not apply to Commission and Brokerage—Reinsurance Assumed, or Commission and Brokerage—Reinsurance Ceded.

D. Taxes

Taxes shall comprise the totals of the operating expense classification Taxes, Licenses and Fees.

E. General Expenses

General Expenses shall comprise all expenses not assignable by these rules to other expense groups.

3. ALLOCATION TO EXPENSE GROUPS (as amended)

A. Expenses shall be allocated to expense groups as follows:

Expenses To Be Allocated Expense Groups	Allocation to Expense Groups
Claim Adjustment Services:	
Direct	Loss Adjustment Expenses
Reinsurance Assumed	Loss Adjustment Expenses
Reinsurance Ceded	Loss Adjustment Expenses
Commission and Brokerage:	
Direct	See Commission and Allowances (Part III, Sec. 2 (C)(2))
Reinsurance Assumed	Acquisition, Field Supervision and Collection Expenses
Reinsurance Ceded	Acquisition, Field Supervision and Collection Expenses
Contingent—Net	Acquisition, Field Supervision and Collection Expenses
Policy and Membership Fees	Acquisition, Field Supervision and Collection Expenses
Allowances to Managers and Agents	See Commission and Allowances (Part III, Sec. 2 (C)(2))
Advertising	Acquisition, Field Supervision and Collection Expenses
Boards, Bureaus and Associations	General Expenses
Surveys and Underwriting	General Expenses
Reports	General Expenses
Audit of Assureds' Records	See Special Instructions Relating
Salaries	to the Allocation of Salaries and Other Expenses (Part V)
Employee Relations and Welfare	Overhead on Salaries
Insurance	Overhead on Salaries
Directors' Fees	Overhead on Salaries
Travel and Travel Items	Special Studies
Rent and Rent Items	Overhead on Salaries
Equipment	Overhead on Salaries
Printing and Stationery	Overhead on Salaries
Postage, Telephone and Telegraph, Exchange and Express	Overhead on Salaries
Legal and Auditing	Special Studies
Taxes, Licenses and Fees	Taxes
Real Estate Expenses	Investment Expenses
Real Estate Taxes	Investment Expenses
Income from Special Services	Special Studies
Miscellaneous	Special Studies

B. Definitions

For definitions of the term Overhead on Salaries and Special Studies, see Part II, Sec. 1 (B).

C. Other Bases Permitted or Prescribed

For those operating expense classifications permitting the basis Overhead on Salaries, any other basis of allocation may be adopted which yields more accurate results. The basis Overhead on Salaries shall not be used if clearly inappropriate.

Statutory Issue Paper No. 95

Holding Company Obligations

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 15

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Statutory accounting currently requires disclosure of holding company obligations which are guaranteed. It does not specifically address a reporting entity subsidiaries' accounting treatment of obligations of a holding company parent when the subsidiary does not guarantee the obligation, however, it is accepted statutory practice that these obligations are not recorded or disclosed.

2. The Financial Accounting Standards Board (FASB) has been unable to reach a consensus that any particular method of presentation is preferable related to this issue. The SEC staff believes that when debt is incurred in connection with or otherwise related to the acquisition of a subsidiary in a purchase transaction and a subsidiary subsequently files a registration statement in connection with a public offering of its stock or debt, the parent company's debt, related interest expense, and allocable debt issue costs should be reflected in the subsidiary's financial statements included in the public offering if (1) the subsidiary is to assume the debt of the parent, either presently or in a planned transaction in the future, (2) the proceeds of a debt or equity offering of the subsidiary will be used to retire all or a part of the parent company's debt, or (3) the subsidiary guarantees or pledges its assets as collateral for the parent company's debt.

3. The purpose of this issue paper is to establish statutory accounting principles for recording and disclosure requirements of holding company obligations and any related guarantees in the financial statements of a subsidiary that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. In situations where the reporting entity does not guarantee the obligation of the holding company, there is no legal obligation on the part of the reporting entity. Therefore, the reporting entity shall not record the obligation of its parent holding company unless the obligation relates to services or benefits incurred by a non-insurance parent company or holding company on its behalf. In these situations, the reporting entity shall recognize an expense for its share of the services or benefits incurred on its behalf during the period by the parent company or holding company based on an allocation from the parent or holding company. A liability shall be established for any such amounts due, but not yet paid. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. *Issue Paper No. 8—Accounting for Pensions* (Issue Paper No. 8), *Issue Paper No. 11—Compensated Absences* (Issue Paper No. 11), *Issue Paper No. 13—Employers' Accounting for Postemployment Benefits* (Issue Paper No. 13), and *Issue Paper No. 14—Employers' Accounting for Postretirement Benefits Other Than Pensions* (Issue Paper No. 14) address specific examples where the obligation relates to benefits provided to the subsidiary by a non-insurance parent company or holding company.

5. If the reporting entity guarantees an obligation of the holding company, the guidance in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5) shall be followed for determining the recording and disclosure of the guarantee. Issue Paper Nos. 8, 11, 13 and 14 provide specific accounting and disclosure guidelines for employee benefit plans when the reporting entity is directly liable for obligations under the plan.

DISCUSSION

6. Statutory accounting requires that a reporting entity record only its direct assets and direct obligations and not those of related parties. If the reporting entity has no legal obligation related to the holding company's obligations, the entity shall not record those obligations unless there is a guarantee of such debt that would require recording under the guidance in Issue Paper No. 5 or unless the obligation falls under the requirements discussed in paragraph 4. This is supported by the recognition concept included in the Statement of Concepts.

7. This issue paper rejects the requirements of *SEC Staff Accounting Bulletin No. 73, Push-Down Basis of Accounting Required in Certain Limited Circumstances* (SAB 73). The subsidiary has no direct legal obligation and, therefore, SAB 73 is inconsistent with statutory accounting principles as described in the Statement of Concepts. Other than the instances described in paragraph 4, the only way funding can be provided by the reporting entity to the holding company is through the payment of dividends and these payments are restricted to the amounts approved by the state insurance departments for the purpose of providing protection of surplus. As a result, the holding company can not legally require the reporting entity to fund debt payments in excess of the allowable dividends.

Drafting Notes/Comments

None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. As discussed above, there is no current statutory guidance specifically related to this issue. The following disclosure requirements are outlined in the NAIC Annual Statement Instructions for Property and Casualty Companies - Notes to Financial Statements:

> 5. Information Concerning Parent, Subsidiaries and Affiliates
>
> e. Describe guarantees or undertakings for the benefit of an affiliate which result in a material contingent exposure of the company's or any affiliated insurer's assets to liability, if not disclosed. Report the total amount of guarantees for affiliates.
>
> 9. Contingent Liabilities
>
> a. Report briefly the nature of any material contingent liabilities including but not limited to: notes receivable discounted, reverse repurchase agreements, accounts and agents' balances assigned, accommodation paper, additional taxes, guarantees of liabilities of other companies (including companies that act as dealers in Over the Counter derivative instruments or as a Futures Commissions Merchant establishing of compensating balances, long-term contracts, loan take-out agreements and indemnification agreements, deferred expense contracts, structured settlements and arrangements between parents, subsidiaries or affiliates. Include in the disclosure: The date incurred or discovered; the nature of the contingent liability, contract, agreement or commitment; the amount or amounts, if known; the status as of the annual statement date; and all other information necessary for a full disclosure. Report the total amount of contingent liabilities.

The Annual Statement Instructions for Life and Accident and Health Companies contain similar requirements.

OTHER SOURCES OF INFORMATION

9. SAB 73 provides the following guidance:

Facts:
Company A (or Company A and related persons) acquired substantially all of the common stock of Company B in one or a series of purchase transactions.

Question 1:
Must Company B's financial statements presented in either its own or Company A's subsequent filings with the Commission reflect the new basis of accounting arising from Company A's acquisition of Company B when Company B's separate corporate entity is retained?

Interpretative Response:
Yes. The staff believes that purchase transactions that result in an entity becoming substantially wholly owned (as defined in Rule 1-02 (z) of Regulation S-X) establish a new basis of accounting for the purchased assets and liabilities.

When the form of ownership is within the control of the parent the basis of accounting for purchased assets and liabilities should be the same regardless of whether the entity continues to exist or is merged into the parent's operations. Therefore, Company A's cost of acquiring Company B should be "pushed down", i.e., used to establish a new accounting basis in Company B's separate financial statements.

Question 2:
What is the staff's position if Company A acquired less than substantially all of the common stock of Company B or Company B had publicly held debt or preferred stock at the time Company B became wholly owned?

Interpretative Response:
The staff recognizes that the existence of outstanding public debt, preferred stock or a significant minority interest in a subsidiary might impact the parent's ability to control the form of ownership. Although encouraging its use, the staff generally does not insist on the application of push down accounting in these circumstances. [Added by SAB No. 54, 11/3/83]

Question 3:
Company A borrows funds to acquire substantially all of the common stock of Company B. Company B subsequently files a registration statement in connection with a public offering of its stock or debt. Should Company B's new basis ("push down") financial statements include Company's A debt related to its purchase of Company B?

Interpretative Response:
The staff believes that Company A's debt, related interest expense and allocable debt issue costs should be reflected in Company B's financial statements included in the public offering (or an initial registration under the Exchange Act) if: (1) Company B is to assume the debt of Company A, either presently or in a planned transaction in the future; (2) the proceeds of a debt or equity offering of Company B will be used to retire all or a part of Company A's debt; or (3) Company B guarantees or pledges its assets as collateral for Company A's debt.

Other relationships may exist between Company A and Company B, such as the pledge of Company B's stock as collateral for Company A's debt. While in this latter situation, it may be clear that Company B's cash flows will service all or part of Company A's debt, the staff does not insist that the debt be reflected in Company B's financial statements providing there is full and prominent disclosure of the relationship between the Companies A and B and the actual or potential cash flow commitment. In this regard, the staff believes that Statements of Financial

Accounting Standards Nos. 5 and 57 requires sufficient disclosure to allow users of Company B's financial statements to fully understand the impact of the relationship on Company B's present and future cash flows. Rule 4-08(e) of Regulation S-X (17 CFR 210.4-08(e)) also requires disclosure of restrictions which limit the payment of dividends. Therefore, the staff believes that the equity section of Company B's balance sheet and any pro forma financial information and capitalization tables should clearly disclose that this arrangement exists.[(4)]

Regardless of whether the debt is reflected in Company B's financial statements, the notes to Company B's financial statements should generally disclose, at a minimum: (1) the relationship between Company A and Company B; (2) a description of any arrangements that result in Company B's guarantee, pledge of assets or stock, etc. that provides security for Company A's debt; (3) the extent (in the aggregate and for each of the five years subsequent to the date of the latest balance sheet presented) to which Company A is dependent on Company B's cash flows to service its debt and the method by which this will occur; and (4) the impact of such cash flows on Company B's ability to pay dividends or other amounts to holders of its securities.

Additionally, the staff believes Company B's Management's Discussion and Analysis of Financial Condition and Results of Operations should discuss any material impact of the servicing of Company A's debt on its own liquidity pursuant to Item 303(a)(1) of Regulations S-K (17 CFR 229.303(a)(1)). (Added by SAB No. 73, 12/30/87.)

Statutory Issue Paper No. 96

Other Liabilities

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 67

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for the other liabilities is provided in Chapter 17, Other Liabilities, of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies and Chapter 13, Other Liabilities, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies.

2. The purpose of this issue paper is to establish statutory accounting principles for other liabilities, including self-insurance reserves, which are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. For purposes of identifying other liabilities, the discussion, definition and accounting treatment outlined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5) must be considered. This paper is not an all-inclusive list of other liabilities. Certain other liabilities are covered in other issue papers. All other liabilities, whether or not specifically identified in this issue paper shall be recorded and disclosed in accordance with Issue Paper No. 5, which states that "a liability shall be recorded on a reporting entity's financial statements when incurred".

4. Specific accounting treatment and where appropriate, a definition of certain other liabilities, is discussed below.

Self-Insurance

5. Self-insurance occurs when an entity retains insurance risks associated with the entity's day-to-day operations that are commonly transferred to an insurer through an insurance contract. Self-insurance can also be described as a decision not to insure or non-insurance. To the extent that an event occurs, obligating the entity in accordance with the definition of a liability or impairment of an asset in Issue Paper No. 5, for which insurance coverage has not been obtained, the entity shall record either the appropriate write-down of the assets, if applicable, or reserves shall be established using the same estimation methodology an insurance company uses when an insurance contract is issued for the type of insurance risk which is self-insured. *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* describes the specific reserving guidance which should be followed.

6. The related costs should be treated similarly to comparable expenses and allocated appropriately (see *Issue Paper No. 94—Allocation of Expenses*). As a result of this treatment, the costs are accounted for based on the nature of the underlying expenses.

7. The mere fact that a decision is made not to insure against losses that can reasonably be expected some time in the future does not necessitate accrual by the entity if it is not probable that an asset has been impaired or a liability incurred at the date of the financial statements.

Amounts Withheld or Retained by Company as Agent or Trustee

8. A reporting entity may, in the normal course of its business, withhold funds as an agent or trustee which will ultimately be paid to others. Amounts withheld or retained by an entity as trustee or agent shall be recorded as a liability when the salaries or other compensation are expensed (8(a and b)) or the funds are received (8(c, d and e)). Examples of such occurrences are:

a. As an employer, the reporting entity deducts and withholds federal and state income taxes, social security taxes, charitable contributions, savings plan deductions, garnishments, employee contributions to pension plans, employee share of group life and health insurance premiums, and other employee salary withholdings or deductions.

b. Amounts due under deferred compensation arrangements shall be accrued in accordance with the provisions of *Issue Paper No. 14—Employers' Accounting for Postretirement Benefits Other Than Pensions.* Segregated funds (i.e., Rabbi trusts and similar arrangements) shall not be netted against the accrued liability unless the requirements of *Issue Paper No. 76—Offsetting and Netting of Assets and Liabilities* are met.

c. Many reporting entities invest in commercial and residential mortgages. The entity may require the mortgagor to prepay real estate taxes and property insurance premiums which the entity will hold in escrow and pay when due.

d. Deposits held by a reporting entity in connection with leases of investment property.

e. Any other funds the reporting entity may receive and hold in a fiduciary capacity.

Remittances and Items Not Allocated

9. Cash receipts cannot always be identified for a specific purpose or, for other reasons, applied to a specific account when received. The reporting entity shall record a liability for these cash receipts when the funds are received. Such liability accounts are generally referred to as suspense accounts. Examples of such receipts include:

a. Premium payments received with the application for policies which have not yet been issued;

b. Premium payments in an amount different than the amount billed by the reporting entity;

c. Unidentified cash receipts.

Interest Payable

10. Interest payable includes interest on borrowed money as well as interest on real estate and approved interest on surplus notes. It also includes interest on funds held as a deposit or security, such as those held by a ceding company against a reinsurer. The amount to be reported is the amount which has accrued and is unpaid at the balance sheet date. The Property and Casualty Annual Statement includes a specific line to record accrued interest. Accrued interest for Life and Accident and Health Companies shall be recorded with the liability.

Payable to Parent, Subsidiaries and Affiliates

11. A liability shall be established for expenditures incurred on behalf of the reporting entity by a parent, affiliates, or subsidiaries or for amounts owed through other intercompany transactions. Examples of such expenses are executive salaries, workers' compensation insurance premiums, pension contributions, etc. The liability shall be identified as an intercompany balance.

12. Reinsurance transactions are not considered liabilities of this nature and are covered in *Issue Paper No. 74—Life, Deposit-Type and Accident and Health Reinsurance* and *Issue Paper No. 75—Property and Casualty Reinsurance.*

DISCUSSION

13. This issue paper adopts *FASB Statement No. 116, Accounting for Contributions Received and Contributions made* and *AICPA Statement of Position 96*-1, *Environmental Remediation Liabilities*.

14. The principles established are consistent with current statutory accounting principles and with Issue Paper No. 5. The requirement that liabilities be recorded when they are incurred is also consistent with the recognition principle described in the Statement of Concepts.

15. The liabilities addressed above are not specifically discussed in GAAP, however, they are considered liabilities and therefore are treated consistently with the GAAP guidance referenced in Issue Paper No. 5. The "Scope of the Statement" section of *FASB Statement No. 5*, *Accounting for Contingencies*, includes a reference to the fact that self-insurance is covered under the scope of the statement.

Drafting Notes/Comments

- Interest payable on surplus notes is addressed in *Issue Paper No. 41—Surplus Notes*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

16. Chapter 17, Other Liabilities, of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies discusses accounting for other liabilities as follows:

> Amounts Withheld or Retained by Company as Agent or Trustee
>
> The life insurance company may, in the normal course of its business, withhold funds as an agent or trustee which will ultimately be paid to others. Funds held must be identified as to whom they are held for, as well as the amount, so that the liability can be confirmed by subsequent payments or confirmation by the payee. Examples of such occurrences are:
>
> 1. As an employer, the life insurance company deducts and withholds federal and state income taxes, social security taxes, employee contributions to pension plans, and employees' share of group life and health insurance premiums. Such funds are recorded as a liability of the company at the time gross salaries are expensed and the liability is subsequently cleared by payment.
>
> 2. Many life insurance companies invest in commercial and residential mortgages. The company may require the mortgagor to prepay real estate taxes and property insurance premiums which the company will hold in escrow and pay when due.
>
> 3. Any other funds the company may receive and hold in a fiduciary capacity.
>
> Remittances and Items Not Allocated
>
> Cash receipts cannot always be identified for a specific purpose or, for other reasons, applied to a specific account when received. It is undesirable, costly, and imprudent for a company to delay depositing such receipts until the payment can be identified. Cash receipts should be deposited intact when received for good accounting control and to be available for investment by the company. It is customary for life insurance companies to maintain one or more liability accounts to record cash receipts which cannot be specifically allocated. Such liability accounts are generally referred to as suspense accounts. Examples of such receipts include:

> 1. Premium payments received with the application for policies which have not yet been issued;
>
> 2. Premium payments of amount different than the amount billed by the company;
>
> 3. Unidentified cash receipts.
>
> Special attention should be given to the verification and clearance of suspense accounts. The outstanding suspense items should be aged. Any suspense item that has not been cleared after a specified time should be investigated. If premium payments are allowed to remain in suspense for a long period of time, it is possible that a policy might be improperly lapsed for nonpayment of premium or have nonforfeiture options or automatic premium loan options applied.
>
> Payable to Parent, Subsidiaries and Affiliates
>
> A liability should be established for amounts payable to a parent, subsidiary or affiliate for intercompany disbursements. Examples of such expenses are executive salaries, workers' compensation insurance premiums, pension contributions, etc. The purpose of separating this liability from other accounts is to identify intercompany balances.

17. Chapter 13 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Other Liabilities, discusses accounting for other liabilities as follows:

> Other liabilities are those liabilities not specifically covered by other chapters. Included in this category are the following annual statement captions:
>
> Borrowed Money
> Interest Payable
> Stockholder Dividends Declared and Unpaid
> Policyholder Dividends Declared and Unpaid
> Amounts Withheld or Retained by Company for Account of Others
> Provision for Reinsurance
> Excess of Statutory Reserves over Statement Reserves
> Net Adjustments in Assets and Liabilities Due to Foreign Exchange Rates
> Liability for Amounts Held Under Uninsured Accident and Health Plans
> Drafts Outstanding
> Payable to Affiliates
> Payable for Securities
> Debt Obligations of Employee Stock Ownership Plans
> Postretirement Benefits Other Than Pensions
>
> Interest Payable
>
> Interest payable includes interest on "Borrowed Money" as well as interest on real estate and surplus loans. It also includes interest on funds held as a deposit or security, such as those held by a ceding company against a reinsurer. Further treatment of funds held by a ceding company may be found in Chapter 22, Reinsurance.
>
> The interest on "Borrowed Money" is also shown parenthetically as part of the caption of this liability item in the annual statement.
>
> Amounts Withheld or Retained by Company for Account of Others
>
> Items to be included under this classification are:
>
> 1. Amounts withheld from employee payrolls and unpaid at the balance sheet date. These include federal, state and city taxes and social security taxes, savings bonds deductions, charitable contributions, savings plan deductions, employee retirement plan

contributions, garnishments, group life and health insurance premiums, and other employee salary withholdings or deductions.

2. Deposits held by the company in connection with leases of investment property.

3. Escrow balances required of mortgagors for property taxes and insurance on real estate pledged for mortgages held by the company.

4. Any other funds the company holds in a fiduciary capacity for the account of others. This excludes reinsurance funds held, which are reported elsewhere and covered in Chapter 22-Reinsurance.

Payable to Affiliates

Amounts shown under this caption include unreimbursed expenditures on behalf of the company by a parent, affiliates, or subsidiaries or amounts owing through other intercompany transactions.

Reinsurance transactions are not normally reported on this line. For further information, see Chapter 22-Reinsurance.

Generally Accepted Accounting Principles

18. *FASB Statement No. 5, Accounting for Contingencies*

SCOPE OF THIS STATEMENT

56. Some respondents to the Exposure Draft proposed that the Statement not deal with accrual and disclosure of loss contingencies in general but, rather, only with the following three specific matters: “self-insurance,” risk of losses from catastrophes assumed by property and casualty insurance companies including reinsurance companies, and threat of expropriation.

57. The Board has concluded, however, that the broad issue of accrual and disclosure of loss contingencies should be dealt with in a single Statement, just as the Discussion Memorandum encompasses “the broad issue of accounting for future losses.” As the Discussion Memorandum stated, “future losses of all types presently known to affect enterprises and new types of future losses that may arise are conceptually included in the scope of this project.”

RISK OF FUTURE LOSS OR DAMAGE OF ENTERPRISE PROPERTY, INJURY TO OTHERS, DAMAGE TO THE PROPERTY OF OTHERS, AND BUSINESS INTERRUPTION

85. Some persons contend that the decision not to purchase insurance against losses that can be reasonably expected sometime in the future (such as risk of loss or damage of enterprise property, injury to others, damage to the property of others, and business interruption) justifies periodic accrual for those losses without regard to whether it is probable that an asset has been impaired or a liability incurred at the date of the financial statements. As a basis for their position, they frequently cite the following factors: matching of revenue and expense, spreading the burden of irregularly occurring costs to successive generations of customers, and conservatism. They also believe that accrual of estimated losses from those types of risks improves the comparability of the financial statements of enterprises that purchase insurance. Some contend that a prohibition against periodic accrual for uninsured losses will force enterprises to purchase insurance coverage that would not otherwise be purchased.

86. In the Board’s judgment, however, the mere existence of risk, at the date of an enterprise’s financial statements, does not mean that a loss should be accrued. Anticipation of asset impairments or liabilities or losses from business interruption that do not relate to the current or a prior period is not justified by the matching concept.

87. The Board’s view regarding the contention that periodic accrual for uninsured losses is a way of providing protection against loss and improving comparability among enterprises that do

not purchase insurance, and the contention that prohibition of accrual will force enterprises to purchase insurance are discussed in paragraphs 61-66. The Board's position regarding periodic accrual for uninsured risks and other loss contingencies on the grounds of spreading the burden of irregularly occurring costs to successive generations of customers or on the grounds of conservatism is discussed in paragraphs 81-84.

Statutory Issue Paper No. 97

Underwriting Pools and Associations Including Intercompany Pools

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 63

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Underwriting pools and associations can be categorized as follows: involuntary, voluntary, and intercompany.

2. Involuntary pools represent a mechanism employed by states to provide insurance coverage to those with higher than average probability of loss who otherwise would be excluded from obtaining coverage. Reporting entities are generally required to participate in the underwriting results, including premiums, losses, expenses, and other operations of involuntary pools, based on their proportionate share of similar business written in the state. Involuntary plans are also referred to as residual market plans, involuntary risk pools, and mandatory pools.

3. Voluntary pools are similar to involuntary pools except they are not state mandated and a reporting entity participates in the pool voluntarily. In addition, voluntary pools are not limited to the provision of insurance coverage to those with higher than average probability of loss, but often are used to provide greater capacity for risks with exceptionally high levels of insurable values (e.g., aircraft, nuclear power plants, refineries, and offshore drilling platforms).

4. Intercompany pooling relates to business which is pooled among affiliated entities who are party to a pooling arrangement.

5. Current statutory accounting provides limited guidance on accounting for a reporting entity's participation in underwriting pools and associations. Although it is not specifically stated in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies (Life/A&H and P&C Accounting Practices & Procedures Manuals), certain annual statement schedules do require that the reporting entity's participation in the pools' underwriting results be recorded on a gross basis. However, the guidance does not address whether participation in the pools should be recorded using accrual or cash basis accounting. Reporting entities are currently utilizing both approaches. GAAP guidance related to underwriting pools and associations is limited to *FASB Statement No. 113*, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113). FAS 113 states that involuntary plans are included within the scope of the statement; therefore the reinsurance activity should be recorded on a gross basis.

6. The purpose of this issue paper is to establish statutory accounting principles for underwriting pools and associations that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

7. *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5), defines a liability and states that the definition "includes but is not limited to liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for

incurred but not reported claims).” Issue Paper No. 5 requires liabilities to be recorded on a reporting entity’s financial statements when incurred.

8. Participation in a pool may be on a joint and several basis, i.e., in addition to a proportional share of losses and expenses incurred by the pool, participants will be responsible for their share of any otherwise unrecoverable obligations of other pool participants. In certain instances, one or more entities may be designated as servicing carriers for purposes of policy issuance, claims handling, and general administration of the pooled business, while in other cases a pool manager or administrator performs all of these functions and simply bills pool participants for their respective shares of all losses and expenses incurred by the pool. In either case, liabilities arising from pooled business are generally incurred on a basis similar to those associated with non-pooled business, and should therefore be treated in a manner consistent with the guidelines set forth in Issue Paper No. 5 and in paragraph 7 of this issue paper.

9. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all of the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares. In such arrangements, only the policy issuing entity has direct liability to its policyholders or claimants; other pool participants are liable as reinsurers for their share of the issuing entity’s obligations. Although participants may use different assumptions (e.g., discount rates) in recording transactions, the timing of recording transactions shall be consistently applied by all participants.

10. Underwriting results shall be accounted for on a gross basis whereby the participant’s portion of premiums, losses, expenses, and other operations of the pools are recorded separately in the financial statements rather than netted against each other. Premiums and losses shall be recorded as direct, assumed, and/or ceded as applicable. If the reporting entity is a direct writer of the business premiums, losses shall be recorded as directly written and accounted for in the same manner as other business which is directly written by the entity. To the extent that premium is ceded to a pool, premiums and losses shall be recorded in the same manner as any other reinsurance arrangement. A reporting entity who is a member of a pool shall record its participation in the pool as assumed business as in any other reinsurance arrangement.

11. Equity interests in, or deposits receivable from, a pool represent cash advances to provide funding for operations of the pool. These are admitted assets and shall be recorded separately from receivables and payables related to a pool’s underwriting results. Receivables and payables related to underwriting results should be accounted for in accordance with the guidance in paragraphs 7 to 10, above. If, in accordance with Issue Paper No. 5, it is probable that these receivables are uncollectible, any uncollectible amounts shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible but is not written off, disclosure requirements outlined in Issue Paper No. 5 shall be followed.

12. If a reporting entity is part of a group of affiliated entities which utilizes a pooling arrangement under which the pool participants cede substantially all of their direct and assumed business to the pool, the financial statements shall include:

a. A description of the basic terms of the arrangement and the related accounting;

b. Identification of the lead entity and of all affiliated entities participating in the intercompany pool (include NAIC Company Codes) and indication of their respective percentage shares of the pooled business;

c. Description of the lines and types of business subject to the pooling agreement;

d. Description of cessions to non-affiliated reinsurers of business subject to the pooling agreement, and indication of whether such cessions were prior to or subsequent to the cession of pooled business from the affiliated pool members to the lead entity;

e. Identification of all pool members which are parties to reinsurance agreements with non-affiliated reinsurers covering business subject to the pooling agreement and which have a contractual right of direct recovery from the non-affiliated reinsurer per the terms of such reinsurance agreements;

f. Explanation of any discrepancies between entries regarding pooled business on the assumed and ceded reinsurance schedules of the lead entity and corresponding entries on the assumed and ceded reinsurance schedules of other pool participants;

g. Description of intercompany sharing, if other than in accordance with the pool participation percentage, of the Provision for Reinsurance (Schedule F, Part 7) and the write–off of uncollectible reinsurance.

DISCUSSION

13. This issue paper applies Issue Paper No. 5 to underwriting pools and associations.

14. There are a variety of types of underwriting pools and associations. Examples include, but are not limited to Assigned Risk Plans, Joint Underwriting Associations, Reinsurance Pools, Fair Access to Insurance Requirements Plans, Comprehensive Health Insurance Plans, and Workers' Compensation Pools.

15. Certain underwriting pools and associations, such as Assigned Risk Plans, require the reporting entity to accept a share of the undesirable risks based on the percent of the premium written in that state. The reporting entity is then responsible for collecting premiums and paying claims on policies issued to these applicants. Other underwriting pools and associations, such as Joint Underwriting Associations, require all entities in the state to participate in the underwriting results, however, a servicing company is designated to issue the policies and pay the claims for these risks on behalf of the pool.

16. Current statutory practice related to underwriting pools and associations is varied. A "pay-as-you-go" (cash basis) approach has been adopted by many entities. This issue paper rejects that treatment because it is inconsistent with the concepts of conservatism and recognition outlined in the Statement of Concepts. It is also inconsistent with the accounting principles set forth in Issue Paper No. 5. With respect to conservatism, the Statement of Concepts states:

> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management...In order to provide a margin of protection to policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.

17. With respect to recognition, the Statement of Concepts states that:

> *"Liabilities require recognition as they are incurred...Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment."*

18. Many reporting entities have adopted the practice of netting the underwriting results related to their participation in underwriting pools and associations. Although the Life/A&H and P&C Accounting Practices and Procedures Manuals do not specifically state that the reporting entity's participation in the pool's underwriting results shall be recorded on a gross basis, the Annual Statement Instructions for Property and Casualty Insurance Companies require a separate disclosure of "the net reserves for losses

and expenses for the entity's share of underwriting pools' and associations' unpaid loss and expenses which are included in reserves." The instructions also require that reinsurance assumed from and ceded to underwriting pools and associations be disclosed separately thereby establishing the requirement to record reinsurance on a gross basis.

19. All forms of underwriting pools and associations should be accounted for consistently. It would be inconsistent to require reporting entities to account for underwriting results related to assigned risk plans on a gross basis and underwriting results related to joint underwriting associations on a net basis. Accounting for the plans consistently enables regulators to more effectively compare results of the individual entities participating in the plans.

20. The consistency requirement of paragraph 19 is supported by the Statement of Concepts which states that:

> The regulator's need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.

21. There is no specific GAAP guidance related to underwriting pools and associations other than in FAS 113 which states that involuntary risk pools are included within the scope of the statement and thereby requires the reinsurance activity to be recorded on a gross basis.

Drafting Notes/Comments
None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

22. The P&C Accounting Practices and Procedures Manual, Chapter 14, *Premiums*, discusses the following:

> Underwriting Pools, Associations, and Syndicates
> Companies also participate as members of an underwriting pool, association, or syndicate organized to provide special insurance coverages. Operating results, including the applicable premiums, are distributed to member companies based on their prescribed share.
>
> Usually, statements are received by the company showing the total premiums written, as well as the member company's participation. These premiums are recorded on a summary basis (usually by line of business) as direct or assumed business depending on the requirements of the particular association.

23. The P&C Accounting Practices and Procedures Manual, Chapter 22, R*einsurance*, discusses the following:

> Fronting arrangements, servicing carrier business, and pools and association business are often accomplished using reinsurance contracts. The guidance included in this chapter also applies to these types of contracts, except as specifically exempted.

24. The Annual Statement Instructions for Property and Casualty Insurance Companies, General Section, discusses the following requirements related to the actuarial opinion:

> 8. The scope paragraph should contain a sentence such as the following:
>
> "I have examined the actuarial assumptions and methods used in determining reserves listed below, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 19__."
>
> The paragraph should list items and amounts with respect to which the actuary is expressing an opinion. The list should include but not necessarily be limited to:
>
> A. Reserve for Unpaid Losses (Page 3, Line 1);
> B. Reserve for Unpaid Loss Adjustment Expenses (Page 3, Line 2);
> C. Reserve for Unpaid Losses - Direct and Assumed (Schedule P, Part 1, Totals from Cols. 13 and 15); and
> D. Reserve for Unpaid Loss Adjustment Expenses - Direct and Assumed (Schedule P, Part 1, Totals from Cols. 17, 19, and 22).
>
> If the actuary includes the Excess of Statutory over Statement Reserves to the above list, the actuary must also opine on the reserves excluding this amount.
>
> 9. The actuary should state that the items in paragraph 8, on which he or she is expressing an opinion, reflect the following items:
>
> A. ...
> B. ...
> C. The net reserves for losses and expenses for the company's share of voluntary and involuntary underwriting pools' and associations' unpaid losses and expenses which are included in reserves shown on Page 3 - Liability, Surplus and Other Funds, Lines 1 and 2, $__________.
>
> 11. The actuary should comment in the scope section on each of the following topics, describing the effect of each on loss or loss expense reserves: ...underwriting pools or associations,...

25. The Annual Statement Instructions for Property and Casualty Insurance Companies, Section referring to Assets, discusses the following disclosure requirement:

> Line 17 - Equities and Deposits in Pools and Associations
>
> In the event that the insurer has equity in, or deposits receivable from, underwriting associations, pools, etc., the equity interests and deposits receivable should be reported here.

26. The Annual Statement Instructions for Property and Casualty Insurance Companies, Section referring to Schedule F-Part 1-Assumed Reinsurance and Schedule F-Part 3-Ceded Reinsurance, requires reinsurance assumed from and ceded to mandatory pools and associations be disclosed separately from voluntary pools and associations.

27. The Property and Casualty Reinsurance Study Group of the Accounting Practices and Procedures (EX4) Task Force adopted the following disclosure requirements for intercompany pooling arrangements at its September 29, 1996 meeting.

PROPOSED INSTRUCTIONS
PROPERTY/CASUALTY ANNUAL STATEMENT FOOTNOTE

Intercompany Pooling Arrangements

Instruction:

If the company is part of a group of affiliated insurers which utilizes a pooling arrangement that affects the solvency and integrity of the insurer's reserves under which the pool participants cede substantially all of their direct and assumed business to the pool, describe the basic terms of such arrangement[s] and the related accounting. The disclosure should include:

- Identification of the lead company and of all affiliated companies participating in the intercompany pool (include NAIC Company Codes) and indication of their respective percentage shares of the pooled business.

- Description of the lines and types of business subject to the pooling agreement.

- Description of cessions to non-affiliated reinsurers of business subject to the pooling agreement, and indication of whether such cessions were prior to or subsequent to the cession of pooled business from the affiliated pool members to the lead company.

- Identification of all pool members which are parties to reinsurance agreements with non-affiliated reinsurance reinsurers covering business subject to the pooling agreement and which have a contractual right of direct recovery from the non-affiliated reinsurer per the terms of such reinsurance agreements.

- Explanation of any discrepancies between entries regarding pooled business on the assumed and ceded reinsurance schedules of the lead company and corresponding entries on the assumed and ceded reinsurance schedules of other pool participants.

- Description of intercompany sharing, if other than in accordance with the pool participation percentage, of the Provision for Reinsurance (Schedule F, Part 7) and the write–off of uncollectible reinsurance.

Illustration

ALTERNATIVE 1: EXTERNAL REINSURANCE PRIOR TO POOLING

The Company participates in an intercompany reinsurance pooling arrangement in which The ABC Insurance Company is the lead company. Under the terms of the arrangement, all of the property-casualty underwriting risks of the intercompany pool participants except other accident & health are reinsured with the lead company after each individual company's external reinsurance is transacted among third parties. This pool of property-casualty net underwriting risks is then retroceded from the lead company to the other non-lead pool participants based on pool participation percentages.

The names, NAIC company codes and pool participation percentages of the ABC Group's intercompany pooling arrangement are as follows:

Pool Participant	NAIC Company Code	Pool Participation %
The ABC Insurance Company	00001	75%
The ABC Casualty Company	0000100002	10%
The ABC Indemnity Company	00003	10%
ABC Fire Insurance Company	00004	5%

ALTERNATIVE 2: EXTERNAL REINSURANCE AFTER POOLING

The Company participates in an intercompany reinsurance pooling arrangement in which The ABC Insurance Company is the lead company. Under the terms of the arrangement, all of the property–casualty underwriting risks of the intercompany pool participants except other accident & health are reinsured with the lead company. After reinsurance is transacted among third parties by the lead company, the remaining pool of property-casualty underwriting risks is the then retroceded to the other non–lead pool participants based on pool participation percentages.

The names, NAIC company codes and pool participation percentages of the ABC Group's intercompany pooling arrangement are as follows:

Pool Participant	NAIC Company Code	Pool Participation %
The ABC Insurance Company	00001	75%
The ABC Casualty Company	0000100002	10%
The ABC Indemnity Company	00003	10%
ABC Fire Insurance Company	00004	5%

Generally Accepted Accounting Principles

28. The AICPA Audit and Accounting Guide: Audits of Property and Casualty Insurance Companies describes several types of involuntary plans in Chapter 1, *Nature, Conduct, and Regulation of the Business.*

29. FAS 113 discusses the following:

> 50. Several respondents questioned whether servicing carriers for involuntary risk pools should be included in the Statement's scope. Servicing carriers generally retain the primary obligation to the policyholder and have no right to offset claim liabilities against amounts due from other pool participants. Although the credit risk associated with involuntary pools may be reduced because of the pool membership's joint and several liability, the servicing carrier is still dependent on the ability of other pool members to pay their proportionate share of claims. State authorities oversee such pools and may act to support the solvency of pool, but that action generally is voluntary. The Board concluded that it was unable to effectively distinguish servicing carrier business from other types of reinsurance for accounting purposes. Separate presentation or disclosure of servicing carrier activity is not precluded by this Statement.

Statutory Issue Paper No. 99

Nonapplicable GAAP Pronouncements

STATUS
Updated for actions taken by the Statutory Accounting Principles (E) Working Group and the Emerging Accounting Issues (E) Working Group through December 2014

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. For items presented to the Statutory Accounting Principles (E) Working Group, ~~T~~this issue paper~~statement~~ addresses Generally Accepted Accounting Principles (GAAP) pronouncements that are nonapplicable due to one of the following reasons:

a. The pronouncement does not relate to the insurance industry;

b. The pronouncement is not within the objectives of statutory accounting;

c. The pronouncement would not add a substantive amount of guidance to statutory accounting due to the narrow scope of the topic;

d. The pronouncement relates to transition of a previously issued GAAP pronouncement.

2. For items presented to the Emerging Accounting Issues (E) Working Group, this issue paper includes references to EITFs that have been rejected for the following reasons:

a. Rejected as not applicable to statutory accounting;

b. Rejected without providing additional statutory guidance;

c. Rejected on the basis of issues rejected in a SSAP.

EITFs that were rejected on the basis of issues rejected in a SSAP (paragraph 2.c.) are denoted with an asterisk after the EITF number. Additional information related to those rejected issues is located in Appendix H, *Interpretation 99-00—Compilation of Rejected EITFs*.

SUMMARY CONCLUSION

~~2~~3. GAAP pronouncements[1] not considered applicable to ~~the~~ NAIC ~~codification project~~statutory accounting principles are summarized as follows:

GAAP Pronouncement	Title
FASB Accounting Standards Updates (ASU)	
ASU 2009-02	Omnibus Update—Amendments to Various Topics for Technical Corrections
ASU 2009-13	Revenue Recognition: Multiple Deliverable Revenue Arrangements

[1] GAAP guidance that is rejected explicitly in an SSAP is not included within this listing.

GAAP Pronouncement	Title
ASU 2009-15	Accounting for Own-Share Lending Arrangements in Contemplation of Convertible Debt Issuance or Other Financing

Statutory Issue Paper No. 100

Health Care Delivery Assets—Supplies, Pharmaceuticals and Surgical Supplies, and Durable Medical Equipment

STATUS
Finalized June 23, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 73

Type of Issue:
Health Entities

SUMMARY OF ISSUE

1. This issue paper applies only to reporting entities which directly provide health care services to subscribers, members or policyholders. Such providers acquire and retain assets not directly addressed in current statutory guidelines. These assets, commonly referred to as "health care delivery assets", are assets used in connection with the direct delivery of health care services in facilities owned or operated by the reporting entity and include supplies, pharmaceuticals and surgical supplies, and durable medical equipment.

2. The purpose of this issue paper is to establish statutory accounting principles for health care delivery assets—supplies, pharmaceuticals and surgical supplies, and durable medical equipment that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Supplies, pharmaceuticals and surgical supplies, and durable medical equipment meet the definition of assets established in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4). Pharmaceuticals and surgical supplies, and durable medical equipment held by reporting entities and used for the direct delivery of health care services are assets which are used to fulfill policyholder obligations within the meaning of Issue Paper No. 4 and are admitted assets to the extent that they conform to the requirements of this issue paper.

4. The reporting entity shall maintain a control system that provides for identification of quantities on hand and appropriate valuation (lower of cost or market) of supplies, pharmaceuticals and surgical supplies, and durable medical equipment.

5. Supplies except for pharmaceuticals and surgical supplies discussed in paragraph 6 (e.g., linens, uniforms and garments, food and other commodities, and housekeeping, maintenance, and office supplies) shall be nonadmitted assets.

6. Pharmaceutical and surgical supplies (e.g. drugs, surgical items (such as implants), and medical dressings) used directly in the treatment of medical conditions shall be admitted assets.

7. Durable medical equipment includes consumable or salable equipment such as wheelchairs, crutches and braces, that is generally classified as inventory, and is of a nature that it may be reused. Subscribers, members or policyholders may utilize durable medical equipment on a temporary basis and later return the equipment to the provider. The provider shall recognize the diminution in value, if any, as a result of use of such equipment.

8. In accordance with the reporting entity's capitalization policy, immaterial amounts of medical supplies, pharmaceuticals and surgical supplies, and durable medical equipment may be expensed when purchased.

DISCUSSION

9. Supplies as defined in this issue paper are nonadmitted assets because they are consumed in the normal operations of a hospital or medical facility and would generally have limited or no value in the event of liquidation.

10. Pharmaceuticals and surgical supplies, and durable medical equipment are admitted assets as defined in this issue paper because they are used to fulfill benefit requirements, they are tightly controlled and the nature of such items would generally permit the recovery of costs upon liquidation.

11. This issue paper rejects the AICPA Audit and Accounting Guide: Health Care Organizations.

12. The statutory accounting principles established in this issue paper are consistent with the recognition concept in the Statement of Concepts which states:

> The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

13. The Health Maintenance Organization Model Act, dated July 1995 states the following:

> **Section 5. Powers of Health Maintenance Organizations**
>
> A. The powers of a health maintenance organization include, but are not limited to, the following:
>
> (1) The purchase, lease, construction, renovation, operation or maintenance of hospitals, medical facilities, or both, and their ancillary equipment, and property reasonably required for its principal office or for purposes necessary to the transaction of the business of the organization;
>
> **Section 12. Investments**
>
> With the exception of investments made in accordance with Section 5A(1), the funds of a health maintenance organization shall be invested only in accordance with [cite section of law or regulation implementing the NAIC Health Maintenance Organization Investment Guidelines.]

Generally Accepted Accounting Principles

14. The AICPA Audit and Accounting Guide: Health Care Organizations states the following:

> 6.02. Supplies usually are not material to the financial position of health care organizations. However, because of the volume of supply transactions, they may materially affect operations. Supplies typically include medical and surgical supplies; pharmaceuticals; linens; uniforms, and garments; food and other commodities; and housekeeping, maintenance, and office supplies.
>
> 6.04. Accounting for property and equipment, supplies, and other assets of health care organizations is similar to that used by other business organizations.

Other Sources of Information

15. The NAIC Survey on State Practice Regarding Admissibility of Health Care Delivery Assets dated January 1996 conducted by the Risk-Based Capital Task Force surveyed the state insurance departments that regulate HMOs to determine if and to what degree that they allow HMOs to admit health care delivery assets. Responses from 38 state insurance departments indicated that the vast majority admit such assets at book value. A number of state insurance departments noted that they do place varying limits on the amount of certain health care delivery assets that can be admitted. However, none of the respondent states indicated that they did not admit such assets.

Statutory Issue Paper No. 101

Health Care Delivery Assets—Furniture, Medical Equipment and Fixtures, and Leasehold Improvements in Health Care Facilities

STATUS
Finalized June 23, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 73

Type of Issue:
Health Entities

SUMMARY OF ISSUE

1. This issue paper applies only to reporting entities which directly provide health care services to subscribers, members or policyholders. Such providers acquire and retain assets not directly addressed in current statutory guidelines. These assets commonly referred to as "health care delivery assets", are assets used in connection with the direct delivery of health care services in facilities owned or operated by the reporting entity and include furniture, medical equipment and fixtures and leasehold improvements.

2. Furniture, medical equipment and fixtures used in connection with the direct provision of health care services include diagnostic equipment, laboratory equipment, patient monitoring equipment, hospital beds, examining tables, and operating room equipment.

3. The purpose of this issue paper is to establish statutory accounting principles for health care delivery assets - furniture, medical equipment and fixtures and leasehold improvements in health care facilities that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. Furniture, medical equipment and fixtures, and leasehold improvements in health care facilities owned or operated by the reporting entity meet the definition of assets established in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4). Furniture, medical equipment and fixtures, and leasehold improvements held by health reporting entities and used for the direct delivery of health care services are admitted assets to the extent that they conform to the requirements of this issue paper. Furniture, fixtures and equipment, and leasehold improvements which are not used in the direct delivery of health care (e.g., for administrative activities including claims processing, billing, and maintenance of medical records) are nonadmitted assets and are addressed in *Issue Paper No. 19—Furniture, Fixtures, and Equipment* and *Issue Paper No. 31—Leasehold Improvements Paid by the Reporting Entity as Lessee*, respectively.

5. These assets shall be depreciated over their estimated useful lives but for a period not to exceed three years, except for a leasehold improvement which shall be amortized against net income over the shorter of its estimated useful life or the remaining life of the original lease excluding renewal or option periods, using methods detailed in *Issue Paper No. 67—Depreciation of Property and Amortization of Leasehold Improvements*.

6. In accordance with the reporting entity's capitalization policy, immaterial amounts of furniture, medical equipment and fixtures, and leasehold improvements may be expensed when purchased.

DISCUSSION

7. Furniture, medical equipment and fixtures and leasehold improvements in health care facilities owned or operated by the reporting entity used in the direct delivery of health care are admitted assets as defined in this issue paper because they are used to fulfill benefit requirements.

8. The AICPA Audit and Accounting Guide: Health Care Organizations is rejected in *Issue Paper No. 100—Health Care Delivery Assets – Supplies, Pharmaceuticals and Surgical Supplies, and Durable Medical Equipment*.

9. The statutory accounting principles established in this issue paper are consistent with the recognition concept in the Statement of Concepts which states:

> The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

Drafting Notes/Comments

- Land and building, including health care facilities, are addressed in *Issue Paper No. 23—Property Occupied by the Company*.
- Electronic Data Processing Equipment and Software are addressed in *Issue Paper No. 16—Electronic Data Processing Equipment and Software*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

10. The Accounting Practices and Procedures Manual for Health Maintenance Organizations (Chapter 5, *Other Admitted Assets*) states:

> INVESTMENTS INVOLVING EQUIPMENT
>
> The statutory method of accounting for equipment arrangements is governed largely by the form of the agreement to which the HMO is a party.

11. The Accounting Practices and Procedures Manual for Health Maintenance Organizations (Chapter 6, *Nonadmitted Assets*) states:

> COMMON EXAMPLES
>
> Some examples of assets which are non-admitted due to either an uncertainty as to their collectibility or an insufficient basis for determining their valuation or for other reasons are:
>
> (6) net book value of equipment and furniture (except certain electronic data processing equipment and medical equipment)

12. The Health Maintenance Organization Model Act, dated July 1995 states the following:

> **Section 5. Powers of Health Maintenance Organizations**
>
> A. The powers of a health maintenance organization include, but are not limited to, the following:
>
> (1) The purchase, lease, construction, renovation, operation or maintenance of hospitals, medical facilities, or both, and their ancillary equipment, and property reasonably required for its principal office or for purposes necessary to the transaction of the business of the organization;
>
> **Section 12. Investments**
>
> With the exception of investments made in accordance with Section 5A(1), the funds of a health maintenance organization shall be invested only in accordance with [cite section of law or regulation implementing the NAIC Health Maintenance Organization Investment Guidelines.]

Generally Accepted Accounting Principles

13. The AICPA Audit and Accounting Guide: Health Care Organizations states the following:

> 6.01. Health care organizations use various types of property and equipment. Those assets may be material to the financial position of institutional health organizations, such as hospitals and nursing homes. Typical accounts used to record property and equipment transactions are land, land improvements, buildings and improvements, leasehold improvements, equipment (fixed and movable), leased property and equipment, accumulated depreciation and amortization, and construction in progress.
>
> 6.04. Accounting for property and equipment, supplies, and other assets of health care organizations is similar to that used by other business organizations.
>
> 6.05. Depreciation and amortization of property and equipment are recorded in conformity with GAAP. Useful lives assigned to depreciable assets should be reasonable, based on the circumstances. The American Hospital Association publishes useful guidelines for classifications and estimated useful lives for property and equipment used by hospitals. Those guidelines also may be useful to other health care organizations. If there is a potential that an asset is impaired, health care organizations should consider the guidance in *FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to be Disposed of.*

Other Sources of Information

14. The NAIC Survey on State Practice Regarding Admissibility of Health Care Delivery Assets dated January 1996 conducted by the Risk Based Capital Task Force surveyed the state insurance departments that regulate HMOs to determine if and to what degree that they allow HMOs to admit health care delivery assets. Responses from 38 state insurance departments indicated that the vast majority admit such assets at book value. A number of state insurance departments noted that they do place varying limits on the amount of certain health care delivery assets that can be admitted. However, none of the respondent states indicated that they did not admit such assets.

Statutory Issue Paper No. 103

Accounting for the Issuance of Insurance-Linked Securities Issued by a Property and Casualty Insurer Through a Protected Cell

STATUS
Finalized June 13, 2000

Original SSAP and Current Authoritative Guidance: SSAP No. 74

Type of Issue:
Property and Casualty

SUMMARY OF ISSUE

1. Insurance–linked securities are fully funded corporate securities with special language that requires the securityholder to forgive or defer some or all payments of interest or principal if actual insurance losses surpass a specified amount, or trigger event. Should a triggering event occur, an insurer or reinsurer that issued insurance-linked securities can pay claims with all or a portion of the securityholder proceeds. To the extent that securityholders proceeds are at risk of loss, the insurer or reinsurer can write down its liability for the securities, and recognize a surplus benefit in an equal amount.

2. Chapter 1 of the *Accounting Practices and Procedures Manual for Property/Casualty Insurance Companies* does not specifically address accounting for the issuers of insurance-linked securities issued through a protected cell. Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 133 - *Accounting for Derivative Instruments and Hedging Activities* (FAS 133) dictates that these types of contracts would be accounted for as reinsurance.

3. The purpose of this issue paper is to provide guidance for protected cells that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Definitions

4. The Protected Cell Model Act (included in its entirety in the Relevant Statutory Accounting and GAAP Guidance section) includes a complete listing of definitions used in this issue paper.

General

5. An insurance-linked security can be issued by the insurer through a protected cell for purchase by investors. A protected cell is retained within the insurance or reinsurance company and is used to insulate the proceeds of the securities offering from the general business risks of the insurer, granting an additional comfort level for investors of the securitized instrument. The insurance exposures that have been securitized by the insurance-linked security are attributed to the protected cell.

6. Under the terms of the security, the principal may be paid to the investor on a specified maturity date, with interest, unless a trigger event occurs. The proceeds of the security offering will collateralize (i) the issuer's obligation under an insurance or reinsurance agreement if a trigger event occurs and (ii) the issuer's obligation to repay the security if a trigger event does not occur.

7. If the trigger event takes place before a specified date, the issuer is relieved of some or its entire obligation to repay the securityholders, and the investor incurs a loss of some or all of its investment. The security must be issued with an indemnity trigger.

8. In an insurance-linked security, the insurer that originated the transaction has hedged its portfolio of insurance risks by transferring certain of those risks to the securityholders. Should the triggering event occur, the issuer would incur a loss that would be partly offset by the amount of liability to securityholders from which it is relieved. This issue paper provides statutory accounting guidance solely for indemnity triggered insurance securitization transactions conducted through a protected cell.

Accounting for Prefunded Insurance-Linked Securities for Business Attributed to the Protected Cell from the General Account

General Account Reporting

9. Activities such as sales, underwriting and contract administration, premium collection and payment of premium taxes, and claims processing are activities of the insurance company distinct from the protected cell and shall be accounted for as transactions of the general account.

10. Amounts paid to the protected cell for underwriting risks, which ultimately will be securitized by the protected cell, shall be reported separately as a reduction of written and earned premiums in the current period general account's statement of income. This premium is earned by the general account in accordance with *Issue Paper No. 53—Property Casualty Contracts–Premiums*.

11. At the maturity of the protected cell all assets and liabilities of the protected cell are distributed based on the contractual agreement with the securityholders. If after this distribution assets still reside in the protected cell, these assets shall be attributed to the general account and recognized as an adjustment to surplus.

12. Insurance claim liabilities arising from past insurable events attributed to the protected cell account from the general account shall be accounted for as retro-active reinsurance as prescribed in *Issue Paper No. 75—Property and Casualty Reinsurance*.

13. General account recoverables from the protected cell as a result of an indemnity based securitized event, shall be recognized separately as a reduction of gross losses and loss expenses incurred in the current period general account's statement of income. General account recoverables from the protected cell on unpaid reported and incurred but not reported losses and loss adjustment expenses shall be netted against the liability for gross losses and loss adjustment expenses in the general account's balance sheet. Recoverables from the protected cell shall not exceed the assets carried at fair value in the protected cell.

14. The general account shall include an aggregate write-in for the total assets and an aggregate write-in for liabilities of any protected cell which it maintains. Transfers to the general account due or accrued shall be reported on a net basis so that the asset and the liability totals of the general account are not overstated.

Protected Cell Reporting

15. The protected cell annual statement is concerned with the investment activities and obligations relating to insurance-linked securities attributed to that protected cell. As a result, the protected cell statement shall report only the financial activities of the protected cell and shall not include general account expenses related to insurance activities which are recorded for in the general account.

16. The protected cell shall record premium income for transactions attributed to it by the general account as income reported in the protected cell's statement of income. This premium attribution is earned by the protected cell in accordance with *Issue Paper No. 53— Property Casualty Contracts–Premiums*.

17. The obligation from the issuance of the insurance-linked security is recorded as Funds Held Under Securitization Agreement, a liability on the protected cell balance sheet which is reported at its contractual value which will be the lower of the scheduled amount to be repaid to investors or the fair value of the investments in the protected cell. All protected cell assets shall be reported at fair value. Interest expenses payable to securityholders associated with the protected cell investment operations shall be deducted in the determination of net operating income of the cell. Net investment income and realized capital gains and losses relating to the investment operations of the protected cell are recorded as net investment income. Payables to the general account shall not exceed the assets carried at fair value in the protected cell.

18. Changes in both (i.) the fair value of the protected cell invested assets and (ii.) the protected cell contractual (or discounted) value of liabilities to investors shall be reported as an unrealized gain/loss in the equity section of the protected cell balance sheet.

19. When the trigger event occurs with respect to the underlying exposures attributed to the protected cell, the protected cell shall record the appropriate incurred losses in its current period statement of income. Correspondingly, the Funds Held Under Securitization Agreement shall be reduced and offset by gross losses incurred in the current period Statement of Income. The applicable funds to cover the subject exposure are then attributed to the general account via a balance sheet account, "Due to/from the General Account."

20. If the trigger event does not take place on or before the contractual maturity date, the protected cell repays the bond principal as prescribed in the debt contract by reducing Funds Held Under Securitization Agreement.

Disclosures

General Account

21. Prior to the adoption of formal blanks changes by the NAIC Blanks Task Force, the general account shall reflect all activities with its protected cells as an aggregate write-in in its statutory balance sheet and income statement. The general account shall also disclose in its notes to the financial statements the types and amounts of exposures /risks attributed to each of its protected cells.

Protected Cells

22. Each protected cell of a protected cell company shall prepare and submit to all states where the protected cell company is licensed and the NAIC the following supplemental financial information:

a. Balance Sheet
b. Income Statement
c. Statement of Cash Flows
d. Investment Schedules as typically required for a property/casualty insurer
e. Schedule P

DISCUSSION

23. This issue paper prescribes the accounting for the issuance of insurance-linked securities issued by a property and casualty insurer through a protected cell. This guidance was adopted by the Insurance Securitization Working Group of the Financial Condition (E) Committee in 1999. The Emerging Accounting Issues Working Group adopted the guidance as "NAIC Preferred Accounting Treatment" in October 1999. This issue is specifically scoped out of FAS 133, and therefore the protected cell concept is unique to statutory accounting.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

24. In October 1999, the Emerging Accounting Issues Working Group adopted as "NAIC Preferred Accounting Treatment" the issue summary titled *Accounting for the Issuance of Insurance-Linked Securities Issued by a Property and Casualty Insurer through a Protected Cell*. The guidance included in the Summary Conclusion section of this issue paper is consistent with the previously adopted issue summary.

Generally Accepted Accounting Principles

25. The following language is included in FAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*:

> 192. Example 26: Disaster Bond. A bond that pays a coupon above that of an otherwise comparable traditional bond; however, all or a substantial portion of the principal amount is subject to loss if a specified disaster experience occurs.
>
> Scope Application: A disaster bond can be viewed as a fixed-rate bond combined with a conditional exchange contract (an option). The investor receives an additional coupon interest payment in return for giving the issuer an option indexed to industry loss experience on a specified disaster. Because the option contract is indexed to the specified disaster experience, it cannot be viewed as being clearly and closely related to an investment in a fixed-rate bond. Therefore, the embedded derivative should be separated from the host contract and accounted for by both parties pursuant to the provisions of this Statement.
>
> However, if the "embedded derivative" entitles the holder of the option (that is, the issuer of the disaster bond) to be compensated only for changes in the value of specified assets or liabilities for which the holder is at risk (including the liability for insurance claims payable due to the specified disaster) as a result of an identified insurable event (refer to paragraph 10.c.(2)), a separate instrument with the same terms as the "embedded derivative" would not meet the Statement's definition of a derivative in paragraphs 6–11. In that circumstance, because the criterion in paragraph 12.c. would not be met, there is no embedded derivative to be separated from the host contract, and the disaster bond would not be subject to the requirements of this Statement. The investor is essentially providing a form of insurance or reinsurance coverage to the issuer.

26. This issue paper only contemplates transactions with an indemnity-based trigger, as such they would be excluded from FAS 133 and accounting for as reinsurance under FAS 113, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts*.

27. The Insurance Securitization Working Group developed the following Protected Cell Model Act. Details of considerations made in drafting this model act can be found in the minutes of the working group.

PROTECTED CELL COMPANY MODEL ACT

Table of Contents

Section 1. Short Title
Section 2. Purpose
Section 3. Definitions
Section 4. Establishment of Protected Cells
Section 5. Use and Operation of Protected Cells
Section 6. Reach of Creditors and Other Claimants.
Section 7. Conservation, Rehabilitation or Liquidation of Protected Cell Companies
Section 8. No Transaction of an Insurance Business
Section 9. Authority to Adopt Regulations
Section 10. Effective Date

Section 1. Short Title

This Act may be cited as the “Protected Cell Company Act.”

Section 2. Purpose

This Act is adopted to provide a basis for the creation of protected cells by a domestic insurer as one means of accessing alternative sources of capital and achieving the benefits of insurance securitization. Investors in fully funded insurance securitization transactions provide funds that are available to pay the insurer’s insurance obligations or to repay the investors or both. The creation of protected cells is intended to be a means to achieve more efficiencies in conducting insurance securitizations.

Drafting Note: Under the terms of the typical debt instrument underlying an insurance securitization transaction, prepaid principal is repaid to the investor on a specified maturity date with interest, unless a trigger event occurs. The insurance securitization proceeds secure both the protected cell company’s insurance obligations if a trigger event occurs, as well as the protected cell company’s obligation to repay the insurance securitization investors if a trigger event does not occur. Insurance securitization transactions have been performed through alien companies in order to utilize efficiencies available to alien companies that are not currently available to domestic companies. This Act is adopted in order to create more efficiency in conducting insurance securitization, to allow domestic protected cell companies easier access to alternative sources of capital, and to promote the benefits of insurance securitization generally.

Section 3. Definitions

For the purposes of this Act, the following terms shall have the following meanings:

A. “Domestic insurer” means an insurer domiciled in the State of [insert state].

B. “Fully funded” means that, with respect to any exposure attributed to a protected cell, the fair value of the protected cell assets, on the date on which the insurance securitization is effected, equals or exceeds the maximum possible exposure attributable to the protected cell with respect to such exposures.

C. “General account” means the assets and liabilities of a protected cell company other than protected cell assets and protected cell liabilities.

D. “Indemnity trigger” means a transaction term by which relief of the issuer’s obligation to repay investors is triggered by its incurring a specified level of losses under its insurance or reinsurance contracts.

E. “Fair value” of an asset (or liability) means the amount at which that asset (or liability) could be bought (or incurred) or sold (or settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If a quoted market price is available, the fair value is the product of the number of trading units times market price. If quoted market prices are not available, the estimate of fair value shall be based on the best information available. The estimate of fair value shall consider prices for similar assets and liabilities and the results of valuation techniques to the extent available in the circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis. Valuation techniques for measuring financial assets and liabilities and servicing assets and liabilities shall be consistent with the objective of measuring fair value. Those techniques shall incorporate assumptions that market participants would use in their estimates of values, future revenues, and future expenses, including assumptions about interest rates, default, prepayment, and volatility. In measuring financial liabilities and servicing liabilities at fair value by discounting estimated future cash flows, an objective is to use discount rates at which those liabilities could be settled in an arm’s-length transaction. Estimates of expected future cash flows, if used to estimate fair value, shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence shall be considered in developing estimates of expected future cash flows. The weight given to the evidence shall be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.

F. “Non-indemnity trigger” means a transaction term by which relief of the issuer’s obligation to repay investors is triggered solely by some event or condition other than the individual protected cell company incurring a specified level of losses under its insurance or reinsurance contracts.

G. “Protected cell” means an identified pool of assets and liabilities of a protected cell company segregated and insulated by means of this Act from the remainder of the protected cell company’s assets and liabilities.

Drafting Note: This term is meant to reference identification of statutorily segregated assets and liabilities through the accounting function. By attributing certain assets and liabilities to a protected cell on the protected cell company’s books and records, and otherwise complying with the provisions of this Act, the protected cell company will receive statutory insulation of those assets and liabilities from the protected cell company’s other assets and liabilities not identified in the accounting records as attributable to the protected cell.

H. “Protected cell account” means a specifically identified bank or custodial account established by a protected cell company for the purpose of segregating the protected cell assets of one protected cell from the protected cell assets of other protected cells and from the assets of the protected cell company’s general account.

Drafting Note: This term is meant to reference a custodial account established to hold and invest protected cell assets, such that protected cell assets are also distinct and identifiable from the assets of the general account.

I. “Protected cell assets” means all assets, contract rights and general intangibles, identified with and attributable to a specific protected cell of a protected cell company.

J. “Protected cell company” means a domestic insurer that has one or more protected cells.

K. “Protected cell company insurance securitization” means the issuance of debt instruments, the proceeds from which support the exposures attributed to the protected cell, by a protected cell company where repayment of principal or interest, or both, to investors pursuant to the transaction terms is contingent upon the occurrence or nonoccurrence of an event with respect to which the protected cell company is exposed to loss under insurance or reinsurance contracts it has issued.

L. “Protected cell liabilities” means all liabilities and other obligations identified with and attributable to a specific protected cell of a protected cell company.

Section 4. Establishment of Protected Cells

A. A protected cell company may establish one or more protected cells with the prior written approval of the commissioner of a plan of operation or amendments thereto submitted by the protected cell company with respect to each protected cell in connection with an insurance securitization. Upon the written approval of the commissioner of the plan of operation, which shall include, but not be limited to, the specific business objectives and investment guidelines of the protected cell, the protected cell company may, in accordance with the approved plan of operation, attribute to the protected cell insurance obligations with respect to its insurance business and obligations relating to the insurance securitization and assets to fund the obligations. A protected cell shall have its own distinct name or designation, which shall include the words “protected cell.” The protected cell company shall transfer all assets attributable to a protected cell to one or more separately established and identified protected cell accounts bearing the name or designation of that protected cell. Protected cell assets shall be held in the protected cell accounts for the purpose of satisfying the obligations of that protected cell.

Drafting Note: Insert the title of the chief insurance regulatory official wherever the term “commissioner” appears.

B. All attributions of assets and liabilities between a protected cell and the general account shall be in accordance with the plan of operation approved by the commissioner. No other attribution of assets or liabilities may be made by a protected cell company between the protected cell company’s general account and its protected cells. Any attribution of assets and liabilities between the general account and a protected cell, or from investors in the form of principal on a debt instrument issued by a protected cell company in connection with a protected cell company securitization shall be in cash or in readily marketable securities with established market values.

C. The creation of a protected cell does not create, in respect of that protected cell, a legal person separate from the protected cell company. Amounts attributed to a protected cell under this Act, including assets transferred to a protected cell account, are owned by the protected cell company and the protected cell company may not be, nor hold itself out to be, a trustee with respect to those protected cell assets of that protected cell account. Notwithstanding the foregoing, the protected cell company may allow for a security interest to attach to protected cell assets or a protected cell account when in favor of a creditor of the protected cell and otherwise allowed under applicable law.

D. This Act shall not be construed to prohibit the protected cell company from contracting with or arranging for an investment advisor, commodity trading advisor, or other third party to manage the protected cell assets of a protected cell, provided that all remuneration, expenses and other compensation of the third party advisor or manager are payable from the protected cell assets of that protected cell and not from the protected cell assets of other protected cells or the assets of the protected cell company's general account.

E. (1) A protected cell company shall establish administrative and accounting procedures necessary to properly identify the one or more protected cells of the protected cell company and the protected cell assets and protected cell liabilities attributable to the protected cells. It shall be the duty of the directors of a protected cell company to:

(a) Keep protected cell assets and protected cell liabilities separate and separately identifiable from the assets and liabilities of the protected cell company's general account and;

(b) Keep protected cell assets and protected cell liabilities attributable to one protected cell separate and separately identifiable from protected cell assets and protected cell liabilities attributable to other protected cells.

(2) Notwithstanding the foregoing, if this section is violated, the remedy of tracing shall be applicable to protected cell assets when commingled with protected cell assets of other protected cells or the assets of the protected cell company's general account. The remedy of tracing shall not be construed as an exclusive remedy.

F. The protected cell company shall, when establishing a protected cell, attribute to the protected cell assets with a value at least equal to the reserves and other insurance liabilities attributed to that protected cell.

Section 5. Use and Operation of Protected Cells

A. The protected cell assets of a protected cell may not be charged with liabilities arising out of any other business the protected cell company may conduct. All contracts or other documentation reflecting protected cell liabilities shall clearly indicate that only the protected cell assets are available for the satisfaction of those protected cell liabilities.

B. The income, gains and losses, realized or unrealized, from protected cell assets and protected cell liabilities shall be credited to or charged against the protected cell without regard to other income, gains or losses of the protected cell company, including income, gains or losses of other protected cells. Amounts attributed to any protected cell and accumulations on the attributed amounts may be invested and reinvested without regard to any requirements or limitations of Section [insert reference applicable sections of the insurance code imposing limitations on insurance company investments] and the investments in a protected cell or cells shall not be taken into account in applying the investment limitations otherwise applicable to the investments of the protected cell company.

C. Assets attributed to a protected cell shall be valued at their fair value on the date of valuation.

D. A protected cell company shall, in respect of any of its protected cells, engage in fully funded indemnity triggered insurance securitization to support in full the protected cell exposures attributable to that protected cell. A protected cell company insurance securitization that is non-indemnity triggered shall qualify as an insurance securitization under the terms of this Act only after the commissioner, in accordance with the authority granted under Section 9 of this Act, adopts regulations addressing the methods of funding of the portion of the risk that is not indemnity based, accounting, disclosure, risk based capital treatment, and assessing risks associated with such securitizations. A protected cell company insurance securitization that is not fully funded, whether indemnity triggered or non-indemnity triggered, is prohibited. Protected cell assets may be used to pay interest or other consideration on any outstanding debt or other obligation attributable to that protected cell, and nothing in this subsection shall be construed or interpreted to prevent a protected cell company from entering into a swap agreement or other transaction for the account of the protected cell that has the effect of guaranteeing interest or other consideration.

E. In all protected cell company insurance securitizations, the contracts or other documentation effecting the transaction shall contain provisions identifying the protected cell to which the transaction will be attributed. In addition, the contracts or other documentation shall clearly disclose that the assets of that protected cell, and only those assets, are available to pay the obligations of that protected cell. Notwithstanding the foregoing, and subject to the provisions of this Act and any other applicable law or regulation, the failure to include such language in the contracts or other documentation shall not be used as the sole basis by creditors, reinsurers or other claimants to circumvent the provisions of this Act.

F. A protected cell company shall only be authorized to attribute to a protected cell account the insurance obligations relating to the protected cell company's general account. Under no circumstances shall a protected cell be authorized to issue insurance or reinsurance contracts directly to policyholders or reinsureds or have any obligation to the policyholders or reinsureds of the protected cell company's general account.

G. At the cessation of business of a protected cell in accordance with the plan approved by the commissioner, the protected cell company shall voluntarily close out the protected cell account.

Section 6. Reach of Creditors and Other Claimants

A. (1) Protected cell assets shall only be available to the creditors of the protected cell company that are creditors in respect to that protected cell and shall thereby be entitled, in conformity with the provisions of this Act, to have recourse to the protected cell assets attributable to that protected cell, and shall be absolutely protected from the creditors of the protected cell company that are not creditors in respect of that protected cell and who, accordingly, shall not be entitled to have recourse to the protected cell assets attributable to that protected cell. Creditors with respect to a protected cell shall not be entitled to have recourse against the protected cell assets of other protected cells or the assets of the protected cell company's general account.

(2) Protected cell assets shall only be available to creditors of a protected cell company after all protected cell liabilities have been extinguished or otherwise provided for in accordance with the plan of operation relating to that protected cell.

B. When an obligation of a protected cell company to a person arises from a transaction, or is otherwise imposed, in respect of a protected cell:

(1) That obligation of the protected cell company shall extend only to the protected cell assets attributable to that protected cell, and the person shall, with respect to that obligation, be entitled to have recourse only to the protected cell assets attributable to that protected cell; and

(2) That obligation of the protected cell company shall not extend to the protected cell assets of any other protected cell or the assets of the protected cell company's general account, and that person shall not, with respect to that obligation, be entitled to have recourse to the protected cell assets of any other protected cell or the assets of the protected cell company's general account.

C. When an obligation of a protected cell company relates solely to the general account, the obligation of the protected cell company shall extend only to, and that creditor shall, with respect to that obligation, be entitled to have recourse only to, the assets of the protected cell company's general account.

D. The activities, assets, and obligations relating to a protected cell are not subject to the provisions of Section [insert applicable sections of the insurance code addressing life and health and property and casualty guaranty or insolvency funds], and neither a protected cell nor a protected cell company shall be assessed by or otherwise be required to contribute to any guaranty fund or guaranty association in this state with respect to the activities, assets, or obligations of a protected cell. Nothing in this subsection shall affect the activities or obligations of an insurer's general account.

E. In no event shall the establishment of one or more protected cells alone constitute or be deemed to be a fraudulent conveyance, an intent by the protected cell company to defraud creditors, or the carrying out of business by the protected cell company for any other fraudulent purpose.

Section 7. Conservation, Rehabilitation or Liquidation of Protected Cell Companies

A. Notwithstanding any contrary provision in the insurance code of this state, the regulations promulgated under the insurance code of this state, or any other applicable law or regulation, upon any order of conservation, rehabilitation or liquidation of a protected cell company, the receiver shall be bound to deal with the protected cell company's assets and liabilities, including protected cell assets and protected cell liabilities, in accordance with the requirements set forth in this Act.

B. With respect to amounts recoverable under a protected cell company insurance securitization, the amount recoverable by the receiver shall not be reduced or diminished as a result of the entry of an order of conservation, rehabilitation or liquidation with respect to the protected cell company notwithstanding any provisions to the contrary in the contracts or other documentation governing the protected cell company insurance securitization.

Drafting note: A number of states require a liquidator to cancel policies within a pre-specified time period in the event of a liquidation. While reviewing the Plan of Operation, commissioners should consider the termination provisions, if any, of the securitization instruments in the event of the cancellation of all of the insurance policies underlying the securitization in order to assess whether any portion of the risk premium relating to those underlying policies should equitably be returned to the estate of the general account.

Section 8. No Transaction of an Insurance Business

A protected cell company insurance securitization shall not be deemed to be an insurance or reinsurance contract. An investor in a protected cell company insurance securitization shall not, by sole means of this investment, be deemed to be transacting an insurance business in this state. The underwriters or selling agents (and their partners, directors, officers, members, managers, employees, agents, representatives and advisors) involved in a protected cell company insurance securitization shall not be deemed to be conducting an insurance or reinsurance agency, brokerage, intermediary, advisory or consulting business by virtue of their activities in connection therewith.

Section 9. Authority to Adopt Regulations

The commissioner may promulgate regulations necessary to effectuate the purposes of this Act.

Section 10. Effective Date

This Act shall become effective on [insert date].

Statutory Issue Paper No. 104

Reinsurance Deposit Accounting - An Amendment to SSAP No. 62—Property and Casualty Reinsurance

STATUS
Finalized September 12, 2000

Original SSAP and Current Authoritative Guidance: SSAP No. 62R

Type of Issue:
Property and Casualty

SUMMARY OF ISSUE

1. *SSAP No. 62—Property and Casualty Reinsurance* (SSAP No. 62) prescribes the accounting treatment for reinsurance contracts that do not transfer both components of insurance risk (underwriting risk and timing risk). The requirements for Generally Accepted Accounting Principles (GAAP) are contained within American Institute of Certified Public Accountants (AICPA) *Statement of Position No. 98-7, Deposit Accounting: Accounting for Insurance and Reinsurance Contracts That do not Transfer Insurance Risk* (SOP No. 98-7).

2. The purpose of this issue paper is to address the requirements of SOP 98-7 and amend the deposit accounting provisions of SSAP No. 62. In considering GAAP guidance as reflected in SOP 98-7, the purpose of this issue paper is to amend the deposit accounting provisions of SSAP No. 62 and remain consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Deposit Accounting
3. This issue paper supersedes paragraph 34 of SSAP No. 62. The following guidance shall be followed when reinsurance contracts do not transfer both components of insurance risk.

4. To the extent that a reinsurance agreement does not, despite its form, transfer both components of insurance risk, all or part of the agreement shall be accounted for and reported as deposits in the following manner:

a. At the outset of the reinsurance agreement, the net consideration paid by the ceding entity (premiums less commissions or other allowances) shall be recorded as a deposit by the ceding company and as a liability by the assuming entity. The deposit shall be reported as an admitted asset by the ceding company if (i) the assuming company is licensed, accredited or otherwise qualified in the ceding company's state of domicile as described in Appendix A-785 or (ii) there are funds held by or on behalf of the ceding company which meet the requirements of paragraph 16 of Appendix A-785;

b. At subsequent reporting dates, the amount of the deposit/liability should be adjusted by calculating the effective yield on the deposit agreement to reflect actual payments to date (receipts and disbursements should be recorded through the deposit/liability accounts) and expected future payments (as discussed below), with a corresponding credit or charge to interest income or interest expense;

c. The calculation of the effective yield should use the estimated amount and timing of cash flows. If a change in the actual or estimated timing or amount of cash flows occurs, the effective yield should be recalculated to reflect the revised actual or estimated cash flows. The deposit should be adjusted to the amount that would have existed at the reporting date had the new effective yield been applied since the inception of the reinsurance agreement. Changes in the carrying amount of the deposit asset/liability resulting from changes in the effective yield shall be recorded as interest income or interest expense.

d. It shall be assumed that any cash transactions for the settlement of losses will reduce the asset/liability accounts by the amount of the cash transferred. When the remaining losses are revalued upward, an increase in the deposit liability shall be recorded as interest expense – by the assuming insurer. Conversely, the ceding insurer shall increase its deposit (asset) with an offsetting credit to interest income; and increase its outstanding loss liability with an offsetting charge to incurred losses;

e. No deduction shall be made from the loss and loss adjustment expense reserves on the ceding company's Statement of Financial Position, schedules, and exhibits;

f. The assuming company shall record net consideration to be returned to the ceding company as a liability.

(For an illustration of the provisions of paragraph 4 see Exhibit A)

Disclosures

5. The financial statements shall disclose the following with respect to reinsurance agreements that have been accounted for as deposits:

a. A description of the reinsurance agreements.
b. Any adjustment of the amounts initially recognized for expected recoveries. The individual components of the adjustment (e.g., interest accrual, change due to a change in estimated or actual cash flow) shall be disclosed separately.

DISCUSSION

6. Subsequent to the adoption of SSAP No. 62, the AICPA issued SOP 98-7. This SOP provides guidance on how to account for insurance and reinsurance contracts that do no transfer insurance risk. It applies to all entities and all insurance and reinsurance contracts that do not transfer insurance risk, except for long-term life and health insurance contracts. The method used to account for insurance and reinsurance contracts that do not transfer insurance risk is referred to in this SOP as deposit accounting. The SOP does not address when deposit accounting should be applied.

7. This issue paper adopts, with modification, AICPA SOP 98-7 paragraphs 10 to 12 and 19 (subsection b only). The fundamental concepts of SSAP No. 62 are based upon the fact that unless a reinsurance contract contains a transfer of insurance risk, no underwriting credit shall be granted. The critical ingredient of a reinsurance contract is the transfer of risk. The essential element of every true reinsurance agreement is the undertaking by the reinsurer to indemnify the ceding entity, i.e., reinsured entity, not only in form but in fact, against loss or liability by reason of the original insurance. Insurance risk involves uncertainties about both (a) the ultimate amount of net cash flows from premiums, commissions, claims, and claims settlement expenses (underwriting risk) and (b) the timing of the receipt and payment of those cash flows (timing risk). SOP 98-7 paragraphs 10 to 12 requires the use of the interest method for contracts that transfer neither timing nor underwriting risk and contracts that only transfer timing risk. This issue paper adopts the interest method contained with those paragraphs, but modifies the SOP to require the interest method when the contract does not transfer one or both components of insurance risk.

8. The issue paper rejects AICPA SOP 98-7 paragraphs 13 to 17 and 19 (subsections a and c). This is due to the fact that the SOP allows entities to take underwriting credit for contracts that only transfer significant underwriting risk. This is in direct conflict with the fundamental concept that reinsurance contracts must transfer insurance risk (both underwriting and timing risks).

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

9. SSAP No. 62 paragraph 34:

> **Deposit Accounting**
>
> 34. To the extent that a reinsurance agreement does not, despite its form, transfer both components of insurance risk, all or part of the agreement shall be accounted for and reported as deposits in the following manner:
>
> a. At the outset of the reinsurance agreement the net consideration paid by the ceding entity (premiums less commissions or other allowances) shall be recorded as a deposit by the ceding entity and as a liability by the assuming entity. The deposit shall be reported as an admitted asset by the ceding entity if (i) the assuming entity is licensed, accredited or otherwise qualified in the ceding entity's state of domicile as described in Appendix A-785 or (ii) there are funds held by or on behalf of the ceding entity as described in Appendix A-785;
>
> b. Throughout the life of the agreement, receipts and disbursements shall be recorded through the deposit/liability accounts;
>
> c. When individual case reserves are the basis for the deposit and the assuming entity pays in excess of the amount transferred by the ceding entity, the amount paid in excess of the deposit received shall be recognized as a loss by the assuming entity and as a gain by the ceding entity as Other Income in the statement of income;
>
> d. When the agreement is completed, or when there is a loss payment in excess of the deposit, any difference between consideration and recoveries shall be recorded in the Other Income or Loss account as a loss to the reinsurer and as a gain in the Other Income or Loss account by the reinsured;
>
> e. With regard to bulk reserves,(i.e., IBNR) it shall be assumed that any cash transactions for the settlement of losses will reduce the asset/liability accounts by the amount of the cash transferred. When the remaining losses are revalued upward, an increase in the liability shall be recorded as a loss recognized by the assuming entity. Conversely, the ceding entity shall increase its deposit (asset) and outstanding loss liability;
>
> f. No deduction shall be made from the loss and loss adjustment expense reserves on the ceding entity's balance sheet, schedules, and exhibits; and
>
> g. The assuming entity shall record net consideration to be returned to the ceding entity as liabilities.

10. The Property Casualty Reinsurance Study Group of the Accounting Practices and Procedures (E) Task Force reviewed SOP 98-7 in detail. The Study Group adopted its position at its March 7, 1999 meeting. The conclusion of this issue paper is consistent with the Study Group's recommendation. The applicable section of the minutes is included herein:

Michael Moriarty (N.Y.) opened the meeting by inviting Keith Bell (Travelers) to comment on his previously submitted proposal to revise statutory accounting guidance to permit accrual of interest income or expense related to funds held on deposit type transactions. Mr. Bell stated that the intent of the proposed revision was to make the statutory rules more consistent with Generally Accepted Accounting Procedures (GAAP) treatment, by using the interest method to reflect the actual cash flows and to periodically adjust the implicit rate of interest.

Peter Medley (Wis.) raised a question regarding the interest rate to be used for this purpose. Frank Maffa (American Reinsurance Company) explained that reinsurance agreements which did not satisfy risk transfer requirements had to be accounted for as deposit-transactions, and suggested that it would be appropriate to recognize the interest income or expense associated with the funds on deposit in a timely manner over the life of the transaction. Mr. Moriarty commented that he saw no reason not to permit accrual of such amounts and asked Norris Clark (Calif.) to explain how the proposed revision would be implemented. Mr. Clark said that the proposal would go from the study group to the Accounting Practices and Procedures Task Force, which would presumably consider the proposal to be a codification maintenance item which need not be referred to the Emerging Accounting Issues Task Force before the proposal could be implemented as a revision to the pertinent language in SSAP No. 62 and the corresponding section of the Accounting Practices and Procedures Manual for Property and Casualty Companies.

Thomas Burke (N.H.) moved to adopt the proposal and Mr. Clark seconded the motion which passed on a 4 to 1 vote of the study group members.

Generally Accepted Accounting Principles

11. AICPA SOP 98-7 paragraphs 9 to 20:

Initial Measurement

9. At inception, a deposit asset or liability should be recognized for insurance and reinsurance contracts accounted for under deposit accounting and should be measured based on the consideration paid or received, less any explicitly identified premiums or fees to be retained by the insurer or reinsurer, irrespective of the experience of the contract. Accounting for such fees should be based on the terms of the contract. Deposit assets and liabilities should be reported on a gross basis, unless the right of offset exists as defined in *FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts.* The accounting by the insured and insurer are symmetrical, except as noted in paragraph 15 of this SOP.

Subsequent Measurement

Insurance and Reinsurance Contracts That Transfer Only Significant Timing Risk and Insurance and Reinsurance Contracts That Transfer Neither Significant Timing Nor Underwriting Risk

10. For insurance and reinsurance contracts that transfer only significant timing risk or that transfer neither significant timing nor significant underwriting risk, the amount of the deposit asset or liability should be adjusted at subsequent reporting dates by calculating the effective yield on the deposit to reflect actual payments to date and expected future payments (as discussed in paragraph 11 below), with a corresponding credit or charge to interest income or expense. This approach is consistent with the interest method described in *Accounting Principles Board (APB) Opinion No. 21, Interest on Receivables and Payables,* and *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases.*

11. The calculation of the effective yield should use the estimated amount and timing of cash flows. Consistent with paragraph 19 of FASB Statement No. 91, if a change in the actual or estimated timing or amount of cash flows occurs, the effective yield should be recalculated to reflect the revised actual or estimated cash flows. The deposit should be adjusted to the amount that would have existed at the balance-sheet date had the new effective yield been applied since

the inception of the insurance or reinsurance contract. Changes in the carrying amount of the deposit should be reported as interest income or interest expense.

12. Significant changes in the expected amounts of aggregate cash flows are expected to occur infrequently because of the nature of these kinds of contracts. Should a significant change occur in the total amount of actual or estimated cash flows, the enterprise should determine whether the change indicates that the contract does include significant underwriting risk and therefore should be converted to the accounting for contracts that transfer only significant underwriting risk. (See paragraphs 13 through 15 for the accounting guidance for insurance and reinsurance contracts that transfer only significant underwriting risk.) In addition, a contract that transfers only significant timing risk, which subsequently is determined also to transfer significant underwriting risk, cannot be accounted for under insurance or reinsurance accounting when the revised determination is made.

Insurance and Reinsurance Contracts That Transfer Only Significant Underwriting Risk

13. Until such time as a loss is incurred that will be reimbursed under an insurance or reinsurance contract that transfers only significant underwriting risk, the deposit should be measured based on the unexpired portion of the coverage provided. Once a loss is incurred that will be reimbursed under such a contract, then the deposit should be measured by the present value of the expected future cash flows arising from the contract plus the remaining unexpired portion of the coverage provided.

14. Changes in the recorded amount of the deposit, other than the unexpired portion of the coverage provided, arising from an insurance or reinsurance contract that transfers only significant underwriting risk should be recorded in an insured's income statement as an offset against the loss recorded by the insured that will be reimbursed under the insurance or reinsurance contract and in an insurer's income statement as an incurred loss. Insurance enterprises should record the reduction in the deposit related to the unexpired portion of the coverage provided as an adjustment to incurred losses. Insurance enterprises should disclose the amounts related to those deposit contracts that are reported in incurred losses in their statement of earnings. (See paragraph 19.) If the insured is an enterprise other than an insurance enterprise, the reduction in the deposit related to the unexpired portion of the coverage provided should be recorded as an expense.

15. For the insured or ceding enterprise, the discount rate used to determine the deposit asset should be the current rate on United States government obligations with similar cash-flow characteristics, adjusted for default risk. Consideration of the default risk, if any, should be based on the assessment of the creditworthiness of the insurer. For the insurer or assuming enterprise, the discount rate used to determine the deposit liability should be the current rate on United States government obligations with similar cash-flow characteristics. These rates should be established at the date of each loss incurred and used for the remaining life of the contract and should not be changed. If numerous losses occur, the use of average rates is permitted because establishing individual rates might require detailed recordkeeping and computations that could be burdensome and unnecessary to produce reasonable approximations of the results.

Insurance and Reinsurance Contracts With Indeterminate Risk

16. Uncertainties surrounding insurance and reinsurance contracts with indeterminate risk are analogous to those often associated with foreign property and liability reinsurance as addressed in *SOP 92-5*, *Accounting for Foreign Property and Liability Reinsurance.* As a result, the guidance in SOP 92-5, regarding the open-year method, should be followed. The open-year method should not, however, be used to defer losses that otherwise would be recognized pursuant to FASB Statement No. 5.

17. Under the open-year method, the effects of the contracts are not included in the determination of net income until sufficient information becomes available to reasonably estimate

and allocate premiums. The open-year method requires that these effects be aggregated in the balance sheet. If sufficient information becomes available to reasonably estimate and allocate premiums, the insurance or reinsurance contract with indeterminate risk should be reclassified into one of the three categories as an insurance or reinsurance contract that transfers neither significant timing nor significant underwriting risk, transfers only significant timing risk, or transfers only significant underwriting risk, as appropriate, and accounted for accordingly. The change in deposit assets or liabilities that result if sufficient information becomes available is treated as a change in accounting estimate in accordance with *APB Opinion 20, Accounting Changes.*

Disclosures

18. Entities should disclose a description of the contracts accounted for as deposits and the separate amounts of total deposit assets and total deposit liabilities reported in the statement of financial position.

19. Insurance enterprises should disclose the following information regarding the changes in the recorded amount of the deposit arising from an insurance or reinsurance contract that transfers only significant underwriting risk:

a. The present values of initial expected recoveries that will be reimbursed under the insurance or reinsurance contracts that have been recorded as an adjustment to incurred loses

b. Any adjustment of amounts initially recognized for expected recoveries (The individual components of the adjustment (meaning, interest accrual, the present value of additional expected recoveries, and the present value of reductions in expected recoveries) should be disclosed separately.)

c. The amortization expense attributable to the expiration of coverage provided under the contract

20. This SOP is effective for financial statements for fiscal years beginning after June 15, 1999, with earlier adoption encouraged. Previously issued annual financial statements should not be restated. The initial application of this SOP should be as of the beginning of an entity's fiscal year (that is, if the SOP is adopted prior to the effective date and during an interim period, all prior interim periods should be restated). The effect of initially adopting this SOP should be reported as a cumulative effect of a change in accounting principle (in accordance with the provisions of APB Opinion 20).

- March 7, 1999 minutes of the P/C Reinsurance Study Group

Generally Accepted Accounting Principles

- *American Institute of Certified Public Accountants (AICPA) Statement of Position No. 98-7, Deposit Accounting: Accounting for Insurance and Reinsurance Contracts That do not Transfer Insurance Risk*

State Regulations

- No additional guidance obtained from state statutes or regulations.

Exhibit A
Illustration of a Reinsurance Contract That Is Accounted for as a Deposit using the Interest Method

Assumptions:

Premium = $1,000 (assumes no commissions or allowances)
Coverage Period = 1 year
Initial expected recoveries = $225 per year (at end of year) for five years
Initial Implicit rate = 4 percent*

*present value of $225 per year for five years at 4 percent = $1,000

At the end of Year 2, the timing of anticipated recoveries under the reinsurance contract changes. A reevaluation of the implicit interest rate produces a rate of 3.63 percent and an asset of $640 at the end of the year.

Description	Interest Income	Cash Recoveries	Deposit Balance
Initial payment			$1,000
Year 1 (4%)	$ 40		$1,040
End of Year 1		$ (225)	$ 815
Year 2 (4 %)	$ 33		$ 848
End of Year 2		$ (200)	$ 648
Yield adjustment	$ (8)		$ 640
Year 3 (3.63 %)	$ 23		$ 663
End of Year 3		$ (175)	$ 488
Year 4 (3.63 %)	$ 18		$ 506
End of Year 4		$ (175)	$ 331
Year 5 (3.63 %)	$ 12		$ 343
End of Year 5		$ (175)	$ 168
Year 6 (3.63 %)	$ 7		$ 175
End of Year 6		$ (175)	$ 0

At the inception of the contract, the ceding insurer records a deposit asset of $1,000 and the assuming company, a $1,000 deposit liability. The asset is admitted providing the conditions for credit for reinsurance are met.

At subsequent reporting dates, the deposit asset is adjusted by calculating the effective yield on the reinsurance agreement to reflect actual payments to date and expected future payments with a corresponding credit to interest income by the ceding company and interest expense by the assuming company.

At the end of year two, it is determined that the expected cash flows will differ from previous estimates, resulting in a lower effective yield on the deposit asset. The deposit asset is adjusted to the amount that would have existed at the reporting date had the new effective yield been applied from the inception of the reinsurance agreement. The adjustment is charged to interest income, i.e., as a reduction of interest income. Interest income during the remaining term of the agreement is reduced accordingly (i.e., the yield is reduced from 4.0% to 3.63%).

Statutory Issue Paper No. 105

Reporting on the Costs of Start-Up Activities

STATUS
Finalized September 12, 2000

Original SSAP and Current Authoritative Guidance: SSAP No. 76

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper addresses start-up costs. In practice, various terms are used to refer to start-up costs, such as preopening, preoperating, and organization costs. For purpose of this issue paper, these costs are referred to as start-up costs. Current statutory accounting guidance is provided in *SSAP No. 17—Preoperating and Research and Development Costs* (SSAP No. 17). American Institute of Certified Public Accountants (AICPA) Statement of Position 98-5, *Reporting on the Costs of Start-Up Activities,* (SOP 98-5) specifically addresses the reporting of start-up costs.

2. The purpose of this issue paper is to adopt SOP 98-5 with modification to add certain disclosure requirements, which is consistent with SSAP No. 17 and the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Cost of start-up activities, including organization costs, shall be expensed as incurred. Start-up activities are defined broadly as those one-time activities related to: (1) opening a new facility; (2) introducing a new product or service; (3) conducting business in a new territory; (4) conducting business with a new class of customer or beneficiary; (5) initiating a new process in an existing facility; or (6) commencing some new operation. Start-up activities include activities related to organizing a new entity (commonly referred to as organization costs).

4. Cost of start-up activities incurred in an accounting period shall be disclosed in the annual audited statutory financial report only.

DISCUSSION

5. This issue paper adopts SOP 98-5, which requires costs of start-up activities and organization costs to be expensed as incurred. This is consistent with SSAP No. 17 and the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy.

6. *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) defines an asset *as "probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events."* Although in some instances start-up and organization costs may appear to comply with the definition of an asset established by SSAP No. 4, it is not consistent with the "Conservatism" concept included in the Statement of Concepts to presume that it is "probable" that an entity in a start-up phase will generate future economic benefits. Start-up and organization costs, therefore, do not meet the definition of an asset for statutory accounting purposes and as such should be expensed as incurred. To expense rather than to capitalize such costs is also consistent with the Recognition concept included in the Statement of Concepts, which states that a reporting entity's "ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due."

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

7. SSAP No. 17, paragraph 2 states:

> Preoperating, including organization and start up costs, and research and development costs shall be expensed as incurred. Preoperating and research and development costs are incurred for such new projects as: (a) arranging operations for a new company (e.g., legal, actuarial and accounting costs associated with regulatory approval and licensing and issuance of stock); (b) establishing production, sales or service facilities at a new site; (c) changing operations or production significantly; or (d) developing and producing a new product, adopting a new process or offering a new service.

Generally Accepted Accounting Principles

8. SOP 98-5, paragraph 12 states:

> **Conclusions**
>
> **Accounting for Start-Up Costs**
>
> .12 Costs of start-up activities, including organization costs, should be expensed as incurred.

Statutory Issue Paper No. 106

Real Estate Sales – An Amendment to SSAP No. 40—Real Estate Investments

STATUS
Finalized September 12, 2000

Current Authoritative Guidance for Real Estate Sales: SSAP No. 40
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 77

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for Real Estate is provided in *SSAP No. 40—Real Estate Investments* (SSAP No. 40). SSAP No. 40 adopted *FASB Statement No. 66, Accounting for Sales of Real Estate* (FAS 66), with modification to paragraph 9 to indicate that only letters of credit from institutions listed by the Securities Valuation Office shall be included in determining the buyer's initial investment. Although FAS 66 states that it is applicable to all sales of real estate, it does not explicitly define real estate or identify the real estate transactions to which it is specifically applicable.

2. Paragraph 1 of *FASB Statement No. 66, Accounting for Sales of Real Estate*, states, "This Statement establishes standards for recognition of profit on all real estate sales transactions without regard to the nature of the seller's business." *FASB Interpretation No. 43, Real Estate Sales an interpretation of FASB Statement No. 66* (FIN 43) clarifies that the phrase "all real estate sales" to include sales of real estate with property improvements or integral equipment that cannot be removed and used separately from the real estate without incurring significant costs. *FASB Emerging Issues Task Force No. 00-13*, *Determining Whether Equipment is "Integral Equipment" Subject to FASB Statements No. 66 and No. 98* (EITF 00-13) adds guidance relative to the definition of integral equipment.

3. The purpose of this issue paper is to adopt FIN 43 and EITF 00-13 which is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. This issue paper supersedes paragraphs 16 and 17 of SSAP No. 40. The following guidance shall be followed when accounting for the sales of real estate.

5. Recognition of profit on sales of real estate investments shall be accounted for in accordance with *FASB Statement No. 66, Accounting for Sales of Real Estate* (FAS 66), except as modified in paragraph 6 of this statement, *FASB Emerging Issues Task Force No. 87-9, Profit Recognition on Sales of Real Estate with Insured Mortgages or Surety Bonds* (EITF 87-9), *FASB Emerging Issues Task Force No.* 87-29, *Exchange of Real Estate Involving Boot* (EITF 87-29), *FASB Interpretation No. 43, Real Estate Sales an interpretation of FASB Statement No. 66* (FIN 43) and *FASB Emerging Issues Task Force No. 00-13, Determining Whether Equipment is "Integral Equipment" Subject to FASB Statements No. 66 and No. 98*. This issue paper applies to all sales of real estate including real estate with property improvements or integral equipment. The terms "property improvements" and "integral equipment" refer to any physical structure or equipment attached to the real estate that cannot be removed and used separately without incurring significant costs, such as an office building. Profit shall be recognized in full when real estate is sold, provided (a) the profit is determinable, that is, the collectibility of the sales price is reasonably

assured or the amount that will not be collectible can be estimated, and (b) the earnings process is virtually complete, that is, the seller is not obliged to perform significant activities after the sale to earn the profit. Unless both conditions exist, recognition of all or part of the profit shall be postponed. Profit shall not be recognized by the full accrual method until all of the following criteria are met:

a. A sale is consummated;

b. The buyer's initial and continuing investments are adequate to demonstrate a commitment to pay for the property;

c. The seller's receivable is not subject to future subordination; and

d. The seller has transferred to the buyer the usual risks and rewards of ownership in a transaction that is in substance a sale and does not have a substantial continuing involvement with the property after the sale.

6. The calculation of the buyer's initial investment specified in paragraph 9 of FAS 66 shall be modified to reflect that buyer's notes must be supported by letters of credit from institutions that are listed by the Securities Valuation Office of the National Association of Insurance Commissioners as meeting credit standards to be included in determining the buyer's initial investment. Any profit or loss is considered a realized gain or loss in the year of the sale in accordance with FAS 66.

DISCUSSION

7. This issue paper adopts FIN 43, which clarifies that the phrase "all real estate sales" includes sales of real estate with property improvements or integral equipment that cannot be removed and used separately from the real estate without incurring significant costs. This is consistent with SSAP No. 40 and the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy. This issue paper also adopts EITF 00-13 which clarifies use of the term "integral equipment".

Drafting Notes/Comments

- Accounting for leases and sale-leaseback transactions involving real estate transactions are addressed in *SSAP No. 22—Leases*.
- Accounting for leasehold improvements is addressed in *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*.
- Accounting for transfers and servicing of financial assets and extinguishments of liabilities is addressed in *SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. SSAP No. 40, paragraphs 16 and 17 state:

> **Sale of Real Estate**
>
> 16. Recognition of profit on sales of real estate investments shall be accounted for in accordance with *FASB Statement No. 66, Accounting for Sales of Real Estate* (FAS 66), except as modified in paragraph 17 of this statement*, FASB Emerging Issues Task Force No. 87-9, Profit Recognition on Sales of Real Estate with Insured Mortgages or Surety Bonds* (EITF 87-9), and *FASB Emerging Issues Task Force No. 87-29, Exchange of Real Estate Involving Boot* (EITF 87-29). Profit shall be recognized in full when real estate is sold, provided (a) the profit is determinable, that is, the collectibility of the sales price is reasonably assured or the amount that will not be collectible can be estimated, and (b) the earnings process is virtually complete, that is, the seller is not obliged to perform significant activities after the sale to earn the profit. Unless

both conditions exist, recognition of all or part of the profit shall be postponed. Profit shall not be recognized by the full accrual method until all of the following criteria are met:

a. A sale is consummated;

b. The buyer's initial and continuing investments are adequate to demonstrate a commitment to pay for the property;

c. The seller's receivable is not subject to future subordination; and

d. The seller has transferred to the buyer the usual risks and rewards of ownership in a transaction that is in substance a sale and does not have a substantial continuing involvement with the property after the sale.

17. The calculation of the buyer's initial investment specified in paragraph 9 of FAS 66 shall be modified to reflect that buyer's notes must be supported by letters of credit from institutions that are listed by the Securities Valuation Office of the National Association of Insurance Commissioners as meeting credit standards to be included in determining the buyer's initial investment. Any profit or loss is considered a realized gain or loss in the year of the sale in accordance with FAS 66.

Generally Accepted Accounting Principles

9. FIN 43 provides the following guidance:

INTERPRETATION

2. Statement 66 applies to all sales of real estate, including real estate with property improvements or integral equipment. The terms property improvements and integral equipment as they are used in this Interpretation refer to any physical structure or equipment attached to the real estate that cannot be removed and used separately without incurring significant cost. Examples include an office building, a manufacturing facility, a power plant, and a refinery.

3. The provisions of Statement 66 do not apply to transactions that involve the following:

a. The sale of only property improvements or integral equipment without a concurrent (or contemplated) sale of the underlying land[1]

[1] Except for sales of property improvements or integral equipment with the concurrent lease (whether explicit or implicit in the transaction) of the underlying land to the buyer. Those transactions should be accounted for in accordance with paragraphs 38 and 39 of Statement 66. In addition, sales of property improvements or integral equipment subject to an existing lease of the underlying land are also subject to the provisions of Statement 66.

b. The sale of the stock or net assets of a subsidiary or a segment of a business if the assets of that subsidiary or that segment, as applicable, contain real estate, unless the transaction is, in substance, the sale of real estate

c. The sale of securities that are accounted for in accordance with *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities*.[2]

[2] Sales of those types of securities are addressed by *FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*.

4. In the first sentence of paragraph 38 of Statement 66, the phrase property improvements is interpreted to include both property improvements and integral improvements (to conform that paragraph to the scope clarification provided by this Interpretation).

10. EITF 00-13 provides the following guidance:

1. With the issuance of Interpretation 43, which concludes that sales of integral equipment are within the scope of Statement 66, determining whether equipment constitutes "integral equipment" has taken on increased importance as that determination now affects whether the detailed guidance in Statement 66 should be applied to a transfer of equipment. Further, the appropriateness of sales-type lease classification by lessors for leases involving equipment is also impacted by the determination of whether the equipment to be leased is "integral equipment." In addition, that determination is important for reaching a conclusion as to whether Statement 98, with its more stringent provisions, applies to a sale-leaseback transaction.

2. Integral equipment is defined in Interpretation 43 as "any physical structure or equipment attached to the real estate that cannot be removed and used separately without incurring significant cost." The authoritative pronouncements governing the accounting for leasing transactions and sales of real estate do not provide any guidance for interpreting the phrase "cannot be removed and used separately without incurring significant cost," and, as a result, there may be diversity in practice with respect to determining what constitutes "integral equipment" for the purpose of applying Statements 13, 66, and 98.

3. This issue is how the determination of whether equipment is integral equipment should be made.

EITF 00-13 DISCUSSION

4. The Task Force agreed that the phrase "cannot be removed and used separately without incurring significant cost" contains two distinct concepts: (a) the ability to remove the equipment without incurring significant cost and (b) the ability of a different entity to use the equipment at another location without significant diminution in utility or value. The Task Force reached a consensus that the determination of whether equipment is integral equipment should be based on the significance of the cost to remove the equipment from its existing location (which would include the cost of repairing damage done to the existing location as a result of the removal), combined with the decrease in the value of the equipment as a result of that removal. The Task Force agreed that, at a minimum, the decrease in the value of the equipment as a result of its removal is the estimated cost to ship and reinstall the equipment at a new site. The nature of the equipment, and the likely use of the equipment by other potential users, should be considered in determining whether any additional diminution in fair value exists beyond that associated with costs to ship and install the equipment.

5. When the combined total of both the cost to remove plus the decrease in value (for leasing transactions, the information used to estimate those costs and the decrease in value should be as of lease inception) exceeds 10 percent of the fair value of the equipment (installed) (for leasing transactions, at lease inception), the equipment is integral equipment.

6. Refer to Exhibit 00-13A for an example that illustrates the application of this consensus.

Exhibit 00-13A

ILLUSTRATION OF THE APPLICATION OF THE EITF CONSENSUS
ON ISSUE 00-13

Company A leases equipment to Company B for use in a manufacturing facility. The fair value of the production equipment (installed) at lease inception is $1,075,000. The estimated cost to remove the equipment after installation (estimate is as of the beginning of the lease term) is $80,000, which includes $30,000 to repair damage to the existing location as a result of the removal. The estimated cost to ship and reinstall the equipment at a new site (estimated as of the beginning of the lease term) is $85,000. For this example, assume that the equipment would have the same fair value (installed) to the seller and a potential buyer. Therefore, there is no diminution in fair value of the equipment beyond the discount a purchaser would presumably require to cover the cost to ship and reinstall the equipment.

In accordance with this consensus, Company A would assess whether or not the production equipment is integral equipment as follows ($80,000 + $85,000) ÷ $1,075,000 = 15.3 percent. Because the cost of removal combined with the diminution in value exceeds 10 percent of the fair value (installed) of the production equipment, the cost to remove the equipment and use it separately is deemed to be significant. Therefore, the production equipment is integral equipment.

Statutory Issue Paper No. 107

Certain Health Care Receivables and Receivables Under Government Insured Plans

STATUS
Finalized August 8, 2001

Original SSAP and Current Authoritative Guidance: SSAP No. 84

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) provides the definition of admitted and nonadmitted assets.

2. Pharmaceutical rebates are arrangements between pharmaceutical companies and reporting entities in which the reporting entities receive rebates based upon the drug utilization of its subscribers at participating pharmacies. Reporting entities use different ways to record pharmacy rebates on their financial statements. These rebates are sometimes recorded as receivables by reporting entities using estimates based upon historical trends which should be adjusted to reflect significant variables involved in the calculation, such as number of prescriptions written/filled, type of drugs prescribed, use of generic vs. brand-name drugs, etc. In some cases, the reporting entity determines the amount of the rebate due based on the actual use of various prescription drugs during the accumulation period and then invoices the pharmaceutical company. In other cases, an affiliated or unaffiliated pharmacy benefits management company may determine the amount of the rebate based on a listing (of prescription drugs filled) prepared for the reporting entity's review. The reporting entity will confirm the listing and the pharmaceutical rebate receivable. The pharmacy benefits management company will then collect the amount due from the pharmaceutical company for remittance to the reporting entity. Some reporting entities do not participate in rebate arrangements at all but receive similar benefits through contracted discounts on pharmaceutical purchases. Current statutory accounting guidance does not specifically address the admittance of pharmaceutical rebates.

3. Claim overpayments may occur as a result of several events, including but not limited to claim payments made in error to a provider. Reporting entities often establish receivables for claim overpayments. Claim overpayments may meet the conditions for the right of offset as defined in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64). Since claim overpayments are not specifically identified as an admitted asset within the Accounting Practices and Procedures Manual effective January 1, 2001 they would be reported as nonadmitted.

4. A health entity may make loans or advances to large hospitals or other providers. Such loans or advances are supported by legally enforceable contracts and are generally entered into at the request of the provider. In many cases, loans or advances are paid monthly and are intended to represent one month of fee-for-service claims activity with the respective provider. At least for large hospitals with many sources of cash flow, an offset for these loans and advances exists in the reporting entity's combined reported and unreported claims liability and claims reserve. Additionally, such loans and advances are generally reconciled quarterly against actual claim utilization (allowing for adequate run-out of such claims) pursuant to contractual terms. In such cases, the reconciled differences are settled and the advance payments for future months may be adjusted based upon the materiality of reconciled differences. Current

statutory guidance in *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25) is limited to loans and advances to related parties.

5. The glossary to the statements of statutory accounting principles contained in the Accounting Practices and Procedures Manual effective January 1, 2001, defines a capitation arrangement as a compensation plan used in connection with some managed care contracts in which a physician or other medical provider is paid a flat amount, usually on a monthly basis, for each subscriber who has elected to use that physician or medical provider. Risk-sharing agreements are contracts between reporting entities and providers with a risk-sharing element based upon utilization. The compensation payments for risk-sharing agreements are typically estimated monthly and settled annually. These agreements can result in receivables due from the providers if annual utilization is different than that used in estimating the monthly compensation. SSAP No. 25 provides accounting guidance for loans and advances and advances under capitation arrangements to providers who meet the definition of related parties.

6. Current GAAP provides guidance relative to defining a health care receivable and accounting guidance on loan impairment. Such guidance is presented in the American Institute of Certified Public Accountants (AICPA) Audit and Accounting Guide: Health Care Organizations. This audit guide was rejected in *SSAP No. 73—Health Care Delivery Assets – Supplies, Pharmaceuticals and Surgical Supplies, Durable Medical Equipment, Furniture, Medical Equipment and Fixtures, and Leasehold Improvements in Health Care Facilities.*

7. *SSAP No. 47—Uninsured Plans* (SSAP No. 47) paragraph 10.c. provides accounting guidance for the admissibility of uninsured Medicare and similar government funded plans. Current statutory accounting guidance does not specifically address the admittance of amounts receivable under government insured plans.

8. The purpose of this issue paper is to establish statutory accounting principles for pharmaceutical rebate receivables, claim overpayment receivables, loans and advances to providers who do not meet the definition of related parties, capitation arrangement receivables, risk-sharing receivables, and amounts receivable under government insured plans consistent with the Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

9. The definition and accounting treatment for nonadmitted assets is outlined in paragraph 3 of SSAP No. 4 as follows:

> As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet", and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting , and is one which is:
>
> a. Specifically identified within the Accounting Practices and Procedures Manual as a nonadmitted asset; or
>
> b. Not specifically identified as an admitted asset within the Accounting Practices and Procedures Manual.
>
> If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Accounting Practices and Procedures Manual. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's capitalization policy,

immaterial amounts of furniture, fixtures, equipment, or supplies, can be expensed when purchased.

10. Pharmaceutical rebate receivables, claim overpayment receivables, loans and advances to providers, capitation arrangement receivables, risk-sharing receivables, and amounts receivable under government insured plans meet the definition of assets as set forth in SSAP No. 4, and are admitted assets to the extent that the requirements for admission defined in this issue paper are met.

11. This issue paper shall not be considered an all-inclusive list of health care receivables. Certain health care receivables are addressed in other statements. Health care receivable assets not addressed in other statements or this statement are nonadmitted assets.

Pharmaceutical Rebate Receivables

12. Pharmaceutical rebates receivables consist of reasonably estimated amounts and billed amounts. Both the billed amount and the estimated amount shall be admitted assets subject to the conditions specified below:

a. Estimated amounts shall be related solely to actual prescriptions filled during the 3 months immediately preceding the reporting date;

b. Billed amounts represent pharmaceutical rebate receivables that have been invoiced or confirmed in writing but not collected as of the reporting date. Billed amounts for an estimated amount under paragraph 12.a. above shall be admitted only if the determination of the rebate, based on actual prescriptions filled, occurs and is invoiced or confirmed in writing within the 2 months following the reporting date of the estimated amount. Adjustments to previously billed amounts related to prior periods shall be nonadmitted until invoiced or confirmed in writing. Pharmaceutical rebates that have not been collected within 90 days of the invoice date or confirmation date shall be nonadmitted. Furthermore, if accrued pharmaceutical rebate receivables are not invoiced or confirmed in writing in accordance with the contract provisions, the accrual shall be nonadmitted; and

c. Evaluation of the collectibility of pharmaceutical rebate receivables shall be made periodically. If in accordance with *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5), it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

13. The method used to reasonably estimate the receivable shall be consistent from period to period and shall be adjusted periodically for any changes in the underlying pharmaceutical rebate contract provisions. The financial statements shall disclose information regarding the reporting entity's pharmaceutical rebates in accordance with paragraph 26 of this issue paper.

14. Income from pharmaceutical rebates of insured plans shall be reported as a reduction to claims expense on the summary of operations.

15. Receivable and payable balances related to uncollected pharmaceutical rebates of uninsured plans shall be recorded on the financial statements of the reporting entity. Any pharmaceutical rebates earned by the reporting entity that are in excess of the amounts to be remitted to the uninsured plan pursuant to an administrative services agreement shall be determined consistent with the requirements of paragraphs 12 and 13 and shall be reported on the balance sheet as an amount receivable relating to uninsured accident and health plans, and as a reduction to general expenses on the statement of operations.

Claim Overpayment Receivables

16. A claim overpayment shall not be recorded as a receivable until invoiced. To the extent that the claim overpayment meets the setoff conditions in SSAP No. 64 and the overpayment is a specific identifiable payment and not an estimate, the receivable may be admitted up to the amount of the payable to the provider for reported claims (i.e., excluding incurred but not reported claims). The receivable and payable shall be reported gross rather than netted on the balance sheet. Evaluation of the collectibility of claim overpayment receivables shall be made periodically. If in accordance with SSAP No. 5, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. Amounts in excess of that written off that do not meet the right of offset conditions shall be nonadmitted as they are not available to satisfy policyholder obligations.

Loans and Advances to Providers

17. Loans or advances to providers who meet the definition of related parties in SSAP No. 25 shall follow the guidance in that statement. To the extent a loan or advance to a non-related party provider meets the setoff conditions in SSAP No. 64, the loan or advance may be admitted up to the amount of the payable to the provider for reported claims (i.e., excluding incurred but not reported claims).

18. In addition, a loan or advance to a non-related party hospital shall be admitted up to the amount of claims incurred and payable to the hospital, if all of the following conditions are met:

a. The loan or advance meets the setoff conditions in SSAP No. 64;
b. The loan or advance is supported by a legally enforceable contract;
c. The loan or advance is administered pursuant to contractual terms;
d. The contractual terms of the agreement provide for separate quarterly reconciliations;
e. Each quarterly reconciliation shall be completed within nine months of the end of such quarter; and
f. A quarterly reconciled difference shall be settled within 90 days of the date the reconciliation is completed.

19. If a quarterly reconciliation is not performed or settled in accordance with paragraphs 18.e. and 18.f. above, all assets for loans or advances to that hospital shall be nonadmitted.

20. The receivable and payable shall be reported gross rather than netted on the balance sheet. Evaluation of the collectibility of loans and advances to providers shall be made periodically. If in accordance with SSAP No. 5, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. Amounts in excess of that written off that do not meet the right of offset conditions shall be nonadmitted as they are not available to satisfy policyholder obligations.

Capitation Arrangement Receivables

21. Advances to providers under capitation arrangements that are made under the terms of an approved provider services contract in anticipation of future services shall be admitted to the extent that the advanced amount does not exceed one month of average capitation payments for the subject provider during the preceding twelve months, and provided that the contract cannot be terminated before the end of the month for which the advanced amount was paid. Evaluation of the collectibility of capitation arrangement receivables shall be made periodically. If in accordance with SSAP No. 5, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

Risk-Sharing Receivables

22. Risk-sharing receivables may consist of reasonably estimated amounts and billed amounts. Both the billed amount and the estimated amount shall be admitted assets subject to the conditions specified below:

a. Risk-sharing receivables and payables shall only be recorded when reasonably estimated. Estimates of risk-sharing receivables may be admitted if based on at least six months of actual claims experience for each risk-sharing contract. The contractual terms of any risk-sharing agreement shall provide for evaluation of the experience under the contract at least annually. The determination of the risk-sharing balance shall commence no later than 6 months following the close of such annual period, and the balance shall be invoiced no later than 8 months following close of the annual period;

b. Billed amounts represent risk-sharing receivables that have been invoiced but not collected as of the reporting date. Risk-sharing receivables and payables shall be invoiced or refunded in accordance with the contractual provisions of the risk-sharing agreement. Adjustments resulting in increases to previously billed amounts related to prior periods shall be nonadmitted until invoiced. Adjustments resulting in decreases to previously billed amounts shall be recognized immediately. Risk-sharing receivables that have not been collected within 90 days of the date of invoicing shall be nonadmitted;

c. Risk-sharing receivables and payables shall be reported gross rather than netted on the balance sheet. However, if a reporting entity has both a receivable and payable balance with the same provider and the balances meet the setoff conditions in SSAP No. 64, those balances shall be netted in accordance with SSAP No. 64; and

d. Evaluation of the collectibility of risk-sharing receivables shall be made quarterly. If in accordance with SSAP No. 5, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

23. The method used to reasonably estimate the receivable shall be consistent from period to period and shall be adjusted periodically for any changes in the underlying risk-sharing contract. The financial statements shall disclose information regarding the reporting entity’s risk-sharing receivables in accordance with paragraph 27 of this issue paper.

24. Income/expense from risk-sharing contracts shall be reported as a component of claims expense on the summary of operations.

Amounts Receivable Under Government Insured Plans

25. Amounts receivable under government insured plans, including amounts over 90 days due, that qualify as accident and health contracts in accordance with *SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts in Force* shall be admitted assets. Amounts receivable under government insured plans include but are not limited to receivables under Medicare, Medicaid and similarly funded government insured plans. Evaluation of the collectibility of amounts receivable under government insured plans shall be made periodically. If in accordance with SSAP No. 5, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

Disclosures

26. The financial statements shall disclose the method used by the reporting entity to estimate pharmaceutical rebate receivables. Furthermore, for the most recent three years and for each quarter therein, the reporting entity shall also disclose the following:

a. Estimated balance of pharmacy rebate receivables as reported on the financial statements;
b. Pharmacy rebates as invoiced or confirmed in writing; and
c. Pharmacy rebates collected.

An example of this disclosure is shown in Exhibit A to this issue paper.

27. The financial statements shall disclose the method used by the reporting entity to estimate its risk-sharing receivables. If any receivable and payable balances with the same provider are netted, the reporting entity shall disclose the gross receivable and payable balances in the notes to the financial statements. Furthermore, for the most recent three years, the reporting entity shall also disclose the following:

a. Risk-sharing receivables as estimated and reported on the prior year financial statements for annual periods ending in the current year;
b. Risk-sharing receivables as estimated and reported on the financial statements for annual periods ending in the current year and the following year;
c. Risk-sharing receivables invoiced as determined after the annual period;
d. Risk-sharing receivables not yet invoiced; and
e. Amounts collected from providers as payments under risk-sharing contracts.

An example of this disclosure is shown in Exhibit B to this issue paper.

Effective Date and Transition

28. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years ending on or after December 31, 2001.

29. Prior to January 1, 2003, reporting entities may transition the invoicing provision outlined in paragraph 12 and shall invoice pharmaceutical rebates on no less than a semi-annual basis. Furthermore, prior to January 1, 2003, reporting entities may transition the 90 day admissibility provision outlined in paragraph 12 and shall nonadmit pharmaceutical rebates if such rebates have not been collected within 180 days of the invoicing date.

30. Prior to January 1, 2003, reporting entities may transition the invoicing provision outlined in paragraph 22 and shall invoice the risk-sharing balance no later than 11 months days following the close of the annual period.

DISCUSSION

31. The statutory accounting principles outlined above are consistent with the conservatism and recognition concepts in the Statement of Concepts, current statutory accounting guidance and SSAP No. 4.

> Conservatism
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency.
>
> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

32. SSAP No. 47 paragraph 8 provides guidance on accounting for amounts receivable from uninsured plans:

> 8. Amounts receivable from uninsured plans for (a) claims and other costs paid by the administrator on behalf of the third party at risk and (b) fees related to services provided by the administrator to the plan meet the definition of assets as set forth in SSAP No. 4—Assets and Nonadmitted Assets. A receivable shall not be recorded for unpaid claims. A receivable related to Medicare or a similarly structured cost based reimbursement contract shall only be recorded when services have been rendered.

33. SSAP No. 47 paragraph 10.c. provides guidance on determining the nonadmitted portion of amounts receivable from Medicare and similar government funded uninsured plans:

> 10 c. Medicare and similar government funded plans—Amounts due related to Medicare and similar government plans shall not be nonadmitted when they become over ninety days due. Appropriate reserves shall be established to cover costs incurred which may not be reimbursed upon final determination by the governing agencies under the cost contract or for adjustments to revenues based on performance under the terms of the contract or other external factors.

34. SSAP No. 64 paragraph 2 provides guidance on accounting for offsetting and netting of assets and liabilities:

> 2. Assets and liabilities shall be offset and reported net only when a valid right of setoff exists except as provided for in paragraphs 3 and 4. A right of setoff is a reporting entity's legal right, by contract or otherwise, to discharge all or a portion of the debt owed to another party by applying an amount that the other party owes to the reporting entity against the debt. A valid right of setoff exists only when all the following conditions are met:
>
> a. Each of the two parties owes the other determinable amounts. An amount shall be considered determinable for purposes of this provision when it is reliably estimable by both parties to the agreement;
>
> b. The reporting party has the right to setoff the amount owed with the amount owed by the other party;

> c. The reporting party intends to setoff; and
>
> d. The right of setoff is enforceable at law.

35. SSAP No. 25 paragraphs 7 and 8 include the following guidance for loans or advances by a reporting entity:

> 7. Loans or advances by a reporting entity to all other related parties shall be evaluated by management and nonadmitted if they do not constitute arm's-length transactions as defined in paragraph 10. Loans or advances made by a reporting entity to related parties (other than its parent or principal owner) that are economic transactions as defined in paragraph 10 shall be admitted. This includes financing arrangements with providers of health care services with whom the reporting entity contracts with from time to time. Such arrangements can include both loans and advances to these providers. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with SSAP No. 5, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.
>
> 8. Any advances under capitation arrangements made directly to providers, or to intermediaries that represent providers, that exceed one month's payment shall be nonadmitted assets.

Generally Accepted Accounting Principles

36. The AICPA Audit and Accounting Guide: Health Care Organizations states the following:

> 5.01. Receivables may include amounts due for (*a*) health care services from patients, residents, third-party payors, and employers; (*b*) premiums and stop-loss insurance recoveries; (*c*) intercompany transactions; (*d*) promises to give in future periods (pledges); and (*e*) amounts due from employees, physicians, or others. All loans, such as loans to physicians, should be evaluated periodically for impairment. Loans that are included in the scope of *FASB Statement No. 114*, *Accounting by Creditors for Impairments of a Loan*, should be evaluated based on the provisions of that statement. A loan is impaired when, based on current information and events, it is probable that the provider will be unable to collect all amounts due, including principal and interest, according to the contractual terms of the loan agreement. If the provider measures an impaired loan using a present value amount, the creditor should calculate that present value based on an estimate of the expected future cash flows of the impaired loan, discounted at the loan's effective interest rate.

	2002	XXX	$223	XXX	$223	$XXX	XXX	XXX	XXX

DRAFTING NOTE: If there were only one contract or if all contracts have the same experience period, then there would only be an entry in either the “Invoiced” or “Not Invoiced” column for the current year. This example assumes varying dates on experience periods for multiple contracts. Assumptions: Two risk-sharing contracts are in place, one with an experience period that ends 3/31/03 and one with an experience period that ends 10/31/03.

The $155,000 receivable for the contract period that ends 3/31/03 would be invoiced no later than 11/30/03 (or 8 months days following close of the contract period) and could be received no later than 2/28/04. Therefore, the $155,000 would appear in the “Invoiced” column in 2003 but not shown as received in 2003. Further, the $189,000 estimate for the experience period that ends 3/31/04 could be recorded on the December 31, 2003 financial statement, since there is more than six months of experience under the contract.

The contract with the experience period that ends 10/31/03 with an estimated $77,000 receivable would be invoiced by 6/30/04 and received by 09/30/04. Therefore, it would appear in the “Not Invoiced” column and not shown as received in 2003. However, no estimate could be reported on the December 31, 2003 financial statement for the experience period that ends 10/31/04, because there is less than six months of experience under the contract.

Statutory Issue Paper No. 108

Multiple Peril Crop Insurance

STATUS
Finalized September 12, 2000

Original SSAP and Current Authoritative Guidance: SSAP No. 78

Type of Issue:
Property and Casualty

SUMMARY OF ISSUE

1. Farming has always been an inherently risky enterprise because farmers operate at the mercy of nature and frequently are subjected to weather-related perils such as droughts, floods, hurricanes, and other natural disasters. Since the 1930s, many farmers have been able to transfer part of the risk of loss in production to the federal government through the subsidized Multiple Peril Crop Insurance (MPCI) program administered by the Federal Crop Insurance Corporation (FCIC), an agency of the United States Department of Agriculture. Major legislation enacted in 1980 and 1994 restructured the MPCI program. The 1980 legislation enlisted, for the first time, private insurance companies to sell, service, and share the risk of MPCI insurance policies. Subsequently, in 1994, the Federal Crop Insurance Reform and Department of Agriculture Reorganization Act revised the program to offer farmers two primary levels of insurance coverage, catastrophic and buy-up.

2. Catastrophic insurance is designed to provide farmers with protection against extreme crop losses for a small processing fee. Buy-up insurance provides protection against more typical and smaller crop losses in exchange for a policyholder-paid premium. The government subsidizes the total premium for catastrophic insurance and a portion of the premium for buy-up insurance. Farmers who purchase buy-up crop insurance must choose both the coverage level (the proportion of the crop to be insured) and the unit price (such as, per bushel) at which any loss is calculated. With respect to the coverage level of production, farmers can choose to insure as much as 85 percent of normal production or as little as 50 percent of normal production at different price levels. With respect to the unit price, farmers choose whether to value their insured production at FCICs full estimated market price or at a percentage of the full price.

3. In recent years, FCIC has introduced a new risk management tool called revenue insurance. Unlike traditional crop insurance, which insures against losses in the level of crop production, revenue insurance plans insure against losses in revenue. The plans protect the farmer from the effects of declines in crop prices or declines in crop yields, or both. Like traditional buy-up insurance, the government subsidizes a portion of the premiums. One of the plans, called Crop Revenue Coverage, is available in many states for major crops. Two other plans, called Income Protection and Revenue Assurance, are available to farmers in only limited areas.

4. Companies participate in the MPCI program with FCIC through the Standard Reinsurance Agreement (SRA) per the terms of which the insurance companies share in the underwriting results of each policy. In 1999, MPCI gross written premium was $2.3 billion and total insurance in force amounted to over $30.9 billion. The program has unique loss exposure characteristics, which resulted in a gross loss ratio over 200% for 1988 and 1993.

5. The SRA reinsurance terms provide a company the flexibility to limit its exposure on a state by state basis. MPCI premium is not expense loaded, therefore FCIC pays the insurance companies, on behalf of the policyholder, a percent of premium for administrative expenses associated with selling and servicing crop insurance policies, including the expenses associated with adjusting claims.

6. The FCIC utilizes an escrow account to distribute or collect additional funds. Premium (collected from the policyholders and the federal government subsidy) is deposited in the escrow account and is available to pay the claims arising under the program.

7. Existing statutory accounting practices do not address the distinctive characteristics of the MPCI line of business. Current practices within the industry vary. Accordingly, this issue paper establishes statutory accounting principles for direct MPCI premium written and the related business ceded to FCIC, and is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy. This issue paper also establishes statutory accounting principles for the recently enacted Aquatic Crop Reinsurance Agreement (hereinafter included in the term MPCI).

8. Commercial multiple-peril crop reinsurance and crop hail insurance would not be impacted by this issue paper and would continue to follow existing statutory accounting principles.

SUMMARY CONCLUSION

Premium Recognition

9. MPCI gross premium is defined as the contractually determined amount specified by FCIC to the policyholder for the effective period of the contract based on the actuarially determined expectation of risk and policy benefits associated with the coverage provided by the terms of the insurance contract. In addition, gross premium shall also include the government premium subsidy paid on behalf of the policyholder.

10. MPCI ceded premium and losses are defined as the amount calculated by applying the proportional and non-proportional factors as stated in the SRA. An example of this application is shown in Exhibit A to this issue paper.

11. MPCI written premium shall be recorded as soon as an estimate can be made, but no later than the processing date. Upon recording written premium, a liability for the unearned premium reserve shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided.

12. The company shall disclose the method used to compute the unearned premium reserve in the financial statements.

Amounts Receivable or Payable

13. The company shares underwriting risk with FCIC and can earn or lose money according to the claims it must pay farmers for crop losses. The company earns underwriting profits when the net retained premiums exceed the net crop loss claims paid. The company incurs underwriting losses when the net claims paid for crop losses exceed the net retained premiums. These definitions do not consider underwriting expenses, which would be included for traditional statutory accounting underwriting gains and losses. The use of the terms underwriting gains and losses in this issue paper are unique to the MPCI program. As the premiums of the program are held by FCIC in escrow, the company shall recognize as a write-in asset a receivable from FCIC for the amount of the underwriting gain (as defined in this paragraph). Whereas, when the company is in an underwriting loss position, the company shall recognize a write-in liability to the FCIC for the amount of the underwriting loss (as defined in this paragraph), as the monies held in the escrow account are not sufficient to cover the company's claims. In accordance with the SRA, funds that remain in escrow will be distributed to the company at the conclusion of the contract period if the contract results in a gain to the company. If the company owes additional funds to the escrow (i.e., it is in a loss position), those funds are remitted on a periodic basis until the contract expires. These amounts shall be recorded net as the program meets the requirements of offsetting as defined in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64). In accordance with *SSAP No. 21—Other Admitted Assets* (SSAP No. 21), the amount receivable under the Federal Crop Insurance program shall be reported as an admitted asset.

14. Amounts receivable from policyholders meet the definition of an admitted asset as set forth in *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) and should be accounted for in accordance with *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers* (SSAP No. 6). The due date shall be governed by contractual due date of the premium billing, and not the effective date of the contract.

Unpaid Losses and Loss Adjustment Expenses

15. In accordance with *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55), losses and loss adjustment expenses shall be recognized as expense when a covered or insured event occurs.

16. The covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event and, in order to recognize the expense of a covered or insured event, it is necessary to establish a liability. The following are the types of future costs relating to the MPCI program:

a. Reported Losses: Expected payments for losses relating to insured events that have occurred and have been reported to, but not paid by, the insurer as of the statement date;

b. Incurred But Not Reported Losses, (IBNR): Expected payments for losses relating to insured events that have occurred but have not been reported to the insurer as of the statement date;

c. Loss Adjustment Expenses: Costs expected to be incurred in connection with the adjustment and recording of losses defined in subparagraphs 16a. and 16b. of this issue paper.

Administrative Expense Payment

17. FCIC pays the insurance companies a percent of premium for administrative expenses associated with selling and servicing crop insurance policies, including the expenses associated with adjusting claims. The expense payment associated with the catastrophic coverage shall be recorded as a reduction of loss expenses whereas the expense payment for the buy-up coverage shall be recorded as a reduction of other underwriting expenses. The company shall disclose the total amounts received for each type of coverage.

Escrow Account

18. The escrow account shall not be recorded on the financial statements of the insurance company. This account is considered an FCIC account and as such is not owned by the insurance company, however, the company's underwriting gain is reflected as a receivable in accordance with paragraph 13.

Effective Date

19. This issue paper is effective for SRA contracts entered into after January 1, 2001. A change resulting from the adoption of this issue paper shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Correction of Errors*.

DISCUSSION

20. The conclusions reached in this issue paper are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy. The issue paper also relies on the conclusions reached in various other issue papers. Due to the unique terms and complicated provisions in the MPCI program and the SRA, there is very little specific guidance for insurers when accounting for MPCI premiums and losses.

21. The definition of gross premium is consistent with the contractual provisions of the MPCI program. The policyholder pays a portion of the buy-up coverage with the remainder subsidized by FCIC. As such it is consistent and reasonable to report both components as gross premium. The ceded premium is computed using the factors given in the SRA. The SRA is unlike traditional reinsurance agreements in that it includes both proportional and non-proportional coverage within the same agreement contingent upon underwriting

results. As such, it is essential that each company compute and report ceded premiums consistently. Exhibit A is included to provide an illustration of the computation. Written premium in this issue paper is accounted for differently than *SSAP No. 53—Property Casualty Contracts - Premiums* (SSAP No. 53). SSAP No. 53 states that written premium shall be recorded on the effective date of the contract whereas this issue paper states that written shall be recorded on the processing date. This difference is due to the fact that policyholders engage in the contracts before they know how much acreage will be covered under the contract. Once the crops have been planted, an acreage report is generated which is used to compute the premium due under the contract. Therefore, it would be unreasonable for the insurance company to record written premium on the effective date, as the premium is not yet determinable.

22. The amounts receivable or payable from FCIC are addressed in SSAP No. 21. SSAP No. 21 states that amounts receivable from Federal Crop Insurance programs shall be reported as admitted assets. The amount receivable from policyholders is addressed in SSAP No. 6. This issue paper clarifies that the due date of the receivable shall be governed by the contractual due date of the premium billing as the premiums are computed months after the contracts are effective. If the receivables were aged as of the effective date, they could be non-admitted before they billed.

23. Unpaid losses and loss adjustment expenses shall be recorded consistent with SSAP No. 55. The conclusions reached in SSAP No. 55 are consistent with the provisions of the MPCI program.

24. FCIC pays the insurance companies a percent of premium for the administrative expenses associated with selling and servicing crop insurance policies, including the expenses associated with adjusting claims. The requirement to show these payments as reductions in loss adjustment expenses and other underwriting expenses is because the MPCI premium is not expense loaded. Some companies simply pass these payments to the agents in lieu of commissions. In that case, the remittance would then also be recorded as an increase in other underwriting expenses (i.e., commission expense) and there would be no effect on net income.

Drafting Notes/Comments

25. Companies writing MPCI as their predominate line of insurance can experience distorted Insurance Regulatory Information System (IRIS) ratios based upon the accounting for this line of business. The acceptable ranges for the IRIS ratios should either be changed or the ratios should be footnoted by NAIC based upon the uniqueness on the MPCI line of insurance. The IRIS ratios most often affected are gross premiums to surplus, agent's balances to surplus, and liabilities to liquid assets.

26. Commercial Reinsurance discussed in SSAP No. 62.

EXHIBIT A - ILLUSTRATION OF CEDED PREMIUMS AND LOSSES

NOTES TO THE ILLUSTRATION

Fund — The reinsurance fund specified in the Standard Reinsurance Agreement (SRA).

Column 1 — Reinsured Company proportional reinsurance retention percentage.

Column 2 — Gross Written Premium equals the insured paid premium amount plus premium subsidy provided by FCIC.

Column 3 — Net Retained Premium is the Reinsured Company retained premium after proportional reinsurance. Gross Written Premium (Column 2) times the Reinsured Company retention percentage (Column 1).

Column 4 — Proportional Ceded Premium is the premium retained by FCIC after proportional reinsurance. Gross Written Premium (Column 2) minus the Reinsured Company Net Retained Premium (Column 3).

Column 5 — Reinsured Company proportional reinsurance retention percentage (Column 1).

Column 6 — Gross Losses equals total claim payments to insured.

Column 7 — Net Retained Losses are the Reinsured Company retained losses after proportional reinsurance. Gross Losses (Column 6) times the Reinsured Company retention percentage (Column 5).

Column 8 — Proportional Ceded Losses are the losses retained by FCIC after proportional reinsurance. Gross Losses (Column 7) minus the Reinsured Company Net Retained Losses (Column 7).

Column 9 — Retained Loss Ratio is the Reinsured Company's Net Retained Losses (Column 7) divided by the Reinsured Company's Net Retained Premium (Column 3).

Column 10 — Underwriting (Gain)/Loss is the Reinsured Company share of the MPCI program gain or loss after calculating the non-proportional reinsurance provided in the SRA.

Column 11 — Non-Proportional Ceded Premium is equal to the Reinsured Company Net Retained Premium (Column 3) minus Net Retained Losses (Column 7) minus an Underwriting (Gain) (Column 10) if one exists. This is FCIC's share of the underwriting gain after proportional reinsurance, based on the non-proportional reinsurance gain sharing factors specified in the SRA.

Column 12 — Non-Proportional Ceded Losses is equal to the Reinsured Company Net Retained Premium (Column 3) minus Net Retained Losses (Column 7) minus an Underwriting Loss (Column 10) if one exists. This is FCIC's share of the underwriting loss after proportional reinsurance, based on the non-proportional reinsurance loss sharing factors specified in the SRA.

Column 13 — Final Retained Premium is equal to the Reinsured Company Net Retained Premium (Column 3) minus the Non-Proportional Ceded Premium (Column 11). The Reinsured Company Net Retained Premium after proportional reinsurance is reduced by the amount of FCIC's underwriting gain share after non-proportional reinsurance.

Column 14 Final Retained Losses is equal to the Reinsured Company Net Retained Premium (Column 3) minus the Non-Proportional Ceded Losses (Column 12). The Reinsured Company Net Retained Losses after proportional reinsurance are reduced by the amount of FCIC's underwriting loss share after non-proportional reinsurance.

Column 15 Final Retained Loss Ratio is equal to Final Retained Losses divided by Final Retained Premium.

(a) Calculated based on the loss ratios for each fund by state. Net Retained Premium (Col 3) is applied to the percentages of Section II. C. and D. of the Standard Reinsurance Agreement.

(b) If the fund is in a GAIN position then there would be Non-proportional ceded premium. If the fund is in a LOSS position then there would be Non-proportional ceded losses.

Since each fund and state stands alone in the calculations, there is a possibility of Non-proportional ceded premium AND ceded losses within the same reinsurance year. There is also the possibility of this within the same fund (some states with a Gain and some states with a Loss).

Statutory Issue Paper No. 109

Depreciation of Nonoperating System Software – An Amendment to SSAP No. 16—Electronic Data Processing Equipment and Software

STATUS
Finalized September 12, 2000

Current Authoritative Guidance for Depreciation of Nonoperating System Software: SSAP No. 16R
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 79

Type of Issue:
Common

SUMMARY OF ISSUE

1. *SSAP No. 16—Electronic Data Processing Equipment and Software* (SSAP No. 16) requires depreciation of all electronic data processing (EDP) equipment and software for a period not to exceed three years. This requirement is applicable to both operating and nonoperating system software.

2. The purpose of this issue paper is to amend SSAP No. 16 to allow the depreciation of nonoperating system software over the lesser of its useful life or five years rather than three years. The conclusions outlined in this issue paper are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. This issue paper amends paragraph 3 and 8 of SSAP No. 16. The following guidance shall be followed for depreciation of EDP equipment, operating system software and nonoperating system software.

4. EDP equipment and operating system software shall be depreciated over the lesser of its useful life or three years. Nonoperating system software shall be depreciated over the lesser of its useful life or five years. In either case, the methods detailed in *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements* shall be used.

Effective Date

5. EDP equipment and operating system software capitalized prior to January 1, 2001 shall be depreciated over the lesser of its remaining useful life or three years. Nonoperating system software capitalized prior to January 1, 2001 shall be depreciated over the lesser of its remaining useful life or five years.

DISCUSSION

6. A different amortization period for nonoperating system software, often called “applications software,” was not discussed during the initial drafting of SSAP No. 16. The amortization period for admitted EDP and software was discussed as part of the overall debate about whether any or all EDP and operating systems software should be an admitted asset. Amortization of nonoperating system software over a five year period does not violate the Statement of Concepts as illustrated below:

a. Allowing amortization of nonoperating system software over its useful life by an appropriate method requires an insurer to appropriately recognize the expense and its income effect over time;

b. The statutory accounting concept of conservatism is served by continuing to nonadmit nonoperating system software. It is not violated by allowing amortization over a longer period of time than three years if that period is no longer than the software's useful life; and

c. Implementation of SSAP No. 16 as drafted may adversely affect companies and regulators by requiring insurers to accelerate expense recognition in a manner that was not foreseen. A number of states allow amortization of admitted EDP equipment and software over periods as long as 10 years, and current statutory accounting (prior to implementation of SSAP No. 16) provides the option of amortizing nonoperating systems software over its useful life. In addition, the initial draft of Issue Paper No. 16 allowed depreciation of nonadmitted EDP and software against net income as the estimated economic benefit expired. In 1999 insurers made significant purchases of nonoperating system software, in many cases to ensure that the software was not subject to the "year 2000 problem."

7. SSAP No. 16 currently requires EDP equipment and software capitalized prior to January 1, 2001 to be depreciated over the lesser of its remaining useful life or three years; therefore it is important that this issue paper be implemented concurrently with the effective date of SSAP No. 16.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. SSAP No. 16 paragraphs 3 and 8:

> 3. EDP equipment and software shall be depreciated for a period not to exceed three years using methods detailed in *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*.
>
> 8. EDP equipment and software capitalized prior to January 1, 2001 shall be depreciated over the shorter of its remaining useful life or three years.

Generally Accepted Accounting Principles

9. GAAP does not address the issue of different depreciation periods for operating and nonoperating system software.

Drafting Notes/Comments

- *AICPA Statement of Position 98-1: Accounting for Costs of Computer Software Developed or Obtained for Internal Use* will be addressed in a separate issue paper.

Statutory Issue Paper No. 110

Life Contracts, Deposit-Type Contracts and Separate Accounts, Amendments to SSAP No. 51—Life Contracts, SSAP No. 52—Deposit-Type Contracts, and SSAP No. 56—Separate Accounts

STATUS
Finalized September 12, 2000

Original SSAP and Current Authoritative Guidance: SSAP No. 51, SSAP No. 52 and SSAP No. 56

Type of Issue:
Life

SUMMARY OF ISSUE

1. *SSAP No. 51—Life Contracts* (SSAP No. 51) prescribes the accounting treatment for life contracts, *SSAP No. 52—Deposit-Type Contracts* (SSAP No. 52) prescribes the accounting treatment for deposit-type contracts, and *SSAP No. 56—Separate Accounts* (SSAP No. 56) prescribes the accounting treatment for separate accounts.

2. The purpose of this issue paper is to amend SSAP No. 51, SSAP No. 52 and SSAP No. 56 to incorporate the guidance included in appendices A-200, A-695 and A-830 and remain consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Statutory policy reserves for those group annuity contracts or other contracts that, in whole or in part, establish the insurer's obligations by reference to a segregated portfolio of assets not owned by the insurer shall be established in accordance with the guidance in Appendix A-695.

4. Statutory policy reserves for those contracts with nonlevel premiums or benefits, or contracts with secondary guarantees shall be established in accordance with the guidance in Appendix A-830.

5. Statutory policy reserves for those group life contracts utilizing a separate account that meet the requirements outlined in paragraph 1 of Appendix A-200 shall be computed in accordance with the guidance in that appendix.

6. This issue paper amends paragraph 43 of SSAP No. 51 to the following:

> This statement incorporates the requirements of Appendices A-225, A-235, A-585, A-620, A-695, A-812, A-820, A-821, A-822, A-825, A-830 and the Actuarial Standards Board *Actuarial Standards of Practice.*

7. This issue paper amends paragraph 19 of SSAP No. 52 to the following:

> This statement incorporates the requirements of Appendices A-235, A-695, A-820, A-822, A-825, and the Actuarial Standards Board *Actuarial Standards of Practice*.

8. This issue paper amends the first sentence of paragraph 23 of SSAP No. 56 to the following:

> The reserving methodologies and assumptions used in computation of policy reserves shall also meet the provisions of Appendices A-200, A-250, A-270, A-255, A-585, A-588, A-620, A-695, A-820, A-822, and the actuarial guidelines found in Appendix C of this Manual.

9. This issue paper amends paragraph 30 of SSAP No. 56 to the following:

> This statement incorporates the requirements of Appendices A-200, A-250, A-255, A-270, A-585, A-588, A-620, A-695, A-812, A-820, A-821, A-822, A-825, and the Actuarial Standards Board *Actuarial Standards of Practice*.

Effective Date

10. This issue paper is effective for years beginning January 1, 2001. Contracts issued prior to January 1, 2001 shall be accounted for based on the laws and regulations of the domiciliary state.

DISCUSSION

11. Subsequent to the NAIC's adoption of SSAP No. 51, SSAP No. 52, and SSAP No. 56, the NAIC adopted the Separate Accounts Funding Guaranteed Minimum Benefits Under Group Contracts Model Regulation, the Synthetic Guaranteed Investment Contracts Model Regulation, and the Valuation of Life Insurance Policies Model Regulation. Appendices A-200, A-695 and A-830 excerpt the accounting guidance from each of these three model regulations, respectively. This issue paper incorporates the requirements of these appendices.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

12. SSAP No. 51 paragraph 43:

> 43. This statement incorporates the requirements of Appendices A-225, A-235, A-585, A-620, A-812, A-820, A-821, A-822, A-825, and the Actuarial Standards Board *Actuarial Standards of Practice.*

13. SSAP No. 52, paragraph 19:

> 19. This statement incorporates the requirements of Appendices A-235, A-820, A-822, A-825, and the Actuarial Standards Board Actuarial Standards of Practice.

14. SSAP No. 56, paragraph 23:

> 23. The reserving methodologies and assumptions used in computation of policy reserves shall also meet the provisions of Appendices A-250, A-270, A-255, A-585, A-588, A-620, A-820, A-822, and the actuarial guidelines found in Appendix C of this Manual. Where separate account contracts have guaranteed elements, the basis for determining the value of the liability shall be consistent with the basis used for asset values (i.e., valuation interest rates as defined in Appendix A-820 shall be used when assets are recorded as if held in the general account and current interest rates based on market rates shall be used when assets are recorded at market). Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

15. SSAP No. 56, paragraph 30:

> 30. This statement incorporates the requirements of Appendices A-250, A-255, A-270, A-585, A-588, A-620, A-812, A-820, A-821, A-822, A-825, and the Actuarial Standards Board *Actuarial Standards of Practice*.

Statutory Issue Paper No. 111

Software Revenue Recognition

STATUS
Finalized December 4, 2000

Current Authoritative Guidance for Software Revenue Recognition: SSAP No. 16R
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 81

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. During the development of the initial Statements of Statutory Accounting Principles (SSAP) issues related to software revenue recognition were deemed to be not applicable to statutory accounting. Since the development of the initial SSAPs, significant changes have occurred in the world of technology and the opportunities available to insurance entities to license, sell, lease or otherwise market computer software have greatly expanded.

2. Generally Accepted Accounting Principles (GAAP) guidance for software revenue recognition was originally addressed in Statement of Position (SOP) 91-1, *Software Revenue Recognition*. SOP 91-1 was published to provide guidance on applying GAAP to software transactions and to narrow the range of revenue recognition practices that were in use before its issuance. Since the distribution of SOP 91-1, practice issues have been identified that are not addressed adequately in SOP 91-1. Therefore, the American Institute of Certified Public Accountants (AICPA) issued SOP 97-2, *Software Revenue Recognition* to replace SOP 91-1. SOP 97-2 has been modified by the issuance of SOP 98-4, *Deferral of the Effective Date of a Provision of SOP 97-2, Software Revenue Recognition* and SOP 98-9*, Modification of SOP 97-2, Software Revenue Recognition, With Respect to Certain Transactions*. SOP 97-2 has also been interpreted by the Emerging Issues Task Force (EITF) 00-3, *Application of AICPA Statement of Position 97-2 to Arrangements That Include the Right to Use Software Stored on Another Entity's Hardware*.

3. The purpose of this issue paper is to address SOP 97-2, SOP 98-4, SOP 98-9 and EITF 00-3 and establish statutory accounting principles that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

4. This issue paper adopts SOP 97-2 paragraphs 6 through 91 with certain modifications, SOP 98-9 paragraphs 6 through 8 and EITF 00-3. This issue paper rejects SOP 98-4 as not applicable because the effective date of the corresponding SSAP is expected to be January 1, 2002.

5. The modifications to SOP 97-2 are as follows:

   a. Paragraph 10 is amended to require that entities follow the guidance outlined in *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* rather than *Statement of Financial Accounting Standard* (FAS) *No. 5*, *Accounting for Contingencies*;

b. Paragraph 33 is amended to remove the reference to *Technical Bulletin* (TB) *No. 79-10: Fiscal Funding Clauses in Lease Agreements*;

c. Paragraph 57 is amended to remove the reference to *FAS No. 86*, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed*;

d. Paragraph 73 is rejected as not applicable to statutory accounting.

Effective Date and Transition

6. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years beginning on or after January 1, 2002.

DISCUSSION:

7. The modifications to SOP 97-2 were made in order to maintain consistency with current statutory accounting principles and the Statement of Concepts.

a. Paragraph 10 is amended because it includes a reference to FAS No. 5, *Accounting for Contingencies*. SSAP No. 5—*Liabilities, Contingencies and Impairments of Assets* contains the authoritative statutory accounting for loss contingencies;

b. Paragraph 33 is amended because it includes a reference to TB No. 79-10. The removal of the reference does not change the accounting prescribed in SOP 97-2 and it eliminates any possible conflict with the fact that TB No. 79-10 is rejected by SSAP No. 22 — *Leases*;

c. Paragraph 57 was amended because it includes a reference to FAS No. 86. Paragraph 57 is not impacted by the removal of FAS No. 86 because it is used in the context of a piece of historical evidence. SSAP No. 17 - *Preoperating and Research and Development Costs* requires all such costs to be expensed, therefore there is no capitalization experience to analyze;

d. Paragraph 73 was deemed to be not applicable because of the requirement to follow FAS No. 86 in the case of capitalizing funded software-development costs. This approach is inconsistent with the provisions of SSAP No. 17 and the requirement to expense such costs. The directive to expense such costs eliminates the need for this paragraph.

8. SOP 98-4 as well as the effective date paragraphs of SOP 97-2 and SOP 98-9 were not adopted in this issue paper as it is expected that the effective date for the SSAP will be January 1, 2002.

9. EITF 00-3 was adopted because it supports the principles adopted in SOP 97-2.

10. SOP 97-2 includes several references to GAAP pronouncements that were deemed not applicable in the initial SSAPs. This includes Accounting Research Bulletin No. 45, *Long-Term Construction-Type Contracts*, SOP 81-1, *Accounting for Performance of Construction-Type and Certain Production-Type Contracts*, FAS No. 48, *Revenue Recognition When Right of Return Exists* and FAS 68, *Research and*

Development Arrangements. These GAAP pronouncements are deemed to be applicable to statutory accounting only to the extent that SOP 97-2 references them.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting

11. In general, the initial SSAPs deemed the relevant GAAP guidance to be not applicable to statutory accounting. As discussed above, technology and the environment have changed significantly since the original SSAPs were adopted and therefore guidance is now needed.

Generally Accepted Accounting Principles

12. *AICPA Statement of Position 97-2*, *Software Revenue Recognition* provides the following:

> Conclusions
>
> .06 The following conclusions should be read in conjunction with the Basis for Conclusions section, beginning with paragraph .93 of this SOP, and the examples in appendix A, Examples of the Application of Certain Provisions of this SOP.
>
> Basic Principles
>
> .07 Software arrangements range from those that provide a license for a single software product to those that, in addition to the delivery of software or a software system, require significant production, modification, or customization of software. If an arrangement to deliver software or a software system, either alone or together with other products or services, requires significant production, modification, or customization of software, the entire arrangement should be accounted for in conformity with Accounting Research Bulletin (ARB) No. 45, Long-Term Construction-Type Contracts, using the relevant guidance herein, and in SOP 81-1, Accounting for Performance of Construction-Type and Certain Production-Type Contracts.
>
> .08 If the arrangement does not require significant production, modification, or customization of software, revenue should be recognized when all of the following criteria are met.
>
> - Persuasive evidence of an arrangement exists.
> - Delivery has occurred.
> - The vendor’s fee is fixed or determinable.
> - Collectibility is probable.
>
> .09 Software arrangements may provide licenses for multiple software deliverables (for example, software products, upgrades/enhancements, PCS, or services), which are termed multiple elements. A number of the elements may be described in the arrangement as being deliverable only on a when-and-if-available basis. When-and-if-available deliverables should be considered in determining whether an arrangement includes multiple elements. Accordingly, the requirements of this SOP with respect to arrangements that consist of multiple elements should be applied to all additional products and services specified in the arrangement, including those described as being deliverable only on a when-and-if-available basis.
>
> .10 If an arrangement includes multiple elements, the fee should be allocated to the various elements based on vendor-specific objective evidence of fair value, regardless of any separate prices stated within the contract for each element. Vendor-specific objective evidence of fair value is limited to the following:
>
> - The price charged when the same element is sold separately
> - For an element not yet being sold separately, the price established by management having the relevant authority; it must be probable that the price, once established, will not change before the separate introduction of the element into the marketplace
>
> The amount allocated to undelivered elements is not subject to later adjustment. However, if it becomes probable that the amount allocated to an undelivered element will result in a loss on

that element of the arrangement, the loss should be recognized pursuant to FASB Statement No. 5, Accounting for Contingencies. When a vendor's pricing is based on multiple factors such as the number of products and the number of users, the amount allocated to the same element when sold separately must consider all the factors of the vendor's pricing structure.

.11 If a discount is offered in a multiple-element arrangement, a proportionate amount of that discount should be applied to each element included in the arrangement based on each element's fair value without regard to the discount. However, as discussed in paragraph .37, no portion of the discount should be allocated to any upgrade rights. Moreover, to the extent that a discount exists, the residual method described in paragraph .12 attributes that discount entirely to the delivered elements.

.12 If sufficient vendor-specific objective evidence does not exist for the allocation of revenue to the various elements of the arrangement, all revenue from the arrangement should be deferred until the earlier of the point at which (a) such sufficient vendor-specific objective evidence does exist or (b) all elements of the arrangement have been delivered. The following exceptions to this guidance are provided.

- If the only undelivered element is PCS, the entire fee should be recognized ratably (see paragraphs .56 through .62).
- If the only undelivered element is services that do not involve significant production, modification, or customization of software (for example, training or installation), the entire fee should be recognized over the period during which the services are expected to be performed (see paragraphs .63 through .71).
- If the arrangement is in substance a subscription, the entire fee should be recognized ratably (see paragraphs .48 and .49).
- If the fee is based on the number of copies, the arrangement should be accounted for in conformity with paragraphs .43 through .47.
- There may be instances in which there is vendor-specific objective evidence of the fair values of all undelivered elements in an arrangement but vendor-specific objective evidence of fair value does not exist for one or more of the delivered elements in the arrangement. In such instances, the fee should be recognized using the residual method, provided that (a) all other applicable revenue recognition criteria in this SOP are met and (b) the fair value of all of the undelivered elements is less than the arrangement fee. Under the residual method, the arrangement fee is recognized as follows: (a) the total fair value of the undelivered elements, as indicated by vendor-specific objective evidence, is deferred and (b) the difference between the total arrangement fee and the amount deferred for the undelivered elements is recognized as revenue related to the delivered elements.

.13 The portion of the fee allocated to an element should be recognized as revenue when the criteria in paragraph .08 of this SOP are met with respect to the element. In applying those criteria, the delivery of an element is considered not to have occurred if there are undelivered elements that are essential to the functionality of the delivered element, because the customer would not have the full use of the delivered element.

.14 No portion of the fee (including amounts otherwise allocated to delivered elements) meets the criterion of collectibility if the portion of the fee allocable to delivered elements is subject to forfeiture, refund, or other concession if any of the undelivered elements are not delivered. In order for the revenue related to an arrangement to be considered not subject to forfeiture, refund, or other concession, management must intend not to provide refunds or concessions that are not required under the provisions of the arrangement. All available evidence should be considered to determine whether the evidence persuasively indicates that the revenue is not subject to forfeiture, refund, or other concession. Although no single item of evidence may be persuasive, the following additional items should be considered:

- Acknowledgment in the arrangement of products not currently available or not to be delivered currently
- Separate prices stipulated in the arrangement for each deliverable element

- Default and damage provisions as defined in the arrangement
- Enforceable payment obligations and due dates for the delivered elements that are not dependent on the delivery of the future deliverable elements, coupled with the intent of the vendor to enforce rights of payment
- Installation and use of the delivered software
- Support services, such as telephone support, related to the delivered software being provided currently by the vendor

Regardless of the preceding, the vendor's historical pattern of making refunds or other concessions that were not required under the original provisions (contractual or other) of other arrangements should be considered more persuasive than terms included in the arrangement that indicate that no concessions are required.

Evidence of an Arrangement

.15 Practice varies with respect to the use of written contracts. Although a number of sectors of the industry rely upon signed contracts to document arrangements, other sectors of the industry that license software (notably the packaged software sector) do not.

.16 If the vendor operates in a manner that does not rely on signed contracts to document the elements and obligations of an arrangement, the vendor should have other forms of evidence to document the transaction (for example, a purchase order from a third party or on-line authorization). If the vendor has a customary business practice of utilizing written contracts, evidence of the arrangement is provided only by a contract signed by both parties.

.17 Even if all other requirements set forth in this SOP for the recognition of revenue are met (including delivery), revenue should not be recognized on any element of the arrangement unless persuasive evidence of an arrangement exists.

Delivery

.18 The second criterion in paragraph .08 for revenue recognition is delivery. The principle of not recognizing revenue before delivery applies whether the customer is a user or a reseller. Except for arrangements in which the fee is a function of the number of copies, delivery is considered to have occurred upon the transfer of the product master or, if the product master is not to be delivered, upon the transfer of the first copy. For software that is delivered electronically, the delivery criterion of paragraph .08 is considered to have been met when the customer either (a) takes possession of the software via a download (that is, when the customer takes possession of the electronic data on its hardware), or (b) has been provided with access codes that allow the customer to take immediate possession of the software on its hardware pursuant to an agreement or purchase order for the software. In such cases, revenue should be recognized if the other criteria of paragraph .08 have been satisfied.

.19 Paragraphs .20 through .25 provide guidance on determining whether delivery is considered to have occurred in certain kinds of software transactions.

Customer Acceptance

.20 After delivery, if uncertainty exists about customer acceptance of the software, license revenue should not be recognized until acceptance occurs.

Determining Delivery—Multiple Copies of Software Products Versus Multiple Licenses

.21 Arrangements to use multiple copies of a software product under site licenses with users and to market multiple copies of a software product under similar arrangements with resellers should be distinguished from arrangements to use or market multiple single licenses of the same software.

- In the former kind of arrangement, duplication is incidental to the arrangement and the delivery criterion is met upon the delivery of the first copy or product master. The vendor may be obligated to furnish up to a specified number of copies of the software, but only if the copies are requested by the user. The licensing fee is payable even if no additional copies are requested by the user or reseller. If the other criteria in this SOP for revenue recognition are met, revenue should be recognized upon delivery of the first copy or product master. The estimated costs of duplication should be accrued at that time.

- In the latter kind of arrangement, the licensing fee is a function of the number of copies delivered to, made by, or deployed by the user or reseller. Delivery occurs and revenue should be recognized as the copies are made by the user or sold by the reseller if the other criteria in this SOP for revenue recognition are met.

Delivery Other Than to the Customer

.22 Delivery should not be considered complete unless the destination to which the software is shipped is the customer's place of business or another site specified by the customer. In addition, if a customer specifies an intermediate site but a substantial portion of the fee is not payable until the delivery by the vendor to another site specified by the customer, revenue should not be recognized until the delivery is made to that other site.

Delivery Agents

.23 Vendors may engage agents, often referred to as fulfillment houses, to either duplicate and deliver or only deliver software products to customers. Revenue from transactions involving delivery agents should be recognized when the software is delivered to the customer. Transferring the fulfillment obligation to an agent of the vendor does not relieve the vendor of the responsibility for delivery. This is the case even if the vendor has no direct involvement in the actual delivery of the software product to the customer.

Authorization Codes

.24 In a number of software arrangements, vendors use authorization codes, commonly referred to as keys, to permit customer access to software that otherwise would be restricted. Keys are used in a variety of ways and may serve different purposes. For example, permanent keys may be used to control access to the software, or additional permanent keys may be necessary for the duplication of the software. Temporary keys may be used for the same purposes and also may be used to enhance the vendor's ability to collect payment or to control the use of software for demonstration purposes.

.25 In software arrangements involving the use of keys, delivery of a key is not necessarily required to satisfy the vendor's delivery responsibility. The software vendor should recognize revenue on delivery of the software if all other requirements for revenue recognition under this SOP and all of the following conditions are met.

- The customer has licensed the software and the vendor has delivered a version of the software that is fully functional except for the permanent key or the additional keys (if additional keys are used to control the reproduction of the software).
- The customer's obligation to pay for the software and the terms of payment, including the timing of payment, are not contingent on delivery of the permanent key or additional keys (if additional keys are used to control the reproduction of the software).
- The vendor will enforce and does not have a history of failing to enforce its right to collect payment under the terms of the original arrangement.

In addition, if a temporary key is used to enhance the vendor's ability to collect payment, the delivery of additional keys, whether temporary or permanent, is not required to satisfy the vendor's delivery responsibility if (a) the above conditions are met and (b) the use of a temporary key in such circumstances is a customary practice of the vendor. Selective issuance of temporary keys might indicate that collectibility is not probable or that the software is being used only for demonstration purposes.

Fixed or Determinable Fees and Collectibility

.26 The other prerequisites in paragraph .08 for revenue recognition are that (a) the vendor's fee is fixed or determinable and (b) collectibility is probable. A software licensing fee is not fixed or determinable if the amount is based on the number of units distributed or copied, or the expected number of users of the product. Revenue recognition for variable-pricing arrangements is discussed in paragraphs .43 through .47 of this SOP. Additionally, if an arrangement includes (a) rights of return or (b) rights to refunds without return of the software, FASB Statement No. 48 requires that conditions that must be met in order for the vendor to recognize revenue include that the amount of future returns or refunds can be reasonably estimated.

Factors That Affect the Determination of Whether a Fee is Fixed or Determinable and Collectible

.27 A number of arrangements that call for fixed or determinable payments, including minimum royalties or license fees from resellers, specify a payment period that is short in relation to the period during which the customer is expected to use or market the related products. Other arrangements have payment terms that extend over a substantial portion of the period during which the customer is expected to use or market the related products. Because a product's continuing value may be reduced due to the subsequent introduction of enhanced products by the vendor or its competitors, the possibility that the vendor still may provide a refund or concession to a creditworthy customer to liquidate outstanding amounts due under the original terms of the arrangement increases as payment terms become longer.

.28 For the reason cited in paragraph .27 any extended payment terms in a software licensing arrangement may indicate that the fee is not fixed or determinable. Further, if payment of a significant portion of the software licensing fee is not due until after expiration of the license or more than twelve months after delivery, the licensing fee should be presumed not to be fixed or determinable. However, this presumption may be overcome by evidence that the vendor has a standard business practice of using long-term or installment contracts and a history of successfully collecting under the original payment terms without making concessions. In such a situation, a vendor should consider such fees fixed or determinable and should recognize revenue upon delivery of the software, provided all other conditions for revenue recognition in this SOP have been satisfied.

.29 If it cannot be concluded that a fee is fixed or determinable at the outset of an arrangement, revenue should be recognized as payments from customers become due (assuming all other conditions for revenue recognition in this SOP have been satisfied).

.30 For reseller arrangements, the following factors also should be considered in evaluating whether the fixed or determinable fee and collectibility criteria for revenue recognition are met.

- Business practices, the reseller's operating history, competitive pressures, informal communications, or other factors indicate that payment is substantially contingent on the reseller's success in distributing individual units of the product.
- Resellers are new, undercapitalized, or in financial difficulty and may not demonstrate an ability to honor a commitment to make fixed or determinable payments until they collect cash from their customers.
- Uncertainties about the potential number of copies to be sold by the reseller may indicate that the amount of future returns cannot be reasonably estimated on delivery; examples of such factors include the newness of the product or marketing channel, competitive products, or dependence on the market potential of another product offered (or anticipated to be offered) by the reseller.
- Distribution arrangements with resellers require the vendor to rebate or credit a portion of the original fee if the vendor subsequently reduces its price for a product and the reseller still has rights with respect to that product (sometimes referred to as price protection). If a vendor is unable to reasonably estimate

> future price changes in light of competitive conditions, or if significant uncertainties exist about the vendor's ability to maintain its price, the arrangement fee is not fixed or determinable. In such circumstances, revenue from the arrangement should be deferred until the vendor is able to reasonably estimate the effects of future price changes and the other conditions of this SOP have been satisfied.

.31 Customer Cancellation Privileges. Fees from licenses cancelable by customers are neither fixed nor determinable until the cancellation privileges lapse. Fees from licenses with cancellation privileges expiring ratably over the license period are considered to become determinable ratably over the license period as the cancellation privileges lapse. In applying the provisions of this paragraph, obligations related to warranties for defective software, including warranties that are routine, short-term, and relatively minor, should be accounted for in conformity with FASB Statement No. 5. Additionally, short-term rights of return, such as thirty-day money-back guarantees, should not be considered cancellation privileges; the related returns should be accounted for in conformity with FASB Statement No. 48.

.32 Fiscal Funding Clauses. Fiscal funding clauses sometimes are found in software license arrangements in which the licensees are governmental units. Such clauses generally provide that the license is cancelable if the legislature or funding authority does not appropriate the funds necessary for the governmental unit to fulfill its obligations under the licensing arrangement.

.33 Consistent with FASB Technical Bulletin No. 79-10, Fiscal Funding Clauses in Lease Agreements, a software licensing arrangement with a governmental unit containing a fiscal funding clause should be evaluated to determine whether the uncertainty of a possible license arrangement cancellation is a remote contingency. If the likelihood is assessed as remote, the software licensing arrangement should be considered noncancelable. Such an assessment should include the factors discussed in paragraphs .27 and .28 of this SOP. If the likelihood is assessed as other than remote, the license should be considered cancelable, thus precluding revenue recognition. A fiscal funding clause with a customer other than a governmental unit that is required to include such a clause creates a contingency that precludes revenue recognition until the requirements of the clause and all other provisions of this SOP have been satisfied.

Multiple-Element Arrangements

.34 As discussed in paragraph .09, multiple-element arrangements to which contract accounting does not apply may include customer rights to any combination of additional software deliverables, services, or PCS. If contract accounting does not apply, individual elements in such arrangements should be accounted for in accordance with paragraphs .08 through .14. Paragraphs .35 through .73 provide guidance on the application of those paragraphs to multiple-element arrangements.

Additional Software Deliverables and Rights to Exchange or Return Software

.35 As part of a multiple-element arrangement, a vendor may agree to deliver software currently and to deliver additional software in the future. The additional deliverables may include upgrades/enhancements or additional software products. Additionally, a vendor may provide the customer with the right to exchange or return software, including the right to transfer software from one hardware platform or operating system to one or more other platforms or operating systems (a platform-transfer right).

.36 Upgrades/enhancements. As part of a multiple-element arrangement, a vendor may agree to deliver software currently and provide the customer with an upgrade right for a specified upgrade/enhancement. The upgrade right may be evidenced by a specific agreement, commitment, or the vendor's established practice. (Rights to receive unspecified upgrades/enhancements on a when-and-if-available basis are PCS, as it has been redefined in this SOP.) The upgrade right should be accounted for as a separate element in accordance with paragraphs .08 through .14. Guidance on the application of those paragraphs to multiple-element software arrangements that include upgrade rights is given in paragraphs .37 and .38.

.37 If a multiple-element arrangement includes an upgrade right, the fee should be allocated between the elements based on vendor-specific objective evidence of fair value. The fee allocated to the upgrade right is the price for the upgrade/enhancement that would be charged to existing users of the software product being updated. If the upgrade right is included in a multiple-element arrangement on which a discount has been offered (see paragraph .11), no portion of the discount should be allocated to the upgrade right. If sufficient vendor-specific evidence exists to reasonably estimate the percentage of customers that are not expected to exercise the upgrade right, the fee allocated to the upgrade right should be reduced to reflect that percentage. This estimated percentage should be reviewed periodically. The effect of any change in that percentage should be accounted for as a change in accounting estimate.

.38 The amount of the fee allocated to the upgrade right should be recognized as revenue when the conditions in paragraphs .08 through .14 are met. If sufficient vendor-specific objective evidence does not exist for the allocation of the fee to the upgrade right, revenue from the arrangement should be deferred until the earlier of the point at which (a) such sufficient vendor-specific objective evidence does exist or (b) all elements of the arrangement have been delivered.

.39 Additional Software Products. As part of a multiple-element arrangement, a vendor may agree to deliver software currently and deliver specified additional software products in the future. The rights to these additional products may be included either in the terms of a PCS arrangement or in a separate agreement. Even if the rights to the additional software products are included in a PCS arrangement, the revenue allocable to the additional software products should be accounted for separately from the PCS arrangement as an element of a multiple-element arrangement.

.40 Multiple-element arrangements that include rights to undelivered additional software products that are not subscriptions (see paragraphs .48 and .49) should be accounted for in accordance with paragraphs .08 through .14 of this SOP. Guidance on the application of those paragraphs to such arrangements is provided in paragraphs .41 through .47 below.

.41 The fee from the arrangement should be allocated among the products based on vendor-specific objective evidence of fair value. The allocation should be based on the relative sales prices (determined pursuant to paragraphs .10 and .11 of this SOP) of the products. If vendor-specific objective evidence of fair value does not exist, paragraph .12 of this SOP requires that all revenue from the arrangement be deferred until the earlier of the point at which (a) such sufficient vendor-specific objective evidence does exist or (b) all elements of the arrangement have been delivered. The fee allocated to the additional software products should not be reduced by the percentage of any customers that are not expected to exercise the right to receive additional software products.

.42 If the arrangement is based on a price per product (not a price per copy), the portion of the fee allocated to a product should be recognized as revenue when the product is delivered, assuming all other provisions of paragraphs .08 through .14 of this SOP are met.

.43 Some fixed fee license or reseller arrangements provide customers with the right to reproduce or obtain copies at a specified price per copy (rather than per product) of two or more software products up to the total amount of the fixed fee. A number of the products covered by the arrangement may not be deliverable or specified at the inception of the arrangement. Although the price per copy is fixed at the inception of the arrangement, an allocation of the arrangement fee to the individual products generally cannot be made, because the total revenue allocable to each software product is unknown and depends on the choices to be made by the customer and, sometimes, future development activity while the arrangement is in effect. Nevertheless, as discussed in paragraph .46 of this SOP, in certain situations, revenue can be allocated to the products that are undeliverable or not specified at the inception of the arrangement.

.44 In arrangements in which no allocation can be made, until the first copy or product master of each product covered by the arrangement has been delivered to the customer assuming the provisions of paragraphs .08 through .14 of this SOP are met, revenue should be recognized as copies of delivered products either (a) are reproduced by the customer or (b) are furnished to the customer if the vendor is duplicating the software. Once the vendor has delivered the product master or the first copy of all products covered by the arrangement, any licensing fees not previously recognized should be recognized. (At that point, only duplication of the software is required to satisfy the vendor's delivery requirement. As discussed in paragraph .21 of this SOP, duplication of the software is incidental to the arrangement, and delivery is deemed to have occurred upon delivery of the product master or first copy.) When the arrangement terminates, the vendor should recognize any licensing fees not previously recognized.

.45 The revenue from the kind of arrangements discussed in paragraph .44 should not be recognized fully until at least one of the following conditions is met.

- Delivery is complete for all products covered by the arrangement.
- The aggregate revenue attributable to all copies of the software products delivered is equal to the fixed fee, provided that the vendor is not obligated to deliver additional software products under the arrangement.

.46 Nevertheless, certain arrangements that include products that are not deliverable at the inception impose a maximum number of copies of the undeliverable product(s) to which the customer is entitled. In such arrangements, a portion of the arrangement fee should be allocated to the undeliverable product(s). This allocation should be made assuming that the customer will elect to receive the maximum number of copies of the undeliverable product(s).

.47 The revenue allocated to the delivered products should be recognized when the product master or first copy is delivered. If, during the term of the arrangement, the customer reproduces or receives enough copies of these delivered products so that revenue allocable to the delivered products exceeds the revenue previously recognized, such additional revenue should be recognized as the copies are reproduced or delivered. The revenue allocated to the undeliverable product(s) should be reduced by a corresponding amount.

.48 As part of a multiple-element arrangement with a user, a vendor may agree to deliver software currently and to deliver unspecified additional software products in the future (including unspecified platform transfer rights that do not qualify for exchange accounting as described in paragraphs .50 through .55). For example, the vendor may agree to deliver all new products to be introduced in a family of products over the next two years. These arrangements are similar to arrangements that include PCS in that future deliverables are unspecified. Nevertheless, they are distinguished from arrangements that include PCS because the future deliverables are products, not unspecified upgrades/enhancements.

.49 The software elements of the kinds of arrangements discussed in paragraph .48 should be accounted for as subscriptions. No allocation of revenue should be made among any of the software products, and all software product-related revenue from the arrangement should be recognized ratably over the term of the arrangement beginning with delivery of the first product. If the term of the arrangement is not stated, the revenue should be recognized ratably over the estimated economic life of the products covered by the arrangement, beginning with delivery of the first product. An intent on the part of the vendor not to develop new products during the term of the arrangement does not relieve the vendor of the requirement to recognize revenue ratably over the term of the arrangement, beginning with the delivery of the first product.

.50 Rights to Exchange or Return Software. As part of an arrangement, a software vendor may provide the customer with the right to return software or to exchange software for products with no more than minimal differences in price, functionality, or features. The accounting for returns is significantly different from the accounting for exchanges. Although it is sometimes difficult to determine whether a transaction is a return or exchange of software, the fact that the software is not returned physically does not preclude accounting for the transaction as either an exchange or as a return. If the software is not returned physically and the customer contractually is entitled to continue to use the previously delivered software, the arrangement should be accounted for in the manner prescribed in the section herein entitled “Additional Software Products” (see paragraphs .39 through .49). If the software is not returned physically and the customer contractually is not entitled to continue to use the previously delivered software, the transaction should be accounted for either as a return or as an exchange, as discussed in the following paragraphs.

.51 If the rights discussed in the previous paragraph are offered to users (but not resellers), the exchanges are analogous to “exchanges by ultimate customers of one item for another of the same kind, quality, and price . . . [that] are not considered returns" described in footnote 3 of FASB Statement No. 48. Conversely, exchanges by users of software products for dissimilar software products or for similar software products with more than minimal differences in price, functionality, or features are considered returns, and revenue related to arrangements that provide users with the rights to make such exchanges should be accounted for in conformity with FASB Statement No. 48. If the other product(s) is not available at the time the initial product is delivered, there should be persuasive evidence that demonstrates there will be no more than minimal differences in price, features, or functionality among the products in order for the right to qualify as a right to exchange. Additionally, if the vendor expects to incur a significant amount of development costs related to the other product, the other product should be considered to have more than a minimal difference in functionality.

.52 As part of a multiple-element arrangement, a vendor may grant a user a platform-transfer right. Depending on the circumstances, the exercise of a platform-transfer right may represent an exchange, a return, or additional software products for accounting purposes. If the customer contractually is entitled to continue to use the software that was delivered originally (in addition to the software that is to be delivered for the new platform), the platform transfer right should be accounted for in the manner prescribed in the section herein entitled “Additional Software Products” (see paragraphs .39 through .49).

.53 If, as part of a multiple-element arrangement, a vendor offers a user (not a reseller) a platform-transfer right, and the provisions of paragraphs .08 through .14 of this SOP are met, the revenue from the software license should be recognized upon the initial delivery of the software, and the exercise of the platform-transfer right should be treated as an exchange, if the platform-transfer right —

- Is for the same product (see paragraph .54)
- Does not increase the number of copies or concurrent users of the software product available under the license arrangement.

.54 Products are considered to be the same product if there are no more than minimal differences among them in price, features, and functions, and if they are marketed as the same product, even though there may be differences arising from environmental variables such as operating systems, databases, user interfaces, and platform scales. Indicators of "marketed as the same product" include (a) the same product name (although version numbers may differ) and (b) a focus on the same features and functions.

.55 As part of their standard sales terms or as a matter of practice, vendors may grant resellers the rights to exchange unsold software for other software (including software that runs on a different hardware platform or operating system). Because the reseller is not the ultimate customer (see paragraph .51), such exchanges, including those referred to as stock balancing arrangements, should be accounted for as returns. Arrangements that grant rights to make such exchanges should be accounted for in conformity with FASB Statement No. 48, even if the vendors require the resellers to purchase additional software to exercise the exchange rights.

Postcontract Customer Support

.56 Software arrangements may include the right to PCS. PCS includes the right to receive PCS services or unspecified upgrades/enhancements, or both, offered to users or resellers. A vendor may develop historical patterns of regularly providing all customers or certain kinds of customers with the services or unspecified upgrades/enhancements normally associated with PCS, or may anticipate doing so, even though there is no written contractual obligation or the stipulated PCS term commences at some date after delivery. In those situations, an implied PCS arrangement exists that commences upon product delivery. For purposes of applying the guidance in this SOP, PCS includes a vendor's expected performance based on such patterns, even if performance is entirely at the vendor's discretion and not pursuant to a formal agreement.

.57 If a multiple-element software arrangement includes explicit or implicit rights to PCS, the total fees from the arrangement should be allocated among the elements based on vendor-specific objective evidence of fair value, in conformity with paragraph .10. The fair value of the PCS should be determined by reference to the price the customer will be required to pay when it is sold separately (that is, the renewal rate). The portion of the fee allocated to PCS should be recognized as revenue ratably over the term of the PCS arrangement, because the PCS services are assumed to be provided ratably. However, revenue should be recognized over the period of the PCS arrangement in proportion to the amounts expected to be charged to expense for the PCS services rendered during the period if—

- Sufficient vendor-specific historical evidence exists demonstrating that costs to provide PCS are incurred on other than a straight-line basis. In making this determination, the vendor should take into consideration allocated portions of cost accounted for as research and development (R&D) costs and the amortization of costs related to the upgrade-enhancement capitalized in conformity with FASB Statement No. 86, Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed. Such costs should be considered as part of the costs to provide PCS.
- The vendor believes that it is probable that the costs incurred in performing under the current arrangement will follow a similar pattern.

Because the timing, frequency, and significance of unspecified upgrades/enhancements can vary considerably, the point at which unspecified upgrades/enhancements are expected to be delivered should not be used to support income recognition on other than a straight-line basis.

.58 If sufficient vendor-specific objective evidence does not exist to allocate the fee to the separate elements and the only undelivered element is PCS, the entire arrangement fee should be recognized ratably over (a) the contractual PCS period (for those arrangements with explicit rights to PCS) or (b) the period during which PCS is expected to be provided (for those arrangements with implicit rights to PCS).

.59 PCS revenue may be recognized together with the initial licensing fee on delivery of the software if all of the following conditions are met.

a. The PCS fee is included with the initial licensing fee.
b. The PCS included with the initial license is for one year or less.
c. The estimated cost of providing PCS during the arrangement is insignificant.
d. Unspecified upgrades/enhancements offered during PCS arrangements historically have been and are expected to continue to be minimal and infrequent.

If PCS revenue is recognized upon the delivery of the software, the vendor must accrue all estimated costs of providing the services, including upgrades/enhancements. Upgrades/enhancements are not developed solely for distribution to PCS customers; revenues are expected to be earned from providing the enhancements to other customers as well. Therefore, costs should be allocated between PCS arrangements and other licenses.

.60 A determination that unspecified upgrades/enhancements offered during the PCS arrangement are expected to be minimal and infrequent should be evidenced by the patterns of minimal and infrequent unspecified upgrades/enhancements offered in previous PCS arrangements. A conclusion that unspecified upgrades/enhancements are expected to be minimal and infrequent should not be reached simply because unspecified upgrades/enhancements have been or are expected to be offered less frequently than on an annual basis. Regardless of the vendor's history of offering unspecified upgrades/enhancements to initial licensees, PCS should be accounted for separately from the initial licensing fee if the vendor expects to offer upgrades/enhancements that are greater than minimal or more than infrequent to the users or resellers of the licensed software during the PCS arrangement.

.61 Postdelivery Telephone Support at No Additional Charge. Postdelivery telephone support provided to users by the vendor at no additional charge should be accounted for as PCS, in conformity with this SOP, regardless of whether the support is provided explicitly under the licensing arrangement. Although such telephone support may be offered or available for periods exceeding one year, if the vendor has established a history of providing substantially all the telephone support within one year of the licensing or sale of the software, the PCS may be considered to have a term of one year or less in applying paragraph .59, item (b) of this SOP. Accordingly, revenue allocable to telephone support may be recognized together with the initial licensing fee on delivery of the software if all the conditions in paragraph .59 of this SOP are met. This provision applies only to telephone support provided at no additional charge. If revenue allocable to telephone support is recognized together with the licensing fee on delivery, the vendor should accrue the estimated cost of providing that support.

.62 PCS Granted by Resellers. An arrangement in which a vendor grants a reseller the right to provide unspecified upgrades/enhancements to the reseller’s customers is an implied PCS arrangement between the vendor and the reseller, even if the vendor does not provide direct telephone support to the reseller’s customers. If sufficient vendor-specific objective evidence does not exist to allocate the fee to the software and the PCS, revenue from both the licensing arrangement and the PCS should be recognized ratably over the period during which PCS is expected to be provided.

Services

.63 Certain arrangements include both software and service elements (other than PCS-related services). The services may include training, installation, or consulting. Consulting services often include implementation support, software design or development, or the customization or modification of the licensed software.

.64 If an arrangement includes such services, a determination must be made as to whether the service element can be accounted for separately as the services are performed. Paragraph .65 discusses the criteria that must be considered in making such a determination. If the nature of the services is such that the service element does not qualify for separate accounting as a service, contract accounting must be applied to both the software and service elements included in the arrangement. Paragraphs .74 through .91 of this SOP address the application of contract accounting to software arrangements.

.65 In order to account separately for the service element of an arrangement that includes both software and services, sufficient vendor-specific objective evidence of fair value must exist to permit allocation of the revenue to the various elements of the arrangement (as discussed in paragraphs .10 and .12). Additionally, the services (a) must not be essential to the functionality of any other element of the transaction and (b) must be described in the contract such that the total price of the arrangement would be expected to vary as the result of the inclusion or exclusion of the services.

.66 If an arrangement includes services that meet the criteria of paragraph .65 for separate accounting, revenue should be allocated among the service and software elements of the contract. This allocation should be based on vendor-specific objective evidence of fair values. (Fair values are not necessarily the same as any separate prices stated for the separate elements of the arrangement.) Revenue allocated to the service element should be recognized as the services are performed or, if no pattern of performance is discernible, on a straight-line basis over the period during which the services are performed.

.67 If vendor-specific objective evidence of the fair value does not exist to allocate a portion of the fee to the service element, and the only undelivered element is services that do not involve significant production, modification, or customization of the software (for example, training or installation), the entire arrangement fee should be recognized as the services are performed. If no pattern of performance is discernible, the entire arrangement fee should be recognized on a straight-line basis over the period during which the services are performed.

.68 An important factor to consider in determining whether the services are essential to the functionality of any other element is whether the software included in the arrangement is considered core or off-the-shelf software. Core software is software that a vendor uses in creating other software. It is not sold as is because customers cannot use it unless it is customized to meet system objectives or customer specifications. Off-the-shelf software is software that is marketed as a stock item that can be used by customers with little or no customization.

.69 Software should be considered off-the-shelf software if it can be added to an arrangement with insignificant changes in the underlying code and it could be used by the customer for the customer's purposes upon installation. Actual use by the customer and performance of other elements of the arrangement is not required to demonstrate that the customer could use the software off-the-shelf. If significant modifications or additions to the off-the-shelf software are necessary to meet the customer's purpose (for example, changing or making additions to the software, or because it would not be usable in its off-the-shelf form in the customer's environment), the software should be considered core software for purposes of that arrangement. If the software that is included in the arrangement is not considered to be off-the-shelf software, or if significant modifications or additions to the off-the-shelf software are necessary to meet the customer's functionality, no element of the arrangement would qualify for accounting as a service, and contract accounting should be applied to both the software and service elements of the arrangement.

.70 Factors indicating that the service element is essential to the functionality of the other elements of the arrangement, and consequently should not be accounted for separately, include the following.

- The software is not off-the-shelf software.
- The services include significant alterations to the features and functionality of the off-the-shelf software.
- Building complex interfaces is necessary for the vendor's software to be functional in the customer's environment.
- The timing of payments for the software is coincident with performance of the services.
- Milestones or customer-specific acceptance criteria affect the realizability of the software-license fee.

.71 Judgment is required in determining whether the obligation to provide services in addition to the delivery of software should be accounted for separately as a service element. Services that qualify for accounting as a service element of a software arrangement always are stated separately and have one or more of the following characteristics.

- The services are available from other vendors.
- The services do not carry a significant degree of risk or unique acceptance criteria.
- The software vendor is an experienced provider of the services.
- The vendor is providing primarily implementation services, such as implementation planning, loading of software, training of customer personnel, data conversion, building simple interfaces, running test data, and assisting in the development and documentation of procedures.
- Customer personnel are dedicated to participate in the services being performed.

.72 Funded Software-Development Arrangements. Software-development arrangements that are fully or partially funded by a party other than the vendor that is developing the software typically provide the funding party with some or all of the following benefits:

- Royalties payable to the funding party based solely on future sales of the product by the software vendor (that is, reverse royalties)
- Discounts on future purchases by the funding party of products produced under the arrangement
- A nonexclusive sublicense to the funding party, at no additional charge, for the use of any product developed (a prepaid or paid-up nonexclusive sublicense)

.73 A funded software-development arrangement within the scope of FASB Statement No. 68, Research and Development Arrangements, should be accounted for in conformity with that Statement. If the technological feasibility of the computer software product pursuant to the provisions of FASB Statement No. 86 has been established before the arrangement has been entered into, FASB Statement No. 68 does not apply because the arrangement is not a research and development arrangement. Accounting for costs related to funded software-development arrangements is beyond the scope of this SOP. However, if capitalization of the software-development costs commences pursuant to FASB Statement No. 86, any income from the funding party under a funded software-development arrangement should be credited first to the amount of the development costs capitalized. If the income from the funding party exceeds the amount of development costs capitalized, the excess should be deferred and credited against future amounts that subsequently qualify for capitalization. Any deferred amount remaining after the project is completed (that is, when the software is available for general release to customers and capitalization has ceased) should be credited to income.

Contract Accounting

.74 If an arrangement to deliver software or a software system, either alone or together with other products or services, requires significant production, modification, or customization of software, the service element does not meet the criteria for separate accounting set forth in paragraph .65. The entire arrangement should be accounted for in conformity with ARB No. 45, using the relevant guidance in SOP 81-1. Nevertheless, transactions that normally are accounted for as product sales should not be accounted for as long-term contracts merely to avoid the delivery requirements normally associated with product sales for revenue recognition.

.75 In applying contract accounting, the vendor must use either the percentage-of-completion method or the completed-contract method. The determination of the appropriate method should be made according to the recommendations in paragraphs 21 through 33 of SOP 81-1.

.76 Segmentation. Software contracts may have discrete elements that meet the criteria for segmenting in paragraphs 39 through 42 of SOP 81-1. If a contract is segmented, each segment is treated as a separate profit center. Progress-to-completion for each segment should be measured in conformity with paragraphs .78 through .80 of this SOP.

.77 Some vendors of arrangements that include software combined with services or hardware or both do not identify the elements separately and do not sell them separately because of agreements with their suppliers. Other vendors who are not restricted by such agreements nevertheless bid or negotiate software and other products and services together. Arrangements that do not meet the segmentation criteria in paragraph 40 of SOP 81-1 are prohibited from being segmented, unless the vendor has a history of providing the software and other products and services to customers under separate arrangements and the arrangement meets the criteria in paragraph 41 of SOP 81-1.

.78 Measuring Progress-to-Completion Under the Percentage-of-Completion Method. Paragraph 46 of SOP 81-1 describes the approaches to measuring progress on contracts (or segments thereof) under the percentage-of-completion method. Those approaches are grouped into input and output measures, as follows.

- Input measures are made in terms of efforts devoted to a contract. They include the methods based on costs and on efforts expended. Output measures are made in terms of results achieved. They include methods based on units produced, units delivered, contract milestones, and value added. For contracts under which separate units of output are produced, progress can be measured on the basis of units of work completed.

For software contracts, an example of an input measure is labor hours; an example of an output measure is arrangement milestones, such as the completion of specific program modules.

.79 If, as discussed in paragraph .76 of this SOP, a software contract includes a discrete element that meets the segmentation criteria of SOP 81-1, the method chosen to measure progress-to-completion on the element should be the method that best approximates progress-to-completion. Progress-to-completion on separate elements of the same software arrangement may be measured by different methods. The software vendor should choose measurement methods consistently, however, so that it uses similar methods to measure progress-to-completion on similar elements.

.80 Output measures, such as value-added or arrangement milestones, may be used to measure progress-to-completion on software arrangements, but many companies use input measures because they are established more easily. As noted in paragraph 47 of SOP 81-1, "The use of either type of measure requires the exercise of judgment and the careful tailoring of the measure to the circumstances." Further, paragraph 51 of SOP 81-1 states that

> The acceptability of the results of input or output measures deemed to be appropriate to the circumstances should be periodically reviewed and confirmed by alternative measures that involve observation and inspection. For example, the results provided by the measure used to determine the extent of progress may be compared to the results of calculations based on physical observations by engineers, architects, or similarly qualified personnel. That type of review provides assurance somewhat similar to that provided for perpetual inventory records by periodic physical inventory counts.

.81 Input Measures. Input measures of progress-to-completion on arrangements are made in terms of efforts devoted to the arrangement and, for software arrangements, include methods based on costs, such as cost-to-cost measures, and on efforts expended, such as labor hours or labor dollars. Progress-to-completion is measured indirectly, based on an established or assumed relationship between units of input and productivity. A major advantage of input measures is that inputs expended are easily verifiable. A major disadvantage is that their relationship to progress-to-completion may not hold if inefficiencies exist or if the incurrence of the input at a particular point does not indicate progress-to-completion.

.82 Costs incurred should be included in measuring progress-to-completion only to the extent that they relate to contract performance. Items not specifically produced for the arrangement, such as hardware purchased from third parties or off-the-shelf software, should not be included in the measurement of progress-to-completion.

.83 Labor hours often are chosen as the basis for measuring progress-to-completion, because they closely approximate the output of labor-intensive processes and often are established more easily than output measures. Core software requires labor-intensive customization. Therefore, labor hours provide a good measure of progress-to-completion on elements of software arrangements that involve the customization of core software.

.84 If the measurement of progress-to-completion is based primarily on costs, the contribution to that progress of hardware and software that were produced specifically for the arrangement may be measurable and recognizable before delivery to the user's site. For example, efforts to install, configure, and customize the software may occur at the vendor's site.

The costs of such activities are measurable and recognizable at the time the activities are performed.

.85 Output Measures. Progress on arrangements that call for the production of identifiable units of output can be measured in terms of the value added or milestones reached. Although progress-to-completion based on output measures is measured directly from results achieved, thus providing a better approximation of progress than is provided by input measures, output measures may be somewhat unreliable because of the difficulties associated with establishing them.

.86 In order for the value added to be verifiable, the vendor must identify elements or subcomponents of those elements. If output measures are neither known nor reasonably estimable, they should not be used to measure progress-to-completion.

.87 If value added by off-the-shelf software is to be included in the measurement of progress-to-completion, such software cannot require more than minor modifications and must be usable by the customer for the customer’s purpose in the customer’s environment. If more than minor modifications or additions to the off-the-shelf software are necessary to meet the functionality required under the arrangement terms, either by changing or making additions to the software, or because the software would not be usable by the customer in its off-the-shelf form for the customer's purpose in the customer's environment, it should be accounted for as core software.

.88 Value added by the customization of core software should be included in the measurement of progress-to-completion of the customization and installation at the user's site. However, if the installation and customization processes are divided into separate output modules, the value of core software associated with the customization of a module should be included in the measurement of progress-to-completion when that module is completed.

.89 Contract milestones may be based on contractual project plans. Contractual provisions generally require the performance of specific tasks with the approval or acceptance by the customer; project plans generally schedule inspections in which the project's status is reviewed and approved by management. The completion of tasks that trigger such inspections are natural milestones because they are subject to relatively independent review as an intrinsic part of the project management process.

.90 Considerations other than progress-to-completion affect the amounts that become billable at particular times under many arrangements. Accordingly, although the achievement of contract milestones may cause arrangement revenues to become billable under the arrangement, the amounts billable should be used to measure progress-to-completion only if such amounts indeed indicate such progress.

.91 The milestones that are selected to measure progress-to-completion should be part of the management review process. The percentage-of-completion designated for each milestone should be determined considering the experience of the vendor on similar projects.

.92 This SOP is effective for transactions entered into in fiscal years beginning after December 15, 1997. Earlier application is encouraged as of the beginning of fiscal years or interim periods for which financial statements or information have not been issued. Retroactive application of the provisions of this SOP is prohibited.

13. *AICPA Statement of Position 98-4, Deferral of the Effective Date of a Provision of SOP 97-2, Software Revenue Recognition* provides the following:

Conclusions

.05 The second sentences of paragraphs 10, 37, 41, and 57 of SOP 97-2, which limit what is considered VSOE [vendor-specific objective evidence] of the fair value of the various elements in a multiple-element arrangement, and the related examples noted in paragraph .03 of this SOP need not be applied to transactions entered into before fiscal years beginning after March 15, 1999.

.06 All other provisions of SOP 97-2, including the remainder of paragraph 10, should be applied as stated in SOP 97-2. Accordingly, this SOP does not alter the requirements that (a) any allocation of the fee in a multiple-element arrangement to the various elements should be based on the fair values of each element, (b) those fair values must be supported by VSOE, and (c) in instances where there is insufficient VSOE of the fair values of each element to allow for an allocation of revenue to each element, all revenue from the arrangement should be deferred pursuant to paragraph 12 of that SOP.

Effective Date and Transition

.07 This SOP is effective as of March 31, 1998. If an enterprise had applied SOP 97-2 in an earlier period for financial statements or information already issued prior to the promulgation of this SOP, amounts reported in those financial statements or as part of that information may be restated to reflect the deferral of the effective date of the second sentences of paragraphs 10, 37, 41, and 57 of SOP 97-2 and the related examples noted in paragraph .03 of this SOP.

14. *AICPA Statement of Position 98-9, Modification of SOP 97-2, Software Revenue Recognition, With Respect to Certain Transactions* provides the following:

Conclusions

.06 The following changes are made to SOP 97-2.

a. The following sentence is added to the end of paragraph 11 of SOP 97-2.

Moreover, to the extent that a discount exists, the residual method described in paragraph 12 [of SOP 97-2] attributes that discount entirely to the delivered elements.

b. The following is added to the end of paragraph 12 of SOP 97-2.

There may be instances in which there is vendor-specific objective evidence of the fair values of all undelivered elements in an arrangement but vendor-specific objective evidence of fair value does not exist for one or more of the delivered elements in the arrangement. In such instances, the fee should be recognized using the residual method, provided that (a) all other applicable revenue recognition criteria in this SOP [SOP 97-2] are met and (b) the fair value of all of the undelivered elements is less than the arrangement fee. Under the residual method, the arrangement fee is recognized as follows: (a) the total fair value of the undelivered elements, as indicated by vendor-specific objective evidence, is deferred and (b) the difference between the total arrangement fee and the amount deferred for the undelivered elements is recognized as revenue related to the delivered elements.

c. The following example is added to appendix A of SOP 97-2, following "Multiple Element Arrangements—Products and Services—Example 3."

Multiple Element Arrangements—Products and Services—Example 4

Facts
A vendor sells software product A for $950. The license arrangement for product A always includes one year of "free" PCS. The annual renewal price of PCS is $150.
Revenue Recognition
Assuming that, apart from the lack of vendor-specific objective evidence of the fair value of the delivered software element, all applicable revenue recognition criteria in this SOP [SOP 97-2] are met, revenue in the amount of $150 should be deferred and recognized in

income over the one-year PCS service period. Revenue of $800 should be allocated to the software element and recognized upon delivery of the software.

Discussion
Vendor-specific objective evidence of the fair value of the software does not exist because the software is never sold separately. Consequently, sufficient vendor-specific objective evidence of fair value does not exist for the allocation of revenue to the various elements based on their relative fair values. Paragraph 12 of this SOP [SOP 97-2] states, however, that the residual method should be used when there is vendor-specific objective evidence of the fair values of all undelivered elements; all other applicable revenue recognition criteria in this SOP [SOP 97-2] are met; and the fair value of all of the undelivered elements is less than the total arrangement fee.
If there had been vendor-specific objective evidence of the fair value of the delivered software but not of the undelivered PCS, the entire arrangement fee would be deferred and recognized ratably over the contractual PCS period in accordance with paragraphs 12 and 58 [of SOP 97-2].

.07 Paragraph 5 of SOP 98-4, Deferral of the Effective Date of a Provision of SOP 97-2, Software Revenue Recognition, is replaced with the following.

The second sentences of paragraphs 10, 37, 41, and 57 of SOP 97-2 which limit what is considered VSOE [vendor-specific objective evidence] of the fair value of the various elements in a multiple-element arrangement, and the related examples noted in paragraph 3 of this SOP [SOP 98-4] need not be applied to transactions entered into before fiscal years beginning after March 15, 1999.

.08 All provisions of SOP 97-2 for software transactions outside the scope of this SOP and all other provisions of SOP 97-2 for transactions within the scope of this SOP should be applied as stated in SOP 97-2.

Effective Date and Transition

.09 The provisions of this SOP that extend the deferral of the application of certain passages of SOP 97-2 are effective December 15, 1998. All other provisions of this SOP are effective for transactions entered into in fiscal years beginning after March 15, 1999. Earlier adoption is permitted as of the beginning of fiscal years or interim periods for which financial statements or information has not been issued. Retroactive application of the provisions of this SOP is prohibited.

15. *EITF 00-3: Application of AICPA Statement of Position 97-2 to Arrangements That Include the Right to Use Software Stored on Another Entity's Hardware* provides the following:

EITF 00-3 ISSUE

1. In connection with the licensing of software products, some vendors are offering arrangements in which end users of the software do not take possession of the software. Rather, the software application resides on the vendor's or a third party's hardware, and the customer accesses and uses the software on an as-needed basis over the Internet or via a dedicated line ("hosting").

2. Structurally, the form of those arrangements may be split into two elements-(a) the right to use software and (b) the hosting service. The arrangements may or may not include a license right to the software and the customer may or may not have an option to take delivery of the software.

3. SOP 97-2 establishes standards for recognition of revenue for licensing, selling, leasing, or otherwise marketing computer software. The scope of SOP 97-2 includes arrangements that provide for multiple deliverables (for example, software products and services), which are termed

multiple elements. Under SOP 97-2, if an arrangement includes multiple elements, the fee should be allocated to the various elements based on vendor-specific objective evidence (VSOE) of fair value and recognized when certain criteria are met. One of the criteria for revenue recognition is that delivery has occurred. In addition, if a multiple-element arrangement includes both software and services, the portion of the fee allocable to the services is recognized separately as the services are performed, provided certain criteria are met.

4. The issues are:

Issue 1—Whether SOP 97-2 applies to arrangements that require the vendor to host the software.

Issue 2—Whether SOP 97-2 applies to arrangements in which the customer has an option to take delivery of the software. If so, when does delivery of the software occur and how does the vendor's hosting obligation impact revenue recognition?

EITF 00-3 DISCUSSION

5. The Task Force reached a consensus that a software element covered by SOP 97-2 is only present in a hosting arrangement if the customer has the contractual right to take possession of the software at any time during the hosting period without significant penalty 1 and it is feasible for the customer to either run the software on its own hardware or contract with another party unrelated to the vendor to host the software. Therefore, SOP 97-2 only applies to hosting arrangements in which the customer has such an option. Arrangements that do not give the customer such an option are service contracts and are outside the scope of SOP 97-2. The Task Force observed that hosting arrangements that are service arrangements may include multiple elements that affect how revenue should be attributed.

6. The Task Force also reached a consensus that for those hosting arrangements in which the customer has the option, as described above, to take possession of the software, delivery of the software occurs when the customer has the ability to take immediate possession of the software. The Task Force observed that if the software element is within the scope of SOP 97-2, all of the SOP's requirements for recognizing revenue, including VSOE of fair value and the requirement that the fee allocated to the software element not be subject to forfeiture, refund, or other concession, must be met in order to recognize revenue upon delivery for the portion of the fee allocated to the software element. The portion of the fee allocated to the hosting element should be recognized as the service is provided. The Task Force noted that hosting arrangements that are, pursuant to this Issue, within the scope of SOP 97-2 may also include other elements, such as specified or unspecified upgrade rights, in addition to the software product and the hosting service.

7. The Task Force observed that if the vendor sells, leases, or licenses software that is within the scope of SOP 97-2, then the development costs of such software should be accounted for in accordance with Statement 86. Conversely, if the vendor never sells, leases, or licenses the software in an arrangement within the scope of SOP 97-2, then the software is utilized in providing services and the development costs of the software should be accounted for in accordance with SOP 98-1. However, if during such software's development or modification, the vendor develops a substantive plan to sell, lease, or otherwise market the software externally, the development costs of the software should be accounted for in accordance with Statement 86.

EITF 00-3 STATUS

8. No further EITF discussion is planned.

Statutory Issue Paper No. 112

Accounting for the Costs of Computer Software Developed or Obtained for Internal Use and Web Site Development Costs

STATUS
Finalized December 4, 2000

Current Authoritative Guidance for Costs of Computer Software Developed or Obtained for Internal Use and Web Site Development Costs: SSAP No. 16R
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 82

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Current statutory accounting guidance for accounting for the costs of computer software developed or obtained for internal use and web site development costs is provided in *SSAP No. 16R—Electronic Data Processing Equipment and Software* (SSAP No. 16R) and *SSAP No. 17—Preoperating and Research and Development Costs* (SSAP No. 17). However, these SSAPs do not provide specific guidance on accounting for internal use software and web site development costs.

2. GAAP guidance for these issues is established in *AICPA Statement of Position 98-1*, *Accounting for the Costs of Computer Software Developed or Obtained for Internal Use* (SOP 98-1) and *FASB Emerging Issue Task Force No. 00-2*, *Accounting for Web Site Development Costs* (EITF 00-2). Current statutory guidance is similar to GAAP, except that these issues are not specifically addressed.

3. The purpose of this issue paper is to address SOP 98-1 and EITF 00-2 and establish statutory accounting principles that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

4. This issue paper adopts SOP 98-1 paragraphs 11-42 and paragraph 93 with certain modifications. This issue paper also adopts EITF 00-2 in its entirety.

5. The modifications to SOP 98-1 are as follows:

a. Paragraph 11 states that the accounting for costs of reengineering activities, which often are associated with new or upgraded software applications, is not included within the scope of this SOP. This issue paper expands upon that paragraph to require that such costs shall be expensed as incurred.

b. Paragraph 32 is amended to require that entities who license internal-use computer software follow the operating lease provisions outlined in *SSAP No. 22— Leases* (SSAP No. 22);

c. Paragraph 36 is amended to require that entities follow the amortization guidelines as established in paragraph 9 of *SSAP No. 19—Furniture, Fixtures and Equipment;*

Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements (SSAP No. 19);

d. Paragraph 37 is amended to require that capitalized operating system software shall be depreciated for a period not to exceed three years. Capitalized nonoperating system software shall be depreciated for a period not to exceed five years. This treatment is consistent with the guidelines of SSAP No. 16 and *Issue Paper No. 109—Depreciation of Nonoperating System Software – An Amendment to SSAP No. 16—Electronic Data Processing Equipment and Software* (Issue Paper No. 109);

e. Paragraph 40 is amended to require that if during the development of internal-use software, an entity decides to market the software to others, the entity shall immediately expense any amounts previously capitalized;

f. Paragraph 41 is amended to require entities to follow the disclosure provisions outlined in paragraph 5 of SSAP No. 16 and paragraph 5 of SSAP No. 17;

g. Paragraph 42 is amended to require an effective date of January 1, 2002; and

h. Any software costs capitalized in accordance with this issue paper shall be deemed nonoperating system software costs. Nonoperating system software is a nonadmitted asset in accordance with SSAP No. 16.

6. In accordance with the reporting entity's capitalization policy, immaterial amounts of such costs can be expensed when incurred.

Effective Date and Transition

7. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years beginning on or after January 1, 2002.

DISCUSSION:

8. The modifications to SOP 98-1 were made in order to maintain consistency with current statutory accounting principles and the Statement of Concepts.

a. Paragraph 11 states that the accounting for costs of reengineering activities, which often are associated with new or upgraded software applications, is not included within the scope of this SOP. This issue paper expands upon that paragraph to require that such costs shall be expensed as incurred. This treatment is consistent with the GAAP equivalent contained within *Emerging Issues Task Force Issue No. 97-13*, *Accounting for Costs Incurred in Connection with a Consulting Contract or an Internal Project That Combines Business Process Reengineering and Information Technology Transformation*.

b. Paragraph 32 states that even though *FASB Statement No. 13, Accounting for Leases* (FAS 13), excludes licensing agreements from its scope, entities should analogize to that Statement when determining the asset acquired in a software licensing arrangement. The concepts outlined in FAS 13 are inconsistent with the provisions of SSAP. No. 22, therefore paragraph 32 was amended to require that licensing agreements shall be treated as operating leases;

c. Paragraph 36 was modified to remain consistent with the amortization guidelines contained within SSAP No. 19 paragraph 9;

d. Paragraph 37 was amended to remain consistent with the depreciable lives guidelines contained within SSAP No. 16 and the recently adopted Issue Paper No. 109;

e. Paragraph 40 requires that if, during the development of internal-use software, an entity decides to market the software to others, the entity should follow *FASB Statement No. 86, Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed* (FAS No. 86). Amounts previously capitalized under this SOP should be evaluated at each balance sheet date in accordance with paragraph 10 of FAS No. 86. Capitalized software costs should be amortized in accordance with paragraph 8 of FAS No. 86. Both paragraphs 8 and 10 are rejected in SSAP No. 17 and therefore the most conservative measure is to expense such amounts immediately;

f. Paragraph 41 includes references to various different GAAP pronouncements for its disclosure requirements. This paragraph was modified as SSAP Nos. 16 and 17 already include the pertinent disclosure requirements;

g. Paragraph 42 indicates that SOP 98-1 is effective for financial statements for fiscal years beginning after December 15, 1998. The paragraph was modified to allow an effective date of January 1, 2002 so as to provide ample opportunity for statutory accounting user implementation; and

h. In order to remain consistent with the treatment of nonoperating system software, the nonadmission criteria outlined in paragraph 2 of SSAP No. 16 were included in this issue paper. In order to prevent the possible misclassification of nonoperating system software as operating software, the working group felt it was appropriately conservative to classify all software costs capitalized in accordance with this issue paper as nonoperating system software costs. The Glossary to the SSAPs defines operating and nonoperating system software as:

> The operating system is a program or a series of programs controlling the data job and task management operations of a computer or a computer network through executive scheduling and monitoring. It increases the productivity of a computer installation by managing the allocation of all available computer resources including the control processing unit, main storage and input/output devices.
>
> Nonoperating systems software such as language processors, library routines and debugging aides and other computer software are not considered operating system software.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting

9. In general, capitalization of software is provided for in SSAP No. 16. This issue paper provides more specific guidelines for capitalization of internal software and web site development costs. SSAP No. 16 renders the following instruction:

2. EDP equipment and software generally meet the definition of assets established in *SSAP No. 4—Assets and Nonadmitted Assets*. EDP equipment and operating system software are admitted assets to the extent they conform to the requirements of this statement. Nonoperating system software are nonadmitted assets.

3. EDP equipment and software shall be depreciated for a period not to exceed three years using methods detailed in *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*.

4. The aggregate amount of admitted EDP equipment and operating system software (net of accumulated depreciation) shall be limited to three percent of the reporting entity's capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any EDP equipment and operating system software, net deferred tax assets and net positive goodwill.

Disclosures

5. The following disclosures shall be made in the financial statements:

a. Depreciation and amortization expense for the period;

b. For EDP equipment and operating system software, balances of major classes of depreciable assets, by nature or function, at the balance sheet date;

c. For EDP equipment and operating system software, accumulated depreciation and amortization, either by major classes of depreciable assets or in total, at the balance sheet date; and

d. A general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets.

6. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 5 above shall be included in the annual audited statutory financial reports only.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

8. EDP equipment and software capitalized prior to January 1, 2001 shall be depreciated over the shorter of its remaining useful life or three years.

Generally Accepted Accounting Principles

10. *AICPA Statement of Position 98-1*, *Accounting for the Costs of Computer Software Developed or Obtained for Internal Use* provides the following:

.11 Accounting for costs of reengineering activities, which often are associated with new or upgraded software applications, is not included within the scope of this SOP.

Conclusions

Characteristics of Internal-Use Computer Software

.12 For purposes of this SOP, internal-use software is software having the following characteristics:

a. The software is acquired, internally developed, or modified solely to meet the entity’s internal needs.

b. During the software's development or modification, no substantive plan exists or is being developed to market the software externally.

A substantive plan to market software externally could include the selection of a marketing channel or channels with identified promotional, delivery, billing, and support activities. To be considered a substantive plan under this SOP, implementation of the plan should be reasonably possible. Arrangements providing for the joint development of software for mutual internal use (for example, cost-sharing arrangements) are not substantive plans to market software for purposes of this SOP. Similarly, routine market feasibility studies are not substantive plans to market software for purposes of this SOP.

.13 An entity must meet both characteristics in paragraph .12 for software to be considered for internal use.

.14 An entity's past practices related to selling software may help determine whether the software is for internal use or is subject to a plan to be marketed externally. For example, an entity in the business of selling computer software often both uses and sells its own software products. Such a past practice of both using and selling computer software creates a rebuttable presumption that any software developed by that entity is intended for sale, lease, or other marketing, and thus is subject to the guidance in FASB Statement No. 86.

.15 Computer software to be sold, leased, or otherwise marketed includes software that is part of a product or process to be sold to a customer and should be accounted for under FASB Statement No. 86. For example, software designed for and embedded in a semiconductor chip is included in the scope of FASB Statement No. 86 because it is an integral part of the product. By contrast, software for internal use, though it may be used in developing a product, is not part of or included in the actual product or service sold. If software is used by the vendor in the production of the product or providing the service but the customer does not acquire the software or the future right to use it, the software is covered by this SOP. For example, for a communications company selling telephone services, software included in a telephone switch is part of the internal equipment used to deliver a service but is not part of the product or service actually being acquired or received by the customer.

.16 The Appendix [paragraph .93] provides examples of when computer software is and is not for internal use.

Stages of Computer Software Development

.17 The following table illustrates the various stages and related processes of computer software development.

Preliminary Project Stage	**Application Development Stage**	**Post-Implementation/ Operation Stage**
▪ Conceptual formulation of alternatives	▪ Design of chosen path, including software configuration and software interfaces	▪ Training
▪ Evaluation of alternatives	▪ Coding	▪ Application maintenance
▪ Determination of existence of needed technology	▪ Installation of hardware	
▪ Final selection of alternatives	▪ Testing, including parallel processing phase	

The SOP recognizes that the development of internal-use computer software may not follow the order shown above. For example, coding and testing are often performed simultaneously. Regardless, for costs incurred subsequent to completion of the preliminary project stage, the SOP should be applied based on the nature of the costs incurred, not the timing of their incurrence. For example, while some training may occur in the application development stage, it should be expensed as incurred as required in paragraphs .21 and .23.

Research and Development

.18 The following costs of internal-use computer software are included in research and development and should be accounted for in accordance with the provisions of FAS No. 2:

a. Purchased or leased computer software used in research and development activities where the software does not have alternative future uses.

b. All internally developed internal-use computer software (including software developed by third parties, for example, programmer consultants) if (1) the software is a pilot project (that is, software of a nature similar to a pilot plant as noted in paragraph 9.h. of FASB Statement No. 2) or (2) the software is used in a particular research and development project, regardless of whether the software has alternative future uses.

Capitalize or Expense

.19 Preliminary Project Stage. When a computer software project is in the preliminary project stage, entities will likely—

a. Make strategic decisions to allocate resources between alternative projects at a given point in time. For example, should programmers develop a new payroll system or direct their efforts toward correcting existing problems in an operating payroll system?

b. Determine the performance requirements (that is, what it is that they need the software to do) and systems requirements for the computer software project it has proposed to undertake.

c. Invite vendors to perform demonstrations of how their software will fulfill an entity's needs.

d. Explore alternative means of achieving specified performance requirements. For example, should an entity make or buy the software? Should the software run on a mainframe or a client server system?

e. Determine that the technology needed to achieve performance requirements exists.

f. Select a vendor if an entity chooses to obtain software.

g. Select a consultant to assist in the development or installation of the software.

.20 Internal and external costs incurred during the preliminary project stage should be expensed as they are incurred.

.21 Application Development Stage. Internal and external costs incurred to develop internal-use computer software during the application development stage should be capitalized. Costs to develop or obtain software that allows for access or conversion of old data by new systems should also be capitalized. Training costs are not internal-use software development costs and, if incurred during this stage, should be expensed as incurred.

.22 The process of data conversion from old to new systems may include purging or cleansing of existing data, reconciliation or balancing of the old data and the data in the new system, creation of new/additional data, and conversion of old data to the new system. Data conversion often occurs during the application development stage. Data conversion costs, except as noted in paragraph .21, should be expensed as incurred.

.23 Post-Implementation/Operation Stage. Internal and external training costs and maintenance costs should be expensed as incurred.

.24 Upgrades and Enhancements. For purposes of this SOP, upgrades and enhancements are defined as modifications to existing internal-use software that result in additional functionality—

that is, modifications to enable the software to perform tasks that it was previously incapable of performing. Upgrades and enhancements normally require new software specifications and may also require a change to all or part of the existing software specifications. In order for costs of specified upgrades and enhancements to internal-use computer software to be capitalized in accordance with paragraphs .25 and .26, it must be probable that those expenditures will result in additional functionality.

.25 Internal costs incurred for upgrades and enhancements should be expensed or capitalized in accordance with paragraphs .20-.23. Internal costs incurred for maintenance should be expensed as incurred. Entities that cannot separate internal costs on a reasonably cost-effective basis between maintenance and relatively minor upgrades and enhancements should expense such costs as incurred.

.26 External costs incurred under agreements related to specified upgrades and enhancements should be expensed or capitalized in accordance with paragraphs .20-.23. (If maintenance is combined with specified upgrades and enhancements in a single contract, the cost should be allocated between the elements as discussed in paragraph .33 and the maintenance costs should be expensed over the contract period.) However, external costs related to maintenance, unspecified upgrades and enhancements, and costs under agreements that combine the costs of maintenance and unspecified upgrades and enhancements should be recognized in expense over the contract period on a straight-line basis unless another systematic and rational basis is more representative of the services received.

.27 Capitalization of costs should begin when both of the following occur.

a. Preliminary project stage is completed.

b. Management, with the relevant authority, implicitly or explicitly authorizes and commits to funding a computer software project and it is probable that the project will be completed and the software will be used to perform the function intended. Examples of authorization include the execution of a contract with a third party to develop the software, approval of expenditures related to internal development, or a commitment to obtain the software from a third party.

.28 When it is no longer probable that the computer software project will be completed and placed in service, no further costs should be capitalized, and guidance in paragraphs .34 and .35 on impairment should be applied to existing balances.

.29 Capitalization should cease no later than the point at which a computer software project is substantially complete and ready for its intended use. For purposes of this SOP, computer software is ready for its intended use after all substantial testing is completed.

.30 New software development activities should trigger consideration of remaining useful lives of software that is to be replaced. When an entity replaces existing software with new software, unamortized costs of the old software should be expensed when the new software is ready for its intended use.

Capitalizable Costs

.31 Costs of computer software developed or obtained for internal use that should be capitalized include only the following:

a. External direct costs of materials and services consumed in developing or obtaining internal-use computer software. Examples of those costs include but are not limited to fees paid to third parties for services provided to develop the software during the application development stage, costs incurred to obtain computer software from third parties, and travel expenses incurred by employees in their duties directly associated with developing software.

b. Payroll and payroll-related costs (for example, costs of employee benefits) for employees who are directly associated with and who devote time to the internal-use computer software project, to the extent of the time spent directly on the project. Examples of employee activities include but are not limited to coding and testing during the application development stage.

c. Interest costs incurred while developing internal-use computer software. Interest should be capitalized in accordance with the provisions of FASB Statement No. 34, Capitalization of Interest Cost.

General and administrative costs and overhead costs should not be capitalized as costs of internal-use software.

.32 Entities often license internal-use software from third parties. Though *FASB Statement No. 13, Accounting for Leases*, excludes licensing agreements from its scope, entities should analogize to that Statement when determining the asset acquired in a software licensing arrangement.

Multiple-Element Software Arrangements Included in Purchase Price

.33 Entities may purchase internal-use computer software from a third party. In some cases, the purchase price includes multiple elements, such as training for the software, maintenance fees for routine maintenance work to be performed by the third party, data conversion costs, reengineering costs, and rights to future upgrades and enhancements. Entities should allocate the cost among all individual elements. The allocation should be based on objective evidence of fair value of the elements in the contract, not necessarily separate prices stated within the contract for each element. Those elements included in the scope of this SOP should be accounted for in accordance with the provisions of this SOP.

Impairment

.34 Impairment should be recognized and measured in accordance with the provisions of FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of. Paragraph 8 of FASB Statement No. 121 requires that assets should be grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets. FASB Statement No. 121 guidance is applicable, for example, when one of the following occurs related to computer software being developed or currently in use:

a. Internal-use computer software is not expected to provide substantive service potential,
b. A significant change occurs in the extent or manner in which the software is used or is expected to be used,
c. A significant change is made or will be made to the software program,
d. Costs of developing or modifying internal-use computer software significantly exceed the amount originally expected to develop or modify the software.

.35 Paragraph 10 of FASB Statement No. 121 requires that “if the asset is not expected to provide any service potential to the entity, the asset shall be accounted for as if abandoned or held for disposal in accordance with the provisions of paragraph 15 of [FASB Statement No. 121].” When it is no longer probable that computer software being developed will be completed and placed in service, the asset should be reported at the lower of the carrying amount or fair value, if any, less costs to sell. The rebuttable presumption is that such uncompleted software has a fair value of zero. Indications that the software may no longer be expected to be completed and placed in service include the following:

a. A lack of expenditures budgeted or incurred for the project
b. Programming difficulties that cannot be resolved on a timely basis
c. Significant cost overruns
d. Information has been obtained indicating that the costs of internally developed software will significantly exceed the cost of comparable third-party software or software products, so that management intends to obtain the third-party software or software products instead of completing the internally developed software

e. Technologies are introduced in the marketplace, so that management intends to obtain the third-party software or software products instead of completing the internally developed software

f. Business segment or unit to which the software relates is unprofitable or has been or will be discontinued.

Amortization

.36 The costs of computer software developed or obtained for internal use should be amortized on a straight-line basis unless another systematic and rational basis is more representative of the software's use.

.37 In determining and periodically reassessing the estimated useful life over which the costs incurred for internal-use computer software will be amortized, entities should consider the effects of obsolescence, technology, competition, and other economic factors. Entities should consider rapid changes that may be occurring in the development of software products, software operating systems, or computer hardware and whether management intends to replace any technologically inferior software or hardware. Given the history of rapid changes in technology, software often has had a relatively short useful life.

.38 For each module or component of a software project, amortization should begin when the computer software is ready for its intended use, regardless of whether the software will be placed in service in planned stages that may extend beyond a reporting period. For purposes of this SOP, computer software is ready for its intended use after all substantial testing is completed. If the functionality of a module is entirely dependent on the completion of other modules, amortization of that module should begin when both that module and the other modules upon which it is functionally dependent are ready for their intended use.

Internal-Use Computer Software Marketed

.39 If, after the development of internal-use software is completed, an entity decides to market the software, proceeds received from the license of the computer software, net of direct incremental costs of marketing, such as commissions, software reproduction costs, warranty and service obligations, and installation costs, should be applied against the carrying amount of that software. No profit should be recognized until aggregate net proceeds from licenses and amortization have reduced the carrying amount of the software to zero. Subsequent proceeds should be recognized in revenue as earned.

.40 If, during the development of internal-use software, an entity decides to market the software to others, the entity should follow FASB Statement No. 86. Amounts previously capitalized under this SOP should be evaluated at each balance sheet date in accordance with paragraph 10 of FASB Statement No. 86. Capitalized software costs should be amortized in accordance with paragraph 8 of FASB Statement No. 86. A pattern of deciding to market internal-use software during its development creates a rebuttable presumption that any software developed by that entity is intended for sale, lease, or other marketing, and thus is subject to the guidance in FASB Statement No. 86.

Disclosures

.41 This SOP does not require any new disclosures; disclosure should be made in accordance with existing authoritative literature, including *Accounting Principles Board (APB) Opinion No. 12, Disclosure of Depreciable Assets and Depreciation; APB Opinion No. 22, Disclosure of Accounting Policies* (for example, amortization methods); FASB Statement Nos. 2 and 121; and *SOP 94-6, Disclosure of Certain Significant Risks and Uncertainties*.

Effective Date and Transition

.42 This SOP is effective for financial statements for fiscal years beginning after December 15, 1998, and should be applied to internal-use computer software costs incurred in those fiscal years for all projects, including those projects in progress upon initial application of this SOP. Earlier application is encouraged in fiscal years for which annual financial statements have not been issued.

Appendix

.93

Examples Illustrating When Computer Software Is for Internal Use

1. A manufacturing entity purchases robots and customizes the software that the robots use to function. The robots are used in a manufacturing process that results in finished goods.
2. An entity develops software that helps it improve its cash management, which may allow the entity to earn more revenue.
3. An entity purchases or develops software to process payroll, accounts payable, and accounts receivable.
4. An entity purchases software related to the installation of an online system used to keep membership data.
5. A travel agency purchases a software system to price vacation packages and obtain airfares.
6. A bank develops software that allows a customer to withdraw cash, inquire about balances, make loan payments, and execute wire transfers.
7. A mortgage loan servicing entity develops or purchases computer software to enhance the speed of services provided to customers.
8. A telecommunications company develops software to run its switches that are necessary for various telephone services such as voice mail and call forwarding.
9. An entity is in the process of developing an accounts receivable system. The software specifications meet the company’s internal needs and the company did not have a marketing plan before or during the development of the software. In addition, the company has not sold any of its internal-use software in the past. Two years after completion of the project, the company decided to market the product to recoup some or all of its costs.
10. A broker-dealer entity develops a software database and charges for financial information distributed through the database.
11. An entity develops software to be used to create components of music videos (for example, the software used to blend and change the faces of models in music videos). The entity then sells the final music videos, which do not contain the software, to another entity.
12. An entity purchases software to computerize a manual catalog and then sells the manual catalog to the public.
13. A law firm develops an intranet research tool that allows firm members to locate and search the firm’s databases for information relevant to their cases. The system provides users with the ability to print cases, search for related topics, and annotate their personal copies of the database.

Examples Illustrating When Computer Software Is Not Internal Use

14. An entity sells software required to operate its products, such as robots, electronic game systems, video cassette recorders, automobiles, voice-mail systems, satellites, and cash registers.
15. A pharmaceutical company buys machines and writes all of the software that allows the machines to function. The pharmaceutical company then sells the machines, which help control the dispensation of medication to patients and help control inventory, to hospitals.
16. A semiconductor entity develops software embedded in a microcomputer chip used in automobile electronic systems.
17. An entity purchases software to computerize a manual catalog and then sells the computer version and the related software to the public.

18. A software company develops an operating system for sale and for internal use. Though the specifications of the software meet the company's internal needs, the company had a marketing plan before the project was complete. In addition, the company has a history of selling software that it also uses internally and the plan has a reasonable possibility of being implemented.
19. An entity is developing software for a point-of-sale system. The system is for internal use; however, a marketing plan is being developed concurrently with the software development. The plan has a reasonable possibility of being implemented.
20. A telecommunications entity purchases computer software to be used in research and development activities.
21. An entity incurs costs to develop computer software for another entity under a contract with that other entity.

11. EITF 00-2 provides the following:

EITF 00-2 ISSUE

1. Companies are incurring significant costs to develop Internet web sites. These companies may be "Internet" companies, traditional "brick and mortar" companies, or service companies. The web sites may be used to promote or advertise products or services, supplant manual processes or services, sell products (including software) or services, or to do a combination of all three. Further, due to rapid changes in technology, new uses for web sites are being developed. Diversity in practice exists in accounting for web site development costs. Some entities capitalize web site development costs, others expense such costs, and still others capitalize some of those costs and expense the rest.

2. The issue is how an entity should account for costs incurred to develop a web site.

EITF 00-2 DISCUSSION

3. The Task Force discussed the accounting for web site development costs and reached the following consensuses.

Costs Incurred in the Planning Stage

4. Planning stage activities are described in detail in Exhibit 00-2A. The Task Force reached a consensus that, regardless of whether the web site planning activities specifically relate to software, all costs incurred in the planning stage should be expensed as incurred.

Costs Incurred in the Web Site Application and Infrastructure Development Stage

5. As described in Exhibit 00-2A, the web site application and infrastructure development stage involves acquiring or developing hardware and software to operate the web site. The cost of hardware is outside the scope of this Issue. SOP 98-1 provides guidance for distinguishing between internal-use software and software to be sold, leased, or otherwise marketed. A key aspect of the definition of internal-use software is that it excludes software for which a plan exists or for which a plan is being developed to market the software externally. The Task Force reached a consensus that all costs relating to software used to operate a web site should be accounted for under SOP 98-1 unless a plan exists or is being developed to market the software externally, in which case the costs relating to the software should be accounted for pursuant to Statement 86. Fees incurred for web site hosting, which involve the payment of a specified, periodic fee to an Internet service provider in return for hosting the web site on its server(s) connected to the Internet, generally would be expensed over the period of benefit.

Costs Incurred to Develop Graphics

6. For purposes of this Issue, graphics involve the overall design of the web page (use of borders, background and text colors, fonts, frames, buttons, and so forth) that affect the "look and feel" of the web page and generally remain consistent regardless of changes made to the content. The Task Force reached a consensus that graphics are a component of software and that the costs of developing initial graphics should be accounted for pursuant to SOP 98-1 for internal-use software, and pursuant to Statement 86 for software marketed externally. Modifications to graphics after a web site is launched should be evaluated to determine whether the modifications represent maintenance or enhancements of the web site. The accounting for maintenance and enhancements is discussed in paragraph 8.

Costs Incurred to Develop Content

7. Content refers to information included on the web site, which may be textual or graphical in nature (although the specific graphics described in paragraph 6, above, are excluded from content). For example, articles, product photos, maps, and stock quotes and charts are all forms of content. Content may reside in separate databases that are integrated into (or accessed from) the web page with software, or it may be coded directly into the web pages. The Task Force observed that the accounting for web site content involves issues that also apply to other forms of content or information that are not unique to web sites. Accordingly, the Task Force concluded that the accounting for content should be addressed as a separate EITF Issue.

Costs Incurred in the Operating Stage

8. As described in Exhibit 00-2A, costs incurred during the operating stage include training, administration, maintenance, and other costs to operate an existing web site. The Task Force reached a consensus that the costs of operating a web site should not be accounted for differently from the costs of other operations; that is, those costs should be expensed as incurred. However, costs incurred in the operation stage that involve providing additional functions or features to the web site should be accounted for as, in effect, new software. That is, costs of upgrades and enhancements that add functionality should be expensed or capitalized based on the general model of SOP 98-1 (which requires certain costs relating to upgrades and enhancements to be capitalized if it is probable that they will result in added functionality) or, for software that is marketed, Statement 86 (which applies its software capitalization model to "product enhancements," which include improvements that extend the life or significantly improve the marketability of a product). The Task Force observed that the determination of whether a change to web site software results in (a) an upgrade or enhancement, if internal-use software, or (b) a product enhancement, if externally marketed software, is a matter of judgment based on the specific facts and circumstances. The Task Force also observed that SOP 98-1 indicates that entities that cannot separate internal costs on a reasonably cost-effective basis between maintenance and relatively minor upgrades and enhancements must expense such costs as incurred.

Transition

9. The consensuses in this Issue are effective for web site development costs incurred for fiscal quarters beginning after June 30, 2000 (including costs incurred for projects in process as of the beginning of the quarter of adoption of these consensuses). Earlier application is encouraged. The Task Force observed that an entity may elect to adopt the consensuses as a cumulative effect of a change in accounting principles in accordance with Opinion 20.

10. Exhibit 00-2A illustrates the application of the above-described consensuses to specific web site development costs.

EITF 00-2 STATUS

11. No further EITF discussion is planned.

EXHIBIT 00-2A
APPLICATION OF THE EITF CONSENSUSES ON ISSUE 00-2

Planning Stage	
Web Site Development Activity	**Accounting Required by Issue 00-2**
a. Develop a business, project plan, or both. This may include identification of specific goals for the web site (for example, to provide information, supplant manual processes, conduct e-commerce, and so forth), a competitive analysis, identification of the target audience, creation of time and cost budgets, and estimates of the risks and benefits.	Expense as incurred.
b. Determine the functionalities (for example, order placement, order and shipment tracking, search engine, e-mail, chat rooms, and so forth) of the web site.	Expense as incurred.
c. Identify necessary hardware (for example, the server) and web applications. Web applications are the software needed for the web site's functionalities. Examples of web applications are search engines, interfaces with inventory or other back-end systems, as well as systems for registration and authentication of users, commerce, content management, usage analysis, and so forth.	Expense as incurred.
d. Determine that the technology necessary to achieve desired functionalities exists. Factors might include, for example, target audience numbers, user traffic patterns, response time expectations, and security requirements.	Expense as incurred.
e. Explore alternatives for achieving functionalities (for example, internal versus external resources, custom-developed versus licensed software, company-owned versus third-party-hosted applications and servers).	Expense as incurred.
f. Conceptually formulate and/or identify graphics and content (refer to "Graphics and Content Development Stages" for further discussion).	Expense as incurred.
g. Invite vendors to demonstrate how their web applications, hardware, or service will help achieve the web site's functionalities.	Expense as incurred.
h. Select external vendors or consultants.	Expense as incurred.
i. Identify internal resources for work on the web site design and development.	Expense as incurred.
j. Identify software tools and packages required for development purposes.	Expense as incurred.
k. Address legal considerations such as privacy, copyright, trademark, and compliance.	Expense as incurred.

Web Site Application and Infrastructure Development Stage	
Web Site Development Activity	**Accounting Required by Issue 00-2**
	The discussion of web site application and infrastructure development assumes that any software is developed for the entity's internal needs and no plan exists or is being developed to market the software externally (refer to paragraph 12 of SOP 98-1). Software for which a plan exists or is being developed to market the software externally is subject to Statement 86, and costs associated with the development of that software should be expensed until technological feasibility is established (refer to paragraph 4 of Statement 86).
a. Acquire or develop the software tools required for the development work (for example, HTML editor, software to convert existing data to HTML form, graphics software, multimedia software, and so forth).	Apply SOP 98-1. Costs incurred to purchase software tools, or costs incurred during the application development stage for internally developed tools, generally should be capitalized unless they are used in research and development and (1) do not have any alternative future uses or (2) are internally developed and represent a pilot project or are being used in a specific research and development project (see paragraph 18 of SOP 98-1).
b. Obtain and register an Internet domain name.	Generally, capitalize pursuant to paragraph 24 of APB 17.
c. Acquire or develop software necessary for general web site operations, including server operating system software, Internet server software, web browser software, and Internet protocol software.	Apply SOP 98-1. Generally, capitalize pursuant to paragraphs 21 and 31 of SOP 98-1.
d. Develop or acquire and customize code for web applications (for example, catalog software, search engines, order processing systems, sales tax calculation software, payment systems, shipment tracking applications or interfaces, e-mail software, and related security features).	Apply SOP 98-1. Generally, capitalize pursuant to paragraphs 21 and 31 of SOP 98-1.
e. Develop or acquire and customize database software and software to integrate distributed applications (for example, corporate databases and accounting systems) into web applications.	Apply SOP 98-1. Generally, capitalize pursuant to paragraphs 21 and 31 of SOP 98-1.
f. Develop HTML web pages or develop templates and write code to automatically create HTML pages.	Apply SOP 98-1. Generally, capitalize pursuant to paragraphs 21 and 31 of SOP 98-1.
g. Purchase the web and application server(s), Internet connection (bandwidth), routers, staging servers (where preliminary changes to the web site are made in a test environment), and production servers (accessible to customers using the web site). Alternatively, these services may be provided by a third party via a hosting arrangement.	Acquisitions of servers and related hardware infrastructure are outside the scope of this Issue. Payments for hosting arrangements should be expensed over the period of benefit.

h. Install developed applications on the web server(s).	Apply SOP 98-1. Generally, capitalize pursuant to paragraphs 21 and 31 of SOP 98-1.
i. Create initial hypertext links to other web sites or to destinations within the web site. Depending on the site, links may be extensive or minimal.	Apply SOP 98-1. Generally, capitalize pursuant to paragraphs 21 and 31 of SOP 98-1.
j. Test the web site applications (for example, stress testing).	Apply SOP 98-1. Generally, capitalize pursuant to paragraphs 21 and 31 of SOP 98-1.

Graphics and Content Development Stages	
Web Site Development Activity	**Accounting Required by Issue 00-2**
a. Create initial graphics for the web site. Graphics include the design or layout of each page (that is, the graphical user interface), color, images, and the overall "look and feel" and "usability" of the web site. Creation of graphics may involve coding of software, either directly or through the use of graphic software tools. The amount of coding depends on the complexity of the graphics.	Apply SOP 98-1. Initial graphics are part of the software and generally should be capitalized pursuant to paragraph 21 of SOP 98-1.
b. Create content or populate databases. Content may be created or acquired to populate databases or web pages. Content may be acquired from unrelated parties or may be internally developed.	To be addressed in a future EITF Issue.
c. Enter initial content into the web site. Content is text or graphical information (exclusive of graphics described in (a) above) on the web site which may include information on the entity, products offered, information sources that the user subscribes to, and so forth. Content may originate from databases that must be converted to HTML pages or databases that are linked to HTML pages through integration software. Content also may be coded directly into web pages.	Apply SOP 98-1. Paragraph 22 of SOP 98-1 specifies that "data conversion costs" should be expensed as incurred. Similarly, costs to input content into a web site generally should be expensed as incurred. Software used to integrate a database with a web site generally should be capitalized pursuant to paragraph 21 of SOP 98-1.

Operating Stage	
Web Site Development Activity	**Accounting Required by Issue 00-2**
a. Train employees involved in support of the web site.	Apply SOP 98-1. Generally, expense as incurred pursuant to paragraph 23 of SOP 98-1.
b. Register the web site with Internet search engines.	Expense as incurred. These expenditures represent advertising costs and are expensed as incurred pursuant to paragraph 26 of SOP 93-7.
c. Perform user administration activities.	Apply SOP 98-1. Generally, expense as incurred pursuant to paragraph 23 of SOP 98-1.
d. Update site graphics (for updates of graphics related to major enhancements, refer to (h), below).	Apply SOP 98-1. Generally, expense as incurred pursuant to paragraph 23 of SOP 98-1.

e. Perform regular backups.	Apply SOP 98-1. Generally, expense as incurred pursuant to paragraph 23 of SOP 98-1.
f. Create new links.	Apply SOP 98-1. Generally, expense as incurred pursuant to paragraph 23 of SOP 98-1.
g. Verify that links are functioning properly and update existing links (that is, link management or maintenance).	Apply SOP 98-1. Generally, expense as incurred pursuant to paragraph 23 of SOP 98-1.
h. Add additional functionalities or features.	Apply SOP 98-1. Generally, capitalize if they meet the definition of "upgrades and enhancements" in paragraph 24 of SOP 98-1.
i. Perform routine security reviews of the web site and, if applicable, of the third-party host.	Apply SOP 98-1. Generally, expense as incurred pursuant to paragraph 23 of SOP 98-1.
j. Perform usage analysis.	Apply SOP 98-1. Generally, expense as incurred pursuant to paragraph 23 of SOP 98-1.

Statutory Issue Paper No. 113

Mezzanine Real Estate Loans

STATUS
Finalized June 11, 2001

Original SSAP and Current Authoritative Guidance: SSAP No. 83

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The purpose of this issue paper is to establish statutory accounting principles for the accounting and reporting guidelines of Mezzanine Real Estate Loans (MREL).

SUMMARY CONCLUSION

2. For statutory accounting purposes, a MREL shall be defined as a debt obligation that is not a security, which is secured by a pledge of equity interest in an entity that owns real estate. (A security is a share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer) that:

a. Either is represented by an instrument issued in bearer or registered form, or if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer;

b. Is of a type commonly dealt in on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment; and

c. Either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations).

3. MREL's meet the definition of assets as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this issue paper.

4. Reporting entities holding MREL's shall follow the accounting and disclosure requirements defined within *SSAP No. 37—Mortgage Loans* (SSAP No. 37).

5. In order for a MREL to qualify as an admitted asset, the MREL agreement (the agreement) shall:

a. Require that each pledgor abstain from granting additional security interests in the equity interest pledged; and

b. In addition to satisfaction of the requirements set forth in paragraphs c and d below, the MREL lender shall employ techniques to minimize the likelihood or impact of a bankruptcy filing on the part of the real estate owner and, if different, on the part of the mezz borrower. These techniques may include (by way of example and not limitation) one or more of the following: (i) separateness covenants, (ii) cash management techniques, (iii) exceptions to the non-recourse provisions for damages arising out of the mezz borrower's failure to comply with covenants prohibiting additional debt, transfers of the real estate, transfers of pledged interests, and violation of the single asset/single purpose covenants, (iv) full recourse liability in the event of a bankruptcy filing on the part of the real estate owner and, if different, on the part of the mezz borrower, and (v) loan guaranties; and

The selection of techniques that are applied in the instance of any particular MREL to achieve said purposes requires an exercise of judgment by the MREL lender. The reasonableness of the techniques utilized in any particular MREL will be assessed in light of the credit characteristics of the MREL borrower, any guarantors and the underlying real estate at the time of origination. Utilizing this standard provides flexibility to the MREL lender and provides a basis for the regulator and auditor in analyzing the reasonableness of the judgment of the MREL lender; and

c. The real estate owner and, if different, the mezz borrower shall:

i. Hold no assets other than, in the case of the real estate owner, the real property, and in the case of the mezz borrower (if different), the equity interest in the real estate owner;

ii. Not engage in any business other than, in the case of the real estate owner, the ownership and operation of the real estate, and in the case of the mezz borrower (if different), holding an ownership interest in the real estate owner; and

iii. Not incur additional debt, other than limited trade payables, a first mortgage loan (in the case of the real estate owner), and the MREL (in the case of the mezz borrower, if different).

d. At the time of the initial investment, the MREL lender shall corroborate that the sum of the first mortgage and the MREL does not exceed 100% of the value of the real estate as evidenced by a current appraisal. Acceptable appraisal methods are described in paragraph 11 of *SSAP No. 40—Real Estate Investments*.

e. The MREL lender shall report in Appendix A-001 to its annual statement the amount and percentages of its total admitted assets held in MREL and the largest three investments held in MREL except that such detail shall not be required for assets held in MREL totaling less than 2.5% of its total admitted assets.

Effective Date

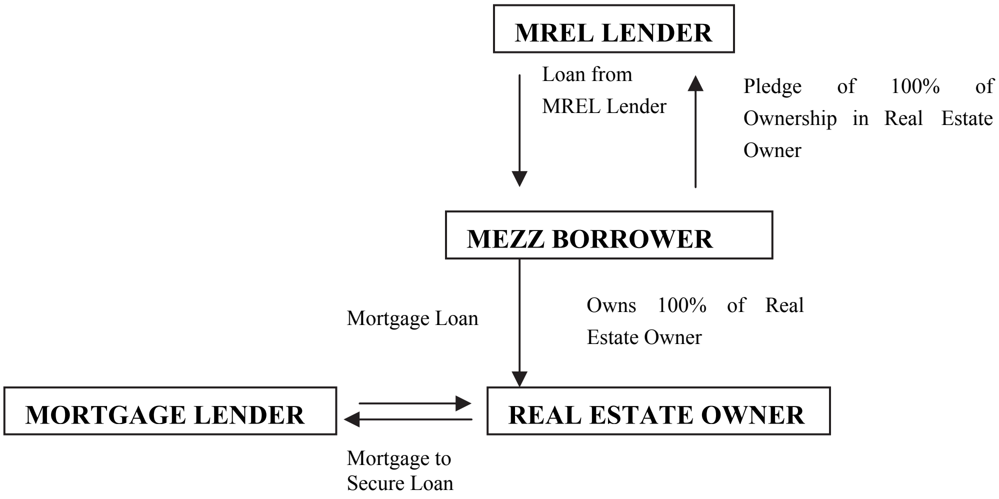
6. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date for years ending on or after December 31, 2001.

DISCUSSION

Definition of MREL

7. An MREL is a loan secured by a pledge of direct or indirect equity interests in an entity that owns real estate (the "real estate owner"). The real estate owner is typically the borrower under a mortgage loan secured by the same real estate. The MREL borrower ("mezz borrower") may be the real estate owner or one or more of the holder(s) of the direct or indirect equity interest(s) in the real estate owner. As used herein, "direct equity interests" means the then issued and outstanding shares or units of partnership, membership or other beneficial interests in the real estate owner, and "indirect equity

interests" means the then issued and outstanding shares or units of partnership, membership or other beneficial interests in a member, partner, shareholder or other holder of direct equity interests in the real estate owner. The following illustrates one typical MREL structure:



Typical Sources and Market Characteristics of MRELs

8. Significant portions of large real estate loans are now originated with the intent of securitizing[1] the real estate mortgage loan. Mortgage loans targeted for securitization are typically subject to uniform underwriting and structuring requirements, including requirements that (a) the mortgage loan satisfy a loan to value ratio of 65% or less, (b) prohibit encumbrance of the real estate to secure additional debt, and (c) the borrower satisfy certain SPE (special purpose entity) requirements (as described below).

9. In many instances, the subject real estate project requires financing in excess of 65% of the value of the property. By utilizing a MREL, the real estate owner is able to obtain a low cost first mortgage loan and the mezz borrower is able to obtain additional project financing in the form of the MREL without jeopardizing the securitization of the first mortgage loan by subjecting the real estate to additional liens.

10. Like its securitized mortgage loan counterpart, MRELs typically have common underwriting and structuring characteristics. As noted above, MRELs are secured by a pledge of the mezz borrower's equity interest in the real estate owner. Similar to securitized loan requirements, the documents evidencing the MREL require that (a) the mezz borrower abstain from granting additional security interests in its equity interest in the real estate owner, and (b) both the real estate owner and the mezz borrower be a special purpose, bankruptcy remote corporation, limited liability company or limited partnership (a "SPE"). In the case of a limited partnership SPE, the general partner of such SPE must in turn be a SPE (and if the real estate owner is a limited partnership, the general partnership interest is also pledged to secure the MREL). The SPE requirements are intended to protect both the mortgage lender and the MREL lender from the risks associated with bankruptcy filings and consolidation of claims relating to affiliated entities.[2]

[1] A "securitized" real estate loan is a loan combined with other loans secured by real estate for sale in the secondary market, typically in the form of a commercial mortgaged backed security.

[2] In order to comply with typical SPE requirements, an entity must, among other things: (i) hold no assets other than, in the case of the real estate owner, the real property, and in the case of the mezz borrower, the equity interest in the real estate owner; (ii) not engage in any business other than, in the case of the real estate owner, the ownership and operation of the real estate, and in the case of the mezz borrower, the ownership of the real estate owner; (iii) not incur additional debt, other than limited trade payables, a first mortgage loan (in the case of the real estate owner), and the MREL (in the case of the mezz borrower); and (iv) have at all times an independent director or member whose vote is required for, among other things, a voluntary bankruptcy filing.

MREL Lender Remedies

11. Should the mezz borrower default on its obligations under the MREL, the MREL lender has the right to assume ownership and control of the real estate owner by realizing upon its security interest in the equity interest in the real estate owner. Similar to foreclosure of a junior mortgage position, the goal of this remedy is to gain control over the ownership and operation of the real estate and thereby preserve both the good standing of the mortgage loan and the equity in the real estate that will ultimately repay the MREL.

12. Unlike foreclosure of a junior mortgage, the remedies afforded a MREL lender can typically be exercised very quickly and reach conclusion much faster than foreclosure; in most jurisdictions, a MREL lender can exercise remedies under the applicable Uniform Commercial Code (UCC)[3] without the need for judicial action. Further, most MRELs are structured with cash management requirements that protect both the mortgage lender and the MREL lender from misapplication of rents and other income generated by the real estate. Finally, unlike most holders of junior mortgage liens, MREL lenders are typically able to negotiate notice and cure rights from the holders of the mortgage debt. These rights give the MREL lender the ability to preserve the good standing of the mortgage loan (thereby avoiding accrual of default interest and ultimately foreclosure) while the MREL lender exercises its remedies and gains control over the real estate, while remaining subordinate to the first mortgage obligation.

Remedy Comparison

13. Below is a description of several different forms of subordinated real estate investments, the security that the investment relies upon for repayment and the related default/foreclosure scenarios for each type of investment:

	First Mortgage	**Second Mortgage**	**Mezzanine Real Estate Loan**	**Comm. Mtg Back Security (AA & Down)**
Security	First lien on property (deed of trust)	Second lien on property (deed of trust)	Lien on ownership interest in the real estate owner	Rights to subordinated cash flow from trust
Default/Fore-Closure Remedy	Become owner of property free and clear of all liens	Become owner of property subject to first mortgage	Control owner of property subject to first mortgage	Become holder of subordinated interest in cash flow and prop. Residual
Comment		If 1st mortgage not kept/brought current by 2nd then 1st may foreclose	If 1st mortgage not kept/brought current by MREL Lender then 1st may foreclose	

14. As shown above, the downside credit outcome for a MREL is essentially the same as the outcome for a second mortgage. Both investment types rely on excess cash flow beyond the first mortgage for

[3] See Exhibit A for a detail question and answer with respect to the requirements of the UCC for MRELs.

payment, and in a default scenario both ultimately result in the lender controlling real property with a first mortgage in place that requires current payments.

15. Foreclosure of a second mortgage varies by state law (judicial vs. statutory) and for a MREL is generally the same in all states under the UCC. The MREL remedy process is typically quicker than the judicial process and is similar in time to states with a statutory foreclosure process.

16. MRELs are also documented with monthly payment requirements and hard maturity dates. Like loans secured by a second mortgage, MRELs' typical return characteristics do not vary with the amount of cash flow available for payment. MRELs are passive investments, with no or very little authority over management of the real property prior to default, but similar to other debt instruments have protective covenants (rules), which, if violated, trigger the right to exercise the remedies discussed above.

17. MRELs meet the definition of assets as specified in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of SSAP No. 37 and this issue paper (particularly, paragraph 5). Recording MRELs as admitted assets is consistent with the recognition concept in the Statement of Concepts (i.e., the existence of readily marketable assets available when both current and future obligations are due). Due to their similarity to second mortgages, the requirement to account and disclose MRELs in accordance with SSAP No. 37 is concordant with the principle of consistency in the Statement of Concepts.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

18. As MRELs are not currently defined or identified as admitted assets within the Accounting Practices and Procedures Manual, they are currently nonadmitted in accordance with SSAP No. 4

19. The Invested Assets Working Group addressed the admissibility of MRELs at its August 28, 2000 working group meeting. The following represents an excerpt from a report containing its recommendation as to the admissibility of such assets:

> In addition to reviewing the material you provided, the IAWG also heard a presentation (including recommendations) from Interested Persons on Mezzanine Loans. The IAWG agrees that Mezzanine Loans meet the definition of assets contained in *SSAP No. 4—Assets and Nonadmitted Assets* and should be admitted assets if they conform to the requirements of *SSAP No. 37—Mortgage Loans*. However, we also believe Mezzanine Loans should be treated as an entirely new type of asset class. Accordingly, the IAWG recommends that any proposed regulatory accounting guidance first precisely define a mezzanine loan by reference to its structural features and legal characteristics. For example, we understand that the borrower takes ownership rights in the entity owning the property. This legal interest is not the same thing as an interest in real estate secured by a mortgage lien. Therefore, it will be important to identify how the state Uniform Commercial Code will define an ownership interest and how an insurer investor perfects a security interest in ownership rights. Ownership rights in the entity may also subject the insurer to owner related liabilities that should be considered in accounting guidance. Further, to the extent the real estate is to play a significant role in recovering the value of the loan in a default situation, it is also important to understand how the insurer effectively ensures that the borrower cannot further encumber its real estate. In this regard, the IAWG noted that the written discussion paper presented by the Interested Persons did not provide an authoritative description of the structural or other characteristics of this type of asset. The IAWG also recommends that the Risk Based Capital Task Force should determine the appropriate Risk Based Capital treatment for Mezzanine Loans.

Generally Accepted Accounting Principles

ISSUE PAPER 113 – EXHIBIT A

Uniform Commerical Code Questions and Answers

As further background on the treatment and structure of a mezzanine real estate loan, the following questions and answers are presented.

1. How is a security interest of this type characterized under the UCC?

   - Either investment property, general intangible or instrument
   - Security interest in shares of a corporation should be investment property. See § 9-102(a)(49); § 8-102(a)(15); § 8-103(a)
   - Partnership or limited liability company- generally a general intangible. See § 9-102(a)(42)
   - If such interests represented in writing could be classified as "instruments". See § 9-102(47).
   - Possibility of misclassification of an interest in a closely held corporation as an instrument. See In re U.S. Physicians, Inc., 236 B.R. 593 (Bankr. E.D. Penn. 1999)
   - Require borrowers to opt into Article 8. See § 8-102(a)(15)(iii)(b) investment property.

2. How does the insurer perfect its security interest?

   - A security interest in investment property is perfected by either obtaining "control", See § 9-314, or filing a financing statement. See § 9-312(a).
   - An interest that is perfected by control has priority over one perfected by filing. See § 9-328.
   - A secured party has control of investment property when the secured party may transfer that property without further consent from the owner. See § 8-106.
   - If the collateral is a certificated security in bearer form control is achieved by possession. See § 8-106(a).
   - If the collateral is a certificated security in registered form control is achieved when the secured party takes possession of the certificate and the certificate is endorsed to the party or is registered in the party's name upon issue or transfer. See § 8-106(b). Certificated securities are accompanied by executed stock powers.
   - If the collateral is an uncertificated security control is achieved by "delivery" of the security, which can be achieved by the secured party becoming the registered owner, or the issuer providing that it will comply with instructions of the secured party without further action from the registered owner. See § 8-106(c). A pledge or security interest in uncertificated securities is typically acknowledged by the issuer delivering an "Initial Transaction Statement". See § 8-408.
   - An interest in a general intangible is perfected by filing a financing statement. See § 9-310.
   - An interest in an instrument may be perfected by filing a financial statement, See § 9-312(a), or by possession. See § 9-313.
   - Security interest extends to all proceeds generated by the pledged securities. See § 9-306(1).
   - Typically, regardless of the nature of the securities pledged, the secured party will file UCC financing statements as a precautionary measure.

3. What steps does the insurer take to realize on the collateral?

   - Once the borrower is in default, the secured party may possess the collateral either through the judicial process or any other peaceful means. See § 9-610(b).
   - If the secured party has perfected by control it has the ability to foreclose on the collateral without additional steps. See § 9 - 601.
   - The UCC provides that disposition of collateral following default must be conducted in a commercially reasonable manner. See § 9-610(b).

4. Does the answer differ under the old UCC and the amended UCC, due to take effect in 2001?

- The most significant change relevant to these transactions is that a security interest in an instrument may now be perfected by filing; where the prior Article 9 allowed perfection of an instrument only by possession. See § 9-312(a).
- Where a subsequent purchaser is unaware of the secured party's interest, the interest may be extinguished upon purchase. See § 9-330(d). This risk is minimized by the secured party obtaining an Initial Transaction Statement confirming registration of the pledge of uncertificated securities and by the secured party taking possession of certificated securities together with executed stock powers.
- The filing of a financing statement does not constitute notice. See § 9-331.

5. Could a fraudulent borrower further encumber the real estate and thus defeat the insurer's interest in the real estate?

Yes, but some factors that mitigate the risk:

- Typically, a mezzanine loan will have a hard lockbox. Since no cash will flow to a subsequent encumbering lender, most mortgagees would be dissuaded from loaning funds with the security of a second mortgage.
- Until securitization sometimes second mortgage is required for just this reason.
- The Special Purpose Entity (SPE) organizational documents will prohibit such a mortgage. Any reputable lender will ask for opinion of counsel that the mortgage is authorized. Reputable counsel would obtain copies of the organizational documents before rendering an opinion and the lender might request such documents as well.
- Sometimes the secured lender is given special member status where its vote/consent is required for specified actions such as the grant of subordinate liens.
- Violation of the entity's organizational documents would subject the grant of a subordinate mortgage to challenge as an ultra vires act.
- The securitized first mortgage will make the grant of additional liens on the property an event of default. No reputable mortgagee would lend money with the risk of an immediate default under the first mortgage. The risk of such a default might also deter the borrower from placing the mortgage on the property.
- The granting of an additional lien will likely trigger liability under the non-recourse carveouts under the first and mezzanine loan documents. Fraud is typically a carve-out from the non-recourse provisions of the documents and violation of the SPE covenants may also be a carve-out. There may be an express carveout for voluntary liens. Assuming the entity/individual guarantying the non-recourse carveouts (typically entities or individuals affiliated with both the mortgage borrower and the mezzanine borrower) has assets available to satisfy claims, the triggering of a significant non-recourse carveout liability is a substantial deterrent. Payments under the carveouts would also provide a source of repayment to the mezzanine lender.

6. Could a lender inherit borrower liabilities for say, environmental remediation?

Yes, but some factors that mitigate the risk:

- Mezzanine lenders typically require Phase I Environmental reports and further testing if the Phase I indicates a problem.
- Prior to foreclosing on the ownership interest in the property owner, the mezzanine lender would update its initial Phase I.

- It is common to obtain for the benefit of the Mezzanine Lender as well as the First Mortgagee an environmental indemnification. The value of this will depend upon the creditworthiness of the indemnifying party.
- The SPE covenants will limit the activities the entity may engage in which if honored would limit the obligations that a mezzanine lender would assume. Violation of the SPE covenants would trigger personal recourse liability in those situations when the SPE covenants are carve-outs to the non-recourse provisions.
- The lender protections against environmental liabilities in a first mortgage situation may be overrated since to sell the property with significant environmental problems is likely to result in significant loss. Most often the lender assesses the environmental liability and may elect to take title and cure the problem before selling. The mezzanine lender may similarly elect to take title and cure the problem if that makes economic sense.
- The mezzanine lender assumes ownership of stock/membership interest/partnership interests in a SPE that holds title to potentially contaminated real estate. By avoiding any action that would cause a court "to pierce the corporate veil" (a difficult standard for a plaintiff to overcome) the mezzanine lender's sole exposure it its investment in the SPE. The Lender can be further insulated by transferring ownership of the real estate SPE to an SPE created by the mezzanine lender.

7. Are there similar types of structural risks introduced by this structure that should be part of the criteria for determining whether mortgage loan treatment is appropriate?

You have identified the three major risks:

- Certainty of ability to foreclose
- Possibility that junior mortgages or liens could encumber the property with no ability to foreclose out the mortgages or liens
- Liability for entity level obligations

There are some distinct advantages:

- A mezzanine lender can gain control over the property in say 30 days as compared to years in judicial foreclosure states.
- The lockbox structure, atypical in a classic second mortgage, prevents the borrower from milking the property and diverting cash.
- The SPE structure, atypical with second mortgages prior to the advent of securitized transactions, limits the activities of the borrower to the single mortgaged property making it less likely that other activities or properties adversely affect the mortgaged property.
- The Intercreditor Agreement with the First Mortgagee is likely to be more advantageous than any agreement reached by a second mortgagee. Cure rights can frequently be obtained.

Statutory Issue Paper No. 114

Accounting for Derivative Instruments and Hedging Activities

STATUS
Finalized October 16, 2001

Original SSAP and Current Authoritative Guidance: SSAP No. 86

Type of Issue
Common Area

SUMMARY OF ISSUE

1. *SSAP No. 31—Derivative Instruments* (SSAP No. 31) contains guidance on accounting for derivative instruments. The applicable GAAP guidance is included in *Financial Accounting Standard No. 133*, *Accounting for Derivative Instruments and Hedging Activities* (FAS 133), FAS 137, *Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133 an amendment of FASB Statement No. 133* (FAS 137), FAS 138, *Accounting for Certain Derivative Instruments and Certain Hedging Activities—an amendment of FASB Statement No. 133* (FAS 138) and their related Emerging Issues Task Force Issues.

2. The purpose of this issue paper is to address the concepts outlined in FAS 133 and establish a comprehensive statutory accounting model for derivative instruments. This issue paper will also reassess the provisions of SSAP No. 31. The result will be a new SSAP, which will supersede SSAP No. 31. The purpose also includes development of an accounting model for derivatives that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. SSAP No. 31 is superseded in its entirety by the conclusions outlined in this issue paper.

4. This issue paper addresses the recognition of derivatives and measurement of derivatives used in:

a. Hedging transactions;
b. Income generation transactions; and
c. Replication transactions

Definitions (for purposes of this issue paper)

5. "Derivative instrument" means an agreement, option, instrument or a series or combination thereof:

a. To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or

b. That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.

6. Derivative instruments include, but are not limited to; options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures

and any other agreements or instruments substantially similar thereto or any series or combination thereof.

a. “Caps” are option contracts in which the cap writer (seller), in return for a premium, agrees to limit, or cap, the cap holder’s (purchaser) risk associated with an increase in a reference rate or index. For example, in an interest rate cap, if rates go above a specified interest rate level (the strike price or the cap rate), the cap holder is entitled to receive cash payments equal to the excess of the market rate over the strike price multiplied by the notional principal amount. Because a cap is an option-based contract, the cap holder has the right but not the obligation to exercise the option. If rates move down, the cap holder has lost only the premium paid. A cap writer has virtually unlimited risk resulting from increases in interest rates above the cap rate;

b. “Collar” means an agreement to receive payments as the buyer of an option, cap or floor and to make payments as the seller of a different option, cap or floor;

c. “Floors” are option contracts in which the floor writer (seller), in return for a premium, agrees to limit the risk associated with a decline in a reference rate or index. For example, in an interest rate floor, if rates fall below an agreed rate, the floor holder (purchaser) will receive cash payments from the floor writer equal to the difference between the market rate and an agreed rate multiplied by the notional principal amount;

d. “Forwards” are agreements (other than a futures) between two parties that commit one party to purchase and the other to sell the instrument or commodity underlying the contract at a specified future date. Forward contracts fix the price, quantity, quality, and date of the purchase and sale. Some forward contracts involve the initial payment of cash and may be settled in cash instead of by physical delivery of the underlying instrument;

e. “Futures” are standardized forward contracts traded on organized exchanges. Each exchange specifies the standard terms of futures contracts it sponsors. Futures contracts are available for a wide variety of underlying instruments, including insurance, agricultural commodities, minerals, debt instruments (such as U.S. Treasury bonds and bills), composite stock indices, and foreign currencies;

f. “Options” are contracts that give the option holder (purchaser of the option rights) the right, but not the obligation, to enter into a transaction with the option writer (seller of the option rights) on terms specified in the contract. A call option allows the holder to buy the underlying instrument, while a put option allows the holder to sell the underlying instrument. Options are traded on exchanges and over the counter;

g. “Swaps” are contracts to exchange, for a period of time, the investment performance of one underlying instrument for the investment performance of another underlying instrument, typically without exchanging the instruments themselves. Swaps can be viewed as a series of forward contracts that settle in cash rather than by physical delivery. Swaps generally are negotiated over-the-counter directly between the dealer and the end user. Interest rate swaps are the most common form of swap contract. However, foreign currency and commodity swaps also are common;

h. “Warrants” are instruments that give the holder the right to purchase an underlying financial instrument at a given price and time or at a series of prices and times outlined in the warrant agreement. Warrants may be issued alone or in connection with the sale of other securities, for example, as part of a merger or recapitalization agreement, or to facilitate divestiture of the securities of another business entity.

7. “Firm commitment” is an agreement with an unrelated party, binding on both parties and expected to be legally enforceable, with the following characteristics:

a. The agreement specifies all significant terms, including the quantity to be exchanged, the fixed price, and the timing of the transaction. The fixed price may be expressed as a specified amount of an entity’s functional currency or of a foreign currency. It may also be expressed as a specified interest rate or specified effective yield;

b. The agreement includes a disincentive for nonperformance that is sufficiently large to make performance probable; and

c. For investments in subsidiary, controlled, and affiliated entities (as defined by *SSAP No. 46—Investments in Subsidiary, Controlled, and Affiliated Entities*) and investments in limited liability companies (as defined by *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*) it must be probable that acquisition will occur within a reasonable period of time.

8. A hedging transaction is defined as a derivative transaction which is entered into and maintained to reduce:

a. The risk of a change in the fair value or cash flow of assets and liabilities which the reporting entity has acquired or incurred or has a firm commitment to acquire or incur or for which the entity has forecasted acquisition or incurrence; or

b. The currency exchange rate risk or the degree of exposure as to assets and liabilities which a reporting entity has acquired or incurred or has a firm commitment to acquire or incur or for which the entity has forecasted acquisition or incurrence.

9. “Income generation transaction” is defined as derivatives written or sold to generate additional income or return to the reporting entity. They include covered options, caps, and floors (e.g., a reporting entity writes an equity call option on stock that it already owns).

10. “Replication (Synthetic Asset) transaction” is a derivative transaction entered into in conjunction with other investments in order to reproduce the investment characteristics of otherwise permissible investments. A derivative transaction entered into by an insurer as a hedging or income generation transaction shall not be considered a replication (synthetic asset) transaction.

11. “Forecasted transaction” is a transaction that is expected to occur for which there is no firm commitment. Because no transaction or event has yet occurred and the transaction or event when it occurs will be at the prevailing market price, a forecasted transaction does not give an entity any present rights to future benefits or a present obligation for future sacrifices.

12. An “underlying” is a specified interest rate, security price, commodity price, foreign exchange rate, index of prices or rates, or other variable. An underlying may be a price or rate of an asset or liability but is not the asset or liability itself.

Embedded Derivative Instruments

13. Contracts that do not in their entirety meet the definition of a derivative instrument, such as bonds, insurance policies, and leases, may contain “embedded” derivative instruments—implicit or explicit terms that affect some or all of the cash flows or the value of other exchanges required by the contract in a manner similar to a derivative instrument. The effect of embedding a derivative instrument in another type of contract (“the host contract”) is that some or all of the cash flows or other exchanges

that otherwise would be required by the contract, whether unconditional or contingent upon the occurrence of a specified event, will be modified based on one or more underlyings. An embedded derivative instrument shall not be separated from the host contract and accounted for separately as a derivative instrument.

Impairment

14. This issue paper adopts the impairment guidelines established by *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5) for the underlying financial assets or liabilities.

Recognition and Measurement of Derivatives Used in Hedging Transactions

15. Derivative instruments represent rights or obligations that meet the definitions of assets (*SSAP No. 4—Assets and Nonadmitted Assets*) or liabilities (SSAP No. 5) and shall be reported in financial statements. In addition, derivative instruments also meet the definition of financial instruments as defined in *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments* (SSAP No. 27). Should the cost basis of the derivative instrument be undefined (i.e., no premium is paid), the instrument shall be disclosed in accordance with paragraphs 8-10 of SSAP No. 27. Derivative instruments are admitted assets to the extent they conform to the requirements of this issue paper.

16. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet the criteria of an effective hedge shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting).

17. Entities shall not bifurcate the effectiveness of derivatives. A derivative instrument is either classified as an effective hedge or an ineffective hedge. Entities must account for the derivative using fair value accounting if it is deemed to be ineffective. Entities may redesignate a derivative in a hedging relationship even though the derivative was used in a previous hedging relationship that proved to be ineffective. An entity shall prospectively discontinue hedge accounting for an existing hedge if any one of the following occurs:

a. Any criterion in paragraphs 20-23 is no longer met;

b. The derivative expires or is sold, terminated, or exercised (impact recorded as realized gains or losses or, for effective hedges of firm commitments or forecasted transactions, in a manner that is consistent with the hedged transaction – see paragraph 18);

c. The entity removes the designation of the hedge; or

d. The derivative is deemed to be impaired in accordance with paragraph 14. A permanent decline in a counterparty's credit quality/rating is one example of impairment required by paragraph 14, for derivatives used in hedging transactions.

18. For those derivatives which qualify for hedge accounting, the change in the carrying value or cash flow of the derivative shall be recorded consistently with how the changes in the carrying value or cash flow of the hedged asset, liability, firm commitment or forecasted transaction are recorded.

Hedge Designations

19. An entity may designate a derivative instrument as hedging the exposure to:

a. Changes in the fair value of an asset or a liability or an identified portion thereof that is attributable to a particular risk. This type of hedge can be utilized regardless of whether the hedged asset or liability is recorded in the financial statements at fair value;

b. Variability in expected future cash flows that is attributable to a particular risk. That exposure may be associated with an existing recognized asset or liability (such as all or certain future interest payments on variable-rate debt) or a forecasted transaction; or

c. Foreign currency exposure. Specific examples include a fair value or cash flow hedge of a firm commitment or financial instrument.

Fair Value Hedges

20. Fair value hedges qualify for hedge accounting if all of the following criteria are met:

a. At inception of the hedge, the formal documentation requirements of paragraph 26 are met;

b. Both at inception of the hedge and on an ongoing basis, the hedging relationship must be highly effective in achieving offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months. All assessments of effectiveness shall be consistent with the risk management strategy documented for that particular hedging relationship;

c. The term highly effective has the same meaning as the notion of high correlation as utilized in *FAS No. 80*, *Accounting for Futures Contracts* (FAS 80). As a result, highly effective describes a fair value hedging relationship where the change in the fair value of the derivative hedging instrument is within 80 to 125 percent of the opposite change in the fair value of the hedged item attributable to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique. Further guidance on determining effectiveness can be found within Exhibit A and B;

d. The hedged item is specifically identified as either all or a specific portion of a recognized asset or liability or of an unrecognized firm commitment. The hedged item is a single asset or liability (or a specific portion thereof) or is a portfolio of similar assets or a portfolio of similar liabilities (or a specific portion thereof); and

e. If similar assets or similar liabilities are aggregated and hedged as a portfolio, the individual assets or individual liabilities must share the risk exposure for which they are designated as being hedged. The change in fair value attributable to the hedged risk for each individual item in a hedged portfolio must be expected to respond in a generally proportionate manner to the overall change in fair value of the aggregate portfolio attributable to the hedged risk.

Cash Flow Hedges

21. Cash flow hedges qualify for hedge accounting if all of the following criteria are met:

a. At inception of the hedge, the formal documentation requirements of paragraph 26 are met;

b. Both at inception of the hedge and on an ongoing basis, the hedging relationship shall be highly effective in achieving offsetting cash flows attributable to the hedged risk during the term of the hedge. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months. All assessments of effectiveness shall be consistent with the originally documented risk management strategy for that particular hedging relationship; and

c. The term highly effective has the same meaning as the notion of high correlation as utilized in FAS No. 80. As a result, highly effective describes a cash flow hedging relationship where the change in the cash flows of the derivative hedging instrument is within 80 to 125 percent of the opposite change in the cash flows of the hedged item attributable to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique. Further guidance on determining effectiveness can be found within Exhibit A and B.

Hedging Forecasted Transactions

22. A forecasted transaction is eligible for designation as a hedged transaction in a cash flow hedge if all of the following additional criteria are met:

a. The forecasted transaction is specifically identified as a single transaction or a group of individual transactions. If the hedged transaction is a group of individual transactions, those individual transactions must share the same risk exposure for which they are designated as being hedged. Thus, a forecasted purchase and a forecasted sale cannot both be included in the same group of individual transactions that constitute the hedged transaction.

b. The occurrence of the forecasted transaction is probable. An assessment of the likelihood that a forecasted transaction will take place should not be based solely on management's intent because intent is not verifiable. The transaction's probability should be supported by observable facts and the attendant circumstances. Consideration should be given to the following circumstances in assessing the likelihood that a transaction will occur:

i. The frequency of similar past transactions;
ii. The financial and operational ability of the entity to carry out the transaction;
iii. Substantial commitments of resources to a particular activity (for example, a manufacturing facility that can be used in the short run only to process a particular type of commodity);
iv. The extent of loss or disruption of operations that could result if the transaction does not occur; and
v. The likelihood that transactions with substantially different characteristics might be used to achieve the same business purpose (for example, an entity that intends to raise cash may have several ways of doing so, ranging from a short-term bank loan to a common stock offering).

The term probable requires a significantly greater likelihood of occurrence than the phrase more likely than not. In addition, both the length of time until a forecasted transaction is projected to occur and the quantity of the forecasted transaction are considerations in determining probability. Other factors being equal, the more distant a forecasted transaction is, the less likely it is that the transaction would be considered probable and the stronger the evidence that would be needed to support an assertion that it is probable. For example, a transaction forecasted to occur in five years may be less likely than a transaction forecasted to occur in one year. However, forecasted interest payments for the next 20 years on variable-rate debt typically would be probable if supported by an existing contract. Additionally, other factors being equal, the greater the physical quantity or future value of a forecasted transaction, the less likely it is that the transaction would be considered probable and the stronger the evidence that would be required to support an assertion that it is probable. For example, less evidence generally would be needed to support forecasted investments of $100,000 in a particular month than would be needed to support forecasted investments of $950,000 in that month by an entity, even if its investments have averaged $950,000 per month for the past 3 months.

A forecasted transaction that is expected to occur with 2 months of the original forecasted date (or time frame) may still be considered probable. If the transaction will not occur until greater than 2 months after the original forecasted date, it is no longer probable and will be accounted for as per the following paragraph.

If a forecasted transaction is determined to no longer be probable per the standards above, hedge accounting shall cease immediately and any deferred gains or losses on the derivative must be recognized in unrealized gains or losses. If an entity demonstrates a pattern of determining that hedged forecasted transactions probably will not occur, such action would call into question both the entity's ability to accurately predict forecasted transactions and the propriety of using hedge accounting in the future for similar forecasted transactions. Accordingly, hedging of forecasted transactions will no longer be permitted by that entity.

c. If the hedged transaction is the forecasted purchase or sale of a nonfinancial asset, the designated risk being hedged is (1) the risk of changes in the functional-currency-equivalent cash flows attributable to changes in the related foreign currency exchange rates or (2) the risk of changes in the cash flows relating to all changes in the purchase price or sales price of the asset (reflecting its actual location if a physical asset), not the risk of changes in the cash flows relating to the purchase or sale of a similar asset in a different location or of a major ingredient.

d. If the hedged transaction is the forecasted purchase or sale of a financial asset or liability or the variable cash inflow or outflow of an existing financial asset or liability, the designated risk being hedged is (1) the risk of changes in the cash flows of the entire asset or liability, such as those relating to all changes in the purchase price or sales price (regardless of whether that price and the related cash flows are stated in the entity’s functional currency or a foreign currency), (2) the risk of changes in its cash flows attributable to changes in the designated benchmark interest rate, (3) the risk of changes in the functional-currency-equivalent cash flows attributable to changes in the related foreign currency exchange rates, or (4) the risk of changes in its cash flows attributable to default or changes in the obligor’s creditworthiness, and changes in the spread over the benchmark interest rate with respect to the hedged item’s credit sector at inception of the hedge. Two or more of the above risks may be designated simultaneously as being hedged. The benchmark interest rate being hedged in a hedge of interest rate risk must specifically be identified as part of the designation and documentation at the inception of the hedging relationship. An entity may not designate prepayment risk as the risk being hedged.

Foreign Currency Hedges

23. For foreign currency hedges, this issue paper adopts paragraphs 36-42 (except for last sentence of paragragh 38) of FAS No. 133 and paragraphs 4.b.- 4.o. of FAS No. 138 which amend FAS No. 133.

Hedge Effectiveness

24. The measurement of hedge effectiveness for a particular hedging relationship shall be consistent with the entity's risk management strategy and the method of assessing hedge effectiveness that was documented at the inception of the hedging relationship, as discussed in paragraph 26.

25. The gain or loss on a derivative designated as a cash flow hedge and assessed to be effective is reported consistently with the hedged item. If an entity's defined risk management strategy for a particular hedging relationship excludes a specific component of the gain or loss, or related cash flows, on the hedging derivative from the assessment of hedge effectiveness (as discussed in Exhibit B), that excluded component of the gain or loss shall be recognized as an unrealized gain or loss. For example, if the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the changes in the option's time value would be recognized in unrealized gains or losses. Time value is equal to the fair value of the option less its intrinsic value.

Documentation Guidance

26. At inception of the hedge, documentation must include:

a. A formal documentation of the hedging relationship and the entity's risk management objective and strategy for undertaking the hedge, including identification of the hedging instrument, the hedged item, the nature of the risk being hedged, and how the hedging instrument's effectiveness in offsetting the exposure to changes in the hedged item's fair value or variability in cash flows attributable to the hedged risk will be assessed. There must be a reasonable basis for how the entity plans to assess the hedging instrument's effectiveness;

b. An entity's defined risk management strategy for a particular hedging relationship may exclude certain components of a specific hedging derivative's change in fair value, such as time value, from the assessment of hedge effectiveness, as discussed in paragraph 63 of FAS 133;

c. Signature of approval, for each instrument, by person(s) authorized, either by the entity's board of directors or a committee authorized by the board, to approve such transactions; and

d. A description of the reporting entity's methodology used to verify that opening transactions do not exceed limitations promulgated by the state of domicile.

27. For all derivatives terminated, expired, or exercised during the year:

a. Signature of approval, for each instrument, by person(s) authorized, either by the entity's board of directors or a committee authorized by the board, to approve such transactions;

b. A description, for each instrument, of the nature of the transaction, including:

i. The date of the transaction;

ii. A complete and accurate description of the specific derivative, including description of the underlying securities, currencies, rates, indices, commodities, derivatives, or other financial market instruments;
iii. Number of contracts or notional amount;
iv. Date of maturity, expiry or settlement;
v. Strike price, rate or index (termination price for futures contracts);
vi. Counterparty, or exchange on which the transaction was traded; and
vii. Consideration paid or received, if any, on termination.

c. Description of the reporting entity's methodology to verify that derivatives were effective hedges; and

d. Identification of any derivatives that ceased to be effective as hedges.

28. For derivatives open at quarter-end:

a. A description of the methodology used to verify the continued effectiveness of hedges;
b. An identification of any derivatives which have ceased to be effective as hedges;
c. A description of the reporting entity's methodology to determine fair values of derivatives;
d. Copy of Master Agreements, if any, where indicated on Schedule DB Part E Section 1.

Recognition and Measurement of Derivatives Used in Income Generation Transactions

General

29. Income generation transactions are defined as derivatives written or sold to generate additional income or return to the reporting entity. They include covered options, caps, and floors (e.g., a reporting entity writes an equity call option on stock that it already owns).

30. Because these transactions require writing derivatives, they expose the reporting entity to potential future liabilities for which the reporting entity receives a premium up front. Because of this risk, dollar limitations and additional constraints are imposed requiring that the transactions be "covered" (i.e., offsetting assets can be used to fulfill potential obligations). To this extent, the combination of the derivative and the covering asset works like a reverse hedge where an asset owned by the reporting entity in essence hedges the derivative risk.

31. As with derivatives in general, these instruments include a wide variety of terms regarding maturities, range of exercise periods and prices, counterparties, underlying instruments, etc.

32. The principal features of income generation transactions are:

a. Premium received is initially recorded as a deferred liability;
b. The accounting of the covering asset or underlying interest controls the accounting of the derivative. The covering asset/underlying interest is accounted at either fair value (e.g., common stocks) or (amortized) cost (e.g., bonds);
c. The gain/loss on termination of the derivative is a capital item. For life insurance companies, it shall be subject to IMR treatment if interest rate related;
d. For options which are exercised, the remaining premium shall adjust the proceeds (cost) associated with the exercise resulting in no explicit gain or loss reported for the derivative itself.

Written Fixed Income Covered Call Options

33. The principal features of written fixed income covered call options are:

a. The general approach is to value at cost (i.e., consideration received) without amortization over the life of the contract if the original duration is less than one year, otherwise carry at amortized cost;

b. An alternative to the general approach combines the accounting of the written option with the covering asset and then uses standard accounting for callable bonds (yield to worst amortization) on the adjusted asset. This method prevents the possibility of future loss recognition upon exercise while at the same time providing recognition of the income feature of the option over time. This approach would appear most relevant for longer-lived covered European call options, which are in substance like callable bonds;

c. For life insurance companies, the gain or loss flows through the IMR if the covering asset or underlying interest is subject to the IMR using callable bond rules to determine the remaining life;

d. Reporting entities are responsible for timely recognition of any probable losses that may occur as a result of the strategy. If the exercise price is below the covering asset's book value, the asset shall be evaluated for write down or disclosure treatment in accordance with SSAP No. 5. All relevant factors such as whether the option is currently exercisable, the fair value of the bond relative to its exercise price, to what extent the statement value of the option premium offsets any loss on the asset, or how any IMR transaction on exercise would affect unassigned funds (surplus) and income shall be considered.

34. Written fixed income covered call options shall be accounted for as follows:

STATUS OF OPTION	COVERING ASSET VALUED AT AMORTIZED COST	COVERING ASSET VALUED AT FAIR VALUE
Open	Record premium as deferred liability. Carry at amortized value. (Alternatively carry at consideration received if original duration is less than 1 year to maturity.) Alternatively, attach premium to covering asset and amortize (under yield to worse scenario) using standard callable bond accounting.	Record premium as deferred liability. Changes in fair value recorded as unrealized adjustments to unassigned funds (surplus) – gain/loss.
Closed – Expired	Premium received recognized as realized capital gain. Gain from expiration to flow through IMR, if applicable. (1)	Premium received recognized as realized capital gain.
Closed – Exercised	Adjust disposition proceeds. (Include in capital gain/loss of disposed asset.) Gain or loss from disposition to flow through IMR, if applicable. (1)	Adjust disposition proceeds. (Include in capital gain/loss of disposed asset.)
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain or loss from disposition to flow through IMR, if applicable. (1)	Recognize net amount as realized capital gain/loss.

NOTE:

(1) If premium is attached to covering asset, the accounting treatment for the covering asset applies.

Written Covered Put Options

35. The principal features of written covered put options are:

a. The accounting for the underlying interest instead of the covering asset governs the accounting of the written put while it is open. For example, if a reporting entity wrote a put requiring it to purchase a certain common stock (underlying interest) at a specific price, the reporting entity might cover that option by holding cash or cash equivalents (covering asset). The accounting for the common stock would govern the accounting of the option in this case;

b. As with covered call writing for life insurance companies, gain/loss on termination may be subject to IMR over the remaining life of the underlying interest;

c. As with covered call writing, entities writing put options for income generation purposes are responsible for timely recognition of any probable losses that may occur as a result of the strategy.

36. Written covered put options shall be accounted for as follows:

STATUS OF OPTION	UNDERLYING INTEREST VALUED AT AMORTIZED COST	UNDERLYING INTEREST VALUED AT FAIR VALUE
Open	Record premium as deferred liability. Carry at amortized value. (Alternatively carry at consideration received if original duration is less than 1 year to maturity.)	Record premium as deferred liability. Changes in fair value recorded as unrealized adjustments to unassigned funds (surplus) – gain/loss.
Closed – Expired	Premium received recognized as realized capital gain. Gain from expiration to flow through IMR, if applicable.	Premium received recognized as realized capital gain.
Closed – Exercised	Adjust acquisition cost by premium received.	Adjust acquisition cost by premium received.
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain or loss from disposition to flow through IMR, if applicable.	Recognize net amount as realized capital gain/loss.

Written Fixed Income Caps and Floors

37. The principal features of written fixed income caps and floors are:

a. The value of the premium received shall be amortized into income over the life of the contract. For caps and floors, where the entity is selling off possible excess interest/income, the value of the covering asset is not relevant;

b. Gain/loss may be subject to IMR. The expected maturity would be the derivative contract's maturity.

38. Written fixed income caps and floors shall be accounted for as follows:

STATUS OF OPTION	COVERING ASSET VALUED AT AMORTIZED COST	COVERING ASSET VALUED AT FAIR VALUE
Open	Record premium as deferred liability. Carry at amortized value. (Alternatively carry at consideration received if original duration is less than 1 year to maturity.) Amortize over life of contract to produce constant yield. Record any interest expense as "Other Investment Income" – negative value.	Record premium as deferred liability. Changes in fair value recorded as unrealized adjustments to unassigned funds (surplus) – gain/loss.
Closed – Matured	Would usually mature at zero amortized value. Any remaining unamortized value recognized as ordinary income through a final amortization adjustment.	Premium received recognized as realized capital gain.
Closed – Exercised	Not applicable.	Not applicable.
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain/loss on termination to flow through IMR, if applicable.	Recognize net amount as realized capital gain/loss.

Recognition and Measurement of Derivatives Used in Replication (Synthetic Asset) Transactions

39. Replication (Synthetic Asset) transaction means a derivative transaction entered into in conjunction with other investments in order to reproduce the investment characteristics of otherwise permissible investments. A derivative transaction entered into by an insurer as a hedging or income generation transaction shall not be considered a replication (synthetic asset) transaction.

40. Any premium paid or received shall be carried as an asset or liability on the balance sheet (Aggregate Write-in for Invested Asset (or) Liability). Premiums paid or received on the replication (synthetic asset) derivative should be amortized into investment income or expense until the exercise, termination or maturity date of the derivative.

41. If the replication (synthetic asset) transaction would be carried at amortized cost and the cash instrument used is carried at amortized cost, then the derivative used should be carried at amortized cost. The derivative may be valued at fair value when both the replication (synthetic asset) and the cash instrument are valued at amortized cost. This is consistent with the alternative valuation methods available for hedges. If the replication (synthetic asset) transaction would be carried at fair value and/or the cash instrument used is carried at fair value, then the derivative used should be carried at fair value.

	(a)	(b)	(c)	(d)
	If the Replication (Synthetic Asset) is Valued at:	And Cash Instrument(s) Used is (are) Valued at:	The Derivative is Valued at:	Alternative Derivative Value Basis:
1.	Amortized Cost	Amortized Cost	Amortized Cost	Fair value
2.	Fair value	Fair value	Fair value	N/A
3.	Amortized Cost	Fair value	Fair value	N/A
4.	Fair value	Amortized Cost	Fair value	N/A

42. In the case of No. 3 in the chart above, the fair values for the cash instrument and derivative, when added together, shall not exceed the replication (synthetic asset) statement value. If this does occur, the excess shall reduce the fair value of the derivative.

43. If the replication (synthetic asset) transaction involves the exchange of interest related cash flows (default free assets), then the cash flows should be accrued as investment income. If the replication (synthetic asset) transaction involves the exchange of total return or change in index cash flows, then the cash flows should be segregated between interest income and fair value (equity) changes. The interest income portion should be accrued as investment income.

44. If the derivative is carried at fair value, the periodic change in the fair value should be recorded as an unrealized gain or loss adjustment to surplus until the transaction is terminated. If the replication (synthetic asset) transaction involves the exchange of total return or change in index cash flows, then the cash flows should be segregated between interest income and fair value (equity) changes. The fair value (equity) change should be recognized as a deferred asset/liability until the termination of the contract. Gains or losses on the derivative at termination or sale should be recognized as realized.

Disclosure Requirements

45. Reporting entities shall disclose the following for all derivative contracts used:

a. General disclosures:

i. A description of the reporting entity's objectives for using derivatives, i.e., hedging, income generation or replication;

ii. A description of the context needed to understand those objectives and its strategies for achieving those objectives;

iii. The description for hedging objectives shall identify the category, e.g., fair value hedges, cash flow hedges, or foreign currency hedges, and for all objectives, the type of instrument(s) used;

iv. A description of the accounting policies for derivatives including the policies for recognizing (or reasons for not recognizing) and measuring the derivatives used, and when recognized, where those instruments and related gains and losses are reported;

v. The net gain or loss recognized in unrealized gains or losses during the reporting period representing the component of the derivative instruments' gain or loss, if any, excluded from the assessment of hedge effectiveness; and

vi. The net gain or loss recognized in unrealized gains or losses during the reporting period resulting from derivatives that no longer qualify for hedge accounting.

b. Disclosures by type of instrument outstanding, e.g., call options, floors, etc.:

i. Notional or contract amounts;

ii. Carrying and fair values; and

iii. A discussion of the market risk, credit risk, and cash requirements of the derivatives.

c. For derivatives held for other-than-hedging purposes in addition to a and b above:

i. Average fair value of the derivatives during the reporting period together with the related end-of-period fair value distinguishing between assets and liabilities;

ii. Net gains or losses detailed by class, business activity or other category that is consistent with the management of those activities and where the net gains or losses are reported.

d. The financial statements shall disclose details of covered items and/or written transactions to allow evaluation of cash flow implications for all written covered options used for income generation.

e. For derivatives accounted for as cash flow hedges of a forecasted transaction, disclose:

i. The maximum length of time over which the entity is hedging its exposure to the variability in future cash flows for forecasted transactions excluding those forecasted transactions related to the payment of variable interest on existing financial instruments; and

iii. The amount of gains and losses classified in unrealized gains/losses related to cash flow hedges that have been discontinued because it was no longer probable that the original forecasted transactions would occur by the end of the originally specified time period or within 2 months of that date.

f. The disclosure requirements of 45 a, 45 b, and 45 e shall be included in the Annual Statement. Refer to the preamble for further discussion regarding interim disclosure requirements. The disclosure requirements of paragraphs 45.a.- 45.e. shall be included in the annual audited statutory financial reports. Paragraph 55 of the Preamble states that disclosures made within specific schedules or exhibits to the Annual Statement need not be duplicated in a separate note.

Effective Date

46. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years ending on or after December 31, 2002.

DISCUSSION

47. The purpose of this issue paper is two-fold. First, to provide a comprehensive source on accounting for derivatives used in hedges, income generation and replication transactions. Second, to address the GAAP guidance that has been issued subsequent to the finalization of SSAP No. 31. In general, this issue paper adopts the framework established by FAS No. 133 for fair value and cash flow hedges, but not its technical guidance (discussed further in subsequent paragraphs). This issue paper adopts the provisions of FAS No. 133 and 138 related to foreign currency hedges. With the exception of guidance specific to foreign currency hedges and amendments specific to refining the hedging of interest rate risk (under FAS 138, the risk of changes in the benchmark interest rate would be the hedged risk), this issue paper rejects FAS No. 137 and 138 as well as the various related Emerging Issues Task Force interpretations (complete listing found in RELEVANT LITERATURE section of this issue paper). It should be noted that the conclusions reached in this issue paper are not intended to usurp the rules and regulations put forth by states in their respective investment laws. The contents of this issue paper are intended to provide accounting guidance on the use of derivatives as allowed by an insurer's state of domicile. It is not intended to imply that insurers may use derivatives or cash instruments that the insurer's state of domicile does not allow under the state's insurance regulatory requirements, e.g., in replication transactions.

Definitions

48. This issue paper defines a derivative instrument somewhat differently than FAS No. 133. The Statutory Accounting Principles (SAP) working group evaluated the FAS No. 133 definition and found that it was inconsistent with the manner in which derivatives are regulated in the insurance industry. While FAS 133 defines derivatives in the context of the characteristics contained in an instrument, the working group concluded that a definition based upon the legal form/contractual rights and obligations is more relevant to statutory reporting. As a result, the definition of a derivative in paragraph 5 of this issue paper is not intended to include life contracts, accident and health contracts, property and casualty contracts and deposit-type contracts as defined within SSAP No. 50—*Classifications and Definitions of Insurance or Managed Care Contracts in Force*. Some of these contracts may be considered derivatives under the FAS No. 133 definition.

Embedded Derivative Instruments

49. FAS No. 133 requires that a contract containing an embedded derivative be accounted for separately from the host contract unless the embedded instrument is clearly and closely related to economic characteristics and risks of the host contract. This issue paper rejects that requirement and stipulates that such embedded derivatives shall not be accounted for separately from the host contract. The SAP working group does not believe this provision is applicable to insurance companies as evidenced by the FASB's difficulty in providing guidance for certain life contracts that include features not associated with insured events. In addition, the SAP working group believes the insurance specific definition of a derivative used in paragraph 5 of this issue paper excludes a majority of the contracts that would include embedded derivatives.

Impairment

50. This issue paper adopts the impairment guidelines of SSAP No. 5. The application of such shall be consistent with the hedged or replicated asset. For instance, a derivative used in a hedging transaction would follow the impairment guidelines for the hedged asset, whereas a derivative used in a replication transaction would follow the impairment guidelines for the asset it is replicating. For derivatives used in hedging transactions one example of an impairment in accordance with SSAP No. 5 would be the permanent decline in the counterparty's credit rating/quality. This example is not applicable to replication transactions as a reporting entity might be try to replicate a similar scenario.

Recognition and Measurement of Derivatives Used in Hedging Transactions

51. The SAP working group believes that a prudent use of derivatives can be an important tool in a sound risk management strategy. Risk management is the practice of defining the risk level an entity desires, identifying the risk level it currently has, and using derivative or other financial instruments to adjust the actual risk level to the desired risk level. Therefore, this issue paper allows holders of derivative instruments used in hedging transactions that meet the criteria of an effective hedge to value and report the derivative in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). This would allow derivatives that effectively hedge assets valued at amortized cost to also be valued at amortized cost.

52. This treatment is a dramatic departure from the requirements of FAS No. 133 in which all derivatives are valued and reported at fair value. This is possible for GAAP accounting because of the existence of *FAS No. 115, Accounting for Certain Investments in Debt and Equity Securities* (FAS No. 115) which requires a majority of GAAP (debt and equity) investments to be recorded at fair value. Therefore, the GAAP model is consistent within its framework to value many financial instruments at fair value. FAS No. 115 has been rejected by several SSAPs as regulators have concluded that the fluctuations of fair value from period to period violates the concepts of conservatism and consistency (further discussion can be found within Issue Paper Nos. 26, 30, 32 and 43). The result of rejecting FAS No. 115 results in a mixed valuation model in which certain financial instruments are valued at cost while some others are recognized at fair value (e.g., non-impaired bonds are recorded at amortized cost, equity instruments valued at fair value, real estate valued at cost or fair value depending upon management's intent). The SAP working group does not believe it is appropriate to value all derivatives at fair value if the assets they are intended to hedge are not also recognized at fair value. Under the FAS No. 133 model, an insurer cannot utilize hedge accounting for debt securities that the entity has the positive intent and ability to hold to maturity as such securities are classified as held-to-maturity securities and reported at amortized cost. This is due to the fact that fluctuations in fair value of the derivative would not offset the fluctuations in fair value of the debt security as the debt security is recorded at amortized cost and there is no impact on surplus for changes in its fair value. By utilizing the concept of emulating valuation of the hedged assets and derivatives adopted in this issue paper consistency is achieved within the mixed valuation model. The concept of emulating valuation also supports the conservatism concept of statutory accounting in that using the amortized values and unrealized gains or losses, derivatives used in hedging should be protected from significant temporary gains from being incorporated into earnings. Further, the conservatism concept is supported in permanent losses by application of the impairment requirement.

53. This issue paper also adopts a provision to recognize the changes in fair value of a derivative that does not meet the criteria for hedge accounting to be recorded as unrealized gains or losses. SSAP No. 31 requires these changes to be recognized currently in earnings. The SAP working group believes the SSAP No. 31 treatment is inconsistent with similar guidance for equity investments in that the earnings process has not been completed.

Hedge Designations

54. This issue paper adopts the hedge designation framework established in FAS No. 133 in that entities may designate a derivative instrument as hedging the exposure to changes in fair value, variability in expected future cash flow or foreign currency exposures. This decision was made so that statutory accounting would be consistent for entities that must also conform to the documentation requirements of FAS No. 133.

55. This issue paper allows entities to hedge a portfolio of similar assets or similar liabilities but does not advocate hedging of an entire portfolio with dissimilar risks (referred to as macro hedging). If similar assets or similar liabilities are aggregated and hedged as a portfolio, the individual assets or individual

liabilities must share the same risk exposure for which they are designated as being hedged. In a fair value hedge, the change in fair value attributable to the hedged risk for each individual item in a hedged portfolio must be expected to respond in a generally proportionate manner to the overall change in fair value of the aggregate portfolio attributable to the hedged risk. That is, if the change in fair value of a hedged portfolio attributable to the hedged risk was 10 percent during a reporting period, the change in the fair values attributable to the hedged risk for each item constituting the portfolio should be expected to be within a fairly narrow range, such as 9 percent to 11 percent. In contrast, an expectation that the change in fair value attributable to the hedged risk for individual items in the portfolio would range from 7 percent to 13 percent would be inconsistent with this provision. In aggregating loans in a portfolio to be hedged, an entity may choose to consider some of the following characteristics, as appropriate: loan type, loan size, nature and location of collateral, interest rate type (fixed or variable) and the coupon interest rate (if fixed), scheduled maturity, prepayment history of the loans (if seasoned), and expected prepayment performance in varying interest rate scenarios.

56. To qualify for hedge accounting, this issue paper requires that fair value, cash flow and foreign currency hedges must be highly effective in achieving its offsetting objectives. The term "highly effective" is specifically defined within this issue paper unlike FAS No. 133. The SAP working group defined this term so that consistent application of effectiveness could be attained. Additionally, the issue paper rejects the FAS No. 133 concept of identifying and separately accounting for the effective and ineffective portions of a single hedge. This issue paper instructs entities not to bifurcate effectiveness; an entity either has an effective hedge (must use hedge accounting) or an ineffective hedge (must use fair value accounting). Again, deviation from FAS No. 133 was made for consistency.

57. The provisions of FAS No. 133 and 138 related to hedging foreign currency are adopted in this issue paper as they do not violate the principles that define the Statement of Concepts.

Documentation

58. This issue paper adopts documentation guidance, which is a combination of the requirements of FAS No. 133 and SSAP No. 31. None of the requirements of SSAP No. 31 were removed and the FAS No. 133 requirements were added so that entities that also complete GAAP statements would not have to maintain separate documentation.

Recognition and Measurement of Derivatives Used in Income Generation Transactions

59. This issue paper retains the requirements of SSAP No. 31 for income generation transactions. This guidance is needed for those entities who wish to write or sell derivatives in an attempt to generate additional income and therefore do not use these types of derivatives to hedge risk exposures.

Recognition and Measurement of Derivatives Used in Replication (Synthetic Asset) Transactions

60. The guidance included for replication transactions was adopted as "NAIC Preferred Accounting Treatment" by the Emerging Accounting Issues working group on June 7, 1999. Inclusion in this issue paper of the preferred accounting guidance for replications formalizes its position within the Statutory Hierarchy.

Disclosures

61. This issue paper adopts disclosure requirements that represent a combination of the provisions of FAS No. 133 and SSAP No. 31.

Drafting Notes/Comments

- The issue of disclosing derivatives embedded within financial assets will be addressed by the Invested Asset (E) Working Group
- The issue of accounting for and the reporting of insurance derivatives (used in hedging insurance exposures) will be addressed by the Insurance Securitization (E) Working Group.
- The general reference to FAS No. 133 and 138 for foreign currency hedges will be replaced with the specific language in the SSAP once the staff has an opportunity to meld the two pronouncements together.
- The reporting guidance referred to in paragraph 18 will be refined by the FAS No. 133 Subgroup after further deliberation.
- The language specific to Insurance Futures and Insurance Futures Options has not been included in this issue paper due to the lack of activity in this market.

RELEVANT STATUTORY AND GAAP GUIDANCE:

Statutory Accounting

62. *SSAP No. 31—Derivative Instruments* provides the current statutory guidance for most derivative transactions.

63. The Emerging Accounting Issues Working Group adopted as NAIC preferred accounting treatment the conclusions reached in this issue paper for replication transactions. The following was taken from the June 7, 1999, minutes of the Working Group:

> Mr. Clark reported that the working group had reached a tentative consensus on the issue of accounting for replication transactions during an interim conference call on May 12, 1999. This consensus was exposed on the NAIC website after the 1999 Spring National Meeting, and the NAIC staff received no comments on it.
>
> Mr. Medley questioned whether the word “consideration” could be used instead of “premium” as shown on Attachment A Part (b) (see attachment 4 to the 5/12/99 conference call minutes). Maria Avila (Northwestern Mutual Life), on behalf of interested parties, indicated that the change would not modify the intent or conclusion of the proposal. Mr. Johnson made a motion to finalize the tentative consensus, as modified, and grant the proposal preferred NAIC accounting treatment. Mr. Ford seconded the motion. The working group unanimously adopted the motion.
>
> Mr. Clark stressed that this issue falls under the old working group rules and, thus, the working group can only grant preferred NAIC accounting treatment. This issue will also be addressed by the Codification of Statutory Accounting Principles working group when SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities is reviewed under the maintenance process.

Generally Accepted Accounting Principles

64. FAS 133 provides the following guidance (the language shown in italics has been amended by FAS No. 137 and 138):

> INTRODUCTION
>
> 1. This Statement addresses the accounting for derivative instruments, including certain derivative instruments embedded in other contracts, and hedging activities.
>
> 2. Prior to this Statement, hedging activities related to changes in foreign exchange rates were addressed in *FASB Statement No. 52, Foreign Currency Translation. FASB Statement No. 80, Accounting for Futures Contracts*, addressed the use of futures contracts in other hedging activities. Those Statements addressed only certain derivative instruments and differed in the criteria required for hedge accounting. In addition, the Emerging Issues Task Force (EITF) addressed the accounting for various hedging activities in a number of issues.

3. In developing the standards in this Statement, the Board concluded that the following four fundamental decisions should serve as cornerstones underlying those standards:

a. Derivative instruments represent rights or obligations that meet the definitions of assets or liabilities and should be reported in financial statements.
b. Fair value is the most relevant measure for financial instruments and the only relevant measure for derivative instruments. Derivative instruments should be measured at fair value, and adjustments to the carrying amount of hedged items should reflect changes in their fair value (that is, gains or losses) that are attributable to the risk being hedged and that arise while the hedge is in effect.
c. Only items that are assets or liabilities should be reported as such in financial statements.
d. Special accounting for items designated as being hedged should be provided only for qualifying items. One aspect of qualification should be an assessment of the expectation of effective offsetting changes in fair values or cash flows during the term of the hedge for the risk being hedged.

Those fundamental decisions are discussed individually in paragraphs 217–231 of Appendix C.

4. This Statement standardizes the accounting for derivative instruments, including certain derivative instruments embedded in other contracts, by requiring that an entity recognize those items as assets or liabilities in the statement of financial position and measure them at fair value. If certain conditions are met, an entity may elect to designate a derivative instrument as follows:

a. A hedge of the exposure to changes in the fair value of a recognized asset or liability, or of an unrecognized firm commitment, that are attributable to a particular risk (referred to as a fair value hedge)
b. A hedge of the exposure to variability in the cash flows of a recognized asset or liability, or of a forecasted transaction, that is attributable to a particular risk (referred to as a cash flow hedge)
c. A hedge of the foreign currency exposure of (1) an unrecognized firm commitment (a foreign currency fair value hedge), (2) an available-for-sale security (a foreign currency fair value hedge), (3) a forecasted transaction (a foreign currency cash flow hedge), or (4) a net investment in a foreign operation.

This Statement generally provides for matching the timing of gain or loss recognition on the hedging instrument with the recognition of (a) the changes in the fair value of the hedged asset or liability that are attributable to the hedged risk or (b) the earnings effect of the hedged forecasted transaction. Appendix A provides guidance on identifying derivative instruments subject to the scope of this Statement and on assessing hedge effectiveness and is an integral part of the standards provided in this Statement. Appendix B contains examples that illustrate application of this Statement. Appendix C contains background information and the basis for the Board's conclusions. Appendix D lists the accounting pronouncements superseded or amended by this Statement. Appendix E provides a diagram for determining whether a contract is a freestanding derivative subject to the scope of this Statement.

Scope and Definition

5. This Statement applies to all entities. Some entities, such as not-for-profit organizations and defined benefit pension plans, do not report earnings as a separate caption in a statement of financial performance. The application of this Statement to those entities is set forth in paragraph 43.

Derivative Instruments

6. A derivative instrument is a financial instrument or other contract with all three of the following characteristics:

a. It has (1) one or more underlyings and (2) one or more notional amounts or payment provisions or both. Those terms determine the amount of the settlement or settlements, and, in some cases, whether or not a settlement is required.

b. It requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors.

c. Its terms require or permit net settlement, it can readily be settled net by a means outside the contract, or it provides for delivery of an asset that puts the recipient in a position not substantially different from net settlement.

7. Underlying, notional amount, and payment provision. An underlying is a specified interest rate, security price, commodity price, foreign exchange rate, index of prices or rates, or other variable. An underlying may be a price or rate of an asset or liability but is not the asset or liability itself. A notional amount is a number of currency units, shares, bushels, pounds, or other units specified in the contract. The settlement of a derivative instrument with a notional amount is determined by interaction of that notional amount with the underlying. The interaction may be simple multiplication, or it may involve a formula with leverage factors or other constants. A payment provision specifies a fixed or determinable settlement to be made if the underlying behaves in a specified manner.

8. Initial net investment. Many derivative instruments require no initial net investment. Some require an initial net investment as compensation for time value (for example, a premium on an option) or for terms that are more or less favorable than market conditions (for example, a premium on a forward purchase contract with a price less than the current forward price). Others require a mutual exchange of currencies or other assets at inception, in which case the net investment is the difference in the fair values of the assets exchanged. A derivative instrument does not require an initial net investment in the contract that is equal to the notional amount (or the notional amount plus a premium or minus a discount) or that is determined by applying the notional amount to the underlying.

9. Net settlement. A contract fits the description in paragraph 6.c. if its settlement provisions meet one of the following criteria:

a. Neither party is required to deliver an asset that is associated with the underlying or that has a principal amount, stated amount, face value, number of shares, or other denomination that is equal to the notional amount (or the notional amount plus a premium or minus a discount). For example, most interest rate swaps do not require that either party deliver interest-bearing assets with a principal amount equal to the notional amount of the contract.

b. One of the parties is required to deliver an asset of the type described in paragraph 9.a., but there is a market mechanism that facilitates net settlement, for example, an exchange that offers a ready opportunity to sell the contract or to enter into an offsetting contract.

c. One of the parties is required to deliver an asset of the type described in paragraph 9.a., but that asset is readily convertible to cash or is itself a derivative instrument. An example of that type of contract is a forward contract that requires delivery of an exchange-traded equity security. Even though the number of shares to be delivered is the same as the notional amount of the contract and the price of the shares is the underlying, an exchange-traded security is readily convertible to cash. Another example is a swaption—an option to require delivery of a swap contract, which is a derivative.

Derivative instruments embedded in other contracts are addressed in paragraphs 12-16.

10. Notwithstanding the conditions in paragraphs 6-9, the following contracts are not subject to the requirements of this Statement:

a. “Regular-way” security trades. Regular-way security trades are contracts with no net settlement provision and no market mechanism to facilitate net settlement (as described in paragraphs 9.a. and 9.b.). They provide for delivery of a security within the time generally established by regulations or conventions in the marketplace or exchange in which the transaction is being executed.

b. Normal purchases and normal sales. Normal purchases and normal sales are contracts with no net settlement provision and no market mechanism to facilitate net settlement (as described in paragraphs 9.a. and 9.b.). They provide for the purchase or sale of something other than a financial instrument or derivative instrument that will be delivered in quantities expected to be used or sold by the reporting entity over a reasonable period in the normal course of business.

c. Certain insurance contracts. Generally, contracts of the type that are within the scope of *FASB Statements No. 60, Accounting and Reporting by Insurance Enterprises, No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, and *No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts*, are not subject to the requirements of this Statement whether or not they are written by insurance enterprises. That is, a contract is not subject to the requirements of this Statement if it entitles the holder to be compensated only if, as a result of an identifiable insurable event (other than a change in price), the holder incurs a liability or there is an adverse change in the value of a specific asset or liability for which the holder is at risk. The following types of contracts written by insurance enterprises or held by the insureds are not subject to the requirements of this Statement for the reasons given:

(1) Traditional life insurance contracts. The payment of death benefits is the result of an identifiable insurable event (death of the insured) instead of changes in a variable.

(2) Traditional property and casualty contracts. The payment of benefits is the result of an identifiable insurable event (for example, theft or fire) instead of changes in a variable.

However, insurance enterprises enter into other types of contracts that may be subject to the provisions of this Statement. In addition, some contracts with insurance or other enterprises combine derivative instruments, as defined in this Statement, with other insurance products or nonderivative contracts, for example, indexed annuity contracts, variable life insurance contracts, and property and casualty contracts that combine traditional coverages with foreign currency options. Contracts that consist of both derivative portions and nonderivative portions are addressed in paragraph 12.

d. Certain financial guarantee contracts. Financial guarantee contracts are not subject to this Statement if they provide for payments to be made only to reimburse the guaranteed party for a loss incurred because the debtor fails to pay when payment is due, which is an identifiable insurable event. In contrast, financial guarantee contracts are subject to this Statement if they provide for payments to be made in response to changes in an underlying (for example, a decrease in a specified debtor’s creditworthiness).

e. Certain contracts that are not traded on an exchange. Contracts that are not exchange-traded are not subject to the requirements of this Statement if the underlying on which the settlement is based is one of the following:

(1) A climatic or geological variable or other physical variable

(2) The price or value of (a) a nonfinancial asset of one of the parties to the contract provided that the asset is not readily convertible to cash or (b) a nonfinancial liability of one of the parties to the contract provided that the liability does not require delivery of an asset that is readily convertible to cash

(3) Specified volumes of sales or service revenues of one of the parties to the contract.

If a contract has more than one underlying and some, but not all, of them qualify for one of the exceptions in paragraphs 10.e.(1), 10.e.(2), and 10.e.(3), the application of this Statement to that contract depends on its predominant characteristics. That is, the contract is subject to the requirements of this Statement if all of its underlyings, considered in combination, behave in a manner that is highly correlated with the behavior of any of the component variables that do not qualify for an exception.

f. Derivatives that serve as impediments to sales accounting. A derivative instrument (whether freestanding or embedded in another contract) whose existence serves as an impediment to recognizing a related contract as a sale by one party or a purchase by the counterparty is not subject to this Statement. For example, the existence of a guarantee of the residual value of a leased asset by the lessor may be an impediment to treating a contract as a sales-type lease, in which case the contract would be treated by the lessor as an operating lease. Another example is the existence of a call option enabling a transferor to repurchase transferred assets that is an impediment to sales accounting under *FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*.

11. Notwithstanding the conditions of paragraphs 6-10, the reporting entity shall not consider the following contracts to be derivative instruments for purposes of this Statement:

a. Contracts issued or held by that reporting entity that are both (1) indexed to its own stock and (2) classified in stockholders' equity in its statement of financial position

b. Contracts issued by the entity in connection with stock-based compensation arrangements addressed in *FASB Statement No. 123, Accounting for Stock-Based Compensation*

c. Contracts issued by the entity as contingent consideration from a business combination. The accounting for contingent consideration issued in a business combination is addressed in *APB Opinion No. 16, Business Combinations*. In applying this paragraph, the issuer is considered to be the entity that is accounting for the combination using the purchase method.

In contrast, the above exceptions do not apply to the counterparty in those contracts. In addition, a contract that an entity either can or must settle by issuing its own equity instruments but that is indexed in part or in full to something other than its own stock can be a derivative instrument for the issuer under paragraphs 6-10, in which case it would be accounted for as a liability or an asset in accordance with the requirements of this Statement.

Embedded Derivative Instruments

12. Contracts that do not in their entirety meet the definition of a derivative instrument (refer to paragraphs 6-9), such as bonds, insurance policies, and leases, may contain "embedded" derivative instruments—implicit or explicit terms that affect some or all of the cash flows or the value of other exchanges required by the contract in a manner similar to a derivative instrument. The effect of embedding a derivative instrument in another type of contract ("the host contract") is that some or all of the cash flows or other exchanges that otherwise would be required by the contract, whether unconditional or contingent upon the occurrence of a specified event, will be modified based on one or more underlyings. An embedded derivative instrument shall be separated from the host contract and accounted for as a derivative instrument pursuant to this Statement if and only if all of the following criteria are met:

a. The economic characteristics and risks of the embedded derivative instrument are not clearly and closely related to the economic characteristics and risks of the host contract. Additional guidance on applying this criterion to various contracts containing embedded derivative instruments is included in Appendix A of this Statement.

b. The contract ("the hybrid instrument") that embodies both the embedded derivative instrument and the host contract is not remeasured at fair value under otherwise applicable generally accepted accounting principles with changes in fair value reported in earnings as they occur.

c. A separate instrument with the same terms as the embedded derivative instrument would, pursuant to paragraphs 6-11, be a derivative instrument subject to the requirements of this Statement. (The initial net investment for the hybrid instrument shall not be considered to be the initial net investment for the embedded derivative.)

13. For purposes of applying the provisions of paragraph 12, an embedded derivative instrument in which the underlying is an interest rate or interest rate index that alters net interest payments that otherwise would be paid or received on an interest-bearing host contract is considered to be clearly and closely related to the host contract unless either of the following conditions exist:

a. The hybrid instrument can contractually be settled in a such a way that the investor (holder) would not recover substantially all of its initial recorded investment.

b. The embedded derivative could at least double the investor's initial rate of return on the host contract and could also result in a rate of return that is at least twice what otherwise would be the market return for a contract that has the same terms as the host contract and that involves a debtor with a similar credit quality.

Even though the above conditions focus on the investor's rate of return and the investor's recovery of its investment, the existence of either of those conditions would result in the embedded derivative instrument not being considered clearly and closely related to the host contract by both parties to the hybrid instrument. Because the existence of those conditions is assessed at the date that the hybrid instrument is acquired (or incurred) by the reporting entity, the acquirer of a hybrid instrument in the secondary market could potentially reach a different conclusion than could the issuer of the hybrid instrument due to applying the conditions in this paragraph at different points in time.

14. However, interest-only strips and principal-only strips are not subject to the requirements of this Statement provided they (a) initially resulted from separating the rights to receive contractual cash flows of a financial instrument that, in and of itself, did not contain an embedded derivative that otherwise would have been accounted for separately as a derivative pursuant to the provisions of paragraphs 12 and 13 and (b) do not incorporate any terms not present in the original financial instrument described above.

15. An embedded foreign currency derivative instrument shall not be separated from the host contract and considered a derivative instrument under paragraph 12 if the host contract is not a financial instrument and it requires payment(s) denominated in (a) the currency of the primary economic environment in which any substantial party to that contract operates (that is, its functional currency) or (b) the currency in which the price of the related good or service that is acquired or delivered is routinely denominated in international commerce (for example, the U.S. dollar for crude oil transactions). Unsettled foreign currency transactions, including financial instruments, that are monetary items and have their principal payments, interest payments, or both denominated in a foreign currency are subject to the requirement in Statement 52 to recognize any foreign currency transaction gain or loss in earnings and shall not be considered to contain embedded foreign currency derivative instruments under this Statement. The same proscription applies to available-for-sale or trading securities that have cash flows denominated in a foreign currency.

16. In subsequent provisions of this Statement, both (a) a derivative instrument included within the scope of this Statement by paragraphs 6-11 and (b) an embedded derivative instrument that has been separated from a host contract as required by paragraph 12 are collectively referred to as derivative instruments. If an embedded derivative instrument is separated from its host contract, the host contract shall be accounted for based on generally accepted accounting principles applicable to instruments of that type that do not contain embedded derivative instruments. If an entity cannot reliably identify and measure the embedded derivative instrument that paragraph 12 requires be separated from the host contract, the entire contract shall be measured at fair value with gain or loss recognized in earnings, but it may not be designated as a hedging instrument pursuant to this Statement.

Recognition of Derivatives and Measurement of Derivatives and Hedged Items

17. An entity shall recognize all of its derivative instruments in its statement of financial position as either assets or liabilities depending on the rights or obligations under the contracts. All derivative instruments shall be measured at fair value. The guidance in *FASB Statement No. 107, Disclosures about Fair Value of Financial Instruments*, as amended, shall apply in determining the fair value of a financial instrument (derivative or hedged item). If expected future cash flows are used to estimate fair value, those expected cash flows shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence shall be considered in developing estimates of expected future cash flows. The weight given to the evidence shall be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or the timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.

18. The accounting for changes in the fair value (that is, gains or losses) of a derivative depends on whether it has been designated and qualifies as part of a hedging relationship and, if so, on the reason for holding it. Either all or a proportion of a derivative may be designated as the hedging instrument. The proportion must be expressed as a percentage of the entire derivative so that the profile of risk exposures in the hedging portion of the derivative is the same as that in the entire derivative. (Thus, an entity is prohibited from separating a compound derivative into components representing different risks and designating any such component as the hedging instrument, except as permitted at the date of initial application by the transition provisions in paragraph 49.) Subsequent references in this Statement to a derivative as a hedging instrument include the use of only a proportion of a derivative as a hedging instrument. Two or more derivatives, or proportions thereof, may also be viewed in combination and jointly designated as the hedging instrument. Gains and losses on derivative instruments are accounted for as follows:

a. No hedging designation. The gain or loss on a derivative instrument not designated as a hedging instrument shall be recognized currently in earnings.

b. Fair value hedge. The gain or loss on a derivative instrument designated and qualifying as a fair value hedging instrument as well as the offsetting loss or gain on the hedged item attributable to the hedged risk shall be recognized currently in earnings in the same accounting period, as provided in paragraphs 22 and 23.

c. Cash flow hedge. The effective portion of the gain or loss on a derivative instrument designated and qualifying as a cash flow hedging instrument shall be reported as a component of other comprehensive income (outside earnings) and reclassified into earnings in the same period or periods during which the hedged forecasted transaction affects earnings, as provided in paragraphs 30 and 31. The remaining gain or loss on the derivative instrument, if any, shall be recognized currently in earnings, as provided in paragraph 30.

d. Foreign currency hedge. The gain or loss on a derivative instrument or nonderivative financial instrument designated and qualifying as a foreign currency hedging instrument shall be accounted for as follows:

   (1) The gain or loss on the hedging derivative or nonderivative instrument in a hedge of a foreign-currency-denominated firm commitment and the

offsetting loss or gain on the hedged firm commitment shall be recognized currently in earnings in the same accounting period, as provided in paragraph 37.

(2) The gain or loss on the hedging derivative instrument in a hedge of an available-for-sale security and the offsetting loss or gain on the hedged available-for-sale security shall be recognized currently in earnings in the same accounting period, as provided in paragraph 38.

(3) The effective portion of the gain or loss on the hedging derivative instrument in a hedge of a forecasted foreign-currency-denominated transaction shall be reported as a component of other comprehensive income (outside earnings) and reclassified into earnings in the same period or periods during which the hedged forecasted transaction affects earnings, as provided in paragraph 41. The remaining gain or loss on the hedging instrument shall be recognized currently in earnings.

(4) The gain or loss on the hedging derivative or nonderivative instrument in a hedge of a net investment in a foreign operation shall be reported in other comprehensive income (outside earnings) as part of the cumulative translation adjustment to the extent it is effective as a hedge, as provided in paragraph 42.

19. In this Statement, the change in the fair value of an entire financial asset or liability for a period refers to the difference between its fair value at the beginning of the period (or acquisition date) and the end of the period adjusted to exclude (a) changes in fair value due to the passage of time and (b) changes in fair value related to any payments received or made, such as in partially recovering the asset or partially settling the liability.

Fair Value Hedges
General

20. An entity may designate a derivative instrument as hedging the exposure to changes in the fair value of an asset or a liability or an identified portion thereof (“hedged item”) that is attributable to a particular risk. Designated hedging instruments and hedged items qualify for fair value hedge accounting if all of the following criteria and those in paragraph 21 are met:

a. At inception of the hedge, there is formal documentation of the hedging relationship and the entity’s risk management objective and strategy for undertaking the hedge, including identification of the hedging instrument, the hedged item, the nature of the risk being hedged, and how the hedging instrument’s effectiveness in offsetting the exposure to changes in the hedged item’s fair value attributable to the hedged risk will be assessed. There must be a reasonable basis for how the entity plans to assess the hedging instrument’s effectiveness.

(1) For a fair value hedge of a firm commitment, the entity’s formal documentation at the inception of the hedge must include a reasonable method for recognizing in earnings the asset or liability representing the gain or loss on the hedged firm commitment.

(2) An entity’s defined risk management strategy for a particular hedging relationship may exclude certain components of a specific hedging derivative’s change in fair value, such as time value, from the assessment of hedge effectiveness, as discussed in paragraph 63 in Section 2 of Appendix A.

b. Both at inception of the hedge and on an ongoing basis, the hedging relationship is expected to be highly effective in achieving offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months. If the hedging instrument (such as an at-the-money option contract) provides only one-sided offset of the hedged risk, the increases (or decreases) in the fair value of the hedging instrument must be expected to be highly effective in offsetting the decreases (or increases) in the fair value of the hedged item. All assessments of effectiveness shall be consistent with the risk management strategy documented for that particular hedging relationship (in accordance with paragraph 20.a. above).

c. If a written option is designated as hedging a recognized asset or liability, the combination of the hedged item and the written option provides at least as much potential for gains as a result of a favorable change in the fair value of the combined instruments as exposure to losses from an unfavorable change in their combined fair value. That test is met if all possible percentage favorable changes in the underlying (from zero percent to 100 percent) would provide at least as much gain as the loss that would be incurred from an unfavorable change in the underlying of the same percentage.

(1) A combination of options (for example, an interest rate collar) entered into contemporaneously shall be considered a written option if either at inception or over the life of the contracts a net premium is received in cash or as a favorable rate or other term. (Thus, a collar can be designated as a hedging instrument in a fair value hedge without regard to the test in paragraph 20.c. unless a net premium is received.) Furthermore, a derivative instrument that results from combining a written option and any other nonoption derivative shall be considered a written option.

A nonderivative instrument, such as a Treasury note, shall not be designated as a hedging instrument, except as provided in paragraphs 37 and 42 of this Statement.

The Hedged Item

21. An asset or a liability is eligible for designation as a hedged item in a fair value hedge if all of the following criteria are met:

a. The hedged item is specifically identified as either all or a specific portion of a recognized asset or liability or of an unrecognized firm commitment. The hedged item is a single asset or liability (or a specific portion thereof) or is a portfolio of similar assets or a portfolio of similar liabilities (or a specific portion thereof).

(1) If similar assets or similar liabilities are aggregated and hedged as a portfolio, the individual assets or individual liabilities must share the risk exposure for which they are designated as being hedged. The change in fair value attributable to the hedged risk for each individual item in a hedged portfolio must be expected to respond in a generally proportionate manner to the overall change in fair value of the aggregate portfolio attributable to the hedged risk. That is, if the change in fair value of a hedged portfolio attributable to the hedged risk was 10 percent during a reporting period, the change in the fair values attributable to the hedged risk for each item constituting the portfolio should be expected to be within a fairly narrow range, such as 9 percent to 11 percent. In contrast, an expectation that the change in fair value attributable to the hedged risk for individual items in the portfolio would range from 7 percent to 13 percent would be inconsistent with this provision. In aggregating loans in a portfolio to be hedged, an entity may choose to consider some of the following characteristics, as appropriate: loan type, loan size, nature and location of collateral, interest rate type (fixed or variable) and the coupon interest rate (if fixed), scheduled maturity, prepayment history of the loans (if seasoned), and expected prepayment performance in varying interest rate scenarios.

(2) If the hedged item is a specific portion of an asset or liability (or of a portfolio of similar assets or a portfolio of similar liabilities), the hedged item is one of the following:

(a) A percentage of the entire asset or liability (or of the entire portfolio)

(b) One or more selected contractual cash flows (such as the portion of the asset or liability representing the present value of the interest payments in the first two years of a four-year debt instrument)

(c) A put option, a call option, an interest rate cap, or an interest rate floor embedded in an existing asset or liability that is not an embedded derivative accounted for separately pursuant to paragraph 12 of this Statement

(d) The residual value in a lessor's net investment in a direct financing or sales-type lease.

If the entire asset or liability is an instrument with variable cash flows, the hedged item cannot be deemed to be an implicit fixed-to-variable swap (or similar instrument) perceived to be embedded in a host contract with fixed cash flows.

b. The hedged item presents an exposure to changes in fair value attributable to the hedged risk that could affect reported earnings. The reference to affecting reported earnings does not apply to an entity that does not report earnings as a separate caption in a statement of financial performance, such as a not-for-profit organization, as discussed in paragraph 43.

c. The hedged item is not (1) an asset or liability that is remeasured with the changes in fair value attributable to the hedged risk reported currently in earnings *(for example, if foreign exchange risk is hedged, a foreign-currency-denominated asset for which a foreign currency transaction gain or loss is recognized in earnings)*, (2) an investment accounted for by the equity method in accordance with the requirements of APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock, (3) a minority interest in one or more consolidated subsidiaries, (4) an equity investment in a consolidated subsidiary, (5) a firm commitment either to enter into a business combination or to acquire or dispose of a subsidiary, a minority interest, or an equity method investee, or (6) an equity instrument issued by the entity and classified in stockholders' equity in the statement of financial position.

d. If the hedged item is all or a portion of a debt security (or a portfolio of similar debt securities) that is classified as held-to-maturity in accordance with *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities,* the designated risk being hedged is the risk of changes in its fair value attributable to changes in the obligor's creditworthiness or if the hedged item is an option component of a held-to-maturity security that permits its prepayment, the designated risk being hedged is the risk of changes in the entire fair value of that option component. (The designated hedged risk for a held-to-maturity security may not be the risk of changes in its fair value attributable to changes in market interest rates or foreign exchange rates. If the hedged item is other than an option component that permits its prepayment, the designated hedged risk also may not be the risk of changes in its overall fair value.)

e. If the hedged item is a nonfinancial asset or liability (other than a recognized loan servicing right or a nonfinancial firm commitment with financial components), the designated risk being hedged is the risk of changes in the fair value of the entire hedged asset or liability (reflecting its actual location if a physical asset). That is, the price risk of a similar asset in a different location or of a major ingredient may not be the hedged risk. Thus, in hedging the exposure to changes in the fair value of gasoline, an entity may not designate the risk of changes in the price of crude oil as the risk being hedged for purposes of determining effectiveness of the fair value hedge of gasoline

f. If the hedged item is a financial asset or liability, a recognized loan servicing right, or a nonfinancial firm commitment with financial components, the designated risk being hedged is (1) the risk of changes in the overall fair value of the entire hedged item, (2) the risk of changes in its fair value attributable to changes in market interest rates, (3) the risk of changes in its fair value attributable to changes in the related foreign currency exchange rates (refer to paragraphs 37 and 38*)*, or (4) the risk of changes in its fair value attributable to changes in *the* obligor's creditworthiness. If the risk designated as being hedged is not the risk in paragraph 21.f.(1) above, two or more of the other risks (market interest rate risk, foreign currency exchange risk, and credit risk) may simultaneously be designated as being hedged. An entity may not simply designate prepayment risk as the risk being hedged for a financial asset. However, it can designate the option component of a prepayable instrument as the hedged item in a fair value hedge of the entity's exposure to changes in the fair value of that "prepayment" option, perhaps thereby achieving the objective of its desire to hedge prepayment risk. The effect of an embedded derivative of the same risk class must be considered in designating a hedge of an individual risk. For example, the effect of an embedded prepayment option must be considered in designating a hedge of market interest rate risk.

22. Gains and losses on a qualifying fair value hedge shall be accounted for as follows:

a. The gain or loss on the hedging instrument shall be recognized currently in earnings.
b. The gain or loss (that is, the change in fair value) on the hedged item attributable to the hedged risk shall adjust the carrying amount of the hedged item and be recognized currently in earnings.

If the fair value hedge is fully effective, the gain or loss on the hedging instrument, adjusted for the component, if any, of that gain or loss that is excluded from the assessment of effectiveness under the entity's defined risk management strategy for that particular hedging relationship (as discussed in paragraph 63 in Section 2 of Appendix A), would exactly offset the loss or gain on the hedged item attributable to the hedged risk. Any difference that does arise would be the effect of hedge ineffectiveness, which consequently is recognized currently in earnings. The measurement of hedge ineffectiveness for a particular hedging relationship shall be consistent with the entity's risk management strategy and the method of assessing hedge effectiveness that was documented at the inception of the hedging relationship, as discussed in paragraph 20.a. Nevertheless, the amount of hedge ineffectiveness recognized in earnings is based on the extent to which exact offset is not achieved. Although a hedging relationship must comply with an entity's established policy range of what is considered "highly effective" pursuant to paragraph 20.b. in order for that relationship to qualify for hedge accounting, that compliance does not assure zero ineffectiveness. Section 2 of Appendix A illustrates assessing hedge effectiveness and measuring hedge ineffectiveness. Any hedge ineffectiveness directly affects earnings because there will be no offsetting adjustment of a hedged item's carrying amount for the ineffective aspect of the gain or loss on the related hedging instrument.

23. If a hedged item is otherwise measured at fair value with changes in fair value reported in other comprehensive income (such as an available-for-sale security), the adjustment of the hedged item's carrying amount discussed in paragraph 22 shall be recognized in earnings rather than in other comprehensive income in order to offset the gain or loss on the hedging instrument.

24. The adjustment of the carrying amount of a hedged asset or liability required by paragraph 22 shall be accounted for in the same manner as other components of the carrying amount of that asset or liability. For example, an adjustment of the carrying amount of a hedged asset held for sale (such as inventory) would remain part of the carrying amount of that asset until the asset is sold, at which point the entire carrying amount of the hedged asset would be recognized as the cost of the item sold in determining earnings. An adjustment of the carrying amount of a hedged interest-bearing financial instrument shall be amortized to earnings;

amortization shall begin no later than when the hedged item ceases to be adjusted for changes in its fair value attributable to the risk being hedged.

25. An entity shall discontinue prospectively the accounting specified in paragraphs 22 and 23 for an existing hedge if any one of the following occurs:

a. Any criterion in paragraphs 20 and 21 is no longer met.
b. The derivative expires or is sold, terminated, or exercised.
c. The entity removes the designation of the fair value hedge.

In those circumstances, the entity may elect to designate prospectively a new hedging relationship with a different hedging instrument or, in the circumstances described in paragraphs 25.a. and 25(c) above, a different hedged item or a hedged transaction if the hedging relationship meets the criteria specified in paragraphs 20 and 21 for a fair value hedge or paragraphs 28 and 29 for a cash flow hedge.

26. In general, if a periodic assessment indicates noncompliance with the effectiveness criterion in paragraph 20.b., an entity shall not recognize the adjustment of the carrying amount of the hedged item described in paragraphs 22 and 23 after the last date on which compliance with the effectiveness criterion was established. However, if the event or change in circumstances that caused the hedging relationship to fail the effectiveness criterion can be identified, the entity shall recognize in earnings the changes in the hedged item's fair value attributable to the risk being hedged that occurred prior to that event or change in circumstances. If a fair value hedge of a firm commitment is discontinued because the hedged item no longer meets the definition of a firm commitment, the entity shall derecognize any asset or liability previously recognized pursuant to paragraph 22 (as a result of an adjustment to the carrying amount for the firm commitment) and recognize a corresponding loss or gain currently in earnings.

Impairment

27. An asset or liability that has been designated as being hedged and accounted for pursuant to paragraphs 22-24 remains subject to the applicable requirements in generally accepted accounting principles for assessing impairment for that type of asset or for recognizing an increased obligation for that type of liability. Those impairment requirements shall be applied after hedge accounting has been applied for the period and the carrying amount of the hedged asset or liability has been adjusted pursuant to paragraph 22 of this Statement. Because the hedging instrument is recognized separately as an asset or liability, its fair value or expected cash flows shall not be considered in applying those impairment requirements to the hedged asset or liability.

Cash Flow Hedges

General

28. An entity may designate a derivative instrument as hedging the exposure to variability in expected future cash flows that is attributable to a particular risk. That exposure may be associated with an existing recognized asset or liability (such as all or certain future interest payments on variable-rate debt) or a forecasted transaction (such as a forecasted purchase or sale). Designated hedging instruments and hedged items or transactions qualify for cash flow hedge accounting if all of the following criteria and those in paragraph 29 are met:

a. At inception of the hedge, there is formal documentation of the hedging relationship and the entity's risk management objective and strategy for undertaking the hedge, including identification of the hedging instrument, the hedged transaction, the nature of the risk being hedged, and how the hedging instrument's effectiveness in hedging the exposure to the hedged transaction's variability in cash flows attributable to the hedged risk will be assessed. There must be a reasonable basis for how the entity plans to assess the hedging instrument's effectiveness.

(1) An entity's defined risk management strategy for a particular hedging relationship may exclude certain components of a specific hedging derivative's change in fair value from the assessment of hedge effectiveness, as discussed in paragraph 63 in Section 2 of Appendix A.

(2) Documentation shall include all relevant details, including the date on or period within which the forecasted transaction is expected to occur, the specific nature of asset or liability involved (if any), and the expected currency amount or quantity of the forecasted transaction.

(a) The phrase expected currency amount refers to hedges of foreign currency exchange risk and requires specification of the exact amount of foreign currency being hedged.

(b) The phrase expected . . . quantity refers to hedges of other risks and requires specification of the physical quantity (that is, the number of items or units of measure) encompassed by the hedged forecasted transaction. If a forecasted sale or purchase is being hedged for price risk, the hedged transaction cannot be specified solely in terms of expected currency amounts, nor can it be specified as a percentage of sales or purchases during a period. The current price of a forecasted transaction also should be identified to satisfy the criterion in paragraph 28.b. for offsetting cash flows.

The hedged forecasted transaction shall be described with sufficient specificity so that when a transaction occurs, it is clear whether that transaction is or is not the hedged transaction. Thus, the forecasted transaction could be identified as the sale of either the first 15,000 units of a specific product sold during a specified 3-month period or the first 5,000 units of a specific product sold in each of 3 specific months, but it could not be identified as the sale of the last 15,000 units of that product sold during a 3-month period (because the last 15,000 units cannot be identified when they occur, but only when the period has ended).

b. Both at inception of the hedge and on an ongoing basis, the hedging relationship is expected to be highly effective in achieving offsetting cash flows attributable to the hedged risk during the term of the hedge, except as indicated in paragraph 28.d. below. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months. If the hedging instrument, such as an at-the-money option contract, provides only one-sided offset against the hedged risk, the cash inflows (outflows) from the hedging instrument must be expected to be highly effective in offsetting the corresponding change in the cash outflows or inflows of the hedged transaction. All assessments of effectiveness shall be consistent with the originally documented risk management strategy for that particular hedging relationship.

c. If a written option is designated as hedging the variability in cash flows for a recognized asset or liability, the combination of the hedged item and the written option provides at least as much potential for favorable cash flows as exposure to unfavorable cash flows. That test is met if all possible percentage favorable changes in the underlying (from zero percent to 100 percent) would provide at least as much favorable cash flows as the unfavorable cash flows that would be incurred from an unfavorable change in the underlying of the same percentage. (Refer to paragraph 20.c.(1).)

d. If a hedging instrument is used to modify the interest receipts or payments associated with a recognized financial asset or liability from one variable rate to another variable rate, the hedging instrument must be a link between an existing designated asset (or group of similar assets) with variable cash flows and an existing designated liability (or group of similar liabilities) with variable cash flows and be highly effective at achieving offsetting cash flows. A link exists if the basis (that is, the rate index on which the interest rate is based) of one leg of an interest rate swap is the same as the basis of the interest receipts for the designated asset and the basis of the other leg of the swap is the same as the basis of the interest payments for the designated liability. In this situation, the criterion in the first sentence in paragraph 29.a. is applied separately to the designated asset and the designated liability.

A nonderivative instrument, such as a Treasury note, shall not be designated as a hedging instrument for a cash flow hedge.

The Hedged Forecasted Transaction

29. A forecasted transaction is eligible for designation as a hedged transaction in a cash flow hedge if all of the following additional criteria are met:

a. The forecasted transaction is specifically identified as a single transaction or a group of individual transactions. If the hedged transaction is a group of individual transactions, those individual transactions must share the same risk exposure for which they are designated as being hedged. Thus, a forecasted purchase and a forecasted sale cannot both be included in the same group of individual transactions that constitute the hedged transaction.

b. The occurrence of the forecasted transaction is probable.

c. The forecasted transaction is a transaction with a party external to the reporting entity (except as permitted by paragraph 40) and presents an exposure to variations in cash flows for the hedged risk that could affect reported earnings.

d. The forecasted transaction is not the acquisition of an asset or incurrence of a liability that will subsequently be remeasured with changes in fair value attributable to the hedged risk reported currently in earnings *(for example, if foreign exchange risk is hedged, the forecasted acquisition of a foreign-currency-denominated asset for which a foreign currency transaction gain or loss will be recognized in earnings). However, forecasted sales on credit and the forecasted accrual of royalties on probable future sales by third-party licensees are not considered the forecasted acquisition of a receivable*. If the forecasted transaction relates to a recognized asset or liability, the asset or liability is not remeasured with changes in fair value attributable to the hedged risk reported currently in earnings.

e. If the variable cash flows of the forecasted transaction relate to a debt security that is classified as held-to-maturity under Statement 115, the risk being hedged is the risk of changes in its cash flows attributable to *default or changes in the obligor's creditworthiness*. For those variable cash flows, the risk being hedged cannot be the risk of changes in its cash flows attributable to *changes in market interest rates*.

f. The forecasted transaction does not involve a business combination subject to the provisions of Opinion 16 and is not a transaction (such as a forecasted purchase, sale, or dividend) involving (1) a parent company's interests in consolidated subsidiaries, (2) a minority interest in a consolidated subsidiary, (3) an equity-method investment, or (4) an entity's own equity instruments.

g. If the hedged transaction is the forecasted purchase or sale of a nonfinancial asset, the designated risk being hedged is (1) the risk of changes in the functional-currency-equivalent cash flows attributable to changes in the related foreign currency exchange rates or (2) the risk of changes in the cash flows relating to all changes in the purchase price or sales price of the asset (reflecting its actual location if a physical asset), not the risk of changes in the cash flows relating to the purchase or sale of a similar asset in a different location or of a major ingredient. Thus, for example, in hedging the exposure to changes in the cash flows relating to the purchase of its bronze bar inventory, an entity may not designate the risk of changes in the cash flows relating to purchasing the copper component in bronze as the risk being hedged for purposes of assessing offset as required by paragraph 28.b..

h. If the hedged transaction is the forecasted purchase or sale of a financial asset or liability or the variable cash inflow or outflow of an existing financial asset or liability, the designated risk being hedged is (1) *the risk of changes in the cash flows of the entire asset or liability*, such as those relating to all changes in the purchase price or sales price (regardless of whether that price and the related cash flows are stated in the entity's functional currency or a foreign currency), (2) the risk of changes in its cash flows attributable to changes in *market interest rates*, (3) the risk of changes in the functional-currency-equivalent cash flows attributable to changes in the related foreign currency exchange rates *(refer to paragraph 40)*, or (4) the risk of changes in its cash flows attributable to *default or changes in the obligor's creditworthiness*. Two or more of the above risks may be designated simultaneously as being hedged. An entity may not designate prepayment risk as the risk being hedged (refer to paragraph 21.f.).

30. The effective portion of the gain or loss on a derivative designated as a cash flow hedge is reported in other comprehensive income, and the ineffective portion is reported in earnings. More specifically, a qualifying cash flow hedge shall be accounted for as follows:

a. If an entity's defined risk management strategy for a particular hedging relationship excludes a specific component of the gain or loss, or related cash flows, on the hedging derivative from the assessment of hedge effectiveness (as discussed in paragraph 63 in Section 2 of Appendix A), that excluded component of the gain or loss shall be recognized currently in earnings. For example, if the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the changes in the option's time value would be recognized in earnings. Time value is equal to the fair value of the option less its intrinsic value.

b. Accumulated other comprehensive income associated with the hedged transaction shall be adjusted to a balance that reflects the lesser of the following (in absolute amounts):

(1) The cumulative gain or loss on the derivative from inception of the hedge less (a) the excluded component discussed in paragraph 30.a. above and (b) the derivative's gains or losses previously reclassified from accumulated other comprehensive income into earnings pursuant to paragraph 31

(2) The portion of the cumulative gain or loss on the derivative necessary to offset the cumulative change in expected future cash flows on the hedged transaction from inception of the hedge less the derivative's gains or losses previously reclassified from accumulated other comprehensive income into earnings pursuant to paragraph 31.

That adjustment of accumulated other comprehensive income shall incorporate recognition in other comprehensive income of part or all of the gain or loss on the hedging derivative, as necessary.

c. A gain or loss shall be recognized in earnings, as necessary, for any remaining gain or loss on the hedging derivative or to adjust other comprehensive income to the balance specified in paragraph 30.b. above.

Section 2 of Appendix A illustrates assessing hedge effectiveness and measuring hedge ineffectiveness. Examples 6 and 9 of Section 1 of Appendix B illustrate the application of this paragraph.

31. Amounts in accumulated other comprehensive income shall be reclassified into earnings in the same period or periods during which the hedged forecasted transaction affects earnings (for example, when a forecasted sale actually occurs). If the hedged transaction results in the acquisition of an asset or the incurrence of a liability, the gains and losses in accumulated other comprehensive income shall be reclassified into earnings in the same period or periods during which the asset acquired or liability incurred affects earnings (such as in the periods that depreciation expense, interest expense, or cost of sales is recognized). However, if an entity expects at any time that continued reporting of a loss in accumulated other comprehensive income would lead to recognizing a net loss on the combination of the hedging instrument and

the hedged transaction (and related asset acquired or liability incurred) in one or more future periods, a loss shall be reclassified immediately into earnings for the amount that is not expected to be recovered. For example, a loss shall be reported in earnings for a derivative that is designated as hedging the forecasted purchase of inventory to the extent that the cost basis of the inventory plus the related amount reported in accumulated other comprehensive income exceeds the amount expected to be recovered through sales of that inventory. (Impairment guidance is provided in paragraphs 34 and 35.)

32. An entity shall discontinue prospectively the accounting specified in paragraphs 30 and 31 for an existing hedge if any one of the following occurs:

a. Any criterion in paragraphs 28 and 29 is no longer met.
b. The derivative expires or is sold, terminated, or exercised.
c. The entity removes the designation of the cash flow hedge.

In those circumstances, the net gain or loss shall remain in accumulated other comprehensive income and be reclassified into earnings as specified in paragraph 31. Furthermore, the entity may elect to designate prospectively a new hedging relationship with a different hedging instrument or, in the circumstances described in paragraphs 32.a. and 32.c., a different hedged transaction or a hedged item if the hedging relationship meets the criteria specified in paragraphs 28 and 29 for a cash flow hedge or paragraphs 20 and 21 for a fair value hedge.

33. *If a cash flow hedge is discontinued because it is probable that the original forecasted transaction will not occur, the net gain or loss in accumulated other comprehensive income shall be immediately reclassified into earnings.*

34. Existing requirements in generally accepted accounting principles for assessing asset impairment or recognizing an increased obligation apply to an asset or liability that gives rise to variable cash flows (such as a variable-rate financial instrument), for which the variable cash flows (the forecasted transactions) have been designated as being hedged and accounted for pursuant to paragraphs 30 and 31. Those impairment requirements shall be applied each period after hedge accounting has been applied for the period, pursuant to paragraphs 30 and 31 of this Statement. The fair value or expected cash flows of a hedging instrument shall not be considered in applying those requirements. The gain or loss on the hedging instrument in accumulated other comprehensive income shall, however, be accounted for as discussed in paragraph 31.

35. If, under existing requirements in generally accepted accounting principles, an impairment loss is recognized on an asset or an additional obligation is recognized on a liability to which a hedged forecasted transaction relates, any offsetting net gain related to that transaction in accumulated other comprehensive income shall be reclassified immediately into earnings. Similarly, if a recovery is recognized on the asset or liability to which the forecasted transaction relates, any offsetting net loss that has been accumulated in other comprehensive income shall be reclassified immediately into earnings.

Foreign Currency Hedges

36. *Consistent with the functional currency concept in Statement 52*, an entity may designate the following types of hedges of foreign currency exposure, as specified in paragraphs 37-42:

a. A fair value hedge of an unrecognized firm commitment or *an available-for-sale security*
b. A cash flow hedge of a forecasted foreign-currency-denominated transaction or a forecasted intercompany foreign-currency-denominated transaction
c. A hedge of a net investment in a foreign operation.

The criterion in paragraph 21.c.(1) requires that a recognized asset or liability that may give rise to a foreign currency transaction gain or loss under Statement 52 (such as a foreign-currency-

denominated receivable or payable) not be the hedged item in a foreign currency fair value or cash flow hedge because it is remeasured with the changes in the carrying amount attributable to what would be the hedged risk (an exchange rate change) reported currently in earnings. Similarly, the criterion in paragraph 29.d. requires that the forecasted acquisition of an asset or the incurrence of a liability that may give rise to a foreign currency transaction gain or loss under Statement 52 not be the hedged item in a foreign currency cash flow hedge because, subsequent to acquisition or incurrence, the asset or liability will be remeasured with changes in the carrying amount attributable to what would be the hedged risk reported currently in earnings. A foreign currency derivative instrument that has been entered into with another member of a consolidated group can be a hedging instrument in the consolidated financial statements only if that other member has entered into an offsetting contract with an unrelated third party to hedge the exposure it acquired from issuing the derivative instrument to the affiliate that initiated the hedge.

Foreign Currency Fair Value Hedges

37. Unrecognized firm commitment. A derivative instrument or a nonderivative financial instrument that may give rise to a foreign currency transaction gain or loss under Statement 52 can be designated as hedging changes in the fair value of an unrecognized firm commitment, or a specific portion thereof, attributable to foreign currency exchange rates. The designated hedging relationship qualifies for the accounting specified in paragraphs 22-27 if all the fair value hedge criteria in paragraphs 20 and 21 are met.

38. Available-for-sale security. A nonderivative financial instrument shall not be designated as the hedging instrument in a fair value hedge of the foreign currency exposure of an available-for-sale security. A derivative instrument can be designated as hedging the changes in the fair value of an available-for-sale debt security (or a specific portion thereof) attributable to changes in foreign currency exchange rates. The designated hedging relationship qualifies for the accounting specified in paragraphs 22-27 if all the fair value hedge criteria in paragraphs 20 and 21 are met. An available-for-sale equity security can be hedged for changes in the fair value attributable to changes in foreign currency exchange rates and qualify for the accounting specified in paragraphs 22-27 only if the fair value hedge criteria in paragraphs 20 and 21 are met and the following two conditions are satisfied:

a. The security is not traded on an exchange (or other established marketplace) on which trades are denominated in the investor’s functional currency.

b. Dividends or other cash flows to holders of the security are all denominated in the same foreign currency as the currency expected to be received upon sale of the security.

The change in fair value of the hedged available-for-sale equity security attributable to foreign exchange risk is reported in earnings pursuant to paragraph 23 and not in other comprehensive income.

39. Gains and losses on a qualifying foreign currency fair value hedge shall be accounted for as specified in paragraphs 22-27. The gain or loss on a nonderivative hedging instrument attributable to foreign currency risk is the foreign currency transaction gain or loss as determined under Statement 52. That foreign currency transaction gain or loss shall be recognized currently in earnings along with the change in the carrying amount of the hedged firm commitment.

Foreign Currency Cash Flow Hedges

40. A nonderivative financial instrument shall not be designated as a hedging instrument in a foreign currency cash flow hedge. *A derivative instrument designated as hedging the foreign currency exposure to variability in the functional-currency-equivalent cash flows associated with either a forecasted foreign-currency-denominated transaction (for example, a forecasted export sale to an unaffiliated entity with the price to be denominated in a foreign currency) or a forecasted intercompany foreign-currency-denominated transaction (for example, a forecasted sale to a foreign subsidiary or a forecasted royalty from a foreign subsidiary) qualifies for hedge accounting if all of the following criteria are met:*

a. *The operating unit that has the foreign currency exposure is a party to the hedging instrument (which can be an instrument between a parent company and its subsidiary—refer to paragraph 36).*

b. The hedged transaction is denominated in a currency other than *that* unit's functional currency.

c. All of the criteria in paragraphs 28 and 29 are met, except for the criterion in paragraph 29.c. that requires that the forecasted transaction be with a party external to the reporting entity.

d. If the hedged transaction is a group of individual forecasted foreign-currency-denominated transactions, a forecasted inflow of a foreign currency and a forecasted outflow of the foreign currency cannot both be included in the same group.

41. A qualifying foreign currency cash flow hedge shall be accounted for as specified in paragraphs 30-35.

Hedges of the Foreign Currency Exposure of a Net Investment in a Foreign Operation

42. A derivative instrument or a nonderivative financial instrument that may give rise to a foreign currency transaction gain or loss under Statement 52 can be designated as hedging the foreign currency exposure of a net investment in a foreign operation. The gain or loss on a hedging derivative instrument (or the foreign currency transaction gain or loss on the nonderivative hedging instrument) that is designated as, and is effective as, an economic hedge of the net investment in a foreign operation shall be reported in the same manner as a translation adjustment to the extent it is effective as a hedge. The hedged net investment shall be accounted for consistent with Statement 52; the provisions of this Statement for recognizing the gain or loss on assets designated as being hedged in a fair value hedge do not apply to the hedge of a net investment in a foreign operation.

Accounting by Not-for-Profit Organizations and Other Entities That Do Not Report Earnings

43. An entity that does not report earnings as a separate caption in a statement of financial performance (for example, a not-for-profit organization or a defined benefit pension plan) shall recognize the gain or loss on a hedging instrument and a nonhedging derivative instrument as a change in net assets in the period of change unless the hedging instrument is designated as a hedge of the foreign currency exposure of a net investment in a foreign operation. In that case, the provisions of paragraph 42 of this Statement shall be applied. Entities that do not report earnings shall recognize the changes in the carrying amount of the hedged item pursuant to paragraph 22 in a fair value hedge as a change in net assets in the period of change. Those entities are not permitted to use cash flow hedge accounting because they do not report earnings separately. Consistent with the provisions of FASB Statement No. 117, Financial Statements of Not-for-Profit Organizations, this Statement does not prescribe how a not-for-profit organization should determine the components of an operating measure, if one is presented.

Disclosures

44. An entity that holds or issues derivative instruments (or nonderivative instruments that are designated and qualify as hedging instruments pursuant to paragraphs 37 and 42) shall disclose its objectives for holding or issuing those instruments, the context needed to understand those objectives, and its strategies for achieving those objectives. The description shall distinguish between derivative instruments (and nonderivative instruments) designated as fair value hedging instruments, derivative instruments designated as cash flow hedging instruments, derivative instruments (and nonderivative instruments) designated as hedging instruments for hedges of the foreign currency exposure of a net investment in a foreign operation, and all other derivatives. The description also shall indicate the entity's risk management policy for each of those types of hedges, including a description of the items or transactions for which risks are hedged. For derivative instruments not designated as hedging instruments, the description shall indicate the purpose of the derivative activity. Qualitative disclosures about an entity's objectives and strategies for using derivative instruments may be more meaningful if such objectives and strategies are described in the context of an entity's overall risk management profile. If

appropriate, an entity is encouraged, but not required, to provide such additional qualitative disclosures.

45. An entity's disclosures for every reporting period for which a complete set of financial statements is presented also shall include the following:

Fair value hedges

a. For derivative instruments, as well as nonderivative instruments that may give rise to foreign currency transaction gains or losses under Statement 52, that have been designated and have qualified as fair value hedging instruments and for the related hedged items:
   (1) The net gain or loss recognized in earnings during the reporting period representing (a) the amount of the hedges' ineffectiveness and (b) the component of the derivative instruments' gain or loss, if any, excluded from the assessment of hedge effectiveness, and a description of where the net gain or loss is reported in the statement of income or other statement of financial performance
   (2) The amount of net gain or loss recognized in earnings when a hedged firm commitment no longer qualifies as a fair value hedge.

Cash flow hedges

b. For derivative instruments that have been designated and have qualified as cash flow hedging instruments and for the related hedged transactions:
   (1) The net gain or loss recognized in earnings during the reporting period representing (a) the amount of the hedges' ineffectiveness and (b) the component of the derivative instruments' gain or loss, if any, excluded from the assessment of hedge effectiveness, and a description of where the net gain or loss is reported in the statement of income or other statement of financial performance
   (2) A description of the transactions or other events that will result in the reclassification into earnings of gains and losses that are reported in accumulated other comprehensive income, and the estimated net amount of the existing gains or losses at the reporting date that is expected to be reclassified into earnings within the next 12 months
   (3) The maximum length of time over which the entity is hedging its exposure to the variability in future cash flows for forecasted transactions excluding those forecasted transactions related to the payment of variable interest on existing financial instruments
   (4) The amount of gains and losses reclassified into earnings as a result of the discontinuance of cash flow hedges because it is probable that the original forecasted transactions will not occur.

Hedges of the net investment in a foreign operation

c. For derivative instruments, as well as nonderivative instruments that may give rise to foreign currency transaction gains or losses under Statement 52, that have been designated and have qualified as hedging instruments for hedges of the foreign currency exposure of a net investment in a foreign operation, the net amount of gains or losses included in the cumulative translation adjustment during the reporting period.

The quantitative disclosures about derivative instruments may be more useful, and less likely to be perceived to be out of context or otherwise misunderstood, if similar information is disclosed about other financial instruments or nonfinancial assets and liabilities to which the derivative instruments are related by activity. Accordingly, in those situations, an entity is encouraged, but not required, to present a more complete picture of its activities by disclosing that information.

Reporting Changes in the Components of Comprehensive Income

46. An entity shall display as a separate classification within other comprehensive income the net gain or loss on derivative instruments designated and qualifying as cash flow hedging instruments that are reported in comprehensive income pursuant to paragraphs 30 and 41.

47. As part of the disclosures of accumulated other comprehensive income, pursuant to paragraph 26 of FASB Statement No. 130, Reporting Comprehensive Income, an entity shall separately disclose the beginning and ending accumulated derivative gain or loss, the related net change associated with current period hedging transactions, and the net amount of any reclassification into earnings.

Effective Date and Transition

48. *This Statement shall be effective for all fiscal quarters of all fiscal years beginning after June 15, 1999*. Initial application of this Statement shall be as of the beginning of an entity's fiscal quarter; on that date, hedging relationships shall be designated anew and documented pursuant to the provisions of this Statement. Earlier application of all of the provisions of this Statement is encouraged but is permitted only as of the beginning of any fiscal quarter that begins after issuance of this Statement. Earlier application of selected provisions of this Statement is not permitted. This Statement shall not be applied retroactively to financial statements of prior periods.

49. At the date of initial application, an entity shall recognize all freestanding derivative instruments (that is, derivative instruments other than embedded derivative instruments) in the statement of financial position as either assets or liabilities and measure them at fair value, pursuant to paragraph 17. The difference between a derivative's previous carrying amount and its fair value shall be reported as a transition adjustment, as discussed in paragraph 52. The entity also shall recognize offsetting gains and losses on hedged assets, liabilities, and firm commitments by adjusting their carrying amounts at that date, as discussed in paragraph 52.b. Any gains or losses on derivative instruments that are reported independently as deferred gains or losses (that is, liabilities or assets) in the statement of financial position at the date of initial application shall be derecognized from that statement; that derecognition also shall be reported as transition adjustments as indicated in paragraph 52. Any gains or losses on derivative instruments reported in other comprehensive income at the date of initial application because the derivative instruments were hedging the fair value exposure of available-for-sale securities also shall be reported as transition adjustments; the offsetting losses and gains on the securities shall be accounted for pursuant to paragraph 52.b.. Any gain or loss on a derivative instrument reported in accumulated other comprehensive income at the date of initial application because the derivative instrument was hedging the variable cash flow exposure of a forecasted (anticipated) transaction related to an available-for-sale security shall remain in accumulated other comprehensive income and shall not be reported as a transition adjustment. The accounting for any gains and losses on derivative instruments that arose prior to the initial application of the Statement and that were previously added to the carrying amount of recognized hedged assets or liabilities is not affected by this Statement. Those gains and losses shall not be included in the transition adjustment.

50. *At the date of initial application, an entity also shall recognize as an asset or liability in the statement of financial position any embedded derivative instrument that is required pursuant to paragraphs 12-16 to be separated from its host contract if the hybrid instrument in which it is embedded was issued, acquired, or substantively modified by the entity after December 31, 1997. For all of its hybrid instruments that exist at the date of initial application and were issued or acquired before January 1, 1998 and not substantively modified thereafter, an entity may choose either (a) not to apply this Statement to any of those hybrid instruments or (b) to recognize as assets or liabilities all the derivative instruments embedded in those hybrid instruments that would be required pursuant to paragraphs 12-16 to be separated from their host contracts. That choice is not permitted to be applied to only some of an entity's individual hybrid instruments and must be applied on an all-or-none basis.*

51. If an embedded derivative instrument is to be separated from its host contract in conjunction with the initial application of this Statement, the entity shall consider the following in determining the related transition adjustment:

a. The carrying amount of the host contract at the date of initial application shall be based on its fair value on the date that the hybrid instrument was issued or acquired by the entity and shall reflect appropriate adjustments for subsequent activity, such as subsequent cash receipts or payments and the amortization of any premium or discount on the host contract arising from the separation of the embedded derivative.

b. The carrying amount of the embedded derivative instrument at the date of initial application shall be its fair value.

c. The transition adjustment shall be the difference at the date of initial application between (1) the previous carrying amount of the hybrid instrument and (2) the sum of the new net carrying amount of the host contract and the fair value of the embedded derivative instrument. The entity shall not retroactively designate a hedging relationship that could have been made had the embedded derivative instrument initially been accounted for separate from the host contract.

52. The transition adjustments resulting from adopting this Statement shall be reported in net income or other comprehensive income, as appropriate, as the effect of a change in accounting principle and presented in a manner similar to the cumulative effect of a change in accounting principle as described in paragraph 20 of APB Opinion No. 20, Accounting Changes. Whether a transition adjustment related to a specific derivative instrument is reported in net income, reported in other comprehensive income, or allocated between both is based on the hedging relationships, if any, that had existed for that derivative instrument and that were the basis for accounting under generally accepted accounting principles before the date of initial application of this Statement.

a. If the transition adjustment relates to a derivative instrument that had been designated in a hedging relationship that addressed the variable cash flow exposure of a forecasted (anticipated) transaction, the transition adjustment shall be reported as a cumulative-effect-type adjustment of accumulated other comprehensive income.

b. *If the transition adjustment relates to a derivative instrument that had been designated in a hedging relationship that addressed the fair value exposure of an asset, a liability, or a firm commitment, the transition adjustment for the derivative shall be reported as a cumulative-effect-type adjustment of net income. Concurrently, any gain or loss on the hedged item (that is, difference between the hedged item's fair value and its carrying amount) shall be recognized as an adjustment of the hedged item's carrying amount at the date of initial application, but only to the extent of an offsetting transition adjustment for the derivative. That adjustment of the hedged item's carrying amount shall also be reported as a cumulative-effect-type adjustment of net income. The transition adjustment related to the gain or loss reported in accumulated other comprehensive income on a derivative instrument that hedged an available-for-sale security, together with the loss or gain on the related security (to the extent of an offsetting transition adjustment for the derivative instrument), shall be reclassified to earnings as a cumulative-effect-type adjustment of both net income and accumulated other comprehensive income.*

c. If a derivative instrument had been designated in multiple hedging relationships that addressed both the fair value exposure of an asset or a liability and the variable cash flow exposure of a forecasted (anticipated) transaction, the transition adjustment for the derivative shall be allocated between the cumulative-effect-type adjustment of net income and the cumulative-effect-type adjustment of accumulated other comprehensive income and shall be reported as discussed in paragraphs 52.a. and 52.b. above. Concurrently, any gain or loss on the hedged item shall be accounted for at the date of initial application as discussed in paragraph 52.b. above.

d. Other transition adjustments not encompassed by paragraphs 52.a., 52.b. and 52.c. above shall be reported as part of the cumulative-effect-type adjustment of net income.

53. Any transition adjustment reported as a cumulative-effect-type adjustment of accumulated other comprehensive income shall be subsequently reclassified into earnings in a manner consistent with paragraph 31. For those amounts, an entity shall disclose separately in the year of initial application the amount of gains and losses reported in accumulated other comprehensive income and associated with the transition adjustment that are being reclassified into earnings during the 12 months following the date of initial application.

54. At the date of initial application, an entity may transfer any held-to-maturity security into the available-for-sale category or the trading category. An entity will then be able in the future to designate a security transferred into the available-for-sale category as the hedged item, or its variable interest payments as the cash flow hedged transactions, in a hedge of the exposure to changes in *market interest rates, changes in foreign currency exchange rates*, or changes in its overall fair value. (Paragraph 21.d. precludes a held-to-maturity security from being designated as the hedged item in a fair value hedge of *market* interest rate risk or the risk of changes in its overall fair value. Paragraph 29.e. similarly precludes the variable cash flows of a held-to-maturity security from being designated as the hedged transaction in a cash flow hedge of *market* interest rate risk.) The unrealized holding gain or loss on a held-to-maturity security transferred to another category at the date of initial application shall be reported in net income or accumulated other comprehensive income consistent with the requirements of paragraphs 15.b. and 15.c. of Statement 115 and reported with the other transition adjustments discussed in paragraph 52 of this Statement. Such transfers from the held-to-maturity category at the date of initial adoption shall not call into question an entity's intent to hold other debt securities to maturity in the future.

55. At the date of initial application, an entity may transfer any available-for-sale security into the trading category. After any related transition adjustments from initially applying this Statement have been recognized, the unrealized holding gain or loss remaining in accumulated other comprehensive income for any transferred security at the date of initial application shall be reclassified into earnings (but not reported as part of the cumulative-effect-type adjustment for the transition adjustments), consistent with paragraph 15.b. of Statement 115. If a derivative instrument had been hedging the variable cash flow exposure of a forecasted transaction related to an available-for-sale security that is transferred into the trading category at the date of initial application and the entity had reported a gain or loss on that derivative instrument in other comprehensive income (consistent with paragraph 115 of Statement 115), the entity also shall reclassify those derivative gains and losses into earnings (but not report them as part of the cumulative-effect-type adjustment for the transition adjustments).

56. At the date of initial application, mortgage bankers and other servicers of financial assets may choose to restratify their servicing rights pursuant to paragraph 37.g. of Statement 125 in a manner that would enable individual strata to comply with the requirements of this Statement regarding what constitutes "a portfolio of similar assets." As noted in footnote 9 of this Statement, mortgage bankers and other servicers of financial assets that designate a hedged portfolio by aggregating servicing rights within one or more risk strata used under paragraph 37.g. of Statement 125 would not necessarily comply with the requirement in paragraph 21.a. of this Statement for portfolios of similar assets, since the risk stratum under paragraph 37.g. of Statement 125 can be based on any predominant risk characteristic, including date of origination or geographic location. The restratification of servicing rights is a change in the application of an accounting principle, and the effect of that change as of the initial application of this Statement shall be reported as part of the cumulative-effect-type adjustment for the transition adjustments.

65. FAS 137 provides the following:

Amendments to Statement 133

3. Statement 133 is amended as follows:

a. The first sentence of paragraph 48 is replaced by the following:

> This Statement shall be effective for all fiscal quarters of all fiscal years beginning after June 15, 2000.

b. Paragraph 50 is replaced by the following:

> At the date of initial application, an entity shall choose to either (a) recognize as an asset or liability in the statement of financial position all embedded derivative instruments that are required pursuant to paragraphs 12-16 to be separated from their host contracts or (b) select either January 1, 1998 or January 1, 1999 as a transition date for embedded derivatives. If the entity chooses to select a transition date, it shall recognize as separate assets and liabilities (pursuant to paragraphs 12-16) only those derivatives embedded in hybrid instruments issued, acquired, or substantively modified by the entity on or after the selected transition date. That choice is not permitted to be applied to only some of an entity's individual hybrid instruments and must be applied on an all-or-none basis.

Effective Date

4. This Statement is effective upon issuance. An entity that has already applied the provisions of Statement 133 and has issued interim or annual financial statements reflecting that application may not revert to a previous method of accounting for derivative instruments and hedging activities.

66. FAS 138 provides the following (certain sections not affecting the excerpted FAS No. 133 guidance excluded):

Amendments to Statement 133

4. Statement 133 is amended as follows:

Amendment Related to Normal Purchases and Normal Sales

a. Paragraph 10.b. is replaced by the following:

> Normal purchases and normal sales. Normal purchases and normal sales are contracts that provide for the purchase or sale of something other than a financial instrument or derivative instrument that will be delivered in quantities expected to be used or sold by the reporting entity over a reasonable period in the normal course of business. However, contracts that have a price based on an underlying that is not clearly and closely related to the asset being sold or purchased (such as a price in a contract for the sale of a grain commodity based in part on changes in the S&P index) or that are denominated in a foreign currency that meets neither of the criteria in paragraphs 15.a. and 15.b. shall not be considered normal purchases and normal sales. Contracts that contain net settlement provisions as described in paragraphs 9.a. and 9.b. may qualify for the normal purchases and normal sales exception if it is probable at inception and throughout the term of the individual contract that the contract will not settle net and will result in physical delivery. Net settlement (as described in paragraphs 9.a. and 9.b.) of contracts in a group of contracts similarly designated as normal purchases and normal sales would call into question the classification of all such contracts as normal purchases or normal sales. Contracts that require cash settlements of gains or losses or are otherwise settled net on a

periodic basis, including individual contracts that are part of a series of sequential contracts intended to accomplish ultimate acquisition or sale of a commodity, do not qualify for this exception. For contracts that qualify for the normal purchases and normal sales exception, the entity shall document the basis for concluding that it is probable that the contract will result in physical delivery. The documentation requirements can be applied either to groups of similarly designated contracts or to each individual contract.

Amendments to Redefine Interest Rate Risk

b. Paragraph 21 is amended as follows:

(1) The first sentence of subparagraph (d) is replaced by the following:

> If the hedged item is all or a portion of a debt security (or a portfolio of similar debt securities) that is classified as held-to-maturity in accordance with FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities, the designated risk being hedged is the risk of changes in its fair value attributable to credit risk, foreign exchange risk, or both. If the hedged item is an option component of a held-to-maturity security that permits its prepayment, the designated risk being hedged is the risk of changes in the entire fair value of that option component.

(2) In the first parenthetical sentence of subparagraph (d), changes in market interest rates or foreign exchange rates is replaced by interest rate risk.

(3) In subparagraph (f)(2), market interest rates is replaced by the designated benchmark interest rate (referred to as interest rate risk).

(4) In subparagraph (f)(3), (refer to paragraphs 37 and 38) is replaced by (referred to as foreign exchange risk) (refer to paragraphs 37, 37A, and 38).

(5) In subparagraph (f)(4), both is inserted between to and changes and the obligor's creditworthiness is replaced by the obligor's creditworthiness and changes in the spread over the benchmark interest rate with respect to the hedged item's credit sector at inception of the hedge (referred to as credit risk).

(6) In the second sentence of subparagraph (f), market is deleted.

(7) In subparagraph (f), the following sentences and footnote are added after the second sentence:

> The benchmark interest rate being hedged in a hedge of interest rate risk must be specifically identified as part of the designation and documentation at the inception of the hedging relationship. Ordinarily, an entity should designate the same benchmark interest rate as the risk being hedged for similar hedges, consistent with paragraph 62; the use of different benchmark interest rates for similar hedges should be rare and must be justified. In calculating the change in the hedged item's fair value attributable to changes in the benchmark interest rate, the estimated cash flows used in calculating fair value must be based on all of the contractual cash flows of the entire hedged item. Excluding some of the hedged item's contractual cash flows (for example, the portion of the interest coupon in excess of the benchmark interest rate) from the calculation is not permitted.

(8) In the fourth sentence of subparagraph (f), overall is inserted between exposure to changes in the and fair value of that.

(9) In the last sentence of subparagraph (f), market is deleted.

c. Paragraph 29 is amended as follows:

(1) In the first sentence of subparagraph (e), default or changes in the obligor's creditworthiness is replaced by credit risk, foreign exchange risk, or both.

(2) In the last sentence of subparagraph (e), changes in market interest rates is replaced by interest rate risk.

(3) In the first sentence of subparagraph (h), (or the interest payments on that financial asset or liability) is added after sale of a financial asset or liability.

(4) In subparagraph (h)(1), the risk of changes in the cash flows of the entire asset or liability is replaced by the risk of overall changes in the hedged cash flows related to the asset or liability.

(5) In subparagraph (h)(2), market interest rates is replaced by the designated benchmark interest rate (referred to as interest rate risk).

(6) In subparagraph (h)(3), (refer to paragraph 40) is replaced by (referred to as foreign exchange risk) (refer to paragraphs 40, 40A, 40B, and 40C).

(7) In subparagraph (h)(4), default or changes in the obligor's creditworthiness is replaced by default, changes in the obligor's creditworthiness, and changes in the spread over the benchmark interest rate with respect to the hedged item's credit sector at inception of the hedge (referred to as credit risk).

(8) In subparagraph (h), the following sentences are added after the second sentence:

The benchmark interest rate being hedged in a hedge of interest rate risk must be specifically identified as part of the designation and documentation at the inception of the hedging relationship. Ordinarily, an entity should designate the same benchmark interest rate as the risk being hedged for similar hedges, consistent with paragraph 62; the use of different benchmark interest rates for similar hedges should be rare and must be justified. In a cash flow hedge of a variable-rate financial asset or liability, either existing or forecasted, the designated risk being hedged cannot be the risk of changes in its cash flows attributable to changes in the specifically identified benchmark interest rate if the cash flows of the hedged transaction are explicitly based on a different index, for example, based on a specific bank's prime rate, which cannot qualify as the benchmark rate. However, the risk designated as being hedged could potentially be the risk of overall changes in the hedged cash flows related to the asset or liability, provided that the other criteria for a cash flow hedge have been met.

d. Paragraph 54 is amended as follows:

(1) In the second sentence, market interest rates, changes in foreign currency exchange rates, is replaced by the designated benchmark interest rate.

(2) In the third and fourth (parenthetical) sentences, market is deleted.

(3) In the penultimate sentence of footnote 14, market interest rates is replaced by interest rate risk.

e. In the first sentence of paragraph 90, market is deleted.

Amendments Related to Hedging Recognized Foreign-Currency-Denominated Assets and Liabilities

f. In paragraph 21.c.(1), (for example, if foreign exchange risk is hedged, a foreign-currency-denominated asset for which a foreign currency transaction gain or loss is recognized in earnings) is deleted.

g. Paragraph 29.d. is amended as follows:

1) In the first sentence, (for example, if foreign exchange risk is hedged, the forecasted acquisition of a foreign-currency-denominated asset for which a foreign currency transaction gain or loss will be recognized in earnings) is deleted.

(2) The second sentence is deleted.

h. In paragraph 29.g.(2), (reflecting its actual location if a physical asset) is replaced by reflecting its actual location if a physical asset (regardless of whether that price and the related cash flows are stated in the entity's functional currency or a foreign currency).

i. The following subparagraph is added after subparagraph (c) of paragraph 30:

d. In a cash flow hedge of the variability of the functional-currency-equivalent cash flows for a recognized foreign-currency-denominated asset or liability that is remeasured at spot exchange rates under paragraph 15 of Statement 52, an amount that will offset the related transaction gain or loss arising from the remeasurement and adjust earnings for the cost to the purchaser (income to the seller) of the hedging instrument shall be reclassified each period from other comprehensive income to earnings.

j. Paragraph 36 is amended as follows:

(1) In the first sentence, Consistent with the functional currency concept in Statement 52 is replaced by If the hedged item is denominated in a foreign currency.

(2) In subparagraph (a), an available-for-sale security is replaced by a recognized asset or liability (including an available-for-sale security).

(3) Subparagraph (b) is replaced by the following:
A cash flow hedge of a forecasted transaction, an unrecognized firm commitment, the forecasted functional-currency-equivalent cash flows associated with a recognized asset or liability, or a forecasted intercompany transaction.

(4) The first two sentences following subparagraph (c) are replaced by the following:

The recognition in earnings of the foreign currency transaction gain or loss on a foreign-currency-denominated asset or liability based on changes in the foreign currency spot rate is not considered to be the remeasurement of that asset or liability with changes in fair value attributable to foreign exchange risk recognized in earnings, which is discussed in the criteria in paragraphs 21.c.(1) and 29.d. Thus, those criteria are not impediments to either a foreign currency fair value or cash flow hedge of such a foreign-currency-denominated asset or liability or a foreign currency cash flow hedge of the forecasted acquisition or incurrence of a foreign-currency-denominated asset or liability whose carrying amount will be remeasured at spot exchange rates under paragraph 15 of Statement 52.

k. The following paragraph is added after paragraph 36:

36A. The provisions in paragraph 36 that permit a recognized foreign-currency-denominated asset or liability to be the hedged item in a fair value or cash flow hedge of foreign currency exposure also pertain to a recognized foreign-currency-denominated receivable or payable that results from a hedged forecasted foreign-currency-denominated sale or purchase on credit. An entity may choose to designate a single cash flow hedge that encompasses the variability of functional currency cash flows attributable to foreign exchange risk related to the settlement of the foreign-currency-denominated receivable or payable resulting from a forecasted sale or purchase on credit. Alternatively, an entity may choose to designate a cash flow hedge of the variability of functional currency cash flows attributable to foreign exchange risk related to a forecasted foreign-currency-denominated sale or purchase on credit and then separately designate a foreign currency fair value hedge of the resulting recognized foreign-currency-denominated receivable or payable. In that case, the cash flow hedge would terminate (be dedesignated) when the hedged sale or purchase occurs and the foreign-currency-denominated receivable or payable is recognized. The use of the same foreign currency derivative instrument for both the cash flow hedge and the fair value hedge is not prohibited though some ineffectiveness may result.

l. The following paragraph is added after paragraph 37:

37A. Recognized asset or liability. A nonderivative financial instrument shall not be designated as the hedging instrument in a fair value hedge of the foreign currency exposure of a recognized asset or liability. A derivative instrument can be designated as hedging the changes in the fair value of a recognized asset or liability (or a specific portion thereof) for which a foreign currency transaction gain or loss is recognized in earnings under the provisions of paragraph 15 of Statement 52. All recognized foreign-currency-denominated assets or liabilities for which a foreign currency transaction gain or loss is recorded in earnings may qualify for the accounting specified in paragraphs 22-27 if all the fair value hedge criteria in paragraphs 20 and 21 and the conditions in paragraphs 40.a. and 40.b. are met.

m. Paragraph 40 is amended as follows:

(1) The second sentence is replaced by the following:

A derivative instrument designated as hedging the foreign currency exposure to variability in the functional-currency-equivalent cash flows associated with a forecasted transaction (for example, a forecasted export sale to an unaffiliated entity with the price to be denominated in a foreign currency), a recognized asset or liability, an unrecognized firm commitment, or a forecasted intercompany transaction (for example, a forecasted sale to a foreign subsidiary or a forecasted royalty from a foreign subsidiary) qualifies for hedge accounting if all the following criteria are met:

(2) The following subparagraph is added:

e. If the hedged item is a recognized foreign-currency-denominated asset or liability, all the variability in the hedged item's functional-currency-equivalent cash flows must be eliminated by the effect of the hedge. (For example, a cash flow hedge cannot be used with a variable-rate foreign-currency-denominated asset or liability and a derivative based solely on changes in exchange rates because the derivative does not eliminate all the variability in the functional currency cash flows.)

Amendments Related to Intercompany Derivatives

n. In the last sentence of paragraph 36, in a fair value hedge or in a cash flow hedge of a recognized foreign-currency-denominated asset or liability or in a net investment hedge is added after can be a hedging instrument.

o. The following paragraphs are added after paragraph 40:

40A. Internal derivative. A foreign currency derivative contract that has been entered into with another member of a consolidated group (such as a treasury center) can be a hedging instrument in a foreign currency cash flow hedge of a forecasted borrowing, purchase, or sale or an unrecognized firm commitment in the consolidated financial statements only if the following two conditions are satisfied. (That foreign currency derivative instrument is hereafter in this section referred to as an internal derivative.)

a. From the perspective of the member of the consolidated group using the derivative as a hedging instrument (hereafter in this section referred to as the hedging affiliate), the criteria for foreign currency cash flow hedge accounting in paragraph 40 must be satisfied.

b. The member of the consolidated group not using the derivative as a hedging instrument (hereafter in this section referred to as the issuing affiliate) must either (1) enter into a derivative contract with an unrelated third party to offset the exposure that results from that internal derivative or (2) if the conditions in paragraph 40B are met, enter into derivative contracts with unrelated third parties that would offset, on a net basis for each foreign currency, the foreign exchange risk arising from multiple internal derivative contracts.

40B. Offsetting net exposures. If an issuing affiliate chooses to offset exposure arising from multiple internal derivative contracts on an aggregate or net basis, the derivatives issued to hedging affiliates may qualify as cash flow hedges in the consolidated financial statements only if all of the following conditions are satisfied:

a. The issuing affiliate enters into a derivative contract with an unrelated third party to offset, on a net basis for each foreign currency, the foreign exchange risk arising from multiple internal derivative contracts, and the derivative contract with the unrelated third party generates equal or closely approximating gains and losses when compared with the aggregate or net losses and gains generated by the derivative contracts issued to affiliates.

b. Internal derivatives that are not designated as hedging instruments are excluded from the determination of the foreign currency exposure on a net basis that is offset by the third-party derivative. In addition, nonderivative contracts may not be used as hedging instruments to offset exposures arising from internal derivative contracts.

c. Foreign currency exposure that is offset by a single net third-party contract arises from internal derivative contracts that mature within the same 31-day period and that involve the same currency exposure as the net third-party derivative. The offsetting net third-party derivative related to that group of contracts must offset the aggregate or net exposure to that currency, must mature within the same 31-day period, and must be entered into within 3 business days after the designation of the internal derivatives as hedging instruments.

d. The issuing affiliate tracks the exposure that it acquires from each hedging affiliate and maintains documentation supporting linkage of each internal derivative contract and the offsetting aggregate or net derivative contract with an unrelated third party.

e. The issuing affiliate does not alter or terminate the offsetting derivative with an unrelated third party unless the hedging affiliate initiates that action. If the issuing affiliate does alter or terminate any offsetting third-party derivative (which should be rare), the hedging affiliate must prospectively cease hedge accounting for the internal derivatives that are offset by that third-party derivative.

40C. A member of a consolidated group is not permitted to offset exposures arising from multiple internal derivative contracts on a net basis for foreign currency cash flow exposures related to recognized foreign-currency-denominated assets or liabilities. That prohibition includes situations in which a recognized foreign-currency-denominated asset or liability in a fair value hedge or cash flow hedge results from the occurrence of a specifically identified forecasted transaction initially designated as a cash flow hedge.

Amendments for Certain Interpretations of Statement 133 Cleared by the Board Relating to the Derivatives Implementation Group Process

p. In the second sentence of paragraph 12, host is inserted between would be required by the and contract, whether unconditional.

Amendments to Implement Guidance in Implementation Issue No. G3, “Discontinuation of a Cash Flow Hedge”

q. Paragraph 33 is replaced by the following:
The net derivative gain or loss related to a discontinued cash flow hedge shall continue to be reported in accumulated other comprehensive income unless it is probable that the forecasted transaction will not occur by the end of the originally specified time period (as documented at the inception of the hedging relationship) or within an additional two-month period of time thereafter, except as indicated in the following sentence. In rare cases, the existence of extenuating circumstances that are related to the nature of the forecasted transaction and are outside the control or influence of the reporting entity may cause the forecasted transaction to be probable of occurring on a date that is beyond the additional two-month period of time, in which case the net derivative gain or loss related to the discontinued cash flow hedge shall continue to be reported in accumulated other comprehensive income until it is reclassified into earnings pursuant to paragraph 31. If it is probable that the hedged forecasted transaction will not occur either by the end of the originally specified time period or within the additional two-month period of time and the hedged forecasted transaction also does not qualify for the exception described in the preceding sentence, that derivative gain or loss reported in accumulated other comprehensive income shall be reclassified into earnings immediately.

r. The following is added at the end of paragraph 45.b.(4):
by the end of the originally specified time period or within the additional period of time discussed in paragraph 33.

Amendments to Implement Guidance in Implementation Issue No. H1, “Hedging at the Operating Unit Level”

s. In the last sentence of paragraph 37, and the conditions in paragraphs 40.a. and 40(b) is added between paragraphs 20 and 21 and are met.

t. In the third sentence of paragraph 38, and the conditions in paragraphs 40.a. and 40.b. is added between paragraphs 20 and 21 and are met.

u. In paragraph 42, provided the conditions in paragraphs 40.a. and 40.b. are met is added to the end of the first sentence.

Amendments to Implement Guidance in Implementation Issue No. H2, “Requirement That the Unit with the Exposure Must Be a Party to the Hedge”

v. Paragraph 40 is amended as follows:

(1) Subparagraph (a) is replaced by the following:
For consolidated financial statements, either (1) the operating unit that has the foreign currency exposure is a party to the hedging instrument or (2) another member of the consolidated group that has the same functional currency as that operating unit (subject to the restrictions in this subparagraph and related footnote) is a party to the hedging instrument. To qualify for applying the guidance in (2) above, there may be no intervening subsidiary with a different functional currency. (Refer to paragraphs 36, 40A, and 40B for conditions for which an intercompany foreign currency derivative can be the hedging instrument in a cash flow hedge of foreign exchange risk.)

(2) In subparagraph (b), that is replaced by the hedging.

EXHIBIT A - DISCUSSION OF HEDGING EFFECTIVENESS

The Financial Accounting Standards Board established the Derivatives Implementation Group in 1999 to address execution of FAS No. 133. The Derivatives Implementation Group addressed two issues related to effectiveness that are applicable to this issue paper. The issues have been authored by the FASB staff and represents the staff's views, although FASB has discussed the responses at a public meeting and chosen not to object to dissemination of those responses. Official positions of the FASB are determined only after extensive due process and deliberation.

No. E7: Hedging—General: Methodologies to Assess Effectiveness of Fair Value and Cash Flow Hedges

Paragraph references: 20.b., 22, 28.b., 62, 86, 87
Date cleared by Board: May 17, 2000

QUESTION

1. Since Statement 133 provides an entity with flexibility in choosing the method it will use in assessing hedge effectiveness, must an entity use a dollar-offset approach in assessing effectiveness?

BACKGROUND

2. Paragraph 20.b. of Statement 133 states, in part:

> Both at inception of the [fair value] hedge and on an ongoing basis, the hedging relationship is expected to be highly effective in achieving offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months.

3. Paragraph 28.b. indicates a similar requirement that the hedging relationship be expected to be highly effective in achieving offsetting changes in cash flows attributable to the hedged risk during the period that the hedge is designated.

4. Paragraph 22 of Statement 133 states, in part:

> The measurement of hedge ineffectiveness for a particular hedging relationship shall be consistent with the entity's risk management strategy and the method of assessing hedge effectiveness that was documented at the inception of the hedging relationship, as discussed in paragraph 20.a. Nevertheless, the amount of hedge ineffectiveness recognized in earnings is based on the extent to which exact offset is not achieved.

5. Paragraph 62 emphasizes that each entity must "define at the time it designates a hedging relationship the method it will use to assess the hedge's effectiveness in achieving offsetting changes in fair value or offsetting cash flows attributable to the risk being hedged." It also states, "This Statement does not specify a single method for either assessing whether a hedge is expected to be highly effective or measuring hedge ineffectiveness."

RESPONSE

6. No. Statement 133 requires an entity to consider hedge effectiveness in two different ways—in prospective considerations and in retrospective evaluations.

a. Prospective considerations

Upon designation of a hedging relationship (as well as on an ongoing basis), the entity must be able to justify an expectation that the relationship will be highly effective over future periods in achieving offsetting changes in fair value or cash flows. That expectation, which is forward-looking, can be based upon regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information.

b. Retrospective evaluations

At least quarterly, the hedging entity must determine whether the hedging relationship has been highly effective in having achieved offsetting changes in fair value or cash flows through the date of the periodic assessment. That assessment can be based upon regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information. If an entity elects at the inception of a hedging relationship to utilize the same regression analysis approach for both prospective considerations and retrospective evaluations of assessing effectiveness, then during the term of that hedging relationship those regression analysis calculations should generally incorporate the same number of data points. Electing to utilize a regression or other statistical analysis approach instead of a dollar-offset approach to perform retrospective evaluations of assessing hedge effectiveness may affect whether an entity can apply hedge accounting for the current assessment period as discussed below.

7. Paragraph 62 requires that at the time an entity designates a hedging relationship, it must define and document the method it will use to assess the hedge's effectiveness. That paragraph also states that ordinarily "an entity should assess effectiveness for similar hedges in a similar manner; use of different methods for similar hedges should be justified." Furthermore, it requires that an entity use that defined and documented methodology consistently throughout the period of the hedge. If an entity elects at the inception of a hedging relationship to utilize a regression analysis approach for prospective considerations of assessing effectiveness and the dollar-offset method to perform retrospective evaluations of assessing effectiveness, then that entity must abide by the results of that methodology as long as that hedging relationship remains designated. Thus, in its retrospective evaluation, an entity might conclude that, under a dollar-offset approach, a designated hedging relationship does not qualify for hedge accounting for the period just ended, but that the hedging relationship may continue because, under a regression analysis approach, there is an expectation that the relationship will be highly effective in achieving offsetting changes in fair value or cash flows in future periods. In its retrospective evaluation, if that entity concludes that, under a dollar-offset approach, the hedging relationship has not been highly effective in having achieved offsetting changes in fair value or cash flows, hedge accounting may not be applied in the current period. Whenever a hedging relationship fails to qualify for hedge accounting in a certain assessment period, the overall change in fair value of the derivative for that current period is recognized in earnings (not reported in other comprehensive income for a cash flow hedge) and the change in fair value of the hedged item would not be recognized in earnings for that period (for a fair value hedge).

8. If an entity elects at the inception of a hedging relationship to utilize a regression analysis (or other statistical analysis) approach for either prospective considerations or retrospective evaluations of assessing effectiveness, then that entity must periodically update its regression analysis (or other statistical analysis). For example, if there is significant ineffectiveness measured and recognized in earnings for a hedging relationship, which is calculated each assessment period, the regression analysis should be rerun to determine whether the expectation of high effectiveness is still valid. As long as an entity reruns its regression analysis and determines that the hedging relationship is still expected to be highly effective, then it can continue to apply hedge accounting without interruption.

9. In all instances, the actual measurement of hedge ineffectiveness to be recognized in earnings each reporting period is based on the extent to which exact offset is not achieved as specified in paragraph 22 of Statement 133 (for fair value hedges) or paragraph 30 (for cash flow hedges). That requirement applies even if a regression or other statistical analysis approach for both prospective considerations and retrospective evaluations of assessing effectiveness supports an expectation that the hedging relationship will be highly effective and demonstrates that it has been highly effective, respectively.

10. The application of a regression or other statistical analysis approach to assessing effectiveness is complex. Those methodologies require appropriate interpretation and understanding of the statistical inferences.

E8: Hedging–General: Assessing Hedge Effectiveness of Fair Value and Cash Flow Hedges Period-by-Period or Cumulatively under a Dollar-Offset Approach

Paragraph references: 20.b., 28.b., 30, 62, 64, 67
Date cleared by Board: June 28, 2000

QUESTION

1. In periodically assessing retrospectively the effectiveness of a fair value hedge (or a cash flow hedge) in having achieved offsetting changes in fair values (or cash flows), an entity compares the change in the hedging instrument's fair value (or cash flows) to the change in the hedged item's fair value (or hedged transaction's cash flows) attributable to the hedged risk. If an entity elects at inception of a hedging relationship to utilize the dollar-offset approach for retrospective evaluations of assessing effectiveness, then should that entity base that comparison on (a) the fair value (or cash flow) changes that have occurred during the period being assessed (that is, on a period-by-period basis) or (b) the cumulative fair value (or cash flow) changes to date from the inception of the hedge? Is that entity permitted to use either a period-by-period approach or a cumulative approach on individual fair value hedges (or cash flow hedges) under a dollar-offset approach?

BACKGROUND

2. Paragraph 20.b. of Statement 133 states, in part:

> Both at inception of the [fair value] hedge and on an ongoing basis, the hedging relationship is expected to be highly effective in achieving offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months.…All assessments of effectiveness shall be consistent with the risk management strategy documented for that particular hedging relationship.

3. Paragraph 28.b. states, in part:

> Both at inception of the [cash flow] hedge and on an ongoing basis, the hedging relationship is expected to be highly effective in achieving offsetting cash flows attributable to the hedged risk during the term of the hedge, except as indicated in paragraph 28.d. below. An assessment of effectiveness is required whenever financial statements or earnings are reported, and at least every three months.…All assessments of effectiveness shall be consistent with the originally documented risk management strategy for that particular hedging relationship.

4. Paragraph 30.b. states that "the effective portion of the gain or loss on a derivative designated as a cash flow hedge is reported in other comprehensive income." Paragraph 30.b. specifies how the effective portion to be reported in other comprehensive income should be calculated. The calculation of the

effective portion is, in part, based on "cumulative gain or loss on the derivative from inception of the hedge."

5. Paragraph 67 of the Statement states, in part:

> If the hedge initially qualifies for hedge accounting, the entity would continue to assess whether the hedge meets the effectiveness test and also would measure any ineffectiveness during the hedge period. If the hedge fails the effectiveness test at any time (that is, if the entity does not expect the hedge to be highly effective at achieving offsetting changes in fair values or cash flows), the hedge ceases to qualify for hedge accounting.

RESPONSE

6. In periodically (that is, at least quarterly) assessing retrospectively the effectiveness of a fair value hedge (or a cash flow hedge) in having achieved offsetting changes in fair values (or cash flows) under a dollar-offset approach, Statement 133 permits an entity to use either a period-by-period approach or a cumulative approach on individual fair value hedges (or cash flow hedges). The period-by-period approach involves comparing the changes in the hedging instrument's fair values (or cash flows) that have occurred during the period being assessed to the changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged that have occurred during the same period. The cumulative approach involves comparing the cumulative changes (to date from inception of the hedge) in the hedging instrument's fair values (or cash flows) to the cumulative changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged. At inception of the hedge, an entity may choose either approach in designating how effectiveness will be assessed, depending on the nature of the hedge documented in accordance with paragraphs 20.a. and 28.a. For example, an entity may decide that the cumulative approach is generally preferred, yet may wish to use the period-by-period approach in certain circumstances.

7. Paragraph 62 requires that at the time an entity designates a hedging relationship, it must define and document the method it will use to assess the hedge's effectiveness. That paragraph also states that ordinarily "an entity should assess effectiveness for similar hedges in a similar manner; use of different methods for similar hedges should be justified." Furthermore, it requires that an entity use that defined and documented methodology consistently throughout the period of the hedge. If an entity elects at inception of a hedging relationship to base its comparison of changes in fair value (or cash flows) on a cumulative approach, then that entity must abide by the results of that methodology as long as that hedging relationship remains designated. Electing to utilize a period-by-period approach instead of a cumulative approach (or vice versa) to perform retrospective evaluations of assessing hedge effectiveness under the dollar-offset method may affect whether an entity can apply hedge accounting for the current assessment period.

8. If an entity elects to base its comparison of changes in fair value (or cash flows) on a period-by-period approach, the period cannot exceed three months. Fair value (or cash flow) patterns of the hedging instrument or the hedged item (or hedged transaction) in periods prior to the period being assessed are not relevant.

9. The foregoing guidance relates to an entity's periodic retrospective assessment and determining whether a hedging relationship continues to qualify for hedge accounting; it does not relate to the actual measurement of hedge ineffectiveness to be recognized in earnings under hedge accounting. The actual measurement of ineffectiveness is based on the extent to which exact offset is not achieved as specified in paragraph 22 for fair value hedges or paragraph 30 for cash flow hedges.

10. The above response has been authored by the FASB staff and represents the staff's views, although the Board has discussed the above response at a public meeting and chosen not to object to

dissemination of that response. Official positions of the FASB are determined only after extensive due process and deliberation.

EXHIBIT B – ASSESSMENT OF HEDGING EFFECTIVENESS

The following is based on paragraphs 62-70 of FAS 133 to offer additional guidance on assessing hedging effectiveness. The intent of such is to remain consistent with FAS 133 with respect to assessing hedge effectiveness.

1. This issue paper requires that an entity define at the time it designates a hedging relationship the method it will use to assess the hedge's effectiveness in achieving offsetting changes in fair value or offsetting cash flows attributable to the risk being hedged. It also requires that an entity use that defined method consistently throughout the hedge period to assess at inception of the hedge and on an ongoing basis whether it expects the hedging relationship to be highly effective in achieving offset. If the entity identifies an improved method and wants to apply that method prospectively, it must discontinue the existing hedging relationship and designate the relationship anew using the improved method. Although this issue paper suggests a method for assessing whether a hedge is expected to be highly effective or measuring hedge ineffectiveness, the appropriateness of a given method of assessing hedge effectiveness can depend on the nature of the risk being hedged and the type of hedging instrument used. Ordinarily, however, an entity should assess effectiveness for similar hedges in a similar manner; use of different methods for similar hedges should be justified.

2. In defining how hedge effectiveness will be assessed, an entity must specify whether it will include in that assessment all of the gain or loss on a hedging instrument. This issue paper permits (but does not require) an entity to exclude all or a part of the hedging instrument's time value from the assessment of hedge effectiveness, as follows:

a. If the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the change in the time value of the contract would be excluded from the assessment of hedge effectiveness.

b. If the effectiveness of a hedge with an option contract is assessed based on changes in the option's minimum value, that is, its intrinsic value plus the effect of discounting, the change in the volatility value of the contract would be excluded from the assessment of hedge effectiveness.

c. If the effectiveness of a hedge with a forward or futures contract is assessed based on changes in fair value attributable to changes in spot prices, the change in the fair value of the contract related to the changes in the difference between the spot price and the forward or futures price would be excluded from the assessment of hedge effectiveness.

In each circumstance above, changes in the excluded component would be included in unrealized gains or losses. As noted in paragraph 1, the effectiveness of similar hedges generally should be assessed similarly; that includes whether a component of the gain or loss on a derivative is excluded in assessing effectiveness. No other components of a gain or loss on the designated hedging instrument may be excluded from the assessment of hedge effectiveness.

3. In assessing the effectiveness of a cash flow hedge, an entity generally will need to consider the time value of money if significant in the circumstances. Considering the effect of the time value of money is especially important if the hedging instrument involves periodic cash settlements. An example of a situation in which an entity likely would reflect the time value of money is a tailing strategy with futures contracts. When using a tailing strategy, an entity adjusts the size or contract amount of futures contracts used in a hedge so that earnings (or expense) from reinvestment (or funding) of daily settlement gains (or losses) on the futures do not distort the results of the hedge. To assess offset of expected cash flows when a tailing strategy has been used, an entity could reflect the time value of money, perhaps by

comparing the present value of the hedged forecasted cash flow with the results of the hedging instrument.

4. Whether a hedging relationship qualifies as highly effective sometimes will be easy to assess. If the critical terms of the hedging instrument and of the entire hedged asset or liability (as opposed to selected cash flows) or hedged forecasted transaction are the same, the entity could conclude that changes in fair value or cash flows attributable to the risk being hedged are expected to completely offset at inception and on an ongoing basis. For example, an entity may assume that a hedge of a forecasted purchase of a commodity with a forward contract will be highly effective if:

a. The forward contract is for purchase of the same quantity of the same commodity at the same time and location as the hedged forecasted purchase.
b. The fair value of the forward contract at inception is zero.
c. Either the change in the discount or premium on the forward contract is excluded from the assessment of effectiveness and included directly in unrealized gains and losses pursuant to paragraph 22B or the change in expected cash flows on the forecasted transaction is based on the forward price for the commodity.

5. However, assessing hedge effectiveness can be more complex. For example, hedge effectiveness would be reduced by the following circumstances, among others: a. A difference between the basis of the hedging instrument and the hedged item or hedged transaction (such as a Deutsche mark-based hedging instrument and Dutch guilder-based hedged item), to the extent that those bases do not move in tandem. b. Differences in critical terms of the hedging instrument and hedged item or hedged transaction, such as differences in notional amounts, maturities, quantity, location, or delivery dates. Hedge effectiveness also would be reduced if part of the change in the fair value of a derivative is attributable to a change in the counterparty's creditworthiness.

6. A hedge that meets the effectiveness test specified in paragraphs 20.b. and 21.b. (that is, both at inception and on an ongoing basis, the entity expects the hedge to be highly effective at achieving offsetting changes in fair values or cash flows) also must meet the other hedge accounting criteria to qualify for hedge accounting. If the hedge initially qualifies for hedge accounting, the entity would continue to assess whether the hedge meets the effectiveness test. If the hedge fails the effectiveness test at any time (that is, if the entity does not expect the hedge to be highly effective at achieving offsetting changes in fair values or cash flows), the hedge ceases to qualify for hedge accounting. The discussions of measuring hedge effectiveness in the examples in the remainder of this Exhibit assume that the hedge satisfied all of the criteria for hedge accounting at inception.

Assuming Effectiveness in a Hedge with an Interest Rate Swap

7. An entity may assume effectiveness in a hedging relationship of interest rate risk involving an interest-bearing asset or liability and an interest rate swap if all of the applicable conditions in the following list are met:

Conditions applicable to both fair value hedges and cash flow hedges

a. The notional amount of the swap matches the principal amount of the interest-bearing asset or liability.
b. The fair value of the swap at its inception is zero.
c. The formula for computing net settlements under the interest rate swap is the same for each net settlement. (That is, the fixed rate is the same throughout the term, and the variable rate is based on the same index and includes the same constant adjustment or no adjustment.)
d. The interest-bearing asset or liability is not prepayable.

e. Any other terms in the interest-bearing financial instruments or interest rate swaps are typical of those instruments and do not invalidate the assumption of no ineffectiveness.

Conditions applicable to fair value hedges only

f. The expiration date of the swap matches the maturity date of the interest-bearing asset or liability.
g. There is no floor or ceiling on the variable interest rate of the swap.
h. The interval between repricings of the variable interest rate in the swap is frequent enough to justify an assumption that the variable payment or receipt is at a market rate (generally three to six months or less).

Conditions applicable to cash flow hedges only

i. All interest receipts or payments on the variable-rate asset or liability during the term of the swap are designated as hedged, and no interest payments beyond the term of the swap are designated as hedged.
j. There is no floor or cap on the variable interest rate of the swap unless the variable-rate asset or liability has a floor or cap. In that case, the swap must have a floor or cap on the variable interest rate that is comparable to the floor or cap on the variable-rate asset or liability. (For this purpose, comparable does not necessarily mean equal. For example, if a swap's variable rate is LIBOR and an asset's variable rate is LIBOR plus 2 percent, a 10 percent cap on the swap would be comparable to a 12 percent cap on the asset.)
k. The repricing dates match those of the variable-rate asset or liability.
l. The index on which the variable rate is based matches the index on which the asset or liability's variable rate is based.

8. The fixed rate on a hedged item need not exactly match the fixed rate on a swap designated as a fair value hedge. Nor does the variable rate on an interest-bearing asset or liability need to be the same as the variable rate on a swap designated as a cash flow hedge. A swap's fair value comes from its net settlements. The fixed and variable rates on a swap can be changed without affecting the net settlement if both are changed by the same amount. That is, a swap with a payment based on LIBOR and a receipt based on a fixed rate of 5 percent has the same net settlements and fair value as a swap with a payment based on LIBOR plus 1 percent and a receipt based on a fixed rate of 6 percent.

9. Comparable credit risk at inception is not a condition for assuming effectiveness even though actually achieving perfect offset would require that the same discount rate be used to determine the fair value of the swap and of the hedged item or hedged transaction. To justify using the same discount rate, the credit risk related to both parties to the swap as well as to the debtor on the hedged interest-bearing asset (in a fair value hedge) or the variable-rate asset on which the interest payments are hedged (in a cash flow hedge) would have to be the same. However, because that complication is caused by the interaction of interest rate risk and credit risk, which are not easily separable, comparable creditworthiness is not considered a necessary condition to assume no ineffectiveness in a hedge of interest rate risk.

Statutory Issue Paper No. 116

Claim Adjustment Expenses, Amendments to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses

STATUS
Finalized October 16, 2001

Current Authoritative Guidance for Claim Adjustment Expenses, Unpaid Claims, Losses and Loss Adjustment Expenses: SSAP No. 55

This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 85

Type of Issue:
Life and Health, Health Entities

SUMMARY OF ISSUE

1. *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55) prescribes the accounting treatment for recording unpaid claims and claim adjustment expenses for life insurance contracts and accident and health contracts and unpaid losses and loss adjustment expenses for property and casualty insurance contracts.

2. The purpose of this issue paper is to amend SSAP No. 55 to provide clarification regarding what costs should be classified as claim adjustment expenses on accident and health contracts. The conclusions outlined in the issue paper are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

RECOMMENDED CONCLUSION

3. Certain claim adjustment expenses reduce the number or cost of health services thereby resulting in lower premiums or lower premium increases. These claim adjustment expenses shall be classified as cost containment expenses.

4. This issue paper amends paragraph 6.c. of SSAP No. 55 to the following:

c. Claim Adjustment Expenses for Accident and Health Reporting Entities: Costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in subparagraphs 6.a. and 6.b. Claim adjustment expenses, including legal expenses, can be subdivided into cost containment expenses and other claim adjustment expenses:

i. Cost containment expenses: Expenses that actually serve to reduce the number of health services provided or the cost of such services. The following are examples of items that shall be considered "cost containment expenses" only if they result in reduced levels of costs or services:

(a) Case management activities;

(b) Utilization review;

(c) Detection and prevention of payment for fraudulent requests for reimbursement;

(d) Network access fees to Preferred Provider Organizations and other network-based health plans (including prescription drug networks), and allocated internal salaries and related costs associated with network development and/or provider contracting;

(e) Consumer education solely relating to health improvement and relying on the direct involvement of health personnel (this would include smoking cessation and disease management programs, and other programs that involve hands on medical education); and

(f) Expenses for internal and external appeals processes.

ii. Other claim adjustment expenses: Claim adjustment expenses as defined in paragraph 6.c. that are not cost containment expenses. Examples of other claim adjustment expenses are:

(a) Estimating the amounts of losses and disbursing loss payments;

(b) Maintaining records, general clerical, and secretarial;

(c) Office maintenance, occupancy costs, utilities, and computer maintenance;

(d) Supervisory and executive duties; and

(e) Supplies and postage.

5. This issue paper amends paragraph 7.b. of SSAP No. 55 to the following:

b. Claim Adjustment Expenses for Managed Care Reporting Entities: Costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in subparagraph 7.a. of this statement. Claim adjustment expenses, including legal expenses, can be subdivided into cost containment expenses and other claim adjustment expenses:

i. Cost containment expenses: Expenses that actually serve to reduce the number of health services provided or the cost of such services. The following are examples of items that shall be considered "cost containment expenses" only if they result in reduced levels of costs or services:

(a) Case management activities;

(b) Utilization review;

(c) Detection and prevention of payment for fraudulent requests for reimbursement;

(d) Network access fees to Preferred Provider Organizations and other network-based health plans (including prescription drug networks), and allocated internal salaries and related costs associated with network development and/or provider contracting;

(e) Consumer education solely relating to health improvement and relying on the direct involvement of health personnel (this would include smoking cessation and disease management programs, and other programs that involve hands on medical education); and

(f) Expenses for internal and external appeals processes.

ii. Other claim adjustment expenses: Claim adjustment expenses as defined in paragraph 7.b. that are not cost containment expenses. Examples of other claim adjustment expenses are:

(a) Estimating the amounts of losses and disbursing loss payments;

(b) Maintaining records, general clerical, and secretarial;

(c) Office maintenance, occupancy costs, utilities, and computer maintenance;

(d) Supervisory and executive duties; and

(e) Supplies and postage.

Effective Date

6. This issue paper is effective for years ending on and after December 31, 2003.

DISCUSSION

7. In the past, no definitive statutory guidance existed addressing claim adjustment expenses and which expenses should be classified as claim adjustment expenses. In January 2000, the Statutory Accounting Principles Working Group requested assistance from the Accident and Health Working Group of the Life and Health Actuarial Task Force (A&HWG) in providing clarification as to what expenses should be classified as claim adjustment expenses and whether certain claim adjustment expenses should receive special treatment for reporting purposes. The A&HWG made its final recommendations at its March 23, 2001 meeting. The A&HWG determined that claim adjustment expenses shall be subdivided into cost containment expenses and other claim adjustment expenses. The A&HWG also developed a list of items that qualify as cost containment expenses. This issue paper adopts the recommendations of the A&HWG.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. SSAP No. 55, paragraph 6.c.:

> 6.c. Claim Adjustment Expenses for Accident and Health Reporting Entities: Costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in subparagraphs 6.a. and 6.b. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage;

9. SSAP No. 55, paragraph 7.b.:

> 7.b. Claim Adjustment Expenses for Managed Care Reporting Entities: Costs expected to be incurred in connection with the adjustment and recording of accident and health claims

defined in subparagraph 7.a. of this statement. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage;

10. The Accident and Health Working Group of the Life and Health Actuarial Task Force (A&HWG) reviewed in detail the topics of claim adjustment expenses and medical cost containment expenses and whether certain claim adjustment expenses should be included in losses or loss adjustment expenses. The A&HWG made its final recommendations at its March 23, 2001 meeting. The conclusion of this issue paper is consistent with the A&HWG's recommendation. The applicable section of the minutes is included herein:

> At the 2000 Spring National Meeting, a request for assistance concerning codification issues was received from the Statutory Accounting Principles (E) Working Group (pages 90-91 of the *Life and Health Actuarial Subscription*, February 2000). The Accident and Health Working Group sent preliminary recommendations to the Statutory Accounting (E) Principles Working Group at the Fall National Meeting (Attachment Seven-B of the Accident and Health Working Group's Sept. 8, 2000, minutes). The recommendations addressed whether cost containment expenses should be included in losses or loss adjustment expenses. The Codification Subteam of the Accident and Health Working Group continued work on addressing how the prior recommendations could be implemented into the Health Annual Statement and in the Life, Accident and Health Annual Statement. This was the focus of the Feb.15 and March 2 conference calls.
>
> At the 2001 Spring National Meeting, John Rink (NE), chair of the Codification Subteam, reviewed the proposed memorandum to the Statutory Accounting Principles (E) Working Group. Mr. Rink noted that the recommendations in the proposed memorandum were designed to generate minimal changes to the annual statements, but still implement the prior recommendations of the Accident and Health Working Group.
>
> Mike Batte (NM) moved, John Hartnedy (AR) seconded and the working group agreed to forward the recommendations with the proposed revisions to the Statutory Accounting (E) Principles Working Group. The final memo to the Statutory Accounting Principles (E) Working Group is Attachment Twelve-A.

11. Applicable excerpts from Attachment Twelve-A to the minutes of the March 23, 2001, meeting of the Accident and Health Working Group of the Life and Health Actuarial Task Force are included herein:

> The Accident and Health Working Group (A&HWG) addressed cost containment expenses in a Sept. 11, 2000, memorandum to the Statutory Accounting Principles Working Group. This document is Attachment Seven-B of the Sept. 8, 2000 minutes of the Accident and Health Working Group and may be found on pages 160-162 of the Sept. 2000 *Life & Health Actuarial Subscription.*
>
> In that memorandum, nine items were identified that could be considered cost containment expenses. Those nine items were further divided into two groupings. One grouping included the following expenses:
>
> 1. Clinical quality assurance and other types of medical care quality improvement efforts.
> 2. Provider contracting and credentialing costs.
> 3. Consumer education not exclusively relating to health improvement, such as newsletters and e-mails designed to provide health improvement ideas.
>
> Another grouping identified in the Sept. 11 memorandum included the following expenses:
>
> 1. Case management activities.
> 2. Concurrent utilization review.
> 3. Prospective utilization review.
> 4. Detection and prevention of payment for fraudulent requests for reimbursement.

5. Network access fees to Preferred Provider Organizations and other network-based health plans, including prescription drug networks.
6. Consumer education solely relating to health improvement and relying on the direct involvement of health personnel. This would include smoking cessation and disease management programs, and other programs that involve hands on medical education.

These expenses reduce the number or cost of health services, which results in lower premiums or lower premium increases. These six expenses will be the only expenses referenced as "cost containment expenses" in this memorandum.

In the Sept. 11 memorandum, the A&HWG recommended that cost containment expenses, as identified above, be included as losses for statutory reporting purposes, and that quality assurance expenses not be included as losses for statutory reporting. The remainder of this memorandum addresses how the Sept. 11 recommendations may be implemented in the Health Blank and in the Life, Accident and Health Blank.

Statutory Issue Paper No. 118

Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 46

STATUS
Finalized December 9, 2002

Original SSAP and Current Authoritative Guidance: SSAP No. 68 and SSAP No. 97

Type of Issue:
Common Area

1. The purpose of this issue paper is to establish statutory accounting principles for investments in subsidiaries, controlled and affiliated entities (hereinafter referred to as SCA entities) that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

2. This issue paper replaces the conclusions reached in *SSAP No. 46—Investments in Subsidiary, Controlled and Affiliated Entities* (SSAP No. 46) and nullifies the following interpretations of the Emerging Accounting Issues Working Group:

   a. INT 99-03 – Accounting for Investment in Subsidiary, Controlled or Affiliated Entities with Subsequent Downstream Investment in an Insurance Company

   b. INT 99-28 – Accounting for SCA Mutual Funds, Broker-Dealers and Similar Entities Under SSAP No. 46

   c. INT 00-01 – Investment in a Foreign SCA Entity

   d. INT 01-22 – Use of Interim Financial Statements in Computing Reporting Entity's Investment in Subsidiary Under the GAAP Equity Method (conclusion was incorporated into SSAP)

   e. INT 01-24 – Application of SSAP No. 46 and 48 to Certain Noninsurance Subsidiary, Controlled or Affiliated Entities

SUMMARY CONCLUSION

Definitions

3. The interpretations of the Emerging Accounting Issues Working Group, which interpret SSAP No. 46 that are affected by the new SSAP, which will be the result of this issue paper, will be identified in the new SSAP.

4. Parent and subsidiary are defined as follows:

   a. Parent—An entity that directly or indirectly owns and controls the reporting entity;

   b. Subsidiary—An entity that is, directly or indirectly, owned and controlled by the reporting entity.

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48). Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by common management, or (d) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. The 10% ownership threshold shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13% and therefore each member of the affiliated group shall be presumed to have control. These presumptions can be overcome by predominant evidence to the contrary, however, they shall stand until overcome by such predominant contradictory evidence. *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18*, provides guidance on determining when such evidence exists. A reporting entity with 10% or more of the voting interest shall evaluate all facts and circumstances relating to the investment and reach a judgment about whether the presumption of control is overcome. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting interest of an investee.

8. Investments in SCA entities meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this issue paper.

Applying the Market Valuation, Audited Statutory Equity and Audited GAAP Equity Methods

9. The admitted investments in SCA entities shall be recorded using either the market valuation approach (as described in paragraph 9.a.), or one of the equity methods (as described in paragraph 9.b.).

a. In order to use the market valuation approach for SCA entities, the following requirements apply:

i. The subsidiary must be traded on one of the following three major exchanges: (1) the New York Stock Exchange, (2) the American Stock Exchange, or (3) the NASDAQ National exchange;

ii. The reporting entity must submit subsidiary information to the Securities Valuation Office (SVO) for its calculation of the subsidiary's market value. Such calculation could result in further discounts in market value above the established base discounts based on ownership percentages detailed below;

iii. Ownership percentages for determining the discount rate shall be measured at the holding company level;

iv. If an investment in a SCA results in an ownership percentage between 10% and 50%, a base discount percentage between 0% and 20% on a sliding scale basis is required;

v. If an investment in a SCA results in an ownership percentage greater than 50% up to and including 80%, a base discount percentage between 20% and 30% on a sliding scale basis is required;

vi. If an investment in a SCA results in an ownership percentage greater than 80% up to and including 85%, a minimum base discount percentage of 30% is required.

vii. Further, the SCA must have at least two million shares outstanding, with a total market value of at least $50 million in the public's control; and

viii. Any ownership percentages exceeding 85% will result in the SCA being recorded on an equity method.

b. If a SCA investment does not meet the requirements for the market valuation approach in paragraph 9.a. or, if the requirements are met, but a reporting entity elects not to use that approach, the reporting entity's proportionate share of its investments in SCAs shall be recorded as follows:

i. Investments in U.S. insurance SCA entities shall be recorded based on the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68). Reporting entities shall record investments in U.S. insurance SCA entities on at least a quarterly basis, and shall base the investment value on the most recent quarterly information available from the SCA. Entities may recognize their investment in U.S. insurance SCA entities based on the unaudited statutory equity in the SCAs year-end Annual Statement if the annual SCA audit is not complete as of the filing deadline. The recorded statutory equity shall be adjusted for audit adjustments, if any, as soon as the annual audit has been completed. Annual consolidated audits are allowed if completed in accordance with the Model Regulation Requiring Annual Audited Financial Reports as adopted by the SCA's domiciliary state;

ii. Investments in noninsurance SCA entities that are engaged in the following transactions or activities:

(a) Collection of balances as described in *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*

(b) Sale/lease or rental of EDP Equipment and Software as described in *SSAP No. 16—Electronic Data Processing Equipment and Software* and *SSAP No. 79—Depreciation of Nonoperating System Software*

(c) Sale/lease or rental of furniture, fixtures, equipment or leasehold improvements as described in *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*

(d) Loans to employees, agents, brokers, representatives of the reporting entity or SCA as described in *SSAP No. 20—Nonadmitted Assets*

(e) Sale/lease or rental of automobiles, airplanes and other vehicles as described in *SSAP No. 20—Nonadmitted Assets*

(f) Providing insurance services on behalf of the reporting entity including but not limited to accounting, actuarial, auditing, data processing, underwriting, collection of premiums, payment of claims and benefits, policyowner services

(g) Acting as an insurance or administrative agent or an agent for a government instrumentality performing an insurance function (e.g. processing of state workers' compensations plans, managing assigned risk plans, Medicaid processing etc).

(h) Purchase or securitization of acquisition costs

and if 20% or more of the SCA's revenue is generated from the reporting entity and its affiliates, then the underlying equity of the respective entity's audited Generally Accepted Accounting Principles (GAAP) financial statements shall be adjusted to a statutory basis of accounting (refer to paragraph 10). For purposes of this section, revenue means GAAP revenue reported in the audited GAAP financial statements excluding realized and unrealized capital gains/losses. Paragraphs 18-20 provide guidance for investments in holding companies;

iii. Investments in noninsurance SCA entities that do not qualify under subparagraph 9.b.ii. shall be recorded based on the audited GAAP equity of the investee;

iv. Investments in foreign insurance SCA entities shall be recorded based on the underlying audited U.S. GAAP equity of the respective entity adjusted to a statutory basis of accounting in accordance with paragraph 10 and adjusted for reserves of the foreign insurance SCA with respect to the business it assumes directly and indirectly from a U.S. insurer using the statutory accounting principles promulgated by the NAIC in the *Accounting Practices and Procedures Manual*.

The recorded GAAP equity shall be adjusted for any audit adjustments resulting from either the annual GAAP audit of the respective entity or, if the entity is a member of a consolidated group of insurers, the annual audit of the consolidated group of companies, as soon as determined. GAAP is defined as those pronouncements included in the United States GAAP Hierarchy as described in *AICPA Statement of Auditing Standard No. 69, The Meaning of "Presents Fairly in Conformity With GAAP"*. Foreign SCA entities are defined as those entities incorporated or otherwise legally formed under the laws of a foreign country. Foreign insurance SCA entities are defined as alien insurers formed according to the legal requirements of a foreign country. Investments in foreign noninsurance SCA entities shall follow the guidance in 8 b. ii., and 8 b. iii. above.

10. Statutory basis for accounting for investments in noninsurance SCA entities, subject to paragraph 9 b. ii. and foreign insurance SCA entities, subject to paragraph 9.b.iv., shall be based on the underlying audited U.S. GAAP equity of the respective entity with the following adjustments:

a. Nonadmit assets pursuant to the following statutory accounting principles as promulgated by the NAIC in the *Accounting Practices and Procedures Manual*;

i. *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*

ii. *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*

iii. *SSAP No. 20—Nonadmitted Assets*

iv. *SSAP No. 29—Prepaid Expenses*

v. *SSAP No. 16—Electronic Data Processing Equipment and Software*

vi. *SSAP No. 79—Depreciation of Nonoperating System Software*

b. Expense costs that are capitalized in accordance with GAAP but are expensed pursuant to statutory accounting as promulgated by the NAIC in the *Accounting Practices and Procedures Manual* (e.g., deferred policy acquisition costs);

c. Adjust depreciation for certain assets in accordance with the following statutory accounting principles:

i. *SSAP No. 16—Electronic Data Processing Equipment and Software* and *SSAP No. 79—Depreciation of Nonoperating System Software*

ii. *SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements*

d. Nonadmit the amount of goodwill of the SCA in excess of 10% of the audited GAAP equity of the SCA's last audited financial statements.

e Nonadmit amount of the net deferred tax assets (DTAs) of the SCA in excess of 10% of the audited GAAP equity of the SCA's last audited financial statements.

f. Adjust the GAAP annuity account value reserves of a foreign insurance SCA, with respect to the business it wrote directly, using the commissioners' annuity reserve valuation method (CARVM) as defined in paragraphs 12 and 13 of Appendix A-820 (including the reserving provisions in the various Actuarial Guidelines which support CARVM). The valuation interest rate and mortality tables to be used in applying CARVM should be that prescribed by the foreign insurance SCA's country of domicile. If the Foreign SCA's country of domicile does not prescribe the necessary tables and/or rates, no reserve adjustment shall be made.

11. The recorded GAAP equity shall be adjusted for any audit adjustments resulting from either the annual GAAP audit of the respective entity or, if the entity is a member of a consolidated group of insurers, the audit of the consolidated group of companies, as soon as determined. GAAP is defined as those pronouncements included in the United States GAAP Hierarchy as described in *AICPA Statement of Auditing Standards No. 69, The Meaning of "Presents Fairly in Conformity With GAAP."* The statutory equity method as described in paragraph 9.b.i., 9.b.ii. and 9.b.iii. shall be applied by recording an initial and subsequent investment in an investee at cost (excluding any investment in an investee's surplus notes), which is defined in SSAP No. 68 as the sum of (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition. After the date of acquisition, the investment amount shall be adjusted for the amortization of goodwill and

the reporting entity's share of the change in special surplus funds, other than special surplus funds and unassigned funds (surplus), as defined in *SSAP No. 72—Surplus and Quasi-reorganizations*. This represents the carrying amount of the investment.

12. Once the reporting entity elects to use a valuation approach for a particular subsidiary, the reporting entity may not change the valuation method to another method without the approval of the domiciliary commissioner. For instance, if an entity selects the market valuation method, it may not change to an equity method or vice versa without approval from the domiciliary commissioner. The only exception to this notification requirement is the case in which an investment in a SCA entity that was previously accounted for under one method no longer qualifies under that method because of a change in the level of ownership, (i.e., acquisition of additional interests by the reporting entity) acquisition or retirement of interests by the investee, or a change in facts or circumstances (e.g., paragraphs 9.a.i., 9.a.vii.). Further, in order for an entity to transfer from a paragraph 9.a., 9.b.ii. or 9.b.iii. valuation to a paragraph 9.b.iv. valuation, the SCA shall not exceed the 20% threshold (as defined in paragraphs 9.b.ii. and 9.b.iii.) for three consecutive years. When an investment qualifies for use of another method of accounting, the reporting entity shall adopt the new method of accounting and the investment shall be adjusted to reflect the reporting entity's equity interest in the SCA entity under the new method. A corresponding amount shall be recorded as an unrealized gain or loss.

13. If the reporting entity is using an equity method, the reporting entity's share of undistributed earnings and losses of the investee shall be included in unrealized gains and losses of the reporting entity. The reporting entity's share of other changes in the investee's surplus (e.g., the change in the investee's nonadmitted assets) shall be recorded by the investor as a component of unrealized capital gains and losses on investments. If the reporting entity uses the market valuation approach outlined in paragraph 9.a., changes in that valuation shall be included in unrealized gains and losses. Dividends or distributions received from an investee shall be recognized in investment income when declared to the extent that they are not in excess of the undistributed accumulated earnings attributable to the investee. Dividends or distributions declared in excess of the undistributed accumulated earnings attributable to the investee shall reduce the carrying amount of the investment.

14. For investments in entities recorded based on the underlying audited GAAP equity of the investee, the amount to be recorded shall be defined as the initial investment in an investee at cost (as defined in SSAP No. 68). The carrying amount of the investment shall be adjusted to recognize the reporting entity's share of the audited GAAP basis earnings or losses of the investee after the date of acquisition, adjusted for any dividends received. A reporting entity's share of adjustments that are recorded directly to the investee's stockholder's equity under GAAP shall also be recorded as adjustments to the carrying value of the investment with an offsetting amount recorded directly to unrealized capital gains and losses on investments.

15. On at least a quarterly basis, the procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 9.b.i. through 9.b.iv.), as applicable, to investments in SCA entities:

a. A difference between the cost of an investment and the underlying equity in the statutory or GAAP book value, as applicable, of the acquired company at the date of acquisition shall be accounted for in accordance with SSAP No. 68;

b. A transaction of an investee of a capital nature that affects the reporting entity's share of stockholders' equity of the investee shall be reflected as an unrealized gain or loss (e.g., where the investee issues additional stock or a new class of stock that impacts the reporting entity's equity ownership in the investee, the reporting entity's recorded investment shall be adjusted to reflect the transaction);

c. Realized gains or losses on the sale of an investment in a SCA entity shall be recorded in an amount equal to the difference at the time of sale between the selling price and carrying amount of the investment plus any previously recorded unrealized gain or loss;

d. If financial statements of an investee are not sufficiently timely for the reporting entity to apply an equity method to the investee's current results of operations, the reporting entity shall record its share of the earnings or losses of an investee from the most recent available financial statements. A lag in reporting shall be consistent from period to period;

e. A reporting entity's share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero and shall not provide for additional losses unless the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee (guaranteed obligations meeting the definition of liabilities in *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* shall be recorded as liabilities). If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended;

f. When an investee has outstanding cumulative preferred stock, the reporting entity shall compute its share of earnings (losses) after deducting the investee's preferred dividends, whether or not such dividends are declared;

g. An investment in a SCA entity may fall below the level of ownership described in paragraph 6 from the sale of a portion of an investment by the reporting entity, the sale of additional interests by an investee, or other transactions. The reporting entity shall discontinue accruing its share of the earnings or losses of the investee for an investment that no longer qualifies for an equity method. The earnings or losses that relate to the investment interests retained by the reporting entity and that were previously accrued shall remain as a part of the carrying amount of the investment. The investment account shall not be adjusted retroactively under the conditions described in this subparagraph. However, dividends received by the investor in subsequent periods which exceed the reporting entity's share of earnings for such periods shall be applied as a reduction of the carrying amount of the investment.

16. A reporting entity that owns an interest in itself via direct ownership of shares of an upstream intermediate or ultimate parent shall reduce the value of such shares for the reciprocal ownership. If the shares of the parent are owned indirectly by a reporting entity, via a downstream SCA entity, the directly held entity, which owns the parent's shares, shall have its value reduced for the reciprocal ownership.

17. Any parent reporting entity that owns an interest in itself via either direct or indirect ownership of a down-stream affiliate, which in turn owns shares of the parent reporting entity, shall eliminate its proportionate interest in these shares from the valuation of such affiliate.

Investments in Holding Companies

18. Valuation of a holding company depends upon the nature of the SCA entities it holds in accordance with paragraph 9 and the guidance contained in the applicable SSAP for non-SCA investments. If an SCA investment of the holding company does not meet the provisions of paragraph 9.a. or if it elects not to use the guidance in paragraph 9.a., and instead uses the guidance in paragraph 9.b., then the holding company would look to its underlying assets and record them as follows:

a. Investments by a holding company in insurance SCA entities are recorded based upon the guidance in paragraph 9.b.i.;

b. Investments by a holding company in noninsurance SCA entities that primarily provide services or hold assets that are for the direct or indirect use of the reporting entity or its affiliates are recorded based upon the guidance in paragraph 9.b.ii. or 9.b.iii. as applicable;

c. Investments by a holding company in noninsurance SCA entities that do not qualify under paragraph 18.b. above shall be recorded based upon the guidance in paragraph 9.b.iii.; and

d. Investments by a holding company in foreign insurance and noninsurance SCA entities shall be recorded based upon the guidance in paragraphs 9.b.iv. above.

19. In lieu of separate GAAP audits of SCA entities of the holding company, the insurer can choose to have a GAAP audit performed at the holding company level with a consolidating balance sheet showing GAAP equity of all the SCA entities. The consolidating balance sheet shall then be adjusted for GAAP to SAP differences of the insurance entities and paragraph 9.b.ii. 9.b.iii. and 9.b.iv. entities under the holding company. This adjusted amount would then be the reported value of the investment in holding company at the higher level insurance company.

20. A purchased holding company is valued in accordance with the provisions above and the provisions of SSAP No. 68.

Investment in Preferred Stock or Surplus Notes of a Subsidiary, Controlled and Affiliated Entity

21. When the reporting entity also holds an investment in preferred stock or surplus note(s) of an SCA and the carrying amount determined in accordance with paragraphs 9.b. and 10 includes preferred stock or surplus note(s), the investment in the SCA must be separated into its components. The carrying amount of the SCA is reduced by the value of the SCA's preferred stock or surplus note(s).

22. Investments in the preferred stock of an SCA shall be accounted for and reported in accordance with the provisions of *SSAP No. 32—Investments in Preferred Stock* (SSAP No. 32). This statement amends the title of SSAP No. 32 as follows:

> *SSAP No. 32—Investments in Preferred Stock (including ~~excluding~~ investments in preferred stock of subsidiary, controlled, or affiliated entities)*

This statement amends paragraphs 2 and 3 of SSAP No. 32 to the following:

> 2. Investments in preferred stock of subsidiaries, controlled or affiliated entities are included within the scope of this statement.

3. Preferred stock (including investment in affiliates), which may or may not be publicly traded and may include shares against which exchange traded call options are outstanding, shall include:

23. Investments in the surplus notes of an SCA shall be accounted for and reported in accordance with the provisions of *SSAP No. 41—Surplus Notes.*

24. The following example is provided to illustrate the accounting and reporting. The reporting entity holds 100% of the preferred stock. The SCA issued the preferred stock for $50,000. The investment in the SCA, measured in accordance with this SSAP is $250,000 including the preferred stock of the SCA. The investment in the SCA is $200,000 ($250,000-50,000) and the preferred stock is measured and reported in accordance with SSAP No. 32.

Impairment

25. When there is a decline in the fair value of an asset owned by a SCA entity that is other than temporary, the SCA entity shall write the asset down to fair value.

26. For any decline in the fair value of an investment in a SCA entity that is other than temporary, the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings, which would justify the carrying amount of the investment. A fair value of an investment that is below the carrying amount based on the statutory equity method or the existence of investee operating losses may indicate a loss in value, however, they are not necessarily indicative of a loss in value that is other than temporary.

Consolidation

27. Majority-owned subsidiaries shall not be consolidated for individual entity statutory reporting. This does not exempt certain reporting entities that are members of an affiliated group from the requirement to issue consolidated or combined annual statements as supplemental information in accordance with NAIC guidelines.

Disclosures

28. The significance of an investment to the reporting entity's financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investee. The following disclosures shall be made for all investments in SCA entities that exceed 10% of the total admitted assets of the reporting entity:

a. Financial statements of a reporting entity shall disclose (i) the name of each SCA entity and percentage of ownership of common stock, (ii) the accounting policies of the reporting entity with respect to investments in SCA entities, and (iii) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., goodwill, other nonadmitted assets, market value or discounted market value adjustments) and the accounting treatment of the difference;

b. For those SCA entities for which a quoted market price is available, the aggregate value of each SCA investment based on the quoted market price and the difference, if any, between the amount at which the investment is carried and the quoted market price shall be disclosed;

c. Summarized information as to assets, liabilities, and results of operations shall be presented for SCA entities, either individually or in groups;

d. Conversion of outstanding convertible securities, exercise of outstanding options and warrants and other contingent issuances of an investee may have a significant effect on an investor's share of reported earnings or losses. Accordingly, material effects of possible conversions, exercises or contingent issuances shall be disclosed in notes to the financial statements of the reporting entity; and

e. For those SCA entities in which the reporting entity elected, or was required to change its valuation method as described in paragraph 12, a description of the reason for the change and the amount of adjustment recorded as unrealized gains or losses shall be disclosed. The entity shall also disclose whether commissioner approval was obtained in accordance with paragraph 12.

29. Any commitment or contingent commitment to a SCA entity shall be disclosed (e.g., guarantees or commitments to provide additional capital contributions).

30. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment; and

b. The amount of the impairment and how fair value was determined.

31. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 28.d. above shall be included in the annual audited statutory financial reports only.

Effective Date and Transition

32. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years ending on or after December 31, 2004.

DISCUSSION

33. This issue paper replaces the conclusions reached in SSAP No. 46. The amendments to SSAP No. 46 included in this issue paper are considered substantive by the Statutory Accounting Principles Working Group as they replace the judgment in determining application of statutory equity method versus the audited GAAP equity with a specific "bright-line" test. The following represents the substantive changes from SSAP No. 46 that are included in this issue paper:

SSAP No. 46 Paragraph	IP 118 No. Paragraph	Description
7 and 13.h	12	Retains guidance from SSAP No. 46 but includes a specific requirement in order to transfer from a noninsurance market or statutory equity method to an audited GAAP method.
7.b.i.	9.b.i.	Adds an audit requirement.
7.b.ii.	9.b.ii. and 9.b.iii.	Removes ambiguous language related to “significant ongoing operations” with a bright-line test.
7.b.iii.	9.b.ii.	Removes ambiguous language related to “significant ongoing operations” with default position.
-	9.b.iv.	New language included for investments in foreign SCA entities.
8	-	Paragraph removed in its entirety. This paragraph was interpreted to be in conflict with paragraph 7 of SSAP No. 46.
11	9 and 10	Language from SSAP No. 46 moved to paragraphs 9 and 10 of issue paper to provide further clarity.
13.a.	15.a.	References to noninsurance SCA as defined in SSAP No. 46 paragraph 7.b.ii. removed as definition of such SCA was modified by this issue paper.
-	28.e.	New disclosure related to change in valuation method was added.

34. This issue paper nullifies the following interpretations of the Emerging Accounting Issues Working Group:

a. *INT 99-03: Accounting for Investment in Subsidiary, Controlled or Affiliated Entities with Subsequent Downstream Investment in an Insurance Company* is nullified because INT 01-06 provided for a more descriptive application for holding companies. As this issue paper incorporates the guidance in INT 01-06, the conclusions reached in INT 99-3 are no longer necessary.

b. *INT 99-28: Accounting for SCA Mutual Funds, Broker-Dealers and Similar Entities Under SSAP No. 46* is nullified because there is no longer a need to differentiate certain SCA investments as the term “significant operations” has now been defined.

c. *INT 00-01: Investment in a Foreign SCA Entity* is nullified by the conclusions reached in paragraph 9.b.iv.

d. *INT 01-24: Application of SSAP No. 46 and 48 to Certain Noninsurance Subsidiary, Controlled or Affiliated Entities* is nullified by the conclusions reached in paragraph 9 and Exhibit A.

Generally Accepted Accounting Principles

- See Issue Paper No. 46 for GAAP references.

State Regulations

- No additional guidance obtained from state statutes or regulations

EXHIBIT A – ILLUSTRATIVE EXAMPLES FOR PROVISION OF PARAGRAPH 9.b.

Example 1:

Insurance Company A owns 100% of a third party administrator, TPA1. TPA1 processes claims for noninsurance companies and for Medicare and Medicaid programs. TPA1 is completely independent from Insurance Company A and as such does not receive any management income or lease income from Insurance Company A or its affiliates. TPA1 does not process claims for Insurance Company A.

Equity Method – Insurance Company A would value TPA1 under 9 b. iii. (audited GAAP equity) as TPA1's revenue from Insurance Company A is less than 20%.

Example 2:

Insurance Company A owns 100% of a company that processes insurance claims, TPA2. TPA2 processes claims for Insurance Company A, Insurance Company B, Insurance Company C and Insurance Company D. TPA2 owns the EDP equipment and software necessary to provide administrative services to its customers. Insurance Companies B, C and D are not affiliates of Insurance Company A. The processing of claims for Insurance Company A constitutes 15% of the revenues of TPA2.

Equity Method – Insurance Company A would value TPA2 under 9 b. iii. (audited GAAP equity) as TPA2's revenue from Insurance Company A is less than 20%.

Example 3:

Insurance Companies A, B, C and D each own 25% of a company, TPA3, that provides administrative services, including all EDP processing, to Insurance Companies A, B, C and D. TPA3 owns the EDP equipment and software and furniture, fixtures and equipment necessary to provide administrative services to its customers. TPA3 does not provide administrative services to any other entities. Insurance Companies A, B, C and D are not part of the same insurance holding company system. The processing that TPA3 does for each of Insurance Companies A, B, C and D constitutes 25% of its business and revenues.

Equity Method – Insurance Company A, B, C and D would value TPA3 under 9 b. ii. (audited GAAP equity adjusted to SAP or audited SAP equity) as TPA3's revenue from each Insurance Company A, B, C and D is greater than 20%.

Example 4:

Insurance Company A owns 100% of a company, TPA4, that provides administrative services, including EDP processing, to Insurance Company A, Insurance Company B, Bank C and Manufacturing Company D. TPA4 owns the EDP equipment and software necessary to provide administrative services to its customers. Insurance Company A, Insurance Company B, Bank C and Manufacturing Company D are not affiliates, i.e. none of the four companies are related to one another. The processing that TPA4 does for Insurance Company A represents 40% of TPA4's business and revenues.

Equity Method – Insurance Company A would value TPA4 under 9 b. ii. (audited GAAP equity adjusted to SAP or audited SAP equity) as TPA4's revenue from Insurance Company A is greater than 20%.

Example 5:

Insurance Company A owns 100% of a company, TPA5, that provides claims administration services, including EDP processing, to Insurance Company A, Insurance Company B, numerous self-insured companies and Medicare. TPA5 owns the EDP equipment and software necessary to provide administrative services to its customers. Insurance Company A, Insurance Company B and the self-insured companies are not affiliates, i.e., they are not related to one another. Insurance Companies A and B may provide stop-loss coverage to some of the self-insured companies for whom TPA5 provides claims administration services. The processing that TPA5 does for Insurance Company A represents 51% of TPA5's business and revenues.

Equity Method – Insurance Company A would value TPA5 under 9 b. ii. (audited GAAP equity adjusted to SAP or audited SAP equity) as TPA4's revenue from Insurance Company A is greater than 20%.

Example 6:
Insurance Company A holds an 18.77% Partnership Interest in LPA. This fund was organized for the primary purpose of investing in investment vehicles and commodity pools as a "fund of funds" investment manager. The insurer is a limited partner. The general partner is not affiliated with the insurer. Quoting from the limited partnership agreement Section 3.1 – "The general partner shall be vested with the complete control of the business of the fund. The limited partners shall have no responsibility for the management of the fund and shall have no authority or right to act on behalf of the fund or to bind the fund in connection with any matter." The largest holding on their 12/31/99 audited GAAP financials was $293.6 million of "Investments in limited partnerships and investment funds, at fair value." Beyond that they have $28.0 million of cash and cash equivalents and $90k of dividends and interest receivable.

Equity Method – Insurance Company A would value LPA under 9 b. iii. (audited GAAP equity) as less than 20% of LPA's investment income is for the benefit of Insurance Company A.

Example 7:
Insurance Company A holds a 25% Partnership Interest in LPB. Similar to the LPA above, LPB is another limited partnership investment where the insurer owns greater than a 10% interest. The LP fund was organized primarily for the purpose of making investments in media businesses. The fund's general partner is not affiliated with the insurer. The general partner manages all of the affairs of the Fund, i.e., controls the business activities of the fund. The largest holding on their 12/31/99 unaudited GAAP financials (assume for this example that audited statements are not and will not be prepared) was $194.0 million of "Portfolio investments at fair value." This was made up of a combination of partnership and stock investments. Total assets were $200.8 million at 12/31/99.

Equity Method – Insurance Company A would value LPB under 9 b. ii. (audited GAAP equity adjusted to SAP or audited SAP equity) as more than 20% of the investment income of LPB is for the benefit of Insurance Company A.

Example 8:
Insurance Company A holds a 25% Partnership Interest in LLP. LLP is a real estate development limited partnership in which the insurer holds a 25% interest as a limited partner. The LLP's general partner is not affiliated with the insurer. The general partner manages the affairs of partnership including decisions on properties to acquire and/or develop. Assets of the partnership include real estate properties, both residential and commercial. Total assets of the partnership are $1 billion and total liabilities $500 million, primarily outside debt. LLP prepares annual audited GAAP financial statements, however, they are not completed prior to the insurer filing its annual financial statements.

Equity Method – Insurance Company A would value LLP under 9 b. ii. (audited GAAP equity adjusted to SAP or audited SAP equity) as more than 20% of the investment income of LLP is for the benefit of Insurance Company A.

Statutory Issue Paper No. 119

Capitalization Policy, An Amendment to SSAP Nos. 4, 19, 29, 73, 79 and 82

STATUS
Finalized June 10, 2002

Current Authoritative Guidance for Capitalization Policy: SSAP No. 4, SSAP No. 19, SSAP No. 29 and SSAP No. 73

This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 87

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The purpose of this issue paper is to establish a statutory capitalization policy that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

2. This issue paper amends certain conclusions reached in *SSAP No. 4–Assets and Nonadmitted Assets* (SSAP No. 4), *SSAP No. 19–Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements* (SSAP No. 19)*, SSAP No. 29–Prepaid Expenses* (SSAP No. 29)*, SSAP No. 73–Health Care Delivery Assets - Supplies, Pharmaceuticals and Surgical Supplies, Durable Medical Equipment, Furniture, Medical Equipment and Fixtures, and Leasehold Improvements in Health Care Facilities* (SSAP No. 73), *SSAP No. 79–Depreciation of Nonoperating System Software – An Amendment to SSAP No. 16–Electronic Data Processing Equipment and Software* (SSAP No. 79) and *SSAP No. 82– Accounting for the Costs of Computer Software Developed or Obtained for Internal Use and Web Site Development Costs* (SSAP No. 82).

RECOMMENDED CONCLUSION

3. In general, this issue paper amends the phrase “in accordance with the reporting entity's capitalization policy, immaterial amounts … can be expensed …” to “in accordance with the reporting entity’s capitalization policy, amounts less than a predefined threshold … shall be expensed …”. A predefined threshold shall be established, for each asset class identified by SSAP Nos. 19, 29, 73, 79 and 82, by management based upon an analysis of circumstances unique to the entity and shall not be adjusted from period to period except under extenuating circumstances. If an entity demonstrates a pattern of varying its capitalization policy from period to period without sufficient evidence as determined by the reporting entity’s domestic regulator, such action would call into question both the entity's ability to accurately establish a predefined threshold and the propriety of expensing or capitalizing certain assets. Accordingly, entities shall expense all immaterial amounts (i.e., entity is no longer allowed to establish its own capitalization policy).

4. This issue paper amends paragraph 3 of SSAP No. 4 to the following:

> As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to

encumbrances or other third party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting, and is one which is:

a. Specifically identified within the Accounting Practices and Procedures Manual as a nonadmitted asset; or

b. Not specifically identified as an admitted asset within the Accounting Practices and Procedures Manual.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Accounting Practices and Procedures Manual. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

5. This issue paper amends paragraphs 3 and 6 of SSAP No. 19 to the following:

> In accordance with the reporting entity's capitalization policy, amounts less than a predefined threshold of such assets shall be expensed when purchased.

6. This issue paper amends paragraph 3 of SSAP No. 29 to the following:

> In accordance with the reporting entity's capitalization policy, prepaid expenses less than a predefined threshold shall be expensed when purchased.

7. This issue paper amends paragraph 10 of SSAP No. 73 to the following:

> In accordance with the reporting entity's capitalization policy, amounts less than a predefined threshold of medical supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures, and leasehold improvements shall be expensed when purchased.

8. This issue paper amends paragraph 4 of SSAP No. 79 to the following:

> In accordance with the reporting entity’s capitalization policy, amounts less than a predefined threshold shall be expensed when purchased, otherwise the assets shall be capitalized and depreciated in accordance with this statement.

9. This issue paper amends paragraph 4 of SSAP No. 82 to the following:

> In accordance with the reporting entity’s capitalization policy, amounts less than a predefined threshold of such costs shall be expensed when incurred.

10. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Disclosures

11. The financial statements shall disclose if the written capitalization policy and the resultant predefined thresholds changed from the prior period and the reason(s) for such change.

Effective Date and Transition

12. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years beginning on or after January 1, 2004.

DISCUSSION

13. This issue paper replaces the subjectivity associated with capitalizing assets based upon materiality with a more quantifiable concept of capitalizing assets above a predefined threshold. This amendment is in harmony with the principle of consistency found in the Statement of Concepts. That is, the concept of materiality used in previous SSAPs was subject to interpretation and manipulation from period to period whereas the predefined threshold model used in this issue paper provides a definitive benchmark that can be quantified and judged from period to period. This issue paper requires entities to disclose their threshold, explain how they reached their threshold and offer support if they modify their capitalization policy. Previous statements, due to the subjective nature of expensing immaterial amounts, did not require this disclosure. The issue paper also includes a penalty for entities that manipulate their capitalization policy from period to period. The NAIC believe this issue paper provides a more consistent and transparent capitalization framework than previous statements.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

14. SSAP No. 4 paragraph 3:

> 3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting, and is one which is:
>
> a. Specifically identified within the Accounting Practices and Procedures Manual as a nonadmitted asset; or
>
> b. Not specifically identified as an admitted asset within the Accounting Practices and Procedures Manual.
>
> If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Accounting Practices and Procedures Manual. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's capitalization policy, immaterial amounts of furniture, fixtures, equipment, or supplies, can be expensed when purchased.

15. SSAP No. 19 paragraphs 3 and 6:

> 3. In accordance with the reporting entity's capitalization policy, immaterial amounts of such assets can be expensed when purchased.

> 6. In accordance with the reporting entity's capitalization policy, immaterial amounts of such assets can be expensed when acquired.

16. SSAP No. 29 paragraph 3:

> 3. In accordance with the reporting entity's capitalization policy, immaterial prepaid expenses may be expensed when purchased.

17. SSAP No. 73 paragraph 10:

> 10. In accordance with the reporting entity's capitalization policy, immaterial amounts of medical supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures, and leasehold improvements may be expensed when purchased.

18. SSAP No. 79 paragraph 4:

> 4. In accordance with the reporting entity’s capitalization policy, immaterial amounts may be expensed when purchased, otherwise the assets shall be capitalized and depreciated in accordance with this statement.

19. SSAP No. 82 paragraph 4:

> 4. In accordance with the reporting entity’s capitalization policy, immaterial amounts of such costs can be expensed when incurred.

EXHIBIT A: Illustration of Marked Changes to Amended SSAPs

The following depicts the amendments made by this issue paper as "marked changes" (new text underlined and deleted text struck-through):

SSAP No. 4 paragraph 3:

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting, and is one which is:

a. Specifically identified within the Accounting Practices and Procedures Manual as a nonadmitted asset; or

b. Not specifically identified as an admitted asset within the Accounting Practices and Procedures Manual.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Accounting Practices and Procedures Manual. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's capitalization policy, ~~immaterial~~ amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, ~~can~~ shall be expensed when purchased.

SSAP No. 19 paragraphs 3 and 6:

3. In accordance with the reporting entity's capitalization policy, ~~immaterial~~ amounts less than a predefined threshold of such assets ~~can~~ shall be expensed when purchased.

6. In accordance with the reporting entity's capitalization policy, ~~immaterial~~ amounts less than a predefined threshold of such assets ~~can~~ shall be expensed when purchased.

SSAP No. 29 paragraph 3:

3. In accordance with the reporting entity's capitalization policy, ~~immaterial~~ prepaid expenses less than a predefined threshold shall ~~may~~ be expensed when purchased.

SSAP No. 73 paragraph 10:

10. In accordance with the reporting entity's capitalization policy, ~~immaterial~~ amounts less than a predefined threshold of medical supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures, and leasehold improvements ~~may~~ shall be expensed when purchased.

SSAP No. 79 paragraph 4:

4. In accordance with the reporting entity's capitalization policy, ~~immaterial~~ amounts less than a predefined threshold shall ~~may~~ be expensed when purchased, otherwise the assets shall be capitalized and depreciated in accordance with this statement.

SSAP No. 82 paragraph 4:

4. In accordance with the reporting entity's capitalization policy, ~~immaterial~~ amounts less than a predefined threshold of such costs ~~can~~ shall be expensed when incurred.

Statutory Issue Paper No. 121

Accounting for the Impairment or Disposal of Real Estate Investments

STATUS
Finalized March 15, 2004

Original SSAP and Current Authoritative Guidance: SSAP No. 90

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for the impairment or disposal of real estate investments is provided in *SSAP No. 40—Real Estate Investments* (SSAP No. 40). Guidance for accounting for discontinued operations is found in *SSAP No. 24—Discontinued Operations and Extraordinary Items* (SSAP No. 24). Further, *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68) contains guidance for impairment of goodwill arising from a business combination.

2. Generally Accepted Accounting Principles (GAAP) guidance for these issues was previously found in *Financial Accounting Standards Board (FASB) Statement No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of* (FAS 121) and *Accounting Principles Board (APB) Opinion No. 30, Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions* (APB 30). FAS 121 was superseded by *FASB Statement No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets* (FAS 144). APB 30 was superseded in part by FAS 144.

3. This issue paper establishes statutory accounting principles for the impairment or disposal of real estate investments and the treatment of long-lived assets associated with discontinued operations including nonadmitted intangible assets other than goodwill, such as trade names (referred to collectively as long-lived assets). This statement is not intended to conflict with guidance concerning operating results associated with discontinued operations, which is contained in SSAP No. 24.

4. This issue paper supersedes SSAP No. 40, paragraphs 9, 10 and 19.

5. This issue paper does not apply to (a) goodwill, (b) servicing assets, (c) financial instruments, including investments in equity securities accounted for under the cost or equity method, (d) deferred policy acquisition costs, and (e) deferred tax assets. This issue paper also does not apply to long-lived assets for which the accounting is prescribed by FASB Statement No. 86, Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed as adopted with modification to preclude the capitalization of software development costs in SSAP No. 17—Preoperating and Research and Development Costs. For a discussion on software development costs, see the guidance in SSAP No. 82—Accounting for the Costs of Computer Software Developed or Obtained for Internal Use and Web Site Development Costs. Statutory guidance on goodwill is in SSAP No. 68.

RECOMMENDED CONCLUSION

Recognition and Measurement of an Impairment Loss

6. For purposes of this Statement, impairment is the condition that exists when the carrying amount of a long-lived asset exceeds its fair value. An impairment loss shall be recognized only if the carrying amount of a long-lived asset is not recoverable and exceeds its fair value. The carrying amount of a long-

lived asset is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset. That assessment shall be based on the carrying amount of the asset at the date it is tested for recoverability, whether in use or under development. An impairment loss shall be measured as the amount by which the carrying amount of a long-lived asset exceeds its fair value.

When to Test a Long-Lived Asset for Recoverability

7. A long-lived asset shall be tested for recoverability whenever events or changes in circumstances indicate that its carrying amount may not be recoverable. The following are examples of such events or changes in circumstances:

a. A significant decrease in the market price of a long-lived asset

b. A significant adverse change in the extent or manner in which a long-lived asset is being used or in its physical condition

c. A significant adverse change in legal factors or in the business climate that could affect the value of a long-lived asset, including an adverse action or assessment by a regulator

d. An accumulation of costs significantly in excess of the amount originally expected for the acquisition or construction of a long-lived asset

e. A current-period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with the use of a long-lived asset

f. A current expectation that, more likely than not, a long-lived asset will be sold or otherwise disposed of significantly before the end of its previously estimated useful life.

8. When a long-lived asset is tested for recoverability, it also may be necessary to review depreciation estimates and methods as required by *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). Any revision to the remaining useful life of a long-lived asset resulting from that review also shall be considered in developing estimates of future cash flows used to test the asset for recoverability. However, any change in the accounting method for the asset resulting from that review shall be made only after applying this Statement.

Grouping Long-Lived Assets to Be Held and Used

9. For purposes of recognition and measurement of an impairment loss, a long-lived asset or assets shall not be grouped with other assets and liabilities at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities for properties occupied by the company.

10. In limited circumstances, a long-lived asset (for example, a corporate headquarters facility) may not have identifiable cash flows that are largely independent of the cash flows of other assets and liabilities and of other asset groups that consist of properties occupied by the company. In those circumstances, the asset group for that asset shall include all assets and liabilities of the entity.

New Cost Basis

11. If an impairment loss is recognized, the adjusted carrying amount of a long-lived asset shall be its new cost basis. For a depreciable long-lived asset, the new cost basis shall be depreciated (amortized) over the remaining useful life of that asset. Restoration of a previously recognized impairment loss is prohibited.

Estimates of Future Cash Flows Used to Test a Long-Lived Asset for Recoverability

12. Estimates of future cash flows used to test the recoverability of a long-lived asset shall include only the future cash flows (cash inflows less associated cash outflows) that are directly associated with, and that are expected to arise as a direct result of, the use and eventual disposition of the asset. Those estimates shall exclude interest charges that will be recognized as an expense when incurred.

13. Estimates of future cash flows used to test the recoverability of a long-lived asset shall incorporate the entity's own assumptions about its use of the asset and shall consider all available evidence. The assumptions used in developing those estimates shall be reasonable in relation to the assumptions used in developing other information used by the entity for comparable periods, such as internal budgets and projections, accruals related to incentive compensation plans, or information communicated to others. However, if alternative courses of action to recover the carrying amount of a long-lived asset are under consideration or if a range is estimated for the amount of possible future cash flows associated with the likely course of action, reporting entities shall use their best estimate in testing the recoverability of a long-lived asset.

14. Estimates of future cash flows used to test the recoverability of a long-lived asset shall be made for the remaining useful life of the asset to the entity.

15. Estimates of future cash flows used to test the recoverability of a long-lived asset that is in use, including a long-lived asset for which development is substantially complete, shall be based on the existing service potential of the asset at the date it is tested. The service potential of a long-lived asset encompasses its remaining useful life, cash-flow-generating capacity, and for tangible assets, physical output capacity. Those estimates shall include cash flows associated with future expenditures necessary to maintain the existing service potential of a long-lived asset, including those that replace the service potential of component parts of a long-lived asset (for example, the roof of a building) and component assets other than the primary asset of an asset group. Those estimates shall exclude cash flows associated with future capital expenditures that would increase the service potential of a long-lived asset.

16. Estimates of future cash flows used to test the recoverability of a long-lived asset that is under development shall be based on the expected service potential of the asset when development is substantially complete. Those estimates shall include cash flows associated with all future expenditures necessary to develop a long-lived asset, including interest payments that will be capitalized as part of the cost of the asset.

17. If a long-lived asset that is under development is part of an asset group that is in use, estimates of future cash flows used to test the recoverability of that group shall include the cash flows associated with future expenditures necessary to maintain the existing service potential of the group as well as the cash flows associated with all future expenditures necessary to substantially complete the asset that is under development.

Fair Value

18. A discussion of fair value is contained in the Glossary to the Statements of Statutory Accounting Principles. This issue paper requires properties occupied by the company, that are determined to be subject to recoverability testing as discussed in paragraphs 7 and 8, to follow the guidance in SSAP No. 40, paragraph 11.

Real Estate Investment Categories

19. SSAP No. 40 states that real estate investments shall be reported in the balance sheet categories of properties occupied by the company, properties held for the production of income, and properties held

for sale. However, the accounting guidance in FAS 144 distinguishes between long-lived assets to be held and used and long-lived assets to be disposed of. For statutory accounting purposes, long-lived assets to be held and used encompass properties occupied by the company and properties held for the production of income. Further, FAS 144 bifurcates the category of long-lived assets to be disposed of into long-lived assets to be disposed of other than by sale and long-lived assets to be disposed of by sale. Long-lived assets to be disposed of other than by sale shall be classified either as properties occupied by the company or as properties held for the production of income. Long-lived assets to be disposed of by sale shall be classified as properties held for sale.

Long-Lived Assets to Be Disposed Of Other Than by Sale

20. A long-lived asset to be disposed of other than by sale (for example, by abandonment, in an exchange for a similar productive long-lived asset, or in a distribution to owners in a spinoff) shall continue to be classified as held and used until disposal. Paragraphs 6-19 shall apply while the asset is classified as held and used. If a long-lived asset is to be abandoned or distributed to owners in a spinoff together with other assets (and liabilities) as a group and that disposal group is a segment, paragraph 33 shall apply to the disposal group at the date of disposal.

Long-Lived Asset to Be Abandoned

21. For purposes of this Statement, a long-lived asset to be abandoned is disposed of when it ceases to be used. If an entity commits to a plan to abandon a long-lived asset before the end of its previously estimated useful life, depreciation estimates shall be revised in accordance with SSAP No. 3 to reflect the use of the asset over its shortened useful life. A long-lived asset that has been temporarily idled shall not be accounted for as if abandoned.

Long-Lived Asset to Be Exchanged for a Similarly Productive Long-Lived Asset or to Be Distributed to Owners in a Spinoff

22. For purposes of this Statement, a long-lived asset to be exchanged for a similarly productive long-lived asset or to be distributed to owners in a spinoff is disposed of when it is exchanged or distributed. If the asset is tested for recoverability while it is classified as held and used, the estimates of future cash flows used in that test shall be based on the use of the asset for its remaining useful life, assuming that the disposal transaction will not occur. In addition to any impairment losses required to be recognized while the asset is classified as held and used, an impairment loss, if any, shall be recognized when the asset is disposed of if the carrying amount of the asset exceeds its fair value.

Long-Lived Assets to Be Disposed Of by Sale

Recognition

23. A long-lived asset to be sold shall be classified as held for sale in the period in which all of the following criteria are met:

a. Management, having the authority to approve the action, commits to a plan to sell the asset;

b. The asset is available for immediate sale in its present condition subject only to terms that are usual and customary for sales of such assets;

c. An active program to locate a buyer and other actions required to complete the plan to sell the asset have been initiated;

d. The sale of the asset is probable, and transfer of the asset is expected to qualify for recognition as a completed sale, within one year, except as permitted by paragraph 24;

e. The asset is being actively marketed for sale at a price that is reasonable in relation to its current fair value;

f. Actions required to complete the plan indicate that it is unlikely that significant changes to the plan will be made or that the plan will be withdrawn.

If at any time the criteria in this paragraph are no longer met (except as permitted by paragraph 24), a long-lived asset classified as held for sale shall be reclassified as held and used in accordance with paragraphs 31 and 32.

24. Events or circumstances beyond an entity's control may extend the period required to complete the sale of a long-lived asset beyond one year. An exception to the one-year requirement in paragraph 23.d. shall apply in the following situations in which such events or circumstances arise:

a. If at the date an entity commits to a plan to sell a long-lived asset the entity reasonably expects that others (not a buyer) will impose conditions on the transfer of the asset that will extend the period required to complete the sale and (1) actions necessary to respond to those conditions cannot be initiated until after a firm purchase commitment is obtained and (2) a firm purchase commitment is probable within one year.

b. If an entity obtains a firm purchase commitment and, as a result, a buyer or others unexpectedly impose conditions on the transfer of a long-lived asset previously classified as held for sale that will extend the period required to complete the sale and (1) actions necessary to respond to the conditions have been or will be initiated in a timely manner and (2) a favorable resolution of the delaying factors is expected.

c. If during the initial one-year period, circumstances arise that previously were considered unlikely and, as a result, a long-lived asset previously classified as held for sale is not sold by the end of that period and (1) during the initial one-year period the entity initiated actions necessary to respond to the change in circumstances, (2) the asset is being actively marketed at a price that is reasonable given the change in circumstances, and (3) the criteria in paragraph 23 are met.

25. A long-lived asset that is newly acquired and that will be sold rather than held and used shall be classified as held for sale at the acquisition date only if the one-year requirement in paragraph 23.d. is met (except as permitted by paragraph 24) and any other criteria in paragraph 23 that are not met at that date are probable of being met within a short period following the acquisition (usually within three months).

26. If the criteria in paragraph 23 are met after the balance sheet date but before issuance of the financial statements, a long-lived asset shall continue to be classified as held and used in those financial statements when issued. The information required by paragraph 39 shall be disclosed in the notes to the financial statements. If the asset is tested for recoverability (on a held-and-used basis) as of the balance sheet date, the estimates of future cash flows used in that test shall consider the likelihood of possible outcomes that existed at the balance sheet date, including the assessment of the likelihood of the future sale of the asset. That assessment made as of the balance sheet date shall not be revised for a decision to sell the asset after the balance sheet date. An impairment loss, if any, to be recognized shall be measured as the amount by which the carrying amount of the asset exceeds its fair value at the balance sheet date.

Measurement

27. A long-lived asset classified as held for sale shall be measured at the lower of its carrying amount or fair value less cost to sell. If the asset is newly acquired, the carrying amount of the asset shall be established based on its fair value less cost to sell at the acquisition date. A long-lived asset shall not be depreciated (amortized) while it is classified as held for sale. Interest and other expenses attributable to the liabilities of a disposal classified as held for sale shall continue to be accrued.

28. Costs to sell are the incremental direct costs to transact a sale, that is, the costs that result directly from and are essential to a sale transaction and that would not have been incurred by the entity had the decision to sell not been made. Those costs include broker commissions, legal and title transfer fees, and closing costs that must be incurred before legal title can be transferred. Those costs exclude expected future losses associated with the operations of a long-lived asset while it is classified as held for sale.

29. The carrying amounts of any assets that are not covered by this Statement that are included in a disposal classified as held for sale shall be adjusted in accordance with other applicable statements of statutory accounting principles prior to measurement.

30. A realized loss shall be recognized in the summary of operations for any initial or subsequent write-down to fair value less cost to sell. A gain shall not be recognized for any subsequent increase in fair value less cost to sell until the asset is sold. The loss shall adjust only the carrying amount of a long-lived asset, whether classified as held for sale individually or as part of a disposal group. A gain or loss not previously recognized that results from the sale of a long-lived asset shall be recognized at the date of sale.

Changes to a Plan of Sale

31. If circumstances arise that previously were considered unlikely and, as a result, an entity decides not to sell a long-lived asset previously classified as held for sale, the asset shall be reclassified as held and used. A long-lived asset that is reclassified shall be measured individually at the lower of its (a) carrying amount before the asset was classified as held for sale, adjusted for any depreciation (amortization) expense that would have been recognized had the asset been continuously classified as held and used, or (b) fair value at the date of the subsequent decision not to sell.

32. Any required adjustment to the carrying amount of a long-lived asset that is reclassified as held and used shall be included in income from operations in the period of the subsequent decision not to sell. That adjustment shall be reported in the same income statement caption used to report a loss, if any, recognized in accordance with paragraph 34.

Reporting Long-Lived Assets and Disposal Groups to Be Disposed Of

Reporting Discontinued Operations

33. For purposes of reporting income and losses related to discontinued operations; any reference to the phrase “component of an entity” is replaced with “segment” as defined in SSAP No. 24.

Reporting Disposal Gains or Losses in Operations

34. Any disposal gain or loss recognized for long-lived assets shall be included as a net realized gain or loss in the summary of operations.

Reporting a Long-Lived Asset or Disposal Group Classified as Held for Sale

35. A long-lived asset classified as held for sale shall be presented separately in the balance sheet. The assets and liabilities of a disposal classified as held for sale shall be presented separately in the asset and liability sections, respectively, of the balance sheet. Those assets and liabilities shall not be offset and presented as a single amount. The major classes of assets and liabilities classified as held for sale shall be separately disclosed either on the face of the balance sheet or in the notes to financial statements (paragraph 39).

Reporting Impairment

36. Any impairment loss recognized on long-lived assets shall be recorded in the summary of operations as a realized loss.

Disclosures

37. The following information shall be disclosed in the notes to the financial statements that include the period in which an impairment loss is recognized:

a. A description of the impaired assets and the facts and circumstances leading to the impairment;

b. The amount of the impairment loss and how fair value was determined; and

38. The caption in the summary of operations, which includes the impairment loss.

39. The following information shall be disclosed in the notes to the financial statements that cover the period in which a long-lived asset either has been sold or is classified as held for sale:

a. A description of the facts and circumstances leading to the expected disposal, the expected manner and timing of that disposal.

b. If applicable, the gain or loss recognized and if not separately presented on the face of the summary of operations, the caption in the summary of operations that includes that gain or loss.

40. If paragraphs 31 and 32 apply, a description of the facts and circumstances leading to the decision to change the plan to sell the asset; and its effect on the results of operations for the period and any prior periods presented shall be disclosed in the notes to financial statements that include the period of that decision.

Effective Date and Transition

41. Upon adoption of this issue paper, the NAIC will release a SSAP for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years beginning on or after January 1, 2004.

DISCUSSION

42. FAS 144 supersedes FAS 121 and in part APB 30. FAS 144 retains the requirements of FAS 121 to (a) recognize an impairment loss only if the carrying amount of a long-lived asset is not recoverable from its undiscounted cash flows and (b) measure an impairment loss as the difference between the carrying amount and fair value of the asset. FAS 144 requires that a long-lived asset to be abandoned, exchanged for a similar productive asset, or distributed to owners in a spinoff be considered held and used until it is disposed of. FAS 144 also sets forth that the accounting model for long-lived assets to be disposed of by sale is used for all long-lived assets, whether previously held and used or newly acquired. FAS 144 also resolves implementation issues that came about in the application of existing guidance.

43. SSAP No. 40 states that real estate investments shall be reported in the balance sheet categories of properties occupied by the company, properties held for the production of income, and properties held for sale. However, the accounting guidance in FAS 144 distinguishes between long-lived assets to be held and used and long-lived assets to be disposed of. For statutory accounting purposes, long-lived assets to be held and used encompass properties occupied by the company and properties held for the production of income and will be referred to as such in this issue paper. Further, FAS 144 bifurcates the category of long-lived assets to be disposed of into long-lived assets to be disposed of other than by sale and long-lived assets to be disposed of by sale. In this issue paper, long-lived assets to be disposed of other than by sale shall be classified either as properties occupied by the company or as properties held for the production of income, as set forth in paragraph 27 of FAS 144 which is adopted in this issue paper. Long-lived assets to be disposed of by sale shall be classified as properties held for sale.

44. FAS 144 contains substantial guidance concerning the concept of grouping of assets for the purposes of measurement of an impairment loss. Grouping would seem to allow for the offsetting of gains on certain assets with losses on other assets in the same grouping, possibly resulting in no impairment loss being recognized. This is contrary to the concept of conservatism in the Statement of Concepts. As such, grouping of assets for the purpose of determining whether an impairment loss has occurred will not be allowed for statutory accounting purposes.

45. During the drafting process of this issue paper, an initial determination was made that SSAP Nos. 24, 40, 68 would be amended as a result of adopting FAS 144. Ultimately, only SSAP No. 40 was amended relative to adoption of FAS 144 as discussed below.

46. This issue paper adopts FAS 144 with modification to paragraphs 9, 17, 18, 19, 21, 25, 28, 35, 36, 37, 41, 42, 44, 45 and 47. Further, this issue paper rejects paragraphs 10-14, paragraphs 22-24, 26.d., and 43 of FAS 144. Refer to paragraph 47 of this issue paper for additional information with regard to these paragraphs.

47. The following modifications to FAS 144 were made in order to maintain consistency with current statutory accounting principles and the Statement of Concepts:

a. Paragraph 9 is amended to require that changes in depreciation estimates and methods and amortization periods found as a result of a test for recoverability should be accounted for in accordance with SSAP No. 3;

b. Paragraphs 10-14, which address the grouping of assets, are rejected, as reporting entities should apply the guidance in this statement to each of its assets on an individual basis;

c. Paragraphs 17, 18, 19 and 21 discuss estimates of future cash flows used to test the recoverability of a long-lived asset, and states that a probability-weighted approach may be useful in considering the likelihood of those possible outcomes. For statutory accounting purposes, reporting entities shall use their best estimate in testing the recoverability of a long-lived asset;

d. Paragraphs 22-24, which discuss fair value, are rejected. The definition of fair value is in the glossary to the Statement of Statutory Accounting Principles. In addition, this statement allows a modification to use for determining the fair value of properties occupied by company.

e. Paragraph 25 is amended to require that an impairment loss on properties occupied by the company and properties held for the production of income shall be recorded in the summary of operations as a realized loss;

f. Paragraph 28 is amended to require that changes in depreciation estimates shall be accounted for in accordance with SSAP No. 3;

g. If the sale is expected to occur beyond one year, paragraph 35 allows the cost to sell to be discounted. For statutory accounting purposes, the cost to sell shall not be discounted;

h. Paragraph 36 is amended to remove the reference to goodwill, as FAS 144 does not include goodwill within its scope unless such goodwill is included in an asset group that is or includes a reporting unit; paragraph 18 of this issue paper does not recognize a reporting unit. Paragraph 36 is further amended to require reporting entities to adjust all assets in accordance with other applicable statements of statutory accounting principles prior to measurement;

i. Paragraph 37 is amended to clarify that losses recognized as a result of adjustments to fair value less cost to sell shall be recorded in the summary of operations as a realized gain/loss. Paragraph 37 is also modified to disallow the recognition of any gain for subsequent increases in fair value less cost to sell until the asset is sold. This is consistent with the concept of conservatism found in the Statement of Concepts;

j. Within paragraphs 41, 42 and 44 of FAS 144 addressing discontinued operations, any reference to the phrase “component of an entity” is replaced with “segment” as defined in SSAP No. 24;

k. Paragraph 42 is amended to state that the results of operations of a discontinued operation shall be reported consistently with the entity’s reporting of continuing operations. This is consistent with the guidance found in paragraph 5 of SSAP No. 24;

l. Paragraph 44 is amended to state that adjustments to amounts previously reported related to continuing operations shall be reported consistently with the entity’s reporting of continuing operations. This is consistent with the guidance found in paragraph 5 of SSAP No. 24. In addition, subparagraphs a. through c. of paragraph 44 are adopted into paragraph 5 of SSAP No. 24;

m. Paragraph 45 is amended to state that a gain or loss on an asset classified as held for sale that has been disposed of shall be included in the summary of operations as a realized gain or loss;

n. The disclosures in paragraphs 47.a. and 47.b. are adopted with respect to properties held for sale, except for the disclosures related to major classes of assets, as grouping has been rejected in this issue paper. Subparagraphs 47.c. and 47.d. are rejected as such paragraphs relate to discontinued operations and segment reporting. The disclosures included in paragraphs 6 and 7 of SSAP No. 24 are more appropriate given the differences between statutory and GAAP reporting of discontinued operations;

o. Paragraph 26.d. requires the disclosure of the segment in which an impaired asset is reported. This paragraph is rejected, as statutory accounting requires accounting and reporting at the legal entity level. Further, any additional references to segments, reporting units, or disposal groups found in FAS 144 are also rejected, except with regard to a segment within the context of discontinued operations; and

p. Paragraph 43 is rejected and the guidance related to the recognition of losses/income expected between the measurement date and the expected disposal date included in paragraph 4 of SSAP No. 24 is retained, as such guidance is consistent with the concept of conservatism in the Statement of Concepts.

48. Paragraphs 12-14 of FAS 121 address the impairment of goodwill, and paragraphs 12, 14.a. and 14.b. of FAS 121 were adopted in SSAP No. 68. However, paragraph 12 of FAS 121 was superseded by FASB Statement No. 142, Goodwill and Other Intangible Assets (FAS 142), which was rejected in SSAP No. 68. Given the applicability of the guidance found in paragraph 12 of FAS 121 to statutory accounting principles, the impairment guidance found in FAS 121, paragraph 12 is retained. Paragraph 12 of FAS 121 has been excerpted in *Issue Paper No. 68—Business Combinations and Goodwill*, paragraph 31.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

49. SSAP No. 40 paragraphs 4, 8, 9, 10, 11, and 19:

> 4. Real estate investments shall be reported net of encumbrances in the following balance sheet categories, with parenthetical disclosure of the amount of related encumbrances:
>
> a. Properties occupied by the company;
>
> b. Properties held for the production of income; and
>
> c. Properties held for sale.
>
> 8. The cost of property included in real estate investments, other than land, shall be depreciated over the estimated useful life, not to exceed fifty years. Depreciation expense shall be included in investment expenses.
>
> 9. Properties occupied by the company and properties held for the production of income shall be carried at depreciated cost less encumbrances unless events or circumstances indicate the carrying amount of the asset (amount prior to reduction for encumbrances) may not be recoverable. Paragraph 5 of *FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of* (FAS 121), provides examples of events or changes in circumstances which indicate that the recoverability of the carrying amount of properties occupied by the company or properties held for the production of income should be assessed. If the events or changes in circumstances set forth in paragraph 5 of FAS 121 are present or if other events or changes in circumstances indicate that the carrying amount of properties occupied by the company or properties held for the production of income may not be recoverable, the entity shall determine whether an impairment loss must be recognized in accordance with paragraph 6 of FAS 121. Property occupied by the company shall be evaluated using the asset grouping approach of paragraph 8 of FAS 121. An impairment loss is measured as the amount by which the individual carrying amounts exceed the fair value of properties occupied by the company or properties held for the production of income. Fair value is determined in accordance with paragraph 11 of this statement. If the fair value of the asset is less than the carrying value, the asset shall be written down to the fair value thereby establishing a new cost basis. The new cost basis shall not be changed for subsequent recoveries in fair value. The adjustment shall be recorded in the statement of operations as a realized loss.

10. Properties that the reporting entity has the intent to sell or is required to sell shall be classified as properties held for sale and carried at the lower of depreciated cost or fair value less encumbrances and estimated costs to sell the property consistent with paragraph 16 of FAS 121. The intent to sell a property exists when management, having the authority to approve the action, has committed to a plan to dispose of the asset, either by sale or abandonment. Fair value of the asset shall be determined in accordance with paragraph 11 of this statement. Subsequent revisions to the fair value of the asset shall be accounted for in accordance with paragraph 17 of FAS 121.

11. The current fair value of real estate shall be determined on a property by property basis (i.e., increases in the fair value of one property shall not be used to offset declines in fair value of another) and shall be defined as the price that a property would bring in a competitive and open market under all conditions requisite to a fair sale (i.e., the buyer and seller acting prudently and knowledgeably with the price not affected by any undue stimulus). If market quotes are unavailable, estimates of fair value shall be determined by an appraisal (internal or third party), which is based upon an evaluation of all relevant data about the market, considering the following:

a. A physical inspection of the premises;

b. The present value of future cash flows generated by the property (Discounted Cash Flows), or capitalization of stabilized net operating income (Direct Capitalization);

c. Current sales prices of similar properties with adjustments for differences in the properties (Sales Comparison Approach);

d. Costs to sell the property if the reporting entity does not have the intent or ability to hold the real estate as an investment; and

e. Replacement costs of the improvements, less depreciation, plus the value of the land (Cost Approach).

19. An entity that recognizes an impairment loss shall disclose all of the following in financial statements that include the period of the impairment write-down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment;

b. The amount of the impairment loss and how fair value was determined; and

c. The caption in the statement of operations in which the impairment loss is aggregated.

50. SSAP No. 24 paragraphs 4, 6 and 7:

4. The determination of whether a gain or loss results from the disposal shall be made at the measurement date based on estimates at that date of the net realizable value of the segment after giving consideration to any estimated costs and expenses directly associated with the disposal and, if a plan of disposal is to be carried out over a period of time and contemplates continuing operations during that period, to any estimated income or losses from operations. If it is expected that net losses from operations will be incurred between the measurement date and the expected disposal date, the computation of the gain or loss on disposal shall also include an estimate of such amounts. If it is expected that net income will be generated from operations during that period the computation shall include the estimated net income, limited however to the amount of any loss otherwise recognizable for the disposal, with any remainder accounted for when realized. Any changes in the original estimate shall be accounted for in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

6. Additionally, the financial statements for the period encompassing the measurement date and the year subsequent shall contain the following:

a. The identity of the segment of business that has been or will be discontinued;

b. The expected disposal date, if known (see definition in paragraph 2 above);

c. The expected manner of disposal;

d. A description of the remaining assets and liabilities of the segment at the balance sheet date; and

e. The amounts related to the discontinued operations and the effect on the financial statements, including the balance sheet and income statement line items which have been affected.

7. If material revisions are made to the estimates of the cost to dispose of a segment in years subsequent to the disclosure required in paragraph 6 above, the nature and the effect of the revisions to the estimates shall be disclosed for the period in which the revision was made including the effect on income or loss from operations and the effect on the carrying amount of the remaining assets and liabilities of the segment at the balance sheet date.

51. SSAP No. 3 paragraphs 3-6:

Change in Accounting Principle

3. A change in accounting principle results from the adoption of an accepted accounting principle, or method of applying the principle, which differs from the principles or methods previously used for reporting purposes. A change in the method of applying an accounting principle shall be considered a change in accounting principle.

4. A characteristic of a change in accounting principle is that it concerns a choice from among two or more statutory accounting principles. However, a change in accounting principle is neither (a) the initial adoption of an accounting principle in recognition of events or transactions occurring for the first time or previously immaterial in their effect, nor (b) the adoption or modification of an accounting principle necessitated by transactions or events that are clearly different in substance from those previously occurring.

5. The cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods.

Change in Accounting Estimate

6. Changes in estimates used in accounting are necessary consequences of periodic presentations of financial statements which require estimating the effects of future events. Examples of items for which estimates are necessary include service lives of depreciable assets and changes in loss reserve estimates for property and casualty companies. Accounting estimates change as new events occur, as more experience is acquired, or as additional information is obtained.

Generally Accepted Accounting Principles

52. FAS 144 provides the following:

Long-Lived Assets to Be Held and Used

Recognition and Measurement of an Impairment Loss

7. For purposes of this Statement, impairment is the condition that exists when the carrying amount of a long-lived asset (asset group) exceeds its fair value. An impairment loss shall be recognized only if the carrying amount of a long-lived asset (asset group) is not recoverable and exceeds its fair value. The carrying amount of a long-lived asset (asset group) is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset (asset group). That assessment shall be based on the carrying amount of the asset (asset group) at the date it is tested for recoverability, whether in use (paragraph 19) or under development (paragraph 20). An impairment loss shall be measured as the amount by which the carrying amount of a long-lived asset (asset group) exceeds its fair value.

When to Test a Long-Lived Asset for Recoverability

8. A long-lived asset (asset group) shall be tested for recoverability whenever events or changes in circumstances indicate that its carrying amount may not be recoverable. The following are examples of such events or changes in circumstances:

a. A significant decrease in the market price of a long-lived asset (asset group)

b. A significant adverse change in the extent or manner in which a long-lived asset (asset group) is being used or in its physical condition

c. A significant adverse change in legal factors or in the business climate that could affect the value of a long-lived asset (asset group), including an adverse action or assessment by a regulator

d. An accumulation of costs significantly in excess of the amount originally expected for the acquisition or construction of a long-lived asset (asset group)

e. A current-period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with the use of a long-lived asset (asset group)

f. A current expectation that, more likely than not, a long-lived asset (asset group) will be sold or otherwise disposed of significantly before the end of its previously estimated useful life.

9. When a long-lived asset (asset group) is tested for recoverability, it also may be necessary to review depreciation estimates and method as required by APB Opinion No. 20, Accounting Changes, or the amortization period as required by *FASB Statement No. 142, Goodwill and Other Intangible Assets*. Any revision to the remaining useful life of a long-lived asset resulting from that review also shall be considered in developing estimates of future cash flows used to test the asset (asset group) for recoverability (paragraph 18). However, any change in the accounting method for the asset resulting from that review shall be made only after applying this Statement.

Grouping Long-Lived Assets to Be Held and Used

10. For purposes of recognition and measurement of an impairment loss, a long-lived asset or assets shall be grouped with other assets and liabilities at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities. However, an impairment loss, if any, that results from applying this Statement shall reduce only the carrying amount of a long-lived asset or assets of the group in accordance with paragraph 14.

11. In limited circumstances, a long-lived asset (for example, a corporate headquarters facility) may not have identifiable cash flows that are largely independent of the cash flows of other assets and liabilities and of other asset groups. In those circumstances, the asset group for that long-lived asset shall include all assets and liabilities of the entity.

12. Goodwill shall be included in an asset group to be tested for impairment under this Statement only if the asset group is or includes a reporting unit. Goodwill shall not be included in

a lower-level asset group that includes only part of a reporting unit. Estimates of future cash flows used to test that lower-level asset group for recoverability shall not be adjusted for the effect of excluding goodwill from the group.

13. Other than goodwill, the carrying amounts of any assets (such as accounts receivable and inventory) and liabilities (such as accounts payable, long-term debt, and asset retirement obligations) not covered by this Statement that are included in an asset group shall be adjusted in accordance with other applicable generally accepted accounting principles prior to testing the asset group for recoverability.

14. An impairment loss for an asset group shall reduce only the carrying amounts of a long-lived asset or assets of the group. The loss shall be allocated to the long-lived assets of the group on a pro rata basis using the relative carrying amounts of those assets, except that the loss allocated to an individual long-lived asset of the group shall not reduce the carrying amount of that asset below its fair value whenever that fair value is determinable without undue cost and effort. (Example 1 of Appendix A illustrates the allocation of an impairment loss for an asset group.)

New Cost Basis

15. If an impairment loss is recognized, the adjusted carrying amount of a long-lived asset shall be its new cost basis. For a depreciable long-lived asset, the new cost basis shall be depreciated (amortized) over the remaining useful life of that asset. Restoration of a previously recognized impairment loss is prohibited.

Estimates of Future Cash Flows Used to Test a Long-Lived Asset for Recoverability

16. Estimates of future cash flows used to test the recoverability of a long-lived asset (asset group) shall include only the future cash flows (cash inflows less associated cash outflows) that are directly associated with and that are expected to arise as a direct result of the use and eventual disposition of the asset (asset group). Those estimates shall exclude interest charges that will be recognized as an expense when incurred.

17. Estimates of future cash flows used to test the recoverability of a long-lived asset (asset group) shall incorporate the entity’s own assumptions about its use of the asset (asset group) and shall consider all available evidence. The assumptions used in developing those estimates shall be reasonable in relation to the assumptions used in developing other information used by the entity for comparable periods, such as internal budgets and projections, accruals related to incentive compensation plans, or information communicated to others. However, if alternative courses of action to recover the carrying amount of a long-lived asset (asset group) are under consideration or if a range is estimated for the amount of possible future cash flows associated with the likely course of action, the likelihood of those possible outcomes shall be considered. A probability-weighted approach may be useful in considering the likelihood of those possible outcomes. (Example 2 of Appendix A illustrates the use of that approach when alternative courses of action are under consideration.)

18. Estimates of future cash flows used to test the recoverability of a long-lived asset (asset group) shall be made for the remaining useful life of the asset (asset group) to the entity. The remaining useful life of an asset group shall be based on the remaining useful life of the primary asset of the group. For purposes of this Statement, the primary asset is the principal long-lived tangible asset being depreciated or intangible asset being amortized that is the most significant component asset from which the asset group derives its cash-flow-generating capacity. Factors that an entity generally should consider in determining whether a long-lived asset is the primary asset of an asset group include the following: (a) whether other assets of the group would have been acquired by the entity without the asset, (b) the level of investment that would be required to replace the asset, and (c) the remaining useful life of the asset relative to other assets of the group. If the primary asset is not the asset of the group with the longest remaining useful life, estimates of future cash flows for the group should assume the sale of the group at the end of the remaining useful life of the primary asset.

19. Estimates of future cash flows used to test the recoverability of a long-lived asset (asset group) that is in use, including a long-lived asset (asset group) for which development is substantially complete, shall be based on the existing service potential of the asset (asset group) at the date it is tested. The service potential of a long-lived asset (asset group) encompasses its remaining useful life, cash-flow-generating capacity, and for tangible assets, physical output capacity. Those estimates shall include cash flows associated with future expenditures necessary to maintain the existing service potential of a long-lived asset (asset group), including those that replace the service potential of component parts of a long-lived asset (for example, the roof of a building) and component assets other than the primary asset of an asset group. Those estimates shall exclude cash flows associated with future capital expenditures that would increase the service potential of a long-lived asset (asset group).

20. Estimates of future cash flows used to test the recoverability of a long-lived asset (asset group) that is under development shall be based on the expected service potential of the asset (group) when development is substantially complete. Those estimates shall include cash flows associated with all future expenditures necessary to develop a long-lived asset (asset group), including interest payments that will be capitalized as part of the cost of the asset (asset group).

21. If a long-lived asset that is under development is part of an asset group that is in use, estimates of future cash flows used to test the recoverability of that group shall include the cash flows associated with future expenditures necessary to maintain the existing service potential of the group (paragraph 19) as well as the cash flows associated with all future expenditures necessary to substantially complete the asset that is under development (paragraph 20). (Example 3 of Appendix A illustrates that situation.)

Fair Value

22. The fair value of an asset (liability) is the amount at which that asset (liability) could be bought (incurred) or sold (settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. However, in many instances, quoted market prices in active markets will not be available for the long-lived assets (asset groups) covered by this Statement. In those instances, the estimate of fair value shall be based on the best information available, including prices for similar assets (groups) and the results of using other valuation techniques.

23. A present value technique is often the best available valuation technique with which to estimate the fair value of a long-lived asset (asset group). Paragraphs 39-54 of *FASB Concepts Statement No. 7, Using Cash Flow Information and Present Value in Accounting Measurements*, discuss the use of two present value techniques to measure the fair value of an asset (liability). The first is expected present value, in which multiple cash flow scenarios that reflect the range of possible outcomes and a risk-free rate are used to estimate fair value. The second is traditional present value, in which a single set of estimated cash flows and a single interest rate (a rate commensurate with the risk) are used to estimate fair value. Either present value technique can be used for a fair value measurement. However, for long-lived assets (asset groups) that have uncertainties both in timing and amount, an expected present value technique will often be the appropriate technique. (Example 4 of Appendix A illustrates the use of that technique.)

24. If a present value technique is used, estimates of future cash flows shall be consistent with the objective of measuring fair value. Assumptions that marketplace participants would use in their estimates of fair value shall be incorporated whenever that information is available without undue cost and effort. Otherwise, the entity may use its own assumptions.

Reporting and Disclosure

25. An impairment loss recognized for a long-lived asset (asset group) to be held and used shall be included in income from continuing operations before income taxes in the income statement of a business enterprise and in income from continuing operations in the statement of

activities of a not-for-profit organization. If a subtotal such as "income from operations" is presented, it shall include the amount of that loss.

26. The following information shall be disclosed in the notes to the financial statements that include the period in which an impairment loss is recognized:

a. A description of the impaired long-lived asset (asset group) and the facts and circumstances leading to the impairment

b. If not separately presented on the face of the statement, the amount of the impairment loss and the caption in the income statement or the statement of activities that includes that loss

c. The method or methods for determining fair value (whether based on a quoted market price, prices for similar assets, or another valuation technique)

d. If applicable, the segment in which the impaired long-lived asset (asset group) is reported under FASB Statement No. 131, Disclosures about Segments of an Enterprise and Related Information.

Long-Lived Assets to Be Disposed Of Other than by Sale

27. A long-lived asset to be disposed of other than by sale (for example, by abandonment, in an exchange for a similar productive long-lived asset, or in a distribution to owners in a spinoff) shall continue to be classified as held and used until it is disposed of. Paragraphs 7-26 shall apply while the asset is classified as held and used. If a long-lived asset is to be abandoned or distributed to owners in a spinoff together with other assets (and liabilities) as a group and that disposal group is a component of an entity, paragraphs 41-44 shall apply to the disposal group at the date it is disposed of.

Long-Lived Asset to Be Abandoned

28. For purposes of this Statement, a long-lived asset to be abandoned is disposed of when it ceases to be used. If an entity commits to a plan to abandon a long-lived asset before the end of its previously estimated useful life, depreciation estimates shall be revised in accordance with Opinion 20 to reflect the use of the asset over its shortened useful life (refer to paragraph 9). A long-lived asset that has been temporarily idled shall not be accounted for as if abandoned.

Long-Lived Asset to Be Exchanged for a Similar Productive Long-Lived Asset or to Be Distributed to Owners in a Spinoff

29. For purposes of this Statement, a long-lived asset to be exchanged for a similar productive long-lived asset or to be distributed to owners in a spinoff is disposed of when it is exchanged or distributed. If the asset (asset group) is tested for recoverability while it is classified as held and used, the estimates of future cash flows used in that test shall be based on the use of the asset for its remaining useful life, assuming that the disposal transaction will not occur. In addition to any impairment losses required to be recognized while the asset is classified as held and used, an impairment loss, if any, shall be recognized when the asset is disposed of if the carrying amount of the asset (disposal group) exceeds its fair value.

Long-Lived Assets to Be Disposed Of by Sale

Recognition

30. A long-lived asset (disposal group) to be sold shall be classified as held for sale in the period in which all of the following criteria are met:

a. Management, having the authority to approve the action, commits to a plan to sell the asset (disposal group).

b. The asset (disposal group) is available for immediate sale in its present condition subject only to terms that are usual and customary for sales of such assets (disposal groups). (Examples 5–7 of Appendix A illustrate when that criterion would be met.)

c. An active program to locate a buyer and other actions required to complete the plan to sell the asset (disposal group) have been initiated.

d. The sale of the asset (disposal group) is probable, and transfer of the asset (disposal group) is expected to qualify for recognition as a completed sale, within one year, except as permitted by paragraph 31. (Example 8 of Appendix A illustrates when that criterion would be met.)

e. The asset (disposal group) is being actively marketed for sale at a price that is reasonable in relation to its current fair value.

f. Actions required to complete the plan indicate that it is unlikely that significant changes to the plan will be made or that the plan will be withdrawn.

If at any time the criteria in this paragraph are no longer met (except as permitted by paragraph 31), a long-lived asset (disposal group) classified as held for sale shall be reclassified as held and used in accordance with paragraph 38.

31. Events or circumstances beyond an entity's control may extend the period required to complete the sale of a long-lived asset (disposal group) beyond one year. An exception to the one-year requirement in paragraph 30.d. shall apply in the following situations in which such events or circumstances arise:

a. If at the date an entity commits to a plan to sell a long-lived asset (disposal group) the entity reasonably expects that others (not a buyer) will impose conditions on the transfer of the asset (group) that will extend the period required to complete the sale and (1) actions necessary to respond to those conditions cannot be initiated until after a firm purchase commitment is obtained and (2) a firm purchase commitment is probable within one year. (Example 9 of Appendix A illustrates that situation.)

b. If an entity obtains a firm purchase commitment and, as a result, a buyer or others unexpectedly impose conditions on the transfer of a long-lived asset (disposal group) previously classified as held for sale that will extend the period required to complete the sale and (1) actions necessary to respond to the conditions have been or will be timely initiated and (2) a favorable resolution of the delaying factors is expected. (Example 10 of Appendix A illustrates that situation.)

c. If during the initial one-year period, circumstances arise that previously were considered unlikely and, as a result, a long-lived asset (disposal group) previously classified as held for sale is not sold by the end of that period and (1) during the initial one-year period the entity initiated actions necessary to respond to the change in circumstances, (2) the asset (group) is being actively marketed at a price that is reasonable given the change in circumstances, and (3) the criteria in paragraph 30 are met. (Example 11 of Appendix A illustrates that situation.)

32. A long-lived asset (disposal group) that is newly acquired and that will be sold rather than held and used shall be classified as held for sale at the acquisition date only if the one-year requirement in paragraph 30.d. is met (except as permitted by paragraph 31) and any other criteria in paragraph 30 that are not met at that date are probable of being met within a short period following the acquisition (usually within three months).

33. If the criteria in paragraph 30 are met after the balance sheet date but before issuance of the financial statements, a long-lived asset shall continue to be classified as held and used in those financial statements when issued. The information required by paragraph 47.a. shall be disclosed in the notes to the financial statements. If the asset (asset group) is tested for recoverability (on a held-and-used basis) as of the balance sheet date, the estimates of future

cash flows used in that test shall consider the likelihood of possible outcomes that existed at the balance sheet date, including the assessment of the likelihood of the future sale of the asset. That assessment made as of the balance sheet date shall not be revised for a decision to sell the asset after the balance sheet date. An impairment loss, if any, to be recognized shall be measured as the amount by which the carrying amount of the asset (asset group) exceeds its fair value at the balance sheet date.

Measurement

34. A long-lived asset (disposal group) classified as held for sale shall be measured at the lower of its carrying amount or fair value less cost to sell. If the asset (disposal group) is newly acquired, the carrying amount of the asset (disposal group) shall be established based on its fair value less cost to sell at the acquisition date. A long-lived asset shall not be depreciated (amortized) while it is classified as held for sale. Interest and other expenses attributable to the liabilities of a disposal group classified as held for sale shall continue to be accrued.

35. Costs to sell are the incremental direct costs to transact a sale, that is, the costs that result directly from and are essential to a sale transaction and that would not have been incurred by the entity had the decision to sell not been made. Those costs include broker commissions, legal and title transfer fees, and closing costs that must be incurred before legal title can be transferred. Those costs exclude expected future losses associated with the operations of a long-lived asset (disposal group) while it is classified as held for sale. If the sale is expected to occur beyond one year as permitted in limited situations by paragraph 31, the cost to sell shall be discounted.

36. The carrying amounts of any assets that are not covered by this Statement, including goodwill, that are included in a disposal group classified as held for sale shall be adjusted in accordance with other applicable generally accepted accounting principles prior to measuring the fair value less cost to sell of the disposal group.

37. A loss shall be recognized for any initial or subsequent write-down to fair value less cost to sell. A gain shall be recognized for any subsequent increase in fair value less cost to sell, but not in excess of the cumulative loss previously recognized (for a write-down to fair value less cost to sell). The loss or gain shall adjust only the carrying amount of a long-lived asset, whether classified as held for sale individually or as part of a disposal group. A gain or loss not previously recognized that results from the sale of a long-lived asset (disposal group) shall be recognized at the date of sale.

Changes to a Plan of Sale

38. If circumstances arise that previously were considered unlikely and, as a result, an entity decides not to sell a long-lived asset (disposal group) previously classified as held for sale, the asset (disposal group) shall be reclassified as held and used. A long-lived asset that is reclassified shall be measured individually at the lower of its (a) carrying amount before the asset (disposal group) was classified as held for sale, adjusted for any depreciation (amortization) expense that would have been recognized had the asset (disposal group) been continuously classified as held and used, or (b) fair value at the date of the subsequent decision not to sell.

39. Any required adjustment to the carrying amount of a long-lived asset that is reclassified as held and used shall be included in income from continuing operations in the period of the subsequent decision not to sell. That adjustment shall be reported in the same income statement caption used to report a loss, if any, recognized in accordance with paragraph 45. If a component of an entity is reclassified as held and used, the results of operations of the component previously reported in discontinued operations in accordance with paragraph 43 shall be reclassified and included in income from continuing operations for all periods presented.

40. If an entity removes an individual asset or liability from a disposal group previously classified as held for sale, the remaining assets and liabilities of the disposal group to be sold shall continue to be measured as a group only if the criteria in paragraph 30 are met. Otherwise, the remaining long-lived assets of the group shall be measured individually at the lower of their

carrying amounts or fair values less cost to sell at that date. Any long-lived assets that will not be sold shall be reclassified as held and used in accordance with paragraph 38.

Reporting Long-Lived Assets and Disposal Groups to Be Disposed Of

Reporting Discontinued Operations

41. For purposes of this Statement, a component of an entity comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. A component of an entity may be a reportable segment or an operating segment (as those terms are defined in paragraph 10 of Statement 131), a reporting unit (as that term is defined in Statement 142), a subsidiary, or an asset group (as that term is defined in paragraph 4).

42. The results of operations of a component of an entity that either has been disposed of or is classified as held for sale shall be reported in discontinued operations in accordance with paragraph 43 if both of the following conditions are met: (a) the operations and cash flows of the component have been (or will be) eliminated from the ongoing operations of the entity as a result of the disposal transaction and (b) the entity will not have any significant continuing involvement in the operations of the component after the disposal transaction. (Examples 12-15 of Appendix A illustrate disposal activities that do or do not qualify for reporting as discontinued operations.)

43. In a period in which a component of an entity either has been disposed of or is classified as held for sale, the income statement of a business enterprise (or statement of activities of a not-for-profit organization) for current and prior periods shall report the results of operations of the component, including any gain or loss recognized in accordance with paragraph 37, in discontinued operations. The results of operations of a component classified as held for sale shall be reported in discontinued operations in the period(s) in which they occur. The results of discontinued operations, less applicable income taxes (benefit), shall be reported as a separate component of income before extraordinary items and the cumulative effect of accounting changes (if applicable). For example, the results of discontinued operations may be reported in the income statement of a business enterprise as follows:

Income from continuing operations before income taxes	$XXXX
Income taxes	XXX
Income from continuing operations 24	$XXXX
Discontinued operations (Note X)	
Loss from operations of discontinued Component X (including loss on disposal of $XXX)	XXXX
Income tax benefit	XXXX
Loss on discontinued operations	XXXX
Net income	$XXXX

A gain or loss recognized on the disposal shall be disclosed either on the face of the income statement or in the notes to the financial statements (paragraph 47.b.).

44. Adjustments to amounts previously reported in discontinued operations that are directly related to the disposal of a component of an entity in a prior period shall be classified separately in the current period in discontinued operations. The nature and amount of such adjustments shall be disclosed. Examples of circumstances in which those types of adjustments may arise include the following:

a. The resolution of contingencies that arise pursuant to the terms of the disposal transaction, such as the resolution of purchase price adjustments and indemnification issues with the purchaser

b. The resolution of contingencies that arise from and that are directly related to the operations of the component prior to its disposal, such as environmental and product warranty obligations retained by the seller

c. The settlement of employee benefit plan obligations (pension, postemployment benefits other than pensions, and other postemployment benefits), provided that the settlement is directly related to the disposal transaction.

Reporting Disposal Gains or Losses in Continuing Operations

45. A gain or loss recognized for a long-lived asset (disposal group) classified as held for sale that is not a component of an entity shall be included in income from continuing operations before income taxes in the income statement of a business enterprise and in income from continuing operations in the statement of activities of a not-for-profit organization. If a subtotal such as "income from operations" is presented, it shall include the amounts of those gains or losses.

Reporting a Long-Lived Asset or Disposal Group Classified as Held for Sale

46. A long-lived asset classified as held for sale shall be presented separately in the statement of financial position. The assets and liabilities of a disposal group classified as held for sale shall be presented separately in the asset and liability sections, respectively, of the statement of financial position. Those assets and liabilities shall not be offset and presented as a single amount. The major classes of assets and liabilities classified as held for sale shall be separately disclosed either on the face of the statement of financial position or in the notes to financial statements (paragraph 47.a.).

Disclosure

47. The following information shall be disclosed in the notes to the financial statements that cover the period in which a long-lived asset (disposal group) either has been sold or is classified as held for sale:

a. A description of the facts and circumstances leading to the expected disposal, the expected manner and timing of that disposal, and, if not separately presented on the face of the statement, the carrying amount(s) of the major classes of assets and liabilities included as part of a disposal group

b. The gain or loss recognized in accordance with paragraph 37 and if not separately presented on the face of the income statement, the caption in the income statement or the statement of activities that includes that gain or loss

c. If applicable, amounts of revenue and pretax profit or loss reported in discontinued operations

d. If applicable, the segment in which the long-lived asset (disposal group) is reported under Statement 131.

48. If either paragraph 38 or paragraph 40 applies, a description of the facts and circumstances leading to the decision to change the plan to sell the long-lived asset (disposal group) and its effect on the results of operations for the period and any prior periods presented shall be disclosed in the notes to financial statements that include the period of that decision.

EXHIBIT A: Illustration of Marked Changes to Amended SSAPs

The following depicts the amendments made by this issue paper as "marked changes" (new text underlined and deleted text struck-through). These amendments may ultimately be revised in the final statement of statutory accounting principle.

SSAP No. 40 paragraph 9:

Properties occupied by the company and properties held for the production of income shall be carried at depreciated cost less encumbrances unless events or circumstances indicate the carrying amount of the asset (amount prior to reduction for encumbrances) may not be recoverable. Paragraph 8~~5~~ of *FASB Statement No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets* (FAS 144)~~FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets to be Disposed Of (FAS 121)~~, provides examples of events or changes in circumstances which indicate that the recoverability of the carrying amount of properties occupied by the company or properties held for the production of income should be assessed. If the events or changes in circumstances set forth in paragraph 8~~5~~ of FAS 144~~121~~ are present or if other events or changes in circumstances indicate that the carrying amount of properties occupied by the company or properties held for the production of income may not be recoverable, the entity shall determine whether an impairment loss must be recognized in accordance with paragraph 7~~6~~ of FAS 144~~121~~. In evaluating the recoverability of properties ~~occupied by the company or properties~~ held for the production of income, the reporting entity should utilize the methods of estimating future cash flows in accordance with paragraphs 16-21 of FAS 144. Property occupied by the company shall be evaluated using the asset grouping approach of ~~paragraph 8 of FAS 121~~ paragraphs 10 and 11 of FAS 144. An impairment loss is measured as the amount by which the individual carrying amounts exceed the fair value of properties occupied by the company or properties held for the production of income. Fair value is determined in accordance with paragraph 11 of SSAP No. 40~~this statement~~. If the fair value of the asset is less than the carrying value, the asset shall be written down to the fair value thereby establishing a new cost basis. The new cost basis shall not be changed for subsequent recoveries in fair value. The adjustment shall be recorded in the statement of operations as a realized loss.

SSAP No. 40 paragraph 10:

Properties that the reporting entity has the intent to sell or is required to sell shall be classified as properties held for sale and carried at the lower of depreciated cost or fair value less encumbrances and estimated costs to sell the property consistent with paragraph 34~~16~~ of FAS 144~~121~~. The intent to sell a property exists when the criteria set forth in paragraph 30 of FAS 144 are met.~~management, having the authority to approve the action, has committed to a plan to dispose of the asset, either by sale or abandonment.~~ Fair value of the asset shall be determined in accordance with paragraph 11 of SSAP No. 40~~this statement~~. Subsequent revisions to the fair value of the asset shall be accounted for in accordance with paragraph 37~~17~~ of FAS 144, as modified by this issue paper ~~121~~.

SSAP No. 40 paragraph 19:

~~An entity that recognizes an impairment loss shall disclose all of the following in financial statements that include the period of the impairment write-down:~~

~~a. A description of the impaired assets and the facts and circumstances leading to the impairment;~~

~~b. The amount of the impairment loss and how fair value was determined; and~~

~~c. The caption in the statement of operations in which the impairment loss is aggregated.~~

An entity that recognizes an impairment loss shall disclose all of the following in financial statements that include the period of the impairment write-down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment;

b. The amount of the impairment loss and how fair value was determined; and

c. The caption in the statement of operations in which the impairment loss is aggregated.

In the period in which a property classified as held for sale has either been sold or is classified as held for sale, the reporting entity shall disclose the following:

a. A description of the facts and circumstances leading to the expected disposal, the expected manner and timing of that disposal; and

b. If applicable, the gain or loss recognized and if not separately presented on the face of the statement of operations, the caption in the statement of operations that includes that gain or loss.

If the reporting entity makes changes to a plan of sale in accordance with paragraphs 38 and 40 of FAS 144, in the period of that decision the reporting entity shall disclose a description of the facts and circumstances leading to the decision to change the plan to sell the asset and its effect on the results of operations for the period and any prior periods presented.

Statutory Issue Paper No. 122

Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

STATUS
Adopted December 8, 2003

Current Authoritative Guidance for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities: SSAP No. 103
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 91

Type of Issue:
Common

SUMMARY OF ISSUE

1. Current statutory accounting guidance for transfers and servicing of financial assets and extinguishments of liabilities is provided in *SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 18). Current statutory accounting guidance for asset securitizations and securitizations of policy acquisition costs is provided in *SSAP No. 33—Securitization* (SSAP No. 33). Current statutory accounting guidance for repurchase agreements, reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements is provided in *SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements* (SSAP No. 45). SSAP No. 18, SSAP No. 33 and SSAP No. 45 adopted *FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125) with modification for statutory accounting purposes. The modifications to FAS 125 primarily relate to:

a. The nonadmission of servicing rights assets;

b. The accounting for repurchase agreements, reverse repurchase agreements, and dollar repurchase agreements;

c. The accounting for realized gains and losses for reporting entities required to maintain an IMR;

d. The accounting for financial assets subject to prepayment;

e. The accounting for assets pledged as collateral;

f. The accounting for leases in accordance with *SSAP No. 22—Leases* (SSAP No. 22)*;*

g. The accounting for sales of receivables with recourse; and

h. Paragraph 14 of FAS 125 is rejected as it relates to classifications of securities under *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities* (FAS 115). FAS 115 is rejected in *SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities* (SSAP No. 26).

2. In September 2000, the Financial Accounting Standards Board (FASB) issued *FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*

(FAS 140). FAS 140 replaces FAS 125. FAS 140 reconsiders or clarifies the guidance in FAS 125 concerning the following:

a. Circumstances in which a special-purpose entity (SPE) can be considered qualifying;

b. Circumstances in which the assets held by a qualifying SPE should appear in the consolidated financial statements of the transferor;

c. Whether sale accounting is precluded if the transferor holds a right to repurchase transferred assets that is attached to, is embedded in, or is otherwise transferable with the financial assets;

d. Circumstances in which sale accounting is precluded if transferred financial assets can be removed from a SPE by the transferor (for example under a removal-of-accounts provision (ROAP);

e. Whether arrangements that obligate, but do not entitle, a transferor to repurchase or redeem transferred financial assets should affect the accounting for those transfers;

f. The impact of the powers of the Federal Deposit Insurance Corporation (FDIC) on isolation of assets transferred by financial institutions;

g. Whether transfers of financial assets measured using the equity method of accounting should continue to be included in the scope of FAS 125;

h. Whether disclosures should be enhanced to provide more information about assumptions used to determine the fair value of retained interests and the gain or loss on financial assets sold in securitizations; and

i. The accounting for and disclosure about collateral that can be sold or repledged.

3. The purpose of this issue paper is to establish statutory accounting principles for transfers and servicing of financial assets, including asset securitizations and securitizations of policy acquisition costs, extinguishments of liabilities, repurchase agreements and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This issue paper discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this issue paper. Securitizations of nonfinancial assets are outside the scope of this issue paper.

RECOMMENDED CONCLUSION

4. See *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25) for additional accounting and disclosure guidance concerning related party transactions. In addition the guidance for the following topics have been addressed in Interpretations of the Emerging Accounting Issues Working Group:

a. *INT 99-22: EITF 98-8 Accounting for Transfers of Investments That Are in Substance Real Estate* resolved this conflict between application of *SSAP No. 40—Real Estate Investments* and SSAP No. 18.

b. *INT 99-21: EITF 98-7 Accounting for Exchanges of Similar Equity Method Investments* resolved this conflict between application of *SSAP No. 28—Nonmonetary Transactions* and SSAP No. 18.

5. SSAP No. 18, SSAP No. 33 and SSAP No. 45 are superseded by the conclusions outlined in this issue paper.

6. This issue paper does not address the securitization of mortality or morbidity risk. The NAIC's Insurance Securitization Working Group of the Financial Condition (E) Committee is charged with the development of model laws, model regulations and proposed accounting guidance for the securitization of mortality and morbidity risk. When such proposed accounting guidance is finalized the development of an issue paper will be considered.

7. Except as discussed in paragraphs 57 and 89, a transfer of a group of financial assets, or a portion of a financial asset in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if, and only if, all of the following conditions are met:

a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (see paragraphs 18 and 19);

b. Either (i) each transferee obtains the right, free of conditions that constrain it from taking advantage of that right (see paragraphs 20-24), to pledge or exchange the transferred assets or (ii) the transferee is a qualifying special-purpose entity as defined in paragraph 26 and the holders of beneficial interests in that entity have the right, free of conditions that constrain them from taking advantage of that right (see paragraph 25), to pledge or exchange those interests and no condition both constrains the transferee (or holder) from taking advantage of its right to pledge or exchange and provide more than a trivial benefit to the transferor; and

c. The transferor does not maintain effective control over the transferred assets through (i) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (see paragraphs 39-41) or (ii) the ability to unilaterally cause the holder to return specific assets, other than through a cleanup call (see paragraphs 23-24 and 42-46).

8. Upon completion of any transfer of financial assets, the transferor shall:

a. Continue to carry in its balance sheet any retained interest in the transferred assets, including, if applicable, beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization, and retained undivided interests (see paragraphs 9.c., 49 and 50); and

b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (see paragraphs 49 and 50).

9. Upon completion of a transfer of assets that satisfies the conditions to be accounted for as a sale (see paragraph 7), the transferor (seller) shall:

a. Eliminate the transferred assets from the balance sheet;

b. Allocate the previous carrying amount of the transferred assets to the securities representing beneficial interests retained by the reporting entity, if any, and the securities representing beneficial interests not retained, if any, based on the relative fair values of the transferred assets at the date of transfer;

c. Record in its balance sheet, the allocated carrying value of the securities representing retained beneficial interests in the assets (e.g., loan-backed securities). Subsequent to the transfer of assets:

i. Retained residuals are to be carried at fair value with the difference between fair value and the allocated cost basis recognized as an unrealized gain or loss;

ii. Retained beneficial interests shall be accounted for in accordance with the statutory accounting principles for the specific asset type (e.g., bonds shall be accounted for in accordance with SSAP No. 26, loan-backed securities shall be accounted for in accordance with *SSAP No. 43—Loan-Backed and Structured Securities*, preferred stock in accordance with *SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled or affiliated entities)*.

d. Recognize all additional assets obtained (i.e., other than the securities representing retained beneficial interests which are recorded in accordance with 9 c.) and liabilities incurred in consideration as proceeds of the sale;

e. Initially measure such additional assets obtained and liabilities incurred in the sale at fair value (see Glossary), or if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraph 51); and

f. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized and unrealized capital gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an IMR, realized capital gains and losses shall be reported as net realized capital gains or losses in the statement of income, and unrealized capital gains and losses shall be reported as net unrealized gains and losses in unassigned funds (surplus).

10. The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value (in aggregate, presumptively the price paid).

11. Repurchase agreements, reverse repurchase agreements, and dollar repurchase agreements are described in paragraphs 68-78. When an asset is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales and shall be accounted for as sales and disclosed as required by paragraph 92. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

12. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) (a) does not meet the criteria for a sale in paragraph 7, or (b) is a sale of receivables with recourse (see paragraph 89); the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (see paragraph 14).

Recognition and Measurement of Servicing Assets and Liabilities

13. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained, or separate purchase or assumption of the servicing. If distinct servicing rights to transferred assets exist and are retained by the reporting entity, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be

received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations in other income. If the servicing asset or liability was purchased or assumed rather than undertaken in a sale or securitization of the financial assets being serviced, it shall be measured initially at its fair value, presumptively the price paid. The servicing asset or liability shall be amortized into income in proportion to, and over the period of estimated servicing income (if an asset) or estimated servicing loss (if a liability). A servicing asset or liability shall be assessed for impairment or increased obligation based on its fair value.

Secured Borrowings and Collateral

14. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (see paragraph 12). The accounting for collateral by the debtor (or obligor) and the secured party depends on whether the secured party has taken control over the collateral, and on the rights and obligations that result from the collateral arrangement:

a. If the secured party is permitted to sell or repledge the collateral, and the debtor does not have the right and ability to redeem the collateral on short notice, (e.g., by substituting other collateral or terminating the contract), then:

   The debtor shall reclassify that asset and report that asset in its balance sheet separately (for example, as security pledged to creditors) from other assets not so encumbered;

   The secured party shall recognize that collateral as its asset, initially measure it at fair value, and also recognize its obligation to return it.

b. If the secured party sells or repledges collateral on terms that do not give it the right and ability to repurchase or redeem the collateral from the transferee on short notice, the secured party shall recognize the proceeds from the sale or the asset repledged and its obligation to return the asset to the extent that it has not already recognized them. The sale or repledging of the asset is a transfer subject to the provisions of this statement;

c. If the debtor defaults under the terms of the secured contract and is no longer entitled to redeem the collateral, it shall derecognize the collateral. The secured party shall recognize the collateral as an asset (to the extent it has not already recognized it) and initially measure it at fair value;

d. Otherwise, the debtor shall continue to carry the collateral as an asset, and the secured party shall not recognize the pledged asset.

15. Insurers may enter into certain transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract. If the assets pledged are recorded as admitted assets under *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) and are not impaired under the provisions of *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5), the pledging insurer records the collateral as an admitted asset until committing a contract default that has not been cured in accordance with the contract provisions. At the time of an uncured default, the provisions of paragraph 14 above shall be used to determine the appropriate accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of

the liability owed by the pledging insurer as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset shall be removed from the balance sheet since that obligation has been satisfied through the secured party's utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer shall only record an admitted asset for the amount of collateral that it can redeem.

Extinguishments of Liabilities

16. A debtor shall derecognize a liability if, and only if, it has been extinguished (see *SSAP No. 15—Debt and Holding Company Obligations*). A liability has been extinguished if either of the following conditions is met:

a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities whether the securities are canceled or held as so-called treasury bonds; or

b. The debtor is legally released from being the primary obligor under the liability, either judicially or by the creditor.

17. If a creditor releases a debtor from primary obligation on the condition that a third party assumes the obligation and that the original debtor becomes secondarily liable, that release extinguishes the original debtor's liability. However, in those circumstances, whether or not explicit consideration was paid for that guarantee, the original debtor becomes a guarantor. As a guarantor, it shall recognize a guarantee obligation in the same manner as would a guarantor that had never been primarily liable to that creditor, with due regard for the likelihood that the third party will carry out its obligations. The guarantee obligation shall be initially measured at fair value, and that amount reduces the gain or increases the loss recognized on extinguishment.

Isolation Beyond the Reach of the Transferor and Its Creditors

18. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor. Transactions between related parties or affiliates are accounted for in accordance with SSAP No. 25.

19. Many common financial transactions, for example, typical repurchase agreements and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

20. Sale accounting is allowed under paragraph 7 only if each transferee has the right to pledge, or the right to exchange, the transferred assets or beneficial interests it received, but constraints on that right

also matter. Many transferor-imposed or other conditions on a transferee's right to pledge or exchange a transferred asset both constrain a transferee from pledging or exchanging the transferred assets and, through that constraint, provide more than a trivial benefit to the transferor. For example, a provision in the transfer contract that prohibits selling or pledging a transferred loan receivable not only constrains the transferee but also provides the transferor with the more-than-trivial benefits of knowing who has the asset, a prerequisite to repurchasing the asset, and of being able to block the asset from finding its way into the hands of a competitor for the loan customer's business or someone that the loan customer might consider an undesirable creditor. Transferor-imposed contractual constraints that narrowly limit timing or terms, for example, allowing a transferee to pledge only on the day assets are obtained or only on terms agreed with the transferor, also constrain the transferee and presumptively provide the transferor with more-than-trivial benefits.

21. However, some conditions do not constrain a transferee from pledging or exchanging the asset and therefore do not preclude a transfer subject to such a condition from being accounted for as a sale. For example, a transferor's right of first refusal on the occurrence of a bona fide offer to the transferee from a third party presumptively would not constrain a transferee, because that right in itself does not enable the transferor to compel the transferee to sell the assets and the transferee would be in a position to receive the sum offered by exchanging the asset, albeit possibly from the transferor rather than the third party. Further examples of conditions that presumptively would not constrain a transferee include (a) a requirement to obtain the transferor's permission to sell or pledge that is not to be unreasonably withheld, (b) a prohibition on sale to the transferor's competitor if other potential willing buyers exist, (c) a regulatory limitation such as on the number or nature of eligible transferees (as in the case of securities issued under Securities Act Rule 144A or debt placed privately), and (d) illiquidity, for example, the absence of an active market. Judgment is required to assess the significance of some conditions. For example, a prohibition on sale to the transferor's competitor would be a significant constraint if that competitor were the only potential willing buyer other than the transferor.

22. A condition imposed by a transferor that constrains the transferee presumptively provides more than a trivial benefit to the transferor. A condition not imposed by the transferor that constrains the transferee may or may not provide more than a trivial benefit to the transferor. For example, if the transferor refrains from imposing its usual contractual constraint on a specific transfer because it knows an equivalent constraint is already imposed on the transferee by a third party, it presumptively benefits more than trivially from that constraint. However, the transferor cannot benefit from a constraint if it is unaware at the time of the transfer that the transferee is constrained.

Transferor's Rights or Obligations to Reacquire Transferred Assets

23. Some rights or obligations to reacquire transferred assets both constrain the transferee and provide more than a trivial benefit to the transferor, thus precluding sale accounting under paragraph 7. For example, a freestanding call option written by a transferee to the transferor benefits the transferor and, if the transferred assets are not readily obtainable in the marketplace, is likely to constrain a transferee because it might have to default if the call was exercised and it had exchanged or pledged the assets. A freestanding forward purchase-sale contract between the transferor and the transferee on transferred assets not readily obtainable in the marketplace would benefit the transferor and is likely to constrain a transferee in much the same manner. Judgment is necessary to assess constraint and benefit. For example, put options written to the transferee generally do not constrain it, but a put option on a not-readily-obtainable asset may benefit the transferor and effectively constrain the transferee if the option is sufficiently deep-in-the-money when it is written that it is probable that the transferee will exercise it and the transferor will reacquire the transferred asset. In contrast, a sufficiently out-of-the-money call option held by the transferor may not constrain a transferee if it is probable when the option is written that it will not be exercised. Freestanding rights to reacquire transferred assets that are readily obtainable presumptively do not constrain the transferee from exchanging or pledging them and thus do not preclude sale accounting under paragraph 7.

24. Other rights or obligations to reacquire transferred assets, regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred assets, as discussed in paragraphs 42-46, thus precluding sale accounting under paragraph 7.

Conditions That Constrain a Holder of Beneficial Interests in a Qualifying SPE

25. The considerations in paragraphs 20-23, about conditions that may or may not constrain a transferee that is not a qualifying special-purpose entity (SPE) from pledging or exchanging the transferred assets, also extend to conditions that may or may not constrain a beneficial interest holder (BIH) from pledging or exchanging its beneficial interests in assets transferred to a qualifying SPE. For example, if BIHs agree to sell their beneficial interests in a qualifying SPE back to the transferor upon request at the price paid plus a stated return, that arrangement clearly conveys more than a trivial benefit to the transferor; sale accounting for the transfer to the qualifying SPE would be precluded if that agreement constrained a BIH from exchanging or pledging its beneficial interest.

Qualifying SPE

26. A qualifying SPE is a trust or other legal vehicle that meets all of the following conditions:

a. It is demonstrably distinct from the transferor (paragraphs 27 and 28);

b. Its permitted activities:

i. Are significantly limited;

ii. Were entirely specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds; and

iii. May be significantly changed only with the approval of the holders of at least a majority of the beneficial interests held by entities other than any transferor, its affiliates, and its agents (paragraphs 29 and 30).

c. It shall hold only:

i. Financial assets transferred to it that are passive in nature (paragraph 31);

ii. Passive derivative financial instruments that pertain to beneficial interests (other than another derivative financial instrument) issued or sold to parties other than the transferor, its affiliates, or its agents (paragraphs 31 and 32);

iii. Financial assets (for example, guarantees or rights to collateral) that would reimburse it if others were to fail to adequately service financial assets transferred to it or to timely pay obligations due to it and that it entered into when it was established, when assets were transferred to it, or when beneficial interests (other than derivative financial instruments) were issued by the SPE;

iv. Servicing rights related to financial assets that it holds;

v. Temporarily, nonfinancial assets obtained in connection with the collection of financial assets that it holds (paragraph 33);

vi. Cash collected from assets that it holds and investments purchased with that cash pending distribution to holders of beneficial interests that are appropriate for that purpose (that is, money-market or other relatively risk-free instruments without options and with maturities no later than the expected distribution date).

d. If it can sell or otherwise dispose of noncash financial assets, it can do so only in automatic response to one of the following conditions:

i. Occurrence of an event or circumstance that:

(a) Is specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds;

(b) Is outside the control of the transferor, its affiliates, or its agents; and

(c) Causes, or is expected at the date of transfer to cause, the fair value of those financial assets to decline by a specified degree below the fair value of those assets when the SPE obtained them (paragraphs 34 and 35.)

ii. Exercise by a BIH (other than the transferor, its affiliates, or its agents) of a right to put that holder's beneficial interest back to the SPE (paragraph 36);

iii. Exercise by the transferor of a call specified in the legal documents that established the SPE, transferred assets to the SPE, or created the beneficial interests in the transferred assets that it holds (paragraphs 42-46);

iv. Termination of the SPE or maturity of the beneficial interests in those financial assets on a fixed or determinable date that is specified at inception (paragraph 37).

Need to Be Demonstrably Distinct from the Transferor

27. A qualifying SPE is demonstrably distinct from the transferor only if it cannot be unilaterally dissolved by any transferor, its affiliates, or its agents and either:

a. At least 10 percent of the fair value of its beneficial interests is held by parties other than any transferor, its affiliates, or its agents; or

b. The transfer is a guaranteed mortgage securitization.

28. An ability to unilaterally dissolve an SPE can take many forms, including but not limited to holding sufficient beneficial interests to demand that the trustee dissolve the SPE, the right to call all the assets transferred to the SPE, and a right to call or a prepayment privilege on the beneficial interests held by other parties.

Limits on Permitted Activities

29. The powers of the SPE must be limited to those activities allowed by paragraph 26 for it to be a qualifying SPE. Many kinds of entities are not so limited. For example, any bank, insurance company, pension plan, or investment company has powers that cannot be sufficiently limited for it to be a qualifying SPE.

30. The BIHs other than any transferor, its affiliates, or its agents may have the ability to change the powers of a qualifying SPE. If the powers of a previously qualifying SPE are changed so that the SPE is no longer qualifying, unless the conditions in paragraph 7.b. are then met by the SPE itself and the conditions in paragraphs 7.a. and 7.c. continue to be met, that change would bring the transferred assets held in the SPE back under the control of the transferor (paragraph 47).

Limits on What a Qualifying SPE May Hold

31. A financial asset or derivative financial instrument is passive only if holding the asset or instrument does not involve its holder in making decisions other than the decisions inherent in servicing. An equity instrument is not passive if the qualifying SPE can exercise the voting rights and is permitted to choose how to vote. Investments are not passive if through them, either in themselves or in combination with other investments or rights, the SPE or any related entity, such as the transferor, its affiliates, or its agents, is able to exercise control, as defined in *SSAP No. 46—Investments in Subsidiary, Controlled, and Affiliated Entities* (SSAP No. 46), over the investee. A derivative financial instrument is not passive if, for example, it includes an option allowing the SPE to choose to call or put other financial instruments that would allow it and its related entities to control 10% of more of the financial instruments issuer; but other derivative financial instruments can be passive, for example, interest rate caps and swaps and forward contracts. Derivative financial instruments that result in liabilities, like other liabilities of a qualifying SPE, are a kind of beneficial interest in the qualifying SPE's assets.

32. A derivative financial instrument pertains to beneficial interests (other than another derivative financial instrument) issued only if it:

a. Is entered into:

   i. When the beneficial interests are issued by the qualifying SPE to parties other than the transferor, its affiliates, or its agents or sold to such other parties after being issued by the qualifying SPE to the transferor, its affiliates, or its agents; or

   ii. When a passive derivative financial instrument needs to be replaced upon occurrence of an event or circumstance (specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds) outside the control of the transferor, its affiliates, or its agents, for example, when the counterparty to the derivative defaults or is downgraded below a specified threshold.

b. Has a notional amount that does not initially exceed the amount of those beneficial interests and is not expected to exceed them subsequently;

c. Has characteristics that relate to, and partly or fully but not excessively counteract, some risk associated with those beneficial interests or the related transferred assets.

33. A qualifying SPE may hold nonfinancial assets other than servicing rights only temporarily and only if those nonfinancial assets result from collecting the transferred financial assets. For example, a qualifying SPE could be permitted to temporarily hold foreclosed nonfinancial collateral. In contrast, an entity cannot be a qualifying SPE if, for example, it receives from a transferor significant secured financial assets likely to default with the expectation that it will foreclose on and profitably manage the securing nonfinancial assets.

Limits on Sales or Other Dispositions of Assets

34. Examples of requirements to sell, exchange, put, or distribute (hereinafter referred to collectively as dispose of) noncash financial assets that are permitted activities of a qualifying SPE—because they respond automatically to the occurrence of an event or circumstance that:

a. Is specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds;

b. Is outside the control of the transferor, its affiliates, or its agents; and

c. Causes, or is expected to cause, the fair value of those assets to decline by a specified degree below the fair value of those assets when the qualifying SPE obtained them—include requirements to dispose of transferred assets in response to:

i. A failure to properly service transferred assets that could result in the loss of a substantial third-party credit guarantee;

ii. A default by the obligor;

iii. A downgrade by a major rating agency of the transferred assets or of the underlying obligor to a rating below a specified minimum rating;

iv. The involuntary insolvency of the transferor; or

v. A decline in the fair value of the transferred assets to a specified value less than their fair value at the time they were transferred to the SPE.

35. The following are examples of powers or requirements to dispose of noncash financial assets that are not permitted activities of a qualifying SPE, because they do not respond automatically to the occurrence of a specified event or circumstance outside the control of the transferor, its affiliates, or its agents that causes, or is expected to cause, the fair value of those transferred assets to decline by a specified degree below the fair value of those assets when the SPE obtained them:

a. A power that allows an SPE to choose to either dispose of transferred assets or hold them in response to a default, a downgrade, a decline in fair value, or a servicing failure;

b. A requirement to dispose of marketable equity securities upon a specified decline from their "highest fair value" if that power could result in disposing of the asset in exchange for an amount that is more than the fair value of those assets at the time they were transferred to the SPE;

c. A requirement to dispose of transferred assets in response to the violation of a nonsubstantive contractual provision (that is, a provision for which there is not a sufficiently large disincentive to ensure performance).

36. A qualifying SPE may dispose of transferred assets automatically to the extent necessary to comply with the exercise by a BIH (other than the transferor, its affiliates, or its agents) of its right to put beneficial interests back to the SPE in exchange for:

a. A full or partial distribution of those assets;

b. Cash (which may require that the SPE dispose of those assets or issue beneficial interests to generate cash to fund settlement of the put);

c. New beneficial interests in those assets.

37. A qualifying SPE may have the power to dispose of assets to a party other than the transferor, its affiliate, or its agent on termination of the SPE or maturity of the beneficial interests, but only automatically on fixed or determinable dates that are specified at inception. For example, if an SPE is required to dispose of long-term mortgage loans and terminate itself at the earlier of (a) the specified maturity of beneficial interests in those mortgage loans or (b) the date of prepayment of a specified amount of the transferred mortgage loans, the termination date is a fixed or determinable date that was specified at inception. In contrast, if that SPE has the power to dispose of transferred assets on two

specified dates and the SPE can decide which transferred assets to sell on each date, the termination date is not a fixed or determinable date that was specified at inception.

Investments in Special-Purpose Entities

38. Reporting entities that have qualifying special-purpose entities as affiliates shall carry their investment in such entity at its underlying statutory book value in accordance with SSAP No. 46. Additionally, transactions entered involving affiliated qualifying special-purpose entities are subject to the provisions of SSAP No. 25.

Agreements That Maintain Effective Control Over Transferred Assets

39. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor's effective control over those assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 40);

b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 41);

c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price; and

d. The agreement is entered into concurrently with the transfer.

40. To be substantially the same, the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same);

b. Identical form and type so as to provide the same risks and rights;

c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield);

d. Identical contractual interest rates;

e. Similar assets as collateral; and

f. The same aggregate unpaid principal amount or principal amounts within accepted good delivery standards for the type of security involved.

41. To be able to repurchase or redeem assets on substantially all of the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

Ability to Unilaterally Cause the Return of Specific Transferred Assets

42. Some rights to reacquire transferred assets (or to acquire beneficial interests in transferred assets held by a qualifying SPE), regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred assets through the unilateral ability to cause the return of specific transferred assets. Such rights preclude sale accounting under paragraph 7. For example, an attached call in itself would not constrain a transferee who is able, by exchanging or pledging the asset subject to that call, to obtain substantially all of its economic benefits. An attached call could result, however, in the transferor's maintaining effective control over the transferred asset(s) because the attached call gives the transferor the ability to unilaterally cause whoever holds that specific asset to return it. In contrast, transfers of financial assets subject to calls embedded by the issuers of the financial instruments, for example, callable bonds or prepayable mortgage loans, do not preclude sale accounting. Such an embedded call does not result in the transferor's maintaining effective control, because it is the issuer rather than the transferor who holds the call.

43. If the transferee is a qualifying SPE, it has met the conditions in paragraph 26 and therefore must be constrained from choosing to exchange or pledge the transferred assets. In that circumstance, any call held by the transferor is effectively attached to the assets and could—depending on the price and other terms of the call—maintain the transferor's effective control over transferred assets through the ability to unilaterally cause the transferee to return specific assets. For example, a transferor's unilateral ability to cause a qualifying SPE to return to the transferor or otherwise dispose of specific transferred assets at will or, for example, in response to its decision to exit a market or a particular activity, could provide the transferor with effective control over the transferred assets.

44. A call that is attached to transferred assets maintains the transferor's effective control over those assets if, under its price and other terms, the call conveys more than a trivial benefit to the transferor. Similarly, any unilateral right to reclaim specific assets transferred to a qualifying SPE maintains the transferor's effective control over those assets if the right conveys more than a trivial benefit to the transferor. A call or other right conveys more than a trivial benefit if the price to be paid is fixed, determinable, or otherwise potentially advantageous, unless because that price is so far out of the money or for other reasons it is probable when the option is written that the transferor will not exercise it. Thus, for example, a call on specific assets transferred to a qualifying SPE at a price fixed at their principal amount maintains the transferor's effective control over the assets subject to that call. Effective control over transferred assets can be present even if the right to reclaim is indirect. For example, if an embedded call allows a transferor to buy back the beneficial interests of a qualifying SPE at a fixed price, then the transferor remains in effective control of the assets underlying those beneficial interests. A cleanup call, however, is permitted as an exception to that general principle.

45. A right to reclaim specific transferred assets by paying their fair value when reclaimed generally does not maintain effective control, because it does not convey a more than trivial benefit to the transferor. However, a transferor has maintained effective control if it has such a right and also holds the residual interest in the transferred assets. For example, if a transferor can reclaim such assets at termination of the qualifying SPE by purchasing them in an auction, and thus at what might appear to be fair value, then sale accounting for the assets it can reclaim would be precluded. Such circumstances provide the transferor with a more than trivial benefit and effective control over the assets, because it can pay any price it chooses in the auction and recover any excess paid over fair value through its residual interest.

46. A transferor that has a right to reacquire transferred assets from a qualifying SPE does not maintain effective control if the reclaimed assets would be randomly selected and the amount of the assets reacquired is sufficiently limited because that would not be a right to reacquire specific assets. Nor does a transferor maintain effective control through an obligation to reacquire transferred assets from a qualifying SPE if the transfer could occur only after a specified failure of the servicer to properly service

the transferred assets that could result in the loss of a third-party guarantee (paragraph 34.c.i.) or only after a BIH other than the transferor, its affiliate, or its agent requires a qualifying SPE to repurchase that beneficial interest (paragraph 36.b.), because the transferor could not cause that reacquisition unilaterally.

Changes That Result in the Transferor's Regaining Control of Assets Sold

47. A change in law, status of the transferee as a qualifying SPE, or other circumstance may result in the transferor's regaining control of assets previously accounted for appropriately as having been sold, because one or more of the conditions in paragraph 7 are no longer met. Such a change, unless it arises solely from either the initial application of this issue paper or a change in market prices (for example, an increase in price that moves into-the-money a freestanding call that was originally sufficiently out-of-the-money that it was judged not to constrain the transferee), is accounted for in the same manner as a purchase of the assets from the former transferee(s) in exchange for liabilities assumed (paragraph 9). After that change, the transferor recognizes in its financial statements those assets together with liabilities to the former transferee(s) or BIHs in those assets (paragraph 30). The transferor initially measures those assets and liabilities at fair value on the date of the change, as if the transferor purchased the assets and assumed the liabilities on that date. The former transferee would derecognize the assets on that date, as if it had sold the assets in exchange for a receivable from the transferor. Subsequent to that date, the reporting entity shall follow statutory accounting for the assets and liabilities in accordance with the guidance in the SSAPs.

Assets Obtained and Liabilities Incurred as Proceeds

48. The proceeds from a sale of financial assets consist of the cash and any other assets obtained in the transfer less any liabilities incurred. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value.

Retained Interests

49. Other interests in transferred assets—those that are not part of the proceeds of the transfer—are retained interests over which the transferor has not relinquished control. They shall be measured at the date of the transfer by allocating the previous carrying amount between the assets sold, if any, and the retained interests, based on their relative fair values. That procedure shall be applied to all transfers in which interests are retained, even those that do not qualify as sales. Examples of retained interests include securities backed by the transferred assets, undivided interests, servicing assets, and cash reserve accounts and residual interests in securitization trusts. If a transferor cannot determine whether an asset is a retained interest or proceeds from the sale, the asset shall be treated as proceeds from the sale and accounted for in accordance with paragraph 48.

50. If the retained interests are subordinated to more senior interests held by others, that subordination may concentrate into the retained interests most of the risks inherent in the transferred assets and shall be taken into consideration in estimating the fair value of the retained interests. For example, if the amount of the gain recognized, after allocation, on a securitization with a subordinated retained interest is greater than the gain would have been had the entire asset been sold, the transferor needs to be able to identify why that can occur. Otherwise, it is likely that the impact of the retained interest being subordinate to a senior interest has not been adequately considered in the determination of the fair value of the subordinated retained interest.

If It Is Not Practicable to Estimate Fair Values

51. If it is not practicable to estimate the fair values of assets, the transferor shall record those assets at an allocated cost basis of zero. If it is not practicable to estimate the fair values of liabilities, the transferor shall recognize no gain on the transaction and shall record those liabilities at the greater of:

a. The excess, if any, of (i) the fair values of assets obtained less the fair values of other liabilities incurred, over (ii) the sum of the carrying values of the assets transferred;

b. The amount that would be recognized in accordance with SSAP No. 5.

Securitizations

52. Financial assets such as mortgage loans are assets commonly transferred in securitizations. Securitizations of mortgage loans may include pools of single-family residential mortgages or other types of real estate mortgage loans, for example, multifamily residential mortgages and commercial property mortgages. Both financial and nonfinancial assets can be securitized; life insurance policy loans, patent and copyright royalties also have been securitized. Securitizations of nonfinancial assets are outside the scope of this issue paper.

53. An originator of a typical securitization (the transferor) transfers a portfolio of financial assets to an SPE, commonly a trust. In "pass-through" and "pay-through" securitizations, receivables are transferred to the SPE at the inception of the securitization, and no further transfers are made; all cash collections are paid to the holders of beneficial interests in the SPE. In "revolving-period" securitizations, receivables are transferred at the inception and also periodically (daily or monthly) thereafter for a defined period (commonly three to eight years), referred to as the revolving period. During the revolving period, the SPE uses most of the cash collections to purchase additional receivables from the transferor on prearranged terms.

54. Beneficial interests in the SPE are sold to investors and the proceeds are used to pay the transferor for the assets transferred. Those beneficial interests may comprise either a single class having equity characteristics or multiple classes of interests, some having debt characteristics and others having equity characteristics. The cash collected from the portfolio is distributed to the investors and others as specified by the legal documents that established the SPE.

55. Pass-through, pay-through, and revolving-period securitizations that meet the criteria in paragraph 7 qualify for sale accounting under this issue paper. All financial assets obtained or retained and liabilities incurred by the originator of a securitization that qualifies as a sale shall be recognized and measured as provided in paragraph 9; that includes the implicit forward contract to sell new receivables during a revolving period, which may become valuable or onerous to the transferor as interest rates and other market conditions change.

Sales of Future Revenues

56. In addition to securitization of assets, some reporting entities have entered into transactions characterized as a sale of future revenues. These transactions are sometimes referred to as securitizations and are sometimes characterized as selling deferred acquisition costs. A sale of future revenues by a reporting entity shall not result in the immediate recognition of income or surplus. The proceeds of any such sale shall be established as a liability and shall be reduced as the proceeds are repaid.

Removal-of-Accounts Provisions

57. Many transfers of financial assets in securitizations empower the transferor to reclaim assets subject to certain restrictions. Such a power is sometimes called a removal-of-accounts provision (ROAP). If there is a ROAP, the transfer of assets shall not be accounted for as a sale.

Securities Lending Transactions

58. When securities are loaned, they remain assets of the reporting entity and are not removed from the accounting records. Any fees received by the transferor for loaning the securities shall be recorded as miscellaneous income. During a securities lending transaction, collateral is pledged by the transferee to the transferor that has loaned the securities. If the collateral pledged by the transferee is not available for the general use of the transferor (restricted), then the transferor shall not reflect the collateral in the transferor's balance sheet as an asset, and the transferor shall not establish a liability for the return of the collateral. However, if the collateral pledged is available for the general use of the transferor (unrestricted), then the collateral shall be recorded as an asset on the transferor's balance sheet and a separate liability shall be established on the transferor's balance sheet to record the obligation to return the collateral. The failure by the transferor to maintain sufficient collateral for the loaned securities would result in nonadmission of the undercollateralized portion. The specific collateral requirements are as follows:

a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 102 percent of the fair value of the loaned securities at that date. If at any time the fair value collateral is less than 100 percent of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals 102 percent of the fair value of the loaned securities;

b. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to 105 percent of the fair value of the loaned securities at that date. If at any time the fair value is less than 102 percent of the fair value of the loaned securities, the reporting entity must obtain additional collateral, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals 105 percent of the fair value of the loaned securities.

59. Securities lending transactions are generally initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver securities sold. Securities lending transactions typically extend less than one year. Transferees (borrowers) of securities generally are required to provide collateral to the transferor (lender) of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities borrowed. If the collateral is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or rebated to the transferee. If the collateral is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of collateral (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash collateral impose market and credit risks on the transferor.

60. Many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred assets before their maturity under which the transferor maintains effective control over those assets (paragraphs 39-41). Those transactions shall be

accounted for as secured borrowings, in which cash (or securities that the holder is permitted by contract or custom to sell or repledge) received as collateral is considered the amount borrowed, the securities loaned are considered pledged as collateral against the cash borrowed, and any rebate paid to the transferee of securities is interest on the cash the transferor is considered to have borrowed. Collateral provided in securities lending transactions that are accounted for as secured borrowings shall be reported and disclosed like other collateral, as set forth in paragraphs 14 and 58.

61. In some transactions, characterized as securities lending, all of the criteria in paragraph 7 are met, including the effective control criterion in paragraph 7.c., and consideration other than beneficial interests in the transferred assets is received. During the term of such agreements, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities, with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the collateral and the forward repurchase commitment. Those transactions shall be accounted for:

a. By the transferor as a sale of the loaned securities, for proceeds consisting of the collateral and a forward repurchase commitment. (If the collateral is a financial asset that the holder is permitted to sell or repledge and the debtor does not have the right and ability to redeem the collateral on short notice, e.g., by substituting other collateral or terminating the contract, that financial asset is proceeds of the sale of the loaned securities. To the extent that the collateral consists of letters of credit or other financial instruments that the holder is not permitted to sell or pledge, a securities lending transaction does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee); and

b. By the transferee as a purchase of the borrowed securities in exchange for the collateral and a forward resale commitment.

Repurchase Agreements and "Wash Sales"

62. Government securities dealers, banks, other financial institutions, and corporate investors commonly use repurchase agreements to obtain or use short-term funds. Under those agreements, the transferor ("repo party") transfers a security to a transferee ("repo counterparty" or "reverse party") in exchange for cash and concurrently agrees to reacquire that security at a future date for an amount equal to the cash exchanged plus a stipulated "interest" factor. Repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement.

63. Repurchase agreements can be effected in a variety of ways. Some repurchase agreements are similar to securities lending transactions in that the transferee has the right to sell or repledge the securities to a third party during the term of the repurchase agreement. In other repurchase agreements, the transferee does not have the right to sell or repledge the securities during the term of the repurchase agreement. For example, in a tri-party repurchase agreement, the transferor transfers securities to an independent third-party custodian that holds the securities during the term of the repurchase agreement. Also, many repurchase agreements are for short terms, often overnight, or have indefinite terms that allow either party to terminate the arrangement on short notice. However, other repurchase agreements are for longer terms, sometimes until the maturity of the transferred asset. Some repurchase agreements call for repurchase of securities that need not be identical to the securities transferred.

64. If the criteria in paragraph 7 are met, including the criterion in paragraph 7.c.i., the transferor shall account for the repurchase agreement as a sale of financial assets and a forward repurchase commitment, and the transferee shall account for the agreement as a purchase of financial assets and a forward resale commitment. Other transfers that are accompanied by an agreement to repurchase the transferred assets that shall be accounted for as sales include transfers with agreements to repurchase at

maturity and transfers with repurchase agreements in which the transferee has not obtained collateral sufficient to fund substantially all of the cost of purchasing replacement assets.

65. Furthermore, "wash sales" that previously were not recognized if the same financial asset was purchased within 30 days before or after the sale shall be accounted for as sales under this issue paper. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

66. As with securities lending transactions, under many agreements to repurchase transferred assets before their maturity the transferor maintains effective control over those assets. Repurchase agreements that do not meet all the criteria in paragraph 7 shall be treated as secured borrowings. Fixed-coupon and dollar-roll repurchase agreements, and other contracts under which the securities to be repurchased need not be the same as the securities sold, qualify as borrowings if the return of substantially the same (paragraph 40) securities as those concurrently transferred is assured. Therefore, those transactions shall be accounted for as secured borrowings by both parties to the transfer.

67. If a transferor has transferred securities to an independent third-party custodian, or to a transferee, under conditions that preclude the transferee from selling or repledging the assets during the term of the repurchase agreement (as in most tri-party repurchase agreements), the transferor has not surrendered control over those assets.

Repurchase Agreements

68. Repurchase agreements are defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 40 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

69. For repurchase agreements that are accounted for as collateralized lendings in accordance with paragraph 66 of this statement, the underlying securities shall not be accounted for as investments owned by the reporting entity. The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount paid and the amount at which the securities will be subsequently resold shall be reported as interest income, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

70. Reporting entities generally take possession of the underlying collateral under repurchase agreements and in many cases may obtain additional collateral when the estimated fair value of such securities falls below their current contract value. However, to the extent that the current fair value of the collateral is less than the recorded amount, the shortfall shall reduce the admitted asset value of the repurchase agreement.

Reverse Repurchase Agreements

71. Reverse repurchase agreements are defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 40 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

72. For reverse repurchase agreements that are accounted for as collateralized borrowings in accordance with paragraph 66 of this statement, the underlying securities shall continue to be accounted

for as an investment by the reporting entity. The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

Collateral Requirements

73. The collateral requirements for repurchase and reverse repurchase agreements are as follows:

Repurchase Transaction

a. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to 102 percent of the purchase price paid by the reporting entity for the securities. If at anytime the fair value of the collateral is less than 100 percent of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals 102 percent of the purchase price.

Reverse Repurchase Transaction

b. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 95 percent of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at anytime the fair value of the collateral is less than 95 percent of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral, the fair value of which, together with the fair value of all collateral then held in connection with the transaction, at least equals 95 percent of the fair value of the transferred securities.

Dollar Repurchase Agreements

74. Dollar repurchase and dollar reverse repurchase agreements are defined as repurchase and reverse repurchase agreements involving debt instruments that are pay-through securities collateralized with Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC) and Federal National Mortgage Association (FNMA) collateral, and pass-through certificates sponsored by GNMA, mortgage participation certificates issued by the FHLMC or similar securities issued by the FNMA. Dollar repurchase agreements are also commonly referred to as dollar roll transactions. To meet the definition of dollar repurchase and dollar reverse repurchase agreements, the securities underlying the agreements must meet the criteria defined in paragraph 40, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

75. For the seller in a dollar reverse repurchase agreement accounted for as collateralized borrowing in accordance with paragraph 66 of this statement, a liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities sold.

76. When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased must be in good delivery form consistent with paragraph 40.

77. If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded.

78. For the purchaser in a dollar repurchase agreement accounted for as collateralized lending in accordance with paragraph 67 of this statement, an asset is recorded for the amount of the purchase. Upon completion of the reverse repurchase agreement, cash is received in exchange for a "substantially the same" security. The difference between the purchase and reselling price represents interest income for the lending of short-term funds.

Separate Transactions

79. Agreements to repurchase and resell securities that do not meet the definitions in paragraphs 60 and 66 of this issue paper shall be accounted for as two separate transactions, that is, as a sale and purchase or as a purchase and sale, in accordance with the relevant statutory accounting guidance. For example, sales of bonds would result in recognition of realized gains or losses.

Offsetting

80. Reporting entities may operate on both sides of the repurchase agreement market resulting in recording of liabilities and assets representing repurchase and reverse repurchase agreements, respectively.

81. Reporting entities shall offset such liabilities and assets only to the extent that one of the following occurs:

a. A legal right of offset exists as defined in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64); or

b. The securities have the same settlement date, are executed with the same counterparty in accordance with a master netting arrangement, involve securities that exist in "book entry" form, and settle on securities transfer systems that have the same key elements and operating characteristics as the Fedwire Securities Transfer System.

82. Otherwise, separate assets and liabilities shall be recognized.

Loan Syndications

83. Borrowers often borrow amounts greater than any one lender is willing to lend. Therefore, it is common for groups of lenders to jointly fund those loans. That may be accomplished by a syndication under which several lenders share in lending to a single borrower, but each lender loans a specific amount to the borrower and has the right to repayment from the borrower.

84. A loan syndication is not a transfer of financial assets. Each lender in the syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender who then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is also functioning as a servicer and, therefore, shall only recognize its portion of the loan as an asset.

Loan Participations

85. Groups of banks or other entities also may jointly fund large borrowings through loan participations in which a single lender makes a large loan to a borrower and subsequently transfers undivided interests in the loan to other entities.

86. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the transferor (originating lender) continues to service the loan. The transferee (participating entity) may or may not have the right to sell or transfer its participation during the term of the loan, depending upon the terms of the participation agreement.

87. If the loan participation agreement gives the transferee the right to pledge or exchange those participations and the other criteria in paragraph 7 are met, the transfers to the transferee shall be accounted for by the transferor as sales of financial assets. A transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor is a limitation on the transferee's rights but presumptively does not constrain a transferee from exercising its right to pledge or exchange. However, if the loan participation agreement constrains the transferees from pledging or exchanging their participations, the transferor has not relinquished control over the loan and shall account for the transfers as secured borrowings.

Factoring Arrangements

88. Factoring arrangements are a means of discounting accounts receivable on a nonrecourse, notification basis. Accounts receivable are sold outright, usually to a transferee (the factor) that assumes the full risk of collection, without recourse to the transferor in the event of a loss. Debtors are directed to send payments to the transferee. Factoring arrangements that meet the criteria in paragraph 7 shall be accounted for as sales of financial assets because the transferor surrenders control over the receivables to the factor.

Transfers of Receivables with Recourse

89. In a transfer of receivables with recourse, the transferor is obligated under the terms of the recourse provision to make payments to the transferee or to repurchase receivables sold under certain circumstances, typically for defaults up to a specified percentage. A transfer of receivables with recourse shall not be recognized as a sale but rather, as a financing. A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received. Sales of premium receivables are addressed in *SSAP No. 42—Sale of Premium Receivables*.

Disclosures

90. A reporting entity shall disclose the following:

a. For collateral:

i. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security;

ii. If the entity has pledged any of its assets as collateral that are not reclassified and separately reported in the statement of financial position pursuant to paragraph 14.a., the carrying amount and classification of those assets as of the date of the latest statement of financial position presented;

iii. If the entity has accepted collateral that it is permitted by contract or custom to sell or repledge, the fair value as of the date of each statement of financial position presented of that collateral and of the portion of that collateral that it has sold or repledged, and information about the sources and uses of that collateral; and

iv. For securities lending transactions, disclose collateral for transactions that extend beyond one year from the reporting date.

b. If debt was considered to be extinguished by in-substance defeasance, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period so long as that debt remains outstanding;

c. If assets are set aside solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets;

d. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value;

e. For all servicing assets and servicing liabilities:

i. The amounts of servicing assets nonadmitted or liabilities recognized and amortized during the period; and

ii. The fair value of recognized servicing assets and liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value.

f. If the entity has securitized financial assets during any period presented and accounts for that transfer as a sale, for each major asset type (for example, mortgage loans):

i. Its accounting policies for initially measuring the retained interests, if any, including the methodology (whether quoted market price, prices based on sales of similar assets and liabilities, or prices based on valuation techniques) used in determining their fair value (Glossary); and

ii. The characteristics of securitizations (a description of the transferor's continuing involvement with the transferred assets, including, but not limited to, servicing, recourse, and restrictions on retained interests) and the gain or loss from sale of financial assets in securitizations;

iii. The key assumptions used in measuring the fair value of retained interests at the time of securitization (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, if applicable); and

iv. Cash flows between the securitization SPE and the transferor (including proceeds from new securitizations, purchases of delinquent or foreclosed loans, servicing fees, and cash flows received on interests retained.)

g. If the entity has retained interests in securitized financial assets at the date of the latest statement of financial position presented, for each major asset type (for example, mortgage loans):

i. Its accounting policies for subsequently measuring those retained interests, including the methodology (whether quoted market price, prices based on sales of similar assets and liabilities, or prices based on valuation techniques) used in determining their fair value (Glossary);

ii. The key assumptions used in subsequently measuring the fair value of those interests (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses, if applicable);

iii. A sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests of two or more unfavorable variations from the expected levels for each key assumption that is reported under ii. above independently from any change in another key assumption, and a description of the objectives, methodology, and limitations of the sensitivity analysis or stress test; and

iv. For the securitized assets and any other financial assets that the entity manages together with the retained interests[1]:

(a) The total principal amount outstanding, the portion that has been derecognized, and the portion that continues to be recognized in each category reported in the statement of financial position, at the end of the period;

(b) Delinquencies at the end of the period; and

(c) Credit losses, net of recoveries, during the period.

v. Disclosure of average balances during the period is encouraged, but not required.

h. Description of any loaned securities, including the amount, a description of, and the policy for, requiring collateral, and whether or not the collateral is restricted;

i. A description of the securities underlying repurchase and reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements, including book values and fair values, maturities, and weighted average interest rates for the following categories: (i) securities subject to reverse repurchase agreements; (ii) securities subject to repurchase agreements; (iii) securities subject to dollar repurchase agreements; and (iv) securities subject to dollar reverse repurchase agreements; and

j. A description of the terms of reverse repurchase agreements whose amounts are included in borrowed money.

91. Disclose any transfers of receivables with recourse.

92. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 11, involving transactions for securities with a NAIC designation of 3 or below, or unrated:

a. A description of the reporting entity's objectives regarding these transactions;

b. An aggregation of transactions by NAIC Designation 3 or below, or unrated;

c. The number of transactions involved during the reporting period;

d. The book value of securities sold;

[1] Excluding securitized assets that an entity continues to service but with which it has no other continuing involvement.

e. The cost of securities repurchased; and

f. The realized gains/losses associated with the securities involved.

93. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures required by paragraph 92 shall be made for the current quarter in the quarterly statement and for the year in the annual statement.

Effective Date and Transition

94. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will be effective for transfers and servicing of financial assets and extinguishments of liabilities occurring after January 1, 2005, and shall be applied prospectively.

95. For each servicing contract in existence before January 1, 2005, previously recognized or nonadmitted servicing rights and excess servicing receivables shall be combined, net of any previously recognized servicing obligations under that contract, as a servicing asset (nonadmitted) or liability. Thereafter, the subsequent measurement provisions of this statement shall be applied to the servicing assets (nonadmitted) or liabilities for those servicing contracts.

DISCUSSION

96. The accounting guidance in this issue paper is consistent with the guidance included in SSAP No. 18, SSAP No. 33 and SSAP No. 45, and is expanded to include issues addressed in FAS 140.

97. This statement adopts FAS 140 with the following modifications:

a. Servicing rights assets are nonadmitted;

b. Sales treatment is not permitted for transactions including recourse provisions or removal-of-accounts provisions on the transferred assets whereas GAAP would permit the recognition of the transfer as a sale under some circumstances;

c. As statutory financial statements are prepared on a legal entity basis, special purpose entities shall not be consolidated in a reporting entity's statutory financial statements;

d. Leases shall be accounted for in accordance with SSAP No. 22;

e. Reporting entities required to maintain an IMR shall account for realized and unrealized capital gains and losses in accordance with SSAP No. 7; and

f. The concepts of revolving-period securitizations, banker's acceptances and risk participations in banker's acceptances are not applicable for statutory accounting purposes.

98. This issue paper adopts *AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as used In Certain Audit Guides and a Statement of Position*. This statement adopts *FASB Emerging Issues Task Force No. 87-34, Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB Emerging Issues Task Force No. 88-11, Allocation of Recorded Investment When a Loan as Part of a Loan is Sold, FASB Emerging Issues Task Force No. 88-18, Sales of*

Future Revenues, FASB Emerging Issues Task Force No. 88-22, Securitization of Credit Card and Other Receivable Portfolios, FASB Emerging Issues Task Force No. 90-21, Balance Sheet Treatment of a Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB Emerging Issues Task Force No. 95-5, Determination of What Risks and Rewards, If Any, Can Be Retained and Whether Any Unresolved Contingencies May Exist in a Sale of Mortgage Loan Servicing Rights and *FASB Emerging Issues Task Force No. 96-19, Debtor's Accounting for a Modification or Exchange of Debt Instruments*.

99. This issue paper rejects *FASB Emerging Issues Task Force No. 84-5, Sale of Marketable Securities with a Put Option,* and *FASB Emerging Issues Task Force No. 92-2, Measuring Loss Accruals by Transferors of Receivables with Recourse*.

RELEVANT STATUTORY AND GAAP GUIDANCE:

Statutory Accounting

100. SSAP No. 18 provides the following guidance:

> **SUMMARY CONCLUSION**
>
> 3. Except as discussed in paragraph 35, a transfer of a group of financial assets, or a portion of a financial asset in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if, and only if, all of the following conditions are met:
>
> a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (see paragraphs 12 and 13);
>
> b. Either (i) each transferee obtains the right, free of conditions that constrain it from taking advantage of that right (see paragraph 14), to pledge or exchange the transferred assets or (ii) the transferee is a qualifying special-purpose entity as defined in paragraph 9 of SSAP No. 33 and the holders of beneficial interests in that entity have the right, free of conditions that constrain them from taking advantage of that right (see paragraph 14), to pledge or exchange those interests; and
>
> c. The transferor does not maintain effective control over the transferred assets through (i) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (see paragraphs 15-17) or (ii) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable (see paragraph 18).
>
> 4. Upon completion of any transfer of financial assets, the transferor shall:
>
> a. Continue to carry in its balance sheet any retained interest in the transferred assets, including, if applicable, beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization (see SSAP No. 33), and retained undivided interests (see paragraph 20); and
>
> b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (see paragraphs 19 and 20).
>
> 5. Upon completion of a transfer of assets that satisfies the conditions to be accounted for as a sale (see paragraph 3), the transferor (seller) shall:

a. Eliminate the transferred assets from the balance sheet;

b. Allocate the previous carrying amount of the transferred assets to the securities representing beneficial interests retained by the reporting entity, if any, and the securities representing beneficial interests not retained, if any, based on the relative fair values of the transferred assets at the date of transfer;

c. Record in its balance sheet, the allocated carrying value of the securities representing retained beneficial interests in the assets (e.g., loan-backed securities);

d. Recognize all additional assets obtained (i.e., other than the securities representing retained beneficial interests which are recorded in accordance with 5 c.) and liabilities incurred in consideration as proceeds of the sale;

e. Initially measure such additional assets obtained and liabilities incurred in the sale at fair value; and

f. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized gains and losses shall be reported as net realized capital gains or losses in the statement of income.

6. The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value (in aggregate, presumptively the price paid).

7. Repurchase agreements, reverse repurchase agreements, and dollar repurchase agreements shall meet the definition of SSAP No. 45. When an asset is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales and shall be accounted for as sales and disclosed as required by paragraph 37. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

8. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) (a) does not meet the criteria for a sale in paragraph 3, or (b) is a sale of receivables with recourse (see paragraph 35); the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (see paragraph 10).

Recognition and Measurement of Servicing Assets and Liabilities

9. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained, or separate purchase or assumption of the servicing. If distinct servicing rights to transferred assets exist and are retained by the reporting entity, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations. The servicing asset or liability shall be amortized into income in proportion to, and over the period of estimated servicing income (if an asset) or estimated servicing loss (if a liability). A servicing asset or liability shall be assessed for impairment or increased obligation based on its fair value.

Secured Borrowings and Collateral

10. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (see paragraph 8). The accounting for collateral by the debtor (or obligor) and the secured party depends on whether the secured party has taken control over the collateral, and on the rights and obligations that result from the collateral arrangement:

a. If the secured party is permitted to sell or repledge the collateral, and the debtor does not have the right and ability to redeem the collateral on short notice, (e.g., by substituting other collateral or terminating the contract), then:

i. The debtor shall disclose the amount of such assets and the secured party's right to sell or repledge such collateral;

ii. The secured party shall recognize that collateral as its asset, initially measure it at fair value, and also recognize its obligation to return it.

b. If the secured party sells or repledges collateral on terms that do not give it the right and ability to repurchase or redeem the collateral from the transferee on short notice, the secured party shall recognize the proceeds from the sale or the asset repledged and its obligation to return the asset to the extent that it has not already recognized them. The sale or repledging of the asset is a transfer subject to the provisions of this statement;

c. If the debtor defaults under the terms of the secured contract and is no longer entitled to redeem the collateral, it shall derecognize the collateral. The secured party shall recognize the collateral as an asset (to the extent it has not already recognized it) and initially measure it at fair value;

d. Otherwise, the debtor shall continue to carry the collateral as an asset, and the secured party shall not recognize the pledged asset.

Extinguishments of Liabilities

11. A debtor shall derecognize a liability if, and only if, it has been extinguished (see SSAP No. 15). A liability has been extinguished if either of the following conditions is met:

a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities; or

b. The debtor is legally released from being the primary obligor under the liability, either judicially or by the creditor.

Isolation Beyond the Reach of the Transferor and Its Creditors

12. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All

available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its affiliates, except for an affiliate that is a qualifying special-purpose entity designed to make remote the possibility that it would enter bankruptcy or other receivership (see SSAP No. 33).

13. Many common financial transactions, for example, typical repurchase agreements (see SSAP No. 45) and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

14. Many transferor-imposed or other conditions on a transferee's contractual right to pledge or exchange a transferred asset constrain a transferee from taking advantage of that right. However, a transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission to sell or pledge that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor generally does not constrain a transferee from pledging or exchanging the asset and, therefore, presumptively does not preclude a transfer containing such a condition from being accounted for as a sale. For example, a prohibition on sale to the transferor's competitor would not constrain the transferee if it were able to sell the transferred assets to a number of other parties; however, it would be a constraint if that competitor were the only potential willing buyer.

Agreements That Maintain Effective Control Over Transferred Assets

15. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor's effective control over those assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

    a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (see paragraph 16);

    b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (see paragraph 17);

    c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price; and

    d. The agreement is entered into concurrently with the transfer.

16. To be substantially the same, the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

    a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same);

    b. Identical form and type so as to provide the same risks and rights;

c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield);

d. Identical contractual interest rates;

e. Similar assets as collateral; and

f. The same aggregate unpaid principal amount or principal amounts within accepted good delivery standards for the type of security involved.

17. To be able to repurchase or redeem assets on substantially all of the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

18. A call option or forward contract that entitles the transferor to repurchase, prior to maturity, transferred assets not readily obtainable elsewhere maintains the transferor's effective control, because it would constrain the transferee from exchanging those assets, unless it is only a cleanup call.

Assets Obtained and Liabilities Incurred as Proceeds

19. The proceeds from a sale of financial assets consist of the cash and any other assets obtained in the transfer less any liabilities incurred. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value.

Retained Interests

20. Other interests in transferred assets—those that are not part of the proceeds of the transfer—are retained interests over which the transferor has not relinquished control. They shall be measured at the date of the transfer by allocating the previous carrying amount between the assets sold, if any, and the retained interests, based on their relative fair values. That procedure shall be applied to all transfers in which interests are retained, even those that do not qualify as sales. Examples of retained interests include securities backed by the transferred assets, undivided interests, servicing assets, and cash reserve accounts and residual interests in securitization trusts. If a transferor cannot determine whether an asset is a retained interest or proceeds from the sale, the asset shall be treated as proceeds from the sale and accounted for in accordance with paragraph 19.

Fair Value

21. The fair value of an asset (or liability) is the amount at which that asset (or liability) could be bought (or incurred) or sold (or settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If a quoted market price is available, the fair value is the product of the number of trading units times market price.

22. If quoted market prices are not available, the estimate of fair value shall be based on the best information available. The estimate of fair value shall consider prices for similar assets and liabilities and the results of valuation techniques to the extent available in the

circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis. Valuation techniques for measuring financial assets and liabilities and servicing assets and liabilities shall be consistent with the objective of measuring fair value. Those techniques shall incorporate assumptions that market participants would use in their estimates of values, future revenues, and future expenses, including assumptions about interest rates, default, prepayment, and volatility. In measuring financial liabilities and servicing liabilities at fair value by discounting estimated future cash flows, an objective is to use discount rates at which those liabilities could be settled in an arm's-length transaction.

23. Estimates of expected future cash flows, if used to estimate fair value, shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence shall be considered in developing estimates of expected future cash flows. The weight given to the evidence shall be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.

If It Is Not Practicable to Estimate Fair Values

24. If it is not practicable to estimate the fair values of assets, the transferor shall record those assets at zero. If it is not practicable to estimate the fair values of liabilities, the transferor shall recognize no gain on the transaction and shall record those liabilities at the greater of:

a. The excess, if any, of (i) the fair values of assets obtained less the fair values of other liabilities incurred, over (ii) the sum of the carrying values of the assets transferred;

b. The amount that would be recognized in accordance with *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets*.

Securities Lending Transactions

25. When securities are loaned, they remain assets of the reporting entity and are not removed from the accounting records. Any fees received by the transferor for loaning the securities should be recorded as miscellaneous income. During a securities lending transaction, collateral is pledged by the transferee to the transferor that has loaned the securities. If the collateral pledged by the transferee is not available for the general use of the transferor (restricted), then the transferor shall not reflect the collateral in the transferor's balance sheet as an asset, and the transferor shall not establish a liability for the return of the collateral. However, if the collateral pledged is available for the general use of the transferor (unrestricted), then the collateral shall be recorded as an asset on the transferor's balance sheet and a separate liability shall be established on the transferor's balance sheet to record the obligation to return the collateral. The failure by the transferor to maintain sufficient collateral for the loaned securities would result in nonadmission of the undercollateralized portion. The specific collateral requirements are as follows:

a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 102 percent of the fair value of the loaned securities at that date. If at any time the fair value collateral is less than 100 percent of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals 102 percent of the fair value of the loaned securities.

b. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to 105 percent of the fair value of the loaned securities at that date. If at any time the fair value is less than 102 percent of the fair value of the loaned securities, the reporting entity must obtain additional collateral, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals 105 percent of the fair value of the loaned securities.

26. Securities lending transactions are generally initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver securities sold. Transferees (borrowers) of securities generally are required to provide collateral to the transferor (lender) of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities borrowed. If the collateral is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or rebated to the transferee. If the collateral is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of collateral (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash collateral impose market and credit risks on the transferor.

27. Securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred assets before their maturity under which the transferor maintains effective control over those assets (see paragraphs 15-18). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder is permitted by contract or custom to sell or repledge) received as collateral is considered the amount borrowed, the securities loaned are considered pledged as collateral against the cash borrowed, and any rebate paid to the transferee of securities is interest on the cash the transferor is considered to have borrowed. Collateral provided in securities lending transactions that are accounted for as secured borrowings shall be reported and disclosed like other collateral, as set forth in paragraphs 10 and 25.

28. In some transactions, characterized as securities lending, all of the criteria in paragraph 3 are met. During the term of such agreements, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities, with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the collateral and the forward repurchase commitment. Those transactions shall be accounted for:

a. By the transferor as a sale of the loaned securities, for proceeds consisting of the collateral and a forward repurchase commitment. (If the collateral is a financial asset that the holder is permitted to sell or repledge and the debtor does not have the right and ability to redeem the collateral on short notice, e.g., by substituting other collateral or terminating the contract, that financial asset is proceeds of the sale of the loaned securities. To the extent that the collateral consists of letters of credit or other financial instruments that the holder is not permitted to sell or pledge, a securities lending transaction does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee); and

b. By the transferee as a purchase of the borrowed securities in exchange for the collateral and a forward resale commitment.

Loan Syndications

29. Borrowers often borrow amounts greater than any one lender is willing to lend. Therefore, it is common for groups of lenders to jointly fund those loans. That may be accomplished by a syndication under which several lenders share in lending to a single borrower, but each lender loans a specific amount to the borrower and has the right to repayment from the borrower.

30. Each lender in the syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender who then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is also functioning as a servicer and, therefore, shall only recognize its portion of the loan as an asset.

Loan Participations

31. Groups of banks or other entities also may jointly fund large borrowings through loan participations in which a single lender makes a large loan to a borrower and subsequently transfers undivided interests in the loan to other entities.

32. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the transferor (originating lender) continues to service the loan. The transferee (participating entity) may or may not have the right to sell or transfer its participation during the term of the loan, depending upon the terms of the participation agreement.

33. If the loan participation agreement gives the transferee the right to pledge or exchange those participations and the other criteria in paragraph 3 are met, the transfers to the transferee shall be accounted for by the transferor as sales of financial assets. A transferor’s right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor’s permission that shall not be unreasonably withheld, or a prohibition on sale to the transferor’s competitor is a limitation on the transferee’s rights but presumptively does not constrain a transferee from exercising its right to pledge or exchange. However, if the loan participation agreement constrains the transferees from pledging or exchanging their participations, the transferor has not relinquished control over the loan and shall account for the transfers as secured borrowings.

Factoring Arrangements

34. Factoring arrangements are a means of discounting accounts receivable on a nonrecourse, notification basis. Accounts receivable are sold outright, usually to a transferee (the factor) that assumes the full risk of collection, without recourse to the transferor in the event of a loss. Debtors are directed to send payments to the transferee. Factoring arrangements that meet the criteria in paragraph 3 shall be accounted for as sales of financial assets because the transferor surrenders control over the receivables to the factor.

Transfers of Receivables with Recourse

35. In a transfer of receivables with recourse, the transferor is obligated under the terms of the recourse provision to make payments to the transferee or to repurchase receivables sold under certain circumstances, typically for defaults up to a specified percentage. A transfer of receivables with recourse shall not be recognized as a sale but rather, as a financing. A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received. Sales of premium receivables are addressed in SSAP No. 42.

Disclosures

36. A reporting entity shall disclose the following:

    a. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value;

    b. Description of any loaned securities, including the amount, a description of, and the policy for, requiring collateral, and whether or not the collateral is restricted; and

    c. For all servicing assets and servicing liabilities:

        i. The amounts of servicing assets nonadmitted or liabilities recognized and amortized during the period; and

        ii. The fair value of servicing liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value.

37. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 7, involving transactions for securities with a NAIC designation of 3 or below, or unrated:

    a. A description of the reporting entity's objectives regarding these transactions;

    b. An aggregation of transactions by NAIC Designation 3 or below, or unrated;

    c. The number of transactions involved during the reporting period;

    d. The book value of securities sold;

    e. The cost of securities repurchased; and

    f. The realized gains/losses associated with the securities involved.

38. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures required by paragraph 37 shall be made for the current quarter in the quarterly statement and for the year in the annual statement.

Relevant Literature

39. This statement adopts FAS 125 with modification to paragraphs 9, 10.a., 11.d., 13, 15-17, 35-41, and 68. Additionally, paragraphs 14, 59-60, 77-81, and 83 are rejected. The modifications to FAS 125 primarily relate to (a) the nonadmission of servicing rights assets, (b) the accounting for repurchase agreements, reverse repurchase agreements, and dollar repurchase agreements, (c) the accounting for realized gains and losses for reporting entities required to maintain an IMR, (d) the accounting for financial assets subject to prepayment, (e) the accounting for assets pledged as collateral, (f) the accounting for leases in accordance with *SSAP No. 22—Leases*, and (g) the accounting for sales of receivables with recourse. Paragraphs 77-81 are rejected because they are not applicable to the insurance industry.

40. This statement adopts AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as used In Certain Audit Guides and a Statement of Position. This statement adopts FASB Emerging Issues Task Force

No. 87-34, Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB Emerging Issues Task Force No. 88-11, Allocation of Recorded Investment When a Loan as Part of a Loan is Sold, FASB Emerging Issues Task Force No. 88-18, Sales of Future Revenues, FASB Emerging Issues Task Force No. 88-22, Securitization of Credit Card and Other Receivable Portfolios, FASB Emerging Issues Task Force No. 90-21, Balance Sheet Treatment of a Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB Emerging Issues Task Force No. 95-5, Determination of What Risks and Rewards, If Any, Can Be Retained and Whether Any Unresolved Contingencies May Exist in a Sale of Mortgage Loan Servicing Rights and FASB Emerging Issues Task Force No. 96-19, Debtor's Accounting for a Modification or Exchange of Debt Instruments.

41. This statement rejects FASB Statement No. 127, Deferral of the Effective Date of Certain Provisions of FASB Statement No. 125, an amendment of FASB Statement No. 125, FASB Emerging Issues Task Force No. 84-5, Sale of Marketable Securities with a Put Option, FASB Emerging Issues Task Force No. 92-2, Measuring Loss Accruals by Transferors of Receivables with Recourse, and FASB Emerging Issues Task Force No. 96-20, Impact of FASB Statement No. 125 on Consolidation of Special-Purpose Entities.

Effective Date and Transition

42. This statement shall be effective for transfers and servicing of financial assets and extinguishments of liabilities occurring after January 1, 2001, and shall be applied prospectively.

43. For each servicing contract in existence before January 1, 2001, previously recognized or nonadmitted servicing rights and excess servicing receivables shall be combined, net of any previously recognized servicing obligations under that contract, as a servicing asset (nonadmitted) or liability. Thereafter, the subsequent measurement provisions of this statement shall be applied to the servicing assets (nonadmitted) or liabilities for those servicing contracts.

101. SSAP No. 33 provides the following guidance:

Accounting for Securitizations of Financial Assets

3. A financial asset shall be defined as cash, evidence of an ownership interest in an entity, or a contract that both

a. Imposes on one entity a contractual obligation (i) to deliver cash or another financial instrument to a second entity or (ii) to exchange other financial instruments on potentially unfavorable terms with the second entity; and

b. Conveys to that second entity a contractual right (i) to receive cash or another financial instrument from the first entity or (ii) to exchange other financial instruments on potentially favorable terms with the first entity.

4. A securitization in which the transferor surrenders control over the financial asset transferred shall be accounted for as a sale, with recognition of proceeds and measurement of a gain or loss only to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The portion of the securitization for which beneficial interests in the transferred assets are received shall not be accounted for as a sale, but shall be treated as an exchange of assets with no measurement of a gain or loss. All other securitizations shall be accounted for as secured borrowings in accordance with paragraph 11.

5. The transferor has surrendered control if, and only if, all of the following conditions are met:

a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership;

b. The transferee is a qualifying special-purpose entity and the holders of beneficial interests in that entity have the right—free of transferor-imposed conditions that constrain them from taking advantage of that right—to pledge or exchange those interests; and

c. The transferor does not maintain effective control over the transferred assets through (i) an agreement that entitles and obligates the transferor to repurchase or redeem them before their maturity, or (ii) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable.

6. A beneficial interest shall be defined as the right to receive all or portions of specified cash inflows to a trust or other entity, including senior and subordinated shares of interest or principal inflows to be "passed through" or "paid through," premiums due guarantors, and residual interests. Residual interests are interests in the cash flows of the trust or other entity, after the cash flows of structured securities issued by the trust are met.

7. Upon completion of the securitization of financial assets meeting the criteria for sales treatment required by paragraph 5, the transferor shall:

a. Eliminate the transferred assets from the statement of financial position;

b. Allocate the previous carrying amount of the transferred assets to the securities representing beneficial interests retained by the reporting entity, if any, and the securities representing beneficial interests not retained, if any, based on the relative fair values of the transferred assets at the date of transfer;

c. Record in its statement of financial position, the allocated carrying value of the securities representing retained beneficial interests in the assets (e.g., loan-backed securities);

d. Recognize all additional assets obtained (i.e., other than the securities representing retained beneficial interests which are recorded in accordance with 7 c.) and liabilities incurred in consideration as proceeds of the sale;

e. Initially measure such additional assets obtained and liabilities incurred in the sale at fair value; and

f. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized gains and losses shall be reported as net realized capital gains or losses line in the Investment Income section of the Underwriting and Investment Exhibit.

8. The successor (transferee) shall recognize all assets obtained and any liabilities incurred and initially measure them at fair value.

9. A qualifying special-purpose entity (including a CMO special-purpose entity) as used in this statement must meet all of the following conditions:

a. It is a trust, corporation, or other legal vehicle whose activities are permanently limited by the legal documents establishing the special-purpose entity to:

i. Holding title to transferred financial assets;

ii. Issuing beneficial interests (If some of the beneficial interests are in the form of debt securities or equity securities, the transfer of assets is a securitization.);

iii. Collecting cash proceeds from assets held, reinvesting proceeds in financial instruments pending distribution to holders of beneficial interests, and otherwise servicing the assets held; and

iv. Distributing proceeds to the holders of its beneficial interests.

b. It has a standing at law distinct from the transferor. Having standing at law depends in part on the nature of the special-purpose entity. For example, generally, under U.S. law, if a transferor of assets to a special-purpose trust holds all of the beneficial interests, it can unilaterally dissolve the trust, and thereby resume control over the individual assets held in the trust, and the transferor can effectively assign its interest and its creditors can reach it. In that circumstance, the trust has no standing at law, is not distinct, and thus is not a qualified special-purpose entity. A special-purpose entity that has distinct standing at law may still be an affiliate of the transferor.

Investments in Special-Purpose Entities

10. Reporting entities that have qualifying special-purpose entities as affiliates shall carry their investment in such entity at its underlying statutory book value in accordance with *SSAP No. 46—Investments in Subsidiary, Controlled, and Affiliated Entities*. Additionally, transactions entered involving affiliated qualifying special-purpose entities are subject to the provisions of *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*.

Secured Obligations and Collateral

11. Securitizations of financial assets that do not meet the criteria for sale treatment set forth in paragraph 5 shall be presumed to be secured borrowings and shall be recorded as follows. Financial assets shall remain on the reporting entity's books and a liability shall be recorded to reflect the proceeds from the issuance of any type of certificate. Non-cash proceeds shall be recorded as a contra liability and netted against the liability. The liability shall be reduced as the obligation to holders of beneficial interests is repaid. Financial assets pledged as collateral shall not be offset against the liability reflecting the proceeds of the transaction.

Recognition of Servicing Rights

12. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or separate purchase or assumption of the servicing. If distinct servicing rights to transferred assets exist and are retained by the reporting entity, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations. The servicing asset or liability shall be amortized into income in proportion to, and over the period of estimated servicing income (if an asset) or estimated servicing loss (if a liability). The servicing asset or liability shall be measured in a manner consistent with paragraphs 13 and 35-38 of *FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125).

Sales of Future Revenues

13. In addition to securitization of assets, some reporting entities have entered into transactions characterized as a sale of future revenues. These transactions are sometimes referred to as securitizations and are sometimes characterized as selling deferred acquisition costs. A sale of future revenues by a reporting entity shall not result in the immediate recognition of income or surplus. The proceeds of any such sale shall be established as a liability and shall be reduced as the proceeds are repaid.

Relevant Literature

14. This statement adopts portions of FAS 125, with the following modifications (FAS 125 is addressed in its entirety in *SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities)*:

    a. This statement requires servicing rights assets to be nonadmitted;

    b. This statement does not permit sales treatment for transactions where recourse provisions exist or where “call” or “put” options exist on the transferred assets whereas GAAP would permit the recognition of the transfer as a sale under some circumstances;

    c. This statement requires debtors to provide disclosure when a secured party is permitted to sell or pledge financial assets transferred as collateral whereas FAS 125 requires the encumbered assets to be reported separately from unencumbered assets;

    d. This statement does not address transfers of financial assets accomplished in a manner other than through securitizations whereas FAS 125 does address such transfers; and

    e. Paragraph 14 is rejected as it is not applicable.

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

102. SSAP No. 45 provides the following guidance:

> 2. Repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.
>
> **Repurchase Agreements**
>
> 3. Repurchase agreements are defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date within 12 months of the purchase. For securities to be substantially the same, the criteria defined in paragraph 14 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.
>
> 4. Repurchase agreements shall be accounted for as collateralized lendings. The underlying securities shall not be accounted for as investments owned by the reporting entity. The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount paid and the amount at which the securities will be subsequently resold shall be reported as interest income, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.
>
> 5. Reporting entities generally take possession of the underlying collateral under repurchase agreements and in many cases may obtain additional collateral when the estimated fair value of such securities falls below their current contract value. However, to the extent that the current fair value of the collateral is less than the recorded amount, the shortfall shall reduce the admitted asset value of the repurchase agreement.
>
> **Reverse Repurchase Agreements**
>
> 6. Reverse repurchase agreements are defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date within 12 months of the sale date. For securities to be substantially the same, the criteria defined in paragraph 13 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.
>
> 7. Reverse repurchase agreements shall be accounted for as collateralized borrowings (financing transactions). The underlying securities shall continue to be accounted for as an investment by the reporting entity. The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement. Although recording these transactions gross tends to inflate assets and liabilities, it more closely reflects the financing nature of the transactions and their associated leverage impact to the financial statements.
>
> **Collateral Requirements**
>
> 8. The collateral requirements for repurchase and reverse repurchase agreements are as follows:
>
> Repurchase Transaction

a. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to 102 percent of the purchase price paid by the reporting entity for the securities. If at any time the fair value of the collateral is less than 100 percent of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals 102 percent of the purchase price.

Reverse Repurchase Transaction

b. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 95 percent of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at anytime the fair value of the collateral is less than 95 percent of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral, the fair value of which, together with the fair value of all collateral then held in connection with the transaction, at least equals 95 percent of the fair value of the transferred securities.

Dollar Repurchase Agreements

9. Dollar repurchase and dollar reverse repurchase agreements are defined as repurchase and reverse repurchase agreements involving debt instruments that are pay-through securities collateralized with Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC) and Federal National Mortgage Association (FNMA) collateral, and pass-through certificates sponsored by GNMA, mortgage participation certificates issued by the FHLMC or similar securities issued by the FNMA. Dollar repurchase agreements are also commonly referred to as dollar roll transactions. To meet the definition of dollar repurchase and dollar reverse repurchase agreements, the securities underlying the agreements must meet the criteria defined in paragraph 13, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

10. For the seller in a dollar reverse repurchase agreement, a liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities sold.

11. When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased must be in good delivery form consistent with paragraph 13.

12. If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded.

13. For the purchaser in a dollar repurchase agreement, an asset is recorded for the amount of the purchase. Since the term of the agreement is limited to twelve months, it is accounted for as a short-term investment. Upon completion of the reverse repurchase agreement, cash is received in exchange for a “substantially the same” security. The

difference between the purchase and reselling price represents interest income for the lending of short-term funds.

Criteria to Meet Substantially the Same

14. For debt instruments, including mortgage-backed securities, to be substantially the same, all the following criteria must be met:

a. The debt instruments must have the same primary obligor, except for debt instruments guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and terms of the guarantee must be the same;

b. The debt instruments must be identical in form and type so as to give the same risks and rights to the holder;

c. The debt instruments must bear the identical contractual interest rate;

d. The debt instruments must have the same maturity except for mortgage-backed pass-through and pay-through securities for which the mortgages collateralizing the securities must have similar remaining weighted average maturities (WAMs) that result in approximately the same market yield;

e. Mortgage-backed pass-through and pay through securities must be collateralized by a similar pool of mortgages, such as single-family residential mortgages; and

f. The debt instruments must have the same aggregate unpaid principal amounts, except for mortgage-backed pass-through and pay-through securities, where the aggregate principal amounts of the mortgage-backed securities given up and the mortgage-backed securities reacquired must be within the accepted “good delivery” standard for the type of mortgage-backed security involved.

Separate Transactions

15. Agreements to repurchase and resell securities that do not meet the definitions in paragraph 3, 6, or 8 of this statement shall be accounted for as two separate transactions, that is, as a sale and purchase or as a purchase and sale, in accordance with the relevant statutory accounting guidance. For example, sales of bonds would result in recognition of realized gains or losses.

Offsetting

16. Reporting entities may operate on both sides of the repurchase agreement market resulting in recording of liabilities and assets representing repurchase and reverse repurchase agreements, respectively.

17. Reporting entities shall offset such liabilities and assets only to the extent that one of the following occurs:

a. A legal right of offset exists as defined in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64), or

b. The securities have the same settlement date, are executed with the same counterparty in accordance with a master netting arrangement, involve securities that exist in “book entry” form, and settle on securities transfer systems that have the same key elements and operating characteristics as the Fedwire Securities Transfer System.

Otherwise, separate assets and liabilities shall be recognized.

Disclosures

18. The following disclosures shall be made in the financial statements:

a. If the reporting entity has entered into repurchase agreements, its policy for requiring collateral or other security;

b. A description of the securities underlying the agreements, including book values and fair values, maturities, and weighted average interest rates for the following categories: (i) securities subject to reverse repurchase agreements; (ii) securities subject to repurchase agreements; (iii) securities subject to dollar repurchase agreements; and (iv) securities subject to dollar reverse repurchase agreements; and

c. A description of the terms of reverse repurchase agreements whose amounts are included in borrowed money.

19. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

20. This statement adopts AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used In Certain Audit Guides and a Statement of Position.

21. This statement adopts paragraphs 9-13, 15-17, 23-25, 27-30 and 66-71 of *FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125), as they relate to repurchase agreements, reverse repurchase agreements and dollar repurchase agreements.

22. This statement adopts FASB Emerging Issues Task Force No. 84-20, GNMA Dollar Rolls. This statement is consistent with FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts—an interpretation of APB Opinion No. 10 and FASB Statement No. 105 (FIN 39) (as it relates to reverse repurchase and repurchase agreements) and FASB Interpretation No. 41, Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements—an interpretation of APB Opinion No. 10 and a modification of FASB Interpretation No. 39 (FIN 41). FIN 39 and FIN 41 are adopted in SSAP No. 64.

23. This statement rejects paragraph 14 of FAS 125 as it relates to the classifications of securities under *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities* (FAS 115). FAS 115 is rejected in *SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities*.

Effective Date and Transition

24. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

103. *INT 01-31: Assets Pledged as Collateral* (INT 01-31) provides the following guidance:

INT 01-31 Issue

1. Insurers may enter into certain transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract. The arrangement is commonly referred to as a pledge, typically accomplished by delivery of assets to the secured party or to an independent custodian. In these transactions, the pledging

insurer typically (1) continues to receive the income on the pledged collateral and (2) can remove and substitute other securities with little or no advance notice to the secured party as long as they comply with related investment quality and market value agreement provisions. Examples include collateral pledged under investment, derivative, debt obligations and policyholder transactions.

2. Specific examples of collateral pledged for derivative and investment transactions include but are not limited to: (1) securities posted with a broker as margin for futures and options transactions, (2) securities pledged to secure credit exposure with swap counterparties, (3) securities pledged under reverse repurchase agreements or securitizations that are accounted for as secured borrowing transactions and (4) securities pledged under securities lending transactions.

3. Specific examples of collateral pledged for debt obligations and policyholder transactions include but are not limited to assets pledged to secure (1) debt borrowings from or insurance contracts issued to banking entities and (2) insurance contracts issued to governmental entities such as municipalities.

4. Under these transactions, the fair value of the securities pledged as collateral may exceed the contract balance (swap fair value, advance balance, policyholder account balance, etc). For this interpretation, this excess carrying value of securities pledged over the corresponding asset or contract balance is called the “overcollateralization” amount.

5. The accounting issue is whether the assets pledged as collateral under the various transactions mentioned above should be considered admitted assets.

INT 01-31 Discussion

6. The working group reached a consensus that if the collateral had not been pledged in the examples described above, it is assumed the underlying asset would be recorded as an admitted asset under SSAP No. 4 (e.g. they are readily marketable assets available to meet both current and future policyholder obligations). In addition, it is assumed that the asset would not be considered impaired under SSAP No. 5 due to a default, market value decline, or other loss contingency.

7. Therefore, for the examples described above, the pledging insurer would record the collateral (including the overcollateralization amount) as an admitted asset until they have committed a contract default that has not been cured in accordance with the contract provisions. This accounting is in accordance with the provisions of SSAP Nos. 18, 33 and 45. This consensus of reporting collateral as an admitted asset is further supported by SSAP Nos. 4 and 5 since generally, the insurer can readily substitute pledged assets. Additionally, an insurer may typically unwind the transaction allowing the assets to be available to the pledging insurer to meet policyholder obligations. Furthermore, no event has occurred to indicate an impairment or potential loss contingency with respect to such pledged assets. The fact that some pledged assets may constitute an overcollaterlization amount does not change this analysis. Accordingly, all assets pledged in support of these type transactions should also be admitted.

8. At the time of an uncured default, the provisions of paragraph 10 of SSAP No. 18 shall be used to determine the appropriate accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of the liability owed by the pledging insurer as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset should be removed from the balance sheet since that obligation has been satisfied through the secured party’s utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer should only record an admitted asset for the amount of collateral that it can redeem.

INT 01-31 Status

9. The consensus position of this interpretation is consistent with the position of the NAIC Invested Asset (E) Working Group. This interpretation will be reviewed by the FAS 140 Subgroup of the NAIC Statutory Accounting Principles (E) Working Group in conjunction of its consideration of incorporating GAAP pronouncement *FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, a replacement of FASB Statement 125* into the statutory accounting model. As such, this interpretation is subject to amendment pending disposition of the FAS 140 Subgroup's review of collateral and FAS 140 in its entirety.

Generally Accepted Accounting Principles

104. FAS 140 provides the following guidance:

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Accounting for Transfers and Servicing of Financial Assets

9. A transfer of financial assets (or all or a portion of a financial asset) in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if and only if all of the following conditions are met:

a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (paragraphs 27 and 28).
b. Each transferee (or, if the transferee is a qualifying SPE (paragraph 35), each holder of its beneficial interests) has the right to pledge or exchange the assets (or beneficial interests) it received, and no condition both constrains the transferee (or holder) from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor (paragraphs 29-34).
c. The transferor does not maintain effective control over the transferred assets through either (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 47-49) or (2) the ability to unilaterally cause the holder to return specific assets, other than through a cleanup call (paragraphs 50-54).

10. Upon completion of any transfer of financial assets, the transferor shall:

a. Continue to carry in its statement of financial position any retained interest in the transferred assets, including, if applicable, servicing assets (paragraphs 61-67), beneficial interests in assets transferred to a qualifying SPE in a securitization (paragraphs 73-84), and retained undivided interests (paragraphs 58 and 59)
b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (paragraphs 56-60).

11. Upon completion 3 of a transfer of assets that satisfies the conditions to be accounted for as a sale (paragraph 9), the transferor (seller) shall:

a. Derecognize all assets sold
b. Recognize all assets obtained and liabilities incurred in consideration as proceeds of the sale, including cash, put or call options held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations), swaps (for example, provisions that convert interest rates from fixed to variable), and servicing liabilities, if applicable (paragraphs 56, 57, and 61-67)

c. Initially measure at fair value assets obtained and liabilities incurred in a sale (paragraphs 68-70) or, if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraphs 71 and 72)
d. Recognize in earnings any gain or loss on the sale.

The transferee shall recognize all assets obtained and any liabilities incurred and initially measure them at fair value (in aggregate, presumptively the price paid).

12. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) does not meet the criteria for a sale in paragraph 9, the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (paragraph 15).

Recognition and Measurement of Servicing Assets and Liabilities

13. Each time an entity undertakes an obligation to service financial assets it shall recognize either a servicing asset or a servicing liability for that servicing contract, unless it transfers the assets to a qualifying SPE in a guaranteed mortgage securitization, retains all of the resulting securities, and classifies them as debt securities held-to-maturity in accordance with *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities*. If the servicing asset or liability was purchased or assumed rather than undertaken in a sale or securitization of the financial assets being serviced, it shall be measured initially at its fair value, presumptively the price paid. A servicing asset or liability shall be amortized in proportion to and over the period of estimated net servicing income (if servicing revenues exceed servicing costs) or net servicing loss (if servicing costs exceed servicing revenues). A servicing asset or liability shall be assessed for impairment or increased obligation based on its fair value (paragraphs 61-64).

Financial Assets Subject to Prepayment

14. Interest-only strips, retained interests in securitizations, loans, other receivables, or other financial assets that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment, except for instruments that are within the scope of Statement 133, shall be subsequently measured like investments in debt securities classified as available-for-sale or trading under Statement 115, as amended (paragraph 362).

Secured Borrowings and Collateral

15. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (paragraph 12). The accounting for noncash 4 collateral by the debtor (or obligor) and the secured party depends on whether the secured party has the right to sell or repledge the collateral and on whether the debtor has defaulted.

a. If the secured party (transferee) has the right by contract or custom to sell or repledge the collateral, then the debtor (transferor) shall reclassify that asset and report that asset in its statement of financial position separately (for example, as security pledged to creditors) from other assets not so encumbered.
b. If the secured party (transferee) sells collateral pledged to it, it shall recognize the proceeds from the sale and its obligation to return the collateral. The sale of the collateral is a transfer subject to the provisions of this Statement.
c. If the debtor (transferor) defaults under the terms of the secured contract and is no longer entitled to redeem the pledged asset, it shall derecognize the pledged asset,

and the secured party (transferee) shall recognize the collateral as its asset initially measured at fair value or, if it has already sold the collateral, derecognize its obligation to return the collateral.

d. Except as provided in paragraph 15.c., the debtor (transferor) shall continue to carry the collateral as its asset, and the secured party (transferee) shall not recognize the pledged asset.

Extinguishments of Liabilities

16. A debtor shall derecognize a liability if and only if it has been extinguished. A liability has been extinguished if either of the following conditions is met:

a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities whether the securities are canceled or held as so-called treasury bonds.

b. The debtor is legally released 5 from being the primary obligor under the liability, either judicially or by the creditor.

Disclosures

17. An entity shall disclose the following:

a. For collateral:

(1) If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security

(2) If the entity has pledged any of its assets as collateral that are not reclassified and separately reported in the statement of financial position pursuant to paragraph 15.a., the carrying amount and classification of those assets as of the date of the latest statement of financial position presented

(3) If the entity has accepted collateral that it is permitted by contract or custom to sell or repledge, the fair value as of the date of each statement of financial position presented of that collateral and of the portion of that collateral that it has sold or repledged, and information about the sources and uses of that collateral

b. If debt was considered to be extinguished by in-substance defeasance under the provisions of *FASB Statement No. 76, Extinguishment of Debt*, prior to the effective date of Statement 125, 6 a general description of the transaction and the amount of debt that is considered extinguished at the end of the period so long as that debt remains outstanding

c. If assets are set aside after the effective date of Statement 125 solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets

d. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value

e. For all servicing assets and servicing liabilities:

(1) The amounts of servicing assets or liabilities recognized and amortized during the period

(2) The fair value of recognized servicing assets and liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value

(3) The risk characteristics of the underlying financial assets used to stratify recognized servicing assets for purposes of measuring impairment in accordance with paragraph 63

(4) The activity in any valuation allowance for impairment of recognized servicing assets—including beginning and ending balances, aggregate additions charged and reductions credited to operations, and aggregate direct write-downs charged against the allowances—for each period for which results of operations are presented.

f. If the entity has securitized financial assets during any period presented and accounts for that transfer as a sale, for each major asset type (for example, mortgage loans, credit card receivables, and automobile loans):
   (1) Its accounting policies for initially measuring the retained interests, if any, including the methodology (whether quoted market price, prices based on sales of similar assets and liabilities, or prices based on valuation techniques) used in determining their fair value (paragraphs 68-70)
   (2) The characteristics of securitizations (a description of the transferor's continuing involvement with the transferred assets, including, but not limited to, servicing, recourse, and restrictions on retained interests) and the gain or loss from sale of financial assets in securitizations
   (3) The key assumptions 7 used in measuring the fair value of retained interests at the time of securitization (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, 8 and anticipated credit losses, if applicable)
   (4) Cash flows between the securitization SPE and the transferor, unless reported separately elsewhere in the financial statements or notes (including proceeds from new securitizations, proceeds from collections reinvested in revolving-period securitizations, purchases of delinquent or foreclosed loans, servicing fees, and cash flows received on interests retained)

g. If the entity has retained interests in securitized financial assets at the date of the latest statement of financial position presented, for each major asset type (for example, mortgage loans, credit card receivables, and automobile loans):
   (1) Its accounting policies for subsequently measuring those retained interests, including the methodology (whether quoted market price, prices based on sales of similar assets and liabilities, or prices based on valuation techniques) used in determining their fair value (paragraphs 68-70)
   (2) The key assumptions used in subsequently measuring the fair value of those interests (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses, 9 if applicable)
   (3) A sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests of two or more unfavorable variations from the expected levels for each key assumption that is reported under (2) above independently from any change in another key assumption, and a description of the objectives, methodology, and limitations of the sensitivity analysis or stress test
   (4) For the securitized assets and any other financial assets that it manages together with them: 10
      (a) The total principal amount outstanding, the portion that has been derecognized, and the portion that continues to be recognized in each category reported in the statement of financial position, at the end of the period
      (b) Delinquencies at the end of the period
      (c) Credit losses, net of recoveries, during the period

   Disclosure of average balances during the period is encouraged, but not required.

Implementation Guidance

18. Appendix A describes certain provisions of this Statement in more detail and describes their application to certain types of transactions. Appendix A is an integral part of the standards provided in this Statement.

Effective Date and Transition

19. Except as provided in paragraphs 20-25, this Statement shall be effective for transfers and servicing of financial assets and extinguishments of liabilities occurring after March 31, 2001.

This Statement shall be applied prospectively, 11 except as provided in paragraphs 20, 21, 23, and 24. Earlier or retroactive application of this Statement is not permitted.

20. For each servicing contract in existence before January 1, 1997, previously recognized servicing rights and "excess servicing" receivables that do not exceed contractually specified servicing fees shall be combined, net of any previously recognized servicing obligations under that contract, as a servicing asset or liability. Previously recognized servicing receivables that exceed contractually specified servicing fees shall be reclassified as interest-only strips receivable. Thereafter, the subsequent measurement provisions of this Statement shall be applied to the servicing assets or liabilities for those servicing contracts (paragraph 63) and to the interest-only strips receivable (paragraph 14).

21. The provisions of paragraph 14 and the amendment to Statement 115 (paragraph 362) shall be effective for financial assets held on or acquired after January 1, 1997.

22. Paragraphs 17.f. and 17.g. shall be effective for financial statements for fiscal years ending after December 15, 2000. The information required to be disclosed about securitizations of financial assets during the period that are accounted for as sales need not be reported for periods ending on or before December 15, 2000, for which an income statement is presented for comparative purposes.

23. Collateral previously recognized in financial statements in accordance with the requirements of paragraphs 15.a.ii. and 15.b. of Statement 125 that is no longer to be recognized in accordance with paragraph 15 of this Statement shall no longer be recognized in financial statements for fiscal years ending after December 15, 2000, and financial statements for previous periods presented for comparative purposes shall be restated accordingly. The requirements for reclassification of certain assets in paragraph 15.a. of this Statement and for disclosure about collateral pledged and accepted in paragraphs 17.a.(2) and 17.a.(3) shall be effective for financial statements for fiscal years ending after December 15, 2000; that information need not be reported for periods ending on or before December 15, 2000, for which a statement of financial position is presented for comparative purposes.

24. Assets transferred on or before March 31, 2001, and transfers of assets after that date required by commitments made before that date to transferees or beneficial interest holders (BIHs) other than the transferor, its affiliates, 12 or its agents shall continue to be accounted for under the previous accounting standards for transfers of assets that applied when the transferor made or committed to those transfers. Transfers of assets after that date, unless required by commitments made before that date to transferees or BIHs unrelated to the transferor, shall be subject to all the provisions of this Statement.

25. A formerly qualifying SPE that fails to meet one or more conditions for being a qualifying SPE under this Statement shall continue to be considered a qualifying SPE if it maintains its qualifying status under previous accounting standards, does not issue new beneficial interests after the effective date, and does not receive assets it was not committed to receive (through a commitment to BIHs unrelated to the transferor) before the effective date. Otherwise, the formerly qualifying SPE and assets transferred to it shall be subject to other consolidation policy standards and guidance and to all the provisions of this Statement.

Appendix A: IMPLEMENTATION GUIDANCE

Introduction

26. This appendix describes certain provisions of this Statement in more detail and describes how they apply to certain types of transactions. This appendix discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this Statement. This appendix is an integral part of the standards provided in this Statement.

Isolation beyond the Reach of the Transferor and Its Creditors

27. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or SPE might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any consolidated affiliate of the transferor that is not a special-purpose corporation or other entity designed to make remote the possibility that it would enter bankruptcy or other receivership (paragraph 83.c.).

28. Whether securitizations isolate transferred assets may depend on such factors as whether the securitization is accomplished in one step or two steps (paragraphs 80-84). Many common financial transactions, for example, typical repurchase agreements and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

29. Sale accounting is allowed under paragraph 9.b. only if each transferee has the right to pledge, or the right to exchange, the transferred assets or beneficial interests it received, but constraints on that right also matter. Many transferor-imposed or other conditions on a transferee's right to pledge or exchange a transferred asset both constrain a transferee from pledging or exchanging the transferred assets and, through that constraint, provide more than a trivial benefit to the transferor. For example, a provision in the transfer contract that prohibits selling or pledging a transferred loan receivable not only constrains the transferee but also provides the transferor with the more-than-trivial benefits of knowing who has the asset, a prerequisite to repurchasing the asset, and of being able to block the asset from finding its way into the hands of a competitor for the loan customer’s business or someone that the loan customer might consider an undesirable creditor. Transferor-imposed contractual constraints that narrowly limit timing or terms, for example, allowing a transferee to pledge only on the day assets are obtained or only on terms agreed with the transferor, also constrain the transferee and presumptively provide the transferor with more-than-trivial benefits.

30. However, some conditions do not constrain a transferee from pledging or exchanging the asset and therefore do not preclude a transfer subject to such a condition from being accounted for as a sale. For example, a transferor's right of first refusal on the occurrence of a bona fide offer to the transferee from a third party presumptively would not constrain a transferee, because that right in itself does not enable the transferor to compel the transferee to sell the assets and the transferee would be in a position to receive the sum offered by exchanging the asset, albeit possibly from the transferor rather than the third party. Further examples of conditions that presumptively would not constrain a transferee include (a) a requirement to obtain the transferor's permission to sell or pledge that is not to be unreasonably withheld, (b) a prohibition on sale to the transferor's competitor if other potential willing buyers exist, (c) a regulatory limitation such as on the number or nature of eligible transferees (as in the case of securities issued under Securities Act Rule 144A or debt placed privately), and (d) illiquidity, for example, the absence of an active market. Judgment is required to assess the significance of some conditions. For example, a prohibition on sale to the transferor’s competitor would be a significant constraint if that competitor were the only potential willing buyer other than the transferor.

31. A condition imposed by a transferor that constrains the transferee presumptively provides more than a trivial benefit to the transferor. A condition not imposed by the transferor that constrains the transferee may or may not provide more than a trivial benefit to the transferor. For example, if the transferor refrains from imposing its usual contractual constraint on a specific transfer because it knows an equivalent constraint is already imposed on the transferee by a third party, it presumptively benefits more than trivially from that constraint. However, the transferor cannot benefit from a constraint if it is unaware at the time of the transfer that the transferee is constrained.

Transferor's Rights or Obligations to Reacquire Transferred Assets

32. Some rights or obligations to reacquire transferred assets both constrain the transferee and provide more than a trivial benefit to the transferor, thus precluding sale accounting under paragraph 9.b. For example, a freestanding call option written by a transferee to the transferor benefits the transferor and, if the transferred assets are not readily obtainable in the marketplace, is likely to constrain a transferee because it might have to default if the call was exercised and it had exchanged or pledged the assets. A freestanding forward purchase-sale contract between the transferor and the transferee on transferred assets not readily obtainable in the marketplace would benefit the transferor and is likely to constrain a transferee in much the same manner. Judgment is necessary to assess constraint and benefit. For example, put options written to the transferee generally do not constrain it, but a put option on a not-readily-obtainable asset may benefit the transferor and effectively constrain the transferee if the option is sufficiently deep-in-the-money when it is written that it is probable that the transferee will exercise it and the transferor will reacquire the transferred asset. In contrast, a sufficiently out-of-the-money call option held by the transferor may not constrain a transferee if it is probable when the option is written that it will not be exercised. Freestanding rights to reacquire transferred assets that are readily obtainable presumptively do not constrain the transferee from exchanging or pledging them and thus do not preclude sale accounting under paragraph 9.b.

33. Other rights or obligations to reacquire transferred assets, regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred assets, as discussed in paragraphs 50-54, thus precluding sale accounting under paragraph 9.c.(2). [15]

Conditions That Constrain a Holder of Beneficial Interests in a Qualifying SPE

34. The considerations in paragraphs 29-32, about conditions that may or may not constrain a transferee that is not a qualifying SPE from pledging or exchanging the transferred assets, also extend to conditions that may or may not constrain a BIH from pledging or exchanging its beneficial interests in assets transferred to a qualifying SPE. For example, if BIHs agree to sell their beneficial interests in a qualifying SPE back to the transferor upon request at the price paid plus a stated return, that arrangement clearly conveys more than a trivial benefit to the transferor; sale accounting for the transfer to the qualifying SPE would be precluded if that agreement constrained a BIH from exchanging or pledging its beneficial interest.

Qualifying SPE

35. A qualifying SPE 16 is a trust or other legal vehicle that meets all of the following conditions:

a. It is demonstrably distinct from the transferor (paragraph 36).

b. Its permitted activities (1) are significantly limited, (2) were entirely specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds, and (3) may be significantly changed only with the approval of the holders of at least a majority of the beneficial interests held by entities other than any transferor, its affiliates, and its agents (paragraphs 37 and 38).

c. It may hold only:

(1) Financial assets transferred to it that are passive in nature (paragraph 39)

(2) Passive derivative financial instruments that pertain to beneficial interests (other than another derivative financial instrument) issued or sold to parties other than the transferor, its affiliates, or its agents (paragraphs 39 and 40)

(3) Financial assets (for example, guarantees or rights to collateral) that would reimburse it if others were to fail to adequately service financial assets transferred to it or to timely pay obligations due to it and that it entered into when it was established, when assets were transferred to it, or when beneficial interests (other than derivative financial instruments) were issued by the SPE

(4) Servicing rights related to financial assets that it holds

(5) Temporarily, nonfinancial assets obtained in connection with the collection of financial assets that it holds (paragraph 41)

(6) Cash collected from assets that it holds and investments purchased with that cash pending distribution to holders of beneficial interests that are appropriate for that purpose (that is, money-market or other relatively risk-free instruments without options and with maturities no later than the expected distribution date).

d. If it can sell or otherwise dispose of noncash financial assets, it can do so only in automatic response to one of the following conditions:

(1) Occurrence of an event or circumstance that (a) is specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds; (b) is outside the control of the transferor, its affiliates, or its agents; and (c) causes, or is expected at the date of transfer to cause, the fair value of those financial assets to decline by a specified degree below the fair value of those assets when the SPE obtained them (paragraphs 42 and 43)

(2) Exercise by a BIH (other than the transferor, its affiliates, or its agents) of a right to put that holder's beneficial interest back to the SPE (paragraph 44)

(3) Exercise by the transferor of a call or ROAP specified in the legal documents that established the SPE, transferred assets to the SPE, or created the beneficial interests in the transferred assets that it holds (paragraphs 51-54 and 85-88)

(4) Termination of the SPE or maturity of the beneficial interests in those financial assets on a fixed or determinable date that is specified at inception (paragraph 45).

Need to Be Demonstrably Distinct from the Transferor

36. A qualifying SPE is demonstrably distinct from the transferor only if it cannot be unilaterally dissolved by any transferor, its affiliates, or its agents and either (a) at least 10 percent of the fair value of its beneficial interests is held by parties other than any transferor, its affiliates, or its agents or (b) the transfer is a guaranteed mortgage securitization. 17 An ability to unilaterally dissolve an SPE can take many forms, including but not limited to holding sufficient beneficial interests to demand that the trustee dissolve the SPE, the right to call all the assets transferred to the SPE, and a right to call or a prepayment privilege on the beneficial interests held by other parties.

Limits on Permitted Activities

37. The powers of the SPE must be limited to those activities allowed by paragraph 35 for it to be a qualifying SPE. Many kinds of entities are not so limited. For example, any bank, insurance company, pension plan, or investment company has powers that cannot be sufficiently limited for it to be a qualifying SPE.

38. The BIHs other than any transferor, its affiliates, or its agents may have the ability to change the powers of a qualifying SPE. If the powers of a previously qualifying SPE are changed

so that the SPE is no longer qualifying, unless the conditions in paragraph 9.b. are then met by the SPE itself and the conditions in paragraphs 9.a. and 9.c. continue to be met, that change would bring the transferred assets held in the SPE back under the control of the transferor (paragraph 55).

Limits on What a Qualifying SPE May Hold

39. A financial asset or derivative financial instrument is passive only if holding the asset or instrument does not involve its holder in making decisions other than the decisions inherent in servicing (paragraph 61). An equity instrument is not passive if the qualifying SPE can exercise the voting rights and is permitted to choose how to vote. Investments are not passive if through them, either in themselves or in combination with other investments or rights, the SPE or any related entity, such as the transferor, its affiliates, or its agents, is able to exercise control or significant influence (as defined in generally accepted accounting principles for consolidation policy and for the equity method, respectively) over the investee. A derivative financial instrument is not passive if, for example, it includes an option allowing the SPE to choose to call or put other financial instruments; but other derivative financial instruments can be passive, for example, interest rate caps and swaps and forward contracts. Derivative financial instruments that result in liabilities, like other liabilities of a qualifying SPE, are a kind of beneficial interest in the qualifying SPE's assets.

40. A derivative financial instrument pertains to beneficial interests (other than another derivative financial instrument) issued only if it:

a. Is entered into (1) when the beneficial interests are issued by the qualifying SPE to parties other than the transferor, its affiliates, or its agents or sold to such other parties after being issued by the qualifying SPE to the transferor, its affiliates, or its agents or (2) when a passive derivative financial instrument needs to be replaced upon occurrence of an event or circumstance (specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds) outside the control of the transferor, its affiliates, or its agents, for example, when the counterparty to the derivative defaults or is downgraded below a specified threshold

b. Has a notional amount that does not initially exceed the amount of those beneficial interests and is not expected to exceed them subsequently

c. Has characteristics that relate to, and partly or fully but not excessively counteract, some risk associated with those beneficial interests or the related transferred assets.

41. A qualifying SPE may hold nonfinancial assets other than servicing rights only temporarily and only if those nonfinancial assets result from collecting the transferred financial assets. For example, a qualifying SPE could be permitted to temporarily hold foreclosed nonfinancial collateral. In contrast, an entity cannot be a qualifying SPE if, for example, it receives from a transferor significant secured financial assets likely to default with the expectation that it will foreclose on and profitably manage the securing nonfinancial assets. A qualifying SPE also may hold the residual value of a sales-type or a direct financing lease only to the extent that it is guaranteed at the inception of the lease either by the lessee or by a third party financially capable of discharging the obligations that may arise from the guarantee (paragraph 89).

Limits on Sales or Other Dispositions of Assets

42. Examples of requirements to sell, exchange, put, or distribute (hereinafter referred to collectively as dispose of) noncash financial assets that are permitted activities of a qualifying SPE—because they respond automatically to the occurrence of an event or circumstance that (a) is specified in the legal documents that established the SPE or created the beneficial interests in the transferred assets that it holds; (b) is outside the control of the transferor, its affiliates, or its agents; and (c) causes, or is expected to cause, the fair value of those assets to decline by a specified degree below the fair value of those assets when the qualifying SPE obtained them—include requirements to dispose of transferred assets in response to:

a. A failure to properly service transferred assets that could result in the loss of a substantial third-party credit guarantee
b. A default by the obligor
c. A downgrade by a major rating agency of the transferred assets or of the underlying obligor to a rating below a specified minimum rating
d. The involuntary insolvency of the transferor
e. A decline in the fair value of the transferred assets to a specified value less than their fair value at the time they were transferred to the SPE.

43. The following are examples of powers or requirements to dispose of noncash financial assets that are not permitted activities of a qualifying SPE, because they do not respond automatically to the occurrence of a specified event or circumstance outside the control of the transferor, its affiliates, or its agents that causes, or is expected to cause, the fair value of those transferred assets to decline by a specified degree below the fair value of those assets when the SPE obtained them:

a. A power that allows an SPE to choose to either dispose of transferred assets or hold them in response to a default, a downgrade, a decline in fair value, or a servicing failure
b. A requirement to dispose of marketable equity securities upon a specified decline from their "highest fair value" if that power could result in disposing of the asset in exchange for an amount that is more than the fair value of those assets at the time they were transferred to the SPE
c. A requirement to dispose of transferred assets in response to the violation of a nonsubstantive contractual provision (that is, a provision for which there is not a sufficiently large disincentive to ensure performance).

44. A qualifying SPE may dispose of transferred assets automatically to the extent necessary to comply with the exercise by a BIH (other than the transferor, its affiliates, or its agents) of its right to put beneficial interests back to the SPE in exchange for:

a. A full or partial distribution of those assets
b. Cash (which may require that the SPE dispose of those assets or issue beneficial interests to generate cash to fund settlement of the put)
c. New beneficial interests in those assets.

45. A qualifying SPE may have the power to dispose of assets to a party other than the transferor, its affiliate, or its agent on termination of the SPE or maturity of the beneficial interests, but only automatically on fixed or determinable dates that are specified at inception. For example, if an SPE is required to dispose of long-term mortgage loans and terminate itself at the earlier of (a) the specified maturity of beneficial interests in those mortgage loans or (b) the date of prepayment of a specified amount of the transferred mortgage loans, the termination date is a fixed or determinable date that was specified at inception. In contrast, if that SPE has the power to dispose of transferred assets on two specified dates and the SPE can decide which transferred assets to sell on each date, the termination date is not a fixed or determinable date that was specified at inception.

Qualifying SPEs and Consolidated Financial Statements

46. A qualifying SPE shall not be consolidated in the financial statements of a transferor or its affiliates.

Maintaining Effective Control over Transferred Assets

Agreement to Repurchase or Redeem Transferred Assets

47. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor's effective control over those assets under paragraph 9.c.(1), and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 48).
b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 49).
c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price.
d. The agreement is entered into concurrently with the transfer.

48. To be substantially the same, 18 the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:
a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same)
b. Identical form and type so as to provide the same risks and rights
c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities, similar remaining weighted-average maturities that result in approximately the same market yield)
d. Identical contractual interest rates
e. Similar assets as collateral
f. The same aggregate unpaid principal amount or principal amounts within accepted “good delivery” standards for the type of security involved.

49. To be able to repurchase or redeem assets on substantially the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

Ability to Unilaterally Cause the Return of Specific Transferred Assets

50. Some rights to reacquire transferred assets (or to acquire beneficial interests in transferred assets held by a qualifying SPE), regardless of whether they constrain the transferee, may result in the transferor’s maintaining effective control over the transferred assets through the unilateral ability to cause the return of specific transferred assets. Such rights preclude sale accounting under paragraph 9.c.(2). For example, an attached call in itself would not constrain a transferee who is able, by exchanging or pledging the asset subject to that call, to obtain substantially all of its economic benefits. An attached call could result, however, in the transferor’s maintaining effective control over the transferred asset(s) because the attached call gives the transferor the ability to unilaterally cause whoever holds that specific asset to return it. In contrast, transfers of financial assets subject to calls embedded by the issuers of the financial instruments, for example, callable bonds or prepayable mortgage loans, do not preclude sale accounting. Such an embedded call does not result in the transferor’s maintaining effective control, because it is the issuer rather than the transferor who holds the call.

51. If the transferee is a qualifying SPE, it has met the conditions in paragraph 35.d. and therefore must be constrained from choosing to exchange or pledge the transferred assets. In that circumstance, any call held by the transferor is effectively attached to the assets and could—depending on the price and other terms of the call—maintain the transferor’s effective control over transferred assets through the ability to unilaterally cause the transferee to return specific assets. For example, a transferor's unilateral ability to cause a qualifying SPE to return to the transferor or otherwise dispose of specific transferred assets at will or, for example, in response to its decision to exit a market or a particular activity, could provide the transferor with effective control over the transferred assets.

52. A call that is attached to transferred assets maintains the transferor’s effective control over those assets if, under its price and other terms, the call conveys more than a trivial benefit to the transferor. Similarly, any unilateral right to reclaim specific assets transferred to a qualifying SPE maintains the transferor’s effective control over those assets if the right conveys more than a trivial benefit to the transferor. A call or other right conveys more than a trivial benefit if the price

to be paid is fixed, determinable, or otherwise potentially advantageous, unless because that price is so far out of the money or for other reasons it is probable when the option is written that the transferor will not exercise it. Thus, for example, a call on specific assets transferred to a qualifying SPE at a price fixed at their principal amount maintains the transferor's effective control over the assets subject to that call. Effective control over transferred assets can be present even if the right to reclaim is indirect. For example, if an embedded call allows a transferor to buy back the beneficial interests of a qualifying SPE at a fixed price, then the transferor remains in effective control of the assets underlying those beneficial interests. A cleanup call, however, is permitted as an exception to that general principle.

53. A right to reclaim specific transferred assets by paying their fair value when reclaimed generally does not maintain effective control, because it does not convey a more than trivial benefit to the transferor. However, a transferor has maintained effective control if it has such a right and also holds the residual interest in the transferred assets. For example, if a transferor can reclaim such assets at termination of the qualifying SPE by purchasing them in an auction, and thus at what might appear to be fair value, then sale accounting for the assets it can reclaim would be precluded. Such circumstances provide the transferor with a more than trivial benefit and effective control over the assets, because it can pay any price it chooses in the auction and recover any excess paid over fair value through its residual interest.

54. A transferor that has a right to reacquire transferred assets from a qualifying SPE does not maintain effective control if the reclaimed assets would be randomly selected and the amount of the assets reacquired is sufficiently limited (paragraph 87.a.), because that would not be a right to reacquire specific assets. Nor does a transferor maintain effective control through an obligation to reacquire transferred assets from a qualifying SPE if the transfer could occur only after a specified failure of the servicer to properly service the transferred assets that could result in the loss of a third-party guarantee (paragraph 42.a.) or only after a BIH other than the transferor, its affiliate, or its agent requires a qualifying SPE to repurchase that beneficial interest (paragraph 44.b.), because the transferor could not cause that reacquisition unilaterally.

Changes That Result in the Transferor's Regaining Control of Assets Sold

55. A change in law, status of the transferee as a qualifying SPE, or other circumstance may result in the transferor's regaining control of assets previously accounted for appropriately as having been sold, because one or more of the conditions in paragraph 9 are no longer met. Such a change, unless it arises solely from either the initial application of this Statement or a change in market prices (for example, an increase in price that moves into-the-money a freestanding call that was originally sufficiently out-of-the-money that it was judged not to constrain the transferee), is accounted for in the same manner as a purchase of the assets from the former transferee(s) in exchange for liabilities assumed (paragraph 11). After that change, the transferor recognizes in its financial statements those assets together with liabilities to the former transferee(s) or BIHs in those assets (paragraph 38). The transferor initially measures those assets and liabilities at fair value on the date of the change, as if the transferor purchased the assets and assumed the liabilities on that date. The former transferee would derecognize the assets on that date, as if it had sold the assets in exchange for a receivable from the transferor.

Measurement of Interests Held after a Transfer of Financial Assets

Assets Obtained and Liabilities Incurred as Proceeds

56. The proceeds from a sale of financial assets consist of the cash and any other assets obtained in the transfer less any liabilities incurred. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value, if practicable.

Illustration—Recording Transfers with Proceeds of Cash, Derivatives, and Other Liabilities

57. Company A sells loans with a fair value of $1,100 and a carrying amount of $1,000. Company A retains no servicing responsibilities but obtains an option to purchase from the transferee loans similar to the loans sold (which are readily obtainable in the marketplace) and assumes a limited recourse obligation to repurchase delinquent loans.

Company A agrees to provide the transferee a return at a floating rate of interest even though the contractual terms of the loan are fixed rate in nature (that provision is effectively an interest rate swap).

Fair Values	
Cash proceeds	$1,050
Interest rate swap	40
Call option	70
Recourse obligation	60

Net Proceeds	
Cash received	$1,050
Plus: Call option	70
Interest rate swap	40
Less: Recourse obligation	(60)
Net proceeds	$1,100

Gain on Sale	$1,100
Net proceeds	1,000
Carrying amount of loans sold	$ 100
Gain on sale	

Journal Entry		
Cash	1,050	
Interest rate swap	40	
Call option	70	
Loans		1,000
Recourse obligation		60
Gain on sale		100
To record transfer		

Retained Interests

58. Other interests in transferred assets—those that are not part of the proceeds of the transfer—are retained interests over which the transferor has not relinquished control. They shall be measured at the date of the transfer by allocating the previous carrying amount between the assets sold, if any, and the retained interests, based on their relative fair values. Allocation procedures shall be applied to all transfers in which interests are retained, even those that do not qualify as sales. Examples of retained interests include securities backed by the transferred assets, undivided interests, servicing assets, and cash reserve accounts and residual interests in securitization trusts. If a transferor cannot determine whether an asset is a retained interest or proceeds from the sale, the asset shall be treated as proceeds from the sale and accounted for in accordance with paragraph 56.

59. If the retained interests are subordinated to more senior interests held by others, that subordination may concentrate into the retained interests most of the risks inherent in the transferred assets and shall be taken into consideration in estimating the fair value of the retained interests. For example, if the amount of the gain recognized, after allocation, on a securitization

with a subordinated retained interest is greater than the gain would have been had the entire asset been sold, the transferor needs to be able to identify why that can occur. Otherwise, it is likely that the impact of the retained interest being subordinate to a senior interest has not been adequately considered in the determination of the fair value of the subordinated retained interest.

Illustration—Recording Transfers of Partial Interests

60. Company B sells a pro rata nine-tenths interest in loans with a fair value of $1,100 and a carrying amount of $1,000. There is no servicing asset or liability, because Company B estimates that the benefits of servicing are just adequate to compensate it for its servicing responsibilities.

Servicing Assets and Liabilities

61. Servicing of mortgage loans, credit card receivables, or other financial assets commonly includes, but is not limited to, collecting principal, interest, and escrow payments from borrowers; paying taxes and insurance from escrowed funds; monitoring delinquencies; executing foreclosure if necessary; temporarily investing funds pending distribution; remitting fees to guarantors, trustees, and others providing services; and accounting for and remitting principal and interest payments to the holders of beneficial interests in the financial assets. Servicing is inherent in all financial assets; it becomes a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or separate purchase or assumption of the servicing.

62. An entity that undertakes a contract to service financial assets shall recognize either a servicing asset or a servicing liability, with only one exception. (That exception is if the transferor transfers the assets in a guaranteed mortgage securitization, retains all of the resulting securities, and classifies them as debt securities held-to-maturity in accordance with Statement 115, in which case the servicing asset or liability may be reported together with the asset being serviced.) Each sale or securitization with servicing retained or separate purchase or assumption of servicing results in a servicing contract. A servicer of financial assets commonly receives the benefits of servicing—revenues from contractually specified servicing fees, late charges, and other ancillary sources, including “float,” all of which it is entitled to receive only if it performs the

servicing—and incurs the costs of servicing the assets. Each servicing contract results in a servicing asset or servicing liability. Typically, the benefits of servicing are expected to be more than adequate compensation to a servicer for performing the servicing, and the contract results in a servicing asset. However, if the benefits of servicing are not expected to adequately compensate a servicer for performing the servicing, the contract results in a servicing liability. (A servicing asset may become a servicing liability, or vice versa, if circumstances change, and the initial measure for servicing may be zero if the benefits of servicing are just adequate to compensate the servicer for its servicing responsibilities.)

63. A servicer that recognizes a servicing asset or servicing liability shall account for the contract to service financial assets separately from those assets, as follows:

a. Report servicing assets separately from servicing liabilities in the statement of financial position (paragraph 13).

b. Initially measure servicing assets retained in a sale or securitization of the assets being serviced at their allocated previous carrying amount based on relative fair values, if practicable, at the date of the sale or securitization (paragraphs 10, 58-60, and 68-72).

c. Initially measure servicing assets purchased or servicing liabilities assumed at fair value (paragraph 13).

d. Initially measure servicing liabilities undertaken in a sale or securitization at fair value, if practicable (paragraphs 11.b., 11.c., and 68-72).

e. Account separately for rights to future interest income from the serviced assets that exceeds contractually specified servicing fees. Those rights are not servicing assets; they are financial assets, effectively interest-only strips to be accounted for in accordance with paragraph 14 of this Statement.

f. Subsequently measure servicing assets by amortizing the amount recognized in proportion to and over the period of estimated net servicing income—the excess of servicing revenues over servicing costs (paragraph 13).

g. Subsequently evaluate and measure impairment of servicing assets as follows:

(1) Stratify servicing assets based on one or more of the predominant risk characteristics of the underlying financial assets. Those characteristics may include financial asset type, 19 size, interest rate, date of origination, term, and geographic location.

(2) Recognize impairment through a valuation allowance for an individual stratum. The amount of impairment recognized shall be the amount by which the carrying amount of servicing assets for a stratum exceeds their fair value. The fair value of servicing assets that have not been recognized shall not be used in the evaluation of impairment.

(3) Adjust the valuation allowance to reflect changes in the measurement of impairment subsequent to the initial measurement of impairment. Fair value in excess of the carrying amount of servicing assets for that stratum, however, shall not be recognized. This Statement does not address when an entity should record a direct write-down of recognized servicing assets (paragraph 13).

h. Subsequently measure servicing liabilities by amortizing the amount recognized in proportion to and over the period of estimated net servicing loss—the excess of servicing costs over servicing revenues. However, if subsequent events have increased the fair value of the liability above the carrying amount, for example, because of significant changes in the amount or timing of actual or expected future cash flows from the cash flows previously projected, the servicer shall revise its earlier estimates and recognize the increased obligation as a loss in earnings (paragraph 13).

64. As indicated above, transferors sometimes agree to take on servicing responsibilities when the future benefits of servicing are not expected to adequately compensate them for performing that servicing. In that circumstance, the result is a servicing liability rather than a servicing asset. For example, if in the transaction illustrated in paragraph 57 the transferor had agreed to service the loans without explicit compensation and it estimated the fair value of that

servicing obligation at $50, net proceeds would be reduced to $1,050, gain on sale would be reduced to $50, and the transferor would report a servicing liability of $50.

Illustration—Sale of Receivables with Servicing Retained

65. Company C originates $1,000 of loans that yield 10 percent interest income for their estimated lives of 9 years. Company C sells the $1,000 principal plus the right to receive interest income of 8 percent to another entity for $1,000. Company C will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the right to receive half of the interest income not sold. The remaining half of the interest income not sold is considered an interest-only strip receivable. At the date of the transfer, the fair value of the loans, including servicing, is $1,100. The fair value of the servicing asset is $40.

66. The previous illustration demonstrates how a transferor would account for a simple sale or securitization in which servicing is retained. Company C might instead transfer the financial assets to a corporation or a trust that is a qualifying SPE. The qualifying SPE then securitizes the loans by selling beneficial interests to the public. The qualifying SPE pays the cash proceeds to the original transferor, which accounts for the transfer as a sale and derecognizes the financial

assets assuming that the criteria in paragraph 9 are met. Securitizations often combine the elements shown in paragraphs 57, 60, and 65, as illustrated below.

Illustration—Recording Transfers of Partial Interests with Proceeds of Cash, Derivatives, Other Liabilities, and Servicing

67. Company D originates $1,000 of prepayable loans that yield 10 percent interest income for their 9-year expected lives. Company D sells nine-tenths of the principal plus interest of 8 percent to another entity. Company D will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the 2 percent of the interest income not sold. Company D obtains an option to purchase from the transferee loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse obligation to repurchase delinquent loans.

Fair Value

68. The fair value of an asset (or liability) is the amount at which that asset (or liability) could be bought (or incurred) or sold (or settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If a quoted market price is available, the fair value is the product of the number of trading units times that market price.

69. If quoted market prices are not available, the estimate of fair value shall be based on the best information available in the circumstances. The estimate of fair value shall consider prices for similar assets and liabilities and the results of valuation techniques to the extent available in the circumstances. Examples of valuation techniques include the present value of estimated future cash flows, [20] option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis. Valuation techniques for measuring financial assets and liabilities and servicing assets and liabilities shall be consistent with the objective of measuring fair value. Those techniques shall incorporate assumptions that market participants would use in their estimates of values, future revenues, and future expenses, including assumptions about interest rates, default, prepayment, and volatility. [21] In measuring financial liabilities and servicing liabilities at fair value, the objective is to estimate the value of the assets required currently to (a) settle the liability with the holder or (b) transfer a liability to an entity of comparable credit standing.

70. Estimates of expected future cash flows, if used to estimate fair value, shall be based on reasonable and supportable assumptions and projections. All available evidence shall be considered in developing estimates of expected future cash flows. The weight given to the evidence shall be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered either directly, if applying an expected cash flow approach, or indirectly through the risk-adjusted discount rate, if determining the best estimate of future cash flows.

If It Is Not Practicable to Estimate Fair Values

71. If it is not practicable to estimate the fair values of assets, the transferor shall record those assets at zero. If it is not practicable to estimate the fair values of liabilities, the transferor shall recognize no gain on the transaction and shall record those liabilities at the greater of:

a. The excess, if any, of (1) the fair values of assets obtained less the fair values of other liabilities incurred, over (2) the sum of the carrying values of the assets transferred

b. The amount that would be recognized in accordance with *FASB Statement No. 5, Accounting for Contingencies*, as interpreted by *FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss*.

Illustration—Recording Transfers If It Is Not Practicable to Estimate a Fair Value

72. Company E sells loans with a carrying amount of $1,000 to another entity for cash plus a call option to purchase loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse obligation to repurchase any delinquent loans. Company E undertakes to service the transferred assets for the other entity. In Case 1, Company E finds it impracticable to estimate the fair value of the servicing contract, although it is confident that servicing revenues will be more than adequate compensation for performing the servicing. In Case 2, Company E finds it impracticable to estimate the fair value of the recourse obligation.

Fair Values	**Case 1**	**Case 2**
Cash proceeds	$1,050	$1,050
Servicing asset	XX*	40

Call option	70	70
Recourse obligation	60	XX*

* Assets shall be recorded at zero if an estimate of the fair value of the assets is not praticable.

† The amount recorded as a liability in this example equals the sum of the known assets less the fair value of the known liabilities, that is, the amount that results in no gain or loss.

Securitizations

73. Financial assets such as mortgage loans, automobile loans, trade receivables, credit card receivables, and other revolving charge accounts are assets commonly transferred in securitizations. Securitizations of mortgage loans may include pools of single-family residential mortgages or other types of real estate mortgage loans, for example, multifamily residential mortgages and commercial property mortgages. Securitizations of loans secured by chattel mortgages on automotive vehicles as well as other equipment (including direct financing or sales-type leases) also are common. Both financial and nonfinancial assets can be securitized; life insurance policy loans, patent and copyright royalties, and even taxi medallions also have been securitized. But securitizations of nonfinancial assets are outside the scope of this Statement.

74. An originator of a typical securitization (the transferor) transfers a portfolio of financial assets to an SPE, commonly a trust. In "pass-through" and "pay-through" securitizations,

receivables are transferred to the SPE at the inception of the securitization, and no further transfers are made; all cash collections are paid to the holders of beneficial interests in the SPE. In "revolving-period" securitizations, receivables are transferred at the inception and also periodically (daily or monthly) thereafter for a defined period (commonly three to eight years), referred to as the revolving period. During the revolving period, the SPE uses most of the cash collections to purchase additional receivables from the transferor on prearranged terms.

75. Beneficial interests in the SPE are sold to investors and the proceeds are used to pay the transferor for the assets transferred. Those beneficial interests may comprise either a single class having equity characteristics or multiple classes of interests, some having debt characteristics and others having equity characteristics. The cash collected from the portfolio is distributed to the investors and others as specified by the legal documents that established the SPE.

76. Pass-through, pay-through, and revolving-period securitizations that meet the criteria in paragraph 9 qualify for sale accounting under this Statement. All financial assets obtained or retained and liabilities incurred by the originator of a securitization that qualifies as a sale shall be recognized and measured as provided in paragraph 11; that includes the implicit forward contract to sell new receivables during a revolving period, which may become valuable or onerous to the transferor as interest rates and other market conditions change.

Revolving-Period Securitizations

77. The value of the forward contract implicit in a revolving-period securitization arises from the difference between the agreed-upon rate of return to investors on their beneficial interests in the trust and current market rates of return on similar investments. For example, if the agreed-upon annual rate of return to investors in a trust is 6 percent, and later market rates of return for those investments increased to 7 percent, the forward contract’s value to the transferor (and burden to the investors) would approximate the present value of 1 percent of the amount of the investment for each year remaining in the revolving structure after the receivables already transferred have been collected. If a forward contract to sell receivables is entered into at the market rate, its value at inception may be zero. Changes in the fair value of the forward contract are likely to be greater if the investors receive a fixed rate than if the investors receive a rate that varies based on changes in market rates.

78. Gain or loss recognition for revolving-period receivables sold to a securitization trust is limited to receivables that exist and have been sold. Recognition of servicing assets or liabilities for revolving-period receivables is similarly limited to the servicing for the receivables that exist and have been transferred. As new receivables are sold, rights to service them become assets or liabilities and are recognized.

79. Revolving-period securitizations may use either a discrete trust, used for a single securitization, or a master trust, used for many securitizations. To achieve another securitization using an existing master trust, a transferor first transfers additional receivables to the trust and then sells additional ownership interests in the trust to investors. Adding receivables to a master trust, in itself, is neither a sale nor a secured borrowing under paragraph 9, because that transfer only increases the transferor’s beneficial interest in the trust’s assets. A sale or secured borrowing does not occur until the transferor receives consideration other than beneficial interests in the transferred assets. Transfers that result in an exchange of cash, that is, either transfers that in essence replace previously transferred receivables that have been collected or sales of beneficial interests to outside investors, are transfers in exchange for consideration other than beneficial interests in the transferred assets and thus are accounted for as sales (if they satisfy all the criteria in paragraph 9) or as secured borrowings.

Isolation of Transferred Assets in Securitizations

80. A securitization carried out in one transfer or a series of transfers may or may not isolate the transferred assets beyond the reach of the transferor and its creditors. Whether it does

depends on the structure of the securitization transaction taken as a whole, considering such factors as the type and extent of further involvement in arrangements to protect investors from credit and interest rate risks, the availability of other assets, and the powers of bankruptcy courts or other receivers.

81. In certain securitizations, a corporation that, if it failed, would be subject to the U.S. Bankruptcy Code transfers financial assets to a special-purpose trust in exchange for cash. The trust raises that cash by issuing to investors beneficial interests that pass through all cash received from the financial assets, and the transferor has no further involvement with the trust or the transferred assets. The Board understands that those securitizations generally would be judged as having isolated the assets, because in the absence of any continuing involvement there would be reasonable assurance that the transfer would be found to be a true sale at law that places the assets beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership.

82. In other securitizations, a similar corporation transfers financial assets to an SPE in exchange for cash and beneficial interests in the transferred assets. That entity raises the cash by issuing to investors commercial paper that gives them a senior interest in cash received from the financial assets. The beneficial interests retained by the transferring corporation represent a junior interest to be reduced by any credit losses on the financial assets in trust. The commercial paper interests are highly rated by credit rating agencies only if both (a) the credit enhancement from the junior interest is sufficient and (b) the transferor is highly rated. Depending on facts and circumstances, the Board understands that those “single-step” securitizations often would be judged in the United States as not having isolated the assets, because the nature of the continuing involvement may make it difficult to obtain reasonable assurance that the transfer would be found to be a true sale at law that places the assets beyond the reach of the transferor and its creditors in U.S. bankruptcy (paragraph 113). If the transferor fell into bankruptcy and the transfer was found not to be a true sale at law, investors in the transferred assets might be subjected to an automatic stay that would delay payments due them, and they might have to share in bankruptcy expenses and suffer further losses if the transfer was recharacterized as a secured loan.

83. Still other securitizations use two transfers intended to isolate transferred assets beyond the reach of the transferor and its creditors, even in bankruptcy. In those “two-step” structures:

a. First, the corporation transfers financial assets to a special-purpose corporation that, although wholly owned, is so designed that the possibility that the transferor or its creditors could reclaim the assets is remote. This first transfer is designed to be judged to be a true sale at law, in part because the transferor does not provide “excessive” credit or yield protection to the special-purpose corporation, and the Board understands that transferred assets are likely to be judged beyond the reach of the transferor or the transferor's creditors even in bankruptcy.

b. Second, the special-purpose corporation transfers the assets to a trust or other legal vehicle with a sufficient increase in the credit or yield protection on the second transfer (provided by a junior retained beneficial interest or other means) to merit the high credit rating sought by third-party investors who buy senior beneficial interests in the trust. Because of that aspect of its design, that second transfer might not be judged to be a true sale at law and, thus, the transferred assets could at least in theory be reached by a bankruptcy trustee for the special-purpose corporation.

c. However, the special-purpose corporation is designed to make remote the possibility that it would enter bankruptcy, either by itself or by substantive consolidation into a bankruptcy of its parent should that occur. For example, its charter forbids it from undertaking any other business or incurring any liabilities, so that there can be no creditors to petition to place it in bankruptcy. Furthermore, its dedication to a single purpose is intended to make it extremely unlikely, even if it somehow entered bankruptcy, that a receiver under the U.S. Bankruptcy Code could reclaim the transferred assets because it has no other assets to substitute for the transferred assets.

The Board understands that the "two-step" securitizations described above, taken as a whole, generally would be judged under present U.S. law as having isolated the assets beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership.

84. The powers of receivers for entities not subject to the U.S. Bankruptcy Code (for example, banks subject to receivership by the FDIC) vary considerably, and therefore some receivers may be able to reach financial assets transferred under a particular arrangement and others may not. A securitization may isolate transferred assets from a transferor subject to such a receiver and its creditors even though it is accomplished by only one transfer directly to an SPE that issues beneficial interests to investors and the transferor provides credit or yield protection. For entities that are subject to other possible bankruptcy, conservatorship, or other receivership procedures in the United States or other jurisdictions, judgments about whether transferred assets have been isolated need to be made in relation to the powers of bankruptcy courts or trustees, conservators, or receivers in those jurisdictions.

Removal-of-Accounts Provisions

85. Many transfers of financial assets in securitizations empower the transferor to reclaim assets subject to certain restrictions. Such a power is sometimes called a removal-of-accounts provision (ROAP). Whether a ROAP precludes sale accounting depends on whether the ROAP results in the transferor's maintaining effective control over specific transferred assets (paragraphs 9.c.(2) and 51-54).

86. The following are examples of ROAPs that preclude transfers from being accounted for as sales:

a. An unconditional ROAP or repurchase agreement that allows the transferor to specify the assets that may be removed, because such a provision allows the transferor unilaterally to remove specific assets

b. A ROAP conditioned on a transferor's decision to exit some portion of its business, because whether it can be triggered by canceling an affinity relationship, spinning off a business segment, or accepting a third party's bid to purchase a specified (for example, geographic) portion of the transferor's business, such a provision allows the transferor unilaterally to remove specific assets.

87. The following are examples of ROAPs that do not preclude transfers from being accounted for as sales:

a. A ROAP for random removal of excess assets, if the ROAP is sufficiently limited so that the transferor cannot remove specific transferred assets, for example, by limiting removals to the amount of the transferor's retained interest and to one removal per month

b. A ROAP for defaulted receivables, because the removal would be allowed only after a third party's action (default) and could not be caused unilaterally by the transferor

c. A ROAP conditioned on a third-party cancellation, or expiration without renewal, of an affinity or private-label arrangement, because the removal would be allowed only after a third party's action (cancellation) or decision not to act (expiration) and could not be caused unilaterally by the transferor.

88. A ROAP that can be exercised only in response to a third party's action that has not yet occurred does not maintain the transferor's effective control over assets potentially subject to that ROAP. However, when a third party's action (such as default or cancellation) or decision not to act (expiration) occurs that allows removal of assets to be initiated solely by the transferor, the transferor must recognize any assets subject to the ROAP, whether the ROAP is exercised or not. If the ROAP is exercised, the assets are recognized because the transferor has reclaimed the assets. If the ROAP is not exercised, the assets are recognized because the transferor now

can unilaterally cause the qualifying SPE to return those specific assets and, therefore, the transferor once again has effective control over those transferred assets (paragraph 55).

Securities Lending Transactions

91. Securities lending transactions are initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver securities sold. Transferees ("borrowers") of securities generally are required to provide "collateral" to the transferor ("lender") of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities "borrowed.” If the "collateral" is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or "rebated" to the transferee. If the "collateral" is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of "collateral" (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash "collateral" impose market and credit risks on the transferor.

92. In some securities lending transactions, the criteria in paragraph 9 are met, including the effective control criterion in paragraph 9.c., and consideration other than beneficial interests in the transferred assets is received. Those transactions shall be accounted for (a) by the transferor as a sale of the "loaned" securities for proceeds consisting of the cash "collateral" 22 and a forward repurchase commitment and (b) by the transferee as a purchase of the "borrowed" securities in exchange for the "collateral" and a forward resale commitment. During the term of that agreement, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the "collateral" and the forward repurchase commitment.

93. However, many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred assets before their maturity under which the transferor maintains effective control over those assets (paragraphs 47-49). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder is permitted by contract or custom to sell or repledge) received as "collateral" is considered the amount borrowed, the securities "loaned" are considered pledged as collateral against the cash borrowed and reclassified as set forth in paragraph 15.a., and any "rebate" paid to the transferee of securities is interest on the cash the transferor is considered to have borrowed.

94. The transferor of securities being “loaned” accounts for cash received in the same way whether the transfer is accounted for as a sale or a secured borrowing. The cash received shall be recognized as the transferor's asset—as shall investments made with that cash, even if made by agents or in pools with other securities lenders—along with the obligation to return the cash. If securities that may be sold or repledged are received, the transferor of the securities being “loaned” accounts for those securities in the same way as it would account for cash received.

Illustration—Securities Lending Transaction Treated as a Secured Borrowing

95. The following example illustrates the accounting for a securities lending transaction treated as a secured borrowing, in which the securities borrower sells the securities upon receipt and later buys similar securities to return to the securities lender:

Facts

Transferor’s carrying amount and fair value of security loaned	$1,000
Cash “collateral”	1,020
Transferor’s return from investing cash collateral at a 5 percent annual rate	5
Transferor’s rebate to the securities borrower at a 4 percent annual rate	4

For simplicity, the fair value of the security is assumed not to change during the 35-day term of the transaction.

Repurchase Agreements and "Wash Sales"

96. Government securities dealers, banks, other financial institutions, and corporate investors commonly use repurchase agreements to obtain or use short-term funds. Under those agreements, the transferor ("repo party") transfers a security to a transferee ("repo counterparty" or "reverse party") in exchange for cash 23 and concurrently agrees to reacquire that security at a future date for an amount equal to the cash exchanged plus a stipulated "interest" factor.

97. Repurchase agreements can be effected in a variety of ways. Some repurchase agreements are similar to securities lending transactions in that the transferee has the right to sell or repledge the securities to a third party during the term of the repurchase agreement. In other repurchase agreements, the transferee does not have the right to sell or repledge the securities during the term of the repurchase agreement. For example, in a tri-party repurchase agreement, the transferor transfers securities to an independent third-party custodian that holds the securities during the term of the repurchase agreement. Also, many repurchase agreements are for short terms, often overnight, or have indefinite terms that allow either party to terminate the arrangement on short notice. However, other repurchase agreements are for longer terms, sometimes until the maturity of the transferred asset. Some repurchase agreements call for repurchase of securities that need not be identical to the securities transferred.

98. If the criteria in paragraph 9 are met, including the criterion in paragraph 9.c.(1), the transferor shall account for the repurchase agreement as a sale of financial assets and a forward repurchase commitment, and the transferee shall account for the agreement as a purchase of financial assets and a forward resale commitment. Other transfers that are accompanied by an agreement to repurchase the transferred assets that shall be accounted for as sales include transfers with agreements to repurchase at maturity and transfers with repurchase agreements in which the transferee has not obtained collateral sufficient to fund substantially all of the cost of purchasing replacement assets.

99. Furthermore, "wash sales" that previously were not recognized if the same financial asset was purchased soon before or after the sale shall be accounted for as sales under this Statement. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

100. As with securities lending transactions, under many agreements to repurchase transferred assets before their maturity the transferor maintains effective control over those assets. Repurchase agreements that do not meet all the criteria in paragraph 9 shall be treated as secured borrowings. Fixed-coupon and dollar-roll repurchase agreements, and other contracts under which the securities to be repurchased need not be the same as the securities sold, qualify as borrowings if the return of substantially the same (paragraph 48) securities as those concurrently transferred is assured. Therefore, those transactions shall be accounted for as secured borrowings by both parties to the transfer.

101. If a transferor has transferred securities to an independent third-party custodian, or to a transferee, under conditions that preclude the transferee from selling or repledging the assets during the term of the repurchase agreement (as in most tri-party repurchase agreements), the transferor has not surrendered control over those assets.

Loan Syndications

102. Borrowers often borrow amounts greater than any one lender is willing to lend. Therefore, it is common for groups of lenders to jointly fund those loans. That may be accomplished by a syndication under which several lenders share in lending to a single borrower, but each lender loans a specific amount to the borrower and has the right to repayment from the borrower.

103. A loan syndication is not a transfer of financial assets. Each lender in the syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender that then distributes the collections to the other lenders of the syndicate. In those

circumstances, the lead lender is simply functioning as a servicer and, therefore, shall not recognize the aggregate loan as an asset.

Loan Participations

104. Groups of banks or other entities also may jointly fund large borrowings through loan participations in which a single lender makes a large loan to a borrower and subsequently transfers undivided interests in the loan to other entities.

105. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the transferor ("originating lender") continues to service the loan. The transferee ("participating entity") may or may not have the right to sell or transfer its participation during the term of the loan, depending upon the terms of the participation agreement.

106. If the loan participation agreement gives the transferee the right to pledge or exchange those participations and the other criteria in paragraph 9 are met, the transfers to the transferee shall be accounted for by the transferor as sales of financial assets. A transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor if other potential willing buyers exist is a limitation on the transferee's rights but presumptively does not constrain a transferee from exercising its right to pledge or exchange. However, if the loan participation agreement constrains the transferees from pledging or exchanging their participations, the transferor presumptively receives a more than trivial benefit, has not relinquished control over the loan, and shall account for the transfers as secured borrowings.

Factoring Arrangements

112. Factoring arrangements are a means of discounting accounts receivable on a nonrecourse, notification basis. Accounts receivable are sold outright, usually to a transferee (the factor) that assumes the full risk of collection, without recourse to the transferor in the event of a loss. Debtors are directed to send payments to the transferee. Factoring arrangements that meet the criteria in paragraph 9 shall be accounted for as sales of financial assets because the transferor surrenders control over the receivables to the factor.

Transfers of Receivables with Recourse

113. In a transfer of receivables with recourse, the transferor provides the transferee with full or limited recourse. The transferor is obligated under the terms of the recourse provision to make payments to the transferee or to repurchase receivables sold under certain circumstances, typically for defaults up to a specified percentage. The effect of a recourse provision on the application of paragraph 9 may vary by jurisdiction. In some jurisdictions, transfers with full recourse may not place transferred assets beyond the reach of the transferor and its creditors, but transfers with limited recourse may. A transfer of receivables with recourse shall be accounted for as a sale, with the proceeds of the sale reduced by the fair value of the recourse obligation, if the criteria in paragraph 9 are met. Otherwise, a transfer of receivables with recourse shall be accounted for as a secured borrowing.

Extinguishments of Liabilities

114. If a creditor releases a debtor from primary obligation on the condition that a third party assumes the obligation and that the original debtor becomes secondarily liable, that release extinguishes the original debtor's liability. However, in those circumstances, whether or not explicit consideration was paid for that guarantee, the original debtor becomes a guarantor. As a guarantor, it shall recognize a guarantee obligation in the same manner as would a guarantor that had never been primarily liable to that creditor, with due regard for the likelihood that the third party will carry out its obligations. The guarantee obligation shall be initially measured at fair value, and that amount reduces the gain or increases the loss recognized on extinguishment.

EXHIBIT A - GLOSSARY

Asset Securitization

An asset securitization is the process of converting assets which would normally serve as collateral for a loan into securities. The largest category of securitized assets is real estate mortgage loans, which serve as collateral for mortgage-backed securities.

Beneficial Interests

Rights to receive all or portions of specified cash inflows to a trust or other entity, including senior and subordinated shares of interest, principal, or other cash inflows to be passed-through or paid-through, premiums due to guarantors, commercial paper obligations and residual interests, whether in the form of debt or equity.

Beneficial Interest Holder ("BIH")

Holder of beneficial interests

Cleanup Call

An option held by the servicer, which may be the transferor, to purchase transferred financial assets, or the remaining beneficial interests not held by the transferor, its affiliates, or its agents in a qualifying SPE (or in a series of beneficial interests in transferred assets within a qualifying SPE), when the amount of outstanding assets falls to a level at which the cost of servicing those assets becomes burdensome in relation to the benefits or servicing.

Collateral

Personal or real property in which a security interest has been given.

Derecognize

Remove previously recognized assets or liabilities from the balance sheet.

Derivative Financial Instrument

A derivative instrument (as defined in *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions*) that is a financial instrument (refer to SSAP No. 27, paragraph 2).

Embedded Call (See Issue Paper on FAS 140 paragraphs 50 and 52)

A call option held by the issuer of a financial instrument that is part of and trades with the underlying instrument. For example, a bond may allow the issuer to call it by posting a public notice well before its stated maturity that asks the current holder to submit it for early redemption and provides that interest ceases to accrue on the bond after the early redemption date. Rather than being an obligation of the initial purchaser of the bond, an embedded call trades with and diminishes the value of the underlying bond.

Financial Asset

Cash, evidence of an ownership interest in an entity, or a contract that conveys to a second entity a contractual right (a) to receive cash or another financial instrument from a first entity or (b) to exchange other financial instruments on potentially favorable terms with the first entity.

Financial Liability

A contract that imposes on one entity a contractual obligation (a) to deliver cash or another financial instrument to a second entity or (b) to exchange other financial instruments on potentially unfavorable terms with the second entity.

Guaranteed Mortgage Securitization

A securitization of mortgage loans which includes a substantive guarantee by a third party.

Proceeds

Cash, derivatives, or other assets that are obtained in a transfer of financial assets, less any liabilities incurred.

Recourse

The right of a transferee of receivables to receive payment from the transferor of those receivables for (a) failure of debtors to pay when due, (b) the effects of prepayments, or (c) adjustments resulting from defects in the eligibility of the transferred receivables.

Residual

Residuals are a class of retained or purchased beneficial interests that have rights to the last cash flows from the pool of securitized assets and are not rated by a NRSRO. Residuals are to be carried at fair value with the difference between fair value and the allocated cost basis recognized as an unrealized gain or loss.

Securitization

The process by which financial assets are transformed into securities.

Security Interest

A form of interest in property that provides that upon default of the obligation for which the security interest is given, the property may be sold in order to satisfy that obligation.

Seller

A transferor that relinquishes control over financial assets by transferring them to a transferee in exchange for consideration.

Servicing Asset

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are expected to more than adequately compensate the servicer for performing the servicing. A servicing contract is either (a) undertaken in conjunction with selling or securitizing the financial assets being serviced or (b) purchased or assumed separately.

Servicing Liability

A contract to service financial assets under which the estimated future revenues from stated servicing fees, late charges, and other ancillary revenues are not expected to adequately compensate the servicer for performing the servicing.

Transfer

The conveyance of a noncash financial asset by and to someone other than the issuer of that financial asset. Thus, a transfer includes selling a receivable, putting it into a securitization trust, or posting it as collateral but excludes the origination of that receivable, the settlement of that receivable, or the restructuring of that receivable into a security in a troubled debt restructuring.

Transferee

An entity that receives a financial asset, a portion of a financial asset, or a group of financial assets from a transferor.

Transferor

An entity that transfers a financial asset, a portion of a financial asset, or a group of financial assets that it controls to another entity.

Undivided Interest

Partial legal or beneficial ownership of an asset as a tenant in common with others. The proportion owned may be pro rata, for example, the right to receive 50 percent of all cash flows from a security, or non-pro rata, for example, the right to receive the interest from a security while another has the right to the principal.

Unrestricted Collateral

Securities received that may be sold or repledged and which were obtained under agreements that are not subject to repurchase or redemption on short notice, for example, by substitution of other collateral or termination of the contract.

Unilateral Ability (See Issue Paper on FAS 140 paragraphs 50 and 51)

A capacity for action not dependent on the actions (or failure to act) of any other party.

EXHIBIT B - ILLUSTRATIONS

1. Illustration—Recording Transfers with Proceeds of Cash, Derivatives, and Other Liabilities

Company A sells loans with a fair value of $1,100 and a carrying amount of $1,000. Company A retains no servicing responsibilities but obtains an option to purchase from the transferee loans similar to the loans sold (which are readily obtainable in the marketplace) and assumes a limited recourse obligation to repurchase delinquent loans.

Company A agrees to provide the transferee a return at a floating rate of interest even though the contractual terms of the loan are fixed rate in nature (that provision is effectively an interest rate swap).

Fair Values	
Cash proceeds	$1,050

3. Illustration—Sale of Receivables with Servicing Retained

Company C originates $1,000 of loans that yield 10 percent interest income for their estimated lives of 9 years. Company C sells the $1,000 principal plus the right to receive interest income of 8 percent to another entity for $1,000. Company C will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the right to receive half of the interest income not sold. The remaining half of the interest income not sold is considered an interest-only strip receivable. At the date of the transfer, the fair value of the loans, including servicing, is $1,100. The fair value of the servicing asset is $40.

Fair Values	
Cash proceeds	$1,000
Servicing asset	40
Interest-only strip receivable	60

4. Illustration—Recording Transfers of Partial Interests with Proceeds of Cash, Derivatives, Other Liabilities, and Servicing

Company D originates $1,000 of prepayable loans that yield 10 percent interest income for their 9-year expected lives. Company D sells nine-tenths of the principal plus interest of 8 percent to another entity. Company D will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the 2 percent of the interest income not sold. Company D obtains an option to purchase from the transferee loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse obligation to repurchase delinquent loans.

Fair Values

Cash proceeds	$900
Call option	70
Recourse obligation	60
Servicing asset	90
One-tenth interest retained	100

Net Proceeds

Cash received	$900
Plus: Call option	70
Less: Recourse obligation	(60)
Net proceeds	$910

Carrying Amount Based on Relative Fair Values

	Fair Value	Percentage Of Total Fair Value	Allocated Carrying Amount
Interest sold	$ 910	83	$ 830
Servicing asset	90	8	80
One-tenth interest retained	100	9	90
Total	$ 1,100	100	$ 1,000

Gain on Sale

To record servicing asset		

At the time of the transfer, Company D reports its one-tenth retained interest in the loans at its allocated carrying amount of $90.

5. Illustration—Recording Transfers If It Is Not Practicable to Estimate a Fair Value

Company E sells loans with a carrying amount of $1,000 to another entity for cash plus a call option to purchase loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse obligation to repurchase any delinquent loans. Company E undertakes to service the transferred assets for the other entity. In Case 1, Company E finds it impracticable to estimate the fair value of the servicing contract, although it is confident that servicing revenues will be more than adequate compensation for performing the servicing. In Case 2, Company E finds it impracticable to estimate the fair value of the recourse obligation.

Fair Values	**Case 1**	**Case 2**
Cash proceeds	$1,050	$1,050
Servicing asset	XX*	40
Call option	70	70
Recourse obligation	60	XX*
Fair value of loans transferred	$1,100	$1,100

* Not practicable to estimate fair value

Net Proceeds	**Case 1**	**Case 2**
Cash received	$1,050	$1,050
Plus: Call option	70	70
Less: Recourse obligation	(60)	XX
Net proceeds	$1,060	$1,120

Carrying Amount Based on Relative Fair Values (Case 1)

	Fair Value	Percentage Of Total Fair Value	Allocated Carrying Amount
Loans sold	$ 1,060	100	$ 1,000
Servicing asset	0	0	0
Total	$ 1,060	100	$ 1,000

Carrying Amount Based on Relative Fair Values (Case 2)

	Fair Value	Percentage Of Total Fair Value	Allocated Carrying Amount
Loans sold	$ 1,120	97	$ 970
Servicing asset	40	3	30
Total	$ 1,160	100	$ 1,000

Journal Entries	**Case 1**		**Case 2**

Servicing asset	0*		30	
Call option	70		70	
Loans		1,000		1,000
Recourse obligation		60		150†
Gain on sale		60		0
To record transfer				

* Assets shall be recorded at zero if an estimate of the fair value of the assets is not praticable.

† The amount recorded as a liability in this example equals the sum of the known assets less the fair value of the known liabilities, that is, the amount that results in no gain or loss.

6. The following example illustrates the accounting for a securities lending transaction treated as a secured borrowing, in which the securities borrower sells the securities upon receipt and later buys similar securities to return to the securities lender:

Facts	
Transferor’s carrying amount and fair value of security loaned	$1,000
Cash “collateral”	1,020
Transferor’s return from investing cash collateral at a 5 percent annual rate	5
Transferor’s rebate to the securities borrower at a 4 percent annual rate	4

For simplicity, the fair value of the security is assumed not to change during the 35-day term of the transaction.

Statutory Issue Paper No. 123

Accounting for Pensions, A Replacement of SSAP No. 8

STATUS
Finalized September 15, 2003

Current Authoritative Guidance for Accounting for Pensions: SSAP No. 102
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 89

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for employers' pension obligations is provided in *SSAP No. 8—Pensions* (SSAP No. 8). This issue paper supersedes the conclusions reached in SSAP No. 8 and incorporates the guidance in *INT 99-24: Accounting for Restructuring Charges, INT 99-26: Offsetting Pension Assets and Liabilities, INT 01-16: Measurement Date for SSAP No. 8 Actuarial Valuations, INT 01-17: Accounting for Nonqualified Retirement Plans, Nonvested Ancillary Benefits Within Retirement Plans, and Protected Benefits Such as Early Retirement Subsidies in Retirement Plans*, as well as some of the guidance in *INT 02-18: Accounting for the Intangible Asset as Described in SSAP No. 8 Paragraph 9.d.v. and 9.f.*

2. The changes made in this issue paper regarding the accounting treatment of the additional minimum pension liability will create a nonsubstantive change to *SSAP No. 72—Surplus and Quasi-reorganizations*. Unassigned funds (surplus) will include changes in the additional minimum pension liability.

3. Generally Accepted Accounting Principles (GAAP) guidance for these issues is established in *Financial Accounting Standards Board (FASB) Statement No. 87, Employers' Accounting for Pensions* (FAS 87), *FASB Statement No. 88, Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits* (FAS 88), *FASB Statement No. 132, Employers' Disclosures about Pensions and Other Postretirement Benefits* (FAS 132), and *FASB Statement No. 130, Other Comprehensive Income* (FAS 130).

4. The purpose of this issue paper is to establish statutory accounting principles for an employer's pension obligations that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Defined Benefit Plans

5. A defined benefit plan defines the amount of the pension benefit that will be provided to the plan participant at retirement or termination. For such benefit plans, reporting entities shall adopt FAS 87 with modifications to exclude non-vested employees and to account for the additional minimum pension liability. Therefore, the cost related to services rendered prior to becoming eligible and vested in the plan are recognized as a component of the net periodic pension cost in the period the employee becomes vested. Any intangible asset or prepaid expense, other than the intangible asset associated with the transition obligation recorded as of January 1, 2001, resulting from adoption of the provisions of this issue paper shall be considered a nonadmitted asset, as such an asset cannot be readily converted to cash

to satisfy policyholder obligations. This is consistent with the definition of assets and nonadmitted assets set forth in *SSAP No. 4—Assets and Nonadmitted Assets*.

6. If the accumulated benefit obligation exceeds the fair value of plan assets, the reporting entity shall recognize a liability (including unfunded accrued pension cost) that is at least equal to the unfunded accumulated benefit obligation. Recognition of an additional minimum liability is required if an unfunded accumulated benefit obligation exists and (a) a prepaid pension cost asset has been recognized as a nonadmitted asset, (b) the liability already recognized as unfunded accrued pension cost is less than the unfunded accumulated benefit obligation, or (c) no accrued or prepaid pension cost has been recognized.

7. If an additional minimum liability is recognized an equal amount shall be recognized as an intangible asset, provided that the asset recognized shall not exceed the amount of unrecognized prior service cost (unrecognized prior service cost shall include unamortized incremental liability). If an intangible asset generated by the additional minimum liability is recognized, only that portion in excess of the unamortized incremental liability associated with the transition shall be nonadmitted. If an additional liability required to be recognized exceeds unrecognized prior service cost, the excess (which would represent a net loss not yet recognized as net periodic pension cost) shall be reported as a component of unassigned funds (surplus), net of any tax benefits that result from considering such losses as temporary differences for purposes of applying the provisions of *SSAP No. 10—Income Taxes*.

8. When a new determination of the amount of additional liability is made, the related intangible asset and the balance accumulated in unassigned funds (surplus) shall be eliminated or adjusted as necessary.

9. If a reporting entity settles or curtails a defined benefit plan, the reporting entity shall immediately recognize all previously unrecognized amounts as discussed below. A settlement is a transaction which is irrevocable and releases the employer from responsibility for the pension obligation by eliminating the risks relative to the obligation and the assets associated with the plan (e.g., making lump-sum cash payments to plan participants in exchange for their rights to receive specified pension benefits or purchasing nonparticipating annuity contracts to cover vested benefits). If a settlement occurs and the net result is a loss, such loss is recognized at the time of the settlement. If the net result is a gain, such gain is not recognized until the proceeds are received by the reporting entity. A curtailment is an event which significantly alters the makeup of the pension plan. If a curtailment occurs, there are generally two components to any gain or loss (e.g., a reduction in the years of service required or the employees covered). Any unrecognized prior service cost shall be recognized as a loss. An increase or decrease in pension benefit obligations due to the curtailment will also result in a gain or loss, and is combined with the prior service cost loss. If the net result of the curtailment is a loss, such loss shall be recognized when it is probable that the curtailment will occur and that the effects can be reasonably estimated. If the net result is a gain, such gain shall not be recognized in earnings until the employees terminate or the plan suspension or amendment is adopted and the proceeds are received by the reporting entity. When such settlement or curtailment gains are recognized, any excess tax surcharges shall also be recognized.

Defined Contribution Plans

10. A defined contribution plan defines the amount of the employer's contributions to the plan and its allocation to plan participants. The pension benefit provided to the plan participant at retirement or termination depends on the amount of employer and employee contributions, earnings on plan investments and, in some plans, other participant forfeitures.

11. For defined contribution plans, the reporting entity shall expense contributions required by the plan over the period in which the employee vests in those contributions. Contributions to plan participants' accounts made prior to vesting shall be treated as prepaid expenses, and shall be

nonadmitted. Contributions required after participants terminate or retire shall be accrued and an expense shall be recorded over the working lives of the participants beginning at the date the participant initially vests in plan contributions.

12. Certain defined contribution plans may define the employer’s contribution as a percentage of the plan participants’ individual compensation rather than as a specific dollar amount which is allocated among the plan participants. If an employer's contributions to a defined contribution plan are in excess of those required under the plan and required to be allocated to individual participants, such amounts are recorded as a prepaid expense and nonadmitted under statutory accounting principles.

Disclosures

13. The following disclosures shall be made for defined benefit pension plans for which the reporting entity is directly liable:

a. A reconciliation of beginning and ending balances of the benefit obligation showing separately, if applicable, the effects during the period attributable to service cost, interest cost, contributions by plan participants, actuarial gains and losses, foreign currency exchange rate changes, benefits paid, plan amendments, business combinations, divestitures, curtailments, settlements, and special termination benefits;

b. The amount of the pension obligation for non-vested employees as of the most recent actuarial valuation date;

c. A reconciliation of beginning and ending balances of the fair value of plan assets showing separately, if applicable, the effects during the period attributable to actual return on plan assets, foreign currency exchange rate changes, contributions by the reporting entity, contributions by plan participants, benefits paid, business combinations, divestitures, and settlements;

d. The funded status of the plan, the amounts not recognized in the statement of financial position, and the amounts recognized in the statement of financial position, including:

i. The amount of any unamortized prior service cost;

ii. The amount of any unrecognized net gain or loss (including asset gains and losses not yet reflected in market-related value);

iii. The amount of any remaining unamortized, unrecognized net obligation or net asset existing at the initial date of application of this statement;

iv. The net pension or other postretirement benefit prepaid assets or accrued liabilities; and

v. Any intangible asset;

e. The amount of net periodic benefit cost recognized, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the amortization of the unrecognized incremental liability or incremental asset (see paragraph 20), the amount of recognized gains and losses, the amount of prior service cost recognized, and the amount of gain or loss recognized due to a settlement or curtailment;

f. The amount included in unassigned funds (surplus) for the period arising from a change in the additional minimum pension liability recognized pursuant to paragraph 7;

g. On a weighted-average basis, the following assumptions used in the accounting for the plan: assumed discount rate, rate of compensation increase (for pay-related plans), and expected long-term rate of return on plan assets;

h. If applicable, the amounts and types of securities of the reporting entity and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the reporting entity or related parties, and any significant transactions between the reporting entity or related parties and the plan during the period;

i. If applicable, any alternative amortization method used to amortize prior service amounts or unrecognized net gains and losses pursuant to paragraphs 26 and 33 of FAS 87;

j. If applicable, any substantive commitment, such as past practice or a history of regular benefit increases, used as the basis for accounting for the benefit obligation;

k. If applicable, the cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event; and

l. An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this statement.

Amounts related to the reporting entity’s results of operations shall be disclosed for each period for which an income statement is presented. Amounts related to the reporting entity’s statement of financial position shall be disclosed for each balance sheet presented.

14. The reporting entity shall disclose the amount of cost recognized for defined contribution pension plans during the period separately from the amount of cost recognized for defined benefit plans. The disclosures shall include a description of the nature and effect of any significant changes during the period affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

15. The reporting entity shall disclose the amount of contributions to multiemployer plans during the period. The reporting entity may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pensions and other postretirement benefits. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

16. Refer to the preamble for further discussion regarding disclosure requirements.

Consolidated/Holding Company Plans

17. The employees of many reporting entities are members of a plan sponsored by a parent company or holding company. A reporting entity who participates in these plans and is not directly liable for obligations under the plan shall recognize pension expense equal to its allocation from the holding company or parent company of the required contribution to the plan for the period. A liability shall be established for any such contributions due and unpaid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting

entity is directly liable for obligations under the plan, then the requirements outlined above in paragraphs 5-13 and 20-24 of this issue paper shall be applied.

DISCUSSION

18. The conclusions in paragraphs 5-13 and 20-24 adopt FAS 87, FAS 88, and FAS 132 with certain modifications. Those modifications and additional information from nullified interpretations are listed below:

a. Calculation of the pension obligation shall exclude non-vested employees. Partially vested employees are included only to the extent of their vested amounts;

b. A liability for ancillary benefits (primarily death and disability benefits) shall be accrued prior to the triggering event of these benefits for purposes of Projected Benefit Obligation (PBO) and Service Cost (SC) in accordance with the guidance in FAS 87 (use of a general vesting standard rather than an Internal Revenue Service income tax vesting standard);

c. A liability for protected, nonvested benefits shall be accrued for purposes of PBO and SC in accordance with the guidance in FAS 87 (use of a general vesting standard rather than an Internal Revenue Service income tax vesting standard);

d. A liability for nonvested, nonqualified benefits prior to retirement or when there is no longer a substantial risk of forfeiture, shall be accrued for purposes of PBO and SC in accordance with the guidance in FAS 87 (use of a general vesting standard rather than an Internal Revenue Service income tax vesting standard);

e. Entities shall perform actuarial analysis consistent with the three month guideline contained within FAS 87;

f. A reporting entity that utilizes an actuarial valuation as of a date prior to the financial statement date to measure plan assets and obligations, and determines that an additional minimum liability is required to be established in accordance with paragraph 37 of FAS 87, and if the reporting entity contributes amounts to the plan to fund that additional minimum liability prior to the financial statement date, such amount funded may be used to reduce the additional minimum liability recognized in the reporting entity's financial statements;

g. It is not acceptable statutory accounting practice to offset pension or postretirement benefits other than pensions (OPEB) liability generated by one plan against the prepaid asset of another plan;

h. Reporting entities may downsize their operations and in doing so, often offer severance pay and other benefits to displaced workers. Costs associated with downsizing shall be recorded as an expense in the financial statements;

i. The prepaid asset which results from an excess of the fair value of plan assets over the pension obligation shall be recorded as a nonadmitted asset;

j. Any intangible asset offsetting the minimum pension liability (excluding the unamortized incremental liability associated with transition) shall be nonadmitted and charged to surplus;

k. Any additional minimum liability in excess of unrecognized prior service cost that is reported as a component of unassigned funds (surplus), shall be classified as an aggregate write-in for gains and losses in surplus;

l. As of January 1, 2001 the pension obligation or asset not previously recognized related to vested employees may be recorded immediately or may be amortized over future periods;

m. Paragraphs 36-38 of FAS 87 are adopted with modifications described in paragraph 7 of this issue paper;

n. A net gain (net of excess tax surcharge) resulting from the settlement or curtailment of a pension plan is not recognized until the proceeds are received by the reporting entity;

o. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132 are rejected. All reporting entities shall follow the disclosure requirements included in paragraph 5 of FAS 132;

p. For the disclosures relating to the initial date of application in paragraph 5 of FAS 132, January 1, 2001 shall be considered the initial date of application; and

q. Pension disclosures relating to other comprehensive income in paragraph 5 of FAS 132 shall be made for unassigned funds (surplus) on a statutory basis.

19. This issue paper also adopts *FASB Emerging Issues Task Force No. 88-1, Determination of Vested Benefit Obligation for a Defined Benefit Pension Plan*, *FASB Emerging Issues Task Force No. 90-3, Accounting for Employers' Obligations for Future Contributions to a Mutliemployer Pension Plan*, *FASB Emerging Issues Task Force No. 91-7, Accounting for Pension Benefits Paid by Employers after Insurance Companies Fail to Provide Annuity Benefits*, and *FASB Emerging Issues Task Force No 96-5, Recognition of Liabilities for Contractual Termination Benefits or Changing Benefit Plan Assumptions in Anticipation of a Business Combination*.

Effective Date and Transition

20. As of January 1, 2001, the transition obligation or asset shall be determined as the difference between the vested projected benefit obligation and the fair value of plan assets. If prior to the effective date of January 1, 2001, the reporting entity has adopted FAS 87 for statutory accounting purposes, the transition obligation or asset calculated above shall be compared to those amounts previously recorded under FAS 87. The difference between these amounts represents an incremental asset or liability. If the reporting entity has not previously adopted FAS 87 for statutory accounting purposes, the entire transition asset or obligation represents the incremental asset or liability.

21. As of January 1, 2001, if the reporting entity calculates an incremental liability, this liability shall be recognized according to one of the two following methods:

a. The reporting entity may elect to record the entire incremental liability as a direct charge to surplus;

b. Alternatively, the reporting entity may elect to amortize the incremental liability as a component of net periodic pension cost over a period not to exceed 20 years.

22. As of January 1, 2001, if the reporting entity calculates an incremental asset, this asset shall be recognized according to one of the two following methods:

a. The reporting entity may elect to record the entire incremental asset as a direct credit to surplus;

b. Alternatively, the reporting entity may elect to accrue the incremental asset as a component of net periodic pension cost in an amount each period such that total net periodic pension cost may be reduced to an amount not less than zero (i.e., the accrual of the incremental asset may be used to offset current period net periodic pension cost).

23. An incremental asset resulting from a transition obligation that is less than an amount previously recorded under FAS 87 shall first reduce the recorded liability. Any remaining incremental asset shall be recorded as nonadmitted.

24. This issue paper is effective for years ending on or after, December 31, 2003. SSAP No. 8 applies to the calculation of the transition obligation in accordance with the adoption of FAS 87 for periods prior to the adoption of this statement. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. For reporting entities that expensed the additional minimum pension liability through income prior to January 1, 2004 under SSAP No. 8, if the additional minimum pension liability subsequently decreases because of factors such as asset value recovery, the reversal of the expense shall be through unassigned funds (surplus). Restatement of previously expensed additional minimum liability amounts through the income statement is not permitted.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

25. The following is excerpted from Interpretation 02-18

> The working group reached a consensus to require reporting entities to recognize the entire minimum pension liability in the financial statement. Further, any intangible asset offsetting the minimum pension liability shall be nonadmitted and charged to surplus.

26. See Issue Paper No. 8 for additional statutory references

Generally Accepted Accounting Principles

27. The following is excerpted from *FASB Statement No. 130, Other Comprehensive Income* (FAS 130):

> 10. This Statement uses the term comprehensive income to describe the total of all components of comprehensive income, including net income.[4] This Statement uses the term other comprehensive income to refer to revenues, expenses, gains, and losses that under generally accepted accounting principles are included in comprehensive income but excluded from net income. This Statement does not require that an enterprise use the terms comprehensive income or other comprehensive income in its financial statements, even though those terms are used throughout this Statement.[5]
>
> [4] FAS130, Footnote 4--This Statement uses the term net income to describe a measure of financial performance resulting from the aggregation of revenues, expenses, gains, and losses that are not items of other comprehensive income as identified in this Statement. A variety of other terms such as net earnings or earnings may be used to describe that measure.
>
> [5] FAS130, Footnote 5--Paragraph 40 of Concepts Statement 5 states that "just as a variety of terms are used for net income in present practice, the Board anticipates that total nonowner changes in equity, comprehensive loss, and other equivalent terms will be used in future financial statements as names for comprehensive income."

Statutory Issue Paper No. 124

Treatment of Cash Flows When Quantifying Changes in Valuation and Impairments, An Amendment to SSAP No. 43—Loan-Backed and Structured Securities

STATUS
Finalized December 2, 2007

Original SSAP and Current Authoritative Guidance: SSAP No. 43R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. *SSAP No. 43—Loan-Backed and Structured Securities* (SSAP No. 43) requires that loan-backed and structured securities shall be revalued using new prepayment assumptions by utilizing either the prospective or retrospective adjustment methodologies. When calculating these new prepayment assumptions, SSAP No. 43 states that undiscounted cash flows should be utilized.

2. Concerns have been raised that an undiscounted cash flows approach for impairment analysis does not properly evaluate certain asset-backed or structured securities. These securities are subject to other than temporary impairment due to deterioration in the credit quality of the underlying securities which serve as the source of cash flow for the payment of interest, and, depending upon the structure of the security, in some cases may also serve as the source for a substantial portion of the return of principal. The issue is that other than temporarily impaired securities are not accurately identified or reported under SSAP No. 43 impairment analysis.

3. The purpose of this issue paper is to amend SSAP No. 43 to require the use of fair value for impairment analysis and subsequent valuation of loan-backed and structured securities, and remain consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy.

SUMMARY CONCLUSION

4. This issue paper amends paragraphs 14 through 16 of SSAP No. 43 to the following:

> 14. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless ~~the undiscounted anticipated cash flow is less than the carrying amount of the investment~~ the security is determined to be other than temporarily impaired.
>
> 15. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the

revised yield been applied since inception, and investment income is correspondingly decreased or increased.

16. ~~Regardless of whether a reporting entity is using a prospective or retrospective method, if the revaluation based on new currently estimated cash flows results in a negative yield (i.e., undiscounted estimated future cash flows are less than the current book value), an other than temporary impairment shall be considered to have occurred.~~ If it is determined that the decline in fair value of the security is ~~an~~ other than temporary, ~~impairment has occurred,~~ then the cost basis of the security shall be written down to fair value. ~~the undiscounted estimated future cash flows and t~~The amount of the write down shall be accounted for as a realized loss. An interest related decline in value shall be considered other than temporary only when a reporting entity has the intent to sell the investment, at the reporting date, before recovery of the cost of the investment. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. Credit related other than temporary impairment losses shall be recorded through the AVR; interest related other than temporary impairment losses shall be recorded through the IMR. The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore, the prospective adjustment method must be utilized for periods subsequent to the loss recognition.

Effective Date and Transition

5. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will be effective for reporting periods beginning on or after January 1, 2009. A change resulting from the adoption of the finalized SSAP shall be accounted for prospectively.

DISCUSSION

6. Two forms of asset-backed or structured securities, commonly referred to as principal protected securities and combination notes, pose a significant risk of credit related impairment. A typical principal protected security is structured such that cash and securities are deposited in a trust, with the trust issuing new securities on the basis of the deposited assets. The cash is used to purchase a zero coupon U.S. government strip (or similar low risk security) with the intent that it will accrete to an amount equal to the original principal of the structured security at maturity. The deposited higher risk securities support the payment of interest. In dynamically hedged structures, the allocation to the low risk securities varies throughout the life of the structured security based on the performance of the higher risk assets. In this type of structure, the higher risk assets may be supporting the interest payments as well as providing for a substantial portion, or potentially all, of the return of principal.

7. The allocation to the low risk strip is used as a hedge to advocate the position that the security is "principal protected" since the intent is for the investor to be "guaranteed" a return of principal at maturity. This position ignores the economic reality that in some structured security arrangements, particularly those that are dynamically hedged or leveraged, the initial value of the low risk strip may be a very small percentage of the principal value of the assets in the trust, with the balance being in residual tranches of higher risk securities.

8. Recently there have been a large number of residual tranches used in principal protected securities that have experienced significant declines in value purely as a result of the crystallization of credit risk. When the value of the residual securities in these structures is diminished, the market value of

the structured security moves toward the present value of the low risk strip. Though the value of the structured securities has often been significantly impaired, in many cases, other than temporary impairment recognition would not be required in the financial statements under an undiscounted cash flows approach to impairment analysis.

9. From an admitted asset perspective, in such an instance, a reporting entity with solvency or liquidity problems could only sell such an investment, or force the trust to unwind, for an amount that would be substantially less than the original value of the security. Thus, the fair value of the investment is the amount that would be available to the reporting entity to meet its current and future obligations, and is the amount that should be reflected in the financial statements.

10. SSAP No. 43 impairment guidance does not properly identify these securities as other than temporarily impaired. The use of undiscounted cash flows causes concern among regulators because it ignores the credit dynamic described in paragraphs 6 through 9, and does not provide for proper analysis or valuation of these securities. The fair value of the security in such a situation is what remains of the principal at the measurement date, and it is a substantially diminished value. In order to provide for conservative, consistent and accurate financial statements, an impairment approach that utilizes fair value is necessary to properly analyze and value this class of securities.

11. During discussion of this issue, concerns were raised regarding the impact of the proposed changes to SSAP No. 43 on certain high quality loan-backed securities, such as those issued by the Government National Mortgage Association (GNMA) which are backed by the full faith and credit of the U.S. Government, or those issued by the Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (FHLMC) which are generally considered to be of extremely high credit quality. The primary concern was that under a fair value impairment approach, these securities would be considered other than temporarily impaired when in an unrealized loss position due to the general fluctuation of market interest rates, though a reporting entity had the intent to hold such a security to maturity.

12. In 2006, the Emerging Accounting Issues Working Group (EAIWG) of the NAIC released *INT 06-07: Definition of Phrase "Other Than Temporary"*(INT 06-07), to address the GAAP guidance issued by the FASB in *FSP FAS 115-1/124-1: The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments* (FSP FAS 115-1/124-1). Within INT 06-07, the EAIWG concluded that interest related declines in value should only be considered other than temporary impairments when a reporting entity has the intent to sell the security at the reporting date, before recovery of the cost of the investment. When evaluating for interest related impairment, a reporting entity should consider whether its cash or working capital requirements and contractual or regulatory obligations indicate that an investment may need to be sold before the forecasted recovery occurs.

13. Given this interpretation by the EAIWG, and considering that the primary motivation of regulators in proposing revisions to SSAP No. 43 impairment guidance was the proper recognition of credit quality related impairment, the Statutory Accounting Principles Working Group (SAPWG) included language in the exposure draft to specify that interest related declines in value should be considered other than temporary only when the reporting entity has the intent to sell the security, at the reporting date, before recovery of the cost of the investment. This additional guidance is consistent with the statutory accounting interpretation provided in INT 06-07.

14. For clarification purposes, the SAPWG also added language relevant to reporting entities required to maintain an Asset Valuation Reserve (AVR) and an Interest Maintenance Reserve (IMR). The additional guidance specifies that, for companies required to maintain such reserves, credit related other than temporary impairment losses are to be recorded through the AVR, while interest related other than temporary impairment losses are to be recorded through the IMR.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

15. SSAP No. 43, paragraphs 14 through 16:

> 14. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the undiscounted anticipated cash flow is less than the carrying amount of the investment.
>
> 15. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.
>
> 16. Regardless of whether a reporting entity is using a prospective or retrospective method, if the revaluation based on new prepayment assumptions results in a negative yield (i.e., undiscounted estimated future cash flows are less than the current book value), an other than temporary impairment shall be considered to have occurred. If it is determined that a decline in the fair value of a loan-backed security is other than temporary, the cost basis of the security shall be written down to the undiscounted estimated future cash flows and the amount of the write down shall be accounted for as a realized loss (which shall be included in Interest Maintenance Reserve (IMR), if applicable). The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore, the prospective adjustment method must be utilized for periods subsequent to the loss recognition.

16. INT 06-07, paragraphs 1 through 8:

> 1. The Accounting Practices and Procedures Manual contains guidance for determining when an investment is considered impaired within each of the above identified statements. Those statements should also be used to determine the measurement of an impairment loss. Each of the above statements also makes reference to an “other than temporary” decline in fair value. This interpretation is designed to address questions related to that phrase, as well as summarize the statutory accounting process for determining when an investment is considered impaired.
>
> **Step 1: Determine Whether an Investment Is Impaired**
>
> 2. The decision for determining when an investment is considered impaired is dictated by the applicable SSAP and the respective impairment indicators included in each of the SSAPs. If an impairment indicator is present, the determination of an impairment shall be assessed at the individual security or investment level as reported in the annual statement and supporting schedules. For those SSAPs that require the reporting entity to use the fair value to determine if an impairment has occurred, the determination of that value shall be consistent with how the term fair value is defined within the Glossary of the Accounting Practices and Procedures Manual. Once a reporting entity has determined that an impairment indicator is present, the reporting entity shall continue to evaluate whether the investment is impaired each subsequent reporting period until either (a) the investment experiences a recovery of the fair value up to (or beyond) its carrying value or (b) the investor recognizes an other-than-temporary impairment loss.

Step 2: Evaluate Whether an Impairment Is Other Than Temporary

3. There are numerous factors to be considered when determining whether an impairment is other than temporary and their relative significance will vary from case to case. The Emerging Accounting Issues Working Group (working group) has been asked if the phrase "other than temporary" should be interpreted to mean "permanent". The working group1 believes the Statutory Accounting Principles Working Group consciously chose the phrase "other than temporary" as the analysis was not intended to determine whether an individual security or investment was "permanently impaired." The fair value of assets may decline for various reasons. The market price may be affected by general market conditions, which reflect prospects for the economy as a whole, or by specific information pertaining to an industry or an individual company. Such declines require further investigation by management. Acting upon the premise that a write-down may be required, management should consider all available evidence to evaluate the fair value of its investment.

4. The working group believes that the following items are only a few examples of the factors, which, individually or in combination, indicate that a security's decline in value is specific to an issuer's fundamental credit difficulties, or that a non-interest related decline is other than temporary and that a write-down of the carrying value is required:

a. The length of time and the extent to which the fair value has been less than cost;

b. The financial condition and short-term prospects of the issuer, including any specific events that may influence the operations of the issuer, such as changes in technology, that may impair the earnings potential of the asset or the discontinuance of a segment of the business that may affect the future earnings potential; or

c. The intent and ability of the holder to retain its investment in the issuer for a period of time sufficient to allow for any anticipated recovery in value.

5. An interest related impairment should be deemed other-than-temporary when an investor has the intent to sell an investment, at the reporting date, before recovery of the cost of the investment. The investor should consider whether its cash or working capital requirements and contractual or regulatory obligations indicate that the investment may need to be sold before the forecasted recovery occurs. The term "interest related" includes a declining value due to both increases in the risk free interest rate and general credit spread widening. Credit spreads can widen or contract for a variety of reasons, including supply/demand imbalances in the marketplace or perceived higher/lower risk of an entire sector. If the declining value is caused, in whole or in part, due to credit spreads widening, but not due to fundamental credit problems of the issuer, the change in credit spreads is deemed to be interest related. Fundamental credit problems exist with the issuer when there is evidence of financial difficulty that may result in the issuer being unable to pay principal or interest when due.

6. Unless evidence exists to support the assertion that the decline in fair value below carrying value is temporary, a write-down, accounted for as a realized loss, should be recorded. In accordance with the guidance of the SSAPs, such loss should be recognized in income for the period in which other than temporary impairment is determined to have occurred. The adjusted carrying value reflecting the impairment loss of the individual security or investment shall be the new cost basis of the individual security or investment.

7. The working group has also been asked if it is appropriate for reporting entities, independent auditors or state examiners to apply predefined thresholds to the phrase "other than temporary"? The working group is aware that certain insurers, independent auditors and state examiners, over time, have developed quantitative thresholds as "rules of thumb" to assist in the evaluation of asset impairment. One rule of thumb in particular suggests that if the fair value is less than its carrying value by 20 percent or more, then it is considered to be other than temporarily impaired. Another suggests that an asset is other than temporarily impaired if the fair value has been less than cost for more than 6 months. The use of a numerical threshold may

provide the basis for a preliminary assumption that – without considering all relevant circumstances – an impairment may have occurred. Identifying the impairment is only the beginning of the analysis; it cannot appropriately be used as a substitute for a full analysis of all relevant qualitative considerations. Exclusive reliance on such thresholds removes the ability of management to apply its judgment, a concept inherent to the impairment model.

Step 3: If the Impairment is Other Than Temporary, the Cost Basis of the Individual Asset Shall Be Written Down to a New Cost Basis and the Amount of the Write-Down Is Accounted for as a Realized Loss

8. If an impairment is considered other than temporary, the cost or carrying value of the asset should be written down to reflect its value in accordance with the relevant SSAP. A company's management should follow the impairment guidance in the SSAP pertaining to that particular asset class while considering various factors on a case-by-case basis in determining the amount of the realized loss that should be recorded.

Generally Accepted Accounting Principles

Statutory Issue Paper No. 125

Accounting for Low Income Housing Tax Credit Property Investments

STATUS
Finalized December 6, 2004

Original SSAP and Current Authoritative Guidance: SSAP No. 48 and SSAP No. 93

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48) prescribes accounting treatment for the valuation of Limited Liability Companies. However, current statutory accounting principles do not specifically address accounting for the unique manner in which federal Low Income Housing Tax Credit Property (LIHTC) investments provide a return of investment. Due to the fact that most of these investments are structured as limited partnerships, the majority of these investments fall within the current guidance prescribed by SSAP No. 48. LIHTC investments provide a return on investment in a unique manner, which is not fully recognized under current statutory accounting in SSAP No. 48.

2. Generally accepted accounting principles (GAAP) guidance for federal LIHTC investments is addressed in *Emerging Issues Task Force* (EITF) *94-1: Accounting for Tax Benefits Resulting from Investments in Affordable Housing Projects* (EITF 94-1). EITF 94-1 is listed as not applicable to statutory accounting in *Issue Paper No. 99—Nonapplicable GAAP Pronouncements* (Issue Paper No. 99).

3. The purpose of this issue paper is to provide statutory accounting principles for LIHTC by reconsidering the applicability of EITF 94-1 as appropriate statutory accounting treatment and the development of an accounting model for federal LIHTC investments that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

4. Some states have enacted laws that create programs by which transferable state tax credits are granted to entities under certain specified conditions (e.g., an entity makes an investment in a particular industry). Investments in transferable state tax credits are not within the scope of this issue paper.

RECOMMENDED CONCLUSION

5. This issue paper supersedes paragraph 1 of SSAP No. 48, as follows:

> 1. This statement establishes statutory accounting principles for investments in joint ventures, partnerships, and limited liability companies. This statement does not address the accounting for investments in partnerships and limited liability companies that invest in federal Low Income Housing Tax Credit Properties as discussed in *Issue Paper No. 125—Accounting for Low Income Housing Tax Credit Property Investments.*

6. This issue paper modifies Issue Paper No. 99 to remove the reference to EITF 94-1 and in turn, adopts EITF 94-1 with certain modifications.

7. Subject to adoption of a Statement of Statutory Accounting Principles on this topic federal, LIHTC investments held by reporting entities will meet the definition of an asset as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admissible assets to the extent that they comply with the requirements of this issue paper.

8. The modifications to EITF 94-1 are as follows:

a. LIHTC investments (regardless of whether they are guaranteed) shall be initially recorded at cost and carried at amortized cost unless considered impaired as discussed in paragraphs 13-16. The amortized cost method utilized shall be similar to the amortized cost method discussed in EITF 94-1, with a modification to include federal tax benefits during the holding period because the primary value of the LIHTC is derived during the property holding period (typically 15 years). An illustration has been in Appendix A to this statement. A reporting entity investor using the cost method shall amortize any excess of the carrying amount of the investment over its estimated residual value during the periods in which federal tax credits are allocated to the investor. The estimated residual value used in determining the amount to be amortized is the estimated residual value at the end of the last period in which federal tax credits are allocated to the investor and should not reflect anticipated inflation. Annual amortization should be based on the proportion of federal tax credits received in the current year to total estimated federal tax credits to be allocated to the investor.

b. All LIHTC investments in which an investor is a partner or limited partner in affordable housing project for both legal and tax purposes and the investor's liability is limited to its capital investment shall follow the accounting guidance of this issue paper.

c. Federal tax credits shall be recognized in the income statement as an offset to federal taxes in the tax reporting year in which the tax credit is utilized in accordance with *SSAP No. 10—Income Taxes* (SSAP No. 10).

d. Tax benefits received, other than tax credits, shall be accounted for pursuant to SSAP No. 10. Amortization shall be reported as a component of net investment income.

e. *AICPA Statement of Position 78-9, Accounting for Investments in Real Estate Ventures* (SOP 78-9) is rejected for purposes of statutory accounting in SSAP No. 48. This issue paper does not intend to establish SOP 78-9 as applicable to statutory accounting.

f. *FASB Interpretation No. 46, Consolidation of Variable Interest Entities* (FIN 46) is rejected for purposes of statutory accounting in *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). This issue paper does not intend to establish FIN 46 as applicable to statutory accounting.

g. Many LIHTC investments require future equity contributions by the investor (equity contributions), that may be contingent on a variety of conditions, such as such as receiving representations, contract performance, meeting occupancy requirements, etc. If the commitment by the investor to provide equity contributions meets the definition of a liability as defined in *SSAP No. 5—Liabilities Contingencies and Impairments of Assets* a liability shall be recorded. If the commitment to provide equity contributions does not meet the definition of a liability, the contingent commitment shall be disclosed in the notes to the financial statements with other contingent commitments.

h. *EITF 85-16: Leveraged Leases* (EITF 85-16) is adopted for purposes of statutory accounting in *SSAP No. 22—Leases* (SSAP No. 22). This issue paper does not intend to readdress the conclusions reached in SSAP No. 22.

i. *SSAP No. 46—Investments in Subsidiary, Controlled, and Affiliated Entities* and *SSAP No. 88—Investments in Subsidiary, Controlled, and Affiliated Entities, a Replacement of SSAP No. 46* should be utilized to account for investments that qualify as subsidiary, controlled or affiliated entities.

j. The impairment guidance contained in this issue paper shall be followed.

k. For statutory accounting purposes, deferred taxes are not reported as a component of income from continuing operations in the income statement; rather, deferred taxes are recognized as a separate component of gains and losses in unassigned funds (surplus).

9. Additional funding that does not result in additional federal tax credits for the investor shall be expensed as a component of net investment income. In the event for a reporting entity obtains additional federal tax credits occurs for a LIHTC investment, the following shall be applied:

a. If additional tax credits are allocated without additional funding, the additional tax credits shall not be afforded any value; rather, the tax benefit is only recognized when realized.

b. If additional funding directly related to the additional tax credits is required, the provisions of this issue paper shall be followed as if the additional funding were a new investment in LIHTC properties.

10. An investment amortized to residual value in accordance with paragraph 8.a. of this issue paper shall not be revalued under any other method during or subsequent to the amortization period, other than as in this issue paper.

11. Changes in estimated losses shall be accounted for in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* as a change in estimate and included as a component of net investment income.

12. This issue paper shall be interpreted by *INT 02-07: Definition of Phrase "Other Than Temporary."* The remaining Interpretations of SSAP No. 48 are deemed not applicable.

Impairment

13. Reporting entities with investments in LIHTC properties shall complete and document an impairment analysis at each reporting period. If it is determined that an impairment exists, the book value of the LIHTC investment shall be compared to the present value of future federal tax benefits discounted at a risk free rate of return, i.e., the rate on U.S. Treasury obligations of a similar duration,_and the investment shall be written down if the book value is higher. This will result in a new cost basis and the amount of the write-down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in fair value.

14. Among other things, an impairment shall be considered to have occurred if it is probable that future federal tax benefits will not be received as expected. For purposes of determining impairment, future federal tax benefits consist of both estimated tax losses and anticipated tax credits. Loan default or a reasonable probability of credit recapture would signify that tax benefits would not be received as expected.

15. In a multi-tiered partnership, whereby one limited partnership exists only to hold interests in other limited partnerships that are each invested in different developments, the impairment should be determined at the lowest tier. The partnership that holds the assets in which the impairment is determined to exist will be adjusted to a new cost basis representing the lower of book value or the present value of future federal tax benefits discounted at a risk free rate of interest. This new cost basis and related realized loss shall be recognized by the holder of a LIHTC investments.
16. It should be noted that a foreclosure of a single property within an LIHTC investment fund only affects the loss of federal tax credits on a proportional basis. For example, a foreclosure of one property in a six property fund generating equal levels of credits would only eliminate 1/6 of the credits, thereby, only affecting 1/6 of the LIHTC investment fund value to the individual investors.

Audited Financial Statements

17. The reporting entity's return and book value of an LIHTC investment is reliant upon maintaining federal tax credit eligibility and not its share of the equity as reported on a financial statement. As such, a reporting entity shall monitor the federal tax credit eligibility of an LIHTC investment through requiring either audited GAAP or audited tax basis financial statements. In the event an audited GAAP or audited tax basis financial statement is not obtained, the asset shall be nonadmitted.

Effective Date and Transition

18. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years ending on or after December 31, 2005. A change resulting from the adoption of the finalized SSAP shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

DISCUSSION

19. The purpose of this issue paper is to address the unique manner in which LIHTC investments provide a return on investment by reconsidering the applicability of EITF 94-1 as appropriate statutory accounting treatment and the development of an accounting model for LIHTC investments that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy.

20. SSAP No. 48 prescribes accounting treatment for the valuation of limited liability companies. Most of these investments are structured as limited partnerships, and, the majority of these investments fall within the guidance prescribed by SSAP No. 48. LIHTC investments provide a return on investment in a unique manner, which is not fully recognized under current statutory accounting in SSAP No. 48. Currently, such treatment would generally lead to a valuation based on the audited generally accepted accounting principles (GAAP) equity of the limited partnership and; consequently, its underlying real estate investment. However, this treatment does not recognize the value of the federal tax credits (a direct offset to federal income taxes) and the pass through of federal tax losses to the investor. Resale valuation of these investments is based on the present value of the future stream of federal tax credits and deductible losses, and not the market value of the underlying real estate.

21. Current guidance under SSAP No. 48 would require that the equity accounting approach be used to account for investments in LIHTC structured in the form of investments in limited partnerships. One of the implicit assumptions behind the equity methodology is that the operating activities of the entity are reflective of the value being created by the entity. However, this assumption is contrary to how a LIHTC investment provides investment return. The market value of an LIHTC investment is generally unaffected

by the operational activities occurring at the operational level of the entity (i.e. generally considered to be the "property" level for investments in more traditional equity real estate deals). Rather, the value of an LIHTC is directly tied to the remaining stream of federal tax benefits (credits and tax losses) available to LIHTC investors. Investments in LIHTC investments, and the related pricing to the investors, are driven primarily by the level of federal tax credits and tax losses that are projected to be produced by the LIHTC during its "credit-producing life."

22. This critical element of value is typically known with a high degree of certainty before the deal is marketed to potential investors. The degree of certainty regarding projected federal tax credits and tax losses, coupled with market rate returns and below market risk when compared to alternative investments, are what attract investors to an LIHTC investment. Likewise, there is an active secondary market for LIHTC deals. As with primary market transactions, pricing is driven by the remaining federal tax credit and deductible loss streams in the LIHTC investment at resale. Structurally, these investments are typically owned by multiple investors with varying interests in a top tier limited partnership, which in turn holds direct interests in the operating limited partnerships within a single LIHTC investment fund. In other words, a single investor may hold a 15% interest in the "fund" level partnership, which in turns owns 99% interests in 10 operating level limited partnerships. Although, not technically guaranteed as contemplated in EITF 94-1, investment risk in LIHTC's has proven to be historically low, typically reflecting a default experience similar to that of secured commercial mortgages versus the higher loss rate typically associated with equity real estate investments.

23. The proportional amortized cost method discussed in EITF 94-1 is in line with the Statutory Accounting Concepts of Conservatism and Recognition because the primary value of the LIHTC is derived during the property holding period (typically 15 years). In contrast, GAAP basis financial statements for the limited partnership generally utilize a 40-year depreciation life, which ultimately is picked up by the investor when applying the GAAP equity method.

24. The proportional amortized cost approach results in an investment balance at the end of each accounting period that is more indicative of the liquidation value at that point in time than does the equity method. An impairment analysis should also be made when facts and circumstances indicate an impairment has occurred as well as at the end of each accounting period. If it is probable that the future federal tax benefits will not be received as expected, then an impairment exists, and, the investment should be written down to the lower of fair value or the present value of future federal tax benefits discounted at a risk free rate of return. Since write-down adjustments would be based on actual property level foreclosure or loss of qualification due to occupancy levels or other compliance issues with tax code provisions within an LIHTC fund, subjectivity with respect to the timing and the amount of the write-down would be eliminated. An impairment shall be recorded as a realized loss and the investment written down to the new cost basis.

25. In summary, application of the equity method of accounting for LIHTC investments is inappropriate because the value of the asset is independent from the value of the real estate. Investment balances provided by this methodology are not necessarily reflective of the value that would be received if the assets were to be liquidated. Therefore, the adoption of the proportional cost amortization approach outlined in EITF 94-1 is recommended. This approach leads to a more realistic valuation of the investment and takes into account the fact that the primary value to the investor dissipates to zero when the federal tax credits are no longer available.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

26. *SSAP No. 22—Leases* provides the following adoption of EITF 85-16 in the relevant literature section of the SSAP.

> Relevant Literature
>
> 26. This statement rejects FAS 13, as amended and interpreted, except for certain of the guidance on operating leases, sale-leaseback transactions and leveraged leases (i.e., paragraphs 15, 16.(b., c., d.), 19.(a., b.), 23.(b., c.), 36, 37, 38.b., 39.c. and, 42-47). A complete list of all FASB Statements, Interpretations and Technical Bulletins adopted and rejected in this statement is as follows:
>
> a. FASB Statement No. 13, Accounting for Leases, [paragraphs 15, 16.(b., c., d.), 19.(a., b.), 23.(b., c.), 36, 37, 38.b., 39.c., 42-47 adopted; all other paragraphs rejected];
>
> aa. FASB Emerging Issues Task Force No. 85-16, Leveraged Leases [adopted in its entirety]

27. *SSAP No. 48—Investments in Joint Ventures, Partnerships and Limited Liability Companies* provides the following inclusion of limited liability companies in the scope paragraph.

> SCOPE OF STATEMENT
>
> 1. This statement establishes statutory accounting principles for investments in joint ventures, partnerships, and limited liability companies.

Generally Accepted Accounting Principles

28. EITF 94-1: Accounting for Tax Benefits from Investments in Affordable Housing Projects provides the following guidance regarding the valuation of

> EITF 94-1 ISSUE
>
> The Revenue Reconciliation Act of 1993, enacted in August 1993, retroactively extended and made permanent the affordable housing credit, which had expired after June 30, 1992. Investors in entities operating qualified affordable housing projects receive tax benefits in the form of tax deductions from operating losses and tax credits. The tax credits are allowable on the tax return each year over a 10-year period as a result of renting a sufficient number of units to qualifying tenants and are subject to restrictions on gross rentals paid by those tenants. These credits are subject to recapture over a 15-year period starting with the first year tax credits are earned. Corporate investors generally purchase an interest in a limited partnership that operates the qualified affordable housing projects.
>
> The issue is how an entity that invests in a qualified affordable housing project through a limited partnership should account for its investment.
>
> EITF 94-1 DISCUSSION
>
> The Task Force reached a consensus that immediate recognition at the time the investment is purchased of the entire benefit of the tax credits to be received during the term of a limited partnership investment in a qualified affordable housing project is not appropriate (that is, affordable housing credits should not be recognized in the financial statements prior to their inclusion in the investor's tax return).
>
> The Task Force reached a consensus that an entity that invests in a qualified affordable housing project through a limited partnership investment may elect to account for the investment using the effective yield method (described in the following two paragraphs) provided all of the following conditions are met:
>
> a. The availability (but not necessarily the realization) of the tax credits allocable to the investor is guaranteed by a creditworthy entity through a letter of credit, a tax indemnity agreement, or another similar arrangement.
>
> b. The investor's projected yield based solely on the cash flows from the guaranteed tax credits is positive.

c. The investor is a limited partner in the affordable housing project for both legal and tax purposes and the investor's liability is limited to its capital investment.

Under the effective yield method, the investor recognizes tax credits as they are allocated and amortizes the initial cost of the investment to provide a constant effective yield over the period that tax credits are allocated to the investor. The effective yield is the internal rate of return on the investment, based on the cost of the investment and the guaranteed tax credits allocated to the investor. Any expected residual value of the investment should be excluded from the effective yield calculation. Cash received from operations of the limited partnership or sale of the property, if any, should be included in earnings when realized or realizable.

Under the effective yield method, the tax credit allocated, net of the amortization of the investment in the limited partnership, is recognized in the income statement as a component of income taxes attributable to continuing operations. Any other tax benefits received should be accounted for pursuant to Statement 109.

For a limited partnership investment in a qualified affordable housing project not accounted for using the effective yield method, the Task Force reached a consensus that the investment should be accounted for in accordance with SOP 78-9. (In accounting for such an investment under SOP 78-9, the consensuses in this Issue that are not related to the effective yield method should be applied.) The Task Force observed that SOP 78-9 generally requires use of the equity method of accounting for limited partnership investments unless the limited partner's interest is so minor as to give the partner virtually no influence over partnership operating and financial policies. [Note: See STATUS section.] The Task Force also noted that the AICPA's Accounting Standards Executive Committee is reconsidering the guidance in SOP 78-9 in its project titled, "Accounting for Investors' Interests in Unconsolidated Real Estate Joint Ventures."

The Task Force also reached a consensus that an investor using the cost method should amortize any excess of the carrying amount of the investment over its estimated residual value during the periods in which tax credits are allocated to the investor. The estimated residual value used in determining the amount to be amortized is the estimated residual value at the end of the last period in which tax credits are allocated to the investor and should not reflect anticipated inflation. Annual amortization should be based on the proportion of tax credits received in the current year to total estimated tax credits to be allocated to the investor.

The Task Force reached a consensus that a limited partnership investment in a qualified affordable housing project should be reviewed periodically for impairment.

The Task Force reached a consensus that a liability should be recognized for delayed equity contributions that are unconditional and legally binding. A liability also should be recognized for equity contributions that are contingent upon a future event when that contingent event becomes probable. The Task Force observed that Statement 5, Issue No. 85-16, "Leveraged Leases," and Concepts Statement 6 provide additional guidance on the accounting for delayed equity contributions.

The Task Force observed that the decision to apply the effective yield method of accounting would be an accounting policy decision rather than a decision to be applied to individual investments that qualify for use of the effective yield method. The SEC Observer commented that the SEC staff believes that it would be inappropriate to extend the effective yield method of accounting to analogous situations.

Exhibit 94-1A illustrates the application of the consensuses in this Issue to a limited partnership investment in an affordable housing project accounted for using the cost, equity, and effective yield methods.

EITF 94-1 STATUS

The SEC Observer at the May 18-19, 1995 meeting discussed a related issue in an announcement. The announcement addresses the SEC staff's position concerning the application of the equity method to investments in limited partnerships. [Note: See Topic No. D-46 in Appendix D.]

Interpretation 46, which was issued in January 2003, addresses consolidation by business enterprises of variable interest entities, which may include some limited partnerships. Interpretation 46 requires a variable interest entity to be consolidated by an enterprise if that enterprise will absorb a majority of the entity's expected losses or is entitled to receive a majority of the entity's expected residual returns or both. The consolidation requirements of Interpretation 46 apply immediately to variable interest entities created after January 31, 2003. The consolidation requirements apply to older entities in the first fiscal year or interim period beginning after June 15, 2003. Certain of the disclosure requirements apply in all financial statements issued after January 31, 2003, regardless of when the variable interest entity was established.

FSP FIN 46-6 deferred the effective date for applying the provisions of Interpretation 46 for:
1. Interests held by a public entity in variable interest entities created before February 1, 2003, if the public entity has not issued financial statements reporting that interest in accordance with Interpretation 46. The application of Interpretation 46 to those interests is deferred until the end of the first period ending after December 15, 2003.
2. Nonregistered investment companies accounting for their investments in accordance with the specialized accounting guidance in the investment company Guide.
No further EITF discussion is planned.

See Appendix A to this issue paper for illustration of the amortized cost method (modified to include tax benefits).

EITF 85-16: Leveraged Leases

EITF 85-16 (B) DISCUSSION
The Task Force reached a consensus that the type of recourse debt resulting from the delayed equity investment does not contradict the notion of nonrecourse under paragraph 42.c. of Statement 13 and, therefore, does not preclude leveraged lease accounting as long as other requirements of leveraged lease accounting are met. The Task Force also agreed that the lessor's related obligation should be recorded as a liability at present value at the inception of the lease. The Task Force agreed that recognition of the liability would increase the lessor's net investment on which the lessor bases its pattern of income recognition. It was noted that while the increase to the net investment results in an increase in income, it tends to be offset by the accrual of interest on the liability.

Appendix A – Low Income Housing Tax Credit Property Investments

A Limited Partnership Investment in an Affordable Housing Project Accounted for Using the Amortized Cost Method (modified to include tax benefits):

This appendix is based on EITF 94-1 “Schedule 3 Cost Method with Amortization with modifications to include tax benefits.

Terms:
Date of Investment: January 1, 20X1
Purchase Price of Investment: $100,000

Assumptions:

1. All cash flows (except initial investment) occur at the end of each year.
2. Depreciation expense is computed, for book and tax purposes, using the straight-line method with a 27.5 year life (the same method is used for simplicity).
3. The investor made a $100,000 investment for a 5 percent limited partnership interest in the project at the beginning of the first year of eligibility for the tax credit.
4. The partnership finances the project cost of $4,000,000 with 50 percent equity and 50 percent debt.
5. The annual tax credit allocation (equal to 8 percent of the project's original cost) will be received for a period of 10 years.
6. The investor's tax rate is 35 percent.
7. For simplicity, the project will operate with break-even pretax cash flows including debt service during the first 15 years of operations.
8. The project's taxable and book loss will be equal to depreciation expense.
9. The investor will maintain the investment for 15 years (so there will be no recapture of tax credits).
10. The investor expects that the estimated residual value of the investment will be zero.

	Beginning Investment Balance	Tax Credits	Tax Depreciation	Tax Loss Benefit	Total Tax Benefits	Amortization	Ending Investment Balance
Year	1	2	3	4	5	6	7
0							100,000
1	100,000	16,000	7,273	2,546	18,546	9,358	90,642
2	90,642	16,000	7,273	2,546	18,546	9,358	81,285
3	81,285	16,000	7,273	2,546	18,546	9,358	71,927
4	71,927	16,000	7,273	2,546	18,546	9,358	62,569
5	62,569	16,000	7,273	2,546	18,546	9,358	53,212
6	53,212	16,000	7,273	2,546	18,546	9,358	43,854
7	43,854	16,000	7,273	2,546	18,546	9,358	34,496
8	34,496	16,000	7,273	2,546	18,546	9,358	25,139
9	25,139	16,000	7,273	2,546	18,546	9,358	15,781
10	15,781	16,000	7,273	2,546	18,546	9,358	6,423
11	6,423		7,273	2,546	2,546	1,285	5,139
12	5,139		7,273	2,546	2,546	1,285	3,854
13	3,854		7,273	2,546	2,546	1,285	2,569
14	2,569		7,273	2,546	2,546	1,285	1,285
15	1,285		7,273	2,546	2,546	1,285	-
Total		160,000	109,095	38,190	198,190	100,000	

1. Beginning-of-year investment for a 5 percent limited partnership interest in the project.
2. 8 percent tax credit on $200,000 tax basis of the underlying assets.
3. Tax Loss = Tax Depreciation (assumption 7) - $200,000 tax basis of the underlying assets using the straight-line method over 27.5 years.
4. Column (3) × 35% tax rate).
5. Column (2) + column (4)
6. Proportional amortization - $100,000 x column 5 / column 5 total
7. Beginning-of-year investment for a 5 percent limited partnership interest in the project (column 1) net of amortization in column 6.

Statutory Issue Paper No. 126

Accounting for Transferable State Tax Credits

STATUS
Finalized December 5, 2005

Original SSAP: SSAP No. 94; Current Authoritative Guidance: SSAP No. 94R
This issue paper may not be directly related to the current authoritative statement.

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The purpose of this issue paper is to establish statutory accounting principles for transferable state tax credits that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

2. Currently, generally accepted accounting principles do not provide separate guidance for transferable state tax credits; general guidance for income taxes is found in *FASB Statement No. 109, Accounting for Income Taxes* (FAS 109). *SSAP No. 10—Income Taxes* (SSAP No. 10), paragraph 2 notes the adoption of FAS 109 with modifications for state income taxes, the realization criteria for deferred tax assets, and the recording of the impact of changes in its deferred tax balances.

3. Investments in Low Income Housing Tax Credits as discussed in *SSAP No. 93—Accounting for Low Income Housing Tax Credit Property Investments*, which involve an investment by a reporting entity in a limited liability company or similar entity that earns tax credits as a consequence of its operating activities involving low income housing developments and passes those tax credits to its investors, are not within the scope of this issue paper.

SUMMARY CONCLUSION

Definitions

4. Some states have enacted laws that create programs by which transferable state tax credits are granted to entities under certain specified conditions (e.g., an entity makes an investment in a particular industry). The terms of these state tax credits vary from state to state and, within a state, from program to program. However, many of these state tax credit programs share the following four characteristics:

a. The tax credit is nonrefundable;

b. The holder of the transferable state tax credit may sell or otherwise transfer the transferable state tax credit to another entity, which can likewise resell or transfer the credit;

c. The transferable state tax credit will expire if not used by a predetermined date; and

d. The transferable state tax credit can be applied against either state income tax or state premium tax.

5. For purposes of this issue paper, such programs will be referred to as "transferable state tax credits." The criteria in subparagraphs 4.b., 4.c. and 4.d. must be present in order for the transferable state

tax credit to receive the accounting treatment described in this issue paper. When a reporting entity purchases a transferable state tax credit from another entity, the transaction does not result in a continuing investment in a business entity (i.e. limited partnership).

6. Subject to adoption of a Statement of Statutory Accounting Principles (SSAP) on this topic, transferable state tax credits held by reporting entities will meet the definition of assets as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and will be admissible assets to the extent that they comply with the requirements of the SSAP.

Acquisition

7. Transferable state tax credits are recorded at cost at the date of acquisition.

Balance Sheet Treatment

8. Transferable state tax credits expected to be realized are initially recorded at cost.

9. Transferable state tax credits shall be established gross of any related state tax liabilities and reported in the category of other-than-invested assets (not reported net).

10. As transferable state tax credits are redeemed, the carrying value of the tax credits is reduced dollar for dollar by the amount of transferable state tax credits applied toward the reporting entity's applicable state tax liability.

Income Statement Treatment

11. Gains on transferable state tax credits are deferred until the value of the transferable state tax credits utilized exceeds the cost of the transferable state tax credits or until the transferable state tax credits are sold to other entities and the payment received is greater than the book value.

12. Losses on transferable state tax credits are recognized when known.

13. Gains and losses on transferable state tax credits are reflected in other income.

Impairment

14. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the transferable state tax credits. Transferable state tax credits should be evaluated for impairment at each reporting date.

15. When there is a decline in the realizability of a transferable state tax credit owned by the reporting entity that is other than temporary, the asset shall be written down to the expected realizable amount and the amount of the write down shall be accounted for as a realized loss. The expected realizable value is the new cost basis.

16. The new cost basis shall not be changed for subsequent recoveries in realizability.

Disclosures

17. The following disclosures shall be made in the financial statements. For purposes of this disclosure, total unused transferable state tax credits represent the entire transferable state tax credits available:

a. Carrying value of transferable state tax credits gross of any related state tax liabilities by state and in total,

b. Total unused transferable state tax credits by state;

c. Method of estimating utilization of remaining transferable state tax credits or other projected recovery of the current carrying value.

d. Impairment amount recognized in the reporting period, if any.

Effective Date and Transition

18. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years ending on or after December 31, 2006.

DISCUSSION

19. This issue paper provides new statutory accounting guidance for a type of investment, which is not currently addressed in the *Accounting Practices and Procedures Manual*. Therefore, in accordance with SSAP No. 4, they default to a nonadmitted asset. In evaluating transferable state tax credits, several points were considered. The transferable characteristics of these state tax credit are a major factor in developing statutory accounting guidance, which would admit investments in transferable state tax credits that comply with the guidance.

20. It is consistent with the Statement of Concepts, conservatism to report the transferable state tax credits at cost.

21. Reporting the transferable state tax credits gross is consistent with other reporting and with the principles in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities.* State premium tax liabilities for multiple states are reported on the same annual statement line on the liabilities page of the annual statement. Therefore, if a reporting entity wrote business in multiple states, it would violate the *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* offsetting criteria to net the premium tax liability from one state against a premium tax credit of another state.

22. The primary reason for purchasing transferable state tax credits is to reduce state premium tax expenses. They are not purchased for investment income, so it seems appropriate to report transferable state tax credits as other-than-invested assets. Losses are realized losses in the other income category.

23. It is consistent with the concept of conservatism to delay any recognition of gain on the utilization or sales of transferable state tax credits until the gain is realized. Realization is determined to have occurred when the state tax credits are utilized and meet or exceed the cost of the credits, or credits are sold and the sales price realized meets or exceeds the cost of state tax credits sold.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

24. *SSAP No. 10—Income Taxes* provides the following references on state income taxes:

2. For purposes of accounting for federal and foreign income taxes, reporting entities shall adopt FASB Statement No. 109, Accounting for Income Taxes (FAS 109) with modifications for state income taxes, the realization criteria for deferred tax assets, and the recording of the impact of changes in its deferred tax balances. As a result, financial statements will recognize current and deferred income tax assets and liabilities in accordance with the provisions of this statement.

4. State taxes (including premium, income and franchise taxes) shall be computed in accordance with SSAP No. 5 and shall be limited to (a) taxes due as a result of the current year's taxable basis calculated in accordance with state laws and regulations and (b) amounts incurred or received during the current year relating to prior periods, to the extent not previously provided as such amounts are deemed to be changes in accounting estimates. Property and casualty insurance companies shall report state taxes as other underwriting expenses under the caption "Taxes, licenses, and fees." Life and accident and health insurance companies shall report such amounts as general expenses under the caption "Insurance taxes, licenses, and fees, excluding federal income taxes." Other health entities shall report such amounts as general administration expenses under the caption "Taxes, licenses, and fees." State tax recoverables that are reasonably expected to be recovered in a subsequent accounting period are admitted assets. State taxes are reasonably expected to be recovered if the refund is attributable to overpayment of estimated tax payments, errors, carrybacks, or items for which the reporting entity has authority to recover under a state regulation or statute.

1.1 A – SSAP No. 10 establishes statutory accounting principles for current and deferred federal and foreign income taxes and current state income taxes. In general, SSAP No. 10 adopts the concepts of FAS 109, with modifications. The primary differences and modifications are summarized below:

1.2 State Income Tax

- FAS 109 – State income taxes should be included as “income taxes incurred.” Deferred state income taxes are provided.
- SSAP No. 10 – State income taxes should be included as “Taxes, Licenses, and Fees” by property and casualty insurers and as “Insurance taxes, licenses, and fees, excluding federal income taxes” by life and accident and health insurers. No deferred state income taxes are provided.

25. Statutory accounting guidance does not currently address transferable state tax credits, therefore, in accordance with *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4), transferable state tax credits default to nonadmitted assets at this time.

RELEVANT LITERATURE

Statutory Accounting

- Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy
- *SSAP No. 10—Income Taxes*

Generally Accepted Accounting Principles

- *FASB Statement No. 109, Accounting for Income Taxes* was adopted with modification in *SSAP No. 10—Income Taxes*

State Regulations

- No additional guidance obtained from state statutes or regulations

Implementation Guide

On 1/1/X1 SAM Insurance Company purchased transferable state tax credits for a cost of $100,000. The transferable state tax credits are redeemable for $160,000 and expire at the end of 12/31/X4. SAM initially expects to utilize the tax credits before expiration. in their state of domicile in the amount of $40,000 per year. In year X4, SAM sells the remaining $30,000 in transferable state tax credits for $20,000

1/1/x1	Transferable state tax credits	100,000	
	Cash		100,000
	To record the purchase of the tax credits		
6/30/x1	Premium tax expense	40,000	
	Premium taxes payable to domiciliary state		40,000
	To record premium tax expense and accrue the liability in Year 1.		
10/1/x1	Premium tax payable	40,000	
	Transferable state tax credits		40,000
	To record the use of tax credits in Year 1. The reporting entity expects to be able to utilize remaining tax credits before expiration.		
6/30/x2	Premium tax expense	60,000	
	Premium taxes payable to domiciliary state		60,000
	To record premium tax expense and accrue the liability in Year 2.		
9/30/x2	Premium tax payable	60,000	
	Transferable state tax credits		60,000
	To record the use of taxes credits in Year 2. The reporting entity expects to be able to utilize remaining tax credits before expiration.		
6/30/x3	Premium tax expense	30,000	
	Premium taxes payable to domiciliary state		30,000
	To record premium tax expense and accrue the liability in Year 3.		
9/30/x3	Premium tax payable	30,000	
	Other income		30,000
	To record the use of premium tax credits in excess of cost and recognize a gain on premium tax credits in other income. The Company intends to sell the remaining tax credits in year 4.		
6/30/x4	Cash	20,000	
	Other income		20,000
	To record the sale of the remaining tax credits.

Statutory Issue Paper No. 127

Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions

STATUS
Finalized March 6, 2006

Original SSAP and Current Authoritative Guidance: SSAP No. 90 and SSAP No. 95

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Existing statutory accounting literature for nonmonetary transactions is maintained within *SSAP No. 28—Nonmonetary Transactions* (SSAP No. 28), which is based on *Accounting Principles Board Opinion No. 29, Accounting for Nonmonetary Transactions* (APB 29). APB 29 is based on the principle that exchanges of nonmonetary assets should be measured based on the fair value of the assets exchanged. However, this guidance includes an exception to this basic premise for nonmonetary exchanges of similar productive assets. *Statement of Financial Accounting Standards No. 153*: *Exchanges of Nonmonetary Assets, an amendment of APB Opinion No. 29* (FAS 153), eliminates this exception and replaces it with a general exception for exchanges of nonmonetary assets that do not have commercial substance. A nonmonetary exchange has commercial substance if the future cash flows of the reporting entity are expected to change significantly as a result of the exchange.

2. The concept of similar productive assets is brought into statutory accounting by the adoption of APB 29 in SSAP No. 28. The concept of commercial substance introduced in FAS 153 is not explicitly discussed in statutory accounting.

FAS 153 affects the following:

- *APB Opinion No. 29, Accounting for Nonmonetary Transactions* (APB 29) which is adopted in *SSAP No. 28—Nonmonetary Transactions*
- Amends *FAS 19, Financial Accounting and Reporting by Oil and Gas Producing Companies*, which is not applicable to statutory accounting
- Amends *FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, A Replacement of FASB Statement 125*, which is adopted with modification in *SSAP No. 91—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 91)
- Amends FAS 144, which is adopted with modification in *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments* (SSAP No. 90)

3. Statutory accounting principles currently exist for nonmonetary exchanges in *SSAP No. 28—Nonmonetary Transactions* (SSAP No. 28). Some elements of APB 29 were adopted and modified for statutory accounting and reporting directly within SSAP No. 28. Other requirements of APB 29 were adopted through reference as in paragraph 3 of SSAP No. 28:

> 3. Except as addressed in other statements (including, but not limited to, *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12), *SSAP No. 13—Stock Option and Stock Purchase Plans* (SSAP No. 13), *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25), *SSAP No. 68—Business*

Combinations and Goodwill (SSAP No. 68), and *SSAP No. 72—Surplus and Quasi*-reorganizations (SSAP No. 72)), nonmonetary transactions shall be accounted for in accordance with *Accounting Principles Board Opinion No. 29, Accounting for Nonmonetary Transactions* (APB 29). The accounting for such transactions shall be based on the fair values of the assets (or services) involved, as defined in paragraph 25 of APB 29.

4. The purpose of this issue paper is to update statutory accounting principles for nonmonetary transactions by updating conclusions reached in SSAP No. 28 related to APB 29 with those included in FAS 153. Consequently, this issue paper adopts FAS 153 with modifications to change GAAP references to those applicable to statutory accounting. In addition, references made to APB 29 within SSAP No. 28 will be replaced with the actual amended guidance resulting from FAS 153.

5. In addition, the purpose of this issue paper is to also amend language used in *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments, Discontinued Operations* (SSAP No. 90) affected by FAS 153.

SUMMARY CONCLUSION

Definitions

6. The definitions of certain terms used in this statement are:

a. Monetary assets and liabilities are assets and liabilities whose amounts are fixed in terms of units of currency by contract or otherwise. Examples are cash; amounts due from agents, brokers, and intermediaries; policy loans; accounts payable; and other amounts receivable or payable in cash;

b. Nonmonetary assets and liabilities are assets and liabilities other than monetary ones. Examples are common stocks; furniture, fixtures, and equipment; real estate and liabilities for rent collected in advance;

c. Exchange (or exchange transaction) is a reciprocal transfer between a reporting entity and another entity that results in the reporting entity acquiring assets or services or satisfying liabilities by surrendering other assets or services or incurring other obligations. A reciprocal transfer of a nonmonetary asset shall be deemed an exchange only if the transferor has no substantial continuing involvement in the transferred asset such that the usual risks and rewards of ownership of the asset are transferred.

d. Nonreciprocal transfer is a transfer of assets or services in one direction, either from a reporting entity to its owners (whether or not in exchange for their ownership interests) or another entity, or from owners or another entity, to the reporting entity. An insurance company's reacquisition of its outstanding stock is an example of a nonreciprocal transfer.

7. Nonmonetary transactions shall be accounted for in accordance with this statement, except as addressed by other statements or interpretations including but not limited to *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12), *SSAP No. 13—Stock Option and Stock Purchase Plans* (SSAP No. 13), *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25), *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68), *SSAP No. 72—Surplus and Quasi-reorganizations* (SSAP No. 72), *SSAP No. 91—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 91), *INT 99-21: EITF 98-7: Accounting for Exchanges of Similar Equity Method Investments, INT 00-12: EITF 99-4: Accounting for Stock Received from the Demutualization of a Mutual Insurance Company, INT 00-26: EITF 98-3: Determining Whether a Nonmonetary Transactions Involves Receipt of Productive Assets or*

of a Business (INT 00-26), *INT 00-29: EITF 99-17: Accounting for Advertising Barter Transactions* (INT 00-29), and *INT 03-16: Contribution of Stock* (INT 03-16).

8. Accounting for nonmonetary transactions shall generally be based on the fair values of the assets (or services) involved, as defined in paragraph 16, which is the same basis as that used in monetary transactions. Thus, the cost of a nonmonetary asset acquired in exchange for another nonmonetary asset (reciprocal transactions) is the fair value of the asset surrendered to obtain it, and a gain or loss should be recognized on the exchange. The fair value of the asset received should be used to measure the cost if it is more clearly evident than the fair value of the asset surrendered. Similarly, a nonmonetary asset received in a nonreciprocal transfer should be recorded at the fair value of the asset received as defined in paragraph 9. A transfer of a nonmonetary asset to a stockholder or to another entity in a nonreciprocal transfer should be recorded at the fair value of the asset transferred, and a gain or loss should be recognized on the disposition of the asset. The fair value of a reporting entity's own stock reacquired may be a more clearly evident measure of the fair value of the asset distributed in a nonreciprocal transfer if the transaction involves distribution of a nonmonetary asset to eliminate a disproportionate part of owners' interests (that is, to acquire stock for the treasury or for retirement).

9. Fair value of assets received or transferred in a nonreciprocal transfer shall be measured based on statutory accounting principles for the type of asset transferred. Accordingly, the value shall be determined in accordance with *SSAP No. 26—Bonds, Excluding Loan-Backed and Structured Securities, SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities), SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities), SSAP No. 37—Mortgage Loans, SSAP No. 39—Reverse Mortgages, SSAP No. 40—Real Estate Investments, SSAP No. 43—Loan-backed and Structured Securities* or other applicable statement. The guidance provided in SSAP No. 25 shall be followed in accounting for nonreciprocal transactions with affiliates and other related parties as defined in that statement.

10. A nonmonetary exchange shall be measured based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) of the nonmonetary asset(s) relinquished (*SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments, Discontinued Operations*, (paragraph 20)), and not on the fair values of the exchanged assets, if any of the following conditions apply:

a. *Fair Value Not Determinable*. The fair value of neither the asset(s) received nor the asset(s) relinquished is determinable within reasonable limits (paragraph 16).

b. *Exchange Transaction to Facilitate Sales to Customers*. The transaction is an exchange of a product or property held for sale in the ordinary course of business for a product or property to be sold in the same line of business to facilitate sales to customers other than the parties to the exchange.

c. *Exchange Transaction That Lacks Commercial Substance*. The transaction lacks commercial substance (paragraph 11).

11. A nonmonetary exchange has commercial substance if the entity's future cash flows are expected to significantly change as a result of the exchange. The entity's future cash flows are expected to significantly change if either of the following criteria is met:

a. The configuration (risk, timing, and amount)[1] of the future cash flows of the asset(s) received differs significantly from the configuration of the future cash flows of the asset(s) transferred.

b. The entity-specific value[2] of the asset(s) received differs from the entity-specific value of the asset(s) transferred, and the difference is significant in relation to the fair values of the assets exchanged.

A qualitative assessment will, in some cases, be conclusive in determining that the estimated cash flows of the entity are expected to significantly change as a result of the exchange.

12. In the United States and some other tax jurisdictions, a transaction is not given effect for tax purposes unless it serves a legitimate business purpose other than tax avoidance. In assessing the commercial substance of an exchange, tax cash flows that arise solely because the tax business purpose is based on achieving a specified financial reporting result shall not be considered.

13. Stock received in the form of a stock dividend or stock split shall not result in the recognition of income. The cost basis of stock held shall be reallocated ratably to the total shares held after receipt of the stock dividend or stock split.

14. The exchanges of nonmonetary assets that would otherwise be based on recorded amounts (paragraphs 10 and 11) may include an amount of monetary consideration. The recipient of the monetary consideration has realized gain on the exchange to the extent that the amount of the monetary receipt exceeds a proportionate share of the recorded amount of the asset surrendered. The portion of the cost applicable to the realized amount should be based on the ratio of the monetary consideration to the total consideration received (monetary consideration plus the estimated fair value of the nonmonetary asset received) or, if more clearly evident, the fair value of the nonmonetary asset transferred. However, the entity paying the monetary consideration should not recognize any gain on a transaction covered in paragraphs 10 and 11 but should record the asset received at the amount of the monetary consideration paid plus the recorded amount of the nonmonetary asset surrendered. If a loss is indicated by the terms of a transaction described in this paragraph or in paragraphs 10 and 11, the entire indicated loss on the exchange should be recognized.

15. *Nonreciprocal Transfers to Owners*. Accounting for the distribution of nonmonetary assets to owners of an enterprise in a spin-off or other form of reorganization or liquidation or in a plan that is in substance the rescission of a prior business combination should be based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) (An indicated impairment of value of a long-lived asset covered by SSAP No. 90 shall be determined in accordance with paragraph 20 of that Statement.) of the nonmonetary assets distributed. A prorata distribution to owners of an enterprise of shares of a subsidiary or other investee company that has been or is being consolidated or that has been or is being accounted for under the equity method is to be considered to be equivalent to a spin-off. Other nonreciprocal transfers of nonmonetary assets to owners should be accounted for at fair value if the fair value of the nonmonetary asset distributed is objectively measurable and would be clearly realizable to the distributing entity in an outright sale at or near the time of the distribution.

[1] The configuration of future cash flows is composed of the risk, timing, and amount of the cash flows. A change in any one of those elements would be a change in configuration.

[2] An entity-specific value (referred to as an entity-specific measurement in Concepts Statement 7) is different from a fair value measurement. As described in paragraph 24.b. of Concepts Statement 7, an entity-specific value attempts to capture the value of an asset or liability in the context of a particular entity. For example, an entity computing an entity-specific value of an asset would use its expectations about its use of that asset rather than the use assumed by marketplace participants. If it is determined that the transaction has commercial substance, the exchange would be measured at fair value, rather than at the entity-specific value.

16. Fair value of a nonmonetary asset transferred to or from a reporting entity in a nonmonetary transaction should be determined by referring to estimated realizable values in cash transactions of the same or similar assets, quoted market prices, independent appraisals, estimated fair values of assets or services received in exchange, and other available evidence. If one of the parties in a nonmonetary transaction could have elected to receive cash instead of the nonmonetary asset, the amount of cash that could have been received may be evidence of the fair value of the nonmonetary assets exchanged.

17. Fair value should be regarded as not determinable within reasonable limits if major uncertainties exist about the realizability of the value that would be assigned to an asset received in a nonmonetary transaction accounted for at fair value. An exchange involving parties with essentially opposing interests is not considered a prerequisite to determining a fair value of a nonmonetary asset transferred; nor does an exchange insure that a fair value for accounting purposes can be ascertained within reasonable limits. If neither the fair value of a nonmonetary asset transferred nor the fair value of a nonmonetary asset received in exchange is determinable within reasonable limits, the recorded amount of the nonmonetary asset transferred from the enterprise may be the only available measure of the transaction.

18. A difference between the amount of gain or loss recognized for tax purposes and that recognized for accounting purposes may constitute a temporary difference to be accounted for according to *SSAP No. 10—Income Taxes*.

19. Involuntary conversions of nonmonetary assets to monetary assets (for example, as a result of total or partial destruction, theft, seizure, or condemnation) are monetary transactions for which gain or loss shall be recognized even though a reporting entity reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets. In some cases, a nonmonetary asset may be destroyed or damaged in one accounting period, and the amount of monetary assets to be received is not determinable until a subsequent accounting period. In those cases, gain or loss shall be recognized in accordance with the conclusions in *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5). Gain or loss resulting from an involuntary conversion of a nonmonetary asset to monetary assets shall be reported consistently with the reporting entity's reporting of continuing operations and disclosed in the notes to financial statements in accordance with *SSAP No. 24—Discontinued Operations and Extraordinary Items* (SSAP No. 24).

20. Language used in the accounting guidance for long-lived assets to be disposed of other than by sale in paragraphs 18-20 of *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments, Discontinued Operations* (SSAP No. 90), including section titles, shall be amended as follows:

> Long-Lived Assets to Be Disposed Of Other Than By Sale
>
> 18. A long-lived asset to be disposed of other than by sale (for example, by abandonment, in an exchange measured based on the recorded amount of the nonmonetary asset relinquished~~for a similar productive long-lived asset~~, or in a distribution to owners in a spinoff) shall continue to be classified as held and used until disposal. Paragraphs 4-17, and 31-35 shall apply while the asset is classified as held and used. If a long-lived asset is to be abandoned or distributed to owners in a spinoff together with other assets (and liabilities) as a group and that disposal group is a segment, paragraphs 31-35 shall apply to the disposal group at the date of disposal.
>
> Long-Lived Asset to Be Abandoned
>
> 19. For purposes of this statement, a long-lived asset to be abandoned is disposed of when it ceases to be used. If an entity commits to a plan to abandon a long-lived asset before the end of its previously estimated useful life, depreciation estimates shall be revised in accordance with SSAP No. 3 to reflect the use of the asset over its shortened useful life.

A long-lived asset that has been temporarily idled shall not be accounted for as if abandoned.

Long-Lived Asset to Be Exchanged ~~for a Similarly Productive Long-Lived Asset~~ or to Be Distributed to Owners in a Spinoff

20. For purposes of this statement, a long-lived asset to be disposed of in an exchange measured based on the recorded amount of the nonmonetary asset relinquished ~~exchanged for a similarly productive long-lived asset~~ or to be distributed to owners in a spinoff is disposed of when it is exchanged or distributed. If the asset is tested for recoverability while it is classified as held and used, the estimates of future cash flows used in that test shall be based on the use of the asset for its remaining useful life, assuming that the disposal transaction will not occur. In addition to any impairment losses required to be recognized while the asset is classified as held and used, an impairment loss, if any, shall be recognized when the asset is disposed of if the carrying amount of the asset exceeds its fair value.[3]

Disclosures

21. A reporting entity that engages in a nonmonetary transaction during a period shall disclose the following in the financial statements:

a. The nature of the transaction;

b. The basis of accounting for the assets transferred; and

c. Gains or losses recognized on transfers.

22. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure in paragraph 21 above shall be included in the annual audited statutory financial reports only.

Effective Date and Transition

23. Upon adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years ending on or after December 31, 2006.

DISCUSSION

24. In December 2004, the FASB issued SFAS No. 153: *Exchanges of Nonmonetary Assets, an amendment of APB Opinion No. 29* (APB 29) to improve the comparability of cross-boarder financial reporting. Working with the International Accounting Standards Board (IASB), FAS 153 was issued as part of a joint effort between the FASB and the IASB to develop a single set of high-quality accounting standards by eliminating a narrow difference between existing accounting standards relative to nonmonetary exchanges.

25. Although not meant to be all inclusive, accounting for specific nonmonetary transactions and unique circumstances is addressed in the following statements of statutory accounting principles:

- *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12),

[3] The provisions of this paragraph apply to nonmonetary exchanges that are not recorded at fair value under the provisions of paragraphs 10 and 15 of this issue paper.

- *SSAP No. 13—Stock Options and Stock Purchase Plans* (SSAP No. 13),
- *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25),
- *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68),
- *SSAP No. 72—Surplus and Quasi-reorganizations* (SSAP No. 72),
- *SSAP No. 91—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 91),

26. This issue paper updates general statutory guidance for accounting for nonmonetery transactions not specifically addressed in the statements of statutory accounting principles noted above and carries forward current statutory guidance for stock dividends and stock splits received, other types of nonmonetary transactions and involuntary conversions of nonmonetary assets to monetary assets. The guidance in this issue paper remains consistent with the guidance provided in *SSAP No. 30—Investments in Common Stock (excluding investment in common stock of subsidiary, controlled, or affiliated entities)* (SSAP No. 30), which addresses cash dividends and requires that dividends on common stock be recorded as investment income when declared with a corresponding receivable to be extinguished upon receipt of cash. This issue paper carries forward the disclosure requirements related to nonmonetary transactions from SSAP No. 28.

27. This issue paper adopts APB 29 as modified by FAS 153.

28. This issue paper adopts FAS 153 with modifications for references to statements of statutory accounting principles.

29. This issue paper continues the adoption of ARB 43, Chapter 7, Section B paragraphs 1-9 as such relates to the receipt of stock in the form of a stock in the form of a stock dividend or stock split. This conclusion is consistent with the recognition concept included in the Statement of Concepts, which states, *"Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed".*

30. This issue paper continues the adoption of FIN 30 with modification to provide that gain or loss contingencies be recognized in accordance with the conclusion in SSAP No. 5 and that gain or loss resulting from an involuntary conversion of nonmonetary assets to monetary assets be accounted for in continuing operations and disclosed in accordance with *SSAP No. 24—Discontinued Operations and Extraordinary Items*.

31. This issue paper continues the adoption of EITF 86-29 and EITF 93-11 consistent with the general rule discussed in paragraph 26 above.

32. This issue paper continues the rejection of paragraph 16 of *Accounting Principles Board Opinion No. 6, Status of Accounting Research Bulletins and Emerging Issues Task Force No. 96-4, Accounting for Reorganizations Involving a Non-Pro Rata Split-off of Certain Nonmonetary Assets to Owners*.

33. The conclusions above are consistent with the recognition concept included in the Statement of Concepts. The recognition concept states:

> The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.
>
> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).
>
> Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.
>
> SAP income reflects the extent that changes have occurred in SAP assets and liabilities for current period transactions, except changes in capital resulting from receipts or distributions to owners. SAP income also excludes certain other direct charges to surplus which are not directly attributable to the earnings process, (e.g., changes in non-admitted assets).

34. None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

35. Statutory accounting principles currently exist for nonmonetary exchanges in *SSAP No. 28—Nonmonetary Transactions* (SSAP No. 28). Statutory accounting guidance regarding nonmonetary transactions related to assets transferred between affiliates currently exists in *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and other Related Parties* (SSAP No. 25).

Generally Accepted Accounting Principles

36. APB 29, as amended by FAS 153, provides the following guidance:

> INTRODUCTION
>
> 1. Most business transactions involve exchanges of cash or other monetary assets or liabilities[1] for goods or services. The amount of monetary assets or liabilities exchanged generally provides an objective basis for measuring the cost of nonmonetary assets or

services received by an enterprise as well as for measuring gain or loss on nonmonetary assets transferred from an enterprise. Some transactions, however, involve either (a) an exchange with another entity (reciprocal transfer[1]) that involves principally nonmonetary assets or liabilities[1] or (b) a transfer of nonmonetary assets for which no assets are received or relinquished in exchange (nonreciprocal transfer[1]). Both exchanges and nonreciprocal transfers that involve little or no monetary assets or liabilities are referred to in this section as nonmonetary transactions.

[1] See paragraph 3 of this Opinion for definitions of these terms.

2. Questions have been raised concerning the determination of the amount to assign to a nonmonetary asset transferred to or from an enterprise in a nonmonetary transaction and also concerning the recognition of a gain or loss on a nonmonetary asset transferred from an enterprise in a nonmonetary transaction. Practice has varied; some nonmonetary transactions have been accounted for at the estimated fair value of the assets transferred and some at the amounts at which the assets transferred were previously recorded. This Opinion sets forth the views of the Board on accounting for nonmonetary transactions.

Definitions

3. The meanings of certain terms used in this section are:

a. Monetary assets and liabilities are assets and liabilities whose amounts are fixed in terms of units of currency by contract or otherwise. Examples are cash, short or long-term accounts and notes receivable in cash, and short- or long-term accounts and notes payable in cash.[2]

b. Nonmonetary assets and liabilities are assets and liabilities other than monetary ones. Examples are inventories; investments in common stocks; property, plant and equipment; and liabilities for rent collected in advance. [2]

[2] *APB Statement No. 3, Financial Statements Restated for General Price-Level Changes*, paragraphs 17-19, and Appendix B, contains a more complete explanation of monetary and nonmonetary items.

c. Exchange (or exchange transaction) is a reciprocal transfer between an enterprise and another entity that results in the enterprise's acquiring assets or services or satisfying liabilities by surrendering other assets or services or incurring other obligations. A reciprocal transfer of a nonmonetary asset shall be deemed an exchange only if the transferor has no substantial continuing involvement in the transferred asset such that the usual risks and rewards of ownership of the asset are transferred.

d. Nonreciprocal transfer is a transfer of assets or services in one direction, either from an enterprise to its owners (whether or not in exchange for their ownership interests) or another entity or from owners or another entity to the enterprise. An entity's reacquisition of its outstanding stock is an example of a nonreciprocal transfer.

e. Productive assets are assets held for or used in the production of goods or services by the enterprise. Productive assets include an investment in another entity if the investment is accounted for by the equity method but exclude an investment not accounted for by that method. Similar productive assets are productive assets that are of the same general type, that perform the same function or that are employed in the same line of business.

[3] [This footnote has been deleted. See Status page.]

Applicability

4. This Opinion does not apply to the following transactions:

a. A business combination accounted for by an enterprise according to the provisions of *FASB Statement No. 141, Business Combinations*, [3a]

[3a] Paragraph 10 of Statement 141 states that an exchange of a business for a business is a business combination.

b. A transfer of nonmonetary assets solely between companies or persons under common control, such as between a parent company and its subsidiaries or between two subsidiary corporations of the same parent, or between a corporate joint venture and its owners,

c. Acquisition of nonmonetary assets or services on issuance of the capital stock of an enterprise,[4]

[4] *FASB Statement No. 123 (revised 2004), Share-Based Payment*, applies to all transactions in which an entity acquires goods or services by issuing its shares or other equity instruments (except for equity instruments held by an employee stock ownership plan or by incurring liabilities to the supplier (a) in amounts based, at least in part, on the price of the entity's shares or other equity instruments or (b) that require or may require settlement by issuance of the entity's shares or other equity instruments.

d. Stock issued or received in stock dividends and stock splits which are accounted for in accordance with ARB No. 43, Chapter 7B,

e. A transfer of assets to an entity in exchange for an equity interest in that entity,

f. A pooling of assets in a joint undertaking intended to find, develop, or produce oil or gas from a particular property or group of properties, as described in paragraph 44 of *FASB Statement No. 19, Financial Accounting and Reporting by Oil and Gas Producing Companies*, as amended by *FASB Statements No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets, No. 145, Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections, and No. 153, Exchanges of Nonmonetary Assets*,

g. The exchange of a part of an operating interest owned for a part of an operating interest owned by another party that is subject to paragraph 47.e. of Statement 19, and

h. The transfer of a financial asset within the scope of *FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*.

Some exchanges of nonmonetary assets involve a small monetary consideration, referred to as "boot," even though the exchange is essentially nonmonetary. This Opinion also applies to those transactions. For purposes of applying this Opinion, events and transactions in which nonmonetary assets are involuntarily converted (for example, as a result of total or partial destruction, theft, seizure, or condemnation) to monetary assets that are then reinvested in other nonmonetary assets—are monetary transactions since the recipient is not obligated to reinvest the monetary consideration in other nonmonetary assets.

DISCUSSION

Present Accounting for Nonmonetary Transactions

5. *Nonreciprocal Transfers with Owners.* Some nonmonetary transactions are nonreciprocal transfers between an enterprise and its owners. Examples include (a) distribution of nonmonetary assets, such as marketable equity securities, to stockholders as dividends, (b) distribution of nonmonetary assets, such as marketable equity securities, to stockholders to redeem or acquire outstanding capital stock of the enterprise, (c) distribution of nonmonetary assets, such as capital stock of subsidiaries, to stockholders in corporate liquidations or plans of reorganization that involve disposing of all or a significant segment of the business (the plans are variously referred to as spin-offs, split-ups, and split-offs), and (d) distribution of nonmonetary assets to groups of stockholders, pursuant to plans of rescission or other settlements relating to a prior business combination, to redeem or acquire shares of capital stock previously issued in a business combination. Accounting for decreases in owners' equity that result from nonreciprocal nonmonetary transactions with owners has usually been based on the recorded amount of the nonmonetary assets distributed.

6. *Nonreciprocal Transfers with Other Than Owners.* Other nonmonetary transactions are nonreciprocal transfers between an enterprise and entities other than its owners. Examples are the contribution of nonmonetary assets by an enterprise to a charitable organization and the contribution of land by a governmental unit for construction of productive facilities by an enterprise. Accounting for nonmonetary assets received in a nonreciprocal transfer from an entity other than an owner has usually been based on fair value of the assets received while accounting for nonmonetary assets transferred to another entity has usually been based on the recorded amount of the assets relinquished.

7. *Nonmonetary Exchanges.* Many nonmonetary transactions are exchanges of nonmonetary assets or services with another entity. Examples include (a) exchange of product held for sale in the ordinary course of business (inventory) for dissimilar property as a means of selling the product to a customer, (b) exchange of product held for sale in the ordinary course of business (inventory) for similar product as an accommodation - that is, at least one party to the exchange reduces transportation costs, meets immediate inventory needs, or otherwise reduces costs or facilitates ultimate sale of the product—and not as a means of selling the product to a customer, and (c) exchange of productive assets—assets employed in production rather than held for sale in the ordinary course of business - for similar productive assets or for an equivalent interest in similar productive assets. Examples of exchanges in category (c) include the trade of player contracts by professional sports organizations, exchange of leases on mineral properties, exchange of one form of interest in an oil producing property for another form of interest, exchange of real estate for real estate. Accounting for nonmonetary assets acquired in a nonmonetary exchange has sometimes been based on the fair value of the assets relinquished and sometimes on the recorded amount of the assets relinquished.

Differing Views

8. Views of accountants differ as to appropriate accounting for all of the types of nonmonetary transactions described in paragraphs 5-7.

9. *Nonreciprocal Transfers of Nonmonetary Assets to Owners.* Some believe that accounting for nonreciprocal transfers of nonmonetary assets to owners should be based on the carrying amount of the nonmonetary assets transferred because only that method is consistent with the historical cost basis of accounting.

10. Others believe that accounting for transfers of nonmonetary assets to reduce certain owners' interests other than through a reorganization, liquidation, or rescission of a prior business combination should be based on the fair value of the nonmonetary assets distributed or the fair value of the stock representing the owners' equity eliminated, whichever is more clearly evident. In their view, disposing of the value represented by a nonmonetary asset is a significant economic event, and the unrecorded increase or decrease that has resulted in the value of the nonmonetary asset since its acquisition should be recognized.

11. Many who agree with accounting based on fair value for a nonreciprocal transfer of a nonmonetary asset that reduces certain owners' interests also believe that distributing a nonmonetary asset as an ordinary dividend (but not distributing a nonmonetary asset as a liquidating dividend or in a spin-off, reorganization or similar distributions) may be regarded as equivalent to an exchange with owners and therefore recorded at the fair value of the nonmonetary asset distributed, particularly if the dividend is distributable as either cash or the nonmonetary asset at the election of the owner. They believe that failure to recognize the fair value of nonmonetary assets transferred may both misstate the dividend and fail to recognize gains and losses on nonmonetary assets that have already been earned or incurred by the enterprise and should be recognized on distributing the assets for dividend purposes.

12. Others generally agree with the view that nonreciprocal transfers of nonmonetary assets to certain owners should be accounted for at fair value but believe that dividends and other prorata distributions to owners are essentially similar to liquidating dividends or distributions in spin-offs and reorganizations and should be accounted for at the recorded amount of the asset transferred.

13. *Nonreciprocal Receipts of Nonmonetary Assets.* Many believe that a nonmonetary asset received in a nonreciprocal transfer from other than owners should be recorded at fair value because fair value is the only value relevant to the recipient enterprise. Others believe that such nonmonetary assets should be recorded at a nominal value since fair value cannot be reasonably determined in view of performance obligations usually agreed to by the recipient as a consideration for the transfer.

14. *Nonreciprocal Transfers of Nonmonetary Assets to Other Than Owners.* Some believe that accounting for a nonreciprocal transfer of a nonmonetary asset to an entity other than an owner should be based on the carrying amount of the asset transferred because only that method is consistent with the historical cost basis of accounting. Others believe that failure to recognize the fair value of a nonmonetary asset transferred may both understate (or overstate) expenses incurred and fail to recognize gains or losses on nonmonetary assets that have already been earned or incurred by the enterprise and should be recognized when the transfer of the asset is recognized as an expense.

15. *Exchange Transactions.* Some believe that accounting for an exchange of nonmonetary assets between an enterprise and another entity (an enterprise or individual acting in a capacity other than a stockholder of the enterprise) should be based on the fair values of the assets involved, while others believe that accounting for the exchange should be based on the carrying amount of the asset transferred from the enterprise. Those who advocate the former view believe it to be the only method consistent with the accounting principle that an asset acquired should be recorded at its cost as measured by the fair value of the asset relinquished to acquire it. Those advocating the latter view believe that revenue should be recognized only if an exchange involves monetary assets; therefore recognizing fair value is inappropriate unless a monetary asset is received in an exchange.

16. Many accountants who accept the concept that accounting for an exchange of nonmonetary assets should be based on fair value believe that problems of measurement and questions about the conditions for recognizing revenue require modification of the concept in two types of exchanges. They therefore conclude that:

    a. Fair values should not be recognized if an enterprise exchanges product or property held for sale in the ordinary course of business for product or property to be sold in the same line of business. The emphasis in that exchange, in their view, is on developing economical ways to acquire inventory for resale to customers rather than on marketing inventory to obtain revenue from customers. Therefore, "swapping" inventories between enterprises that are essentially competitors and not customers of each other is merely an incidental early stage of an earning process, and revenue should not be recognized until the time of sale of the exchanged products (in the same or another form) to a customer of the enterprise.

    b. Fair value should not be recognized if an enterprise exchanges a productive asset for a similar productive asset or an equivalent interest in the same or similar productive asset. Therefore, revenue should not be recognized merely because one productive asset is substituted for a similar productive asset but rather should be considered to flow from the production and sale of the goods or services to which the substituted productive asset is committed.

17. *Fair Value Not Determinable.* General agreement exists that a nonmonetary transaction, regardless of form, should not be recorded at fair value if fair value is not determinable within reasonable limits. Major uncertainties concerning realizability of the fair value proposed to be assigned to a nonmonetary asset received in a nonmonetary transaction are indicative of an inability to determine fair value within reasonable limits. Some believe that only an exchange transaction between parties with essentially opposing interests provides an independent test of fair value to be used in measuring the transaction; therefore fair value is determinable within reasonable limits only in a negotiated exchange transaction. Others believe that fair value in a nonreciprocal transfer is also often determinable within reasonable limits and should be recognized in certain types of transactions.

OPINION

Basic Principle

18. The Board concludes that in general accounting for nonmonetary transactions should be based on the fair values[5] of the assets (or services) involved which is the same basis as that used in monetary transactions. Thus, the cost of a nonmonetary asset acquired in exchange for another nonmonetary asset is the fair value of the asset surrendered to obtain it, and a gain or loss should be recognized on the exchange. The fair value of the asset received should be used to measure the cost if it is more clearly evident than the fair value of the asset surrendered. Similarly, a nonmonetary asset received in a nonreciprocal transfer should be recorded at the fair value of the asset received. A transfer of a nonmonetary asset to a stockholder or to another entity in a nonreciprocal transfer should be recorded at the fair value of the asset transferred, and a gain or loss should be recognized on the disposition of the asset. The fair value of an entity's own stock reacquired may be a more clearly evident measure of the fair value of the asset distributed in a nonreciprocal transfer if the transaction involves distribution of a nonmonetary asset to eliminate a disproportionate part of owners' interests (that is, to acquire stock for the treasury or for retirement).

[5] See paragraph 25 for determination of fair value.

19. The Board believes that certain modifications of the basic principle are required to accommodate problems of measurement and questions about the conditions for recognizing revenue. These modifications are specified in paragraphs 20-23.

Modifications of the Basic Principle

20. A nonmonetary exchange shall be measured based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) of the nonmonetary asset(s) relinquished, [5a] and not on the fair values of the exchanged assets, if any of the following conditions apply:

[5a] An indicated impairment of value of a long-lived asset within the scope of Statement 144 shall be determined in accordance with paragraph 29 of that Statement.

a. Fair Value Not Determinable. The fair value of neither the asset(s) received nor the asset(s) relinquished is determinable within reasonable limits (paragraph 25).

b. Exchange Transaction to Facilitate Sales to Customers. The transaction is an exchange of a product or property held for sale in the ordinary course of business for a product or property to be sold in the same line of business to facilitate sales to customers other than the parties to the exchange.

c. Exchange Transaction That Lacks Commercial Substance. The transaction lacks commercial substance (paragraph 21).

Commercial Substance

21. A nonmonetary exchange has commercial substance if the entity's future cash flows[5b] are expected to significantly change as a result of the exchange. The entity's future cash flows are expected to significantly change if either of the following criteria is met:

[5b] *FASB Concepts Statement No. 7, Using Cash Flow Information and Present Value in Accounting Measurements*, contains guidance that may be useful in evaluating changes in future cash flows.

a. The configuration (risk, timing, and amount) [5c] of the future cash flows of the asset(s) received differs significantly from the configuration of the future cash flows of the asset(s) transferred.

[5c] The configuration of future cash flows is composed of the risk, timing, and amount of the cash flows. A change in any one of those elements would be a change in configuration.

b. The entity-specific value[5d] of the asset(s) received differs from the entity-specific value of the asset(s) transferred, and the difference is significant in relation to the fair values of the assets exchanged.

[5d] An entity-specific value (referred to as an entity-specific measurement in Concepts Statement 7) is different from a fair value measurement. As described in paragraph 24.b. of Concepts Statement 7, an entity-specific value attempts to capture the value of an asset or liability in the context of a particular entity. For example, an entity computing an entity-specific value of an asset would use its expectations about its use of that asset rather than the use assumed by marketplace participants. If it is determined that the transaction has commercial substance, the exchange would be measured at fair value, rather than at the entity-specific value.

A qualitative assessment will, in some cases, be conclusive in determining that the estimated cash flows of the entity are expected to significantly change as a result of the exchange.

[6] [This footnote has been deleted. See Status page.]

21A. In the United States and some other tax jurisdictions, a transaction is not given effect for tax purposes unless it serves a legitimate business purpose other than tax avoidance. In assessing the commercial substance of an exchange, tax cash flows that arise solely because the tax business purpose is based on achieving a specified financial reporting result shall not be considered.

22. The exchanges of nonmonetary assets that would otherwise be based on recorded amounts (paragraph 21) may include an amount of monetary consideration. The Board believes that the recipient of the monetary consideration has realized gain on the exchange to the extent that the amount of the monetary receipt exceeds a proportionate share of the recorded amount of the asset surrendered. The portion of the cost applicable to the realized amount should be based on the ratio of the monetary consideration to the total consideration received (monetary consideration plus the estimated fair value of the nonmonetary asset received) or, if more clearly evident, the fair value of the nonmonetary asset transferred. The Board further believes that the entity paying the monetary consideration should not recognize any gain on a transaction covered in paragraph 21 but should record the asset received at the amount of the monetary consideration paid plus the recorded amount of the nonmonetary asset surrendered. If a loss is indicated by the terms of a transaction described in this paragraph or in paragraph 21, the entire indicated loss on the exchange should be recognized.

23. Nonreciprocal Transfers to Owners. Accounting for the distribution of nonmonetary assets to owners of an enterprise in a spin-off or other form of reorganization or liquidation or in a plan that is in substance the rescission of a prior business combination should be based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) [6a] of the nonmonetary assets distributed. A prorata distribution to owners of an enterprise of shares of a subsidiary or other investee company that has been or is being consolidated or that has been or is being accounted for under the equity method is to be considered to be equivalent to a spin-off. Other nonreciprocal transfers of nonmonetary assets to owners should be accounted for at fair value if the fair value of the nonmonetary asset distributed is objectively measurable and would be clearly realizable to the distributing entity in an outright sale at or near the time of the distribution.

[6a] An indicated impairment of value of a long-lived asset covered by Statement 144 shall be determined in accordance with paragraph 29 of that Statement.

Applying the Basic Principle

24. The Board's conclusions modify to some extent existing practices as described in paragraphs 5 to 7. The conclusions are based on supporting reasons given in paragraphs 8-17.

25. Fair value of a nonmonetary asset transferred to or from an enterprise in a nonmonetary transaction should be determined by referring to estimated realizable values in cash transactions of the same or similar assets, quoted market prices, independent appraisals, estimated fair values of assets or services received in exchange, and other available evidence. If one of the parties in a nonmonetary transaction could have elected to receive cash instead of the nonmonetary asset, the amount of cash that could have been received may be evidence of the fair value of the nonmonetary assets exchanged.

26. Fair value should be regarded as not determinable within reasonable limits if major uncertainties exist about the realizability of the value that would be assigned to an asset received in a nonmonetary transaction accounted for at fair value. An exchange involving parties with essentially opposing interests is not considered a prerequisite to determining a fair value of a nonmonetary asset transferred; nor does an exchange insure that a fair value for accounting purposes can be ascertained within reasonable limits. If neither the fair value of a nonmonetary asset transferred nor the fair value of a nonmonetary asset received in exchange is determinable within reasonable limits, the recorded amount of the nonmonetary asset transferred from the enterprise may be the only available measure of the transaction.

27. A difference between the amount of gain or loss recognized for tax purposes and that recognized for accounting purposes may constitute a temporary difference to be accounted for according to *FASB Statement No. 109, Accounting for Income Taxes*.

Disclosure

28. An enterprise that engages in one or more nonmonetary transactions during a period should disclose in financial statements for the period the nature of the transactions, the basis of accounting for the assets transferred, and gains or losses recognized on transfers.[7]

[7] Paragraph 12 of ARB No 51, Consolidated Financial Statements, includes additional disclosures that are preferred if a parent company disposes of a subsidiary during the year.

37. ARB 43, Chapter 7, Section B provides the following guidance (only the pertinent excerpts are included below):

As to the Recipient

5. One of the basic problems of accounting is that of income determination. Complete discussion of this problem is obviously beyond the scope of this chapter. Basically, income is a realized gain and in accounting is recognized, recorded, and stated in accordance with certain principles as to time and amount.

6. If there is an increase in the market value of his holdings, such unrealized appreciation is not income. In the case of a stock dividend or split-up, there is no distribution, division, or severance of corporate assets. Moreover, there is nothing resulting therefrom that the shareholder can realize without parting with some of his proportionate interest in the corporation.

7. The foregoing are important points to be considered in any discussion of the accounting procedures to be followed by the recipient of a stock dividend or split-up since many arguments put forward by those who favor recognizing stock dividends as income are in substance arguments for the recognition of corporate income as income to the shareholder as it accrues to the corporation, and prior to its distribution to the shareholder; the acceptance of such arguments would require the abandonment of the separate entity concept of corporation accounting.

8. The question as to whether or not stock dividends are income has been extensively debated; the arguments pro and con are well known.[1] The situation cannot be better summarized, however, than in the words approved by Mr. Justice Pitney in Eisner v. Macomber, 252 U.S. 189, wherein it was held that stock dividends are not income under the Sixteenth Amendment, as follows:

"A stock dividend really takes nothing from the property of the corporation and adds nothing to the interests of the stockholders. Its property is not diminished and their interests are not increased . . . the proportional interest of each shareholder remains the same. The only change is in the evidence which represents that interest, the new shares and the original shares together representing the same proportional interests that the original shares represented before the issue of the new ones."

[1] See, for instance, Freeman, "Stock Dividends and the New York Stock Exchange," American Economic Review, December, 1931 (pro), and Whitaker, "Stock Dividends, Investment Trusts, and the Exchange," American Economic Review, June, 1931 (con).

9. Since a shareholder's interest in the corporation remains unchanged by a stock dividend or split-up except as to the number of share units constituting such interest, the cost of the shares previously held should be allocated equitably to the total shares held after receipt of the stock dividend or split-up. When any shares are later disposed of, a gain or loss should be determined on the basis of the adjusted cost per share.

38. FIN 30 provides the following guidance (only the pertinent excerpts are included below):

1. The FASB has been asked whether gain or loss results from an involuntary conversion of a nonmonetary asset to monetary assets if the monetary assets are subsequently reinvested in a similar nonmonetary asset.[1] Generally, if a nonmonetary asset is involuntarily converted, gain or loss for the difference between the cost[2] of the nonmonetary asset and the amount of monetary assets received has been recognized in income in the period of the involuntary conversion. In other cases, that difference has been accounted for as an adjustment to the cost basis of a nonmonetary asset that is subsequently acquired as replacement property.

[1] The terms "nonmonetary" and "monetary" as used in this Interpretation have the same meaning as those terms have in *APB Opinion No. 29, Accounting for Nonmonetary Transactions*.

[2] As used in this Interpretation, the term cost refers to the cost of a nonmonetary asset or to its carrying amount, if different.

INTERPRETATION

2. Involuntary conversions of nonmonetary assets to monetary assets are monetary transactions for which gain or loss shall be recognized even though an enterprise reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets. As discussed in paragraph 11 of this Interpretation, however, the requirement to recognize gain does not apply to certain involuntary conversions of LIFO inventories.[3]

[3] Paragraph 14.b. of *APB Opinion No. 28, Interim Financial Reporting*, provides an exception for the liquidation of a LIFO inventory at an interim date if replacement is expected by year-end. Accordingly, that exception applies to an involuntary conversion of a LIFO inventory if replacement is expected by year-end.

3. In some cases, a nonmonetary asset may be destroyed or damaged in one accounting period, and the amount of monetary assets to be received is not determinable until a subsequent accounting period. In those cases, gain or loss shall be recognized in accordance with *FASB Statement No. 5, Accounting for Contingencies*.

4. Gain or loss resulting from an involuntary conversion of a nonmonetary asset to monetary assets shall be classified in accordance with the provisions of *APB Opinion No. 30, Reporting the Results of Operations—-Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions*.

5. Gain or loss resulting from an involuntary conversion of a nonmonetary asset to monetary assets that is not recognized for income tax reporting purposes in the same period in which the gain or loss is recognized for financial reporting purposes is a temporary difference for which comprehensive recognition of deferred taxes, as described in *FASB Statement No. 109, Accounting for Income Taxes*, is required.

39. EITF 86-29 provides the following guidance (only the pertinent excerpts are included below):

ISSUE

The basic principle contained in Opinion 29 is that the exchange of nonmonetary assets should be recorded at fair value. Certain modifications to that basic principle are contained in paragraphs 21 and 22 of Opinion 29. (The Task Force previously discussed certain aspects of those modifications in Issues No. 84-29, "Gain and Loss Recognition on Exchanges of Productive Assets and the Effect of Boot," and No. 85-43, "Sale of Subsidiary for Equity Interest in Buyer.")

The issues are (1) how the accounting for certain nonmonetary transactions should be affected by the magnitude of boot and (2) how the exceptions to the use of fair value should be applied.

EITF DISCUSSION

The Task Force reached a consensus that the decision as to whether an exchange involving products or properties held for sale (paragraph 21.a. of Opinion 29) should be measured using the recorded amounts or fair value depends on whether the products or properties received will be sold in the same line of business as the products or properties given up.

Further, the Task Force reached a consensus that the decision as to whether an exchange of similar productive assets (paragraph 21.b.) should be measured using the recorded amounts or fair value should be based on a "same line of business" test.

Some Task Force members expressed the view that the exchange of a controlled business (as defined in ARB 51) for an investment in an entity that is not controlled, but is in the same line of business, would not necessarily meet the definition of a similar productive asset and would have to be evaluated based on individual facts and circumstances. No consensus was reached on this issue.

The Task Force reached a consensus that a product or property held for sale and exchanged for a productive asset did not fall within the modifications to the basic principle of Opinion 29 (even if they were in the same line of business) and should be recorded at fair value.

The Task Force discussed an exchange of nonmonetary assets that would otherwise be based on recorded amounts but that also involves boot, reached a consensus that the transaction should be considered monetary (rather than nonmonetary) if the boot is significant, and agreed that "significant" should be defined as at least 25 percent of the fair value of the exchange. As a monetary transaction, both parties would record the exchange at fair value. If the boot in a transaction is less than 25 percent, the pro rata gain recognition guidance in paragraph 22 of Opinion 29 should be applied by the receiver of boot, and the payer of boot would not recognize a gain. The Task Force acknowledged that the ability to satisfactorily measure fair value is a prerequisite to the use of fair value.

The Task Force also discussed various exchanges involving investments accounted for by consolidation and by the equity method. The Task Force reached a consensus that an enterprise should account for an exchange of securities in which it acquires control of a subsidiary as a business combination in accordance with Opinion 16. An enterprise should account for an exchange of securities accounted for by consolidation or by the equity method for an investment in which it does not acquire control of a business but for which it will account by the equity method, as a nonmonetary transaction in accordance with Opinion 29. The Task Force noted that the provisions of this consensus were not intended to apply to exchanges involving joint ventures or the acquisition of a minority interest.

Additionally, several Task Force members and the SEC Observer expressed concern that a literal application of the consensus to an exchange in which an enterprise acquires control of a business could result in the recognition of gain on transactions that are in substance an exchange of similar productive assets or result in a 100 percent write-up of an asset in circumstances in which an entity has not transferred control of the asset. For example, Company A transfers an asset to Company B in exchange for shares of Company B. As a result of the exchange, Company A acquires control of Company B; Company A also indirectly retains control of the asset received by Company B. The Task Force agreed that Company A should account for this transaction as a partial sale (to minority shareholders of Company B), and gain recognition should be limited to that portion of the asset treated as sold. If Company B accounts for the exchange at fair value, profit applicable to the portion of the asset indirectly controlled by Company A would be eliminated in Company A's consolidation of Company B.

Further, the Task Force observed that the consensus is not intended to change the application of Opinion 16 or to eliminate the need to exercise judgment in those circumstances in which the substance of a transaction indicates that fair value accounting is not appropriate. That is, if Opinion 16 is to apply, the substance of the transaction must be a business combination.

STATUS

Issues relating to the exchange of real estate involving boot were discussed in Issue No. 87-29, "Exchange of Real Estate Involving Boot." For that Issue, the Task Force reached a consensus that a transaction involving an exchange of similar real estate that is considered a monetary transaction under Issue 86-29 because boot is at least 25 percent of the fair value of the exchange would be allocated between two components: a monetary portion and a nonmonetary portion. (An exchange of similar real estate is defined in Issue 87-29 as an exchange of either (a) real estate held for sale in the ordinary course of business for real estate to be sold in the same line of business or (b) real estate not held for sale in the ordinary course of business for similar real estate.) The allocation between the monetary and nonmonetary portions of the transaction should be based on their relative fair values at the time of the transaction. For the receiver of boot, the monetary portion would be accounted for under Statement 66 as the equivalent of a sale of an interest in the underlying real estate, and the nonmonetary portion would be accounted for under paragraph 21 of Opinion 29. For the payer of boot, the monetary portion would be accounted for as an acquisition of real estate, and the nonmonetary portion would be accounted for under paragraph 21 of Opinion 29. Exhibit 87-29A presents an example of the application of the consensus reached on Issue 87-29.

No further EITF discussion is planned.

40. EITF 93-11 provides the following guidance (only the pertinent excerpts are included below):

ISSUE

In a barter transaction involving barter credits, an enterprise enters into a transaction to exchange a nonmonetary asset (for example, inventory) for barter credits. Those transactions may occur directly between principals to the transaction or include a third party whose business is to facilitate those types of exchanges (for example, a barter company).

The barter credits can be used to purchase goods or services, such as advertising time, from either the barter company or members of its barter exchange network. The goods and services to be purchased may be specified in a barter contract or limited to items made available by members of the exchange network. Some arrangements may require the payment of cash in addition to the barter credits to purchase goods or services. Barter credits also may have a contractual expiration date, at which time they become worthless.

The issue is whether Opinion 29 should be applied to an exchange of a nonmonetary asset for barter credits and, if so, the amount of profit or loss, if any, that should be recognized.

EITF DISCUSSION

The Task Force reached a consensus that transactions in which nonmonetary assets are exchanged for barter credits should be accounted for under Opinion 29. An impairment of the nonmonetary asset exchanged should be recognized prior to recording the exchange if the fair value of that asset is less than its carrying amount. The impairment should be measured as the amount by which the carrying amount of the asset exceeds its fair value. Recognition of an impairment loss also would be required in an exchange of assets or contractual rights not reported in the balance sheet (for example, operating leases) if the transferor is not relieved of primary liability for the related obligation. The definition of fair value in paragraph 13 of Statement 15 may be useful in determining the fair value of the nonmonetary asset. The Task Force noted that fair value should not be based on an estimate of the value of the barter credits to be received. After an impairment is recognized, the reduced carrying amount of the nonmonetary asset becomes its new cost. [Note: See STATUS section.]

If an exchange involves the transfer or assumption of an operating lease, impairment of that lease should be measured as the amount of the remaining lease costs (discounted rental payments and unamortized leasehold improvements) in excess of the discounted amount of probable sublease rentals for the remaining lease term. [Note: See STATUS section.]

The Task Force also reached a consensus that in reporting the exchange of a nonmonetary asset for barter credits, it should be presumed that the fair value of the nonmonetary asset exchanged is more clearly evident than the fair value of the barter credits received and that the barter credits should be reported at the fair value of the nonmonetary asset exchanged. The Task Force noted, however, that that presumption might be overcome if an entity can convert the barter credits into cash in the near term, as evidenced by a historical practice of converting barter credits into cash shortly after receipt, or if independent quoted market prices exist for items to be received upon exchange of the barter credits. It also should be presumed that the fair value of the nonmonetary asset does not exceed its carrying amount unless there is persuasive evidence supporting a higher value. An impairment loss on the barter credits should be recognized if it subsequently becomes apparent that (1) the fair value of any remaining barter credits is less than the carrying amount or (2) it is probable that the enterprise will not use all of the remaining barter credits.

STATUS

In March 1995, the FASB issued Statement 121 which requires that long-lived assets and certain identifiable intangibles to be held and used be reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Statement 121 establishes accounting standards for the recognition and measurement of impairment losses and sets forth an approach to determining an asset's fair value. Statement 121 also requires that long-lived assets and certain identifiable intangibles to be disposed of be reported at the lower of carrying amount or fair value less cost to sell.

In August 2001, the FASB issued Statement 144. Statement 144 addresses financial accounting and reporting for the impairment of long-lived assets and for long-lived assets to be disposed of and supersedes Statement 121.

No further EITF discussion is planned.

Statutory Issue Paper No. 128

Settlement Requirements for Intercompany Transactions, An Amendment to SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties

STATUS
Finalized June 12, 2006

Current Authoritative Guidance for Settlement Requirements for Intercompany Transactions: SSAP No. 25

This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 96

Type of Issue:

Common Area

SUMMARY OF ISSUE

1. Current statutory guidance relating to intercompany transactions is included in *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25). SSAP No. 25 does not explicitly impose an aging threshold for admission of loans and advances to related parties outstanding as of the reporting date. In addition, no explicit aging threshold exists for admission of receivables associated with transactions for services provided to related parties outstanding as of the reporting date.

2. While SSAP No. 25 established statutory accounting principles and disclosure requirements for related party transactions, the purpose of this issue paper is to amend this guidance to include an explicit aging threshold for admissibility for these transactions. A threshold will further clarify the current requirement in paragraph 6 of SSAP No. 25 regarding the maintenance of accounts "on a current basis." In addition, a threshold provides explicit parameters in which to apply the fair and reasonable standard established by Appendix A-440, which is referenced in paragraph 15, of SSAP No. 25.

SUMMARY CONCLUSION

3. This issue paper shall amend SSAP No. 25 to insert the following additional paragraph numbered six and to renumber the remaining paragraphs of the statement:

Transactions between related parties must be in the form of a written agreement. The written agreement must provide for timely settlement of amounts owed, with a specified due date. Amounts owed to the reporting entity over ninety days from the written agreement due date shall be nonadmitted. If the due date is not addressed by the written agreement any uncollected receivable is nonadmitted.

Disclosures

4. This issue paper requires no additional disclosures.

Effective Date and Transition

5. After adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The initial draft of the SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note

that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will be effective for reporting periods beginning on or after January 1, 2007.

DISCUSSION

6. This issue paper will help ensure transactions between the reporting entity and its parent, affiliates and related parties, are current. This inclusion of a 90-day rule is consistent with other statements of statutory accounting principles.

Drafting Notes/Comments

7. None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

8. The concept of an aging threshold for admissibility (i.e., 90-day rule) is contained in *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers* (SSAP No. 6) as follows:

> 9. Nonadmitted amounts are determined as follows:
>
> a. Uncollected Premium—To the extent that there is no related unearned premium, any uncollected premium balances which are over ninety days due shall be nonadmitted. If an installment premium is over ninety days due, the amount over ninety days due plus all future installments that have been recorded on that policy shall be nonadmitted;
>
> b. Bills Receivable—Bills receivable shall be nonadmitted if either of the following conditions are present:
>
> i. If any installment is past due, the entire bills receivable balance from that policy is nonadmitted; or
>
> ii. If the bills receivable balance due exceeds the unearned premium on the policy for which the note was accepted, the amount in excess of the unearned premium is nonadmitted.
>
> c. Agents' Balances—The uncollected agent's receivable on a policy by policy basis which is over ninety days due shall be nonadmitted regardless of any unearned premium;
>
> i. If amounts are both payable to and receivable from an agent on the same underlying policy, and the contractual agreements between the agent and the reporting entity permit offsetting, the nonadmitted portion of amounts due from that agent shall not be greater than the net balance due, by agent;
>
> If reconciling items between a reporting entity's account and an agent's account are over ninety days due, the amounts shall be nonadmitted.

9. This aging concept is also include in *SSAP No. 10—Income Taxes* (SSAP No. 10) as follows:

> 13. Amounts owed to a reporting entity pursuant to a recognized transaction shall be treated as a loan or advance, and nonadmitted, pursuant to SSAP No. 25, to the extent that the

recoverable is not settled within 90 days of the filing of a consolidated income tax return, or where a refund is due the reporting entity's parent, within 90 days of the receipt of such refund.

Generally Accepted Accounting Principles

10. GAAP does not address the concept of admitted assets.

EXHIBIT A: Illustration of Marked Changes to Amended SSAP No. 25

The following depicts the amendment made by this issue paper as “marked changes”: (new text underlined):

SCOPE OF STATEMENT

1. Related party transactions are subject to abuse because reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair and reasonable to the reporting entity or its policyholders. As such, related party transactions require specialized accounting rules and increased regulatory scrutiny. This statement establishes statutory accounting principles and disclosure requirements for related party transactions.

SUMMARY CONCLUSION

2. Related parties are defined as entities that have common interests as a result of ownership, control, affiliation or by contract. Related parties shall include but are not limited to the following:

a. Affiliates of the reporting entity, as defined in paragraph 3;

b. Trusts for the benefit of employees, such as pension and profit-sharing trusts and Employee Stock Ownership Plans that are managed by or under the trusteeship of management of the reporting entity, its parent or affiliates;

c. The principal owners of the reporting entity;

d. The management of the reporting entity, its parent or affiliates (including directors);

e. Members of the immediate families of principal owners and management of the reporting entity, its parent or affiliates and their management;

f. Parties with which the reporting entity may deal if either party directly or indirectly controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interest;

g. A party which can, directly or indirectly, significantly influence the management or operating policies of the reporting entity, which may include a provider who is contracting with the reporting entity. This is not intended to suggest that all provider contracts create related party relationships;

h. A party which has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests;

i. Attorney-in-fact of a reciprocal reporting entity or any affiliate of the attorney-in-fact; and

j. A U.S. manager of a U.S. Branch or any affiliate of the U.S. manager of a U.S. Branch.

3. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48). Those entities are accounted for under the

guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

4. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

5. Control as defined in paragraph 4 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18*. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.

b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.

c. An entity where the insurer has given up participation rights[1] as a shareholder to the investee.

6. Transactions between related parties must be in the form of a written agreement. The written agreement must provide for timely settlement of amounts owed, with a specified due date. Amounts owed to the reporting entity over ninety days from the written agreement due date shall be nonadmitted. If the due date is not addressed by the written agreement any uncollected receivable is nonadmitted.

Related Party Loans

~~6.~~7. Loans or advances (including debt, public or private) made by a reporting entity to its parent or principal owner shall be admitted if approval for the transaction has been obtained from the domiciliary commissioner and the loan or advance is determined to be collectible based on the parent or principal owner's independent payment ability. An affiliate's ability to pay shall be determined after consideration of the liquid assets or revenues available from external sources (i.e., determination shall not include dividend paying ability of the subsidiary making the loan or advance) which are available to repay the balance and/or maintain its account on a current basis. Evaluation of the collectibility of loans or

[1] The term “participating rights” refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee’s ordinary course of business and is distinguished from the more limited type of rights referred to as “protective rights”. Refer to the sections entitled: “Protective Rights” and “Substantive Participating Rights” in *EITF 96-16, Investor’s Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term “participating rights” shall be used consistent with the discussion of substantive participating rights in the EITF.

advances shall be made periodically. If, in accordance with *SSAP No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (SSAP No. 5), it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

~~7.~~8. Loans or advances by a reporting entity to all other related parties shall be evaluated by management and nonadmitted if they do not constitute arm's-length transactions as defined in paragraph 10. Loans or advances made by a reporting entity to related parties (other than its parent or principal owner) that are economic transactions as defined in paragraph 10 shall be admitted. This includes financing arrangements with providers of health care services with whom the reporting entity contracts with from time to time. Such arrangements can include both loans and advances to these providers. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with SSAP No. 5, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

~~8.~~9. Any advances under capitation arrangements made directly to providers, or to intermediaries that represent providers, that exceed one month's payment shall be nonadmitted assets.

~~9.~~10. Indirect loans are loans or extensions of credit to any person who is not an affiliate, where the reporting entity makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the reporting entity making the loans or extensions of credit. The admissibility of indirect loans made by a reporting entity for the benefit of its parent or principal owner shall be determined in accordance with the guidelines in paragraph 6. Indirect loans or advances made for the benefit of all other related parties shall be evaluated and accounted for consistent with loans or advances to related parties as described in paragraphs 7 and 8.

Transactions Involving the Exchange of Assets or Liabilities

~~10.~~11. An arm's-length transaction is defined as a transaction in which willing parties, each being reasonably aware of all relevant facts and neither under compulsion to buy, sell, or loan, would be willing to participate. A transaction between related parties involving the exchange of assets or liabilities shall be designated as either an economic transaction or non-economic transaction. An economic transaction is defined as an arm's-length transaction which results in the transfer of the risks and rewards of ownership and represents a consummated act thereof, i.e., "permanence." The appearance of permanence is also an important criterion in assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed. If subsequent events or transactions reverse the effect of an earlier transaction prior to the issuance of the financial statements, the reversal shall be considered in determining whether economic substance existed in the case of the original transaction. Subsequent events are addressed in *SSAP No. 9—Subsequent Events*. An economic transaction must represent a bonafide business purpose demonstrable in measurable terms. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction. The statutory accounting shall follow the substance, not the form of the transaction.

~~11.~~12. In determining whether there has been a transfer of the risks and rewards of ownership in the transfer of assets or liabilities between related parties, the following—and any other relevant facts and circumstances related to the transaction—shall be considered:

a. Whether the seller has a continuing involvement in the transaction or in the financial interest transferred, such as through the exercise of managerial authority to a degree usually associated with ownership;

b. Whether there is an absence of significant financial investment by the buyer in the financial interest transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer;

c. Whether repayment of debt that constitutes the principal consideration in the transaction is dependent on the generation of sufficient funds from the asset transferred;

d. Whether limitations or restrictions exist on the buyer's use of the financial interest transferred or on the profits arising from it;

e. Whether there is retention of effective control of the financial interest by the seller.

~~12.~~13. A transaction between related parties may meet the criteria for treatment as an economic transaction at one level of financial reporting, but may not meet such criteria at another level of financial reporting. An example of such a transaction is a reporting entity purchasing securities at fair value from an affiliated reporting entity that carried the securities at amortized cost. This transaction meets the criteria of an economic transaction at this level of financial reporting, and therefore, the selling reporting entity would record a gain and the acquiring reporting entity would record the securities at their cost (fair value on the transaction date). At the common parent level of reporting, this transaction has resulted in the mere inflation of surplus, and therefore, is a non-economic transaction. The parent reporting entity shall defer the net effects of any gain or increase in surplus resulting from such transactions by recording a deferred gain and an unrealized loss. The deferred gain shall not be recognized by the parent reporting entity unless and until arms-length transaction(s) with independent third parties give rise to appropriate recognition of the gain.

~~13.~~14. A non-economic transaction is defined as any transaction that does not meet the criteria of an economic transaction. Similar to the situation described in paragraph 12, transfers of assets from a parent reporting entity to a subsidiary, controlled or affiliated entity shall be treated as non-economic transactions at the parent reporting level because the parent has continuing indirect involvement in the assets.

~~14.~~15. When accounting for a specific transaction, reporting entities shall use the following valuation methods:

a. Economic transactions between related parties shall be recorded at fair value at the date of the transaction. To the extent that the related parties are affiliates under common control, the controlling reporting entity shall defer the effects of such transactions that result in gains or increases in surplus (see paragraph 12);

b. Non-economic transactions between reporting entities, which meet the definition of related parties above, shall be recorded at the lower of existing book values or fair values at the date of the transaction;

c. Non-economic transactions between a reporting entity and an entity that has no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or it's affiliates, shall be recorded at the fair value at the date of the transaction; however, to the extent that the transaction results in a gain, that gain shall be deferred until such time as permanence can be verified;

d. Transactions which are designed to avoid statutory accounting practices shall be reported as if the reporting entity continued to own the assets or to be obligated for a liability directly instead of through a subsidiary.

Examples of transactions deemed to be non-economic include security swaps of similar issues between or among affiliated companies, and swaps of dissimilar issues accompanied by exchanges of liabilities between or among affiliates.

Transactions Involving Services

~~15.~~16. Transactions involving services between related parties can take a variety of different forms. One of the significant factors as to whether these transactions will be deemed to be arm's length is the amount charged for such services. In general, amounts charged for services are based either on current market rates or on allocations of costs. Determining market rates for services is difficult because the circumstances surrounding each transaction are unique. Unlike transactions involving the exchange of assets and liabilities between related parties, transactions for services create income on one party's books and expense on the second party's books, and therefore, do not lend themselves to the mere inflation of surplus. These arrangements are generally subject to regulatory approval.

~~16.~~17. Transactions involving services provided between related parties shall be recorded at the amount charged. Regulatory scrutiny of related party transactions where amounts charged for services do not meet the fair and reasonable standard established by Appendix A-440, may result in (a) amounts charged being recharacterized as dividends or capital contributions, (b) transactions being reversed, (c) receivable balances being nonadmitted, or (d) other regulatory action. Expenses that result from cost allocations shall be allocated subject to the same fair and reasonable standards, and the books and records of each party shall disclose clearly and accurately the precise nature and details of the transaction. See *SSAP No. 70—Allocation of Expenses* for additional discussion regarding the allocation of expenses.

Disclosures

~~17.~~18. The financial statements shall include disclosures of all material related party transactions. In some cases, aggregation of similar transactions may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm's-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

a. The nature of the relationships involved;

b. A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, any non-insurance transactions which involve less than 1/2 of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:

i. Date of transaction;

ii. Explanation of transaction;

iii. Name of reporting entity;

iv. Name of affiliate;

v. Description of assets received by reporting entity;

vi. Statement value of assets received by reporting entity;

vii. Description of assets transferred by reporting entity; and

viii. Statement value of assets transferred by reporting entity.

c. The dollar amounts of transactions for each of the periods for which financial statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period;

d. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement;

e. Any guarantees or undertakings, written or otherwise, for the benefit of an affiliate or related party which result in a material contingent exposure of the reporting entity's or any related party's assets or liabilities;

f. A description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party. This shall include, but is not limited to, sale lease-back arrangements, computer or fixed asset leasing arrangements, and agency contracts, which remove assets otherwise recordable (and potentially nonadmitted) on the reporting entity's financial statements;

g. The nature of the control relationship whereby the reporting entity and one or more other enterprises are under common ownership or control and the existence of that control could result in operating results or financial position of the reporting entity significantly different from those that would have been obtained if the enterprises were autonomous. The relationship shall be disclosed even though there are no transactions between the enterprises; and

h. The amount deducted from the value of an upstream intermediate entity or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated entity, in accordance with the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, "Procedures for Valuing Common Stocks and Stock Warrants."

~~18.~~19. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

~~19.~~20. This statement adopts *FASB Statement No. 57, Related Party Disclosures* with a modification to paragraph 2 to require disclosure of compensation arrangements, expense allowances, and other similar items in the ordinary course of business.

Statutory Issue Paper No. 129

Share-Based Payment, A Replacement of SSAP No. 13—Stock Options and Stock Purchase Plans

STATUS:
Adopted March 3, 2012

Current Authoritative Guidance for Stock Options and Stock Purchase Plans: SSAP No. 104R
This issue paper may not be directly related to the current authoritative statement.

Original SSAP: SSAP No. 104

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The Financial Accounting Standards Board (FASB) issued FAS 123(R): *Share-Based Payments* (FAS 123(R)) in December of 2004. FAS 123(R) is a revision of *FASB Statement No. 123: Accounting for Stock-Based Compensation* (FAS 123) and supersedes *APB Opinion No. 25, Accounting for Stock Issued to Employees* (APB Opinion No. 25), and its related implementation guidance. The scope of FAS 123(R) establishes standards for the accounting of transactions in which an entity exchanges its equity instruments for goods or services. It also addresses transactions in which an entity incurs liabilities in exchange for goods or services that are based on the fair value of the entity's equity instruments or that may be settled by the issuance of those equity instruments. FAS 123(R) focuses primarily on accounting for transactions in which an entity obtains employee services in share-based payment transactions. FAS 123(R) does not change the accounting guidance for share-based payment transactions with parties other than employees provided in Statement 123 as originally issued and *EITF Issue No. 96-18, Accounting for Equity Instruments That Are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods or Services*. FAS 123(R) does not address the accounting for employee share ownership plans, which are subject to *AICPA Statement of Position 93-6, Employers' Accounting for Employee Stock Ownership Plans*. (SOP 93-6 is adopted with modification in *SSAP No. 12—Employee Stock Ownership Plans* and EITF 96-18, and other guidance regarding share-based payment transaction with non-employees has been rejected as not applicable to statutory accounting.)

2. FAS 123(R) requires a public entity to measure the cost of employee services received in exchange for an award of equity instruments based on the grant-date fair value of the award (with limited exceptions). That cost will be recognized over the period during which an employee is required to provide service in exchange for the award—the requisite service period (usually the vesting period). No compensation cost is recognized for equity instruments for which employees do not render the requisite service. Employee share purchase plans will not result in recognition of compensation cost if certain conditions are met; those conditions are much the same as the related conditions in FAS 123.

3. Under FAS 123(R), a nonpublic entity, likewise, measures the cost of employee services received in exchange for an award of equity instruments based on the grant-date fair value of those instruments, except in certain circumstances. Specifically, if it is not possible to reasonably estimate the fair value of equity share options and similar instruments because it is not practicable to estimate the expected volatility of the entity's share price, a nonpublic entity is required to measure its awards of equity share options and similar instruments based on a value calculated using the historical volatility of an appropriate industry sector index instead of the expected volatility of its share price.

4. Under FAS 123(R), a public entity initially measures the cost of employee services received in exchange for an award of liability instruments based on its current fair value; the fair value of that award are remeasured subsequently at each reporting date through the settlement date. Changes in fair value during the requisite service period will be recognized as compensation cost over that period. A nonpublic entity may elect to measure its liability awards at their intrinsic value through the date of settlement.

5. Under FAS 123(R), the grant-date fair value of employee share options and similar instruments are estimated using option-pricing models adjusted for the unique characteristics of those instruments (unless observable market prices for the same or similar instruments are available). If an equity award is modified after the grant date, incremental compensation cost is recognized in an amount equal to the excess of the fair value of the modified award over the fair value of the original award immediately before the modification.

6. Under FAS 123(R), excess tax benefits are recognized as an addition to paid-in capital. In addition, cash retained as a result of those excess tax benefits are presented in the statement of cash flows as financing cash inflows. The write-off of deferred tax assets relating to unrealized tax benefits associated with recognized compensation cost are recognized as income tax expense unless there are excess tax benefits from previous awards remaining in paid-in capital to which it can be offset.

7. Under FAS 123(R), the notes to financial statements of both public and nonpublic entities disclose information to assist users of financial information to understand the nature of share-based payment transactions and the effects of those transactions on the financial statements.

8. The purpose of this issue paper is to update statutory accounting principles for the accounting of transactions in which an entity exchanges its equity instruments to employees in share-based payment transactions and proposes the issuance of a new *SSAP No. 104—Stock Options and Stock Purchase Plans* (SSAP No. 104) that adopts, with modification, the guidance from FAS 123(R) and related accounting guidance and interpretations as noted within this issue paper. This issue paper proposes application of the substantively revised SSAP No. 104 for new awards and awards modified, repurchased, or cancelled after the required effective date. This issue paper also addresses transactions in which an entity incurs liabilities in exchange for goods or services that are based on the fair value of the entity's equity instruments or that may be settled by the issuance of those equity instruments.

9. As noted in footnote 1 (paragraph 11), the fair value measurement objective in this issue paper is generally consistent with the fair value measurement objective in *SSAP No. 100—Fair Value Measurements* (SSAP No. 100). However, for certain share-based payment transactions with employees, the measurements at the grant date are fair-value-based measurements, not fair value measurements. Although some measurements in this issue paper are fair value measurements, for practical reasons this issue paper is proposed to be excluded in its entirety from SSAP No. 100. To be consistent with GAAP guidance on share-based payment transactions, the definition of fair value for use in this issue paper is: "The amount at which the asset (or liability) could be bought (or incurred) or sold (settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale." Observable market prices of identical or similar equity or liability instruments in active markets are the best estimate of fair value and, if available, should be used as the basis for the measurement of equity and liability instruments awarded in a share-based payment transaction with employees. To clarify the exclusion, the following revision is also proposed to SSAP No. 100:

> 3. This standard applies under other statutory accounting pronouncements that require or permit fair value measurements, except as follows
>
> a. This standard does not eliminate the practicality exceptions to fair value measurements in accounting pronouncements within the scope of this standard.
>
> b. This standard does not apply under *SSAP No. 22—Leases* (SSAP No. 22) and other accounting pronouncements that address fair value measurements for

purposes of lease classification to measurement under SSAP No. 22. This scope exception does not apply to assets acquired or liabilities assumed in a business combination that are required to be measured at fair value under *SSAP No. 68—Business Combinations and Goodwill* (SSAP No. 68), regardless of whether those assets and liabilities are related to leases. This standard does not apply to share-based payment transactions captured within *SSAP No. 104—Stock Options and Stock Purchase Plans* (SSAP No. 104).

SUMMARY CONCLUSION

Objectives

10. The objective of accounting for transactions under share-based payment arrangements with employees is to recognize in the financial statements the employee services received in exchange for equity instruments issued or liabilities incurred and the related cost to the entity as those services are consumed. This issue paper uses the terms compensation and payment in their broadest senses to refer to the consideration paid for employee services.

11. This issue paper requires that the cost resulting from all share-based payment transactions be recognized in the financial statements. This issue paper establishes fair value as the measurement objective in accounting for share-based payment arrangements and requires all entities to apply a fair-value-based measurement method[1] in accounting for share-based payment transactions with employees except for equity instruments held by employee stock ownership plans.

Scope and Scope Exceptions

12. This issue paper applies to all share-based payment transactions in which an entity acquires employee services by issuing (or offering to issue) its shares, share options, or other equity instruments or by incurring liabilities to an employee that meet either of the following conditions:

a. The amounts are based, at least in part, on the price of the entity's shares or other equity instruments. (The phrase "*at least in part*" is used because an award of share-based compensation may be indexed to both the price of an entity's shares and something else that is neither the price of the entity's shares nor a market, performance, or service condition.)

b. The awards require or may require settlement by issuing the entity's equity shares or other equity instruments.

13. Share-based payments awarded to an employee of the reporting entity by a related party or other holder of an economic interest in the entity as compensation for services provided to the entity are share-based payment transactions to be accounted for under this issue paper unless the transfer is clearly for a purpose other than compensation for services to the reporting entity. The substance of such a transaction is that the economic interest holder makes a capital contribution to the reporting entity, and that entity makes a share-based payment to its employee in exchange for services rendered. An example of a

[1] Accounting pronouncements that require fair value measurements but that are excluded from *SSAP No. 100—Fair Value Measurements* is limited to this issue paper addressing share-based payment transactions. The fair value measurement objective in this issue paper is generally consistent with the fair value measurement objective in SSAP No. 100. However, for certain share-based payment transactions with employees, the measurements at the grant date are fair-value-based measurements, not fair value measurements. Although some measurements in this issue paper are fair value measurements, for practical reasons this issue paper is excluded in its entirety from SSAP No. 100. To be consistent with GAAP guidance on share-based payment transactions, the definition of fair value for use in this issue paper is: "The amount at which the asset (or liability) could be bought (or incurred) or sold (settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale." Observable market prices of identical or similar equity or liability instruments in active markets are the best estimate of fair value and, if available, should be used as the basis for the measurement of equity and liability instruments awarded in a share-based payment transaction with employees.

situation in which such a transfer is not compensation is a transfer to settle an obligation of the economic interest holder to the employee that is unrelated to employment by the entity.

14. The guidance in this issue paper does not apply to share-based transactions for other than employee services.

15. The guidance in this issue paper does not apply to equity instruments held by an employee stock ownership plan. Such equity instruments shall follow the guidance in *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12).

16. The guidance in this statement is divided as follows:

a. Compensatory Share-Based Payment Plans: Paragraphs 17-112.

b. Noncompensatory Share-Based Payment Plans: Paragraphs 113-119.

c. Consolidated / Holding Company Share-Based Payment Plans: Paragraphs: 120-121.

Compensatory Share-Based Payment Plans

Recognition

Recognition Principle for Share-Based Payment Transactions

17. Stock purchase and stock option plans that do not meet the criteria of a non-compensatory plan (paragraphs 113-119) and are not otherwise excluded from the scope of this issue paper shall be classified as compensatory and follow the recognition, measurement and disclosure guidance in paragraphs 18-112.

18. An entity shall recognize the services received in a share-based payment transaction with an employee as services are received. Employee services themselves are not recognized before they are received. The entity shall recognize either a corresponding increase in equity or a liability, depending on whether the instruments granted satisfy the equity or liability classification criteria (see paragraphs 22-35.) As the services are consumed, the entity shall recognize the related cost.

19. The accounting for all share-based payment transactions shall reflect the rights conveyed to the holder of the instruments and the obligations imposed on the issuer of the instruments, regardless of how those transactions are structured. For example, the rights and obligations embodied in a transfer of equity shares to an employee for a note that provides no recourse to other assets of the employee (that is, other than the shares) are substantially the same as those embodied in a grant of equity share options. Thus, that transaction shall be accounted for as a substantive grant of equity share options.

20. Assessment of both the rights and obligations in a share-based payment award and any related arrangement and how those rights and obligations affect the fair value of an award requires the exercise of judgment in considering the relevant facts and circumstances.

Determining the Grant Date

21. As a practical accommodation, in determining the grant date of an award subject to this issue paper, assuming all other criteria in the grant date definition have been met, a mutual understanding of the key terms and conditions of an award to an individual employee shall be presumed to exist at the date the award is approved in accordance with the relevant corporate governance requirements (that is, by the Board or management with the relevant authority) if both of the following conditions are met:

a. The award is a unilateral grant and, therefore, the recipient does not have the ability to negotiate the key terms and conditions of the award with the employer.

b. The key terms and conditions of the award are expected to be communicated to an individual recipient within a relatively short time period from the date of approval. A relatively short time period is that period in which an entity could reasonably complete all actions necessary to communicate the awards to the recipients in accordance with the entity's customary human resource practices.

Determining Whether to Classify a Financial Instrument as a Liability or As Equity

22. This paragraph, through paragraph 35, provides guidance for determining whether certain financial instruments awarded in share-based payment transactions are liabilities. In determining whether an instrument not specifically discussed in those paragraphs shall be classified as a liability or as equity, an entity shall apply statutory accounting principles applicable to financial instruments issued in transactions not involving share-based payment.

23. Unless paragraphs 24-35 require otherwise, an entity shall apply the classification criteria in Appendix A, as they are effective at the reporting date, in determining whether to classify as a liability a freestanding financial instrument given to an employee in a share-based payment transaction. Paragraphs 73-77 provide criteria for determining when instruments subject to this issue paper subsequently become subject to other applicable statutory accounting principles.

24. In determining the classification of an instrument, an entity shall take into account the classification requirements that are effective for that specific entity at the reporting date as established by Appendix A. In addition, a call option written on an instrument that is not classified as a liability under those classification requirements also shall be classified as equity so long as those equity classification requirements for the entity continue to be met, unless liability classification is required under the provisions of paragraphs 27 and 28.

25. Appendix A does not apply to outstanding shares embodying a conditional obligation to transfer assets, for example, shares that give the employee the right to require the employer to repurchase them for cash equal to their fair value (puttable shares). A put right may be granted to the employee in a transaction that is related to a share-based compensation arrangement. If exercise of such a put right would require the entity to repurchase shares issued under the share-based compensation arrangement, the shares shall be accounted for as puttable shares. A puttable (or callable) share awarded to an employee as compensation shall be classified as a liability if either of the following conditions is met:

a. The repurchase feature permits the employee to avoid bearing the risks and rewards normally associated with equity share ownership for a reasonable period of time from the date the requisite service is rendered and the share is issued. An employee begins to bear the risks and rewards normally associated with equity share ownership when all the requisite service has been rendered. A repurchase feature that can be exercised only upon the occurrence of a contingent event that is outside the employee's control (such as an initial public offering) would not meet this condition until it becomes probable that the event will occur within the reasonable period of time.

b. It is probable that the employer would prevent the employee from bearing those risks and rewards for a reasonable period of time from the date the share is issued.

For this purpose, a period of six months or more is a reasonable period of time.

26. A puttable (or callable) share that does not meet either of those conditions shall be classified as equity.

27. Options or similar instruments on shares shall be classified as liabilities if either of the following conditions is met:

a. The underlying shares are classified as liabilities.

b. The entity can be required under any circumstances to settle the option or similar instrument by transferring cash or other assets. A cash settlement feature that can be exercised only upon the occurrence of a contingent event that is outside the employee's control (such as an initial public offering) would not meet this condition until it becomes probable that event will occur.

28. For example, a reporting entity that is a Securities and Exchange Commission (SEC) registrant may grant an option to an employee that, upon exercise, would be settled by issuing a mandatorily redeemable share. Because the mandatorily redeemable share would be classified as a liability under Appendix A (as well as under *SSAP No. 72—Surplus and Reorganizations*), the option also would be classified as a liability.

29. An award may be indexed to a factor in addition to the entity's share price. If that additional factor is not a market, performance, or service condition, the award shall be classified as a liability for purposes of this issue paper, and the additional factor shall be reflected in estimating the fair value of the award.

30. For this purpose, an award of equity share options granted to an employee of an entity's foreign operation that provides for a fixed exercise price denominated either in the foreign operation's functional currency or in the currency in which the employee's pay is denominated shall not be considered to contain a condition that is not a market, performance, or service condition. Therefore, such an award is not required to be classified as a liability if it otherwise qualifies as equity. For example, equity share options with an exercise price denominated in euros granted to employees of a U.S. entity's foreign operation whose functional currency is the euro are not required to be classified as liabilities if those options otherwise qualify as equity. In addition, such options are not required to be classified as liabilities even if the functional currency of the foreign operation is the U.S. dollar, provided that the employees to whom the options are granted are paid in euros.

31. The accounting for an award of share-based payment shall reflect the substantive terms of the award and any related arrangement. Generally, the written terms provide the best evidence of the substantive terms of an award. However, an entity's past practice may indicate that the substantive terms of an award differ from its written terms. For example, an entity that grants a tandem award under which an employee receives either a stock option or a cash-settled stock appreciation right is obligated to pay cash on demand if the choice is the employee's, and the entity thus incurs a liability to the employee. In contrast, if the choice is the entity's, it can avoid transferring its assets by choosing to settle in stock, and the award qualifies as an equity instrument. However, if an entity that nominally has the choice of settling awards by issuing stock predominately settles in cash or if the entity usually settles in cash whenever an employee asks for cash settlement, the entity is settling a substantive liability rather than repurchasing an equity instrument. In determining whether an entity that has the choice of settling an award by issuing equity shares has a substantive liability, the entity also shall consider whether:

a. It has the ability to deliver the shares. (Federal securities law generally requires that transactions involving offerings of shares under employee share option arrangements be registered, unless there is an available exemption. For purposes of this issue paper, such requirements do not, by themselves, imply that an entity does not have the ability to deliver shares and thus do not require an award that otherwise qualifies as equity to be classified as a liability.)

b. It is required to pay cash if a contingent event occurs (see paragraphs 27-28).

32. A provision that permits employees to effect a broker-assisted cashless exercise of part or all of an award of share options through a broker does not result in liability classification for instruments that otherwise would be classified as equity if both of the following criteria are satisfied:

a. The cashless exercise requires a valid exercise of the share options.

b. The employee is the legal owner of the shares subject to the option (even though the employee has not paid the exercise price before the sale of the shares subject to the option).

33. A broker that is a related party of the entity must sell the shares in the open market within a normal settlement period, which generally is three days, for the award to qualify as equity.

34. Similarly, a provision for either direct or indirect (through a net-settlement feature) repurchase of shares issued upon exercise of options (or the vesting of nonvested shares), with any payment due employees withheld to meet the employer's minimum statutory withholding requirements resulting from the exercise, does not, by itself, result in liability classification of instruments that otherwise would be classified as equity. However, if an amount in excess of the minimum statutory requirement is withheld, or may be withheld at the employee's discretion, the entire award shall be classified and accounted for as a liability.

35. Minimum statutory withholding requirements are to be based on the applicable minimum statutory withholding rates required by the relevant tax authority (or authorities, for example, federal, state, and local), including the employee's share of payroll taxes that are applicable to such supplemental taxable income.

Market, Performance, and Service Conditions

36. Accruals of compensation cost for an award with a performance condition shall be based on the probable outcome of that performance condition—compensation cost shall be accrued if it is probable that the performance condition will be achieved and shall not be accrued if it is not probable that the performance condition will be achieved. If an award has multiple performance conditions (for example, if the number of options or shares an employee earns varies depending on which, if any, of two or more performance conditions is satisfied), compensation cost shall be accrued if it is probable that a performance condition will be satisfied. In making that assessment, it may be necessary to take into account the interrelationship of those performance conditions.

37. If an award requires satisfaction of one or more market, performance, or service conditions (or any combination thereof), compensation cost shall be recognized if the requisite service is rendered, and no compensation cost shall be recognized if the requisite service is not rendered.

Payroll Taxes

38. A liability for employee payroll taxes on employee stock compensation shall be recognized on the date of the event triggering the measurement and payment of the tax to the taxing authority (for a nonqualified option in the United States, generally the exercise date). Payroll taxes, even though directly related to the appreciation on stock options, are operating expenses and shall be reflected as such in the statement of operations.

Initial Measurement

39. While some of the material in paragraphs 39-42 was written in terms of awards classified as equity, it applies equally to awards classified as liabilities. The subparagraphs of paragraph 44 provide specific guidance for awards classified as liabilities.

40. A share-based payment transaction with employees shall be measured based on the fair value (or in certain situations specified in this issue paper, a calculated value or intrinsic value) of the equity instruments issued.

41. An entity shall account for the compensation cost from share-based payment transactions with employees in accordance with the fair-value-based method set forth in this issue paper. That is, the cost of services received from employees in exchange for awards of share-based compensation generally shall be measured based on the grant-date fair value of the equity instruments issued or on the fair value of the liabilities incurred. The cost of services received by an entity as consideration for equity instruments issued or liabilities incurred in share-based compensation transactions with employees shall be measured based on the fair value of the equity instruments issued or the liabilities settled. The portion of the fair value of an instrument attributed to employee service is net of any amount that an employee pays (or becomes obligated to pay) for that instrument when it is granted. For example, if an employee pays $5 at the grant date for an option with a grant-date fair value of $50, the amount attributed to employee service is $45.

42. However, this issue paper provides certain exceptions (see paragraph 58) to that measurement method if it is not possible to reasonably estimate the fair value of an award at the grant date. A reporting entity that is not able to reasonably estimate the fair value of its equity options and similar instruments may measure its liabilities under share-based payment arrangements at intrinsic value (see paragraphs 57 and 44.b.).

Terms of the Award Affect Fair Value

43. The terms of a share-based payment award and any related arrangement affect its value and, except for certain explicitly excluded features, such as a reload feature, shall be reflected in determining the fair value of the equity or liability instruments granted. For example, the fair value of a substantive option structured as the exchange of equity shares for a nonrecourse note will differ depending on whether the employee is required to pay nonrefundable interest on the note.

Measurement Objective – Fair Value at Grant Date

44. The measurement objective for equity instruments awarded to employees is to estimate the fair value at the grant date of the equity instruments that the entity is obligated to issue when employees have rendered the requisite service and satisfied any other conditions necessary to earn the right to benefit from the instruments (for example, to exercise share options). That estimate is based on the share price and other pertinent factors, such as expected volatility, at the grant date. The following subparagraphs provide guidance regarding the measurement objective and measurement date for liability instruments:

a. Measurement Objective and Measurement Date for Liabilities (Public Entity): At the grant date, the measurement objective for liabilities incurred under share-based compensation arrangements is the same as the measurement objective for equity instruments awarded to employees as described in paragraph 44. However, the measurement date for liability instruments is the date of settlement.

b. Measurement Objective and Measurement Date for Liabilities (Non-Public Entity): An entity subject to paragraph 57 shall make a policy decision of whether to measure all of its liabilities incurred under share-based payment arrangements at fair value or to measure all such liabilities at intrinsic value. Consistent with the guidance in paragraph 57, an entity that is not able to reasonably estimate the fair value of its equity share options and similar instruments because it is not practicable for it to estimate the expected volatility of its share price shall make a policy choice of whether to measure its liabilities under share-based payment arrangements at calculated value or at intrinsic value.

45. The fair value of an equity share option or similar instrument shall be measured based on the observable market price of an option with the same or similar terms and conditions.

46. Such market prices for equity share options and similar instruments granted to employees are frequently not available; however, they may become so in the future.

47. As such, the fair value of an equity share option or similar instrument shall be estimated using a valuation technique such as an option-pricing model. For this purpose, a similar instrument is one whose fair value differs from its intrinsic value, that is, an instrument that has time value. For example, a share appreciation right that requires net settlement in equity shares has time value; an equity share does not.

Factors or Restrictions that Impact the Determination of Fair Value at Grant Date

Vesting Versus Nontransferability

48. To satisfy the measurement objective in paragraph 44, the restrictions and conditions inherent in equity instruments awarded to employees are treated differently depending on whether they continue in effect after the requisite service period. A restriction that continues in effect after an entity has issued instruments to employees, such as the inability to transfer vested equity share options to third parties or the inability to sell vested shares for a period of time, is considered in estimating the fair value of the instruments at the grant date. For equity share options and similar instruments, the effect of nontransferability (and nonhedgeability, which has a similar effect) is taken into account by reflecting the effects of employees' expected exercise and postvesting employment termination behavior in estimating fair value (referred to as an option's expected term).

Forfeitability

49. A restriction that stems from the forfeitability of instruments to which employees have not yet earned the right, such as the inability either to exercise a nonvested equity share option or to sell nonvested shares, is not reflected in estimating the fair value of the related instruments at the grant date. Instead, those restrictions are taken into account by recognizing compensation cost only for awards for which employees render the requisite service.

Performance of Service Conditions

50. Awards of share-based employee compensation ordinarily specify a performance condition or a service condition (or both) that must be satisfied for an employee to earn the right to benefit from the award. No compensation cost is recognized for instruments that employees forfeit because a service condition or a performance condition is not satisfied (that is, instruments for which the requisite service is not rendered).

51. The fair-value-based method described in paragraphs 44 and 48-52 uses fair value measurement techniques, and the grant-date share price and other pertinent factors are used in applying those techniques. However, the effects on the grant-date fair value of service and performance conditions that apply only during the requisite service period are reflected based on the outcomes of those conditions. This issue paper refers to the required measure as fair value.*)*

Market Conditions

52. Some awards contain a market condition. The effect of a market condition is reflected in the grant-date fair value of an award. (Valuation techniques have been developed to value path-dependent options as well as other options with complex terms. Awards with market conditions, as defined in this issue paper, are path-dependent options.) Compensation cost thus is recognized for an award with a market condition provided that the requisite service is rendered, regardless of when, if ever, the market condition is satisfied.

Market, Performance, and Service Conditions That Affect Conditions Other than Vesting or Exercisability

53. Market, performance, and service conditions (or any combination thereof) may affect an award's exercise price, contractual term, quantity, conversion ratio, or other factors that are considered in measuring an award's grant-date fair value. A grant-date fair value shall be estimated for each possible outcome of such a performance or service condition, and the final measure of compensation cost shall be based on the amount estimated at the grant date for the condition or outcome that is actually satisfied.

Nonvested or Restricted Shares

54. A nonvested equity share or nonvested equity share unit awarded to an employee shall be measured at its fair value as if it were vested and issued on the grant date.*)*

55. Nonvested shares granted to employees usually are referred to as restricted shares, but this issue paper reserves that term for fully vested and outstanding shares whose sale is contractually or governmentally prohibited for a specified period of time.*)*

56. A restricted share awarded to an employee, that is, a share that will be restricted after the employee has a vested right to it, shall be measured at its fair value, which is the same amount for which a similarly restricted share would be issued to third parties.

Calculated Value for Entities Not Reasonably Able to Estimate Fair Value

57. An entity may not be able to reasonably estimate the fair value of its equity share options and similar instruments because it is not practicable for it to estimate the expected volatility of its share price. In that situation, the entity shall account for its equity share options and similar instruments based on a value calculated using the historical volatility of an appropriate industry sector index instead of the expected volatility of the entity's share price (the calculated value). Throughout the remainder of this issue paper, provisions that apply to accounting for share options and similar instruments at fair value also apply to calculated value.

Difficulty of Estimation

58. It should be possible to reasonably estimate the fair value of most equity share options and other equity instruments at the date they are granted. However, in rare circumstances, it may not be possible to reasonably estimate the fair value of an equity share option or other equity instrument at the grant date because of the complexity of its terms.

59. An equity instrument for which it is not possible to reasonably estimate fair value at the grant date shall be accounted for based on its intrinsic value (see paragraph 79 for measurement after issue date).

Reload and Contingent Features

60. The fair value of each award of equity instruments, including an award of options with a reload feature (reload options), shall be measured separately based on its terms and the share price and other pertinent factors at the grant date. The effect of a reload feature in the terms of an award shall not be included in estimating the grant-date fair value of the award. Rather, a subsequent grant of reload options pursuant to that provision shall be accounted for as a separate award when the reload options are granted.

61. A contingent feature of an award that might cause an employee to return to the entity either equity instruments earned or realized gains from the sale of equity instruments earned for consideration that is less than fair value on the date of transfer (including no consideration), such as a clawback feature shall not be reflected in estimating the grant-date fair value of an equity instrument.

Requisite Service Period

62. An entity shall make its initial best estimate of the requisite service period at the grant date (or at the service inception date, if that date precedes the grant date) and shall base accruals of compensation cost on that period.

63. The initial best estimate and any subsequent adjustment to that estimate of the requisite service period for an award with a combination of market, performance, or service conditions shall be based on an analysis of all of the following:

a. All vesting and exercisability conditions

b. All explicit, implicit, and derived service periods

c. The probability that performance or service conditions will be satisfied.

Market, Performance, and Service Conditions

64. Performance or service conditions that affect vesting are not reflected in estimating the fair value of an award at the grant date because those conditions are restrictions that stem from the forfeitability of instruments to which employees have not yet earned the right. However, the effect of a market condition is reflected in estimating the fair value of an award at the grant date (see paragraph 52). For purposes of this issue paper, a market condition is not considered to be a vesting condition, and an award is not deemed to be forfeited solely because a market condition is not satisfied.

Subsequent Measurement

65. Guidance that equally applies to both liabilities and equity is generally found in paragraphs 66-78. Paragraphs 79-87 provide additional subsequent measurement guidance for awards classified as equity and paragraphs 88-91 provide additional subsequent measurement guidance for awards classified as liabilities**.**

Recognition of Compensation Costs Over the Requisite Service

66. The compensation cost for an award of share-based employee compensation classified as equity shall be recognized over the requisite service period, with a corresponding credit to equity (generally, paid-in capital). The requisite service period is the period during which an employee is required to provide service in exchange for an award, which often is the vesting period. The requisite service period is estimated based on an analysis of the terms of the share-based payment award.

67. The total amount of compensation cost recognized at the end of the requisite service period for an award of share-based compensation shall be based on the number of instruments for which the requisite service has been rendered (that is, for which the requisite service period has been completed). An entity shall base initial accruals of compensation cost on the estimated number of instruments for which the requisite service is expected to be rendered. That estimate shall be revised if subsequent information indicates that the actual number of instruments is likely to differ from previous estimates. The cumulative effect on current and prior periods of a change in the estimated number of instruments for which the requisite service is expected to be or has been rendered shall be recognized in compensation cost in the period of the change. Previously recognized compensation cost shall not be reversed if an employee share option (or share unit) for which the requisite service has been rendered expires unexercised (or unconverted).

68. An entity shall reverse previously recognized compensation cost for an award with a market condition only if the requisite service is not rendered.

Estimating the Requisite Service Period

69. The requisite service period may be explicit or it may be implicit, being inferred from an analysis of other terms in the award, including other explicit service or performance conditions. The requisite service period for an award that contains a market condition can be derived from certain valuation techniques that may be used to estimate grant-date fair value. An award may have one or more explicit, implicit, or derived service periods; however, an award may have only one requisite service period for accounting purposes unless it is accounted for as in-substance multiple awards. An award with a graded vesting schedule that is accounted for as in-substance multiple awards is an example of an award that has more than one requisite service period (see paragraph 72).

70. The service inception date is the beginning of the requisite service period. If the service inception date precedes the grant date, accrual of compensation cost for periods before the grant date shall be based on the fair value of the award at the reporting date. In the period in which the grant date occurs, cumulative compensation cost shall be adjusted to reflect the cumulative effect of measuring compensation cost based on fair value at the grant date rather than the fair value previously used at the service inception date (or any subsequent reporting date).

71. An entity shall adjust that initial best estimate in light of changes in facts and circumstances. Whether and how the initial best estimate of the requisite service period is adjusted depends on both the nature of the conditions identified in paragraph 63 and the manner in which they are combined, for example, whether an award vests or becomes exercisable when either a market or a performance condition is satisfied or whether both conditions must be satisfied.

Graded Vesting Awards

72. An entity shall make a policy decision about whether to recognize compensation cost for an award with only service conditions that has a graded vesting schedule in either of the following ways:

a. On a straight-line basis over the requisite service period for each separately vesting portion of the award as if the award was, in-substance, multiple awards

b. On a straight-line basis over the requisite service period for the entire award (that is, over the requisite service period of the last separately vesting portion of the award).

However, the amount of compensation cost recognized at any date must at least equal the portion of the grant-date value of the award that is vested at that date.

Awards May Become Subject to Other Guidance

73. Paragraphs 74-77 are intended to apply to those instruments issued in share-based payment transactions with employees accounted for under this issue paper, and to instruments exchanged in a business combination for share-based payment awards of the acquired business that were originally granted to employees of the acquired business and are outstanding as of the date of the business combination. Instruments issued, in whole or in part, as consideration for goods or services other than employee service shall not be considered to have been issued in exchange for employee service when applying the guidance in those paragraphs, irrespective of the employment status of the recipient of the award on the grant date.

74. A freestanding financial instrument issued to an employee in exchange for past or future employee services that is subject to initial recognition and measurement guidance within this issue paper shall continue to be subject to the recognition and measurement provisions of this issue paper throughout the life of the instrument, unless its terms are modified when the holder is no longer an employee. Only for purposes of this paragraph, a modification does not include a change to the terms of an award if that

change is made solely to reflect an equity restructuring provided that both of the following conditions are met:

a. There is no increase in fair value of the award (or the ratio of intrinsic value to the exercise price of the award is preserved, that is, the holder is made whole) or the antidilution provision is not added to the terms of the award in contemplation of an equity restructuring.

b. All holders of the same class of equity instruments (for example, stock options) are treated in the same manner.

75. Other modifications of that instrument that take place when the holder is no longer an employee shall be subject to the modification guidance in paragraph 77. Following modification, recognition and measurement of the instrument should be determined through reference to other applicable statutory accounting principles

76. Once the classification of an instrument is determined, the recognition and measurement provisions of this issue paper shall be applied until the instrument ceases to be subject to the requirements discussed in paragraph 74. Other applicable statutory accounting principles apply to a freestanding financial instrument that was issued under a share-based payment arrangement but that is no longer subject to this issue paper.

77. An entity may modify (including cancel and replace) or settle a fully vested, freestanding financial instrument after it becomes subject to other applicable statutory accounting principles. Such a modification or settlement shall be accounted for under the provisions of this issue paper unless it applies equally to all financial instruments of the same class regardless of whether the holder is (or was) an employee (or an employee's beneficiary). Following the modification, the instrument continues to be accounted for under other applicable statutory accounting principles. A modification or settlement of a class of financial instrument that is designed exclusively for and held only by current or former employees (or their beneficiaries) may stem from the employment relationship depending on the terms of the modification or settlement. Thus, such a modification or settlement may be subject to the requirements of this issue paper. See paragraph 74 for a discussion of changes to awards made solely to reflect an equity restructuring.

Change in Classification Due to Change in Probable Settlement Outcome

78. An option or similar instrument that is classified as equity, but subsequently becomes a liability because the contingent cash settlement event is probable of occurring, shall be accounted for similar to a modification from an equity to liability award. That is, on the date the contingent event becomes probable of occurring (and therefore the award must be recognized as a liability), the entity recognizes a share-based liability equal to the portion of the award attributed to past service (which reflects any provision for acceleration of vesting) multiplied by the award's fair value on that date. To the extent the liability equals or is less than the amount previously recognized in equity, the offsetting debit is a charge to equity. To the extent that the liability exceeds the amount previously recognized in equity, the excess is recognized as compensation cost. The total recognized compensation cost for an award with a contingent cash settlement feature shall at least equal the fair value of the award at the grant date. The guidance in this paragraph is applicable only for options or similar instruments issued as part of employee compensation arrangements. That is, the guidance included in this paragraph is not applicable, by analogy or otherwise, to instruments outside employee share-based payment arrangements.

Subsequent Measurement For Awards Classified as Equity

Fair Value Not Reasonably Estimable

79. An equity instrument for which it is not possible to reasonably estimate fair value at the grant date shall be remeasured at each reporting date through the date of exercise or other settlement. The final measure of compensation cost shall be the intrinsic value of the instrument at the date it is settled. Compensation cost for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered at the reporting date) in the intrinsic value of the instrument in each reporting period. The entity shall continue to use the intrinsic value method for those instruments even if it subsequently concludes that it is possible to reasonably estimate their fair value.

Contingent Features

80. A contingent feature of an award that might cause an employee to return to the entity either equity instruments earned or realized gains from the sale of equity instruments earned for consideration that is less than fair value on the date of transfer (including no consideration), such as a clawback feature, shall be accounted for if and when the contingent event occurs.

Modification of An Award

81. A modification of the terms or conditions of an equity award shall be treated as an exchange of the original award for a new award. In substance, the entity repurchases the original instrument by issuing a new instrument of equal or greater value, incurring additional compensation cost for any incremental value. The effects of a modification shall be measured as follows:

a. Incremental compensation cost shall be measured as the excess, if any, of the fair value of the modified award determined in accordance with the provisions of this issue paper over the fair value of the original award immediately before its terms are modified, measured based on the share price and other pertinent factors at that date. As indicated in paragraph 57, references to fair value throughout this issue paper shall be read also to encompass calculated value. The effect of the modification on the number of instruments expected to vest also shall be reflected in determining incremental compensation cost. The estimate at the modification date of the portion of the award expected to vest shall be subsequently adjusted, if necessary, in accordance with paragraph 67.

b. Total recognized compensation cost for an equity award shall at least equal the fair value of the award at the grant date unless at the date of the modification the performance or service conditions of the original award are not expected to be satisfied. Thus, the total compensation cost measured at the date of a modification shall be the sum of the following:

   i. The portion of the grant-date fair value of the original award for which the requisite service is expected to be rendered (or has already been rendered) at that date

   ii. The incremental cost resulting from the modification.

   Compensation cost shall be subsequently adjusted, if necessary, in accordance with paragraph 67.

c. A change in compensation cost for an equity award measured at intrinsic value in accordance with paragraph 79 shall be measured by comparing the intrinsic value of the modified award, if any, with the intrinsic value of the original award, if any, immediately before the modification.

82. Paragraphs 73-77 provide additional guidance on accounting for modifications of certain freestanding financial instruments that initially were subject to this issue paper but subsequently became subject to other applicable statutory accounting principles.

Short-Term Inducements

83. A short-term inducement shall be accounted for as a modification of the terms of only the awards of employees who accept the inducement. Other inducements are modifications of the terms of all awards subject to them and shall be accounted for as such.

Equity Restructuring or Business Combination

84. Exchanges of share options or other equity instruments or changes to their terms in conjunction with an equity restructuring or a business combination are modifications for purposes of this issue paper. Except for a modification to add an antidilution provision that is not made in contemplation of an equity restructuring, accounting for a modification in conjunction with an equity restructuring requires a comparison of the fair value of the modified award with the fair value of the original award immediately before the modification in accordance with paragraph 81. If those amounts are the same, for instance, because the modification is designed to equalize the fair value of an award before and after an equity restructuring, no incremental compensation cost is recognized. See paragraph 74 for an additional exception.

Repurchase or Cancellation

85. The amount of cash or other assets transferred (or liabilities incurred) to repurchase an equity award shall be charged to equity, to the extent that the amount paid does not exceed the fair value of the equity instruments repurchased at the repurchase date. Any excess of the repurchase price over the fair value of the instruments repurchased shall be recognized as additional compensation cost. An entity that repurchases an award for which the requisite service has not been rendered has, in effect, modified the requisite service period to the period for which service already has been rendered, and thus the amount of compensation cost measured at the grant date but not yet recognized shall be recognized at the repurchase date.

Cancellation and Replacement

86. Cancellation of an award accompanied by the concurrent grant of (or offer to grant) a replacement award or other valuable consideration shall be accounted for as a modification of the terms of the cancelled award. (The phrase *offer to grant* is intended to cover situations in which the service inception date precedes the grant date.) Therefore, incremental compensation cost shall be measured as the excess of the fair value of the replacement award or other valuable consideration over the fair value of the cancelled award at the cancellation date in accordance with paragraph 81. Thus, the total compensation cost measured at the date of a cancellation and replacement shall be the portion of the grant-date fair value of the original award for which the requisite service is expected to be rendered (or has already been rendered) at that date plus the incremental cost resulting from the cancellation and replacement.

87. A cancellation of an award that is not accompanied by the concurrent grant of (or offer to grant) a replacement award or other valuable consideration shall be accounted for as a repurchase for no consideration. Accordingly, any previously unrecognized compensation cost shall be recognized at the cancellation date.

Subsequent Measurement For Awards Classified as Liabilities

Measurement

88. The fair value of liabilities incurred in share-based payment transactions with employees shall be remeasured at the end of each reporting period through settlement.

89. Changes in the fair value (or intrinsic value for an entity that elects that method) of a liability incurred under a share-based payment arrangement that occur during the requisite service period shall be recognized as compensation cost over that period. The percentage of the fair value (or intrinsic value) that is accrued as compensation cost at the end of each period shall equal the percentage of the requisite service that has been rendered at that date. Changes in the fair value (or intrinsic value) of a liability that occur after the end of the requisite service period are compensation costs of the period in which the changes occur. Any difference between the amount for which a liability award is settled and its fair value at the settlement date as estimated in accordance with the provisions of this issue paper is an adjustment of compensation cost in the period of settlement.

90. Reporting entities shall measure a liability award under a share-based payment arrangement based on the award's fair value (or calculated value in accordance with paragraph 57) remeasured at each reporting date until the date of settlement. Compensation cost for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered at the reporting date) in the fair value of the instrument for each reporting period.

Modification of an Award

91. A modification of a liability award is accounted for as the exchange of the original award for a new award. However, because liability awards are remeasured at their fair value (or calculated value for an entity subject to paragraph 57) at each reporting date, no special guidance is necessary in accounting for a modification of a liability award that remains a liability after the modification.

Look-Back Plans

92. The accounting guidance in this section addresses the accounting for certain employee stock purchase plans with a look-back option. An example of a look-back option is a provision that establishes the purchase price as an amount based on the lessor of the stock's market price at the grant date or its market price at the exercise date (or purchase date).

93. As with all employee share purchase plans, the objective of the measurement process for employee share purchase plans with a look-back option is to reasonably measure fair value of the award at the grant date. Paragraph 79 provides guidance on the measurement requirements if it is not possible to reasonably estimate fair value at the grant date.

Accounting for Tax Effects of Share-Based Compensation Awards

94. Income tax regulations specify allowable tax deductions for instruments issued under share-based payment arrangements in determining an entity's income tax liability. For example, under tax law, allowable tax deductions may be measured as the intrinsic value of an instrument on a specified date. The time value component, if any, of the fair value of an instrument generally may not be tax deductible. Therefore, tax deductions may arise in different amounts and in different periods from compensation costs recognized in financial statements. Similarly, the amount of expense reported for an employee stock ownership plan during a period may differ from the amount of the related income tax deduction prescribed by income tax rules and regulations.

95. This guidance addresses how temporary differences are recognized for share-based payment arrangement awards that are classified either as equity or as liabilities under the requirements of

paragraphs 23-35. Incremental guidance is also provided for issues related to employee stock ownership plans.

Tax Effects for Instruments Classified as Equity

96. The cumulative amount of compensation cost recognized for instruments classified as equity that ordinarily would result in a future tax deduction under existing tax law shall be considered to be a deductible temporary difference in applying the requirements of *SSAP No. 101—Income Taxes* (SSAP No. 101). The deductible temporary difference shall be based on the compensation cost recognized for financial reporting purposes. Compensation costs that are capitalized as part of the cost of an asset, such as inventory, shall be considered to be part of the tax basis of that asset for financial reporting purposes.

97. Recognition of compensation cost for instruments that ordinarily do not result in tax deductions under existing tax law shall not be considered to result in a deductible temporary difference. A future event can give rise to a tax deduction for instruments that ordinarily do not result in a tax deduction. The tax effects of such an event shall be recognized only when it occurs. An example of a future event that would be recognized only when it occurs is an employee's sale of shares obtained from an award before meeting a tax law's holding period requirement, sometimes referred to as a disqualifying disposition, which results in a tax deduction not ordinarily available for such an award.

Tax Effects for Instruments Classified as Liability

98. The cumulative amount of compensation cost recognized for instruments classified as liabilities that ordinarily would result in a future tax deduction under existing tax law also shall be considered to be a deductible temporary difference. The deductible temporary difference shall be based on the compensation costs recognized for financial reporting purposes.

Accounting for Tax Effects – Initial Measurement

99. SSAP No. 101 requires a deferred tax asset to be evaluated for future realization and to be reduced by a statutory valuation allowance to the amount that is more likely than not to be realized. Differences between the deductible temporary difference computed pursuant to paragraphs 96 and 97 and the tax deduction that would result based on the current fair value of the entity’s shares shall not be considered in measuring the gross deferred tax asset or determining the need for a valuation allowance for a deferred tax asset recognized under these requirements.

Accounting for Tax Effects – Subsequent Measurement

100. If a deduction reported on a tax return for an award of equity instruments exceeds the cumulative compensation cost for those instruments recognized for financial reporting, any resulting realized tax benefit that exceeds the previously recognized deferred tax asset for those instruments is the excess tax benefit. If only a portion of an award is exercised, determination of the excess tax benefits shall be based on the portion of the award that is exercised.

101. The amount deductible for an award of equity instruments on the employer’s tax return may be less than the cumulative compensation cost recognized for financial reporting purposes. The write-off of a deferred tax asset related to that deficiency, net of the related statutory valuation allowance, if any, shall first be offset to the extent of any remaining gross paid-in and contributed surplus from excess tax benefits arising from previous awards granted, modified, or settled in cash and measured in accordance with a fair value based method of accounting. An entity shall exclude from that amount excess tax benefits from share-based payment arrangements that are outside the scope of this issue paper, excess tax benefits from employee stock ownership plans, and excess tax benefits that have not been realized pursuant to the requirements established in SSAP No. 101.

102. An excess tax benefit determined pursuant to paragraph 100 shall be recognized as gross paid-in and contributed surplus, except that an excess of a realized tax benefit for an award over the deferred tax asset for that award shall be recognized in the income statement to the extent that the excess stems from a reason other than changes in the fair value of an entity's shares between the measurement date for accounting purposes and a later measurement date for tax purposes.

103. Paragraph 101 contains measurement guidance on how much, if any, of the write-off of a deferred tax asset from a tax deficiency shall be offset against additional paid-in capital. The remaining balance, if any, of the write-off of a deferred tax asset related to a tax deficiency shall be recognized in the income statement.

Tax Benefits of Dividends on Share-Based Payment Awards to Employees

104. A realized income tax benefit from dividends or dividend equivalents that are charged to unassigned-funds (surplus) and are paid to employees for any of the following equity classified awards shall be recognized as an increase to gross paid-in and contributed surplus:

a. Nonvested equity shares

b. Nonvested equity share units

c. Outstanding equity share options.

105. The amount recognized in gross paid-in and contributed surplus for the realized income tax benefit from dividends on the awards identified in the preceding paragraph shall be included in the pool of excess tax benefits available to absorb tax deficiencies on share-based payment awards.

106. Dividends or dividend equivalents paid to employees for the awards identified in paragraph 104 may result in a tax deduction prior to the actual realization of the related tax benefit because the employer, for example, has a net operating loss carryforward. The income tax benefit of those dividends shall not be recognized until the deduction reduces income taxes payable. Unrealized income tax benefits from dividends on equity-classified employee share-based payment awards shall be excluded from the pool of excess tax benefits available to absorb potential future tax deficiencies on share-based payment awards.

107. Dividends or dividend equivalents paid to employees on the portion of an award of equity shares or other equity instruments that vests be charged to unassigned-funds (surplus). If the related award is not expected to vest, dividends or dividend equivalents shall be recognized as compensation costs. Dividends and dividend equivalents shall be reclassified between unassigned-funds (surplus) and compensation costs in a subsequent period if the entity changes its forfeiture estimates (or actual forfeitures differ from previous estimates).

108. Adjustments to gross paid-in and contributed surplus for reclassifications of the tax benefits from dividends on the awards discussed in the preceding paragraph in subsequent periods increase or decrease the entity's pool of excess tax benefits available to absorb tax deficiencies by a corresponding amount. Additionally, the tax benefits from dividends that are reclassified from gross paid-in and contributed surplus to the income statement (that is, as a reduction of income tax expense or an increase of income tax benefit) if an entity's estimate of forfeitures increases (or actual forfeitures exceed the entity's estimates) shall be limited to the entity's pool of excess tax benefits available to absorb tax deficiencies on the date of the reclassification.

Accounting for Rabbi Trusts

109. Rabbi trusts are grantor trusts generally set up to fund compensation for a select group of management or highly paid executives. To qualify as a rabbi trust for income tax purposes, the terms of

the trust agreement must explicitly state that the assets of the trust are available to satisfy the claims of general creditors in the event of bankruptcy of the employer.

110. There are four potential scenarios for deferred compensation arrangements where amounts earned by an employee are invested in the stock of the employer and placed in a "rabbi trust."

Plan A: The plan does not permit diversification and must be settled by the delivery of a fixed number of shares of employer stock.

Plan B: The plan does not permit diversification and may be settled by the delivery of cash or shares of employer stock.

Plan C: The plan permits diversification; however, the employee has not diversified (the plan may be settled in cash, shares of employer stock, or diversified assets).

Plan D: The plan permits diversification and the employee has diversified (the plan may be settled in cash, shares of employer stock, or diversified assets).

111. The accounts of the rabbi trust should be consolidated with the accounts of the employer in the financial statements of the employer.

a. For Plan A, employer stock held by the rabbi trust should be classified in equity in a manner similar to the manner in which treasury stock is accounted for. Subsequent changes in the fair value of the employer's stock should not be recognized. The deferred compensation obligation should be classified as an equity instrument and changes in the fair value of the amount owed to the employee should not be recognized.

b. For Plans B and C, employer stock held by the rabbi trust should be classified in equity in a manner similar to the manner in which treasury stock is accounted for. Subsequent changes in the fair value of the employer's stock should not be recognized. The deferred compensation obligation should be classified as a liability and adjusted with a corresponding charge (or credit) to compensation cost, to reflect the changes in the fair value of the amount owed to the employee.

c. For Plan D, assets held by the rabbi trust should be accounted for in accordance with statutory accounting principles for the particular asset (for example, if the diversified asset is a marketable equity security, that security would be accounted for in accordance with SSAP No. 30). The deferred compensation obligation should be classified as a liability and adjusted, with a corresponding charge (or credit) to compensation cost, to reflect changes in the fair value of the amount owed to the employee. Changes in the fair value of the deferred compensation obligation should not be recorded in unrealized gains or losses, even if changes in the fair value of the assets held by the rabbi trust are recorded, pursuant to SSAP No. 30, in surplus.

Disclosure

112. An entity with one or more share-based payment arrangements shall disclose information that enables users of the financial statements to understand all of the following:

a. The nature and terms of such arrangements that existed during the period and the potential effects of those arrangements on shareholders

b. The effect of compensation costs arising from share-based payment arrangements on the income statement

c. The method of estimating the fair value of the goods or services received, or the fair value of the equity instruments granted (or offered to grant), during the period

d. The cash flow effects resulting from share-based payment arrangements.

The disclosures in paragraph 112 are for annual audited statutory financial reports only. Appendix B provides the information needed to achieve the objectives in this paragraph.

Noncompensatory Employee Share Purchase Plans

Overview and Background

113. This section provides guidance to all entities that use employee share purchase plans. The entity must first determine whether the plan is compensatory or noncompensatory. This is determined by the terms of the plan (see paragraphs 114 and 115). A plan with an option feature, for example a look-back feature, is considered compensatory.

Recognition

114. An employee share purchase plan that satisfies all of the following criteria does not give rise to recognizable compensation costs (that is, the plan is noncompensatory):

a. The plan satisfies either of the following conditions:

i. The terms of the plan are no more favorable than those available to all holders of the same class of shares. Note that a transaction subject to an employee share purchase plan that involves a class of equity shares designed exclusively for and held only by current or former employees or their beneficiaries may be compensatory depending on the terms of the arrangement.

ii. Any purchase discount from the market price does not exceed the per-share amount of share issuance costs that would have been incurred to raise a significant amount of capital by a public offering. A purchase discount of five percent or less from the market price shall be considered to comply with this condition without further justification. A purchase discount greater than five percent that cannot be justified under this condition results in compensation cost for the entire amount of the discount. Note that an entity that justifies a purchase discount in excess of five percent shall reassess at least annually, and no later than the first share purchase offer during the fiscal year, whether it can continue to justify that discount pursuant to this paragraph.

b. Substantially all employees that meet limited employment qualifications may participate on an equitable basis.

c. The plan incorporates no option features, other than the following:

i. Employees are permitted a short period of time—not exceeding 31 days—after the purchase price has been fixed to enroll in the plan.

ii. The purchase price is based solely on the market price of the shares at the date of purchase, and employees are permitted to cancel participation before the purchase date and obtain a refund of amounts previously paid (such as those paid by payroll withholdings).

115. A plan provision that establishes the purchase price as an amount based on the lesser of the equity share's market price at date of grant or its market price at date of purchase, commonly called a look-back plan, is an example of an option feature that causes the plan to be compensatory. Similarly, a plan in which the purchase price is based on the share's market price at date of grant and that permits a participating employee to cancel participation before the purchase date and obtain a refund of amounts previously paid contains an option feature that causes the plan to be compensatory.

116. The requisite service period for any compensation cost resulting from an employee share purchase plan is the period over which the employee participates in the plan and pays for the shares.

Initial Measurement

117. The objective in paragraph 44 also applies to the fair value measurements associated with grants under a compensatory employee share purchase plan. The objective in this paragraph states that the fair value measurement method is to estimate the fair value of the equity instruments, based on the share price and other measurement assumptions at the grant date, that are issued in exchange for employee services.

Subsequent Measurement

118. Changes in total employee withholdings during a purchase period that occur solely as a result of salary increases, commissions, or bonus payments are not plan modifications if they do not represent changes to the terms of the award that was offered by the employer and initially agreed to by the employee at the grant (or measurement) date. Under those circumstances, the only incremental compensation cost is that which results from the additional shares that may be purchased with the additional amounts withheld (using the fair value calculated at the grant date). For example, an employee may elect to participate in the plan on the grant date by requesting that five percent of the employee's annual salary be withheld for future purchases of stock. If the employee receives an increase in salary during the term of the award, the base salary on which the five percent withholding amount is applied will increase, thus increasing the total amount withheld for future share purchases. That increase in withholdings as a result of the salary increase is not considered a plan modification and thus only increases the total compensation cost associated with the award by the grant date fair value associated with the incremental number of shares that may be purchased with the additional withholdings during the period. The incremental number of shares that may be purchased is calculated by dividing the incremental amount withheld by the exercise price as of the grant date (for example, 85 percent of the grant date stock price).

119. Any decreases in the withholding amounts (or percentages) shall be disregarded for purposes of recognizing compensation cost unless the employee services that were valued at the grant date will no longer be provided to the employer due to a termination. However, no compensation cost shall be recognized for awards that an employee forfeits because of failure to satisfy a service requirement for vesting. The accounting for decreases in withholdings is consistent with the requirement in paragraph 67 that the total amount of compensation cost that must be recognized for an award be based on the number of instruments for which the requisite service has been rendered (that is, for which the requisite service period has been completed).

Consolidated / Holding Company Plans

120. Except for the disclosure requirement in paragraph 121, the provisions of this issue paper do not apply to a reporting entity, as long as:

a. The reporting entity is not directly liable for obligations under the share-based payment plan.

b. Compensation costs associated with share-based payments provided by a related party or holder of an economic interest in the reporting entity, equal to the required contribution to the plan for the period, are included in allocated expenses to the reporting entity. A liability shall be established for any such contributions due and unpaid.

121. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of the expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liability for the share-based payment plan, then the other provisions of this issue paper apply.

Relevant Literature

122. This issue paper adopts, with modification, GAAP guidance regarding stock options and stock purchase plans reflected in *Topic 718: Compensation – Stock Compensation,* as amended by *ASU 2010-13, Compensation – Stock Compensation (Topic 18): Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Current of the Market in Which the Underlying Equity Security Trades,* with the exception of *FASB Codification Subtopic 718-40: Employee Stock Ownership Plans*. Statutory guidance on employee stock ownership plans is provided in *SSAP No. 12—Employee Stock Ownership Plans*. This adoption with modification includes the related implementation guidance reflected within the FASB Codification Topic 718, not reflected within this issue paper.

123. The adoption, with modification, of FASB Codification Topic 718 identified in paragraph 122 also reflects adoption, with modification, of the following pre-codification GAAP standards:

a. *FAS 123R, Share-Based Payment* (FAS 123R), establishes accounting for transactions in which an entity exchanges its equity instruments for goods or services. It also addresses liabilities in exchange for goods or services that are based on the fair value if the entity's equity instruments or that may be settled by the issuance of those equity instruments. The guidance from FAS 123R has been incorporated within the FASB Codification in *Topic 718, Compensation – Stock Compensation* and is the underlying base of guidance included within this issue paper. (FASB Codification Topic *718-40, Employee Stock Ownership Plans* is excluded from this issue paper as it generally reflects guidance from *AICPA SOP 93-6; Employer's Accounting for Employee Stock Ownership Plans,* and is adopted, with modification in SSAP No. 12.)

b. *FAS 150, Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity* (FAS 150) establishes GAAP standards for how an issuer classifies and measures certain financial instruments with characteristics of both liabilities and equity. The guidance in FAS 150 was previously under consideration by the Statutory Accounting Principles Working Group, and in November 2007, the Valuation of Securities Task Force advised that it is not prevalent for insurers to issue securities or financial instruments within the scope of FAS 150. As a result of that information, in March 2008, FAS 150 was rejected by the Statutory Accounting Principles Working Group as not applicable to statutory accounting. Although originally rejected as not applicable, the guidance in FAS 150 (included within *Topic 480: Distinguishing Liabilities from Equity* (Topic 480) of the FASB Codification) referenced in FAS 123R for classifying instruments as equity or liability is adopted for application in this issue paper. The adopted guidance is reflected in Appendix A of this issue paper.

c. *FASB Staff Position FAS 123(R)-1: Classification and Measurement of Freestanding Financial Instruments Originally issued in Exchange for Employee Services under FASB Statement No. 123(R)* (FAS 123R-1). Under FSP FAS 123R-1, certain freestanding instruments shall continue to be subject to the recognition and measurement provisions of

FAS 123(R) throughout the life of the instrument, unless its terms are modified when the holder is no longer an employee. The guidance from FSP FAS 123R-1 has been incorporated within the FASB Codification in *Topic 718-10, Compensation – Stock Compensation, Overall* in paragraphs 718-10-35-9 through 718-10-35-11.

d. *FASB Staff Position (FSP) FAS 123(R)-2: Practical Accommodation to the Application of Grant Date as Defined in FASB Statement No. 123(R)* (FSP FAS 123R-2). This FSP provided a practical solution for when a mutual understanding of key concepts of a share-based payment award exist. The guidance from FSP FAS 123R-2 has been incorporated within the FASB Condition in *Topic 718-10, Compensation – Stock Compensation, Overall* in paragraph 718-10-25-5.

e. *FASB Staff Position (FSP) FAS123(R)-4: Classification of Options and Similar Instruments Issued as Employee Compensation That Allow for Cash Settlement upon the Occurrence of a Contingent Event* (FSP FAS 123R-4). The guidance in this FSP revised FAS 123R to clarify that an option or instrument classified as equity with a cash settlement feature shall not be reclassified to a liability until it becomes probable that the event will occur. The guidance from FSP FAS 123R-4 has been incorporated within the FASB Condition in *Topic 718-10, Compensation – Stock Compensation, Overall* in paragraph 718-10-35-14.

f. *FASB Staff Position (FSP) FAS 123(R)-5: Amendment of FASB Staff Position FAS 123R-1* (FSP FAS 123R-5). This FSP addresses a question on whether an entity that executes a restructuring must, in all cases, reassess whether the recognition and measurement of an instrument whose holder is no longer an employee becomes subject to other applicable GAAP. The guidance from FSP FAS 123R-5 has been incorporated within the FASB Codification (included through the reference of FSP FAS 123R-1) in *Topic 718-10, Compensation – Stock Compensation, Overall* in paragraph 718-10-35-10.

g. *FASB Staff Position (FSP) FAS 123(R)-6: Technical Corrections of FASB Statement No. 123(R)* (FSP FAS 123R-6). This FSP provides technical corrections. The guidance from FSP FAS 123R-6 has been incorporated within the FASB Codification in paragraphs 710-10-50-2, 718-20-55-32, 718-20-55-121 and the FASB Master Glossary.

h. *EITF 00-16, Recognition and Measurement of Employer Payroll Taxes on Employee Stock-Based Compensation* (EITF 00-16). This EITF was previously considered by the NAIC Emerging Accounting Issues (E) Task Force with adoption in INT 01-14. The adopted guidance from EITF 00-16 is included within this issue paper (as it is included in the FASB Codification 718-10-25-22) with a proposal to nullify INT 01-14.

i. *FASB Technical Bulletin 97-01, Accounting under Statement 123 for Certain Employee Stock Purchase Plans with a Look-Back Option* (TB 97-01). The accounting guidance in TB 97-1 addresses the accounting for certain stock purchase plans with a look-back option. The guidance in TB 97-1 has been incorporated within the FASB Codification in *Topic 718-50, Compensation – Stock Compensation, Employee Share Purchase Plans*.

124. The adoption, with modification of FASB Codification Topic 718 in this issue paper reflects rejection of the following pre-codification GAAP standards:

a. *FASB Staff Position (FSP) FAS 123(R)-3: Transition Election Related to Accounting for the Tax Effects of Share-Based Payment Awards* (FSP FAS 123R-3). This FSP provided a practical transition election related to accounting for the tax effects of share-based payment awards to employees. This guidance, as it relates to transition of FAS 123R in

2005, has not been incorporated in the FASB Codification. FSP FAS 123R-3 is rejected for statutory accounting, with transition guidance established within this issue paper.

b. *FASB Staff Position (FSP) EITF 03-6-1; Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities* (FSP EITF 03-6-1), issued in June 2008. This FSP addresses whether instruments granted in share-based payment transactions are participating securities prior to vesting and, therefore, need to be included in earnings allocation in computing earnings per share (EPS). The guidance from this FSP has been included in the FASB Codification within *Topic 260-10, Earnings Per Share, Overall*. However, as this guidance pertains to calculating EPS, this issue paper rejects this guidance as not applicable for statutory accounting.

125. Modifications to the adopted GAAP guidance are as follows:

a. GAAP references are revised to reference applicable statutory accounting guidance;

b. GAAP reporting line items (either explicitly provided in the issue paper or adopted by reference – such as the GAAP implementation guidance) shall be replaced to reference applicable annual statement line items. (For example, GAAP references to “other comprehensive income” shall be reflected within “Surplus - Unassigned Funds”).

c. GAAP guidance to calculate earnings per share is not applicable to statutory accounting and has not been included within this issue paper.

d. GAAP effective date and transition, and transition disclosures have not been incorporated. Reporting entities shall follow the effective date and transition elements provided within this issue paper.

e. Inclusion of guidance specific to statutory for consolidated/holding company plans.

Effective Date and Transition

126. Upon adoption of this issue paper, the NAIC will release a new *SSAP No. 104—Stock Options and Stock Purchase Plans* (SSAP No. 104) for comment. The SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years beginning on or after January 1, 2013, with early adoption permitted for Dec. 31, 2012, financial statements.

127. Reporting entities with existing share-based payment instruments that applied the guidance contained in *SSAP No. 13—Stock Options and Stock Purchase Plans* (SSAP No. 13) shall apply the requirements of the adopted SSAP No. 104 prospectively to new awards and to awards modified, repurchased, or cancelled after the required effective date. Those reporting entities shall continue to account for any portion of awards outstanding at the date of initial application using the accounting principles originally applied to those awards (SSAP No. 13).

DISCUSSION

128. The Financial Accounting Standards Board (FASB) originally issued FAS 123(R) in December of 2004. FAS 123(R) is a revision of *FASB Statement No. 123: Accounting for Stock-Based Compensation* (FAS 123) and supersedes *APB Opinion No. 25, Accounting for Stock Issued to Employees* (APB Opinion No. 25), and its related implementation guidance. The scope of FAS 123(R) establishes standards for the

accounting for transactions in which an entity exchanges its equity instruments for goods or services. It also addresses transactions in which an entity incurs liabilities in exchange for goods or services that are based on the fair value of the entity's equity instruments or that may be settled by the issuance of those equity instruments. FAS 123(R) focuses primarily on accounting for transactions in which an entity obtains employee services in share-based payment transactions. FAS 123(R) does not change the accounting guidance for share-based payment transactions with parties other than employees provided in Statement 123 as originally issued and *EITF Issue No. 96-18, Accounting for Equity Instruments That Are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods or Services*. FAS 123(R) does not address the accounting for employee share ownership plans, which are subject to *AICPA Statement of Position 93-6, Employers' Accounting for Employee Stock Ownership Plans*.

129. FASB's reasons for issuing FAS 123(R) are as follows:

a. Addressing concerns of users and others by requiring an entity to recognize the cost of employee services received in share-based payment transactions, thereby reflecting the economic consequences of the transactions in the financial statements.

b. Improves comparability of reporting financial information by eliminating alternative accounting methods.

c. Simplifies U.S. GAAP.

d. Convergence with international accounting standards.

130. Typically, stock option plans issue options that are "at the money", where the exercise price equals that of the market value for the underlying security and requires a vesting period to earn the stock option. These stock options are issued as an incentive for employees to work to increase the market value of the company's stock and thus shareholder value. As the intrinsic value method (required in SSAP No. 13) measures compensation expense as the fair value (market value) of the underlying stock less the amount by the employee is required to pay, this results in zero compensation expense for stock options issued to employees issued at the money. FAS 123(R) requires that the stock option be measured at fair value on the date of grant using option-pricing models adjusted for the unique characteristics of the instruments issued. This accounting treatment captures the costs of employee services relative to the awards granted, which is now more conservative than current SAP guidance.

131. NAIC staff notes that SSAP No. 13 rejected FAS 123. Although the rationale for rejection is based on the impact on statutory assets and liabilities. The Working Group considers the optionality of FAS 123 to be an additional reason why FAS 123 was rejected. FAS 123(R) now eliminates the optional accounting treatment by requiring recognition of compensation expense for all employee services received in share-based payment transactions using a fair-value-based method. As a result, this statement recognizes transactions that affect the issuer's reported financial condition and results of operations that previous guidance, and guidance adopted in SSAP No. 13, fails to capture.

132. This issue paper proposes adoption, with modifications, of FAS 123(R), as reflected in the FASB Codification *Topic 718, Compensation – Stock Compensation*. Consideration of FAS 123(R), as it is reflected in the FASB Codification, also resulted with consideration of the following guidance:

a. *ASU 2010-13 – Compensation – Stock Compensation (Topic 718): Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Currency of the Market in Which the Underlying Equity Security Trades – a consensus of the FASB Emerging Issues Task Force*, issued in April 2010. The accounting guidance in ASU 2010-13 clarifies that an that an employee share-based payment award with an exercise price denominated in the currency of a market in which a substantial portion of the entity's equity securities trades should not be considered to contain a condition that is not a market, performance, or service condition. Therefore, an entity would not classify such an award as a liability if it otherwise qualifies as equity. The guidance in ASU 2010-13 has been incorporated within the FASB Codification in *Topic 718-10, Compensation – Stock Compensation, Overall*. This issue paper proposes to adopt, with modification, ASU 2010-13.

b. *FAS 150: Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity* (FAS 150), issued May 2003, establishes GAAP standards for how an issuer classifies and measures certain financial instruments with characteristics of both liabilities and equity. The guidance in FAS 150 was previously under consideration by the Statutory Accounting Principles Working Group, and in November 2007, the Valuation of Securities Task Force advised that it is not prevalent for insurers to issue securities or financial instruments within the scope of FAS 150. As a result of that information, in March 2008, FAS 150 was rejected by the Statutory Accounting Principles Working Group as not applicable to statutory accounting. Although originally rejected as not applicable, the guidance in FAS 150 (included within *Topic 480: Distinguishing Liabilities from Equity* (Topic 480) of the FASB Codification) as it is referenced in FAS 123R for classifying instruments as equity or liability is proposed to be adopted within Appendix A of this issue paper. This reversal of position on FAS 150 is considered necessary to prevent a GAAP to SAP difference regarding the classification of share-based payments. (If desired by the Working Group, subsequent consideration of Topic 480 could occur to provide criteria for liability or equity classification for instruments outside the scope of this issue paper.)

c. *FASB Technical Bulletin 97-01, Accounting under Statement 123 for Certain Employee Stock Purchase Plans with a Look-Back Option* (TB 97-01), issued in December 1997. The accounting guidance in TB 97-1 addresses the accounting for certain stock purchase plans with a look-back option. An example of a look-back option is a provision that establishes the purchase price as an amount based on the lessor of the stock market's price at the grant date or its market price at the exercise (or purchase) date. The guidance in TB 97-1 originally revised *FAS 123, Share-Based Payment* (FAS 123), but was amended after the issuance of FAS 123(R). The guidance in TB 97-1 has been incorporated within the FASB Codification in *Topic 718-50, Compensation – Stock Compensation, Employee Share Purchase Plans*. This issue paper proposes to adopt, with modification, TB 97-01. (Guidance from TP 97-01 included within the implementation guidance of the FASB Codification guidance is also considered adopted for statutory, but is not explicitly included within this issue paper.)

d. *FASB Staff Position FAS 123(R)-1: Classification and Measurement of Freestanding Financial Instruments Originally issued in Exchange for Employee Services under FASB Statement No. 123(R)* (FAS 123R-1), issued in August 2005. This Statement defers the guidance in FAS 123R that requires a freestanding financial instrument issued to an employee in exchange for past or future employee services subject to FAS 123(R) or was subject to FAS 123(R) upon initial adoption, to be subject to the recognition and measurement requirements of other applicable GAAP when the rights conveyed by the instrument to the holder are no longer dependent on the holder being an employee of the entity. With this FSP FAS 123R-1 deferral, such freestanding instruments shall continue to be subject to the recognition and measurement provisions of FAS 123(R) throughout the life of the instrument, unless its terms are modified when the holder is no longer an employee. The guidance from FSP FAS 123R-1 has been incorporated within the FASB Codification in *Topic 718-10, Compensation – Stock Compensation, Overall* in paragraphs 718-10-35-9 through 718-10-35-11. This guidance is proposed to be adopted, with modification, for statutory accounting.

e. *FASB Staff Position (FSP) FAS 123(R)-2: Practical Accommodation to the Application of Grant Date as Defined in FASB Statement No. 123(R)* (FSP FAS 123R-2), issued in October 2005. This FSP provides a practical solution for when a mutual understanding of key concepts of a share-based payment award exist. Under this guidance, a mutual understanding of key terms and concepts of an award to an individual employee shall be presumed to exist at the date the award is approved in accordance with the relevant corporate governance requirements if the following two conditions are met: (1) the award is a unilateral grant, therefore the recipient does not have the ability to negotiate key terms and conditions with the employer; and (2) The key terms and conditions of the award are expected to be communicated to an individual recipient within a relatively short-period form the date of approval. The guidance from FSP FAS 123R-2 has been incorporated within the FASB Condition in *Topic 718-10, Compensation – Stock Compensation, Overall* in paragraph 718-10-25-5. This guidance is proposed to be adopted, with modification, for statutory accounting.

f. *FASB Staff Position (FSP) FAS 123(R)-3: Transition Election Related to Accounting for the Tax Effects of Share-Based Payment Awards* (FSP FAS 123R-3), issued in November 2005. This FSP provided a practical transition election related to accounting for the tax effects of share-based payment awards to employees. This guidance, as it relates to transition of FAS 123R in 2005, has not been incorporated the FASB Codification. As the guidance from FSP FAS 123R-3 results in two transition options, for consistency purposes it is presumed that a single transition method will be desired for statutory. As such, it is proposed that the guidance from FSP FAS 123R-3 be rejected for statutory accounting, with transition guidance established within this issue paper.

g. *FASB Staff Position (FSP) FAS123(R)-4: Classification of Options and Similar Instruments Issued as Employee Compensation That Allow for Cash Settlement upon the Occurrence of a Contingent Event* (FSP FAS 123R-4), issued in February 2006. This FSP addresses the classification of options and similar instruments issued as employee compensation that allow for cash settlement upon the occurrence of a contingent event. The guidance in this FSP revised FAS 123R to clarify that an option or instrument classified as equity with a cash settlement feature shall not be reclassified to a liability until it becomes probable that the event will occur. The guidance from FSP FAS 123R-4 has been incorporated within the FASB Condition in *Topic 718-10, Compensation – Stock Compensation, Overall* in paragraph 718-10-35-14. This guidance is proposed to be adopted, with modification, for statutory accounting.

h. *FASB Staff Position (FSP) FAS 123(R)-5: Amendment of FASB Staff Position FAS 123R-1* (FSP FAS 123R-5), issued in October 2006. This FSP addresses a question on whether an entity that executes a restructuring must, in all cases, reassess whether the recognition and measurement of an instrument whose holder is no longer an employee becomes subject to other applicable GAAP. Under the guidance in the FSP, instruments that were originally issued as employee compensation and then modified, and that modification is made to the terms of the instrument solely to reflect an equity restructuring that occurs when the holders are no longer employees, no change in the recognition and measurement (due to a change in classification) of those instruments will result if both of the following conditions are met: (a) there is no increase in the fair value of the award, or the anti-dilution provision is not added to the terms of the award in contemplation of an equity restructuring; and (b) all holders of the same class of equity instruments are treated in the same manner. The guidance from FSP FAS 123R-5 has been incorporated within the FASB Codification (included through the reference of FSP FAS 123R-1) in *Topic 718-10, Compensation – Stock Compensation, Overall* in paragraph 718-10-35-10. This guidance is proposed to be adopted, with modification, for statutory accounting. (This

FSP revised FSP FAS 123R-1 (which revised FAS 123R), thus, the guidance is included in the FASB Codification through incorporation of those standards, but FSP FAS 123(R)-5 is not specifically referenced in the codification.)

i. *FASB Staff Position (FSP) FAS 123(R)-6: Technical Corrections of FASB Statement No. 123(R)* (FSP FAS 123R-6), issued in October 2006. This FSP addresses technical corrections and specifically amends (a) paragraph A240(d)(1) to exempt nonpublic entities from disclosing the aggregate intrinsic value of outstanding fully vested share options (or share units) and share options expected to vest; (b) paragraph A102 of illustration 4(b) to revise the computation of minimum compensation cost that must be recognized to comply with paragraph 42 of FAS 123R; (c) paragraph A107 of Illustration 13(e) to indicate that at the date that the illustrative awards were no longer probable of vesting, any previously recognized compensation cost should have been reversed; and (d) paragraph E1 to amend the definition of "short-term inducement" to exclude an offer to settle an award. The guidance from FSP FAS 123R-6 has been incorporated within the FASB Codification (This FSP revised FAS 123R, thus the guidance is included within the FASB Codification through incorporation of that standard, but FSP FAS 123R-6 is not specifically included in the FASB Codification.) The guidance is reflected in paragraphs 710-10-50-2, 718-20-55-32, 718-20-55-121 and the FASB Master Glossary. With the exception of the glossary term, the revisions impact the related implementation guidance. This guidance is proposed to be adopted, with modification, for statutory.

j. *FASB Staff Position (FSP) EITF 03-6-1; Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities* (FSP EITF 03-6-1), issued in June 2008. This FSP addresses whether instruments granted in share-based payment transactions are participating securities prior to vesting and, therefore, need to be included in earnings allocation in computing earnings per share (EPS) under the two-class method described in *FASB Statement No. 128, Earnings Per Share*. Pursuant to the FSP, unvested share-based payment awards that contain nonforfeitable rights to dividends or dividend equivalents (whether paid or unpaid) are participating securities and shall be included in the computation of EPS pursuant to the two-class method. The guidance from this FSP has been included in the FASB Codification within *Topic 260-10, Earnings Per Share, Overall*. As this guidance pertains to calculating EPS, this issue paper proposes for this guidance to be rejected as not applicable for statutory accounting.

k. *EITF 00-12; Accounting by an Investor for Stock-Based Compensation Granted to Employees of an Equity Method Investee* (EITF 00-12), issued in July 2000. This EITF addresses the accounting for stock-based compensation based on the investor's stock granted to employees of an investee accounted for under the equity method when no proportionate funding by the other investors occurs and the investor does not receive any increase in the investor's relative ownership percentage of the investee. This EITF clarifies that an investee shall recognize the costs of the stock-based compensation incurred by the investor on its behalf, and a corresponding capital contribution, as the costs are incurred on its behalf. A contributing investor should expense the cost of stock-based compensation (based on fair value) granted to employees of an equity method investee as incurred to the extent that the investor's claim on the investee's book value has not increased. This EITF also clarifies that other (noncontributing) investors should recognize income equal to the amount that their interest in the investee's net book value has increased (that is, their percentage share of the contributed capital recognized by the investee) as a result of the disproportionate funding of the compensation costs. Further, other investors should recognize their percentage share of earnings or losses in the investee (inclusive of any expense recognized by the investee for the stock-based compensation funded on its behalf). This EITF has been updated to reference FAS 123R, but the issuance of FAS 123R did not change the consensus reached in EITF 00-12. The guidance in EITF 00-12 has been included in the FASB Codification primarily within *Topic 323-10, Investments—Equity Method and Joint Ventures, Overall.* Although there is reference to FAS 123R within EITF 00-12, as this does not revise the guidance for stock options or stock purchase plans, this item is not included within this issue paper and is still considered pending for statutory accounting.

l. *EITF 00-16, Recognition and Measurement of Employer Payroll Taxes on Employee Stock-Based Compensation* (EITF 00-16), issued July 2000. This EITF was previously considered by the NAIC Emerging Accounting Issues (E) Task Force with adoption of the following EITF 00-16 position within Interpretation INT 01-14: *A liability for employee payroll taxes on employee stock compensation should be recognized on the date of the event triggering the measurement and payment of the tax to the taxing authority (for a nonqualifying option in the United States, generally the exercise date.)* The adopted guidance from EITF 00-16 is proposed to be included within this issue paper (as it is included in the FASB Codification 718-10-25-22) with INT 01-14 nullified as the guidance has been incorporated within SSAP No. 104.

m. *EITF 00-18; Accounting Recognition for Certain Transactions Involving Equity Instruments Granted to Other Than Employees* (EITF 00-18), issued in July 2000. This issue provides symmetrical guidance in determining the measurement date for both the grantor and the grantee under *EITF 96-18; Accounting for Equity Instruments That Are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods or Services* (EITF 96-18) and *EITF 00-08; Accounting by a Grantee for an Equity Instrument to be Received in Conjunction with Providing Good and Services* (EITF 00-08). Although there is reference to FAS 123R within EITF 00-18, as this issue within EITF 00-18 specifically pertains to "other than employees" and FAS 123R is specific to "employee" awards, this item is not included within this issue paper and is still considered pending for statutory accounting.

133. In evaluating the guidance for share-based payments, it is proposed that statutory accounting principles adopt related GAAP guidance as there are no identified insurance-specific reasons to incorporate statutory accounting guidance that differs from GAAP for share-based payment transactions. This issue paper proposes adoption of the GAAP guidance with limited modifications as follows:

a. GAAP references are revised to reference applicable statutory accounting guidance;

b. GAAP reporting items (either explicitly provided in the issue paper or adopted by reference – such as the GAAP implementation guidance) shall be replaced to reference applicable annual statement line items. (For example, GAAP references to "other comprehensive income" shall be reflected within "Surplus - Unassigned Funds").

c. GAAP guidance to calculate earnings per share is not applicable to statutory accounting and is therefore not adopted for statutory.

d. GAAP effective date and transition, and transition disclosures have not been incorporated. Reporting entities shall follow the effective date and transition elements provided within this issue paper.

e. Inclusion of guidance specific to statutory for consolidated/holding company plans.

134. With adoption of a SSAP related to this issue paper (SSAP No. 104) that supersedes SSAP No. 13, previous adoptions of GAAP guidance in SSAP No. 13 may no longer be applicable. As a result of

the adoption of SSAP No. 104, GAAP guidance in Appendix D of the *NAIC Accounting Practices and Procedures Manual* (GAAP Cross-Reference to SAP) will reflect the following conclusions:

a. *ASU 2010-13 – Compensation – Stock Compensation (Topic 718): Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Currency of the Market in Which the Underlying Equity Security Trades – A Consensus of the Emerging Issues Task Force*: This guidance will be identified as adopted with modification in SSAP No. 104.

b. *FASB Statement No. 123(R), Share-Based Payment* (FAS 123R): This guidance will be identified as adopted with modification in SSAP No. 104.

c. *FASB Statement No. 123, Accounting for Stock-Based Compensation* (FAS 123): This guidance was superseded by FAS 123R. As this guidance was previously rejected in SSAP No. 13 no change will be reflected within Appendix D.

d. *FASB Statement No. 148, Accounting for Stock-Based Compensation – Transition and Disclosures – and Amendment of FAS 123* (FAS 148): This guidance was superseded by FAS 123R. As this guidance was previously rejected in SSAP No. 13 no change will be reflected in Appendix D.

e. *FASB Statement No. 150, Accounting for Certain Financial Instruments with Characteristics of Both Liabilities and Equity* (FAS 150): This guidance was previously identified as not applicable to statutory accounting. This reference will be updated to reflect adoption as it is referenced in SSAP No. 104, but to continue to reject as not applicable for all other transactions.

f. *FASB Interpretation No. 28, Accounting for Stock Appreciation Rights and Other Variable Stock Option or Award Plans* (FIN 28) – This guidance was superseded by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that this guidance is no longer applicable within SSAP No. 104.

g. *FASB Interpretation No. 38, Determining the Measurement Date for Stock Option, Purchase, and Award Plans Involving Junior Stock* (FIN 38): This guidance was superseded by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that this guidance is no longer applicable within SSAP No. 104.

h. *FASB Interpretation No. 44, Accounting for Certain Transactions Involving Stock Compensation* (FIN 44): This guidance was superseded by FAS 123R. Although this guidance was not previously reviewed for statutory accounting, reference will be added to identify that this guidance is not applicable within SSAP No. 104.

i. *Accounting Principles Bulletin No. 25, Accounting for Stock Issued to Employees* (APB 25): This guidance was superseded by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that this guidance is no longer applicable within SSAP No. 104.

j. *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins - Chapter 13B*: This guidance was deleted by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that this guidance is no longer applicable within SSAP No. 104.

k. *FASB Technical Bulletin 97-1, Accounting Under Statement 123 for Certain Employee Stock Purchase Plans with a Look-Back Option* (TB 97-1): This guidance has been amended after the issuance of FAS 123R, and this amended guidance has been included within the FASB Codification. Under the proposal of this issue paper, this guidance will be identified as adopted with modification in SSAP No. 104.

l. *FASB Staff Position FAS 123(R)-1: Classification and Measurement of Freestanding Financial Instruments Originally issued in Exchange for Employee Services under FASB Statement No. 123(R)* (FAS 123R-1): This guidance was issued to defer a provision within FAS 123R related to freestanding instruments when the holder is no longer an employee. Under the proposal of this issue paper, this guidance will be identified as adopted with modification in SSAP No. 104.

m. *FASB Staff Position (FSP) FAS 123(R)-2: Practical Accommodation to the Application of Grant Date as Defined in FASB Statement No. 123(R)* (FSP FAS 123R-2): This guidance was issued to provide a practical application of FAS 123R. Under the proposal of this issue paper, this guidance will be identified as adopted with modification in SSAP No. 104.

n. *FASB Staff Position (FSP) FAS 123(R)-3: Transition Election Related to Accounting for the Tax Effects of Share-Based Payment Awards* (FSP FAS 123R-3): This guidance provides a practical transition election under FAS 123R related to accounting for the tax effects of share-based payment awards to employees. Under the proposal of this issue paper, this guidance will be identified as rejected in SSAP No. 104.

o. *FASB Staff Position (FSP) FAS123(R)-4: Classification of Options and Similar Instruments Issued as Employee Compensation That Allow for Cash Settlement upon the Occurrence of a Contingent Event* (FSP FAS 123R-4): This guidance addresses the FAS 123R classification of options and similar instruments issued as employee compensation that allow for cash settlement upon the occurrence of a contingent event. Under the proposal of this issue paper, this guidance will be identified as adopted with modification in SSAP No. 104.

p. *FASB Staff Position (FSP) FAS 123(R)-5: Amendment of FASB Staff Position FAS 123R-1* (FSP FAS 123R-5): This guidance addresses a FAS 123R question on whether an entity that executes a restructuring must, in all cases, reassess whether the recognition and measurement of an instrument whose holder is no longer an employee becomes subject to other applicable GAAP. Under the proposal of this issue paper, this guidance will be identified as adopted with modification in SSAP No. 104.

q. *FASB Staff Position (FSP) FAS 123(R)-6: Technical Corrections of FASB Statement No. 123(R)* (FSP FAS 123R-6): This FSP guidance addresses technical corrections within FAS 123R. Under the proposal of this issue paper, this guidance will be identified as adopted with modification in SSAP No. 104.

r. *FASB Staff Position (FSP) EITF 03-6-1; Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities* (FSP EITF 03-6-1): This guidance addresses whether instruments granted in share-based payment transactions are participating securities prior to vesting and, therefore, need to be included in computing earnings per share (EPS). Under the proposal of this issue paper, this guidance will be identified as rejected in SSAP No. 104.

s. *EITF 84-8, Variable Stock Purchase Warrants Given by Supplies to Customers* (EITF 84-08): This guidance was resolved by FAS 123R. Although this guidance was not previously reviewed for statutory accounting, reference will be added to identify that consideration of this EITF is unnecessary with the issuance of SSAP No. 104.

t. *EITF 84-13, Purchase of Stock Options and Stock Appreciation Rights in a Leveraged Buyout* (EITF 84-13): This guidance was nullified by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

u. *EITF 84-18, Stock Option Pyramiding* (EITF 84-18): This guidance was nullified by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

v. *EITF 84-34, Permanent Discount Restricted Stock Purchase* (EITF 84-34): This guidance was nullified by FAS 123R. Although this guidance was not previously reviewed for statutory accounting, reference will be added to identify that consideration of this EITF is unnecessary with the issuance of SSAP No. 104.

w. *EITF 85-45, Business Combinations: Settlement of Stock Options and Awards* (EITF 85-45): This guidance was nullified by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

x. *EITF 87-6, Adjustments Relating to Stock Compensation* (EITF 87-6): This guidance was nullified by FIN 44. As this guidance was previously adopted in SSAP No. 13 (and as FAS 123R superseded FIN 44), reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

y. *EITF 87-23, Book Value Stock Purchase Plans* (EITF 87-23): This guidance was nullified by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

z. *EITF 87-33, Stock Compensation Issues Related to Market Decline* (EITF 87-33): This guidance was nullified by FIN 44. As this guidance was previously adopted in SSAP No. 13 (and as FAS 123R superseded FIN 44), reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

aa. *EITF 88-6, Book Value Stock Plans in an Initial Public Offering* (EITF 88-6): This guidance was nullified by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

bb. *EITF 90-7, Accounting for Reload Stock Option (EITF 90-6):* This guidance was nullified by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

cc. *EITF 90-9, Changes to Fixed Employee Stock Option Plans as a Result of Equity Restructuring* (EITF 90-9). This guidance was nullified by FIN 44. As this guidance was previously adopted in SSAP No. 13 (and as FAS 123R superseded FIN 44), reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

dd. *EITF 94-6, Accounting for the Buyout of Compensatory Stock Options* (EITF 94-6). This guidance was nullified by FIN 44. As this guidance was previously adopted in SSAP No. 13 (and as FAS 123R superseded FIN 44), reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

ee. *EITF 95-16, Accounting for Stock Compensation Arrangements with Employer Loan Features under APB Opinion No. 25* (EITF 95-16): This guidance was nullified by FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that the adoption of this EITF is nullified with the issuance of SSAP No. 104.

ff. *EITF 97-5, Accounting for the Delayed Receipt of Option Shares upon Exercise Under APB Opinion No. 25* (EITF 97-5): This guidance was nullified by FAS 123R. Although this guidance was not previously reviewed for statutory accounting, reference will be added to identify that consideration of this EITF is unnecessary with the issuance of SSAP No. 104.

gg. *EITF 97-12, Accounting for Increased Share Authorizations in an IRS Section 423 Employee Stock Purchase Plan under APB Opinion No. 25* (EITF 97-12): This guidance was nullified by FAS 123R. This guidance was adopted for statutory in INT 99-17. Upon the issuance of SSAP No. 104, INT 99-17 will be nullified, with reference in Appendix D that the adoption of EITF 97-12 is nullified with the issuance of SSAP No. 104.

hh. *EITF 00-15, Classification in the Statement of Cash Flows of the Income Tax Benefits Received by a Company upon Exercise of a Nonqualified Employee Stock Option* (EITF 00-15): This guidance was nullified by FAS 123R. As this guidance was previously reviewed and considered to be not applicable to statutory accounting, no changes will be reflected in Appendix D.

ii. *EITF 00-16, Recognition and Measurement of Employer Payroll Taxes on Employee Stock-Based Compensation* (EITF 00-16): This guidance was previously considered by the NAIC Emerging Accounting Issues (E) Task Force with adoption in INT 01-14. Under the proposal of this issue paper, INT 01-14 will be nullified, with reference to SSAP No. 104 regarding the adoption of this guidance.

jj. *EITF 00-23, Issues Related to the Accounting for Stock Compensation under APB Opinion No. 25 and FASB Interpretation No. 44* (EITF 00-23): This guidance was nullified by FAS 123R. Although this guidance was not previously reviewed for statutory accounting, reference will be added to identify that consideration of this EITF is unnecessary with the issuance of SSAP No. 104.

kk. *AIN-APB 25, Accounting for Stock Issued to Employees: Accounting Interpretations of APB Opinion No. 25* (AIN-APB 25): Interpretation 1 was superseded with the issuance of FAS 123R. As this guidance was previously adopted in SSAP No. 13, reference will be added to identify that this guidance is no longer applicable within SSAP No. 104.

135. The following item that provides interpretative guidance to SSAP No. 13 will continue to provide interpretative guidance after the adoption of SSAP No. 104. Reference will be updated in the respective interpretation to reference SSAP No. 104 instead of SSAP No. 13:

a. *INT 00-32: EITF 00-08, Accounting by a Grantee for an Equity Instrument to be Received in Conjunction with Providing Goods or Services*. INT 00-32 adopts with modification EITF 00-08.

136. This issue paper proposes issuance of a new SSAP No. 104 (SSAP No. 104) for new awards and awards modified, repurchased, or cancelled after the required effective date. This issue paper also addresses transactions in which an entity incurs liabilities in exchange for goods or services that are based on the fair value of the entity's equity instruments or that may be settled by the issuance of those equity instruments. This issue paper focuses primarily on accounting for transactions in which an entity obtains employee services in share-based payment transactions.

137. The conclusions above are consistent with the recognition concept included in the Statement of Concepts.

STATE REGULATIONS

- No additional guidance obtained from state statutes or regulations.

APPENDIX A: Classification Criteria: Liability or Equity

Classification Criteria

1. As detailed in paragraph 22 of the issue paper, an entity shall apply the classification criteria detailed in paragraphs 22 through 35 in the issue paper, as they are effective at the reporting date, in determining whether to classify as a liability a freestanding financial instrument given to an employee in a share-based payment transaction.

2. The guidance in this Section shall be applied to a freestanding financial instrument in its entirety. Any nonsubstantive or minimal features shall be disregarded in applying the classification provisions of this Section. Judgment, based on consideration of all the terms of an instrument and other relevant facts and circumstances, is necessary to distinguish substantive, nonminimal features from nonsubstantive or minimal features.

Mandatorily Redeemable Financial Instruments

3. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the reporting entity.

4. A financial instrument that embodies a conditional obligation to redeem the instrument by transferring assets upon an event not certain to occur becomes mandatorily redeemable if that event occurs, the condition is resolved, or the event becomes certain to occur.

5. In determining if an instrument is mandatorily redeemable, all terms within a redeemable instrument shall be considered. The following items do not affect the classification of a mandatorily redeemable financial instrument as a liability:

a. A term extension option

b. A provision that defers redemption until a specified liquidity level is reached

c. A similar provision that may delay or accelerate the timing of a mandatory redemption.

6. If a financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument in this issue paper. However, that financial instrument would be assessed at each reporting period to determine whether circumstances have changed such that the instrument now meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument is reclassified as a liability.

Obligations to Repurchase Issuer's Equity Shares by Transferring Assets

7. An entity shall classify as a liability (or an asset in some circumstances) any financial instrument, other than an outstanding share, that, at inception, has both of the following characteristics:

a. It embodies an obligation to repurchase the issuer's equity shares, or is indexed to such an obligation.

b. It requires or may require the issuer to settle the obligation by transferring assets.

8. In this issue paper, *indexed to* is used interchangeably with *based on variations in the fair value of*. The phrase *requires or may require* encompasses instruments that either conditionally or

unconditionally obligate the issuer to transfer assets. If the obligation is conditional, the number of conditions leading up to the transfer of assets is irrelevant.

9. Examples of financial instruments that meet the criteria in paragraph 7 of Appendix A include forward purchase contracts or written put options on the issuer's equity shares that are to be physically settled or net cash settled.

10. All obligations that permit the holder to require the issuer to transfer assets result in liabilities, regardless of whether the settlement alternatives have the potential to differ.

11. Certain financial instruments that embody obligations that are liabilities within the scope of this issue paper also may contain characteristics of assets but be reported as single items. Some examples include the following:

a. Net-cash-settled or net-share-settled forward purchase contracts

b. Certain combined options to repurchase the issuer's shares.

Those instruments are classified as assets or liabilities initially or subsequently depending on the instrument's fair value on the reporting date.

12. An instrument that requires the issuer to settle its obligation by issuing another instrument (for example, a note payable in cash) ultimately requires settlement by a transfer of assets, accordingly:

a. When applying paragraphs 7-12 of Appendix A, this also would apply for an instrument settled with another instrument that ultimately may require settlement by a transfer of assets (warrants for puttable shares).

b. It is clear that a warrant for mandatorily redeemable shares would be a liability under this issue paper.

Certain Obligations to Issue a Variable Number of Shares

13. A financial instrument that embodies an unconditional obligation, or a financial instrument other than an outstanding share that embodies a conditional obligation, that the issuer must or may settle by issuing a variable number of its equity shares shall be classified as a liability (or an asset in some circumstances) if, at inception, the monetary value of the obligation is based solely or predominantly on any one of the following:

a. A fixed monetary amount known at inception (for example, a payable settleable with a variable number of the issuer's equity shares)

b. Variations in something other than the fair value of the issuer's equity shares (for example, a financial instrument indexed to the Standard and Poor's S&P 500 Index and settleable with a variable number of the issuer's equity shares)

c. Variations inversely related to changes in the fair value of the issuer's equity shares (for example, a written put option that could be net share settled).

Prohibition on Combining Freestanding Financial Instruments

14. A freestanding financial instrument that is within the scope of this issue paper shall not be combined with another freestanding financial instrument in applying paragraphs 3-13 of Appendix A. For example, a freestanding written put option that is classified as a liability under this issue paper shall not be combined with an outstanding equity share.

Distinguishing Liability from Equity – Scope and Scope Exclusions

15. The guidance in paragraphs 22-35 of this issue paper applies to any freestanding financial instrument, including one that has any of the following attributes:

a. Comprises more than one option or forward contract

b. Has characteristics of both a liability and equity and, in some circumstances, also has characteristics of an asset (for example, a forward contract to purchase the issuer's equity shares that is to be net cash settled). Accordingly, this issue paper does not address an instrument that has only characteristics of an asset.

16. For example, an instrument that consists of a written put option for an issuer's equity shares and a purchased call option and nothing else is a freestanding financial instrument. That freestanding financial instrument embodies an obligation to repurchase the issuer's equity shares and is subject to the requirements of this issue paper.

APPENDIX B: Disclosure Information

1. The following list indicates the minimum information needed to achieve the objectives in paragraph 112 and illustrates how the disclosure requirements might be satisfied. In some circumstances, an entity may need to disclose information beyond the following to achieve the disclosure objectives:

a. A description of the share-based payment arrangement(s), including the general terms of awards under the arrangement(s), such as:

i. The requisite service period(s) and any other substantive conditions (including those related to vesting)

ii. The maximum contractual term of equity (or liability) share options or similar instruments

iii. The number of shares authorized for awards of equity share options or other equity instruments.

b. The method it uses for measuring compensation cost from share-based payment arrangements with employees.

c. For the most recent year for which an income statement is provided, both of the following:

i. The number and weighted-average exercise prices (or conversion ratios) for each of the following groups of share options (or share units):

(a) Those outstanding at the beginning of the year

(b) Those outstanding at the end of the year

(c) Those exercisable or convertible at the end of the year

(d) Those that during the year were:

(1) Granted

(2) Exercised or converted

(3) Forfeited

(4) Expired.

ii. The number and weighted-average grant-date fair value (or calculated value for an entity that uses that method or intrinsic value for awards measured pursuant to paragraph 58) of equity instruments not specified in (c)(1), for all of the following groups of equity instruments:

(a) Those nonvested at the beginning of the year

(b) Those nonvested at the end of the year

(c) Those that during the year were:

(1) Granted

(2) Vested

(3) Forfeited.

d. For each year for which an income statement is provided, both of the following:

i. The weighted-average grant-date fair value (or calculated value for an entity that uses that method or intrinsic value for awards measured at that value pursuant to paragraphs 58-59) of equity options or other equity instruments granted during the year .

ii. The total intrinsic value of options exercised (or share units converted), share-based liabilities paid, and the total fair value of shares vested during the year.

e. For fully vested share options (or share units) and share options expected to vest at the date of the latest statement of financial position, both of the following:

i. The number, weighted-average exercise price (or conversion ratio), aggregate intrinsic value, and weighted-average remaining contractual term of options (or share units) outstanding.

ii. The number, weighted-average exercise price (or conversion ratio), aggregate intrinsic value, and weighted-average remaining contractual term of options (or share units) currently exercisable (or convertible).

f. For each year for which an income statement is presented, both of the following (An entity that uses the intrinsic value method pursuant to paragraphs 58-59 is not required to disclose the following information for awards accounted for under that method):

i. A description of the method used during the year to estimate the fair value (or calculated value) of awards under share-based payment arrangements

ii. A description of the significant assumptions used during the year to estimate the fair value (or calculated value) of share-based compensation awards, including (if applicable):

(a) Expected term of share options and similar instruments, including a discussion of the method used to incorporate the contractual term of the instruments and employees' expected exercise and postvesting employment termination behavior into the fair value (or calculated value) of the instrument.

(b) Expected volatility of the entity's shares and the method used to estimate it. An entity that uses a method that employs different volatilities during the contractual term shall disclose the range of expected volatilities used and the weighted-average expected volatility. An entity that uses the calculated value method shall disclose the reasons why it is not practicable for it to estimate the expected volatility of its share price, the appropriate industry sector index that it has selected, the reasons for selecting that particular index, and how it has calculated historical volatility using that index.

(c) Expected dividends. An entity that uses a method that employs different dividend rates during the contractual term shall disclose the range of expected dividends used and the weighted-average expected dividends.

(d) Risk-free rate(s). An entity that uses a method that employs different risk-free rates shall disclose the range of risk-free rates used.

(e) Discount for post-vesting restrictions and the method for estimating it.

g. An entity that grants equity or liability instruments under multiple share-based payment arrangements with employees shall provide the information specified in paragraph (a) through (f) separately for different types of awards to the extent that the differences in the characteristics of the awards make separate disclosure important to an understanding of the entity's use of share-based compensation. For example, separate disclosure of weighted-average exercise prices (or conversion ratios) at the end of the year for options (or share units) with a fixed exercise price (or conversion ratio) and those with an indexed exercise price (or conversion ratio) could be important. It also could be important to segregate the number of options (or share units) not yet exercisable into those that will become exercisable (or convertible) based solely on fulfilling a service condition and those for which a performance condition must be met for the options (share units) to become exercisable (convertible). It could be equally important to provide separate disclosures for awards that are classified as equity and those classified as liabilities. In addition, an entity that has multiple share-based payment arrangements with employees shall disclose information separately for different types of awards under those arrangements to the extent that differences in the characteristics of the awards make separate disclosure important to an understanding of the entity's use of share-based compensation.

h. For each year for which an income statement is presented, both of the following:

i. Total compensation cost for share-based payment arrangements

(a) Recognized in income as well as the total recognized tax benefit related thereto

(b) Capitalized as part of the cost of an asset.

ii. A description of significant modifications, including:

(a) The terms of the modifications

(b) The number of employees affected

(c) The total incremental compensation cost resulting from the modifications.

i. As of the latest balance sheet date presented, the total compensation cost related to nonvested awards not yet recognized and the weighted-average period over which it is expected to be recognized

j. If not separately disclosed elsewhere, the amount of cash received from exercise of share options and similar instruments granted under share-based payment arrangements and the tax benefit realized from stock options exercised during the annual period

k. If not separately disclosed elsewhere, the amount of cash used to settle equity instruments granted under share-based payment arrangements

l. A description of the entity's policy, if any, for issuing shares upon share option exercise (or share unit conversion), including the source of those shares (that is, new shares or treasury shares). If as a result of its policy, an entity expects to repurchase shares in the following annual period, the entity shall disclose an estimate of the amount (or a range, if more appropriate) of shares to be repurchased during that period.

2. In addition to the information required by this issue paper, an entity may disclose supplemental information that it believes would be useful to investors and creditors, such as a range of values calculated on the basis of different assumptions, provided that the supplemental information is reasonable and does not lessen the prominence and credibility of the information required by this issue paper. The alternative assumptions shall be described to enable users of the financial statements to understand the basis for the supplemental information.

Statutory Issue Paper No. 131

Accounting for Certain Securities Subsequent to an Other-Than-Temporary Impairment

STATUS
Finalized March 29, 2008

Current Authoritative Guidance for Certain Securities Subsequent to an Other-Than-Temporary Impairment: SSAP No. 26, SSAP No. 32 and SSAP No. 34

> *This issue paper may not be directly related to the current authoritative impairment guidance in SSAP No. 43R.*

Original SSAP from Issue Paper: SSAP No. 99

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. In November of 2005, the FASB issued *FSP FAS 115-1/124-1*: *The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments* (FSP FAS 115-1/124-1) to address several issues related other-than-temporary impairment for investments. In December of 2006, the Emerging Accounting Issues Working Group of the NAIC released *INT 06-07: Definition of Phrase "Other Than Temporary"* (INT 06-07), which addressed all but two issues contained within FSP FAS 115-1/124-1. The purpose of this issue paper is to address one of those remaining issues, specifically the guidance provided in paragraph 16 of FSP FAS 115-1/124-1 regarding treatment of premium or discount for a debt security subsequent to other-than-temporary impairment recognition.

2. Current statutory guidance on accounting for impairment of debt securities, amortization of premium and accrual of discount is provided in *SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities* (SSAP No. 26), *SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities)* (SSAP No. 32), *SSAP No. 34—Investment Income Due and Accrued* (SSAP No. 34), and *SSAP No. 43—Loan-backed and Structured Securities* (SSAP No. 43).

3. Subsequent to recognition of an other-than-temporary impairment for a debt security, the GAAP guidance in FSP FAS 115-1/124-1 requires that a reporting entity account for the security as if the security had been purchased on the measurement date of the other-than-temporary impairment. As such, the recorded discount or reduced premium should be amortized over the remaining life of the security in a prospective manner based on the amount and timing of future estimated cash flows. Statutory accounting statements currently contain no explicit guidance on the issue of whether to continue amortization of premium or accrual of discount subsequent to other-than-temporary impairment recognition.

SUMMARY CONCLUSION

4. This issue paper adopts the guidance in paragraph 16 of FSP FAS 115-1/124-1, with modification to the applicable statutory accounting statements to be consistent with the statutory language in each respective statement as indicated in the following paragraphs.

Bonds, excluding Loan-backed and Structured Securities

5. The guidance in paragraphs 6 and 7 of this issue paper shall supersede the guidance in paragraph 9 of SSAP No. 26.

Impairment

6. An other-than-temporary impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition. A decline in fair value which is other-than-temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value. If it is determined that a decline in the fair value of a bond is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the bonds carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. Credit related other-than-temporary impairment losses shall be recorded through the AVR; interest related other-than-temporary impairment losses shall be recorded through the IMR.

7. In periods subsequent to the recognition of an other-than-temporary impairment loss for a bond, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment. The fair value of the bond on the measurement date shall become the new cost basis of the bond and the new cost basis shall not be adjusted for subsequent recoveries in fair value. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized over the remaining life of the security in the prospective manner based on the amount and timing of future estimated cash flows. The security shall continue to be subject to impairment analysis for each subsequent reporting period. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

Preferred Stock

8. The guidance in paragraphs 9-12 of this issue paper shall supersede the guidance in paragraphs 22-24 of SSAP No. 32.

Impairment of Redeemable Preferred Stock

9. An other-than-temporary impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the security in effect at the date of acquisition. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value (i.e., amortized cost). If it is determined that a decline in the fair value of a redeemable preferred stock is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the redeemable preferred stock's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserves.*

10. In periods subsequent to the recognition of other-than-temporary impairment loss for a redeemable preferred stock, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment, and in accordance with paragraph 18 or paragraph 20 of SSAP No. 32, as applicable. The fair

value of the redeemable preferred stock on the measurement date shall become the new cost basis of the redeemable preferred stock and the new cost basis shall not be adjusted for subsequent recoveries in fair value. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized over the remaining life of the security in the prospective manner based on the amount and timing of future estimated cash flows. The security shall continue to be subject to impairment analysis for each subsequent reporting period. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

Impairment of Perpetual Preferred Stock

11. If it is determined that a decline in the fair value of a perpetual preferred stock is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the perpetual preferred stock's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.

12. In periods subsequent to the recognition of an other-than-temporary impairment loss for a perpetual preferred stock, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment, and in accordance with paragraph 19 or paragraph 21 of SSAP No. 32, as applicable. The fair value of the perpetual preferred stock on the measurement date shall become the new cost basis of the perpetual preferred stock and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Future declines in fair value which are determined to be other-than-temporary, shall be recorded as realized losses.

Investment Income Due and Accrued

13. The guidance in SSAP No. 34, paragraph 3, shall be modified by this issue paper as follows:

> 3. In general, gross investment income shall be recorded as earned and shall include investment income collected during the period, the change in investment income due and accrued, the change in unearned investment income plus any amortization (e.g., discounts or premiums on bonds, origination fees on mortgage loans, etc.) Immediate amortization of premium which occurs upon recognition of an other-than-temporary impairment loss for a debt security with a recorded premium shall be reported as a realized loss and shall not be included in investment income.

Loan-backed and Structured Securities

14. This issue paper shall insert the following new paragraph 17 into SSAP No. 43, with subsequent paragraphs of SSAP No. 43 to be renumbered accordingly:

> 17. In periods subsequent to the recognition of an other than temporary impairment loss for a loan-backed or structured security, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment. The fair value of the security on the measurement date shall become the new cost basis. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized in the prospective manner over the remaining period in which repayment of principal is expected to occur. The security shall continue to be subject to impairment analysis for each subsequent reporting period. The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore, the prospective adjustment method

must be utilized for periods subsequent to the impairment loss recognition. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

Disclosures

15. This issue paper requires no additional disclosures.

Relevant Literature

16. This issue paper adopts FSP FAS 115-1/124-1, paragraph 16, with modification to be consistent with statutory language in the respective statutory accounting statements.

Effective Date and Transition

17. After adoption of this issue paper, it is expected that the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The initial draft of the SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. To allow time for any necessary system related changes, it is expected that the SSAP will be effective for reporting periods ending on or after December 31, 2008.

DISCUSSION

18. Though statutory accounting statements include instructions on accounting for impaired debt securities, guidance is currently silent regarding the treatment of premium or discount subsequent to recognition of an other-than-temporary impairment loss. Prior to issuance of FSP FAS 115-1/124-1, GAAP guidance was also silent on the issue. This has led to inconsistent accounting practices.

19. The FASB guidance requires that amortization of premium or accrual of discount continues in periods subsequent to other-than-temporary impairment recognition. Statutory accounting guidance should provide for consistent accounting treatment in this subsequent period, and there appears to be no compelling reason for statutory guidance to diverge from GAAP on this issue. As such, this issue paper adopts the GAAP guidance contained in FSP FAS 115-1/124-1, paragraph 16, with modifications to be consistent with existing statutory accounting language.

20. The term “cost” is used in GAAP for evaluation, measurement and subsequent accounting treatment related to impairment of debt securities. FSP FAS 115-1 / 124-1, footnote 2 to paragraph 7, defines cost to include adjustments made to the cost basis of an investment for accretion, amortization, previous other-than-temporary impairments, and hedging. Based on this definition, cost for GAAP purposes would be the equivalent of the book adjusted carrying value relevant to statutory accounting.

21. The guidance adopted by this issue paper requires that subsequent to impairment recognition, a debt security be accounted for as if the security had been purchased on the measurement date of the other-than-temporary impairment. For debt securities carried with unamortized premium, the impairment loss is first applied to any unamortized premium, and the reduced premium is amortized over the remaining life of the security in a prospective manner based on the amount and timing of future estimated cash flows. If an impairment loss is so significant that the unamortized premium is fully expensed upon recognition of the realized loss, any remaining impairment loss is applied to the cost of the security and amortization would no longer be applicable.

22. For securities carried with unaccrued discount, the impairment loss is recorded as a reduction of cost, with no effect on the unaccrued discount. The sum of the new cost basis plus the unaccrued discount

becomes the maximum amortized value, or the maximum value to which the security is allowed to be accreted. The unaccrued discount is then accrued over the remaining life of the security based on the amount and timing of future estimated cash flows. As the carrying value shall not be adjusted for subsequent recoveries in fair value, the book adjusted carrying value shall not exceed the maximum amortized value during the remaining life of the security.

23. This exposure draft also includes clarifying guidance for SSAP No. 26 regarding the proper recording of impairment losses for reporting entities required to maintain an Asset Valuation Reserve (AVR) and an Interest Maintenance Reserve (IMR). The language was added to paragraph 6 of this issue paper to clarify that for reporting entities required to maintain such reserves, credit related other-than-temporary impairment losses are to be recorded through the AVR, while interest related other-than-temporary impairment losses are to be recorded through the IMR.

24. The guidance adopted by this issue paper is consistent with the concepts of statutory accounting.

Drafting Notes/Comments

25. None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

26. Statutory guidance for amortization of premium, accrual of discount, and impairment for bonds, excluding loan-backed and structured securities, is provided in SSAP No. 26:

> Amortized Cost
>
> 6. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond. Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion) shall be amortized to the call or maturity value/date which produces the lowest asset value (yield to worst).
>
> Impairment
>
> 9. If it is determined that a decline in the fair value of a bond is other than temporary, the cost basis of the bond shall be written down to fair value as a new cost basis and the amount of the write down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value which are determined to be other than temporary, shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition. A decline in fair value which is other than temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value.

27. Statutory guidance for amortization of premium, accrual of discount, and impairment for preferred stock is provided in SSAP No. 32:

> Amortization
>
> 12. Redeemable preferred stock purchased at a premium shall be amortized to reduce the carrying value to the call or redemption value over the period to the call or earliest redemption date, whichever produces the lowest asset value (yield to worst). Redeemable preferred stock

purchased at a discount shall be amortized to increase the carrying value to par value over the period to maturity or the latest redemption date.

13. PIK preferred stock shall be amortized to the lower of the call price or par value, measured in either case at the end of the stock dividend period and based on all of the shares expected to be held at the end of that period, including those received as dividends.

14. Amortization shall be calculated using the interest method and shall be reported as increases or decreases in dividends collected during the year.

Impairment

22. If it is determined that a decline in the fair value of a preferred stock is other than temporary, the preferred stock shall be written down to fair value as a new cost basis and the amount of the write down shall be accounted for as a realized loss. For those reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.

23. Perpetual preferred stock shall be accounted for in accordance with paragraph 19 or paragraph 21, as applicable, subsequent to the recognition of an other than temporary impairment. Future declines in fair value which are determined to be other than temporary, shall be recorded as realized losses. A decline in fair value which is other than temporary includes situations where the reporting entity has made a decision to sell a security at an amount below its carrying value.

24. Redeemable preferred stock shall be accounted for in accordance with paragraph 18 or paragraph 20, as applicable, subsequent to the recognition of an other than temporary impairment. Future declines in fair value which are determined to be other than temporary, shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the security in effect at the date of acquisition. A decline in fair value which is other than temporary includes situations where the reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value (i.e., amortized cost).

28. Statutory guidance in SSAP No. 34 provides items to be included in gross investment income:

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investment income due and accrued.

SUMMARY CONCLUSION

2. Investment income due shall be defined as investment income earned and legally due to be paid to the reporting entity (i.e., receivable) as of the reporting date. Investment income accrued shall be defined as investment income earned as of the reporting date but not legally due to be paid to the reporting entity until subsequent to the reporting date.

3. In general, gross investment income shall be recorded as earned and shall include investment income collected during the period, the change in investment income due and accrued, the change in unearned investment income plus any amortization (e.g., discounts or premiums on bonds, origination fees on mortgage loans, etc.).

4. Investment income due and accrued shall be recorded as an asset in accordance with SSAP No. 4—Assets and Nonadmitted Assets (SSAP No. 4). An evaluation shall be made of such assets in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5), to determine whether an impairment exists. Amounts determined to be uncollectible shall be written off through the statement of operations. Then an evaluation shall be made to determine nonadmitted amounts.

5. This two-step process is set forth below.

a. Investment income due and accrued shall be assessed for collectibility. If, in accordance with SSAP No. 5, it is probable the investment income due and accrued balance is uncollectible, the amount shall be written off and shall be charged against investment income in the period such determination is made;

b. Any remaining investment income due and accrued (i.e., amounts considered probable of collection) representing either (1) amounts that are over 90 days past due (generated by any invested asset except mortgage loans in default), or (2) amounts designated elsewhere in the Accounting Practices and Procedures Manual as nonadmitted shall be considered nonadmitted assets and recognized through a direct charge to surplus in accordance with SSAP No. 4. These nonadmitted amounts shall be subject to continuing assessments of collectibility and, if determined to be uncollectible, a write-off shall be recorded in the period such determination is made in accordance with subparagraph a. above.

6. Accrued interest on mortgage loans that are in default (as defined in SSAP No. 37—Mortgage Loans) shall be recorded as Investment Income Due and Accrued when such interest is deemed collectible. Interest can be accrued on mortgage loans in default if deemed collectible; if interest is deemed uncollectible, it shall not be accrued and any previously accrued amounts are to be written off in accordance with the guidelines in paragraph 5.a. above. If a mortgage loan in default has interest 180 days past due which has been assessed as collectible, all interest shall be considered a nonadmitted asset and recognized through a direct charge to surplus as outlined in paragraph 5.b. above.

29. Statutory guidance for amortization of premium, accrual of discount, and impairment for loan-backed and structured securities is provided in SSAP No. 43:

Amortization

7. Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method and shall be recorded as an adjustment to investment income. The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the loan-backed securities is expected to occur, not the stated maturity period.

Impairment

16. Regardless of whether a reporting entity is using a prospective or retrospective method, if the revaluation based on new currently estimated cash flows results in a negative yield (i.e., undiscounted estimated future cash flows are less than the current book value), an other than temporary impairment shall be considered to have occurred. If it is determined an other than temporary impairment has occurred, the cost basis of the security shall be written down to the undiscounted estimated future cash flows and the amount of the write down shall be accounted for as a realized loss. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve. The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore, the prospective adjustment method must be utilized for periods subsequent to the loss recognition.

Generally Accepted Accounting Principles

30. FSP FAS 115-1/124-1, paragraph 16 contains the GAAP guidance which is addressed by this issue paper:

> Accounting for Debt Securities Subsequent to an Other-Than-Temporary Impairment
>
> 16. In periods subsequent to the recognition of an other-than-temporary impairment loss for debt securities, an investor shall account for the other-than-temporarily impaired debt security as if the debt security had been purchased on the measurement date of the other-than-temporary impairment. That is, the discount or reduced premium recorded for the debt security, based on the new cost basis, would be amortized over the remaining life of the debt security in a prospective manner based on the amount and timing of future estimated cash flows.

31. Footnote 2 to paragraph 7 of FSP FAS 115-1/124-1, provides the GAAP definition of cost, which is used in impairment evaluation:

> Cost includes adjustments made to the cost basis of an investment for accretion, amortization, previous other-than-temporary impairments, and hedging.

Statutory Issue Paper No. 132

Accounting for Pensions, A Replacement of SSAP No. 89

STATUS:
Initially Adopted – December 5, 2008
Adopted to Reflect SSAP No. 102 – December 18, 2012

Original SSAP and Current Authoritative Guidance: SSAP No. 102

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. In September 2006, the Financial Accounting Standards Board (FASB) issued *FASB Statement No. 158: Accounting for Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132(R)* (FAS 158). The adoption with modification of FAS 158 requires entities that sponsor one or more single-employer defined benefit plan to:

   a. Recognize the overfunded or underfunded status of a defined benefit postretirement plan (other than a multiemployer plan) as an asset or liability in the statement of financial position.

   b. Aggregate the statuses of all overfunded plans and recognize that amount as a nonadmitted asset in its statement of financial position. It also shall aggregate the statuses of all underfunded plans and recognize that amount as a liability in its statement of financial position.

   c. Recognize as a component of unassigned funds (surplus) the gains and losses and prior service costs or credits that arise during the period but were not recognized as components of net periodic benefit cost of the period pursuant to SSAP No. 89 and SSAP No. 14.

   d. Recognize corresponding adjustments in unassigned funds (surplus) when the gains and losses, prior service costs or credits and transition assets and obligations remaining from the initial application of SSAP No. 89 and SSAP No. 14 are subsequently recognized as components of net periodic benefit cost pursuant to the recognition and amortization provisions of SSAP No. 89 and SSAP No. 14.

2. Current statutory accounting guidance for pensions is provided within *SSAP No. 89—Accounting for Pension, A Replacement of SSAP No. 8* (SSAP No. 89). The conclusions reached in SSAP No. 89 resulted from adoption *of FASB Statement No. 87: Employers' Accounting for Pensions* (FAS 87), *FASB Statement No. 88: Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits* (FAS 88), *FASB Statement No. 132, Employers' Disclosures about Pensions and Other Postretirement Benefits an amendment of FASB Statements No. 87, 88, and 106* (FAS 132) with certain modifications and *FASB Statement No. 132 (R), Employers' Disclosures about Pensions and Other Postretirement Benefits, and amendment of FASB Statements No. 87, 88, and 106* (FAS 132R) with certain modifications.

3. The purpose of this issue paper is to update statutory accounting principles for pensions, including both defined benefit plans and defined contribution plans. Consequently, this issue paper adopts FAS 158 with modifications considered necessary for consistent statutory reporting. The result will be a new SSAP (SSAP No. 102) superseding SSAP No. 89.

SCOPE OF STATEMENT

4. This issue paper establishes financial accounting and reporting standards for an insurer that offers pension benefits to its employees. Ordinarily, such benefits are periodic pension payments to retired employees or their survivors, but they may also include benefits payable as a single lump sum and other types of benefits, such as death benefits provided through a pension plan. (This issue paper does not apply to life insurance benefits provided outside a pension plan or postretirement health and welfare benefits.) Arrangements to provide pension benefits may take a variety of forms and may be financed in different ways. This issue paper applies to any arrangement that is similar in substance to a pension plan regardless of form or financing. This issue paper applies to a written plan and to a plan whose existence may be implied from a well-defined, although perhaps unwritten, practice of paying postretirement benefits. This issue paper supersedes the guidance in *SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8* (SSAP No. 89), nullifies and incorporates the guidance in *Interpretation 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26)*,* and *INT 04-12: Determining the Classification and Benefit Attribution Method for a Cash Balance Pension Plan* (INT 04-12), and nullifies *INT 01-16: Measurement Date for SSAP No. 8 Actuarial Valuations* (INT 01-16), *INT 03-18—Accounting for a Change in the Additional Minimum Liability in SSAP No. 8 (INT 03-18)* and *INT 04-03: Clarification for Calculating the Additional Minimum Pension Liability under SSAP No. 89* (INT 04-03) This issue paper also modifies *INT 04-17: Impact of Medicare Modernization on Postretirement Benefits* (INT 04-17) to remove reference to pensions as this interpretation only addresses postretirement benefits other than pensions.

SUMMARY CONCLUSION

Defined Benefit Plans

Single-Employer Defined Benefit Pension Plans

5. A defined benefit pension plan is one that defines an amount of pension benefit to be provided, usually as a function of one or more factors such as age, years of service, or compensation. (Hybrid pension plans that refer to an account balance, rather than a monthly annuity at retirement (also known as cash balance plans) are considered defined benefit plans for purposes of applying this issue paper.) For defined benefit plans, reporting entities shall adopt *FAS 158: Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106, and 132(R)* and *FASB Staff Position FAS 136(R)-1, Employers' Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 136(R)-1), with modifications as discussed within paragraph 83.

6. A pension benefit is part of the compensation paid to an employee for services. In a defined benefit pension plan, the employer promises to provide, in addition to current wages, retirement income payments in future years after the employee retires or terminates service. Generally, the amount of benefit to be paid depends on a number of future events that are incorporated in the plan's benefit formula, often including how long the employee and any survivors live, how many years of service the employee renders, and the employee's compensation in the years immediately before retirement or termination. In most cases, services are rendered over a number of years before an employee retires and begins collecting the pension. Even though the services rendered by an employee are complete and the employee has retired, the total amount of benefit that the employer has promised and the cost to the employer of the services rendered are not precisely determinable but can only be estimated using the benefit formula and estimates of the relevant future events, many of which the employer cannot control.

Elements of Pension Accounting

7. Net periodic pension cost is made up of several components that reflect different aspects of the employer's financial arrangements as well as the cost of benefits earned by employees. The cost of a benefit can be determined without regard to how the employer decides to finance the plan. The service cost component of net periodic pension cost is the actuarial present value of benefits attributed by the plan's benefit formula to services rendered by employees during the period. The service cost component is conceptually the same for an unfunded plan, a plan with minimal funding, and a well-funded plan. The other components of net periodic pension cost are interest cost (interest on the projected benefit obligation, which is a discounted amount), actual[1] return on plan assets, amortization of any prior service cost or credit included in unassigned funds (surplus), and gain or loss, which includes, to the extent recognized, amortization of the net gain or loss included in unassigned funds (surplus) (refer to paragraph 26).

8. The projected benefit obligation is the actuarial present value of all benefits attributed by the plan's benefit formula to employee service rendered prior to that date. The projected benefit obligation is measured using an assumption as to future compensation levels if the pension benefit formula is based on those future compensation levels. The projected benefit obligation is a measure of benefits attributed to service to date assuming that the plan continues in effect and that estimated future events (including compensation increases, turnover, and mortality) occur.

9. The accumulated benefit obligation is the actuarial present value of benefits attributed by the pension benefit formula to employee service rendered prior to that date and based on current and past compensation levels. The accumulated benefit obligation differs from the projected benefit obligation in that it includes no assumption about future compensation levels. For plans with flat-benefit or non-pay-related pension benefit formulas, the accumulated benefit obligation and the projected benefit obligation are the same.

10. Plan assets are assets that have been segregated and restricted to provide for pension benefits. The amount of plan assets includes amounts contributed by the employer and amounts earned from investing the contributions, less benefits paid. Assets not segregated in a trust or otherwise effectively restricted so that they cannot be used by the employer for other purposes are not considered plan assets even though it may be intended that such assets be used to provide for pension benefits. Amounts accrued by the employer but not yet paid to the plan are also not considered plan assets. Securities of the employer held by the plan are includable in plan assets provided they are transferable.

Recognition of Net Periodic Pension Cost

11. The following components shall be included in the net pension cost for a period by an employer sponsoring a defined benefit pension plan: a) Service cost; b) Interest cost; c) Actual return on plan assets; d) Amortization of any prior service cost or credit included in unassigned funds (surplus); e) Gain or loss (including the effects of changes in assumptions) to the extent recognized; and f) Amortization of any net transition asset or obligation existing at the date of initial application of this issue paper and remaining in unassigned funds (surplus).

[1] To address a question on how the expected return on plan assets affects the determination of net periodic pension cost if the actual return on plan assets for a period is a component of net periodic pension cost, it is noted that the expected return on plan assets generally will be different from the actual return on plan assets for the year. This statement provides for recognition of that difference (a net gain or loss) in unassigned funds in the period it arises. The amount recognized in unassigned funds is also a component of net periodic pension cost for the current period. Thus, the amount recognized in unassigned funds and the actual return on plan assets, when aggregated, equal the expected return on plan assets. The amount recognized in unassigned funds affects future net periodic pension cost through subsequent amortization, if any, of the net gain or loss. (This footnote reflects guidance included in E12 of FSP FAS 158-1.)

Service Cost

12. The service cost component recognized in a period shall be determined as the actuarial present value of benefits attributed by the pension benefit formula to employee service (including both vested and nonvested employees) during that period.

13. The prior service cost for nonvested employees not previously recognized[2] is not required to be included in net periodic pension cost entirely in the year this issue paper is adopted. Unrecognized prior service cost for nonvested employees shall be amortized as a component of net periodic pension cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is adjusted each period as prior service cost is amortized (refer to paragraphs 85-87 for transition guidance related to the recognition of the prior service cost for nonvested employees though unassigned surplus).

Interest Cost

14. The interest cost component recognized in a period shall be determined as the increase in the projected benefit obligation due to the passage of time. Measuring the projected benefit obligation as a present value requires accrual of an interest cost at rates equal to the assumed discount rates.

Actual Return on Plan Assets

15. For a funded plan, the actual return on plan assets shall be determined based on the fair value of plan assets at the beginning and the end of the period, adjusted for contributions and benefit payments.

Prior Service Cost

16. Plan amendments (including initiation of a plan) often include provisions that grant increased benefits based on services rendered in prior periods. Because plan amendments are granted with the expectation that the employer will realize economic benefits in future periods, the cost of providing such retroactive benefits (prior service cost) is not required to be included in net periodic pension cost entirely in the year of the amendment but provides for recognition during the future service periods of those employees active at the date of the amendment who are expected to receive benefits under the plan.

17. A plan amendment that retroactively increases benefits (including benefits that are granted to retirees) increases the projected benefit obligation. The cost of the benefit improvement shall be recognized as a charge to unassigned funds (surplus) at the date of the amendment. Except as specified in paragraphs 18-19, that prior service cost shall be amortized as a component of net periodic pension cost by assigning an equal amount to each future period of service of each employee active at the date of the amendment who is expected to receive benefits under the plan. If all or almost all of a plan's participants are inactive, the cost of retroactive plan amendments affecting benefits of inactive participants shall be amortized based on the remaining life expectancy of those participants instead of based on the remaining service period. Unassigned funds (surplus) is adjusted each period as prior service cost is amortized.

18. Consistent use of an alternative approach that more rapidly amortizes the cost of retroactive amendments is acceptable. For example, a straight-line amortization of the cost over the average remaining service period of employees expected to receive benefits under the plan is acceptable. The alternative method used shall be disclosed.

[2] The previous statutory accounting guidance in *SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8* excluded nonvested employees from the service cost calculation. This exclusion has been eliminated with the issuance of this issue paper.

19. In some situations a history of regular plan amendments and other evidence may indicate that the period during which the employer expects to realize economic benefits from an amendment granting retroactive benefits is shorter than the entire remaining service period of the active employees. Identification of such situations requires an assessment of the individual circumstances and the substance of the particular plan situation. In those circumstances, the amortization of prior service cost shall be accelerated to reflect the more rapid expiration of the employer's economic benefits and to recognize the cost in the periods benefited.

20. A plan amendment that retroactively reduces, rather than increases, benefits decreases the projected benefit obligation. The reduction in benefits shall be recognized as a credit (prior service credit) to unassigned funds (surplus) that shall be used first to reduce any remaining prior service cost included in unassigned funds (surplus). Any remaining prior service credit shall be amortized as a component of net periodic pension cost on the same basis as the cost of a benefit increase.

Gains and Losses

21. Gains and losses are changes in the amount of either the projected benefit obligation or plan assets resulting from experience different from that assumed and from changes in assumptions. This issue paper does not distinguish between those sources of gains and losses. Gains and losses include amounts that have been realized, as well as amounts that are unrealized. Because gains and losses may reflect refinements in estimates as well as real changes in economic values and because some gains in one period may be offset by losses in another or vice versa, recognition of gains and losses as components of net pension cost of the period in which they arise is not required. Gains and losses that are not recognized immediately as a component of net periodic pension cost shall be recognized as increases or decreases in unassigned funds (surplus) as they arise.

22. The expected return on plan assets shall be determined based on the expected long-term rate of return on plan assets and the fair value of plan assets.

23. Asset gains and losses are differences between the actual return on assets during a period and the expected return on assets for that period. Asset gains and losses include changes reflected in the fair value of assets.

24. As a minimum, amortization of a net gain or loss included in unassigned funds (surplus) shall be included as a component of net pension cost for a year if, as of the beginning of the year, that net gain or loss exceeds 10 percent of the greater of the projected benefit obligation or the fair value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active employees expected to receive benefits under the plan. If all or almost all of a plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of average remaining service.

25. Any systematic method of amortizing gains or losses may be used in lieu of the minimum specified in the previous paragraph provided that (a) the minimum is used in any period in which the minimum amortization is greater (reduces the net balance included in unassigned funds (surplus) by more), (b) the method is applied consistently, (c) the method is applied similarly to both gains and losses, and (d) the method used is disclosed.

26. The gain or loss component of net periodic pension cost shall consist of (a) the difference between the actual return on plan assets and the expected return on plan assets and (b) amortization of the net gain or loss included in unassigned funds (surplus).

Recognition of Liabilities and Assets

27. If the projected benefit obligation (considering both vested and nonvested participants) exceeds the fair value of plan assets, the employer shall recognize in its statement of financial position a liability that equals the unfunded projected benefit obligation. If the fair value of plan assets exceeds the projected benefit obligation, the employer shall recognize in its statement of financial position an asset that equals the overfunded projected benefit obligation. This prepaid asset resulting from the excess of the fair value of plan assets over the projected benefit obligation shall be nonadmitted.

28. If multiple single-employer plans exist, the employer shall aggregate the statuses of all overfunded plans and recognize that amount as an asset in its statement of financial position. It also shall aggregate the statuses of all underfunded plans and recognize that amount as a liability in its statement of financial position. It is not acceptable statutory accounting practice to offset pension or postretirement benefits other than pensions liability generated by one plan against the prepaid assets of another plan.

29. The asset or liability that is recognized pursuant to paragraph 27 may result in a temporary difference, as defined in *SSAP No. 101—Income Taxes – A Replacement of SSAP No. 10R and 10* (SSAP No. 101). The deferred tax effects of any temporary differences shall be recognized in income tax expense or benefit for the year and shall be allocated pursuant to SSAP No. 101.

30. If a new determination of the funded status of a plan to be recognized as an asset or a liability in the employer's statement of financial position is made, or when net gains or losses, prior service costs or credits, or the net transition asset or obligation existing at the date of initial application of this issue paper are amortized as components of net periodic pension cost, the related balances for those net gains or losses, prior service costs or credits, and transition asset or obligation in unassigned funds (surplus) shall be adjusted as necessary and reported in unassigned funds (surplus).

Measurement of Cost and Obligations

31. The service component of net periodic pension cost, the projected benefit obligation, and the accumulated benefit obligation are based on an attribution of pension benefits to periods of employee service and on the use of actuarial assumptions to calculate the actuarial present value of those benefits. Actuarial assumptions reflect the time value of money (discount rate) and the probability of payment (assumptions as to mortality, turnover, early retirement, and so forth).

Attribution

32. Pension benefits ordinarily shall be attributed to periods of employee service based on the plan's benefit formula to the extent that the formula states or implies an attribution. In some situations a history of regular increases and other evidence may indicate that an employer has a present commitment to make future amendments and that the substance of the plan is to provide benefits attributable to prior service that are greater than the benefits defined by the written terms of the plan. In those situations, the substantive commitment shall be the basis for the accounting, and the existence and nature of the commitment to make future amendments shall be disclosed.

33. In some situations a history of regular increases in non-pay-related benefits or benefits under a career-average-pay plan and other evidence may indicate that an employer has a present commitment to make future amendments and that the substance of the plan is to provide benefits attributable to prior service that are greater than the benefits defined by the written terms of the plan. In those situations, the substantive commitment shall be the basis for the accounting, and the existence and nature of the commitment to make future amendments shall be disclosed.

34. Some plans may have benefit formulas that attribute all or a disproportionate share of the total benefits provided to later years of service, thereby achieving in substance a delayed vesting of benefits. For such plans the total projected benefit shall be considered to accumulate in proportion to the ratio of the number of completed years of service to the number that will have been completed when the benefit is first fully vested. If a plan's benefit formula does not specify how a particular benefit relates to services rendered, the benefit shall be considered to accumulate as follows:

a. For benefits of a type includable in vested benefits, in proportion to the ratio of the number of completed years of service to the number that will have been completed when the benefit is first fully vested.

b. For benefits of a type not includable in vested benefits, in proportion to the ratio of completed years of service to total projected years of service.

Assumptions

35. Each significant actuarial assumption used shall reflect the best estimate solely with respect to that individual assumption. All assumptions shall presume that the plan will continue in effect in the absence of evidence that it will not continue.

36. Assumed discount rates shall reflect the rates at which the pension benefits could be effectively settled. It is appropriate in estimating those rates to look to available information about rates implicit in current prices of annuity contracts that could be used to effect settlement of the obligation. In making those estimates, employers may also look to rates of return on high-quality fixed-income investments currently available and expected to be available during the period to maturity of the pension benefits. Assumed discount rates are used in measurements of the projected, accumulated, and vested benefit obligations and the service and interest cost components of net periodic pension cost.

37. The objective of selecting assumed discount rates using the method noted in paragraph 36 is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the pension benefits when due. Notionally, that single amount, the projected benefit obligation, would equal the fair value of a portfolio of high-quality zero coupon bonds whose maturity dates and amounts would be the same as the timing and amount of the expected future benefit payments. Because cash inflows would equal cash outflows in timing and amount, there would be no reinvestment risk in the yields to maturity of the portfolio. However, in other than a zero coupon portfolio, such as a portfolio of long-term debt instruments that pay semiannual interest payments or whose maturities do not extend far enough into the future to meet expected benefit payments, the assumed discount rates (the yield to maturity) need to incorporate expected reinvestment rates available in the future. Those rates shall be extrapolated from the existing yield curve at the measurement date. The determination of the assumed discount rate is separate from the determination of the expected rate of return on plan assets whenever the actual portfolio differs from the hypothetical portfolio above. Assumed discount rates shall be reevaluated at each measurement date. If the general level of interest rates rises or declines, the assumed discount rates shall change in a similar manner.

38. The expected long-term rate of return on plan assets shall reflect the average rate of earnings expected on the funds invested or to be invested to provide for the benefits included in the projected benefit obligation. In estimating that rate, appropriate consideration should be given to the returns being earned by the plan assets in the fund and the rates of return expected to be available for reinvestment. The expected long-term rate of return on plan assets is used to compute the expected return on assets.

39. The service cost component of net periodic pension cost and the projected benefit obligation shall reflect future compensation levels to the extent that the pension benefit formula defines pension benefits

wholly or partially as a function of future compensation levels. Future increases for which a present commitment exists shall be similarly considered. Assumed compensation levels shall reflect an estimate of the actual future compensation levels of the individual employees involved, including future changes attributed to general price levels, productivity, seniority, promotion, and other factors. All assumptions shall be consistent to the extent that each reflects expectations of the same future economic conditions, such as future rates of inflation. Measuring service cost and the projected benefit obligation based on estimated future compensation levels entails considering indirect effects, such as changes under existing law in social security benefits or benefit limitations that would affect benefits provided by the plan.

40. The accumulated benefit obligation shall be measured based on employees' history of service and compensation without an estimate of future compensation levels. Excluding estimated future compensation levels also means excluding indirect effects of future changes such as increases in the social security wage base. In measuring the accumulated benefit obligation, projected years of service shall be a factor only in determining employees' expected eligibility for particular benefits, such as:

a. Increased benefits that are granted provided a specified number of years of service are rendered

b. Early retirement benefits

c. Death benefits

d. Disability benefits

41. Automatic benefit increases specified by the plan (for example, automatic cost-of-living increases) that are expected to occur shall be included in measurements of the projected, accumulated, and vested benefit obligations, and the service cost component. Also, retroactive plan amendments shall be included in the computation of the projected and accumulated benefit obligations once they have been contractually agreed to, even if some provisions take effect only in future periods.

Measurement of Plan Assets

42. Plan investments, whether equity or debt securities, real estate, or other, shall be measured at their fair value as of the measurement date. The fair value of an investment shall be reduced by brokerage commissions and other costs normally incurred in a sale, if those costs are significant (similar to fair value less costs to sell).

43. Plan assets used in plan operations (for example, buildings, equipment, furniture and fixtures, and leasehold improvements) shall be measured at cost less accumulated depreciation or amortization for all purposes.

44. The measurements of plan assets and benefit obligations shall be as of the date of the employer’s fiscal year-end statement of financial position. Requiring that the pension measurements be as of a particular date is not intended to require that all procedures be performed after that date. As with other financial statement items requiring estimates, much of the information can be prepared as of an earlier date and projected forward to account for subsequent events (for example, employee service). Unless a business entity remeasures both its plan assets and benefit obligations during the fiscal year, the funded status it reports in its interim-period statement of financial position shall be the same asset or liability recognized in the previous year-end statement of financial position adjusted for (1) subsequent accruals of net periodic pension cost that exclude the amortization of amounts previously recognized in other unassigned funds (surplus) (for example, subsequent accruals of service cost, interest cost, and return on plan assets) and (2) contributions to a funded plan, or benefit payments. Sometimes, a business entity remeasures both plan assets and benefit obligations during the fiscal year. That is the case, for example,

when a significant event such as a plan amendment, settlement, or curtailment occurs that calls for a remeasurement. Upon remeasurement, a business entity shall adjust its statement of financial position in a subsequent interim period to reflect the overfunded or underfunded status of the plan consistent with that measurement date.

45. Measurements of net periodic pension cost for both interim and annual financial statements shall be based on the assumptions used for the previous year-end measurements unless more recent measurements of both plan assets and obligations are available or a significant event occurs, such as a plan amendment, that would ordinarily call for such measurements.

Employers with Two or More Plans

46. An employer that sponsors two or more separate defined benefit pension plans shall determine net periodic pension cost, liabilities, and assets by separately applying the provisions of this issue paper to each plan. In particular, unless an employer clearly has a right to use the assets of one plan to pay benefits of another, a liability required to be recognized for one plan shall not be reduced or eliminated because the employer has recognized an asset for another plan that has assets in excess of its projected benefit obligation. (As noted within paragraph 28, overfunded plans shall be aggregated for asset reporting (nonadmitted) and underfunded plans shall be aggregated for liability reporting.)

Annuity Contracts

47. An annuity contract is a contract in which an insurance company unconditionally undertakes a legal obligation to provide specified benefits to specific individuals in return for a fixed consideration or premium. An annuity contract is irrevocable and involves the transfer of significant risk from the employer to the insurance company. Some annuity contracts (participating annuity contracts) provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser. If the substance of a participating contract is such that the employer remains subject to all or most of the risks and rewards associated with the benefit obligation covered and the assets transferred to the insurance company, that contract is not an annuity contract for purposes of this issue paper.

48. To the extent that benefits currently earned are covered by annuity contracts, the cost of those benefits shall be the cost of purchasing the contracts, except as provided in paragraph 51. That is, if all the benefits attributed by the plan's benefit formula to service in the current period are covered by nonparticipating annuity contracts, the cost of the contracts determines the service cost component of net pension cost for that period.

49. Benefits provided by the pension benefit formula beyond benefits provided by annuity contracts (for example, benefits related to future compensation levels) shall be accounted for according to the provisions of this issue paper applicable to plans not involving insurance contracts.

50. Benefits covered by annuity contracts shall be excluded from the projected benefit obligation and the accumulated benefit obligation. Except as provided in paragraph 51, annuity contracts shall be excluded from plan assets.

51. Some annuity contracts provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser, the effect of which is to reduce the cost of the plan. The purchase price of a participating annuity contract ordinarily is higher than the price of an equivalent contract without participation rights. The difference is the cost of the participation right. The cost of the participation right shall be recognized at the date of purchase as a nonadmitted asset. In subsequent periods, the participation right shall be nonadmitted and measured at its fair value if the contract is such

that fair value is reasonably estimable. Otherwise, the participation right shall be measured at its amortized cost (not in excess of its net realizable value), and the cost shall be amortized systematically over the expected dividend period under the contract.

Other Contracts with Insurance Companies

52. Insurance contracts that are in substance equivalent to the purchase of annuities shall be accounted for as such. Other contracts with insurance companies shall be accounted for as investments and measured at fair value. For some contracts, the best available evidence of fair value may be contract value. If a contract has a determinable cash surrender value or conversion value, that is presumed to be its fair value.

Defined Benefit Plans – Settlements and Curtailments

53. A settlement is defined as a transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a pension benefit obligation, and (c) eliminates significant risks related to the obligation and the assets used to effect the settlement. Examples of transactions that constitute a settlement include (a) making lump-sum cash payments to plan participants in exchange for their rights to receive specified pension benefits and (b) purchasing nonparticipating annuity contracts to cover vested benefits.

54. A transaction that does not meet all of the above three criteria does not constitute a settlement for purposes of this issue paper. For example, investing in a portfolio of high-quality fixed-income securities with principal and interest payment dates similar to the estimated payment dates of benefits may avoid or minimize certain risks. However, that does not constitute a settlement because the investment decision can be reversed and such a strategy does not relieve the employer (or the plan) of primary responsibility for a pension obligation nor does it eliminate significant risks related to the obligation.

Annuity Contracts

55. The definition of an annuity contract is included in paragraph 47. If the substance of a participating annuity contract is such that the employer remains subject to all or most of the risks and rewards associated with the benefit obligation covered or the assets transferred to the insurance company, the purchase of the contract does not constitute a settlement.

Curtailment

56. A curtailment is an event that significantly reduces the expected years of future service of present employees or eliminates for a significant number of employees the accrual of defined benefits for some or all of their future services. Curtailments include:

a. Termination of employees' services earlier than expected, which may or may not involve closing a facility or discontinuing a component of an entity.

b. Termination or suspension of a plan so that employees do not earn additional defined benefits for future services. In the latter situation, future service may be counted toward vesting of benefits accumulated based on past service.

Relationship of Settlements and Curtailments to Other Events

57. A settlement and a curtailment may occur separately or together. If benefits to be accumulated in future periods are reduced but the plan remains in existence and continues to pay benefits, to invest assets, and to receive contributions, a curtailment has occurred but not a settlement. If an employer purchases

nonparticipating annuity contracts for vested benefits and continues to provide defined benefits for future service, either in the same plan or in a successor plan, a settlement has occurred but not a curtailment. If a plan is terminated (that is, the obligation is settled and the plan ceases to exist) and not replaced by a successor defined benefit plan, both a settlement and a curtailment have occurred (whether or not the employees continue to work for the employer).

Accounting for the Settlement of the Pension Obligation

58. The maximum gain or loss subject to recognition in earnings when a pension obligation is settled is the net gain or loss remaining in unassigned funds (surplus) plus any transition asset remaining in unassigned funds (surplus) from initial application of SSAP No. 89. That maximum amount includes any gain or loss first measured at the time of settlement. The maximum amount shall be recognized in earnings if the entire projected benefit obligation is settled. If only part of the projected benefit obligation is settled, the employer shall recognize in earnings a pro rata portion of the maximum amount equal to the percentage reduction in the projected benefit obligation.

59. If the purchase of a participating annuity contract constitutes a settlement, the maximum gain (but not the maximum loss) shall be reduced by the cost of the participation right before determining the amount to be recognized in earnings.

60. If the cost of all settlements in a year is less than or equal to the sum of the service cost and interest cost components of net periodic pension cost for the plan for the year, gain or loss recognition is permitted but not required for those settlements. However, the accounting policy adopted shall be applied consistently from year to year.

Accounting for a Plan Curtailment

61. The prior service cost included in unassigned funds (surplus) associated with years of service no longer expected to be rendered as the result of a curtailment is a loss. For example, if a curtailment eliminates half of the estimated remaining future years of service of those who were employed at the date of a prior plan amendment and were expected to receive benefits under the plan, then the loss associated with the curtailment is half of the prior service cost included in unassigned funds (surplus) related to that amendment that has not been amortized as a component of net periodic pension cost. For purposes of applying the provisions of this paragraph, prior service cost includes the cost of retroactive plan amendments and any transition obligation remaining in unassigned funds (surplus) from initial application of SSAP No. 89.

62. The projected benefit obligation may be decreased (a gain) or increased (a loss) by a curtailment.

a. To the extent that such a gain exceeds any net loss included in unassigned funds (surplus) (or the entire gain, if a net gain exists), it is a curtailment gain.

b. To the extent that such a loss exceeds any net gain included in unassigned funds (surplus) (or the entire loss, if a net loss exists), it is a curtailment loss.

For purposes of applying the provisions of this paragraph, any transition asset remaining in unassigned funds (surplus) from initial application of SSAP No. 89 shall be treated as a net gain and shall be combined with the net gain or loss arising subsequent to transition to SSAP No. 89.

63. If the sum of the effects identified in paragraphs 61 and 62 is a net loss, it shall be recognized in earnings when it is probable that a curtailment will occur and the effects described are reasonably estimable. If the sum of those effects is a net gain, it shall be recognized in earnings when the related employees terminate or the plan suspension or amendment is adopted.

Termination Benefits

64. An employer may provide benefits to employees in connection with their termination of employment. They may be either special termination benefits offered only for a short period of time or contractual termination benefits required by the terms of a plan only if a specified event, such as a plant closing, occurs. An employer that offers special termination benefits to employees shall recognize a liability and a loss when the employees accept the offer and the amount can be reasonably estimated. An employer that provides contractual termination benefits shall recognize a liability and a loss when it is probable that employees will be entitled to benefits and the amount can be reasonably estimated. Termination benefits may take various forms including lump-sum payments, periodic future payments, or both. They may be paid directly from an employer's assets, an existing pension plan, a new employee benefit plan, or a combination of those means. The cost of termination benefits recognized as a liability and a loss shall include the amount of any lump-sum payments and the present value of any expected future payments. A situation involving termination benefits may also involve a curtailment to be accounted for under paragraphs 61-63.

Disclosures – Single Employer Defined Benefit Plans

65. An employer that sponsors one or more defined benefit pension plans or one or more other defined benefit postretirement plans shall provide the following information, separately for pension plans and other postretirement benefit plans. Amounts related to the employer’s results of operations shall be disclosed for each period for which a statement of income is presented. Amounts related to the employer’s statement of financial position, shall be disclosed as of the date of each statement of financial position presented.

a. A reconciliation of beginning and ending balances of the benefit obligation showing separately, if applicable, the effects during the period attributable to each of the following: service cost, interest cost, contributions by plan participants, actuarial gains and losses, foreign currency exchange rate changes, benefits paid, plan amendments, business combinations, divestitures, curtailments, settlements, and special termination benefits.

b. A reconciliation of beginning and ending balances of the fair value of plan assets showing separately, if applicable, the effects during the period attributable to each of the following: actual return on plan assets, foreign currency exchange rate changes, contributions by the employer, contributions by plan participants, benefits paid, business combinations, divestitures, and settlements.

c. The funded status of the plans and the amounts recognized in the statement of financial position, showing separately the assets and liabilities recognized.

d. The objectives of the disclosures about postretirement benefit plan assets are to provide users of financial statements with an understanding of:

   i. How investment allocation decisions are made, including the factors that are pertinent to an understanding of investment policies and strategies

   ii. The classes of plan assets

   iii. The inputs and valuation techniques used to measure the fair value of plan assets

iv. The effect of fair value measurements using significant unobservable inputs (Level 3) on changes in plan assets for the period

v. Significant concentrations of risk within plan assets.

An employer shall consider those overall objectives in providing the following information about plan assets:

(a) A narrative description of investment policies and strategies, including target allocation percentages or range of percentages considering the classes of plan assets disclosed pursuant to 65.d.v.(b), as of the latest statement of financial position presented (on a weighted-average basis for employers with more than one plan), and other factors that are pertinent to an understanding of those policies and strategies such as investment goals, risk management practices, permitted and prohibited investments including the use of derivatives, diversification, and the relationship between plan assets and benefit obligations. For investment funds disclosed as classes as described in 65.d.v.(b), a description of the significant investment strategies of those funds shall be provided.

(b) The fair value of each class of plan assets as of each date for which a statement of financial position is presented. Asset classes shall be based on the nature and risks of assets in an employer's plan(s). Examples of classes of assets could include, but are not limited to, the following: cash and cash equivalents; equity securities, (segregated by industry type, company size, or investment objective); debt securities, issued by national, state, and local governments; corporate debt securities; asset-backed securities; structured debt; derivatives on a gross basis (segregated by type of underlying risk in the contract, for example, interest rate contracts, foreign exchange contracts, equity contracts, commodity contracts, credit contracts, and other contracts); investment funds (segregated by type of fund); and real estate. Those examples are not meant to be all inclusive. An employer should consider the overall objectives in paragraph 65.d. in determining whether additional classes of plan assets or further disaggregation of classes should be disclosed.

(c) A narrative description of the basis used to determine the overall expected long-term rate-of-return-on-assets assumption, such as the general approach used, the extent to which the overall rate-of-return-on-assets assumption was based on historical returns, the extent to which adjustments were made to those historical returns in order to reflect expectations of future returns, and how those adjustments were determined. The description should consider the classes of assets described in 65.d.v.(b)., as appropriate.

(d) Information that enables users of financial statements to assess the inputs and valuation techniques used to develop fair value measurements of plan assets at the reporting date. For fair value measurements using significant unobservable inputs, an employer shall disclose the effect of the measurements on changes in plan assets for the period. To meet those objectives, the employer shall disclose the following information for each class of plan assets disclosed pursuant to 65.d.v.(b)., for each annual period:

(1) The level within the fair value hierarchy in which the fair value measurements in their entirety fall,[3] segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

(2) For fair value measurements of plan assets using significant unobservable inputs (Level 3), a reconciliation of the beginning and ending balances, separately presenting changes during the period attributable to the following:

(i) Actual return on plan assets, separately identifying the amount related to assets still held at the reporting date and the amount related to assets sold during the period

(ii) Purchases, sales, and settlements, net

(iii) Transfers in and/or out of Level 3 (for example, transfers due to changes in the observability of significant inputs)

(3) Information about the valuation technique(s) and inputs used to measure fair value and a discussion of changes in valuation techniques and inputs, if any, during the period.

e. For defined benefit pension plans, the accumulated benefit obligation.

f. The benefits (as of the date of the latest statement of financial position presented) expected to be paid in each of the next five fiscal years, and in the aggregate for the five fiscal years thereafter. The expected benefits should be estimated based on the same assumptions used to measure the company's benefit obligation at the end of the year and should include benefits attributable to estimated future employee service.

g. The employer's best estimate, as soon as it can reasonably be determined, of contributions expected to be paid to the plan during the next fiscal year beginning after the date of the latest statement of financial position presented. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

h. The amount of net benefit cost recognized, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to settlements or curtailments.

i. Separately the net gain or loss and net prior service cost or credit recognized in unassigned funds (surplus) for the period pursuant to paragraphs 17 and 21 and reclassification adjustments of unassigned funds (surplus) for the period, as those

[3] In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest level input that is significant to the fair value measurement in its entirety. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, considering factors specific to the asset or liability.

amounts, including amortization of the net transition asset or obligation, are recognized as components of net periodic benefit cost.

j. The amounts in unassigned funds (surplus) that have not yet been recognized as components of net periodic benefit cost, showing separately the net gain or loss, net prior service cost or credit, and net transition asset or obligation.

k. On a weighted-average basis, the following assumptions used in the accounting for the plans: assumed discount rates, rates of compensation increase (for pay-related plans), and expected long-term rates of return on plan assets specifying, in a tabular format, the assumptions used to determine the benefit obligation and the assumptions used to determine net benefit cost.

l. If applicable, the amounts and types of securities of the employer and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer or related parties, and any significant transactions between the employer or related parties and the plan during the period.

m. If applicable, any alternative method used to amortize prior service amounts or net gains and losses pursuant to paragraphs 18 and 25.

n. If applicable, any substantive commitment, such as past practice or a history of regular benefit increases, used as the basis for accounting for the benefit obligation.

o. If applicable, the cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event.

p. An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this issue paper.

q. The amounts in unassigned funds (surplus) expected to be recognized as components of net periodic benefit cost over the fiscal year that follows the most recent annual statement of financial position presented, showing separately the net gain or loss, net prior service cost or credit, and net transition asset or obligation.

r. The amount and timing of any plan assets expected to be returned to the employer during the 12-month period, or operating cycle if longer, that follows the most recent annual statement of financial position presented.

Disclosures – Employers with Two or More Defined Benefit Plans

66. The disclosures required by this issue paper shall be aggregated for all of an employer's defined benefit pension plans and for all of an employer's other defined benefit postretirement plans unless disaggregating in groups is considered to provide useful information or is otherwise required by this paragraph and paragraph 67. Disclosures shall be as of the date of each statement of financial position presented. Disclosures about pension plans with assets in excess of the accumulated benefit obligation generally may be aggregated with disclosures about pension plans with accumulated benefit obligations in excess of assets. The same aggregation is permitted for other postretirement benefit plans. If aggregate disclosures are presented, an employer shall disclose:

a. The aggregate benefit obligation and aggregate fair value of plan assets for plans with benefit obligations in excess of plan assets as of the measurement date of each statement of financial position presented.

b. The aggregate pension accumulated benefit obligation and aggregate fair value of plan assets for pension plans with accumulated benefit obligations in excess of plan assets.

67. A U.S. reporting entity may combine disclosures about pension plans or other postretirement benefit plans outside the United States with those for U.S. plans unless the benefit obligations of the plans outside the United States are significant relative to the total benefit obligation and those plans use significantly different assumptions.

Interim Financial Disclosures –Defined Benefit Plans

68. The following shall be disclosed within interim financial statements that include a statement of income:

a. The amount of net periodic benefit cost recognized, for each period for which a statement of income is presented, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the amount of prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to a settlement or curtailment.

b. The total amount of the employer’s contributions paid, and expected to be paid, during the current fiscal year, if significantly different from amounts previously disclosed pursuant to paragraph 65.g. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

Defined Contribution Plans

69. A defined contribution pension plan is a plan that provides pension benefits in return for services rendered, provides an individual account for each participant, and has terms that specify how contributions to the individual's account are to be determined rather than the amount of pension benefits the individual is to receive. Under a defined contribution plan, the pension benefits a participant will receive depend only on the amount contributed to the participant's account, the returns earned on investments of those contributions, and forfeitures of other participants' benefits that may be allocated to the participant's account.

70. To the extent that a plan's defined contributions to an individual's account are to be made for periods in which that individual renders services, the net pension cost for a period shall be the contribution called for in that period. If a plan calls for contributions for periods after an individual retires or terminates, the estimated cost shall be accrued during the employee's service period.

71. A pension plan having characteristics of both a defined benefit plan and a defined contribution plan requires careful analysis. If the substance of the plan is to provide a defined benefit, as may be the case with some "target benefit" plans, the accounting requirements shall be determined in accordance with the provisions applicable to a defined benefit plan and the disclosure requirements within paragraph 65 shall be followed.

Disclosures - Defined Contribution Plans

72. An employer shall disclose the amount of cost recognized for defined contribution pension plans and for other defined contribution postretirement benefit plans for all periods presented separately from the amount of cost recognized for defined benefit plans. The disclosures shall include a description of the nature and effect of any significant changes during the period affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

Multiemployer Plans

73. A multiemployer plan is a pension plan to which two or more unrelated employers contribute, usually pursuant to one or more collective-bargaining agreements. A characteristic of multiemployer plans is that assets contributed by one participating employer may be used to provide benefits to employees of other participating employers since assets contributed by an employer are not segregated in a separate account or restricted to provide benefits only to employees of that employer.

74. A reporting entity participating in a multiemployer plan shall recognize as net pension cost the required contribution for the period and shall recognize as a liability any contributions due and unpaid.

75. In some situations, withdrawal from a multiemployer plan may result in a reporting entity having an obligation to the plan for a portion of its unfunded benefit obligations. If withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions of *SSAP No. 5—Liabilities, Contingencies and Impairment of Assets – Revised* (SSAP No. 5R) shall apply.

Disclosures - Multiemployers Plans

76. A reporting entity shall disclose the amount of contributions to multiemployer plans for each annual period for which a statement of income is presented. A reporting entity may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pension plans and other postretirement benefit plans. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

77. In some situations, withdrawal from a multiemployer plan may result in a reporting entity having an obligation to the plan for a portion of the unfunded benefit obligation of the pension plans and other postretirement benefit plans. If withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions of SSAP No. 5R shall apply. If it is either probable or reasonably possible that (a) an employer would withdraw from the plan under circumstances that would give rise to an obligation or (b) an employer's contribution to the fund would be increased during the remainder of the contract period to make up a shortfall in the funds necessary to maintain the negotiated level of benefit coverage (a "maintenance of benefits" clause), the employer shall apply the provisions of SSAP No. 5R.

Multiple Employer Plans

78. Some pension plans to which two or more unrelated employers contribute are not multiemployer plans. Rather, they are in substance aggregations of single-employer plans combined to allow participating employers to pool their assets for investment purposes and to reduce the costs of plan administration. Those plans ordinarily do not involve collective-bargaining agreements. They may also have features that allow participating employers to have different benefit formulas, with the employer's contributions to the plan based on the benefit formula selected by the employer. Such plans shall be

considered single-employer plans rather than multiemployer plans, and each reporting entity's accounting shall be based on its respective interest in the plan.

Non-U.S. Pension Plans

79. Except for its effective date, this issue paper includes no special provisions applicable to pension arrangements outside the United States. To the extent that those arrangements are in substance similar to pension plans in the United States, they are subject to the provisions of this issue paper. The substance of an arrangement is determined by the nature of the obligation and by the terms or conditions that define the amount of benefits to be paid, not by whether (or how) a plan is funded, whether benefits are payable at intervals or as a single amount, or whether the benefits are required by law or custom or are provided under a plan the employer has elected to sponsor.

80. It is customary or required in some countries to provide benefits in the event of a voluntary or involuntary severance of employment (also called termination indemnities). If such an arrangement is in substance a pension plan (for example, if the benefits are paid for virtually all terminations), it is subject to the provisions of this issue paper.

Business Combinations

81. When an employer is acquired in a business combination and that employer sponsors a single-employer defined benefit pension plan, the assignment of the purchase price to individual assets acquired and liabilities assumed shall include a liability for the projected benefit obligation in excess of plan assets or an asset for plan assets in excess of the projected benefit obligation, thereby eliminating any previously existing net gain or loss, prior service cost or credit, or transition asset or obligation recognized in unassigned funds (surplus). If it is expected that the plan will be terminated or curtailed, the effects of those actions shall be considered in measuring the projected benefit obligation.

Consolidated/Holding Company Plans

82. The employees of many reporting entities are members of a plan sponsored by a parent company or holding company. A reporting entity that participates in these plans and is not directly liable for obligations under the plan shall recognize pension expense equal to its allocation from the holding company or parent company of the required contribution to the plan for the period. A liability shall be established for any such contributions due and unpaid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for obligations under the plan, then the requirements outlined above in paragraphs 4-81 and 84-92 of this issue paper shall be applied.

Relevant Literature

83. This issue paper adopts with modification paragraphs 1-7 and 16-17 as well as Appendix C – Amendments to Statements 87 and 88 and Appendix E – Amendments to Statement 132(R) of *FASB Statement No. 158, Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132(R)* (FAS 158). Paragraphs 8-10 providing specific guidance for not-for-profit organizations is rejected. Paragraphs 11-15 regarding the effective dates for FAS 158 is rejected and paragraph 19 providing an alternative method for remeasuring plan assets and benefits obligations as of the fiscal year the measurement date provisions are applied is also rejected. Appendix D – Amendments to Statement 106 has not been incorporated within this statutory statement as it will be considered in accordance with revisions to *SSAP No. 14—Postretirement Benefits Other Than Pensions* (SSAP No. 14). Disclosures included within FAS 132 (R), as amended by FAS 158,

pertaining to health care (paragraphs 5.l. and 5.m.) have been rejected for inclusion within this standard, but will also be considered in accordance with revisions to SSAP No. 14. This issue paper adopts the revisions to paragraph 5.d. of FAS 132(R) as amended by *FASB Staff Position FAS 132(R)-1, Employers' Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 132(R)-1) and *ASU 2010-06, Fair Value Measurements and Disclosures (Topic 820): Improving Disclosures about Fair Value Measurements* (ASU 2010-06). Other revisions to disclosures requirements as amended by FSP FAS 132(R)-1 relate to nonpublic entities and are rejected. This Statement adopts by reference *FSP FASB 158-1, Conforming Amendments to the Illustrations in FASB Statements No. 87, No. 88, and No. 106 and to the Related Staff Implementation Guides* (FSP FAS 158-1) to the extent that the examples and related implementation guides comply with the adopted GAAP guidance previously identified within this statement, as modified for statutory accounting. The following modifications from the adopted paragraphs of FAS 158 have been incorporated within this standard:

a. All references to 'other comprehensive income' or 'accumulated other comprehensive income' within FAS 158 have been revised to reflect unassigned funds (surplus).

b. Any prepaid asset resulting from the excess of the fair value of plan assets over the projected benefit obligation shall be nonadmitted. Furthermore, any asset recognized from the cost of a 'participation right' of an annuity contract per paragraph 51 shall also be nonadmitted.

c. Provisions within paragraph 30 of FAS 87, as amended by FAS 158, permitting a market-related value of plan assets have been eliminated with only the fair value measurement method for plan assets being retained.

d. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132(R), as amended by FAS 158, are rejected. All reporting entities shall follow the disclosure requirements included in paragraph 5 of FAS 132(R) as amended by FAS 158.

e. Clarification has been included within this standard to ensure both vested and nonvested employees are included within the recognition of net periodic pension cost and in the pension benefit obligation. Although this is consistent with GAAP, this is a change from previous statutory accounting. As nonvested employees were excluded from statutory accounting under SSAP No. 89, guidance has been included to indicate that the unrecognized prior service cost attributed to nonvested individuals is not required to be included in net periodic pension cost entirely in the year this standard is adopted. The unrecognized prior service cost for nonvested employees shall be amortized as a component of net periodic pension cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is then adjusted each period as prior service cost is amortized. (Guidance is included within the transition related to the recognition of the prior service cost for nonvested employees through unassigned funds (surplus).)

f. Conclusion of Interpretation 04-12*: EITF 03-4: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan* (INT 04-12) indicating that 'cash balance' plans are considered defined benefit plans has been incorporated within paragraph 5 of this issue paper.

g. Conclusion of Interpretation 99-26*: Offsetting Pension Assets and Liabilities* (INT 99-26) prohibiting the offset of defined benefit liabilities of one plan with prepaid assets of another plan has been incorporated within paragraph 28 of this issue paper.

h. Provisions within paragraph 36 of FAS 87, as amended by FAS 158, regarding the classification of underfunded liabilities as current or noncurrent liabilities and the classification of assets from overfunded plans as noncurrent assets has been rejected as inconsistent with statutory accounting.

i. Provisions within paragraph 49 of FAS 87, as amended by FAS 158, defining the fair value of investments have been rejected. Fair value definitions and measurement for investments shall be determined in accordance with statutory accounting guidance.

j. Provisions within paragraph 52 of FAS 87, as amended by FAS 158, regarding the plan assets measurement date for consolidating subsidiaries or entities utilizing the equity method under APB Opinion No. 18 has been rejected. For statutory accounting, all entities shall follow the measurement date guidance within paragraph 44 of this statement.

k. Transition under FAS 158 is different from this issue paper. FAS 158 requires entities with publicly traded equity securities to initially apply the requirement to recognize the funded status of a benefit plan; the gains/losses, prior service costs/credits and transition obligations/assets that have not yet been included in net periodic benefit cost; and the disclosure requirements as of the end of the fiscal year ending after December 15, 2006. Transition guidelines for statutory accounting are defined in paragraphs 84-92.

l. FAS 158 provided two approaches for an employer to transition to a fiscal year-end measurement date. For purposes of statutory accounting, the second approach permitting reporting entities to use earlier measurements determined for year-end reporting as of the fiscal year immediately preceding the year that the measurement date provisions is rejected. For consistency purposes, all reporting entities shall follow the first approach and remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied.

Effective Date and Transition

84. Reporting entities are required to disclose the projected benefit obligation, the accumulated benefit obligation and the fair value of plan assets for defined benefit pension plans in the first reporting period after the effective date of this standard and in each subsequent reporting period. This disclosure shall specifically note the funded/underfunded status of the pension plan based on the projected benefit obligation. Reporting entities shall also specifically note the surplus impact necessary, at each reporting date, to reflect the full projected benefit obligation within the financial statements.

85. The SSAP that results from this issue paper is effective for quarterly and annual reporting periods beginning on or after January 1, 2013 (transition date) with early adoption permitted. Any unfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, is a liability under SSAP No. 5R and shall be reported in the first quarter statutory financial statements after the transition date with a corresponding entry to unassigned funds (surplus). If the fair value of plan assets exceeds the projected benefit obligation, the asset shall be considered a nonadmitted asset. Net periodic pension cost shall include a component for unrecognized prior service cost for nonvested employees beginning in 2013.

86. Gains or losses, prior service costs or credits (including prior service costs for non-vested participants pursuant to paragraph 13), and remaining transition assets or obligations from prior application of SSAP No. 89 (collectively referred to as “unrecognized items”) that have not yet been

included in net periodic benefit cost as of December 31, 2012[4] shall be recognized as components of the balance of unassigned funds (surplus), net of tax, as of January 1, 2013 (provided that alternative transition is not elected per paragraph 87.b.). The offset to unassigned funds is reported separately as an "Aggregate Write-In for Other-Than-Invested Assets" or as an "Aggregate Write-In for Other Liabilities". After recognition, the full unfunded or overfunded status of the plan shall be reflected within the financial statements[5]. Any prepaid asset resulting from an overfunded plan shall be nonadmitted.

87. Due to the potential impact to surplus as a result of immediately applying the accounting guidance in paragraph 86, reporting entities may elect one of the following two methods, on an individual plan basis, to recognize the transition surplus impact:

a. Reporting entities may elect to recognize the entire transition surplus impact calculated from applying paragraph 86, on an individual plan basis, as of January 1, 2013.

b. Alternatively, reporting entities may elect to recognize the entire surplus impact from applying paragraph 86, on an individual plan basis, over a period not to exceed ten (10) years. The surplus impact initially recognized as of January 1, 2013, under this transition option, and subsequently over the transition period, shall be the greater of:

i. Ten percent of the calculated surplus impact as of the transition date;

ii. Amortization[6] of the "unrecognized items" (defined in paragraph 86) into net periodic pension cost, including any accelerated amortization of these items from curtailments or settlements that occur after the transition date. (If the amortization cannot be determined at transition, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for this component of the calculation. If the amount recognized for transition (greater of all three components in paragraph 87.b.) is subsequently determined to be less than what is amortized for the year (87.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds (surplus).);

[4] The intent of the guidance is to recognize the unrecognized amounts as of December 31, 2012 annual statements, even if new actuarial projections (accumulated benefit obligation/projected benefit obligation amounts) are calculated as of January 1, 2013. (These projections would be considered in the recognition of the 2013 pension cost.)

[5] Upon the effective date of this statement, reporting entities are required to reflect the full unfunded or overfunded status of their defined benefit pension plans. As such, the concept of an "additional minimum liability" previously reflected in *SSAP No. 89—Pensions* is not incorporated within this Statement. If an additional minimum liability (and a corresponding intangible asset) had been recognized under SSAP No. 89, such items shall be eliminated with the implementation of this Statement, and the guidance in paragraph 87 shall be followed. The elimination of any additional minimum liability and corresponding intangible asset shall also occur if the entity elects the transition option reflected in paragraph 87.b.

[6] Unless otherwise impacted from the provisions within this Statement or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date.

iii. Amount necessary to establish a total liability that is equal to any unfunded accumulated benefit obligation (the accumulated benefit obligation less the fair value of plan assets)[7].

If the surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact (collectively referred to as the "transition liability"[8]) on a systematic basis over a period not to exceed nine years. The minimum amount recognized each subsequent year shall be an amount that reflects the conditions within paragraph 87.b. Additionally, reporting entities must recognize any remaining transition liability to the extent that the plan reflects a prepaid benefit cost. (For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded.) Furthermore, if circumstances result with a subsequent gain attributed to the plan that will be recognized in earnings, the entity must recognize an additional amount of the remaining transition liability to offset the recognized gain. Reporting entities are permitted to recognize the remaining transition liability, or an amount in excess of the minimum requirement, at any time after the transition date. This transition guidance is specific to the transition surplus impact from initially applying this statement on Jan. 1, 2013. Thus, this transition guidance does not apply to additional liability calculated from subsequent comparison of the fair value of plan assets to the projected benefit obligation, or the impact of subsequent plan amendments.

88. Reporting entities electing to apply the transition guidance in paragraph 87.b. must disclose the full transition surplus impact calculated from applying paragraph 86 in the first quarter statutory financial statements after the transition date and each reporting period thereafter. This disclosure shall include the initial "transition liability" calculated under paragraph 86, the annual amortization amount of the "unrecognized items" into net periodic pension cost, the amount of the unfunded accumulated benefit obligation, and the remaining unrecognized transition impact. This disclosure shall include a schedule of the entity's anticipated recognition of the remaining surplus impact over the transition period.

89. The requirement to measure plan assets and benefit obligations as of the date of the reporting entity's financial statement year-end is effective in SSAP No. 102 for financial statement years beginning January 1, 2014. (The measurement date change will be initially reflected in the Dec. 31, 2014, financial statements.)

90. In order to transition to a fiscal year-end measurement date, the reporting entity shall remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. The reporting entity shall use those new measurements to determine the effects of the measurement date change as of the beginning of the fiscal year that the measurement date provisions are applied.

[7] The intent of this standard is to ensure that under the deferral option the liability initially recognized for an unfunded plan reflects the minimum liability previously recognized under SSAP No. 89. For any instances in which an additional minimum liability recognized under SSAP No. 89 is greater than the unfunded ABO at transition, an amount equal to the previously recognized additional minimum liability shall be used in determining this component of 87.b.iii. The deferral option under this standard is not intended to allow a surplus benefit to be recognized at initial transition for an unfunded plan.

[8] If the surplus deferral from paragraph 87.b. is elected, the deferred liability, although comprised of the previous "unrecognized items" shall be collectively referred to as the "transition liability". Although reporting entities will need to continue to track the unrecognized items for amortization into net periodic cost (offset through unassigned funds), reporting entities shall not allocate the recognized surplus impact from transition to these categories. As noted in paragraph 87.b.ii., the minimum amount of liability recognized under the deferral option must cover the annual amortization of the "unrecognized items" into net periodic pension cost to prevent a surplus benefit.

91. The reporting entity shall measure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. This would result with the following:

a. Net periodic benefit cost for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied, exclusive of any curtailment or settlement gain or loss, shall be recognized, net of tax, as a separate adjustment of the opening balance unassigned funds (surplus). That is, the pretax amount recognized as an adjustment to unassigned funds (surplus) is the net periodic benefit cost that without a change in measurement date otherwise would have been recognized on a delayed basis during the first interim period for the fiscal year that the measurement date provisions are applied.

b. Any gain or loss arising from a curtailment or settlement between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized in earnings in that period and not as an adjustment to unassigned funds (surplus). This provision prohibits a reporting entity from early application of the measurement date provisions when the reporting entity has issued financial statements for the prior year without recognition of such a settlement or curtailment.

c. Other changes in the fair value of plan assets and the benefit obligations (for example, gains or losses) for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized, net of tax, as a separate adjustment of the opening balance of unassigned funds (surplus) for the fiscal year that the measurement date provisions are applied.

92. Earlier application of the recognition or measurement date provisions is encouraged, however, early applications must be for all of the reporting entity's benefit plans. If early application is elected, the transition date shall reflect the January 1st of the year in which SSAP No. 102 is initially applied. Retrospective application is not permitted.

93. After adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principles (SSAP) for comment. The initial draft of the SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will be effective for reporting periods beginning on or after January 1, 2013.

DISCUSSION:

94. The FASB issued FAS 158 to address concerns that existing accounting for postretirement benefit plans failed to communicate the funded status of those plans in a complete and understandable way. The prior standards did not require an employer to report in its statement of financial position the overfunded or underfunded status of a defined benefit postretirement plan. The prior standards also did not require an employer to recognize completely in earnings or other comprehensive income the financial effects of certain events affecting the plan's funded status when those events occurred.

95. Within the prior GAAP standards, an employer was allowed to recognize in its statement of financial position an asset or liability arising from the defined benefit postretirement plan, which almost always differed from the plan's overfunded or underfunded status. Those standards allowed an employer to delay recognition of economic events that affected the costs of providing postretirement benefits—

changes in plan assets and benefit obligations—and recognize a liability that was sometimes significantly less than the underfunded status of the plan as well as recognize an asset in its statement of financial position, in some situations, for a plan that was underfunded. Furthermore, information regarding the overfunded or underfunded status of a plan was relegated to the notes to the financial statements. That information was in the form of a reconciliation of the overfunded or underfunded status to amounts recognized in the employer's statement of financial position. By presenting this information only in the notes it was difficult for users of financial statements to assess an employer's financial position and ability to satisfy postretirement benefits.

96. In issuing FAS 158, the FASB concluded that the reporting requirements of other standards did not provide representationally faithful and understandable financial information and might lead to the inefficient allocation of resources in capital markets. The issuance of FAS 158 is the first step of a project to comprehensively reconsider FAS 87, 88, 106, 132(R), and related pronouncements.

97. In accordance with the Statutory Accounting Principles Statement of Concepts, the conservatism concept supports the adoption of FAS 158 to ensure proper liability recognition and in accordance with the responsibility to regulate financial solvency.

98. Modifications to FAS 158 have been established primarily to clarify the components for liability consideration and to ensure consistency within reporting and recognition among reporting entities. Guidance related to not-for-profit entities, transition, and alternative methods for remeasuring plan assets and benefit obligations for the first year application have been rejected to ensure consistent application for statutory purposes. Revisions incorporated within FAS 158 specifically attributed to FAS 106 or postretirement benefits other than pensions have not been addressed within this issue paper and will be considered in accordance with revisions to SSAP No. 14. Modifications from FAS 158 incorporated within this issue paper include:

a. All references to 'other comprehensive income' or 'accumulated other comprehensive income' within FAS 158 have been revised to reflect 'unassigned funds (surplus)'. This modification simply alters the guidance within FAS 158 to adhere to the reporting captions for statutory accounting.

b. Any prepaid asset resulting from the excess of the fair value of plan assets over the projected benefit obligation shall be nonadmitted. Furthermore, any asset recognized from the cost of a "participation right" of an annuity contract per paragraph 51 shall also be nonadmitted. These modifications are consistent with the definition of assets and nonadmitted assets set forth in *SSAP No. 4—Assets and Nonadmitted Assets* as assets recognized from overfunding postretirement plans or participating rights from annuity contracts cannot be readily converted to cash to satisfy policyholder obligations.

c. Provisions within paragraph 30 of FAS 87, as amended by FAS 158, permitting a calculated market-related value of plan assets has been eliminated with only the fair value measurement method for plan assets being retained. The calculated market-related value is a process to systematically and rationally recognize changes in fair value over a period of five years. This modification eliminates the potential for inconsistent measurement methods among reporting entities.

d. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132(R), as amended by FAS 158, are rejected. All reporting entities shall follow the disclosure requirements in paragraph 5 of FAS 132(R), as amended by FAS 158.

e. Clarification has been included within this standard to ensure both vested and nonvested employees are included within the recognition of net periodic pension cost and in the pension benefit obligation. Although this is consistent with GAAP, this is a change from previous statutory accounting. As nonvested employees were excluded from statutory accounting under SSAP No. 89, guidance has been included to indicate that the unrecognized prior service cost attributed to nonvested individuals is not required to be included in net periodic pension cost entirely in the year this standard is adopted. The unrecognized prior service cost for nonvested employees shall be amortized as a component of net periodic pension cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is then adjusted each period as prior service cost is amortized.

f. Conclusion of Interpretation 04-12*: EITF 03-4: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan* (INT 04-12) indicating that 'cash balance' plans are considered defined benefit plans has been incorporated within paragraph 5 of this issue paper.

g. Conclusion of Interpretation 99-26*: Offsetting Pension Assets and Liabilities* (INT 99-26) prohibiting the offset of defined benefit liabilities of one plan with prepaid assets of another plan has been incorporated within paragraph 28 of this issue paper.

h. Provisions within paragraph 36 of FAS 87, as amended by FAS 158, regarding the classification of underfunded liabilities as current or noncurrent liabilities and the classification of assets from overfunded plans as noncurrent assets has been rejected as inconsistent with statutory accounting.

i. Provisions within paragraph 49 of FAS 87, as amended by FAS 158, defining the fair value of investments have been rejected. Fair value definitions and measurement for investments shall be determined in accordance with statutory accounting guidance.

j. Provisions within paragraph 52 of FAS 87, as amended by FAS 158, regarding the plan assets measurement date for consolidating subsidiaries or entities utilizing the equity method under APB Opinion No. 18 has been rejected. For statutory accounting, all entities shall follow the measurement date guidance within paragraph 44 of this statement.

k. Transition under FAS 158 is different from this issue paper. FAS 158 requires entities with publicly traded equity securities to initially apply the requirement to recognize the funded status of a benefit plan; the gains/losses, prior service costs/credits and transition obligations/assets that have not yet been included in net periodic benefit cost; and the disclosure requirements as of the end of the fiscal year ending after December 15, 2006. Transition guidelines for statutory accounting are defined in paragraphs 84-92.

l. FAS 158 provided two approaches for an employer to transition to a fiscal year-end measurement date. For purposes of statutory accounting, the second approach permitting reporting entities to use earlier measurements determined for year-end reporting as of the fiscal year immediately preceding the year that the measurement date provisions was rejected. For consistency purposes, all reporting entities shall follow the first approach and shall remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied.

99. Application of this issue paper as a new Statutory Accounting Principle is expected to generate an increased projected benefit obligation as a result of the inclusion of nonvested participants. (In SSAP No. 89, nonvested participants were excluded from the projected benefit obligation. This exclusion has been

eliminated.) The increase to the projected benefit obligation is not anticipated to be significant for pension plans as federal legislature already exists that requires vesting within a fairly short timeframe after the start of employment (seven years maximum).

WORKING GROUP RESEARCH AND KEY ISSUES CONSIDERED:

100. During the Statutory Accounting Principles (E) Working Group's discussions on this issue paper, the Working Group conducted research and considered key issues to determine the appropriate course of action in response to comments received. Summaries of the key topics discussed, the research conducted, and the Working Group's conclusions have been detailed in the paragraphs below:

101. *Admittance of Prepaid Pension Costs for Overfunded Assets* – During the Spring 2008 Hearing, comments were received that prohibiting admittance of the asset established from overfunded plans would be punitive in comparison to GAAP reporting. A comment was also received proposing an offsetting admission for overfunded plan assets, whereas, an asset from overfunded plans would be admitted to the extent that a separate plan was underfunded. In considering these comments, the Working Group identified that there is a punitive tax that significantly hinders a company's ability to reclaim overfunded defined benefit assets. The 4980 Excise Tax on Reversions is a punitive, non-deductible excise tax imposed on the reversion of excess defined benefit assets to the employer. In 2008, the law imposed a confiscatory 50% tax on a simple reversion of excess assets to the employer. Because the excise tax is not deductible, ordinary income tax also applies on the entire amount of the reversion. Assuming federal and states income taxes total 40%, with the excise tax, a combined 90% tax is levied on the reversion. The Working Group identified that there are exceptions to when the tax is reduced to 20% and if the excess assets of a terminating defined benefit plan are transferred to a qualifying replacement plan, no excise tax would be due on the transferred assets.

102. In considering this research, the Working Group agreed that continued nonadmittance of overfunded plan assets was appropriate as the excise tax would significantly reduce the amount of assets that could be reclaimed by the company and utilized for policyholder claims. This conclusion is consistent with the existing statutory guidance in *SSAP No. 29—Prepaid Expenses*, in which prepaid assets were previously concluded to be nonadmitted assets as they are not readily available to satisfy policyholder obligations. The Working Group did further consider whether admittance of overfunded assets could occur if the company had plans to transfer the overfunded assets into a qualified replacement plan. However, after identifying that plan assets can only be transferred excise tax-free to a qualified replacement plan if in connection with a qualified plan termination, it was noted that no allowance should be permitted to admit overfunded plan assets for such circumstances or to offset an underfunded plan's liability. (A transfer of overfunded plan assets from an existing plan to a new or different plan would not be excise-tax free as the original plan would not meet the requirements of a qualified plan termination.)

103. *Admission of Deferred Tax Assets from Pension Liabilities* – During the Spring 2008 Hearing, comments were received regarding how reporting the full liabilities for pension or OPEB plans would result in a need to consider revisions to *SSAP No. 10—Income Taxes* (SSAP No. 10) as statutory guidance currently limits the amount of deferred tax assets (DTAs) that can be admitted. In considering these comments, the Working Group identified that the Pension Protection Act of 2006 would seem to reduce the extent of deferred tax assets for defined benefit pension plans and that existing SSAP No. 10 guidance would allow companies to admit additional DTAs if they have a tax-planning strategy. (A DTA is created when pension/OPEB liabilities are accrued in the financial statements, but are only recognized/removed when contributions are made to the plan.)

104. The Pension Protection Act of 2006 (PPA), which goes into effect in 2008, is anticipated to reduce the extent that DTAs are created. Under the PPA funding requirements, plans must stay fully funded (assets must equal or exceed liabilities). If the plan is not fully funded, the funding contribution must also include the amount necessary to amortize over seven years the difference between the fund's

liabilities and assets. Although the establishment of the PPA is not anticipated to eliminate DTAs (the PPA liability calculation to which funds must be contributed is a different calculation from one that compares funded plan assets to the projected benefit obligation as required by FAS 158 and this issue paper), it is anticipated that DTAs for pensions will be reduced in accordance with contributions required by the PPA.

105. Current statutory accounting guidance in SSAP No. 10 does not make specific allowances for deferred tax assets resulting from pension obligations. However, SSAP No. 10 currently allows the admittance of deferred tax assets expected to be realized within one year, if less than 10% of capital and surplus, as well as tax-planning strategies to be considered in determining admitted DTAs. Pursuant to the guidance within SSAP No. 10, an entity is permitted to admit a DTA in response to a prudent and feasible tax-planning strategy that if implemented would result in realization of DTAs within one year of the balance sheet date. The entity is not required to implement the strategy within the 12-month period, but it must have the ability to implement the strategy within such time period. The entity must demonstrate that while it ordinarily might not take such actions, it would do so to prevent an operating loss credit carryforward or other similar item from expiring unused. If the tax-planning strategy criteria is met, an entity may recognize as admitted assets the related DTAs that are realizable as a result of the available tax-planning strategy in accordance with paragraphs SSAP No. 10.

106. As a result of the above information, the Working Group agreed not to further consider revisions to SSAP No. 10 to add specific guidance to admit DTAs resulting from pension or OPEB plans. Update 2012[9]: SSAP No. 10 has been superseded by *SSAP No. 101—Income Taxes* (SSAP No. 101). Guidance in SSAP No. 101 is similar to SSAP No. 10 as it also does not make specific allowances for deferred tax assets resulting from pension obligations. Although, the DTA admittance calculation has been revised from SSAP No. 10 – allowing greater timeframes for recovery and realization of DTAs, and a higher percentage for a realization threshold – SSAP No. 101 continues with the approach to determine admittance of DTAs in accordance with a three-component admittance calculation. Also, tax planning-strategies are still permitted to be considered in admitting DTAs.

107. *Inclusion of Nonvested Employees in Determining Pension Liability* - During the 2008 Spring Hearing, the Working Group received comments that nonvested employees in a pension or OPEB plan do not have a current claim, and should be excluded from pension and OPEB obligation determinations. In considering this issue, the Working Group identified current requirements under federal statute regarding company obligations for nonvested employees in terminated pension plans. Additionally, the Working Group identified that the exclusion of nonvested participants would result in less conservative liability requirements for statutory accounting in comparison to other regulations.

108. The Working Group identified guidelines within the Employee Retirement Income Security Act of 1974 (ERISA) and the Pension Benefit Guaranty Corporation (PBGC) that limit the vesting period for defined benefit plans and require consideration of nonvested employees if such plans are terminated. As of 2007, employees' benefits in a defined benefit pension plan must become vested at 100% after five years, or under a seven-year graded-vesting schedule. Furthermore, an employer may terminate a single-employer plan under a standard termination if the plan's assets equal or exceed its liabilities. If the assets are less than the liabilities, the employer must contribute the amount necessary to fully fund the plan. In a standard termination, all accrued benefits under the plan become 100% vested and the plan must purchase annuity contracts for all participants. This means that employees have a right to all the benefits that were earned at the time of the plan termination, even benefits in which they were not vested and would have lost if the employee had left the employer.

[9] Issue papers are considered non-authoritative and provide historical discussion for the development of a SSAP. Issue papers are generally updated after the initial adoption of the related SSAP but not typically thereafter. SSAP No. 102 was adopted in March 2012, the Working Group directed staff to update this issue paper to reflect the final decisions in that SSAP.

109. The Working Group identified that the Financial Accounting Standards Board (FASB) has concluded that accrual accounting (recognition when events and circumstances occur – i.e., employee service) is more representationally faithful and more relevant to financial statement users. Furthermore, actuarial assumptions used in determining pension liabilities already consider that some existing or future retirees will live longer than others and that some individuals will terminate employment before becoming eligible for the benefits. Based on the requirements by FASB, if the statutory accounting guidelines were to require liability determination based on vested employees only, the statutory accounting liabilities for pension plans would be inconsistent and less conservative than GAAP.

110. As a result of the above information, the Working Group agreed that all employees (vested and nonvested) should be included in the pension plan liability determination for statutory accounting. Update 2012: During the development of SSAP No. 102, the Working Group heard additional comments regarding the inclusion of non-vested participants from the American Academy of Actuaries. These comments addressed the inclusion of liabilities within statutory financial statements that are not binding and that may be discontinued when insolvency is imminent, and therefore not a solvency obligation. In considering these comments, the Working Group responded that obligations for pension and other postemployment benefits should be reflected in the financial statements, even if the employer has the discretion to unilaterally freeze, reduce or withdraw those benefits. When the employer or reporting entity freezes or reduces the pension or other postemployment benefit, then it would be appropriate to adjust the obligation accordingly.

111. *Consideration of Using ABO Versus PBO in Establishing Liability* – During the 2008 Spring Hearing, comments were received that the movement to utilize the projected benefit obligation (PBO) instead of the accumulated benefit obligation (ABO) continues to remain a controversial issue. It was noted that the American Academy of Actuaries had previously submitted comments to the FASB indicating that the ABO was a better measure than the PBO as the ABO does not include estimated future increases in compensation which have not yet occurred. In considering these comments, the Working Group identified information included within FASB statements that detail the FASB's considerations of utilizing either the ABO or the PBO, and their decision to require use of the PBO for the liability determination in FAS 158.

112. In discussing the FASB conclusions, the Working Group identified that pension obligations are considered to meet the GAAP definition of a liability and that the PBO is considered to be the most relevant measure of the pension obligation. It was noted that the FASB perceives a difference between an employer promise to pay a benefit of 1% of an employee's final pay and a promise to pay an employee a fixed amount that happens to equal 1% of current pay. If the ABO was utilized, this would result with a practice that ignores the future variable (future pay) and not recognizing a difference between these commitments.

113. Although additional discussion was considered by the Working Group, including comments that ABO is better for a statutory accounting solvency focus as it reflects an obligation at a point of time, the Working Group agreed to be consistent with GAAP on this issue.

114. *Transition and Effective Date* – With the adoption of Issue Paper No. 132 in December 2008, the Statutory Accounting Principles (E) Working Group directed NAIC staff to draft SSAP No. 102 with reconsideration of the effective date to 2011 and expanding the proposed transition period from 5 years to 10 years. In discussing the draft SSAP, an effective date of Jan. 1, 2013, was ultimately adopted.

115. The transition guidance originally proposed in Issue Paper No. 132 required companies with a surplus impact of less than 1% from initial application of the standard to recognize the full surplus impact, including a liability that equaled the full unfunded projected benefit obligation. Reporting entities with a surplus impact of greater than 1% from initial application of the standard would have the option to defer

recognition of the full surplus impact for a period not to exceed five years. This guidance required a minimum of 20% to be recognized in subsequent years. In working with interested parties, actuaries, plan administrators, representatives of the AICPA, and members of the Working Group, the transition guidance was revised to include the following elements:

a. In the first reporting period after transition, reporting entities are required to disclose the obligation and the fair value of plan assets. This disclosure shall specifically note the funded/unfunded status of the plan, and the surplus impact necessary to reflect the full unfunded benefit obligation. Any unfunded defined benefit amounts are considered a liability under SSAP No. 5R and are to be reported in the first quarter financial statements with a corresponding entry to surplus. If the fair value of plan assets exceeds the obligation, the asset is nonadmitted. Items previously recognized from SSAP No. 14 or SSAP No. 89 (gains or losses, prior service costs or credits, and remaining transition items from the original application of those standards) are to be recognized in unassigned funds (surplus). After this recognition, the full unfunded or overfunded status of the plan shall be reflected in the financial statements.

b. Transition Election: Due to the potential surplus impact, reporting entities may elect one of two methods in initially applying the standards:

    i. Reporting entities may elect to recognize the entire transition surplus impact calculated, on an individual plan basis, as of January 1, 2013 (no transition).

    ii. Alternatively, reporting entities may elect to recognize the entire surplus impact, on an individual plan basis, over a period not to exceed ten (10) years. The surplus impact initially recognized as of January 1, 2013, under this transition option, and subsequently over the transition period, shall be the greater of:

        (a) Ten percent of the calculated surplus impact as of the transition date;

        (b) Amortization[10] of the "unrecognized items" into net periodic pension cost, including any accelerated amortization of these items from curtailments or settlements that occur after the transition date. (If the amortization cannot be determined at transition, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for this component of the calculation. If the amount recognized for transition (greater of all three components) is subsequently determined to be less than what is amortized for the year, the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds (surplus).);

        (c) Amount necessary to establish a total liability that is equal to any unfunded accumulated benefit obligation (the accumulated benefit obligation less the fair value of plan assets).

If the surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus

[10] Unless otherwise impacted from the provisions within this issue paper or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date.

impact (collectively referred to as the "transition liability"[11]) on a systematic basis over a period not to exceed nine years. The minimum amount recognized each subsequent year shall be an amount that reflects the three components identified above. Additionally, reporting entities must recognize any remaining transition liability to the extent that the plan reflects a prepaid benefit cost. (For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded.) Furthermore, if circumstances result with a subsequent gain attributed to the plan that will be recognized in earnings, the entity must recognize an additional amount of the remaining transition liability to offset the recognized gain. Reporting entities are permitted to recognize the remaining transition liability, or an amount in excess of the minimum requirement, at any time after the transition date. This transition guidance is specific to the transition surplus impact from initially applying this statement on Jan. 1, 2013. Thus, this transition guidance does not apply to additional liability calculated from subsequent comparison of the fair value of plan assets to the projected benefit obligation, or the impact of subsequent plan amendments.

116. Reporting entities electing to apply the transition guidance must disclose the full transition surplus impact calculated in the first quarter statutory financial statements after the transition date and each reporting period thereafter. This disclosure shall include the initial "transition liability" calculated, the annual amortization amount of the "unrecognized items" into net periodic pension cost, the amount of the unfunded accumulated benefit obligation, and the remaining unrecognized transition impact. This disclosure shall include a schedule of the entity's anticipated recognition of the remaining surplus impact over the transition period.

117. In establishing the final transition guidance, the following key elements were noted:

a. All reporting entities are equally allowed to participate in the transition election. However, reporting entities are not required to elect the surplus deferral, and at transition, or at any time subsequent to transition, reporting entities are permitted to recognize the full transition surplus impact.

b. A 10% minimum surplus recognition threshold provides the potential for a longer transition period (potentially 10 years) to mitigate the surplus impact. However, the transition guidance is not intended to allow reporting entities to improve their surplus position simply by electing to defer recognition of the surplus impact at initial application. Therefore, reporting entities electing the transition option must consider a three-component calculation to determine the minimum surplus impact that must be recognized. This calculation is utilized each time recognition is required for the transition surplus impact to determine the minimum required. Although the guidance allows up to a 10-year transition timeframe, the actual transition timeframe permitted for each reporting entity will depend on the three-component calculation.

c. The transition guidance is specific that it requires a minimum of 10% of the "surplus impact" to be recognized at each reporting period. This guidance was written to prevent an interpretation that would allow a systematic reduction of nonadmitted prepaid benefit cost over the transition timeframe before recognition of any unfunded liability. (As the prepaid benefit cost is nonadmitted, a reduction of this amount is offset by an equal

[11] If the surplus deferral is elected, the deferred liability, although comprised of the previous "unrecognized items" shall be collectively referred to as the "transition liability". Although reporting entities will need to continue to track the unrecognized items for amortization into net periodic cost (offset through unassigned funds), reporting entities shall not allocate the recognized surplus impact from transition to these categories. The minimum amount of liability recognized under the deferral option must cover the annual amortization of the "unrecognized items" into net periodic pension cost to prevent a surplus benefit.

change to the nonadmitted assets. As such, this action alone results in a zero surplus impact.)

d. At initial adoption on Jan. 1, 2013, reporting entities are required to recognize the minimum calculated transition surplus impact. Subsequently, reporting entities are not required to recognize the minimum surplus impact until Dec. 31, 2014. This spread from the initial and first subsequent recognition prevents reporting entities from incurring a surplus impact twice in the same reporting year.

e. Reporting entities must recognize any remaining transition liability to the extent that a plan reflects a prepaid benefit cost, overfunded plan asset or when a gain is subsequently recognized in earnings. For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded. Additionally, if circumstances result with a subsequent gain attributed to the plan that will be recognized in earnings, the entity must recognize an additional amount of the remaining transition liability to offset the recognized gain.

f. Transition guidance is specific to the transition surplus impact from initially applying the adopted SSAP. The transition guidance does not apply to additional liabilities calculated from subsequent comparison of the fair value of plan assets to the projected benefit obligation or the impact of subsequent plan amendments. (Subsequent plan amendments resulting in a gain would be considered under paragraph 115.e. above.)

118. *Reporting Unfunded Liabilities in the Financial Statements* – During the 2010 Summer National Meeting, the Statutory Accounting Principles (E) Working Group exposed draft SSAPs for pensions and other postretirement benefit benefits. As a result of this exposure, comments were received from interested parties on the reporting of the unfunded benefit obligations and benefits. These comments noted that the proposed SSAPs appear to commingle the accounting for prepaid and accrued pension costs with the adjustments to surplus necessary to reflect the funded status of the plan on the balance sheet date. It was noted that only some of the transactions impact the income statement, and commingling the amounts on the balance sheet would create cross-check errors with the associated general expense exhibits.

119. After researching the statutory reporting options, it was concluded that there was no viable option that would result with the use of a single financial statement line that will provide regulators with the unfunded pension obligation on the face of the financial statements in a manner similar to GAAP without significant revisions to existing schedules and cross-checks. As a result of these findings, the Working Group agreed that separate reporting will be necessary in the financial statements for "unpaid expenses" and the "transition liability" for pension and postretirement obligations. This could result in situations when a plan reflects a prepaid benefit (nonadmitted prepaid benefit cost) as well as a liability for pension benefits (unfunded obligations). To address these situations and ensure a liability presentation on the balance sheet for unfunded plans, a contra-asset is utilized as an aggregate write-in for other-than-invested assets to offset the prepaid benefit, resulting in a net zero asset presentation on the balance sheet. In order to address concerns that the reporting may be unclear, disclosures are required to separately show the assets and liabilities recognized.

120. *SSAP Amendments_– SSAP No. 102—Accounting for Pensions* was adopted March 2012. Subsequent to adoption, but before finalization of this issue paper, two agenda items were proposed to clarify guidance:

a. Agenda Item 2012-18: Additional Pension Examples - This agenda proposed three additional implementation examples for inclusion in SSAP No. 102. These examples include (1) prepaid benefit cost with unfunded liability – no surplus deferral elected, (3) prepaid benefit cost with unfunded liability – surplus deferral elected with funded accumulated benefit obligation, and (3) prepaid benefit cost with unfunded liability – surplus deferral elected with unfunded accumulated benefit obligation. These examples were adopted Nov. 29, 2012, and have been reflected within the implementation guide of this issue paper.

b. Agenda Item 2012-19: Clarification of Measurement Date Change in SSAP No. 92 & SSAP No. 102 and Applicability of INT 03-18 for SSAP No. 102 – This agenda item proposed revisions to clarify the effective date of the measurement date change for plan assets and benefit obligations reflected in paragraph 89 of this issue paper. This particular aspect is intended to have an effective date subsequent to the effective date of the SSAP. The delayed effective date for the measurement date change is consistent with GAAP. This agenda item also proposed revisions to clarify that *INT 03-18—Accounting for a Change in the Additional Minimum Liability in SSAP No. 8—Pensions* (INT 03-18) is nullified, and incorporate minor revisions to clarify how existing additional minimum liability from SSAP No. 89 is addressed with the adoption of SSAP No. 102. The revisions from agenda item 2012-19 were adopted Nov. 29, 2012, and have been reflected within paragraph 4, 89, 123 and footnote numbers 5 and 7 to paragraph 87.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting

121. Statutory Accounting Principles currently exist for pensions in SSAP No. 89. The conclusions reached in SSAP No. 89 resulted from adoption *of FASB Statement No. 87: Employers' Accounting for Pensions* (FAS 87), *FASB Statement No. 88: Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits* (FAS 88), *FASB Statement No. 132, Employers' Disclosures about Pensions and Other Postretirement Benefits an amendment of FASB Statements No. 87, 88, and 106* (FAS 132) with certain modifications and *FASB Statement No. 132 (R), Employers' Disclosures about Pensions and Other Postretirement Benefits, and amendment of FASB Statements No. 87, 88, and 106* (FAS 132R) with certain modifications. SSAP No. 89 superseded previous guidance within *SSAP No. 8—Pensions* (SSAP No. 8). The guidance within SSAP No. 8 was derived from adoption of FAS 87, FAS 88 and FAS 132 with modifications.

122. The adoption of SSAP No. 89 nullified the following interpretations:

a. *INT 99-24: Accounting for Restructuring Changes*

b. *INT 01-17: Accounting for Nonqualified Retirement Plans, Nonvested Ancillary Benefits Within Retirement Plans, and Protected Benefits Such as Early Retirement Subsidies in Retirement Plans*

c. *INT 02-18: Accounting for the Intangible Asset as Described in SSAP No. 8 Paragraph 9.d.v. and 9.f.*

123. Upon the establishment of a new statutory accounting principle that adopts FAS 158 with modification and supersedes SSAP No. 89, the following interpretations will be nullified:

a. *INT 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26). This interpretation has been incorporated within paragraph 28 of this issue paper.

b. *INT 01-16: Measurement Date for SSAP No. 8 Actuarial Valuations* (INT 01-16). The 'measurement date' guidance referencing FAS 87 within this interpretation has been revised in accordance with FAS 158. The measurement date guidance included within paragraphs 89-90 of the issue paper should be followed.

c. INT 03-18: Accounting for a Change in the Additional Minimum Liability in SSAP No. 8—Pensions. This INT will be nullified as this issue paper eliminates the additional minimum liability.

d. *INT 04-03: Clarification for Calculating the Additional Minimum Pension Liability Under SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8, paragraph 16.f.* (INT 04-03). This INT will be nullified as this issue paper eliminates the need of an additional pension liability.

e. *INT 04-12: EITF 03-4: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan* (INT 04-12). This INT will be nullified as 'cash balance' pension plans have been classified as defined benefit plans for purposes of this issue paper.

124. Upon the establishment of a new statutory accounting principle that adopts FAS 158 with modification and supersedes SSAP No. 89, *INT 04-17: Impact of Medicare Modernization Act on Postretirement Benefits* will no longer provide interpretative guidance for pensions. INT 04-17 adopts with modification the FASB staff position pertaining to whether prescription drug coverage under the Medicare Prescription Drug, Improvement and Modernization Act of 2003 should impact accumulated postretirement benefit obligations. Although this interpretation is specific to postretirement benefits other than pensions, it has historically been referenced on the pension SSAP. With the adoption of SSAP No. 102, this reference will no longer occur, and INT 04-17 will be specific for *SSAP No. 92—Postretirement Benefits Other Than Pensions*.

Generally Accepted Accounting Principles

125. This issue paper adopts with modifications guidance included within FAS 158 and the resulting amended guidance within FAS 87, 88 and 132(R).

126. FAS 158 also references related EITF guidance previously adopted by statutory accounting:

a. *EITF 88-1: Determination of a Vested Benefit Obligation for a Defined Benefit Pension Plan* (EITF 88-1) – This EITF issue is whether the vested benefit obligation is the actuarial present value of the vested benefits to which the employee is entitled if the employee separates immediately (approach 1) or the actuarial present value of the vested benefits to which the employee is currently entitled but based on the employee's expected date of separation or retirement (approach 2). The consensus reached that either approach is acceptable for situations not specifically addressed by FAS 87 for facts and circumstances analogous to EITF 88-1.

b. *EITF 90-3: Accounting for Employers' Obligations for Future Contributions to a Multiemployer Pension Plan* (EITF 90-3) – This EITF issue is whether an employer must record a liability for the total future payments for prior service costs pursuant to the agreement at the date the employer enters the plan or improves benefits under the plan. The consensus reached was that, per paragraph 87 of FAS 87, as amended by FAS 158, the existence of the executed agreement does not require that a liability be reported beyond any contributions currently due and unpaid.

c. *EITF 91-7: Accounting for Pension Benefits Paid by Employers after Insurance Companies Fail to Provide Annuity Benefits* (EITF 97-1) – This EITF issue is how an employer should account for the cost of making up the deficiency in annuity payments to the retirees. The consensus reached that the employer should recognize a loss at the time the deficiency is assumed by the employer if any gain was recognized on the original settlement. The loss recognized would be the lesser of any gain recognized on the original settlement or the amount of the benefit obligation assumed by the employer. The excess obligation assumed by the employer over the loss recognized should be accounted for as a plan amendment or plan initiation in accordance with paragraphs 24-28 of FAS 87, as amended by FAS 158.

d. *EITF 96-5: Recognition of Liabilities for Contractual Termination Benefits or Changing Benefit Plan Assumptions in Anticipation of a Business Combination* (EITF 96-5) – This EITF issue is whether a liability for the contractual termination benefits and the curtailment losses under employee benefit plans that will be triggered by the consummation of the business combination should be recognized when it is probable that the business combination will be consummated or when the business combination is consummated. The consensus reached is that the liability for the contractual termination benefits and the curtailment losses under employee benefit plans that will be triggered by the consummation of the business commutation and should be recognized when the business combination is consummated.

127. The following is excerpted from *FASB Statement No. 130, Other Comprehensive Income* (FAS 130):

> 10. This Statement uses the term comprehensive income to describe the total of all components of comprehensive income, including net income. [4] This Statement uses the term other comprehensive income to refer to revenues, expenses, gains, and losses that under generally accepted accounting principles are included in comprehensive income but excluded from net income. This Statement does not require that an enterprise use the terms comprehensive income or other comprehensive income in its financial statements, even though those terms are used throughout this Statement. [5]
>
> [4] FAS130, Footnote 4--This Statement uses the term net income to describe a measure of financial performance resulting from the aggregation of revenues, expenses, gains, and losses that are not items of other comprehensive income as identified in this Statement. A variety of other terms such as net earnings or earnings may be used to describe that measure.
>
> [5] FAS130, Footnote 5--Paragraph 40 of Concepts Statement 5 states that "just as a variety of terms are used for net income in present practice, the Board anticipates that total nonowner changes in equity, comprehensive loss, and other equivalent terms will be used in future financial statements as names for comprehensive income."

Statutory Issue Paper No. 133

Accounting for Postretirement Benefits Other Than Pensions, A Replacement of SSAP No. 14

STATUS:

Initially Adopted – December 5, 2008
Adopted to Reflect SSAP No. 92 – December 18, 2012

Original SSAP and Current Authoritative Guidance: SSAP No. 92

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. In September 2006, the Financial Accounting Standards Board (FASB) issued *FASB Statement No. 158: Accounting for Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132(R)* (FAS 158). The adoption with modification of FAS 158 requires entities that sponsor one or more single-employer defined benefit plan to:

a. Recognize the overfunded or underfunded status of a defined benefit postretirement plan (other than a multiemployer plan) as an asset or liability in the statement of financial position.

b. Aggregate the statuses of all overfunded plans and recognize that amount as a nonadmitted asset in its statement of financial position. It also shall aggregate the statuses of all underfunded plans and recognize that amount as a liability in its statement of financial position.

c. Recognize as a component of unassigned funds (surplus) the gains and losses and prior service costs or credits that arise during the period but were not recognized as components of net periodic benefit cost of the period pursuant to SSAP No. 89 and SSAP No. 14.

d. Recognize corresponding adjustments in unassigned funds (surplus) when the gains and losses, prior service costs or credits and transition assets and obligations remaining from the initial application of SSAP No. 89 and SSAP No. 14 are subsequently recognized as components of net periodic benefit cost pursuant to the recognition and amortization provisions of SSAP No. 89 and SSAP No. 14.

2. Current statutory accounting guidance for postretirement plans other than pensions is provided within *SSAP No. 14—Postretirement Benefits Other Than Pensions* (SSAP No. 14). The conclusions reached within this SSAP resulted from adoption with modification *of FASB Statement No. 106—Employers' Accounting for Postretirement Benefits Other Than Pensions* (FAS 106), *FASB Statement No. 132, Employers' Disclosures about Pensions and Other Postretirement Benefits an amendment of FASB Statements No. 87, 88, and 106* (FAS 132) and *FASB Statement No. 132 (R), Employers' Disclosures about Pensions and Other Postretirement Benefits, and amendment of FASB Statements No. 87, 88, and 106* (FAS 132R).

3. The purpose of this issue paper is to update statutory accounting principles for postretirement benefits other than pensions. Consequently, this issue paper adopts FAS 158 with modifications

considered necessary for consistent statutory reporting. The result will be a new SSAP (SSAP No. 92) superseding SSAP No. 14.

SCOPE OF STATEMENT

4. This issue paper applies to all postretirement benefits expected to be provided by an employer to current and former employees (including retirees, disabled employees, and other former employees who are expected to receive postretirement benefits), their beneficiaries, and covered dependents, pursuant to the terms of an employer's undertaking to provide those benefits. Other postretirement benefits include, but are not limited to, postretirement health care; life insurance provided outside a pension plan to retirees; and other welfare benefits such as tuition assistance, day care, legal services, and housing subsidies provided after retirement. Often those benefits are in the form of a reimbursement to plan participants or direct payment to providers for the cost of specified services as the need for those services arises, but they may also include benefits payable as a lump sum, such as death benefits. Much of the guidance in this Statement focuses on postretirement health care plans. Nevertheless, this issue paper applies equally to all postretirement benefits other than pensions. A postretirement benefit plan may be part of a larger plan or arrangement that provides benefits currently to active employees as well as to retirees. In those circumstances, the promise to provide benefits to present and future retirees under the plan shall be segregated from the promise to provide benefits currently to active employees and shall be accounted for in accordance with the provisions of this Statement. Absent evidence to the contrary, it shall be presumed that an employer that has provided postretirement benefits in the past or is currently promising those benefits to employees will continue to provide those future benefits. This issue paper supersedes the guidance in *SSAP No. 14—Postretirement Plans Other Than Pensions* (SSAP No. 14), nullifies and incorporates the guidance in *Interpretation 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26) and nullifies *INT 01-16: Measurement Date for SSAP No. 8 Actuarial Valuations* (INT 01-16).

SUMMARY CONCLUSION

Defined Postretirement Plans

•

Single-Employer Defined Benefit Pension Plans

•

5. A defined benefit postretirement plan is one that defines the postretirement benefits in terms of (a) monetary amounts or (b) benefit coverage to be provided. In some cases, an employer may limit its obligation through an individual or an aggregate "cap" on the employer's cost or benefit obligation. Plans of that nature are considered to be defined benefit postretirement plans. (Hybrid postretirement plans or ‘cash-balance’ plans are considered defined benefit plans for purposes of applying this issue paper.) For defined benefit plans, reporting entities shall adopt *FAS 158: Employers’ Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132 (R)* (FAS 158) and *FASB Staff Position FAS 136(R)-1, Employers’ Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 136(R)-1) with modifications as discussed in paragraph 101.

6. A postretirement benefit is part of the compensation paid to an employee for services rendered. In a defined benefit plan, the employer promises to provide, in addition to current wages and benefits, future benefits during retirement. Generally, the amount of those benefits depends on the benefit formula (which may include factors such as the number of years of service rendered or the employee's compensation before retirement or termination), the longevity of the retiree and any beneficiaries and covered dependents, and the incidence of events requiring benefit payments (for example, illnesses affecting the amount of health care required). In most cases, services are rendered over a number of years before an employee retires and begins to receive benefits or is entitled to receive benefits as a need arises. Even though the services rendered by the employee are complete and the employee has retired, the total amount of benefits the employer has promised and the cost to the employer of the services rendered are not

precisely determinable but can be estimated using the plan's benefit formula and estimates of the effects of relevant future events.

Elements of Accounting for Postretirement Benefits

7. Any method of accounting that recognizes the cost of postretirement benefits over employee service periods (before the payment of benefits to retirees) must deal with two factors that stem from the nature of the arrangement. First, estimates or assumptions must be made about the future events that will determine the amount and timing of the benefit payments. Second, an attribution approach that assigns benefits and the cost of those benefits to individual years of service must be selected.

8. The expected postretirement benefit obligation for an employee is the actuarial present value as of a particular date of the postretirement benefits expected to be paid by the employer's plan to or for the employee, the employee's beneficiaries, and any covered dependents pursuant to the terms of the plan. Measurement of the expected postretirement benefit obligation is based on the expected amount and timing of future benefits, taking into consideration the expected future cost of providing the benefits and the extent to which those costs are shared by the employer, the employee (including consideration of contributions required during the employee's active service period and following retirement, deductibles, coinsurance provisions, and so forth), or others (such as through governmental programs).

9. The accumulated postretirement benefit obligation as of a particular date is the actuarial present value of all future benefits attributed to an employee's service rendered to that date pursuant to paragraphs 32-33 and 44-47, assuming the plan continues in effect and that all assumptions about future events are fulfilled. Prior to the date on which an employee attains full eligibility for the benefits that employee is expected to earn under the terms of the postretirement benefit plan (the full eligibility date), the accumulated postretirement benefit obligation for an employee is a portion of the expected postretirement benefit obligation. On and after the full eligibility date, the accumulated postretirement benefit obligation and the expected postretirement benefit obligation for an employee are the same. Determination of the full eligibility date is affected by plan terms that provide incremental benefits expected to be received by or on behalf of an employee for additional years of service, unless those incremental benefits are trivial. Determination of the full eligibility date is not affected by plan terms that define when benefit payments commence or by an employee's current dependency status.

10. Net periodic postretirement benefit cost comprises several components that reflect different aspects of the employer's financial arrangements. The service cost component of net periodic postretirement benefit cost is the actuarial present value of benefits attributed to services rendered by employees during the period (the portion of the expected postretirement benefit obligation attributed to service in the period). The service cost component is the same for an unfunded plan, a plan with minimal funding, and a well-funded plan. The other components of net periodic postretirement benefit cost are interest cost (interest on the accumulated postretirement benefit obligation, which is a discounted amount), actual return on plan assets[1], amortization of any prior service cost or credit included in unassigned funds (surplus), amortization of the transition obligation or transition asset, and the gain or loss component which includes, to the extent recognized, amortization of the net gain or loss included in unassigned funds (surplus) (refer to paragraph 51).

[1] To address a question on how the expected return on plan assets affects the determination of net periodic benefit cost if the actual return on plan assets for a period is a component of net periodic benefit cost, it is noted that the expected return on plan assets generally will be different from the actual return on plan assets for the year. This issue paper provides for recognition of that difference (a net gain or loss) in unassigned funds (surplus) in the period it arises. The amount recognized in unassigned funds (surplus) is also a component of net periodic benefit cost for the current period. Thus, the amount recognized in unassigned funds (surplus) and the actual return on plan assets, when aggregated, equal the expected return on plan assets. The amount recognized in unassigned funds (surplus) affects future net periodic benefit cost through subsequent amortization, if any, of the net gain or loss. (This footnote reflects guidance included in E12 of FSP FAS 158-1.)

Measurement of Cost and Obligations

Accounting for the Substantive Plan

11. An objective of this issue paper is that the accounting reflects the terms of the exchange transaction that takes place between an employer that provides postretirement benefits and the employees who render services in exchange for those benefits, as those terms are understood by both parties to the transaction. Generally, the extant written plan provides the best evidence of the terms of that exchange transaction. However, in some situations, an employer's cost-sharing policy, as evidenced by past practice or by communication of intended changes to a plan's cost-sharing provisions, or a past practice of regular increases in certain monetary benefits may indicate that the substantive plan—the plan as understood by the parties to the exchange transaction—differs from the extant written plan. The substantive plan shall be the basis for the accounting.

12. Except as provided in paragraph 13, an employer's cost-sharing policy, as evidenced by the following past practice or communication, shall constitute the cost-sharing provisions of the substantive plan if either of the following conditions exist. Otherwise, the extant written plan shall be considered to be the substantive plan.

a. The employer has a past practice of (1) maintaining a consistent level of cost sharing between the employer and its retirees through changes in deductibles, coinsurance provisions, retiree contributions, or some combination of those changes or (2) consistently increasing or reducing the employer's share of the cost of the covered benefits through changes in retired or active plan participants' contributions toward their retiree health care benefits, deductibles, coinsurance provisions, out-of-pocket limitations, and so forth, in accordance with the employer's established cost-sharing policy.

b. The employer has the ability, and has communicated to affected plan participants its intent, to institute different cost-sharing provisions at a specified time or when certain conditions exist (for example, when health care cost increases exceed a certain level).

13. An employer's past practice of maintaining a consistent level of cost sharing with its retirees or consistently increasing or reducing its share of the cost of providing the covered benefits shall not constitute provisions of the substantive plan if accompanied by identifiable offsetting changes in other benefits or compensation or if the employer incurred significant costs, such as work stoppages, to effect that cost-sharing policy. Similarly, an employer's communication of its intent to institute cost-sharing provisions that differ from the extant written plan or the past cost-sharing practice shall not constitute provisions of the substantive plan (a) if the plan participants would be unwilling to accept the change without adverse consequences to the employer's operations or (b) if other modifications of the plan, such as the level of benefit coverage, or providing offsetting changes in other benefits, such as pension benefits, would be required to gain plan participants' acceptance of the change to the cost-sharing arrangement.

14. A past practice of regular increases in postretirement benefits defined in terms of monetary amounts may indicate that the employer has a present commitment to make future improvements to the plan and that the plan will provide monetary benefits attributable to prior service that are greater than the monetary benefits defined by the extant written plan. In those situations, the substantive commitment to increase those benefits shall be the basis for the accounting. Changes in the benefits, other than benefits defined in terms of monetary amounts, covered by a postretirement health care plan or by other postretirement benefit plans shall not be anticipated.

15. Contributions expected to be received from active employees toward the cost of their postretirement benefits and from retired plan participants are treated similarly for purposes of measuring an employer's expected postretirement benefit obligation. That obligation is measured as the actuarial present value of the benefits expected to be provided under the plan, reduced by the actuarial present value of contributions expected to be received from the plan participants during their remaining active service and postretirement periods. In determining the amount of the contributions expected to be received from those participants toward the cost of their postretirement benefits, consideration is given to any related substantive plan provisions, such as an employer's past practice of consistently increasing or reducing the contribution rates as described in paragraphs 12-13. An obligation to return contributions received from employees who do not attain eligibility for postretirement benefits and, if applicable, any interest accrued on those contributions shall be recognized as a component of an employer's postretirement benefit obligation.

16. Automatic benefit changes specified by the plan that are expected to occur shall be included in measurements of the expected and accumulated postretirement benefit obligations and the service cost component of net periodic postretirement benefit cost. Also, plan amendments shall be included in the computation of the expected and accumulated postretirement benefit obligations once they have been contractually agreed to, even if some provisions take effect only in future periods. For example, if a plan amendment grants a different benefit level for employees retiring after a future date, that increased or reduced benefit level shall be included in current-period measurements for employees expected to retire after that date.

17. Measuring the net periodic postretirement benefit cost and accumulated postretirement benefit obligation based on best estimates is superior to implying, by a failure to accrue, that no cost or obligation exists prior to the payment of benefits. This issue paper requires the use of explicit assumptions, each of which individually represents the best estimate of a particular future event, to measure the expected postretirement benefit obligation. A portion of that expected postretirement benefit obligation is attributed to each period of an employee's service associated with earning the postretirement benefits, and that amount is accrued as service cost for that period.

18. The service cost component of postretirement benefit cost, any prior service cost, and the accumulated postretirement benefit obligation are measured using actuarial assumptions and present value techniques to calculate the actuarial present value of the expected future benefits attributed to periods of employee service. Each assumption used shall reflect the best estimate solely with respect to that individual assumption. All assumptions shall presume that the plan will continue in effect in the absence of evidence that it will not continue. Principal actuarial assumptions include the time value of money (discount rates); participation rates (for contributory plans); retirement age; factors affecting the amount and timing of future benefit payments, which for postretirement health care benefits consider past and present per capita claims cost by age, health care cost trend rates, Medicare reimbursement rates, and so forth; salary progression (for pay-related plans); and the probability of payment (turnover, dependency status, mortality, and so forth).

19. Assumed discount rates shall reflect the time value of money as of the measurement date in determining the present value of future cash outflows currently expected to be required to satisfy the postretirement benefit obligation. In making that assumption, employers shall look to rates of return on high-quality fixed-income investments currently available whose cash flows match the timing and amount of expected benefit payments. If settlement of the obligation with third-party insurers is possible (for example, the purchase of nonparticipating life insurance contracts to provide death benefits), the interest rates inherent in the amount at which the postretirement benefit obligation could be settled are relevant in determining the assumed discount rates. Assumed discount rates are used in measurements of the expected and accumulated postretirement benefit obligations and the service cost and interest cost components of net periodic postretirement benefit cost.

20. Pursuant to paragraph 19, an employer shall look to rates of return on high-quality fixed-income investments in determining assumed discount rates. The objective of selecting assumed discount rates using that method is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the postretirement benefits when due. Notionally, that single amount, the accumulated postretirement benefit obligation, would equal the current fair value of a portfolio of high-quality zero coupon bonds whose maturity dates and amounts would be the same as the timing and amount of the expected future benefit payments. Because cash inflows would equal cash outflows in timing and amount, there would be no reinvestment risk in the yields to maturity of the portfolio. However, in other than a zero coupon portfolio, such as a portfolio of long-term debt instruments that pay semiannual interest payments or whose maturities do not extend far enough into the future to meet expected benefit payments, the assumed discount rates (the yield to maturity) need to incorporate expected reinvestment rates available in the future. Those rates shall be extrapolated from the existing yield curve at the measurement date. The determination of the assumed discount rate is separate from the determination of the expected rate of return on plan assets whenever the actual portfolio differs from the hypothetical portfolio described above. Assumed discount rates shall be reevaluated at each measurement date. If the general level of interest rates rises or declines, the assumed discount rates shall change in a similar manner.

21. The expected long-term rate of return on plan assets shall reflect the average rate of earnings expected on the existing assets that qualify as plan assets and contributions to the plan expected to be made during the period. In estimating that rate, appropriate consideration should be given to the returns being earned on the plan assets currently invested and the rates of return expected to be available for reinvestment. If the return on plan assets is taxable to the trust or other fund under the plan, the expected long-term rate of return shall be reduced to reflect the related income taxes expected to be paid under existing law. There is no assumption of an expected long-term rate of return on plan assets for plans that are unfunded or that have no assets that qualify as plan assets pursuant to this issue paper.

22. The service cost component of net periodic postretirement benefit cost and the expected and accumulated postretirement benefit obligations shall reflect future compensation levels to the extent the postretirement benefit formula defines the benefits wholly or partially as a function of future compensation levels. For pay-related plans, assumed compensation levels shall reflect the best estimate of the actual future compensation levels of the individual employees involved, including future changes attributed to general price levels, productivity, seniority, promotion, and other factors. All assumptions shall be consistent to the extent that each reflects expectations about the same future economic conditions, such as future rates of inflation. Measuring service cost and the expected and accumulated postretirement benefit obligations based on estimated future compensation levels entails considering any indirect effects, such as benefit limitations, that would affect benefits provided by the plan.

Assumptions Unique to the Postretirement Health Care Benefits

23. Measurement of an employer's postretirement health care obligation requires the use of several assumptions unique to health care benefits. Most significantly, it includes several assumptions about factors that will affect the amount and timing of future benefit payments for postretirement health care. Those factors include consideration of historical per capita claims cost by age, health care cost trend rates (for plans that provide a benefit in kind), and medical coverage to be paid by governmental authorities and other providers of health care benefits.

24. In principle, an employer's share of the expected future postretirement health care cost for a plan participant is developed by reducing the assumed per capita claims cost at each age at which the plan participant is expected to receive benefits under the plan by (a) the effects of coverage by Medicare and other providers of health care benefits, and (b) the effects of the cost-sharing provisions of the plan (deductibles, copayment provisions, out-of-pocket limitations, caps on the limits of the employer-provided payments, and retiree contributions). The resulting amount represents the assumed net incurred

claims cost at each age at which the plan participant is expected to receive benefits under the plan. If contributions are required to be paid by active plan participants toward their postretirement health care benefits, the actuarial present value of the plan participants' future contributions reduces the actuarial present value of the aggregate assumed net incurred claims costs.

25. The assumed per capita claims cost by age is the annual per capita cost, for periods after the measurement date, of providing the postretirement health care benefits covered by the plan from the earliest age at which an individual could begin to receive benefits under the plan through the remainder of the individual's life or the covered period, if shorter. The assumed per capita claims cost shall be the best estimate of the expected future cost of the benefits covered by the plan. It may be appropriate to consider other factors in addition to age, such as sex and geographical location, in developing the assumed per capita claims cost.

26. Past and present claims data for the plan, such as a historical pattern of gross claims by age (claims curve), should be used in developing the current per capita claims cost to the extent that those data are considered to be indicative of the current cost of providing the benefits covered by the plan. Those current claims data shall be adjusted by the assumed health care cost trend rate. The resulting assumed per capita claims cost by age, together with the plan demographics, determines the amount and timing of expected future gross eligible charges.

27. In the absence of sufficiently reliable plan data about the current cost of the benefits covered by the plan, the current per capita claims cost should be based, entirely or in part, on the claims information of other employers to the extent those costs are indicative of the current cost of providing the benefits covered by the plan. For example, the current per capita claims cost may be based on the claims experience of other employers derived from information in data files developed by insurance companies, actuarial firms, or employee benefits consulting firms. The current per capita claims cost developed on those bases shall be adjusted to best reflect the terms of the employer's plan and the plan demographics. For example, the information should be adjusted, as necessary, for differing demographics, such as the age and sex of plan participants, health care utilization patterns by men and women at various ages, and the expected geographical location of retirees and their dependents, and for significant differences between the nature and types of benefits covered by the employer's plan and those encompassed by the underlying data.

28. The assumption about health care cost trend rates represents the expected annual rates of change in the cost of health care benefits currently provided by the postretirement benefit plan, due to factors other than changes in the demographics of the plan participants, for each year from the measurement date until the end of the period in which benefits are expected to be paid. Past and current health care cost trends shall be used in developing an employer's assumed health care cost trend rates, which implicitly consider estimates of health care inflation, changes in health care utilization or delivery patterns, technological advances, and changes in the health status of plan participants. Differing services, such as hospital care and dental care, may require the use of different health care cost trend rates. It is appropriate for that assumption to reflect changes in health care cost trend rates over time. For example, the health care cost trend rates may be assumed to continue at the present level for the near term, or increase for a period of time, and then grade down over time to an estimated health care cost trend rate ultimately expected to prevail.

29. Certain medical claims may be covered by governmental programs under existing law or by other providers of health care benefits. Benefit coverage by those governmental programs shall be assumed to continue as provided by the present law and by other providers pursuant to their present plans. Presently enacted changes in the law or amendments of the plans of other health care providers that take effect in future periods and that will affect the future level of their benefit coverage shall be considered in current-period measurements for benefits expected to be provided in those future periods. Future changes in laws

concerning medical costs covered by governmental programs and future changes in the plans of other providers shall not be anticipated.

30. In some cases, determining the assumed per capita claims cost by age as described in paragraphs 25-27 may not be practical because credible historical information about the gross per capita cost of covered benefits may not be available or determinable to satisfy the stated measurement approach. However, credible historical information about incurred claims costs may be available. In those cases, an alternative method of developing the assumed per capita claims cost may be used provided the method results in a measure that is the best estimate of the expected future cost of the benefits covered by the plan. For example, the assumed health care cost trend rates may be determined by adjusting the expected change in the employer's share of per capita incurred claims cost by age by a factor that reflects the effects of the plan's cost-sharing provisions. However, an approach that projects net incurred claims costs using unadjusted assumed health care cost trend rates would implicitly assume changes in the plan's cost-sharing provisions at those assumed rates and, therefore, is not acceptable unless the plan's cost-sharing provisions are indexed in that manner or the substantive plan operates in that manner.

31. Assumed discount rates include an inflationary element that reflects the expected general rate of inflation. Assumed compensation levels include consideration of future changes attributable to general price levels. Similarly, assumed health care cost trend rates include an element that reflects expected general rates of inflation for the economy overall and an element that reflects price changes of health care costs in particular. To the extent that those assumptions consider similar inflationary effects, the assumptions about those effects shall be consistent.

Attribution

32. An equal amount of the expected postretirement benefit obligation for an employee generally shall be attributed to each year of service in the attribution period (a benefit/years-of-service approach). However, some plans may have benefit formulas that attribute a disproportionate share of the expected postretirement benefit obligation to employees' early years of service. For that type of plan, the expected postretirement benefit obligation shall be attributed in accordance with the plan's benefit formula.

33. The beginning of the attribution period generally shall be the date of hire. However, if the plan's benefit formula grants credit only for service from a later date and that credited service period is not nominal in relation to employees' total years of service prior to their full eligibility dates, the expected postretirement benefit obligation shall be attributed from the beginning of that credited service period. In all cases, the end of the attribution period shall be the full eligibility date.

Recognition of Liabilities and Assets

34. An employer that sponsors one or more single-employer defined benefit postretirement plans other than pensions shall recognize in its statement of financial position the funded statuses of those plans. The status for each plan shall be measured as the difference between the fair value of plan assets and the accumulated postretirement benefit obligation (considering both vested and nonvested employees) as it is defined in this issue paper.

35. The employer shall aggregate the statuses of all overfunded plans and recognize that amount as a nonadmitted asset in its statement of financial position. It also shall aggregate the statuses of all underfunded plans and recognize that amount as a liability in its statement of financial position. It is not acceptable statutory accounting practice to offset pension or postretirement benefits other than pensions liability generated by one plan against the prepaid assets of another plan.

Recognition of Net Periodic Postretirement Benefit Cost

36. As with other forms of deferred compensation, the cost of providing postretirement benefits shall be attributed to the periods of employee service rendered in exchange for those future benefits pursuant to the terms of the plan. That cost notionally represents the change in the unfunded accumulated postretirement benefit obligation for the period, ignoring employer contributions to the plan, plan settlements, and payments made by the employer directly to retirees. However, changes in that unfunded obligation that arise from experience gains and losses and the effects of changes in assumptions may be recognized as a component of net periodic postretirement benefit cost on a delayed basis. In addition, the effects of a plan initiation or amendment generally are recognized on a delayed basis.

37. The following components shall be included in the net postretirement benefit cost recognized for a period by an employer sponsoring a defined benefit postretirement plan: a) service cost; b) interest cost; c) actual return on plan assets, if any; d) amortization of any prior service cost or credit included in unassigned funds (surplus) to the extent required by paragraphs 42-47; e) gain or loss (including the effects of changes in assumptions) to the extent recognized ; and f) amortization of any obligation or asset existing at the date of initial application of this issue paper, hereinafter referred to as the transition obligation or transition asset remaining in unassigned funds (surplus).

Service Cost

38. The service cost component recognized in a period shall be determined as the portion of the expected postretirement benefit obligation attributed to employee service during that period. The measurement of the service cost component requires identification of the substantive plan and the use of assumptions and an attribution method, which are discussed in paragraphs 11-33.

39. The prior service cost for nonvested employees not previously recognized[2] is not required to be included in net postretirement benefit cost entirely in the year this standard is adopted. Unrecognized prior service cost for nonvested employees shall be amortized as a component of the net postretirement benefit cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is adjusted each period as prior service cost is amortized (refer to paragraphs 102-105 for transition guidance related to the recognition of the prior service cost for nonvested employees through unassigned funds (surplus)).

Interest Cost

40. The interest cost component recognized in a period shall be determined as the increase in the accumulated postretirement benefit obligation to recognize the effects of the passage of time. Measuring the accumulated postretirement benefit obligation as a present value requires accrual of an interest cost at rates equal to the assumed discount rates.

Actual Return on Plan Assets

41. For a funded plan, the actual return on plan assets shall be determined based on the fair value of plan assets at the beginning and end of the period, adjusted for contributions and benefit payments. If the fund holding the plan assets is a taxable entity, the actual return on plan assets shall reflect the tax expense or benefit for the period determined in accordance with generally accepted accounting principles. Otherwise, no provision for taxes shall be included in the actual return on plan assets.

[2] The previous statutory accounting guidance in *SSAP No. 14—Postretirement Benefits Other Than Pensions* excluded nonvested employees from the service cost calculation. This exclusion has been eliminated with the issuance of this SSAP.

Prior Service Cost

42. Plan amendments (including initiation of a plan) may include provisions that attribute the increase or reduction in benefits to employee service rendered in prior periods or only to employee service to be rendered in future periods. For purposes of measuring the accumulated postretirement benefit obligation, the effect of a plan amendment on a plan participant's expected postretirement benefit obligation shall be attributed to each year of service in that plan participant's attribution period, including years of service already rendered by that plan participant, in accordance with the attribution of the expected postretirement benefit obligation to years of service as discussed in paragraphs 32-33. If a plan is initiated that grants benefits solely in exchange for employee service after the date of the plan initiation or a future date, no portion of the expected postretirement benefit obligation is attributed to prior service periods because, in that case, the credited service period for the current employees who are expected to receive benefits under the plan begins at the date of the plan initiation or the future date.

43. Plan amendments that improve benefits are granted with the expectation that the employer will realize economic benefits in future periods. Consequently, except as discussed in paragraph 46, this issue paper does not permit the cost of benefit improvements (that is, prior service cost) to be included in net periodic postretirement benefit cost entirely in the year of the amendment. Rather, paragraph 44 provides for recognition of prior service cost arising from benefit improvements during the remaining years of service to the full eligibility dates of those plan participants active at the date of the plan amendment.

44. A plan amendment that retroactively increases benefits (including benefits that are granted to fully eligible plan participants) increases the accumulated postretirement benefit obligation. The cost of the benefit improvement shall be recognized as a charge to unassigned funds (surplus) at the date of the amendment. Except as specified in the next sentence and in paragraphs 45-46, that prior service cost shall be amortized as a component of net periodic postretirement benefit cost by assigning an equal amount to each remaining year of service to the full eligibility date of each plan participant active at the date of the amendment who was not yet fully eligible for benefits at that date. If all or almost all of a plan's participants are fully eligible for benefits, the prior service cost shall be amortized based on the remaining life expectancy of those plan participants rather than on the remaining years of service to the full eligibility dates of the active plan participants. Unassigned funds (surplus) is adjusted as a result of amortizing prior service cost.

45. To reduce the complexity and detail of the computations required, consistent use of an alternative approach that more rapidly amortizes the prior service cost recognized in unassigned funds (surplus) is permitted. For example, a straight-line amortization of the cost over the average remaining years of service to full eligibility for benefits of the active plan participants is acceptable.

46. In some situations, a history of regular plan amendments and other evidence may indicate that the period during which the employer expects to realize economic benefits from an amendment that grants increased benefits is shorter than the remaining years of service to full eligibility for benefits of the active plan participants. Identification of those situations requires an assessment of the individual circumstances of the particular plan. In those circumstances, the amortization of prior service cost shall be accelerated to reflect the more rapid expiration of the employer's economic benefits and to recognize the cost in the periods benefited.

47. A plan amendment that retroactively reduces, rather than increases, benefits decreases the accumulated postretirement benefit obligation. The reduction in benefits shall be recognized as a corresponding credit (prior service credit) to unassigned funds (surplus) that shall be used first to reduce any remaining prior service cost included in unassigned funds (surplus), then to reduce any transition obligation remaining in unassigned funds (surplus). The excess, if any, shall be amortized as a component of net periodic postretirement benefit cost on the same basis as specified in paragraph 44 for prior service cost. Immediate recognition of the excess is not permitted.

Gains and Losses

48. Gains and losses are changes in the amount of either the accumulated postretirement benefit obligation or plan assets resulting from experience different from that assumed or from changes in assumptions. This issue paper generally does not distinguish between those sources of gains and losses. Gains and losses include amounts that have been realized as well as amounts that are unrealized. Because gains and losses may reflect refinements in estimates as well as real changes in economic values and because some gains in one period may be offset by losses in another or vice versa, this issue paper does not require recognition of gains and losses as components of net postretirement benefit cost in the period in which they arise, except as described in paragraph 53. Gains and losses that are not recognized immediately as a component of net periodic postretirement benefit cost shall be recognized as increases or decreases in unassigned funds (surplus) as they arise.

49. The expected return on plan assets shall be determined based on the expected long-term rate of return on plan assets and the fair value of plan assets.

50. Plan asset gains and losses are differences between the actual return on plan assets during a period and the expected return on plan assets for that period. Plan asset gains and losses include changes reflected in the fair value of plan assets.

51. As a minimum, amortization of a net gain or loss included in unassigned funds (surplus) shall be included as a component of net periodic postretirement benefit cost for a year if, as of the beginning of the year, that net gain or loss exceeds 10 percent of the greater of the accumulated postretirement benefit obligation or the fair value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active plan participants. If all or almost all of a plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of the average remaining service period.

52. Any systematic method of amortizing gains and losses included in unassigned funds (surplus) may be used in place of the minimum amortization specified in paragraph 51 provided that (a) the minimum amortization is recognized in any period in which it is greater (reduces the net gain or loss balance by more) than the amount that would be recognized under the method used, (b) the method is applied consistently, (c) the method is applied similarly to both gains and losses, and (d) the method used is disclosed. If an enterprise uses a method of consistently recognizing gains and losses immediately, any gain that does not offset a loss previously recognized in income pursuant to this paragraph shall first offset any transition obligation remaining in unassigned funds (surplus); any loss that does not offset a gain previously recognized in income pursuant to this paragraph shall first offset any transition asset remaining in unassigned funds (surplus).

53. In some situations, an employer may forgive a retrospective adjustment of the current or past years' cost-sharing provisions of the plan as they relate to benefit costs already incurred by retirees or may otherwise deviate from the provisions of the substantive plan to increase or decrease the employer's share of the benefit costs incurred in the current or past periods. The effect of a decision to temporarily deviate from the substantive plan shall be immediately recognized as a loss or gain.

54. The gain or loss component of net periodic postretirement benefit cost shall consist of (a) the difference between the actual return on plan assets and the expected return on plan assets, (b) any gain or loss immediately recognized or the amortization of the net gain or loss included in unassigned funds (surplus), and (c) any amount immediately recognized as a gain or loss pursuant to paragraph 53.

Measurement of Plan Assets

55. Plan assets are assets—usually stocks, bonds, and other investments (except certain insurance contracts as noted in paragraph 59)—that have been segregated and restricted (usually in a trust) to be used for postretirement benefits. The amount of plan assets includes amounts contributed by the employer, and by plan participants for a contributory plan, and amounts earned from investing the contributions, less benefits, income taxes, and other expenses incurred. Plan assets ordinarily cannot be withdrawn by the employer except under certain circumstances when a plan has assets in excess of obligations and the employer has taken certain steps to satisfy existing obligations. Securities of the employer held by the plan are includable in plan assets provided they are transferable.

56. Assets not segregated in a trust, or otherwise effectively restricted, so that they cannot be used by the employer for other purposes are not plan assets for purposes of this issue paper, even though the employer may intend that those assets be used to provide postretirement benefits. Those assets shall be accounted for in the same manner as other employer assets of a similar nature and with similar restrictions. Amounts accrued by the employer but not yet paid to the plan are not plan assets for purposes of this issue paper.

57. Plan investments, whether equity or debt securities, real estate, or other, shall be measured at their fair value as of the measurement date.

58. Plan assets used in plan operations (for example, buildings, equipment, furniture and fixtures, and leasehold improvements) shall be measured at cost less accumulated depreciation or amortization for all purposes.

Insurance Contracts

59. For purposes of this issue paper, an insurance contract is defined as a contract in which an insurance company unconditionally undertakes a legal obligation to provide specified benefits to specific individuals in return for a fixed consideration or premium; an insurance contract is irrevocable and involves the transfer of significant risk from the employer (or the plan) to the insurance company. Benefits covered by insurance contracts shall be excluded from the accumulated postretirement benefit obligation. Insurance contracts shall be excluded from plan assets.

60. Some insurance contracts (participating insurance contracts) provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser, the effect of which is to reduce the cost of the plan. If the participating insurance contract causes the employer to remain subject to all or most of the risks and rewards associated with the benefit obligation covered or the assets transferred to the insurance company, that contract is not an insurance contract for purposes of this issue paper, and the purchase of that contract does not constitute a settlement pursuant to paragraphs 82-87.

61. The purchase price of a participating insurance contract ordinarily is higher than the price of an equivalent contract without a participation right. The difference is the cost of the participation right. The cost of the participation right shall be recognized at the date of purchase as a nonadmitted asset. In subsequent periods, the participation right shall be nonadmitted and measured at its fair value if the contract is such that fair value is reasonably estimable. Otherwise the participation right shall be measured at its amortized cost (not in excess of its net realizable value), and the cost shall be amortized systematically over the expected dividend period under the contract.

62. To the extent that insurance contracts are purchased during the period to cover postretirement benefits attributed to service in the current period (such as life insurance benefits), the cost of those benefits shall be the cost of purchasing the coverage under the contracts, except as provided in paragraph

61 for the cost of a participation right. If all the postretirement benefits attributed to service in the current period are covered by nonparticipating insurance contracts purchased during that period, the cost of the contracts determines the service cost component of net postretirement benefit cost for that period. Benefits attributed to current service in excess of benefits provided by nonparticipating insurance contracts purchased during the current period shall be accounted for according to the provisions of this issue paper applicable to plans not involving insurance contracts.

63. Other contracts with insurance companies may not meet the definition of an insurance contract because the insurance company does not unconditionally undertake a legal obligation to provide specified benefits to specified individuals. Those contracts shall be accounted for as investments and measured at fair value. If a contract has a determinable cash surrender value or conversion value, that is presumed to be its fair value. For some contracts, the best available estimate of fair value may be contract value.

Measurement Date

64. The measurements of plan assets and benefit obligations required by this issue paper shall be as of the date of the employer's fiscal year-end statement of financial position. Even though the postretirement benefit measurements are required as of a particular date, all procedures are not required to be performed after that date. As with other financial statement items requiring estimates, much of the information can be prepared as of an earlier date and projected forward to account for subsequent events (for example, employee service).

65. Measurements of net periodic postretirement benefit cost for both interim and annual financial statements generally shall be based on the assumptions at the beginning of the year (assumptions used for the previous year-end measurements of plan assets and obligations) unless more recent measurements of both plan assets and the accumulated postretirement benefit obligation are available. For example, if a significant event occurs, such as a plan amendment, settlement, or curtailment, that ordinarily would call for remeasurement, the assumptions used for those later measurements shall be used to remeasure net periodic postretirement benefit cost from the date of the event to the year-end measurement date. Unless an employer remeasures both its plan assets and benefit obligations during the fiscal year, the funded status it reports in its interim-period statement of financial position shall be the same asset or liability recognized in the previous year-end statement of financial position adjusted for (a) subsequent accruals of net periodic postretirement benefit cost that exclude the amortization of amounts previously recognized in unassigned funds (surplus) (for example, subsequent accruals of service cost, interest cost, and return on plan assets) and (b) contributions to a funded plan, or benefit payments. Upon remeasurement, a reporting entity shall adjust its statement of financial position in a subsequent interim period to reflect the overfunded or underfunded status of the plan consistent with that measurement date.

Disclosures - Single-Employer Defined Postretirement Plans

66. An employer that sponsors one or more other defined benefit postretirement plans shall provide the following information for postretirement benefit plans other than pensions. Amounts related to the employer's results of operations shall be disclosed for each period for which a statement of income is presented. Amounts related to the employer's statement of financial position, shall be disclosed as of the date of each statement of financial position presented.

a. A reconciliation of beginning and ending balances of the benefit obligation showing separately, if applicable, the effects during the period attributable to each of the following: service cost, interest cost, contributions by plan participants, actuarial gains and losses, foreign currency exchange rate changes, benefits paid, plan amendments, business combinations, divestitures, curtailments, settlements, and special termination benefits.

b. A reconciliation of beginning and ending balances of the fair value of plan assets showing separately, if applicable, the effects during the period attributable to each of the following: actual return on plan assets, foreign currency exchange rate changes, contributions by the employer, contributions by plan participants, benefits paid, business combinations, divestitures, and settlements.

c. The funded status of the plans and the amounts recognized in the statement of financial position, showing separately the assets (nonadmitted) and liabilities recognized.

d. The objectives of the disclosures about postretirement benefit plan assets are to provide users of financial statements with an understanding of:

i. How investment allocation decisions are made, including the factors that are pertinent to an understanding of investment policies and strategies

ii. The classes of plan assets

iii. The inputs and valuation techniques used to measure the fair value of plan assets

iv. The effect of fair value measurements using significant unobservable inputs (Level 3) on changes in plan assets for the period

v. Significant concentrations of risk within plan assets.

An employer shall consider those overall objectives in providing the following information about plan assets:

(a) A narrative description of investment policies and strategies, including target allocation percentages or range of percentages considering the classes of plan assets disclosed pursuant to 66.d.v.(b) below, as of the latest statement of financial position presented (on a weighted-average basis for employers with more than one plan), and other factors that are pertinent to an understanding of those policies and strategies such as investment goals, risk management practices, permitted and prohibited investments including the use of derivatives, diversification, and the relationship between plan assets and benefit obligations. For investment funds disclosed as classes as described in 66.d.v.(b), a description of the significant investment strategies of those funds shall be provided.

(b) The fair value of each class of plan assets as of each date for which a statement of financial position is presented. Asset classes shall be based on the nature and risks of assets in an employer's plan(s). Examples of classes of assets include, but are not limited to, the following: cash and cash equivalents; equity securities, (segregated by industry type, company size, or investment objective); debt securities, issued by national, state, and local governments; corporate debt securities; asset-backed securities; structured debt; derivatives on a gross basis (segregated by type of underlying risk in the contract, for example, interest rate contracts, foreign exchange contracts, equity contracts, commodity contracts, credit contracts, and other contracts); investment funds (segregated by type of fund); and real estate. Those examples are not meant to be all inclusive. An employer should consider the overall objectives in paragraph 66.d. in determining whether additional classes of plan assets or further disaggregation of classes should be disclosed.

(c) A narrative description of the basis used to determine the overall expected long-term rate-of-return-on-assets assumption, such as the general approach used, the extent to which the overall rate-of-return-on-assets assumption was based on historical returns, the extent to which adjustments were made to those historical returns in order to reflect expectations of future returns, and how those adjustments were determined. The description should consider the classes of assets described in 66.d.v.(b) as appropriate.

(d) Information that enables users of financial statements to assess the inputs and valuation techniques used to develop fair value measurements of plan assets at the reporting date. For fair value measurements using significant unobservable inputs, an employer shall disclose the effect of the measurements on changes in plan assets for the period. To meet those objectives, the employer shall disclose the following information for each class of plan assets disclosed pursuant to 66.d.v.(b) above for each annual period:

(1) The level within the fair value hierarchy in which the fair value measurements in their entirety fall,[3] segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

(2) For fair value measurements of plan assets using significant unobservable inputs (Level 3), a reconciliation of the beginning and ending balances, separately presenting changes during the period attributable to the following:

(i) Actual return on plan assets, separately identifying the amount related to assets still held at the reporting date and the amount related to assets sold during the period

(ii) Purchases, sales, and settlements, net

(iii) Transfers in and/or out of Level 3 (for example, transfers due to changes in the observability of significant inputs)

(3) Information about the valuation technique(s) and inputs used to measure fair value and a discussion of changes in valuation techniques and inputs, if any, during the period.

e. The benefits (as of the date of the latest statement of financial position presented) expected to be paid in each of the next five fiscal years, and in the aggregate for the five

[3] In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest level input that is significant to the fair value measurement in its entirety. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, considering factors specific to the asset or liability.

fiscal years thereafter. The expected benefits should be estimated based on the same assumptions used to measure the company's benefit obligation at the end of the year and should include benefits attributable to estimated future employee service.

f. The employer's best estimate, as soon as it can reasonably be determined, of contributions expected to be paid to the plan during the next fiscal year beginning after the date of the latest statement of financial position presented. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

g. The amount of net periodic benefit cost recognized, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to settlements or curtailments.

h. Separately the net gain or loss and net prior service cost or credit recognized in unassigned funds (surplus) for the period pursuant to paragraphs 44 and 48, and reclassification adjustments of unassigned funds (surplus) for the period, as those amounts, including amortization of the net transition asset or obligation, are recognized as components of net periodic benefit cost.

i. The amounts in unassigned funds (surplus) that have not yet been recognized as components of net periodic benefit cost, showing separately the net gain or loss, net prior service cost or credit, and net transition asset or obligation.

j. On a weighted-average basis, the following assumptions used in the accounting for the plans: assumed discount rates, rates of compensation increase (for pay-related plans), and expected long-term rates of return on plan assets specifying, in a tabular format, the assumptions used to determine the benefit obligation and the assumptions used to determine net benefit cost.

k. The assumed health care cost trend rate(s) for the next year used to measure the expected cost of benefits covered by the plan (gross eligible charges), and a general description of the direction and pattern of change in the assumed trend rates thereafter, together with the ultimate trend rate(s) and when that rate is expected to be achieved.

l. The effect of a one-percentage-point increase and the effect of a one-percentage- point decrease in the assumed health care cost trend rates on (1) the aggregate of the service and interest cost components of net periodic postretirement health care benefit costs and (2) the accumulated postretirement benefit obligation for health care benefits. (For purposes of this disclosure, all other assumptions shall be held constant, and the effects shall be measured based on the substantive plan that is the basis for the accounting.)

m. If applicable, the amounts and types of securities of the employer and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer or related parties, and any significant transactions between the employer or related parties and the plan during the period.

n. If applicable, any alternative method used to amortize prior service amounts or net gains and losses pursuant to paragraphs 45 and 52.

o. If applicable, any substantive commitment, such as past practice or a history of regular benefit increases, used as the basis for accounting for the benefit obligation.

p. If applicable, the cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event.

q. An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this issue paper.

r. The amounts in unassigned funds (surplus) expected to be recognized as components of net periodic benefit cost over the fiscal year that follows the most recent annual statement of financial position presented, showing separately the net gain or loss, net prior service cost or credit, and net transition asset or obligation.

s. The amount and timing of any plan assets expected to be returned to the employer during the 12-month period, or operating cycle if longer, that follows the most recent annual statement of financial position presented.

Employers with Two or More Plans

67. Postretirement benefits offered by an employer may vary in nature and may be provided to different groups of employees. As discussed in paragraph 68, in some cases an employer may aggregate data from unfunded plans for measurement purposes in lieu of performing separate measurements for each unfunded plan (including plans whose designated assets are not appropriately segregated and restricted and thus have no plan assets as that term is used in this issue paper). Net periodic postretirement benefit cost, the accumulated postretirement benefit obligation, and plan assets shall be determined for each separately measured plan or aggregation of plans by applying the provisions of this issue paper to each such plan or aggregation of plans.

68. The data from all unfunded postretirement health care plans may be aggregated for measurement purposes if (a) those plans provide different benefits to the same group of employees or (b) those plans provide the same benefits to different groups of employees. Data from other unfunded postretirement welfare benefit plans may be aggregated for measurement purposes in similar circumstances, such as when an employer has a variety of welfare benefit plans that provide benefits to the same group of employees. However, a plan that has plan assets (as defined herein) shall not be aggregated with other plans but shall be measured separately.

Disclosures – Employers with Two or More Defined Benefit Plans

69. The disclosures required by this issue paper shall be aggregated for all of an employer's other defined benefit postretirement plans unless disaggregating in groups is considered to provide useful information or is otherwise required by this paragraph and paragraph 70 of this issue paper. Disclosures shall be as of the date of each statement of financial position presented. If aggregate disclosures are presented, an employer shall disclose:

a. The aggregate benefit obligation and aggregate fair value of plan assets for plans with benefit obligations in excess of plan assets as of the measurement date of each statement of financial position presented.

70. A U.S. reporting entity may combine disclosures about pension plans or other postretirement benefit plans outside the United States with those for U.S. plans unless the benefit obligations of the plans outside the United States are significant relative to the total benefit obligation and those plans use significantly different assumptions.

Interim Financial Disclosures – Defined Benefit Plans

71. The following shall be disclosed within interim financial statements that include a statement of income:

a. The amount of net periodic benefit cost recognized, for each period for which a statement of income is presented, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the amount of prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to a settlement or curtailment.

b. The total amount of the employer’s contributions paid, and expected to be paid, during the current fiscal year, if significantly different from amounts previously disclosed pursuant to paragraph 66.f. of this issue paper. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

Multiemployer Plans

72. For purposes of this issue paper, a multiemployer plan is a postretirement benefit plan to which two or more unrelated employers contribute, usually pursuant to one or more collective-bargaining agreements. A characteristic of multiemployer plans is that assets contributed by one participating employer may be used to provide benefits to employees of other participating employers since assets contributed by an employer are not segregated in a separate account or restricted to provide benefits only to employees of that employer.

73. An employer participating in a multiemployer plan shall recognize as net postretirement benefit cost the required contribution for the period, which shall include both cash and the fair value of noncash contributions, and shall recognize as a liability any unpaid contributions required for the period.

74. In some situations, withdrawal from a multiemployer plan may result in an employer having an obligation to the plan for a portion of the plan's unfunded accumulated postretirement benefit obligation. If it is either probable or reasonably possible that (a) an employer would withdraw from the plan under circumstances that would give rise to an obligation or (b) an employer's contribution to the fund would be increased during the remainder of the contract period to make up a shortfall in the funds necessary to maintain the negotiated level of benefit coverage (a "maintenance of benefits" clause), the employer shall apply the provisions *SSAP No. 5—Liabilities, Contingencies, and Impairments of Assets - Revised* (SSAP No. 5R).

Disclosures - Multiemployer Plans

75. An employer shall disclose the amount of contributions to multiemployer plans for each annual period for which a statement of income is presented. An employer may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pension plans and other postretirement benefit plans. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

76. Pursuant to paragraph 74, if withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions and disclosures of SSAP No. 5R, shall apply.

Multiple-Employer Plans

77. Some postretirement benefit plans to which two or more unrelated employers contribute are not multiemployer plans. Rather, those multiple-employer plans are in substance aggregations of single-employer plans, combined to allow participating employers to pool plan assets for investment purposes or to reduce the costs of plan administration. Those plans ordinarily do not involve collective-bargaining agreements. They may also have features that allow participating employers to have different benefit formulas, with the employer's contributions to the plan based on the benefit formula selected by the employer. Those plans shall be considered single-employer plans rather than multiemployer plans for purposes of this issue paper, and each employer's accounting shall be based on its respective interest in the plan.

Postretirement Benefit Plans Outside the United States

78. This issue paper includes no special provisions applicable to postretirement benefit arrangements outside the United States. Those arrangements are subject to the provisions of this issue paper. The applicability of this issue paper to those arrangements is determined by the nature of the obligation and by the terms or conditions that define the amount of benefits to be paid, not by whether or how a plan is funded, whether benefits are payable at intervals or as a single amount, or whether the benefits are required by law or custom or are provided under a plan the employer has elected to sponsor.

Business Combinations

79. When an employer is acquired in a business combination and that employer sponsors a single-employer defined benefit postretirement plan, the assignment of the purchase price to individual assets acquired and liabilities assumed shall include a liability for the accumulated postretirement benefit obligation in excess of the fair value of the plan assets or an asset for the fair value of the plan assets in excess of the accumulated postretirement benefit obligation. The accumulated postretirement benefit obligation assumed shall be measured based on the benefits attributed by the acquired entity to employee service prior to the date the business combination is consummated, adjusted to reflect (a) any changes in assumptions based on the purchaser's assessment of relevant future events (as discussed in paragraphs 11-31) and (b) the terms of the substantive plan (as discussed in paragraphs 11-16) to be provided by the purchaser to the extent they differ from the terms of the acquired entity's substantive plan.

80. If the postretirement benefit plan of the acquired entity is amended as a condition of the business combination (for example, if the change is required by the seller as part of the consummation of the acquisition), the effects of any improvements attributed to services rendered by the participants of the acquired entity's plan prior to the date of the business combination shall be accounted for as part of the accumulated postretirement benefit obligation of the acquired entity. Otherwise, if improvements to the postretirement benefit plan of the acquired entity are not a condition of the business combination, credit granted for prior service shall be recognized as a plan amendment as discussed in paragraphs 42-47. If it is expected that the plan will be terminated or curtailed, the effects of those actions shall be considered in measuring the accumulated postretirement benefit obligation. Otherwise, no future changes to the plan shall be anticipated.

81. As a result of applying the provisions of paragraphs 79-80, any previously existing net gain or loss, prior service cost or credit, or transition obligation or transition asset remaining in unassigned funds (surplus) is eliminated for the acquired employer's plan.

Accounting for Settlement of a Postretirement Benefit Obligation

82. For purposes of this issue paper, a settlement is defined as a transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a postretirement benefit

obligation, and (c) eliminates significant risks related to the obligation and the assets used to effect the settlement. Examples of transactions that constitute a settlement include making lump-sum cash payments to plan participants in exchange for their rights to receive specified postretirement benefits and purchasing long-term nonparticipating insurance contracts for the accumulated postretirement benefit obligation for some or all of the plan participants.

83. A transaction that does not meet the three criteria of paragraph 82 does not constitute a settlement for purposes of this issue paper. For example, investing in a portfolio of high-quality fixed-income securities with principal and interest payment dates similar to the estimated payment dates of benefits may avoid or minimize certain risks. However, that investment decision does not constitute a settlement because that decision can be reversed, and investing in that portfolio does not relieve the employer (or the plan) of primary responsibility for a postretirement benefit obligation nor does it eliminate significant risks related to that obligation.

84. For purposes of this issue paper, the maximum gain or loss subject to recognition in income when a postretirement benefit obligation is settled is the net gain or loss included in unassigned funds (surplus) defined in paragraphs 48-52 plus any transition asset remaining in unassigned funds (surplus). That maximum gain or loss includes any gain or loss resulting from remeasurements of plan assets and the accumulated postretirement benefit obligation at the time of settlement.

85. If the entire accumulated postretirement benefit obligation is settled and the maximum amount subject to recognition is a gain, the settlement gain shall first reduce any transition obligation remaining in unassigned funds (surplus); any excess gain shall be recognized in income. If the entire accumulated postretirement benefit obligation is settled and the maximum amount subject to recognition is a loss, the maximum settlement loss shall be recognized in income. If only part of the accumulated postretirement benefit obligation is settled, the employer shall recognize in income the excess of the pro rata portion (equal to the percentage reduction in the accumulated postretirement benefit obligation) of the maximum settlement gain over any remaining transition obligation or a pro rata portion of the maximum settlement loss.

86. If the purchase of a participating insurance contract constitutes a settlement, the maximum gain (but not the maximum loss) shall be reduced by the cost of the participation right before determining the amount to be recognized in income.

87. If the cost of all settlements in a year is less than or equal to the sum of the service cost and interest cost components of net postretirement benefit cost for the plan for the year, gain or loss recognition is permitted but not required for those settlements. However, the accounting policy adopted shall be applied consistently from year to year.

Accounting for a Plan Curtailment

88. For purposes of this issue paper, a curtailment is an event that significantly reduces the expected years of future service of active plan participants or eliminates the accrual of defined benefits for some or all of the future services of a significant number of active plan participants. Curtailments include:

a. Termination of employees' services earlier than expected, which may or may not involve closing a facility or discontinuing a component of an entity.

b. Termination or suspension of a plan so that employees do not earn additional benefits for future service. In the latter situation, future service may be counted toward eligibility for benefits accumulated based on past service.

89. The prior service cost included in unassigned funds (surplus) associated with the portion of the future years of service that had been expected to be rendered, but as a result of a curtailment are no longer expected to be rendered, is a loss. For purposes of measuring the effect of a curtailment, prior service cost includes the cost of plan amendments and any remaining transition obligation. For example, a curtailment may result from the termination of a significant number of employees who were plan participants at the date of a prior plan amendment. The loss associated with that curtailment is measured as the portion of the remaining prior service cost included in unassigned funds (surplus) related to that (and any prior) plan amendment attributable to the previously expected remaining future years of service of the employees who were terminated and the portion of the remaining transition obligation attributable to the previously expected remaining future years of service of the terminated employees who were plan participants at the date of transition.

90. The accumulated postretirement benefit obligation may be decreased (a gain) or increased (a loss) by a curtailment. That (gain) loss shall reduce any net loss (gain) included in unassigned funds (surplus).

a. To the extent that such a gain exceeds any net loss included in unassigned funds (surplus) (or the entire gain, if a net gain exists), it is a curtailment gain.

b. To the extent that such a loss exceeds any net gain included in unassigned funds (surplus) (or the entire loss, if a net loss exists), it is a curtailment loss.

For purposes of applying the provisions of this paragraph, any transition asset remaining in unassigned funds (surplus) shall be treated as a net gain and shall be combined with the unrecognized net gain or loss arising subsequent to transition to this issue paper.

91. If the sum of the effects identified in paragraphs 89-90 is a net loss, it shall be recognized in income when it is probable that a curtailment will occur and the net effect is reasonably estimable. If the sum of those effects is a net gain, it shall be recognized in income when the related employees terminate or the plan suspension or amendment is adopted.

92. A settlement and a curtailment may occur separately or together. If benefits expected to be paid in future periods are eliminated for some plan participants (for example, because a significant portion of the work force is dismissed or a plant is closed) but the plan remains in existence and continues to pay benefits, to invest assets, and to receive contributions, a curtailment has occurred but not a settlement. If an employer purchases nonparticipating insurance contracts for the accumulated postretirement benefit obligation and continues to provide defined benefits for future service, either in the same plan or in a successor plan, a settlement has occurred but not a curtailment. If a plan termination occurs (that is, the obligation is settled and the plan ceases to exist) and the plan is not replaced by a successor defined benefit plan, both a settlement and a curtailment have occurred (whether or not the employees continue to work for the employer).

Measurement of the Effects of Termination Benefits

93. An employer that offers special or contractual termination benefits to employees shall recognize a liability and a loss when the employees accept the offer and the amount can be reasonably estimated. An employer that provides contractual termination benefits shall recognize a liability and a loss when it is probable that employees will be entitled to benefits and the amount can be reasonably estimated. A situation involving special or contractual termination benefits may also result in a curtailment to be accounted for under paragraphs 88-91.

94. The liability and loss recognized for employees who accept an offer of special termination benefits to be provided by a postretirement benefit plan shall be the difference between (a) the accumulated postretirement benefit obligation for those employees, assuming that those employees

(active plan participants) not yet fully eligible for benefits would terminate at their full eligibility date and that fully eligible plan participants would retire immediately, without considering any special termination benefits and (b) the accumulated postretirement benefit obligation as measured in (a) adjusted to reflect the special termination benefits.

Defined Contribution Plans

95. For purposes of this issue paper, a defined contribution postretirement plan is a plan that provides postretirement benefits in return for services rendered, provides an individual account for each participant, and has terms that specify how contributions to the individual's account are to be determined rather than the amount of postretirement benefits the individual is to receive. Under a defined contribution plan, the postretirement benefits a plan participant will receive are limited to the amount contributed to the plan participant's account, the returns earned on investments of those contributions, and forfeitures of other plan participants' benefits that may be allocated to the plan participant's account.

96. To the extent a plan's defined contributions to an individual's account are to be made for periods in which that individual renders services, the net postretirement benefit cost for a period shall be the contribution called for in that period. If a plan calls for contributions for periods after an individual retires or terminates, the estimated cost shall be accrued during the employee's service period.

97. A postretirement benefit plan having characteristics of both a defined benefit plan and a defined contribution plan requires careful analysis. If the substance of the plan is to provide a defined benefit, as may be the case with some "target benefit" plans, the accounting requirements shall be determined in accordance with the provisions of this issue paper applicable to a defined benefit plan and the disclosure requirements within paragraph 66 shall be followed.

Disclosures - Defined Contribution Plans

98. An employer shall disclose the amount of cost recognized for defined contribution postretirement benefit plans for all periods presented separately from the amount of cost recognized for defined benefit plans. The disclosures shall include a description of the nature and effect of any significant changes during the period affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

Consolidated/Holding Company Plans

99. The employees of many reporting entities are eligible for certain postretirement benefits other than pensions provided by a parent company or holding company. A reporting entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation of the benefits earned during the period. A liability shall be established for any such amounts due but not yet paid.

100. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of the postretirement benefit expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for postretirement benefits other than pensions, then the requirements outlined in paragraphs 4-98 and paragraphs 101-110 of this issue paper shall be applied.

Relevant Literature

101. This issue paper adopts with modification paragraphs 1-7 and 16-17 as well as Appendix D – Amendments to Statement 106 and Appendix E – Amendments to Statement 132(R) of *FASB Statement*

No. 158, Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132(R) (FAS 158). Paragraphs 8-10 and D2u providing specific guidance for not-for-profit organizations is rejected. Paragraphs 11-15 regarding the effective dates for FAS 158 is rejected and paragraph 19 providing an alternative method for remeasuring plan assets and benefits obligations as of the fiscal year the measurement date provisions are applied is also rejected. The disclosure included within FAS 132 (R), as amended by FAS 158, pertaining specifically to pensions (paragraph 5.e.) has been rejected for inclusion within this standard. This issue paper adopts the revisions to paragraph 5.d. of FAS 132(R) as amended by *FASB Staff Position FAS 132(R)-1, Employers' Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 132(R)-1) and *ASU 2010-06, Fair Value Measurements and Disclosures (Topic 820): Improving Disclosures about Fair Value Measurements* (ASU 2010-06). Other revisions to disclosure requirements as amended by FSP FAS 132(R)-1 relate to nonpublic entities and are rejected. This issue paper adopts by reference *FSP FASB 158-1, Conforming Amendments to the Illustrations in FASB Statements No. 87, No. 88, and No. 106 and to the Related Staff Implementation Guides* (FSP FAS 158-1) to the extent that the examples and related implementation guides comply with the adopted GAAP guidance previously identified within this issue paper, as modified for statutory accounting. The following modifications from the adopted paragraphs of FAS 158 and FAS 106 have been incorporated within this issue paper:

a. All references to 'other comprehensive income' or 'accumulated other comprehensive income' within FAS 158 have been revised to reflect 'unassigned funds (surplus)'.

b. Any prepaid asset resulting from the excess of the fair value of plan assets over the accumulated postretirement benefit obligation shall be nonadmitted. Furthermore, any asset recognized from the cost of a 'participation right' of an annuity contract per paragraph 61 shall also be nonadmitted.

c. Provisions within paragraph 57 and 58 of FAS 106, as amended by FAS 158, permitting a calculated market-related value of plan assets has been eliminated with only the fair value measurement method for plan assets retained.

d. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132(R), as amended by FAS 158, are rejected. All reporting entities shall follow the disclosure requirements within this issue paper which have been adopted from paragraph 5 of FAS 132(R), as amended by FAS 158.

e. Clarification has been included within this standard to ensure both vested and nonvested employees are included within the recognition of net postretirement benefit cost and in the accumulated postretirement benefit obligation. Although this is consistent with GAAP, this is a change from previous statutory accounting. As nonvested employees were excluded from statutory accounting under SSAP No. 14, guidance has been included to indicate that the unrecognized prior service cost attributed to nonvested individuals is not required to be included in net postretirement benefit cost entirely in the year this standard is adopted. The unrecognized prior service cost for nonvested employees shall be amortized as a component of net postretirement benefit cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is then adjusted each period as prior service cost is amortized. (Guidance is included within the transition related to the recognition of the prior service cost for nonvested employees through unassigned funds (surplus).)

f. Conclusion of *Interpretation 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26) prohibiting the offset of defined benefit liabilities of one plan with prepaid assets of another plan has been incorporated within paragraph 35 of this issue paper.

g. Provisions within paragraph 44B of FAS 106, as amended by FAS 158, regarding the classification of underfunded liabilities as current or noncurrent liabilities and the classification of assets from overfunded plans as noncurrent assets has been rejected as inconsistent with statutory accounting.

h. Provisions within paragraph 65 of FAS 106, as amended by FAS 158, defining the fair value of investments have been rejected. Fair value definitions and measurement for investments shall be determined in accordance with statutory accounting guidance.

i. Provisions within paragraph 72 of FAS 106, as amended by FAS 158, regarding the plan assets measurement date for consolidating subsidiaries or entities utilizing the equity method under APB Opinion No. 18 has been rejected. For statutory accounting, all entities shall follow the measurement date guidance within paragraph 64 of this issue paper.

j. The disclosure requirement included within paragraph 5.e. of FAS 132(R) has been rejected for this issue paper as it specifically pertains to pensions.

k. Transition under FAS 158 is different from the requirements of this issue paper. FAS 158 requires publicly traded equity securities to initially apply the requirement to recognize the funded status of a postretirement benefit plan; the gains/losses, prior service costs/credits and transition obligations/assets that have not yet been included in net periodic benefit cost; and the disclosure requirements as of the end of the fiscal year ending after December 15, 2006. Transition guidelines for statutory accounting are defined in paragraphs 102-110.

l. FAS 158 provided two approaches for an employer to transition to a fiscal year-end measurement date. For purposes of statutory accounting, the second approach permitting reporting entities to use earlier measurements determined for year-end reporting as of the fiscal year immediately preceding the year that the measurement date provisions was rejected. For consistency purposes, all reporting entities shall follow the first approach and remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied.

Effective Date and Transition

102. Reporting entities are required to disclose the accumulated postretirement benefit obligation and the fair value of plan assets for defined postretirement benefit plans in the first reporting period after the effective date of SSAP No. 92 and in each subsequent reporting period. This disclosure shall specifically note the funded/unfunded status of the postretirement benefit plan. Reporting entities shall also specifically note the surplus impact necessary, at each reporting date, to reflect the full benefit obligation within the financial statements.

103. The SSAP that results from this issue paper is effective for quarterly and annual reporting periods beginning on or after January 1, 2013 (transition date) with early adoption permitted. Any unfunded defined benefit postretirement amounts, as determined when the accumulated benefit obligation exceeds the fair value of plan assets is a liability under SSAP No. 5R and shall be reported in the first quarter statutory financial statements after the transition date with a corresponding entry to unassigned funds (surplus). If the fair value of plan assets exceeds the accumulated benefit obligation, the asset shall be considered a nonadmitted asset. Net periodic benefit cost shall include a component for unrecognized prior service cost for nonvested employees beginning in 2013.

104. Gains or losses, prior service costs or credits (including prior service costs for nonvested participants pursuant to paragraph 39), and remaining transition assets or obligations (collectively referred to as "unrecognized items") from prior application of SSAP No. 14 that have not yet been included in net periodic benefit cost as of December 31, 2012[4] shall be recognized as components of the ending balance of unassigned funds (surplus), net of tax, as of January 1, 2013 (provided that alternative transition is not elected per paragraph 105.b.). The offset to unassigned funds (surplus) is reported separately as an "Aggregate Write-In for Other-Than-Invested Assets" or as an "Aggregate Write-In for Other Liabilities". After recognition, the full unfunded or overfunded status of the plan shall be reflected within the financial statements. Any prepaid asset resulting from an overfunded plan shall be nonadmitted.

105. Due to the potential impact to surplus as a result of immediately applying the accounting guidance in paragraph 104, reporting entities may elect one of the following two methods, on an individual plan basis, to recognize the surplus impact:

a. Reporting entities may elect to recognize the entire transition surplus impact calculated from applying paragraph 104, on an individual plan basis, as of January 1, 2013.

b. Alternatively, reporting entities may elect to recognize the entire surplus impact from applying paragraph 104, on an individual plan basis, over a period not to exceed ten (10) years. The surplus impact initially recognized as of January 1, 2013, under this transition option, and subsequently over the transition period, shall be the greater of:

i. Ten percent of the calculated surplus impact as of the transition date; and

ii. Amortization[5] of the "unrecognized items" (defined in paragraph 104) into net periodic benefit cost, including any accelerated amortization of these items from curtailments or settlements that occur after the transition date. (If the amortization cannot be determined at transition, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for this component of the calculation. If the amount recognized for transition (greater of both components in paragraph 105.b.) is subsequently determined to be less than what is amortized for the year (105.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds (surplus).)

If the surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact (collectively referred to as the "transition liability"[6]) on a systematic basis over a period not to exceed

[4] The intent of the guidance is to recognize the unrecognized amounts as of Dec. 31, 2012, annual statements, even if new actuarial projections (expected postretirement benefit obligations) are calculated as of Jan. 1, 2013. (These projections would be considered in the recognition of the 2013 net periodic benefit cost.)

[5] Unless otherwise impacted from the provisions within this Statement or in accordance with changes to the benefit plan, the amortization of the unrecognized items into net periodic benefit cost shall continue to follow the existing amortization schedules in effect on the transition date.

[6] If the surplus deferral from paragraph 105.b. is elected, the deferred liability, although comprised of the previous "unrecognized items" shall be collectively referred to as the "transition liability". Although reporting entities will need to continue to track the unrecognized items for amortization into net periodic cost (offset through unassigned funds (surplus)), reporting entities shall not allocate the recognized surplus impact from transition to these categories. As noted in paragraph 105.b.ii., the minimum amount of liability recognized under the deferral option must cover the annual amortization of the "unrecognized items" into net periodic benefit cost to prevent a surplus benefit.

nine years. The minimum amount recognized each subsequent year shall be an amount that reflects the conditions within paragraph 105.b. Additionally, reporting entities must recognize any remaining transition liability to the extent that the plan reflects a prepaid benefit cost. (For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded.) Furthermore, if circumstances result with a subsequent gain attributed to the plan that will be recognized in earnings, the entity must recognize an additional amount of the remaining transition liability to offset the recognized gain. Reporting entities are permitted to recognize the remaining transition liability, or an amount in excess of the minimum requirement, at any time after the transition date. This transition guidance is specific to the transition surplus impact from initially applying this statement on Jan. 1, 2013. Thus, this transition guidance does not apply to additional liability calculated from subsequent comparison of the fair value of plan assets to the accumulated benefit obligation, or the impact of subsequent plan amendments.

106. Reporting entities electing to apply the transition guidance in paragraph 105.b. must disclose the full transition surplus impact calculated from applying paragraph 104 in the first quarter statutory financial statements after the transition date and each reporting period thereafter. This disclosure shall include the initial "transition liability" calculated under paragraph 104 and the annual amortization amount of the "unrecognized items" into net periodic benefit cost. This disclosure shall include a schedule of the entity's anticipated recognition of the remaining surplus impact over the transition period.

107. The requirement to measure plan assets and benefit obligations as of the date of the reporting entity's financial statement year-end is effective per SSAP No. 92 for financial statement years beginning January 1, 2014. (The measurement date change will be initially reflected in the Dec. 31, 2014 financial statements.).

108. In order to transition to a fiscal year-end measurement date, the reporting entity shall remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. The reporting entity shall use those new measurements to determine the effects of the measurement date change as of the beginning of the fiscal year that the measurement date provisions are applied.

109. The reporting entity shall measure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. This would result with the following:

a. Net periodic benefit cost for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied, exclusive of any curtailment or settlement gain or loss, shall be recognized, net of tax, as a separate adjustment of the opening balance of unassigned funds (surplus). That is, the pretax amount recognized as an adjustment to unassigned funds (surplus) is the net periodic benefit cost that without a change in measurement date otherwise would have been recognized on a delayed basis during the first interim period for the fiscal year that the measurement date provisions are applied.

b. Any gain or loss arising from a curtailment or settlement between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized in earnings in that period and not as an adjustment to unassigned funds (surplus). This provision prohibits a reporting entity from early application of the measurement date provisions when the reporting entity has issued financial statements for the prior year without recognition of such a settlement or curtailment.

c. Other changes in the fair value of plan assets and the benefit obligations (for example, gains or losses) for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized, net of tax, as a separate adjustment of the opening balance of unassigned funds (surplus) for the fiscal year that the measurement date provisions are applied.

110. Earlier application of the recognition or measurement date provisions is encouraged, however, early applications must be for all of the reporting entity's benefit plans. If early application is elected, the transition date shall reflect the January 1st of the year in which SSAP No. 92 is initially applied. Retrospective application is not permitted.

111. After adoption of this issue paper, the NAIC will release a Statement of Statutory Accounting Principle (SSAP) for comment. The initial draft of the SSAP will contain the adopted Summary Conclusion of this issue paper. Users of the *Accounting Practices and Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will be effective for reporting periods beginning on or after January 1, 2013.

DISCUSSION:

112. The FASB issued FAS 158 to address concerns that existing accounting for postretirement benefit plans failed to communicate the funded status of those plans in a complete and understandable way. The prior standards did not require an employer to report in its statement of financial position the overfunded or underfunded status of a defined benefit postretirement plan. The prior standards also did not require an employer to recognize completely in earnings or other comprehensive income the financial effects of certain events affecting the plan's funded status when those events occurred.

113. Within the prior GAAP standard, an employer was allowed to recognize in its statement of financial position an asset or liability arising from the defined benefit postretirement plan, which almost always differed from the plan's overfunded or underfunded status. Those standards allowed an employer to delay recognition of economic events that affected the costs of providing postretirement benefits—changes in plan assets and benefit obligations—and recognize a liability that was sometimes significantly less than the underfunded status of the plan as well as recognize an asset in its statement of financial position, in some situations, for a plan that was underfunded. Furthermore, information regarding the overfunded or underfunded status of a plan was relegated to the notes to the financial statements. That information was in the form of a reconciliation of the overfunded or underfunded status to amounts recognized in the employer's statement of financial position. By presenting this information only in the notes it was difficult for users of financial statements to assess an employer's financial position and ability to satisfy postretirement benefits.

114. In issuing FAS 158, the FASB concluded that the reporting requirements of other standards did not provide representationally faithful and understandable financial information and might lead to the inefficient allocation of resources in capital markets. The issuance of FAS 158 is the first step of a project to comprehensively reconsider FAS 87, 88, 106, 132(R), and related pronouncements.

115. In accordance with the Statutory Accounting Principles Statement of Concepts, the conservatism concept supports the adoption of FAS 158 to ensure proper liability recognition and in accordance with the responsibility to regulate financial solvency.

116. Modifications to FAS 158 have been established primarily to clarify the components for liability consideration and to ensure consistency within reporting and recognition among reporting entities. Guidance related to not-for-profit entities, transition, and alternative methods for remeasuring plan assets

and benefit obligations for the first year application have been rejected to ensure consistent application for statutory purposes. Revisions incorporated within FAS 158 specifically attributed to FAS 87 and FAS 88 or pensions have not been addressed within this issue paper and will be considered in accordance with revisions to SSAP No. 89. Modifications from FAS 158 incorporated within this issue paper include:

a. All references to 'other comprehensive income' or 'accumulated other comprehensive income' within FAS 158 have been revised to reflect 'unassigned funds (surplus)'. This modification simply alters the guidance within FAS 158 to adhere to the reporting captions for statutory accounting.

b. Any prepaid asset resulting from the excess of the fair value of plan assets over the accumulated postretirement benefit obligation shall be nonadmitted. Furthermore, any asset recognized from the cost of a "participation right" of an annuity contract per paragraph 61 shall also be nonadmitted. These modifications are consistent with the definition of assets and nonadmitted assets set forth in *SSAP No. 4—Assets and Nonadmitted Assets* as assets recognized from overfunding postretirement plans or participating rights from annuity contracts cannot be readily converted to cash to satisfy policyholder obligations.

c. Provisions within paragraph 57 and 58 of FAS 106, as amended by FAS 158, permitting a calculated market-related value of plan assets has been eliminated with only the fair value measurement method for plan assets being retained. The calculated market-related value is a process to systematically and rationally recognize changes in fair value over a period of five years. This modification eliminates the potential for inconsistent measurement methods among reporting entities.

d. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132(R), as amended by FAS 158, are rejected. All reporting entities shall follow the disclosure requirements within this issue paper which have been adopted from paragraph 5 of FAS 132(R), as amended by FAS 158.

e. Clarification has been included within this standard to ensure both vested and nonvested employees are included within the recognition of net postretirement benefit cost and in the accumulated postretirement benefit obligation. Although this is consistent with GAAP, this is a change from previous statutory accounting. As nonvested employees were excluded from statutory accounting under SSAP No. 14, guidance has been included to indicate that the unrecognized prior service cost attributed to nonvested individuals is not required to be included in net postretirement benefit cost entirely in the year this standard is adopted. The unrecognized prior service cost for nonvested employees shall be amortized as a component of net postretirement benefit cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is then adjusted each period as prior service cost is amortized.

f. Conclusion of Interpretation 99-26*: Offsetting Pension Assets and Liabilities* (INT 99-26) prohibiting the offset of defined benefit liabilities of one plan with prepaid assets of another plan has been incorporated within paragraph 35 of this issue paper.

g. Provisions within paragraph 44B of FAS 106, as amended by FAS 158, regarding the classification of underfunded liabilities as current or noncurrent liabilities and the classification of assets from overfunded plans as noncurrent assets has been rejected as inconsistent with statutory accounting.

h. Provisions within paragraph 65 of FAS 106, as amended by FAS 158, defining the fair value of investments have been rejected. Fair value definitions and measurement for investments shall be determined in accordance with statutory accounting guidance.

i. Provisions within paragraph 72 of FAS 106, as amended by FAS 158, regarding the plan assets measurement date for consolidating subsidiaries or entities utilizing the equity method under APB Opinion No. 18 has been rejected. For statutory accounting, all entities shall follow the measurement date guidance within paragraph 64 of this issue paper.

j. The disclosure requirement included within paragraph 5.e. of FAS 132(R) has been rejected for this issue paper as it specifically pertains to pensions.

k. Transition under FAS 158 is different from the requirements of this issue paper. FAS 158 requires publicly traded equity securities to initially apply the requirement to recognize the funded status of a postretirement benefit plan, the gains/losses prior service costs/credits and transition obligations/assets that have not yet been included in net periodic benefit cost and the disclosure requirements as of the end of the fiscal year ending after December 15, 2006. Transition guidelines for statutory accounting are defined in paragraphs 102-110.

l. FAS 158 provided two approaches for an employer to transition to a fiscal year-end measurement date. For purposes of statutory accounting, the second approach permitting reporting entities to use earlier measurements determined for year-end reporting as of the fiscal year immediately preceding the year that the measurement date provisions was rejected. For consistency purposes, all reporting entities shall follow the first approach and remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied.

WORKING GROUP RESEARCH AND KEY ISSUES CONSIDERED:

117. During the Statutory Accounting Principles (E) Working Group's discussions on this issue paper, the Working Group conducted research and considered key issues to determine the appropriate course of action in response to comments received. Summaries of the key topics discussed, the research conducted, and the Working Group's conclusions has been detailed in the paragraphs below:

118. *Admittance of Prepaid Pension Costs for Overfunded Assets* – During the Spring 2008 Hearing, comments were received that prohibiting admittance of the asset established from overfunded plans would be punitive in comparison to GAAP reporting. A comment was also received proposing an offsetting admission for overfunded plan assets, whereas, an asset from overfunded plans would be admitted to the extent that a separate plan was underfunded. In considering these comments, the Working Group identified that there is a punitive tax that significantly hinders a company's ability to reclaim overfunded defined benefit assets. The 4980 Excise Tax on Reversions is a punitive, non-deductible excise tax imposed on the reversion of excess defined benefit assets to the employer. In 2008, the law imposed a confiscatory 50% tax on a simple reversion of excess assets to the employer. Because the excise tax is not deductible, ordinary income tax also applies on the entire amount of the reversion. Assuming federal and states income taxes total 40%, with the excise tax, a combined 90% tax is levied on the reversion. The Working Group identified that there are exceptions to when the tax is reduced to 20% and if the excess assets of a terminating defined benefit plan are transferred to a qualifying replacement plan, no excise tax would be due on the transferred assets.

119. In considering this research, the Working Group agreed that continued nonadmittance of overfunded plan assets was appropriate as the excise tax would significantly reduce the amount of assets that could be reclaimed by the company and utilized for policyholder claims. This conclusion is consistent with the existing statutory guidance in *SSAP No. 29—Prepaid Expenses*, in which prepaid assets were previously concluded to be nonadmitted assets as they are not readily available to satisfy policyholder obligations. The Working Group did further consider whether admittance of overfunded assets could occur if the company had the ability to transfer the overfunded assets into a qualified replacement plan. However, after identifying that plan assets can only be transferred excise tax-free to a qualified replacement plan if in connection with a qualified plan termination, it was noted that no allowance should be permitted to admit overfunded plan assets for such circumstances or to offset an underfunded plan's liability. (A transfer of overfunded plan assets from an existing plan to a new or different plan would not be excise-tax free as the original plan would not meet the requirements of a qualified plan termination.)

120. *Admission of Deferred Tax Assets from Other Post Employee Benefit (OPEB) Liabilities* – During the Spring 2008 Hearing, comments were received regarding how reporting the full liabilities for pension or OPEB plans would result in a need to consider revisions to *SSAP No. 10—Income Taxes* (SSAP No. 10) as statutory guidance currently limits the amount of deferred tax assets (DTAs) that can be admitted. In considering these comments, the Working Group identified that existing SSAP No. 10 guidance would allow companies to admit additional DTAs if they have a tax-planning strategy. (A DTA is created when pension/OPEB liabilities are accrued in the financial statements, but are only recognized/removed when contributions are made to the plan.)

121. Current statutory accounting guidance in SSAP No. 10 does not make specific allowances for deferred tax assets resulting from postretirement obligations. However, SSAP No. 10 currently allows the admittance of deferred tax assets expected to be realized within one year, if less than 10% of capital and surplus, as well as the consideration of tax-planning strategies in determining admitted DTAs. Pursuant to the guidance within SSAP No. 10, an entity is permitted to admit a DTA in response to a prudent and feasible tax-planning strategy that, if implemented, would result in realization of DTAs within one year of the balance sheet date. The entity is not required to implement the strategy within the 12-month period, but it must have the ability to implement the strategy within such time period. The entity must demonstrate that while it ordinarily might not take such actions, it would do so to prevent an operating loss credit carryforward or other similar item from expiring unused. If the tax-planning strategy criteria is met, an entity may recognize as admitted assets the related DTAs that are realizable as a result of the available tax-planning strategy in accordance with SSAP No. 10. As a result of the options currently available under SSAP No. 10, the Working Group agreed not to further consider revisions to add specific guidance to admit DTAs resulting from pension or OPEB plans. Update 2012[7]: SSAP No. 10 has been superseded by *SSAP No. 101—Income Taxes*. Guidance in SSAP No. 101 is similar to SSAP No. 10 as it also does not make specific allowances for deferred tax assets resulting from postretirement obligations. Although, the DTA admittance calculation has been revised from SSAP No. 10 – allowing greater timeframes for recovery and realization of DTAs, and a higher percentage for a realization threshold – SSAP No. 101 continues with the approach to determine admittance of DTAs in accordance with a three-component admittance calculation. Also, tax planning-strategies are still permitted to be considered in admitting DTAs.

122. *Inclusion of Nonvested Employees in Determining Pension Liability* - During the 2008 Spring Hearing, the Working Group received comments that nonvested employees in a pension or OPEB plan do not have a current claim, and should be excluded from pension and OPEB obligation determinations. In

[7] Issue papers are considered non-authoritative and provide historical discussion for the development of a SSAP. Issue papers are generally updated after initial adoption of the related of the related SSAP but not typically thereafter. SSAP No. 92 was adopted in March 2012; the Working Group directed staff to update this issue paper to reflect the final decisions in that SSAP.

considering this issue, the Working Group identified that the inclusion of nonvested participants would have a significant impact to surplus for OPEB plans. However, the exclusion of nonvested participants would result in less conservative liability requirements for statutory accounting in comparison to GAAP.

123. Application of this issue paper as a new statutory accounting principle is expected to generate a significant increase to accumulated postretirement benefit obligations as a result of the inclusion of nonvested participants. Unlike pension plans, OPEB plans do not have federal vesting requirements or federal oversight. Generally, vesting in OPEB plans occurs when an employee reaches early retirement age. Consequently, the inclusion of employees under early retirement age results in a very significant increase in the accumulated postretirement benefit obligation. (Nonvested participants were excluded from the accumulated benefit obligation in SSAP No. 14.)

124. The Working Group identified that the Financial Accounting Standards Board (FASB) concluded that accrual accounting is more representationally faithful and more relevant to financial statement users. Furthermore, actuarial assumptions used in determining liabilities already consider that some existing or future retirees will live longer than others and that some individuals will terminate employment before becoming eligible for the benefits. The reasons provided by FASB for including nonvested participants were included within FAS 106 and FAS 158:

a. Accrual accounting (and not terminal accounting or cash basis accounting) is more representationally faithful and more relevant to financial statement users. The basis of accrual accounting is that the entity recognizes financial effects of transactions and other events and circumstances that have future cash consequences when those events and transactions occur. (For pension and OPEB obligations, the service of the employee is the event that triggers future cash consequences.)

b. Uncertainty does not change the nature of a promise. Actuarial assumptions consider that some existing or future retirees will live longer than others and that some individuals will terminate employment before becoming eligible for the benefits or die before receiving any benefits. These factors are considered in measuring the probable future sacrifice that will result from the existing promise of benefits to former and current employees.

125. As a result of the above information, and the desire not to have financial statements that are less conservative than GAAP, the Working Group agreed that all employees (vested and nonvested) should be included in the accumulated postretirement plan liability for statutory accounting. Update 2012: During the development of SSAP No. 92, the Working Group heard additional comments regarding the inclusion of non-vested participants from the American Academy of Actuaries. These comments addressed the inclusion of liabilities within statutory financial statements that are not binding and that may be discontinued when insolvency is imminent, and therefore not a solvency obligation. In considering these comments, the Working Group responded that obligations for pension and other postemployment benefits should be reflected in the financial statements, even if the employer has the discretion to unilaterally freeze, reduce or withdraw those benefits. When the employer or reporting entity freezes or reduces the pension or other postemployment benefit, then it would be appropriate to adjust the obligation accordingly.

126. *Transition and Effective Date* – With the adoption of Issue Paper No. 133 in December 2008, the Statutory Accounting Principles (E) Working Group directed NAIC staff to draft SSAP No. 92 with reconsideration of the effective date to 2011 and expanding the proposed transition period from 5 years to 10 years. In discussing the draft SSAP, an effective date of Jan. 1, 2013, was ultimately adopted.

127. The transition guidance originally proposed in Issue Paper No. 133 required companies with a surplus impact of less than 1% from initial application of the standard to recognize the full surplus impact, including a liability that equaled the full unfunded projected benefit obligation. Reporting entities with a

surplus impact of greater than 1% from initial application of the standard would have the option to defer recognition of the full surplus impact for a period not to exceed five years. This guidance required a minimum of 20% to be recognized in subsequent years. In working with interested parties, actuaries, plan administrators, representatives of the AICPA, and members of the Working Group, the transition guidance was revised to include the following elements:

a. In the first reporting period after transition, reporting entities are required to disclose the obligation and the fair value of plan assets. This disclosure shall specifically note the funded/unfunded status of the plan, and the surplus impact necessary to reflect the full unfunded benefit obligation. Any unfunded defined benefit amounts are considered a liability under SSAP No. 5R and are to be reported in the first quarter financial statements with a corresponding entry to surplus. If the fair value of plan assets exceeds the obligation, the asset is nonadmitted. Items previously recognized from SSAP No. 14 or SSAP No. 89 (gains or losses, prior service costs or credits, and remaining transition items from the original application of those standards) are to be recognized in unassigned funds (surplus). After this recognition, the full unfunded or overfunded status of the plan shall be reflected in the financial statements.

b. Transition Election: Due to the potential surplus impact, reporting entities may elect one of two methods in initially applying the standards:

    i. Reporting entities may elect to recognize the entire transition surplus impact calculated, on an individual plan basis, as of January 1, 2013.

    ii. Alternatively, reporting entities may elect to recognize the entire surplus impact, on an individual plan basis, over a period not to exceed ten (10) years. The surplus impact initially recognized as of January 1, 2013, under this transition option, and subsequently over the transition period, shall be the greater of:

        (a) Ten percent of the calculated surplus impact as of the transition date; and

        (b) Amortization[8] of the "unrecognized items" into net periodic benefit cost, including any accelerated amortization of these items from curtailments or settlements that occur after the transition date. (If the amortization cannot be determined at transition, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for this component of the calculation. If the amount recognized for transition (greater of both components) is subsequently determined to be less than what is amortized for the year, the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds (surplus).);

If the surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact

[8] Unless otherwise impacted from the provisions within this Statement or in accordance with changes to the benefit plan, the amortization of the unrecognized items into net periodic benefit cost shall continue to follow the existing amortization schedules in effect on the transition date.

(collectively referred to as the "transition liability"[9]) on a systematic basis over a period not to exceed nine years. The minimum amount recognized each subsequent year shall be an amount that reflects the conditions identified above. Additionally, reporting entities must recognize any remaining transition liability to the extent that the plan reflects a prepaid benefit cost. (For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded.) Furthermore, if circumstances result with a subsequent gain attributed to the plan that will be recognized in earnings, the entity must recognize an additional amount of the remaining transition liability to offset the recognized gain. Reporting entities are permitted to recognize the remaining transition liability, or an amount in excess of the minimum requirement, at any time after the transition date. This transition guidance is specific to the transition surplus impact from initially applying SSAP No. 92 on Jan. 1, 2013. Thus, this transition guidance does not apply to additional liability calculated from subsequent comparison of the fair value of plan assets to the accumulated benefit obligation, or the impact of subsequent plan amendments.

128. Reporting entities electing to apply the transition guidance must disclose the full transition surplus impact calculated in the first quarter statutory financial statements after the transition date and each reporting period thereafter. This disclosure shall include the initial "transition liability" calculated, the annual amortization amount of the "unrecognized items" into net periodic pension cost, the amount of the unfunded accumulated benefit obligation, and the remaining unrecognized transition impact. This disclosure shall include a schedule of the entity's anticipated recognition of the remaining surplus impact over the transition period.

129. In establishing the final transition guidance, the following key elements were noted:

a. All reporting entities are equally allowed to participate in the transition election. However, reporting entities are not required to elect the surplus deferral, and at transition, or at any time subsequent to transition, reporting entities are permitted to recognize the full transition surplus impact.

b. A 10% minimum surplus recognition threshold provides the potential for a longer transition period (potentially 10 years) to mitigate the surplus impact. However, the transition guidance is not intended to allow reporting entities to improve their surplus position simply by electing to defer recognition of the surplus impact at initial application. Therefore, reporting entities electing the transition option must consider a two-component calculation to determine the minimum surplus impact that must be recognized. This calculation is utilized each time recognition is required for the transition surplus impact to determine the minimum required. Although the guidance allows up to a 10-year transition timeframe, the actual transition timeframe permitted for each reporting entity will depend on the two-component calculation.

c. The transition guidance is specific that it requires a minimum of 10% of the "surplus impact" to be recognized at each reporting period. This guidance was written to prevent an interpretation that would allow a systematic reduction of nonadmitted prepaid benefit cost over the transition timeframe before recognition of any unfunded liability. (As the prepaid benefit cost is nonadmitted, a reduction of this amount is offset by an equal change to the nonadmitted assets. As such, this action alone results in a zero surplus impact.)

[9] If the surplus deferral is elected, the deferred liability, although comprised of the previous "unrecognized items" shall be collectively referred to as the "transition liability". Although reporting entities will need to continue to track the unrecognized items for amortization into net periodic cost (offset through unassigned funds (surplus)), reporting entities shall not allocate the recognized surplus impact from transition to these categories. The minimum amount of liability recognized under the deferral option must cover the annual amortization of the "unrecognized items" into net periodic benefit cost to prevent a surplus benefit.

d. At initial adoption on Jan. 1, 2013, reporting entities are required to recognize the minimum calculated transition surplus impact. Subsequently, reporting entities are not required to recognize the minimum surplus impact until Dec. 31, 2014. This spread from the initial and first subsequent recognition prevents reporting entities from incurring a surplus impact twice in the same reporting year.

e. Reporting entities must recognize any remaining transition liability to the extent that a plan reflects a prepaid benefit cost, overfunded plan asset or when a gain is subsequently recognized in earnings. For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded. Additionally, if circumstances result with a subsequent gain attributed to the plan that will be recognized in earnings, the entity must recognize an additional amount of the remaining transition liability to offset the recognized gain.

f. Transition guidance is specific to the transition surplus impact from initially applying the adopted SSAP. The transition guidance does not apply to additional liabilities calculated from subsequent comparison of the fair value of plan assets to the projected benefit obligation or the impact of subsequent plan amendments. (Subsequent plan amendments resulting in a gain would be considered under paragraph 129.e. above.)

130. *Reporting Unfunded Liabilities in the Financial Statements* – During the 2010 Summer National Meeting, the Statutory Accounting Principles (E) Working Group exposed draft SSAPs for pensions and other postretirement benefit benefits. As a result of this exposure, comments were received from interested parties on the reporting of the unfunded benefit obligations and benefits. These comments noted that the proposed SSAPs appear to commingle the accounting for prepaid and accrued pension costs with the adjustments to surplus necessary to reflect the funded status of the plan on the balance sheet date. It was noted that only some of comingled transactions impact the income statement, and commingling the amounts on the balance sheet would create cross-check errors with the associated general expense exhibits.

131. After researching the statutory reporting options, it was concluded that there was no viable option that would result with the use of a single financial statement line that will provide regulators with the unfunded pension obligation on the face of the financial statements in a manner similar to GAAP without significant revisions to existing schedules and cross-checks. As a result of these findings, the Working Group agreed that separate reporting will be necessary in the financial statements for "unpaid expenses" and the "transition liability" for pension and postretirement obligations. This could result in situations when a plan reflects a prepaid benefit (nonadmitted prepaid benefit cost) as well as a liability for pension benefits (unfunded obligations). To address these situations and ensure a liability presentation on the balance sheet for unfunded plans, a contra-asset is utilized as an aggregate write-in for other-than-invested assets to offset the prepaid benefit, resulting in a net zero asset presentation on the balance sheet. In order to address concerns that the reporting may be unclear, disclosures are required to separately show the assets and liabilities recognized.

132. *SSAP Amendments – SSAP No. 92—Accounting for Postretirement Benefits Other Than Pensions* was adopted March 2012. Subsequent to adoption, but before finalization of this issue paper, the following agenda item was proposed to clarify guidance:

a. Agenda Item 2012-19: Clarification of Measurement Date Change in SSAP No. 92 & SSAP No. 102 and Applicability of INT 03-18 for SSAP No. 102 – This agenda item proposed revisions to clarify the effective date of the measurement date change for plan assets and benefit obligations reflected in paragraph 107 of this issue paper. This particular aspect is intended to have an effective date subsequent to the effective date of the SSAP. The delayed effective date for the measurement date change is consistent with GAAP. The revisions from agenda item 2012-19 were adopted Nov. 29, 2012.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting

133. Statutory accounting principles currently exist for postretirement benefits in SSAP No. 14. The conclusions reached in SSAP No. 14 resulted from adoption with modification *of FASB Statement No. 106, Employers' Accounting for Postretirement Benefits Other Than Pension (FAS 106), FASB Statement No. 132, Employers' Disclosures about Pensions and Other Postretirement Benefits an amendment of FASB Statements No. 87, 88, and 106* (FAS 132) with certain modifications and *FASB Statement No. 132 (R), Employers' Disclosures about Pensions and Other Postretirement Benefits, and amendment of FASB Statements No. 87, 88, and 106* (FAS 132R).

134. SSAP No. 14 was previously interpreted by the following interpretations:

a. *INT 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26)

b. *INT 01-16: Measurement Date for SSAP No. 8 Actuarial Valuations* (INT 01-16)

c. *INT 04-12: EITF 03-4: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan* (INT 04-12) Reference to this interpretation has not been incorporated within this issue paper as the issue specifically pertains to pension plans. This item has been incorporated within *Issue Paper No. 132—Accounting for Pensions, A Replacement of SSAP No. 89.*

d. *INT 04-17: Impact of Medicare Modernization Act on Postretirement Benefits (INT 04-17)*

135. Upon the establishment of a new statutory accounting principle that adopts FAS 158 with modification and supersedes SSAP No. 87, the following interpretations will be nullified:

a. *INT 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26). This interpretation has been incorporated within paragraph 35 of this issue paper.

b. *INT 01-16: Measurement Date for SSAP No. 8 Actuarial Valuations* (INT 01-16). The 'measurement date' guidance referencing FAS 87 within this interpretation has been revised in accordance with FAS 158. The measurement date guidance included within paragraphs 106-108 of the issue paper should be followed.

c. *INT 04-12: EITF 03-4: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan* (INT 04-12). This INT is specific for pension plans. The guidance within this INT has been incorporated into *SSAP No. 102—Accounting for Pensions*.

136. Upon the establishment of a new statutory accounting principle that adopts FAS 158 with modification and supersedes SSAP No. 89, the following interpretations will be modified:

a. *INT 04-17: Impact of Medicare Modernization Act on Postretirement Benefits* – This interpretation adopts with modification the FASB staff position pertaining to whether prescription drug coverage under the Medicare Prescription Drug, Improvement and Modernization Act of 2003 should impact accumulated postretirement benefit obligations. Although this interpretation primarily impacts *SSAP No. 14—Postretirement Benefits Other Than Pensions*, this interpretation has been revised to conclude that calculations shall include non-vested employees consistent with the revised SSAP.

4. The working group reached a consensus to adopt the final conclusions reached in FSP FAS 106-2 with the following modifications:

    a. Postretirement benefits should be accounted for in accordance with SSAP No. 92~~14~~.

    b. Income Taxes should be accounted for in accordance with SSAP No. 101.

    c. Calculations shall not exclude non-vested employees.~~ Partially invested employees are included only to the extent of their vested amounts.~~

    d. Any references to *FSP FAS 106-1, Accounting and Disclosure Requirements Related to the Medicare Prescription Drug, Improvement and Modernization Act of 2003* are removed as this guidance was superseded by FSP FAS 106-2.

9. In interim and annual financial statements for the first period in which an employer includes the effects of the subsidy in measuring the net postretirement benefit cost and the first period in which an employer includes the effects of the subsidy in measuring net periodic postretirement benefit cost, it shall disclose the following:

    a. The reduction in the net postretirement benefit cost for the subsidy related to benefits attributed to former employees.

    b. The effect of the subsidy on the measurement of net periodic postretirement benefit cost for the current period. That effect includes (1) any amortization of the actuarial experience gain in (a) as a component of the net amortization called for by paragraph 49 of SSAP No. 92, (2) the reduction in current period service cost due to the subsidy, and (3) the resulting reduction in interest cost on the net postretirement benefit cost as a result of the subsidy.

    c. Any other disclosures required by paragraph 64.q. of SSAP No. 92 which requires disclosure of "An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this statement."

10. For purposes of the disclosures required by paragraphs 64.a. of SSAP No. 92, an employer shall disclose gross benefit payments (paid and expected, respectively), including prescription drug benefits, and separately the gross amount of the subsidy receipts (received and expected, respectively).

Generally Accepted Accounting Principles

137. This issue paper adopts with modifications guidance included within FAS 158 and the resulting amended guidance within FAS 87, 88 and 132(R).

138. FAS 158 also references related EITF guidance previously adopted by statutory accounting:

- *EITF 93-3: Plan Assets under FASB Statement No. 106 (EITF 93-3) – This EITF issue is whether trusts established to pay postretirement benefits must be determined to be bankruptcy-proof in order for the assets in the trust to qualify as plan assets under FAS 106. The consensus reached clarified that it is not necessary to determine that a trust is bankruptcy-proof for the assets of the trust to qualify as plan assets under FAS 106.*

> *However, if the trust explicitly provides that such assets are available to the general creditors of the employer in the event of the employer's bankruptcy, the assets held by that trust would not qualify as plan assets under FAS 106.*

139. The following is excerpted from *FASB Statement No. 130, Other Comprehensive Income* (FAS 130):

> 10. This Statement uses the term comprehensive income to describe the total of all components of comprehensive income, including net income.[4] This Statement uses the term other comprehensive income to refer to revenues, expenses, gains, and losses that under generally accepted accounting principles are included in comprehensive income but excluded from net income. This Statement does not require that an enterprise use the terms comprehensive income or other comprehensive income in its financial statements, even though those terms are used throughout this Statement.[5]
>
> [4]FAS130, Footnote 4 – This Statement uses the term net income to describe a measure of financial performance resulting from the aggregation of revenues, expenses, gains, and losses that are not items of other comprehensive income as identified in this Statement. A variety of other terms such as net earnings or earnings may be used to describe that measure.
>
> [5]FAS130, Footnote 5 – Paragraph 40 of Concepts Statement 5 states that "just as a variety of terms are used for net income in present practice, the Board anticipates that total nonowner changes in equity, comprehensive loss, and other equivalent terms will be used in future financial statements as names for comprehensive income."

140. See Issue Paper No. 14 for additional GAAP references

Statutory Issue Paper No. 134

Servicing Assets/Liabilities, An Amendment of SSAP No. 91

STATUS
Finalized March 29, 2008

Current Authoritative Guidance for Servicing Assets/Liabilities: SSAP No. 103
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 91R

Type of Issue:

Common Area

SUMMARY OF ISSUE:

1. In March 2006, the Financial Accounting Standards Board (FASB) issued *FASB Statement No. 156: Accounting for Servicing of Financial Assets, an amendment of FASB Statement No. 140* (FAS 156) to amend several aspects of accounting for servicing assets. The purpose of this issue paper is to incorporate and/or clarify specific amendments from FAS 156 into statutory accounting principles:

a. Require subsequent fair value measurement of servicing assets and servicing liabilities;

b. Clarify separate recognition of servicing assets and servicing liabilities resulting from a transfer of financial assets to a qualifying SPE in guaranteed mortgage securitizations in which the transferor retains all of the resulting securities;

c. Include separately recognized servicing assets and servicing liabilities in the calculation for determining proceeds from the sale of assets; and

d. Incorporate revised terminology, amending the term 'retained interests' to 'interests that continue to be held by a transferor'.

2. Current statutory accounting guidance for servicing assets and servicing liabilities is located within *SSAP No. 91—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 91). The conclusions reached within SSAP No. 91 resulted from adoption with modification *of FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (FAS 140).*

3. The purpose of this issue paper is to update statutory accounting principles for servicing assets and servicing liabilities. The result will be the incorporation of substantive and nonsubstantive revisions to SSAP No. 91. In accordance with the *NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process* (Maintenance Agenda Policy Statement), substantive revisions require the issuance of a new SSAP. However, as only some aspects of the revisions from FAS 156 are considered substantive, it is requested that the Statutory Accounting Principles Working Group approve the exposure of the adopted FAS 156 revisions within the existing SSAP No. 91, after the adoption of this issue paper.

SUMMARY CONCLUSION

4. This issue paper adopts revisions to FAS 156 indicating that all servicing assets and servicing liabilities should initially be measured at fair value. Consistent with these revisions, this issue paper

adopts guidance from FAS 156 requiring the inclusion of separately recognized servicing assets and servicing liabilities in the calculation of proceeds from the sale of assets and modifies the illustrations included within SSAP No. 91 accordingly. This issue paper rejects the optionality provided within FAS 156 for subsequent measurement of servicing assets and servicing liabilities, but revises the SSAP No. 91 accounting measurement method for such items to a fair value measurement method. This issue paper confirms adoption of guidance previously adopted from FAS 140 regarding servicing assets and servicing liabilities established from the transfer of financial assets to a qualifying SPE in a guaranteed mortgage securitization in which the transferor retains all of the resulting securities. This issue paper also adopts nonsubstantive revisions from FAS 156 in which the term 'retained interests' is replaced with 'interests that continue to be held by the transferor', with amendments to the definition to exclude servicing assets and servicing liabilities.

5. Substantive revisions to SSAP No. 91 from this issue paper are illustrated below:

6. Upon completion of any transfer of financial assets, the transferor shall:

a. Initially recognize and measure at fair value, if practicable, servicing assets and servicing liabilities assumed under a separate contractual obligation to service financial assets (see paragraph 49);

~~a.~~b. Allocate the previous carrying amount between the assets sold, if any, and the ~~retained interests~~interests that continue to be held by a transferor, if any, based on their relative fair values at the date of transfer (see paragraphs 47 and 48).

~~b.~~c. Continue to carry in its balance sheet any ~~retained~~ interest it continues to hold in the transferred assets, including, if applicable, beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization, and retained undivided interests (see paragraphs 7 c., 47 and 48); and

Recognition and Measurement of Servicing Assets and Liabilities

11. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained, or separate purchase or assumption of the servicing. Servicing rights become a distinct asset or liability of the reporting entity pursuant to:

a. A transfer of the servicer's financial assets that meets the requirements for sale accounting;

b. A transfer of financial assets to a qualifying SPE in a guaranteed mortgage obligation in which the transferor retains all of the resulting securities; or

c. An acquisition or assumption of a servicing obligation that does not relate to financial assets of the servicer.

A servicer that transfers or securitizes financial assets in a transaction that does not meet the requirements for sale accounting and is accounted for as a secured borrowing with the underlying assets remaining on the transferor's balance sheet shall not be recognized as a servicing asset or servicing liability.

12. *(New paragraph – renumbering accordingly)* If distinct servicing rights ~~to transferred assets~~ exist in accordance with the above guidelines,~~and are retained by the reporting entity,~~ the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations in other income. ~~If the servicing asset or liability was purchased or assumed rather than undertaken in a sale or~~

~~securitization of the financial assets being serviced,~~ Servicing assets and servicing liabilities ~~it~~ shall be measured initially at ~~its~~ fair value, presumptively the price paid. ~~The s~~Servicing assets or liabilities~~y~~ shall be measured subsequently at fair value at each reporting date with fluctuations in fair value reported as unrealized gains or losses. Declines in fair value which are determined to be other than temporary shall be recorded as realized losses. ~~shall be amortized into income in proportion to, and over the period of estimated servicing income (if an asset) or estimated servicing loss (if a liability). A servicing asset or liability shall be assessed for impairment or increased obligation based on its fair value.~~

Assets Obtained and Liabilities Incurred as Proceeds

46. The proceeds from a sale of financial assets consist of the cash and any other assets obtained, including separately recognized servicing assets, in the transfer less any liabilities incurred, including separately recognized servicing liabilities. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value.

Disclosures

88. A reporting entity shall disclose the following:

~~1.~~j. For all servicing assets and servicing liabilities:

~~1.~~i. ~~The amounts of servicing assets nonadmitted or liabilities recognized and amortized during the period; and~~A description of the valuation techniques or other models, including significant assumptions within models, used to estimate the fair value of servicing assets and servicing liabilities.

~~2.~~ii. ~~The fair value of recognized servicing assets and liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value.~~Changes in fair value resulting from changes in valuation inputs or assumptions used in models and descriptions of other changes in fair value.

6. SSAP No. 91, Exhibit B provides illustrations to assist with the accounting of items subject to this standard. Pursuant to the substantive revisions noted above to paragraph 46 of SSAP No. 91, the proceeds from the sale of financial assets consist of the cash and any other assets obtained, including separately recognized servicing assets. Exhibit B illustrations three, four and five have been modified to convey these revisions:

Illustration—Sale of Receivables with Servicing ~~Retained~~Obtained

3. Company C originates $1,000 of loans that yield 10 percent interest income for their estimated lives of 9 years. Company C sells the $1,000 principal plus the right to receive interest income of 8 percent to another entity for $1,000. Company C will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the right to receive half of the interest income not sold. The remaining half of the interest income not sold is considered an interest-only strip receivable. At the date of the transfer, the fair value of the loans~~,~~ ~~including servicing,~~ is $1,100. The fair values of the servicing asset and the interest-only strip receivable are~~is~~ $40 and $60, respectively.

4. Company D originates $1,000 of prepayable loans that yield 10 percent interest income for their 9-year expected lives. Company D sells nine-tenths of the principal plus interest of 8 percent to another entity. Company D will continue to service the loans, and the contract stipulates that its compensation for performing the servicing is the 2 percent of the interest income not sold. Company D obtains an option to purchase from the transferee loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse

obligation to repurchase delinquent loans. At the date of transfer, the fair value of the loans is $1,100.

5. Company E sells loans with a carrying amount of $1,000 to another entity for cash proceeds of $1,050 plus a call option to purchase loans similar to the loans sold (which are readily obtainable in the marketplace) and incurs a limited recourse obligation to repurchase any delinquent loans. Company E undertakes an obligation to service the transferred assets for the other entity. In Case 1, Company E finds it impracticable to estimate the fair value of the servicing contract, although it is confident that servicing revenues will be more than adequate compensation for performing the servicing. In Case 2, Company E finds it impracticable to estimate the fair value of the recourse obligation.

Fair Values	Case 1	Case 2
Cash proceeds	$1,050	$1,050
Servicing asset	XX*	40
Call option	70	70
Recourse obligation	60	XX*

Gain on sale		60		0
To record transfer				

* Assets shall be recorded at zero if an estimate of the fair value of the assets is not practicable.
† The amount recorded as a liability in this example equals the sum of the known assets less the fair value of the known liabilities, that is, the amount that results in no gain or loss.

Effective Date and Transition

7. Upon adoption of this issue paper, the NAIC will release an updated SSAP No. 91 for comment. The SSAP will contain the adopted nonsubstantive changes to SSAP No. 91, shown in this issue paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC. It is expected that the SSAP will contain an effective date of years beginning on or after January 1, 2009.

DISCUSSION

Initial Recognition and Measurement of Fair Value

8. Revisions to FAS 156 amended guidance regarding how servicing assets and servicing liabilities should be initially recognized and measured. FAS 140 requirements for initial measurement of servicing assets and servicing liabilities varied depending on whether they were purchased separately, assumed, or obtained in a sale or securitization transaction, as well as whether they were assets or liabilities. The revisions in FAS 156 clarified that servicing assets and servicing liabilities should be accounted for similarly, regardless of how they are obtained and that fair value is the most relevant measurement attribute.

9. For statutory accounting, guidance within SSAP No. 91 had previously adopted guidance within paragraph 13 of FAS 140 requiring initial fair value measurement for purchased and assumed servicing assets and servicing liabilities. Similar to GAAP rationale for FAS 156, it is appropriate for statutory accounting that all servicing assets and servicing liabilities be accounted for similarly. As such, this issue paper adopts the FAS 156 guidance that all servicing assets and servicing liabilities should be initially measured at fair value, regardless if such items are purchased, assumed, or undertaken in a sale or securitization.

10. Pursuant to the FAS 156 revisions to initially measure all servicing assets and liabilities at fair value, revisions were incorporated in FAS 156 to include separately recognized servicing assets as part of the proceeds of a sale in order to simplify the application of the accounting guidance and provide

consistency between servicing assets and servicing liabilities obtained in a transfer of financial assets that meet the requirements for sale accounting. These modifications have also been adopted for statutory accounting, with adjustments to statutory accounting illustrations accordingly.

11. Prior to the issuance of FAS 156, separately recognized servicing assets were included as part of retained interests. This issue paper incorporates nonsubstantive revisions to SSAP No. 91, similar to those included within FAS 156, to restate the term 'retained interests' with 'interests that continue to be held by a transferor' and to clarify within paragraph 47 that servicing assets are not considered within the context of this term. (Nonsubstantive revisions to SSAP No. 91 are included as a supplement to this issue paper.)

Subsequent Fair Value Measurement of Servicing Assets and Servicing Liabilities

12. Revisions to FAS 156 permit an entity to choose either an amortization method or fair value measurement method for the subsequent measurement of servicing assets and servicing liabilities. For statutory accounting, it is perceived that this subsequent measurement option hinders the comparability and consistency of financial statements. Although extensive disclosure requirements have been established within FAS 156 to counter the non-comparability created on the face of the financials, such disclosures cannot be considered a substitute for consistent and comparable measurement of similar items for statutory accounting.

13. Existing guidance within SSAP No. 91 requires amortization of servicing assets and servicing liabilities, however, based on the rationale provided below, SSAP No. 91 will be revised to require subsequent fair value measurement of servicing assets and servicing liabilities at each reporting date:

a. SSAP No. 91 already requires an existing fair value consideration each reporting date for a servicing assets/liabilities impairment assessment;

b. SSAP No. 91 already requires disclosure of fair value, if practicable, of recognized servicing assets/liabilities and the method and significant assumptions used to estimate that fair value.

c. SSAP No. 91 nonadmits servicing assets, so positive fluctuations in fair value would not impact earnings;

d. Fair value is the most appropriate measurement method for servicing assets/liabilities as it illustrates the value of the asset or obligation at the financial statement reporting date;

e. There are no identified insurance industry specific characteristics of servicing assets/liabilities that would justify continued reporting of servicing assets/liabilities in a manner that does not represent the fair value of the asset or obligation at the financial statement reporting date.

f. The FASB rationale permitting entities the option to continue using amortized cost, versus a fair value measurement, was based on some entities using non-derivative financial instruments to offset risks inherent in the servicing assets/liabilities (thus, avoiding volatility from the use of derivatives), and some entities considering servicing assets/liabilities to be contracts for services and not financial instruments. For these situations, subsequent measurement of servicing assets/liabilities at fair value would result in a new source of income statement volatility, which is viewed as not representationally faithful of their performance. Although this rationale was considered, for statutory accounting the recognition and measurement of assets and liabilities is a more relevant factor in assessing an insurer's financial position. By utilizing fair value, the insurer's financial position is more appropriately stated.

14. Pursuant to the revisions to require subsequent fair value measurement of servicing assets and servicing liabilities, corresponding disclosure requirements will adequately document the valuation methods and models and the fair value impact caused by input and assumption changes within such models and methods. These revisions will not alter the existing guidance within paragraph 49 of SSAP No. 91 regarding instances in which it is not practicable to estimate fair value:

> **If It Is Not Practicable to Estimate Fair Values**
>
> 49. If it is not practicable to estimate the fair values of assets, the transferor shall record those assets at an allocated cost basis of zero. If it is not practicable to estimate the fair values of liabilities, the transferor shall recognize no gain on the transaction and shall record those liabilities at the greater of:
>
> a. The excess, if any, of (i) the fair values of assets obtained less the fair values of other liabilities incurred, over (ii) the sum of the carrying values of the assets transferred;
>
> b. The amount that would be recognized in accordance with SSAP No. 5.

Servicing Assets and Servicing Liabilities from Securitizations

15. This issue paper confirms adoption of guidance previously included within FAS 140, and revised within FAS 156, that requires separate recognition of servicing assets and servicing liabilities resulting from a transfer of financial assets to a qualifying SPE in a guaranteed mortgage securitization in which the transferor retains all of the resulting securities. This guidance was previously adopted from FAS 140 and noted in paragraph 11 of SSAP No. 91: (bolded for emphasis)

> 11. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale **or securitization of the assets with servicing retained**, or separate purchase or assumption of the servicing. ..

16. The guidance regarding servicing assets and servicing liabilities from such securitizations within FAS 140, revised in FAS 156, included caveats regarding when servicing assets and servicing liabilities could be recognized in accordance with such securitizations. As these limitations were determined through the classification status of the resulting securities (held-for-maturity, available-for-sale, and trading) prescribed by *FAS 115, Accounting for Certain Investments in Debt and Equity Securities* (FAS 115), which was previously rejected for statutory accounting, the caveats for the guaranteed mortgage securitizations were not originally incorporated into SSAP No. 91 for statutory accounting. To clarify the appropriate recognition of servicing assets and servicing liabilities for such securitizations, revisions have been incorporated to mirror the language including within FAS 156, with the exclusion of any limitation imposed by the debt security classification of the resulting securities. (Per FAS 156, securities resulting from such securitizations that are classified as available-for-sale or trading pursuant to FAS 115 should be recognized as a servicing asset or servicing liability. Entities that classify such securities as held-to-maturity are given an option to recognize them as servicing assets or servicing liabilities or report the servicing assets or servicing liabilities with the asset being serviced. FAS 156 was revised from FAS 140 in which entities with held-to-maturity securities were prohibited from recognizing these retained securities as servicing assets or servicing liabilities.)

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

17. Statutory accounting for the transfers, servicing of financial assets and extinguishments of liabilities is provided in SSAP No. 91. The accounting guidance in SSAP No. 91 was established from the

guidance provided in *SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 18), *SSAP No. 33—Securitization* (SSAP No. 33) and *SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements* (SSAP No. 45), and was expanded to include issues addressed in *FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140).

18. SSAP No. 91 adopted FAS 140 with the following modifications:

a. Servicing rights assets are nonadmitted;

b. Sales treatment is not permitted for transactions including recourse provisions or removal-of-accounts provisions on the transferred assets whereas GAAP would permit the recognition of the transfer as a sale under some circumstances;

c. As statutory financial statements are prepared on a legal entity basis, special-purpose entities shall not be consolidated in a reporting entity's statutory financial statements;

d. Leases shall be accounted for in accordance with *SSAP No. 22—Leases*;

e. Reporting entities required to maintain an IMR shall account for realized and unrealized capital gains and losses in accordance with SSAP No. 7; and

f. The concepts of revolving-period securitizations, banker's acceptances and risk participations in banker's acceptances are not applicable for statutory accounting purposes.

g. This statement does not adopt the accounting for collateral as outlined in FAS 140.

19. With the adoption of this issue paper, SSAP No. 91 will be substantively revised (referred as SSAP No. 91R – Jan. 2009) to reflect the adoption of FAS 156 with the following modifications:

a. This statement adopts provisions within FAS 156 requiring an entity to recognize a servicing asset or servicing liability each time it undertakes an obligation to service a financial asset by entering into a servicing contract in any of the following situations:

i. A transfer of the servicer's financial assets that meets the requirements for sale accounting.

ii. A transfer of the servicer's financial assets to a qualifying special-purpose entity in a guaranteed mortgage securitization in which the transferor retains all of the resulting securities. (This rejects FAS 156 language that considers the classification of such securities (held-to-maturity, available-for-sale or trading) prescribed in accordance with FAS 115.)

iii. An acquisition or assumption of an obligation to service a financial asset that does not relate to financial assets of the servicer. (This rejects FAS 156 language pertaining to consolidated affiliates.)

b. This statement adopts provisions within FAS 156 requiring all separately recognized servicing assets and servicing liabilities to be initially measured at fair value, if practicable.

c. This statement rejects provisions provided within FAS 156 allowing entities to choose either an amortization method or a fair value measurement method for subsequent measurement of separately recognized servicing assets and servicing liabilities. In accordance with this issue paper, subsequent measurement of such items should be completed in accordance with a fair value measurement method. If fair value is not practicable to determine, the guidance in paragraph 49 of SSAP No. 91 should be followed.

d. This statement rejects FAS 156 provisions permitting a one-time reclassification of available-for-sale securities to trading securities by entities with recognized servicing rights, without calling into question the treatment of other available-for-sale securities under FAS 115, provided that the available-for-sale securities are identified in some manner as offsetting the entity's exposure to changes in fair value of servicing assets or servicing liabilities that a servicer elects to subsequently measure at fair value. (FAS 115 was rejected for statutory accounting, thus these classifications are not relevant to statutory accounting and do not impact the measurement of securities.)

e. This statement adopts provisions within FAS 156 requiring separate presentation of servicing assets and servicing liabilities subsequently measured at fair value in the statement of financial position and additional disclosures for all separately recognized servicing assets and servicing liabilities.

Generally Accepted Accounting Principles

20. This issue paper adopts with modifications guidance included within FAS 156.

21. FAS 156 nullifies *EITF Issue No. 88-11, Allocation of Recorded Investment When a Loan or Part of a Loan is Sold (EITF No. 88-11)*. This issue was adopted within *SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 18) and SSAP No. 91. EITF No. 88-11 addressed how a recorded investment in a loan should be allocated between the portion of the loan sold and the portion retained. Per the consensus issued within this statement, such allocation should be based on the relative fair value on the date the loan was acquired, adjusted for payments and other activity from the date of sale. Similar to GAAP's nullification of this consensus, this item is no longer relevant for statutory accounting.

22. With the exception of the nullification of EITF 88-11, there is no other impact to the GAAP guidance referenced within paragraphs 94 and 95 of SSAP No. 91:

> 94. This statement adopts AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as used In Certain Audit Guides and a Statement of Position. This statement adopts FASB Emerging Issues Task Force (EITF) No. 87-34, Sale of Mortgage Servicing Rights with a Subservicing Agreement, ~~FASB EITF No. 88-11, Allocation of Recorded Investment When a Loan as Part of a Loan is Sold,~~ FASB EITF No. 88-18, Sales of Future Revenues, FASB EITF No. 88-22, Securitization of Credit Card and Other Receivable Portfolios, FASB EITF No. 90-21, Balance Sheet Treatment of a Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB EITF No. 95-5, Determination of What Risks and Rewards, If Any, Can Be Retained and Whether Any Unresolved Contingencies May Exist in a Sale of Mortgage Loan Servicing Rights and FASB EITF No. 96-19, Debtor's Accounting for a Modification or Exchange of Debt Instruments.
>
> 95. This statement rejects FASB EITF No. 84-5, Sale of Marketable Securities with a Put Option, and FASB EITF No. 92-2, Measuring Loss Accruals by Transferors of Receivables with Recourse and FASB Technical Bulletin 01-1: Effective Date for Certain Financial Institutions of Certain Provisions of Statement 140 related to Isolation of Transferred Financial Assets.

STATE REGULATIONS:

- No additional guidance obtained from state statutes or regulations.

Issue Paper No. 134—Supplement of Nonsubstantive Revisions

1. As noted within paragraph 4, this issue paper adopts nonsubstantive revisions to SSAP No. 91R regarding the definition and terminology for 'interests that continue to be held by the transferor'. The following paragraphs illustrate the nonsubstantive revisions that will be made in accordance with this change in terminology or additional nonsubstantive revisions incorporated within SSAP No. 91R:

> 7. Upon completion of a transfer of financial assets that satisfies the conditions to be accounted for as a sale (see paragraph 5), the transferor (seller) shall:
>
> ### ~~Retained Interests~~Interests That Continue to be Held by a Transferor
>
> 47. Other interests in transferred assets, those that are not part of the proceeds of the transfer, are ~~retained interests~~interests that continue to be held by a transferor over which the transferor has not relinquished control. They shall be measured at the date of the transfer by allocating the previous carrying amount between the assets sold, if any, and the ~~retained interests~~interests that continue to be held by a transferor, based on their relative fair values. That procedure shall be applied to all transfers in which interests are retained, even those that do not qualify as sales. Examples of ~~retained interests~~interests that continue to be held by a transferor include securities backed by the transferred assets, undivided interests, ~~servicing assets,~~ and cash reserve accounts and residual interests in securitization trusts. If a transferor cannot determine whether an asset is a retained interest or proceeds from the sale, the asset shall be treated as proceeds from the sale and accounted for in accordance with paragraph 46.
>
> 48. If the ~~retained interests~~interests that continue to be held by a transferor are subordinated to more senior interests held by others, that subordination may concentrate into the ~~retained interests~~interests that continue to be held by a transferor most of the risks inherent in the transferred assets and shall be taken into consideration in estimating the fair value of the ~~retained interests~~interests that continue to be held by a transferor. For example, if the amount of the gain recognized, after allocation, on a securitization with a subordinated retained interest is greater than the gain would have been had the entire asset been sold, the transferor needs to be able to identify why that can occur. Otherwise, it is likely that the impact of the retained interest being subordinate to a senior interest has not been adequately considered in the determination of the fair value of the subordinated retained interest.
>
> ### Disclosures
>
> 88. A reporting entity shall disclose the following:
>
> d. If the entity has securitized financial assets during any period presented and accounts for that transfer as a sale, for each major asset type (for example, mortgage loans):
>
> i. Its accounting policies for initially measuring the ~~retained interests~~interests that continue to be held by a transferor, if any, including the methodology (whether quoted market price, prices based on sales of similar assets and liabilities, or prices based on valuation techniques) used in determining their fair value (Glossary to the Statements of Statutory Accounting Principles); and
>
> ii. The characteristics of securitizations (a description of the transferor's continuing involvement with the transferred assets, including, but not limited to, servicing, recourse, and restrictions on ~~retained interests~~interests that continue to be held by a transferor) and the gain or loss from sale of financial assets in securitizations;
>
> iii. The key assumptions used in measuring the fair value of ~~retained interests~~interests that continue to be held by a transferor at the time of

securitization (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, if applicable); and

iv. Cash flows between the securitization SPE and the transferor (including proceeds from new securitizations, purchases of delinquent or foreclosed loans, servicing fees, and cash flows received on interests retained.)

g. If the entity has ~~retained interests~~interests that continue to be held by a transferor in securitized financial assets at the date of the latest statement of financial position presented, for each major asset type (for example, mortgage loans):

i. Its accounting policies for subsequently measuring those ~~retained interests~~interests that continue to be held by a transferor, including the methodology (whether quoted market price, prices based on sales of similar assets and liabilities, or prices based on valuation techniques) used in determining their fair value (Glossary to the Statements of Statutory Accounting Principles);

ii. The key assumptions used in subsequently measuring the fair value of those interests (including, at a minimum, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses, if applicable);

iii. A sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests of two or more unfavorable variations from the expected levels for each key assumption that is reported under ii. above independently from any change in another key assumption, and a description of the objectives, methodology, and limitations of the sensitivity analysis or stress test; and

iv. For the securitized assets and any other financial assets that the entity manages together with the ~~retained interests~~interests that continue to be held by a transferor[1]:

(a) The total principal amount outstanding, the portion that has been derecognized, and the portion that continues to be recognized in each category reported in the statement of financial position, at the end of the period;

(b) Delinquencies at the end of the period; and

(c) Credit losses, net of recoveries, during the period.

v. Disclosure of average balances during the period is encouraged, but not required.

2. Additionally, the illustration 'Recording Transfers of Partial Interests' will have nonsubstantive revisions as the terms 'one-tenth interest retained' will be revised to reflect 'One-tenth interest that continues to be held by the transferor'. Replication of this illustration in this Issue Paper for these terminology revisions was not considered necessary.

[1] Excluding securitized assets that an entity continues to service but with which it has no other continuing involvement.

EXHIBIT A - GLOSSARY

Asset Securitization

An asset securitization is the process of converting assets which would normally serve as collateral for a loan into securities. The largest category of securitized assets is real estate mortgage loans, which serve as collateral for mortgage-backed securities.

Beneficial Interests

Rights to receive all or portions of specified cash inflows to a trust or other entity, including senior and subordinated shares of interest, principal, or other cash inflows to be passed-through or paid-through, premiums due to guarantors, commercial paper obligations and residual interests, whether in the form of debt or equity.

Beneficial Interest Holder ("BIH")

Holder of beneficial interests

Cleanup Call

An option held by the servicer, which may be the transferor, to purchase transferred financial assets, or the remaining beneficial interests not held by the transferor, its affiliates, or its agents in a qualifying SPE (or in a series of beneficial interests in transferred assets within a qualifying SPE), when the amount of outstanding assets falls to a level at which the cost of servicing those assets becomes burdensome in relation to the benefits or servicing.

Collateral

Personal or real property in which a security interest has been given.

Derecognize

Remove previously recognized assets or liabilities from the balance sheet.

Derivative Financial Instrument

A derivative instrument (as defined in *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions*) that is a financial instrument (refer to *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments*, paragraph 2).

Embedded Call (See paragraphs 40 and 42)

A call option held by the issuer of a financial instrument that is part of and trades with the underlying instrument. For example, a bond may allow the issuer to call it by posting a public notice well before its stated maturity that asks the current holder to submit it for early redemption and provides that interest ceases to accrue on the bond after the early redemption date. Rather than being an obligation of the initial purchaser of the bond, an embedded call trades with and diminishes the value of the underlying bond.

Financial Asset

Cash, evidence of an ownership interest in an entity, or a contract that conveys to a second entity a contractual right (a) to receive cash or another financial instrument from a first entity or (b) to exchange other financial instruments on potentially favorable terms with the first entity.

Financial Liability

A contract that imposes on one entity a contractual obligation (a) to deliver cash or another financial instrument to a second entity or (b) to exchange other financial instruments on potentially unfavorable terms with the second entity.

Guaranteed Mortgage Securitization

A securitization of mortgage loans which includes a substantive guarantee by a third party.

Interests that continue to be held by a transferor

Other interests in transferred assets, those that are not part of the proceeds of the transfer, over which the transferor has not relinquished control. Includes securities backed by the transferred assets, undivided interests, and cash reserve accounts and residual interests in securitization trusts

Proceeds

Cash, derivatives, or other assets that are obtained in a transfer of financial assets, less any liabilities incurred.

Recourse

The right of a transferee of receivables to receive payment from the transferor of those receivables for (a) failure of debtors to pay when due, (b) the effects of prepayments, or (c) adjustments resulting from defects in the eligibility of the transferred receivables.

Residual

Residuals are a class of retained or purchased beneficial interests that have rights to the last cash flows from the pool of securitized assets and are not rated by a Nationally Recognized Statistical Rating Organization (NRSRO). Residuals are to be carried at fair value with the difference between fair value and the allocated cost basis recognized as an unrealized gain or loss;

Securitization

The process by which financial assets are transformed into securities.

Security Interest

A form of interest in property that provides that upon default of the obligation for which the security interest is given, the property may be sold in order to satisfy that obligation.

Seller

A transferor that relinquishes control over financial assets by transferring them to a transferee in exchange for consideration.

Servicing Asset

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are expected to more than adequately compensate the servicer for performing the servicing. A servicing contract is either (a) undertaken in conjunction with selling or securitizing the financial assets being serviced or (b) purchased or assumed separately.

Servicing Liability

A contract to service financial assets under which the estimated future revenues from stated servicing fees, late charges, and other ancillary revenues are not expected to adequately compensate the servicer for performing the servicing.

Transfer

The conveyance of a noncash financial asset by and to someone other than the issuer of that financial asset. Thus, a transfer includes selling a receivable, putting it into a securitization trust, or posting it as collateral but excludes the origination of that receivable, the settlement of that receivable, or the restructuring of that receivable into a security in a troubled debt restructuring.

Transferee

An entity that receives a financial asset, a portion of a financial asset, or a group of financial assets from a transferor.

Transferor

An entity that transfers a financial asset, a portion of a financial asset, or a group of financial assets that it controls to another entity.

Undivided Interest

Partial legal or beneficial ownership of an asset as a tenant in common with others. The proportion owned may be pro rata, for example, the right to receive 50 percent of all cash flows from a security, or non-pro rata, for example, the right to receive the interest from a security while another has the right to the principal.

Unrestricted Collateral

Securities received that may be sold or repledged and which were obtained under agreements that are not subject to repurchase or redemption on short notice, for example, by substitution of other collateral or termination of the contract.

Unilateral Ability (See paragraphs 40 and 41)

A capacity for action not dependent on the actions (or failure to act) of any other party.

Issue Paper No. 135

Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others

STATUS
Finalized October 18, 2010

Original SSAP and Current Authoritative Guidance: SSAP No. 5R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. In November 2002, the Financial Accounting Standards Board (FASB) issued *FASB Interpretation No. 45: Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others, an interpretation of FASB Statements No. 5, 57, and 107 and rescission of FASB interpretation No. 34* (FIN 45) to elaborate on the disclosures required for obligations issued under certain guarantees and to clarify that a guarantor is required to recognize, at the inception of a guarantee, a liability for the fair value of the obligation undertaken in issuing the guarantee. In November 2005, the FASB issued FASB Staff Position *FIN 45-3, Application of FASB Interpretation No. 45 to Minimum Revenue Guarantees Granted to a Business or its Owners* (FSP FIN 45-3). This FSP modified the scope of FIN 45 to expressly include guarantees granted to a business or owner guarantying that the revenue of the business (or a specific portion of the business) for a specified period will be at least a specified amount within the scope of FIN 45. For purposes of this Issue Paper, the Statutory Accounting Principles Working Group will consider FIN 45, as modified by FSP FIN 45-3 for statutory accounting.

2. Current statutory accounting guidance for guarantees is limited to the disclosure requirements in paragraph 16 of *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5). In accordance with this existing guidance, guarantees shall be disclosed in the financial statements even though the possibility of loss may be remote and disclosures are required regarding the indebtedness of others. These disclosure requirements were incorporated through the adoption of *FASB Interpretation No. 34—Disclosure of Indirect Guarantees on Indebtedness of Others, An Interpretation of FASB Statement No. 5* (FIN 34) and *FSP FAS 133-1 and FIN 45-4: Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45 and Clarification of the Effective Date of FASB Statement No. 161* (FSP FAS 133-1 and FIN 45-4). With the issuance of FIN 45, FASB superseded FIN 34.

3. The purpose of this issue paper is to update statutory accounting principles for guarantees. The proposed result will be adoption, with modification, of guidance from FIN 45, and the incorporation of substantive revisions to SSAP No. 5 and nonsubstantive revisions to *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25). In accordance with the adoption, with modification, of FIN 45, guarantors will be required to recognize, at the inception of the guarantee, a liability for the obligations it has undertaken in issuing the guarantee, including its obligation to stand ready to perform over the term of the guarantee in the event that the specified triggering events or conditions occur. The adoption, with modification, of FIN 45 will also require the following disclosures by guarantors: (a) the nature of the guarantee, including the approximate term of the guarantee, how the guarantee arose, and the events or circumstances that would require the guarantor to perform under the guarantee; (b) the maximum potential amount of future payments under the guarantee;

(c) the carrying amount of the liability, if any, for the guarantor's obligations under the guarantee; and (d) the nature and extent of any recourse provisions or available collateral that would enable the guarantor to recover the amounts paid under the guarantee.

SUMMARY CONCLUSION

4. This issue paper adopts, with modification, guidance within FIN 45, as modified by FSP FIN 45-3, indicating that at the inception of a guarantee, the guarantor shall recognize in its statement of financial position a liability for that guarantee, which generally equals the fair value of the guarantee at its inception. This issue paper also adopts the disclosures within the modified FIN 45 to ensure proper information is provided within the financial statements regarding guarantees, even if the likelihood of having to make payments under a guarantee is remote.

DISCUSSION

5. The FASB issued FIN 45 as a result of observing differing interpretations about the disclosures required of guarantors under *FASB Statement No. 5, Accounting for Contingencies* (FAS 5) and about the need for a guarantor to recognize an initial liability for its obligation under a guarantee. As some constituents believed that FAS 5 prohibited a guarantor from initially recognizing a liability for a guarantee issued unless it is probable that payments will be required under that guarantee, the issuance of FIN 45 clarified the requirements of FAS 5 relating to the guarantor's accounting for and disclosures of certain guarantees issued.

6. FIN 45 clarified that a guarantor is required to disclose (a) the nature of the guarantee, including the approximate term of the guarantee, how the guarantee arose, and the events or circumstances that would require the guarantor to perform under the guarantee; (b) the maximum potential amount of future payments under the guarantee; (c) the carrying amount of the liability, if any, for the guarantor's obligations under the guarantee; and (d) the nature and extent of any recourse provisions or available collateral that would enable the guarantor to recover the amounts paid under the guarantee. For product warranties, instead of disclosing the maximum potential amount of future payments under the guarantee, a guarantor is required to disclose its accounting policy and methodology used in determining its liability for product warranties as well as a tabular reconciliation of the changes in the guarantor's product warranty liability for the reporting period. In issuing FIN 45, the FASB noted that disclosures under the prior practice generally included only the nature and amount of guarantees, but did not provide the same level of useful information as required by FIN 45.

7. FIN 45 also clarified that a guarantor is required to recognize, at the inception of a guarantee, a liability for the obligations it has undertaken in issuing the guarantee, including its ongoing obligation to stand ready to perform over the term of the guarantee in the event that the specified triggering events or conditions occur. The objective of the initial measurement of that liability is the fair value of the guarantee at its inception. Before the issuance of FIN 45, the FASB believed that many entities may not be recognizing a liability for a guarantee because the recognition requirements in FAS 5 (pertaining to loss contingencies) have not been met at the inception of the guarantee and the premium for the guarantee was not separately identified because it was embedded in purchase or sales agreements, service contracts, joint venture agreements, or other commercial agreements.

8. In issuing FIN 45, and requiring recognition of a liability for the obligations undertaken upon issuing a guarantee, the FASB believed that it resulted with a more representationally faithful depiction of the guarantor's assets and liabilities. When a guarantee is issued without a separately identified premium in conjunction with another transaction, the gain or loss recognized on that other transaction would be misstated if the guarantor fails to recognize a liability for the guarantee. For example, if a seller-guarantor issues to its customer's bank a guarantee of the customer's loan to facilitate the customer's obtaining funds to pay the seller for the assets being purchased, the failure to recognize a liability for the issuance of

the guarantee overstates the profit on the sale. In those circumstances, the recognition of the liability for the guarantee results in a more representationally faithful depiction of the seller-guarantor's liabilities and results of operations. The initial recognition and initial measurement requirements within FIN 45 were expected to affect primarily the accounting for multiple-element transactions that include issuance of a guarantee by one party to the other. Additionally, the FASB concluded that the disclosures required by FIN 45 improve the transparency of the financial statement information about the guarantor's obligations and liquidity risks related to guarantees issued.

9. The FASB concluded that the disclosures and initial recognition of guarantees required by FIN 45 complies with the *FASB Concept Statement No. 1, Objectives of Financial Reporting by Business Enterprises*, as financial reporting should provide information to help users assess the amounts, timing, and uncertainty of the guarantor's prospective net cash flows. Furthermore, the FASB concluded that recognition of a liability at the inception of a guarantee is consistent with the definition of a liability in *FASB Concepts Statement No. 6, Elements of Financial Statements*.

10. In November 2005, the FASB issued FASB Staff Position *FIN 45-3, Application of FASB Interpretation No. 45 to Minimum Revenue Guarantees Granted to a Business or its Owners* (FSP FIN 45-3). This FSP modified the scope of FIN 45 to expressly include guarantees granted to a business or owner guarantying that the revenue of the business (or a specific portion of the business) for a specified period will be at least a specified amount within the scope of FIN 45. In making this decision, the FASB concluded that a minimum revenue guarantee granted to a business or its owners meets the characteristics in paragraph 3.a. of FIN 45 because the guarantee's underlying (business gross revenues) is related to an asset or equity security of the guaranteed party. The FASB also clarified that the five examples included within paragraph 3.a. do not constitute an all-inclusive listing of the contracts that would meet the scope provisions of FIN 45.

11. In considering FIN 45, as modified for FIN 45-3, for statutory accounting purposes, the adoption of the guidance in FIN 45 is consistent with the conservatism concept stated within the preamble: "In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting." In accordance with this concept, it is presumed that there must be a compelling reason to have statutory accounting principles that are less conservative then GAAP. In reviewing this issue, staff was unable to identify any such compelling reasons, however, until FIN 45 is adopted for statutory accounting, it will result with less-conservative financial statements for statutory accounting.

12. It is anticipated that comments will be received indicating that the initial recognition of a liability will not represent a "probable" occurrence, and thus will not meet the definition of a liability per SSAP No. 5, paragraph 3. Similar to the FASB's response to such comments, the probability of performance under the guarantee will affect the measurement of the liability at inception, but the probability of performance does not change the fact that a liability has been created upon the issuance of the guarantee and should be reflected in the financial statements. The recognition of a liability for a guarantee is a valid under SSAP No. 5 because it clarifies that the definition of a liability within SSAP No. 5 should not be understood as prohibiting the recognition of a liability for the obligations undertaken in issuing a guarantee, even if the likelihood of the event that would trigger performance under the guarantee is less than remote.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

13. Statutory accounting guidance regarding guarantees is included within *SSAP No. 5—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5). The guidance for guarantees is limited to disclosures within paragraph 16. The current disclosure requirements, which require disclosure of guarantees even if the possibility of loss is remote and disclosures on guarantees on the indebtedness of others, were adopted from *FASB Interpretation No. 34, Disclosure of Indirect Guarantees of Indebtedness of Others, An Interpretation of FASB Statement No. 5* and *FSP FAS 133-1 and FIN 45-4: Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45 and Clarification of the Effective Date of FASB Statement No. 161.*

> 16. Certain loss contingencies, the common characteristic of each being a guarantee, shall be disclosed in financial statements even though the possibility of loss may be remote. Examples include (a) guarantees of indebtedness of others, and (b) guarantees to repurchase receivables (or, in some cases, to repurchase related properties) that have been sold or otherwise assigned. The disclosure of those loss contingencies, and others that in substance have the same characteristics, shall be applied to statutory financial statements. The disclosure shall include the nature and amount of the guarantee. Consideration shall be given to disclosing, if estimable, the value of any recovery that could be expected to result, such as from the guarantor's right to proceed against an outside party.
>
> a. For guarantees on indebtedness of others, disclosure shall include the nature of the guarantee, including the approximate term of the guarantee, how the guarantee arose, the events and circumstances that would require the guarantor to perform under the guarantee, and the current status as of the reporting date of the payment/performance risk of the guarantee. For example, the current status of the payment/performance risk of a credit-risk related guarantee could be based on either recently issued external credit ratings or current internal groupings used by the guarantor to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.

14. With the adoption of this issue paper, SSAP No. 5 will reflect the adoption, with modification, of FIN 45, as modified by FSP FIN 45-3. The statutory modifications require an initial liability recognition for guarantees issued as part of intercompany or related party transactions, require assessment and recognition of non-contingent guarantee obligations after recognition and settlement of a contingent obligation and revise the GAAP guidance to reflect statutory accounting terms and restrictions. (For example, a GAAP exclusion for capital leases will not be incorporated within SSAP No. 5 as the concept of capital leases has previously been rejected for statutory accounting.) Although FIN 45 does not require initial liability recognition for the following guarantees: 1) guarantee issued either between parents and their subsidiaries or between corporations under common control; 2) parent's guarantee of its subsidiary debt to a third party, and 3) subsidiary's guarantee of the debt owed to a third party by either its parent or another subsidiary of that parent, this Issue Paper requires an initial liability recognition under statutory accounting for such guarantees. For these instances, and other intercompany and related party guarantees, this Issue Paper requires that an initial liability must be recognized for the guarantee unless the guarantee is considered "unlimited" or is a guarantee made to/or on behalf of a wholly-owned subsidiary. (An example of an intercompany "unlimited" guarantee would be a guarantee issued in response to a rating agency's requirement to provide a commitment to support.) In instances in which an "unlimited" guarantee exists or a guarantee has been made to/or on behalf of a wholly-owned subsidiary, this Issue Paper would require disclosure, pursuant to the disclosure requirements adopted from FIN 45. These disclosure requirements include the maximum potential amount of future payments of the guarantee, and if the guarantor is unable to determine the maximum potential, the reasons why this amount cannot be

determined. The adoption of this Issue Paper will also revise the current disclosure requirements, presented within SSAP No. 5, paragraph 16.a., regarding guarantees on the indebtedness of others. These disclosure requirements, adopted from FSP FAS 133-1 and FIN 45-4, will be reorganized within SSAP No. 5 and presented in a manner consistent with the modifications incorporated within FIN 45 pursuant to the adoption of this FASB Staff Position.

15. Upon adoption of this Issue Paper, the NAIC will release an updated SSAP No. 5 for comment. The SSAP will contain the adopted substantive changes to SSAP No. 5, shown in this Issue Paper. Users of the Accounting Practices and Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted.

16. Guidance is currently included within paragraph 18.e. of *SSAP No. 25—Accounting for and Disclosures About Transactions with Affiliates and Other Related Parties* (SSAP No. 25) that requires related party disclosures for guarantees or undertakings that result in a material contingent exposure:

> 18. The financial statements shall include disclosures of all material related party transactions. In some cases, aggregation of similar transactions may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm's-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:
>
> e. Any guarantees or undertakings, written or otherwise, for the benefit of an affiliate or related party which result in a material contingent exposure of the reporting entity's or any related party's assets or liabilities;

17. This Issue Paper also proposes nonsubstantive revisions to the SSAP No. 25, paragraph 18.e. guidance to require the FIN 45 disclosure requirements for related party guarantees, including those issued between parents and their subsidiaries or between corporations under common control and situations in which a parent guarantees its subsidiary's debt to a third party or the subsidiary has guaranteed debt owed to a third party by either its parent or another subsidiary of that parent.

18. The adoption of FIN 45 or FSP FIN 45-4 will not impact any of the existing statutory interpretations of SSAP No. 5:

a. *INT 01-31: Assets Pledged as Collateral* (INT 01-31) – This interpretation addresses the accounting issues on whether assets pledged as collateral under specific situations should be considered admitted assets. The consensus reached for INT 01-31 is that the collateral would continue to be recorded as an admitted asset until the reporting entity has committed a contract default that has not been cured in accordance with the contract provisions. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer should only record an admitted asset for the amount of collateral that it can redeem.

b. *INT 01-32: EITF 01-10: Accounting for the Impact of the Terrorist Attacks of September 11, 2001* (INT 01-32) – This interpretation incorporated specific disclosures for losses and costs incurred as a result of the September 11, 2001 events. On June 2, 2007, these disclosure requirements were deemed no longer useful by the Statutory Accounting Principles Working Group.

c. *INT 03-07: EITF 00-19: Accounting for Derivative Financial Instruments Indexed to, and Potentially Settled in, A Company's Own Stock* (INT 03-07) – This interpretation rejected the guidance in EITF 00-19 as not applicable to statutory accounting.
