13. The amount capitalized in an accounting period shall be determined by applying an interest rate(s) ("the capitalization rate") to the average amount of accumulated expenditures for the asset during the period. The capitalization rates used in an accounting period shall be based on the rates applicable to borrowings outstanding during the period. If an enterprise's financing plans associate a specific new borrowing with a qualifying asset, the enterprise may use the rate on that borrowing as the capitalization rate to be applied to that portion of the average accumulated expenditures for the asset that does not exceed the amount of that borrowing. If average accumulated expenditures for the asset exceed the amounts of specific new borrowings associated with the asset, the capitalization rate to be applied to such excess shall be a weighted average of the rates applicable to other borrowings of the enterprise.

14. In identifying the borrowings to be included in the weighted average rate, the objective is a reasonable measure of the cost of financing acquisition of the asset in terms of the interest cost incurred that otherwise could have been avoided. Accordingly, judgment will be required to make a selection of borrowings that best accomplishes that objective in the circumstances. For example, in some circumstances, it will be appropriate to include all borrowings of the parent company and its consolidated subsidiaries; for some multinational enterprises, it may be appropriate for each foreign subsidiary to use an average of the rates applicable to its own borrowings. However, the use of judgment in determining capitalization rates shall not circumvent the requirement that a capitalization rate be applied to all capitalized expenditures for a qualifying asset to the extent that interest cost has been incurred during an accounting period.

15. The total amount of interest cost capitalized in an accounting period shall not exceed the total amount of interest cost incurred by the enterprise in that period. In consolidated financial statements, that limitation shall be applied by reference to the total amount of interest cost incurred by the parent company and consolidated subsidiaries on a consolidated basis. In any separately issued financial statements of a parent company or a consolidated subsidiary and in the financial statements (whether separately issued or not) of unconsolidated subsidiaries and other investees accounted for by the equity method, the limitation shall be applied by reference to the total amount of interest cost (including interest on intercompany borrowings) incurred by the separate entity.

16. For the purposes of this Statement, expenditures to which capitalization rates are to be applied are capitalized expenditures (net of progress payment collections) for the qualifying asset that have required the payment of cash, the transfer of other assets, or the incurring of a liability on which interest is recognized (in contrast to liabilities, such as trade payables, accruals, and retainages on which interest is not recognized). However, reasonable approximations of net capitalized expenditures may be used. For example, capitalized costs for an asset may be used as a reasonable approximation of capitalized expenditures unless the difference is material.

The Capitalization Period

17. The capitalization period shall begin when three conditions are present:

a. Expenditures (as defined in paragraph 16) for the asset have been made.

b. Activities that are necessary to get the asset ready for its intended use are in progress.

c. Interest cost is being incurred.

Interest capitalization shall continue as long as those three conditions are present. The term activities is to be construed broadly. It encompasses more than physical construction; it includes all the steps required to prepare the asset for its intended use. For example, it includes administrative and technical activities during the preconstruction stage, such as the development of plans or the process of obtaining permits from governmental authorities; it includes activities undertaken after construction has begun in order to overcome unforeseen obstacles, such as technical problems, labor disputes, or litigation. If the enterprise suspends substantially all activities related to acquisition of the asset, interest capitalization shall cease until activities are resumed. However, brief interruptions in activities, interruptions that are externally imposed, and delays that are inherent in the asset acquisition process shall not require cessation of interest capitalization.

18. The capitalization period shall end when the asset is substantially complete and ready for its intended use. Some assets are completed in parts, and each part is capable of being used independently while work is continuing on other parts. An example is a condominium. For such assets, interest capitalization shall stop on each part when it is substantially complete and ready for use. Some assets must be completed in their entirety before any part of the asset can be used. An example is a facility designed to manufacture products by sequential processes. For such assets, interest capitalization shall continue until the entire asset is substantially complete and ready for use. Some assets cannot be used effectively until a separate facility has been completed. Examples are the oil wells drilled in Alaska before completion of the pipeline. For such assets, interest capitalization shall continue until the separate facility is substantially complete and ready for use.

19. Interest capitalization shall not cease when present accounting principles require recognition of a lower value for the asset than acquisition cost; the provision required to reduce acquisition cost to such lower value shall be increased appropriately.

Disposition of the Amount Capitalized

20. Because interest cost is an integral part of the total cost of acquiring a qualifying asset, its disposition shall be the same as that of other components of asset cost.

Disclosures

21. The following information with respect to interest cost shall be disclosed in the financial statements or related notes:

a. For an accounting period in which no interest cost is capitalized, the amount of interest cost incurred and charged to expense during the period

b. For an accounting period in which some interest cost is capitalized, the total amount of interest cost incurred during the period and the amount thereof that has been capitalized.

Effective Date and Transition

22. This Statement shall be applied prospectively in fiscal years beginning after December 15, 1979. Earlier application is permitted, but not required, in financial statements for fiscal years beginning before December 16, 1979 that have not been previously issued. With respect to qualifying assets in existence at the beginning of the fiscal year in which this Statement is first applied for which interest cost has not been previously capitalized, interest capitalization shall begin at that time. With respect to qualifying assets for which interest cost has been capitalized according to a method that differs from the provisions of this Statement, no adjustment shall be made to the amounts of interest cost previously capitalized, but interest cost capitalized after this Statement is first applied shall be determined according to the provisions of this Statement. With respect to assets in existence when this Statement is first applied for which interest cost has been capitalized but which do not qualify for interest capitalization according to the provisions of this Statement, no adjustments shall be made, but no additional amounts of interest cost shall be capitalized.

23. If early application is adopted in financial reports for interim periods of a fiscal year beginning before December 16, 1979, previously issued financial information for any interim periods of that fiscal year that precede the period of adoption shall be restated to give effect to the provisions of this Statement, and any subsequent presentation of that information shall be on the restated basis. This Statement shall not be applied retroactively for previously issued annual financial statements.

15. FAS 42 provides the following guidance:

INTRODUCTION

1. Paragraph 8 of *FASB Statement No. 34, Capitalization of Interest Cost*, states that:

In concept, interest cost is capitalizable for all assets that require a period of time to get them ready for their intended use (an "acquisition period"). However, in many cases, the benefit in terms of information about enterprise resources and earnings may not justify the additional accounting and administrative cost involved in providing the information. The benefit may be less than the cost because the effect of interest capitalization and its subsequent amortization or other disposition, compared with the effect of charging it to expense when incurred, would not be material. In that circumstance, interest capitalization is not required by this Statement.

Paragraph 9 of FAS 34 begins as follows:

> Subject to the provisions of paragraph 8, interest shall be capitalized for the following types of assets ("qualifying assets"). . . .

2. The Board has received a number of questions concerning how paragraph 8 should be construed in deciding whether capitalization of interest is required. Some have stated that paragraph 8 appears to establish new tests of materiality that allow an enterprise to measure the effect of interest capitalization on income by a pro forma prospective or retroactive computation without also considering the effect on current year income. The Board has concluded that new tests of materiality should not be established for interest capitalization and has, accordingly, decided to amend paragraph 8 of Statement 34 to delete the language that gave rise to those questions.

3. The Board has concluded that it can reach an informed decision on the basis of existing information without a public hearing and that the effective date and transition specified in paragraph 5 are advisable in the circumstances.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Amendment to FASB Statement No. 34

4. The last two sentences of paragraph 8 of Statement 34 are superseded and replaced by the following sentence:

> Accordingly, interest shall not be capitalized in the situations described in paragraph 10.

The introduction of paragraph 9 of Statement 34 is amended to read as follows:

> Interest shall be capitalized for the following types of assets ("qualifying assets"):

Effective Date and Transition

5. This Statement shall be effective for fiscal years beginning after December 15, 1979. The provisions of this Statement shall be applied at the same time as the provisions of Statement 34 are first applied. Enterprises that already have adopted the provisions of Statement 34 shall apply the provisions of this Statement in their next fiscal year beginning after October 15, 1980 and may, but are not required to, restate their financial statements for the year of initial adoption to reflect the provisions of this Statement.

16. FAS 58 provides the following guidance:

INTRODUCTION

1. The FASB has received several inquiries concerning (a) the limitations of FASB Statement No. 34, Capitalization of Interest Cost, relating to capitalization of interest cost in situations involving investees accounted for by the equity method and (b) the inconsistent requirements between (i) the limitations of Statement 34 on the capitalization of interest cost in situations involving investees accounted for by the equity method and (ii) the requirement of APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock, that income and owners' equity amounts should be the same whether a subsidiary is consolidated or accounted for by the equity method.

2. The basic issue is whether Statement 34 distinguishes qualifying assets owned by the parent and consolidated subsidiaries from those owned by unconsolidated subsidiaries, joint ventures, and other investees accounted for by the equity method for purposes of determining the amount of interest cost to be capitalized in the investor's financial statements. Although paragraph 15 of Statement 34 clearly limits the amount of interest available for capitalization in consolidated financial statements to that shown in those statements, neither paragraph 9 nor paragraph 15 of Statement 34 is explicit regarding any similar limitations on qualifying assets.

3. The Board has concluded that qualifying assets as described in Statement 34 are limited to those of the parent company and consolidated subsidiaries. The Board has also concluded that certain investments (equity, loans, and advances) accounted for by the equity method are qualifying assets of the investor (including parent company and consolidated subsidiaries). For the investment to be a qualifying asset, the investee must be undergoing activities in preparation for its planned principal operations provided that the investee's activities include the use of funds to acquire qualifying assets for its operations. The investment ceases to be a qualifying asset when those operations begin. Subsequent accounting for interest capitalized on the investment is specified by paragraph 19.b. of Opinion 18.

4. This Statement does not affect the accounting for and reporting of capitalized interest cost in the separate financial statements of investees.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Amendments to FASB Statement No. 34

5. The following subparagraph is added to paragraph 9 of Statement 34, which specifies the qualifying assets for which interest is to be capitalized:

> c. Investments (equity, loans, and advances) accounted for by the equity method while the investee has activities in progress necessary to commence its planned principal operations provided that the investee's activities include the use of funds to acquire qualifying assets for its operations.

6. The following subparagraphs are added to paragraph 10 of Statement 34, which specifies the types of assets for which interest is not capitalized:

> c. Assets that are not included in the consolidated balance sheet of the parent company and consolidated subsidiaries
>
> d. Investments accounted for by the equity method after the planned principal operations of the investee begin
>
> e. Investments in regulated investees that are capitalizing both the cost of debt and equity capital

7. The following sentence is added to paragraph 20 of Statement 34, which specifies the accounting for interest after it is capitalized:

> Interest capitalized on an investment accounted for by the equity method shall be accounted for in accordance with paragraph 19.b. of Opinion 18 which states: "A difference between the cost of an investment and the amount of underlying equity in net assets of an investee should be accounted for as if the investee were a consolidated subsidiary."

Amendments to Other Pronouncements

8. Paragraph 10 of *ARB No. 51, Consolidated Financial Statements*, requires accounting for a subsidiary on a step-by-step basis if control is obtained through purchase of two or more blocks of stock. Paragraph 19.m. of Opinion 18 requires retroactive adjustment for an investee that was previously accounted for on other than the equity method when that investee becomes qualified for use of the equity method. Paragraph 34 of *APB Opinion No. 20, Accounting Changes*, requires restatement of prior financial statements for changes in reporting entities. The following footnote is added to each of those paragraphs:

> The amount of interest cost capitalized through application of *FASB Statement No. 58, Capitalization of Interest Cost in Financial Statements That Include Investments Accounted for by the Equity Method*, shall not be changed when restating financial statements of prior periods.

Effective Date and Transition

9. This Statement shall be effective for investments made after June 30, 1982 except that investments contracted for but not yet made may be accounted for as specified in the next sentence. Investments existing at the effective date or date of earlier adoption of this Statement (a) may be accounted for according to the provisions of this Statement or (b) may continue to be accounted for by the method of interest capitalization previously used even though not in accordance with the provisions of this Statement. Earlier application is encouraged. This Statement may be applied retroactively for annual financial statements that have not been issued but shall not be applied retroactively for previously issued annual financial statements.

17. FAS 62 provides the following guidance:

INTRODUCTION

1. The FASB has received a number of requests to reconsider the issue of offsetting interest income against interest cost in the application of *FASB Statement No. 34, Capitalization of Interest Cost*, for purposes of determining either capitalization rates or limitations on the amount of interest to be capitalized. *FASB Technical Bulletin No. 81-5, Offsetting Interest Cost to Be Capitalized with Interest Income*, states that Statement 34 does not permit such offsetting. Other requests have been received to consider the issue of capitalization of interest cost in situations in which qualifying assets are acquired using gifts and grants restricted to the purchase of the specified assets.

2. The Board has concluded that Statement 34 should be amended to require offsetting of interest income against interest cost in certain circumstances involving tax-exempt borrowings that are externally restricted as specified in paragraph 3. Those situations include many governmental borrowings and most governmentally sponsored borrowings (such as industrial revenue bonds and pollution control bonds). In such situations, interest earned generally is considered in and is significant to the initial decision to acquire the asset, and the capitalization of net interest cost provides a better measure of the entity's net investment in the qualifying assets. The Board believes that in those circumstances the association is direct and the funds flows from borrowing, temporary investment, and construction expenditures are so intertwined and restricted as to require accounting for the total net cost of financing as a cost of the qualifying assets. The Board also concluded that in all other situations offsetting of interest income against interest cost is not appropriate. The Board further concluded that qualifying assets acquired with externally restricted gifts or grants should not be subject to capitalization of interest cost under Statement 34.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

3. Interest earned shall not be offset against interest cost in determining either capitalization rates or limitations on the amount of interest cost to be capitalized except in situations involving acquisition of qualifying assets financed with the proceeds of tax-exempt borrowings if those funds are externally restricted to finance acquisition of specified qualifying assets or to service the related debt.

4. The amount of interest cost capitalized on qualifying assets acquired with proceeds of tax-exempt borrowings that are externally restricted as specified in paragraph 3 shall be all interest cost of the borrowing less any interest earned on related interest-bearing investments acquired with proceeds of the related tax-exempt borrowings [1] from the date of the borrowing until the assets are ready for their intended use. Interest cost of a tax-exempt borrowing shall be eligible for capitalization on other qualifying assets of the entity when the specified qualifying assets are no longer eligible for interest capitalization.

[1] The interest cost and interest earned on any portion of the proceeds of the tax-exempt borrowings that are not designated for the acquisition of specified qualifying assets and servicing the related debt are excluded. The entire interest cost on that portion of the proceeds that is available for other uses (such as refunding of an existing debt issue other than a construction loan related to those assets) is eligible for capitalization on other qualifying assets.

Amendments to FASB Statement No. 34

5. The following subparagraph is added to paragraph 10 of Statement 34, which specifies the types of assets for which interest is not capitalized:

> f. Assets acquired with gifts and grants that are restricted by the donor or grantor to acquisition of those assets to the extent that funds are available from such gifts and grants. Interest earned from temporary investment of those funds that is similarly restricted shall be considered an addition to the gift or grant for this purpose.

6. The following footnote is added at the end of the first sentence of paragraph 13 of Statement 34, which deals with determining the amount of interest cost to be capitalized:

> *If qualifying assets are financed with the proceeds of tax-exempt borrowings and those funds are externally restricted to the acquisition of specified qualifying assets or to service the related debt, the amount of interest cost capitalized shall be determined in accordance with *FASB Statement No. 62, Capitalization of Interest Cost in Situations Involving Certain Tax-Exempt Borrowings and Certain Gifts and Grants*.

7. The following footnote is added to paragraph 17 of Statement 34, which specifies the period for interest capitalization:

> *In situations involving qualifying assets financed with the proceeds of tax-exempt borrowings that are externally restricted as specified in Statement 62, the capitalization period begins at the date of the borrowing.

Rescission of Technical Bulletin

8. *FASB Technical Bulletin No. 81-5, Offsetting Interest Cost to Be Capitalized with Interest Income*, is rescinded upon issuance of this Statement.

Effective Date and Transition

9. This Statement shall be effective for tax-exempt borrowing arrangements entered into and gifts or grants received after August 31, 1982, with earlier application encouraged in financial statements that have not been previously issued. This Statement may be, but is not required to be, applied retroactively to previously issued financial statements for fiscal years beginning after December 15, 1979. If previously issued financial statements are restated, the financial statements shall, in the year that this Statement is first applied, disclose the nature of any restatement and its effects on income before extraordinary items, net income, and related per share amounts for each restated year presented.

Statutory Issue Paper No. 45

Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements

STATUS
Finalized March 16, 1998

Current Authoritative Guidance for Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements: SSAP No. 103
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 45

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies contain guidance on accounting for bonds sold subject to reverse repurchase agreements and dollar repurchase agreements.

2. The purpose of this issue paper is to establish statutory accounting principles for repurchase and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements, that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this issue paper.

Repurchase Agreements

4. Repurchase agreements shall be defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date within 12 months of the purchase. For securities to be substantially the same, the criteria set forth in paragraph 23 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

5. Repurchase agreements shall be accounted for as collateralized lendings. The underlying securities shall not be accounted for as investments owned by the reporting entity. The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount paid and the amount at which the securities will be subsequently resold shall be reported as interest income calculated on a straight-line basis or scientific interest (constant yield) basis over the term of the agreement.

6. Reporting entities generally take possession of the underlying collateral under repurchase agreements and in many cases may obtain additional collateral when the estimated fair value of such securities falls below their current contract value. However, to the extent that the current fair value of the

collateral is less than the recorded amount, the shortfall shall be used to reduce the admitted asset value of the repurchase agreement.

Reverse Repurchase Agreements

7. Reverse repurchase agreements shall be defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date within 12 months of the sale date. For securities to be substantially the same, the criteria set forth in paragraph 23 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

8. Reverse repurchase agreements shall be accounted for as collateralized borrowings (financing transactions). The underlying securities shall continue to be accounted for as an investment by the reporting entity. The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense on a straight-line basis or computed using the scientific (constant yield) interest method over the term of the agreement. Although recording these transactions gross tends to inflate assets and liabilities, it more closely reflects the financing nature of these transactions and their associated leverage impact to the financial statements.

Dollar Repurchase Agreements

9. Dollar repurchase and dollar reverse repurchase agreements shall be defined as repurchase and reverse repurchase agreements involving debt instruments that are pay-through securities collateralized with Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC) and Federal National Mortgage Association (FNMA) collateral, and pass-through certificates sponsored by GNMA, mortgage participation certificates issued by the FHLMC or similar securities issued by the FNMA. Dollar repurchase agreements are also commonly referred to as dollar roll transactions. To meet the definition of dollar repurchase and dollar reverse repurchase agreements, the securities underlying the agreements must meet the criteria set forth in paragraph 23, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

10. For the seller in a dollar reverse repurchase agreement, a liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities sold.

11. When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased must be in good delivery form.

12. If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded.

13. For the purchaser in a dollar repurchase agreement, an asset is recorded for the amount of the purchase. Since the term of the agreement is limited to twelve months, it is accounted for as a short-term investment. Upon completion of the reverse repurchase agreement, cash is received in exchange for a

"substantially the same" security. The difference between the purchase and reselling price represents interest income for the lending of short-term funds.

Separate Transactions

14. Agreements to repurchase and resell securities that do not meet the definitions in paragraph 4, 7, or 9 of this issue paper shall be accounted for as two separate transactions, that is, as a sale and purchase or as a purchase and sale, in accordance with the relevant statutory accounting guidance. For example, sales of bonds would result in recognition of realized gains or losses.

Offsetting

15. Reporting entities may operate on both sides of the repurchase agreement market resulting in recording of liabilities and assets representing repurchase and reverse repurchase agreements, respectively. Reporting entities shall offset such liabilities and assets only to the extent that one of the following occurs:

a. A legal right of offset exists as defined in *Issue Paper No. 76—Offsetting and Netting of Assets and Liabilities* (Issue Paper No. 76), or

b. The securities have the same settlement date, are executed with the same counterparty in accordance with a master netting arrangement, involve securities that exist in "book entry" form, and settle on securities transfer systems that have the same key elements and operating characteristics as the Fedwire Securities Transfer System (Fedwire system).

Otherwise, separate assets and liabilities shall be recognized.

Disclosures

16. The following disclosures shall be made in the notes to the financial statements.

a. If the reporting entity has entered into repurchase agreements, its policy for requiring collateral or other security.

b. A description of the securities underlying the agreements, including book values and fair values, maturities, and weighted average interest rates for the following categories: (a) securities subject to reverse repurchase agreements, (b) securities subject to repurchase agreements, (c) securities subject to dollar repurchase agreements, and (d) securities subject to reverse dollar repurchase agreements.

c. A description of the terms of reverse repurchase agreements whose amounts are included in borrowed money.

DISCUSSION

17. The conclusion above adopts current statutory guidance for repurchase agreements, reverse repurchase agreements, and dollar repurchase and reverse repurchase agreements, with a modification to the definition of substantially the same security in the case of mortgage backed securities to be consistent with the "good delivery" standard in *AICPA Statement of Position 90-3*, *Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position* (SOP 90-3). The disclosure requirements are consistent with information requested in the general interrogatories section of the annual statement and have been expanded to include disclosure of the reporting entity's policy for requiring collateral or other security.

18. The conclusion above is consistent with GAAP, and, accordingly, adopts SOP 90-3 and *FASB Emerging Issues Task Force No. 84-20*, *GNMA Dollar Rolls*. Furthermore, the conclusion in this issue

paper is consistent with the *FASB Interpretation No. 39*, *Offsetting of Amounts Related to Certain Contracts—an interpretation of APB Opinion No. 10 and FASB Statement No. 105* (as it relates to reverse repurchase and repurchase agreements) and FASB Interpretation No. 41, *Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements—an interpretation of APB No. 10 and a modification of FASB Interpretation No. 39*. FIN 39 and FIN 41 are adopted in Issue Paper 76.

19. This issue paper also adopts paragraphs 9-13, 15-17, 23-25, 27-30 and 66-71 of FAS 125 as they relate to repurchase agreements, reverse repurchase agreements and dollar repurchase agreements. Paragraph 14 is rejected as it relates to the classifications of securities under FAS 115. FAS 115 was rejected in *Issue Paper No. 26—Bonds, Excluding Loan-Backed and Structured Securities*.

20. The statutory accounting principles outlined in the conclusion above are consistent with the conservatism concept in the Statement of Concepts in that repurchase agreements are reduced by the amounts of any collateral shortfalls. The guidance also prohibits the recognition of gains on sales of securities when there is an agreement to repurchase.

Drafting Notes/Comments

- AVR/IMR is addressed in *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

21. Chapter 1 in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies contain the following guidance relating to repurchase agreements and dollar repurchase agreements:

> When a bond is sold and an equivalent security (a security of the same issuer having equal principal value, coupon rate, and maturity date) is to be repurchased pursuant to the terms of the reverse repurchase agreement, the transaction is accounted for as a financing (borrowing) transaction. A liability is recorded for the amount of the proceeds of the sale and the sold securities are not removed from the accounting records. The differential in the selling price and the repurchased price is recorded as interest expense and not netted against interest income. Amortization of original premium or accrual of original discount and interest income on the sold securities are recorded as though the securities had not been sold.
>
> When a bond is sold and a security which is not an equivalent security is to be repurchased pursuant to a reverse repurchase agreement, the transaction is to be accounted for as two separate transactions. The sold security, including unamortized original premium for or unaccrued original discount, is to be removed from the accounting records and the resulting gain or loss recognized immediately. When the non-equivalent security is acquired pursuant to the reverse repurchase agreement, it is recorded at cost.
>
> Dollar Repurchase Agreements
>
> A dollar repurchase agreement is an agreement (contract) to sell and repurchase pass-through certificates sponsored by the Government National Mortgage Association (GNMA), mortgage participation certificates issued by the Federal Home Loan Mortgage Corporation (FHLMC) or similar securities issued by the Federal National Mortgage Association (FNMA). These instruments are generally referred to as mortgage-backed securities. These contracts do not fall under the definition of equivalent securities previously discussed under Loaned Bonds or Bonds Subject to Reverse Repurchase Agreements.

Where the law, rules, or regulations of the insurer's state of domicile permit such activity, mortgage-backed securities sold and reacquired under a dollar repurchase agreement or purchased and resold under a reverse dollar repurchase agreement should be accounted for as discussed below.

In dollar repurchase/dollar reverse repurchase agreements, the mortgage-backed securities involved may or may not be substantially the same. If the mortgage-backed securities are substantially the same, the dollar repurchase or dollar reverse repurchase agreement is treated as a financing. If the mortgage-backed securities are not substantially the same, the transactions are treated as a sale and purchase or purchase and sale of different securities.

For mortgage-backed securities to be substantially the same, all the following criteria must be met:

1. The mortgage-backed securities must have the same primary obligor, except for securities guaranteed by the United States or an agency thereof, in which case the guarantor must be the same.
2. The mortgage-backed securities must be identical in form and type. For example, the exchange of GNMA I securities for GNMA II securities would not meet the criterion.
3. The mortgage-backed securities must bear the identical contractual interest rate.
4. The mortgage-backed securities must be similar with respect to maturities (expected remaining lives) resulting in approximately the same market yield.
5. The mortgage-backed securities must be collateralized by a similar pool of mortgages, such as single-family residential mortgages.
6. The aggregate principal amounts of the mortgage-backed securities sold and repurchased must be substantially the same. For mortgage-backed securities to meet this criterion, the principal amount of the certificates repurchased must be within 2.5% (plus or minus) of the principal amount of the original certificates. For example, if the principal amount of mortgage-backed securities sold is $1,000,000, the principal amount of mortgage-backed securities reacquired must be between $1,025,000 and $975,000 to qualify under this criterion.

If the mortgage-backed securities involved in a dollar repurchase agreement qualify under the above criteria, the transactions shall be treated as financing for statutory accounting purposes. A liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities.

When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased may be more or less than the book value of the mortgage-backed securities sold (within 2.5%).

If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded. For example, assume that the certificates sold had a book value of $1,000,000 and a market value of $800,000 on the date of sale. This represents a fair market value 20% below the book value. On the date of repurchase, the new certificates have a principal amount of $990,000 (within 2.5% of the book value at date of sale). A loss of $2,000 ($1,000,000—$990,000 x 20%) is recorded.

22. The NAIC Annual Statement Instructions for Life and Accident and Health Insurance Companies include the following in the general interrogatories related to repurchase and reverse repurchase agreements.

> 20. The information to be reported on all such transactions including securities involved in reverse repurchase agreements, loaned to others, and for any other securities that were made available for use by another person during the year covered by this statement must include, but not necessarily be limited to, the following items for each such transaction:
>
> (1) Dates of transaction-securities delivered on ____________________
> securities returned on ____________________
>
> (2) Complete description of securities involved ______________
>
> (3) Number of shares or amount of bond or other security ________________
>
> (4) Market value on date securities were delivered $ _________
>
> (5) Market value on date securities were returned $ __________
>
> (6) Collateral value held $ __________________________________
>
> (7) Form of collateral _______________________________________
>
> (8) Collateral held by _______________________________________
> (name and address)
>
> (9) Names and addresses of all other persons involved in
> transaction ____
>
> Assets owned at year-end which were not under the exclusive control of the company as shown in the General Interrogatories are to be identified in the asset schedules by placing the following symbols to the far right in the description column alongside each such asset:

LS	-	loaned or leased to others;
RR	-	subject to reverse repurchase agreement;
DR	-	dollar repurchase agreement;
DRR	-	dollar reverse repurchase agreement;
C	-	pledged as collateral;
DB	-	placed under option agreement;
DBP	-	placed under an option agreement involving “asset transfers with put options”;
R*	-	letter stock or otherwise restricted as to sale;
O	-	other.

> Companies that had reverse repurchase agreements for periods of two working days or less, with numerous transactions, should combine those transactions in a separate report or each federally insured financial institution and respond to items (4), (5), and (8) as shown in this interrogatory.
>
> Companies should complete a full report for all other transactions, for everything owned at December 31 and respond to all nine items in this interrogatory.
>
> * Private placements are not to be included unless specific restrictions as to sale are included as part of the security agreement.

Generally Accepted Accounting Principles

23. *AICPA Statement of Position 90-3*, *Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position* (SOP 90-3) provides the following guidance:

> .13 To minimize diversity in practice, the AICPA Banking Committee, Savings and Loan Associations Committee, and Stockbrokerage and Investment Banking Committee believe the definition of substantially the same should be narrow. Therefore, the committees have concluded that for debt instruments, including mortgage-backed securities, to be substantially the same, all the following criteria must be met:
>
> a. The debt instruments must have the same primary obligor, except for debt instruments guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and terms of the guarantee must be the same.[1]
>
> [1] The exchange of pools of single-family loans would not meet this criterion because the mortgages comprising the pool do not have the same primary obligor, and would therefore not be considered substantially the same.
>
> b. The debt instruments must be identical in form and type so as to give the same risks and rights to the holder.[2]
>
> [2] For example, the following exchanges would not meet this criterion: GNMA I securities for GNMA II securities; loans to foreign debtors that are otherwise the same except for different U.S. foreign tax credit benefits (because such differences in the tax receipts associated with the loans result in instruments that vary "in form and type"); commercial paper for redeemable preferred stock.
>
> c. The debt instruments must bear the identical contractual interest rate.
>
> d. The debt instruments must have the same maturity except for mortgage-backed pass-through and pay-through securities for which the mortgages collateralizing the securities must have similar remaining weighted average maturities (WAMs) that result in approximately the same market yield.[3]
>
> [3] For example, the exchange of a "fast-pay" GNMA certificate (that is, a certificate with underlying mortgage loans that have a high prepayment record) for a "slow-pay" GNMA certificate would not meet this criterion because differences in the expected remaining lives of the certificates result in different market yields.
>
> e. Mortgage-backed pass-through and pay through securities must be collateralized by a similar pool of mortgages, such as single-family residential mortgages.
>
> f. The debt instruments must have the same aggregate unpaid principal amounts, except for mortgage-backed pass-through and pay-through securities, where the aggregate principal amounts of the mortgage-backed securities given up and the mortgage-backed securities reacquired must be within the accepted "good delivery" standard for the type of mortgage-backed security involved.[4]

[4] Participants in the mortgage-backed securities market have established parameters for what is considered acceptable delivery. These specific standards are defined by the Public Securities Association (PSA) and can be found in Uniform Practices for the Clearance and Settlement of Mortgage-Backed Securities and Other Related Securities, which is published by PSA.

24. *FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts—an interpretation of APB Opinion No. 10 and FASB Statement No. 105* provides the following guidance:

> 5. Opinion 10, paragraph 7, states that "it is a general principle of accounting that the offsetting of assets and liabilities in the balance sheet is improper except where a right of setoff exists." A right of setoff is a debtor's legal right, by contract or otherwise, to discharge all or a portion of the debt owed to another party by applying against the debt an amount that the other party owes to the debtor.[2] A right of setoff exists when all of the following conditions are met:
>
> [2] For purposes of this Interpretation, cash on deposit at a financial institution is to be considered by the depositor as cash rather than as an amount owed to the depositor.
>
> a. Each of two parties owes the other determinable amounts.
>
> b. The reporting party has the right to set off the amount owed with the amount owed by the other party.
>
> c. The reporting party intends to set off.
>
> d. The right of setoff is enforceable at law.
>
> A debtor having a valid right of setoff may offset the related asset and liability and report the net amount.[3]
>
> [3] This Interpretation does not address derecognition or nonrecognition of assets and liabilities. Derecognition by sale of an asset or extinguishment of a liability results in removal of a recognized asset or liability and generally results in the recognition of gain or loss. Although conceptually different, offsetting that results in a net amount of zero and derecognition with no gain or loss are indistinguishable in their effects on the statement of financial position. Likewise, not recognizing assets and liabilities of the same amount in financial statements achieves similar reported results.
>
> 6. Generally, debts may be set off if they exist between mutual debtors each acting in its capacity as both debtor and creditor. In particular cases, however, state laws about the right of setoff may provide results different from those normally provided by contract or as a matter of common law. Similarly, the U.S. Bankruptcy Code imposes restrictions on or prohibitions against the right of setoff in bankruptcy under certain circumstances. Legal constraints should be considered to determine whether the right of setoff is enforceable.

25. *FASB Interpretation No. 41*, *Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements—an interpretation of APB Opinion No. 10 and a modification of FASB Interpretation No. 39* (FIN 41) states the following:

> INTRODUCTION
>
> 1. The Board has been asked to clarify the circumstances in which amounts recognized as payables under repurchase agreements[1] may be offset against amounts recognized as

receivables under reverse repurchase agreements[2] and reported as a net amount in the statement of financial position.

[1] For purposes of this Interpretation, a repurchase agreement (repo) refers to a transaction that is accounted for as a collateralized borrowing in which a seller-borrower of securities sells those securities to a buyer-lender with an agreement to repurchase them at a stated price plus interest at a specified date or in specified circumstances. The "payable" under a repurchase agreement refers to the amount of the seller-borrower's obligation recognized for the future repurchase of the securities from the buyer-lender. In certain industries, the terminology is reversed; that is, entities in those industries refer to this type of agreement as a "reverse repo."

[2] For purposes of this Interpretation, a reverse repurchase agreement (reverse repo) refers to a transaction that is accounted for as a collateralized lending in which a buyer-lender buys securities with an agreement to resell them to the seller-borrower at a stated price plus interest at a specified date or in specified circumstances. The "receivable" under a reverse repurchase agreement refers to the amount due from the seller-borrower for the repurchase of the securities from the buyer-lender. In certain industries, the terminology is reversed; that is, entities in those industries refer to this type of agreement as a "repo."

INTERPRETATION

2. Paragraph 5 of *FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts*, sets forth the conditions necessary for a right of setoff to exist. Those conditions should be present to offset assets and liabilities in the statement of financial position unless offsetting is permitted by paragraph 10 of Interpretation 39 or by another accounting pronouncement listed in paragraph 7 of Interpretation 39.

3. Notwithstanding the condition in paragraph 5.c. of Interpretation 39, an enterprise may, but is not required to, offset amounts recognized as payables under repurchase agreements and amounts recognized as receivables under reverse repurchase agreements if all of the following conditions are met:

a. The repurchase and reverse repurchase agreements are executed with the same counterparty.

b. The repurchase and reverse repurchase agreements have the same explicit settlement date specified at the inception of the agreement.

c. The repurchase and reverse repurchase agreements are executed in accordance with a master netting arrangement.[3]

[3] The qualifications for a master netting arrangement are stated in paragraph 10 of Interpretation 39 and are discussed in paragraphs 21 and 30 of that Interpretation.

d. The securities underlying the repurchase and reverse repurchase agreements exist in "book entry" form and can be transferred only by means of entries in the records of the transfer system operator or securities custodian.[4]

[4] "Book entry" securities meeting the criterion in paragraph 3.d. exist only as items in accounting records maintained by a transfer system operator. This requirement does not preclude offsetting of securities held in "book entry" form solely because other securities of the same issue exist in other forms.

e. The repurchase and reverse repurchase agreements will be settled on a securities transfer system that operates in the manner described in paragraph 4, and the enterprise must have associated banking arrangements in place as described in paragraph 4. Cash settlements for securities transferred are made under established banking arrangements that provide that the enterprise will need available cash on deposit only for any net amounts that are due at the end of the business day. It must be probable[5] that the associated banking arrangements will provide sufficient daylight overdraft or other intraday credit[6] at the settlement date for each of the parties.

[5] The term probable is used in this Interpretation consistent with its use in paragraph 3.a. of FASB Statement No. 5, Accounting for Contingencies, to mean that a transaction or event is likely to occur.

[6] Daylight overdraft or other intraday credit refers to the accommodation in the banking arrangements that allows transactions to be completed even if there is insufficient cash on deposit during the day provided there is sufficient cash to cover the net cash requirement at the end of the day. That accommodation may be through a credit facility, including a credit facility for which a fee is charged, or from a deposit of collateral.

f. The enterprise intends to use the same account at the clearing bank or other financial institution at the settlement date in transacting both (1) the cash inflows resulting from the settlement of the reverse repurchase agreement and (2) the cash outflows in settlement of the offsetting repurchase agreement.

The enterprise's choice to offset or not must be applied consistently. Net receivables resulting from the application of this Interpretation should not be offset against net payables resulting from the application of this Interpretation in the statement of financial position.

4. In a securities transfer system for repurchase and reverse repurchase agreements that meets the requirements of paragraph e., cash transfers are initiated by notification from the owner of record of the securities to its securities custodian[7] to transfer those securities to the counterparty to the agreement. Under associated banking arrangements, each party to a same-day settlement of both a repurchase agreement and a reverse repurchase agreement would be obligated to pay a gross amount of cash for the securities transferred from its counterparty but would be able to reduce that gross obligation by notifying its securities custodian to transfer other securities to that counterparty the same day. Thus, each party is responsible for maintaining available cash on deposit only for the amount of any net payable unless it fails to instruct its securities custodian to transfer securities to its counterparty.[8] If both parties transfer the appropriate securities in settlement of the repurchase and reverse repurchase agreements, the party with a net receivable will not need any cash to facilitate the settlement, while the party with a net payable will need only to have available the required net amount due at the end of the business day.

[7] The securities custodian for a securities transfer system may be the bank or financial institution that executes securities transfers over the securities transfer system, and “book entry” securities exist only in electronic form on the records of the transfer system operator for each entity that has a security account with the transfer system operator. “Book entry” securities exist only as items of account on the “controlling” records of the transfer system operator. Banks or other financial institutions may maintain “subsidiary” records of “book entry” securities. “Book entry” securities may be transferred on the subsidiary records of a bank or financial institution but, for entities that have a security account with the transfer system operator, may be transferred from the account of such an entity only through the transfer system operator.

[8] Failure by either party to instruct its securities custodian to transfer securities owned of record would result in that party's failing to receive cash from the counterparty and, thereby, would require that party to have available cash on deposit for the gross payable due for securities transferred to it.

> The failure also should be an event of default under the master netting arrangement required by paragraph 3.c. The event of default, in turn, should entitle the other party to terminate the arrangement and demand the immediate net settlement of all contracts.

26. *FASB Statement No. 125*, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* provides the following guidance:

> Accounting for Transfers and Servicing of Financial Assets
>
> 9. A transfer of financial assets (or all or a portion of a financial asset) in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if and only if all of the following conditions are met:
>
> a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (paragraphs 23 and 24).
>
> b. Either (1) each transferee obtains the right—free of conditions that constrain it from taking advantage of that right (paragraph 25)—to pledge or exchange the transferred assets or (2) the transferee is a qualifying special-purpose entity (paragraph 26) and the holders of beneficial interests in that entity have the right—free of conditions that constrain them from taking advantage of that right (paragraph 25)—to pledge or exchange those interests.
>
> c. The transferor does not maintain effective control over the transferred assets through (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 27-29) or (2) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable (paragraph 30).
>
> 10. Upon completion of any transfer of financial assets, the transferor shall:
>
> a. Continue to carry in its statement of financial position any retained interest in the transferred assets, including, if applicable, servicing assets (paragraphs 35-41), beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization (paragraphs 47-58), and retained undivided interests (paragraph 33).
>
> b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (paragraphs 31-34).
>
> 11. Upon completion[3] of a transfer of assets that satisfies the conditions to be accounted for as a sale (paragraph 9), the transferor (seller) shall:
>
> a. Derecognize all assets sold
>
> b. Recognize all assets obtained and liabilities incurred in consideration as proceeds of the sale, including cash, put or call options held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations), swaps (for example, provisions that convert interest rates from fixed to variable), and servicing liabilities, if applicable (paragraphs 31, 32, and 35-41)
>
> c. Initially measure at fair value assets obtained and liabilities incurred in a sale (paragraphs 42-44) or, if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraphs 45 and 46)

d. Recognize in earnings any gain or loss on the sale.
The transferee shall recognize all assets obtained and any liabilities incurred and initially measure them at fair value (in aggregate, presumptively the price paid).

[3] Although a transfer of securities may not be considered to have reached completion until the settlement date, this Statement does not modify other generally accepted accounting principles, including *FASB Statement No. 35*, *Accounting and Reporting by Defined Benefit Pension Plans*, and AICPA Statements of Position and audit and accounting Guides for certain industries, that require accounting at the trade date for certain contracts to purchase or sell securities.

12. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) does not meet the criteria for a sale in paragraph 9, the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (paragraph 15).

Recognition and Measurement of Servicing Assets and Liabilities

13. Each time an entity undertakes an obligation to service financial assets it shall recognize either a servicing asset or a servicing liability for that servicing contract, unless it securitizes the assets, retains all of the resulting securities, and classifies them as debt securities held-to-maturity in accordance with *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities*. If the servicing asset or liability was purchased or assumed rather than undertaken in a sale or securitization of the financial assets being serviced, it shall be measured initially at its fair value, presumptively the price paid. A servicing asset or liability shall be amortized in proportion to and over the period of estimated net servicing income (if servicing revenues exceed servicing costs) or net servicing loss (if servicing costs exceed servicing revenues). A servicing asset or liability shall be assessed for impairment or increased obligation based on its fair value (paragraphs 35-38).

Financial Assets Subject to Prepayment

Interest-only strips, loans, other receivables, or retained interests in securitizations that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment shall be subsequently measured like investments in debt securities classified as available-for-sale or trading under Statement 115, as amended by this Statement (paragraph 233).[4]

[4] As a result of that amendment to Statement 115, securities that were previously classified as held-to-maturity may need to be reclassified. Reclassifications of interest-only strips or other securities from held-to-maturity to available-for-sale required to initially apply this Statement would not call into question an entity's intent to hold other debt securities to maturity in the future.

Secured Borrowings and Collateral

15. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (paragraph 12). The accounting for collateral by the debtor (or obligor) and the secured party depends on whether the secured party

has taken control over the collateral and on the rights and obligations that result from the collateral arrangement:

a. If (1) the secured party is permitted by contract or custom to sell or repledge the collateral and (2) the debtor does not have the right and ability to redeem the collateral on short notice, for example, by substituting other collateral or terminating the contract, then
   (i) The debtor shall reclassify that asset and report that asset in its statement of financial position separately (for example, as securities receivable from broker) from other assets not so encumbered.
   (ii) The secured party shall recognize that collateral as its asset, initially measure it at fair value, and also recognize its obligation to return it.
b. If the secured party sells or repledges collateral on terms that do not give it the right and ability to repurchase or redeem the collateral from the transferee on short notice and thus may impair the debtor's right to redeem it, the secured party shall recognize the proceeds from the sale or the asset repledged and its obligation to return the asset to the extent that it has not already recognized them. The sale or repledging of the asset is a transfer subject to the provisions of this Statement.
c. If the debtor defaults under the terms of the secured contract and is no longer entitled to redeem the collateral, it shall derecognize the collateral, and the secured party shall recognize the collateral as its asset to the extent it has not already recognized it and initially measure it at fair value.
d. Otherwise, the debtor shall continue to carry the collateral as its asset, and the secured party shall not recognize the pledged asset.

Extinguishments of Liabilities

16. A debtor shall derecognize a liability if and only if it has been extinguished. A liability has been extinguished if either of the following conditions is met:

a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities whether the securities are canceled or held as so-called treasury bonds.
b. The debtor is legally released[5] from being the primary obligor under the liability, either judicially or by the creditor.

[5] If nonrecourse debt (such as certain mortgage loans) is assumed by a third party in conjunction with the sale of an asset that serves as sole collateral for that debt, the sale and related assumption effectively accomplish a legal release of the seller-debtor for purposes of applying this Statement.

Disclosures

17. An entity shall disclose the following:

   a. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security
   b. If debt was considered to be extinguished by in-substance defeasance under the provisions of *FASB Statement No. 76, Extinguishment of Debt*, prior to the effective date of this Statement, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period so long as that debt remains outstanding
   c. If assets are set aside after the effective date of this Statement solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets

d. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value

e. For all servicing assets and servicing liabilities:

  (1) The amounts of servicing assets or liabilities recognized and amortized during the period

  (2) The fair value of recognized servicing assets and liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value

  (3) The risk characteristics of the underlying financial assets used to stratify recognized servicing assets for purposes of measuring impairment in accordance with paragraph 37

  (4) The activity in any valuation allowance for impairment of recognized servicing assets—including beginning and ending balances, aggregate additions charged and reductions credited to operations, and aggregate direct write-downs charged against the allowances—for each period for which results of operations are presented.

23. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its affiliates, except for an affiliate that is a qualifying special-purpose entity designed to make remote the possibility that it would enter bankruptcy or other receivership (paragraph 57.c.).

24. Whether securitizations isolate transferred assets may depend on such factors as whether the securitization is accomplished in one step or two steps (paragraphs 54-58). Many common financial transactions, for example, typical repurchase agreements and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

25. Many transferor-imposed or other conditions on a transferee's contractual right to pledge or exchange a transferred asset constrain a transferee from taking advantage of that right. However, a transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission to sell or pledge that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor generally does not constrain a transferee from pledging or exchanging the asset and, therefore, presumptively does not preclude a transfer containing such a condition from being accounted for as a sale. For example, a prohibition on sale to the transferor’s competitor would not constrain the transferee if it were able to sell the transferred assets to a number of other parties; however, it would be a constraint if that competitor were the only potential willing buyer.

Agreements That Maintain Effective Control over Transferred Assets

27. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor's effective control over those assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:

a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 28).
b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (paragraph 29).
c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price.
d. The agreement is entered into concurrently with the transfer.

28. To be substantially the same,[9] the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same)
b. Identical form and type so as to provide the same risks and rights
c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield)
d. Identical contractual interest rates
e. Similar assets as collateral
f. The same aggregate unpaid principal amount or principal amounts within accepted "good delivery" standards for the type of security involved.

[9] In this Statement, the term substantially the same is used consistently with the usage of that term in the *AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments*, as Used in Certain Audit Guides and a Statement of Position.

29. To be able to repurchase or redeem assets on substantially the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

30. A call option or forward contract that entitles the transferor to repurchase, prior to maturity, transferred assets not readily obtainable elsewhere maintains the transferor's effective control, because it would constrain the transferee from exchanging those assets, unless it is only a cleanup call.

Repurchase Agreements and "Wash Sales"

66. Government securities dealers, banks, other financial institutions, and corporate investors commonly use repurchase agreements to obtain or use short-term funds. Under those agreements, the transferor ("repo party") transfers a security to a transferee ("repo counterparty" or "reverse party") in exchange for cash[12] and concurrently agrees to reacquire that security at a future date for an amount equal to the cash exchanged plus a stipulated "interest factor".

[12] Other securities or letters of credit rarely are exchanged in repurchase agreements instead of cash.

67. Repurchase agreements can be effected in a variety of ways. Some repurchase agreements are similar to securities lending transactions in that the transferee has the right to sell or repledge the securities to a third party during the term of the repurchase agreement. In other repurchase agreements, the transferee does no have he right to sell or repledge the securities during the term of the repurchase agreement. For example, in a tri-party repurchase agreement, the transferor transfers securities to an independent third-party custodian that holds the securities during the term of the repurchase agreement. Also, many repurchase agreements are for short terms, often overnight, or have indefinite terms that allow either party to terminate the arrangement on short notice. However, other repurchase agreements are for longer terms, sometimes until the maturity of the transferred asset. Some repurchase agreements calls for repurchase of securities that need not be identical to the securities transferred.

68. If the criteria of paragraph 9 are met, including the third criterion, the transferor shall account for the repurchase agreement as a sale of financial assets and a forward repurchase commitment, and the transferee shall account for the agreement as a purchase of financial assets and a forward resale commitment. Others transfers that are accompanied by an agreement to repurchase the transferred assets that shall be accounted for as sales include transfers with agreements to repurchase at maturity and transfers with repurchase agreements in which the transferee has not obtained collateral sufficient to fund substantially all of the cost of purchasing replacement assets.

69. Furthermore, “wash sales” that previously were not recognized if the same financial asset was purchased soon before or after the sale shall be accounted for as sales under this Statement. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

70. As with securities lending transactions, under many agreements to repurchase transferred assets before their maturity the transferor maintains effective control over those assets. Repurchase agreements that do not meet all the criteria in paragraph 9 shall be treated as secured borrowing. Fixed-coupon and dollar-roll repurchase agreements, and other contracts under which the securities to be repurchased need not be the same as securities sold, qualify as borrowing if the return of substantially the same (paragraph 28) securities as those concurrently transferred is assured. Therefore, those transactions shall be accounted for as secured borrowings by both parties to the transfer.

71. If a transferor has transferred securities to an independent third-party custodian, or to a transferee, under conditions that preclude the transferee from selling or repledging the assets during the terms of the repurchase agreement (as in most tri-party repurchase agreements), the transferor has not surrendered control over those assets. In those circumstances, the transferee does not acquire the right to sell or repledge the securities during the term of the repurchase agreement; therefore, it does not have access to the benefits embodied in those assets. The transferee shall not record those assets as its own, nor shall the transferor derecognize those assets.

Statutory Issue Paper No. 46

Accounting for Investments in Subsidiary, Controlled and Affiliated Entities

STATUS
Finalized March 16, 1998

Current Authoritative Guidance for Investments in Subsidiary, Controlled and Affiliated Entities: SSAP No. 97

This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 46

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for investments in subsidiaries, controlled and affiliated entities (hereafter referred to as SCA entities) specifies various valuation bases. The basic guidance is set forth in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* (SVO Purposes and Procedures) and the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. GAAP guidance requires consolidation of majority-owned and controlled subsidiaries and the equity method for all other significant investments in subsidiaries and other entities where the reporting entity has the ability to exercise significant influence over operating and financial policies of the investee. Consolidation of majority-owned subsidiaries was rejected in *Issue Paper No. 1—Consolidation of Majority-Owned Subsidiaries*.

2. The purpose of this issue paper is to establish statutory accounting principles for investments in SCA entities that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Definitions

3. A parent and subsidiary shall be defined as:

   a. Parent - An entity that directly or indirectly owns and controls the reporting entity.

   b. Subsidiary - An entity that is, directly or indirectly, owned and controlled by the reporting entity.

4. An affiliate shall be defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and partnerships, joint ventures and limited liability companies as defined in *Issue Paper No. 48—Investments in Joint Ventures, Partnerships and Limited Liability Companies* (Issue Paper No. 48). Those entities are accounted for under the guidance provided in Issue Paper No. 48 which requires the equity method for all such investments.

5. Control means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of the investee, whether through the ownership of voting securities, by

contract other than a commercial contract for goods or nonmanagement services, by common management, or otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity. The 10% ownership threshold shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity the total interest is 13% and therefore each member of the affiliated group shall be presumed to have control. These presumptions can be overcome by predominant evidence to the contrary, however, they shall stand until overcome by such predominant contradictory evidence. A reporting entity with 10% or more of the voting interest shall evaluate all facts and circumstances relating to the investment and reach a judgment about whether the presumption of control is overcome. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting interest of an investee.

6. Investments in SCA entities meet the definition of assets as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this paper.

Applying the Market Valuation, Statutory Equity and GAAP Equity Methods

7. The admitted investments in SCA entities shall be recorded using a market valuation approach (as described in paragraph 7.a.), or equity methods (as described in paragraph 7.b.).

a. In order to use the market valuation approach for SCA entities, the following requirements apply:

i. Once the reporting entity elects to use the market valuation approach for a particular subsidiary, the reporting entity cannot change the valuation method to another method (e.g., equity) without the approval of the domiciliary commissioner;

ii. The subsidiary must be traded on one of the following three major exchanges: (1) the New York Stock Exchange, (2) the American Stock Exchange, or (3) the NASDAQ National exchange;

iii. The reporting entity must submit subsidiary information to the Securities Valuation Office (SVO) for their calculation of the subsidiary's market value. Such calculation could result in further discounts in market value above the established base discounts based on ownership percentages detailed below;

iv. Ownership percentages for determining the discount rate shall be measured at the holding company level;

v. If an investment in a SCA results in an ownership percentage between 10% and 50%, a base discount percentage between 0% and 20% on a sliding scale basis is required;

vi. If an investment in a SCA results in an ownership percentage greater than 50% up to and including 80%, a base discount percentage between 20% and 30% on a sliding scale basis is required;

vii. If an investment in a SCA results in an ownership percentage greater than 80% up to and including 85%, a minimum base discount percentage of 30% is required. Further, the SCA must have at least two million shares outstanding, with a total market value of at least $50 million in the public's control; and

viii. Any ownership percentages exceeding 85% will result in the SCA being recorded on an equity method.

b. If a SCA investment does not meet the requirements for the market valuation approach in paragraph 7.a. or, if the requirements are met, but a reporting entity elects not to use that approach, investments in SCAs shall be recorded as follows:

i. Investments in insurance SCA entities shall be recorded based on the underlying statutory equity of the respective entity's financial statements, adjusted for unamortized goodwill as provided for in *Issue Paper No. 68—Business Combinations and Goodwill* (Issue Paper No. 68);

ii. Investments in noninsurance SCA entities that have no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates, shall be recorded based on the underlying equity of the respective entity's financial statements adjusted to a statutory basis of accounting and the resultant proportionate share of the subsidiary's adjusted surplus, adjusted for unamortized goodwill as provided for in Issue Paper No. 68. Examples include but are not limited to: 1) an insurer and a SCA entity that leases autos, furniture, office equipment, or computer equipment to the insurer, 2) an insurer and a SCA entity that owns real estate property that is leased to the insurer for office space, and 3) an insurer and an SCA entity which holds investments which an insurer could acquire directly (i.e., "look through" investment subsidiary);

iii. Investments in noninsurance SCA entities that have significant ongoing operations beyond the holding of assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates, shall be recorded based on the audited GAAP equity of the investee. Examples include but are not limited to: 1) a property-casualty or life insurer and a SCA entity that is an oil and gas venture, and 2) a property-casualty or life insurer and a SCA manufacturer.

8. For investments in entities recorded on the underlying audited GAAP equity of the investee the amount to be recorded shall be defined as the initial investment in an investee at cost (as defined in Issue Paper No. 68). The carrying amount of the investment shall be adjusted to recognize the reporting entity's share of the audited GAAP basis earnings or losses of the investee after the date of acquisition, adjusted for any dividends received. A reporting entity's share of adjustments that are recorded directly to the investee's stockholder's equity under GAAP shall also be recorded as adjustments to the carrying value of the investment with an offsetting amount recorded directly to unrealized capital gains and losses on investments.

9. The statutory equity method of accounting, as described in subparagraph 7.b.i., shall be applied by recording an initial investment in an investee at cost, which is defined in Issue Paper No. 68 as the sum of a) any cash payment, b) the fair value of other assets distributed, c) the fair value of any liabilities assumed and d) any direct costs of the acquisition. After the date of acquisition, the initial investment amount shall be adjusted for the amortization of goodwill and to recognize the reporting entity's share of statutory basis earnings or losses and other changes in surplus (including changes in nonadmitted assets) of the investee. This represents the carrying amount of the investment. To apply the equity method of accounting to investees as described in subparagraphs 7.b.ii., certain adjustments shall be made to GAAP (or other basis) income to determine the reporting entity's share of the investee's statutory earnings and losses and other changes in surplus. Further guidance on recording the initial investment (including

goodwill and negative goodwill) and other aspects of applying the equity method are discussed in paragraph 11 below.

10. If the reporting entity is using an equity method, the reporting entity's share of undistributed earnings and losses of the investee shall be included in unrealized gains and losses of the reporting entity. The reporting entity's share of other changes in the investee's surplus (e.g., the change in the investee's nonadmitted assets) shall be recorded by the investor as a component of unrealized capital gains and losses on investments. If the reporting entity uses the market valuation approach outlined in paragraph 7.a., changes in that valuation shall be included in unrealized gains and losses. Dividends or distributions received from an investee shall be recognized in investment income when declared to the extent that they are not in excess of the undistributed accumulated earnings attributable to the investee. Dividends or distributions declared in excess of the undistributed accumulated earnings attributable to the investee shall reduce the carrying amount of the investment.

11. The procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting, as applicable, to investments in SCA entities:

a. A difference between the cost of an investment and the underlying equity in the statutory book value (GAAP book value if a noninsurance SCA entity that has significant ongoing operations beyond the holding of assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates) of the acquired company at the date of acquisition shall be accounted for in accordance with Issue Paper No. 68.

b. A transaction of an investee of a capital nature that affects the reporting entity's share of stockholders' equity of the investee shall be reflected as an unrealized gain or loss (e.g., where the investee issues additional stock or a new class of stock that impacts the reporting entity's equity ownership in the investee, the reporting entity's recorded investment shall be adjusted to reflect the transaction).

c. Realized gains or losses on the sale of an investment in an SCA entity shall be recorded in an amount equal to the difference at the time of sale between the selling price and carrying amount of the investment plus any previously recorded unrealized gain or loss.

d. If financial statements of an investee are not sufficiently timely for the reporting entity to apply an equity method to the investee's current results of operations, the reporting entity shall record its share of the earnings or losses of an investee from the most recent available financial statements. A lag in reporting shall be consistent from period to period.

e. A reporting entity's share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero and shall not provide for additional losses unless the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee (guaranteed obligations meeting the definition of liabilities in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5) shall be recorded as liabilities). If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that the equity method was suspended.

f. When an investee has outstanding cumulative preferred stock, the reporting entity shall compute its share of earnings (losses) after deducting the investee's preferred dividends, whether or not such dividends are declared.

g. An investment in an SCA entity may fall below the level of ownership described in paragraph 5 from the sale of a portion of an investment by the reporting entity, the sale of additional interests by an investee, or other transactions. The reporting entity shall discontinue accruing its share of the earnings or losses of the investee for an investment that no longer qualifies for an equity method. The earnings or losses that relate to the investment interests retained by the reporting entity and that were previously accrued shall remain as a part of the carrying amount of the investment. The investment account shall not be adjusted retroactively under the conditions described in this subparagraph. However, dividends received by the investor in subsequent periods which exceed the reporting entity's share of earnings for such periods shall be applied as a reduction of the carrying amount of the investment.

h. An investment in a SCA entity that was previously accounted for under one method may become qualified for use of another method (as described in paragraph 7) because of a change in the level of ownership (i.e., acquisition of additional interests by the reporting entity, acquisition or retirement of interests by the investee, or other transactions, or a change in facts or circumstances (e.g., paragraphs 7.a.i., 7.a.viii.)). When an investment qualifies for use of another method of accounting, the reporting entity shall adopt the new method of accounting and the investment shall be adjusted to reflect the reporting entity's equity interest in the SCA entity under the new method. A corresponding amount shall be recorded as an unrealized gain or loss.

12. A reporting entity that owns an interest in itself via direct ownership of shares of an upstream intermediate or ultimate parent shall reduce the value of such shares for the reciprocal ownership. If the shares of the parent are owned indirectly by a reporting entity, via a down-stream SCA entity, the directly held entity, which owns the parent's shares, shall have its value reduced for the reciprocal ownership.

13. Any parent reporting entity that owns an interest in itself via either direct or indirect ownership of a down-stream affiliate, which in turn owns shares of the parent reporting entity, shall eliminate its proportionate interest in these shares from the valuation of such affiliate.

Impairment

14. When there is a decline in the fair value of an asset owned by an SCA entity that is deemed to be other than temporary, the SCA entity shall write the asset down to fair value.

15. For any decline in the fair value of an investment in a SCA entity that is other than temporary, the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value which are determined to be other than temporary, shall be recorded as realized losses. This is consistent with Issue Paper No. 5. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment. A fair value of an investment that is below the carrying amount based on the statutory equity method or the existence of investee operating losses may indicate a loss in value, however, they are not necessarily indicative of a loss in value that is other than temporary.

Disclosures

16. The significance of an investment to the reporting entity's financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results

of operations of an investee. Disclosures as follow shall be made for all investments in SCA entities that exceed 10% of the total admitted assets of the reporting entity:

a. Financial statements of a reporting entity shall disclose (1) the name of each SCA entity and percentage of ownership of common stock, (2) the accounting policies of the reporting entity with respect to investments in SCA entities and (3) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., goodwill, other nonadmitted assets, market value or discounted market value adjustments) and the accounting treatment of the difference.

b. For those SCA entities for which a quoted market price is available, the aggregate value of each SCA investment based on the quoted market price and the difference, if any, between the amount at which the investment is carried and the quoted market price shall be disclosed.

c. Summarized information as to assets, liabilities, and results of operations shall be presented for SCA entities, either individually or in groups.

d. Conversion of outstanding convertible securities, exercise of outstanding options and warrants and other contingent issuances of an investee may have a significant effect on an investor's share of reported earnings or losses. Accordingly, material effects of possible conversions, exercises or contingent issuances shall be disclosed in notes to the financial statements of the reporting entity.

17. Any commitment or contingent commitment to a subsidiary, controlled or affiliated entity shall be disclosed (e.g., guarantees or commitments to provide additional capital contributions).

18. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment writedown:

a. A description of the impaired assets and the facts and circumstances leading to the impairment.

b. The amount of the impairment and how fair value was determined.

DISCUSSION

19. The statutory accounting principles described in the summary conclusion section are consistent with current statutory accounting guidance for investments in SCA entities except as follows:

a. Current statutory guidance provides reporting entities with five alternatives for the valuation of common stock investments in subsidiary, controlled and affiliated companies: (1) statutory capital and surplus value, (2) net worth excluding nonadmitted assets, (3) net worth based on audited GAAP financial statements, (4) cost adjusted to reflect statutory basis operating results and (5) market value. Selection of the appropriate alternative depends on whether the investee is an insurance company, whether its stock is publicly traded and whether it is a noninsurance company with audited financial statements.

b. Current statutory accounting guidance allows investments in noninsurance companies to be carried on the audited GAAP equity basis of accounting regardless of the nature of the investee's business operations and its relationship to the investor's business operations. However, in certain circumstances adjustments to reflect the equity in net assets on a statutory basis are required.

c. Current statutory accounting guidance permits, in certain situations, the recognition of equity in an SCA entity's earnings as income rather than unrealized gains and losses in the reporting entity's financial statements.

20. The statutory accounting principles described in the summary conclusion above reject *Accounting Principles Board Opinion No. 18*, *The Equity Method of Accounting for Investments in Common Stock* (APB 18), *AICPA Accounting Interpretations*, *The Equity Method of Accounting for Investments in Common Stock: Accounting Interpretations of APB Opinion No. 18, FASB Technical Bulletin No. 79-19*, *Investor's Accounting for Unrealized Losses on Marketable Securities Owned by an Equity Method Investee, FASB Emerging Issues Task Force No. 87-21*, *Change of Accounting Basis in Master Limited Partnership Transactions,* and *FASB Emerging Issues Task Force No. 96-16*, *Investor's Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The statutory accounting principles differ from GAAP promulgated as follows:

a. APB 18 defines control as ownership of over 50% of the outstanding voting stock but states that it may exist with a lesser percentage of ownership. The statutory accounting principles above define control as ownership of 10% or more of the outstanding voting interests.

b. APB 18 specifies the GAAP equity method of accounting for investments where the investor has the ability to exercise significant influence over operating and financial policies of an investee even though the investor holds 50% or less and specifies investments of 20% or more should lead to a presumption that an investor has such influence unless there is evidence to the contrary. The statutory accounting principles above specify the statutory equity method, if applicable, for investments of 10% or more of the voting interests unless predominant evidence to the contrary is presented.

c. APB 18 paragraph 19.c. specifies that under the GAAP equity method, an investor recognizes its share of the earnings or losses of an investee in the income statement as a single amount except for extraordinary items, whereas the statutory accounting principles described in paragraph 10 of the conclusion above specify when amounts shall be included in unrealized gains and losses or investment income.

21. The statutory accounting principles described in paragraph 5 above state control shall be presumed to exist for investees for which 10 percent or more of the voting interest is owned and presumed not to exist for investees for which less than 10 percent of the voting interest is owned. These presumptions can be overcome if there is predominant evidence to the contrary. *FASB Interpretation No. 35*, *Criteria for Applying the Equity Method of Accounting for Investment in Common Stock an Interpretation of APB Opinion No. 18* (FIN 35), provides guidance on determining when such evidence exists. This issue paper adopts FIN 35 which is included in its entirety in paragraph 29.

22. The statutory accounting principles outlined in the conclusion above are consistent with the conservatism and recognition concepts in the Statement of Concepts. Pertinent excerpts follow:

> Conservatism
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.

> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.
>
> Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

23. The statutory accounting principles outlined in the conclusion above require that the investment for noninsurance SCA entities that have no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates, and that do not qualify for the market valuation approach outlined in paragraph 7.a. or for which the reporting entity does not elect that approach, shall be recorded based on their underlying equity adjusted to a statutory basis of accounting. In applying the provisions of this issue paper to noninsurance SCA entities, the focus is on the primary operations of the SCA for purposes of determining if it is ancillary to the insurance industry and thereby requiring the application of provisions under subparagraph 7.b.ii. Entities whose primary operations do not provide services to the insurance industry fall under provisions of subparagraph 7.b.iii. It is not the intent of subparagraph 7.b.ii. to apply to an affiliate which has insignificant transactions within the insurance industry. Although this is a subjective rule, a bright line test would not benefit insurers or regulators. This rule requires judgment by the reporting entity in making the determination and provides flexibility to the regulator in analyzing the determination. This is consistent with the objectives of statutory financial reporting which emphasize the measurement of solvency for the protection of policyholders. This is consistent with the concepts of conservatism and recognition described above.

Drafting Notes/Comments

- Business combinations and goodwill are addressed in *Issue Paper No. 68—Business Combinations and Goodwill*.
- CMO special purpose subsidiaries are addressed in *Issue Paper No. 86—Securitization*.
- Investment income due and accrued is addressed in *Issue Paper No. 34—Investment Income Due and Accrued*.
- Accounting for related party transactions is addressed in *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

24. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides the following guidance:

> CHAPTER 6
>
> INVESTMENTS IN SUBSIDIARY, CONTROLLED OR AFFILIATED COMPANIES
>
> Recent times have evidenced an increasing interest on the part of insurers in acquiring or organizing subsidiary companies for expanded corporate activities. Some insurers have done this through the vehicle of a separate holding company, whereas others have accommodated this aspect of their corporate operations and expansion directly within the framework of an existing insurance company.

Increasing interest has also developed within the regulatory agencies of various states, as well as the National Association of Insurance Commissioners (NAIC), with respect to regulation of investments in subsidiaries and the valuation of such investments. State insurance regulators are also concerned about transactions and commitments among parent, subsidiary, controlled, and affiliated companies because of the potential for detrimental impacts upon a particular insurance company.

Within this chapter the term SCA is intended to include parent, subsidiary, controlled, and affiliated companies.

Investments in SCA companies include debt security loans to and preferred and common stock. In general, the accounting for each type of investment is the same as it would be for any other bond, preferred stock, or common stock investment except that there are some special valuation considerations.

Loans to SCA companies are accounted for in the same manner as any other private placement bond. Preferred stock and common stock investments in SCA companies are subject to valuation procedures described below under Valuation.

A subsidiary, controlled, or affiliated company is generally defined in terms of controlling ownership in a company’s voting capital stock. Ownership of more than 50% provides undisputed control and 80% or more is sufficient for inclusion in a consolidated U.S. federal income tax return. When 50% or less of the outstanding stock is owned, control is dependent upon the influence that the owner of that block of stock may have on the other holders of outstanding capital stock.

The NAIC instructions for the annual statement define a “person” as an individual, corporation, or any other legal entity. A parent is any person that, directly or indirectly, owns or controls the insurer. A “subsidiary” is any person that is, directly or indirectly, owned or controlled by the insurer. An “affiliate” is any person that is, directly or indirectly, owned or controlled by the same person or by the same group of persons that, directly or indirectly, own or control the insurer. The term affiliate includes parents and subsidiaries. Control and affiliated status shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing 10% or more of the voting securities of any other person.

Allowable Investments

The insurance codes and regulations of the various states contain provisions setting forth the existing restrictions on investments in SCA companies by insurance companies and insurance holding companies. In general, a company may not invest, either directly or indirectly, an amount equal to or more than a certain percentage of its assets or its capital and surplus in the common stock of any one corporation. In the case of an investment in an insurance subsidiary, an insurance company may be allowed to invest amounts different from (generally in excess of) the amount allowable for investment in a non-insurance SCA company.

Valuation

The ultimate authority for SCA company valuation basis and procedures, as with other regulatory aspects of insurance operations, resides with the various state insurance departments. In practice, however, most states have come to utilize the provisions of the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* for the valuation of SCA companies. The specific provisions in this manual represent the efforts and recommendations of the NAIC Valuation of Securities (EX4) Task Force, and have been approved by the NAIC.

As noted in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, the principal alternatives for the valuation of common stock investments in SCA companies include:

1. Statutory capital and surplus value for an insurer whose common capital stock is not publicly traded.

2. Net worth of a non-insurance company, adjusted to use only those assets that would constitute admitted assets if owned directly by an insurance company.

3. Net worth of a non-insurance company provided the financial statements have been audited by an independent certified public accountant in accordance with generally accepted auditing standards. Such value shall be adjusted to reflect the equity in net assets on a statutory basis for any down-stream insurance subsidiary. Also, the value is subject to the limitations on goodwill and other intangible assets described below.

4. Cost adjusted to reflect subsequent operating results of the SCA company. Operating results for an insurer should be in accordance with statutory accounting requirements. Operating results of a non-insurance company should be from an independent certified public accountant's audited financial statement prepared in accordance with generally accepted accounting principles. Such value shall be adjusted to reflect the equity in net assets on a statutory basis for any down-stream insurance subsidiary. Any goodwill and other intangible assets are subject to the limitations described below.

5. Market value for a partially owned company that is listed and publicly traded on a national securities exchange or entered in the NASDAQ National Market System.

A valuation basis used shall be used consistently thereafter unless a change is substantiated as reasonable and approved in writing by the NAIC Securities Valuation Office staff.

An insurer which owns an interest in itself via direct ownership of shares of an upstream intermediate or ultimate parent must reduce the value of such shares for the reciprocal ownership. If the shares of the parent are owned indirectly by an insurer, via a down-stream subsidiary, controlled or affiliated company, the directly held company, which owns the parent's shares, will have its value reduced for the reciprocal ownership.

Any parent insurer which owns an interest in itself via either direct or indirect ownership of a down-stream affiliate, which in turn owns shares of the parent insurer, shall eliminate its proportionate interest in these shares from the valuation of such affiliate. The Securities Valuation Office provides a worksheet for both of these reciprocal ownership elimination computations.

Valuation of common stock investments in SCA companies should be computed after provision for the liquidation value for any preferred stock interest in the SCA company.

The alternatives for market valuation of preferred stock investments in SCA companies are generally similar to those for non-SCA preferred shares. However, preferred stocks of wholly owned subsidiaries of insurance companies are valued in the same manner as the common stock of subsidiaries. The current manual should be consulted for the specific valuation basis in effect and the restrictions applicable to each basis.

Valuation of a CMO special purpose subsidiary is discussed in Chapter 1.

The change in value of subsidiaries is reported as part of the unrealized capital gain due to the change in the difference between asset value and cost.

Goodwill and Other Intangible Assets

The following provisions with respect to goodwill and other intangible assets are applicable:

1. Goodwill is defined as the difference between the cost and the net asset value of the subsidiary acquired. If the acquired subsidiary is an insurance company, statutory basis net asset value is used.

2. The statutory admissible amount of goodwill and other intangible assets in aggregate is limited at all times to a maximum of 10% of an insurance company's statutory capital and surplus.

3. For valuation purposes, the period over which goodwill may be written off (amortized to zero) is limited to 10 years.

4. Some special transitional provisions are included for goodwill in connection with subsidiaries acquired or under contract to be acquired on or prior to June 14, 1972.

Reporting on SCA Companies

The *Purposes and Procedures Manual of the NAIC Securities Valuation Office* provisions for the valuation of common stock investments in SCA Companies include requirements for the submission of reports on each SCA company to the Securities Valuation Office.

An original filing is to be made within 30 days after the acquisition or formation of a SCA company.

Thereafter, an annual filing is due not later than April 1 of each year for each directly and indirectly owned SCA company.

Accounting for Subsidiaries

Under statutory insurance accounting principles, the equity method of accounting for a subsidiary is usually limited to asset valuation of the subsidiary. The prevailing practice is to recognize equity in the undistributed income as an unidentified part of the unrealized capital gain due to change in the difference between asset value and cost. The practice of including equity in the undistributed income of subsidiaries in net gain from operations of a life insurer is followed by a minority of life insurers.

Accounting for a subsidiary using the equity method of accounting means that the parent company may recognize, in its income statement, its equity in the income of the subsidiary when it is reported by the subsidiary.

Under prevailing statutory accounting principles and practices, the accounting for a common stock investment in a subsidiary is the same as the accounting for any other common stock. The only difference is in the manner of investment valuation. However, the asset value of the subsidiary is the same under either of the acceptable alternatives described above. Nevertheless, the inclusion of equity in undistributed income of subsidiaries in net gain from operations can lead to certain abuses and, therefore, companies opting for its use should adhere to the following guidelines.

1. An insurer shall not include equity in undistributed income of subsidiaries in net gain from operations for any subsidiary unless it has the ability to exercise significant influence over the operating and financial policies of the subsidiary. That ability is presumed to exist for subsidiaries for which 20 percent or more of voting control is owned and is presumed not to exist for subsidiaries for which less than 20 percent of voting control is owned (unless otherwise defined by the domiciliary state). Both presumptions may be overcome by predominant evidence to the contrary. The ability to exercise influence or control may be indicated in several ways, such as representation on the board of directors, participation in policy-making processes, material intercompany transactions, interchange of managerial personnel, or technological dependency.

2. If an insurer includes in net gain from operations the equity in undistributed income of subsidiaries from any subsidiary, the insurer shall apply that practice to all subsidiaries that meet or exceed the significant influence test of the preceding paragraph.

3. Prior to changing the method for any subsidiary, the insurer shall first obtain approval from its domiciliary regulatory authority.

4. The filing of such separate supplemental information as may be required to disclose the equity in the undistributed income of the subsidiary.

25. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies provides similar guidance as above with the exception that it does not allow a reporting entity the option of including the equity in undistributed net income of subsidiaries in operations.

26. The *Purposes and Procedures Manual of the NAIC Securities Valuation Office* provides the following guidance in Section 5, Procedures for Valuing Common Stocks and Stock Warrants:

(B) Common Stocks of Subsidiary, Controlled or Affiliated Companies.

(a) Subject to the requirements of Section 5(B)(b), shares of common stock of an insurance or non-insurance company owned by an insurer, which insurer is either the parent of, or under direct or indirect common control, or affiliated with the issuer of such stock, shall have an Association Value determined on the basis of one of the following bases, provided, however, that such basis and the resultant value are reasonable and appropriate in the circumstances, and provided further that an insurer shall not be required to value the common stock of all its subsidiary, controlled and affiliated companies on the same basis. All of the following valuation bases shall be subject to an adjustment for any reciprocal share holdings as required by Section 5(B)(b)(x).

(i) the value of only such of the assets of such company as would constitute lawful investments for the insurer if acquired or held directly by the insurer; or

(ii) subject to the limitations imposed herein and under Section 5(B)(b)(ix), hereunder, the shares of a non-insurance company may be valued on the basis of the net worth of such company determined in accordance with generally accepted accounting principles, as of the end of its most recent fiscal year, provided, subject to (b) hereof, that the financial statements of the company for its most recent fiscal year have been audited by an independent certified public accountant in accordance with generally accepted auditing standards (the common stock of an insurance company may not be valued under this section); or

(If the common stock of a subsidiary, controlled or affiliated company is valued on the basis of generally accepted accounting principles in accordance with the provisions of this section, such value shall be adjusted to reflect the equity in net assets on a statutory basis with respect to the shares of any underlying insurance company subsidiaries and to reflect the market value appropriately discounted for any underlying company valued using option 5(B)(a)(v)); or

(iii) book value, defined as in Section 5(A)(c), provided, however, that the common stock of a non-insurance company may not be valued on the basis of this subsection (iii); or

(iv) subject to the limitations imposed under Section 5(B)(b)(ix), hereunder, a value equal to the cost of the common stock of such company, provided such value is determined and adjusted to reflect subsequent operating results (1) in the case of insurance companies in accordance with statutory accounting requirements, and (2) for other than insurance companies from an independent certified public accountant audited financial statement prepared in accordance with generally accepted accounting principles; or

(If the common stock of a subsidiary, controlled, or affiliated company is valued on the basis of generally accepted accounting principles in accordance with the provisions of this section the adjustment "to reflect subsequent operating results" shall include net changes in all the capital and surplus accounts on a statutory basis with respect to the shares of any underlying insurance company subsidiaries); or

(v) the market value of the common stock of the company, if the stock is listed on a national securities exchange or entered in the NASDAQ System (other securities traded over-the-counter will not be considered under this section); The share price will be discounted for legal restrictions requiring a registration before any sale may be made and the size and depth of the trading activity in relation to the publicly traded shares outstanding; or

(vi) See Section 3(C)(2) for valuation of preferred stocks of wholly-owned subsidiaries of insurance companies.

(vii) In applying the provisions of this section to insurers organized in foreign countries, the provisions of Subsection (i) of this section will be applied (based on financial statements for the most recent fiscal year as prepared by an independent certified public accountant), except where special considerations indicate other treatment would be appropriate; or

(viii) Any other value which the insurer can substantiate to the satisfaction of the SVO staff as being a reasonable value.

(b) (i) The provisions of Section 5(B) shall in all cases be subject to the procedures prescribed by state insurance department practices or laws concerning the use of acquisition cost or any other basis for the valuation of common stocks of subsidiary, controlled or affiliated companies.

(ii) Not later than April 1 of each year, every insurer shall file with the SVO staff, on the appropriate form prescribed by the Valuation of Securities Task Force, (Task Force), relevant information identifying, supporting and justifying the value of, and the basis of valuation used in accordance with the provisions of Section 5(B)(a) for each of its subsidiary, controlled or affiliated companies reported upon in the Annual Statement for the preceding year.

(iii) Within thirty (30) days after the acquisition or formation of a subsidiary, controlled or affiliated company, every insurer shall file with the SVO staff, on the appropriate form prescribed by the Task Force, relevant information identifying, supporting and justifying the value of, and the basis of valuation used in accordance with the provisions of Section 5(B)(a) for such company.

(iv) A valuation basis used for a subsidiary, controlled or affiliated company shall thereafter be consistently applied unless a change is substantiated as reasonable and on that basis is approved in writing by the SVO staff.

(v) If a subsidiary, controlled or affiliated company is valued on the basis of Section 5(B)(a)(ii) and its books are not audited at the time the valuation is included in the insurer's annual statement, the insurer shall thereafter report to the SVO staff and explain the difference, if any, between the value of such company as reported in the annual statement and the value as determined by audit. Such report and explanation shall be made as soon as possible following such audit.

(vi) If the common stock of any subsidiary, controlled or affiliated company is valued other than on the basis of market value as defined in Section 5(B)(a)(v), there shall be deducted from the otherwise determined value a sum equal to the value claimed for any of its assets which would not constitute admitted assets for the insurer if held directly by the insurer, if such assets

(1) are held by the company but used, under a lease arrangement or otherwise, significantly in the conduct of the insurer's business; or

(2) were acquired from or purchased for the benefit or use of the insurer by the company under circumstances that, in the opinion of the SVO staff, support a finding that the primary purpose of such acquisition was the evasion or avoidance of state laws or regulations pertaining to non-admitted assets.

(vii) The SVO staff may require filings to be by the use of such forms as it prescribes and may request such supplemental information as it deems desirable. The SVO staff shall utilize the information in such filings and supplemental information to make its determination as to the reasonableness and appropriateness of the valuation basis and the resultant value and shall notify the insurer and its state of domicile of such determination.

(viii) In making its determination as to the reasonableness and appropriateness of the valuation basis and the resultant value for each subsidiary, controlled or affiliated company, the SVO staff shall, among other relevant factors, take into account the following:

(1) the effect of subsidiary valuation on the solvency of the insurer (it being the intent hereof that doubt as to reasonableness shall be resolved by selection of a conservative valuation standard in those circumstances where the higher valuation would make an otherwise insolvent insurer appear solvent);

(2) if the valuation involves acquisition cost, the degree of affiliation between the insurer and the party from whom such company was acquired, the form of the consideration (cash, property, or the exchange of stock), evidence of ability to recover cost, and whether the acquisition price represented the result of arms-length dealing between economic equals; and,

(3) whether revaluation of assets is involved, and the reasonableness thereof.

(ix) With respect to values determined under Sections 5(B)(a)(ii) and 5(B)(a)(iv), amounts attributable to goodwill, as defined in (a) hereunder, and other intangibles shall not, except as provided in (b), hereunder, in the aggregate (of all direct and indirect subsidiaries), exceed, (either initially upon the acquisition of a subsidiary, or thereafter), 10% of the capital and surplus of an insurer, as reported in its next preceding Annual Statement. Such amounts shall, except as provided in (c) and (d), hereunder, be written off over a period not in excess of 10 years, commencing in all cases with the accounting period ending December 31, 1972. (For instructions as to the manner of write-off in certain cases, see (e) and (f), hereunder.)

(a) For the purposes of this section, "goodwill" shall be defined as the amount arising at a given point in time, resulting from an arms-length transaction involving the transfer of a business, representing the difference between the value of the consideration given and the net asset value of the properties acquired on the books of the predecessor company. With respect to insurance company subsidiaries "net asset value" shall mean statutory or annual statement book value. In addition any asset account representing the present value of future contractual or estimated revenue streams will also be deemed goodwill and subject to the limitations of this section.

(b) The limitation with respect to the permissible amount of goodwill shall not apply in the cases of subsidiaries acquired or under contract to be acquired on or prior to June 14, 1972.

(c) The write-off period for goodwill in the cases of subsidiaries described in (b), above, may, upon application to and approval by the Securities Valuation Office, be extended to not in excess of 20 years.

(d) Where warranted in exceptional cases, the Securities Valuation Office may require a more rapid write-off of goodwill than is otherwise provided in this section.

(e) In the cases of subsidiaries acquired or under contract to be acquired on or prior to June 14, 1972, an insurer may charge the write-off of goodwill to the common stock component of the Asset Valuation Reserve, where such a reserve exists.

(f) In the cases of subsidiaries acquired after June 14, 1972, amounts of goodwill in excess of 10% of an insurer's capital and surplus shall be written off immediately by a direct charge to surplus.

(x) An insurer which owns an interest in itself via direct ownership of shares of an upstream intermediate or ultimate parent must reduce the value of such shares for the reciprocal ownership. When such shares are owned directly their value, as determined under any option of Section 5(B)(a), will be reduced by a percentage amount calculated by dividing the common stockholders equity of the owning insurer by the common stockholders equity of the parent whose shares are owned. A filing with the Securities Valuation Office under the provisions of Section 5(B)(b)(ii) is required. If the shares of the parent are owned indirectly by an insurer, via a downstream subsidiary, controlled, or affiliated (SCA) company, the value of the directly held SCA company which statutorily consolidates the SCA company, which owns the parent shares, into its annual statement will have its value reduced by an amount equal to the common stockholders equity of the SCA owner divided by the common stockholders equity of the parent company whose shares are owned, multiplied times the statement value of the parents shares on the books of the SCA company owning such shares.

Any parent insurer, which owns an interest in itself, i.e., treasury stock, via either direct or indirect ownership of a downstream insurance or non-insurance subsidiary controlled or affiliated (SCA) company which in turn owns shares of the parent insurer, shall eliminate its proportionate interest in these shares from the statutory value of such SCA company as determined under the provision of Section 5(B)(a) if owned directly or from the statutory value of the direct SCA company which consolidates on either a GAAP or Statutory accounting basis the results of the SCA company owning the parent insurer's shares.

(xi) The SVO staff may question the reasonableness and appropriateness of the valuation basis or the resultant value for any subsidiary, controlled or affiliated company, and if, after giving notice and opportunity to be heard, the staff determines that such basis or value is not, under the specific circumstances of the case, reasonable and appropriate, the staff shall report such determination to the insurer and to the insurance department of the state in which the insurer is domiciled and may recommend to such department either an adjustment in valuation or the use of one of the other specified bases of valuation. The SVO staff shall notify the insurance departments of all states of any such determinations or redetermination of value. The SVO staff shall also report such findings of value to the Task Force.

27. The NAIC Annual Statement Instructions (Annual Statement Instructions) provide the following guidance:

SCHEDULE D PART 6 - SECTION 1
VALUATION OF SHARES OF
SUBSIDIARY, CONTROLLED OR AFFILIATED COMPANIES

If an insurer has any common stock or preferred stock reported for any of the following required groups, categories, or subcategories it shall report the subtotal amount of the corresponding group, category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number.

Group or Category	Line Number
Preferred Stock:	
Parent	0199999
U.S. Property & Casualty Insurer	0299999
U.S. Life Insurer	0399999
Alien Insurer	0499999
Non-Insurer Which Controls Insurer	0599999
*Investment Subsidiary	0699999
Other Affiliates	0799999
Subtotal - Preferred Stock	0899999
Common Stock:	
Parent	0999999
U.S. Property & Casualty Insurer	1099999
U.S. Life Insurer	1199999
Alien Insurer	1299999
Non-Insurer Which Controls Insurer	1399999
Investment Subsidiary	1499999
Other Affiliates	1599999
Subtotal - Common Stock	1699999
Total - Preferred and Common Stock	1799999

*NOTE: Investment Subsidiary shall mean any subsidiary, other than a holding company, engaged or organized primarily in the ownership and management of investments for the insurer. An investment subsidiary shall not include any broker dealer or a money management fund managing funds other than those of the parent company. The following criteria is applicable:

1. 95% or more of the investment subsidiary's assets would qualify as admitted assets;
2. The investment subsidiary's total liabilities are 5% or less of total assets;
3. Combining the pro-rata ownership shares of the assets of all the investment subsidiaries with the owning insurer's assets does not violate any state requirements concerning diversification of investments or limitations on investments in a single entity; and
4. The investment subsidiary's statement value does not exceed the imputed value on a statutory accounting basis. If the statement value does exceed the imputed statutory value, the insurer may either non-admit the excess or categorize such subsidiary in the "All Other Affiliates" category.

Column 1 - Description

List the preferred and common stock for each subsidiary, controlled, or affiliated (SCA) company, as defined in the General Section of the Annual Statement Instructions.

Description of preferred and common stock payable in a foreign currency should include the purchase price in that foreign currency.

All CUSIP numbers must conform to those published by the Securities Valuation Office (SVO). CUSIP numbers for all purchased publicly issued securities are available from the broker's confirmation or the certificate and will be identical to those used by the SVO. For private placement securities NAIC has created a special number called a PPN to be assigned by the Standard and Poor's CUSP Bureau.

NAIC numbers for privately placed (unregistered) securities (PPNs) owned prior to December 31, 1988, were made available to all insurers by the SVO in a special publication in early 1989 and are published in the December 31, 1989, and all subsequent versions of the Valuations of Securities manual. Number assignments for privately issued securities purchased subsequent to December 31, 1988, will be made by a special NAIC facility at the Standard and Poor's CUSP Bureau. Call the SVO (212 285-0010) for details. Such a number must be obtained and provided to the SVO before any privately issued security in can be listed in the Valuations of Securities manual.

Column 3 - NAIC Valuation Method

Include the NAIC valuation method as detailed in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*.

Any NAIC Valuation Method which has not been approved by the filing of a SUB 1 form with the NAIC Securities Valuation Office and which is entered by the insurer under its own judgment shall have the letter "Z" appended to the method designation.

Column 4 - Do Insurer's Admitted Assets Include Intangible Assets Connected with Holding of Such Company's Stock?

State whether the admitted assets shown by the insurer in this statement include, through the carrying value of stock of the SCA Company valued under the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, include intangible assets arising out of the purchase of such stock by the insurer or the purchase by the SCA Company of the stock of a lower-tier company controlled by the SCA Company. For purposes of this question, intangible assets at purchase shall be defined as the excess of the purchase price over the tangible net worth (total assets less intangible assets and total liabilities) represented by such shares as recorded, immediately prior to the date of purchase, on the books of the company whose stock was purchased.

Column 5 - If Yes, Amount of Stock Intangible Assets

If the answer in Column 4 is "Yes", give the amount of intangible assets involved. The intangible assets shown for the SCA Company should include any intangible assets which are included in the SCA Company's carrying value of the stock of one or more lower-tier companies controlled by the SCA Company. In all cases, the current intangible assets equal the intangible assets at purchase, as defined above, minus any write-off thereof between the date of purchase and the statement date. If the answer in Column 4 is "No", state "N/A" in Column 5.

Columns 7 and 8 - Stock of Such Company Owned by Insurer on Statement Date

State the number of shares of stock of the SCA Company owned by the insurer on the statement date, and the percent owned of the outstanding shares of the same class.

SCHEDULE D - PART 6 - SECTION 2

If an insurer has any common or preferred stock reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number.

Group or Category	Line Number
Preferred Stock	0199999
Common Stock	0299999
Total - Preferred and Common Stock	0399999

Column 1 - Name of Lower-Tier Company

List each company which is controlled by an SCA Company by means of a holding of a controlling block of the outstanding stock, either directly or through one or more intervening companies which are also so controlled. Do not include companies which are themselves SCA Companies listed in Section 1.

Column 2 - Name of Company Listed in Section 1 Which Controls Lower-Tier Company

If more than one SCA Company controls the lower-tier company, list each SCA Company and complete Columns 3 through 5 separately for each.

Column 3 - Amount of Intangible Assets Included in Amount Shown in Column 5, Section 1

As explained in the instructions for Section 1, this amount is based on the intangible assets at purchase of the stock of the lower-tier company, reduced by any subsequent write-off. The amount shown is also based on the proportionate ownership of the lower-tier company by the reporting insurer.
Columns 4 and 5 - Stock in Lower-Tier Company Owned Indirectly by Insurer on Statement Date

These figures represent the proportionate ownership by the reporting insurer through the particular SCA Company.

Generally Accepted Accounting Principles

28. APB 18 requires the equity method of accounting when the investors' voting stock gives it the ability to exercise significant influence over operating and financial policies even though the investor holds 50% or less of the voting stock. Otherwise the cost method is required. APB 18 also requires disclosure of subsidiary information if significant in relation to investor's financial position or results of operations. Rather than repeat APB 18 in the Relevant GAAP Literature Section of this paper a summary from The Current Text - Section I82 - Investments: Equity Method is provided.

INVESTMENTS: EQUITY METHOD SECTION I82

Sources: APB Opinion 18; AICPA Interpretations of APB Opinion 18; FASB Statement 58; FASB Statement 94; FASB Statement 109; FASB Statement 115; FASB Interpretation 35; FASB Technical Bulletin 79-19

Summary

The equity method is a method of accounting for investments. An investor using the equity method initially records an investment at cost. Subsequently, the carrying amount of the investment is increased to reflect the investor's share of income of the investee and is reduced to reflect the investor's share of losses of the investee or dividends received form the investee. The investor's share of the income or losses of the investee is included in the investor's net income as the investee reports them. Adjustments similar to those made in preparing consolidated financial statements, such as elimination of intercompany gains and losses and amortization of the difference between cost and underlying equity in net assets, also are applicable to the equity method. Under the equity method, and investment in common stock is generally shown in the balance sheet of an investor as a single amount. Likewise, an investor's share of earnings or losses from its investment is ordinarily shown in its income statement as a single amount.

This section requires that an investor use the equity method to account for investments in corporate joint ventures. This section also requires use of the equity method to account for other investments in common stock if the investor has the ability to exercise significant influence over operating and financial policies of the investee enterprise. That ability is presumed to exist for investments of 20 percent or more and is presumed not to exist for investments of less than 20 percent; both presumptions may be overcome by predominant evidence to the contrary.

29. *FASB Interpretation No. 35*, *Criteria for Applying the Equity Method of Accounting for Investments in Common Stock an Interpretation of APB Opinion No. 18*, provides the following guidance:

INTRODUCTION

1. The Board has been asked to clarify the provisions of *APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock,* regarding application of that method to investments of 50 percent or less of the voting stock of an investee enterprise (other than a corporate joint venture).

INTERPRETATION

2. Opinion 18 requires that the equity method of accounting be followed by an investor whose investment in voting stock gives it the ability to exercise significant influence over operating and financial policies of an investee. The presumptions in paragraph 17 of Opinion 18 are intended to provide a reasonable degree of uniformity in applying the equity method. The presumptions can be overcome by predominant evidence to the contrary.

3. Evidence that an investor owning 20 percent or more of the voting stock of an investee may be unable to exercise significant influence over the investee's operating and financial policies requires an evaluation of all the facts and circumstances relating to the investment. The presumption that the investor has the ability to exercise significant influence over the investee's operating and financial policies stands until overcome by predominant evidence to the contrary. [1]

[1] Subject to the limitations on the use of the equity method identified in footnote 4 of Opinion 18. That footnote states that conditions that represent limitations on consolidation shall be applied as limitations to the use of the equity method.

4. Examples of indications that an investor may be unable to exercise significant influence over the operating and financial policies of an investee include:

a. Opposition by the investee, such as litigation or complaints to governmental regulatory authorities, challenges the investor's ability to exercise significant influence.

b. The investor and investee sign an agreement under which the investor surrenders significant rights as a shareholder. [2]

[2] See paragraph 9 of this Interpretation for a discussion of such agreements.

c. Majority ownership of the investee is concentrated among a small group of shareholders who operate the investee without regard to the views of the investor.

d. The investor needs or wants more financial information to apply the equity method than is available to the investee's other shareholders (for example, the investor wants quarterly financial information from an investee that publicly reports only annually), tries to obtain that information, and fails. [3]

[3] The subject of in ability to obtain financial information also is addressed in the American Institute of Certified Public Accountants' Codification of Statements on Auditing Standards, AU Section 332, "Evidential Matter for Long-Term Investments," paragraph 9.

e. The investor tries and fails to obtain representation on the investee's board of directors.

This list is illustrative and is not all-inclusive. None of the individual circumstances is necessarily conclusive that the investor is unable to exercise significant influence over the investee's operating and financial policies. However, if any of these or similar circumstances exists, an investor with ownership of 20 percent or more shall evaluate all facts and circumstances relating to the investment to reach a judgment about whether the presumption that the investor has the ability to exercise significant influence over the investee's operating and financial policies is overcome. It may be necessary to evaluate the facts and circumstances for a period of time before reaching a judgment.

EFFECTIVE DATE AND TRANSITION

5. The provisions of this Interpretation shall be effective for fiscal years beginning after June 15, 1981, with earlier application encouraged. Changes in the method of accounting for investments required by this Interpretation shall be recorded in accordance with paragraphs 19 (1) and (m) of Opinion 18, which provide that:

a. If the investor discontinues application of the equity method, the earnings and losses of the investee that were previously accrued shall remain as part of the carrying amount of the investment. The carrying amount of the investment shall not be adjusted retroactively.

b. If the investor begins applying the equity method, the investment, results of operations (current and prior periods presented), and retained earnings of the investor shall be adjusted retroactively.

This Interpretation was adopted by the unanimous vote of the seven members of the Financial Accounting Standards Board following submission to the Financial Accounting Standards Advisory Council.

Statutory Issue Paper No. 47

Uninsured Plans

STATUS
Finalized June 23, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 47

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies (Life/A&H and P & C Accounting Practices and Procedures Manuals) provide guidance on the recording and reporting of transactions related to uninsured plans. GAAP does not specifically address these types of transactions.

2. The purpose of this issue paper is to establish statutory accounting principles for Administrative Services Only (ASO), Administrative Services Contract (ASC) and Medicare or similarly structured cost based reimbursement contracts that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. For purposes of this issue paper, uninsured accident and health plans, including HMO administered plans, and uninsured property and casualty plans (collectively referred to as uninsured plans) are defined as plans for which a reporting entity as an administrator, performs administrative services such as claims processing for a third party that is at risk, and accordingly, the administrator has not issued an insurance policy, regardless of whether an identification card is issued. In the case of uninsured accident and health plans, the administrator may arrange for the provision of medical services through a contracted or employed provider network. The plan (whether insured by another reporting entity or self insured) bears all of the insurance risk, and there is no possibility of loss or liability to the administrator caused by claims incurred related to the plan. The administrator, however, may be subject to credit risk with regard to the risk bearing entity. An uninsured accident and health plan may be either an ASO plan or an ASC plan. Under an ASO plan, claims are paid from a bank account owned and funded directly by the uninsured plan sponsor; or, claims are paid from a bank account owned by the reporting entity, but only after the reporting entity has received funds from the uninsured plan sponsor that are adequate to fully cover the claim payments. Under an ASC plan, the reporting entity pays claims from its own bank accounts, and only subsequently receives reimbursement from the uninsured plan sponsor. No arrangement where the reporting entity receives a capitated payment for providing medical services to a third party shall qualify as an insured plan.

4. Uninsured accident and health plans also include Federal, state or other government department funded programs such as Medicare cost contracts where there is no underwriting risk to the reporting entity. Under Medicare cost contracts, service provided to recipients includes the direct delivery of health care for which the reporting entity is reimbursed based on costs incurred as provided for in regulations governing the administration of such contracts. Other such programs may include some Medicaid and Champus contracts for which administration or other non-underwriting services are provided.

5. Partially insured or combination plans exist, under which the reporting entity issues an insurance policy for some of the risks related to the claims (e.g. minimum premium and stop-loss plans), but acts as

an administrator for some, or all, of the claims paid by the plan. Such plans shall be treated as two plans: an insured plan (the part for which the reporting entity has issued a policy) and an uninsured plan (the part that meets the definition in paragraph 3 of this issue paper). The components related to uninsured plans shall be accounted for using the accounting principles established in this issue paper; the components related to insured plans shall be accounted for as insurance.

Revenue/Expense Recognition

6. The administrator's statement of operations shall exclude all income and expenses related to claims, losses, premiums, and other amounts received or paid on behalf of uninsured ASO or uninsured ASC plans. An administrator acting as a provider of services, that provides such services through a salaried network, where the cost allocation of the service provided to insured vs. uninsured plans cannot be reasonably determined, shall report medical and hospital expenses on a gross basis by type of expense and report revenue from uninsured plans on a gross basis as fee for service income.

7. Commissions, expenses, and taxes paid by the administrator to administer such plans shall be reported on a gross basis by type of expense. Where the only functions provided are administrative, administrative fees and related reimbursements from the plan shall be deducted from general expenses. Where the reporting entity provides both administration and health care services directly, income from Medicare or similarly structured cost based reimbursement contracts is not recorded as premium but is recorded as revenue on the appropriate line. Health care services rendered as “medical and hospital” categorized by type and administrative expenses by type of expense shall be reported on an incurred basis. Income from cost based reimbursement contracts is recorded as revenue because the service provided is for the direct delivery of care to recipients. There are risks associated with these plans in that all costs incurred under the contract may not be reimbursable and revenues may be adjusted based on subsequent challenges of costs included in filed cost reports. In addition, revenue may also be adjusted based on the performance under the terms of the contract or other external factors.

Amounts Receivable

8. Amounts receivable from uninsured plans for (a) claims and other costs paid by the administrator on behalf of the third party at risk and (b) fees related to services provided by the administrator to the plan meet the definition of assets as set forth in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*. A receivable shall not be recorded for unpaid claims. A receivable related to Medicare or a similarly cost based reimbursement contract shall only be recorded when services have been rendered.

9. An evaluation shall be made of the amounts receivable to determine any nonadmitted amounts. Next, an evaluation shall be made in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5), to determine whether there is an impairment. This two step process is set forth below:

a. Uncollected uninsured plan receivables (excluding Medicare and similar government plans) over ninety days due shall be accounted for as a nonadmitted asset;

b. Remaining amounts determined to be uncollectible shall be written off. If in accordance with Issue Paper No. 5, it is probable the amount receivable is uncollectible, any uncollectible amount receivable shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible and is therefore not written off, disclosure requirements outlined in Issue Paper No. 5 shall be followed. This evaluation may consider irrevocable letters of credit to which the administrator is beneficiary, amounts on deposit with the administrator or other unrestricted funds available to the administrator.

10. The following shall provide additional guidance in determining the nonadmitted portion of amounts receivable from uninsured plans:

a. Amounts classified as nonadmitted assets collected subsequent to the date of the statutory financial statements shall not be used to decrease the nonadmitted asset otherwise calculated;

b. The due date is governed by the contractual billing date of the uninsured plan;

c. Medicare and similar government funded plans - Amounts due related to Medicare and similar government plans shall not be nonadmitted when they become over ninety days due. Appropriate reserves shall be established to cover costs incurred which may not be reimbursed upon final determination by the governing agencies under the cost contract or for adjustments to revenues based on performance under the terms of the contract or other external factors.

Liabilities

11. A liability shall be established for funds held by an administrator in its general assets for the benefit of an insured plan, or for funds which may be owed by the administrator in connection with the administration of an uninsured plan. A liability relating to one plan shall not be offset by an asset relating to a different plan. Administrators shall not record aggregate reserves, claim/loss reserves, or liabilities (except for Medicare or similarly structured cost based reimbursement contracts) for any other claim costs paid by the administrator on behalf of uninsured plans.

Disclosure

12. The statutory financial statements shall provide the following:

a. Information with regard to the profitability to the administrator of all ASO plans and the uninsured portions of partially insured plans for which the reporting entity serves as an ASO administrator;

For the total and each category separately provided: (i) net reimbursement for administrative expenses (including administrative fees) in excess of actual expenses, (ii) total net other income or expense (including interest paid to or received from plans), (iii) total net gain or loss from operations and (iv) the claim and reimbursement volume;

b. Information with regard to the profitability to the administrator of all ASC plans and the uninsured portions of partially insured plans for which the reporting entity serves as an ASC administrator;

For the total and each category separately provided: (i) gross reimbursement for medical cost incurred, (ii) gross administrative fees accrued, (iii) other income or expense (including interest paid to or received from plans), (iv) gross expenses incurred (claims and administrative) and (v) total net gain or loss from operations.

c. Information with regards to Medicare or similarly structured cost based reimbursement contracts shall include: (i) major components of revenue by payor, (ii) receivables from payors with account balances the greater of 10% of gross Health Care Receivables or $10,000, (iii) recorded allowances and reserves for adjustment of recorded revenues, (iv) adjustments to revenue resulting from audit of receivables related to revenues recorded in the prior period.

DISCUSSION

13. The conclusion above adopts existing statutory accounting guidance for uninsured accident and health plans and extends this guidance to other uninsured plans. The current statutory accounting disclosure requirements were expanded to include claim and reimbursement volume.

14. The Statement of Concepts states:

> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

15. Based upon the above concept, ASO, ASC and Medicare or similarly structured cost based reimbursement contract, plan assets and liabilities should reflect only amounts that are available to meet both current and future policyholder obligations and obligations of the reporting entity, respectively.

16. Under the conservatism concept of statutory accounting, ASO and ASC plan receivables which are over ninety days due, shall be treated as nonadmitted assets and charged to surplus. In keeping with the concept of conservatism, subsequent collection of nonadmitted assets shall not be considered in the determination of period-end nonadmitted assets. These recoveries shall be accounted for in the period received.

Drafting Notes/Comments

- Accounting for claims of insured plans are addressed in *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses.*
- Accounting for property and casualty high deductible and retrospective insurance contracts are addressed in *Issue Paper No. 65—Property and Casualty Contracts* and *Issue Paper No. 66—Accounting for Retrospectively Rated Contracts*, respectively.
- Accounting for Medicare and Medicaid Risk Contracts are addressed in *Issue Paper No. 54—Individual and Group Accident and Health Contracts.*

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

17. Chapter 8, Other Admitted Assets*,* of the Life/A&H Accounting Practices and Procedures Manual discusses uninsured accident and health plans as follows:

> Some insurers may act as administrators of accident and health plans under which the plans bear all of the risk of claims. Such plans are commonly termed administrative services only plans and are described in this manual as uninsured plans. The definition of risk used here for the purpose of classifying funding arrangements as they relate to the insurer is the possibility of liability to the insurer due to claims under an accident and health plan.
>
> In addition to plans under which there is no risk to the insurer, there are also partially insured or combination plans. Such plans may include, but are not limited to, plans described as minimum premium, cost-plus/stop-loss, or other similar names. For purposes of statutory financial statement reporting, combination plans or partially insured plans should be treated as, in effect, two plans: one insured and one uninsured. For accounting purposes, the components of a partially insured plan which are applicable to insured benefits should be classified as one would any insured plan. Those components which are related to uninsured and administrative services only should be treated as if they apply to an uninsured plan.

> A receivable from a plan relating to uninsured business must be reported as an asset and may not include amounts relating to claims unpaid by the insurer. Balances due and unpaid in excess of three months, except for those relating to Medicare or similar government plans, must be deducted as not admitted. Correspondingly, a liability must be established for a plan for which an insurer holds funds in its general assets or to which funds may be owed by the insurer, including funds due to certificate holders. An asset relating to one plan may not be offset by a liability relating to a different plan.

18. Chapter 13, Other Liabilities, of the P & C Accounting Practices and Procedures Manual contains similar guidance.

19. Chapter 13, Aggregate Reserves for Accident and Health Policies, of the Life/A&H Accounting Practices and Procedures Manual discusses aggregate reserves for uninsured accident and health plans as follows:

> The insurer's aggregate reserves should not include any amounts arising from uninsured accident and health plans or the uninsured portion of partially insured plans. The insured portion of any partially insured plan should be treated as any other insured plan with appropriate reserves established.

20. Chapter 10, Losses, of the P & C Accounting Practices and Procedures Manual discusses reserves for uninsured accident and health plans as follows:

> The insurers loss reserves should not include any amounts arising from uninsured accident and health plans or the uninsured portion of partially insured plans. The insured portion of any partially insured plan should be treated as any other insured plan with appropriate loss and loss adjustment expense reserves established.

21. Chapter 14, Accident and Health Claims, of the Life/A&H Accounting Practices and Procedures Manual discusses claim reserves for uninsured accident and health plans as follows:

> The insurers claim reserves should not include any amounts arising from uninsured accident and health plans or the uninsured portion of partially insured plans. The insured portion of any partially insured plan should be treated as any other insured plan with appropriate reserves established. This is the same treatment described with regard to aggregate reserves in Chapter 13.

22. Chapter 17, Other Liabilities, of the Life/A&H Accounting Practices and Procedures Manual discusses establishing a liability for uninsured accident and health plans as follows:

> Liability for Amounts Held Under Uninsured Accident and Health Plans
>
> A liability must be established for a plan for which an insurer holds funds in its general assets or to which funds may be owed by the insurer, including funds due to certificate holders. A liability relating to one plan may not be offset by an asset relating to a different plan.

23. Chapter 18, Premium Income, of the Life/A&H Accounting Practices and Procedures Manual discusses premium recognition on uninsured accident and health plans as follows:

> Amounts related to uninsured plans or the uninsured portion of partially insured plans must not be reported in premiums. Conversely income relating to the insured portion of any plan must be reported as premiums.

24. Chapter 14, Premiums, of the P & C Accounting Practices and Procedures Manual contains similar guidance.

25. Chapter 20, Policy and Contract Benefits, of the Life/A&H Accounting Practices and Procedures Manual discusses paying claims for uninsured accident and health plans as follows:

> Claims paid by the insurer under uninsured accident and health plans and the uninsured portion of partially insured accident and health plans should not be reported in the Summary of Operations. Claims payments under the insured portion of partially insured plans are reported as accident and health benefits.

26. Chapter 17, Loss and Loss Adjustment Expenses Incurred, of the P & C Accounting Practices and Procedures Manual discusses losses paid on uninsured accident and health plans as follows:

> Losses paid by the insurer under uninsured accident and health plans should not be reported in the underwriting and investment exhibits. Loss payments under the insured portion of partially insured plans are reported as accident and health losses.

27. Chapter 22, General Expenses and Taxes, Licenses and Fees, of the Life/A&H Accounting Practices and Procedures Manual discusses expenses of uninsured accident and health plans as follows:

> Uninsured accident and health plans have been discussed in prior chapters of this manual. Commissions, expenses, and taxes incurred by the insurer for such plans are to be reported on a gross basis by type of expense; however, administration fees and expense reimbursements relating to uninsured business are deducted in the general expense exhibit and general insurance expenses are to be reported in the Summary of Operations net of such fees and reimbursements.

28. Chapter 19, Expenses, of the P & C Accounting Practices and Procedures Manual contains similar guidance.

29. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies, the NAIC Annual Statement Instructions for Life, Accident and Health Insurance Companies and the NAIC Annual Statement Instructions for Health Maintenance Organizations include the following disclosure requirements:

> Gain or Loss to the Insurer from Uninsured A&H Plans and the Uninsured Portion of Partially Insured Plans
>
> Instruction:
>
> Provide information with regard to the profitability to the insurer (HMO) of uninsured accident and health plans and the uninsured portions of partially insured plans for which the company serves as administrator. For the total and each category separately provided: (1) net reimbursement for administrative expenses (including administrative fees) in excess of actual expenses, (2) total net other income or expense (including interest paid to or received from plans), and (3) total net gain or loss from operations.

Illustration:

The gain from operations from uninsured accident and health plans and the uninsured portion of partially uninsured plans was as follows during 19XX:

	(1)	(2)	(3)
	Uninsured Plans	Uninsured Portion of Partially Insured Plans	Total
i. Net reimbursement for administrative expenses over (under) actual expenses	$	$	$
ii. Other income or (expenses)	$	$	$
iii. Net gain or (loss) from operations	$	$	$

Generally Accepted Accounting Principles

30. There is no GAAP guidance specifically addressing Administrative Services Only plans.

Statutory Issue Paper No. 48

Investments in Joint Ventures, Partnerships and Limited Liability Companies

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 48

> *Wholly-owned single real estate property in an LLC was scoped out of SSAP No. 48 by Issue Paper No. 149 and included within SSAP No. 40R.*

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for investments in joint ventures and partnerships specifies the equity method of accounting and is provided in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. Current statutory accounting guidance does not address accounting for investments in limited liability companies.

2. GAAP addresses accounting for investments in partnerships and joint ventures in Accounting Interpretation of *APB Opinion No. 18*, *The Equity Method of Accounting for Investments in Common Stocks* (AIN APB 18). Although the interpretation states that *Accounting Principles Board Opinion No. 18*, *The Equity Method of Accounting for Investments in Common Stocks,* (APB 18) does not apply to investments in partnerships and joint ventures it suggests that many provisions of APB 18 may be applicable. As a result current practice generally is to account for such investments under the equity method.

3. The purpose of this issue paper is to establish statutory accounting principles for investments in joint ventures, partnerships, and limited liability companies that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. This issue paper addresses accounting for investments in any joint venture, partnership, or limited liability company whether or not it is considered to be controlled by or affiliated with the reporting entity.

5. Investments in joint ventures shall include investments in corporate joint ventures, and unincorporated joint ventures (also referred to as undivided interests in ventures). A corporate joint venture shall be defined as a corporation owned and operated by a small group (the joint venturers) as a separate and specific business or project for the mutual benefit of the members of the group. A corporate joint venture usually provides an arrangement under which each joint venturer may participate, directly or indirectly, in the overall management of the joint venture. Joint venturers thus have an interest or relationship other than as passive investors. An unincorporated joint venture is similar in its purpose but is not incorporated.

6. Investments in partnerships shall include investments in general partnership interests, and limited partnership interests. A general partnership shall be defined as an association in which each partner has unlimited liability. Each partner assumes joint and several liability for all partnership debts. A limited partnership shall be defined as a partnership having two classes of partners: (a) general partners who manage the partnership, subject to the partnership agreement, and have personal liability for the general obligations of the partnership and (b) limited partners who are passive investors and have no personal liability beyond their investment.

7. A limited liability company shall be defined as a form of business organization which is a hybrid of a corporation and partnership whereby the owners have limited liability like a corporation and profits may pass through to the owners for tax purposes like a partnership if certain criteria are met. The owner's personal liability is limited to his own acts and the owners can fully participate in the management of the business with no adverse impact on their limited liability.

8. Investments in the ventures which are defined in paragraphs 5 through 7 meet the definition of assets defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this paper. Investments in joint ventures, partnerships and limited liability companies shall be included in Other Invested Assets in the financial statements.

9. Investments in such ventures, except for limited partnerships with a minor ownership interest, shall be reported using an equity method as defined in paragraphs 7 through 13 of *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities* (Issue Paper No. 46). Limited partnerships in which the entity has a minor ownership interest (i.e., less than 10%) shall be recorded based on the underlying audited GAAP equity of the investee. The amount to be recorded shall be defined as the initial investment in an investee at cost (as defined in paragraph 7 of *Issue Paper No. 68—Business Combinations and Goodwill*). The carrying amount of the investment shall be adjusted to recognize the reporting entity's share of the audited GAAP basis earnings or losses of the investee after the date of acquisition, adjusted for any distributions received. A reporting entity's share of adjustments that are recorded directly to the investee's stockholder's equity under GAAP shall also be recorded as adjustments to the carrying value of the investment with an offsetting amount recorded to unrealized capital gains and losses on investments. The reporting entity's share of undistributed earnings and losses of the investee shall be included in unrealized gains and losses of the reporting entity. The reporting entity's share of other changes in the investee's surplus (e.g., the change in the investee's nonadmitted assets) shall be recorded by the investor as a component of unrealized capital gains and losses on investments. Distributions received from an investee shall be recognized in investment income when declared to the extent they are not in excess of the undistributed accumulated earnings attributable to the investee. If distributions declared exceed the investor's share of undistributed accumulated earnings after the date of the investment, this excess portion of the distribution shall be applied to reduce the carrying value of the investment.

Impairment

10. For any decline in the fair value of an investment in a joint venture, partnership or limited liability company which is determined to be other than temporary, the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary, shall be recorded as realized losses. This is consistent with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets.* An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment. Even if the fair value of an investment is below the carrying amount it is not necessarily indicative of a loss in value that is other than temporary. Similarly the existence of investee operating losses may indicate a loss in value; however, it is not necessarily indicative of a loss in value that is other than temporary. All factors shall be considered in determining whether a loss in value is other than temporary.

Disclosures

11. The significance of an investment to the reporting entity's financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investee. Disclosures as follow shall be made for all investments in joint ventures,

partnerships, or limited liability companies that exceed 10% of the total admitted assets of the reporting entity:

a. Financial statements of a reporting entity shall disclose (1) the name of each joint venture, partnership or limited liability company and percentage of ownership, (2) the accounting policies of the reporting entity with respect to investments in joint ventures, partnerships and limited liability companies and (3) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., nonadmitted goodwill or other nonadmitted assets) and the accounting treatment of the difference.

b. For those joint ventures, partnerships and limited liability companies for which a quoted market price is available, the aggregate value of each joint venture, partnership or limited liability company investment based on the quoted market price shall be disclosed.

c. Summarized information as to assets, liabilities, and results of operations shall be presented for joint ventures, partnerships and limited liability companies either individually or in groups.

12. Any commitment or contingent commitment to a joint venture, partnership or limited liability company shall be disclosed (e.g., guarantees or commitments to provide additional capital contributions).

13. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment.

b. The amount of the impairment and how fair value was determined.

DISCUSSION

14. The statutory accounting principles described in paragraphs 8 through 13 above are consistent with current statutory accounting except as follows:

- Current statutory accounting guidance addresses accounting for investments in partnerships and joint ventures but does not address accounting for investments in limited liability companies.
- Current statutory accounting guidance does not address accounting or disclosures for other than temporary impairments .
- Current statutory accounting guidance allows the reporting entity's equity in the net earnings of the investee to be recorded, in certain situations, as net investment income.

15. The statutory accounting principle described in paragraph 9 above is inconsistent with the GAAP promulgated in paragraph 17 of APB 18 which specifies "an investment of less than 20% of the voting stock of an investee should lead to a presumption that an investor does not have the ability to exercise significant influence unless such ability can be demonstrated. APB 18 is addressed in its entirety and rejected in Issue Paper No. 46. The related interpretation of APB 18, AIN APB 18, is also rejected.

16. The statutory accounting principles referred to in paragraph 9 above with respect to limited partnerships with a minor interest are inconsistent with GAAP guidance described in paragraph 8 of *AICPA Statement of Position 78-9, Accounting for Investments in Real Estate Ventures* (SOP 78-9),

which requires the use of the cost method for investments in limited partnerships where the limited partner's interest is so minor that the limited partner may have virtually no influence over the operating and financial policies. The remaining guidance in SOP 78-9 promotes the accounting prescribed under APB 18 which has been rejected in the above paragraph, therefore this issue paper rejects SOP 78-9.

17. The statutory accounting principles described in the conclusion above apply to limited liability companies. Limited liability companies are a form of business organization, authorized by statute in certain states, characterized by limited liability, management by members or managers, and limitations on the transferability of ownership interest. Limited liability companies have the potential for taxability as partnerships for federal income tax purposes. Although limited liability companies provide members with limited personal liability (traditionally available only to corporations and certain hybrids), this new form of organization typically has more qualities of a partnership than of a corporation. As a result, the accounting for investments in such organizations shall follow the accounting for investments in partnerships. This is consistent with the underlying characteristics of these entities which indicate that they generally have more qualities of a partnership than of a corporation.

18. The statutory accounting principles outlined in the conclusion above are consistent with the conservatism and recognition concepts in the Statement of Concepts. Pertinent excerpts follow:

> Conservatism
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.
>
> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.
>
> Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

Drafting Notes/Comments

- Accounting for business combinations with a venture are addressed in *Issue Paper No. 68—Business Combinations and Goodwill.*
- Accounting for investments in subsidiary, controlled or affiliated entities and definition of the equity method of accounting for statutory accounting principles are addressed in *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

19. The Accounting Practices and Procedures Manual for Life and Accident and Health and Property and Casualty Insurance Companies provides the following guidance:

> Chapter 8 - Other Admitted Assets
>
> Partnerships and Joint Ventures

One investment alternative for insurers is the partnership or joint venture with equity interest in real estate, securities, petroleum and other assets. Real estate partnerships or joint ventures are the most predominant and include investments in apartment complexes, office buildings, shopping centers, mass housing projects, condominiums, and land purchases and sales.

A typical venture will be between partners who offer capital or expertise, or both, to invest in the undertaking. In such a venture, the partners usually are an insurance company (which provides the equity) and a developer (who provides the technical skill and performs the actual work).

The investment made by the insurance company can be the equity investment in the property being developed and/or the permanent financing of the venture (a mortgage loan). The equity investment is returned to the company through its share of cash contributions.

Each venture must maintain its own accounting records that report venture assets, liabilities, partnership equities, and operating income in conformity with generally accepted accounting principles. These are accounting records of the venture and not of the insurance company.

The accounting of a partnership or joint venture is similar to statutory accounting for a subsidiary on the equity method. (See Chapter 6.) Under the equity method of accounting the investment is carried in the balance sheet at the amount invested, plus the investing company's share of undistributed operating results.

There are three types of transactions affecting the insurance company's equity investment in the venture. These are:

1. The actual investment, which is the original contribution to the venture, plus any subsequent contributions;

2. Appreciation or depreciation of the investment, which is the company's share of the GAAP basis net income or loss of the venture;

3. Withdrawals of the company's share of the cash flow that is generated by the operations of the venture.

The partnership agreement designates the percentage of distribution of net income and cash flow between the partners. An insurance company's share of the GAAP net earnings (or losses) of the partnership are reported as investment income in the insurer's statutory financial statements. The second half of the accounting entry involved is to increase (or decrease) the book value of the partnership. Book value also represents the admitted value reported in the statutory financial statement and may be a negative amount. Cash distributions received reduce the company's investment (book value) directly and are not reflected as income except where earnings have not been previously reported.

The most recent financial statements of the partnership should generally be used by an investor to apply the equity method. When a lag in reporting exists, intervening events materially affecting the financial position or results of operations of the partnership should be analyzed to determine whether or not the financial statements of the investment should be adjusted. Reporting should be consistent from period to period. If the method of partnership accounting for tax purposes varies with the accounting for financial reporting purposes, it is necessary that a venture maintain separate accounting records for the areas of difference.

Any contingent commitment to a partnership or joint venture shall be disclosed in the Notes to Financial Statements of the annual statement.

20. The NAIC Annual Statement Instructions provide the following guidance:

SCHEDULE BA OTHER LONG-TERM INVESTED ASSETS OWNED

PARTS 1, 2, AND 3

Include only those classes of invested assets not clearly or normally includable in any other invested asset schedule. Give a detailed description of each investment and the underlying security. If an asset is to be recorded in Schedule BA, which is normally reported in one of the other invested asset schedules, make full disclosure in Column 1 or a footnote of the reason for recording such an asset in Schedule BA.

If an insurer has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, category, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

Group or Category	Line Number
Oil and Gas Production	0199999
Transportation Equipment	0299999
Mineral Rights	0399999
Fixed or Variable Interest Rate Investments that have the underlying characteristics of:	
Bonds	0499999
Mortgage Loans	0599999
Other fixed income instruments	0699999
Joint Venture or Partnership Interests that have the underlying characteristics of:	
Fixed income instruments	0799999
Common Stocks	0899999
Real Estate	0999999
Other	1099999
Surplus Debentures, etc.	1199999
Any Other Class of Admitted Assets	1299999
TOTALS	9999999

The following listing is intended to give examples of investments to be included in each category, however the list should not be considered all inclusive and it should not be implied that any invested asset currently being reported in Schedules A, B or D is to be reclassified to Schedule BA:

Oil and Gas Production

Include: Offshore oil and gas leases

Transportation Equipment

Include: Aircraft owned under leveraged lease agreements
Motor Vehicle Trust Certificates

Mineral Rights

Include: Investments in extractive materials
Timber Deeds

Fixed or Variable Interest Rate Investments that have the underlying characteristics of a Bond, Mortgage Loan or other fixed income instrument

Include: Fixed income instruments that are not corporate or governmental unit obligations (Schedule D) or secured by real property (Schedule B).

Joint Ventures or Partnership Interests for which the primary underlying investments are considered to be:

Fixed Income Instruments

Include: Leveraged Buy-out Fund
A fund investing in the "Z" strip of Collateralized Mortgage Obligations
Mortgage Obligations

Common Stocks

Include: Venture Capital Funds

Real Estate

Include: Real estate development interest

Other

Include: Limited partnership interests in oil and gas production
Forest product partnerships

Generally Accepted Accounting Principles

21. APB 18 provides guidance on the cost method of accounting for investments in noncontrolled entities. Pertinent paragraphs follow:

> 3. Several terms are used in this Opinion as indicated:
>
> a. "Investor" refers to a business entity that holds an investment in voting stock of another company.
>
> b. "Investee" refers to a corporation that issued voting stock held by an investor.
>
> c. "Subsidiary" refers to a corporation which is controlled, directly or indirectly, by another corporation. The usual condition for control is ownership of a majority (over 50%) of the outstanding voting stock. The power to control may also exist with a lesser percentage of ownership, for example, by contract, lease, agreement with other stockholders or by court decree.
>
> d. "Corporate joint venture" refers to a corporation owned and operated by a small group of businesses (the "joint venturers") as a separate and specific business or project for the mutual benefit of the members of the group. A government may also be a member of the group. The purpose of a corporate joint venture frequently is to share risks and rewards in developing a new market, product or technology; to combine complementary technological knowledge; or to pool resources in developing production or other facilities. A corporate joint venture also usually provides an arrangement under which each joint venturer may participate, directly or indirectly, in the overall management of the joint venture. Joint venturers thus have an interest or relationship other than as passive investors. An entity which is a subsidiary of one of the "joint venturers" is not a corporate joint venture. The ownership of a corporate joint venture seldom changes, and its stock is usually not traded publicly. A minority public ownership, however, does not preclude a corporation from being a corporate joint venture.

DISCUSSION

5. Investments are sometimes held in stock of companies other than subsidiaries, namely corporate joint ventures and other noncontrolled corporations. These investments are usually accounted for by one of two methods-the cost method or the equity method. While practice varies to some extent, the cost method is generally followed for most investments in noncontrolled corporations, in some corporate joint ventures, and to a lesser extent in unconsolidated subsidiaries, particularly foreign. The equity method is generally followed for investments in unconsolidated domestic subsidiaries, some corporate joint ventures and some noncontrolled corporations. An adaptation of the cost method, the lower of cost or market, has also been followed for investments in certain marketable securities if a decline in market value is evidently not a mere temporary condition.

6. A summary of the two principal methods of accounting for the investments in common stock discussed in this Opinion follows:

    a. The cost method. An investor records an investment in the stock of an investee at cost, and recognizes as income dividends received that are distributed from net accumulated earnings of the investee since the date of acquisition by the investor. The net accumulated earnings of an investee subsequent to the date of investment are recognized by the investor only to the extent distributed by the investee as dividends. Dividends received in excess of earnings subsequent to the date of investment are considered a return of investment and are recorded as reductions of cost of the investment. A series of operating losses of an investee or other factors may indicate that a decrease in value of the investment has occurred which is other than temporary and should accordingly be recognized.

    b. The equity method. An investor initially records an investment in the stock of an investee at cost, and adjusts the carrying amount of the investment to recognize the investor’s share of the earnings or losses of the investee after the date of acquisition. The amount of the adjustment is included in the determination of net income by the investor, and such amount reflects adjustments similar to those made in preparing consolidated statements including adjustments to eliminate intercompany gains and losses, and to amortize, if appropriate, any difference between investor cost and underlying equity in net assets of the investee at the date of investment. The investment of an investor is also adjusted to reflect the investor’s share of changes in the investee’s capital. Dividends received from an investee reduce the carrying amount of the investment. A series of operating losses of an investee or other factors may indicate that a decrease in value of the investment has occurred which is other than temporary and which should be recognized even though the decrease in value is in excess of what would otherwise be recognized by application of the equity method.

7. Under the cost method of accounting for investments in common stock, dividends are the basis for recognition by an investor of earnings from an investment. Financial statements of an investor prepared under the cost method may not reflect substantial changes in the affairs of an investee. Dividends included in income of an investor for a period may be unrelated to the earnings (or losses) of an investee for that period. For example, an investee may pay no dividends for several periods and then pay dividends substantially in excess of the earnings of a period. Losses of an investee of one period may be offset against earnings of another period because the investor reports neither in results of operations at the time they are reported by the investee. Some dividends received from an investee do not cover the carrying costs of an investment whereas the investor’s share of the investee’s earnings more than covers those costs. Those characteristics of the cost method may prevent an investor from reflecting adequately the earnings related to an investment in common stock-either cumulatively or in the appropriate periods.

> 13. Some hold the view that neither the market value method nor the equity method is appropriate accounting for investments in common stock where the investor holds less than majority ownership of the voting stock. They would account for such investments at cost. Under that view the investor is not entitled to recognize earnings on its investment until a right to claim the earnings arises, and that claim arises only to the extent dividends are declared. The investor is considered to have no earnings on its investment unless it is in a position to control the distribution of earnings. Likewise, an investment or an investor's operations are not affected by losses of an investee unless those losses indicate a loss in value of the investment that should be recognized.
>
> OPINION
>
> 17. The Board concludes that the equity method of accounting for an investment in common stock should also be followed by an investor whose investment in voting stock gives it the ability to exercise significant influence over operating and financial policies of an investee even though the investor holds 50% or less of the voting stock. Ability to exercise that influence may be indicated in several ways, such as representation on the board of directors, participation in policy making processes, material intercompany transactions, interchange of managerial personnel, or technological dependency. Another important consideration is the extent of ownership by an investor in relation to the concentration of other shareholdings, but substantial or majority ownership of the voting stock of an investee by another investor does not necessarily preclude the ability to exercise significant influence by the investor. The Board recognizes that determining the ability of an investor to exercise such influence is not always clear and applying judgment is necessary to assess the status of each investment. In order to achieve a reasonable degree of uniformity in application, the Board concludes that an investment (direct or indirect) of 20% or more of the voting stock of an investee should lead to a presumption that in the absence of evidence to the contrary an investor has the ability to exercise significant influence over an investee. Conversely, an investment of less than 20% of the voting stock of an investee should lead to a presumption that an investor does not have the ability to exercise significant influence unless such ability can be demonstrated. When the equity method is appropriate, it should he applied in consolidated financial statements and in parent-company financial statements prepared for issuance to stockholders as the financial statements of the primary reporting entity. [7]
>
> [7] The equity method should not be applied to the investments described in this paragraph insofar as the limitations on the use of the equity method outlined in footnote 4 would be applicable to investments other than those in subsidiaries.

22. *AICPA Statement of Position 78-9*, *Accounting for Investments in Real Estate Ventures* (SOP 78-9), provides the following guidance:

> THE APPLICABILITY OF THE EQUITY METHOD OF ACCOUNTING
>
> Corporate Joint Ventures
>
> .04 APB Opinion 18 requires investments in corporate joint ventures to be accounted for by the equity method and includes guidance for applying that method in the financial statements of the investor. That opinion applies to corporate joint ventures created to own or operate real estate projects.
>
> .05 Paragraph 3 of APB Opinion 18 states that "an entity which is a subsidiary of one of the 'joint venturers' is not a corporate joint venture." A subsidiary, according to that opinion, refers to
>
> ...a corporation which is controlled, directly or indirectly, by another corporation. The usual condition for control is ownership of a majority (over 50 percent) of the outstanding voting stock.

The power to control may also exist with a lesser percentage of ownership, for example, by contract, lease, agreement with other stockholders, or by court decree.

Accordingly, an investment in a corporate subsidiary that is a real estate venture should be accounted for by the investor-parent using the principles applicable to investments in subsidiaries rather than those applicable to investments in corporate joint ventures. Minority shareholders in such a real estate venture should account for their investment using the principles applicable to investments in common stock set forth in APB Opinion 18 or in *FASB Statement No. 12, Accounting for Certain Marketable Securities*.

General Partnerships

.06 The staff of the American Institute of Certified Public Accountants issued an interpretation of APB Opinion 18 in November, 1971, which concludes that many of the provisions of APB Opinion 18 are appropriate in accounting for investments in certain unincorporated entities. The division believes that the principal difference, aside from income tax considerations, between corporate joint ventures and general partnerships is that the individual investors in general partnerships usually assume joint and several liability. The division believes, however, that the equity method enables noncontrolling investors in general partnerships to reflect the underlying nature of their investments in those ventures as well as it does for investors in corporate joint ventures. Accordingly, the division believes that investments in noncontrolled real estate general partnerships should be accounted for and reported under the equity method. This recommendation requires the one-line equity method of presentation in both the balance sheet and the statement of income.[1] Paragraph 19 of APB Opinion 18 should be used as a guide in applying the equity method. Investors in general partnerships should provide for income taxes on the profits accrued on their investment in the partnership regardless of the tax basis used in the partnership return. The tax liabilities applicable to partnership interests relate directly to the partners, and the accounting for income taxes generally contemplated by APB Opinion 11 is appropriate. Thus, the differences, if any, between income or loss recorded by a partner under the equity method and the partner’s share of distributable taxable income or loss from the partnership should be accounted for as timing differences unless they result from tax-exempt revenues or other permanent differences.

[1] Pro rata consolidation is not appropriate except in the limited circumstances described in paragraph .11.

.07 The division believes a general partnership that is controlled, directly or indirectly, by an investor is, in substance, a subsidiary of the investor. APB Opinion 18 states that the usual condition for control of a corporation is ownership of a majority (over 50 percent) of the outstanding voting stock. However, if partnership voting interests are not clearly indicated, a condition that would usually indicate control is ownership of a majority (over 50 percent) of the financial interests in profits or losses (see paragraph .25). The power to control may also exist with a lesser percentage of ownership, for example, by contract, lease, agreement with other partners, or by court decree. On the other hand, majority ownership may not constitute control if major decisions such as the acquisition, sale or refinancing of principal partnership assets must be approved by one or more of the other partners. The division believes that a controlling investor should account for its investment under the principles of accounting applicable to investments in subsidiaries. Accordingly, intercompany profits and losses on assets remaining within the group should be eliminated. A noncontrolling investor in a general partnership should account for its investment by the equity method and should be guided by the provisions of paragraph 19 of APB Opinion 18.

Limited Partnerships

.08 The division believes that the accounting recommendations for use of the equity method of accounting for investments in general partnerships are generally appropriate for accounting by limited partners for their investments in limited partnerships. A limited partner’s interest may be so minor that the limited partner may have virtually no influence over partnership operating and financial policies. Such a limited partner is, in substance, in the same position with respect to the investment as an investor that owns a minor common stock interest in a corporation, and, accordingly, accounting for the investment using the cost method may be appropriate. Under the cost method, income recognized by the investor is limited to distributions received, except that distributions that exceed the investor's share of earnings after the date of the investment are applied to reduce the carrying value of the investment. Also, differences between income or losses recognized for financial reporting purposes and the investor's share of taxable income or losses should be accounted for as timing differences unless they result from tax-exempt revenues or other permanent differences.

.09 The rights and obligations of the general partners in a limited partnership are different from those of the limited partners. Some believe that general partners should be deemed to have the controlling interest in a limited partnership. However, if limited partners have important rights, such as the right to replace the general partner or partners, approve the sale or refinancing of principal assets, or approve the acquisition of principal partnership assets, the partnership may not be under the control, directly or indirectly, of the general partnership interests. The division believes that the general partners are in control and should account for their investments in accordance with the recommendations in paragraph .07 only if the substance of the partnership or other agreements provides for control by the general partners.

.10 The division believes that if the substance of the partnership arrangement is such that the general partners are not in control of the major operating and financial policies of the partnership, a limited partner may be in control. An example could be a limited partner holding over 50 percent of the total partnership interest. A controlling limited partner should be guided in accounting for its investment by the principles for investments in subsidiaries. Noncontrolling limited partners should account for their investments by the equity method and should be guided by the provision of paragraph 19 of APB Opinion 18, as discussed in paragraphs .06 and .07, or by the cost method, as discussed in paragraph .08, as appropriate.

Statutory Issue Paper No. 49

Policy Loans

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 49

Type of Issue:
Life Specific

SUMMARY OF ISSUE

1. Current statutory accounting guidance for policy loans is provided in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). GAAP guidance is limited but is provided in the AICPA Audit and Accounting Guide: Stock Life Insurance Companies. Current statutory and GAAP guidance are consistent.

2. The purpose of this issue paper is to establish statutory accounting principles for policy loans that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. A policy (or contract) loan shall be defined as a loan to a policyholder, under the provisions of an insurance contract, that is secured by the cash surrender value or collateral assignment of the related policy or contract. Policy loans shall include:

a. Cash loans, including loans resulting from early payment benefits or accelerated payment benefits, on contracts when the terms of the contract specify that such payments are policy loans secured by the policy and

b. Automatic premium loans, which are loans made in accordance with policy provisions whereby delinquent premium payments are automatically paid from the cash value at the end of the established grace period for premium payments.

4. Policy loans meet the definition of assets defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and meet the criteria for admitted assets, except as specified in paragraphs 6 and 7 of this issue paper. Policy loans are readily available to satisfy policyholder obligations as the terms of the policy loan allow the reporting entity to offset an outstanding policy loan balance against the cash surrender value of the policy.

5. Policy loans shall be carried at the unpaid balance of the loan. The unpaid balance of the loan shall include any unpaid principal plus any accrued interest which is 90 days or more past due.

6. If the unpaid balance of the loan exceeds the cash surrender value or policy reserves established for the policy, the policy generally shall lapse. Cash surrender value shall be defined as the cash value of the basic policy plus cash value of any policy accumulations such as paid-up additions. The excess of the unpaid balance of the loan over the cash surrender value shall be evaluated for collectibility. If the amount is considered uncollectible, it shall be written off as a reduction of investment income in the statement of operations during the period it is determined to be uncollectible. Except for collateral

assignment loans, all other amounts in excess of the cash surrender value shall be considered nonadmitted assets. The change in this nonadmitted asset shall be recorded as an unrealized capital gain or loss as applicable.

7. A loan resulting from early payment benefits or accelerated payment benefits and secured by an assignment of the policy to the reporting entity as collateral for the loan shall be an admitted asset, except that any loan (including accrued interest) in excess of the policy reserve for that policy shall be nonadmitted. Upon death, the entire death benefit is recorded as a death benefit expense. The policy proceeds shall be used to repay the loan. Any proceeds in excess of that needed to repay the loan are payable to the named beneficiary.

8. Interest income on policy loans shall be recorded as earned and included in investment income consistent with *Issue Paper No. 34—Investment Income Due and Accrued*. For interest received before it is earned, unearned interest income shall be recorded as a liability in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets.*

9. Accrued interest income on policy loans that is past due 90 days or more shall be reclassified from Investment Income Due and Accrued and included in the unpaid balance of the policy loan as defined in paragraph 5 above.

DISCUSSION

10. The statutory principles described in the conclusion above are consistent with current statutory guidance except for the following:

a. The definition of policy loans includes certain early payment benefits or accelerated payment benefits that by the terms of the applicable policy are policy loans. Existing statutory guidance does not specifically address such loans in the guidance on policy loans. The accounting treatment adopted in paragraph 7 above allows a loan resulting from an early payment benefit or an accelerated payment benefit to be an admitted asset if the loan amount plus accrued interest is less than the policy reserve and the loan is secured by the full assignment of the policy benefits to the reporting entity.

b. Past due interest has been defined in paragraph 9 as accrued interest that is past due 90 days or more.

c. Under current statutory guidance, the excess of the unpaid balance of the loan over the cash surrender value is a nonadmitted asset. The statutory accounting principle in paragraph 6 above requires different accounting treatment for uncollectible and collectible unpaid balances in excess of the cash surrender value.

11. The statutory accounting principles described in the conclusion above are consistent with the conservatism and recognition concepts in the Statement of Concepts. Pertinent excerpts follow:

> Conservatism
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.

> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.
>
> Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

Drafting Notes/Comments
None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

12. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance in Chapter 7, Policy Loans:

> In most states, the right to make a loan is among the standard provisions that are included in cash value life insurance policies. The policy usually provides:
>
> 1. That the company will advance on the security of the policy an amount which, with interest to either the next policy anniversary or premium due date, will not exceed the guaranteed cash value of the policy on that date;
>
> 2. That any outstanding loan and interest will be deducted from the proceeds;
>
> 3. That interest will be payable annually at either a fixed rate that is specified on the policy or at a variable rate with a description of how the rate is determined;
>
> 4. That interest that is not paid when due shall be added to the loan and shall bear interest at the same rate;
>
> 5. That if the total indebtedness equals or exceeds the cash value, the policy shall terminate; and,
>
> 6. That the policy owner may repay the loan either in whole or in part at any time while the policy is in force.
>
> In most states, the maximum interest rate on policy loans has been established by statute, although in several states the rate is determined by state insurance departments. Also, some companies have introduced variable interest rates which will reduce the variance in rates between policy loans and other borrowings.
>
> Cash Loans
>
> The request for a cash loan generally will originate with the policy owner in the form of an application for a cash loan. The insured will also be required to sign a loan agreement which specifies the original amount of the loan and may recite all the conditions of the loan. Other parties may also be required to sign the agreement because of contract limitations as to control or because of prior assignment. The agreement to make a cash loan may be made as a special endorsement on the check that the policy owner receives.

Automatic Premium Loans

An automatic premium loan (APL) is one which is made in accordance with the provision in some policies for automatically paying a delinquent premium from the cash value at the end of the grace period. A special loan agreement is not required because the policy owner previously requested the APL option. In some states the policy owner must specifically elect this provision for it to be effective.

The purpose of the APL provision is that, in the event of inadvertent nonpayment of premium or temporary inability to pay the premium, the policy is kept in full force. If the policy were allowed to lapse and the nonforfeiture options of reduced paid-up or extended term insurance were effective, the policy owner would then be required to comply with the reinstatement procedures, such as furnishing evidence of insurability.

Valuation

Policy loans are reported as admitted assets in the statutory financial statement. They are carried at the unpaid balance of the loan provided the unpaid balance does not exceed either the cash surrender value of the policy or the policy reserves. The cash surrender value generally consists of the cash value of the basic policy plus cash value of any policy accumulations such as paid-up additions.

In cases where the policy indebtedness exceeds the cash surrender value, the excess is a nonadmitted asset. The change in this nonadmitted asset is reflected as an unrealized capital gain or loss as applicable.

Interest

Interest on a policy loan may be payable at either the beginning or end of the policy loan interest period. Where it is payable at the beginning of the period, appropriate balance sheet provision should be established for any unearned policy loan interest. Where it is payable at the end of the period, appropriate provision should be established for any accrued interest. Interest earned is reported as investment income.

The calculation of investment income from a company's policy loans requires a determination of unearned or accrued interest. These are included in their respective accounts in the balance sheet as unearned or accrued investment income and not with the balance of policy loans. The calculation of accrued and unearned interest usually is made on a policy-by-policy basis, or for policies grouped by interest rate and policy anniversary or interest paid- to-date.

Past-due interest normally is capitalized as an addition to the loan balance with the interest recorded as received.

13. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance in Chapter 19, Investment Income and Net Realized Gains:

Gross Investment Income

Investment income arises from interest on bonds, dividends on stock, interest on mortgage loans and policy loans, rent on real estate, and other miscellaneous sources. Such income is on a gross basis and does not reflect investment expenses, taxes, depreciation, depletion or interest on borrowed money. Gross investment income is composed of income collected during the period, the change in income due and accrued and the change in income unearned and nonadmitted.

14. The NAIC Annual Statement Instructions provide the following guidance related to Policy Loans:

> EXHIBIT 4 - UNREALIZED CAPITAL GAINS AND
> (LOSSES) ON INVESTMENTS
>
> Line 5 - Premium Notes, Policy Loans and Liens
>
> Include: In Column 3, the net change in the excess of premium notes, policy loans and other policy assets over net value and other policy liabilities on individual policies. (See Exhibit 14, Line 9.)
>
> EXHIBIT 13 - ASSETS
>
> Lines 5 & 6 - Policy Loans and Premium Notes
>
> Include: In Column 3 premium notes, policy loans, and other policy assets in excess of net value and of other policy liabilities on individual policies.
>
> Exclude: Interest due and accrued (include in Line 16).
>
> Premium extension agreements (include in Line 14).
>
> Policy liens under reinsurance agreements.
>
> Line 5 plus Line 6, Column 3 should agree with Exhibit 14, Line 9, Column 2.
>
> EXHIBIT 14 - ANALYSIS OF NON-ADMITTED ASSETS AND RELATED ITEMS
>
> Line 9 - Premium Notes, etc., in Excess of Net Value and Other Policy Liabilities on Individual Policies
>
> The change for the year should be included in Exhibit 4, Column 3, Line 5.

Generally Accepted Accounting Principles

15. The *AICPA Audit and Accounting Guide: Stock Life Insurance Companies* provides the following guidance in Chapter 4, Investment Operations:

> Policy Loans*
>
> 4.13 Life insurance companies generally must permit borrowing against the cash values of policies. Policy loans are carried at their unpaid balances including accumulated interest but not in excess of cash surrender values or in excess of policy reserves. Many policy contracts require the company to initiate an "automatic premium loan" to pay delinquent premiums.

* *FASB Statement No. 114*, *Accounting by Creditors for Impairment of a Loan*, addresses the accounting by creditors for impairment of certain loans. It is applicable to all creditors and to all loans, uncollateralized as well as collateralized, except large groups of smaller-balance homogeneous loans that are collectively evaluated for impairment, loans that are measured at fair value or at the lower of cost or fair value, leases, and debt securities as defined in FASB Statement No. 115. It applies to all loans that are restructured in a troubled debt restructuring involving a modification of terms.

It requires that impaired loans that are within its scope be measured based on the present value of expected future cash flows discounted at the loan's effective interest rate or, as a practical expedient, at the loans' observable market price or the fair value of the collateral if the loan is collateral dependent.

The Statement amends *FASB Statement No. 5, Accounting for Contingencies*, to clarify that a creditor should evaluate the collectibility of both contractual interest and contractual principal of all receivables when assessing the need for a loss accrual. The Statement also amends *FASB Statement No. 15, Accounting by Debtors and Creditors for Troubled Debt Restructurings*, to require a creditor to measure all loans that are restructured in a trouble debt restructuring involving a modification of terms in accordance with the Statement.

The Statement applies to financial statements for fiscal years beginning after December 15, 1994. Earlier application is encouraged.

The Glossary provides the following definitions:

> Automatic premium loan - A loan made under a provision in a life insurance policy that a premium not paid by the end of the grace period will be automatically paid from the proceeds of a policy loan made by the company if there is sufficient loan value.
>
> Policy loan - A loan made by a life insurance company to a policyholder on the security of the cash surrender value of his policy.

OTHER SOURCES OF INFORMATION

16. NAIC Technical Resource Group Proposed Draft Life Codification provides the following guidance in Chapter 20, Policy and Contract Benefits, related to early payment benefits or accelerated payment benefits:

> Early Payment or Accelerated Payment Benefits
>
> When an insurer offers the insured/policyowner an option to receive benefit payments early, typically when the insured is diagnosed with a terminal illness, accounting for the payments must be consistent with the terms of the contract. Either the loan method or policy reduction method shall be used to account for the payments.
>
>> Loan Method:
>>
>> When the terms of the contract recognize payments to be a loan on the policy with the policy serving as collateral, and interest is charged on the loan amount, all payments are reported as policy loans and included as an admitted asset of the insurer. Interest and fees (if any) are recorded when earned. Upon death or lapse (policy loan plus accrued interest equals the face amount), the policy is accounted for as a claim payment.
>>
>> Policy Reduction Method:
>>
>> When the payments result in a reduction in the amount of insurance, the payments are recorded as benefit payments with a corresponding release of a pro-rata portion of the policy reserve.

Statutory Issue Paper No. 50

Classifications and Definitions of Insurance or Managed Care Contracts In Force

STATUS
Finalized June 23, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 50

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance and state regulatory requirements use many different groupings, classifications and terminologies for insurance contracts in force. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual) groups life insurance contracts into four product type categories based on specific product or marketing attributes: ordinary, industrial, group and credit. The Life/A&H Accounting Practices and Procedures Manual separates accident and health contracts into the categories of individual, group and credit. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices and Procedures Manual) groups property and casualty products by type of coverage only for purposes of presentation in the various Annual Statement exhibits and schedules.

2. GAAP classifies insurance contracts in force as either long-duration or short-duration based on the nature of the insurance enterprise's obligations and policyholder rights under the provisions of the contract. Long-duration contracts include contracts, such as whole life, guaranteed renewable term life, endowment, annuity, and title insurance contracts, that are expected to remain in force for an extended period. All other insurance contracts are considered short-duration contracts and include most property and liability and all credit insurance contracts.

3. The purpose of this issue paper is to provide a general framework for classifying insurance or managed care contracts into categories where the recognition of contract and policy reserves and related revenue, benefits, and claims is fundamentally different. Separate issue papers will establish the accounting principles for premium and income recognition and policy benefit and claim reserves for all contracts as defined herein, including comparisons of statutory accounting principles to GAAP.

SUMMARY CONCLUSION

Overview

4. The primary purpose of insurance, including managed care coverage, is to provide economic protection from identified risks occurring or discovered within a specified period. These risks include death, disability, health benefits, outliving one’s financial assets, and damage to property by an insured peril or damage or injury to the insured or third parties. The accounting for these contracts is significantly influenced by the terms of the insurance or managed care contract.

5. In order to provide for a conservative, consistent, and comparable method of accounting for insurance or managed care contracts, premiums and related benefits shall be recognized considering the policy term, premium payment requirements, risks assumed and benefits provided under the contract

using conservative assumptions as to interest, mortality, morbidity, and incurred costs for health benefits as applicable. The reserve and income recognition methods reflect the premium payment pattern and the insurance protection and/or benefits provided for in the insurance or managed care contract.

6. This issue paper establishes an overall framework for existing insurance or managed care contracts by identifying four broad categories of insurance or managed care contracts where the premium payment pattern and the protection and/or benefits provided are fundamentally different and therefore require different income recognition and reserving methods.

7. Insurance contracts providing any protection against death, disability, accident or illness in which the reporting entity assumes mortality or morbidity risk shall be classified as life or accident and health contracts, as applicable. Managed care contracts provide defined health care services to subscribers, members or policyholders, collectively referred to hereafter as subscribers, in return for fixed, periodic premiums (usually paid monthly) that are generally due at or before the beginning of the coverage period and shall be classified as health contracts. Contracts which insure against damage to property by an insured peril or damage or injury to the insured or third parties, generally over a fixed/limited period of time, shall be classified as property and casualty contracts. Contracts in which the reporting entity does not assume any mortality, morbidity, health benefit costs incurred or casualty risk and which act exclusively as investment vehicles shall be classified as deposit-type contracts. Such classification shall be made at the inception of the contract and shall not change.

Life Contracts

8. The primary purpose of life insurance is to provide financial assistance to a beneficiary at the insured's death. The long period of coverage involving the risk of death, a risk which increases with age, is the distinguishing characteristic by which life insurance is set apart from other forms of insurance. Life insurance is often sold on a level premium basis under which the annual premium remains constant even though the expected policy benefits and services do not occur evenly over the duration of the contract. Premium revenue generally exceeds expected policy benefits in the early years of the contract and it is necessary to accrue, as premium revenue is recognized, a liability for costs that are expected to be paid in the later years of the contracts.

9. The liability for expected costs relating to most types of life contracts is accrued over the current and expected renewal periods of the contracts. The net valuation premium is based upon an assumed interest rate and upon the frequency of death derived from mortality tables. The net premiums collected, after deducting benefits and other costs each year, are accumulated at interest. This accumulation, when combined with future net premiums and future investment income theoretically generates a sum sufficient to pay the claims resulting from the death or disabilities of the insured.

10. The liability which corresponds to this fund is referred to as the policy reserve. These contracts are generally expected to be in-force for an extended period of time and require the performance of various functions and services for an undefined period of time and are generally not subject to unilateral changes in their provisions. The policy reserve is generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums, discounted at valuation interest and mortality.

11. Life insurance contracts shall include contracts with life contingencies, including, but not limited to:

- Whole life contracts
- Endowment contracts
- Term life contracts
- Supplementary contracts
- Group life contracts

- Franchise life contracts
- Universal life type contracts
- Variable life contracts
- Limited payment contracts
- Credit life contracts
- Annuity contracts

Accident and Health Contracts

12. Health insurance policies or managed care contracts, offered by a health maintenance or similar organization, many life insurance and some property and casualty companies, may provide hospital, surgical, medical, loss of income, accidental death and dismemberment, or long-term care coverage as well as other health related benefits. The insurance protection involving economic loss resulting from a medical condition (e.g., medical care expenses or the risk of disability) is the distinguishing characteristic by which accident and health insurance or managed care contracts are set apart from other forms of insurance. Health coverage is currently furnished under group or individual contracts. Coverage sold to individuals can be subdivided according to the reporting entity's right to continue the policy, limitations on the reporting entity's right to increase premiums, as well as other factors.

13. Accident and health contracts also include risk contracts with Medicaid and Medicare whereby the reporting entity assumes insurance risk.

14. Managed care contracts are contracts that provide defined health care services to subscribers in return for fixed, periodic premiums (usually paid monthly) that are generally due at or before the beginning of the coverage period. Managed care means a system or technique(s) generally used by reporting entities to affect access to and control payment for health care services. Managed care techniques most often include one or more of the following: 1) review of medical necessity and appropriateness of services or site of services; 2) contracts with selected providers; 3) financial incentives for enrollees to use specific providers, services, or service sites; 4) controlled access to and coordination of services by a case manager; and 5) payor efforts to identify treatment alternatives and modify benefit restrictions for high cost patient care. Expenses for medical, hospital, pharmacy and other benefits are recognized based on the way the reporting entity provides for the contracted services. In some instances, this is through the payment of claims to providers as services are rendered which require a claims liability to be recorded as addressed in *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (Issue Paper No. 55) or through capitated arrangements based on contracts with providers, where expense is recognized ratably over the contract period.

15. Similar to life insurance contracts, a significant amount of accident and health contracts is sold to individuals and groups on a level premium basis under which the annual premium remains constant even though the expected policy benefits and services may not occur evenly over the duration of the contract. Premium revenue for level premium contracts generally exceeds expected policy benefits in the early years of the contracts and it is necessary to accrue, as premium revenue is recognized, a liability for costs that are expected to be paid in the later years of the contracts.

16. The liability for expected costs relating to accident and health contracts sold on a level premium basis is accrued over the current and expected renewal periods of the contracts. The net valuation premium is based upon an assumed interest rate, persistency, and the frequency of expected death and disability claims generally derived from mortality and morbidity tables. The net premiums collected, after deducting benefits and other costs each year, are accumulated at interest. Similar to life insurance, this accumulation or policy reserve, when combined with future net premiums and future investment income theoretically generate a sum sufficient to pay the claims resulting from the death or disabilities of the insured or subscriber. The reserve is generally calculated as the excess of the present value of future

benefits to be paid to or on behalf of insureds or subscribers less the present value of future net premiums, discounted at valuation interest, mortality, and morbidity.

17. Accident and health contracts shall include contracts with health benefits or disability contingencies, including, but not limited to:

- Managed care contracts
- Income replacement contracts
- Expense reimbursement contracts
- Credit accident and health contracts
- Continuing care contracts
- Long-term care contracts
- Accidental death and dismemberment contracts

Deposit-Type Contracts

18. Deposit-type or investment contracts do not incorporate insurance risk. Contracts issued by insurers that do not incorporate risk from the death or disability of policyholders (mortality or morbidity risk) are more comparable to financial or investment instruments issued by other financial institutions than to insurance contracts.

19. Accounting for investment contracts issued by insurance enterprises should be consistent with the accounting for interest-bearing and other financial instruments where the reserve is either based on the accumulated amounts paid plus an income accumulation based on the contract provisions or based on the present value of future benefits, discounted at the applicable interest factor.

20. Deposit-type contracts shall include contracts without life or disability contingencies, including, but not limited to:

- Supplemental contracts
- Lottery payouts
- Structured settlements
- Guaranteed interest contracts
- Income settlement options
- Dividend and coupon accumulations
- Annuities certain
- Premium and other deposit funds

Property and Casualty Contracts

21. Contracts which insure against damage to property by an insured peril or damage or injury to the insured or third parties shall be classified as property and casualty contracts. Damages shall include both physical and financial damages. Premiums from property and casualty contracts are generally recognized as earned over the exposure period of the contract in proportion to the amount of insurance protection provided.

22. The exposure to insurance risk for most property and casualty insurance contracts does not vary significantly during the duration of the contract. Premiums from property and casualty contracts shall be recognized as earned premium as discussed in *Issue Paper No. 53—Property and Casualty Contracts - Premiums.*

23. These contracts shall include but shall not be limited to:

- Traditional property and casualty insurance contracts
- Title insurance contracts
- Mortgage and financial guaranty contracts

DISCUSSION

24. This issue paper establishes an overall framework for existing insurance contracts by identifying four broad categories of insurance contracts where the premium payment pattern and the insurance protection and/or benefits provided are fundamentally different and therefore require different income recognition and reserving methods. The framework established for the purposes of this issue paper differs from the SAP classifications. Additionally, this framework rejects the GAAP classifications (i.e., short-duration and long-duration) found in *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60), *FASB Statement No. 97*, *Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments* (FAS 97), and *FASB Statement No. 120*, *Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts* (FAS 120*)*. However, this framework does incorporate certain elements of both SAP and GAAP. As new types of contracts are developed, based on their characteristics, the contracts can be readily classified into one of the four categories established by this issue paper. Establishing criteria for the evaluation of new products is consistent with the Statement of Concepts which states:

> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the market place, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.
>
> The multitude of unique circumstances and individual transactions makes it virtually impossible for any codification of accounting principles to be totally comprehensive. Application of SAP, either contained in the Accounting Practices and Procedures Manuals or defined as GAAP and adopted by the NAIC, to unique circumstances or individual transactions should be consistent with the concepts of conservatism, consistency, and recognition.

25. Distinguishing between life, accident and health, deposit-type, and property and casualty contracts is reflective of the insurer's obligations under the terms of the contract. The common attributes of insurance contracts are often readily identified with the duration of the contract, the insurer's ability to unilaterally change the terms of the contract, the premium payment pattern, as well as other factors. Based on the attributes, the following general issue papers have been developed:

Issue Paper	**Title**
Issue Paper No. 51	Life Contracts
Issue Paper No. 52	Deposit-Type Contracts
Issue Paper No. 53	Property Casualty Contracts - Premiums
Issue Paper No. 54	Individual and Group Accident and Health Contracts
Issue Paper No. 65	Property and Casualty Contracts

26. If additional guidance is necessary, separate issue papers will establish statutory accounting principles for specific insurance contracts as indicated below. Current statutory accounting for specific types of contracts will be evaluated for consistency with the basic concepts established in Issue Paper Nos. 51, 52, 53, 54, and 65, as well as for consistency with the Statement of Concepts. The descriptions of specific types of insurance contracts in paragraphs 2 to 52 of this issue paper are consistent with the descriptions of such contracts found in the *AICPA Audits of Property and Liability Insurance Companies* (AICPA P&C Audit and Accounting Guide*)* and the *AICPA Audits of Stock Life Insurance Companies* (AICPA Life Audit and Accounting Guide). A summary of those specific issue papers is as follows:

Issue Paper	**Title**
Life Contracts	
Issue Paper No. 56	Universal Life-Type Contracts, Policyholder Dividends, and Coupons
Issue Paper No. 59	Credit Life and Accident and Health Insurance Contracts
Issue Paper No. 74	Life, Deposit-Type and Accident and Health Reinsurance
Issue Paper No. 89	Separate Accounts
Accident and Health Contracts	
Issue Paper No. 59	Credit Life and Accident and Health Insurance Contracts
Issue Paper No. 74	Life, Deposit-Type and Accident and Health Reinsurance
Property and Casualty Contracts	
Issue Paper No. 57	Title Insurance
Issue Paper No. 69	Financial Guaranty Insurance
Issue Paper No. 88	Mortgage Guaranty Insurance
Issue Paper No. 75	Property and Casualty Reinsurance

27. Areas where premium, policy and claim reserves and related areas are accounted for similarly will be combined and discussed as a single topic. Those categories are as follows:

Issue Paper	**Title**
Issue Paper No. 55	Unpaid Claims, Losses and Loss Adjustment Expenses
Issue Paper No. 66	Accounting for Retrospectively Rated Contracts
Issue Paper No. 97	Underwriting Pools and Associations Including Intercompany Pools

Life Contracts

28. The contract for ordinary life insurance is between the company and the policy owner (often the insured). Many variations of ordinary life coverages are available to a purchaser of insurance, including participating, limited-payment periods, combinations of coverages, and decreasing (or increasing) death benefits. Industrial life insurance, also called “debit” insurance, is insurance under which premiums are paid monthly or more often, the face amount of the policy does not exceed a stated amount, and the words "industrial policy" are printed in prominent type on the face of the policy. Ordinary and industrial life insurance contracts are considered life contracts and include the following types of coverage as described in the following paragraphs.

29. *Whole life contracts* provide a fixed amount of insurance coverage over the life of the insured and the related benefits are normally payable only upon the insured's death. Premiums are paid over various periods as allowed by the terms of the policy contract. Whole life insurance contracts provide for nonforfeiture values, some common types being reduced paid up insurance, extended term insurance, and cash values, and some provide for the payment of policy dividends. A level premium is usually paid for

policies of this type; and the premium may be paid in annual or more frequent modes. An ordinary life (straight-life) policy stipulates that premiums are to be paid during the life of the insured.

30. *Endowment contracts* are principally savings contracts which incorporate an element of life insurance protection. Endowment insurance contracts provide a benefit if the insured survives the endowment period or the amount is paid to a beneficiary if the insured does not survive. A pure endowment contract only provides a benefit to the insured if he/she survives the endowment period. Endowment policies mature at a specified attained age of the insured or at the end of a specified period. Premium payments for endowment contracts are made over a specified period, but may also be made under a single-premium or limited-payment plan. Both whole life and endowment policies contain nonforfeiture or similar clauses which provide for a value in cash or some other form of insurance to be available in the event of failure to continue the required premiums.

31. *Term life contracts* provide insurance over a specified period of time. If the insured dies during this term, the face amount of the policy will be paid to the beneficiary. Policies for term insurance which are written for relatively short periods of time commonly grant the policyholder the right to renew for an additional period or periods up to a maximum age, such as 60 or 65, without requiring additional evidence of insurability. Rights to convert to whole life or endowment contracts may also be included in the contract. Term contracts may also be made for a period which will end when the insured reaches a certain age (for example, age 60 or 65). Such policies do not usually provide nonforfeiture values.

32. *Supplementary contracts with life contingencies* are a type of agreement between the insurance company and either the insured or the beneficiary, usually to provide for full or partial settlement of the amount payable upon the termination of an original contract. Generally, the proceeds are paid over the lifetime of one or more beneficiaries. This differs from a supplementary contract without life contingencies under which the proceeds are paid over a definite period without regard to the life of the beneficiary.

33. *Group life contracts* are insurance on the lives of a group of persons under a single master contract. Insurance of this type is customarily written on a yearly renewable term basis although some permanent group life is sold. Group life insurance is based on a master policy which usually precludes or disallows individual selection and is for the benefit of persons other than the policyholder. The individual insured members may receive certificates of insurance which evidence the contract. The contract is made by the policyholder and the insurer; there is no contract of insurance between the policyholder and the members. State statutes vary as to what constitutes a group and as to who may be a policyholder. Some states permit only employee-employer relationships in a group contract. Others permit union members, credit union members, or similar relationships in group contracts.

34. *Franchise life contracts* usually consist of individual policies offered to all persons in a general class (usually a work profession) who are related in some way such as belonging to a certain association.

35. *Universal life and variable life contracts* include those contracts which have terms that are not fixed and guaranteed relative to premium amounts, expense assessments, or benefits accruing to the policyholder. These contracts generally provide for death benefits and nonforfeiture values and may be issued on a fixed premium basis or on a flexible premium basis where the premiums are paid at the insured’s discretion.

36. *Limited-payment contracts* are contracts with terms that are fixed and guaranteed, and for which premiums are paid over a specified number of years or to a specified age. The insurance coverage continues for the remainder of the insured's life. A single-premium policy requires a lump-sum payment at the inception of the policy.

37. *Credit life contracts* are sold in connection with loans or other credit transactions not exceeding a stated duration and provide insurance protection against death. This form of insurance is generally issued in connection with the issuance of credit to an individual by a bank, retailer, finance company, or other similar organizations. This type of insurance most often protects the creditor to the extent of the unpaid balance of the loan in the form of decreasing term insurance; however, some credit life insurance is sold on a level-term basis.

38. An *annuity contract* is an arrangement whereby an annuitant is guaranteed to receive a series of stipulated amounts commencing either immediately or at some future date. A contract with a purchase rate guarantee represents a life contingency that would require an annuity contract to be classified as a life contract. Annuity contracts are issued to individuals or to groups. Group annuities are often the vehicle used to provide for a company's pension obligations to its employees. The main types of *annuity contracts with life contingencies* are discussed below.

a. A *deferred annuity* provides for the accumulation of funds to be applied at some future period designated by the policyholder. Premium payments can be made in a lump sum amount (single premium deferred annuity), or periodically (flexible or fixed premium deferred annuity) as allowed by the policy contract. At the end of the accumulation period, the policyholder may elect to receive a lump sum distribution or may elect to receive periodic payments for life, over specific period, or some combination thereof.

b. A *variable annuity* is an annuity which includes a provision for benefit payments which vary in accordance with the rate of return of the underlying investment portfolio selected by the policyholder. The considerations for a variable annuity are usually invested in a separate account in which the value of the contract share varies according to the performance of the separate account before the commencement of annuity payments as well as after. Premium payments can be made in lump sum amounts, or periodically as allowed by the policy contract. A minimum death benefit is often guaranteed during the annuity consideration accumulation period and these contracts are therefore classified as life contracts.

c. A *straight-life annuity* provides for periodic payments to the annuitant as long as the annuitant lives. Death of the annuitant constitutes completion of the contract and no further payments are made by the insurance company.

d. A *life annuity with a period certain* works essentially the same way as the straight-life annuity as the annuitant receives periodic payments for as long as the annuitant lives. However, if the annuitant dies before the end of the specified "certain" period, payments are continued to a beneficiary until the specified number of "certain" payments (i.e., the specified period in the contract) is completed.

e. A *refund annuity* is similar to the *life annuity with a period certain* in which the annuitant receives periodic payments for as long as the annuitant lives. There are two variants of this type of annuity. Under the cash refund annuity, a lump-sum payment is made at the death of the annuitant equal to the excess, if any, of the purchase price of the annuity over the sum of the annuity payments made to date of death. The installment refund annuity provides that annuity payments are to continue to a beneficiary after the death of the annuitant until the sum of all payments made equals the purchase price.

f. A *joint and survivorship annuity* provides for the continuation of payments after the death of one of the annuitants during the lifetime of the surviving annuitant.

Accident and Health Contracts

39. Accident and health contracts provide protection against economic losses resulting from accident, sickness, or medical condition. This coverage may be provided under individual policies, under group or franchise policies, managed care contracts, or Medicaid or Medicare risk contracts, or it may be provided under certain special types of policies, such as credit accident and health insurance.

40. The economic losses which accident and health policies cover, or the types of benefits provided, will vary with different policies. The broad categories of economic losses protected against are medical and hospital expense and income replacement. For example, payments for hospital, surgical, or medical expenses may be provided under a hospital expense policy, while under other policies, a more comprehensive form of coverage, known as major medical insurance, may be offered. Similarly, policies may provide monthly benefits for loss of income from disability, either on a short term or a long term basis, or only for disabilities due to accident. Loss of life from accident may be covered under accidental death policies, while under certain limited accident policies, only accidental death from air travel may be covered.

41. Accident and health policies may be categorized by the form of policy through which the coverage is provided; it may be categorized according to the benefits provided by the policy; or it may be categorized by the contingencies insured against. These variations in types of policies and the benefits provided must be considered in discussing the reserves for accident and health policies.

42. *Credit accident and health insurance contracts* are similar to credit life insurance except the insurance protection is in the form of disability insurance.

43. *Long-term care contracts* represent any contract or policy rider providing coverage for not less than twelve consecutive months for each covered person for one or more necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital. Under long-term care contracts, the insured event is generally the inability of the contractholder to perform certain activities of daily living as compared to medical contracts which generally provide insurance protection against accident or sickness or disabilities contracts which generally provide income replacement protection.

Deposit-Type Contracts

44. Under deposit-type contracts, the policyholder may assume all, some, or none of the investment risk, depending on the contract terms. Amounts can be deposited in lump sum, or periodically as allowed by the policy contract. Deposit-type contracts would include annuities certain, whose income payments have no reference to life contingencies and benefits are paid over a specified period (i.e., 10 years, 20 years, etc.)

Property and Casualty Contracts

45. Property and casualty contracts include a variety of types of coverage, including, but not limited to, fire, workers' compensation, automobile, multiple peril, professional and miscellaneous liability, and fidelity and surety bonds as further discussed below.

46. Types of insurance represent the perils that are insured by property and liability insurance companies and classified as property and casualty contracts. Some of the more important types of insurance are as follows:

a. *Fire and allied lines*, which include coverage for fire, windstorm, hail, and water damage (but not floods);

b. *Ocean marine*, which includes coverage for ships and their equipment, cargos, freight or money to be paid for use of the ships, and liability to third parties for damages. This type of insurance includes inland as well as ocean water transportation;

c. *Inland marine*, which covers property in transit. (It also includes floaters, which are policies that cover movable property, such as a tourist's personal property);

d. *Workers' compensation*, which compensates employees for injuries or illness sustained in the course of their employment;

e. *Automobile*, which covers personal injury or automobile damage sustained by the insured and the related liability to third parties for losses caused by the insured;

f. *Multiple peril*, which is a package coverage including most property and liability coverage except workers' compensation, automobile insurance, and surety bonds;

g. *Professional liability*, which covers physicians, surgeons, dentists, hospitals, engineers, architects, accountants, attorneys, and other professionals from liability arising from error or misconduct in providing or failing to provide professional service;

h. *Miscellaneous liability*, which covers most other physical and property damages not included under workers' compensation, automobile liability, and multiple peril policies. (Damages include death, cost of care, and loss of services resulting from bodily injury, as well as loss of use of property);

i. *Fidelity bonds*, which cover employers against dishonest acts by employees. Blanket fidelity bonds cover groups of employees; and

j. *Surety bonds*, which provide for monetary compensation to third parties for failure by the insured to perform specifically covered acts within a stated period. (Most surety bonds are issued for persons doing contract construction, persons connected with court actions, and persons seeking licenses and permits. Surety bonds also include financial guarantees.)

47. In addition to these types, insurance is provided by excess and surplus lines. *Excess liability* covers the insured against loss in excess of a stated amount, but only for losses as covered and defined in an underlying policy. The underlying amount is usually insured by another policy but can be retained by the insured. *Surplus lines* include coverage for risks that do not fit normal underwriting patterns, risks that are not commensurate with standard rates, or risks that will not be written by standard carriers because of general market conditions. These kinds of policies are generally written by carriers not licensed in the jurisdiction where the risk is located and generally are not subject to regulations governing premium rates or policy language.

48. Insurance is generally available to the individual as a means of protection against loss. There are instances, however, in which a person cannot obtain insurance in the voluntary insurance market. States have established *involuntary plans* to provide insurance to those with high risks who otherwise would be excluded from obtaining coverage. A common example is the Automobile Insurance Plan (formerly called the Assigned Risk Plan). Under this plan, all companies writing automobile insurance in a state are allocated a share of the involuntary business on an equitable basis. Other states use a reinsurance plan, under which each insurer accepts all applicants but may place high-risk drivers in a reinsurance pool, with premiums paid to and losses absorbed by the pool. Still another approach is a joint underwriting association, in which one or more servicing companies are designated to handle high-risk drivers. All insurers in the state may be required to participate in the underwriting results. Another example of involuntary plans includes Fair Access to Insurance Requirements (FAIR) plans. FAIR plans are federally approved, state-supervised programs established to provide coverage for property in high-risk areas. Companies that operate in the state are assessed for any underwriting losses experienced by the FAIR plan.

49. *Medical malpractice pools* were established when health-care professionals and institutions were experiencing difficulty in obtaining liability insurance in the voluntary insurance market. The pools were

established by law and currently exist in the majority of states. All insurers writing related liability insurance in such states are considered mandatory participants in the pools as a condition for their continuing authority to transact business in such states.

50. *Workers' compensation pools* are similar to FAIR plans. As with FAIR plans, companies operating in a given state are assessed a proportionate share, based on direct writings, of the underwriting results of the pool.

51. *Title insurance* insures, guarantees, or indemnifies owners of real property or the holders of liens or encumbrances thereon against loss or damage suffered by unidentified instances of defective titles, liens or encumbrances or the unmarketability of the title.

52. *Mortgage guaranty insurance* protects a lender against loss of all or a portion of the principal amount of a mortgage loan upon default of the mortgagor. This type of insurance provides no protection other than against loss due to default.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE (ONLY PERTINENT EXCERPTS ARE INCLUDED BELOW)

Statutory Accounting

53. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance with respect to the classification of life and annuity contracts:

> CHAPTER 10
> AGGREGATE RESERVES FOR LIFE AND ANNUITY CONTRACTS
>
> Life Insurance
>
> All life insurance that is written can be separated into four lines of business: ordinary, industrial, group and credit.
>
> Ordinary life insurance is the most common type of the four lines, and it may consist of whole life, term, or endowment coverages. The contract is between the company and the insured (or the owner, if different). The payment of the premium by the insured/owner usually is sent directly to the home office of the company and not to a company agent.
>
> Many modifications of whole life, term, and endowment coverages are available to the insurance buyer. Such variations include limited payment periods, combinations of coverages, and decreasing (or increasing) death benefits. In addition, some policies, notably universal life policies, offer the insurance buyer the option to vary, or even suspend, premium payments over the life of the policy.
>
> Also considered as ordinary insurance is franchise insurance. It usually consists of individual policies offered to all persons in a general class (usually a work profession) who are related in some way such as belonging to a certain association. Some states require that this relationship be other than through the purchase of insurance.
>
> Industrial life insurance, also called debit insurance, can be defined as insurance under which premiums are paid weekly, or under which the premiums are payable monthly or more often if the face amount of the insurance provided in the policy does not exceed a stated amount and the words "industrial policy" are printed in prominent type on the face of the policy.
>
> Group life insurance is insurance on the lives of a group of members, the minimum number of which may be specified by statute. Group insurance is based on a master policy which usually precludes or disallows individual selection and is for the benefit of persons other than the policyholder. The individual insured members may receive certificates of insurance which evidence

> the contract. The contract is made by the policyholder and the insurer; there is no contract of insurance between the policyholder and the members. The various state statutes vary as to what constitutes a group and as to who may be a policyholder. Some states permit only employee-employer relationships in a group contract. Others permit union members, credit union members, or similar relationships in group contracts.
>
> The fourth line of life insurance is credit. Credit insurance may be either individual or group. All life and all accident and health insurance that is sold in connection with loans or other credit transactions not exceeding a stated duration is to be reported as credit insurance.

54. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance with respect to the classification of accident and health contracts:

> CHAPTER 13
> AGGREGATE RESERVES FOR ACCIDENT AND HEALTH POLICIES
>
> Accident and health insurance provides protection against economic losses resulting from accident and/or sickness. This insurance may be provided under individual policies, under group or franchise policies, or it may be provided under certain special types of policies which bear unique titles such as credit insurance. The economic losses which accident and health insurance policies cover, or the types of benefits provided, will vary with different policies. For example, reimbursement for hospital, surgical, or medical expenses may be provided under a hospital expense policy, while under other policies, a more comprehensive form of coverage, known as major medical insurance, may be offered. Similarly, policies may provide monthly benefits for loss of income from disability, either on a short term or a long term basis, or only for disabilities due to accident. Loss of life from accident may be covered under accidental death policies, while under certain limited accident policies, only accidental death from air travel may be covered. Therefore, accident and health policies may be categorized by the form of policy through which the coverage is provided; it may be categorized according to the benefits provided by the policy; or it may be categorized by the contingencies insured against. These variations in types of policies and the benefits provided must be considered in discussing the reserves for accident and health insurance policies.
>
> Accident and health policies are offered by life companies, casualty companies, fraternal benefits societies, and certain specialty companies. While the coverage originated with casualty companies, it is now the life insurance companies which provide the majority of accident and health insurance. The history of the business is important because many of the concepts currently used originated from casualty insurance practices and use casualty terminology. Since the life insurance companies began writing this insurance, the form of the policies and the concept of coverages have changed, which also produced changes in reserving practices.
>
> Individual Accident and Health Policies
>
> Individual accident and health policies, other than credit insurance, are separated for reserve reporting purposes in the statutory financial statement into six classifications. The definitions are included in the instructions for the statutory financial statement and are based principally on the renewal agreement of the policy. There is some variation in the reserve requirements which apply to the different renewal classifications of policies but most reserve requirements apply to all individual policies.
>
> Group Policies
>
> All organizations that qualify to purchase group life insurance may also, by most state laws, purchase accident and health insurance. In many states, the definition of what constitutes an eligible group for accident and health insurance is entirely left up to any set of good underwriting practices established by the insurance company.

Credit Insurance

Credit accident and health insurance is insurance on a debtor to provide indemnity for payments becoming due on a specific loan or other credit transaction while the debtor is disabled as defined in the policy. Credit policies are limited to issues of 120 months or less in most states. Some states limit such policies to 60 months.
Credit accident and health insurance is sold as either individual or group coverage, and the reserves are included in the annual statement. Because of the significant growth in recent years of credit insurance coverages of 120 months or less are now reported as a separate line of business in the annual statement.

The premium payment methods of credit insurance may be single premium or monthly premium on the outstanding balance. Outstanding balance rates, used only for group coverage, are determined by multiplying a monthly rate times the amount of outstanding insured indebtedness. The premium so determined is remitted on each monthly due date to the insurer by the group creditor. Under single premium credit insurance, the premium rate is applied to the initial amount of insurance and generally is included in the debt. Creditors usually remit the single premium for each new insured once a month.

Although credit insurance may be written on an individual or a group basis, the major portion of credit insurance that is written today is group. The two types differ only in form, not in substance. Consequently, they are treated here as one, unless otherwise noted.

55. The P&C Accounting Practices and Procedures Manual and the Accounting Practices and Procedures Manual for Health Maintenance Organizations do not contain relevant guidance related to the classification and definitions of types of policies.

Generally Accepted Accounting Principles

56. FAS 60, as amended by FAS 120, provides the following guidance on definitions and classification of insurance contracts:

Summary

Insurance contracts, for purposes of this Statement, need to be classified as short-duration or long-duration contracts. Long-duration contracts include contracts, such as whole life, guaranteed renewable term life, endowment, annuity, and title insurance contracts, that are expected to remain in force for an extended period. All other insurance contracts are considered short-duration contracts and include most property and liability insurance contracts.

Premiums from short-duration contracts ordinarily are recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. Claim costs, including estimates of costs for claims relating to insured events that have occurred but have not been reported to the insurer, are recognized when insured events occur.

Premiums from long-duration contracts are recognized as revenue when due from policyholders. The present value of estimated future policy benefits to be paid to or on behalf of policyholders less the present value of estimated future net premiums to be collected from policyholders are accrued when premium revenue is recognized. Those estimates are based on assumptions, such as estimates of expected investment yields, mortality, morbidity, terminations, and expenses, applicable at the time the insurance contracts are made. Claim costs are recognized when insured events occur.

INTRODUCTION

1. The primary purpose of insurance is to provide economic protection from identified risks occurring or discovered within a specified period. Some types of risks insured include death,

disability, property damage, injury to others, and business interruption. Insurance transactions may be characterized generally by the following:

a. The purchaser of an insurance contract makes an initial payment or deposit to the insurance enterprise in advance of the possible occurrence or discovery of an insured event.

b. When the insurance contract is made, the insurance enterprise ordinarily does not know if, how much, or when amounts will be paid under the contract.

2. Two methods of premium revenue and contract liability recognition for insurance contracts have developed, which are referred to as short-duration and long-duration contract accounting in this Statement. Generally, the two methods reflect the nature of the insurance enterprise's obligations and policyholder rights under the provisions of the contract.

3. Premiums from short-duration insurance contracts, such as most property and liability insurance contracts, are intended to cover expected claim[1] costs resulting from insured events that occur during a fixed period of short duration. The insurance enterprise ordinarily has the ability to cancel the contract or to revise the premium at the beginning of each contract period to cover future insured events. Therefore, premiums from short-duration contracts ordinarily are earned and recognized as revenue evenly as insurance protection is provided.

----

[1] Terms defined in the glossary (Appendix A) are in boldface type the first time they appear in this Statement.

----

4. Premiums from long-duration insurance contracts, including many life insurance contracts, generally are level even though the expected policy benefits and services do not occur evenly over the periods of the contracts. Functions and services provided by the insurer include insurance protection, sales, premium collection, claim payment, investment, and other services. Because no single function or service is predominant over the periods of most types of long-duration contracts, premiums are recognized as revenue over the premium-paying periods of the contracts when due from policyholders. Premium revenue from long-duration contracts generally exceeds expected policy benefits in the early years of the contracts and it is necessary to accrue, as premium revenue is recognized, a liability for costs that are expected to be paid in the later years of the contracts. Accordingly, a liability for expected costs relating to most types of long-duration contracts is accrued over the current and expected renewal periods of the contracts.

5. Title insurance contracts provide protection for an extended period and therefore are considered long-duration contracts. Premiums from title insurance contracts ordinarily are recognized as revenue on the effective date of the contract because most of the services associated with the contract have been rendered by that time. Estimated claim costs are recognized when premium revenue is recognized because the insurance provides protection against claims caused by problems with title to real estate arising out of ascertainable insured events that generally exist at that time.

APPLICABILITY AND SCOPE

6. This Statement establishes accounting and reporting standards for the general-purpose financial statements of stock life insurance enterprises, property and liability insurance enterprises[2], and title insurance enterprises, mutual life insurance enterprises, assessment enterprises, and fraternal benefit societies. Except for the sections on premium revenue and claim cost recognition and acquisition costs (paragraphs 9-11, 13-18, and 20-31), this Statement applies to mortgage guaranty insurance enterprises. FASB Statement 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts, addresses the accounting for certain long-duration participating life insurance contracts.

----

[2] Property and liability insurance enterprises, for purposes of this Statement include stock enterprises, mutual enterprises, and reciprocal interinsurance exchanges.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

General Principles

7. Insurance contracts, for purposes of this Statement, shall be classified as short-duration or long-duration contracts depending on whether the contracts are expected to remain in force[3] for an extended period. The factors that shall be considered in determining whether a particular contract can be expected to remain in force for an extended period are:

----

[3] In force refers to the period of coverage, that is, the period during which the occurrence of insured events can result in liabilities of the insurance enterprise.

----

a. Short-duration contract. The contract provides insurance protection for a fixed period of short duration and enables the insurer to cancel the contract or to adjust the provisions of the contract at the end of any contract period, such as adjusting the amount of the premiums charged or coverage provided.

b. Long-duration contract. The contract generally is not subject to unilateral changes in its provisions, such as noncancelable or guaranteed renewable contract, and requires the performance of various functions and services (including insurance protection) for an extended period.

8. Examples of short-duration contracts include most property and liability insurance contracts and certain term life insurance contracts, such as credit life insurance. Examples of long-duration contracts include whole life contracts, guaranteed renewable term life contracts, endowment contracts, annuity contracts, and title insurance contracts. Accident and health insurance contracts may be short-duration or long-duration depending on whether the contracts are expected to remain in force for an extended period. For example, individual and group insurance contracts that are noncancelable or guaranteed renewable (renewable at the option of the insured), or collectively renewable (individual contracts within a group are not cancelable), ordinarily are long-duration contracts.

57. FAS 97, as amended by FAS 120, provides the following guidance on definitions and classifications of insurance contracts:

Summary

This Statement establishes standards of accounting for certain long-duration contracts issued by insurance enterprises, referred to in this Statement as universal life-type contracts, that were not addressed by *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*. The Statement also establishes standards of accounting for limited-payment long-duration insurance contracts and investment contracts and amends Statement 60 to change the reporting of realized gains and losses on investments.

New life insurance contracts have evolved since the development of specialized insurance industry accounting principles and practices in the early 1970s. Many of those new life insurance contracts have different provisions than do the life insurance contracts to which Statement 60 applies. Those new life insurance contracts are characterized by flexibility and discretion granted to one or both parties to the contract. Statement 60 identifies but does not address those contracts, noting that the accounting was under study by the insurance industry and the accounting and actuarial professions.

This Statement requires that the retrospective deposit method be used to account for universal life-type contracts. That accounting method establishes a liability for policy benefits at an amount determined by the account or contract balance that accrues to the benefit of the policyholder. Premium receipts are not reported as revenues when the retrospective deposit method is used. The Statement also requires that capitalized acquisition costs associated with universal life-type contracts be amortized based on a constant percentage of the present value of estimated gross profit amounts from the operation of a "book" of those contracts. Any gain or loss resulting from a policyholder's replacement of other life insurance contracts with universal life-type contracts is recognized in income of the period in which the replacement occurs.

This Statement requires that long-duration contracts issued by insurance enterprises that do not subject the enterprise to risks arising from policyholder mortality or morbidity (investment contracts) be accounted for in a manner consistent with the accounting for interest-bearing or other financial instruments. Payments received on those contracts are not reported as revenue.

This Statement also addresses limited-payment contracts that subject the insurance enterprise to mortality or morbidity risk over a period that extends beyond the period or periods in which premiums are collected and that have terms that are fixed and guaranteed. This Statement requires that revenue and income from limited-payment contracts be recognized over the period that benefits are provided rather than on collection of premiums.

58. AICPA P&C Audit and Accounting Guide provides the following definitions of types of insurance contracts:

Kinds of Insurance

1.04. Kinds of insurance, generally referred to as lines of insurance, represent the perils that are insured by property and liability insurance companies. Some of the more important lines of insurance are --

- Fire and allied lines, which include coverages for fire, windstorm, hail, and water damage (but not floods).

- Ocean marine, which includes coverage for ships and their equipment, cargos, freight or money to be paid for use of the ships, and liability to third parties for damages. (Ocean marine is perhaps the oldest form of insurance, dating back to at least 600 years to the days of the Venetian traders.)

- Inland marine, which covers property being transported other than transocean. (It also includes floaters, such as for personal property, jewelry, and furs.)

- Workers' compensation, which compensates employees for injuries or illness sustained in the course of their employment.

- Automobile, which covers personal injury or automobile damage sustained by the insured and liability to third parties for losses caused by the insured.

- Multiple peril, which is a package coverage including most property and liability coverages except workers' compensation, automobile insurance, and surety bonds.

- Professional liability, which covers physicians, surgeons, dentists, hospitals, engineers, architects, accountants, attorneys, and other professionals from liability arising from error or misconduct in providing or failing to provide professional service.

- Miscellaneous liability, which covers most other physical and property damages not included under workers' compensation or automobile liability policies. (Damages include death, cost of care, and loss of services resulting from bodily injury, as well as loss of use of property.)

- Fidelity bonds, which cover employers against dishonest acts by employees. Blanket fidelity bonds cover groups of employees.

- Surety bonds, which provide for monetary compensation to third parties for failure by the insured to perform specifically covered acts within a stated period. (Most surety bonds are issued for persons doing contract construction, persons connected with court actions, and persons seeking licenses and permits. Surety bonds also include financial guarantees.)

- Accident and health, which covers loss by sickness or accidental bodily injury. (It also includes forms of insurance that provide lump-sum or periodic payments in the event of loss by sickness or accident, such as disability income insurance and accidental death and dismemberment insurance.)

1.05. In addition to these lines, insurance is provided by excess and surplus lines. Excess liability covers the insured against loss in excess of a stated amount, but only for losses as covered and defined in an underlying policy. The underlying amount is usually insured by another policy but can be retained by the insured. Surplus lines include coverage for risks that do not fit normal underwriting patterns, risks that are not commensurate with standard rates, or risks that will not be written by standard carriers because of general market conditions. Policies are written by carriers not licensed in the jurisdiction where the risk is located and generally are not subject to regulations governing premium rates or policy language.

1.06. The lines and premium volume that may be written by a company are generally restricted by state insurance regulations. For example, total written premiums may be limited to a ratio of the company's statutory basis equity. (This and other insurance regulations developed by the National Association of Insurance Commissioners (NAIC) are discussed further in paragraphs 2.05 and 2.06 "NAIC Insurance Regulatory Information System.")

1.07. Insurance written by property and liability insurance companies may be broadly classified as personal lines, which consist of insurance policies issued to individuals, and commercial lines, which consist of policies issued to business enterprises. Personal lines generally consist of large numbers of relatively standard policies with relatively small premiums per policy. Examples are homeowner's and individual automobile policies. Commercial lines involve policies with relatively large premiums that are often retroactively adjusted based on claims experience. The initial premium is often only an estimate because it may be related to payroll or other variables. Examples are workers' compensation and general liability. Many large insurance companies have separate accounting, underwriting, and claim-processing procedures for these two categories.

1.08. Insurance is generally available to the individual as a means of protection against loss. There are instances, however, in which a person cannot obtain insurance in the voluntary insurance market. States have established programs to provide insurance to those with high risks who otherwise would be excluded from obtaining coverage. Following are some of the more common programs that provide the necessary coverage:

- Involuntary automobile insurance. States have a variety of methods for apportioning involuntary automobile insurance. The most widely used approach is the Automobile Insurance Plan (formerly called the Assigned Risk Plan). Under this plan, all companies writing automobile insurance in a state are allocated a share of the involuntary business on an equitable basis. Each automobile insurer operating in the state accepts a share of the undesirable drivers, based on the percent of the state's total auto insurance that it writes. For example, a company that writes 5 percent of the voluntary business in a state may be assigned 5 percent of the involuntary applicants. It is then responsible for collecting the premiums and paying the claims on the policies issued to these applicants. Other states use a reinsurance plan, under which each insurer accepts all applicants but may place high-risk drivers in a reinsurance pool, with premiums paid to and losses absorbed by the pool. Still another approach is a joint underwriting association, in which one or more servicing companies are designated to handle high-risk drivers. All insurers in the state may be required to participate in the underwriting results.

- FAIR plans. FAIR (Fair Access to Insurance Requirements) plans are federally approved, state-supervised programs established to provide coverage for property in high-risk areas. Companies that operate in the state are assessed for any underwriting losses experienced by the FAIR plan.

- Medical malpractice pools. These pools were established when health-care professionals and institutions were experiencing difficulty in obtaining liability insurance in the voluntary insurance market. The pools were established by law and currently exist in the majority of states. All insurers writing related liability insurance in such states are considered mandatory participants in the pools as a condition for their continuing authority to transact business in such states.

- Workers' compensation pools. These pools are similar to FAIR plans. As with FAIR plans, companies operating in a given state are assessed a proportionate share, based on direct writings, of the underwriting results of the pool.

59. *AICPA Life Audit and Accounting Guide, Chapter 3*, *Insurance Operations*, provides the following definitions of types of insurance contracts:

Types of Policies and Contracts

3.02. Policies and contracts usually issued by a life insurance company may generally be designated by the following broad classifications:

1. Life insurance policies.

2. Annuity contracts.

3. Accident and health contracts.

In addition, certain life insurance companies may issue policies which incorporate features of two or three of the broad categories shown above (e.g., an insurance-with-annuity policy). Each of the types of policies is commonly issued both on a participating and on a nonparticipating basis.

3.03. Life Insurance Policies. Life insurance coverage consists of the following basic classes:

1. Whole life.

2. Endowment.

3. Term.

4. Other.

3.04. Whole life policies provide insurance over the insured's entire life and the proceeds (face amount) are paid only upon death of the insured. A level premium is usually paid for policies of this type; and the premium may be paid in annual or more frequent modes. An ordinary-life (straight-life) policy stipulates that premiums are to be paid during the life of the insured. A limited-payment policy is one for which premiums are payable over a stipulated period of time (10, 20, 30 years, etc.). A single-premium policy requires a lump-sum payment at the inception of the policy.

3.05. Endowment policies provide insurance protection over the term of the endowment (i.e., from inception of the policy to the maturity date). Such contracts stipulate payment of the face amount of the policy to a beneficiary if the insured dies during the endowment period. However, if he is still living at the maturity date, the insured will receive the face amount of the policy. Endowment contracts can mature at a specified age of the insured or at the end of a specified period of time. The premiums for contracts of this nature are usually payable over the endowment period, but the premiums can be on a single-payment or limited-payment plan.

3.06. Both whole life and endowment policies contain nonforfeiture or similar clauses which provide for a value in cash or some other form of insurance to be available in the event of failure to continue the required premiums.

3.07. Term policies provide insurance over a specified period of time. If the insured dies during this term, the face amount of the policy will be paid to his beneficiary. Policies for term insurance which are written for relatively short periods of time commonly grant the policyholder the right to renew for an additional period or periods up to a maximum age, such as 60 or 65, without requiring additional evidence of insurability. Rights to convert to whole life or endowment contracts may also be included in the contract. Term contracts may also be made for a period which will end when the insured reaches a certain age (for example, age 60 or 65). Since the premium for term insurance provides for neither maturity benefits nor higher death rates at advanced ages, such policies do not usually accumulate cash surrender values. Collection of premiums for individual insurance may be by mail, where a notice of premium due is sent to the payor, or may be on the debit basis whereby an agent regularly calls at the home of the insured to collect small premium amounts. Usually, the more popular plans of debit life insurance are industrial plans paid up at age 65 or 70 or 10-pay or 20-pay life. Ordinary plans may also be administered on the debit basis.

3.08. In addition to individual policies, life insurance companies offer group life insurance, which insures lives of a group of persons under a single master contract. Insurance of this type is customarily written on a yearly renewable term basis although some permanent group life is sold.

3.09. In addition to the policies and contracts for life insurance mentioned above, there are other life insurance contracts which are becoming more prominent, such as credit life insurance. This form of insurance is generally issued in connection with the issuance of credit to an individual by a bank, retailer, finance company, or other similar organizations. This type of insurance most often protects the creditor to the extent of the unpaid balance of the loan in the form of decreasing term insurance; however, some credit life insurance is sold on a level-term basis.

3.10. In addition to the wide variety of whole life and endowment policies which are available from life insurance companies, the basic policies can be supplemented by the use of riders which are attached to and made a part of the contract. It is fairly common to provide for waiver of premiums through the use of a rider in the event of disability of the insured or for an accidental death benefit. The typical accidental death benefit is often referred to as double indemnity which means that the company will pay twice the amount of the policy if the insured dies through accidental means.

3.11. Annuity Contracts. An annuity contract is an arrangement whereby an annuitant is guaranteed to receive a series of stipulated amounts commencing either immediately or at some future date. Annuity contracts are issued to individuals or to groups. Group annuities are often the vehicle used to provide for a company's pension obligations to its employees.

3.12. The main types of annuities are the following:

3.13. Straight-life annuity -- The straight-life annuity provides for periodic payments to the annuitant as long as he lives. Death of the annuitant constitutes completion of the contract and no further payments are made by the insurance company.

3.14. Life annuity with a period certain -- The life annuity with a period certain works essentially the same way as the straight-life annuity, except that if the annuitant dies before the end of the specified period, payments are continued to a beneficiary until the specified number of payments is completed.

> 3.15. Refund annuity -- The refund annuity is similar to the annuity certain. There are two variants of this type of annuity. Under the cash refund annuity, a lump-sum payment is made at the death of the annuitant equal to the excess, if any, of the purchase price of the annuity over the sum of the annuity payments made to date of death. The installment refund annuity provides that annuity payments are to continue to a beneficiary after the death of the annuitant until the sum of all payments made equals the purchase price.
>
> 3.16. Joint and survivorship annuity -- The joint and survivorship annuity provides for the continuation of payments after the death of one of the annuitants during the lifetime of the surviving annuitant.
>
> 3.17. Variable annuity -- At present, variable annuities for individuals or groups are being introduced throughout the life insurance industry. A variable annuity is an annuity which includes a provision for benefit payments which vary in accordance with investment experience. The considerations for a variable annuity are usually invested in a separate account in which the value of the contract share varies according to the performance of the separate account before the commencement of annuity payments as well as after. Some variable annuities provide for a guaranteed minimum death benefit during the annuity consideration accumulation period.
>
> 3.18. Accident and Health Insurance Contracts. There is a great variety of accident and health contracts which life insurance companies may issue, but most contracts can be generally categorized as follows:
>
> 1. Protection against loss of income through partial or total disability.
>
> 2. Reimbursement of expenses
>
>   a. Hospital expenses, laboratory services, drugs, and so forth.
>
>   b. Surgical or medical expenses.
>
> 3.19. Much of the above coverage is currently being furnished under group contracts. Coverage furnished under individual contracts can be further subdivided according to the insured's right to continue his policy and the limitations on the insurer's right to increase premiums.

60. The *AICPA Audit and Accounting Guide: Health Care Organizations* provides the following guidance:

> Health Care Contracting
>
> 1.18 Contracts between a health care provider and a payor based on anything other than full charges requires the provider to accept some financial risk. The nature and degree of risk for the provider varies depending on the contract terms (for example, the definition of the unit of service or the basis for payment). In planning the audit of the health care provider, the auditor considers the audit risk associated with the entity’s health care contracts. For example, contracts with payments for services based on a discount from the provider’s established rates may have different risks than contracts with payments for services based on a capitated arrangement.
>
> 1.19 Generally, capitation payments are made at the beginning of each month and obligate the provider to render covered services during the month. Revenue is earned as a result of agreeing to provide services to qualified beneficiaries and not as a result of actually providing the care. If the provider’s accounting system records patient charges and establishes patient receivables as services are rendered, appropriate valuation allowances or adjustments should be recorded so only the amount of contract revenue is recorded.
>
> 1.20 A capitation contract may obligate the provider to assume the risk of physician referrals and other outside services. In this case, a liability for unpaid claims, including incurred but not reported claims, should be established. A lag analysis may be helpful in estimating the liability.

1.21 In addition to the capitation payments, the amount of contract revenue may be affected by factors such as reinsurance recoveries, deductibles, coinsurance, and risk pool adjustments. risk pool adjustments may be based on factors such as utilization or cost targets.

1.22 Sometimes health care providers enter preferred provider arrangements with self-insured employers whereby the provider guarantees that the employer's health care cost will not increase over a specified amount or percentage. In substance, these providers may have provided aggregate stop-loss insurance to the self-insured employer, and a material liability to the provider may exist. *FASB Statement No. 5, Accounting for Contingencies*, provides guidance on accounting for these contingencies. *FASB Statement No. 10, Accounting and Financial Reporting for Risk Financing and Related Insurance Issues*, provides guidance on accounting for contingencies by governmental enterprises.

Statutory Issue Paper No. 51

Life Contracts

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 51

Type of Issue
Life Specific

SUMMARY OF ISSUE

1. Current statutory accounting guidance on income recognition and policy reserves for life contracts as defined in *Issue Paper No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (Issue Paper No. 50) is addressed in Chapter 10, Aggregate Reserves for Life and Annuity Contracts and Chapter 18, Premium Income, of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). That guidance applies to premiums and considerations and related policy reserves for all contracts with life contingencies. Amounts left on deposit under optional settlement modes and amounts left to accumulate at interest are recognized as deposit-type funds or considerations for supplemental contracts, as appropriate. In addition, policy reserves must make a good and sufficient provision for all unmatured obligations guaranteed under the terms of the contracts and are generally computed based on the provisions of the NAIC Model Standard Valuation Law (SVL), the Actuarial Opinion and Memorandum Model Regulation, the Actuarial Standards of Practice promulgated by the Actuarial Standards Board and the actuarial guidelines adopted by the NAIC; however, variations by state do exist.

2. GAAP guidance for life contracts recognizes premium income when it is contractually due from the policyholder. However, for investment contracts and universal life-type contracts, GAAP requires the consideration received from the policyholder to be treated as a deposit. For limited-payment contracts, GAAP requires that income be recognized over the total benefit period rather than the premium collection period. GAAP guidance also requires policy reserves to be established using actuarial assumptions applicable at the time the insurance contracts are made or, for certain long-duration contracts, the balance that accrues to the benefit of the policyholder.

3. The purpose of this issue paper is to establish statutory accounting principles for income recognition and policy reserves for all contracts classified as life contracts as defined in Issue Paper No. 50, except for universal-life type contracts as discussed in *Issue Paper No. 56—Universal Life-Type Contracts, Policyholder Dividends, and Coupons* (Issue Paper No. 56) and credit insurance contracts as discussed in *Issue Paper No. 59—Credit Life and Accident and Health Insurance Contracts* that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. This issue paper prescribes the income recognition and general policy reserve requirements for all contracts with life contingencies discussed in Issue Paper No. 50. Also as discussed in Issue Paper No. 50, subsequent issue papers, where needed, will establish specific statutory accounting principles that are applicable to unique characteristics of certain life contracts (e.g., universal life-type, credit life and variable contracts).

Types of Premiums

5. The gross premium is the amount charged to the policyholder and taken into operations as premium income.

6. The net premium is the amount calculated on the basis of the interest and mortality table used to calculate the reporting entity's statutory policy reserves.

7. The difference between the gross premium and the net premium is referred to as 'loading.' Loading generally includes allowances for acquisition costs and other expenses but also includes the differences in mortality and interest assumptions utilized for pricing and statutory reserving purposes.

Premium Income Recognition

8. Premiums shall be recognized as income on the gross basis (amount charged to the policyholder) when due from policyholders under the terms of the insurance contract. As a result, premium income shall include first year and renewal premiums, as well as any related premium adjustments (i.e., retrospective premium contracts which are discussed in *Issue Paper No. 66—Accounting for Retrospectively Rated Contracts)* provided for by the insurance contract. In addition, single and flexible premium amounts shall also be recorded as premium income when received from the policyholder. Premiums on flexible premium products are discussed in Issue Paper No. 56. The contractual due date shall be established through the predetermined billing procedure agreed to by the parties. Further, the recognition of premium income and the change in loading shall be consistent with the assumptions made in calculating the related policy reserve.

9. Premium income shall include dividends, coupons, guaranteed annual pure endowments, and similar benefits provided by the insurance contract when such amounts are applied by the terms of the contract to provide additional paid-up insurance, annuities, or to shorten the endowment or premium-paying period. Premiums and considerations waived by the reporting entity under disability provisions contained in its policies and contracts, and reported in operations as a disability benefit, are included in premium income.

10. Premium income shall exclude premiums that have been received by the reporting entity prior to the reporting date but which are due on or after the next policy anniversary date (i.e., advance premiums as discussed below).

11. Premium income should be reduced for premiums returned and allowances to industrial policyholders for the direct payment of premiums.

12. Premium income shall be increased by reinsurance premiums assumed and reduced by reinsurance premiums ceded. Reinsurance premiums assumed and ceded shall be defined and addressed in *Issue Paper No. 74—Life, Deposit-Type and Accident and Health Reinsurance*.

13. Death or other benefits used to fund new policies shall be accounted for as a benefit payment and as a new premium, another type of income, or a liability, as appropriate.

Premium Adjustments

14. In the Summary of Operations, the change in gross deferred and uncollected premiums is recorded as premium income. Deferred premiums are further discussed in paragraph 21. Since only the net premiums are included in the computation of reserves and reported as an asset, it is necessary to adjust the gross premium for an amount representing the change in loading on deferred and uncollected premiums. The change in loading is included as an expense in the Summary of Operations and is not shown as a reduction to premium income.

Uncollected Premium Balances

15. Gross premiums that are due and unpaid as of the reporting date, net of loading, shall be classified as uncollected premiums. Uncollected premium balances which are less than 90 days past due meet the definition of assets as set forth in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*, and are admitted assets to the extent they conform to the requirements of this paper.

Other Considerations Received

16. Considerations for supplementary contracts, dividends left to accumulate at interest, and amounts deposited and accumulated for guaranteed interest and group annuity contracts shall be recognized as deposit-type funds or considerations for supplemental contracts, as appropriate. These amounts are further discussed in *Issue Paper No. 52—Deposit-Type Contracts*.

Policy Reserves

17. Statutory policy reserves shall be established for all unmatured contractual obligations guaranteed under the terms of the policies. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required by Appendix A-820. These statutory policy reserves are generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. Statutory policy reserves meet the definition of liabilities as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in Issue Paper No. 5.

18. The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-820 and A-822, and the actuarial guidelines found in Part 9 of the Financial Examiners Handbook. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

19. The preceding two paragraphs summarize the general reserve requirements for all types of life contracts. In addition to these general reserve requirements, Appendix A-820 provides additional guidance with respect to certain types of accumulation annuities classified as life contracts that have flexible features (e.g., guaranteed nonforfeiture benefits such as interest guarantees, annuitization options, bailout features, partial withdrawals) which can create varying benefit streams if elected by the policyholder. Specific policies with such flexible features covered by this additional guidance include individual and group annuity and pure endowment contracts, but excludes any disability and accidental death benefits in these contracts. For benefits under these contracts, reserves shall be established according to the commissioners' annuity reserve valuation method (CARVM). Generally, under CARVM, the difference between all possible future guaranteed benefits streams, including guaranteed nonforfeiture benefits, over the future considerations is computed as of the end of each contract year. Each of these differences is discounted to the reporting date at the applicable valuation interest rate. A reserve is then recorded based on the greatest present value difference of each of the contract year calculations.

Valuation (Reserve) Method and Deferred Premiums

20. Reserves shall be established for all benefits guaranteed under the terms of the policy as of the reporting date using appropriate valuation methods, interest, mortality, and morbidity, as appropriate. However, as a practical expedient, reserves have been generally calculated as of the policy anniversary date (i.e., terminal reserves), not the reporting date. As a result, it is necessary to adjust the terminal reserve back to the reporting date. The components used to compute a terminal reserve shall consist of an interest rate, a mortality and/or morbidity table, and a valuation method (e.g., net level, full preliminary term, Commissioners Reserve Valuation Method (CRVM), or Commissioners Annuity Reserve Valuation Method (CARVM)). A terminal reserve is based on the assumption that all net premiums have been received, all interest earned, and all benefits paid to the end of the policy year.

21. Since terminal reserves are computed as of the end of a policy year and not the reporting date, the terminal reserve must be converted to reflect that portion of the net premium that is unearned at the reporting date. This is generally accomplished using either the mean reserve method or the mid-terminal method as described below:

a. Under the mean reserve method, the policy reserve equals the average of the terminal reserve at the end of the policy year and the initial reserve (the initial reserve is equal to the previous year's terminal reserve plus the net annual valuation premium for the current policy year). When reserves are calculated on the mean reserve basis, it is assumed that the net premium for a policy is collected annually at the beginning of the policy year and that policies are issued ratably over the calendar year.

   However, as premiums are often received in installments more frequently than annually and since the calculation of mean reserves assumes payment of the current policy year's entire net annual premium, the policy reserve is overstated by the amount of net modal premiums not yet received for the current policy year as of the valuation date. As a result, it is necessary to compute and report a special asset to offset the overstatement of the policy reserve.

   This special asset is termed "deferred premiums." Deferred premiums are computed by taking the gross premium (or premiums) extending from (and including) the modal (monthly, quarterly, semiannual) premium due date or dates following the valuation date to the next policy anniversary date and subtracting any such deferred premiums that have actually been collected. Deferred premium assets shall also be reduced by loading. Since the calculation of mean reserves assumes payment of the current policy year's entire net annual premium, deferred premium assets are considered admitted assets to compensate for the overstatement of the policy reserve.

b. Under the mid-terminal method, the policy reserves are calculated as the average of the terminal reserves on the previous and the next policy anniversaries. These reserves shall be accompanied by an unearned premium reserve consisting of the portion of valuation premiums paid or due covering the period from the valuation date to the next policy anniversary date.

Advance Premiums

22. Advance premiums are those premiums that have been received by the reporting entity prior to the valuation date but which are due on or after the next policy anniversary date. The policyholder may remit one or more premiums in advance of specific due dates. Where premiums are remitted sufficiently far in advance, the premiums charged to the policyholder may be reduced or discounted to reflect the time value of money. The difference between the gross and discounted premium is ratably charged as interest in the Summary of Operations from the date of payment to the premium due date. At the premium due date, the amount received from the policyholder plus the accumulated interest equals the gross premium necessary to fund the policy. The total amount of such advance premiums, less any discount as of the valuation date, is reported as a liability in the statutory financial statement and is not considered premium income until due. The gross premium, not the net valuation premium, is recorded as the advance premium in recognition of the reporting entity's liability to refund such premiums in the event the policy is terminated.

Reserve Recognition

23. The difference between the policy reserves for life contracts at the beginning and end of the reporting period shall be reflected as the change in reserves in the Summary of Operations, except for any difference due to a change in valuation basis.

Change In Valuation Basis

24. A change in valuation basis shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in *Issue Paper No. 3—Accounting Changes* (Issue Paper No. 3). Consistent with Issue Paper No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the Summary of Operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a new method and a specific transition that allows for grading.

Supplemental Benefits

25. In addition to the basic policy benefit, the insurance contract may provide supplemental benefits. Supplemental benefits include, but are not limited to, accidental death benefits and waiver of premium benefits. Appropriate reserves shall be established for these supplemental benefits based on the terms of the contract.

Unearned Income

26. Amounts assessed that represent compensation to the reporting entity for services to be provided in future periods and which are required to be refunded upon policy termination are not earned in the period assessed. Such amounts, if not already considered in the policy reserve, shall be reported as unearned income, a liability, and recognized as income as the related services are provided.

Accelerated Benefits

27. Accelerated benefits are benefits payable under a life insurance contract to a policyholder or certificateholder during the lifetime of the insured, in anticipation of death or upon the occurrence of specified life-threatening or catastrophic conditions as defined by the policy or rider. These benefits reduce the death benefit otherwise payable under the life insurance contract and are payable upon the occurrence of a single qualifying event which results in the payment of a benefit amount fixed at the time of acceleration. When benefits are provided through the acceleration of benefits under group or individual life policies or riders to such policies, policy reserves shall be determined in accordance with Appendices A-820 and A-822. Reserves for such benefits in the aggregate shall be sufficient to cover policies upon which no claim has yet arisen as well as policies upon which an accelerated claim has arisen. Accounting guidance for accelerated benefit payments made in the form of a loan are addressed in *Issue Paper No. 49—Policy Loans*. In addition, accelerated benefit payments, for those accelerated benefits that reduce the policy, shall not be deferred but shall be charged to the Summary of Operations as a benefit expense when paid to the policyholder.

Additional Reserves Not Included Elsewhere

28. Additional actuarial liabilities are commonly held for such items as:

a. Valuation net premiums in excess of gross premiums (i.e., deficiency reserves)

b. Provision for either nondeduction of deferred fractional premiums or return of premiums at death of the insured

c. Surrender values in excess of reserves otherwise required or carried

d. Substandard extra premiums, extra mortality on group conversions, and guaranteed insurability options

e. Additional reserves required based on cash flow testing and/or asset/liability matching requirements

f. Additional reserves for policies which contain conversion privileges or future contingent benefits

Disclosures

29. For life and annuity reserves the financial statements shall disclose the following:

a. A description of reserve practices concerning the following:

i. Waiver of deduction of deferred fractional premiums upon death of insured;

ii. Return of portion of final premium for periods beyond the date of death; and

iii. Amount of any surrender value promised in excess of the reserve as legally computed;

b. The methods employed in the valuation of substandard policies;

c. The amount of insurance, if any, for which the gross premiums are less than the net premiums according to the valuation standards;

d. The method used to determine tabular interest, tabular less actual reserves released, and tabular cost (by formula or from the basic data for such items); and

e. The nature of significant other reserve changes.

30. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:

a. Subject to discretionary withdrawal:

i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;

(a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the insurer;

(b) In installments over five years or more, with or without a reduction in the interest rate during the installment period;

ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in (v.(d)) below;

iii. At market value, where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current market value, and the liabilities are stated at the current market value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at market value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

(a) In a lump sum without adjustment;

(b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

(c) In a lump sum subject to a fixed surrender charge of less than 5%;

(d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified "bail out" rate and the "bail out" rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues;

(e) All others;

b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded;

e. Total net.

31. If the reporting entity has reported life insurance premiums and annuity considerations deferred and uncollected on policies in force as of the financial statement date, disclose separately the amounts and the loading excluded for each of the following lines of business:

a. Industrial business;

b. Ordinary new business;

c. Ordinary renewal;

d. Credit life;

e. Group life;

f. Group annuity.

32. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.);

f. Total premium written.

33. Reporting entities shall disclose the relative percentage of participating insurance, the method of accounting for policyholder dividends, the amount of dividends, and the amount of any additional income allocated to participating policyholders in the financial statements.

DISCUSSION

SAP Considerations

34. The statutory accounting principles outlined in the conclusion above regarding income recognition and policy reserves for life contracts are consistent with the Statement of Concepts which states:

> Conservatism
>
> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.
>
> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.
>
> Recognition
>
> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).
>
> Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.
>
> SAP income reflects the extent that changes have occurred in SAP assets and liabilities for current period transactions, except changes in capital resulting from receipts or distributions to owners. SAP income also excludes certain other direct charges to surplus which are not directly attributable to the earnings process, (e.g., changes in non-admitted assets).

35. Except as discussed in paragraphs 36-41, the statutory accounting principles outlined in the conclusion above regarding income recognition and policy reserves for life contracts are consistent with current statutory accounting.

Unearned Income

36. Unearned income and other similar amounts described in paragraph 26 are not currently addressed in statutory accounting. Unearned income and other similar amounts meet the definition of liabilities as defined in Issue Paper No. 5. Recording unearned income and other similar amounts as deferred income and recognizing the amounts as income only as the earnings process is completed is consistent with the objectives of the Statement of Concepts.

Cost of Collection Liability

37. Current statutory accounting requires a liability to be established for the costs of collecting deferred and uncollected premiums in excess of loading when loading is not adequate to cover these costs. As previously discussed, deferred premiums are only recorded when using the mean reserve method and are computed by taking the gross premium extending from the modal premium due date following the valuation date to the next policy anniversary date and subtracting any such deferred premiums that have actually been collected. As a result, current statutory accounting requires this liability to be established when using the mean reserve method but not the mid terminal reserve method. Due to the generally conservative nature of the mortality and interest rates prescribed in computing policy reserves, the requirement to establish a liability for the costs of collecting deferred and uncollected premiums in excess of loading has been eliminated. In addition, by eliminating the requirement to establish this liability, the inconsistent practice of requiring this liability to be established when using the mean reserve method as it relates to deferred premiums, but not the mid terminal reserve method has also been eliminated.

Premium Deficiency

38. Due to the manner in which the liability for the costs of collecting deferred and uncollected premiums in excess of loading has historically been computed, any deficiencies in gross deferred premiums relative to corresponding net deferred valuation premiums from the valuation date to the next policy anniversary date were accrued in this liability.

39. As further discussed in Appendix A-820, basic policy reserves are required to be increased in certain circumstances. If in any contract year the gross premium is less than the valuation net premium, the minimum reserve required shall be the greater of

a. the reserve currently held for the contract or

b. the reserve calculated by the method currently used but using minimum valuation standards of mortality and interest. The gross premium on the policy is substituted in this reserve calculation at each contract year in which it is less than the valuation net premium.

Although Appendix A-820 makes no explicit reference to deficiency reserves, the excess of reserves described in b) over those described in a) is often referred to as a deficiency reserve.

40. Historically, this calculation has been performed from the next policy anniversary forward. However, since the liability for the cost of collection in excess of loading has been eliminated, which considered deficiencies in gross deferred premiums relative to corresponding net deferred valuation premiums from the valuation date to the next policy anniversary date, this calculation should be performed from the valuation date through the end of the premium paying period.

Accelerated Benefits

41. Current statutory accounting does not address the accounting for accelerated benefits. Consistent with current statutory accounting which requires benefits paid to policyholders to be recorded as an expense in the Summary of Operations and the Statement of Concepts which generally prohibits accounting practices which defer the recognition of expense, this issue paper requires accelerated benefits to be charged to the Summary of Operations as a benefit expense when paid to the policyholder.

Deferred Premiums

42. Reserves for life contracts are generally calculated on the mean reserve basis. Mean reserves are calculated on the assumption that the net premium for a policy is collected annually at the beginning of the policy year. To the extent such premiums have not been collected, reserves calculated on the mean reserve basis overstate the required policy reserve for life contracts. As a result, an adjustment is needed to offset the overstatement of the policy reserve. Historically, this adjustment has been recorded as an asset called "deferred premiums." For practical reasons related to maintenance, accounting, and financial reporting of reserves for life contracts, these amounts have been reported as assets. As this practice does not affect net income or surplus and considering the importance of consistent financial reporting as well as the anticipated costs and benefits associated with changing this current and pervasive practice, this codification does not change the practice of presenting deferred premiums as admitted assets.

GAAP Considerations

43. Although this issue paper generally reflects the basic accounting for income recognition on life contracts prescribed by GAAP which requires that premiums from life contracts be recognized as income when due from policyholders and that policy reserves be established for the excess of the present value of future benefits and expenses over future net premiums, it rejects the GAAP literature referenced in paragraphs 44 and 45 for the reasons set forth therein.

44. The statutory accounting principles in this issue paper differ from GAAP which specifies different income recognition principles for different types of life contracts. *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments* (FAS 97) excludes certain considerations received from premium income on universal life-type contracts and certain limited-payment contracts. For investment and universal life-type contracts, FAS 97 (paragraphs 15 and 19, respectively) recognizes the considerations received as funds on deposit and income is recognized from amounts assessed against policyholders for mortality, contract administration, and surrender charges, as applicable. For limited-payment contracts, FAS 97 (paragraph 16) specifies any gross premium received in excess of the net premium for limited-payment contracts shall be deferred and recognized in income in a constant relationship with insurance in force (when accounting for life insurance contracts) or with the amount of expected future benefit payments (when accounting for annuity contracts). These differences are inconsistent with the recognition concept in the Statement of Concepts which states that SAP income should reflect the extent that changes have occurred in SAP assets and liabilities for current period transactions, except changes in capital resulting from receipts or distributions to owners.

45. *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60), FAS 97, *FASB Statement 120*, *Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts* (FAS 120), *AICPA Practice Bulletin No. 8, the AICPA Audits of Stock Life Insurance Companies* (AICPA Life Audit and Accounting Guide), and *AICPA Statement of Position 95-1*, *Accounting for Certain Activities of Mutual Life Insurance Enterprises* (SOP 95-1) prescribe the following with respect to policy reserves:

a. Specifies that policy reserves represent the present value of future benefits to be paid to or on behalf of policyholders and related expenses less the present value of future net premiums (portion of gross premium required to provide for all benefits and expenses).

b. Specifies that the liability is estimated using methods that include assumptions, such as estimates of expected investment yields, mortality, terminations, and expenses, applicable at the time the insurance contracts are made. The assumptions shall include provision for the risk of adverse deviation. Original assumptions shall continue to be used in subsequent accounting periods to determine changes in the liability for future policy benefits (often referred to as the "lock-in concept") unless a premium deficiency exists.

c. Specifies that a premium deficiency exists if the existing contract liabilities, together with the present value of future gross premiums, will not be sufficient (a) to cover the present value of future benefits to be paid to or on behalf of policyholders and settlement and maintenance costs relating to a block of long-duration contracts and (b) to recover unamortized acquisition costs.

d. Requires the retrospective deposit method of accounting for universal life-type contracts. That accounting method establishes a liability for policy benefits at an amount determined by the account or contract balance that accrues to the benefit of the policyholder.

e. Specifies that the liability for future policy benefits relating to certain participating contracts be equal to the sum of 1) the net level premium reserve for death and endowment policy benefits, 2) the liability for terminal dividends, and 3) any premium deficiency.

46. This issue paper rejects the GAAP literature related to policy reserves referred to in the preceding paragraph, including the excerpts shown in paragraphs 50-52 below. These GAAP pronouncements permit the use of generally less conservative assumptions of expected investment yields, mortality, terminations, and expenses applicable at the time the insurance contracts are made and usually produce smaller reserves than current SAP. Current SAP assumptions and estimates are generally more conservative in nature and therefore are more consistent with the objectives in the Statement of Concepts. Further, since the requirements for establishing policy reserves for life contracts are directly related to and are inseparable from the income recognition requirements on both a SAP and GAAP basis, the income recognition requirements of the GAAP literature referenced in this paragraph are similarly rejected in this issue paper.

47. GAAP does not specifically address valuation methods, deferred and uncollected premiums, advance premiums, liability for cost of collection, supplemental benefits, and miscellaneous reserves discussed above. Current practice is to account for these items in a manner similar to SAP but consistent with the GAAP reserve methods used to calculate the basic policy reserve.

Drafting Notes/Comments

- Issue Paper No. 50 addresses Classifications and Definitions of Insurance or Managed Care Contracts In Force.
- Issue Paper No. 52 addresses Deposit-Type Contracts.
- Issue Paper No. 53 addresses Property Casualty Contracts – Premiums.
- Issue Paper No. 54 addresses Individual and Group Accident and Health Contracts.
- Issue Paper No. 55 addresses Unpaid Claims, Losses and Loss Adjustment Expenses.
- Issue Paper No. 56 addresses Universal Life-Type Contracts, Policyholder Dividends, and Coupons.
- Issue Paper No. 59 addresses Credit Life and Accident and Health Insurance Contracts.
- Issue Paper No. 66 addresses Accounting for Retrospectively Rated Contracts.
- Issue Paper No. 74 addresses Life, Deposit-Type and Accident and Health Reinsurance.
- Issue Paper No. 89 addresses Separate Accounts.

- No guidance was added from FAS 120, AICPA Practice Bulletin No. 8 or the AICPA Life Audit and Accounting Guide since the guidance was not applicable or was already reflected in FAS 60, FAS 97, and SOP 95-1.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE (ONLY PERTINENT EXCERPTS ARE INCLUDED BELOW)

Statutory Accounting

48. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance on life policy reserves:

> CHAPTER 10
> AGGREGATE RESERVES FOR LIFE AND ANNUITY CONTRACTS
>
> Life insurance pays the beneficiary on the death of the insured. An endowment pays the policyholder if he lives to the end of the period, or a beneficiary if the policyholder dies. An annuity or pure endowment pays the policyholder if he is living. Policies written today may include numerous provisions, which are either written directly into the policy or attached as a rider.
>
> This chapter discusses the reserves that a company must establish. Aggregate reserves are reported as liabilities in the statutory financial statement.
>
> Statutory Reserves
>
> This type of life insurance policy dictates the amount of the reserve that must be established and how long it must be maintained. Within the ordinary life and industrial line of business, there are three basic types of policies: whole life, endowment, and term. (Annuities and pure endowments are discussed later in this chapter.)
>
> Whole life insurance provides coverage for the life of the insured as long as the premiums are paid in conformity with the policy. Under a whole life plan of insurance, the company is obligated to maintain a reserve until the death of the insured.
>
> Term life insurance provides coverage only for the period that is specified in the policy. Under a term insurance plan, the company maintains a required reserve which reduces to zero upon expiration of the term period.
>
> Similar to term insurance, endowment life insurance provides coverage for a period specified in the policy. Unlike term insurance, the proceeds of endowment insurance are payable if the insured lives to the end of the period.
>
> In the aggregate, policy reserves for all life insurance policies that are reported in the statutory financial statements must equal or exceed reserves calculated by using certain assumptions and methods that produce the minimum required by law. Further, each state requires a Statement of Actuarial Opinion which provides the opinion of an actuary that aggregate reserves make good and sufficient provision for all unmatured obligations of the company guaranteed under the terms of its policies and meet the minimum requirements of the laws of the state of domicile.
>
> Minimum Reserves Required
>
> The components necessary to compute reserves are an interest rate, a mortality table, and a method of valuation. The standards for determining the minimum statutory reserves that are required in life insurance policies are prescribed in statutes or regulations. Generally, the states follow the provisions of the NAIC Model Valuation Law and its interpretations; however, variations by state do exist.

These standards vary by line of business and by issue date of the policy. Further limitations are placed on policies having nonforfeiture benefits.

Types of Reserves

The reserves calculated for a block of life insurance policies as of the valuation date may be based upon different assumptions concerning the anniversary (issue) date and the average date when premiums are due. The different types of reserves that may be used are terminal, initial, mid-terminal, and mean.

The terminal reserve is the policy reserve at the end of the policy year. It is based on the assumption that all net premiums have been received, all interest earned, and all benefits paid to the end of the policy year.

The initial reserve is the previous year's terminal reserve plus the net valuation premium for the current policy year. This reserve basis is not frequently utilized in financial reporting.

In computing reserves on ordinary insurance, most companies use mean reserves. These are defined as the average of the initial and terminal reserves for the current year, on the assumption that policies are issued uniformly throughout the calendar year on an annual premium basis. Any fractional premium (e.g., monthly, quarterly, semiannual) for the current policy year which is not yet due must be reported as a deferred premium.

Mid-terminal reserves are generally used to value industrial insurance, on which premiums are usually paid monthly or weekly. Mid-terminal reserves are the average of the terminal reserves on the last and the next policy anniversaries. These reserves must be accompanied by an unearned premium reserve consisting of the portion of valuation premiums paid or due covering the period from the valuation date to the due date of the next modal premium. Any premiums due beyond the valuation date but paid prior to that date are included in the advance premium liability. Certificates of fraternal benefit societies generally are reserved on a mid-terminal basis.

Reserves for permanent group life insurance plans usually are calculated in the same way as individual insurance and can be either mean (with deferred premium) or mid-terminal plus the unearned premium.

Supplemental Benefits

In addition to the basic death benefit, life insurance policies may provide other benefits. These supplemental benefits are sold for additional premiums or for a basic premium that has been calculated to include their costs. In either case, the company must establish appropriate reserves for these benefits. Examples of reserves for these benefits include:

1. Accidental death benefits. The most common additional death benefit is double indemnity which provides for an additional payment equal to the face amount of the policy in the event of accidental death. Triple indemnity also is offered, but it usually is limited to accidental death in connection with commercial travel.

2. Total and permanent disability benefits - active lives. It is common for a life insurance policy to be sold with an additional benefit for waiver of premiums upon the disability of the policyowner. This is called waiver of premiums benefit. The company, of course, must establish a reserve for waiver of premium benefits.

A benefit rider for disability payments to the policyowner/insured also may be attached to a life insurance policy.

3. Total and permanent disability benefits - disabled lives. In the event of a waiver of premiums or payment of benefits due to total and permanent disability, a reserve must be established to cover the present value of the future gross premium to be waived or the

> payments to be paid. Policies on which benefits are currently being paid are called disabled lives. For ordinary contracts this reserve usually is reported as a part of the aggregate life reserves. This is in addition to the basic policy reserve for active lives.

> Miscellaneous Reserves
>
> Since the actuarial liabilities must include provision for any contingent benefit or right which may arise, statutory statements provide for estimates of a number of miscellaneous reserve items. For example, state laws or regulations may require minimum reserves when valuation net premiums exceed gross premiums. The additional reserve needed to meet the minimum may appear separately as a miscellaneous reserve or may be included with the life reserve in accordance with the applicable state regulations. Similarly, provision for either nondeduction of deferred fractional premiums or return of premiums at death of the insured may be made as a separate reserve or as part of the life reserve. Approximate reserving methods are accepted and frequently used to estimate such items. Another minimum reserve which must be provided for is a reserve for surrender values in excess of reserves otherwise required or carried. There are other miscellaneous items commonly encountered, such as reserve for substandard extra premiums, a reserve for extra mortality on group conversions, and reserve for guaranteed insurability options.
>
> Changes in Valuation Bases
>
> Where the interest rate, mortality basis, reserving method (e.g., net level, preliminary term, etc.), or other basis affecting reserve computation of in force business is changed during the year, any increase or decrease in actuarial reserves resulting from this change in valuation basis must be charged directly to surplus rather than as a part of the reserve increase item in the summary of operations. For various reasons, any change in valuation bases which produces an increase in reserves (reserve strengthening) or decrease in reserves (reserve destrengthening) may require the approval of the applicable regulatory authority. Procedures and timing for such approval vary from state to state.

49. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance with respect to premium income recognition:

> CHAPTER 18
> PREMIUM INCOME
>
> Premiums are generally recorded in the company's general ledger when received. This necessitates adjustments as of the balance sheet dates for premiums received in advance of their due date, for premiums which are due but have not yet been received, and for "deferred" premiums. Premium income reported in the Summary of Operations includes reinsurance assumed and is reduced by reinsurance ceded.
>
> Deductions should be made for premiums and annuity considerations returned and allowances to industrial policyholders for direct payment of premiums. Commissions and allowances on reinsurance premiums assumed and ceded may not be deducted.
>
> Single premiums and considerations include dividends, coupons, guaranteed annual pure endowments, and similar benefits applied to provide paid-up additional insurance or annuities. Renewal premiums collected are to include dividends and coupons applied to pay renewal premiums and to shorten the endowment or premium-paying period.
>
> Premiums and considerations waived by the company under disability provisions contained in its policies and contracts, and reported in operations as a disability benefit, are included in premium income.

Gross and Net Premiums and Loading

A “gross” premium is the amount charged to the policyholder and taken into operations as premium income. A “net” premium is the amount calculated on the basis of the interest and mortality table used to calculate the insurance company’s policy reserves.

The difference between the gross and net premium is called “loading.” Loading is an amount of the gross premium that provides the company with the funds to pay commissions, to meet operating expenses, to provide for contingencies, and to return a profit.

Deferred and Uncollected Premiums

The increase in reserves for life insurance policies which is charged against operations for the year is based on reserves frequently calculated on what is called the mean reserve basis. Mean reserves are calculated on the assumption that the entire annual premium for a policy is collected annually at the beginning of the policy year.

However, since premiums are often received in installments more frequently than annually and since the mean reserves assume payment of the current year’s net annual premium, it becomes necessary to compute and report a special asset item to offset the additional liability. This asset item is termed “deferred premiums.” It represents the premium (or premiums) extending from (and including) the modal (monthly, quarterly, semiannual) premium due date or dates following the valuation date to the next policy anniversary date. The company, therefore, reports deferred premiums not yet due as premium income “gross” and as an asset net of loading. Policies with premiums payable annually on the policy anniversary will not have deferred premiums.

Since the policy reserve liability calculated on the mean reserve basis assumes the collection of premiums to the following policy anniversary, deferred premiums (semiannual, quarterly, or monthly premiums due in the following year prior to the anniversary date) which have been collected in the current year reduce the deferred premium asset. The liability for advance premiums would consequently exclude such premiums.

Life insurance premium income also includes, on a gross basis, those premiums that have been billed and are due and unpaid on the valuation date. An asset item is allowable for any such uncollected premiums net of loading. Theoretically, only policies in their grace period would have uncollected premiums at the balance sheet date because policies beyond the grace period would have been lapsed. However, in actual practice most companies, to avoid processing a large number of transactions in the first month or so after the grace period, may not process policies with uncollected premium until 30 to 60 days after expiration of the grace period. These policies, therefore, may still be shown and valued as being premium-paying.

The amount of deferred and uncollected premiums that should be reported as an asset is the aggregate of the related net premiums because the sole purpose of the asset is to offset the net premium included in the policy reserves. If the company reported gross premiums deferred and uncollected as an asset, it would be required to provide an offset for the amount of loading for expenses and profits that have not yet been incurred or realized.

Net premiums deferred and uncollected may be determined in one of two ways. Either a seriatim listing of gross and net premiums may be prepared or the company may calculate ratios of net to gross premiums deferred and uncollected. In this second case, the company must be able to support its factors with studies that consider the mix of business, the amounts applicable first year and renewal premiums, and so forth. In any case, the company should be able to demonstrate that the net premiums are the same as those used in the calculation of the reserves.

In the Summary of Operations the change in gross deferred and uncollected premiums is taken in as premium income. Since only the net premiums are included in reserves and reported as an asset, it is necessary to make an adjustment for the change in the loading on deferred and uncollected premiums.

Cost of Collection in Excess of Loading

A liability should be provided for the cost of collection on premiums and annuity consideration deferred and uncollected in excess of total loading thereon if the company deems the loading to be inadequate. The increase in this item and the increase in loading on deferred and uncollected premiums are both recorded in the same line in the Summary of Operations. Provisions for cost of collection should include commissions, collection fees, and taxes contingent upon the collection of the deferred and uncollected premiums.

Premiums Received in Advance

Premium income reported in operations must exclude premiums that have been received by the company prior to the valuation date but which are due on or after the next policy anniversary date. The accounting treatment is the same for both life and accident and health premiums.

A policyholder may remit one or more premiums in advance of specific due dates. Where premiums are remitted sufficiently far in advance, the premiums may be discounted for interest from their due dates to the date of payment. The total amount of such gross premiums, less any discount as of the valuation date, is reported as a liability in the statutory financial statement. The gross premium less any discount is recorded as the advance premium, not the net valuation premium, in recognition of the company's liability to refund such premiums in the event the policy is terminated.

Advance premiums must be recorded for industrial as well as ordinary and group policies. Advance premiums received on group policies may be reported in the liability for premiums received in advance or as a 100% unearned premium reserve.

Premium and Other Deposit Funds

A company may also receive premiums over one year prior to their due date and include them in a premium deposit fund. These amounts are not reported as income. The premium deposit fund may or may not represent payment of specific future premiums. Interest at contracted rates is credited annually to each individual account. Interest on such funds must be accrued to the balance sheet date. The terms of the fund (interest rate, disposition, and so forth) are specified in the provisions of the policy or in a separate endorsement. An explanation of other deposit funds can be found in Chapter 12.

Amounts deposited and accumulated for guaranteed interest contracts may be included in this classification. Finally, other deposit items of a generally similar nature may also be included herein.

Withdrawals from deposit accounts to pay premiums are credited to the appropriate income account. Provision is made in the statutory financial statement for reporting the balance of such deposits as of the balance sheet date.

Industrial Policies

Mid-terminal reserves are generally held for industrial insurance policies. Because of the collection of premiums due after the statement date and up to the next policy anniversary is not assumed in the calculation of mid-terminal policy reserves, no deferred premium asset is recorded and no deferred premiums are taken into operations as premium income.

Uncollected premiums due on industrial policies are defined in the same way as uncollected ordinary premiums and are bound by the same limitations. For industrial policies on which an asset is recorded for uncollected premiums, reserves should be established on the same basis as for those where the premiums have been collected and such uncollected premiums are taken into operations as premium income.

Group Life Policies

Group term policies generally carry unearned premium or one-year term insurance reserves and where premiums are accounted for on a true monthly premium basis no deferred premium asset would generally be appropriate. However, where premiums are accounted for on an annual premium basis and payable in installments more frequently than annually, it would be appropriate to take deferred premiums into premium income and to set up a net deferred premium asset, based on the valuation standards used, together with an appropriate addition to reserves.

Uncollected premiums are allowed as an asset and should be recorded net of loading. The corresponding reserve liabilities must reflect the uncollected premiums that are taken as an asset.

Group permanent policies may have deferred and uncollected premiums if reserves are calculated on a mean basis. They may have only uncollected premiums if reserves are calculated on a mid-terminal basis.

Annuity Contracts

Certain annuity contracts, usually group pension contracts, frequently provide for the payment to the company of amounts other than premiums or considerations to be accumulated at interest for the purpose of providing pensions for employees at retirement and similar benefits. Amounts withdrawn from the fund to purchase annuity benefits reduce "Annuity and other fund deposits" and increase premium and annuity considerations.

Uncollected and deferred annuity considerations are calculated on deferred annuity contracts other than single payment contracts. The asset item is recorded net of loading.

Considerations for Supplementary Contracts

The Summary of Operations includes as income all policy proceeds which have been left with the company during the year under optional modes of settlement to provide beneficiaries or the policyowner with periodic income under a supplementary contract. Supplementary contracts may provide for an income payable for the lifetime of the payee(s), in which case the considerations would be reported as "Considerations for supplementary contracts with life contingencies." A supplementary contract may also provide for the payment of a periodic income for a specified number of years or for payments of a specified amount until the funds with interest earnings are exhausted. The considerations for such supplementary contracts are reported separately as "Considerations for supplementary contracts without life contingencies."

These considerations arise from proceeds retained at death, disability, surrender, or maturity of policies and annuity contracts. The amount of these retained proceeds is included in the amount reported in the Summary of Operations for policy and contract benefits.

Considerations for Dividend Accumulations

Another income item in the Summary of Operations is "Consideration for dividend accumulations." The accounting treatment for dividend accumulation deposits, dividend accumulation payments, and the change in the liability is similar to accounting for life insurance. Consideration for dividend accumulations represents the amount of policy dividends left on deposit with the company during the year to accumulate at interest. This amount would normally agree with the amount reported in the Dividends and Coupons to Policyholders exhibit of the annual statement as being left on deposit with the company.

Generally Accepted Accounting Principles

50. FAS 60, as amended by FAS 97 and FAS 120, provides the following guidance related to income recognition and related policy reserves for life and accident and health contracts:

Insurance contracts, for purposes of this Statement, need to be classified as short-duration or long-duration contracts. Long-duration contracts include contracts, such as whole-life, guaranteed renewable term life, endowment, annuity, and title insurance contracts, that are expected to remain in force for an extended period. All other insurance contracts are considered short-duration contracts and include most property and liability insurance contracts.

Premiums from long-duration contracts are recognized as revenue when due from policyholders. The present value of estimated future policy benefits to be paid to or on behalf of policyholders less the present value of estimated future new premiums to be collected from policyholders are accrued when premium revenue is recognized. Those estimates are based on assumptions, such as estimates of expected investment yields, mortality, morbidity, terminations, and expenses, applicable at the time the insurance contracts are made. Claim costs are recognized when insured events occur.

INTRODUCTION

1. The primary purpose of insurance is to provide economic protection from identified risks occurring or discovered within a specified period. Some types of risks insured include death, disability, property damage, injury to others, and business interruption. Insurance transactions may be characterized generally by the following:

a. The purchaser of an insurance contract makes an initial payment or deposit to the insurance enterprise in advance of the possible occurrence or discovery of an insured event.

b. When the insurance contract is made, the insurance enterprise ordinarily does not know if, how much, or when amounts will be paid under the contract.

2. Two methods of premium revenue and contract liability recognition for insurance contracts have developed, which are referred to as short-duration and long-duration contract accounting in this Statement. Generally, the two methods reflect the nature of the insurance enterprise's obligations and policyholder rights under the provisions of the contract.

3. Premiums from short-duration insurance contracts, such as most property and liability insurance contracts, are intended to cover expected claim[1] costs resulting from insured events that occur during a fixed period of short duration. The insurance enterprise ordinarily has the ability to cancel the contract or to revise the premium at the beginning of each contract period to cover future insured events. Therefore, premiums from short-duration contracts ordinarily are earned and recognized as revenue evenly as insurance protection is provided.

----

[1] Terms defined in the glossary (Appendix A) are in boldface type the first time they appear in this Statement.

----

4. Premiums from long-duration insurance contracts, including many life insurance contracts, generally are level even though the expected policy benefits and services do not occur evenly over the periods of the contracts. Functions and services provided by the insurer include insurance protection, sales, premium collection, claim payment, investment, and other services. Because no single function or service is predominant over the periods of most types of long-duration contracts, premiums are recognized as revenue over the premium-paying periods of the contracts when due from policyholders. Premium revenue from long-duration contracts generally exceeds expected policy benefits in the early years of the contracts and it is necessary to accrue, as premium revenue is recognized, a liability for costs that are expected to be paid in the later years of the contracts. Accordingly, a liability for expected costs relating to most types of long-duration contracts is accrued over the current and expected renewal periods of the contracts.

APPLICABILITY AND SCOPE

6. This Statement establishes accounting and reporting standards for the general-purpose financial statements of stock life insurance enterprises, property and liability insurance enterprises[2], title insurance enterprises, mutual life insurance enterprises, assessment enterprises, and fraternal benefit societies. Except for the sections on premium revenue and claim cost recognition and acquisition costs (paragraphs 9-11, 13-18, and 20-31), this Statement applies to mortgage guaranty insurance enterprises. *FASB Statement No. 120*, *Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts*, addresses the accounting for certain long-duration participating life insurance contracts.*

* The accounting for certain long duration insurance contracts referred to as investment contracts, limited-payment contracts, and universal life-type contracts is established by FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments.

----

[2] Property and liability insurance enterprises, for purposes of this Statement include stock enterprises, mutual enterprises, and reciprocal interinsurance exchanges.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

General Principles

10. Premiums from long-duration contracts shall be recognized as revenue when due from policyholders. A liability for expected costs relating to most types of long-duration contracts shall be accrued over the current and expected renewal periods of the contracts. The present value of estimated future policy benefits to be paid to or on behalf of policyholders less the present value of estimated future net premiums to be collected from policyholders (liability for future policy benefits) shall be accrued when premium revenue is recognized. Those estimates shall be based on assumptions, such as estimates of expected investment yields, mortality, morbidity, terminations, and expenses, applicable at the time the insurance contracts are made. In addition, liabilities for unpaid claims and claim adjustment expenses shall be accrued when insured events occur.

Liability for Future Policy Benefits

21. A liability for future policy benefits relating to long-duration contracts other than title insurance contracts (paragraph 17) shall be accrued when premium revenue is recognized. The liability, which represents the present value of future benefits to be paid to or on behalf of policyholders and related expenses less the present value of future net premiums (portion of gross premium required to provide for all benefits and expenses), shall be estimated using methods that include assumptions, such as estimates of expected investment yields, mortality, morbidity, terminations, and expenses, applicable at the time the insurance contracts are made. The liability also shall consider other assumptions relating to guaranteed contract benefits, such as coupons, annual endowments, and conversion privileges. The assumptions shall include provision for the risk of adverse deviation. Original assumptions shall continue to be used in subsequent accounting periods to determine changes in the liability for future policy benefits (often referred to as the "lock-in concept") unless a premium deficiency exists (paragraphs 35-37). Changes in the liability for future policy benefits that result from its periodic estimation for financial reporting purposes shall be recognized in income in the period in which the changes occur.

Investment Yields

22. Interest assumptions used in estimating the liability for future policy benefits shall be based on estimates of investment yields (net of related investment expenses) expected at the time insurance contracts are made. The interest assumption for each block of new insurance contracts

(a group of insurance contracts that may be limited to contracts issued under the same plan in a particular year) shall be consistent with circumstances, such as actual yields, trends in yields, portfolio mix and maturities, and the enterprise's general investment experience.

Mortality

23. Mortality assumptions used in estimating the liability for future policy benefits shall be based on estimates of expected mortality.

Morbidity

24. Morbidity assumptions used in estimating the liability for future policy benefits shall be based on estimates of expected incidences of disability and claim costs. Expected incidence of disability and claim costs for various types of insurance (for example, noncancelable and guaranteed renewable accident and health insurance contracts) and other factors, such as occupational class, waiting period, sex, age, and benefit period, shall be considered in making morbidity assumptions. The risk of antiselection (the tendency for lower terminations of poor risks) also shall be considered in making morbidity assumptions.

Terminations

25. Termination assumptions used in estimating the liability for future policy benefits shall be based on anticipated terminations and nonforfeiture benefits, using anticipated termination rates and contractual nonforfeiture benefits. Termination rates may vary by plan of insurance, age at issue, year of issue, frequency of premium payment, and other factors. If composite rates are used, the rates shall be representative of the enterprise's actual mix of business. Termination assumptions shall be made for long-duration insurance contracts without termination benefits because of the effects of terminations on anticipated premiums and claim costs.

Expenses

26. Expense assumptions used in estimating the liability for future policy benefits shall be based on estimates of expected nonlevel costs, such as termination or settlement costs, and costs after the premium-paying period. Renewal expense assumptions shall consider the possible effect of inflation on those expenses.

Premium Deficiency

32. A probable loss on insurance contracts exists if there is a premium deficiency relating to shot-duration or long-duration contracts. Insurance contracts shall be grouped consistent with the enterprise's manner of acquiring, servicing, and measuring the profitability of its insurance contracts to determine if a premium deficiency exists.

Long-Duration Contracts

35. Original policy benefit assumptions for long-duration contracts ordinarily continue to be used during the periods in which the liability for future policy benefits is accrued (paragraph 21). However, actual experience with respect to investment yields, mortality, morbidity, terminations, or expenses may indicate that existing contract liabilities, together with the present value of future gross premiums, will not be sufficient (a) to cover the present value of future benefits to be paid to or on behalf of policyholders and settlement and maintenance costs relating to a block of long-duration contracts and (b) to recover unamortized acquisition costs. In those circumstances a premium deficiency shall be determined as follows:

Present value of future payments for benefits and related settlement and maintenance costs, determined using revised assumptions based on actual and anticipated experience	$XX
Less the present value of future gross premiums, determined using revised assumptions based on actual and anticipated experience	XX

Liability for future policy benefits using revised assumptions	XX
Less the liability for future policy benefits at the valuation date, reduced by unamortized acquisition costs	XX

Premium deficiency	$XX
	=====

> 36. A premium deficiency shall be recognized by a charge to income and (a) a reduction of unamortized acquisition costs or (b) an increase in the liability for future policy benefits. If a premium deficiency does occur, future changes in the liability shall be based on the revised assumptions. No loss shall be reported currently if it results in creating future income. The liability for future policy benefits using revised assumptions based on actual and anticipated experience shall be estimated periodically for comparison with the liability for future policy benefits (reduced by unamortized acquisition costs) at the valuation date.
>
> 37. A premium deficiency, at a minimum, shall be recognized if the aggregate liability on an entire line of business is deficient. In some instances, the liability on a particular line of business may not be deficient in the aggregate, but circumstances may be such that profits would be recognized in early years and losses in later years. In those situations, the liability shall be increased by an amount necessary to offset the losses that would be recognized in later years.

51. FAS 97, as amended by FAS 120, provides the following guidance on premium income recognition:

> Summary
>
> This Statement establishes standards of accounting for certain long-duration contracts issued by insurance enterprises, referred to in this Statement as universal life-type contracts, that were not addressed by *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises*. The Statement also establishes standards of accounting for limited-payment long-duration insurance contracts and investment contracts and amends Statement 60 to change the reporting of realized gains and losses on investments.
>
> New life insurance contracts have evolved since the development of specialized insurance industry accounting principles and practices in the early 1970's. Many of those new life insurance contracts have different provisions than do the life insurance contracts to which Statement 60 applies. Those new life insurance contracts are characterized by flexibility and discretion granted to one or both parties to the contract. Statement 60 identifies but does not address those contracts, noting that the accounting was under study by the insurance industry and the accounting and actuarial professions.
>
> This Statement requires that the retrospective deposit method be used to account for universal life-type contracts. That accounting method establishes a liability for policy benefits at an amount

determined by the account or contract balance that accrues to the benefit of the policyholder. Premium receipts are not reported as revenues when the retrospective deposit method is used. The Statement also requires that capitalized acquisition costs associated with universal life-type contracts be amortized based on a constant percentage of the present value of estimated gross profit amounts from the operation of a "book" of those contracts. Any gain or loss resulting from a policyholder's replacement of other life insurance contracts with universal life-type contracts is recognized in income of the period in which the replacement occurs.

This Statement requires that long-duration contracts issued by insurance enterprises that do not subject the enterprise to risks arising from policyholder mortality or morbidity (investment contracts) be accounted for in a manner consistent with the accounting for interest-bearing or other financial instruments. Payments received on those contracts are not reported as revenue.

This Statement also addresses limited-payment contracts that subject the insurance enterprise to mortality or morbidity risk over a period that extends beyond the period or periods in which premiums are collected and that have terms that are fixed and guaranteed. This Statement requires that revenue and income from limited-payment contracts be recognized over the period that benefits are provided rather than on collection of premiums.

INTRODUCTION

1. *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises*, issued in June 1982, contains specialized accounting principles and practices based on AICPA insurance Industry Audit Guides and Statements of Position. Statement 60 identifies but does not address a number of areas that were being studied by the insurance industry and the accounting and actuarial professions when that Statement was issued. One of those areas is the accounting for universal life insurance and similar products that were developed after the issuance of the AICPA Guides and Statements of Position.

2. Statement 60 describes two methods of premium revenue and contract liability recognition, referred to as long-duration and short-duration contract accounting. Each method is designed to reflect the insurance enterprise's obligations and policyholder rights under the provisions of the contract. The insurance contracts addressed in this Statement are generally considered long-duration insurance contracts.

3. Recognition of premiums as revenue when due from policyholders and measurement of a liability for policyholder benefits based on a uniform percentage of anticipated premiums are distinguishing features of the accounting for long-duration insurance contracts specified in Statement 60. Because no single function or service is predominant over the periods of most long-duration insurance contracts, recognition of premiums as revenue over the premium-paying periods was considered a reasonable measure of service performed.

4. The differences between universal life insurance and the long-duration contracts described in Statement 60 led many to question the propriety of applying the accounting method described in Statement 60 to universal life insurance. Universal life insurance contracts lack the fixed and guaranteed terms that are typical for the contracts for which the accounting specified in Statement 60 was designed. Policyholders are frequently granted significant discretion over the amount and timing of premium payments. Insurers are frequently granted significant discretion over amounts that accrue to and that are assessed against policyholders.

5. Some long-duration insurance contracts that are addressed by Statement 60 have terms that are fixed and guaranteed but lack either the level premiums or the insurance protection characteristics contemplated in Statement 60. The increasing number of those contracts led the Board to reconsider the accounting for them at the same time it considered the accounting for universal life insurance.

APPLICABILITY AND SCOPE

6. This Statement applies to all insurance enterprises to which Statement 60 applies. The Statement establishes standards of financial accounting and reporting for three classes of long-duration contracts issued by those insurance enterprises and for reporting realized investment gains and losses. Those contracts are referred to in this Statement as investment contracts, limited-payment contracts, and universal life-type contracts. The accounting for long-duration contracts not otherwise addressed by this Statement is prescribed in Statement 60 and *FASB Statement No. 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts*.

7. Long-duration contracts that do not subject the insurance enterprise to risks arising from policyholder mortality or morbidity are referred to in this Statement as investment contracts. A mortality or morbidity risk is present if, under the terms of the contract, the enterprise is required to make payments or forego required premiums contingent upon the death or disability (in the case of life insurance contracts) or the continued survival (in the case of annuity contracts) of a specific individual or group of individuals. A contract provision that allows the holder of a long-duration contract to purchase an annuity at a guaranteed price on settlement of the contract does not entail a mortality risk until the right to purchase is executed. If purchased, the annuity is a new contract to be evaluated on its own terms.

8. Annuity contracts may require the insurance enterprise to make a number of payments that are not contingent upon the survival of the beneficiary, followed by payments that are made if the beneficiary is alive when the payments are due (often referred to as life-contingent payments). Such contracts are considered insurance contracts under this Statement and Statement 60 unless (a) the probability that life-contingent payments will be made is remote [1] or (b) the present value of the expected life-contingent payments relative to the present value of all expected payments under the contract is insignificant [2].

----

[1] The term remote is defined in paragraph 3 of FASB Statement No. 5, *Accounting for Contingencies*, as "the chance of the future event or events occurring is slight."

[2] Webster's New World Dictionary, Second College Edition, defines the term insignificant as "having little or no importance; trivial."

----

9. Long-duration insurance contracts with terms that are fixed and guaranteed, and for which premiums are paid over a period shorter than the period over which benefits are provided, are referred to in this Statement as limited-payment contracts. The period over which benefits are provided, as used in this Statement, includes the periods during which the insurance enterprise is subject to risk from policyholder mortality and morbidity and during which the insurance enterprise is responsible for administration of the contract. The benefit period does not include the subsequent period over which the policyholder or beneficiary may elect to have settlement proceeds disbursed.

10. Except as provided in paragraph 11 [not excerpted], long-duration insurance contracts with terms that are not fixed and guaranteed are referred to in this Statement as universal life-type contracts. Universal life-type contracts include contracts that provide either death or annuity benefits and are characterized by any one of the following features:

a. One or more of the amounts assessed by the insurer against the policyholder -- including amounts assessed for mortality coverage, contract administration, initiation, or surrender -- are not fixed and guaranteed by the terms of the contract.

b. Amounts that accrue to the benefit of the policyholder -- including interest accrued to policyholder balances -- are not fixed and guaranteed by the terms of the contract.

c. Premiums may be varied by the policyholder within contract limits and without consent of the insurer.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Investment Contracts

15. Investment contracts issued by an insurance enterprise, as defined in this Statement, do not incorporate significant insurance risk as that concept is contemplated in Statement 60 and shall not be accounted for as insurance contracts. Amounts received as payments for such contracts shall not be reported as revenues. Payments received by the insurance enterprise shall be reported as liabilities and accounted for in a manner consistent with the accounting for interest-bearing or other financial instruments.

Limited-Payment Contracts

16. Limited-payment contracts subject the insurer to risks arising from policyholder mortality and morbidity over a period that extends beyond the period or periods in which premiums are collected. For those contracts, the liability for policy benefits shall be established in accordance with the provisions of Statement 60. The collection of premium does not, however, represent the completion of an earnings process. Any gross premium received in excess of the net premium [3] shall be deferred and recognized in income in a constant relationship with insurance in force (when accounting for life insurance contracts) or with the amount of expected future benefit payments (when accounting for annuity contracts).

----

[3] Statement 60 defines gross premium as “the premium charged to a policyholder for an insurance contract.” That Statement defines net premium as “the portion of the gross premium required to provide for all benefits and expenses.”

Universal Life-Type Contracts

17. The liability for policy benefits for universal life-type contracts shall be equal to the sum of:

a. The balance that accrues to the benefit of policyholders at the date of the financial statements[4]

----

[4] Accounting methods that measure the liability for policy benefits based on policyholder balances are known as retrospective deposit methods.

----

b. Any amounts that have been assessed to compensate the insurer for services to be performed over future periods (paragraph 20)

c. Any amounts previously assessed against policyholders that are refundable on termination of the contract

d. Any probable loss (premium deficiency) as described in paragraphs 35-37 of Statement 60

18. Amounts that may be assessed against policyholders in future periods, including surrender charges, shall not be anticipated in determining the liability for policy benefits. In the absence of a stated account balance or similar explicit or implicit contract value, the cash value, measured at the date of the financial statements, that could be realized by a policyholder upon surrender shall represent the element of liability described in paragraph 17.a. Provisions for adverse deviation shall not be made.

19. Premiums collected on universal life-type contracts shall not be reported as revenue in the statement of earnings of the insurance enterprise. Revenue from those contracts shall represent

amounts assessed against policyholders and shall be reported in the period that the amounts are assessed unless evidence indicates that the amounts are designed to compensate the insurer for services to be provided over more than one period.

20. Amounts assessed that represent compensation to the insurance enterprise for services to be provided in future periods are not earned in the period assessed. Such amounts shall be reported as unearned revenue and recognized in income over the period benefited using the same assumptions and factors used to amortize capitalized acquisition costs. Amounts that are assessed against the policyholder balance as consideration for origination of the contract, often referred to as initiation or front-end fees, are unearned revenues.

Other Amendments to Statement 60

29. This Statement adds the following footnote to paragraph 6 of Statement 60:

> *The accounting for certain long-duration insurance contracts referred to as investment contracts, limited-payment contracts, and universal life-type contracts is established by *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*.

30. Paragraph 15 of Statement 60 is superseded by the following:

> Premiums from long-duration contracts, such as whole-life contracts, guaranteed renewable term life contracts, and title insurance contracts, shall be recognized as revenue when due from policyholders.

52. *AICPA Statement of Position No. 95-1*, *Accounting for Certain Insurance Activities of Mutual Life Insurance Enterprises*, provides the following guidance on premium revenue recognition and policy reserves:

12. Premiums from participating insurance contracts should be reported as revenue in the statement of earnings when due from policyholders.

Liability for Future Policy Benefits

15. A liability for future policy benefits relating to participating life insurance contracts should be equal to the sum of --

a. The net level premium reserve for death and endowment policy benefits.

b. The liability for terminal dividends.

c. Any probable loss (premium deficiency) as described in paragraphs 35-37 of FASB Statement No. 60.

16. The net level premium reserve should be calculated based on the dividend fund interest rate, if determinable, and mortality rates guaranteed in calculating the cash surrender values described in the contract. If the dividend fund interest rate is not determinable, the guaranteed interest rate used in calculating cash surrender values described in the contract should be used. If the dividend fund interest rate is not determinable and there is no guaranteed interest rate, the interest rate used in determining guaranteed nonforfeiture values should be used. Finally, if none of the above rates exists, then the interest rate used to determine minimum cash surrender values -- as set by the National Association of Insurance Commissioners' (NAIC) model standard nonforfeiture law--for the year of issue of the contract should be used. Regardless of the rate used, net premiums should be calculated as a constant percentage of the gross premiums.

17. Terminal dividends should be accrued in the liability for future policy benefits if the following conditions are both met: [4]

a. Payment of the dividend is probable.
b. The amount can be reasonably estimated.

----
[4] These conditions should be used in the same sense that they are used in *FASB Statement No. 5*, *Accounting for Contingencies*.

If the two conditions are met (and they ordinarily will be), the terminal dividends should be recognized as an expense over the life of a book of participating life insurance contracts, at a constant rate based on the present value of the estimated gross margin amounts expected to be realized over the life of the book of contracts. The present value of estimated gross margins should be computed using the expected investment yield (net of related investment expenses). If significant negative gross margins are expected in any period, then the present value of gross margins before annual dividends, estimated gross premiums, or the balance of insurance in force should be substituted as the base for computing the expense amount to be recognized. (The base substituted in this calculation should be the same one substituted in the amortization of deferred acquisition costs discussed in paragraph 20.)

18. Increases in the liability for future policy benefits should be reported as an expense in the statement of earnings.

Statutory Issue Paper No. 52

Deposit-Type Contracts

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 52

Type of Issue:
Life Specific

SUMMARY OF ISSUE

1. Current statutory accounting guidance on income recognition and policy reserves for deposit-type contracts, as defined in *Issue Paper No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (Issue Paper No. 50) is addressed in Chapter 10, Aggregate Reserves for Life and Annuity Contracts, Chapter 12, Deposit Funds and Other Liabilities Without Life or Disability Contingencies, and Chapter 18, Premium Income of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). That guidance applies to premiums, deposit-type funds, and considerations as well as related policy reserves for all life, annuity, deposit, and other similar contracts with and without life contingencies. Under current statutory accounting, considerations on deposit-type contracts are generally recorded as income in the Summary of Operations when received as either annuity considerations, deposit-type funds, considerations for supplemental contracts without life contingencies and dividend accumulations, or coupons left to accumulate at interest, as appropriate. In addition, policy reserves must make a good and sufficient provision for all unmatured obligations guaranteed under the terms of the contracts and are generally computed based on the provisions of the NAIC Model Standard Valuation Law (SVL), the Actuarial Opinion and Memorandum Model Regulation, the Actuarial Standards of Practice promulgated by the American Academy of Actuaries, and the actuarial guidelines adopted by the NAIC; however, variations by state do exist.

2. GAAP requires insurance contracts to be classified as short-duration or long-duration contracts. Long-duration contracts include contracts, such as whole-life, guaranteed renewable term life, endowment, and annuity contracts, that are expected to remain in force for an extended period. Long-duration contracts that do not subject the insurance enterprise to risks arising from policyholder mortality or morbidity are classified as investment contracts and are accounted for in a manner consistent with the accounting for interest-bearing or other financial instruments (i.e., the balance that accrues to the benefit of the policyholder). Payments received on those contracts are not reported as revenue.

3. The purpose of this issue paper is to establish statutory accounting principles for income recognition and policy reserves for deposit-type contracts that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Introduction

4. As discussed in Issue Paper No. 50, deposit-type contracts are those contracts that do not subject the reporting entity to any risks arising from policyholder mortality or morbidity. A mortality or morbidity risk is present if, under the terms of the contract, the reporting entity is required to make payments or forego required premiums contingent upon the death or disability (in the case of life and disability insurance contracts) or the continued survival (in the case of annuity contracts) of a specific individual or group of individuals.

5. As in universal life-type contracts, as discussed in *Issue Paper No. 56—Universal Life-Type Contracts, Policyholder Dividends, and Coupons,* deposit-type contracts frequently grant policyholders significant discretion over the amount and timing of deposits and withdrawals. Reporting entities are frequently granted significant discretion over amounts that accrue to or that are assessed against policyholders.

6. Due to the absence of mortality and/or morbidity risk and the discretionary characteristics noted in the preceding paragraph, the accounting principles for income recognition and policy reserves for deposit-type contracts differ from the accounting for life contracts set forth in *Issue Paper No. 51—Life Contracts* (Issue Paper No. 51), accident and health contracts established in *Issue Paper No. 54—Individual and Group Accident and Health Contracts*, and credit insurance contracts as discussed in Is*sue Paper No. 59—Credit Life and Accident and Health Insurance Contracts*.

7. This issue paper prescribes the income recognition and policy reserve requirements for all contracts without life or disability contingencies. Contracts that generally do not subject the reporting entity to risks arising from policyholder mortality or morbidity include, but are not limited to certain types of the following policy categories:

- Supplemental contracts
- Lottery payouts
- Structured settlements
- Guaranteed interest contracts
- Income settlement options
- Annuities certain
- Dividend and coupon accumulations
- Premium and other deposit funds

As discussed in Issue Paper No. 50, subsequent issue papers, where needed, will establish specific statutory accounting principles that are applicable to unique characteristics of certain deposit-type contracts (e.g., separate accounts).

Income Recognition

8. Contracts issued by a reporting entity that do not incorporate mortality or morbidity risk shall not be accounted for as insurance contracts. Amounts received as payments for such contracts shall not be reported as revenues but shall be recorded directly to an appropriate policy reserve account.

Policy Reserves

9. The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-820 and A-822, and the actuarial guidelines found in Part 9 of the NAIC Financial Examiners Handbook. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

10. Policy reserves shall be established for all contractual obligations of the reporting entity arising out of the provisions of the contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. Statutory policy reserves meet the definition of liabilities as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in Issue Paper No. 5.

11. The policy reserve for contracts without life contingencies where the future benefits are fixed and guaranteed (e.g., supplemental contracts, lottery payouts, structured settlements, guaranteed interest contracts, income settlement options, annuities certain, and unmatured coupon accumulations) shall be based on the present value of the future guaranteed benefits discounted at the valuation interest rate. The

policy reserve for all other contracts (e.g., premium and other deposit funds, and dividend and matured coupon accumulations) shall be based on the accumulated amounts paid plus an income accumulation based on the contract provisions, less any withdrawals and applicable surrender charges.

12. Policy reserves shall be increased for reinsurance assumed and decreased for reinsurance ceded as further described in *Issue Paper No. 74—Life, Deposit-Type and Accident and Health Reinsurance*.

Structured Settlements

13. Reporting entities that have accepted an assignment of obligations under structured settlements shall record those obligations consistent with the accounting and reporting provided for structured settlements in paragraphs 16 and 17 of *Issue Paper No. 65—Property and Casualty Contracts*.

Cost Recognition

14. Interest credited to deposit-type contracts shall be recorded as an expense in the Summary of Operations when earned under the terms of the contract. Payments that represent a return of policyholder balances shall not be recorded as expenses. To the extent such payments differ from the recorded reserve, the difference shall be recorded in the Summary of Operations as a benefit expense.

Change In Valuation Basis

15. A change in valuation basis shall be defined as a change in the interest rate assumption or other factor affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in *Issue Paper No. 3—Accounting Changes* (Issue Paper No. 3). Consistent with Issue Paper No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the Summary of Operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a specific transition that allows for grading.

Unearned Income

16. Amounts assessed that represent compensation to the reporting entity for services to be provided in future periods and which are required to be refunded upon policy termination are not earned in the period assessed. Such amounts, if not already considered in the policy reserve, shall be reported as unearned income, a liability, and recognized as income as the related services are provided.

Additional Reserves Not Included Elsewhere

17. Additional actuarial liabilities are commonly held for such items as:

a. Surrender values in excess of reserves otherwise required or carried

b. Additional reserves required based on cash flow testing and/or asset/liability matching requirements.

Disclosures

18. For life and annuity reserves the financial statements shall disclose the following:

a. A description of reserve practices including the amount of any surrender value promised in excess of the reserve as legally computed;

b. The method of determination of tabular interest on funds not involving life contingencies; and

c. The nature of significant other reserve changes.

19. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:

a. Subject to discretionary withdrawal:

i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;

(a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the reporting entity; and

(b) In installments over five years or more, with or without a reduction in the interest rate during the installment period.

ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in subparagraph v.(d) below;

iii. At market value, where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current market value, and the liabilities are stated at the current market value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at market value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

(a) In a lump sum without adjustment;

(b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

(c) In a lump sum subject to a fixed surrender charge of less than 5%;

(d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified “bail out” rate and the “bail out” rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues; and

(e) All others.

b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded;

e. Total net.

DISCUSSION

SAP Considerations

20. The statutory accounting principles outlined in the conclusion above regarding income recognition and policy reserves for deposit-type contracts are consistent with the Statement of Concepts which states:

> Conservatism
>
> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.
>
> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.
>
> Recognition
>
> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).

21. Except as discussed in next two paragraphs, the statutory accounting principles outlined in the conclusion above regarding income recognition and policy reserves for deposit-type contracts are consistent with current statutory accounting.

22. Current SAP require amounts received on annuity and supplemental contracts without life contingencies and dividend and coupon accumulations to be recorded in the Summary of Operations as income. This issue paper changes current SAP to require that amounts received on deposit-type contracts be recorded directly to policy reserves and not recorded as income. This change was made to reflect that cash inflows (premiums) on deposit-type contracts do not result from providing insurance and are therefore not considered revenue. Similarly, payments to policyholders that represent a return of policyholder balances are not considered expenses. Revenues and expenses arise from the investment of amounts received from policyholders and interest credited to their accounts, respectively.

23. Consistent with Issue Paper No. 51, recording unearned income and other similar amounts as deferred income and recognizing the amounts as income only as the earnings process is completed is consistent with the objectives of the Statement of Concepts.

24. Significant differences exist between life and deposit-type contracts. Life contracts provide insurance protection against death while deposit-type contracts do not provide for mortality risk but act exclusively as investment vehicles. Unlike life contracts, deposit-type contracts frequently grant significant discretion over the amount and timing of payments by policyholders as well as the amounts that accrue to or that are assessed against policyholders by the reporting entity. As a result of these differences, the accounting requirements also vary. Premium income on life contracts is generally recognized on the gross basis (amount charged to the policyholder) when due from policyholders under the terms of the insurance contract (e.g., single, renewal premiums, and any related premium adjustments) while income on deposit-type contracts is recorded based on the underlying performance of the invested assets. Due to these differences, the accounting for life and deposit-type contracts has been discussed in separate issue papers.

GAAP Literature

25. Consistent with Issue Papers Nos. 50 and 51, the GAAP literature, specifically *FASB Statement No. 60, Accounting and Reporting by Insurance* Enterprises (FAS 60), *FASB Statement No. 97*, *Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments* (FAS 97), and *FASB Statement 120*, *Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts* (FAS 120), for deposit-type contracts is rejected.

Drafting Notes/Comments

- Issue Paper No. 50 addresses Classifications and Definitions of Insurance or Managed Care Contracts In Force.
- Issue Paper No. 51 addresses Life Contracts.
- Issue Paper No. 53 addresses Property and Casualty Contracts – Premiums.
- Issue Paper No. 54 addresses Individual and Group Accident and Health Contracts.
- Issue Paper No. 55 addresses Unpaid Claims, Losses and Loss Adjustment Expenses.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE (only pertinent excerpts are included below)

Statutory Accounting

26. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance with respect to policy reserves on deposit-type contracts:

> CHAPTER 10
> AGGREGATE RESERVES FOR LIFE AND ANNUITY CONTRACTS
>
> Annuity and Pure Endowment Contracts
>
> Whereas life insurance provides protection from the loss arising from dying too soon, an annuity protects against the loss from living too long. An annuity can be in either an accumulative (premium paying or paid-up deferred) period or a payout period. The company's obligation in each period is different and is described in detail in the annuity contract.
>
> Anticipated (and actual) mortality experience is different for persons purchasing annuity contracts than for persons who purchase life insurance. Mortality rates of annuitants are lower as a result of selection by the annuitants. For this reason, separate annuity mortality tables have been developed for the valuation of annuity contracts.
>
> Pure endowments, also, are insurance contracts against living too long. A pure endowment benefit is exactly the opposite of term life insurance because the benefits are paid only if the insured survives the term of the contract. No benefit is paid if the insured dies before the end of the term. Sales of pure endowments are somewhat unusual—the typical endowment contract

also includes some type of life insurance and, consequently, is valued as life insurance. Mortality tables for annuities also are used in reserving for pure endowment benefits.

Annuities and pure endowments can be sold either as individual contracts or as group contracts.

If there are interest rate guarantees on group annuity funds, additional reserves may be required by the statutes and regulations of the various states.

Reserves for group pension (group annuity) business involves more complex considerations, and a considerable degree of variation is permitted or prescribed by state regulations and statutes.

Miscellaneous Reserves

Since the actuarial liabilities must include provision for any contingent benefit or right which may arise, statutory statements provide for estimates of a number of miscellaneous reserve items. For example, state laws or regulations may require minimum reserves when valuation net premiums exceed gross premiums. The additional reserve needed to meet the minimum may appear separately as a miscellaneous reserve or may be included with the life reserve in accordance with the applicable state regulations. Similarly, provision for either nondeduction of deferred fractional premiums or return of premiums at death of the insured may be made as a separate reserve or as part of the life reserve. Approximate reserving methods are accepted and frequently used to estimate such items. Another minimum reserve which must be provided for is a reserve for surrender values in excess of reserves otherwise required or carried. There are other miscellaneous items commonly encountered, such as reserve for substandard extra premiums, a reserve for extra mortality on group conversions, and reserve for guaranteed insurability options.

Changes in Valuation Bases

Where the interest rate, mortality basis, reserving method (e.g., net level, preliminary term, etc.), or other basis affecting reserve computation of in force business is changed during the year, any increase or decrease in actuarial reserves resulting from this change in valuation basis must be charged directly to surplus rather than as a part of the reserve increase item in the summary of operations. For various reasons, any change in valuation bases which produces an increase in reserves (reserve strengthening) or decrease in reserves (reserve destrengthening) may require the approval of the applicable regulatory authority. Procedures and timing for such approval vary from state to state.

27. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance with respect to policy reserves on deposit-type contracts:

CHAPTER 12
DEPOSIT FUNDS AND OTHER LIABILITIES WITHOUT LIFE OR DISABILITY CONTINGENCIES

Liability for Premium and Other Deposit Funds

When a company receives premiums over one year prior to their due date, such premium deposits are usually recorded as a liability. A premium deposit fund is not considered to be discounted premiums; instead, interest at contracted rates is credited annually to each individual account. The terms of the fund (interest rate, disposition, and so forth) are specified in the policy or in a separate endorsement. A liability is established in the statutory financial statement for the balance of such premium deposits and accrued interest to the valuation date.

Guarantee investment contracts and other deposit funds of generally similar nature will give rise to statement liability. The terms of such contracts including provisions for early term or surrender of the contracts, must be considered in establishing the appropriate statement liability.

The statutory financial statement differentiates this category of deposit items in the following manner:

1. Premium deposit funds represent deposits made by policyholders to pay premiums in considerations at some future date. The deposits will not, however, be credited to premium or consideration income accounts until the premium due dates. The liability should include any interest declared and credited or accrued.

2. Guaranteed interest contracts (GICs) provide that the contractholder place one or more deposits with the insurance company in exchange for repayment of those deposits plus interest at a guaranteed rate(s). Both the deposits and the repayments are made according to a schedule provided in the contract. Other features common to GICs are:

   (a) The GIC contractholder is typically the sponsor or trustee of an employee benefit plan (pension, profit-sharing, thrift, savings, etc.)

   (b) The guaranteed interest rate on GICs is closely associated with new money rates at the time of contract issue. Lower guaranteed rates may apply to deposits made after the date of issue.

   (c) GICs often contain guarantees which limit insurance company administrative expense charges.

   (d) GICs are usually nonparticipating, that is, the contractholder does not share in good or bad investment experience of the insurance company. Some GICs base the guaranteed rate on an investment or economic index.

   (e) GICs normally contain penalties for failure of the contractholder to make scheduled deposits. In addition, penalties and/or restrictions on early or unscheduled withdrawals of funds are common.

   The liability for GICs is subject to standard valuation law. Generally speaking, the minimum liability is equal to the future scheduled payments discounted back to the valuation date at the applicable valuation rate of interest. The minimum liability may exceed the amounts deposited accumulated at the guaranteed rates.

3. Other deposit items not otherwise included on Page 3.

Supplementary Contracts Without Life Contingencies

A supplementary contract is an agreement between the company and either the insured or the beneficiary, usually arrived at upon the termination of an original benefit contract, to provide for full or partial settlement of the amount payable under the original contract. However, such an agreement can be called a supplementary contract only when it is made for the payment of proceeds of a contract that has been written by the company. If the proceeds are to be paid over a definite period without regard to the life of the beneficiary, or are to be left at interest, the contract is termed a supplementary contract without life contingencies. (See Chapter 10).

Since supplementary contracts involve the payment of interest, the following terms become important. The “contract rate of interest” is the rate stated in the original policy or contract and is the minimum rate which may be paid on the amounts left under the option selected. If a company elects to establish a rate higher than the original contract rate as a minimum interest rate, this new rate becomes a “guaranteed rate.” In practice, some companies have established such guaranteed rates because of higher returns on investments than those anticipated when the original contracts were issued.

Reserves for supplementary contracts without life contingencies are reported as separate liability in the statutory financial statement. The reserve includes any interest credited or accrued to the statement date. For contracts being paid in installments, the reserve is the present value of the future payments.

28. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance with respect to premium income recognition on deposit-type contracts:

CHAPTER 18
PREMIUM INCOME

Premiums are generally recorded in the company's general ledger when received. This necessitates adjustments as of the balance sheet dates for premiums received in advance of their due date, for premiums which are due but have not yet been received, and for "deferred" premiums. Premium income reported in the Summary of Operations includes reinsurance assumed and is reduced by reinsurance ceded.

Deductions should be made for premiums and annuity considerations returned and allowances to industrial policyholders for direct payment of premiums. Commissions and allowances on reinsurance premiums assumed and ceded may not be deducted.

Single premiums and considerations include dividends, coupons, guaranteed annual pure endowments, and similar benefits applied to provide paid-up additional insurance or annuities. Renewal premiums collected are to include dividends and coupons applied to pay renewal premiums and to shorten the endowment or premium-paying period.

Cost of Collection in Excess of Loading

A liability should be provided for the cost of collection on premiums and annuity consideration deferred and uncollected in excess of total loading thereon if the company deems the loading to be inadequate. The increase in this item and the increase in loading on deferred and uncollected premiums are both recorded in the same line in the Summary of Operations. Provisions for cost of collection should include commissions, collection fees, and taxes contingent upon the collection of the deferred and uncollected premiums.

Premiums Received in Advance

Premium income reported in operations must exclude premiums that have been received by the company prior to the valuation date but which are due on or after the next policy anniversary date. The accounting treatment is the same for both life and accident and health premiums.

A policyholder may remit one or more premiums in advance of specific due dates. Where premiums are remitted sufficiently far in advance, the premiums may be discounted for interest from their due dates to the date of payment. The total amount of such gross premiums, less any discount as of the valuation date, is reported as a liability in the statutory financial statement. The gross premium less any discount is recorded as the advance premium, not the net valuation premium, in recognition of the company's liability to refund such premiums in the event the policy is terminated.

Advance premiums must be recorded for industrial as well as ordinary and group policies. Advance premiums received on group policies may be reported in the liability for premiums received in advance or as a 100% unearned premium reserve.

Premium and Other Deposit Funds

A company may also receive premiums over one year prior to their due date and include them in a premium deposit fund. These amounts are not reported as income. The premium deposit fund may or may not represent payment of specific future premiums. Interest at contracted rates is credited annually to each individual account. Interest on such funds must be accrued to the balance sheet date. The terms of the fund (interest rate, disposition, and so forth) are specified in the provisions of the policy or in a separate endorsement. An explanation of other deposit funds can be found in Chapter 12.

Amounts deposited and accumulated for guaranteed interest contracts may be included in this classification. Finally, other deposit items of a generally similar nature may also be included herein.

Withdrawals from deposit accounts to pay premiums are credited to the appropriate income account. Provision is made in the statutory financial statement for reporting the balance of such deposits as of the balance sheet date.

Annuity Contracts

Certain annuity contracts, usually group pension contracts, frequently provide for the payment to the company of amounts other than premiums or considerations to be accumulated at interest for the purpose of providing pensions for employees at retirement and similar benefits. Amounts withdrawn from the fund to purchase annuity benefits reduce "Annuity and other fund deposits" and increase premium and annuity considerations.

Uncollected and deferred annuity considerations are calculated on deferred annuity contracts other than single payment contracts. The asset item is recorded net of loading.

Considerations for Supplementary Contracts

The Summary of Operations includes as income all policy proceeds which have been left with the company during the year under optional modes of settlement to provide beneficiaries or the policyowner with periodic income under a supplementary contract. Supplementary contracts may provide for an income payable for the lifetime of the payee(s), in which case the considerations would be reported as "Considerations for supplementary contracts with life contingencies." A supplementary contract may also provide for the payment of a periodic income for a specified number of years or for payments of a specified amount until the funds with interest earnings are exhausted. The considerations for such supplementary contracts are reported separately as "Considerations for supplementary contracts without life contingencies."

These considerations arise from proceeds retained at death, disability, surrender, or maturity of policies and annuity contracts. The amount of these retained proceeds is included in the amount reported in the Summary of Operations for policy and contract benefits.

Considerations for Dividend Accumulations

Another income item in the Summary of Operations is "Consideration for dividend accumulations." The accounting treatment for dividend accumulation deposits, dividend accumulation payments, and the change in the liability is similar to accounting for life insurance. Consideration for dividend accumulations represents the amount of policy dividends left on deposit with the company during the year to accumulate at interest. This amount would normally agree with the amount reported in the Dividends and Coupons to Policyholders exhibit of the annual statement as being left on deposit with the company.

Generally Accepted Accounting Principles

29. FAS 97, as amended by FAS 120, provides the following guidance with respect to deposit-type contracts:

Summary

This Statement establishes standards of accounting for certain long-duration contracts issued by insurance enterprises, referred to in this Statement as universal life-type contracts, that were not addressed by *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*. The Statement also establishes standards of accounting for limited-payment long-duration insurance contracts and investment contracts and amends Statement 60 to change the reporting of realized gains and losses on investments.

New life insurance contracts have evolved since the development of specialized insurance industry accounting principles and practices in the early 1970's. Many of those new life insurance contracts have different provisions than do the life insurance contracts to which Statement 60 applies. Those new life insurance contracts are characterized by flexibility and discretion granted to one or both parties to the contract. Statement 60 identifies but does not address those contracts, noting that the accounting was under study by the insurance industry and the accounting and actuarial professions.

This Statement requires that the retrospective deposit method be used to account for universal life-type contracts. That accounting method establishes a liability for policy benefits at an amount determined by the account or contract balance that accrues to the benefit of the policyholder. Premium receipts are not reported as revenues when the retrospective deposit method is used. The Statement also requires that capitalized acquisition costs associated with universal life-type contracts be amortized based on a constant percentage of the present value of estimated gross profit amounts from the operation of a "book" of those contracts. Any gain or loss resulting from a policyholder's replacement of other life insurance contracts with universal life-type contracts is recognized in income of the period in which the replacement occurs.

This Statement requires that long-duration contracts issued by insurance enterprises that do not subject the enterprise to risks arising from policyholder mortality or morbidity (investment contracts) be accounted for in a manner consistent with the accounting for interest-bearing or other financial instruments. Payments received on those contracts are not reported as revenue.

This Statement also addresses limited-payment contracts that subject the insurance enterprise to mortality or morbidity risk over a period that extends beyond the period or periods in which premiums are collected and that have terms that are fixed and guaranteed. This Statement requires that revenue and income from limited-payment contracts be recognized over the period that benefits are provided rather than on collection of premiums.

APPLICABILITY AND SCOPE

6. This Statement applies to all insurance enterprises to which Statement 60 applies. The Statement establishes standards of financial accounting and reporting for three classes of long-duration contracts issued by those insurance enterprises and for reporting realized investment gains and losses. Those contracts are referred to in this Statement as investment contracts, limited-payment contracts, and universal life-type contracts. The accounting for long-duration contracts not otherwise addressed by this Statement is prescribed in Statement 60 and *FASB Statement No. 120*, *Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts*.

7. Long-duration contracts that do not subject the insurance enterprise to risks arising from policyholder mortality or morbidity are referred to in this Statement as investment contracts. A mortality or morbidity risk is present if, under the terms of the contract, the enterprise is required to make payments or forego required premiums contingent upon the death or disability (in the case of life insurance contracts) or the continued survival (in the case of annuity contracts) of a specific individual or group of individuals. A contract provision that allows the holder of a long-duration contract to purchase an annuity at a guaranteed price on settlement of the contract does not entail a mortality risk until the right to purchase is executed. If purchased, the annuity is a new contract to be evaluated on its own terms.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Investment Contracts

15. Investment contracts issued by an insurance enterprise, as defined in this Statement, do not incorporate significant insurance risk as that concept is contemplated in Statement 60 and shall not be accounted for as insurance contracts. Amounts received as payments for such contracts shall not be reported as revenues. Payments received by the insurance enterprise shall be reported as liabilities and accounted for in a manner consistent with the accounting for interest-bearing or other financial instruments.

Universal Life-Type Contracts

17. The liability for policy benefits for universal life-type contracts shall be equal to the sum of:

a. The balance that accrues to the benefit of policyholders at the date of the financial statements[4]

[4] Accounting methods that measure the liability for policy benefits based on policyholder balances are known as retrospective deposit methods.

b. Any amounts that have been assessed to compensate the insurer for services to be performed over future periods (paragraph 20)

c. Any amounts previously assessed against policyholders that are refundable on termination of the contract

d. Any probable loss (premium deficiency) as described in paragraphs 35-37 of Statement 60.

18. Amounts that may be assessed against policyholders in future periods, including surrender charges, shall not be anticipated in determining the liability for policy benefits. In the absence of a stated account balance or similar explicit or implicit contract value, the cash value, measured at the date of the financial statements, that could be realized by a policyholder upon surrender shall represent the element of liability described in paragraph 17.a. Provisions for adverse deviation shall not be made.

19. Premiums collected on universal life-type contracts shall not be reported as revenue in the statement of earnings of the insurance enterprise. Revenue from those contracts shall represent amounts assessed against policyholders and shall be reported in the period that the amounts are assessed unless evidence indicates that the amounts are designed to compensate the insurer for services to be provided over more than one period.

20. Amounts assessed that represent compensation to the insurance enterprise for services to be provided in future periods are not earned in the period assessed. Such amounts shall be reported as unearned revenue and recognized in income over the period benefited using the same assumptions and factors used to amortize capitalized acquisition costs. Amounts that are assessed against the policyholder balance as consideration for origination of the contract, often referred to as initiation or front-end fees, are unearned revenues.

Statutory Issue Paper No. 53

Property Casualty Contracts - Premiums

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 53

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance for premium recognition for property and casualty contracts, as defined in *Issue Paper No. 50—Classifications and Definitions of Insurance Contracts In Force* (Issue Paper No. 50), is contained in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices Procedures Manual). Under current statutory accounting, different methods are used for recording premiums. Regardless of the method used, premiums are generally recognized as earned in the statement of operations over the period of risk in proportion to the amount of insurance protection provided. Premiums for title insurance, mortgage guaranty insurance, financial guaranty insurance, retrospectively rated or other experience-rated contracts and single or fixed premium policies with coverage periods in excess of thirteen months are not included in the scope of this issue paper, but will be addressed in separate issue papers.

2. GAAP provides only general guidance on how to record premium, however GAAP requires an unearned premium reserve to be established and premium revenue to be recognized over the period of risk in proportion to the amount of insurance protection provided.

3. The purpose of this issue paper is to establish statutory accounting principles for the recording and recognition of premium revenue for property and casualty contracts that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. This issue paper applies to property and casualty contracts as defined in Issue Paper No. 50. It will establish the basic underlying accounting principles for premium revenue recognition of property and casualty insurance contracts and will be used as the basis to ensure consistency when establishing statutory accounting principles for revenue recognition.

5. Except as provided for in paragraph 6, written premiums shall be defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits and expenses associated with the coverage provided by the terms of the insurance contract. Frequently, insurance contracts are subject to audit by the insurer and the amount of premium charged is subject to adjustment based on the actual exposure. These premium adjustments are discussed in paragraph 10 of this paper.

6. For workers' compensation contracts, which have a premium based upon changes in the activities of the insured, written premiums may be recorded on an installment basis to match the billing to the policyholder. Under this type of arrangement, the premium is determined and billed according to the frequency stated in the contract and written premium is recorded on the basis of that frequency.

7. Written premiums for all other contracts shall be recorded on the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Unearned premium reserve meets the definition of a liability as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5).

8. The exposure to insurance risk for most property and casualty insurance contracts does not vary significantly during the contract period. Therefore, premiums from those types of property and casualty contracts shall be recognized in the statement of operations, as earned premium, using either the daily pro-rata or monthly pro-rata methods as described in paragraph 17. Certain issue papers provide for different methods of recognizing premium in the statement of operations for specific types of contracts. For contracts not separately identified in specific issue papers where the reporting entity can demonstrate the period of risk differs significantly from the contract period, premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided.

9. Additional premiums that are charged to policyholders for endorsements and for changes in coverage under the contract shall be recorded on the effective date of the endorsement and accounted for in a manner consistent with the methods discussed in paragraphs 7 and 8 so that at any point in time a liability is accrued for unearned premium equal to the premium amount charged for the unexpired portion of the policy endorsement.

10. Adjustments to the amount of premium charged for changes in the level of exposure to insurance risk (such as audit premiums on workers' compensation policies) are generally determined based upon audits conducted after the policy has expired. Reporting entities shall estimate audit premiums, the amount generally referred to as earned but unbilled (EBUB) premium, and shall record such amounts as an adjustment to premium, either through written premium or as an adjustment to earned premium. Such amounts meet the definition of assets as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*. Such amounts shall be adjusted upon completion of the audit and the adjustment shall be recognized as revenue immediately. The estimate for EBUB may be determined using actuarially or statistically supported aggregate calculations using company historical unearned premium data, or per policy calculations. Upon completion of an audit that results in a return of premiums to the policyholder, earned premiums shall be reduced. Ten percent of EBUB in excess of collateral specifically held and identifiable on a per policy basis, must be reported in the annual statement as a nonadmitted asset, however, to the extent that amounts in excess of the 10% are not anticipated to be collected they shall be written off against operations in the period the determination is made. Reporting entities shall establish all of the requisite liabilities associated with the asset such as commissions and premium taxes.

11. When the anticipated losses, loss adjustment expenses commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis to the extent they have previously been expensed. For purposes of determining if a premium deficiency exists, insurance contracts shall be grouped in a manner consistent with how policies are marketed, serviced and measured. A liability shall be recognized for each such grouping where a premium deficiency is indicated. Such deficiencies shall not be offset by anticipated profits in other policy groupings. If an reporting entity utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the notes to the financial statements.

Disclosure Requirements

12. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;
b. Federal Employer Identification Number;
c. Whether such person holds an exclusive contract;
d. Types of business written;
e. Type of authority granted (i.e., underwriting, claims payment, etc.); and
f. Total premium written.

DISCUSSION

13. This issue paper adopts current statutory guidance for all property and casualty contracts, except as outlined below. This issue paper modifies current statutory accounting to record the written premium based upon the effective date of the policy or endorsement, except for workers' compensation premiums as discussed in paragraph 6 and premiums which are subject to adjustment, whereas current statutory accounting allows the recording of the premium when the daily report is processed, when the premium is due, or when the premium is paid. This issue paper therefore rejects the conclusions of the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force reached in 1990 and reaffirmed on March 8, 1993, as it relates to premiums other than workers' compensation, which allowed for certain written premiums to be recorded as billed. These changes were made to improve consistency in reporting. This is consistent with *Issue Paper No. 6—Amounts Due From Agents and Brokers* and *Issue Paper No. 10—Uncollected Premium Balances*. The pro-rata methods described in this issue paper provide for premium to be earned in proportion to the exposure to insurance risk for most property and casualty contracts as in most contracts the exposure to insurance risk does not vary significantly during the contract period. Property and casualty contracts where the exposure to insurance risk varies significantly during the contract period and it may not be appropriate to earn premium on a pro-rata basis are addressed in specific issue papers. For those few contracts not addressed in specific issue papers where the exposure to insurance risk varies significantly during the contract period, premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided. This paper also modifies current statutory accounting by requiring the recognition of a premium deficiency in circumstances described in paragraph 11. Current statutory guidance is silent regarding premium deficiency. This issue paper modifies current statutory guidance to allow EBUB to be recorded either through written premium or as an adjustment to earned premium. This change was made to provide consistency between the recording of this type of premium adjustment and retrospective premium adjustments.

14. The conclusions above reject *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60). The recognition of unearned premium as earned is consistent with GAAP except for those policies where the exposure to insurance risk differs materially during the contract period for which specific methods have been provided for the recognition of unearned premium as earned in certain issue papers. The recognition of a percentage of EBUB premium in excess of collateral as a nonadmitted asset is also not required by GAAP but is consistent with the conservatism and recognition concepts of statutory accounting.

15. The unearned premium reserve meets the definition of a liability as defined in Issue Paper No. 5. That issue paper defines liabilities as certain or probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transaction(s) or events. As stated in FAS 60 *"premiums from short-duration insurance contracts, such as property and liability insurance contracts, are intended to cover expected claims costs resulting from insured events that occur during a fixed period of short-duration."* Therefore,

the unearned premium reserve represents the premium to be earned in the future intended to cover the unexpired portion of the policy which generally relates to the future sacrifice of economic benefit, which are the claim costs the reporting entity will pay if losses are incurred during the contract period.

16. Recording the premium as revenue in proportion to the period that insurance protection is provided is consistent with the Recognition concept in the Statement of Concepts. The Recognition concept states, *"revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed."* Therefore, as the period that is protected expires, the underlying earnings process is completed and the revenue should be recognized.

Drafting Notes/Comments

- Accounting for specific types of property and casualty insurance contracts will be addressed in separate issue papers.
- Accounting for reinsurance will be addressed in *Issue Paper No. 74—Life and Accident and Health Reinsurance* and *Issue Paper No. 75—Property and Casualty Reinsurance*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

17. Chapter 14, Premiums*,* in the P&C Accounting Practices and Procedures Manual contains the following guidance pertaining to premiums:

> Different methods of recording written premiums are used and generally follow the company's plan of operation. For example, premiums may be recorded when the daily report is processed, when the premium is due, or when the premium is paid. Many companies use combinations of these methods. Whatever recording method is used, premiums written include the following categories: direct premiums, assumed reinsurance premiums and ceded reinsurance premiums.
>
> Direct Premiums
>
> The major portion of most companies' premiums written is direct premiums. Direct premiums include all premiums arising from policies issued by the company acting as the primary insurance carrier. These premiums should be adjusted for any return or additional premiums arising from endorsements, cancellations, audits, and retrospective rating plans.
>
> Direct written premiums are generally recorded for the full policy term. See Chapter 7-Agents' Balances or Uncollected Premiums, for recording of uncollected premiums.
>
> Endorsement entries generally follow the same recording path as the original entries. Those policies subject to audit may be adjusted on a monthly, quarterly, semi-annual, or annual basis with the premium resulting from a physical review of the exposure immediately recorded as written. Adjustments resulting from retrospective rating plans are immediately recorded as written premiums.
>
> Assumed and Ceded Reinsurance Premiums
>
> Assumed reinsurance premiums include all premiums (less return premiums) from contracts issued to reinsure another insurance company. Ceded reinsurance premiums include all premiums (less return premiums) transferred to another insurance company for reinsurance purchased.
>
> Net Written Premiums
>
> The net written premiums of an insurance company are equal to the direct premiums, plus the reinsurance assumed premiums, less the reinsurance ceded premiums. Net written premiums are shown in the Underwriting and Investment Exhibit of the annual statement.

> Earned Premiums
>
> The earned premiums of an insurance company represent the pro rata portion of the premiums in force applicable to the expired portion of the policy term, plus or minus the premiums earned on audits and other adjustments. To compute earned premiums, deduct from net premium writings the net change which has taken place during the period in total unearned premium reserve.
>
> The Underwriting and Investment Exhibit of the annual statement shows the components of earned premiums during the year for each line of business. The total earned premiums are reported in the Statement of Income of the annual statement.
>
> Earned But Unbilled Premiums
>
> Earned but unbilled premiums (EBUB) typically arise out of the issuance of workers' compensation policies. Since workers' compensation premiums are usually based on payroll statistics, premium billings to the employer are generally estimated and are subject to insurer audit, at which time the true final premium is calculated. If the actual payroll exceeds the payroll figure used in the calculation of premium billings, an additional premium may be owed the insurer. If the actual payroll is less than that used in the premium billing calculation, a return premium may be owed the employer.
>
> An insurer may recognize as an asset accrued EBUB. Actuarially or statistically supported aggregate calculations, using company historical unearned premium data, or per policy calculations are acceptable methods of establishing this asset. To the extent an insurer chooses to recognize the asset for EBUB, it must establish all of the requisite liabilities associated with the asset such as commissions and premium taxes.
>
> EBUB should be reported in the annual statement as written premium and premium receivable. It should not be netted against unearned premiums. Ten percent of EBUB in excess of collateral specifically held and identifiable on a per policy basis must be reported in the annual statement as a non-admitted asset.

18. Chapter 12, Unearned Premiums, in the P&C Accounting Practices and Procedures Manual contains the following guidance pertaining to unearned premiums:

> At the expiration of an insurance contract or policy, the entire premium has been earned. Any point prior to expiration, the company is required to establish a pro rata portion of the premium as a liability to cover the remaining policy term. The company's total unearned premium reserve represents the unearned premium liability for all policies in force.
>
> A number of methods are used for the computation of the unearned premium reserve. In one method, the unearned premiums are calculated by applying the appropriate factors or fractions to the original premiums in force, segregated by line of business, term, and date of expiration. The premium for the full original term is used for this purpose because the factors or fractions are calculated on the basis. When a policy is canceled, the full original premium should be deducted from the total premium in force; otherwise, premiums in force and unearned premiums would be overstated. During the life of a policy, changes are frequently made, resulting in additional or return premiums. For example, a one-year policy may have its premium increased or decreased by a change in coverage after it has been in force for six months, in which case the insured might pay additional premium or receive a return premium. Theoretically, the full annual premium for changes should be calculated so that premiums in force for the one-year term may be correspondingly increased or decreased. However, as a practical matter, some companies adjust the premiums in force by the amount of the actual additional premium or return premium, other than in the event of cancellation, on the assumption that the resulting errors in the premiums in force will largely offset one another.

> One of the more common assumptions used by companies to calculate an unearned premium reserve is the monthly pro rata method. This method assumes that, on the average, the same amount of business is written each day of any month so that the mean will be the middle of the month. For example, one-year premiums written during the first three months of the year have, at the end of the year, the following unearned fractions: January-1/24; February-3/24; March-5/24.
>
> A second method is to calculate the unearned premium on each policy. At the end of each period, the calculation is made on each item of premium to ascertain the unexpired portion and to arrive at the aggregate unearned premium reserve.
>
> If a company assumes reinsurance, it must provide the same unearned premium reserve that would have been provided by the ceding company if reinsurance had not been placed.
>
> There are a number of methods used to calculate unearned premium reserve. Certain states have a provision in their statutes which prescribes the method or methods which should be used.
>
> Audited Policies
>
> Audited premiums are earned as soon as they are recorded, whether they are interim audits or final audits. Many audited policies are written with a deposit premium and provide for monthly, quarterly, or semi-annual audits in addition to the final audit after expiration. Deposit premiums should be earned in such a manner that in conjunction with interim and final audits, earned premium will be correctly reflected during the policy term.

19. Pertinent excerpts of the December 3, 1990 meeting minutes of the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force (Emerging Accounting Issues Working Group) are as follows:

> At its September 10, 1990 meeting (EI 90-3) the working group then adopted the following accounting manual language subject to the development of suitable disclosures and interrogatories:
>
> Written premiums may be recorded at the processing point where the premium amount and term are determinable, e.g., when the daily report is processed, when the premium is billed, or when the premium is collected.
>
> Contracts which have both a fixed policy period and a fixed premium are recorded at the inception date for the term of the policy. This approach should be used in cases where policies have a fixed premium but offer policyholders the option to pay monthly, quarterly, or on some other modal basis, and in cases where the premium has been financed with the insurer receiving the full premium.
>
> For contracts which have a premium based upon changes in the activities of the insured, written premiums may be recorded on an installment basis to match the billing to the policyholder. Under this type of arrangement, the premium is determined and billed according to the frequency stated in the contract and written premium is recorded on the basis of that frequency.

Generally Accepted Accounting Principles

20. FAS 60 contains the following guidance pertaining to revenue recognition for short-duration contracts:

> 3. Premiums from short-duration insurance contracts, such as most property and liability insurance contracts, are intended to cover expected claim[1] costs resulting from insured events that occur during a fixed period of short duration. The insurance enterprise ordinarily has the ability to cancel the contract or to revise the premium at the beginning of each contract period to cover future insured events. Therefore, premiums from short-duration contracts ordinarily are earned and recognized as revenue evenly as insurance protection is provided.

> [1] Terms defined in the glossary (Appendix A) are in boldface type the first time they appear in this statement.
>
> 9. Premiums from short-duration insurance contracts ordinarily shall be recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. A liability for unpaid claims (including estimates of costs for claims relating to insured events that have occurred but have not been reported to the insurer) and a liability for claim adjustment expenses shall be accrued when insured events occur.
>
> Premium Revenue Recognition
>
> Short-Duration Contracts
>
> 13. Premiums from short-duration contracts ordinarily shall be recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. For those few types of contracts for which the period of risk differs significantly from the contract period, premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided. That generally results in premiums being recognized as revenue evenly over the contract period (or the period of risk, if different), except for those few cases in which the amount of insurance protection declines according to a predetermined schedule.

21. Paragraph 33 of FAS 60 provides the following guidance on accounting for premium deficiencies on short-duration contracts:

> A premium deficiency shall be recognized if the sum of expected claim costs and claim adjustment expenses, expected dividends to policyholders, unamortized acquisition costs, and maintenance costs exceeds related unearned premiums.[6]
>
> [6] Disclosure is required regarding whether the insurance enterprise considers anticipated investment income in determining if a premium deficiency relating to short-duration contracts exists (paragraph 60.e.).

22. The *AICPA Audit and Accounting Guide: Audits of Property and Liability Insurance Companies* contains the following regarding revenue recognition under GAAP:

> Revenue Recognition
>
> 3.32. Premiums from a short-duration contract ordinarily should be recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. This generally results in premiums being recognized as revenue evenly over the contract period. Under a few kinds of contracts, the period of risk differs significantly from the contract period. An example is insurance policies for recreational vehicles issued for an annual period, covering claims that are incurred primarily in the summer months. Under other kinds of contracts, the amount of coverage declines over the contract period on a scheduled basis. In those cases, the premium is recognized as revenue over the period of risk in proportion to the amount of insurance protection provided. Unearned premiums, that portion of the premium applicable to the unexpired period of the policy, are included as an unearned premium reserve within the company's balance sheet.
>
> 3.33. As discussed in FASB Statement No. 60, some premiums are subject to subsequent adjustment (for example, retrospectively rated or other experience-rated insurance contracts). In these cases, the premium is determined after the period of the contract and is based on claim experience, or reporting-form contracts, for which the premium is adjusted after the period of the contract based on the value of insured property. If, as is usually the case, the ultimate premium is reasonably estimable, the estimated ultimate premium should be recognized as revenue over the

period of the contract. It should be revised to reflect current experience. However, if the ultimate premium cannot be reasonably estimated, the cost-recovery method or the deposit method may be used until the ultimate premium becomes reasonably estimable. Under the cost-recovery method, premiums are recognized as revenue in amounts equal to estimated claims as insured events occur until the ultimate premium is reasonably estimable, and recognition of income is postponed until then. Under the deposit method, premiums are not recognized as revenue and claims are not charged to expense until the ultimate premium is reasonably estimable, and income recognition is postponed until that time.

Statutory Issue Paper No. 54

Individual and Group Accident and Health Contracts

STATUS
Finalized June 23, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 54

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance on income recognition and policy reserves for individual and group accident and health contracts, as defined in *Issue Paper No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (Issue Paper No. 50), is addressed in Chapter 13, Aggregate Reserves for Accident and Health Policies and Chapter 18, Premium Income, in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). That guidance addresses income recognition and policy reserves related to individual and group accident and health contracts. Under current statutory accounting, premiums are recorded on a gross basis when due from policyholders and policy and claim reserves are computed based upon specific contract provisions and the methods described in the NAIC Model Law, Minimum Reserve Standards for Individual and Group Health Insurance Contracts (Individual and Group Health Model Law), the Long-Term Care Insurance Model Regulation, and the Actuarial Standards of Practice promulgated by the American Academy of Actuaries. Further, policy and claim reserves must, in the aggregate, place a sound value on both present and future liabilities.

2. GAAP requires insurance contracts to be classified as short-duration or long-duration contracts. Long-duration contracts are those contracts expected to remain in force for an extended period and include certain noncancelable and guaranteed renewable accident and health contracts. All other insurance contracts are considered short-duration contracts and include most property and liability insurance contracts. Premiums from short-duration contracts ordinarily are recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. Claim costs, including estimates of costs for claims relating to insured events that have occurred but have not been reported to the reporting entity, are recognized when insured events occur. GAAP guidance requires policy reserves for individual and group accident and health classified as long-duration to be established using actuarial assumptions applicable at the time the insurance contracts are made, or for short-duration contracts, using an unearned premium reserve.

3. The purpose of this issue paper is to establish statutory accounting principles for policy and claim reserves for all individual and group accident and health contracts consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). Credit accident and health insurance contracts are discussed in *Issue Paper No. 59—Credit Life and Accident and Health Insurance Contracts*.

SUMMARY CONCLUSION

Income Recognition

4. Premiums shall be recognized as income on the gross basis (amount charged to the policyholder or subscriber exclusive of copayments or other charges related to the receipt of healthcare services) when due from policyholders or subscribers, but no earlier than the effective date of coverage under the terms of the contract. Due and uncollected premiums shall follow the guidance in *Issue Paper No. 10—*

Uncollected Premium Balances (Issue Paper No. 10), to determine the admissibility of premiums and related receivables. Premiums waived by the reporting entity under disability provisions contained in its policies and contracts, and reported in operations as a disability benefit, are included in premium income.

5. Premium income shall exclude premiums that have been received by the reporting entity on or prior to the valuation date but which are due after the valuation date (i.e., advance premiums as discussed below).

6. Premium income shall be reduced for premiums returned and allowances to industrial policyholders for the direct payment of premiums.

7. Premium income shall be increased by reinsurance premiums assumed and reduced by reinsurance premiums ceded. Reinsurance premiums assumed and ceded shall be defined and addressed in *Issue Paper No. 74—Life, Deposit-Type and Accident and Health Reinsurance*.

8. Advance premiums are those premiums that have been received by the reporting entity prior to or on the valuation date but which are due after the valuation date. The total amount of such advance premiums is reported as a liability in the statutory financial statement and is not considered premium income until due. The gross premium, not the net valuation premium, is recorded as the advance premium in recognition of the company's liability to refund such premiums in the event the policy is terminated.

9. As discussed in *Issue Paper No. 47—Uninsured Plans*, amounts received on behalf of uninsured plans or the uninsured portion of partially insured plans shall not be reported as premium income. Administrative fees for servicing the uninsured plans shall be deducted from general insurance expenses. Conversely, income relating to the insured portion of any plan shall be reported as premium income.

Reserve Requirements

10. The aggregate reserve for individual and group accident and health contracts generally consists of a policy reserve and a claim reserve as well as certain other miscellaneous reserves discussed in paragraphs 26 and 27. The aggregate reserve reflects the future liabilities arising under accident and health insurance policies. Policy reserves have traditionally been referred to as active life reserves and include unearned premium reserves. Policy reserves reflect that premiums cover future liabilities in addition to current claim costs and expenses. Claim reserves, sometimes referred to as disabled life reserves, are required on claims which involve continuing loss. The reserve in this case is a measure of the present value of future benefits or amounts not yet due as of the statement date (the unaccrued portion) which are expected to arise under claims which have been incurred as of the statement date. The aggregate reserve for individual and group accident and health contracts does not include claim liabilities which are the amounts payable at the reporting date (the accrued portion) and reflect the reporting entity's liability for benefits due as of the statement date. Claim liabilities are further discussed in *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses.*

11. Policy reserves for individual and group accident and health contracts shall include an unearned premium reserve and, as applicable, an additional or contract reserve where constant or level premiums are assumed for certain noncancelable or guaranteed renewable contracts. The claim reserve shall consist of a reserve for the present value of amounts not yet due.

12. Statutory policy reserves shall be established for all unmatured contractual obligations of the reporting entity arising out of the provisions of the contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. A prospective gross premium valuation is the ultimate test of reserve adequacy as of a given valuation date. Statutory reserves meet the definition of liabilities as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in Issue Paper No. 5.

13. The reserving methodologies and assumptions used in calculating individual and group accident and health reserves shall meet the provisions of Appendices A-010, A-641, A-820 and A-822 and the actuarial guidelines found in Part 9 of the NAIC Financial Examiners Handbook. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

Policy Reserves

14. Unearned premium reserves shall be required for all accident and health contracts for which premiums have been reported for a period beyond the date of valuation other than premiums paid in advance. The minimum unearned premium reserve that applies to the premium period beyond the valuation date shall be based on the valuation net modal premium if contract reserves are required and the gross modal unearned premium reserve if contract reserves are not required. If premiums due and unpaid are carried as an asset, such premiums must be treated as premiums in force, subject to unearned premium reserve determination. The value of unpaid commissions, premium taxes, and the cost of collection associated with due and unpaid premiums must be carried as an offsetting liability. In no event, however, shall the aggregate policy reserve for all contracts be less than the unearned gross premium under such contracts. Additionally, the reserve shall never be less than the expected claims for the period beyond the valuation date represented by the unearned premium reserve, to the extent not provided for elsewhere.

15. Contract or additional reserves on accident and health contracts shall be recorded when premiums and benefits are not earned or incurred at the same incidence over the policy period (e.g., contracts having premiums determined on an issue-age basis where premiums and related morbidity, risk of loss, and the cost of coverage are not evenly matched). This evaluation may be applied on a rating block basis if the total premiums for the block were developed to support the total risk assumed and expected expenses for the block each year, and a qualified actuary certifies the premium development (e.g., community-rated contracts).The additional reserves shall be set aside from the early years' level premiums to pay the claims that experience indicates will be incurred as the policy continues in force. The fact that the reporting entity may have the right to increase premiums or to decline renewal of the policies for certain reasons has no bearing on whether or not a contract or additional reserve should be held. These reserves shall apply to regardless of whether or not benefits are currently being received, and are in addition to unearned premium reserves discussed in paragraph 14.

16. Contract or additional reserves shall also be recorded where, due to the gross premium structure, the future benefits exceed the future net premiums (e.g., group conversion policies) or where the contract provides for the extension of benefits after the termination of the coverage (e.g., deferred maternity and other similar benefits).

17. A terminal reserve for accident and health contracts is the policy reserve at the end of a policy year to cover the assumed difference between future benefits and future net premiums. The components used to compute a terminal reserve shall consist of an interest rate, a mortality and/or morbidity table, and a valuation method (e.g., net level, one-year full preliminary term, and two-year full preliminary term) and where allowed, other assumptions. A terminal reserve is based on the assumption that all net premiums have been received, all interest earned, and all benefits paid to the end of the policy year.

18. Since terminal reserves are computed as of the end of a policy year and not the reporting date, the terminal reserve as of policy anniversaries immediately prior to and subsequent to the reporting date are adjusted to reflect that portion of the net premium that is unearned at the reporting date. This is generally accomplished using either the mean reserve method or the mid-terminal method as described in paragraph 22 of *Issue Paper No. 51—Life Contracts* (Issue Paper No. 51). Other appropriate methods, including an exact reserve valuation, may also be used.

19. For individual accident and health contracts, negative reserves on any benefit shall be offset against positive reserves for other benefits in the same policy but the mean reserve on any policy shall

never be taken as less than one-half the valuation net premium. The majority of group accident and health policies are written in conjunction with group life or other policies. If these policies are an experience rated package, positive or favorable margins on one of the contracts can offset the need to establish additional reserves on the other contracts.

Additional Reserves

20. When the expected claims payments or incurred costs, claim adjustment expenses and administration costs exceed the premiums to be collected for the remainder of a contract period, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency, with a corresponding charge to operations. For purposes of determining if a premium deficiency exists, contracts shall be grouped in a manner consistent with how policies are marketed, serviced and measured. A liability shall be recognized for each grouping where a premium deficiency is indicated. Deficiencies shall not be offset by anticipated profits in other policy groupings. Such accruals shall be made for any loss contracts, even if the contract period has not yet started.

Claim Reserves

21. Claim reserves shall be accrued for estimated cost of future health care services to be rendered that the reporting entity is currently obligated to provide as a result of premiums earned to date and that would be payable after the reporting date under the terms of arrangements, regulatory requirements or other requirements if the insured’s or subscriber’s illness or disability were to continue. It shall include a reserve for disability benefits covered under premium waiver provisions. For individual and group disability claims with a duration of less than two years, reserves may be based on the reporting entity’s experience, if credible, or other methods, as appropriate. Generally, reserves for disability income claims with durations of greater than two years shall be determined based on a tabular method using the age of the insured at the date of disablement, the number of months the insured already has been disabled, and the number of months remaining in the benefit period.

Reserve Recognition

22. The difference between the aggregate reserve for accident and health contracts at the beginning and end of the reporting period shall be reflected in the summary of operations, except for any difference due to a change in valuation basis.

Change In Valuation Basis

23. A change in valuation basis shall be defined as a change in the interest rate, mortality or morbidity assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in *Issue Paper No. 3—Accounting Changes* (Issue Paper No. 3). Consistent with Issue Paper No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a new method and a specific transition that allows for grading.

Supplemental Benefits

24. In addition to the basic policy benefit, the contract may provide supplemental benefits. Supplemental benefits include, but are not limited to, accidental death benefits, dental and waiver of premium benefits. If the terms of the contract provide for these benefits, appropriate reserves shall be established in accordance with the applicable standards within this Codification.

Reserve Adequacy

25. As discussed in Appendix A-010, a prospective gross premium valuation is the ultimate test of the adequacy of a reporting entity’s accident and health reserves as of a given valuation date and shall be

determined on the basis of unearned premium reserves, contract or additional reserves, claim reserves (including claim liabilities), and miscellaneous reserves combined; however, each component shall be computed separately.

Additional Reserves Not Included Elsewhere

26. Reserve for experience-rating refunds or the dividend liability in group policies are discussed in *Issue Paper No. 66—Accounting for Retrospectively Rated Contracts*.

27. Additional actuarial or other liabilities are commonly held for such items as:

a. Surrender values in excess of reserves otherwise required or carried;

b. Additional reserves required based on cash flow testing and/or asset/liability matching requirements; and

c. Additional reserves for policies which contain conversion privileges or future contingent benefits.

Contracts Subject to Redetermination

28. This statement also applies to other contracts which are subject to redetermination such as Federal (and State) Groups – subject to rate adjustments through audits by the Office of Personnel Management ("OPM"). Reporting entities are required to give Federal Groups the lowest rates that are being charged to similar groups.

29. Amounts due from insureds or subscribers and amounts due to insureds or subscribers under contracts subject to redetermination meet the definitions of assets and liabilities as set forth in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and Issue Paper No. 5, respectively.

30. Contract redeterminations shall be estimated based on the experience to date. The method used to estimate the liability shall be reasonable based on the reporting entity's procedures, and consistent among reporting periods. An examination of contract requirements in relation to the rates being charged and the current status of applicable audits (e.g., OPM, Health Care Finance Administration and other Federal, state or government department) is a common method used to estimate such contract redeterminations.

31. Premium adjustments for contracts subject to redetermination are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Accrued premium adjustments shall be recorded as a write-in for other-than-invested assets, with a corresponding entry to premiums; accrued return premium adjustments shall be recorded as a liability with a corresponding entry to premiums.

32. If, in accordance with Issue Paper No. 5, it is probable that the additional premium adjustment is uncollectible, any uncollectible premium shall be written off against operations in the period the determination is made and the disclosure requirements outlined in Issue Paper No. 5 shall be made.

33. Premium adjustments for contracts subject to redetermination shall be determined and billed or refunded in accordance with the policy provisions or contract provisions. If such premiums are not billed in accordance with the policy provisions or contract provisions, or the policy provisions or contract provisions do not address the due date of such premiums, the accrual shall be nonadmitted. This is consistent with the guidance for audit premiums established in Issue Paper No. 10.

Disclosures

34. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in

Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.);

f. Total premium written.

35. If a premium deficiency reserve is established in accordance with paragraph 20, disclose the amount of that reserve.

DISCUSSION

36. This issue paper adopts the current statutory accounting guidance for premiums, policy reserves, and claim reserves associated with accident and health contracts. However, paragraph 20 of this issue paper expands the current requirements for reserving for contracts where due to the gross premium structure, future benefits exceed future premiums.

37. The statutory accounting principles outlined in the conclusion above are consistent with the conservatism, consistency and recognition concepts in the Statement of Concepts which state:

> Conservatism
>
> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.
>
> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.

Recognition

Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., excess of statutory reserves over statement reserves, interest maintenance reserves, asset valuation reserves, and others).

Claim Reserves - Indemnity and Managed Care Contracts

38. As discussed in paragraph 21, claim reserves shall be accrued for estimated amounts that would be payable after the reporting date if the insured's illness or disability were to continue. For health maintenance organizations claims reserves shall be provided if the benefits for the event extend beyond the contract period. For claims with a duration of less than two years, there are a variety of acceptable methods for calculation. Some of them are: (a) use of the disabled life table—either a published table or one based on the insurer's experience; (b) use of an estimate made by the insurer's claim department for each policy (the individual judgment approach); or (c) other appropriate estimation techniques.

39. The method used to compute the claim reserve must be appropriate in the circumstances. Historical development might provide information as to the appropriateness of the method used by developing statistics to show that its method would (or actually did) produce adequate reserves for prior valuation periods. If the loss-of-time policy provides a waiver of premium benefit, the reserve for policies that are having their premiums waived should be included with the disabled life reserves.

Level Premiums - Indemnity Contracts

40. As discussed in paragraph 15 of this issue paper, contract or additional reserves on accident and health contracts shall be recorded when premiums and benefits are not earned or incurred at the same incidence over the policy period. The Life/A&H Accounting Practices and Procedures Manual requires contract reserves on individual accident and health policies but does not specifically extend this requirement to group policies. This issue paper clarifies current SAP to require contract reserves on group accident and health policies, including those group accident and health contracts that are individually underwritten.

Future Contingent Benefits - Indemnity Contracts

41. A reporting entity shall establish a reserve for future contingent benefits which extend beyond the termination of the policy, subject to specific contract provisions. Such provisions which accrue and are payable at some future date, are predicated on a condition or actual disability which existed at the termination of the contract and which is usually not known to the reporting entity at the time of the termination (e.g., deferred maternity benefits). In situations where the actual disability is not known to the reporting entity at the time of the termination, the reserve shall be computed based on relevant pricing, periodic, or industry studies of similar benefits on terminated policies. Reporting entities shall separately compute a reserve for deferred maternity benefits and any other extended benefits under group contracts.

Extension of Benefits - Indemnity Contracts

42. An additional reserve shall be required for group accident and health contracts which contain a conversion privilege. The minimum additional reserve shall equal the excess morbidity costs assumed in the premium payable on the terminated coverages. If future guaranteed rates are inadequate to meet future obligations, then additional reserves shall be established. A reserve shall be established to cover the expected benefit payments for any policy having a conversion privilege or other similar extension of benefits when the policy is terminated with no additional premiums due but the benefits extend beyond the termination date. However, for cases where the experience of the case or the experience of a block of cases is reflected back to the policyholder, the dividend liability or provision for experience rating refunds is a direct offset to the need to establish an additional reserve.

GAAP Literature

43. Consistent with Issue Papers Nos. 50 and 51, *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60), relating to individual and group accident and health contracts is rejected for the reasons set forth in those issue papers. However, some of the elements regarding income recognition have been used in this issue paper.

Drafting Notes/Comments

- Issue Paper No. 50 addresses Classifications and Definitions of Insurance or Managed Care Contracts In Force.
- Issue Paper No. 51 addresses Life Contracts.
- Issue Paper No. 52 addresses Deposit-Type Contracts.
- Issue Paper No. 55 addresses Unpaid Claims, Losses and Loss Adjustment Expenses.
- Issue Paper No. 59 addresses Credit Life and Accident and Health Insurance Contracts.
- Issue Paper No. 66 addresses Accounting for Retrospectively Rated Contracts.
- Issue Paper No. 74 addresses Life, Deposit-Type and Accident and Health Reinsurance.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE (only pertinent excerpts are included below)

Statutory Accounting

44. Chapter 13, Aggregate Reserves For Accident and Health Policies, of the Life/A&H Accounting Practices and Procedures Manual provides the following guidance on individual and group accident and health reserves:

> Accident and health insurance provides protection against economic losses resulting from accident and/or sickness. This insurance may be provided under individual policies, under group or franchise policies, or it may be provided under certain special types of policies which bear unique titles such as credit insurance. The economic losses which accident and health insurance policies cover, or the types of benefits provided, will vary with different policies. For example, reimbursement for hospital, surgical, or medical expenses may be provided under a hospital expense policy, while under other policies, a more comprehensive form of coverage, known as major medical insurance, may be offered. Similarly, policies may provide monthly benefits for loss of income from disability, either on a short term or a long term basis, or only for disabilities due to accident. Loss of life from accident may be covered under accidental death policies, while under certain limited accident policies, only accidental death from air travel may be covered. Therefore, accident and health policies may be categorized by the form of policy through which the coverage is provided; it may be categorized according to the benefits provided by the policy; or it may be categorized by the contingencies insured against. These variations in types of policies and the benefits provided must be considered in discussing the reserves for accident and health insurance policies.
>
> Accident and health policies are offered by life companies, casualty companies, fraternal benefits societies, and certain specialty companies. While the coverage originated with casualty companies, it is now the life insurance companies which provide the majority of accident and health insurance. The history of the business is important because many of the concepts currently used originated from casualty insurance practices and use casualty terminology. Since the life insurance companies began writing this insurance, the form of the policies and the concept of coverages have changed, which also produced changes in reserving practices.
>
> At one time, all reporting of accident and health insurance was on the miscellaneous blank, which was originally designed for the casualty companies. The policies then offered were referred to as commercial policies under which the insurer had the right to cancel or fail to renew coverage. Some noncancellable accident and health insurance was written with specific reserve requirements for those policies. The premium rates for commercial policies were often on a uniform rate basis, with the same premium applying to a broad range of ages. Under the casualty concept, the reserves for these commercial policies consisted primarily of an unearned premium

reserve and claim reserve. The unearned premium reserve was intended to recognize that portion of a premium which covered a policy period extending beyond the valuation date. Claim reserves were required to recognize the liability of the company for claims which had not been paid or were being processed. The titles assigned to the various claim reserves were intended to reflect their payment status; however, over the years, procedures have changed and certain of the reserves are calculated differently but still bear the same titles. Reserves in the statutory financial statement required for accident and health insurance are measures of the value of liability for future obligations of an insurer. Two basic types of reserves are required to value the future liabilities arising under accident and health insurance policies. “Policy reserves” have traditionally been referred to as active life reserves and unearned premium reserves and are a recognition that premiums cover future liabilities in addition to current claim costs and expenses. “Claim reserves,” sometimes referred to as disabled life reserves, are required on claims which involve continuing loss. The reserve in this case is a measure of the present value of future benefits or amounts not yet due as of the statement date which are expected to arise under claims which have been incurred as of the statement date. “Claim liabilities,” to be discussed in a later chapter, are a measure of an insurer’s liability for benefits due as of the statement date.

In many respects, the reporting of accident and health insurance is similar to that used for life insurance but the reserving of accident and health insurance differs significantly from that used for life insurance. The separation of the claim reserve is an example of unique accident and health reserving and will be discussed later. This chapter will analyze accident and health reserves from a general standpoint and reference will be made to the numerous regulations on accident and health reserves which have been recommended by the NAIC and which have been promulgated at various times by the different states. It is not intended that those reserve recommendations be restated in this chapter but comments will be made to enhance their understanding.

Individual Accident and Health Policies

Individual accident and health policies, other than credit insurance, are separated for reserve reporting purposes in the statutory financial statement into six classifications. The definitions are included in the instructions for the statutory financial statement and are based principally on the renewal agreement of the policy. There is some variation in the reserve requirements which apply to the different renewal classifications of policies but most reserve requirements apply to all individual policies.

Legal Requirements for Reserves

For life insurance, the standard valuation law defines the minimum standard which a company’s aggregate reserves must meet. However, for accident and health insurance, the statutes of most states provide that the insurer shall maintain an active life reserve which shall place a sound value on its liabilities under its accident and health policies and be not less than the reserve according to the appropriate standards set forth in regulations issued by the insurance department. In other states which have not adopted specific reserve requirements for accident and health insurance, the requirement for reserves may be based on more general statutory requirements or on the instructions to the statutory financial statement. Those instructions provide that a reserve must be carried for any policy which provides guarantee of renewability, and the standards adopted by the NAIC in December 1964, are indicated to be an acceptable basis for such additional reserves. The report of the Industry Advisory Committee on Reserves for Individual Accident and Health Policies, approved by the NAIC in December 1964 has served as the basis for the reserve regulations promulgated by many insurance departments. Revisions in the regulations may change the reserve requirements, as well as provide for new morbidity tables, without a change in the reserve law of a state as is true for life insurance.

Unearned Premium Reserves

These reserves are established for all accident and health policies and are equivalent to the amount of the gross premium for that portion of the premium period which extends beyond the valuation date. The unearned portion may be computed on a pro rata basis using the actual due dates, or it may be computed on the "monthly pro rata method," which assumes that all premiums are collected evenly throughout the month. Special consideration should be given to the method used if there is a high concentration of premiums due on a given date because of company practices in the dating of policies. Care must be taken to insure consistency between unearned premium reserves and premiums reported as due and unpaid. For example, if a company is taking a due and unpaid premium for a policy as an asset, the appropriate portion of that premium should be included in the unearned premiums just as if the premium had actually been paid.

Active Life or Additional Reserves

These reserves arise as a consequence of the rating concept for the policy where a constant or "level premium" is assumed over a specified period of years during which the cost of insurance increases with the increasing age of the insured lives. This is similar in concept to the reserves provided for term life insurance policies, but again, there are distinct differences. The active life reserve is required of all in-force policies, which would include policies on those lives which are currently disabled and receiving benefits, and is in addition to any reserves required on those lives in connection with the claim. Active life reserves are necessary because the level premiums, as with life insurance, will likely prove to be inadequate to meet future claim costs as the policies mature. The additional reserves are, therefore, set aside from the early years' level premiums to pay the claims that experience indicates will be incurred as the policy continues in force. The fact that the insurer may have the right to increase premiums or to decline renewal of the policies for certain reasons has no bearing on the calculation of the active life reserves. These additional reserves are not required of policies with certain renewal agreements.

Specific morbidity tables, valuation methods and interest rates have been included in the NAIC recommendations as minimum standards. The policy reserves established and maintained by a company should place a sound value on both present and future liabilities under those policies and should not be less than the minimum values determined by the methods and bases described therein.

The morbidity tables specified in the NAIC recommendations should be viewed as minimum standards. While these morbidity tables have been developed from industry experience data, it has not been possible to recognize all the variations in policy benefits or underwriting philosophies of all companies. Appropriate modifications should be made to reflect the actual benefits provided in the policy. Similarly, recommended morbidity tables do not exist for certain benefits so there is a need to develop reserves based on the insurer's recent morbidity experience, or on recognized published morbidity experience, such that a sound value is placed on the liabilities under that benefit.

The NAIC recommendations permit alternative valuation procedures and assumptions. Often the great variety of benefits and options in accident and health policies make it impractical to precisely value each variation. Approximations such as those involving age groupings, groupings of several years of issue, or average amounts of indemnities are among those mentioned. Others include the computations of the reserve for a policy benefit as a percentage of some other policy benefit or the use of composite annual claim costs for all or any combination of the benefits included in the policies.

The insurer may employ the use of either the level premium, the one-year preliminary term, or the two-year preliminary term valuation methods. The reserves may be shown as mean reserves diminished by appropriate credit for valuation net deferred premiums or as mid-terminal reserves plus the gross or net unearned premium reserves. In no event, however, may the aggregate reserve for all policies be less than the unearned gross premium under such policies. For statement purposes, the net reserve liability may be shown as the excess of the mean reserve over the amount of net unpaid and deferred premiums or, regardless of the underlying method of calculation, it may be divided between the unearned gross premium reserve and a balancing item for the "additional reserve" which is generally based on the mid-terminal reserves. The insurer is required to attach to the statutory financial statement a description of the valuation standards used in calculating the reserves, and to specify the reserve basis, interest rates, and methods.

Because of the aggregate and average nature of policy reserves, deficiency reserves are normally not required for accident and health insurance. Negative reserves on any benefit may be offset against positive reserves for other benefits in the same policy but the mean reserve on any policy should never be taken as less than one-half the valuation net premium.

Reserves for cash value, return of premium, or other nonforfeiture benefits should be calculated using interest, mortality, and morbidity, provided the value of benefits payable upon death is included in the calculation; otherwise, reserves should be calculated on a sinking fund basis using interest and morbidity only. The aggregate policy reserves established for these, over and above any policy reserve required for other policy benefits, should not be less than the aggregate of any withdrawal benefits then payable. Where cash value or return of premium benefits are payable periodically, reserves should be calculated on a recurring term period basis, consistent with the payment cycle.

Group Policies

All organizations that qualify to purchase group life insurance may also, by most state laws, purchase accident and health insurance. In many states, the definition of what constitutes an eligible group for accident and health insurance is entirely left up to any set of good underwriting practices established by the insurance company.

Some insurers may act as administrators of accident and health plans under which the plans bear the risk of claims. Such plans are commonly terms “administrative services only” plans and are described in this manual as “uninsured plans.” For additional discussion see Chapter 8—Other Admitted Assets.

The insurer’s aggregate reserves should not include any amounts arising from uninsured accident and health plans or the uninsured portion of partially insured plans. The insured portion of any partially insured plan should be treated as any other insured plan with appropriate reserves established.

Legal Requirements for Reserves

The minimum reserve for active lives is the gross unearned premium. Unlike life insurance, where due and outstanding premium is a net valuation premium and reserves are also net valuation premium reserves, group accident and health due and outstanding premium and unearned premium reserves are reported on a gross basis. There is, therefore, no need to calculate loading or establish the excess of the cost of collection over loading for group accident and health policies. The liabilities established on due and outstanding premiums are discussed elsewhere in this manual.

Unearned Premium Reserves

The methods of computing group unearned premium reserves may vary between companies and even within a company, depending upon the premium due dates of the policies involved. The monthly pro rata gross unearned premium is a common method used. The assumption of uniform issuance is applied in the monthly pro rata method. At the end of the month in which the premium is due, one-half of the premium is considered to be earned and one-half is considered to be unearned.

Unearned premium reserves also may be based on the actual due date of the premium; this has been referred to as the “daily pro rata” method. It is the most precise basis. Sometimes a combination of the two methods is used. An unearned premium reserve of zero is established for all policies with monthly premium due dates of the first day of the month. For all other monthly policies, a uniform distribution is assumed. Most group accident and health policies are billed on a monthly basis but, in a few cases, quarterly, semiannual, and even triannual modes are encountered. Premium modes other than monthly can be handled in similar fashion.

Additional Reserves

Some states may require an additional reserve for policies which contain a conversion privilege. The minimum reserve should be the excess of the morbidity costs assumed in the premium to be payable on the terminated coverages. If the rates guaranteed into the future are inadequate to meet future obligations, then additional reserves should be established. However, for cases where the experience of the case or the experience of a block of cases is reflected back to the policyholder, the dividend liability or provision for experience rating refunds is a direct offset to the need to establish an additional reserve. Also, it should be noted that the vast majority of group accident and health policies are written in conjunction with a group life policy. In the case of an experience rated package of group life and group accident and health, policyholder margins available from the group life contract may also reduce the need to establish an additional reserve. A detailed discussion of the group dividend liability and experience rating refunds may be found below.

Reserve For Future Contingent Benefits

In addition to the unearned premium reserves for all group accident and health policies, a company may be required to establish a reserve for future contingent benefits. The most common of these is for deferred maternity benefits.

Employer groups frequently have female employees leaving for maternity reasons. These employees usually leave at some time before giving birth and are not members of the group at the time their hospitalization claim is presented. For this reason, most group policies are written to insure conception rather than birth. The requirement, therefore, is that the female employee be a member of the group at the time of conception for her to receive benefits upon giving birth.

One other contingent benefit that may be set up is a special reserve for major medical policies that have a high front-end deductible, such as $5,000 to $10,000. A claim reserve may not have been established since the insureds have not used up the deductible but future contingent benefits may be in the process of building as the deductibles are satisfied.

According to the NAIC instructions, any policy having similar extension of benefits must have such a reserve. It is intended that this reserve should be set up on the assumption that all insurance under policies containing an extension of benefits will terminate on the statement date.

Other Reserve Considerations
Claim Reserves

The treatment of active life reserves for accident and health policies has been discussed in three categories — individual, group, and credit. The requirements for each category were sufficiently unique to warrant separate consideration. The standards and practices employed in the computation of claim reserves, however, are for the most part the same for individual, group, and credit and will apply jointly unless specific reference is made to one line of business.

Claim reserves are reported as accident and health reserves. Estimated amounts that would be payable after the statement date if the insured’s liability were to continue represent the unaccrued benefits which make up the claim reserve. The accrued benefit, i.e., the amount payable on the balance sheet date, is reported as the claim liability in the balance sheet. Separating accrued and unaccrued portions of claims provision often is difficult because many methods of computing claim reserves generate one total amount based upon the company’s past experience.

Disabled Life Reserves For Loss-Of-Time Policies

The calculation of disabled life reserves for claims with a duration of more than two years is straightforward. The disabled life factors are based upon the age of the insured at the date of disablement, the number of months the insured already has been disabled, and the number of months remaining in the benefit period.

For claims with a duration of less than two years, there is a variety of acceptable methods for calculation. Some of them are: (a) use of the disabled life table—either a published table or one based on the insurer's experience; (b) use of an estimate made by the insurer's claim department for each policy (the individual judgment approach); (c) use of a "rule of thumb," such as setting the reserve equal to the prospective claim payments for 3 1/2 times the elapsed period of disability; or (d) a combination of the first three methods.

For any method it uses, the insurer should have statistics to show that its method would (or actually did) produce adequate reserves for prior valuation periods. If the loss-of-time policy provides a waiver of premium benefit, the reserve for policies that are having their premiums waived should be included with the disabled life reserves. A portion of the liability for incurred but not unreported loss-of-time claims may be unaccrued.

A shortage in the statutorily-determined reserves for loss-of-time claims may develop, since the experience of these claims is consolidated for those of more than and less than a duration of two years. Because of the legal requirement, claims of more than two years' duration must have tabular reserves in accordance with statutory requirements. The minimum reserves for these claims are set, therefore, and at least that amount should be reported. Consolidated experience may indicate, because of earlier terminations of payments and lump sum settlements, that these reserves are redundant. In any case, the reserve for the initial two years of incurrence must be sufficient in its own right and must not be reduced to offset a redundancy in the reserve for claims beyond two years' duration.

Claim Reserves For Other Than Loss-Of-Time Policies

The incurred claim reserve for various hospital and medical expense coverages may have an unaccrued portion. For example, if an insured has been hospitalized for 20 days as of a given valuation date, and it was estimated that he would be hospitalized for another 10 days for the same sickness, then the reserve for the 10 days of benefits should be established as a claim reserve. In practice, a total reserve for a given claim generally will be established and then divided by some predetermined means between claim reserves and claim liability. Due to the great latitude given the insurer in determining reserves for other than loss-of-time policies, the insurer is required to provide statistics that support the adequacy of the reserves for each major line of business.

The emergence of discount and the existence of certain minimum-premium policies and excess risk reinsurance may distort the above-mentioned tests. The adequacy of reserves is also affected by other factors, such as the existence of contractual premium clauses under which the insurer can require an additional premium to be paid under certain stipulated conditions.

45. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance on individual and group accident and health premiums:

CHAPTER 18 PREMIUM INCOME

Accident and Health Policies

Accident and health insurance policies typically provide a grace period after the due date for the premium to be received before the policy is terminated. If the company is relatively assured of collecting the late premium, and has established an appropriate unearned premium reserve, it is permitted to record such due and uncollected premium as an admitted asset.

On accident and health policies, other than group, with premiums payable more frequently than quarterly, all due and unpaid premiums are not admitted if more than one period premium is overdue. Group premiums more than 90 days overdue also are disallowed as an admitted asset.

If gross accident and health uncollected premiums are recorded as income and as an asset, commissions on uncollected premiums are included in the liability for unpaid commissions.

The method used for determining the amount of uncollected premiums should be the same for group as for individual policies. This usually is done by preparing an inventory of premiums billed, due prior to the statement date but uncollected. If the company pays a different rate of commission on first-year premiums than on renewals, the premiums should be grouped to facilitate the calculation of the unpaid commissions.

Because the policyholder can terminate the policy at any time simply by not paying the premium, the company should consider its lapse experience in determining the amount it records as uncollected premiums. Recording older due premiums (although not more than 90 days past due), which have little or no unearned premium reserve, may overstate the company's financial condition. Direct mail mail-order insurance is a good example of business having high lapse rates. Many companies record no uncollected premiums on these policies.

Some insurers may act as administrators of accident and health plans under which the plans bear the risk of claims. Such plans are commonly termed "administrative services only" plans and are described in this manual as "uninsured plans." For additional discussion see Chapter 8—Other Admitted Assets.

Amounts related to uninsured plans or the uninsured portion of partially insured plans must not be reported in premiums. Conversely income relating to the insured portion of any plan must be reported as premiums.

Generally Accepted Accounting Principles

46. The *AICPA Audit and Accounting Guide: Health Care Organizations* provides the following guidance:

Revenue

10.04 Revenue usually is recorded when coverage is provided to an enrollee or the service is provided to a patient or resident. Revenue is classified based on the type of service rendered or contracted to be rendered. Examples of revenue include—

- Patient service revenue, which is derived from fees charged for patient care. This may be based on diagnosis related group (DRG) payments, resource-based relative value scales (RBRVS) payments, per diems, discounts, or other fee-for-service arrangements.

- Premium revenue, which is derived from capitation arrangements.

- Resident service revenue, which may be related to maintenance fees, rental fees, or amortization of advance fees.

Accounting for Loss Contracts

13.05 A prepaid health care provider enters into contracts to provide members with specified health care services for specified periods in return for fixed periodic premiums. The premium revenue is expected to cover health care costs and other costs over the terms of the contracts. Only in unusual circumstances would a provider be able to increase premiums on contracts in force to cover expected losses. A provider may be able to control or reduce future health care delivery costs to avoid anticipated losses, but the ability to avoid losses under existing contracts may be difficult to measure and to demonstrate. Associated entities such as hospitals, medical groups, and individual practice associations (IPAs) may enter into similar contracts with prepaid health care providers in which they agree to deliver identified health care services to the providers' members for specified periods in return for fixed fees.

13.06 *FASB Statement No. 5, Accounting for Contingencies*, states that a loss should be accrued in financial statements when it is probable that a loss has been incurred and the amount of the loss can be reasonably estimated. Accordingly, losses should be recognized when it is probable that expected future health care costs and maintenance costs under a group of existing contracts will exceed anticipated future premiums and stop-loss insurance recoveries on those contracts. For purposes of determining whether a loss exists, the expected future health care costs include all costs other than general and administrative, selling, maintenance, marketing and interest. The term maintenance costs refers to costs associated with maintaining announcement records and processing premium collections and payments. The estimated future health care costs and maintenance costs to be considered in determining whether a loss has been incurred should include fixed and variable, direct, and allocable indirect costs. Contracts should be grouped in a manner consistent with the provider's method of establishing premium rates, for example, by community rating practices, geographical area, or statutory requirements, to determine whether a loss has been incurred.

Statutory Issue Paper No. 55

Unpaid Claims, Losses and Loss Adjustment Expenses

STATUS
Finalized June 23, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 55

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance for recording unpaid life and accident and health insurance claims is contained in Chapters 11 and 14 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). Current statutory guidance for recording unpaid property and casualty losses and loss adjustment expenses is contained in Chapters 10 and 11 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices and Procedures Manual). Current statutory guidance for recording unpaid managed care claims, losses and loss adjustment expenses is contained in Chapter 8 of the Accounting Practices and Procedures Manual for Health Maintenance Organizations (HMO Accounting Practices and Procedures Manual). This guidance requires the recognition of a liability for unpaid claims, losses and loss/claim adjustment expenses.

2. GAAP guidance for recording unpaid claims and unpaid losses and loss/claim adjustment expenses is substantially consistent with current statutory guidance. This guidance is found in *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60).

3. The purpose of this issue paper is to establish statutory accounting principles for recording liabilities for unpaid claims and claim adjustment expenses for life insurance contracts and accident and health contracts and unpaid losses and loss adjustment expenses for property and casualty insurance contracts, that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). The guidance set forth in this issue paper applies to all contracts as defined in *Issue Paper No. 50—Definitions and Classifications of Insurance or Managed Care Contracts In Force* (Issue Paper No. 50).

4. This issue paper does not address policy reserves for life and accident and health policies. These reserves are addressed in *Issue Paper No. 51—Life Contracts*, *Issue Paper No. 52—Deposit-Type Contracts*, *Issue Paper No. 54—Individual and Group Accident and Health Contracts* (Issue Paper No. 54), and *Issue Paper No. 59—Credit Life and Accident and Health Insurance Contracts*.

5. This issue paper does not address liabilities for punitive damages. These liabilities shall be recorded in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5).

SUMMARY CONCLUSION

6. Claims, losses and loss/claim adjustment expenses shall be recognized as expense when a covered or insured event occurs. In most instances the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims made type policies the covered or insured event is the reporting to the entity of the incident that gives rise to a claim. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event and, in order to

recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. The future payments associated with settling unpaid claims, unpaid losses and loss/claim adjustment expenses meet the definition of a liability as established in Issue Paper No. 5. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income.

7. The following are types of future costs relating to property and casualty contracts as defined in Issue Paper No. 50, which shall be considered in determining the liabilities for unpaid losses and loss adjustment expenses:

a. Reported Losses: Expected payments for losses relating to insured events that have occurred and have been reported to, but not paid by, the insurer as of the statement date;

b. Incurred But Not Reported Losses, (IBNR): Expected payments for losses relating to insured events that have occurred but have not been reported to the insurer as of the statement date. As a practical matter this also may include losses that have been reported to the company but have not yet been entered to the claims system or bulk provisions. Bulk provisions are reserves included with other IBNR reserves to reflect deficiencies in known case reserves;

c. Loss Adjustment Expenses: Costs expected to be incurred in connection with the adjustment and recording of losses defined in subparagraphs 7.a. and 7.b. of this issue paper. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage. Loss adjustment expenses can be classified into two broad categories: Defense and Cost Containment (DCC) and Adjusting and Other (AO):

1. DCC include defense, litigation, and medical cost containment expenses, whether internal or external. DCC include, but are not limited to, the following items:

i. Surveillance expenses;

ii. Fixed amounts for medical cost containment expenses;

iii. Litigation management expenses;

iv. Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by accident year;

v. Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in defense of a claim, and fees or salaries for rehabilitation nurses, if such cost is not included in losses;

vi. Attorney fees incurred owing to a duty to defend, even when other coverage does not exist;

vii. The cost of engaging experts;

2. AO are those expenses other than DCC as defined in (1) above assigned to the

expense group "Loss Adjustment Expense." AO include, but are not limited to, the following items:

i. Fees and expenses of adjusters and settling agents;

ii. Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by calendar year;

iii. Attorney fees incurred in the determination of coverage, including litigation between the insurer and the policyholder; and

iv. Fees and salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in the capacity of an adjuster.

8. The following future costs relating to life and accident and health indemnity contracts, as defined in Issue Paper No. 50, shall be considered in determining the liability for unpaid claims and claim adjustment expenses:

a. Accident and Health Claim Reserves: Reserves for claims that involve a continuing loss. This reserve is a measure of the future benefits or amounts not yet due as of the statement date which are expected to arise under claims which have been incurred as of the statement date. This shall include the amount of claim payments that are not yet due such as those amounts commonly referred to as disabled life reserves for accident and health claims. The methodology used to establish claim reserves is discussed in Issue Paper No. 54;

b. Claim Liabilities for Life/Accident and Health Contracts:

i. Due and Unpaid Claims: Claims for which payments are due as of the statement date;

ii. Resisted Claims in Course of Settlement: Liability for claims that are in dispute and are unresolved on the statement date. The liability either may be the full amount of the submitted claim or a percentage of the claim based on the reporting entity's past experience with similar resisted claims;

iii. Other Claims in the Course of Settlement: Liability for claims that have been reported but the reporting entity has not received all of the required information or processing has not otherwise been completed as of the statement date;

iv. Incurred But Not Reported Claims: Payments for which a covered event has occurred (such as death, accident or illness) but has not been reported to the reporting entity as of the statement date;

c. Claim Adjustment Expenses for Accident and Health Reporting Entities: Costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in subparagraphs 8.a. and 8.b. of this issue paper. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage;

d. Claim Adjustment Expenses for life entities: Costs expected to be incurred (including legal, investigation, etc.) in connection with the adjustment and recording of life claims in the course of settlement defined in subparagraph 8.b.

9. The following costs relating to managed care contracts as defined in Issue Paper No. 50 shall be considered in determining the claims unpaid and claims adjustment expenses:

a. Claims unpaid for Managed Care Reporting Entities:

i. Unpaid amounts for costs incurred in providing care to a subscriber, member or policyholder including inpatient claims, physician claims, referral claims, other medical claims, resisted claims in the course of settlement and other claims in the course of settlement;

ii. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as an accident, illness or other service) but has not been reported to the reporting entity as of the statement date;

iii. Additional medical costs resulting from failed contractors under capitation contracts and provision for losses incurred by contractors deemed to be related parties for which it is probable that the reporting entity will be required to provide funding;

b. Claim Adjustment Expenses for Managed Care Reporting Entities: Costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in subparagraph 9.a. of this issue paper. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage;

c. Liabilities for percentage withholds ("withholds") from payments made to contracted providers;

d. Liabilities for accrued medical incentives under contractual arrangements with providers and other risk-sharing arrangements whereby the health entity agrees to share savings with contracted providers.

10. The liability for claim reserves and claim liabilities, unpaid losses, and loss/claim adjustment expenses shall be based upon the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and any other factors that would modify past experience. These liabilities will not be discounted unless authorized by specific issue papers, including Issue Paper No. 54 and *Issue Paper No. 65—Property and Casualty Contracts*.

11. Various analytical techniques can be used to estimate the liability for IBNR claims or losses, future development on reported losses/claims, and loss/claim adjustment expenses. These techniques generally consist of statistical analysis of historical experience and are commonly referred to as loss

reserve projections. The estimation process is generally performed by line of business, grouping contracts with like characteristics and policy provisions. The decision to use a particular projection method and the results obtained from that method should be evaluated by considering the inherent assumptions underlying the method and the appropriateness of those assumptions to the circumstances. No single projection method is inherently better than any other in all circumstances. The results of more than one method should be considered.

12. For each line of business and for all lines of business in the aggregate, management shall record its best estimate of its liabilities for unpaid claims, unpaid losses, and loss/claim adjustment expenses. Because the ultimate settlement of claims (including IBNR for death claims and accident and health claims) is subject to future events, no single claim or loss and loss/claim adjustment expense reserve can be considered accurate with certainty. Management's analysis of the reasonableness of claim or loss and loss/claim adjustment expense reserve estimates shall include an analysis of the amount of variability in the estimate. If, for a particular line of business, management develops its estimate considering a range of claim or loss and loss/claim adjustment expense reserve estimates bounded by a high and a low estimate, the best estimate of the liability within that range shall be recorded. The high and low ends of the range shall not correspond to an absolute best-and-worst case scenario of ultimate settlements because such estimates may be the result of unlikely assumptions. Management's range shall be realistic and therefore shall not include the set of all possible outcomes but instead only those outcomes that are considered reasonable.

13. In the rare instances when, for a particular line of business, after considering the relative probability of the points within the estimated range, it is determined that no point within management's estimate of the range is a better estimate than any other point, the midpoint within management's estimate of the range shall be accrued. It is anticipated that using the midpoint in a range will be applicable only when there is a continuous range of possible values, and no amount within that range is any more probable than any other. For purposes of this issue paper, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine its best estimate of the liability.

14. If a reporting entity chooses to anticipate salvage and subrogation recoverables (including amounts recoverable from second injury funds where applicable), these recoverables shall be estimated in a manner consistent with paragraphs 10-12 of this issue paper and shall be deducted from the liability for unpaid claims or losses.

15. Changes in estimates of the liabilities for unpaid claims or losses and loss/claim adjustment expenses resulting from the continuous review process, including the consideration of differences between estimated and actual payments, shall be considered a change in estimate and shall be recorded in accordance with *Issue Paper No. 3—Accounting Changes* (Issue Paper No. 3). Issue Paper No. 3 requires changes in estimates to be included in the statement of operations in the period the change becomes known.

Disclosure

16. The financial statements shall include the following disclosures for each year full financial statements are presented. Life and annuity contracts are not subject to this disclosure requirement.

a. The balance in the liabilities for unpaid claims and unpaid losses and loss/claim adjustment expense reserves at the beginning and end of each year presented;

b. Incurred claims, losses and loss/claim adjustment expenses with separate disclosure of the provision for insured or covered events of the current year and of increases or decreases in the provision for insured or covered events of prior years;

c. Payments of claims, losses and loss/claim adjustment expenses with separate disclosure of payments of losses and loss/claim adjustment expenses attributable to insured or covered events of the current year and to insured or covered events of prior years;

d. The reasons for the change in the provision for incurred claims, losses and loss/claim adjustment expenses attributable to insured or covered events of prior years. The disclosure should indicate whether additional premiums or return premiums have been accrued as a result of the prior-year effects;

e. A summary of management's policies and methodologies for estimating the liabilities for losses and loss/claim adjustment expenses including discussion of claims for toxic waste cleanup, asbestos-related illnesses, or other environmental remediation exposures;

f. Disclosure of the amount paid and reserved for losses and loss/claim adjustment expenses for asbestos and/or environmental claims, on a gross and net of reinsurance basis (the reserves required to be disclosed in this section shall exclude amounts relating to policies specifically written to cover asbestos and environmental exposures);

g. Estimates of anticipated salvage and subrogation (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, when applicable) deducted from the liability for unpaid claims or losses.

DISCUSSION

17. The statutory principles outlined in the conclusion above are consistent with the current statutory guidance for recording a liability for unpaid claims and unpaid losses and loss/claim adjustment expenses. Property and casualty insurers report the liability for loss adjustment expenses separate from the liability for losses while life and accident and health insurers and managed care providers accrue such expenses as part of the claim liability, claim reserve or claims payable. The description of the types of costs considered DCC and AO are consistent with the P&C Accounting Practices and Procedures Manual adopted by Accounting Practices and Procedures (EX4) Task Force in June 1995 to be effective for calendar years beginning January 1, 1997 (later revised to January 1, 1998). Recording estimated salvage and subrogation recoveries continues to be optional.

18. In addition to requiring management to record its best estimate of its unpaid liability for unpaid claims, unpaid losses and loss/claim adjustment expenses for each line of business, the conclusion expands current statutory guidance to require the accrual of the midpoint of a range of loss or loss adjustment expense reserve estimates when for a particular line of business, no point within management's range of reasonably possible estimates is determined to be a better estimate than any other point. This conclusion is consistent with Issue Paper No. 5 which states:

> When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be accrued. When, in management's opinion, no amount within management's estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management's estimate in the range shall be accrued. For purposes of this paragraph, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be used.

Additionally, the conclusion expands the disclosure requirements of current statutory guidance to include the information set forth in paragraph 16. The disclosure required by paragraph 16 provides disclosure in those circumstances where the accompanying exhibits are not part of the company's financial statements (e.g., annual audit report) and is not intended to provide duplicative presentation in the annual statement filings.

19. The conclusions above are consistent with the guidance provided for the recognition of claim costs in FAS 60 with the exception of paragraph 13 of this issue paper which requires the accrual of the midpoint of management's estimate of the range of loss or loss adjustment expense reserve estimates when no point within management's continuous range of reasonably possible estimates is determined to be any more probable than any other. Although FAS 60 is rejected in Issue Paper No. 50, it is considered appropriate that the recognition of claims costs be consistent with those provisions of FAS 60 as they are consistent with the Statement of Concepts. The disclosures required in paragraph 16 are consistent with the guidance in *AICPA Statement of Position 94-5, Disclosures of Certain Matters in the Financial Statements of Insurance Enterprises*. This pronouncement will be addressed in its entirety in a separate issue paper. This issue paper rejects AICPA Statement of Position 92-4, *Auditing Insurance Entities' Loss Reserves.*

20. The statutory accounting principles outlined in the conclusion above are consistent with the conservatism and recognition concepts in the Statement of Concepts. Pertinent excerpts follow:

> Conservatism
>
> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.
>
> Recognition
>
> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies.

Drafting Notes/Comments

- Accounting for reinsurance is addressed in *Issue Paper No. 74—Life, Deposit-Type and Accident and Health Reinsurance* and *Issue Paper No. 75—Property and Casualty Reinsurance.*
- Accounting for title insurance is addressed in *Issue Paper No. 57—Title Insurance*.
- Excess statutory reserves are addressed in *Issue Paper No. 65—Property and Casualty Contracts*.
- Claims made insurance contracts are addressed in *Issue Paper No. 65—Property and Casualty Contracts*.
- Mortgage Guaranty contracts are addressed in *Issue Paper No. 88—Mortgage Guaranty Insurance*.
- Financial Guaranty contracts are addressed in *Issue Paper No. 69—Financial Guaranty Insurance*.
- Property and Casualty liabilities subject to discounting are discussed in *Issue Paper No. 65—Property and Casualty Contracts*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

21. The P&C Accounting Practices and Procedures Manual, Chapter 10, Losses, includes the following guidance:

> Recognition
>
> Even though there are many methods of estimating unpaid losses, the underlying goal is to have unpaid losses reflect the liability outstanding for losses that have occurred as of the financial statement date. Losses, except for "claims-made" policies, are recognized as they occur and not as they are reported to the company. Because of this basis of recognition, unpaid losses are grouped in (1) reported and (2) incurred but not reported (IBNR). Reported losses are those of which the company has been notified. The incurred but not reported losses are those losses that have occurred but have not been reported to the company. As a practical matter, losses which have been reported to the company but not yet entered into the system may be included as IBNR.
>
> Valuation
>
> Generally, a company is required to determine what the value of its claims will be when ultimately settled. Excluding certain types of losses, discussed under Loss Reserve Discounting below, statutory accounting practices require that for every dollar of unpaid losses the company reserve a whole dollar for the future payment of those losses.
>
> Estimation of Reported Losses Unpaid
>
> Unpaid losses for claims that have been reported may be determined in many ways. One way is for the claim to be assigned to an individual who estimates the value of the claim as needed facts are gathered.
>
> Shown below are three examples of methods of calculating unpaid losses, which use information that may be maintained on an accident or report year basis. If historical information is maintained and used by accident year, then the unpaid losses include IBNR unpaid losses and the IBNR unpaid losses must be split from the total. If report year data is used, then the result is an unpaid loss figure for reported claims and IBNR unpaid losses must be estimated separately.
>
> Reported losses may be estimated based on paid loss patterns for particular lines or coverages. This method determines the pattern of prior years paid losses as they relate to ultimate losses. A percentage of paid losses to ultimate losses is calculated at each stage of development. This percentage is then divided into the paid losses for other years in the same stage of development to determine the estimated ultimate loss dollars. The paid losses are then subtracted from the ultimate loss dollars to determine the required unpaid loss amounts. The sum of these amounts for all open years is the total unpaid losses. This method, as is the case with respect to any method based in whole or in part on past experience, is only reliable to the extent there is sufficient volume of similar loss claims in prior years. In addition, changing trends and factors affecting a company's loss liability, such as inflation and trends in jury awards, must always be carefully considered and reflected. Special problems, such as changeovers from a tort to a no-fault system, require special consideration and treatment in estimating unpaid losses.
>
> Another means of establishing unpaid losses is to estimate ultimate loss counts and estimate the average ultimate cost of a claim. These two estimates are then multiplied by each other to establish an ultimate cost. Paid losses to date are subtracted from this ultimate cost figure to arrive at unpaid losses.
>
> The ultimate loss count may be determined by developing a percentage of losses reported at the particular stages of development of prior years. These percentages may then be divided into current reported losses to determine ultimate numbers. This, of course, is assuming that a representative

pattern is present for prior years. The average cost of incurred losses may be determined by developing the average cost of closed claims at various stages of development. After review of prior years average closed claim cost, a factor is developed and used to project trends in total loss costs. This trend factor is then applied to the average closed claim cost of prior years to determine an estimated average ultimate cost for the year being reviewed.

Another method that may be used is unpaid loss counts and average values of unpaid losses. The average value of unpaid losses is multiplied by the unpaid loss count to arrive at an ultimate figure. From this figure, partial payments are subtracted to arrive at a current unpaid loss amount. Average values of unpaid losses are determined by reviewing prior years information as it develops.

Some of the other methods that may be used include frequency and severity analysis and projection of loss ratios.

The foregoing are examples of the many general methods in use. Also, in practice, there are many variations to these methods. Some companies use a combination of methods to establish their unpaid losses. For example, for liability losses that require a great deal of time to settle, average unpaid loss amounts may be assigned until adequate information is compiled. Then the individual case estimate methods may be used.

Incurred But Not Reported Losses

With reported losses representing the liabilities for reported claims, the company must also record a liability for losses that are incurred but not reported. Various methods are used for estimating IBNR losses. Following are examples of two methods.

In a formula method, IBNR losses are related to some base, such as incurred losses, reported losses, premiums and exposures. Sometimes a formula approach is used in estimating total unpaid losses and the IBNR losses are separated from the reported losses by factoring.

In the averaging method, separate projections are made of IBNR claim counts and the average cost for which those claims will settle. The product of these two estimates is the IBNR unpaid losses.

Whatever methods are selected for establishing unpaid losses, the goal should always be reserve adequacy.

Recoveries from Salvage and Subrogation

Anticipated salvage and subrogation may be taken into account when determining ultimate incurred losses and unpaid losses, to the same extent that other factors affecting ultimate claim costs are taken into account. The company is expected to maintain appropriate data and perform appropriate actuarial tests to support the reasonableness of the anticipated salvage and subrogation recoveries.

Companies which have previously reported reserves gross of salvage and subrogation should report the change to the net method as a change in accounting principle. The cumulative effect on prior years of the change should be reported as a write-in item in the surplus section of the annual statement. The change in reserve calculated using the net method should be included in net income for the year of the change and all future years.

22. The P&C Accounting Practices and Procedures Manual, Chapter 11, Loss Adjustment Expenses, includes the following guidance:

The liability for unpaid loss adjustment expenses includes expenses that will be incurred in connection with the settlement of losses unpaid at the statement date. The liability should be the company's best estimate of the loss adjustment expenses that will be necessary to settle both reported and incurred but not reported unpaid losses. In addition to these expenses, the company must establish a liability for incurred but unpaid loss adjustment expenses, the same as for incurred and unpaid general expenses. The liability for unpaid loss adjustment expenses should provide for the estimated expenses necessary to adjust all unpaid losses irrespective of payments made to third party administrators, management companies or other entities, not specifically covered by a contract of insurance.

Allocated Loss Adjustment Expenses

Allocated unpaid loss adjustment expenses are calculated by various methods. Examples of methods used are as follows:

Calendar year paid allocated loss adjustment expense is related to the calendar year paid losses. The ratio developed on the basis is then multiplied by the amount of the loss reserve for each of these coverages to determine the unpaid amount.

Another method tracks accident year development and computes a ratio on an incurred-to-incurred basis. Prior accident years data is accumulated at various stages of development. The ratio of accumulated allocated loss adjustment expense paid to accumulated losses paid is calculated at each stage of development. This process should start with the oldest accident year and move forward. The ratio of paid-to-paid for each accident year under review is then compared to the paid-to-paid ratios for prior accident years at the same stage of development. After this comparison, the estimated ultimate incurred-to-incurred ratio is projected for the accident year under review, based on the subsequent development of prior years' paid-to-paid ratios. The estimated incurred losses for the accident year under review are then multiplied by the incurred-to-incurred ratio to determine ultimate allocated loss adjustment expense amounts. Paid allocated loss adjustment expense is then subtracted to arrive at the unpaid amount. This method recognizes that older claims may require larger amounts of loss expenses.

The liability-to-liability ratio method establishes the liability directly by multiplying the estimated loss liability for each accident year by an estimated liability-to-liability ratio (allocated loss adjustment expense liability to loss liability). It starts by calculating the liability-to-liability (outstanding-to-outstanding) ratios that should have been used in prior accident years at the same stage of development. These prior ratios are then reviewed, and an outstanding-to-outstanding ratio is selected for the accident year involved.

Again, if allocated loss adjustment expense levels increase with age, then the outstanding-to-outstanding ratios will increase with age up to some cut-off age. The selected outstanding-to-outstanding ratios by accident year have no permanence and must be reselected at the end of each new accounting date. This method also requires the maintenance of accident-year data on an all-time cumulative basis through each stage of development.

Unallocated Loss Adjustment Expenses

A commonly used method of calculating unpaid, unallocated loss adjustment expenses computes a paid, unallocated expense ratio to paid losses. Based on this paid-to-paid ratio, each coverage is reviewed as to the percentage of unallocated handling that is complete at the time the claim is opened. This percentage is subtracted from 100% to determine the work that remains to be done. This percentage is then multiplied by the developed paid-to-paid factor. The factor that results from this calculation is then multiplied by the outstanding unpaid losses to determine the unpaid, unallocated loss expenses.

For IBNR paid losses, the full paid-to-paid factor is normally used to determine unpaid, unallocated loss adjustment expenses. This is done because these claims have not been opened and therefore little, if any, work has been completed.

Unpaid loss adjustment expenses are shown as a liability on the annual statement.

23. The Life/A&H Accounting Practices and Procedures Manual, Chapter 11, Unpaid Life Insurance Claims, provides the following guidance:

> Life Insurance Claims
>
> A life insurance contract provides a death benefit, an annuity benefit, or an endowment benefit. The company knows (with few exceptions) the amount of its obligation to each policyholder when it is presented with a claim or when the policy matures. At any statement date the company will owe unpaid policy proceeds which must be provided for in its financial statements.
>
> In addition to the proceeds of the basic contracts, amounts may be payable for supplementary benefits attached to the basic contracts. These include accidental death benefits, payor death or disability benefits, premium waiver as a result of the disability of the insured, and in some instances, disability income benefits. As with the basic contract, the amount of accidental death benefits payable is a fixed amount, known to the company, once the criteria for payment has been established. Payor death requires reserving a specific number of premium payments contingent upon the insured living to a certain age. Payor disability, premium waiver, and disability income require the establishment of reserves based on appropriate morbidity factors and mortality factors. All or part of these reserves may be included in unpaid claims at statement date.
>
> For all practical purposes, payment of life insurance claims and the accrual of the liability for unpaid claims is the same for ordinary, industrial, and group coverages. The liability for unpaid claims consists of both reported and unreported claims. The instances where a company may not be able to make an exact determination of its liability for a life insurance claim might include claims that are being resisted by the company and those involving an accidental death of the insured.
>
> The liabilities that are reported in the statutory financial statement include the following:
>
> 1. Due and unpaid. This item consists of claims on which all processing has been completed and which have been approved for payment, but which have not been paid prior to the statement date. The reported amount may be compiled from a claims register, an inventory of such claims, checks requested, or possibly drafts outstanding and, with an expeditious claims-paying system, may be small or zero.
>
> 2. Claims in course of settlement: resisted. This item contains the liability for claims that are in dispute and are unresolved on the statement date. The liability either may be the full amount of the submitted claim or a percentage of the claim that is based on the past experience of the company with similar resisted claims. The company should also accrue at year end for the estimated additional expenses (legal, investigation, etc.) involved in settling resisted claims. This latter item is included with other general expenses in the statutory financial statement.
>
> 3. Claims in course of settlement: other. These are claims that have been reported to the company but on which all required information has not been received, or the processing not otherwise completed, on the statement date. The company may include all claims that are being held up for reasons beyond its control. These may include awaiting the election of an option by a beneficiary, the completion of reasonable investigation, or determining who is entitled to receive the amount due. The amount of the liability may be based on the past experience of the company but it generally is a compilation of the claims that are pending at the statement date.
>
> 4. Incurred but not reported (IBNR) claims. This represents the company’s liability for claims that have not been reported to it but the insured had died or become disabled prior to the statement date. At the end of the year the liability for IBNR claims may be estimated using any of the following techniques or any other technique which has proved reasonable for the particular company:
>
>   a. Establish a cut-off period of a few weeks subsequent to year end and complete a list of all claims received during the cut-off period that relate to the prior year and then determine the liability for those claims using the same methods as for claims in the course of settlement.

b. Inventory the prior years IBNR claims that were received after the prior years cut-off period and on the basis of past experience, estimate those claims that will be reported thereafter.

c. Analyze the past years experience and project it into the future after considering various modifying factors, such as insurance in force, paid claims, and claim frequency and severity. This should be done by the company's actuary to ensure that all current actuarial assumptions and methods are used.

The policies on which claims have been incurred but not reported until after the statement date will be included in the valuation of insurance in force. By reserving the face amount of the policy as an IBNR claim, the reserve for IBNR claims would be redundant. The policy reserves on those claims, therefore, are deducted either from the aggregate reserves for life policies or from the IBNR claim reserve.

24. The Life/A&H Accounting Practices and Procedures Manual, Chapter 14, Accident And Health Claims provides the following guidance:

Accident and health insurance policies generally provide for the coverage of such benefits as hospital and medical payments, disability and loss of time (income), and accidental death and dismemberment. Claims on accident and health policies are payable in the manner dictated by the risk that is insured. Usually, hospital and medical and accidental death and dismemberment claims are paid in a lump sum after the loss is incurred. Disability and loss-of-time claims, for partial or total disability due to accident and sickness, are paid to the insured weekly or monthly during the period of disability, or a settlement may be reached between the company and the insured for a discounted lump sum payment.

The insurer's claims reserves should not include any amounts arising from uninsured accident and health plans or the uninsured portion of partially insured plans. The insured portion of any partially insured plan should be treated as any other insured plan with appropriate reserves established. This is the same treatment described with regard to aggregate reserves in Chapter 13.

Claim Liabilities and Reserves

Unpaid benefits on accident and health policies are discussed in this chapter and Chapter 13. Amounts that would not be payable on the statement date (the unaccrued portion) are detailed in Chapter 13 as claim reserves. The amounts that are payable on the statement date (the accrued portion) are covered below as claim liabilities.

The various methods described in the following paragraphs are not an exhaustive listing, nor are the descriptions of such methods necessarily complete.

Due and Unpaid Claims

The instructions for completing the statutory financial statement for life and accident and health companies state that only claims which are complete except for the payment of the amount due should be included. Claims that have not been paid, because all of the required information has not been received, should be included with claims in course of settlement. The amount of due and unpaid claims generally will be small. The amount of the liability usually is determined on an exact inventory basis of claims on hand ready to be paid. In practice, a seriatim calculation of this liability is very difficult. Many companies take the approach that if all information is available to pay a claim then it has been paid. All claims on which the Company has only partial information are reported as "Claims in course of settlement."

Claims in Course of Settlement: Other

This item includes the liability for resisted claims in the amount the insurer expects the claim to be settled and paid. The accrued claim liability for all unresisted claims also is included.

For loss-of-time (disability income) policies, the accrued portion of the next periodic payment must be included. For example, when payments on a claim are made to the insured on the fifteenth day of each month and when the valuation date is the end of the month, one-half of the monthly payment is accrued, but not yet due, on the valuation date if the insured is still disabled on the valuation date.

One method is to set up a reserve equal to one-half of all monthly payments being made for loss-of-time policies. A more accurate method to determine the accrued and unpaid liability on reported disability claims is to compute the total amount accrued to the valuation date for each claim, then subtract the amount that already has been paid.

For other than loss-of-time policies, various methods are used in determining liabilities for these claims. Because these methods may produce total claim liabilities, a breakdown between unaccrued and accrued amounts should be made for allocation between claim reserve and claim liability. Although not intended to be a complete list, the following are examples of these methods:

1. An estimate may be made for each outstanding claim. Generally, this is not feasible unless the number of claims is relatively small.

2. Average claim factors may be developed from actual claim experience on similar claims outstanding at previous statement dates. To determine the total liability, these average factors are applied to the current outstanding claims. The calculation of factors, and their application to outstanding claims, should be done separately for each major type of benefit. Furthermore, the average claim factors should recognize the effects of inflation.

3. A formula method determines the adequacy of the claim liability at previous statement dates and of the total claims incurred on a line of business through retrospective studies. The amount of claims paid is related to a pre-established base, such as premium in force, unearned premium reserve, and so on. The percentages developed are applied to the same base on the statement date to develop the current liability. The formula method may be desirable, also, because it can include a provision for the liability for claims incurred but unreported.

Incurred But Not Reported (IBNR) Claims

The formula method, previously described for computing claims in course of settlement, probably is the most commonly used method to calculate this liability. Another method, sometimes called the lag system, is based on the assumption that a significant portion of the incurred but unreported claims will be reported within a specified period after the statement date. Under this method, the insurer establishes a liability for the claims reported, plus an estimated amount for claims reported after the "lag" period. The instructions for preparing the statutory financial statement contain an illustration of a method for computing the reserve for future contingent benefits, i.e., deferred maternity benefits.

For any method that is used, the insurer should verify the appropriateness of the IBNR liability by retrospectively calculating the exact amount of the liability for past valuation period.

Statistical Computation

The statistics developed from prior experience are essential in computing the claim reserves on accident and health policies. The important dates required for individual claims include the incurred date of the claim, the reported date, and the date of the claim payment.

The reported date is the date the claimant notified the company and a claim file is opened. The payment date may be either the date the partial payment is made or the date the final payment is made.

The incurred date must be defined by the contract and any applicable statute for various coverages. For example, for deferred maternity benefits, the incurred date is the date of conception. For major medical coverages, the incurred date should take into account the date of disability, the date the initial expense was incurred, and the date the deductible was satisfied, if and as these features affect the company's contractual obligation under the claim. Hospital and surgical policies present less of a problem because either the date of admission to the hospital or the surgery date is utilized as the incurred date.

If subsequent treatment for the same condition falls within the definition of one illness, as set forth in a hospital, medical, or major medical contract, the original incurred date must be used and any payments considered part of the original claim. In summary, the assignment of incurred dates must bear a logical relationship to the situation creating the claim and must be consistently applied from year to year and is generally the date of the first compensable treatment.

In regard to loss-of-time disability policies with an elimination period, the duration of disablement shall be considered as dating from the time that benefits would have begun to accrue had there been no elimination period.

Reinsurance

On policies that have been reinsured, the liability for claims should be reduced by the amount recoverable from the reinsurer. The amount of reinsurance that is recoverable on claims relating to specific policies should be reported at actual amounts. For incurred but unreported claims, the liability should be estimated net of reinsurance recoverable, unless the company has reliable experience supporting an estimated separation into direct and reinsurance ceded portions. The latter situation usually arises under quota share group reinsurance.

25. The HMO Accounting Practices and Procedures Manual, Chapter 8, Liabilities, provides the following guidance:

LIABILITIES

COVERED AND UNCOVERED LIABILITIES

Any liability for health care expenses for which an enrollee is not responsible in the event of the insolvency of an HMO is deemed to be a covered liability. One method of assuring that an enrollee will not be liable for unpaid medical bills if an HMO becomes insolvent is through a "hold harmless" provision contained in provider contracts. This provision prohibits the provider from seeking payment for medical expenses directly from the enrollee. At present there is a standardized hold harmless agreement adopted as a "guideline" by the National Association of Insurance Commissioners and the National Association of Health Maintenance Organization Regulators and is an attachment to the Model HMO Act.

If this provision is present in provider contracts, then the medical expense for that provider is considered to be a covered liability.

Uncovered Liabilities

Uncovered liabilities are defined as those expenditures that are covered by the HMO for which an enrollee would also be liable in the event of the organization's insolvency. These are expenditures for health care services for which the HMO is at risk. They do not include expenditures for services when a provider has agreed not to bill the enrollee even though the provider is not paid by the HMO, or for services that are guaranteed, insured or assumed by a person or organization other than the HMO.

When preparing its annual statement, an HMO must determine the amount of both the covered and uncovered liabilities and report such amounts in the columns provided in the annual statement blank. The instructions to the annual statement also provide that the HMO describe in the notes to the financial statements the manner in which each liability reported as covered has been covered, i.e., hold harmless agreement, parental guarantee, etc.

Accrued and Unpaid Claims

The establishment and maintenance of adequate reserves is essential to the successful management of an HMO. Claim reserving techniques must be sufficient to project the amount of claims outstanding at the end of each financial reporting period. The amount reported should include provisions for claims that are known and pending as well as for claims incurred but not reported (IBNR).

The statutory annual statement blank contains a schedule for reporting the various parts of the unpaid claim liability. This is titled Schedule F, “Unpaid Claim Analysis.” The Unpaid Claim Analysis consists of two parts. Section 1 is used to report unpaid claims for the current year by line of business. For purposes of completing this report, claims are classified into four distinct types:

- Inpatient Claims
- Physician Claims
- Referral Claims
- Other Medical Claims

The information contained in Section 2 of Schedule F provides for an analysis of the claims unpaid for the prior year as reported on the previous year’s annual statement. The purpose for including this section is to measure the adequacy of the claim reserves established in the prior year’s annual statement by comparing the actual amount paid in the current year against the reserves that were previously established.

In Section 1 of Schedule F, column 2 is used to report the aggregate amount of claims in process of adjustment by classification; column 3 is used to report the estimated liability by classification for claims incurred but unreported (IBNR). The aggregate total of claims in the process of adjustment and the provision of IBNR claims is shown in column 4.

Before delving further into a discussion on developing incurred but not reported reserving techniques, it is important to review lines of business and determine what should be reported in each line. The following schedule reflects the various lines of business and indicates the nature of claim cost that should be reported under each line:

LINE OF BUSINESS

NATURE OF CLAIM COST

Inpatient Claims

Inpatient hospital costs of routine and ancillary services for HMO members while confined to an acute care hospital. Does not include out-of-area hospitalization.

Routine hospital service includes regular room and board (including intensive care units, coronary care units, and other special inpatient hospital units), dietary and nursing services, medical surgical supplies, medical social services, and the use of certain equipment and facilities for which the provider does not customarily make a separate charge.

Ancillary services may also include laboratory, radiology, drugs, delivery room and physical therapy services. Ancillary services may also include other special items and services for which charges are customarily made in addition to a routine service charge. Charges for non-HMO physician services provided in a hospital are included in this line item only if included as an undefined portion of charges by a hospital to the HMO. (If separately itemized or billed, physician charges should be included in referrals, above.) Include the cost of utilizing skilled nursing and intermediate care facilities.

Skilled nursing facilities are primarily engaged in providing skilled nursing care and related services for patients who require medical or nursing care of rehabilitation service. Intermediate care facilities are for individuals who do not require the degree of care and treatment which a hospital or skilled nursing care facility provides, but do require care and services above the level of room and board.

Physician Services Expenses for physician services provided under contractual arrangement to the HMO including the following:

LINE OF BUSINESS NATURE OF CLAIM COST

– Salaries, including fringe benefits, paid to physician for delivery of medical services;

– Capitated payments paid by the HMO to physicians for delivery of medical services to HMO subscribers;

– Fees paid by the HMO to physicians for delivery of medical services to HMO subscribers. This includes capitated referrals; (Do not include expenses for medical personnel time devoted to administrative tasks.)

Compensation, including fringe benefits, paid by the HMO to non-physician providers engaged in the delivery of medical services and to personnel engaged in activities in direct support of medical services. This includes dentists, psychologists, optometrists, podiatrists, externs, nurses, clinical personnel such as ambulance drivers, technicians, paraprofessionals, janitors, quality assurance analysts, administrative supervisors, secretaries to medical personnel, and medical clerks.

Referrals Expenses for providers not under HMO arrangements such as consultations.

Other Medical Costs directly associated with the delivery of medical services under HMO arrangements which are not appropriately assignable to the medical expense categories defined above; e.g., costs of medical supplies, medical administration expense (except compensation), malpractice insurance, etc.

Expenses for other non-contracted health delivery services including emergency room costs incurred by HMO members for which the HMO is responsible on a fee-for-service basis; and out-of-area service costs for emergency physician and hospital.

Another important aspect in reporting claim liabilities is to include only liabilities relating to actual amounts due providers or enrollees for health care services. Items consisting of withholds or the provision for withholds should be reported as a separate liability in the annual statement. Further, claims payable or claims incurred but not reported (IBNR) are not to be adjusted for amounts receivable from other HMOs or indemnity carriers such as coordination of benefits or subrogation. Such receivables are to be reported as an income item in the period received.

Determining IBNR Claims

There are a number of methods used to develop IBNR reserves. Two of the most common are the lag system which is based on the assumption that a majority of claims to be incurred will be reported within a given number of months after the statement date. Under this method, an HMO bases its reserve on an estimate of the reported claims within a specific time following the statement and it includes an amount for claims reported after the “lag” period. A second method bases claims on the development of prior years IBNR results and adjusts this amount for any increase or decrease in business and for the impact of inflation.

Regardless of the method used to develop IBNR claims, the method used should be tested through a retrospective analysis of claims for past periods.

Accrued Medical Incentive Pool

This amount represents the accrual for withholds from IPAs or are a “risk bonus” in capitate medical groups or other such arrangement in which the HMO may return incentive funds to providers. This liability shall not include percentage withholding from providers which should be reported separately. The amount due should be supported by signed agreements and the basis for establishing the liability should be documented when determining the amount of this liability.

AMOUNTS WITHHELD FOR RISK-SHARING

These amounts are also included in amounts withheld from providers, generally in a capitated fee arrangement, requiring the provider to share the risk in the event of adverse claim costs. These amounts are held pursuant to a written arrangement which outlines the circumstances under which the so-called gain or loss on the capitated arrangement has been determined. The amounts reported may carry over from one period to another and it may be difficult to determine. HMOs should maintain data to support the amounts withheld on an annual basis, as well as information to support all disbursements.

26. The minutes of the June 6, 1995 meeting of the Accounting Practices and Procedures (EX4) Task Force indicate the Task Force has adopted changes to Chapter 11, Loss Adjustment Expenses and Chapter 17, Loss Adjustment Expenses Incurred of the P&C Accounting Practices and Procedures Manual to be effective for calendar years beginning January 1, 1997 (later revised to January 1, 1998). The revised chapters are presented below:

CHAPTER 11

LOSS ADJUSTMENT EXPENSES

Every property/casualty insurer is required to maintain reserves in an amount estimated to provide for the expenses of adjustment or settlement of all losses or claims incurred on or prior to the date of statement, whether reported or unreported, which are unpaid as of such date and for which the insurer may be liable. The loss adjustment expense reserve maintained should be established at an amount which is irrespective of any payments made to third-party administrators, management companies, managing general agents, or other entities not specifically covered by a contract of insurance.

Loss adjustment expenses are categorized as “allocated” or “unallocated.” Separate data is shown relative to payments of these expenses and separate reserves are required to be stated for each component within Schedule P of the Annual Statement blank. Relative to allocated loss adjustment expenses, separate reserve provisions are required to be shown for known case reserves and incurred but not reported reserves, and for each of the segments, there is a further requirement to show reserves for direct plus assumed business as well as the ceded portion of those reserves. The actuarial techniques existent for determining the reserves required for each of these components are more precise relative to the allocated expenses because the payments and reserves history are more precisely apportioned to loss years and are thus more homogeneous. Unallocated loss adjustment expenses paid, apportioned to loss year based on formula, are less likely to present data with the same measure of homogeneity.

Allocated loss adjustment expenses can be identified with a particular claim and thus can be linked to the particular loss year underlying such claim. (Note: relative to claims-made type policies, claims are distributed on the basis of report year, i.e., the year a loss is reported to the insurer rather than the year in which the claim was incurred).

See Chapter 17 - Loss and Loss Adjustment Expenses Incurred for a description of the component parts of "Allocated Loss Adjustment Expenses."

The reserve for unallocated loss adjustment expenses should be apportioned to loss year. This apportionment may be based on a formula or formulas containing such items as claim counts or paid to paid patterns that reflect experience for the company and the line of business.

In circumstances involving reinsurance where the definition of allocated loss adjustment expense contained in the contract is consistent with the definition in Chapter 17, it is expected that there would be symmetry of annual statement presentation. In certain instances, where reinsurance contracts define expenses to be covered thereunder differently than the definition of allocated loss adjustment expenses in Chapter 17, there may be a difference in the classification of these expenses between the ceding and assuming parties.

In reviewing the adequacy of an insurer's loss adjustment expense reserves, it is important to group same homogeneously for proper analysis. This may require additional groupings other than the allocated and unallocated categories presented in the financial statements. Also of critical importance, is an evaluation of the company's claims handling procedures over time to discern changes in methods of claims handling, e.g., switching from outside counsel to in-house attorneys.

Frequently, the categories of loss adjustment expense are analyzed by reference to arrays of data by line of insurance that related such expenses to other parameters, such as paid losses, incurred losses or earned premiums. Accordingly, the examination of loss adjustment expense reserve requires some or all of the following procedures:

1. Evaluation of prior developments of reserves;

2. Evaluation of known case reserve adequacy patterns;

3. Evaluation of timing patterns of expense payments in terms of how billings are made as well as the philosophy of claims handling;

4. Notation of any material end-of period transactions which might distort analysis, e.g., major claim settlements;

5. Evaluation of premiums earning procedures or changes which might reflect new forms of policy issuance such as the issuance of cash-flow type policies.

Evaluation of the reasonableness of loss adjustment expense reserves involves many of the same skills that are needed to evaluate the reasonableness of loss reserves. The most typical utilized data arrays for allocated loss adjustment expenses usually present cumulative payments therefore, either separately or in relationship to cumulative loss payments. Ultimate payments or ratios are then calculated and current reserves are computed either by subtracting payments to date from projected ultimate payments or by applying the ultimate ratio to projected ultimate losses and then subtracting allocated loss adjustment expense paid to date.

Relative to unallocated loss adjustment expenses, a common method is to relate such cumulative payments by loss year to a common base, usually earned premium. Ultimate ratios of unallocated loss adjustment expenses to earned premiums are calculated. These ultimate ratios are then multiplied by the related calendar years' earned premiums with cumulative payments to date subtracted to arrive at the required reserves. The use of earned premiums as a base allows for reasonableness tests for a particular insurer as between years as well as amongst insurers, and is rooted in earned premiums being representative of exposures. This has its limitations in that the amount of such earned premiums is not adjusted for premium adequacy level changes and premium adequacy levels may be inconsistent. (Note: if premium adequacy/inadequacy levels are consistent, the use of earned premiums as base or benchmark will not necessarily result in distorted conclusions). In other words, doubled earned premium volume could mean doubled policy exposure and therefore doubled claims adjusting overhead, doubled premium adequacy with not concomitant claims adjusting overhead increase or somewhere in-between.

CHAPTER 17

LOSS AND LOSS ADJUSTMENT EXPENSES INCURRED

Losses Incurred

Losses incurred are reported in the Underwriting and Investment exhibits of the annual statement. Losses incurred are shown in a separate exhibit in the annual statement by adding the current year change in unpaid losses to the paid loss amount for the current year. The paid figure is direct paid losses, plus assumed paid losses, less ceded paid losses. Unpaid loss changes are also calculated on a basis net of reinsurance.

Loss Adjustment Expenses Incurred

Loss adjustment expenses incurred as presented in the annual statement comprise all expenses incurred in connection with the adjustment and recording of policy claims.

They include the total of the expense classification "Claim Adjustment Services" and the types of expenses incurred by company employees in connection with the adjustment and recording of claims. Examples of expenses incurred in these activities are estimating the amounts of claims, disbursing claims, maintaining records, general clerical, secretarial, office maintenance, supervisory and executive duties, supplies, and postage.

Loss adjustment expenses are either "allocated" or "unallocated." Allocated expenses are those that can usually be related to specific claims. Typically they are "Claim Adjustment Services" as modified to include defense, litigation and medical cost containment expenses, whether internal or external, including overhead, and to exclude fees and expenses of all adjusters and settling agents.

Allocated loss adjustment expenses are adjusted for reinsurance assumed and ceded in accordance with the terms of applicable reinsurance contracts. In addition, an assuming reinsurer may incur expenses in its adjustment of reinsured losses. Such expenses for "Claim Adjustment Services" modified as described above are also to be treated by the reinsurer as allocated expenses.

Unallocated expenses are those expenses other than allocated expenses as defined above assigned to the expense group "Loss Adjustment Expense."

For further information on allocation of expenses, see Chapter 19 - Expenses.

Uninsured Accident and Health Plans

See Chapter 14 - Premiums for the discussion of uninsured accident and health plans and partially insured accident and health plans.

Loss paid by the insurer under uninsured accident and health plans should not be reported in the underwriting and investment exhibits. Loss payments under the insured portion of partially insured plans are reported as accident and health losses.

27. The Minutes of the September 23, 1997 meeting of the Casualty Actuarial (Technical) Task Force contain the following:

Casualty Actuarial (Technical) Task Force
Clarification of Revised ALAE Definition

INTRODUCTION

> The Casualty Actuarial (Technical) Task Force (CATF) has extensively studied the issue of financial reporting inconsistencies that occur because of the different business procedures applied by insurers to settle claims. To increase the consistency of reporting between insurers, the task force recommended to the NAIC's Accounting Practices and Procedures (EX4) Task Force that a revised ALAE definition be adopted. The change was adopted by the Accounting Practices and Procedures (EX4) Task Force to be effective Jan. 1, 1998. The rule will be moved to the Annual Statement Instructions as it is deemed to be more of a financial reporting issue than an accounting guidance issue. The task force intends that the revised definition change the emphasis from assignment of claim expenses based on whether they could be specifically assigned to a single claim to a process where "Claim Adjustment Services" including defense, litigation and medical cost containment are assigned to the bucket or hopper currently known as "allocated loss adjustment expenses—ALAE" and remaining expenses associated with adjusting and recording policy claims are assigned to a bucket or hopper currently known as "unallocated loss adjustment expenses—ULAE." The titles containing the terms "allocated" and "unallocated" seem to be causing difficulties for those attempting to understand the revised definition because they associate the term "allocated" with assignment or tying the expenses to a specific claim. As a result, the CATF intends to pursue a future Blanks Proposal to change the titles. The ability of an insurer to assign a particular type of expense to a single claim is no longer the determining factor as to whether the claim expenses will deemed to be ALAE or ULAE. The goal of the task force in suggesting the change is to have consistent reporting of expenses related to defense, litigation and medical cost containment among the various companies. Thus whether a company uses its own employees or hires outside firms no longer matters.
>
> THE REVISED RULE
>
> The Annual Statement Instructions are amended (effective 1/1/98) to include a specific delineation between allocated and unallocated loss adjustment expenses, which states:
>
> Allocated loss adjustment expenses include defense, litigation and medical cost containment expenses, whether internal or external. Allocated loss adjustment expenses include the following items:
>
> i. Surveillance expenses;
> ii. Fixed amounts for medical cost containment expenses;
> iii. Litigation management expenses;
> iv. Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by accident year;
> v. Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in defense of a claim, and fees or salaries for rehabilitation nurses, if such cost is not included in losses;
> vi. Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and
> vii. The cost of engaging experts.
>
> The foregoing list is not intended to be all inclusive.
>
> Unallocated loss adjustment expenses are those expenses other than allocated expenses as defined above assigned to the expense group "Loss Adjustment Expense." Unallocated loss adjustment expenses include the following items:

i. Fees of adjusters and settling agents;
ii. Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by calendar year;
iii. Attorney fees incurred in the determination of coverage, including litigation between the insurer and the policyholder; and
iv. Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in the capacity of an adjuster.

The foregoing list is not intended to be all inclusive.

GUIDANCE IN ASSIGNING CLAIM ADJUSTMENT EXPENSES

The Casualty Actuarial (Technical) Task Force has been asked to provide additional guidance to clarify how various expenses should be classified once this change is implemented. As a result, several questions have been raised about the classification of Loss Adjustment Expenses. The questions and suggested answers follow:

1. Should surveillance expense be classified as ALAE, consistent with the NCCI's classification?

Answer: Yes, even though an apportionment among the claims may be required.

2. Please confirm that litigation management expenses, i.e., costs incurred to conduct audits of outside legal bills for cost containment expenses, should be classified as ALAE.

Answer: Yes, even though an apportionment among the claims may be required.

3. Should fixed amounts for medical cost containment expenses, such as medical bill review, that are not identified to specific claims be classified as ALAE or ULAE?

Answer: ALAE, even though an apportionment among the claims may be required. Note: medical cost containment expenses could be included in losses.

4. Certain voluntary and involuntary market pools (USAIG, MAELU, and JUAs) do not provide a split of LAE. How should they be treated?

Answer: ALAE if reported by accident year; ULAE if reported by calendar year.

5. What is the definition of an adjuster? Does it include appraisers, rehabilitation nurses, private investigators, hearing representatives, reinspectors or fraud investigators?

Answer: Any of the above are ALAE if they are working in defense of a claim. Any of the above are ULAE if they are working in the capacity as an adjuster, except for rehabilitation nurse expenses, which are ALAE. **Note:** rehabilitation nurse expenses could be included in losses.

6. If an attorney engages in adjustment activities, should the attorney's expense be classified as ULAE?

Answer: Yes

7. Do attorney expenses include expenses incurred in securing an opinion regarding matters of coverage, to defend denials of coverage or to evaluate issues of coverage?

Answer: Expenses incurred in the determination of coverage, including litigation between the insurer and the policyholder, are ULAE. Defense expenses incurred owing to a duty to defend, even when other coverage does not exist, are ALAE.

8. Are experts' expenses (doctors, engineers, architects, etc.) ALAE or ULAE? How about outside appraisers? These expenses do not fall neatly into the defense, litigation, medical cost containment or adjuster categories.

Answer: (a) the costs of experts are either ALAE or included in losses. (b) the costs of outside appraisers are ULAE unless the appraiser is working in defense of a claim in which case the costs are ALAE.

9. Does legal overhead for a subsidiary with its own law department (for example, charges passed down to a subsidiary from a corporate law department) become ALAE? If so, at what level must this data be captured (company, claim, product, coverage, etc.)? What is the meaning of overhead? Would it pertain to salaries/benefits etc. of staff associated with the above activities?

Answer: (a) ALAE. The fees charged should include overhead, just like an outside firm charges. Overhead should include the proportionate cost of floor space and associated staff salaries in the same manner as an outside law firm .(b) the level of detail should be enough to prepare Schedule P.

10. NAIC defines ALAE as expenses that can be related to specific claims. Why would Claims Adjuster expenses (e.g., Travel to a specific claim site, etc.) which can be related to a specific claim be excluded?

Answer: The first sentence in this question is inaccurate. The apportionment of claims expenses is not dependent on whether the expenses can be related to specific claims. Claims adjuster expenses are ULAE.

11. What is the NAIC's definition of "defense expense"?

Answer: Defense expense includes all expenses to defend claims, excluding adjuster expenses.

ADDITIONAL COMMENTS

a) There is no special concern about any potential tax problems, but there could be slight tax effects.

b) This new definition of ALAE/ULAE is not retroactive. However, prospectively the change could be implemented on a calendar year or an accident year basis. On a calendar year basis, the expenses in the new and older accident years have the new definition as they develop in the loss and expense triangles. On an accident year basis, the expenses in the new accident years have the new definition and the expenses in the older accident years have the old definition. It is optional to the company which way to do it. There is a split among companies as to which is easier. The actuary should be able to handle either way as long as it is known which choice was made. This information should be disclosed in Interrogatory 8 of Schedule P.

c) The old 45/5 rule for reporting ULAE payments was repealed by a CATF Blanks proposal which was adopted and effective with the 1997 Blank. Insurers should now apportion ULAE payments and reserves by year based on claim counts. For instance, the old rule was based mostly on the theory that 50% of the calendar year ULAE should be assigned to the year in which the claim file was opened (the current year) and 50% to the year in which it was closed. An insurer could now base the apportionment of payments and reserves by the number of claims outstanding, the number of claims reported, etc., or any relationship which seems appropriate. The ALAE payments and reserves are assigned to the accident year of the claim. When ALAE payments and reserves are apportioned, they should be apportioned based on dollars, not claim counts.

d) The task force will also consider a proposal to rename ALAE and ULAE.

28. The Minutes of the June 21, 1993, Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force provide the following with respect to non-renewable accident and health contracts:

> The consensus of the working group was that the presence of non-renewal provisions or expense incurred provisions in accident and health policies does not eliminate the requirement to establish sufficient reserves at a financial statement date to cover the estimated duration of an incurred illness under this type of policy.

29. The Minutes of the June 23, 1998, meeting of the Casualty Actuarial (Technical) Task Force contain the following:

> 1. Discuss Issues Related to the Implementation of the Definition of ALAE/ULAE
>
> Richard J. Roth, Jr. (Calif.) reported that inquiries related to the Jan. 1, 1998 implementation of a definition of allocated loss adjustment expenses (ALAE) and unallocated loss adjustment expenses (ULAE) had dropped off dramatically. He believed that the definition was achieving its intended goal to provide more uniform reporting of information in Schedule P. He believed that regulatory actuaries would benefit from obtaining data that more closely matches expenses between insurers.
>
> Elise Liebers (N.Y.) reported that she and Judy Pool (Ill.) had volunteered to address the various names selected to replace the terms "ALAE" and "ULAE" to coincide with the new definition. She advised that they had considered several proposals. A proposal by James F. Golz (Wausau) suggested ALAE be renamed *Special Claim Adjustment Expense (SCAE)* and that ULAE be renamed *General Claim Adjustment Expense (GCAE)*. A proposal by Mr. Roth suggested that ALAE be renamed *Defense and Cost Containment (DCC)* and that ULAE be renamed *Adjusting and Other (AO)*. Ms. Liebers added that an informal contest was also held to select a name. Ms. Liebers advised that she and Ms. Pool preferred the Golz proposal with a minor amendment. They proposed that ALAE be renamed *Special Claim Expense (SCE)* and that ULAE be renamed *General Claim Adjustment Expense (GCAE)*. They believed that "adjustment" in SACE would be confusing.
>
> Mr. Roth advised that a name would need to be selected at the meeting, as related Blanks proposals would need to be prepared. He asked each task force members to declare their preference. Upon motion by Clark Simcock (D.C.) and second by R. Michael Lamb (Ore.), the task force, by voice vote decided to rename ALAE and ULAE as *Defense and Cost Containment (DCC)* and *Adjusting and Other (AO)* respectively.
>
> Joe Pomilia (National Association of Independent Insurers—NAII) noted that there remained several places in the Blank where the term *loss adjustment expense* was used. He added that this could be confusing to insurers as they report information to the states and the NAIC. Mr. Roth advised that the new terms were a division of *loss adjustment expense* and as such should not be confusing.
>
> Mr. Roth noted that the information packet prepared for the task force contained two draft letters responding to the questions about the appropriate assignment of certain items to ULAE and ALAE. He asked if the task force agreed with the proposed responses. There were no changes suggested so Mr. Roth directed NAIC staff to distribute the letters (Attachments One through Four).

Generally Accepted Accounting Principles

30. FAS 60 provides the following guidance:

> Claim Cost Recognition
>
> 17. A liability for unpaid claim costs relating to insurance contracts other than title insurance contracts, including estimates of costs relating to incurred but not reported claims, shall be accrued when insured events occur. A liability for estimated claim costs relating to title insurance contracts including estimates of costs relating to incurred but not reported claims, shall be accrued when title insurance premiums are recognized as revenue (paragraphs 15 and 16).
>
> 18. The liability for unpaid claims shall be based on the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and any other factors that would modify past experience.[4] Changes in estimates of claim costs resulting from the continuous review process and differences between estimates and payments for claims shall be recognized in income of the period in which the estimates are changed or payments are made. Estimated recoveries on unsettled claims, such as salvage, subrogation, or a potential ownership interest in real estate, shall be evaluated in terms of their estimated realizable value and deducted from the liability for unpaid claims. Estimated recoveries on settled claims other than mortgage guaranty and title insurance claims also shall be deducted from the liability for unpaid claims.
>
> --------------
>
> [4] Certain disclosures are required if the time value of money is considered in estimating liabilities for unpaid claims and claim adjustment expenses relating to short-duration contracts (paragraph 60.d.).
>
> --------------
>
> 20. A liability for all costs expected to be incurred in connection with the settlement of unpaid claims (claim adjustment expenses) shall be accrued when the related liability for unpaid claims is accrued. Claim adjustment expenses include costs associated directly with specific claims paid or in the process of settlement, such as legal and adjusters' fees. Claim adjustment expenses also include other costs that cannot be associated with specific claims but are related to claims paid or in the process of settlement, such as internal costs of the claims function.[5]
>
> --------------
>
> [5] Title insurance internal claim adjustment expenses, which generally consist of fixed costs associated with a permanent staff handling a variety of functions including claim adjustment, ordinarily are expensed as period costs because the costs are insignificant.
>
> --------------

31. The *AICPA Audit and Accounting Guide: Property & Casualty Insurance Companies* (AICPA P&C Audit and Accounting Guide) provides the following guidance:

> **Loss Reserves**
>
> 8.17 Both SAP and GAAP require that insurance companies report a provision for all incurred losses that are unpaid as of the balance sheet date, including losses incurred but not reported. The liability is based on management’s estimate of the ultimate cost of settling each loss. The statutes of many states, however, require minimum reserves for certain lines, called excess Schedule P reserves, primarily bodily injury liability and workers’ compensation. The minimum reserves are based on the company’s actual loss ratio in the five years immediately preceding the most recent three years. The lowest ratios for these years, with a stipulated minimum ratio of 60 percent (65 percent for workers’ compensation) and a maximum ratio of 75 percent, are used. The determined ratio is applied to earned premium for each of the three most recent calendar years. The minimum reserves are then compared with the estimated liabilities for each of the three years, and any excess of the minimum over the estimates is reported as a separate liability in the statements prepared under SAP. Any changes in the excess reserves are reported as charges or credits directly to surplus. When financial statements are prepared in accordance with GAAP, the entries are reversed, and the excess reserves are restored to retained earnings.

32. *AICPA Statement of Position 92-4, Auditing Insurance Entities' Loss Reserves* provides the following guidance:

> **Estimating Methods**
> 2.8 Various analytical techniques exist to assist management, consulting actuaries, and independent auditors in estimating and evaluating the reasonableness of loss reserves. These techniques generally consist of statistical analyses of historical experience and are commonly referred to as loss reserve projections.
>
> 2.13 Loss reserve projections can be performed using a variety of mathematical approaches ranging from simple arithmetic projections using loss development factors to complex statistical models.
>
> 2.14 Within each of these methods, there are a variety of techniques and loss data that may be used; there are also methods that combine features of these basic methods. No single projection method is inherently better than any other in all circumstances.
>
> **Loss Reserve Ranges**
> 4.15 Because the ultimate settlement of claims is subject to future events, no single loss reserve estimate can be considered accurate with certainty. An audit approach should address the inherent variability of loss reserve estimates and the effect of that variability on audit risk. The development of a single loss reserve projection, by itself, does not address the concept of variability and may not provide sufficient evidence to evaluate the reasonableness of the loss reserve provision in the financial statements. An analysis of the reasonableness of loss reserves should include and analysis of the amount of variability in the estimate. One way to perform this analysis is to consider a range of loss reserve estimates bounded by a high and a low estimate. The high and low ends of the range should not correspond to an absolute best-and-worst case scenario of ultimate loss settlements, because such estimates may be the result of unlikely assumptions. The range should be realistic and therefore should not include the set of all possible outcomes but instead only those outcomes that are considered reasonable. Extreme projections should be critically analyzed and, if appropriate, be adjusted, given less credence, or discarded (this would apply to projections outside a cluster of other logical projections that fall within a narrower range).

33. *AICPA Statement of Position 94-5, Disclosures of Certain Matters in the Financial Statements of Insurance Enterprises* (SOP 94-5) provides the following guidance:

> 10. Financial statements should disclose for each fiscal year for which an income statement is presented the following information about the liability for unpaid claims and claim adjustment expenses:
>
> a. The balance in the liability for unpaid claims and claim adjustment expenses at the beginning and end of each fiscal year presented, and the related amount of reinsurance recoverable
>
> b. Incurred claims and claim adjustment expenses with separate disclosure of the provision for insured events of the current fiscal year and of increases or decreases in the provision for insured events of prior fiscal years
>
> c. Payments of claims and claim adjustment expenses with separate disclosure of payments of claims and claim adjustment expenses attributable to insured events of the current fiscal year and to insured events of prior fiscal years
>
> Also, insurance enterprises should discuss the reasons for the change in the provision for incurred claims and claim adjustment expenses attributable to insured events of prior fiscal years and should indicate whether additional premiums or return premiums have been accrued as a result of the prior-year effects.

34. The *AICPA Audit and Accounting Guide: Health Care Organizations* provides the following guidance:

> Accounting for Health Care Costs
>
> 13.02 Health care costs should be accrued as services are rendered, including estimates of the costs of services rendered but not yet reported. Furthermore, if a provider of prepaid health care services is obligated to render services to specific members beyond the premium period due to provisions in the contract or regulatory requirements, the costs of such services to be incurred, net of any related anticipated revenues, also should be accrued currently. Costs that will be incurred after a contract is terminated, such as guaranteed salaries, rent, and depreciation, net of any anticipated revenues, should be accrued when it is determined that a contract with a sponsoring employer or other group will be terminated.
>
> 13.03 Amounts payable to hospitals, physicians, or other health care providers under risk-retention, bonus, or similar programs should be accrued during the contract period based on relevant factors, such as experience to date.
>
> 13.04 The basis for accruing health care costs and significant business and contractual arrangements with hospitals, physicians, or other associated entities should be disclosed in the notes to the financial statements.

Statutory Issue Paper No. 56

Universal Life-Type Contracts, Policyholder Dividends, and Coupons

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 51

Type of Issue:
Life Specific

SUMMARY OF ISSUE

1. Current statutory accounting guidance for universal life-type contracts, policyholder dividends, and coupons is addressed in Chapter 10, Aggregate Reserves for Life and Annuity Contracts, Chapter 15, Liabilities Related to Policyholder Dividends, Chapter 18, Premium Income, and Chapter 20, Policy and Contract Benefits, of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). General reserve requirements and accounting for life contracts has been established in *Issue Paper No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (Issue Paper No. 50) and *Issue Paper No. 51—Life Contracts* (Issue Paper No. 51). Current SAP requires liabilities for dividends on participating policies to be established for dividends due and unpaid, dividends apportioned (or not yet apportioned) for payment in the following calendar year, and dividends left on deposit to accumulate at interest. Unmatured policyholder coupons are recorded at the present value of the unmatured coupons, discounted at interest and mortality.

2. GAAP guidance for universal life-type contracts and coupons requires policy reserves or liabilities to be established using the balance that accrues to the benefit of the policyholder and requires all dividends to be accrued based on the results to date, regardless of when due or payable.

3. The purpose of this issue paper is to provide additional guidance on certain unique features and characteristics relating to universal life-type contracts, policyholder dividends, and coupons consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. This issue paper applies to all universal life-type contracts described in Issue Paper No. 50, all participating contracts, and to all life insurance contracts with coupons. It applies the basic reserving principles relating to life contracts as established in Issue Paper No. 51, prescribes additional accounting requirements regarding unique features of universal life-type contracts, as well as accounting requirements for dividends on participating policies and coupons on life policies.

5. Universal life-type contracts include, among others, flexible premium universal life and fixed premium universal life contracts. Participating contracts include any contract where policyholders are entitled to policy dividends.

6. Premium recognition for fixed premium universal life-type contracts shall be consistent with the accounting requirements of Issue Paper No. 51. Premium on flexible premium universal life-type contracts shall be recorded when received from the policyholder.

Flexible Premium Universal Life-Type Contracts

7. Policy reserves are generally established as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. Unlike traditional life insurance contracts, flexible premium universal life-type contracts do not have guaranteed premiums and some assumption as to future premiums is required. Appendix A-585 establishes a minimum reserving method for universal life-type contracts by providing guidance on how to estimate future premiums on flexible premium universal life-type contracts so that traditional valuation methodologies could be used. Alternative minimum reserves shall be required, if applicable, for flexible premium universal life-type contracts if the guaranteed maturity premium is less than the valuation net premium. Appendix A-585 shall be used in establishing reserves for flexible premium universal life-type contracts.

Fixed Premium Universal Life-Type Contracts

8. Policy reserves are generally established as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. Fixed premium universal life-type contracts shall also follow the guidance in Appendix A-585. Certain fixed premium products offer the policyholder a secondary guarantee. A secondary guarantee provides the policyholder a guaranteed set of cash values, death benefits, and maturity benefits that will be provided regardless of the performance of the policy value. Appendix A-585 requires secondary guarantees to be considered when establishing policy reserves and shall be followed in establishing reserves for fixed premium universal life-type contracts.

Policyholder Dividend Liability

9. A reporting entity shall accrue, as applicable, the following items relating to participating policies. They are dividends due and unpaid, dividends apportioned (or not yet apportioned) for payment in the following twelve months, and dividends left on deposit to accumulate at interest.

10. Dividends due and unpaid represent dividends payable to the policyholder in the current year but which have not been disbursed or otherwise applied at the reporting date.

11. Dividends payable in the following calendar year represent the estimated amount of all dividends declared by a reporting entity’s board of directors prior to the end of the statement year which are not yet paid or due at the end of the year (dividends apportioned for payment) as well as all dividends payable in the following calendar year that have not been declared (dividends not yet apportioned for payment). For individual insurance the amount of this liability shall be equal to the aggregate amount of the dividends estimated to be payable in the following calendar year whether or not declared or apportioned. For group insurance and pensions, the amount of liability is generally equal to the portion of the dividend payable in the following calendar year which has been earned in the current calendar year.

12. Dividends left on deposit with the reporting entity shall be recorded in the amount of the deposit and accrued interest thereon. At the balance sheet date, the interest accrued but not yet credited to the policyholders’ accounts, shall be established as part of this liability.

Coupons

13. Some entities issue policies that guarantee an annual return, usually evidenced by a coupon that is part of the policy and matures on the policy’s anniversary. This return represents an annual pure endowment, and is essentially a return of premium previously paid by the policyholder. For matured coupons that have been left to accumulate, the liability is determined in the same way as the liability for dividend accumulations. Interest accrued is calculated for each coupon from the date each matures. The liability for unmatured policyholder coupons shall be the face value of the coupon, discounted at interest and mortality.

Disclosures

14. For life and annuity reserves the financial statements shall disclose the following:

  a. A description of reserve practices concerning the following:

    i. Waiver of deduction of deferred fractional premiums upon death of insured;

    ii. Return of portion of final premium for periods beyond the date of death; and

    iii. Amount of any surrender value promised in excess of the reserve as legally computed;

  b. The methods employed in the valuation of substandard policies;

  c. The amount of insurance, if any, for which the gross premiums are less than the net premiums according to the valuation standards;

  d. The method used to determine tabular interest, tabular less actual reserves released, and tabular cost (by formula or from the basic data for such items); and

  e. The nature of significant other reserve changes.

15. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:

  a. Subject to discretionary withdrawal:

    i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;

      (a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the insurer;

      (b) In installments over five years or more, with or without a reduction in the interest rate during the installment period;

    ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in (v.(d)) below;

    iii. At market value, where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current market value, and the liabilities are stated at the current market value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

    iv. Total with adjustment or at market value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

(a) In a lump sum without adjustment;

(b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

(c) In a lump sum subject to a fixed surrender charge of less than 5%;

(d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified "bail out" rate and the "bail out" rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues;

(e) All others;

b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded;

e. Total net.

16. If the reporting entity has reported life insurance premiums and annuity considerations deferred and uncollected on policies in force as of the financial statement date, disclose separately the amounts and the loading excluded for each of the following lines of business:

a. Industrial business;

b. Ordinary new business;

c. Ordinary renewal;

d. Credit life;

e. Group life;

f. Group annuity.

17. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.);

f. Total premium written.

18. Reporting entities shall disclose the relative percentage of participating insurance, the method of accounting for policyholder dividends, the amount of dividends, and the amount of any additional income allocated to participating policyholders in the financial statements.

DISCUSSION

Statutory Guidance

19. The statutory accounting principles outlined in the conclusion above are consistent with current statutory accounting and Issue Paper No. 51.

Flexible Premium Universal Life-Type Contracts

20. As discussed in Issue Paper No. 51, policy reserves are generally established as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. Traditional life insurance contracts generally provide a guaranteed set of future cash values and death benefits for a stated premium. Flexible and fixed premium universal life contracts typically develop cash surrender values that are based on a retrospective accumulation of premiums less mortality and expense charges, at a rate of interest declared by the reporting entity or based upon an index. Features such as flexible premiums and variable interest contracts are not compatible with the valuation procedures used for traditional contracts.

21. Flexible premium contracts produce a special valuation problem in that some assumption as to future premiums is required. The method of estimating the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums must be modified to apply to a flexible premium universal life-type contract since neither future premiums nor future benefits are known for a particular policy. The Model UL Regulation established a minimum reserving method for universal life-type contracts by providing guidance on how to estimate future premiums and related benefits on flexible universal life-type contracts so that traditional valuation methodologies could be used.

22. The Model UL Regulation provides a method for calculating reserves for flexible premium universal life contracts as the present value of future guaranteed benefits less the present value of valuation net premiums where the present value of valuation net premiums takes into account an expense allowance, multiplied by a ratio. This ratio is determined at each valuation date as the policyholder account balance divided by the Guaranteed Maturity Fund (GMF), the ratio not to exceed 1. The GMF's are an accumulation of Guaranteed Maturity Premiums (GMP) which are level gross premiums that provide for endowment at the latest permissible maturity date under the contract. Alternative minimum reserves shall be required, if applicable, for flexible premium universal life-type contracts if the guaranteed maturity premium is less than the valuation net premium, both as defined in the Model UL Regulation.

Fixed Premium Universal Life-Type Contracts

23. Many reporting entities offer products whose cash values are calculated using universal life-type contract accumulation procedures, but which lack complete flexibility in premium payments. These products follow a similar set of valuation rules set forth in Appendix A-585. However, some of these products also offer the policyholder a secondary guarantee. A secondary guarantee provides the policyholder a guaranteed set of cash values, death benefits, and maturity benefits that will be provided regardless of the performance of the policy value.

24. Reserves for these products under Appendix A-585 are determined by computing the excess of the projected present value of future guaranteed benefits, taking into account secondary guarantees, over the present value of the future valuation net premium guaranteed at issue.

Policyholder Dividend Liability

25. Ordinary life and industrial life policies may be issued either on a participating or a nonparticipating plan. Under participating plans, policyholders are entitled to policy dividends that have been declared by the reporting entity's board of directors. These dividends reflect all or a part of the difference between the premium charged for a given class of policies and the actual cost of these policies as experienced by the reporting entity based on the terms of the contract.

26. On ordinary policies, the policyholder generally may choose one of five ways of receiving or using the dividend. If no choice is made, the policy usually states which option is to be automatically used. Dividends may be either (1) paid in cash, (2) applied as a reduction of the next premium, (3) applied to buy paid-up additional insurance, (4) left on deposit with the reporting entity to accumulate at a guaranteed rate of interest, or (5) applied to purchase one-year term insurance up to the maximum specified in the agreement (generally the policy cash surrender value) with any balance of the dividend being applied under one of the four other options. Other options may also be available.

27. On industrial policies, dividends are usually paid as premium credits (applied to pay renewal premiums) or as paid-up additional insurance, as specified in the policy.

28. Group life may also be issued on a participating or a nonparticipating basis. If the contract is nonparticipating, it may provide for refunds or premium adjustments through a variety of experience rating arrangements. The group contract may state the experience rating formula to be used in the calculation of refund of premium adjustment. See *Issue Paper No. 66—Accounting for Retrospectively Rated Contracts regarding* experience rating refunds.

29. A liability shall be established for the estimated dividends that will be paid on participating policies in the next twelve months, whether declared or not (dividends not yet apportioned for payment), since dividends are generally paid in the next policy year. Ordinary life contract dividends should also include those contingent on the payment of renewal premiums (generally first year dividends).

GAAP Guidance

30. In Issue Paper Nos. 50 and 51, the GAAP guidance (principally, *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60), *FASB Statement No. 97*, *Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments* (FAS 97), and *AICPA Statement of Position 95-1*, *Accounting for Certain Activities of Mutual Life Insurance Enterprises* (SOP 95-1)) related to insurance contracts, including universal life-type and participating contracts, was rejected for the reasons set forth therein.

Drafting Notes/Comments

- SAP literature was not excerpted from Chapters 10 and 18 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies since all such literature is included in Issue Paper 51 which is consistent with this issue paper.
- Issue Paper No. 50 addresses Classifications and Definitions of Insurance Contracts In Force.
- Issue Paper No. 51 addresses Life Contracts.
- Issue Paper No. 52 addresses Deposit-Type Contracts.
- Issue Paper No. 54 addresses Individual and Group Accident and Health Contracts.
- Issue Paper No. 55 addresses Unpaid Claims, Losses and Loss Adjustment Expenses.
- Issue Paper No. 66 addresses Accounting for Retrospectively Rated Contracts.
- Issue Paper No. 74 addresses Life, Deposit-Type and Accident and Health Reinsurance.
- Issue Paper No. 89 addresses Separate Accounts.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE (only pertinent excerpts are included below)

Statutory Accounting

31. The Life/A&H Accounting Practices and Procedures Manual, Chapter 15, Liabilities Related to Policyholder Dividends, provides the following guidance with respect to policyholder dividends:

> A company may have three liabilities for policyholder dividends. They are dividends due and unpaid, dividends apportioned (or not yet apportioned) for payment in the following calendar year, and dividends left on deposit to accumulate at interest. (Some companies may have an additional dividend liability to provide for amounts provisionally held for payment under deferred dividend policies beyond the following calendar year. Deferred dividend policies, generally prohibited or no longer issued, provide for dividends payable at less frequent intervals than annually.)
>
> Dividends Due and Unpaid
>
> These are dividends payable to the policyholder in the statement year but which have not been disbursed or otherwise applied at the balance sheet date. This may happen when the cash dividend has not yet been disbursed or, to a greater extent, when the premium to which the dividend is to be applied has not been collected and the full premium has been recorded as due and uncollected.
>
> Dividends applied to reduce the premium usually are recorded when the premium is collected. Thus, if a premium is due at the balance sheet date, the premium is recorded as uncollected and a liability for the dividend is established. This may not be the case if the company does all of its bookkeeping for due premiums as if the premium had been collected on the due date. If it does, it would have effectively applied all dividends except those payable in cash.
>
> Some companies pay a first policy year dividend conditional on the payment of the second year premium. Treatment would be similar to that of a dividend used to reduce premium payments.
>
> Dividends Payable in the Following Calendar Year
>
> The estimated amount of all dividends declared by a company's board of directors prior to the end of the statement year which are not yet paid or due at the end of the year, must be included under the liability "Dividends apportioned for payment" in the annual statement. Since companies may declare dividends to policyholders based on other than calendar year anniversary dates (i.e., July 1 to July 1), it is occasionally necessary to estimate the amount of dividends which may be ultimately paid. Thus, at December 31 of the current year, dividends payable from January 1 to June 30 of the following year would be reported under "Dividends apportioned for payment" and an estimate of dividends payable from July 1 of the following year to December 31 of the following year would be reported under "Dividends not yet apportioned". In other words, a company must establish a liability for all dividends payable in the following calendar year whether declared or not. In some instances, the board does not declare dividends until after the end of the year at which time the surplus earnings for the statement year will have been determined. The estimated amount of such dividends to be authorized for payment in the calendar year following the statement date must also be included under "Dividends not yet apportioned."
>
> For individual insurance the amount of this liability should be equal to the aggregate amount of the dividends estimated to be payable in the following calendar year whether or not declared or apportioned. Such dividends should include those contingent on the payment of renewal premiums (generally first year dividends).
>
> For group insurance and pensions, the amount of liability is generally equal to the portion of the dividend payable in the following calendar year which has been earned in the current calendar year. For group pensions the dividend year is generally a calendar year.

Dividend Accumulations

If the policyholder elects to leave the dividend on deposit with the company, the company must record an appropriate liability. This liability is for the amount of the deposit and accrued interest thereon. Interest usually is credited annually on the policy anniversary at the rate stated in the policy or at a rate declared by the company if greater than the stated contract or guaranteed rate. At the balance sheet date, the interest accrued but not yet credited to the policyholders' accounts, must be established as part of this liability.

Coupons

Some companies issue policies that guarantee an annual return, usually evidenced by a coupon that is part of the policy and matures on the policy's anniversary. This return represents an annual pure endowment, and is essentially a return of premium previously paid by the policyholder. Some states prohibit or strictly regulate policies with such provisions. To collect the return, in most cases, the policyholder must submit the coupon to the company. If the coupon is not submitted for payment, it should be treated as a deposit (accumulation) and accrue interest at the stated rate.

Coupons may be presented for cash, be used to reduce the premium, or left at interest. If the company permits, a coupon also may be used to purchase paid-up additional insurance.

The liability for unmatured coupons is generally carried as part of the policy reserve or as a separate policy liability. No matter how the liability is presented, it generally is the same as that for a one-year pure endowment policy in the amount of the face value of the coupon.

For matured coupons that have been left to accumulate, the liability is determined in the same way as the liability for dividend accumulations. Interest accrued is calculated for each coupon from the date each matures.

32. The Life/A&H Accounting Practices and Procedures Manual, Chapter 20, Policy and Contract Benefits, provides the following guidance with respect to policy and contract benefits including policyholder dividends:

Other Benefits

Other contract benefits reported in the Summary of Operations are:

1. Coupons, guaranteed annual pure endowments, and similar benefits.

2. Surrender benefits. These are amounts payable on termination of a policy other than by death or maturity. Such surrender benefits, where available, are guaranteed in the policy. The surrender value of additional insurance purchased by application of dividends is included in this item as well as amounts applied to repay any existing policy loan.

3. Interest on policy or contract funds. Included here are incurred interest payments made on deferred benefit payments and interest credited on premium and other deposit funds after deducting the discount allowed on policy proceeds paid in advance. Excluded from this item are interest on supplementary contracts, dividend accumulations and accumulations of coupons, and guaranteed annual pure endowments which do not exceed the annual premium and similar benefits.

4. Payments on supplementary contracts with life contingencies. In addition to the periodic payments incurred this would include the commuted value of any remaining guaranteed payments upon termination of the contract by death or surrender.

5. Payments on supplementary contracts without life contingencies and of dividend accumulations. The commuted value of any remaining payments upon termination of supplementary contracts without life contingencies by death or surrender would also be included.

6. Accumulated coupon payments.

Dividends to Policyholders

Individual life and health insurance policies may be issued either on a participating or a nonparticipating plan. Under the participating plan, policyholders are entitled to policy dividends that have been declared by the company's board of directors. These dividends reflect the difference between the premium charged for a given class of policies and the actual cost of these policies as experienced by the company. Under the nonparticipating plan, policies are written for a premium that is usually lower than the gross premium on participating insurance.

Group life and health insurance pensions also may be issued on a participating or a nonparticipating basis. If the contract is nonparticipating, it may provide for refunds or premium adjustments through a variety of experience rating arrangements. The group contract may state the experience rating formula to be used in the calculation of refund of premium adjustment. If the formula is stated, it will usually provide that the difference of premiums and interest over claims, reduced by applicable contingency reserves and a retention percentage, will be paid to the group contract holder. The retention percentage is based on the amount the company estimated to be necessary for administration costs, contingency reserves, insurance costs (for pooled experience in all similar groups, i.e., to pay some of the claims in other similar groups when these claims exceed the premiums collected for those similar groups), and a margin for profit. If the contract is participating, dividends will be paid in cash to the employer or, on his written request, be used toward the payment of the next premium.

Should dividend adjustments exceed the amounts contributed by an employer in a contributory plan, the excess must be used for the benefit of the employees—refunded to them, used to enable them to skip contributions for a period, or applied to buy additional insurance or benefits.

Dividends distributed to participating policyholders are not profits in a commercial sense; instead; they represent a return of a portion of the gross premium. The portion of the company's earnings before dividends that is not deemed necessary to strengthen surplus or contingency reserves may be distributed among individual policyholders.

The method of calculating dividends is rarely, if ever, stated in the policy. Instead, the policy makes some declaration that, perhaps, may state: "While this policy is in force...the share of the divisible surplus accruing on this policy shall be annually determined by the company and apportioned as a dividend payable on the following policy anniversary. It is not anticipated that a dividend will be payable for at least two years from date of issue." The statutes of various states describe the conditions under which policyholder dividends are to be declared and paid.

Each year the company must determine how much of the total earned surplus (previously existing, plus additions for the year) should be retained as a contingency fund (or as another special surplus appropriation) and how much should be distributed to the policyholders. It is important to note that no fixed relationship may exist between the surplus gain in a particular calendar year and the dividends distributed to the policyholders on the next policy anniversaries. The directors of the company make the decision as a matter of business judgment. The amount earmarked for distribution is designated as divisible surplus and, once set aside by action of the directors, loses its identity as surplus and becomes a liability of the company.

A company having both participating and nonparticipating policies in force usually must make a separate accounting of each class of insurance and include with its annual statement a separate statement of the operations of each class unless an overwhelming proportion of the business in force (90% of more in certain states) is either participating or nonparticipating. Some states limit the amount of surplus attributable to participating policies that may be transferred to the benefit of the stockholders.

Individual life insurance policies that will participate in the operating gains of the company are almost always sold as such. Occasionally, a company may pay a dividend on a nonparticipating policy or convert it to a participating plan. These situations, however, are very unusual.

Dividends are generally payable on the policy anniversary provided all premiums (annual premiums or installments) have been paid up to that date. The first dividend under a policy is usually paid at the end of the second or third policy year. Occasionally, a dividend is paid at the end of the first policy year on the condition that the annual premium for the second year has been collected.

On ordinary policies, the policyholder generally may choose one of five ways of receiving or using the dividend. If no choice is made, the policy usually states which option is to be automatically used. Dividends may be either (1) paid in cash, (2) applied as a reduction of the next premium, (3) applied to buy paid-up additional insurance, (4) left on deposit with the company to accumulate at a guaranteed rate of interest, or (5) applied to purchase one-year term insurance up to the maximum specified in the agreement (generally the policy cash surrender value) with any balance of the dividend being applied under one of the four other options. Other options may also be available.

On industrial policies, dividends are usually paid as premium credits (applied to pay renewal premiums) or as paid-up additional insurance, as specified in the policy.

Dividends to the policyholders incurred during the period represent the dividends paid or credited, adjusted to include the liabilities at the statement date for dividends due and unpaid, less the corresponding liabilities outstanding at the end of the previous period.

Generally Accepted Accounting Principles

33. FAS 60 provides the following guidance related to policyholder dividends (other relevant sections of FAS 60 have been excerpted in Issue Paper No. 51):

Policyholder Dividends

41. Policyholder dividends shall be accrued using an estimate of the amount to be paid.

42. If limitations exist on the amount of net income from participating insurance contracts of life insurance enterprises that may be distributed to stockholders, the policyholders’ share of net income on those contracts that cannot be distributed to stockholders shall be excluded from stockholders’ equity by a charge to operations and a credit to a liability relating to participating policyholders’ funds in a manner similar to the accounting for net income applicable to minority interests. Dividends declared or paid to participating policyholders shall reduce that liability; dividends declared or paid in excess of the liability shall be charged to operations. Income-based dividend provisions shall be based on net income that includes adjustments between general-purpose and statutory financial statements that will reverse and enter into future calculations of the dividend provision.

43. For life insurance enterprises for which there are no net income restrictions and that use life insurance dividend scales unrelated to actual net income, policyholder dividends (based on dividends anticipated or intended in determining gross premiums or as shown in published dividend illustrations at date insurance contracts are made) shall be accrued over the premium-paying periods of the contracts.

34. SOP 95-1 provides the following guidance on policy reserves for participating contracts issued by mutual life insurance enterprises, fraternal benefit societies and stock life insurance subsidiaries of mutuals or fraternals:

> Liability for Future Policy Benefits
>
> 15. A liability for future policy benefits relating to participating life insurance contracts should be equal to the sum of --
>
> a. The net level premium reserve for death and endowment policy benefits.
>
> b. The liability for terminal dividends.
>
> c. Any probable loss (premium deficiency) as described in paragraphs 35 to 37 of FASB Statement No. 60.
>
> 16. The net level premium reserve should be calculated based on the dividend fund interest rate, if determinable, and mortality rates guaranteed in calculating the cash surrender values described in the contract. If the dividend fund interest rate is not determinable, the guaranteed interest rate used in calculating cash surrender values described in the contract should be used. If the dividend fund interest rate is not determinable and there is no guaranteed interest rate, the interest rate used in determining guaranteed nonforfeiture values should be used. Finally, if none of the above rates exists, then the interest rate used to determine minimum cash surrender values -- as set by the National Association of Insurance Commissioners' (NAIC) model standard nonforfeiture law--for the year of issue of the contract should be used. Regardless of the rate used, net premiums should be calculated as a constant percentage of the gross premiums.
>
> 17. Terminal dividends should be accrued in the liability for future policy benefits if the following conditions are both met:[4]
>
> a. Payment of the dividend is probable.
> b. The amount can be reasonably estimated.
>
> [4] These conditions should be used in the same sense that they are used in FASB Statement No. 5, *Accounting for Contingencies*.
>
> If the two conditions are met (and they ordinarily will be), the terminal dividends should be recognized as an expense over the life of a book of participating life insurance contracts, at a constant rate based on the present value of the estimated gross margin amounts expected to be realized over the life of the book of contracts. The present value of estimated gross margins should be computed using the expected investment yield (net of related investment expenses). If significant negative gross margins are expected in any period, then the present value of gross margins before annual dividends, estimated gross premiums, or the balance of insurance in force should be substituted as the base for computing the expense amount to be recognized. (The base substituted in this calculation should be the same one substituted in the amortization of deferred acquisition costs discussed in paragraph 20.)
>
> 18. Increases in the liability for future policy benefits should be reported as an expense in the statement of earnings.

Statutory Issue Paper No. 57

Title Insurance

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 57

Type of Issue:
Property and Casualty

SUMMARY OF ISSUE

1. Current statutory guidance for premium revenue recognition, unpaid claims, losses, and loss adjustment expenses for title insurance contracts is contained in Appendix B of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P & C Accounting Practices and Procedures Manual). This guidance states that title insurance premiums are fully earned on the date of policy issuance; however, most states require title insurance companies to establish and maintain an unearned premium or reinsurance reserve. This guidance also states that title insurance companies are not required to give recognition to Incurred But Not Reported (IBNR) losses as a liability in statutory reporting; however, disclosure of IBNR is required in Schedule P by the NAIC Annual Statement Instructions - Title (Annual Statement Instructions). Current statutory guidance for title plants is contained in Appendix B of the P & C Accounting Practices and Procedures Manual. This guidance states that title insurers are authorized to invest in title plants and to classify them as admitted assets, subject to certain valuation restrictions.

2. GAAP guidance for premium revenue recognition is found in paragraph 16 of FASB Statement No. 60, *Accounting and Reporting by Insurance Enterprises* (FAS 60). GAAP guidance for claim cost recognition is found in paragraphs 17-20 of FAS 60. GAAP guidance for title plants is presented in FASB Statement No. 61, *Accounting for Title Plant* (FAS 61), as amended by FASB Statement No. 121, *Accounting for The Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of* (FAS 121).

3. The purpose of this issue paper is to establish statutory accounting principles for title insurance that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. A variety of services are generally provided (either by the title insurance underwriter, its agent or others) in connection with the transfer of title to real estate. Title insurance rates frequently are determined in the rate making process based on the bundle of services provided, including some or all of title search and examination and closing or escrow fees, referred to as "Gross All-Inclusive" premiums. By statute or custom, certain states exclude title search and examination and closing or escrow fees from the rate-making process for title insurance premiums; referred to as "Gross Risk Rate" premiums. Premiums shall be recorded at the date of policy issuance, on either the Gross All-Inclusive or Gross Risk Rate premium basis, consistent with the rate-making method used. Amounts paid to or retained by agents shall be reported as an expense.

5. A liability shall be established for all known unpaid claims and loss adjustment expenses (known claims reserve), consistent with paragraph 23 of this issue paper, with a corresponding charge to income. The future payments associated with settling known unpaid claims and loss adjustment expenses meet the

definition of a liability as established in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5).

6. Premium revenue shall be deferred to the extent necessary to maintain a Statutory or Unearned Premium Reserve (SPR/UPR) determined in accordance with the reserve section detailed in paragraph 23 of this issue paper.

7. Additionally, a supplemental reserve shall be established consisting of any other reserves necessary, which when taken in combination with the reserves required by paragraphs 5 and 6 of this issue paper will be sufficient to cover the company's liabilities with respect to all known claims, IBNR claims, and loss adjustment expenses. The total of the known claims reserve, SPR/UPR, and the supplemental reserve shall not be less than the actuarially determined liability for the sum of known claims, IBNR claims, and loss adjustment expenses or the amount determined in accordance with paragraph 23 of this issue paper.

8. Consistent with the statutory objective of maintaining a SPR/UPR in an amount sufficient to purchase reinsurance, the criteria for revenue recognition in paragraphs 6 and 7 recognize the economics of the title insurance contract over the estimated period of exposure.

9. The actuarially determined liability for the sum of known claims reserve required in paragraph 5, and the IBNR claims and loss adjustment expenses required in paragraph 7 of this issue paper, shall be determined consistently with the guidance detailed in *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (Issue Paper No. 55), except that anticipated salvage and subrogation shall not be deducted from the liability for unpaid claims.

10. Assets acquired in settlement of claims (e.g., mortgages and real estate) shall be accounted for consistent with the guidance related to the asset acquired. For example, an impaired loan shall be accounted for in accordance with *Issue Paper No. 37—Mortgage Loans*, and real estate acquired in foreclosure shall be accounted for in accordance with *Issue Paper No. 40—Real Estate Investments*.

11. The financial statements or notes thereto shall disclose the following items for each period presented:

a. The amount of premium revenue reported on the Gross All-Inclusive and on the Gross Risk Rate premium basis;

b. The amount of the known claims reserve, SPR/UPR, and the supplemental reserve;

c. Whether the insurer uses discounting in the calculation of its supplemental reserve, the method and rate used to determine the discount, and the amount of such discount.

12. Any material individual component of the reported expense categories shall be presented either on the face of the Summary of Operations or within the footnotes or related exhibits to the financial statements.

Title Plant

13. Title plants are an integrated and indexed collection of title records consisting of documents, maps, surveys, or entries affecting title to real property or any interest in or encumbrance on the property, which have been filed or recorded in the jurisdiction for which the title plant is established or maintained. They are tangible assets unique to the title insurance industry, and are the principal productive asset used to generate title insurance revenue and to mitigate the risk of claims. Title plant shall be reported as an admitted asset, subject to the following valuation restrictions:

a. Costs incurred to construct a title plant, including the costs incurred to obtain, organize, and summarize historical information in an efficient and useful manner, shall be capitalized until the title plant can be used by the company to conduct title searches and issue title insurance policies. The capitalized costs shall be directly related to, and properly identified with, the activities necessary to construct the title plant.

b. Purchased title plants, including a purchased undivided interest in a title plant, shall be recorded at cost at the date of acquisition. For a title plant acquired separately, cost shall be measured by the fair market value of the consideration given. For title plant acquired as part of a group of assets, cost shall be measured by the fair value of the consideration given and then cost shall be allocated to the title plant based on its fair value in relation to the total fair value of the group of assets acquired. For title plants acquired as part of a purchase of assets or in a business combination, cost shall be determined in accordance with *Issue Paper No. 68—Business Combinations and Goodwill*.

c. After the construction or purchase of a title plant, a company may decide to purchase or construct a title plant that antedates the period of time covered by the existing title plant (backplant). Costs to construct a backplant must be properly identifiable to qualify for capitalization.

d. Costs incurred after a title plant is operational to (a) convert the information from one storage and retrieval system to another; or (b) modify or modernize the storage and retrieval system shall not be capitalized.

e. Costs incurred to maintain a title plant shall be expensed as incurred.

f. Costs incurred to perform title searches shall be expensed as incurred.

g. The aggregate carrying value of an investment in a title plant or plants shall not exceed the lesser of twenty percent (20%) of admitted assets or forty percent (40%) of surplus to policyholders.

14. Certain circumstances may indicate that the value of the title plant may be impaired and, thus, the carrying value of the asset may not be recoverable. If there is an indication of possible impairment of value, the title plant shall be evaluated for impairment and recorded in accordance with Issue Paper No. 5. The following are examples of circumstances that may indicate impairment:

a. Effects of obsolescence, demand and other economic factors;

b. A significant change in the legal or business climate in the jurisdiction for which the title plant is established and maintained;

c. A current period operating or cash flow loss combined with a history of such losses or projections that indicate continued losses associated with the revenue produced by the title plant;

d. A lack of appropriate maintenance to keep the title plant up to date;

e. Abandonment of a title plant.

15. A properly maintained title plant has an indeterminate life and does not diminish in value with the passage of time, and accordingly, shall not be depreciated.

16. A title insurer may (a) sell its title plant and relinquish all rights to its future use; (b) sell an undivided ownership interest in its title plant; or (c) sell a copy of its title plant or the right to use it. Accounting and presentation for each type of sale noted shall be as follows:

a. When a title insurer sells its title plant and relinquishes all rights to its future use, consideration received shall be presented as a separate component of revenue net of the carrying value of the title plant sold.

b. When a title insurer sells an undivided ownership interest in its title plant, consideration received shall be presented as a separate component of revenue net of the pro rata portion of the carrying value of the title plant.

c. When a title insurer sells a copy of its title plant or the right to use it, consideration received shall be presented as a separate component of revenue and the carrying value of the title plant shall not be reduced.

DISCUSSION

17. The P & C Accounting Practices and Procedures Manual states that title insurance premiums are fully earned on the date of policy issuance; however, title insurance companies are required to establish and maintain an unearned premium or reinsurance reserve. The primary objective of the SPR/UPR is to maintain at all times a reserve amount which is sufficient to purchase reinsurance for the IBNR claims and related loss adjustment expenses. Consistent with this objective, the statutory principles in paragraph 6 of this issue paper retain current statutory guidance, which requires that changes in the amount of the SPR/UPR be reflected as an adjustment to premium revenue. Additionally, the supplemental reserve required in paragraph 7 of this issue paper is analogous to the concept of a premium deficiency reserve as discussed in *Issue Paper No. 53—Property and Casualty Contracts – Premiums* (Issue Paper No. 53). Consistent with Issue Paper No. 53, anticipated investment income may be used as a factor in the supplemental reserve calculation.

18. The conclusions reached in this issue paper are consistent with current statutory guidance except as follows with the exception that this issue paper requires consideration of IBNR claims and related loss adjustment expenses in evaluating the sufficiency of the SPR/UPR in order to conform with the Title Insurers Model Act. The Model Act requires the reporting entity's state of domicile to determine the appropriate unearned premium reserve to be set aside. This issue paper also requires the unearned premium reserve to be determined by the reporting entity's state of domicile. The determination by the state of domicile of this reserve is considered necessary given the nature of this product. This issue paper also requires that the liability for known claims reserves be calculated in accordance with Issue Paper No. 55, except that anticipated salvage and subrogation shall not be deducted from the liability for unpaid claims. Issue Paper No. 55 permits, but does not require, anticipated salvage and subrogation recoverables to be deducted from the liability for unpaid claims; whereas current statutory guidance for title insurers does not permit case basis loss and loss adjustment expense reserves to be reduced for anticipated salvage and subrogation.

19. This issue paper modifies current statutory accounting for title plant to require the evaluation and write-off of impairment in value. This is consistent with Issue Paper No. 5. This issue paper adopts FAS 61, modified for carrying value restrictions, as amended by paragraph 29 of *FASB Statement No. 121 - Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of* (FAS 121). Restrictions on the total carrying value of an investment in a title plant or plants have been set consistent with current statutory accounting outlined in the Title Insurers Model Act. FAS 121 is addressed in *Issue Paper No. 40—Real Estate Investments*.

20. The conclusions above reject FAS 60; however, it is considered appropriate to use the factors to be considered in the determination of the ultimate cost of settling claims included in FAS 60 when

establishing the reserves in accordance with paragraphs 5 and 7 of this issue paper. The concepts adopted above are consistent with GAAP literature except that GAAP requires immediate revenue recognition for title insurance contracts and the accrual of claims costs at the time title insurance premiums are recognized as revenue; whereas this issue paper requires that revenues be recognized consistent with the concepts discussed in paragraph 16.

21. The conclusions above are consistent with the regulatory objectives discussed in paragraph 17 of this issue paper and the concept of conservatism in the Statement of Concepts. The conclusions above are also consistent with the recognition and consistency concepts in the Statement of Concepts. Pertinent excerpts follow:

> Conservatism
>
> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.
>
> Recognition
>
> Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed.
>
> SAP income reflects the extent that changes have occurred in SAP assets and liabilities for current period transactions, except changes in capital resulting from receipts or distributions to owners.
>
> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.

Drafting Notes/Comments

- Segregated funds held for others (i.e., escrow funds) will be addressed in *Issue Paper No. 77—Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures*.
- Review of state statutes of not less than 38 states indicates the use of a SPR/UPR, we are not aware of any states without such a requirement.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

22. Amended guidance for title insurance was adopted by the Accounting Practices and Procedures (EX4) Task Force at its October 1, 1996 meeting.

TITLE INSURANCE ACCOUNTING PRINCIPLES SUPPLEMENT

INTRODUCTION

Title insurance insures up to the date of policy issuance that the insured has title to the insured property on a certain title estate, subject to exceptions and exclusions in the policy. Also, a title policy, when issued, has a one time charge to the insured under the policy and reserves are set aside by the title insurance company that issues said policy.

The business of title insurance differs from that of property and casualty insurance in that its basic goal is risk elimination and not loss reimbursement. This risk elimination function results in significantly lower losses than that of other lines of insurance. Because of this fact, the title insurance business is organized and functions differently and its accounting for revenues, losses and loss adjustment expenses, unearned premium reserves, title plants, and escrow funds differs.

This supplement is intended to present the most commonly used practices and procedures as to those differences. Otherwise, title insurance accounting is in agreement with those described elsewhere in this manual.

Title insurers perform many services in connection with the transfer of real estate; however, their principal function involves insuring, guaranteeing, or indemnifying owners of real property or the holders of liens or encumbrances thereon against loss or damage suffered by reason of defective titles, liens or encumbrances or, in most states, the unmarketability of the title.

A one-time nonrefundable charge is due on the effective date of the insurance. This is described in more detail in the section on title insurance revenue. The term of the policy is indefinite in that the policyholder is insured for as long as he or his heirs or devises have an interest in the property.

Before a title insurance policy is issued, skilled personnel must search and examine a variety of public records concerning the ownership, liens, and encumbrances on the subject real estate together with information relating to persons having an interest in the real property as well as maps and other records to determine that title to the property is insurable, or defects can be overcome.

In addition to insuring against defective records or examination of those records, an insurer insures against "non-record defects" such as:

- Forgeries
- Fraud
- Confusion of name in change of title
- Incompetency (minor or persons of unsound mind)
- Mistakes in public records
- Undisclosed or missing heirs
- Instruments executed under a fabricated or expired power of attorney
- Deeds delivered after death of grantor or grantee or without the consent of the grantor
- Deeds by persons supposedly single but actually married
- Wills not probated
- Liens against property (mechanic’s liens, tax liens, etc.)
- Falsified records

TITLE PLANTS

Title plants are an integrated and indexed collection of title records covering parcels of real estate within a county. They are tangible assets unique to the title insurance industry and are the principal productive asset used to generate title insurance revenue.

A title plant consists of (a) indexed and catalogued information for a period of time concerning the ownership of, and the encumbrance on, real estate, (b) information relating to persons having an interest in real property, (c) maps, plats, and so forth, (d) copies of prior title insurance policies and reports, and (e) other documents and records. In summary, a title plant constitutes a historical record of matters affecting title to parcels of land in a particular geographic area. The number of years covered by a title plant varies, depending on regulatory requirements and management decisions concerning the minimum information period needed to issue title insurance policies efficiently. Title plants are updated on a daily or other frequent basis by the addition of copies of documents on the status of title to specific parcels of real estate.

Authorization and Limitations

Title insurers are authorized to invest in title plants and to classify them as admitted assets in their financial statements subject to valuation restrictions which vary from state to state. Insurers' investments in title plants are detailed in Schedule "H" of the annual statement.

Valuation

Costs incurred to construct a title plant, including the costs incurred to obtain, organize and summarize historical information in an efficient and useful manner, should be capitalized until the title plant can be used by the company to conduct title searches and issue title insurance policies. The capitalized costs should be directly related to, and properly identified with, the activities necessary to construct the title plant.

After the construction or purchase of a title plant, a company may decide to purchase or construct a title plant (backplant) that antedates the period of time covered by the existing title plant. Costs to construct a backplant must be properly identifiable to qualify for capitalization.

Purchased title plants, including a purchased undivided interest in a title plant, should be recorded at cost at the date of acquisition. For a title plant acquired separately, cost should be measured by the fair market value of the consideration given. Title plants purchased as part of a group of assets or as part of a business combination accounted for as a purchase, should be accounted for in accordance with APB Opinion 16, "Business Combinations."

Costs incurred after a title plant is operational to (a) convert the information from one storage and retrieval system to another or (b) modify or modernize the storage and retrieval system should not be added to the carrying amount of the title plant. Such costs may be capitalized separately as Title Plant Improvements and charged to expense in a systematic and rational manner in accordance with Statement of Financial Accounting Standards No. 61, "Accounting for Title Plant."

Ordinarily, a title plant has an indeterminate life and does not diminish in value with the passage of time and accordingly should not be depreciated. However, in certain circumstances, evidence may exist that the value of a title plant has been impaired. Evidence of impairment includes the following:

a) a change in legal requirements or statutory practices,
b) effects of obsolescence, demand, and other economic factors,
c) actions of competitors and others that may affect competitive advantages,
d) failure to maintain the title plant properly on a current basis, or,
e) abandonment of a title plant or other circumstances that indicate obsolescence.

If such evidence exists, title plant values should be adjusted to the lower of carrying value or current fair values in accordance with Statement of Financial Accounting Standards No. 121, "Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to be Disposed Of."

Maintenance of Title Plant

Costs incurred to maintain a title plant should be expensed as incurred. Title plant maintenance involves the updating of the title plant on a daily basis or other frequent basis by adding (a) reports on the current status of title to specific parcels of real estate and (b) other documents such as records relating to security or other ownership interests.

Cost of Title Searches

Costs incurred to perform title searches should be expensed as incurred. Title searches involve the process of searching through records for all recorded documents or updating information summarized in the most recently issued title report.

Sale of Title Plant

A title insurance company may (a) sell its title plant and relinquish all rights to its future use, (b) sell an undivided ownership interest in its title plant, that is, the right to its joint use, or (c) sell a copy of its title plant or the right to use it. If the company sells its title plant and relinquishes all future rights to its use, the amount received as consideration for the sale should be presented as a separate component of revenue, net of the carrying amount of the title plant. If the company sells an undivided ownership interest in its title plant, the amount received as consideration should be presented as a separate component of revenue, net of the pro rata portion of the carrying amount of the title plant. If the company sells a copy of its title plant or the right to use it, the amount received should be presented as a separate component of revenue. Ordinarily no cost should be allocated to the sale of a copy or the right to use a title plant.

STATUTORY PREMIUM RESERVE

The premium related to a title insurance policy is due upon the effective date of the insurance and is not refundable. The term of a title insurance policy is indefinite in that the policyholder is insured for as long as he or his heirs or devisees have an interest in the property. Since title insurance premiums are fully earned on the date of policy issuance, there are no unearned premiums for title insurers.

Most states require title insurance companies to establish and maintain a statutory premium reserve. Generally, the title insurance company must establish this statutorily required deferred income account based upon the law of its domiciliary state. The computation is based upon either premium revenue, number of policies issued, liability assumed, or combinations thereof. The reserve is drawn down in accordance with recovery or amortization formulas as prescribed by state law.

Generally, title insurance companies are required to hold, maintain and segregate investments in marketable admitted assets of a particular type and quality as prescribed by certain states' statutes in an amount at least equal to the statutory premium reserve. When applicable, such assets are summarized by investment type in a footnote to the "Assets" page of the annual statement.

TITLE INSURANCE REVENUE

The variety of services performed by a title insurance company in connection with the insurance of a real estate title may vary substantially according to local statutes, regulations or practices. This causes a substantial variance in the classification of these services on financial statements of title insurers. While all such services are an integral part of the transfer of title to real estate, services may in some markets be performed by title insurance companies, separately in competition with title insurance agents, or insurers may subcontract some functions to agents or others.

Where title insurance companies perform these services, it is often not possible to allocate specific revenue or costs to a separate function such as search, examination, closing, or escrow services with any precision. Many joint costs of the insurer cannot be adequately allocated to a specific function, and some functional elements of title insurance costs tend to overlap into other areas, e.g., a portion of search and escrow costs performed by a title insurance company could be partially allocated to an underwriting function.

In order to provide for consistency in reporting financial data in the annual statement, all title insurers must strictly follow the guidelines stated in this instruction. The NAIC has dictated that title insurance revenues reported in the annual statement be differentiated as to (1) two generally acceptable premium rate types, and (2) the distribution network for direct premiums written.

However, the NAIC has recognized that the data reported in Schedule “T” of the annual statement is not intended to be used for the calculation of the amount of premium tax due. In the event the basis used for the calculation of premium tax differs from the basis required for reporting in the annual statement, the company should submit to the respective state insurance department or other premium tax collection agency a separate schedule to support its premium tax calculation.

For the purpose of reporting in Schedule "T" and other schedules or exhibits in the annual statement, the amount of title insurance premiums to be reported by premium rate type shall be guided by the following definitions of the methods of reporting "Direct Premiums Written":

1. Gross All-Inclusive Premiums - Under this method of reporting direct premiums written, the title insurer and its title agent generally perform all the functions necessary to insure the risk and to issue a title insurance policy. The title insurer reports 100% of the premiums charged either through its branch office or its title agents. Direct premiums written reported under this method generally contemplates some or all of the following factors in the rate-making process:

   a. Cost of title search and examination
   b. Policy issuing cost
   c. Amount retained by agents/abstractors/attorneys
   d. Overhead and miscellaneous expenses
   e. Expected losses and LAE from underwriting the risk
   f. Profit margin.
   g. Additional activities (such as closing) may also be included in specific states.

2. Gross Risk Rate Premiums - This method of reporting direct premiums written generally applies to states where either by statute or custom the charge for title search and examination are excluded or charged for separately from the title insurance premiums. The cost factors contemplated in the rate-making process include the proportionate share of all of the factors listed in the "Gross All-Inclusive Premiums" except for the "Cost of the title search and examination."

The applicable premium rate type in effect for each state (either gross all-inclusive or gross risk rate) is reported in the “Premium Rate” column of Schedule “T."

Generally, the direct premiums written reported in the annual statement should fall within the definitions of either Gross All-Inclusive Premiums or Gross Risk Rate Premiums. The net risk or net remittance method is not an acceptable method of reporting premiums written. In the event the company uses another method, this method must be designated as “Other” in the “Premium Rate” column of Schedule “T” for each state and must be footnoted to define the basis for varying from either the Gross All-Inclusive or Gross Risk Rate method.

In addition to designating the premium rate type in effect for each state for direct premiums written in Schedule “T," title insurance companies must report direct premiums written by the distribution network within each state. The NAIC has designated three distribution networks, with direct premiums written reported in separate columns of Schedule “T," as well as in other schedules or exhibits of the annual statement, as follows:

1. Direct Operations - Includes direct premiums written at home office and branch office operations of the title insurer. No amounts attributable to agency operations (even wholly owned agencies) are to be included in this category.

2. Non-affiliated Agency Operations - Includes direct premiums written by non-affiliated agency operations. The standard for reporting as a non-affiliated agency is the affiliation standard established under the holding company laws of the domestic state jurisdiction.

3. Affiliated Agency Operations - Includes direct premiums written by affiliated agency operations, including wholly-owned agencies. The standard for reporting as an affiliated agency is the affiliation standard established under the holding company laws of the domestic state jurisdiction.

Revenues received for services performed by a title insurance company, other than premium, are to be reported under the "Other Income” category of Schedule "T."

EXPENSES

In the title insurance industry, there are expenses incurred in establishing and maintaining the distribution networks involved in acquiring and underwriting policies and servicing policyholders and third party claimants. Expenses are important elements of the company’s operations and accurate statistics are needed for comparisons and control. The instructions for uniform classification of expenses are a part of the NAIC Examiners Handbook - Volume 1.

Expense Group Classifications

Expenses for title insurance companies are listed in the “Operations and Investment Exhibit, Part 4, Expenses” of the annual statement. Expenses are specifically identified or allocated and reported for the following groups:

1. Title and Escrow Operating Expenses - Title and escrow operating expenses consist of all expenses incurred in relation to engaging in the business of title insurance, including costs associated with the following: issuing or offering to issue a title insurance policy; soliciting or negotiating the issuance of a title insurance policy; guaranteeing, warranting or otherwise insuring the correctness of title searches affecting title to real property; handling of escrows, settlements or closings; executing title insurance policies; effecting contracts of reinsurance and abstracting, searching or examining titles. Also included are specifically identifiable and allocated expenses relating to the following activities: supervision and training of employees and agents; operating costs for branch offices or agencies; underwriting activities; receiving and paying of premiums and commissions; maintaining general and detailed records; data processing; advertising and publicity; clerical, secretarial, office maintenance, supervisory and executive duties; postage and delivery; and all other functions reasonably associated with the business of title insurance. Title and escrow operating expenses do not include losses, loss adjustment expenses (allocated or unallocated), expense of other operations or investment expenses. The expenses include only amounts incurred directly by the company, and do not include expenses incurred by any agents (regardless of ownership interest).

2. Unallocated Loss Adjustment Expenses - Unallocated loss adjustment expenses (“ULAE”) are those indirect costs incurred by a title insurer, typically internal to the company, which are necessary to process claims or manage the claims settlement function and which are not incurred on a claim-specific basis. ULAE should include all costs of outside parties involved in claims adjusting services, but should not include any costs incurred by agents in settlement of title or other claims.

3. Other Operations - The amounts shown for this category represent the expenses incurred by the company in operations other than title and escrow, loss adjustment or investment activities.

4. Investment Expenses - Investment expenses are those expenses incurred in the investing of funds and the pursuit of investment income, including specifically identifiable and allocated expenses related to such activities as: initiating or handling orders and recommendations for investments; research; pricing; appraising and valuing; disbursing funds and collecting income; safekeeping of securities and valuable papers; maintaining general and detailed records; data processing; general clerical, secretarial, office maintenance, supervisory and executive duties; supplies, postage, and the like; and all other functions reasonably attributable to the investment of funds.

A company that pays management fees to an affiliate shall allocate these costs to the appropriate expense classification item (salaries, rent, postage, etc.) as if these costs had been borne directly by the company. Management or similar fees should not be reported as a one-line expense. It is appropriate for the company to estimate these expense allocations based on a formula or other reasonable basis.

Title and Escrow Operating Expenses are further broken down in the annual statement by the distribution network that gives rise to the expense incurrence. Accordingly, expenses are specifically identified or allocated (in accordance with reasonable allocation procedures consistently applied) to either Direct Operations, Non-affiliated Agency Operations or Affiliated Agency Operations. Some general guidelines for allocating these expenses to the appropriate distribution network are shown in the following table. The expense classification item (salaries, rent, postage, etc.) are those in the annual statement.

TABLE 1

General Guidelines for Classifying Expenses

Expenses to be Allocated to Distribution Network	**Principal Basis for Allocation**
Personnel costs:	
Salaries	Studies of employee activities
Employee relations and welfare	Pro rate on salary ratios
Payroll taxes	Pro rate on salary ratios
Other personnel costs	Pro rate on salary ratios
Amounts paid to or retained by title agents	Direct charge to non-affiliated or affiliated agents
Production services (purchased outside)	Study of company practices
Advertising	Pro rate on basis of Part 2A revenue distribution
Boards, bureaus and associations	Pro rate on basis of Part 2A revenue distribution
Title plant rent and maintenance	Study of company practices
Amounts charged off, net of recoveries	Direct charge by source of business
Marketing and promotional expenses	Pro rate on basis of Part 2A revenue distribution

Insurance	Pro rate on salary ratios
Directors’ fees	Pro rate on salary ratios
Travel and travel items	Study of company practices
Rent and rent items	Pro rate on salary ratios
Equipment	Pro rate on salary ratios
Printing, stationery, books and periodicals	Pro rate on salary ratios
Postage, telephone, messengers and express	Pro rate on salary ratios
Legal and auditing	Study of company practices
Taxes, licenses and fees	Study of company practices

Any other basis of allocation should be used if it yields more precise results than expenses allocated on the salaries or revenue distribution basis.

NOTES:

Claim adjustment services are all attributable to the Unallocated Loss Adjustment Expenses group.

Real estate expenses and real estate taxes are all attributable to the Investment Expenses group.

Expenses should be specifically identified or allocated to the Unallocated Loss Adjustment Expenses group or Other Operations group based on a study of company practices and employee activities.

AMOUNTS PAID TO OR RETAINED BY TITLE AGENTS

Unlike agents representing other lines of insurance whose primary function is to sell the policy and receive a sales commission, title insurance agents also perform various functions in connection with the issuance of a title insurance policy. These functions can include search and examination, abstracting, certain underwriting and closing services. Typically, the agent collects the entire charge for the title insurance transaction, retains a portion for his services, and forwards the insurer’s portion in accordance with individual agency contracts.

LOSSES AND LOSS ADJUSTMENT EXPENSES/RESERVES

Unlike most other forms of insurance, losses do not generally represent the largest liability or expense for title insurance companies. The emphasis is upon loss prevention and the duty to defend, rather than on reimbursement of losses. Therefore, title insurance companies incur large expenses in labor, equipment, etc. in maintaining title records and in searching and examining the titles to real estate and in curing defects found prior to the issuance of the policy and closing or escrow services.

The liability for unpaid losses is composed of (1) the loss reserve, net of recoveries, for undetermined title and other losses of which notice has been received (known claims reserve), (2) the statutory premium reserve, and (3) the excess of Schedule “P” reserves over statutory reserves (supplemental reserve).

Definitions

Allocated Loss Adjustment Expenses

Allocated loss adjustment expenses are those expenses that can be related to specific claims and include fees, salaries, overhead and expenses of lawyers for legal service in defense, trial or appeal of suit, other legal services rendered in connection with title claims, and general court costs and fees together with appeal costs and expenses. Allocated loss adjustment expenses should include all costs associated with attorneys involved in litigation of specific claims whether such attorneys are engaged as outside counsel or salaried employees of an insurer. The inclusion of “salaried employees” in the definition of allocated loss adjustment expenses is effective January 1, 1996. Allocated loss adjustment expenses also include any fee or expense, other than claim adjuster services, which is directly attributable to the defense of a particular claim. See definition of Unallocated Loss Adjustment Expenses below.

Incurred But Not Reported Reserve

The incurred but not reported reserve (“IBNR”) is an amount estimated to cover all unpaid losses, claims and allocated loss adjustment expenses arising under title insurance policies, guaranteed certificates of title, guaranteed searches and guaranteed abstracts of title, and all unpaid losses, claims and allocated loss adjustment expenses for which the title insurer may be liable and for which the insurer has not received notice by or on behalf of the insured, holder of a guarantee or escrow or security depositor. Title insurance companies are not required to give recognition to IBNR losses in statutory reporting unless a “supplemental reserve” is required. See the definition of Supplemental Reserve below.

Known Claims Reserve

The known claims reserve (referred to as the “loss reserve for undetermined title and other losses of which notice has been received”) is the amount estimated to be sufficient to cover all unpaid losses, claims and allocated loss adjustment expenses arising under title insurance policies, guaranteed certificates of title, guaranteed searches and guaranteed abstracts of title, and all unpaid losses, claims and allocated loss adjustment expenses for which the title insurer may be liable and for which the insurer has received notice by or on behalf of the insured, holder of a guarantee or escrow or security depositor. The known claims reserve also includes “bulk” reserves, if any - a provision for subsequent development on known claims.

Statutory Premium Reserve

See the “Statutory Premium Reserve” section above. The Statutory Premium Reserve (“SPR”) is considered a liquidation reserve and is equivalent to a property and casualty company’s IBNR reserve. Certain states’ statutes also require insurance companies to segregate investments in an amount at least equal to the SPR. If a title insurer becomes insolvent, the segregated assets are used to pay future claims or purchase reinsurance to settle future claims. In addition, the SPR is intended to provide a reserve for unallocated loss adjustment expenses on all claims.

Supplemental Reserve

The supplemental reserve is the excess of Schedule “P” reserves over statutory reserves (i.e., the excess of the known claims reserve + IBNR reserve + ULAE reserve [total Schedule “P” reserves] over the known claims reserve + SPR [statutory reserves]). The supplemental reserve requirement is effective January 1, 1996. Also see “Actuarial Opinion” below.

Title Insurance Losses

Title insurance losses should include all losses on any transaction for which a title insurance premium, rate or charge was made or contemplated. Escrow losses for which the company is contractually obligated should be included. Losses arising from defalcations for which the company is contractually obligated should also be included.

Unallocated Loss Adjustment Expenses

Unallocated loss adjustment expenses ("ULAE") are those expenses other than allocated loss adjustment expenses that are assigned to the expense group "loss adjustment expenses" (i.e. all other expenses, typically internal, necessary to process claims or manage the claims settlement function and which are not incurred on a claim-specific basis). ULAE should include all costs of outside parties involved in claims adjusting services. Schedule "P" reserves include an Unallocated Loss Expense Unpaid component, a reserve estimated to cover all unpaid unallocated loss adjustment expenses on all claims and losses provided for in the known claims reserve and the IBNR reserve. As noted above, the SPR is intended to provide a balance sheet reserve for ULAE on all claims. The requirement to separately report ULAE in the Operating and Investment Exhibit (Part 4 - Expenses) and the ULAE reserve in Schedule "P" is effective January 1, 1996.

Loss Reserving Requirements

Valuation

A company is required to determine what the value of its claims will be when they are ultimately settled, including inflation. Therefore, in general, loss and loss adjustment expense reserves are to be presented on a non-discounted basis. Also see "Loss Reserve Discounting" below.

Known Claims Reserves

The reserve for known claims is generally determined using established reasonable baseline reserves developed by tracking and analyzing historical claims data. These estimates are reviewed and adjusted as necessary.

Incurred But Not Reported Losses and Unallocated Loss Expense Unpaid

In addition to reserving for known claims, a title insurance company must also provide a liability for losses that are incurred but not reported and for unpaid ULAE in Schedule "P," effective January 1, 1996. Various methods are used for estimating these reserves. Whatever methods are selected for establishing unpaid losses, the goal should always be reserve adequacy. Also see "Actuarial Opinion" below.

Loss Reserve Discounting

Discounting of loss and loss adjustment expense reserves is allowed only if expressly permitted by the state insurance department to which the annual statement is being filed. If discounting of loss and loss adjustment expense reserves is reflected in an insurer's balance sheet liabilities as included in the annual statement, then the insurer must complete a reconciliation of the discounted liability to the whole dollar value of the reserves in Schedule "P." The insurer should also complete a note to the annual statement - Discounting of Unpaid Losses or Unpaid Loss Adjustment Expenses - as required by the annual statement instructions.

Actuarial Opinion

Effective January 1, 1996, the Schedule "P" reserves must be supported by an actuarial opinion from a qualified actuary who is a member in good standing of the American Academy of Actuaries, setting forth an opinion as to the adequacy of all loss reserves (known claims reserve, including bulk reserves (if any), + IBNR reserve + ULAE reserve).

Supplemental Reserve Computation - Schedule "P"

As noted above, the supplemental reserve, if any, is the excess of Schedule "P" reserves over statutory reserves. If a supplemental reserve is required, it shall be phased in as follows: twenty-five percent (25%) of the otherwise applicable supplemental reserve will be required until December 31, 1997; fifty percent (50%) of the otherwise applicable supplemental reserve will be required until December 31, 1998; seventy-five percent (75%) of the otherwise applicable supplemental reserve will be required until December 31, 1999; and, one hundred percent (100%) thereafter.

Recoveries from Salvage and Subrogation

Salvage and subrogation should be reflected using the following rules:

1. Paid losses must be reported net of realized, but not anticipated, salvage and subrogation. Case basis loss and loss adjustment expense reserves must not be reduced on account of anticipated salvage and subrogation.

2. Paid salvage and subrogation is not realized until a salvage asset or an actual payment pursuant to a subrogation right is in the direct control of the insurer and is admissible as an asset for statutory reporting purposes in its own right.

3. Salvage assets and payments pursuant to a subrogation right are to be booked at current market value. Current market value of real estate is to be established through an appraisal conducted by a qualified independent appraiser.

4. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount less than the value at which it was originally placed on the books of the insurer, then the loss on disposition is to be treated as a decrease in paid salvage (same effect as an addition to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation will be treated as a loss on disposition or change in value of an asset, and is not to be deducted from the salvage on the corresponding claim.

5. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount greater than the value at which it was originally placed on the books of the insurer, then the gain on disposition is to be treated as an increase in paid salvage (same effect as a deduction to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation will be treated as a gain on disposition or change in value of an asset, and is not to be added to the salvage on the corresponding claim.

6. IBNR reserves may make a provision for the expected value of future salvage and subrogation on open claims and IBNR claims. This provision must be actuarially determined and should not be based upon current case estimates.

TITLE REINSURANCE

Reinsurance is a contract whereby the reinsurer, for consideration received, agrees to indemnify the ceder or policy-issuing company in whole or in part against loss or liability which the ceder may sustain or incur under a separate and original contract of insurance ("policy") with the original insured owner, lender or lessee. The ceder or ceding company is the company which writes the policy insuring the owner, lender or lessee and cedes, lays off, or transfers to the reinsurer all or a portion of its policy risk or exposure which the reinsurer assumes or acquires under the reinsurance agreement or contract.

The principal functions of reinsurance are to provide insurers with capacity enabling them to write policies in larger amounts than could otherwise be written; to spread the risk of a potential loss in order to protect the insured's interest on very large transactions; and to protect the policy issuing company from insolvency in the event of a catastrophic loss.

Reinsurance is necessary when a title insurance company is limited to a certain amount of liability on a policy or transaction risk by either the insurer's self-imposed limitation, statutory limitation or the insured's limitation. Each title insurer internally sets a self-imposed limit where reinsurance is obtained when a policy is issued above that limit. Many states have limitations as to qualifications of insurers relating to single risk liability on risks issued on property in that state. In addition, the insureds on a title policy may also have restrictive liability limits pursuant to their own detailed analysis of a title insurer's financial strength and ability to pay a claim. These limitations are sometimes lower or more restrictive than state statutory limits or a title insurer's self-imposed limits. Therefore, on a certain risk which has all three types of limitations present, whichever limitation is lowest will determine how much reinsurance is necessary on a particular transaction. When reinsurance is purchased, the ceding company may reduce its net retained liability for the risk ceded. The reinsuring company would then be responsible for the appropriate reserves pertaining to its assumed liability or premium, subject to applicable rules and regulations of the state where the insured property is located.

Title insurance utilizes two main types of reinsurance. The most common type is facultative reinsurance that pertains to one individual, particular risk or transaction. The ceder may offer all or any part of a risk to one or more other title insurers or reinsurers who may either accept or reject that particular risk. The facultative reinsurance agreements utilized in the title industry have been developed by the American Land Title Association. The most common form utilized today is the 1994 ALTA Facultative Reinsurance Agreement. This agreement contains conditions and stipulations regarding ceder's cession and warranty, reinsurer's assumption, direct access, notices, investigation and settlement of claims, payment of losses, insolvency of ceder, recoupment and subrogation, rights of insured not prejudiced, laws applicable, actions by or on behalf of ceder, severability, notices-where sent and effective date.

Facultative reinsurance allows some flexibility in the spreading of the risk in which the ceder normally retains the primary risk and a share of the secondary level risk, which secondary level is structured on a coordinate and proportionate share among the secondary participants. There may also be other levels of reinsurance which are mainly utilized to induce reinsurers to accept more liability on larger than usual risks. These levels are called the tertiary, quaternary and quinary levels and they are each coordinate and proportionate as to each level. In other words, a reinsurer's secondary share is based on that reinsurer's secondary liability assumption divided by the total amount of secondary allocation of liability. If the ceding company retained a $5,000,000 primary, then they are responsible for 100% of the first level or primary retention retained. If the loss exceeds the primary into the secondary level, then the reinsurers as well as the ceder must pay off per their coordinate and proportionate share of that level until the secondary level is exhausted. If there is a tertiary level, the coordinate and proportionate tertiary percentage shares as to the total tertiary level control the payment of loss. And so on as to each level of liability.

The other type of reinsurance utilized in the title industry is called treaty reinsurance. This is mainly utilized by smaller companies that have a much smaller self-imposed or statutory limit and do not have the personnel to handle individual facultative agreements on each policy written over their threshold liability limit. This is usually done on an excess of loss basis where a treaty contract is negotiated where ceder is indemnified against loss in excess of a specified retention, normally subject to a specified limit, with respect to each risk covered by the treaty. Normally, the treaty contract specifies contingencies in the event the risk is greater than the treaty contract terms and therefore not covered under the treaty. Either the ceder may have to purchase facultative reinsurance, or the treaty reinsurer would assume all liability under the risk subject to the treaty ceder's primary retention and purchase its own facultative reinsurance on the liability in excess of the treaty limitations.

Schedule "F" of the annual statement summarizes relevant information for both assumed and ceded reinsurance.

SEGREGATED FUNDS HELD FOR OTHERS

Title insurers provide services in which they have custody and are accountable for cash and other assets belonging to others. Generally these services relate to real estate settlement services in which closing "escrow" funds are received and disbursed and note and contract collection services in which payments of principal and interest are received and disbursed. In addition, title insurers may hold cash or other assets as security for indemnity agreements with the company and others relating to title matters.

These "custodial" funds are set apart in special accounts and are excluded from title insurer's assets and liabilities in the statutory statement. However, the title insurer's accountability for these "custodial" funds is reported in a footnote and the detail of segregated deposits of these funds in banks, trust companies, and savings and loan associations are reported in Schedule "E" of the annual statement.

23. The Title Insurers Model Act was adopted by the Title Insurance Working Group of the Special Insurance Issues (E) Committee on December 4, 1995 and was adopted by the full membership of the NAIC at the March, 1996 Plenary Session (only the pertinent excerpts are included below):

Section 3. Definitions

W. "Title Plant" means a set of records consisting of documents, maps, surveys or entries affecting title to real property or any interest in or encumbrance on the property, which have been filed or recorded in the jurisdiction for which the title plant is established or maintained.

Section 9. Admitted Asset Standards

In determining the financial condition of a title insurer doing business under this Act, the general investment provisions of [insert reference to applicable provision of the insurance code governing investments] shall apply, except that an investment in a title plant or plants in an amount equal to the actual cost shall be allowed as an admitted asset for title insurers. The aggregate amount of the investment shall not exceed the lesser of twenty percent (20%) of admitted assets or forty percent (40%) of surplus to policyholders, as shown on the most recent annual statement of the title insurer on file with the commissioner.

Section 10. Reserves

In determining the financial condition of a title insurer doing business under this Act, the general provisions of the insurance code requiring the establishment of reserves sufficient to cover all known and unknown liabilities including allocated and unallocated loss adjustment expense, shall apply, except that a title insurer shall establish and maintain:

A A known claim reserve in an amount estimated to be sufficient to cover all unpaid losses, claims and allocated loss adjustment expenses arising under title insurance policies, guaranteed certificates of title, guaranteed searches and guaranteed abstracts of title, and all unpaid losses, claims and allocated loss adjustment expenses for which the title insurer may be liable, and for which the insurer has received notice by or on behalf of the insured, holder of a guarantee or escrow or security depositor.

B. A Statutory or Unearned Premium Reserve consisting of:

(1) The amount of statutory or unearned premium reserve required by the laws of the domiciliary state of the insurer if the insurer is a foreign or non-U.S. title insurer; or

(2) If the insurer is a domestic insurer of this state, a statutory or unearned premium reserve consisting of:

(a) The amount of the statutory or unearned premium or reinsurance reserve on the effective date of this Act, which balance shall be released in accordance with the law in effect at the time such sums were added to the reserve; and

(b) Out of total charges for policies of title insurance written or assumed commencing with the effective date of this Act, and until December 31, 1997, a title insurer shall add to and set aside in this reserve an amount equal to [insert amount] of the sum of the following items set forth in the title insurer's most recent annual statement on file with the commissioner:

(i) Direct premiums written;

(ii) Escrow and settlement service fees;

(iii) Other title fees and service charges including fees for closing protection letters; and

(iv) Premiums for reinsurance assumed less premiums for reinsurance ceded during year.

(c) Additions to the reserve after January 1, 1998 shall be made out of total charges for title insurance policies and guarantees written, equal to the sum of the following items, as set forth in the title insurer's most recent annual statement on file with the commissioner:

(i) For each title insurance policy on a single risk written or assumed after January 1, 1998, [insert amount] per $1,000 of net retained liability for policies under $500,000 and [insert amount] per $1,000 of net retained liability for policies of $500,000 or greater; and

(ii) [Insert amount] of escrow, settlement and closing fees collected in contemplation of the issuance of title insurance policies or guarantees.

(d) The aggregate of the amounts set aside in this reserve in any calendar year pursuant to Subsections B(2)(b) and B(2)(c) shall be released from the reserve and restored to net profits over a period of twenty (20) years pursuant to the following formula: thirty-five percent (35%) of the aggregate sum on July 1 of the year next succeeding the year of addition; fifteen percent (15%) of the aggregate sum on July 1 of each of the succeeding two (2) years; ten percent (10%) of the aggregate sum on July 1 of the next succeeding year; three percent (3%) of the aggregate sum on July 1 of each of the next three (3) succeeding years; two percent (2%) of the aggregate sum on July 1 of each of the next three (3) succeeding years; and one percent (1%) of the aggregate sum on July 1 of each of the next succeeding ten (10) years.

(e) The insurer shall calculate an adjusted statutory or unearned premium reserve as of the effective date of this Act. The adjusted reserve shall be calculated as if Subsections B(2)(b) through (B(2)(d) of this section had been in effect for all years beginning twenty (20) years prior to the effective date of this Act. For purposes of this calculation, the balance of the reserve as of that date shall be deemed to be zero. If the adjusted reserve so calculated exceeds the aggregate amount set aside for statutory or unearned premiums in the insurer's annual statement on file with the commissioner on the effective date of this Act, the insurer shall, out of total charges for policies of title insurance, increase its statutory or unearned premium reserve by an amount equal to one-sixth of that excess in each of the succeeding six years, commencing with the calendar year that includes the effective date of this Act, until the entire excess has been added.

(f) The aggregate of the amounts set aside in this reserve in any calendar year as adjustments to the insurer's statutory or unearned premium reserve pursuant to Subsection B(2)(e) shall be released from the reserve and restored to net profits, or equity if the additions required by Subsection B(2)(e) of this section reduced equity directly, over a period not exceeding ten (10) years pursuant to the following table:

Year of Addition	Release
Year 1*	Equally over 10 years
Year 2	Equally over 9 years
Year 3	Equally over 8 years
Year 4	Equally over 7 years
Year 5	Equally over 6 years
Year 6	Equally over 5 years

* (The calendar year following the effective date of this Act).

C. A supplemental reserve shall be established consisting of any other reserves necessary, when taken in combination with the reserves required by Subsections A and B of this section, to cover the company's liabilities with respect to all losses, claims and loss adjusted expenses.

D. Each title insurer subject to the provisions of this Act shall file with its annual statement required under [insert section] a certification by a member in good standing of the American Academy of Actuaries. The actuarial certification required of a title insurer must conform to the National Association of Insurance Commissioners' annual statement instructions for title insurers.

E. [Temporary Provision] The supplemental reserve required under Subsection C of this section shall be phased in as follows: twenty-five percent (25%) of the otherwise applicable supplemental reserve will be required until December 31, 1997; fifty percent (50%) of the otherwise applicable supplemental reserve will be required until December 31, 1998; and, seventy-five percent (75%) of the otherwise applicable supplemental reserve will be required until December 31, 1999.

24. The Annual Statement Instructions for Schedule P include the following guidance (only the pertinent excerpts are included below):

> Discounting of loss and loss adjustment expense reserves is allowed only if expressly permitted by the state insurance department to which this annual statement is being filed. If discounting of loss and loss adjustment expense reserves is reflected on Page 3 of this annual statement, a reconciliation is provided in Schedule P, Part 1. Work papers relating to any discount amounts must be available for examination upon request.

Generally Accepted Accounting Principles

25. FAS 60 provides the following guidance related to premium revenue recognition on long-duration contracts:

> 15. Premiums from long-duration contracts, such as whole-life contracts (including limited-payment and single-premium life contracts), guaranteed renewable term life contracts, endowment contracts, annuity contracts, and title insurance contracts, shall be recognized as revenue when due from policyholders.
>
> 16. Premiums from title insurance contracts shall be considered due from policyholders and, accordingly, recognized as revenue on the effective date of the insurance contract. However, the binder date (the date a commitment to issue a policy is given) is appropriate if the insurance enterprise is legally or contractually entitled to the premium on the binder date. If reasonably estimable, premium revenue and cost relating to title insurance contracts issued by agents shall be recognized when the agents are legally or contractually entitled to the premiums, using estimates based on past experience and other sources. If not reasonably estimable, premium revenue and costs shall be recognized when agents report the issuance of title insurance contracts.

26. FAS 60 provides the following guidance related to claim cost recognition:

> 17. A liability for unpaid claim costs relating to insurance contracts other than title insurance contracts, including estimates of costs relating to incurred but not reported claims, shall be accrued when insured events occur. A liability for estimated claim costs relating to title insurance contracts, including estimates of costs relating to incurred but not reported claims, shall be accrued when title insurance premiums are recognized as revenue (paragraphs 15 and 16).
>
> 18. The liability for unpaid claims shall be based on the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and any other factors that would modify past experience.[4] Changes in estimates of claim costs resulting from the continuous review process and differences between estimates and payments for claims shall be recognized in income of the period in which the estimates are changed or payments are made. Estimated recoveries on unsettled claims, such as salvage, subrogation, or a potential ownership interest in real estate, shall be evaluated in terms of their estimated realizable value and deducted from the liability for unpaid claims. Estimated recoveries on settled claims other than mortgage guaranty and title insurance claims also shall be deducted from the liability for unpaid claims.
>
> [4] Certain disclosures are required if the time value of money is considered in estimating liabilities for unpaid claims and claim adjustment expenses relating to short-duration contracts (paragraph 60.d.).
>
> 19. Real estate acquired in settling mortgage guaranty and title insurance claims shall be reported at fair value, that is, the amount that reasonably could be expected to be received in a current sale between a willing buyer and a willing seller. If no market price is available, the expected cash flows (anticipated sales price less maintenance and selling costs of the real estate) may aid in estimating fair value provided the cash flows are discounted at a rate commensurate with the risk involved. Real estate acquired in settling claims shall be separately reported in the balance sheet and shall not be classified as an investment. Subsequent reductions in the reported amount and realized gains and losses on the sale of real estate acquired in settling claims shall be recognized as an adjustment to claim costs incurred.
>
> 20. A liability for all costs expected to be incurred in connection with the settlement of unpaid claims (claim adjustment expenses) shall be accrued when the related liability for unpaid claims is accrued. Claim adjustment expenses include costs associated directly with specific claims paid or in the process of settlement, such as legal and adjusters' fees. Claim adjustment expenses

also include other costs that cannot be associated with specific claims but are related to claims paid or in the process of settlement, such as internal costs of the claims function.[5]

[5] Title insurance internal claim adjustment expenses, which generally consist of fixed costs associated with a permanent staff handling a variety of functions including claim adjustment, ordinarily are expensed as period costs because the costs are insignificant.

27. Accounting for title plant is contained in FAS 61, as amended by FAS 121. Pertinent excerpts are as follows:

> 1. A title plant consists of (a) indexed and catalogued information for a period concerning the ownership of, and encumbrances on, parcels of land in a particular geographic area; (b) information relating to persons having an interest in real estate; (c) maps and plats; (d) copies of prior title insurance contracts and reports; and (e) other documents and records. In summary, a title plant constitutes a historical record of all matters affecting title to parcels of land in a particular geographic area. The number of years covered by a title plant varies, depending on regulatory requirements and the minimum information period considered necessary to issue title insurance policies efficiently. Title plants are updated on a daily or other frequent basis by adding copies of documents on the current status of title to specific parcels of real estate.
>
> 3. Costs incurred to construct a title plant, including the costs incurred to obtain, organize, and summarize historical information in an efficient and useful manner, shall be capitalized until the title plant can be used by the enterprise to do title searches. To qualify for capitalization, costs need to be directly related to, and properly identified with, the activities necessary to construct the title plant.
>
> 4. Purchased title plant, including a purchased undivided interest in title plant, shall be recorded at cost at the date of acquisition. For title plant acquired separately, cost shall be measured by the fair value of consideration given.
>
> 5. An enterprise may decide to construct or purchase a title plant that antedates the period covered by its existing title plant (backplant). Costs to construct a backplant need to be identifiable to qualify for capitalization.
>
> 6. Capitalized costs of title plant shall not be depreciated or charged to income unless circumstances indicate that the carrying amount of the title plant has been impaired.
>
> 7. Costs incurred to maintain a title plant and to do title searches shall be expensed as incurred. Title plant maintenance involves the updating of the title plant on a daily or other frequent basis by adding (a) reports on the current status of title to specific parcels of real estate and (b) other documents, such as records relating to security or other ownership interests. Title searches involve the process of searching through records for all recorded documents or updating information summarized in the most recently issued title report.
>
> 8. Costs incurred after a title plant is operational (a) to convert the information from one storage and retrieval to another or (b) to modify or modernize the storage and retrieval system shall not be capitalized as title plant. Those costs, however, may be capitalized separately and charged to expense in a systematic and rational manner.

Statutory Issue Paper No. 59

Credit Life and Accident and Health Insurance Contracts

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 59

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance on policy reserves for credit life and accident and health insurance contracts, as defined in *Issue Paper No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (Issue Paper No. 50), is addressed in Chapter 10, Aggregate Reserves for Life and Annuity Contracts and Chapter 13, Aggregate Reserves for Accident and Health Policies of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). That guidance addresses policy reserves related to all credit life and accident and health insurance contracts. Under current statutory accounting, credit life policy reserves may be based on either a gross unearned premium reserve or a mortality reserve. Credit accident and health policy reserves are established through a gross unearned premium reserve computed under various methods or an actuarial reserve not less than the gross unearned premium reserve.

2. GAAP requires insurance contracts to be classified as short-duration or long-duration contracts. Long-duration contracts include contracts, such as whole-life, guaranteed renewable term life, endowment, annuity, and title insurance contracts, that are expected to remain in force for an extended period. Other insurance contracts are generally considered short-duration contracts and include most property and liability insurance contracts as well as credit life and accident and health insurance contracts. Premiums from short-duration contracts ordinarily are recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. Claim costs, including estimates of costs for claims relating to insured events that have occurred but have not been reported to the insurer, are recognized when insured events occur.

3. The purpose of this issue paper is to establish statutory accounting principles for credit life and accident and health insurance contract premium recognition and policy reserves that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). Credit life and accident and health insurance contracts will be referred to collectively as "credit insurance" for purposes of this issue paper.

SUMMARY CONCLUSION

Definitions

4. Credit insurance is generally issued in connection with the issuance of credit to an individual by a bank, retailer, finance company, or other similar organization. This type of insurance most often protects the creditor to the extent of the unpaid balance of the loan. Contracts sold in connection with loans or other credit transactions, not exceeding a stated duration shall be reported as credit insurance. Mortgage guaranty insurance is addressed in *Issue Paper No. 88—Mortgage Guaranty Insurance*. Credit policies are generally limited to issues of 120 months or less in most states. Credit insurance is sold as either an individual or group policy and may provide for single or joint life coverage.

5. Credit life insurance, generally in the form of decreasing term insurance, is issued on the lives of debtors to cover payment of loan balances in case of death. Credit accident and health insurance is insurance on a debtor to either provide indemnity for payments becoming due on a specific loan or other credit transaction while the debtor is disabled.

6. Premiums for credit insurance contracts shall be defined as the contractually determined amount charged by the insurance company to the policyholder for the effective period of the contract.

Income Recognition and Policy Reserves

7. Consistent with *Issue Paper No. 51—Life Contracts* (Issue Paper No. 51), premiums shall be recognized in the summary of operations as income on the gross basis (amount charged to the policyholder) when due from policyholders under the terms of the insurance contract.

8. Policy reserves are established through either a gross unearned premium reserve or a mortality/morbidity reserve. The gross unearned premium reserve represents the estimated amount of premium for insurance coverage that has not yet expired. The mortality/morbidity reserve represents the estimated amount of future anticipated benefits, discounted at valuation interest and mortality/morbidity, to be incurred on policies in force. Policy reserves meet the definition of liabilities as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets*.

9. When the level of insurance risk is constant during the contract period, policy reserves shall be recognized over the period of risk using either the daily pro-rata or monthly pro-rata methods as described in *Issue Paper No. 53—Property and Casualty Contracts - Premiums* (Issue Paper No. 53). Policy reserves for contracts where the level of insurance risk is not constant throughout the contract period shall be recognized over the period of risk in proportion to the amount of insurance protection provided. Various methods may be used to accomplish this as discussed in paragraphs 21 to 23. The reporting entity shall select the method that most closely reflects the pattern of insurance protection provided.

10. For credit accident and health contracts, the policy reserve recorded shall not be less than the gross unearned premium reserve. In addition, for all credit contracts in the aggregate, if the premium refund liability exceeds the aggregate recorded reserve, an additional liability shall be established. This premium refund (excess) liability may include consideration of commission, premium tax and other expenses recoverable.

11. The difference between the policy reserves at the beginning and end of the reporting period shall be reflected as the change in reserves or change in unearned premium, as appropriate, in the summary of operations, except for any difference due to a change in valuation basis. A change in valuation basis shall be accounted for consistent with paragraph 24 of Issue Paper No. 51.

12. When the anticipated benefits, expected dividends to policyholders and maintenance cost exceed the recorded policy reserve, a premium deficiency reserve shall be recognized by recording an additional liability for the excess deficiency with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis since they have previously been expensed.

DISCUSSION

13. This issue paper expands on current statutory guidance by requiring that policy reserves on credit insurance contracts be recognized over the exposure period of the contract in proportion to the amount of insurance protection provided. Under current statutory accounting, credit life policy reserves may be based on either a gross unearned premium reserve or a mortality reserve. Credit accident and health policy reserves are established through a gross unearned premium reserve computed under various methods. Additionally, this issue paper modifies current statutory accounting by requiring the recognition of a premium deficiency in circumstances described in the preceding paragraph. Current statutory

guidance does not specifically address premium deficiency reserves. These changes were made to improve consistency in accounting and reporting for credit insurance contracts.

GAAP Literature

14. Consistent with Issue Papers Nos. 50, 51 and *Issue Paper No. 54 - Individual and Group Accident and Health Contracts* (Issue Paper No. 54), *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60), *FASB Statement No. 97*, *Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments* (FAS 97) and *FASB Statement 120*, *Accounting and Reporting by Mutual Life Assurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts* (FAS 120), are rejected for the reasons set forth in those issue papers. However, the GAAP concept of recognizing policy reserves over the period of risk in proportion to the amount of insurance protection provided has been considered in this issue paper.

Characteristics of Credit Life and Accident and Health Insurance Contracts

15. Accounting for credit life and accident and health insurance is significantly affected by the premium mode and the nature of the risks assumed. Both of these factors shall be considered in determining the most appropriate method in which to recognize the policy reserve over the exposure period of the contract in proportion to the amount of insurance protection provided.

16. The premium mode may be either a single premium or a monthly premium based on the outstanding loan balance. Under single premium credit insurance, the premium rate is applied to the initial amount of insurance and generally is included in the debt. The single premium is generally remitted to the insurer at the time the loan is made. Premiums which are collected monthly based on the insurance protection provided are generally the monthly outstanding balance type. Outstanding balance rates, used generally for group coverage, are determined by multiplying a monthly rate times the amount of outstanding insured indebtedness.

17. The nature of the risks assumed are impacted by the loan conditions as well as the type of coverage or benefits provided. Loan conditions include the loan term, amount, payment pattern, and interest rate. Coverage or benefit types for credit life insurance policies are generally either gross coverage, net payoff coverage, level coverage, or a combination of insurance plans. Gross coverage insures the gross indebtedness of a loan in the form of decreasing term insurance and is used for closed end loans such as installment loans. Net payoff coverage provides decreasing term insurance protection where the death benefit is equal to the scheduled amount due under a debt obligation at any time. This normally includes the outstanding principal and insurance premiums, plus any accrued interest since the last payment. Net payoff coverage is generally used for open end loans in which the monthly payment is not fixed (e.g., lines of credit, home equity loans, and variable rate loans). Level coverage is generally used for single payment closed-end loans and provides for the full payment of the loan at maturity using level term insurance as the plan of insurance. Balloon loans provide for monthly installment payments, plus a lump sum payment at maturity (the balloon). Frequently the installment portion of the loan is covered by decreasing term insurance, while the balloon is covered by level term insurance. Other times, decreasing term coverage is provided as a single policy (certificate) where the last month of the coverage decreases by an amount, or balloon, much greater than the regular monthly installment payment.

18. Credit accident and health insurance policies provide generally a monthly benefit payable as long as the insured remains disabled, or until the scheduled maturity of the loan, if earlier. Since the benefit is the full monthly payment of the loan, including interest charges, the coverage is gross coverage. In some cases, a lump sum, total and permanent disability coverage is offered. This coverage provides for the full payment of the loan balance if the insured is totally and permanently disabled.

Income Recognition and Policy Reserves

19. This issue paper requires gross premiums from credit insurance contracts to be recognized when due and for policy reserves to be recognized over the exposure period of the contract in proportion to the amount of insurance protection provided. To the extent the methods discussed below do not reflect the pattern of insurance protection provided, the insurer should modify or develop, if necessary, a method that recognizes net income from the policy over the exposure period of the contract in proportion to the amount of insurance protection provided.

20. Monthly outstanding balance credit policies are generally collected at the beginning of each month. Consequently, premium is generally earned at the end of the month and a gross unearned premium is only needed to the extent policies are issued during the month. When policies are issued throughout the month, a gross unearned premium reserve should be established based on the remaining proportionate amount of insurance protection to be provided using either the daily pro-rata or monthly pro-rata methods as described in Issue Paper No. 53.

21. Single premium credit life policy reserves shall be based on either a gross unearned premium reserve based on a refund formula, or a reserve based on assumed risks using mortality factors. In practice, various methods exist and are currently used to estimate the amount of gross unearned premiums applicable to the unexpired portion of the policies in force. For decreasing gross coverage, the gross unearned premium may be estimated using a Rule of 78's method; for decreasing net payoff coverage, either the Rule of 78's or the single-premium method is used; and for level coverage, the pro-rata method is generally used. The reporting entity shall select a method that reflects the pattern of insurance protection provided.

22. Policy reserves for credit A&H policies shall be based on a gross unearned premium reserve using either the pro rata, Rule of 78's, or actuarial methods. The actuarial reserve is the single premium for the debt's remaining term and amount. Most states require insurers to record a gross unearned premium reserve using the Rule of 78's method. In practice, a mean gross unearned premium reserve (average of the Rule of 78's and the pro rata methods) is often recorded. The reporting entity shall select a method that most closely reflects the pattern of insurance protection provided.

23. Recognizing net income in proportion to the amount of insurance protection provided is consistent with the recognition concept in the Statement of Concepts. The recognition concepts states, *"revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed."* Therefore, as the period that is protected expires, the underlying underwriting process is completed and the net income should be recognized.

Drafting Notes/Comments

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE (only pertinent excerpts are included below)

Statutory Accounting

24. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance with respect to credit life insurance policies:

> CHAPTER 10
> AGGREGATE RESERVES FOR LIFE AND ANNUITY CONTRACTS
>
> Life Insurance
>
> The fourth line of life insurance is credit. Credit insurance may be either individual or group. All life and all accident and health insurance that is sold in connection with loans or other credit transactions not exceeding a stated duration is to be reported as credit insurance.
>
> Types of Reserves
>
> Reserves for credit insurance to a great extent depend on the premium payment plan which may be either a single premium or a monthly premium based on the outstanding loan balance. If the premium is included as part of the finance charge, and included with the total principal and interest to be paid, it is single premium credit insurance. The single premium is remitted to the insurer at the time the loan is made. State regulations may prohibit remittance of a single premium on a monthly basis by a creditor.
>
> If the premium is collected monthly for the amount of indemnity, the indemnity generally is the outstanding balance type. Reserves for credit life insurance on which premiums are remitted monthly are, in most cases, pro rata unearned premium.
>
> Reserves for single premium credit life may be computed by any of several methods. One method is unearned premium reserves based on the refund formula, usually called Sum of the Digits method or the "Rule of 78's" method. The "Rule of 78's" method assumes that refunds may be made to all insureds. Another method of computation establishes reserves in accordance with the assumed risks. This assumes that refunds will be made as they are experienced in the normal course of business, but not necessarily for all policies. Based on this method, reserves for single premium credit life insurance are established using mortality factors.

25. The Life/A&H Accounting Practices and Procedures Manual provides the following guidance with respect to credit accident and health insurance policies:

> CHAPTER 13
> AGGREGATE RESERVES FOR ACCIDENT AND HEALTH POLICIES
>
> Credit Insurance
>
> Credit accident and health insurance is insurance on a debtor to provide indemnity for payments becoming due on a specific loan or other credit transaction while the debtor is disabled as defined in the policy. Credit policies are limited to issues of 120 months or less in most states. Some states limit such policies to 60 months.
>
> Credit accident and health insurance is sold as either individual or group coverage, and the reserves are included in the annual statement. Because of the significant growth in recent years of credit insurance coverages of 120 months or less are now reported as a separate line of business in the annual statement.
>
> The premium payment methods of credit insurance may be single premium or monthly premium on the outstanding balance. Outstanding balance rates, used only for group coverage, are determined by multiplying a monthly rate times the amount of outstanding insured indebtedness.

The premium so determined is remitted on each monthly due date to the insurer by the group creditor. Under single premium credit insurance, the premium rate is applied to the initial amount of insurance and generally is included in the debt. Creditors usually remit the single premium for each new insured once a month.

Although credit insurance may be written on an individual or a group basis, the major portion of credit insurance that is written today is group. The two types differ only in form, not in substance. Consequently, they are treated here as one, unless otherwise noted.

Legal Requirements for Reserves

The reserve for single premium credit accident and health insurance is the unearned premium. Three methods are used to calculate unearned premiums: pro rata, "Rule of 78's," and actuarial. The actuarial reserve is the single premium for the debt's remaining term and amount; it is the most accurate method. Pro rata allocates the single premium proportionately to the remaining term, while "Rule of 78's" does it by using the ratio of the sum of the digits for the remaining term of the sum of the digits for the initial term. The "Rule of 78's" may substantially underreserve relative to the actuarial reserve.

Quite a few states prescribe minimum reserve standards in their credit insurance regulations. Typically, the requirement for credit A & H is either the gross unearned premium, or the actuarial reserve, but not less than the gross unearned premium. On outstanding balance group credit insurance, the gross unearned premium is generally calculated using the methods described above for other group accident and health policies.

Most companies calculate unearned premium reserves for single premium credit accident and health insurance as average factors. On the actuarial basis, the factor is the average of the single premium rates for the remaining number of months and the remaining number of months less one month. Similarly, companies that use the "Rule of 78's" will apply an average of 78's factors. These factors are applied to the single premium and are a function of the original term of the insurance and the number of months remaining in that term. The factor used to compute the reserve will be the average of the "Rule of 78's" factor for the number of months remaining, and the 78's factor for one less than the number of months remaining. This half-month assumption in both methods assumes that debtors become insured uniformly throughout each month.

Generally Accepted Accounting Principles

26. FAS 60, as amended by FAS 120, provides the following guidance:

> 3. Premiums from short-duration insurance contracts, such as most property and liability insurance contracts, are intended to cover expected claim[1] costs resulting from insured events that occur during a fixed period of short duration. The insurance enterprise ordinarily has the ability to cancel the contract or to revise the premium at the beginning of each contract period to cover future insured events. Therefore, premiums from short-duration contracts ordinarily are earned and recognized as revenue evenly as insurance protection is provided.

[1] Terms defined in the glossary (Appendix A) are in boldface type the first time they appear in this Statement.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

General Principles

7. Insurance contracts, for purposes of this Statement, shall be classified as short-duration or long-duration contracts depending on whether the contracts are expected to remain in force[3] for an extended period. The factors that shall be considered in determining whether a particular contract can be expected to remain in force for an extended period are:

a. Short-duration contract. The contract provides insurance protection for a fixed period of short duration and enables the insurer to cancel the contract or to adjust the provisions of the contract at the end of any contract period, such as adjusting the amount of premiums charged or coverage provided.

b. Long-duration contract. The contract generally is not subject to unilateral changes in its provisions, such as a noncancelable or guaranteed renewable contract, and requires the performance of various functions and services (including insurance protection) for an extended period.

8. Examples of short-duration contracts include most property and liability insurance contracts and certain term life insurance contracts, such as credit life insurance. Examples of long-duration contracts include whole-life contracts, guaranteed renewable term life contracts, endowment contracts, annuity contracts, and title insurance contracts. Accident and health insurance contracts may be short-duration or long-duration depending on whether the contracts are expected to remain in force for an extended period. For example, individual and group insurance contracts that are noncancelable or guaranteed renewable (renewable at the option of the insured), or collectively renewable (individual contracts within a group are not cancelable), ordinarily are long-duration contracts.

9. Premiums from short-duration insurance contracts ordinarily shall be recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. A liability for unpaid claims (including estimates of costs for claims relating to insured events that have occurred but have not been reported to the insurer) and a liability for claim adjustment expenses shall be accrued when insured events occur.

Premium Revenue Recognition

Short-Duration Contracts

13. Premiums from short-duration contracts ordinarily shall be recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. For those few types of contracts for which the period of risk differs significantly from the contract period, premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided. That generally results in premiums being recognized as revenue evenly over the contract period (or the period of risk, if different), except for those few cases in which the amount of insurance protection declines according to a predetermined schedule.

[3] *In force* refers to the period of coverage, that is, the period during which the occurrence of insured events can result in liabilities of the insurance enterprise.

27. The AICPA Audit and Accounting Guide: Stock Life Insurance Companies provides the following guidance:

> Term Contracts
>
> 8.18 A wide variety of term insurance contracts are issued. The clearly predominant service provided by many such term contracts is protection. Examples of term contracts where the predominant service is protection, include credit life insurance and other types of single or limited payment contracts of a relatively short duration. Gross premium revenues on such contracts should be recognized in proportion to the amounts of insurance in force. Expressed otherwise, written premiums should be recognized as earned during each year that a policy is in force in proportion to the ratio of the amount of insurance in force each year to the total of the annual amounts in force over the life of the policy.
>
> 8.23 The accounting for accident and health insurance policies, which are expected to be in force for a reasonable period of time and for which elements of expense or benefit costs are not level, should follow the same principle of accounting as followed for whole-life insurance. Accordingly, premium revenues should be recognized over the premium-paying period. For other kinds of health insurance, gross premiums should be recognized as revenues on a pro rata basis over the period covered by the premium except in those cases of credit accident and health where the coverage decreases by passage of time. For the latter type contracts, gross premiums should be recognized as revenues over the stated period of the contract in reasonable relationship to the anticipated claims.

Statutory Issue Paper No. 65

Property and Casualty Contracts

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 65

Type of Issue:
Property and Casualty

SUMMARY OF ISSUE

1. Current statutory accounting for property and casualty insurance contracts is provided in Chapters 10, 11, 12, 14, 17 and 21 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices and Procedures Manual). Property and casualty insurers may issue contracts that have unique features or require specific accounting treatment. Policies may be issued on a claims made basis, certain claims may be of the nature that it may be appropriate to discount the liabilities established, or such that the claim can be satisfied by purchasing an annuity or similar type investment to fund claim payments. Title insurance is a property and casualty insurance contract that is unique and is therefore specifically addressed in *Issue Paper No. 57—Title Insurance*.

2. GAAP guidance is provided in *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60), *FASB Statement No. 113*, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113), *AICPA Audit and Accounting Guide: Property & Casualty Insurance Companies* (AICPA P&C Audit and Accounting Guide) and in *AICPA Statement of Position 94-5, Disclosures of Certain Matters in the Financial Statements of Insurance Enterprises* (SOP 94-5).

3. The purpose of this issue paper is to establish statutory accounting principles for property and casualty insurance contracts that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. In recent years insurers have begun offering policies with unique reporting features. Paragraphs 5 through 10 of this issue paper relate to policies commonly referred to as "claims made" policies. Property and casualty insurance contracts can be written to cover insured events on different reporting bases as follows:

a. Occurrence - These policies cover insured events that occur within the effective dates of the policy regardless of when they are reported to the insurer.

b. Claims Made - These policies cover insured events that are reported (as defined in the policy) within the effective dates of the policy subject to retroactive dates where applicable. Unlike an occurrence policy where a liability is recorded when the event occurs, a liability for a claims made policy shall be recorded when the event is reported to the insurer.

c. Extended Reporting - Endorsements to claims made policies covering insured events reported after the termination of a claims made contract but subject to the same retroactive dates where applicable. See paragraphs 7 and 8 for guidance for when premium shall be earned and losses shall be recorded.

Claims Made Policies

5. When an insured obtains claims made coverage they are normally replacing existing coverage. The existing coverage may have been a claims made policy or an occurrence policy. In either case, in an effort to reduce premium costs, the insured may request that the claims made coverage only cover claims reported within the effective dates of the policy that occur after a specified date. This specified date is referred to as the retroactive date of the claims made policy. This exclusion eliminates duplicate coverage when converting from occurrence coverage to claims made coverage.

6. The amount of the liability recorded for an insured event shall be determined in accordance with the provisions of paragraphs 6 through 12 of *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (Issue Paper No. 55).

7. Premiums shall be recognized in accordance with *Issue Paper No. 53—Property Casualty Contracts - Premiums* (Issue Paper No. 53) unless the policy contains tail coverage as discussed in the following paragraphs.

8. An insured may be provided an extended reporting option to allow extended reporting of events. The extended reporting feature is commonly referred to as "tail coverage." Extended reporting provisions provided on a claims made policy modify the exposure period of the underlying contract and can be for a defined period (e.g., six months, one year, five years, etc.) or can be for an indefinite period.

9. Issue Paper No. 53 states *"Premiums from property and casualty contracts shall be recognized in the statement of operations, as earned premium using either the daily pro-rata or monthly pro-rata methods...unless a different method is specified in issue papers for specific types of property and casualty contracts"*. Therefore, when extended reporting provisions for a defined period are provided to the holder of a claims made policy, the insurer shall establish an unearned premium reserve. This liability shall represent the amount of premium charged for the tail coverage that has not yet expired and shall be earned over the tail period regardless of when the tail coverage is elected. When the claims costs and loss adjustment expenses anticipated to be reported during the extended reporting period, together with expected dividends to policyholders and maintenance cost exceed the recorded unearned premium reserve for a claims made policy, a premium deficiency reserve shall be recognized in accordance with Issue Paper No. 53.

10. When extended reporting provisions are for an undefined or indefinite period the policy has effectively been converted to an occurrence type policy. In such instances the premiums shall be recognized in accordance with Issue Paper No. 53 over the basic coverage period and the insurer shall establish a liability for all insured events that have occurred through the end of the policy period whether or not they have been reported. In establishing such reserves the insurer shall follow the guidance prescribed in Issue Paper No. 55.

Discounting

11. With the exception of fixed and determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims, property and casualty loss reserves shall not be discounted.

12. Tabular reserves are indemnity reserves that are calculated using discounts determined with reference to actuarial tables which incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. This definition shall not include medical loss reserves or any loss adjustment expense reserves.

13. When establishing discounted loss reserve liabilities using a non-tabular method the liability shall be determined in accordance with *Actuarial Standard of Practice No. 20, Discounting of Property and Casualty Loss and Loss Adjustment Expense Reserves* (Actuarial Standard of Practice No. 20) but in no event shall the rate used exceed the lesser of the following two standards:

a. If the company's statutory invested assets are at least equal to the total of all policyholder reserves, the company's net rate of return on statutory invested assets, less 1.5%, otherwise, the company's average net portfolio yield rate less 1.5% as indicated by dividing the net investment income earned, as indicated by line 8 of the Underwriting and Investment Exhibit of the Annual Statement, by the average of the insurer's current and prior year total assets, as indicated on page 2 of the most currently filed annual financial statement; or

b. The current yield to maturity on a United States Treasury debt instrument with maturities consistent with the expected payout of the liabilities.

14. In accordance with *Issue Paper No. 3—Accounting Changes* (Issue Paper No. 3), a change in the discount rate used in discounting loss reserves shall be accounted for as a change in estimate. The provisions of Issue Paper No. 3 require changes in estimates to be included in the statement of operations in the period the change becomes known.

15. Insurers shall disclose the impact of discounting on the reserves for each line of business and reserve category, if any, the discount rate being utilized, and the tables used if applicable, as well as the impact of any change in the discount rate from the prior period. The disclosures required by paragraph 44 of this issue paper shall be made separately for tabular discounting and non-tabular discounting.

Structured Settlements

16. Structured settlements are periodic fixed payments to a claimant for a determinable period, or for life, for the settlement of a claim. Frequently a reporting entity will purchase an annuity to fund these future payments. Reporting entities may purchase an annuity in which the reporting entity is the owner and payee, or may purchase an annuity whereby the claimant is the payee. When annuities are purchased to fund periodic fixed payments they shall be accounted for as follows:

a. When the reporting entity is the owner and payee, no reduction shall be made to loss reserves and the annuity shall be recorded at its present value and accounted for as an other-than-invested asset as it meets the definition of an asset described in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*. Income from these annuities shall be treated as miscellaneous income. The present value of the annuity and the related amortization schedule shall be obtained from the issuing life insurance company at the time the annuity is purchased.

b. When a reporting entity has purchased an annuity and the claimant is the payee, the reporting shall reduce the loss reserve to the extent that the annuity provides for funding of future payments. The cost of these annuities shall be recorded as paid losses in such instances.

17. For each year that full financial statements are presented insurers shall disclose the following in accordance with paragraph 43 of this issue paper:

a. The amount of reserves no longer carried by the insurer because it has purchased annuities with the claimant as payee and the extent to which an insurer is contingently liable for such amounts should the issuers of the annuities fail to perform under the terms of the annuities.

b. The name, location and aggregate statement value of annuities due from any life insurer to the extent that the aggregate value of those annuities, equal or exceed 1% of the reporting entity's policyholders' surplus. This disclosure shall include all annuities for which the company has not obtained a release of liability from the claimant as a result of the purchase of an annuity. The company shall also disclose whether such life insurers are licensed in the company's state of domicile.

Excess Statutory Reserve

18. Current statutory guidance requires insurers to record an excess statutory reserve computed in accordance with the NAIC Annual Statement Instructions to Schedule P - Part 7. The types of insurance that currently are subject to the excess reserve are:

- auto liability
- other liability
- medical malpractice
- workers' compensation
- credit coverages

19. This issue paper eliminates the requirement to record excess statutory reserves. Excess statutory reserves do not meet the definition of a liability as set forth in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5) which states:

> For purposes of statutory accounting, a "liability" shall be defined as certain or probable[1] future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transaction(s) or event(s). A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable[1] future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes but is not limited to liabilities arising from policyholder obligations (e.g. policyholders benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a Company's financial statements when incurred.
>
> [1] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements* (CON 6), states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that *in FASB Statement 5, Accounting for Contingencies*, par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved...

Policies with Coverage Periods Equal to or in Excess of Thirteen Months

20. Some property and casualty insurance contracts are written for coverage periods that equal or exceed thirteen months. These contracts may be single premium or fixed premium policies. These contracts generally are not subject to cancellation or premium modification by the insurer. The most common types of coverages with such periods offered by insurers are home warranty and mechanical breakdown. Revenues are generally not received in proportion to the level of exposure or period of exposure. In order to recognize the economic results of the contract over the contract period, statutory accounting must focus on establishing a liability for the estimated future policy benefits while taking into account estimated future premiums to be received. Insurers that issue such policies shall report unearned premiums in accordance with paragraph 47 of this issue paper. This guidance is primarily focused on home warranty and mechanical breakdown coverages and is not intended to include multiple year contracts comprised of single year policies each of which have separate premiums and annual aggregate

deductibles. This issue paper rejects current statutory guidance for warranty insurance reserves found in Chapter 12, Unearned Premiums, of the P&C Accounting Practices and Procedures Manual.

High Deductible Plans

21. Recently insurers have begun offering certain coverages, particularly workers' compensation coverage, under high deductible plans. These types of plans are different than self insurance coupled with an excess of loss policy in that state laws generally require the insurer to fund the deductible and to periodically review the financial viability of the insured and make an assessment of the suitability of the deductible plan to the insured. Several issues surrounding these types of plans exist, including the recording of claims below the deductible limit and the recording of the reimbursement of the deductible to the insurer.

22. Reserves for claims arising under high deductible plans shall be established net of the deductible, however, no reserve credit shall be permitted for any claim where any amount due from the insured has been determined to be uncollectible. The insurer shall disclose in the notes to the financial statements the amount of reserve credit that has been recorded for high deductibles on unpaid claims and the amounts that have been billed and are recoverable on paid claims.

23. If the policy form requires the insurer to pay for all claims including those under the deductible limit the insurer is subject to credit risk, not underwriting risk. The reimbursement of the deductible shall be accrued and recorded as a reduction of paid losses simultaneously with the recording of the paid loss by the insurer. Amounts accrued for the reimbursement of the deductible shall be billed in accordance with the provisions of the policy and the billed amount shall be accounted for as an asset. Ten percent of deductible recoverable in excess of collateral specifically held and identifiable on a per policy basis, must be reported in the annual statement as a nonadmitted asset, however, to the extent that amounts in excess of the 10% are not anticipated to be collected they shall be nonadmitted.

Environmental Exposures

24. Environmental exposures are any loss or potential loss, including third party claims, related directly or indirectly to the remediation of a site arising from past operations or waste disposal. Examples of environmental exposures include but are not limited to chemical waste, hazardous waste treatment, storage, or disposal facilities, industrial waste disposal facilities, landfills, superfund sites, toxic waste pits, and underground storage tanks.

25. Insurers that are potentially exposed to asbestos or environmental claims shall provide the disclosures required by paragraph 46 of this issue paper. Reserves for asbestos and environmental exposures shall be recorded consistently with Issue Paper No. 55.

Policyholder Dividends

26. Dividends to policyholders become liabilities of the company immediately when they are declared by the board of directors and shall be recorded as a liability in the annual statement. Incurred policyholder dividends are reported in the Statement of Income.

DISCUSSION

Claims Made Policies

27. This issue paper requires the recognition of an unearned premium reserve for claims made policies with defined extended reporting provisions and an unpaid loss reserve for claims made policies with undefined extended reporting periods, whereas current statutory guidance permits that such liabilities be reported with unearned premiums or loss reserves for those losses that have been incurred but not reported regardless of the nature of the extended reporting feature. This issue paper also requires insurers to record a premium deficiency reserve in instances when claim and loss adjustment expenses anticipated during a defined extended reporting period, together with certain other costs as described in paragraph 9 exceed the unearned premium reserve. Eliminating the option to record these reserves as loss reserves

when there is a defined extended reporting period is consistent with the concept that under claims made reporting policies, no loss has been incurred until it has been reported to the insurer. This change was made to be consistent with Issue Paper No. 53 which requires premiums to be earned over the period of exposure. Requiring these reserves to be classified as losses when a claims made policy has effectively been converted to an occurrence policy through an undefined extended reporting period is consistent with Issue Paper No. 55.

Discounting

28. The statutory principles outlined in the conclusion above are consistent with current statutory guidance for property and casualty insurance contracts. It expands current statutory guidance to permit insurers to use a discount rate that can be supported by Actuarial Standard of Practice No. 20 when discounting indemnity reserves established for future cash payments that are both fixed and determinable. Current statutory guidance limits the discount rate to that permitted by the insurer's domiciliary state. This change was made for consistency with the Statement of Concepts which states:

> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.

29. FAS 60 states that the liability for unpaid clams shall be based on the ultimate cost of settling claims and also requires disclosure of amounts of reserves that are discounted as well as the range of discount rates used. No guidance is provided in FAS 60 with respect to the types of reserves that may be discounted. The Securities and Exchange Commission (SEC) permits discounting liabilities for unpaid loss and loss adjustment expenses at the same rates used for reporting to state regulatory authorities with respect to the same claim liabilities. Current practice under GAAP is to follow the SEC guidelines resulting in certain workers' compensation reserves and medical malpractice reserves being recorded at discounted amounts.

Structured Settlements

30. This paper adopts current statutory guidance for structured settlements. GAAP for structured settlements is found in FAS 113. FAS 113 is addressed in its entirety in *Issue Paper No. 75—Property and Casualty Reinsurance*. Statutory accounting and GAAP are consistent for the accounting of structured settlement annuities where the insurer is the owner and payee, and where the claimant is the owner and payee and the insurer has been released from its obligation. GAAP distinguishes those structured settlement annuities where the owner is the claimant and a legally enforceable release from the insurer's liability is obtained from those where the claimant is the owner and payee but the insurer has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the claimant is the owner and payee yet the insurer has not been released from its obligation. Structured settlement annuities are an established practice and the pricing of annuities purchased from non-affiliates is dictated by an effective market. As a result statutory accounting views these settlements as completed transactions and considers the earnings process complete, thereby allowing for immediate gain recognition.

Excess Statutory Reserves

31. This issue paper eliminates the requirement to record excess statutory reserves. Historically, the requirement to record excess statutory reserves was a useful method to assist regulators in monitoring insurers and helped provide a level of conservatism in the liabilities established for losses and loss adjustment expenses. Current statutes in most states now require audited financial statements as well as actuarial certifications of the reported liabilities for losses and loss adjustment expenses for property and

casualty insurers. Current disclosure requirements provide regulators with meaningful information with respect to insurer's reserving practices. Therefore the recording of an arbitrary reserve is no longer justified.

32. Excess statutory reserves do not meet the definition of a liability as set forth in Issue Paper No. 5. The conclusion reached in this issue paper is consistent with the Statement of Concepts which states:

> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies.

33. This conclusion is consistent with Issue Paper No. 55 which requires management of the insurer to record their best estimate of the liability for losses and loss adjustment expenses. GAAP does not require excess statutory reserves to be recorded and therefore the conclusions reached in this issue paper are consistent with GAAP.

Policies with Coverage Periods Equal to or in Excess of Thirteen Months

34. This issue paper adopts current statutory guidance for policies with coverage periods equal to or in excess of thirteen months and extends the guidance to cover warranty insurance reserves. This is consistent with GAAP which requires that premiums from contracts for which the period of risk differs significantly from the contract period be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided.

High Deductible Plans

35. Current statutory guidance for high deductible plans is limited and practice varies. Some insurers attempt to bifurcate the amounts collected into premiums for the risks above the deductible and an administrative fee for administering the claims below the deductible. This has the effect of eliminating a portion of premium taxes that would otherwise be paid. Some insurers report the claims under the deductible limit as losses while others do not, and some insurers report the deductible reimbursement as premium while others do not. This issue paper requires insurers to record as a reduction of paid losses, all amounts that represent contractual reimbursements to the insurer.

36. Treatment of claims below the deductible limit for high deductible plans as a reduction of paid losses of the insurer is consistent with the insurer having no underwriting risk associated with the deductibles. Although the existence of the deductible does not eliminate the insurer's obligation to pay the claim the accounting treatment afforded the deductible is similar to ceded reinsurance balances.

Environmental Exposures

37. This issue paper adopts current statutory guidance for environmental exposures. While GAAP does not specifically address environmental exposures the Securities and Exchange Commission has issued guidance for public companies that is consistent with the current statutory requirements.

Policyholder Dividends

38. This issue paper is consistent with current statutory guidance for policyholder dividends for property casualty insurers. GAAP, for the recognition of policyholder dividends, is to accrue an estimate for amounts that will be paid even though they have not yet been declared by the board of directors. The accounting in this issue paper is a departure from Issue Paper No. 5 and from GAAP. However, codifying current statutory accounting was deemed appropriate as there are no apparent solvency concerns as a result of current statutory accounting for policyholder dividends.

Disclosure

39. The disclosure requirements of this issue paper provide for disclosures in those circumstances where the accompanying exhibits are not part of the company's financial statements (e.g., annual audit report) and are not intended to provide duplicative presentation in the annual statement filings.

Drafting Notes/Comments

- Reinsurance is addressed in *Issue Paper No. 75—Property and Casualty Reinsurance*.
- Title insurance is addressed in *Issue Paper No. 57—Title Insurance*.
- Discounting is prohibited by Issue Paper No. 55 unless it is specifically provided for in a specific issue paper.
- Financial guaranty insurance is addressed in *Issue Paper No. 69—Financial Guaranty Insurance*.

RELEVANT STATUTORY AND GAAP GUIDANCE

Statutory Accounting

40. The P&C Accounting Practices and Procedures Manual, Chapter 10, Losses, provides the following guidance:

> Structured Settlements
>
> If the company has purchased annuities, of which the company is owner and payee, to fund future payments that are fixed or determinable by settlement provisions or by workings of statutes, the present value of such annuities shall be disclosed in the annual statement as assets under “Aggregate write-ins for other-than-invested assets.” Income from these annuities is to be reported as “Aggregate write-ins for miscellaneous income” on Page 4 of the annual statement. The company shall not treat such transactions as paid losses. If the company discounts the applicable loss reserve as a result of the purchase of such annuity, the appropriate discounting disclosure is required (see Loss Reserve Discounting below.)
>
> If the claimant is the payee, the company may treat such transactions as paid losses. Appropriate disclosure of the contingent liability for such amounts must be disclosed in Notes to the Financial Statements of the annual statement.
>
> Only if the company assigns the obligation to make periodic payments to a third party and obtains a full and complete release from the claimant, may the claim be treated as a paid claim without additional disclosure.
>
> Claims-Made Policies
>
> In recent years some companies have issued “claims-made” policies for some liability coverages. Under these policies, losses are recognized as they are reported to the company rather than as they occur. The annual statement instructions have some special provisions for reporting losses under these policies.
>
> These policies frequently have extended reporting period provisions. The IBNR reserve should include provision for claims which will be reported under the extended reporting period coverage.
>
> Loss Reserve Discounting
>
> Present value discounting of property and casualty loss reserves is not a generally accepted statutory accounting practice except as respects fixed and determinable payments such as those emanating from workers’ compensation tabular indemnity reserves (defined below) and long-term disability claims. In the event, however, that an insurer is authorized by its domiciliary state to discount its liability loss reserves, the insurer should complete annual statement Schedule P as required by the annual statement instructions. The insurer should also complete the annual statement Note — Discounting of Liabilities for Unpaid Losses or Unpaid Loss Adjustment Expenses as required by the annual statement instructions.
>
> Tabular reserves are indemnity reserves that are calculated using discounts determined with reference to actuarial tables which incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. This definition shall not include medical loss reserves or any loss adjustment expense reserves.

Statutory Reserve Computation — Schedule P

Minimum statutory reserve calculations are made for auto liability, other liability, medical malpractice, workers' compensation, and credit coverages. Except for credit, the statutory reserve amount is calculated by comparing total losses and loss expenses incurred to earned premiums. Required ratios are set forth in the annual statement instructions for Schedule P.

The statutory reserve for credit is computed in accordance with annual statement instructions.

If a statutory reserve is required, it is shown as a liability on the annual statement. The offsetting charge is to surplus.

41. The P&C Accounting Practices and Procedures Manual, Chapter 12, Unearned Premiums, provides the following guidance:

Claims Made Extended Reporting Coverage Options Relating to Death, Disability or Retirement

Some claims-made policies provide extended reporting coverage at no additional charge in the event of death, disability or retirement of a natural person insured. In such instance, a policy reserve is required to assure that amounts collected by insurers to pay for these benefits are not earned prematurely and that an insurer with an aging book of business will not show adverse operating results simply because an increasing portion of insureds is earning the benefits for which it has paid.

Insurers providing future benefits under this endorsement should include an incremental premium charge for this coverage. It is important that a proportion of each years premiums be set aside to fund this liability. The concept of level funding, applied to these grants of extended reporting coverage is that the indicated incremental premium should not vary because an insurer: is just starting to write this business and does not expect any extended reporting options to be claimed in the near future; or has provided this type of coverage for several years and continues to write new business; or has ceased writing substantial amounts of new business but continues to renew existing accounts, expecting to grant increasing amounts of extended reporting coverage options without additional premium. Periodically insurers should re-evaluate the actuarial assumptions underlying the level premium charge based on any relevant information available at that time.

The amount of the policy reserve, when combined with premium appropriate for an on-going book of business, including some charge for extended reporting coverage, should be adequate to pay for all future claims arising from these coverage features. These future claims include those covered by future grants of extended reporting coverage, without diminishing future profitability below normal expectations for on-going business. If the loss rates for providing this coverage to an aging population are low enough to indicate a negative reserve, then the policy reserve should be set at zero.

Reserve estimates will normally assume that a portion of the existing population of insureds will not continue with the same insurer until qualifying for the benefit and exercising the option. Funding should not anticipate vesting or cash values for individual insureds unless specifically provided by contract.

These additional factors should be considered in estimating the reserve:

1. Loss trends;
2. Time value of money;
3. Nonrenewal rates;
4. Age and tenure eligibility requirements in the contracts;
5. Age and tenure demographics of the insured population;
6. Mortality considerations;
7. Morbidity considerations;
8. Pricing differentials (if any) related to age of insured;

9. Expected claim costs in relation to age of the insured and the number of years until retirement;
10. Waivers (if any) of charges for specialty changes before retirement;
11. Partial benefits (if any) for termination by either the insured or the insurer prior to retirement; and
12. Other factors that impact the value of future benefits.

Insurers may want to use policy reserving techniques that incorporate elements of life actuarial models in addition to the standard property and casualty actuarial techniques in establishing this policy reserve. This reserve, entitled extended reporting endorsement policy reserve, is most appropriately classified as a component part of the unearned premium reserve and should be considered to run more than one year from the date of the policy. The amount of the policy reserve and the accounting/actuarial policies used in determining it should be disclosed in a footnote to the financial statements. When the policy reserve is reviewed or computed at the close of each accounting period, the change in the policy reserve will flow into the net underwriting gain or loss which will result in a better matching of income and expense over the accumulation period of the policy benefit. In addition, an IBNR loss reserve will be established for those insureds which have exercised the extended reporting coverage option.

This reserve may alternatively be considered a claims reserve and included with unpaid losses by an insurer which has obtained authorization to do so from the commissioner of the state of domicile.

Unearned Premiums - Annual Statement Reporting

The Underwriting and Investment Exhibit of the annual statement shows the development of the unearned premium reserve, by line of business, net of reinsurance premiums assumed and ceded. The exhibit displays unearned premiums for policies running one year or less and for policies running more than one year. In addition, the exhibit shows the unearned premium reserves associated with advance premiums and with rate credits and retrospective adjustments. Advance premiums result when policies have been processed, and the premium has been paid prior to the effective date. These advance premiums are considered to be fully unearned. This unearned premium reserve is reported in the Liabilities, Surplus and Other Funds Exhibit of the annual statement.

As an alternative, companies may accumulate advance premiums in a suspense account until the effective dates of these policies. In this case, companies must then report the amount of the suspense account as a separate liability, Advance Premiums, on Page 3 of the annual statement under aggregate write-ins for liabilities. Using this treatment, companies would not include advance premiums in either written premium or the unearned premium reserve.

Unearned Premium - Warranty Insurance Reserves

For purposes of this rule, warranty insurance is defined as insurance covering mechanical breakdown, service contract agreements or maintenance agreements. At any point before the expiration of the insurance contract or policy the company is required to establish a portion of the premium as a liability to cover the remaining policy term. The unearned premium reserve shall equal the gross premium (after proportional reinsurance) multiplied by the ratio of expected future losses and expenses from the unexpired term of the contract to the total expected losses and expenses under the contract.

42. The NAIC Annual Statement Instructions to Schedule P provide the following guidance with respect to calculating the excess of statutory reserves over statement reserves:

SCHEDULE P - INTERROGATORIES

(I) Computation of excess statutory reserves over statement reserves. A percentage minimum loss and loss expense ratio is determined which is then applied to the net earned premiums. The result is then compared to the net losses and loss expenses incurred to give the required excess statutory reserves. If the company has permission from its state of domicile to discount loss and loss expense reserves, the company should compute the excess of statutory reserves over statement reserves using its discounted loss and loss expense reserves rather than the undiscounted reserves. The computation is required only for Auto Liability (Private Passenger and Commercial), Other Liability (including Products Liability), Medical Malpractice, Workers' Compensation, and Credit.

If the company was not in existence for the full five years prior to the statement date, this calculation should be based on the years in which the company was in existence.

Private Passenger Auto Liability and Commercial Auto Liability must be combined before calculating the statutory percentage. Occurrence and claims-made coverages must be combined for Other Liability (including Products Liability) and Medical Malpractice, respectively, before calculating the statutory percentage.

(a) Other than Credit. The percentage to be used is based on the company's actual loss and expense ratios in the five years immediately prior to the most recent three, provided that at least three of the five years have at least $1 million in net earned premium. See Schedule P, Part 1, Column 4 for premiums and Column (30) for loss and expense ratios. Use the lowest ratio of losses and loss expenses incurred for these years using only years which have at least $1 million in net earned premium. If the lowest qualifying ratio is less than 60%, then use 60% (65% for Workers' Compensation). If the lowest qualifying ratio is more than 75%, then use 75%. If at least three of the five years do not have at least $1 million in net earned premium, use 60% (65% for Workers' Compensation). Round percentage to nearest tenth of one percent. Indicate percentage used. The same percentage should be used for the three most recent years. The excess statutory reserve over the statement reserve is this percentage times the earned premium in Column 4 less the incurred amount in Column 27 for the required years. If negative, enter zero. Do not include premiums and losses for non-proportional insurance shown in Parts IN, IO, IP, and 1Q.

(b) Credit. Use the following formula and carry the result over to the annual statement.

1. Net unpaid losses on policies expired prior to October 1, current year
2. Reserve for Losses on policies expired in October, November and December, current year:
   (a) Net Premiums written on such policies
   (b) 50% of (a)
   (c) Net losses paid under such policies
   (d) Difference (b)-(c)
   (e) Net losses unpaid under such policies
   (f) Difference (d)-(e), show zero if negative
3. Reserve for accrued losses on policies in Force December 31, current year:
   (a) Net Premiums earned under such policies
   (b) 50% of (a)
   (c) Net losses paid under such policies
   (d) Difference (b)-(c)
   (e) Net losses unpaid under such policies
   (f) Difference (d)-(e), show zero if negative
4. Excess of Statutory Reserve over Statement Reserves 2(f) + 3(f) (Carry result over to annual statement.)

43. The NAIC Annual Statement Instructions, Note 14, provide the following guidance with respect to disclosure of structured settlements:

14. Structured Settlements

a. Instruction:

If the company has purchased annuities, under which the company is owner and payee, to fund future payments that are fixed or determinable by settlement provisions or by workings of statutes, the present value of such annuities shall be disclosed as assets under “Aggregate write-ins for other-than-invested assets” on Page 2 of the annual statement. The present value of the annuities should be obtained from the issuing life insurance company at the time the annuity is purchased. At the same time, an amortization schedule should be obtained since annual adjustments to the annuity's carrying value are necessary. If the total value of all annuities due from one life insurer equals or exceeds I percent of the Company's policyholders' surplus, list: the life insurer's name and location (headquarters); whether the life insurer is licensed in the company's state of domicile (i.e., yes or no is the requested response); and the statement value (i.e., present value) of the annuity(ies). The requested information is illustrated below. In addition, show the aggregate amount (i.e.. present value) of annuities due from all life insurers.

Illustration:

Life Insurance Company and Location	Licensed in Company's State of Domicile Yes/No	Statement Value (i.e., Present Value) of Annuities

b. Instruction:

If the company has purchased annuities of which the claimant is payee but for which the company is contingently liable, the amount of such contingent liability shall be disclosed in the Notes to Financial Statements, Note #8. This contingent liability is the amount of the liability due to the various claimants that have been offset by the purchase of the annuity. This liability may be measured by the amortized value (i.e., the present value obtained from the life insurer) of the annuities offsetting the liabilities. If the total value (i.e., present value) of all annuities due from one life insurer equals or exceeds I percent of the company's policyholders' surplus, list the life insurer's name and location (headquarters) and the amount of the reserve eliminated when the annuity was purchased. Report the total amount of loss reserves eliminated by annuities. This reserve is measured by the amortized value of the annuities offsetting the reserve. The requested information is illustrated below. In addition, show the aggregate amount (i.e., the present value which is obtained from the life insurer) of annuities due from all life insurers.

Illustration:

Life Insurance Company and Location	Loss Reserves Eliminated by Annuities
i. Total	$

44. The NAIC Annual Statement Instructions, Note 19, provide the following guidance with respect to discounting:

19. Discounting of Liabilities for Unpaid Losses or Unpaid Loss Adjustment Expenses

Instruction:

State whether or not any of the liabilities for unpaid losses or unpaid loss adjustment expenses are discounted, including liabilities for Workers' Compensation. If the company is required to respond to this note in the affirmative for non-tabular discounting, it must also respond in the affirmative to Schedule P Interrogatory #5, and complete Columns 31 and 32 of Part 1, Part IA, etc., of Schedule P.

If the answer is in the affirmative, furnish the following information for each line of business affected:

a. If a tabular basis is used:
   1. Identify table used.
   2. Rate(s) used to discount.
   3. The amount of discounted liability carried in the annual statement.
   4. The amount of tabular discount, disclosed by line of business and reserve category (i.e., case and IBNR).

Definition of Tabular Reserves:

Tabular reserves by accident year are indemnity reserves that are calculated using discounts determined with reference to actuarial tables which incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. This definition shall not include medical loss reserves or any loss adjustment expense reserves.

b. If a non-tabular basis is used:
   1. Rate(s) used to discount and the basis for the rate(s) used.
   2. Amount of non-tabular discount disclosed by line of business and reserve category (i.e., case, IBNR, Allocated Loss Adjustment Expense and Unallocated Adjustment Expense).
   3. The amount of non-tabular discounted liability carried in the annual statement.

c. If the rate(s) used to discount prior accident years' liabilities have changed from the previous annual statement:
   1. Amount of discounted current liabilities at current rate(s) assumption(s). (Exclude the current accident year.)
   2. Amount of discounted current liabilities at previous rate(s) assumption (s). (Exclude the current accident year.)
   3. Change in discounted liability due to change in interest rate(s) assumptions.(l-2)
   4. Amount of non-tabular discount, disclosed by line of business and reserve category (i.e., case, IBNR, allocated loss adjustment expense and unallocated loss adjustment expense).

Illustration:
The Company discounts the liabilities for unpaid losses for Workers' Compensation and Medical Malpractice claims. The Company does not discount unpaid loss adjustment expenses.

Reserves for Workers' Compensation claims have been discounted on a tabular basis using the _________ Table at ___%. The December 31, 19XX and December 31, 19XX liabilities include $____________ and $_____________ of such discounted reserves, respectively. The amount of discount for case and IBNR reserves at December 31, 19XX is as follows:

	Tabular Discount Included in Schedule P	
Schedule P Lines of Business	Part I *	
	(1)	(2)
	Case	IBNR
(1) Homeowner/Farmowners		
(2) Private Passenger Auto Liability/Medical		
(3) Commercial Auto/Truck Liability/Medical		
(4) Workers' Compensation		
(5) Commercial Multiple Peril		
(6.1) Medical Malpractice - occurrence		
(6.2) Medical Malpractice - claims made		
(7) Special Liability		
(8.1) Other Liability - occurrence		
(8.2) Other Liability - claims made		
(9) Special Property		
(10) Auto Physical Damage		
(11) Fidelity, Surety		
(12) Other (including Credit, Accident & Health)		
(13) International		
(14) Reinsurance A		
(15) Reinsurance B		
(16) Reinsurance C		
(17) Reinsurance D		
(18.1) Products Liability - occurrence		
(18.2) Products Liability - claims made		
(19) Financial Guaranty/Mortgage Guaranty		
(20) Total		
* Must exclude medical loss reserves and all loss adjustment expense reserves		

Medical Malpractice unpaid losses have been discounted on a non tabular basis using rates of from ____% to ____%. The discount rates used are based upon ____________________. The amount of the discount as of December 31, 19XX and December 31, 19XX respectively is $ __________ and $ __________ for losses and $ __________ and $ __________ for loss adjustment expense. The amount of discount at December 31, 19XX for case, IBNR, allocated LAE and unallocated LAE is as follows:

B. Non-Tabular Discount

	Non-Tabular Discount *			
Schedule P Lines of Business	(1)	(2)	(3)	(4)
			Allocated	Unallocated
	Case	IBNR	LAE	LAE
(1) Homeowners/Farmowners				
(2) Private Passenger Auto Liability/Medical				
(3) Commercial Auto/Truck Liability/Medical				
(4) Workers' Compensation				
(5) Commercial Multiple Peril				
(6.1) Medical Malpractice - occurrence				

(6.2) Medical Malpractice - claims made				
(7) Special Liability				
(8.1) Other Liability - occurrence				
(8.2) Other Liability - claims made				
(9) Special Property				
(10) Auto Physical Damage				
(11) Fidelity, Surety				
(12) Other (including Credit, Accident & Health)				
(13) International				
(14) Reinsurance A				
(15) Reinsurance B				
(16) Reinsurance C				
(17) Reinsurance D				
(18.1) Products Liability - occurrence				
(18.2) Products Liability - claims made				
(19) Financial Guaranty/Mortgage Guaranty				
(20) Total				
* Should include medical loss reserves and all loss adjustment expense reserves, whether reported as tabular or non-tabular in Schedule P				

The rates used to discount Medical Malpractice unpaid losses at December 31, 19XX have changed from the rates used at December 31, 19XX. At December 31, 19XX, the amount of discounted Medical Malpractice unpaid losses, excluding the current accident year, is $ __________. Had these unpaid losses been discounted at the rates used at December 31, 19XX the amount of discounted liabilities would be $__________. The reduction in the discounted liability due to the change in rates is $__________.

This illustration neither regulates, permits, nor prohibits the practice of discounting liabilities for unpaid losses or unpaid loss adjustment expenses.

45. Chapter 21, Dividends to Policyholders, of the P&C Accounting Practices and Procedures Manual provides the following guidance with respect to policyholder dividends:

> Most state insurance statutes establish the conditions under which dividends may be declared and paid to the policyholder. In general, they provide that dividends to policyholders become liabilities of the company immediately when they are declared by the board of directors. The dividends may be paid only out of unassigned (earned) surplus, in accordance with the rates approved by the board of directors. No dividend may be declared or paid when the surplus of a company is less than the minimum original surplus that is required for the kind or kinds of business which the company is authorized to transact. Also, no dividend may be declared or paid when the payment would reduce the company's surplus below its required minimum. No dividend may be declared or paid that is contrary to any restriction contained in the company's articles of incorporation. Certain states have additional restrictions on declaration of dividends to policyholders.
>
> State statutes usually provide that a company's board of directors or trustees may declare dividends to its policyholders and, in so doing, may establish reasonable classifications or groupings of policyholders and reasonable plans for the distribution of such dividends. This may be done for each general kind and group or class of insurance, and may establish reasonable territorial divisions upon policies expiring during a fixed period.
>
> In establishing the liability for dividends declared and unpaid, the dividend scale approved by the board of directors is applied to all policies in the designated groups or classes.

> The amount of policyholder dividends declared and unpaid should be recorded as a liability in the annual statement. Incurred policyholder dividends are reported in the Statement of Income; the amount so reported includes the paid amount (typically recorded as paid in the ledger asset reconciliation) plus the amount accrued at the end of the year (the dividends declared and unpaid), less the amount accrued at the beginning of the year.

46. The NAIC Annual Statement Instructions, Note 24, provide the following guidance with respect to environmental disclosures:

> 24. Asbestos/Environmental (Mass Tort) Reserves
>
> Instruction:
>
> If the company is potentially exposed to asbestos and/or environmental claims (mass tort), full disclosure of the reserving methodology for both case and IBNR reserves is required. Disclosure of the amount paid and reserved for losses and LAE for asbestos and/or environmental claims, on a gross and net of reinsurance basis, is also required.
>
> Does the company have on the books or has it ever written an insured for which you have identified a potential for the existence of a liability due to asbestos and/or environmental losses? Yes ( ) No ( )I
>
> If yes, describe the lines of business written for which there is potential exposure, the nature of the exposure or exposures and the company's methodology for reserving for both reported and IBNR losses.
>
> If yes, complete the following information, separately for asbestos-related and environmental losses (including coverage dispute costs) for each of the five most current calendar years on both a gross and net of reinsurance basis (more detailed breakdowns are acceptable):
>
> Beginning reserves: $________
> Incurred losses and loss adjustment expenses: ________
> Calendar year payments for losses and loss adjustment expenses: ________
> Ending reserves: $
>
> If yes, complete the following, separately for asbestos-related and environmental reserves:
>
> Does the company hold reserves for unreported claims? Yes ( ) No ( )
>
> Does the company hold reserves for future allocated loss adjustment expenses (including coverage dispute cost)? Yes( ) No ( )
>
> Definition of Environmental Loss
>
> Any loss or potential loss (including third-party claims) related directly or indirectly to the remediation of a site arising from past operations or waste disposal.
>
> Examples of Environmental Exposure:
>
> Chemical Waste
> Hazardous Waste TSD Facilities (Treatment, Storage and/or Disposal)
> Industrial Waste Disposal Facilities
> Landfills
> Superfund
> Toxic Waste Pits
> Underground Storage Tanks

47. The Financial Condition (EX4) Subcommittee adopted the following guidance at the June 7, 1995 meeting of the Subcommittee. The guidance was adopted by the full membership of the NAIC at the September 11, 1995 Plenary Session.

> Unearned Premium Reserve - Single or Fixed Premium Policies with Coverage Periods in Excess of Thirteen Months
>
> This rule shall apply to all contracts or policies (contracts), excluding financial guaranty contracts, mortgage guaranty products, and surety contracts that fulfill both of the following conditions:
>
> 1. The policy or contract term is greater than or equal to 13 months.
>
> 2. The insurer can neither cancel the contract, nor increase the premium during the policy or contract term.
>
> At any valuation date prior to the expiration of the contracts, the company is required to establish an adequate premium reserve, to be reported as the unearned premium reserve for the contracts, on all appropriate annual statement lines and exhibits. Each of the following three tests shall be calculated, for all direct and assumed contracts, in the aggregate by policy year for each line of business with the gross premium reserve being equal to the greatest of the following calculations for each policy year for each line of business. Any reserve credit applicable for reinsurance ceded shall be appropriately reflected in the annual statement with the resulting net premium reserve being established by the company. For reporting net information on the NAIC financial reporting blank, the UPR shall be recalculated on a net basis, which may include appropriate statutory permitted credits for reinsurance, salvage and subrogation.
>
> 1. The best estimate of the amounts refundable to the contractholders at the valuation date.
>
> 2. The gross premium multiplied by the ratio of (a) over (b), where:
>
>   (a) equals the best estimate of future expected gross losses and expenses to be incurred during the unexpired term of the contracts; and
>
>   (b) equals the best estimate of the total expected gross losses and expenses under the contracts.
>
>   The future and total expected losses and expenses are to be re-estimated no less frequently than annually, and the most recent estimate of these expected losses is to be used in this test.
>
> 3. The amount of the present value of the future expected gross losses and expenses to be incurred during the unexpired term of the contracts, reduced by the present value of the future guaranteed gross premiums, if any. In the calculation of the present value:
>
>   (a) Discounting is only permitted for future expected losses and expenses, and not incurred but unpaid losses and expenses.
>
>   (b) Losses and expense provisions may be discounted from the expected date the loss or expense is incurred, not from the expected date of payment, unless such lines of business are permitted to be discounted by the state of domicile.
>
>   (c) The rate of interest used to calculate the present values shall be reviewed and changed as necessary at each valuation date determined as not to exceed the lesser of the following two standards.
>
>   (i) if the company’s statutory invested assets are at least equal to the total of all policyholder reserves, the company’s net rate of return on statutory invested assets, less 1.5%, otherwise, the company's average net

portfolio yield rate less 1.5% as indicated by dividing the net investment income earned, as indicated by line 8 of the Underwriting and Investment Exhibit of the NAIC Annual Statement, by the average of the insurer's current and prior year total assets, as indicated on page 2 of the most currently filed annual financial statement; or

(ii) the current yield to maturity on a United States Treasury debt instrument maturing in five (5) years as of the valuation date.

For the purposes of tests (2) and (3) above, "expenses" shall include all incurred and anticipated expenses related to the issuance and maintenance of the policy, including loss adjustment expenses, policy issuance and maintenance expenses, commissions, and premium taxes.

This unearned premium methodology will result in premium earning patterns which are inconsistent with the assumptions implicit with the excess of statutory reserves over statement reserve calculation. Therefore, contracts subject to this rule will not be required to be included in such Schedule P Interrogatories calculation.

This section shall immediately apply to all inforce and subsequent business. At the company's option, the impact of this rule with regard to the choice of the interest rate under section 3 may be uniformly phased in over a three year period. The amount phased in shall be limited to the difference between the amounts calculated by using the rate mandated by this rule and the rate actually used by the company for discounting as of 12/31/94, so long as the latter rate does not exceed the constant treasury maturity rate determined by using yields from treasury bills with durations which match the duration of the company's existing liabilities for the inforce which is affected by this rule.

Additionally, where this rule produces a higher reserve than the company would have established through the use of their previous methodology, the company may request a phase in period, of not to exceed three years, from it domiciliary Commissioner. Such phase in period shall only be permitted if the company is able to demonstrate to the satisfaction of the Commissioner that it would not be operating in a hazardous financial condition and that there is not adverse risk to its insureds.

Generally Accepted Accounting Principle

48. The AICPA P&C Audit Guide provides the following guidance:

Accounting Principles

3.29 The specialized industry accounting principles for insurance enterprises are specified in FASB Statement No. 60. The following is a brief discussion of the principles and policies relating to the premium cycle. Readers should refer to the FASB Statement for specific guidance. Most property and liability insurance contracts are classified as short-duration contracts, and this guide generally focuses on such contracts.

Revenue Recognition

3.30 Premiums from a short-duration contract ordinarily should be recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. This generally results in premiums being recognized as revenue evenly over the contract period. Under a few kinds of contracts, the period of risk differs significantly from the contract period. An example is insurance policies for recreational vehicles issued for an annual period, covering claims that are incurred primarily in the summer months. Under other kinds of contracts, the amount of coverage declines over the contract period on a scheduled basis. In those cases, the premium is recognized as revenue over the period of risk in proportion to the amount of insurance protection provided. Unearned premiums, that portion of the premium applicable to the unexpired period of the policy, are included as an unearned premium reserve within the company's balance sheet.

3.31 As discussed in FASB Statement No. 60, some premiums are subject to subsequent adjustment (for example, retrospectively rated or other experience-rated insurance contracts). In these cases, the premium is determined after the period of the contract and is based on claim experience, or reporting form contracts, for which the premium is adjusted after the period of the contract based on the value of insured property. If, as is usually the case, the ultimate premium is reasonably estimable, the estimated ultimate premium should be recognized as revenue over the period of the contract. It should be revised to reflect current experience. However, if the ultimate premium cannot be reasonably estimated, the cost-recovery method or the deposit method may be used until the ultimate premium becomes reasonably estimable. Under the cost-recovery method, premiums are recognized as revenue in amounts equal to estimated claims as insured events occur until the ultimate premium is reasonably estimable, and recognition of income is postponed until then. Under the deposit method, premiums are not recognized as revenue and claims are not charged to expense until the ultimate premium is reasonably estimable, and income recognition is postponed until that time.

The Loss Reserving and Claims Cycle

Accounting Practices

4.01 The specialized industry accounting principles for insurance enterprises are described in *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises, FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments, FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts*, and *SOP 92-5, Accounting for Foreign Property and Liability Reinsurance*.

4.02 Under GAAP, liabilities for the cost of unpaid claims, including estimates of the cost of claims incurred but not reported, are accrued when insured events occur. The liability for unpaid claims should be based on the estimated ultimate cost of settling the claims (that is, the total payments expected to be made) and should include the effects of inflation and other social and economic factors. Estimated recoveries on unpaid claims, such as salvage and subrogation are deducted from the liability for unpaid claims. A liability for those adjustment expenses expected to be incurred in the settlement of unpaid claims should be accrued when the related liability for unpaid claims is accrued. Changes in estimates of the liabilities resulting from their periodic review and differences between estimates and ultimate payments are reflected in the income of the period in which the estimates are changed or the claim is settled. If the liabilities for unpaid claims and claim-adjustment expenses are discounted (that is, the liabilities are not recorded at their ultimate cost because the time value of the money is token into consideration), the amount of the liabilities presented at present value in the financial statements and the range of interest rates used to discount those liabilities are required to be disclosed. For public companies, the SEC staff issued *Staff Accounting Bulletin No. 62, Discounting by Property/Casualty Insurance Companies*, which discusses the appropriate accounting and financial reporting when a company adopts or changes its policy with respect to discounting certain unpaid claims liabilities related to short-duration insurance contracts. The SEC issued *Financial Reporting Release No. 20, Rules and Guide for Disclosures Concerning Reserves for Unpaid Claims and Claim Adjustment Expenses of Property-Casualty Underwriters*, which requires additional disclosures concerning the underwriting and claims reserving experience of property-casualty underwriters. The SEC staff also issued *Staff Accounting Bulletin No. 87, Contingency Disclosures on Property/Casualty Insurance Reserves for Unpaid Claim Costs*, which provides guidance concerning those uncertainties surrounding property and casualty loss reserves that may require FASB Statement No. 5, Accounting for Contingencies, contingency disclosures and *Staff Accounting Bulletin No. 92, Accounting and Disclosures Relating to Loss Contingencies*, which provides the SEC staff's interpretation of current accounting literature relating to the following:

Offsetting of probable recoveries against probable contingent liabilities

Recognition of liabilities for costs apportioned to other potential responsible parties

Uncertainties in estimation of the extent of environmental or product liability

The appropriate discount rate for environmental or product liability, if discounting is appropriate

Accounting for exit costs
Financial statement disclosures and disclosure of certain information outside the basic financial statements

Salvage and Subrogation
4.30 After a claim has been settled, the possibility of salvage or subrogation may exist. Perhaps the simplest approach to determining the anticipated receivable is to estimate loss reserves using loss data that is net of salvage and subrogation recoveries. Many of the reserving methods for losses and loss adjustment expenses, however, can also be used to estimate salvage and subrogation recoveries.

Statutory Issue Paper No. 66

Accounting for Retrospectively Rated Contracts

STATUS
Finalized June 23, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 66

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. A retrospectively rated contract is one which has final policy premium calculated based on the loss experience of the insured or subscriber during the term of the policy (including developments after the term of the policy) and the stipulated formula set forth in the policy. The periodic adjustment involves either the payment of return premium to the insured or subscriber or payment of an additional premium by the insured or subscriber, or both, depending on experience. Retrospective rating features are common in certain property and casualty contracts, group life, and group accident and health contracts. Contracts with retrospective rating features are referred to as loss sensitive contracts.

2. Current statutory guidance for accounting for retrospectively rated contracts is contained in Chapter 12, Unearned Premiums, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P & C Accounting Practices and Procedures Manual) and Chapter 13, Aggregate Reserves for Accident and Health Policies, and Chapter 15, Liabilities Related to Policyholder Dividends, of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual) and the NAIC Annual Statement Instructions (Annual Statement Instructions). This guidance requires the recognition of a liability for return premium due to an insured or subscriber and an asset for additional premium due from an insured or subscriber under a retrospectively rated contract. Retrospective premiums reported as assets are subject to various requirements for asset admissibility.

3. GAAP guidance for accounting for retrospectively rated contracts is contained in *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60), and *FASB Emerging Issues Task Force Issue No. 93-14*, *Accounting for Multiple-Year Retrospectively Rated Insurance Contracts by Insurance Enterprises and Other Enterprises* (EITF 93-14). This guidance also requires the recognition of a liability for return premium due to an insured and an asset for additional premium due from an insured under a retrospectively rated insurance contract.

4. The purpose of this issue paper is to establish statutory accounting principles for retrospectively rated contracts that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This issue paper applies to property and casualty contracts, life insurance contracts and accident and health contracts. Retrospective reinsurance contracts are not within the scope of this issue paper, they are addressed in *Issue Paper No. 75—Property and Casualty Reinsurance*.

SUMMARY CONCLUSION

5. Amounts due from insureds and amounts due to insureds under retrospectively rated contracts meet the definition of assets and liabilities as set forth in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4) and *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5), respectively. Amounts due from insureds

and amounts due to insureds under retrospectively rated contracts are admitted assets to the extent they conform to the requirements of this issue paper.

6. Initial premiums shall be recognized in accordance with *Issue Paper No. 51—Life Contracts*, *Issue Paper No. 53—Property Casualty Contracts - Premiums* (Issue Paper No. 53) and *Issue Paper No. 54—Individual and Group Accident and Health Contracts*.

7. Because policy periods do not always correspond to reporting periods and because an insureds loss experience may not be known with certainty until some time after the policy period expires, retrospective premium adjustments shall be estimated based on the experience to date using one of the following methods:

a. Property and Casualty Contracts

i. Use of actuarially accepted methods in accordance with filed and approved retrospective rating plans. This includes but is not limited to the application of historical ratios of retrospective rated developments to earned standard premium to develop a ratio which is then applied to those policies for which no retrospective calculation has been recorded or for which no modification to the recorded calculation is needed. This method results in the calculation of one amount which is either a net asset or a net liability;

ii. Reviewing each individual retrospectively rated risk, comparing known loss development (including IBNR) with that anticipated in the policy contract to arrive at the best estimate of return or additional premium earned at that point in time. This method results in the calculation of an asset or a liability for each risk. The total of all receivables shall be recorded as an asset and the total of all return premiums shall be recorded as a liability.

b. Life and Accident & Health Contracts: Reporting entities offering group coverage have extensive underwriting procedures and complex individually negotiated benefits and contracts. Due to cost and reporting deadlines, these factors make it difficult to establish an exact valuation of retrospective premium. The method used to estimate the liability shall be reasonable based on the reporting entity's procedures, and consistent among reporting periods. Common methods include a mathematical approach using a complex algorithm of the reporting entity's underwriting rules and experience rating practices, and an aggregate or group approach.

8. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.

9. Retrospective premium adjustments are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Additional retrospective premiums and return retrospective premiums shall be recorded as follows:

a. Property And Casualty Insurers:

i. Accrued additional retrospective premiums shall be recorded as a receivable with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed;

ii. Accrued return retrospective premiums shall be recorded as a write-in liability with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed.

iii. Ceded retrospective premium balances payable shall be recorded as liabilities, consistent with *Issue Paper No. 75—Property and Casualty Reinsurance.* Ceded retrospective premiums recoverable shall be recorded as an asset. Consistent with *Issue Paper No. 76—Offsetting and Netting of Assets and Liabilities* (Issue Paper No. 76), ceded retrospective premium balances payable may be deducted from ceded retrospective premiums recoverable when a legal right of setoff exists.

b. Life and Accident & Health Insurers:

i. Accrued additional retrospective and other premiums shall be recorded as a write-in for other-than-invested assets, with a corresponding entry made to premiums;

ii. Accrued return retrospective and other premiums shall be recorded as a liability, Provision for experience rating refunds, with a corresponding entry to premiums.

10. The amount of accrued estimated retrospective premiums to be recorded as a nonadmitted asset for property and casualty insurers shall be determined as follows:

a. 100% of the amount recoverable from any person for whom any agents' balances or uncollected premiums are classified as nonadmitted, and item (b), plus item (c) or (d) below. Once an insurer has elected either (c) or (d) below, a change from one to the other requires approval from the insurer's domiciliary state and such change must be disclosed in the financial statements.

b. Retrospective premium adjustments shall be determined and billed or refunded in accordance with the policy provisions or contract provisions. If accrued additional retrospective premiums are not billed in accordance with the policy provisions or contract provisions, the accrual shall be nonadmitted.

c. 10% of any accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss adjustment expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as described in Appendix A-785. Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to applying collateral by account. If the insurer is unable to allocate amounts by account, no credit may be taken for collateral.

d. An amount calculated using the factors below for accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit.

Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to categorizing by Quality Rating.

Insured's Current Quality Rating*	Insured's Corporate Debit Equivalent to (S&P/Moody's)**	Percentage of Retro Premium to be Nonadmitted***
1	AAA, AA, A/Aaa, Aa, A	1%
2	BBB/Baa	2%
3	BB/Ba	5%
4	B/B	10%
5	CCC, CC, C/Caa, Ca	20%
6	CI, D/C, or insured in default on debt service payments, or insured's debt service payments are jeopardized upon filing of a bankruptcy petition	100%

* The Percentage of Retro Premium to be Nonadmitted is based upon the Insured's Current Quality Rating (i.e., if an insured's quality rating drops, the percentage relating to the lower quality rating is used in calculating the amount to be nonadmitted and vice versa).

** Insureds that do not have a debt rating issued by a publicly recognized rating agency are required to be rated by the NAIC's Securities Valuation Office (SVO).

*** In the event the insured has no debt rating (either from a publicly recognized rating agency or from the SVO) the insured's quality rating will be considered category 5 for purposes of this calculation (i.e., a factor of 20% shall be applied), unless the insurer is aware of conditions of the insured that would warrant a category 6 classification (i.e., a factor of 100%).

11. Once accrued retro premiums are billed, the due date is governed by *Issue Paper No. 6—Amounts Due From Agents and Brokers* (Issue Paper No. 6) (if premium is agency billed), or *Issue Paper No. 10—Uncollected Premium Balances* (Issue Paper No. 10) (if premium is direct billed). Life and accident & health insurers shall nonadmit any accrued retrospective premium that is more than 90 days due. If a reporting entity has more than one policy with the same insured, retrospective balances shall be netted in accordance with Issue Paper No. 76.

12. If, in accordance with Issue Paper No. 5, it is probable that the additional retrospective and other premium is uncollectible, any uncollectible additional retrospective and other premium shall be written off against operations in the period the determination is made. If it is reasonably possible a portion of the balance in excess of the nonadmitted portion determined in accordance with paragraph 11 of this issue paper is not anticipated to be collected, the disclosure requirements outlined in Issue Paper No. 5 shall be made.

Disclosure

13. The financial statements shall disclose the method used by the reporting entity to estimate retrospective and other premium adjustments. The amount of net premiums written that are subject to retrospective rating features and other adjustments, as well as the corresponding percentage to total net premiums written, shall be disclosed.

14. The financial statements shall disclose the calculation of nonadmitted retrospective premium. If a reporting entity chooses treatment described in paragraph 10.c. or 10.d., the appropriate exhibit must be included in the notes to financial statements in the Annual Statement. Once a reporting entity has elected either 10.c. or 10.d., a change from one to the other requires approval from the reporting entity's domiciliary state and such change must be disclosed in the financial statements.

DISCUSSION

15. This issue paper addresses premium adjustments for retrospectively rated contracts. Premium adjustments that have been billed are also addressed in Issue Paper No. 6 and Issue Paper No. 10. The statutory principles outlined in the conclusion above are consistent with the current statutory guidance for accounting for retrospectively rated contracts except as follows:

a. Paragraph 10 requires property and casualty entities to record accrued retrospective premium credits as an aggregate write in for other liabilities whereas current statutory provides for retrospective premium credits to be recorded with unearned premiums.

b. Paragraph 12 requires that any impairment of recorded additional retrospective premiums be charged against operations in the period in which the impairment is determined.

c. Paragraph 14 expands the disclosure requirements that are currently in place for property and casualty insurers to life and accident & health entities.

d. Paragraph 11 expands the requirement for accident and health entities to nonadmit any retrospective premium balances that are more than 90 days past due to life insurers.

These changes were made to be consistent with the approach reflected for earned but unbilled premiums (EBUB) in Issue Paper No. 53 and with the approach reflected in Issue Paper No. 5 which requires the recognition of a loss when an asset has been impaired.

16. The statutory principles outlined in the conclusion above are consistent with the guidance provided for accounting for retrospectively rated insurance contracts in FAS 60 and EITF 93-14 with the exception of the requirement to record certain amounts as nonadmitted. Although FAS 60 is rejected in *Issue Paper No. 50—Classifications and Definition of Insurance or Managed Care Contracts In Force* and EITF 93-14 is rejected in this issue paper since it applies only to multiple-year retrospectively rated contracts, it is considered appropriate that the accounting for retrospectively rated contracts be consistent with those provisions of both FAS 60 and EITF 93-14 as they are consistent with the Statement of Concepts.

17. The statutory accounting principles outlined in the conclusion above are consistent with the recognition concept in the Statement of Concepts of which a pertinent excerpt follows:

> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on

> the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

18. Based on the above concept, accrued retrospective premium balances should reflect only amounts that are available to meet both current and future policyholder obligations. Therefore, amounts determined to be impaired should be charged to income in the period such determination is made. In addition, premium taxes and commissions relating to the accrued retrospective premium should be recorded. The adoption of this methodology will more appropriately provide the statutory financial statement reader with an indication of those assets available to meet policyholder obligations.

19. The statutory accounting principles outlined in the conclusion above are consistent with the conservatism concept in the Statement of Concepts of which a pertinent excerpt follows:

> Conservatism
>
> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.

Drafting Notes/Comments

- Earned but unbilled premiums are addressed in *Issue Paper No. 53—Property Casualty Contracts Premiums*.
- Retrospectively rated reinsurance contracts are addressed in *Issue Paper No. 75—Property and Casualty Reinsurance*.
- The definition of loss sensitive contracts included herein includes all contracts with retrospective rating features. The instructions to Schedule P - Part 7 require reporting for loss sensitive contracts subject to very specific percentage changes in premiums based on loss experience.
- Premium adjustments that have been billed are further discussed in *Issue Paper No. 6—Amounts Due from Agents and Brokers* and *Issue Paper No. 10—Uncollected Premium Balances*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

20. The P & C Accounting Practices and Procedures Manual, Chapter 7, Agents' Balances or Uncollected Premiums*,* provides the following guidance regarding recording accrued retrospective premiums net of ceded reinsurance:

> The annual statement blank requires the following separation: (1) premiums and agents' balances in course of collection (i.e., premiums both booked and billed), less ceded reinsurance balances payable; (2) premium, agents' balances and installments booked but deferred and not yet due (e.g., premiums which have been booked but are not yet billed), less ceded reinsurance balances payable; (3) accrued retrospective premiums (i.e., accrued retrospective premiums which have not been booked or billed), less ceded retrospective rated balances payable.

21. The P & C Accounting Practices and Procedures Manual, Chapter 9, Nonadmitted Assets*,* point 5, lists examples of nonadmitted assets:

> Accrued retrospective premiums from whom any agents' balances or uncollected premiums are classified as nonadmitted.

22. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies, Notes and Miscellaneous, Instructions and Illustrations of How to Report Information in the Notes to Financial Statements*,* page 101, provide the following instructions:

Instruction:

Describe the basis used to determine the amount of accrued retrospective premiums reported as admitted assets in Line 9.3.

23. The P & C Accounting Practices and Procedures Manual, Chapter 12, Unearned Premiums*,* states the methodology that shall be used in determining the unearned premium reserve adjustment relating to accrued retrospective contracts following:

Retrospective Rated Policies

Retrospectively rated policies have a final premium calculated on the experience of the insured during the term of the policy (including developments after the term of the policy) and the stipulated formula set forth in the policy. The adjustment involves either the payment of a return premium to the insured or the payment of an additional premium by the insured.

Recognizing the need for reserve provisions to account for these potential additional or return premiums, provision has been made in the Underwriting and Investment Exhibit of the annual statement for the recording of a special unearned premium reserve fund by line of business called “Reserve for Rate Credits and Retrospective Adjustments Based on Experience.” Such amounts should be calculated using actuarially acceptable methods in accordance with filed and approved retrospective rating plans. Accrued net additional retrospective premiums are reported as assets and subject to collateralization requirements for asset admissibility.

Two methods are commonly employed by insurance companies in computing this unearned premium reserve. The first method is to build up for each line by policy year, a historical record of the ratio of retrospective rated developments to earned standard premium. The ratio is applied to the earned standard premium of those policies for which no retrospective calculation has yet been recorded, producing the indicated unearned premium. A second method is to review each individual retrospectively-rated risk, comparing known loss developments with those anticipated in the policy contract to arrive at the best estimate of return or additional premium due at that point in time.

24. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies, Underwriting and Investment Exhibit, Part 2A, Recapitulation of All Premiums*,* page 59, also sets forth the methodology for calculating and reporting for the reserve for accrued credits and retrospective premium:

The reserve for accrued credits and retrospective return premium adjustments based upon experience, Column 4, may be computed under one of two methods. The first method is to build up for each line by policy year, a historical record of the ratio of retrospective rated developments to earned standard premium. The ratio is then applied to the earned standard premium of those policies for which no retrospective calculation has yet been recorded, producing the indicated unearned premium. The second method is to review each individual retrospectively rated risk, comparing known-loss developments with those anticipated in the policy contract to arrive at the best estimate of return or additional premium due at that point in time. Include, as a negative amount in Column 4, the amount of net accrued retrospective debit adjustments only to the extent they are for incurred (paid and/or unpaid) losses, loss adjustment expenses and, if any, other underwriting expenses also included in the financial statement of the company.

25. The Annual Statement Instructions for Property and Casualty Insurance Companies, Exhibit 1, Analysis of Assets*,* provides additional guidance regarding admissibility:

Line 9.3 - Accrued Retrospective Premiums on Insurance Contracts

Include: Estimated additional direct premiums and assumed premiums accrued that will become due under prescribed terms from insureds or reinsureds under policies or reinsurance agreements containing retrospective rating formulas based on current or expired policies' experience, but not to exceed the limitations, if any, contained in such policies or reinsurance agreements. Net of reinsurance; plus reinsurance assumed fund balance minus reinsurance ceded balance

Exclude: Agents' balances or uncollected premium items (Line 9.1 and Line 9.2) and accrued rate credits

The amount reported in Column I must be zero and the amount reported in Column 2 must agree with the amount reported on Page 8, Part 2A, Line 33.

Include as non-admitted in Column 3, amounts for accrued retrospective premiums which represent:

a. 100% of the amount recoverable from any person for whom any agents' balances or uncollected premiums (Lines 9.1 or 9.2) are classified as non-admitted (Column 3), and item (b) or (c) below. Once an insurer has elected either (b) or (c) below, a change from one to the other requires approval from the insurer's domiciliary state and such change must be disclosed in Note #1 of Notes to Financial Statements.

b. 10% of any accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss adjustment expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (see notes to Schedule F) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as per Section 11 of the NAIC Credit for Reinsurance Model Regulation. Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to applying collateral by account. If the insurer is unable to allocate amounts by account, no credit may be taken for collateral.

c. An amount calculated using the factors below for accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (see notes to Schedule F) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as per Section 11 of the NAIC Credit for Reinsurance Model Regulation.

Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to categorizing by Quality Rating.

Insured's Current Quality Rating*	Insured's Corporate Debt Equivalent to (S&P/Moody's)**	Percentage of Retro Premium to be Nonadmitted***
1	AAA, AA, A/Aaa, Aa, A	1%
2	BBB/Baa	2%
3	BB/Ba	5%
4	B/B	10%
5	CCC, CC, C/Caa, Ca	20%
6	CI, D/C, or insured in default on debt service payments, or insured's debt service payments are jeopardized upon filing of a bankruptcy petition.	100%

* The Percentage of Retro Premium to be Nonadmitted is based upon the Current Quality Rating (i.e., if an insured's quality rating drops, the percentage relating to the lower quality rating is used in calculating the amount to be nonadmitted and vice versa).

** Insureds that do not have a debt rating issued by a publicly recognized rating agency are required to be rated by the NAIC's Securities Valuation Office SVO.

*** In the event the insured has no debt rating (either from a publicly recognized rating agency or from the SVO), the insured's quality rating will be considered category 5 for purposes of this calculation (i.e., a factor of 20% shall be applied), unless the insurer is aware of conditions of the insured that would warrant a category 6 classification (i.e., a factor of 100%).

If an insurer chooses item (b) or (c) above, the appropriate exhibit must be included in Note #18 of the Notes to Financial Statements of the annual statement to summarize the calculation of nonadmitted retrospective premium (see instructions to Notes to Financial Statements).

Include as nonadmitted in Column 3, amounts for accrued retrospective premiums on assumed business which represents 100% of the amount accrued (gross of ceded reinsurance) for any reinsured for which any agents' balances or uncollected premiums (Lines 9.1 or 9.2) are classified as nonadmitted (Column 3).

26. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies, Schedule P Part 7, Supplement for Loss Sensitive Contracts, page 221 requires the following disclosure:

General

1. Only the experience on contracts that meet the following definition should be included in Schedule P, Part 7. The experience on all other contracts should not be included.

   Loss sensitive contracts shall meet the following criteria:

   Contracts where an increase in losses on a policy can cause an increase in net payment (by the insured) for that policy.

   The amount of additional payment (by the insured) must be at least 75% (50% for reinsurance contracts) of the additional losses, before application of aggregate and per accident/claimant limits or caps.

   The net amount paid (by the insured) must also be able to differ by at least 20% (10% for reinsurance contracts), from highest to lowest possible charge in reaction to the loss experience.

> The maximum possible payment by the insured should also be at least 15% (7.5% for reinsurance contracts) above what the insured would pay based on expected loss experience. In other words, the maximum charge should not approximate the expected charge.
>
> The additional payment shall be in the form of additional premiums or additional commissions.
>
> The additional losses and corresponding payments must flow through the income and balance sheets and cannot be "off-balance sheet." For example, a deductible feature does not make a contract "loss sensitive" under this definition, as neither the losses under the deductible nor the reimbursements for these losses flow through the income statement.
>
> 2. In all development exhibits, only reported data as of year end 1993 and subsequent is required. Data for prior year ends is encouraged, but not required. For each year end, data for all issue years is required.
>
> 3. Schedule P, Part 7 is only required of insurers who claim a reduction in their Risk-Based Capital for Loss Sensitive Contracts. Such insurers must complete the entire schedule in each year that they claim such credit.
>
> 4. Schedule P, Part 7A provides experience on primary contracts. Schedule P, Part 7B provides experience on reinsurance contracts. The segregation should be consistent with the Risk-Based Capital formula.
>
> Current Year Loss and LAE Reserves and Net Written Premium
>
> 5. Column (2) of Parts 7A and 7B of Schedule P, when combined, should agree with the net loss and loss expense reserves (undiscounted) reported in the corresponding Part I of Schedule P. Column (3) should reflect the reserve for Loss Sensitive Contracts only.
>
> 6. Column (5) of Parts 7A and 7B of Schedule P, when combined, should agree with the net written premiums reported in the Underwriting and Investment Exhibit. Column (6) should reflect the corresponding premium for Loss Sensitive Contracts only.
>
> 7. Columns (4) and (7) are ratios of (3) to (2) and (6) to (5), respectively. Express as percentages showing one decimal place (e.g., 24.2%).

27. Chapter 13, Aggregate Reserves For Accident And Health Policies, of the Life/A&H Accounting Practices and Procedures Manual provides the following guidance on individual and group accident and health reserves:

> Reserve For Experience-Rating Refunds Or The Dividend Liability In Group Insurance Policies
>
> Some group insurance policyholders may receive partial or full retrospective premium credit for their policy-year experience. On the statutory financial statement date, a provision for the experience rated refund is established based on the experience of the policy year up to the statement date. This liability may include certain funds contributed by the policyholder as a premium stabilization fund. Since many policy years do not end at the statutory financial statement date, subsequent experience may cause the rate credit actually to be greater or less than the liability established on the statement date. For this reason, the rate credit liability becomes a very difficult liability to establish and an equally difficult liability to reconcile. Only for the very smallest of group insurance carriers is it possible to do an exact valuation of this liability based on the company underwriting rules and practices. Larger group insurers have massive texts of underwriting procedures, along with complex individually negotiated benefits and contracts. For reasons of economy and reporting deadlines, few companies can establish an “exact” valuation of this liability. Some companies use a certain approach, using a complex

algorithm of the company's underwriting rules and experience rating practices. Other companies use aggregate or grouping approaches. Regardless of the approach used, the liability must stand the test of reasonableness and consistency. No company should pay experience refunds unless its contracts provide for such payment.

The experience rating refund may be reported as a separate liability item or may be included as an active life reserve.

28. The Life/A&H Accounting Practices and Procedures Manual, Chapter 15, Liabilities Related to Policyholder Dividends*,* provides the following guidance with respect to experience rated contracts:

Experience Rating Refunds (Retrospective Rate Credits)

Nonparticipating group insurance and pension contracts may be subject to experience rating. Experience credits for a given group are usually developed by determining the excess, if any, of the premium and investment income earned with respect to the group over the corresponding benefits and expenses incurred with respect to the group and applying an appropriate credibility adjustment to that excess.

At specified dates, such as the contract anniversary or the end of the calendar year, the experience of the contract is calculated and the refund, if any, is paid. If the balance sheet date falls between the dates on which the refund is paid, the experience up to the balance sheet date is calculated and the appropriate liability is established.

Generally Accepted Accounting Principles

29. FAS 60, paragraph 14, states the following:

If premiums are subject to adjustment (for example, retrospectively rated or other experience rated insurance contracts for which the premium is determined after the period of the contract based on claim experience or reporting-form contracts for which the premium is adjusted after the period of the contract based on the value of insured property), premium revenue shall be recognized as follows:

a. If, as is usually the case, the ultimate premium is reasonably estimable, the estimated ultimate premium shall be recognized as revenue over the period of the contract. The estimated ultimate premium shall be revised to reflect current experience.

b. If the ultimate premium cannot be reasonably estimated, the cost of recovery method or the deposit method may be used until the ultimate premium becomes reasonably estimable.

30. FAS 60, paragraph 44, states the following:

Retrospective and Contingent Commission Arrangements

If retrospective commission or experience refund arrangements exist under experience-rated insurance contracts, a separate liability shall be accrued for those amounts, based on experience and the provisions of the contract. Income in any period shall not include any amounts that are expected to be paid to agents or others in the form of experience refunds or additional commissions. Contingent commissions receivable or payable shall be accrued over the period in which related income is recognized.

31. EITF 93-14, includes the following:

ISSUE

An enterprise (for example, a manufacturing concern, a retailer, a service entity, or a financial institution) enters into a multiple-year retrospectively rated contract with an insurance company.

That contract is similar to the type of contract discussed in Issue No. 93-6, "Accounting for Multiple-Year Retrospectively Rated Contracts by Ceding and Assuming Enterprises," and may cover various types of exposures such as product and environmental liability risks.

Those contracts include a "retrospective rating" provision that provides for at least one of the following based on contract experience: (1) changes in the amount or timing of future contractual cash flows, including premium adjustments, settlement adjustments, or refunds to the noninsurance enterprise, or (2) changes in the contract's future coverage. A critical feature of those contracts is that part or all of the retrospective rating provision is obligatory such that the retrospective rating provision creates for each party to the contract future rights and obligations as a result of past events. A retrospectively rated insurance contract that is not a multiple-year contract or that could be canceled by either party without further obligation is not covered by this Issue. Contracts used by enterprises in certain industries where risks are "pooled," like those discussed in paragraph 45 of Statement 5 and a reinsurance contract entered into by a captive insurer, are addressed by this Issue.

The issue is how a multiple-year retrospectively rated contract arising from an insurance transaction that is not a reinsurance contract should be accounted for.

EITF DISCUSSION

The Task Force reached a consensus that in order to be accounted for as insurance, an insurance contract must indemnify the insured as required by paragraph 44 of Statement 5. For those contracts that do not provide indemnification, the premium paid, less the amount of the premium to be retained by the insurer, should be accounted for as a deposit by the insured.

For a multiple-year retrospectively rated insurance contract accounted for as insurance, the Task Force reached a consensus that the insured should recognize a liability and the insurer should recognize an asset to the extent that the insured has an obligation to pay cash (or other consideration) to the insurer that would not have been required absent experience under the contract. The amount recognized in the current period should be computed, using a with-and-without method, as the difference between the insured's total contract costs before and after the experience under the contract as of the reporting date, including costs such as premium adjustments, settlement adjustments, and impairments of coverage. The amount of premium expense related to impairments of coverage should be measured in relation to the original contract terms. Future experience under the contract (that is, future losses and future premiums that would be paid regardless of past experience) should not be considered in measuring the amount to be recognized.

If the insured could terminate the contract prior to the end of its term and if termination would change the amounts paid (for example, if terminating the contract would cost less than continuing the contract in force), the liability resulting from the contract should be measured as follows:

1. If a decision to terminate has been made, the measurement should be based on an assumption of termination and on experience to date.

2. Otherwise, the measurement should be based on the lesser of the following:
   a. The total incremental amount that would be paid based on the with-and-without calculation assuming experience to date and assuming termination (that is, excluding the effects of future losses and future premiums that would have been paid regardless of experience to date).

   b. The total incremental amount that would be paid based on the with-and-without calculation assuming experience to date and assuming no termination (that is, excluding the effects of future losses and future premiums that would have been paid regardless of experience to date).

The insured should recognize an asset and the insurer should recognize a liability to the extent that any cash (or other consideration) would be payable by the insurer to the insured based on experience to date under the contract.

The insured and the insurer should account for changes in coverage in the same manner as changes in other contract costs. For example, the effects of decreases in coverage without a commensurate reduction in premium should be recognized as a loss by the insured and as a gain by the insurer when the event causing the decrease in coverage takes place.

The Task Force noted that deposit accounting cannot be used to avoid loss recognition that would otherwise be required (for example, if the insured has no future coverage relating to the deposit with the insurer and, therefore, the deposit is not recoverable).

The provisions of this consensus are effective as of November 18, 1993 and should be initially applied no later than the fourth quarter of 1993 for calendar-year enterprises in one of two ways:

1. By recognition of the net effect of applying the provisions at the beginning of an enterprise's current fiscal year as a cumulative effect of a change in accounting principle in accordance with paragraph 20 of Opinion 20. Under this approach, the disclosures required by paragraph 21 of Opinion 20 would be required as long as the income statement for the current fiscal year is presented. The provisions of Statement 3 apply to all interim periods presented.

2. By restatement of financial statements for all periods presented. The Task Force noted that the FASB Staff Views on Issue 93-6 that appear as Topic No. D-35 in Appendix D are useful guidance for applying this consensus.

STATUS

No further EITF discussion is planned.

Statutory Issue Paper No. 67

Depreciation of Property and Amortization of Leasehold Improvements

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 19

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance for accounting for the depreciation of property and the amortization of leasehold improvements is provided in Chapters 4 and 9 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices and Procedures Manual) and Chapter 4 of the Accounting Practices and Procedures Manual for Life, Accident, and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). This guidance requires:

a. The cost of directly owned property (except land), occupied by the company or held for investment, to be allocated to expense (depreciated) over the property's estimated useful life in a systematic and rational manner.

b. The cost of nonadmitted furniture and equipment (including EDP equipment) to either be fully expensed when purchased or depreciated over the property's estimated useful life.

c. The cost of leasehold improvements to be allocated to expense (amortized) over the term of the lease.

2. GAAP guidance for accounting for depreciation is provided in *Accounting Research Bulletin No. 43*, *Restatement and Revision of Accounting Research Bulletins* (ARB 43*),* Chapter 9, *Depreciation*, and *Accounting Principles Board Opinion No. 12*, *Omnibus Opinion - 1967* (APB 12*).* This guidance requires that the cost of depreciable assets, less salvage value (if any) be expensed over the estimated useful lives of the assets. GAAP guidance requires a leasehold improvement to be amortized over the remaining term of the lease or its estimated useful life, whichever is shorter.

3. The purpose of this issue paper is to establish statutory accounting principles for accounting for the depreciation of property and the amortization of leasehold improvements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

4. *Issue Paper No. 16—Electronic Data Processing Equipment and Software* (Issue Paper No. 16), *Issue Paper No. 19—Furniture, Fixtures and Equipment* (Issue Paper No. 19), *Issue Paper No. 31—Leasehold Improvements Paid by the Reporting Entity as Lessee* (Issue Paper No. 31), and *Issue Paper No. 40—Real Estate Investments* (Issue Paper No. 40) each require the depreciation of these assets against net income as their estimated economic benefit expires.

SUMMARY CONCLUSION

5. The acquisition cost of all depreciable assets, net of salvage, shall be allocated to expense over the estimated useful lives of the assets in a systematic and rational manner. The acquisition cost of a leasehold improvement shall be allocated to expense over the shorter of its estimated useful life or the

original lease term excluding options or renewal periods. For leasehold improvements capitalized subsequent to inception of the lease, the cost shall be allocated to expense over the shorter of its estimated useful life or the remaining original lease term excluding options or renewal periods. Amounts capitalized for leasehold improvements in periods subsequent to the original lease term (i.e., during renewal periods), are amortized utilizing the shorter of the estimated useful life of the asset or the remaining term of the renewal period. In accordance with the reporting entity's capitalization policy, immaterial amounts incurred relative to leasehold improvements, can be expensed when purchased.

6. For the purposes of this issue paper, depreciable assets include all tangible capital assets classified as either admitted or nonadmitted in accordance with *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4). Land shall not be considered a depreciable asset.

7. Depreciation and amortization expense shall be recorded in the statement of income in accordance with *Issue Paper No. 94—Allocation of Expenses* (Issue Paper No. 94).

8. A variety of systematic depreciation and amortization methods is available such as the straight-line method, the sum-of-the-years' digits method, and various declining balance methods. The depreciation or amortization method selected shall be that which most appropriately allocates the cost of the depreciable asset or leasehold improvement over its estimated useful life. The use of the sinking fund or constant yield method does not constitute acceptable statutory accounting practice.

9. Useful lives of depreciable assets and leasehold improvements can be obtained from contractors, appraisers, engineers, and manufacturers, or they may be based on prior experience. Estimates published by the Internal Revenue Service can be helpful in the selection of useful lives for specific assets.

10. The following disclosures shall be made in the financial statements or notes thereto:

a. Depreciation and amortization expense for the period.

b. A general description of the method or methods used in computing depreciation and amortization with respect to major classes of depreciable assets and leasehold improvements.

11. Changes in the estimated useful lives of depreciable assets or leasehold improvements from one period to another shall be considered a change in accounting estimate and shall be accounted for in accordance with *Issue Paper No. 3—Accounting Changes* (Issue Paper No. 3). Changes in depreciation or amortization methods from one period to another shall be considered a change in accounting principle and shall be accounted for in accordance with Issue Paper No. 3.

DISCUSSION

12. The statutory principles outlined in the conclusion above are consistent with current statutory guidance except as follows:

a. Paragraph 5 requires the acquisition cost of all depreciable nonadmitted assets to be allocated to expense over their estimated useful lives. Current guidance allows nonadmitted depreciable assets to either be expensed when purchased or depreciated.

b. Paragraph 5 requires a leasehold improvement to be amortized over the shorter of the remaining original term of the lease excluding renewal or option periods or its estimated useful life. Amounts capitalized subsequent to the original lease term (i.e., during a renewal period) are amortized over the shorter of the estimated useful life of the asset or the remaining renewal period. Current guidance requires amortization over the remaining term of the lease.

c. Paragraph 10 requires disclosures with respect to depreciable assets and depreciation and, leasehold improvements and amortization in the notes to the financial statements.

13. The statutory principles outlined in the conclusion above are consistent with the following issue papers:

a. Issue Paper No. 4 which requires that assets be depreciated or amortized against income as the economic benefit expires.

b. Issue Paper No. 16 which requires that the cost of electronic data processing equipment and software be depreciated against net income as the estimated economic benefit expires.

c. Issue Paper No. 19 which requires that the cost of furniture, fixtures and equipment be depreciated against net income as the estimated economic benefit expires.

d. Issue Paper No. 31 which requires that the cost of leasehold improvements be depreciated against net income as the estimated economic benefit expires.

e. Issue Paper No. 40 which requires that the cost of property included in real estate investment, other than land, be depreciated over the estimated useful life.

14. This issue paper rejects Chapter 9 of ARB 43 however, it is considered appropriate to use the concepts of depreciating assets discussed in the GAAP guidance, which requires that the acquisition cost less salvage value be recorded as an expense over the estimated useful life of the asset, as the basis for the statutory guidance codified in this issue paper. Additionally, this issue paper rejects APB 12 although the disclosures required by this issue paper are consistent with the disclosures required therein.

RELEVANT STATUTORY AND GAAP GUIDANCE

Statutory Accounting

15. The P&C Accounting Practices and Procedures Manual, Chapter 4, Real Estate, provides the following guidance:

> Depreciation and Amortization
>
> The cost of property, other than land, should be depreciated over its estimated useful life. Useful lives for buildings and improvements can best be obtained from contractors, appraisers, engineers, and manufacturers. Estimates published by the Internal Revenue Service can be helpful in the selection of useful lives for specific assets. Depreciable life may at times be fixed by contract, such as in a leasehold investment.
>
> A variety of depreciation methods is available, and a company should select the method that is most appropriate provided, however, that the method is both systematic and rational. Depreciation methods in use include the straight-line method and accelerated methods, such as sum-of-years' digits and various declining balance methods.
>
> Because real estate leasehold improvements revert to the lessor at the end of the lease, and the lessee receives benefits from the improvements only during the life of the lease, a leasehold improvement is subject to amortization over the lease life.

The Accounting Practices and Procedures Manual for Life, Accident, and Heath Insurance Companies provides identical guidance.

16. The Life/A&H Accounting Practices and Procedures Manual, Chapter 9, Nonadmitted Assets, provides the following guidance:

> Equipment, Furniture, and Supplies: The company may record furniture and equipment as a ledger asset, depreciate it, and nonadmit it in the exhibit of assets in the statutory financial statements, or the company may expense the furniture and equipment when it is purchased. Supplies are normally expensed when purchased.

17. Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force minutes 90-4 provide the following guidance:

> The Working Group concluded that the use of the sinking fund or constant yield method does not constitute acceptable statutory accounting practice and that the practice should not be applied to new properties acquired in the future nor if the company changes its existing properties' method of depreciation. This conclusion would not impact those properties currently being depreciated using the constant yield method.

Generally Accepted Accounting Principles

18. Chapter 9, Section C of ARB 43, provides the following guidance:

> 5. The cost of a productive facility is one of the costs of the services it renders during its useful economic life. Generally accepted accounting principles require that this cost be spread over the expected useful life of the facility in such a way as to allocate it as equitably as possible to the periods during which services are obtained from the use of the facility. This procedure is known as depreciation accounting, a system of accounting which aims to distribute the cost or other basic value of tangible capital assets, less salvage (if any), over the estimated useful life of the unit (which may be a group of assets) in a systematic and rational matter. It is a process of allocation, not of valuation.

19. *Accounting Principles Board Opinion No. 12*, *Omnibus Opinion - 1967,* provides the following guidance:

> DISCLOSURE OF DEPRECIABLE ASSETS AND DEPRECIATION
>
> 4. Disclosure of the total amount of depreciation expense entering into the determination of results of operations has become a general practice. The balances of major classes of depreciable assets are also generally disclosed. Practice varies, however, with respect to disclosure of the depreciation method or methods used.
>
> 5. Because of the significant effects on financial position and results of operations of the depreciation method or methods used, the following disclosures should be made in the financial statements or in notes thereto:
>
> a. Depreciation expense for the period,
>
> b. Balances of major classes of depreciable assets, by nature or function, at the balance-sheet date,
>
> c. Accumulated depreciation, either by major classes of depreciable assets or in total, at the balance-sheet date, and
>
> d. A general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets.

Statutory Issue Paper No. 68

Business Combinations and Goodwill

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 68

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance and GAAP differ in accounting for business combinations. Current statutory guidance requires that an investment in a subsidiary, controlled or affiliated entity (SCA) be recorded at historical net asset value of the entity acquired (statutory book value for acquired entities). The difference between the value of the consideration given and the statutory net asset value is considered to be goodwill and under current statutory guidance may be recorded as an admitted asset, subject to certain limitations. Amortization of goodwill is limited to 10 years. However, individual state insurance laws and regulations vary with respect to requirements for the treatment of goodwill. Currently some states allow the admission of goodwill within the limits imposed by the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* (SVO Purposes and Procedures), other states require goodwill to be nonadmitted.

2. Current statutory guidance does not specifically address the accounting for mergers, other than to require restatement of prior years for the effect of mergers. Current statutory practice is to account for mergers by combining or carrying forward the existing statutory amounts of assets, liabilities and related surplus accounts.

3. Under GAAP, business combinations are accounted for using either the pooling of interests method or the purchase method. GAAP has certain prerequisites which must be met for the pooling of interests method to be applied. This method accounts for a business combination as the uniting of the ownership interests of two or more companies by exchange of equity securities. No acquisition is recognized because the combination is accomplished without disbursing resources of the constituents. Therefore, the recorded assets and liabilities of the entities are carried forward at their historical amounts, and the income and expenses of the constituents for the prior periods are combined and retroactively restated.

4. Under GAAP, the purchase method of accounting is applied for business combinations which are not considered poolings of interests. Under the purchase method, the acquiring entity records the assets acquired and liabilities assumed at fair value. The difference between the cost of an acquired entity and the sum of the fair values of tangible and identifiable intangible assets (e.g., present value of future profits of a life entity) less the fair value of liabilities is recorded as goodwill. Amortization of goodwill is over the periods in which the acquiring entity benefits economically, not to exceed 40 years.

5. The purpose of this issue paper is to establish statutory accounting principles for business combinations that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). It addresses:

- Accounting for purchases of Subsidiary, Controlled and Affiliated (SCA) investments (defined in *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities* (Issue Paper No. 46)),

- Accounting for purchases of partnerships, joint ventures and limited liability companies (defined in *Issue Paper No. 48—Investments in Joint Ventures, Partnerships and Limited Liability Companies*),
- Accounting for goodwill and
- Accounting for mergers.

SUMMARY CONCLUSION

Business Combinations

6. A business combination shall be accounted for as either a statutory purchase or a statutory merger. Business combinations that create a parent, subsidiary relationship shall be accounted for as a statutory purchase. Business combinations where equity of one entity is issued in exchange for the equity of another entity, which is then canceled, and prospectively only one entity exists, shall be accounted for as a statutory merger.

Statutory Purchases of SCA Investments

7. The statutory purchase method of accounting is defined as accounting for a business combination as the acquisition of one entity by another. It shall be used for all purchases of SCA entities including partnerships, joint ventures and limited liability companies. The acquiring reporting entity shall record its investment at cost. Cost is defined as the sum of a) any cash payment, b) the fair value of other assets distributed, c) the fair value of any liabilities assumed and d) any direct costs of the acquisition. Goodwill is defined as the difference between the cost of acquiring the entity and the reporting entity's share of the book value of the acquired entity. When the cost of the acquired entity is greater than the reporting entity's share of the book value, positive goodwill exists. When the cost of the acquired entity is less than the reporting entity's share of the book value, negative goodwill exists. Goodwill resulting from assumption reinsurance shall be recorded as a separate write-in for other-than-invested assets. All other goodwill shall be reported in the carrying value of the investment. A business combination accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraph 7.b.iii. of Issue Paper No. 46 shall determine the amount of positive goodwill or negative goodwill created by the combination using the reporting entity's share of the GAAP net book value of the acquired entity. Business combinations accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraph 7.b.i. or 7.b.ii. of Issue Paper No. 46 shall determine the amount of positive or negative goodwill created by the business combination using the reporting entity's share of the statutory book value of the acquired entity.

8. Under the statutory purchase method the historical bases of the acquired entity shall continue to be used in preparing its statutory financial statements except in those instances provided for in paragraph 8b. of Issue Paper No. 46. Therefore, pushdown accounting is not permitted.

Positive Goodwill and Negative Goodwill

9. Positive goodwill recorded under the statutory purchase method of accounting shall be admitted subject to the following limitation: Positive goodwill from all sources, including life, accident and health, and deposit-type assumption reinsurance, is limited in the aggregate to 10% of the parent reporting entity's capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net positive goodwill, EDP equipment and operating system software, and net deferred tax assets. When negative goodwill exists it shall be recorded as a contra-asset. Positive or negative goodwill resulting from the purchase of a SCA shall be amortized to unrealized capital gains and losses on investments over the period in which the acquiring entity benefits economically, not to exceed 10 years. Positive or negative goodwill resulting from life, accident and health, and deposit-type assumption reinsurance shall be amortized to operations as a component of general insurance expenses over the period in which the assuming entity benefits economically, not to exceed 10 years. Goodwill shall be evaluated separately for each transaction.

Statutory Mergers

10. The statutory merger method of accounting is defined as accounting for a business combination in which the original investors in the investee receive equity of the reporting entity for their interest in the investee and only one entity survives. It shall be used for all business combinations accomplished by 1) issuing equity of a newly formed entity for the equity of the merging entities, 2) one entity issuing equity in exchange for the equity of another entity and immediately canceling the equity of that entity, or 3) the exchange of membership interest. Under the statutory merger method, no acquisition shall be recognized because the combination is accomplished without disbursing resources of the constituents. Ownership interest continues and the former statutory bases of accounting shall be retained. However, if one of the merged entities did not employ the statutory basis of accounting, the accounts shall be adjusted to the statutory bases with an offsetting adjustment to beginning surplus of the earliest period presented. The recorded assets, liabilities and related surplus accounts of the constituents shall be carried forward to the combined corporation at their recorded statutory amounts. The capital accounts of the entities shall be adjusted as necessary to reflect the appropriate par values of the capital stock of the new entity. Adjustments to the capital stock account shall be made to gross paid-in and contributed surplus, to the extent there is a balance in the account. Income of the combined entity shall include income of the constituents for the entire fiscal period in which the combination occurs and the balance sheet and the statement of operations for the two years presented shall be restated, as required by *Issue Paper No. 3—Accounting Changes*. Goodwill on the historical books of any merged entity that arose from a previous business combination involving the merged companies shall be charged or credited to surplus immediately.

Impairment

11. For any decline in the fair value of an entity, acquired through a purchase that is other than temporary, the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., nonadmitted goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary, shall be recorded as realized losses. This is consistent with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of* Assets (Issue Paper No. 5). An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment. A fair value of an investment that is below the carrying amount based on the statutory equity method or the existence of investee operating losses may indicate a loss in value, however, they are not necessarily indicative of a loss in value that is other than temporary.

Disclosures

12. For business combinations accounted for under the statutory purchase method the financial statements shall disclose the following for as long as unamortized goodwill is reported as a component of the investment:

a. The name and brief description of the acquired entity;

b. Method of accounting, that is the statutory purchase method;

c. Cost of the acquired entity and the amount of goodwill; and

d. The amount of amortization of goodwill recorded for the period.

13. For business combinations taking the form of a statutory merger the financial statements shall disclose:

a. The names and brief description of the combined entities;

b. Method of accounting, that is the statutory merger method;

c. Description of the shares of stock issued in the transaction;

d. Details of the results of operations of the previously separate companies for the period before the combination is consummated that are included in the current combined net income, including revenue, net income, and other changes in surplus; and

e. A description of any adjustments recorded directly to surplus for any entity that previously did not prepare statutory statements.

14. The financial statements shall disclose the following information regarding goodwill resulting from assumption reinsurance:

a. The name of the ceding entity;

b. The type of business assumed;

c. The cost of the acquired business and the amount of goodwill; and

d. The amount of amortization of goodwill recorded for the period.

15. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write-down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment; and

b. The amount of the impairment charged to realized capital gains and losses and how fair value was determined.

DISCUSSION

16. The statutory accounting principles described above reject *Accounting Principles Board Opinion No. 16*, *Business Combinations* (APB 16) and related interpretive pronouncements, *FASB Statement No. 38, Accounting for Preacquisition Contingencies of Purchased Enterprises, an amendment of APB Opinion No. 16* (FAS 38), and *Accounting Principles Board Opinion No. 17*, *Intangible Assets*, (APB 17) and related interpretive pronouncements by limiting the admitted value of an acquired entity. *FASB Statement No. 79*, *Elimination of Certain Disclosures for Business Combinations by Nonpublic Enterprises* (FAS 79) is rejected in this issue paper as the disclosures required by paragraphs 12 and 13 of this issue paper are the same for public and non-public entities. Interpretive literature that is rejected in this issue paper is included in the Relevant GAAP Literature section. This issue paper adopts *FASB Emerging Issues Task Force Issue No. 95-19*, *Determination of the Measurement Date for the Market Price of Securities Issued in a Purchase Business Combination.*

17. Paragraph 8 of this issue paper requires that the historical bases of an acquired entity be carried forward and therefore the allocation of the purchase price is not "pushed-down." Under GAAP, "push-down" accounting is not specifically promulgated but is suggested as appropriate by the SEC in certain circumstances as described in paragraph 30 below. Push-down accounting is often followed where the investor acquires 90% or more of the ownership interest in the investee. The statutory accounting principles described above reject push-down accounting. Current statutory guidance does not address "push-down" accounting.

18. The conclusions reached in this issue paper with respect to impairment are consistent with paragraph 12 of *FASB Statement No. 121*, *Accounting for the Impairment of Long-Lived Assets and for*

Long-Lived Assets to be Disposed Of (FAS 121) to the extent that it addresses impairment of goodwill. Paragraph 12 is therefore adopted. Paragraph 13 of FAS 121 is rejected as it addresses the distinction between continuous operations and discontinued operations. The concept of discontinued operations was rejected in *Issue Paper No. 24—Discontinued Operations and Extraordinary Items*. Paragraph 14 addresses disclosure requirements for impairments. Subparagraphs 14.a. and 14.b. are adopted. Subparagraph 14.c. is rejected as specific statutory reporting requirements have been addressed in the issue paper. Subparagraph 14.d. is rejected as it refers to business segments. FAS 121 is also addressed in *Issue Paper No. 40—Real Estate Investments*.

19. The statutory accounting principles described in the conclusion above are consistent with the current statutory guidance except as follows:

a. Current statutory guidance requires goodwill in excess of 10% of a reporting entity's statutory capital and surplus to be written off immediately as a direct charge to surplus. The statutory accounting principles above require all unamortized goodwill to be recorded as an asset and any amount in excess of 10% of statutory capital and surplus to be nonadmitted.

b. Current statutory guidance does not specifically address accounting for mergers.

c. Current statutory accounting does not address disclosure of impairments.

20. This change to current statutory referred to in subparagraph 19.a. of this issue paper was made in order to recognize that although regulatory limitations are placed on the admissibility of goodwill, it does represent an asset. Placing limitations on goodwill recognizes that in order to liquidate an investment where the insurer is a significant shareholder, full value of such investment may not be realized.

21. The statutory accounting principles outlined in the conclusion above are consistent with the conservatism and recognition concepts in the Statement of Concepts. Under the statutory purchase method described above, the historical bases of the acquired entity are used to value the investment. Goodwill attributable to an acquired entity is recorded as an asset, and treated as an admitted asset to the extent that, when added to existing recorded goodwill, it does not exceed 10% of the acquiring entity's capital and surplus. Admitting a portion of the goodwill recognizes that the acquired entity may be sold for fair value (which may include goodwill) to meet and fund policyholder obligations. This is consistent with *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*. Pertinent excerpts from the Statement of Concepts follow:

> Conservatism
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.
>
> Recognition
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

Drafting Notes/Comments

- Accounting for investments in SCAs after acquisition is addressed in Issue Paper No. 46 - Accounting for Investments in Subsidiary, Controlled and Affiliated Entities.
- Assumption reinsurance is addressed in *Issue Paper No. 74—Life, Deposit-Type and Accident and Health Reinsurance.*

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

22. The *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, Section 5. Procedures for Valuing Common Stocks and Stock Warrants provides the following guidance on valuation of acquired entities and goodwill under Section (B) Common Stocks of Subsidiary, Controlled or Affiliated Companies:

> (a) Subject to the requirements of Section 5 (B) (b), shares of common stock of an insurance or non-insurance company owned by an insurer, which insurer is either the parent of, or under direct or indirect common control, or affiliated with the issuer of such stock, shall have an Association Value determined on the basis of one of the following bases, provided, however, that such basis and the resultant value are reasonable and appropriate in the circumstances, and provided further that an insurer shall not be required to value the common stock of all its subsidiary, controlled and affiliated companies on the same basis. All of the following valuation bases shall be subject to an adjustment for any reciprocal shareholdings as required by Section 5 (B) (b) (x).
>
> (i) the value of only such of the assets of such company as would constitute lawful investments for the insurer if acquired or held directly by the insurer; or
>
> (ii) subject to the limitations imposed herein and under Section 5 (B) (b) (ix), hereunder, the shares of a non-insurance company may be valued on the basis of the net worth of such company determined in accordance with generally accepted accounting principles, as of the end of its most recent fiscal year, provided, subject to (b) hereof, that the financial statements of the company for its most recent fiscal year have been audited by an independent certified public accountant in accordance with generally accepted auditing standards (the common stock of an insurance company may not be valued under this section); or
>
> (If the common stock of a subsidiary, controlled or affiliated company is valued on the basis of generally accepted accounting principles in accordance with the provisions of this section, such value shall be adjusted to reflect the equity in net assets on a statutory basis with respect to the shares of any underlying insurance company subsidiaries and to reflect the market value appropriately discounted for any underlying company valued using option 5 (B) (a) (v)); or
>
> (iii) book value, defined as in Section 5 (A) (c), provided, however, that the common stock of a non-insurance company may not be valued on the basis of this subsection (iii); or
>
> (iv) subject to the limitations imposed under Section 5 (B) (b) (ix), hereunder, a value equal to the cost of the common stock of such company, provided such value is determined and adjusted to reflect subsequent operating results (1) in the case of insurance companies in accordance with statutory accounting requirements, and (2) for other than insurance companies from an independent certified public

accountant audited financial statement prepared in accordance with generally accepted accounting principles; or

(If the common stock of a subsidiary, controlled, or affiliated company is valued on the basis of generally accepted accounting principles in accordance with the provisions of this section the adjustment "to reflect subsequent operating results" shall include net changes in all the capital and surplus accounts on a statutory basis with respect to the shares of any underlying insurance company subsidiaries); or

(v) the market value of the common stock of the company, if the stock is listed on a national securities exchange or entered in the NASDAQ System (other securities traded over-the-counter will not be considered under this section); The share price will be discounted for legal restrictions requiring a registration before any sale may be made and the size and depth of the trading activity in relation to the publicly traded shares outstanding; or

(vi) See Section 3 (C) (2) for valuation of preferred stocks of wholly-owned subsidiaries of insurance companies.

(vii) In applying the provisions of this section to insurers organized in foreign countries, the provisions of Subsection (i) of this section will be applied (based on financial statements for the most recent fiscal year as prepared by an independent certified public accountant), except where special considerations indicate other treatment would be appropriate; or

(viii) any other value that the insurer can substantiate to the satisfaction of the SVO staff as being a reasonable value.

(b) (i) The provisions of Section 5 (B) shall in all cases be subject to the procedures prescribed by state insurance department practices or laws concerning the use of acquisition cost or any other basis for the valuation of common stocks of subsidiary, controlled or affiliated companies.

(ii) Not later than April 1 of each year, every insurer shall file with the SVO staff, on the appropriate form prescribed by the Valuation of Securities Task Force, (Task Force), relevant information identifying, supporting and justifying the value of, and the basis of valuation used in accordance with the provisions of Section 5(B)(a) for each of its subsidiary, controlled or affiliated companies reported upon in the Annual Statement for the preceding year.

(iii) Within thirty (30) days after the acquisition or formation of a subsidiary, controlled or affiliated company, every insurer shall file with the SVO staff, on the appropriated form prescribed by the Task Force, relevant information identifying, supporting and justifying the value of, and the basis of valuation used in accordance with the provisions of Section 5(B)(a) for such company.

(iv) A valuation basis used for a subsidiary, controlled or affiliated company shall thereafter be consistently applied unless a change is substantiated as reasonable and on that basis is approved in writing by the SVO staff.

(v) If a subsidiary, controlled or affiliated company is valued on the basis of Section 5 (B) (a) (ii) and its books are not audited at the time the valuation is included in the insurer's annual statement, the insurer shall thereafter report to the SVO staff and explain the difference, if any, between the value of such company as reported in the annual statement and the value as determined by audit. Such report and explanation shall be made as soon as possible following such audit.

(vi) If the common stock of any subsidiary, controlled or affiliated company is valued other than on the basis of market value as defined in Section 5 (B) (a) (v), there shall be deducted from the otherwise determined value a sum equal to the value claimed for any of its assets that would not constitute admitted assets for the insurer if held directly by the insurer, if such assets

(1) are held by the company but used, under a lease arrangement or otherwise, significantly in the conduct of the insurer's business; or

(2) were acquired from or purchased for the benefit or use of the insurer by the company under circumstances that, in the opinion of the SVO staff, support a finding that the primary purpose of such acquisition was the evasion or avoidance of state laws or regulations pertaining to non-admitted assets.

(vii) The SVO staff may require filings to be by the use of such forms as it prescribes and may requests such supplemental information as it deems desirable. The SVO staff shall utilize the information in such filings and supplemental information to make its determination as to the reasonableness and appropriateness of the valuation basis and the resultant value and shall notify the insurer and its state of domicile of such determination.

(viii) In making its determination as to the reasonableness and appropriateness of the valuation basis and the resultant value for each subsidiary, controlled or affiliated company, the SVO staff shall, among other relevant factors, take into account the following:

(1) the effect of subsidiary valuation on the solvency of the insurer (it being the intent hereof that doubt as to reasonableness shall be resolved by selection of a conservative valuation standard in those circumstances where the higher valuation would make an otherwise insolvent insurer appear solvent);

(2) if the valuation involves acquisition cost, the degree of affiliation between the insurer and the party from whom such company was acquired, the form of the consideration (cash, property, or the exchange of stock), evidence of ability to recover cost, and whether the acquisition price represented the result of arms-length dealing between economic equals; and,

(3) whether revaluation of assets is involved, and the reasonableness thereof.

(ix) With respect to values determined under Sections 5 (B) (a) (ii) and 5 (B) (a) (iv), amounts attributable to goodwill, as defined in (a) hereunder, and other intangibles shall not, except as provided in (b), hereunder, in the aggregate (of all direct and indirect subsidiaries), exceed, (either initially upon the acquisition of a subsidiary, or thereafter), 10% of the capital and surplus of an insurer, as reported in its next preceding Annual Statement. Such amounts shall, except as provided in (c) and (d), hereunder, be written off over a period not in excess of 10 years, commencing in all cases with the accounting period ending December 31, 1972. (For instructions as to the manner of write-off in certain cases, see (e) and (f), hereunder.)

(a) For the purposes of this section, "goodwill" shall be defined as the amount arising at a given point in time, resulting from an arms-length transaction involving the transfer of a business, representing the difference between the value of the consideration given and the net asset value of the properties acquired on the books of the predecessor company. With respect to insurance company subsidiaries "net asset value" shall mean statutory or annual statement book value. In addition any asset account representing the present value of future contractual or estimated revenue streams will also be deemed goodwill and subject to the limitations of this section.

(b) The limitation with respect to the permissible amount of goodwill shall not apply in the cases of subsidiaries acquired or under contract to be acquired on or prior to June 14, 1972.

(c) The write-off period for goodwill in the cases of subsidiaries described in (b), above, may, upon application to and approval by the Securities Valuation Office, be extended to not in excess of 20 years.

(d) Where warranted in exceptional cases, the Securities Valuation Office may require a more rapid write-off of goodwill than is otherwise provided in this section.

(e) In the cases of subsidiaries acquired or under contract to be acquired on or prior to June 14, 1972, an insurer may charge the write-off of goodwill to the common stock component of the Asset Valuation Reserve, where such a reserve exists.

(f) In the cases of subsidiaries acquired after June 14, 1972, amounts of goodwill in excess of 10% of an insurer's capital and surplus shall be written off immediately by a direct charge to surplus.

23. NAIC Annual Statement Instructions provide the following guidance on the restatement of prior year financial information presented after a merger occurs:

> Except in situations where a merger has occurred, amounts reported for assets, liabilities, surplus, revenues, and expenses for prior years in the current year's annual statement shall be identical to the amounts that were reported in the annual statement of the prior year. However, amounts reported in prior years may need to be adjusted in the current year as a result of the following:
>
> > Changes in accounting principles or practices or changes in the methods of applying accounting principles or practices.
> >
> > Changes in accounting estimates as a result of new events or new information.
> >
> > Corrections of errors in previously filed information.
> >
> > A merger.
>
> If changes are required for amounts reported in prior years, such changes should be included in the amounts reported for the current year and the effects of such changes should be reported as follows, unless these instructions or the NAIC Accounting Practices and Procedures manual for Life and Health specifically provide for a different treatment:
>
> (1) The cumulative effect of a change in accounting principles or practices or a change in the method of applying accounting principles or practices should be reported with an appropriate identifying title as a write-in item for gains and losses in surplus (Page 4, Line 46). The cumulative effect of changing to a new accounting principle is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods. An example of a

change in accounting principles would be a change in the method of accounting for pensions or other post-employment benefits.

(2) The effects of changes in accounting estimates are included in income and expenses in the Summary of Operations for the current year. For example, a change in estimate for reserves for accident and health claims related to prior years should be included in the Summary of Operations in disability benefits and benefits under accident and health policies (Page 4, Line 11) for the current year.

(3) The effects of changes resulting from corrections of errors in previously filed information (for example, mathematical mistakes, misapplication of accounting principles, or oversight or misuse of facts) should be reported as an adjustment to surplus in the current year. Such adjustments to surplus should be reported with an appropriate identifying title as a write-in item for gains and losses in surplus (Page 4, Line 46).

(4) In the case of a merger, prior year's amounts reported for assets, liabilities, surplus, revenues and expenses, as well as those amounts reflected in supporting Annual Statement schedules, should be reported on a merged basis consistent with the current year's post-merger reporting basis. A footnote should be inserted on each page of the Annual Statement which contains such merged amounts clearly detailing the circumstances.

24. Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force Issue No. 94-1 and 94-2 provide the following guidance:

> The working has been asked to consider whether it is acceptable statutory accounting practice for an insurer to continue to carry an asset for the unamortized goodwill arising from the acquisition of another insurer after the acquired insurer has been merged into the acquiring insurer (former parent)
>
> After considerable discussion, the working group reached a preliminary consensus that continuing to carry unamortized goodwill under such circumstances was not appropriate for statutory purpose and that the unamortized goodwill should have been charged to surplus at the time the acquired insurer was merged with the parent.
>
> After further discussion, the working group agreed to reaffirm the preliminary decision reached in March. In addition, they concluded that the issue of goodwill in general should be referred to the Codification of Statutory Accounting Principles Working Groups for the review of the appropriateness of goodwill for statutory purposes.

25. Individual state insurance laws and regulations vary with respect to requirements for the treatment of goodwill. Many states require goodwill to be nonadmitted. Certain states do allow the admission of goodwill but impose stringent limitations on the amount of goodwill that is considered an admitted asset.

Generally Accepted Accounting Principles

26. GAAP for business combinations is contained in APB 16 which was rejected in its entirety in this issue paper. Rather than repeat APB 16 in the Relevant GAAP Literature Section of this paper a summary of GAAP for Business Combinations from The Current Text - Section B50 - Business Combinations is provided.

B50 Summary

A business combination occurs when a corporation and one or more incorporated or unincorporated businesses are brought together into one accounting entity. The single entity carries on the activities of the previously separate, independent enterprises. The purchase method and the pooling-of-interests method are both acceptable in accounting for business combinations, although not as alternatives in accounting for the same business combination. This section provides that a business combination shall be accounted for as a pooling of interests if it meets certain specified criteria. Business combinations that do not meet all of the specified criteria shall be accounted for as purchases.

The criteria for the pooling method relate to the attributes of the combining enterprises before the combination, the manner of combining the enterprises, and the absence of certain planned transactions after the combination. The pooling-of-interests method accounts for a business combination as the uniting of the ownership interests of two or more companies by exchange of equity securities. No acquisition is recognized because the combination is accomplished without disbursing resources of the constituents. Ownership interests continue and the former bases of accounting shall be retained. The recorded assets and liabilities of the constituents shall be carried forward to the combined corporation at their recorded amounts. Income of the combined corporation shall include income of the constituents for the entire fiscal period in which the combination occurs. The reported income of the constituents for prior periods shall be combined and restated as income of the combined corporation.

The purchase method accounts for a business combination as the acquisition of one enterprise by another. The acquiring corporation shall record at its cost the acquired assets less liabilities assumed. A difference between the cost of an acquired enterprise and the sum of the fair values of tangible and identifiable intangible assets less liabilities assumed shall be recorded as goodwill. The reported income of an acquiring corporation shall include the operations of the acquired enterprise after acquisition, based on the cost to the acquiring corporation.

27. *Accounting Principles Board Opinion No. 17*, *Intangible Assets* (APB 17), addresses goodwill and amortization of intangible assets. APB 17 specifies that the amortization period should not exceed 40 years and the straight line method is appropriate unless a company demonstrates that another method is more appropriate. APB 17 also requires companies to perform a subsequent review of amortization to determine if changes should be made in the amortization period:

SUMMARY

1. An enterprise may acquire intangible assets from others or may develop them itself. Many kinds of intangible assets may be identified and given reasonably descriptive names, for example, patents, franchises, trademarks, and the like. Other types of intangible assets lack specific identifiability. Both identifiable and unidentifiable assets may be developed internally. Identifiable intangible assets may be acquired singly, as a part of a group of assets, or as part of an entire enterprise, but unidentifiable assets cannot be acquired singly. The excess of the cost of an acquired company over the sum of identifiable net assets, usually called goodwill, is the most common unidentifiable intangible asset.

2. Accounting for an intangible asset involves the same kinds of problems as accounting for other long-lived assets, namely, determining an initial carrying amount, accounting for that amount after acquisition under normal business conditions (amortization), and accounting for that amount if the value declines substantially and permanently. Solving the problems is complicated by the characteristics of an intangible asset: its lack of physical qualities makes evidence of its existence elusive, its value is often difficult to estimate, and its useful life may be indeterminable.

Conclusions

9. The Board concludes that a company should record as assets the costs of intangible assets acquired from others, including goodwill acquired in a business combination. A company should record as expenses the costs to develop intangible assets which are not specifically identifiable. The Board also concludes that the cost of each type of intangible asset should be amortized by systematic charges to income over the period estimated to be benefited. The period of amortization should not, however, exceed forty years.

28. *FASB Statement No. 38, Accounting for Preacquisition Contingencies of Purchased Enterprise an amendment of APB Opinion No. 16* (FAS 38), deals with preacquisition contingencies. Amounts that can be reasonably estimated that are considered probable are recorded as a part of the allocation of the purchase price. Subsequent adjustments are included in net income when the adjustments are determined except in limited circumstances.

Summary

This Statement specifies how an acquiring enterprise should account for contingencies of an acquired enterprise that were in existence at the purchase date and for subsequent adjustments that result from those contingencies. Amounts that can be reasonably estimated for contingencies that are considered probable are recorded as a part of the allocation of the purchase price. Subsequent adjustments are included in net income when the adjustments are determined except in limited circumstances described in this Statement.

29. *FASB Statement No. 79*, *Elimination of Certain Disclosures for Business Combinations by Nonpublic Enterprises* (FAS 79), amends APB 16 to eliminate the requirement for nonpublic enterprises to disclose pro forma results of operations for business combinations accounted for by the purchase method:

INTRODUCTION

1. The FASB has undertaken research on financial reporting by private and small public companies to obtain information about the practices and views of managers, financial statement users, and public accountants involved with those companies.[1] A number of participants in those research efforts stated that the requirement to disclose pro forma results of operations for business combinations accounted for by the purchase method was unnecessary and too costly for private companies.

[1] Refer to (a) FASB Invitation to Comment, Financial Reporting by Private and Small Public Companies, 1981; (b) FASB Special Report, Financial Reporting by Privately Owned Companies: Summary of Responses to FASB Invitation to Comment, 1983; and (c) FASB Research Report, Financial Reporting by Private Companies: Analysis and Diagnosis, prepared by A. Rashad Abdel-Khalik, 1983.

2. Paragraph 96 of *APB Opinion No. 16, Business Combinations*, requires an acquiring enterprise to disclose the following information in financial statements of the period in which a business combination accounted for by the purchase method occurs:

   a. Results of operations for the current period as though the enterprises had combined at the beginning of the period, unless the acquisition was at or near the beginning of the period.

   b. Results of operations for the immediately preceding period as though the enterprises had combined at the beginning of that period if comparative financial statements are presented.

> 3. The Board has concluded that the disclosures prescribed by paragraph 96 of Opinion 16 should not be required in the financial statements of nonpublic enterprises. The basis for the Board's conclusions is presented in the appendix to this Statement.
>
> STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING
>
> 4. Disclosures of pro forma results of operations prescribed in paragraph 96 of Opinion 16 for business combinations accounted for by the purchase method are not required for nonpublic enterprises.
>
> 5. For purposes of this Statement, a nonpublic enterprise is an enterprise other than one (a) whose debt or equity securities are traded in a public market, including those traded on a stock exchange or in the over-the-counter market (including securities quoted only locally or regionally), or (b) whose financial statements are filed with a regulatory agency in preparation for the sale of any class of securities.
>
> Amendment to APB Opinion No. 16
>
> 6. The following footnote is added to the end of paragraph 96 of Opinion 16:
>
> * The disclosures prescribed by paragraph 96 are not required in the financial statements of nonpublic enterprises as defined by *FASB Statement No. 79, Elimination of Certain Disclosures for Business Combinations by Nonpublic Enterprises*.
>
> Effective Date
>
> 7. This Statement shall be effective for financial statements for fiscal years beginning after December 15, 1983. Earlier application is permitted in financial statements that have not previously been issued.

30. GAAP literature is silent on push-down basis of accounting, although it was raised by the FASB in a 1976 Discussion Memorandum on business combinations. The FASB has included the issue of push down in the New Basis Accounting part of its Consolidations and Related Matters project. The SEC staff's views regarding the application of pushdown accounting are discussed Staff Accounting Bulletin Topic 5J. The staff believes that purchase transactions that result in an entity becoming substantially wholly owned, should establish a new basis of accounting for the purchased assets and liabilities which should be reflected in the acquired entity's separate financial statements. In circumstances where outside interest in the form of minority stockholders, or holders of public debt or preferred stock remain, the staff would encourage but generally not insist on the application of pushdown accounting.

31. *FASB Statement No 121*, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of,* provides the following guidance with respect to the impairment of goodwill.

> Goodwill
>
> 12. If an asset being tested for recoverability was acquired in a business combination accounted for using the purchase method, the goodwill that arose in that transaction shall be included as part of the asset grouping (paragraph 8) in determining recoverability. If some but not all of the assets acquired in that transaction are being tested, goodwill shall be allocated to the assets being tested for recoverability on a pro rata basis using the relative fair values of the long-lived assets and identifiable intangibles acquired at the acquisition date unless there is evidence to suggest that some other method of associating the goodwill with those assets is more appropriate. In instances where goodwill is identified with assets that are subject to an impairment loss, the carrying amount of the identified goodwill shall be eliminated before making any reduction of the carrying amounts of impaired long-lived assets and identifiable intangibles.

Reporting and Disclosure

13. An impairment loss for assets to be held and used shall be reported as a component of income from continuing operations before income taxes for entities presenting an income statement and in the statement of activities of a not-for-profit organization. Although there is no requirement to report a subtotal such as “income from operations,” entities that present such a subtotal must include the impairment loss in that subtotal.

14. An entity that recognizes an impairment loss shall disclose all of the following in financial statements that include the period of the impairment write-down:

a. A description of the impaired assets and the facts and circumstances leading to the impairment

b. The amount of the impairment loss and how fair value was determined

c. The caption in the income statement or the statement of activities in which the impairment loss is aggregated if that loss has not been presented as a separate caption or reported parenthetically on the face of the statement

d. If applicable, the business segment(s) affected.

32. *FASB Emerging Issues Task Force Issue No. 95-19*, *Determination of the Measurement Date for the Market Price of Securities Issued in a Purchase Business Combination* provides the following guidance.

ISSUE

Opinion 16 appears to include contradictory guidance about the date that should be used to value equity securities issued to effect a business combination accounted for using the purchase method. Paragraph 74 of Opinion 16 states that “the market price for a reasonable period before and after the date the terms of the acquisition are agreed to and announced should be considered in determining the fair value of securities issued.” On the other hand, paragraph 94 of Opinion 16 refers to determining the cost of an acquired company as of the date of acquisition, which is defined in paragraph 93 as, “ordinarily . . . the date assets are received and other assets are given or securities are issued.” This Issue addresses that apparent contradiction.

The interval between initiating and completing a business combination may involve an extended period of time. Although management of the companies involved may agree to and announce the terms of a business combination at the initiation date, internal or external contingencies, such as the need to obtain shareholder or regulatory approvals, may exist and prevent concurrent consummation of the combination. Because of the length of time that may be required to resolve those contingencies, the market price of the securities that are expected to be issued to effect a purchase business combination may fluctuate. As a result, the total cost of the acquired company assigned by the acquirer may vary significantly depending on the date that is used to value the securities that are issued.

The issue is what date should be used to value marketable equity securities issued to effect a business combination accounted for using the purchase method.

EITF DISCUSSION

The Task Force reached a consensus that the value of marketable equity securities issued to effect a purchase business combination should be determined, pursuant to the guidance in paragraph 74 of Opinion 16, based on the market price of the securities over a reasonable period of time before and after the two companies have reached agreement on the purchase price and the proposed transaction is announced. In other words, the date of measurement of the value of the marketable equity securities should not be influenced by the need to obtain shareholder or

> regulatory approvals. Task Force members observed that the reasonable period of time referred to in paragraph 74 of Opinion 16 is intended to be very short, such as a few days before and after the acquisition is agreed to and announced. Task Force members also observed that in transactions involving a hostile tender offer, the measurement date for the value of the marketable equity securities occurs when the proposed transaction is announced and sufficient shares have been tendered to make the offer binding or when the proposed acquisition becomes nonhostile, as evidenced by the target company's agreement to the purchase price.
>
> The Task Force also reached a consensus that if the purchase price (the number of shares or other consideration) is subsequently changed, a new measurement date for valuing the marketable equity securities that will be issued to effect the combination is established as of the date of the change. Task Force members observed that a change to the purchase price may result from further negotiations or from changes in the market price of the equity securities causing, perhaps pursuant to the initial agreement, a change in the security's exchange ratio or in a cash component of the purchase price.
>
> The Task Force reached a consensus that the consensuses described in this Issue should only be applied prospectively to purchase business combinations consummated after November 16, 1995.

OTHER SOURCES OF INFORMATION

33. The draft discussion material from previous Life codification project provides the following guidance on mergers in the Introduction section under Accounting for Assets Transferred Between Affiliates:

> A merger or consolidation of insurance companies under common control is to be recorded at book value. The combined surplus should not be enhanced or reduced as a result of the restructuring. A bulk reinsurance agreement of all the business where substantially all of the assets and substantially all of the liabilities are transferred in order to create a shell is to be considered a merger or consolidation for purposes of this section.

Statutory Issue Paper No. 69

Financial Guaranty Insurance

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 60

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Financial guaranty insurance provides protection against financial loss as a result of default, changes in interest rate levels, differentials in interest rate levels between markets or products, fluctuations in exchange rates between currencies, inconvertibility of one currency into another, inability to withdraw funds held in a foreign country resulting from restrictions imposed by a governmental body, changes in the value of specific assets or commodities, financial or commodity indices, or price levels in general. Financial guaranty insurance does not provide protection from losses which occur due to fortuitous physical events, failure or deficiency in the operation of equipment, or the inability to extract natural resources. Additionally, it does not provide coverage from losses related to various types of bonds (e.g., individual or schedule public official bond; a contract bond; a court bond), credit insurance, guaranteed investment contracts, and residual value insurance.

2. Current statutory guidance for financial guaranty insurance is provided in the Financial Guaranty Insurance Model Act. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies provides no guidance that is specific to financial guaranty insurance.

3. GAAP guidance for insurance contracts is provided by *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60), however, FAS 60 does not contain guidance that is specific to financial guaranty insurance contracts. Under GAAP, premiums are generally earned in proportion to the amortization of the insured principal over the term of each insured debt obligation.

4. The purpose of this issue paper is to establish statutory accounting principles for the recording and recognition of premium revenue and unpaid losses, losses, and loss adjustment expenses that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

Premium Revenue Recognition

5. Written premium shall be recorded in accordance with *Issue Paper No. 53—Property Casualty Contracts - Premiums.*

6. When premiums are paid on the installment basis, premium revenue shall be recognized in the statement of operations using the monthly pro-rata method. Premiums not paid on the installment basis shall be recognized in the statement of operations in proportion with the amount and expected coverage period of the insured risk.

7. When the anticipated losses, loss adjustment expenses, and maintenance cost exceed the recorded unearned premium reserve and contingency reserve, a premium deficiency reserve shall be recognized by recording an additional liability for the excess deficiency with a corresponding charge to operations.

Commission and other acquisition costs need not be considered in the premium deficiency analysis since they have previously been expensed. If an entity utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the notes to the financial statements.

Unpaid Losses and Loss Adjustment Expense Recognition

8. Unpaid losses and loss adjustment expenses shall be recognized in accordance with *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (Issue Paper No. 55). Each financial guaranty insurer shall establish and maintain reserves for unpaid losses and loss adjustment expenses. The initial date of default shall be considered the incident which gives rise to a claim. Such method shall be used to determine loss reserves, which shall include a reserve for claims reported and unpaid net of collateral. A deduction from loss reserves shall be allowed for the time value of money by application of a discount rate equal to the average rate of return on the admitted assets of the financial guaranty insurer as of the date of the computation of the reserve. The discount rate shall be adjusted at the end of each calendar year. In addition, a reserve component for incurred but not reported claims shall be reasonably estimated if deemed necessary by the financial guaranty insurer or required by the commissioner following an examination or actuarial analysis.

Contingency Reserve

9. In addition to the unearned premium reserve and the liability established for unpaid losses and loss adjustment expenses, financial guaranty insurers shall maintain a liability referred to as a statutory contingency reserve. The purpose of this reserve is to protect policyholders against loss during periods of extreme economic contraction.

10. The contingency reserve required shall be the greater of fifty percent of premiums written for each category or the amount provided by applying the following percentages to the principal guaranteed in each calendar year. The premiums written shall be net of reinsurance if the reinsurer has established a contingency reserve.

a.	Municipal obligation bonds	0.55 percent
b.	Special revenue bonds	0.85 percent
c.	Investment grade Industrial Development Bonds (IDBs) secured by collateral or having a term of seven years or less, and utility first mortgage obligations	1.00 percent
d.	Other investment grade IDBs	1.50 percent
e.	Other IDBs	2.50 percent
f.	Investment grade obligations, secured by collateral or having a term of seven years or less	1.00 percent
g.	Other investment grade obligations	1.50 percent
h.	Non-investment grade consumer debt obligations	2.00 percent
i.	Non-investment grade assetbacked securities	2.00 percent
j.	All other non-investment grade obligations	2.50 percent

11. Additions to the reserve for items a. through e. in paragraph 10 above shall be equal to the greater of one-eightieth of the amounts derived by applying the appropriate contribution specified above shall be made each quarter for a period of twenty (20) years. Additions to the reserve for items f through j. in paragraph 10 above shall be equal to the greater of one-sixtieth of the amounts derived by applying the appropriate contribution specified shall be made each quarter for a period of fifteen (15) years.

12. For contingency reserves required to maintained for 20 years, contributions may be discontinued if the total reserve established for all categories in subparagraphs 10 a. through 10 e. exceeds the sum of the percentages contained therein multiplied by the unpaid principal guaranteed. For contingency reserves required to maintained for 15 years, contributions may be discontinued if the total reserve established for

all categories in subparagraphs 10 f. through 10 j. exceeds the sum of the percentages contained therein multiplied by the unpaid principal guaranteed.

13. The contingency reserve may also be released in the following circumstances:

a. For contingency reserves required to be maintained for 20 years:

i. in any year in which actual incurred losses exceed 35% of the corresponding earned premiums, with commissioner approval;

ii. if the reserve has been in existence less than 40 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer's financial guarantees, with commissioner approval;

ii. if the reserve has been in existence more than 40 quarters, upon demonstration that the amount is excessive relation to the outstanding obligations under the insurer's financial guarantees, upon 30 days prior written notice to the commissioner.

b. For contingency reserves required to be maintained for 15 years:

i. in any year in which actual incurred losses exceed 65% of the corresponding earned premiums, with commissioner approval;

ii. if the reserve has been in existence less than 30 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer's financial guarantees, with commissioner approval;

iii. if the reserve has been in existence more than 30 quarters, upon demonstration that the amount is excessive relation to the outstanding obligations under the insurer's financial guarantees, upon 30 days prior written notice to the commissioner.

Any reductions shall be made on a first-in first-out basis. Changes in the reserve shall be recorded through surplus.

Disclosures

14. Financial guaranty insurers shall make all disclosures required by other issue papers within the codification, including but not limited to the requirements of Issue Paper No. 55 and *Issue Paper No. 77—Disclosures of Accounting Policies, Risks & Uncertainties, and Other Disclosures.*

DISCUSSION

15. This issue paper rejects current statutory guidance set forth in the Financial Guaranty Insurance Model Act. However, some of the circumstances that allow a reporting entity to reduce its contingency reserves in the model were adopted in this issue paper. One of these circumstances provide that the reduction is allowed if it is approved by the commissioner. Commissioner approval of a reserve reduction will only be considered as a viable means of reducing a reserve where the reporting entity can clearly demonstrate to the commissioner that the existing reserves are excessive. This issue paper is generally consistent with statutes adopted in New York with modifications to require an IBNR reserve in certain situations and recognition of a premium deficiency in certain instances as described in paragraph 7. The requirement to record a deficiency reserve was made for consistency with the requirements of Issue Paper No. 55. Additionally, this issue paper expands current statutory guidance by utilizing principal guaranteed to determine a maximum required contingency reserve.

16. The contingency reserve does not meet the definition of a liability which is set forth in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets.* However, it is consistent with the "*ultimate objective of solvency regulations*" as stated in the Statement of Concepts. This states,

> the ultimate objective of solvency regulation is to ensure that policyholder, contract holder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety.

Additionally, recording the contingency reserve as a liability is consistent with the Statement of Concepts which states:

> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., excess of statutory reserves over statement reserves, interest maintenance reserves, asset valuation reserves, and others).

17. This issue paper is inconsistent with GAAP in that GAAP requires all premiums to be recognized in the statement of operations in a manner consistent with the expiration of the insured risk. This issue paper requires installment billings to be recognized in operations using the monthly pro-rata method. FAS 60 was rejected in *Issue Paper No. 50—Definitions and Classifications of Insurance or Managed Care Contracts In Force*.

18. Discounting the liability established for unpaid claims, losses and loss adjustment expenses is consistent with *Issue Paper No. 65—Property Casualty Contracts* because the payments to be made for losses incurred with respect to insured events are generally fixed and determinable once the insured event has occurred.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

19. The Financial Guaranty Insurance Model Act provides the following guidance: (only pertinent excerpts are included)

> **Section 1. Definitions**
>
> A. As used in this article:
>
> (1) Financial guaranty insurance means a surety bond, insurance policy or, when issued by an insurer, an indemnity contract and any guaranty similar to the foregoing types, under which loss is payable upon proof of occurrence of financial loss to an insured claimant, obligee or indemnity as a result of any of the following events:
>
> (a) Failure of any obligor on any debt instrument or other monetary obligation (including common or preferred stock guarantied under a surety bond, insurance policy or indemnity contract) to pay when due principal, interest, premium, dividend or purchase price of or on the instrument or obligation, when the failure is the result of a financial default or insolvency, regardless of whether the obligation is incurred directly or as guarantor by or on behalf of another obligor that has also defaulted;
>
> (b) Changes in the levels of interest rates, whether short or long term, or the differential in interest rates between various markets or products;

(c) Changes in the rate of exchange of currency;

(d) Inconvertibility of one currency into another for any reason, or inability to withdraw funds held in a foreign country resulting from restrictions imposed by a governmental authority;

(e) Changes in the value of specific assets or commodities, financial or commodity indices, or price levels in general; or

(f) Other events which the commissioner determines are substantially similar to any of the foregoing.

(2) Notwithstanding Paragraph (1) of this subsection, financial guaranty insurance shall not include:

(a) Insurance of any loss resulting from any event described in Subsection A(1) of this section, if the loss is payable only upon the occurrence of any of the following, as specified in a surety bond, insurance policy or indemnity contract:

(i) A fortuitous physical event;

(ii) A failure of or deficiency in the operation of equipment; or

(iii) An inability to extract or recover a natural resource;

(b) An individual or schedule public official bond;

(c) A contract bond, including bid, payment or maintenance bond, or a performance bond where the bond is guarantying the execution of a contract other than a contract of indebtedness or other monetary obligation;

(d) A court bond required in connection with judicial, probate, bankruptcy or equity proceedings, including waiver, probate, open estate and life tenant bond;

(e) A bond running to the federal, state, county, municipal government or other political subdivision, as a condition precedent to granting of a license to engage in a particular business or of a permit to exercise a particular privilege;

(f) A loss security bond or utility payment indemnity bond running to a governmental unit, railroad or charitable organization;

(g) A lease, purchase and sale or concessionaire surety bond;

(h) Credit unemployment insurance, meaning insurance on a debtor in connection with a specific loan or other credit transaction, to provide payments to a creditor in the event of unemployment of the debtor for the installments or other periodic payments becoming due while a debtor is unemployed;

Drafting Note: Subparagraph (h) is to be used by states which do not authorize credit unemployment insurance as a separate line of business but do permit this line to be written.

(i) Credit insurance, meaning insurance indemnifying manufacturers, merchants or educational institutions extending credit against loss or damage resulting from nonpayment of debts owed to them for goods or services provided in the normal course of their business;

(j) Guaranteed investment contracts issued by life insurance companies which provide that the life insurer itself will make specified payments in exchange for specific premiums or contributions;

(k) Residual value insurance authorized by Section [insert section];

(l) Mortgage guaranty insurance authorized by Section [insert section];

(m) Indemnity contracts or similar guaranties, to the extent that they are not otherwise limited or proscribed by this chapter, in which a life insurer:

(i) Guaranties its obligations or indebtedness or the obligations or indebtedness of a subsidiary (as defined in Section [insert section]) other than a financial guaranty insurance corporation; provided that:

(I) To the extent that any such obligations or indebtedness are backed by specific assets, the assets must at all times be owned by the insurer or the subsidiary; and

(II) In the case of the guaranty of the obligations or indebtedness of the subsidiary that are not backed by specific assets of the life insurer, the guaranty terminates once the subsidiary ceases to be a subsidiary; or

(ii) Guaranties obligations or indebtedness (including the obligation to substitute assets where appropriate) with respect to specific assets acquired by a life insurer in the course of normal investment activities and not for the purpose of resale with credit enhancement, or guaranties obligations or indebtedness acquired by its subsidiary, provided that the assets acquired pursuant to this item (ii) have been:

(I) Acquired by a special purpose entity, whose sole purpose is to acquire specific assets of the life insurer or the subsidiary and issue securities or participation certificates backed by such assets; or

(II) Sold to an independent third party; or

(iii) Guaranties obligations or indebtedness of an employee or agent of the life insurer; or

(n) Any other form of insurance covering risks which the commissioner determines to be substantially similar to any of the foregoing.

Section 2. Organization; Financial Requirements

(A) A financial guaranty insurance corporation may be organized and licensed in the manner prescribed in Section [insert section], except as modified by the following provisions:

(1) A corporation organized for the purpose of transacting financial guaranty insurance may, subject to all the applicable provisions of this chapter, be licensed to transact the following additional kinds of insurance:

(a) Residual value insurance, as authorized by Section [insert section];

(b) Surety insurance, as authorized by Section [insert section]; and

(c) Credit insurance, as authorized by Section [insert section].

(2) A corporation may only assume those lines of insurance for which it is licensed to write direct business.

(3) Prior to the issuance of a license, a corporation shall submit for the approval of the commissioner a plan of operation detailing the types and projected diversification of guaranties that will be issued, the underwriting procedures that will be followed, managerial oversight methods, investment policies and such other matters as may be prescribed by the commissioner.

(4) A financial guaranty corporation shall be subject to all of the provisions of this chapter applicable to property and casualty insurers to the extent that the provisions are not inconsistent with the provisions of this Act.

(5) A financial guaranty insurance corporation's investments in any one entity insured by that corporation shall not exceed one percent of its admitted assets as of the end of the prior calendar year.

(B) A financial guaranty corporation shall not transact business unless:

(1) It has paid-in capital of at least $10 million and paid-in surplus of at least $40 million, and shall at all times thereafter maintain a minimum surplus to policyholders of $35 million;

(2) It establishes a contingency reserve, net of reinsurance, as follows:

(a) The contributions to the reserve shall be calculated by applying the following percentages to the net principal written each calendar year of guaranties of:

(i) Municipal obligation bonds, 0.8 percent;

(ii) Special revenue bonds, 1.2 percent;

(iii) Industrial development bonds, 1.6 percent;

(iv) Secured investment grade obligations, 1.6 percent;

(v) Investment grade obligations not secured, 2.5 percent; and

(vi) All other obligations guarantied, 3.0 percent.

(b) (i) Quarterly additions to the reserve for Items (i), (ii) and (iii) of Subparagraph (a) above shall be equal to the greater of one-eightieth of the amounts derived by applying the appropriate contribution specified in Subparagraph (a) or fifty percent (50%) of the quarterly earned premiums on such guaranties and shall be maintained for a period of twenty (20) years; and

(ii) Quarterly additions to the reserve for Items (iv), (v) and (vi) of Subparagraph (a) above shall be equal to the greater of one-fortieth of the amounts derived by applying the appropriate contribution specified in Subparagraph (a) or fifty percent (50%) of the quarterly earned premiums on such guaranties and shall be maintained for a period of ten (10) years.

(c) The reserve may be released thereafter in the same manner, except that a part of the reserve may be released proportional to the reduction in net total liabilities resulting from reinsurance and the reinsurer shall, on the effective date of the reinsurance, establish a reserve in an amount equal to the amount released.

(d) Withdrawals from the contingency reserve, to the extent of any excess, may be made from the earliest contributions to the reserve remaining:

(i) With the approval of the commissioner, in any year in which the actual incurred losses exceed thirty-five percent (35%) of earned premiums, or

(ii) Upon thirty (30) days prior notice to the commissioner, provided that the contingency reserve has been in existence for forty (40) quarters, for reserves subject to Item (i) of Subparagraph (b) of this paragraph, and twenty (20) quarters, for reserves subject to Item (ii) of Subparagraph (b) of this section, upon demonstration that the amount carried is excessive in relation to the corporations outstanding obligations.

(3) In addition to the contingency reserve, the case basis method or other method as may be prescribed by the commissioner shall be used to determine loss reserves, in a manner consistent with Section [insert section], which shall include a reserve for claims reported and unpaid net of collateral. A deduction from loss reserves shall be allowed for the time value of money by application of a discount rate equal to the average rate of return on the admitted assets of the insurer as of the date of the computation of the reserve. The discount rate shall be adjusted at the end of each calendar year.

(4) It shall maintain an unearned premium reserve, net of reinsurance, computed on the monthly pro rata basis, where premiums are paid on an installment basis. All other such premiums paid shall be earned proportionately with the expiration of exposure, or by such other method as the commissioner may prescribe or approve.

Generally Accepted Accounting Principles

20. FAS 60 provides the following guidance with respect to revenue recognition:

> 9. Premiums from short-duration insurance contracts ordinarily shall be recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. A liability for unpaid claims (including estimates of costs for claims relating to insured events that have occurred but have not been reported to the insurer) and a liability for claim adjustment expenses shall be accrued when insured events occur.
>
> 13. Premiums from short-duration contracts ordinarily shall be recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided. For those few types of contracts for which the period of risk differs significantly from the contract period, premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided. That generally results in premiums being recognized as revenue evenly over the contract period (or the period of risk, if different), except for those few cases in which the amount of insurance protection declines according to a predetermined schedule.
>
> Premium Deficiency
>
> 32. A probable loss on insurance contracts exists if there is a premium deficiency relating to short-duration or long-duration contracts. Insurance contracts shall be grouped consistent with the enterprise's manner of acquiring, servicing, and measuring the profitability of its insurance contracts to determine if a premium deficiency exists.
>
> Short-Duration Contracts
>
> 33. A premium deficiency shall be recognized if the sum of expected claim costs and claim adjustment expenses, expected dividends to policyholders, unamortized acquisition costs, and maintenance costs exceeds related unearned premiums.
>
> 34. A premium deficiency shall first be recognized by charging any unamortized acquisition costs to expense to the extent required to eliminate the deficiency. If the premium deficiency is greater than unamortized acquisition costs, a liability shall be accrued for the excess deficiency.

Statutory Issue Paper No. 71

Policy Acquisition Costs and Commissions

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 71

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of new and renewal insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Current statutory guidance on the accounting for policy acquisition costs and commissions is contained in Chapters 8 and 18 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies and Chapters 8, 17, and 21 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies. Under this current guidance, policy acquisition costs and commissions are expensed as incurred.

2. GAAP guidance on the accounting for acquisition costs is primarily contained in *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises* (FAS 60) and FASB Statement No. 97, *Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments* (FAS 97). Under GAAP accounting, policy acquisition costs and commissions are deferred and amortized to income.

3. The purpose of this issue paper is to establish statutory accounting principles for policy acquisition costs that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets.*

5. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

6. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party. The continuance of the stream of payments specified in the

levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

7. The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

DISCUSSION

8. This issue paper maintains the current statutory accounting for policy acquisition costs and commissions which differs from GAAP. GAAP accounting for policy acquisition costs and commissions is driven by the objective of matching revenues and expenses, therefore these costs are deferred and amortized to income as the related premium is recognized as revenue for FAS 60 products or in proportion to estimated gross profits for FAS 97 products. The primary objective of statutory accounting is to measure solvency. The guidance adopted in this paper is consistent with the Statement of Concepts which states:

> Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

9. The statutory accounting principles established in this issue paper are consistent with *Issue Paper No. 50—Definitions and Classifications of Insurance Contracts* which rejects FAS 60 and FAS 97.

Drafting Notes/Comments

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

10. Chapter 17, Other Liabilities, of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies contains the following guidance on levelized commissions:

> Levelized Commission
>
> The accounting treatment for certain transactions, characterized as levelized commissions, which results in enhancement of surplus, has been determined to be inappropriate for statutory reporting.
>
> These transactions are, in fact, funding agreements between an insurer and a third party. Agents receive normal (non-level) commissions with payments made by the third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents would ultimately be repaid (with interest explicit or implied) to the third party by "levelized" payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the insurer. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of premium payment or the maintenance of the agents license with the insurer is not maintained with respect to the payment stream.
>
> The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency but rather are linked to the repayment of an advanced amount requires the establishment of a liability in the full amount of the unpaid principal and accrued interest.

11. Chapter 18, Commissions, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies contains the following guidance on commissions:

> Financial statements should not reflect paid or incurred commissions on an earned premium basis, except for commissions based on loss experience. If commissions by contract are paid on an earned premium basis, but are not dependent on the loss experience of the insurance written, a reserve should be established for unpaid commissions. This reserve shall also be offset against "Agents' Balances or Uncollected Premiums".
>
> Commissions payable on reinsurance assumed business should be included as an offset to "Agents' Balances or Uncollected Premiums". Commissions receivable on reinsurance ceded business should be included as an offset to "Ceded Reinsurance Balances Payable", which are included in "Agents' Balances or Uncollected Premiums".
>
> Contingent Commission
>
> Some insurance companies, to encourage quantity and quality of production, or to penetrate a line of business or geographical area, will enter into special commission arrangements with some of their agents. The incentive for the selection of good risks is that the agent is allowed to share in the profitability of the insurance he produces. The terms of the arrangement usually will be set forth in a "contingency commission agreement", which is either incorporated as part of the agency contract or as a separate contract. The agreement will provide for the dates upon which accountings are to be rendered to determine the contingent commissions, items to be included in the calculation, and a provision for the calculation, if any, in the event the contract is canceled.
>
> The determination of the contingent commission liability is based upon the terms of the commission agreement. If the contract specifies that commissions will be determined on the basis of a formula that relates to loss experience, a commission liability must be established for the earned portion. The unpaid liability for commissions that are based upon loss experience should be included in a separate liability heading - "Contingent Commissions and Other Similar Charges".
>
> Some agency contracts provide for vesting of the agents' commissions for renewals or policy adjustments. The contract also may specify that the company will pay the agent for the commutation of commissions payable on future premium collections. Such payments must be included as a commission expense. If the company has incurred a liability to commutate an agent's commission at the balance sheet date, the liability should be included as an offset to "Agents' Balances or Uncollected Premiums".

12. Chapter 21 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies contains the following guidance on commissions:

> Commission Incurred
>
> Except for commissions on deferred and uncollected life insurance premiums, commissions are generally recognized as incurred in the Summary of Operations when it is probable that they will become payable.

13. Chapter 19 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies and Chapter 20 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies simply address the classification of expenses; therefore, there is no explicit guidance for taxes, licenses and fees and general expenses.

14. Chapter 8 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies contains the following guidance:

> In no event should a specifically described nonadmitted asset be recorded as an admitted asset or be used to defer an expense that has been incurred and has no liquidating value, e.g., material used in previous advertising campaigns or supplies that are not resalable.

Generally Accepted Accounting Principles

15. Statement of Accounting Concepts No. 6 establishes the following definition of an asset:

> 26. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.

16. FAS 60 contains the following guidance on the accounting for acquisition costs:

> 28. Acquisition costs are those costs that vary with and are primarily related to the acquisition of new and renewal insurance contracts. Commissions and other costs (for example, salaries of certain employees involved in the underwriting and policy issue functions, and medical and inspection fees) that are primarily related to insurance contracts issued or renewed during the period in which the costs are incurred shall be considered acquisition costs.
>
> 29. Acquisition costs shall be capitalized and charged to expense in proportion to premium revenue recognized. To associate acquisition costs with related premium revenue, acquisition costs shall be allocated by groupings of insurance contracts consistent with the enterprise's manner of acquiring, servicing, and measuring the profitability of its insurance contracts. Unamortized acquisition costs shall be classified as an asset.
>
> 30. If acquisition costs for short-duration contracts are determined based on a percentage relationship of costs incurred to premiums from contracts issued or renewed for a specified period, the percentage relationship and the period used, once determined, shall be applied to applicable unearned premiums throughout the period of the contracts.
>
> 31. Actual acquisition costs for long-duration contracts shall be used in determining acquisition costs to be capitalized as long as gross premiums are sufficient to cover actual costs. However, estimated acquisition costs may be used if the difference is not significant. Capitalized acquisition costs shall be charged to expense using methods that include the same assumptions used in estimating the liability for future policy benefits.

17. The guidance in FAS 60 was modified by FAS 97 as follows:

> 22. Capitalized acquisition costs shall be amortized over the life of a book of universal life-type contracts at a constant rate based on the present value of the estimated gross profit amounts expected to be realized over the life of the book of contracts. The present value of estimated gross profits shall be computed using the rate of interest that accrues to policyholder balances (sometimes referred to as the contract rate). If significant negative gross profits are expected in any period, the present value of estimated gross revenues, gross costs, or the balance of insurance in force shall be substituted as the base for computing amortization.
>
> 23. Estimated gross profit, as the term is used in paragraph 22, shall include estimates of the following elements, each of which shall be determined based on the best estimate of that individual element over the life of the book of contracts without provision for adverse deviation:
>
> a. Amounts expected to be assessed for mortality (sometimes referred to as the cost of insurance) less benefit claims in excess of related policyholder balances
>
> b. Amounts expected to be assessed for contract administration less costs incurred for contract administration (including acquisition costs not included in capitalized acquisition costs as described in paragraph 24)

c. Amounts expected to be earned from the investment of policyholder balances less interest credited to policyholder balances

d. Amounts expected to be assessed against policyholder balances upon termination of a contract (sometimes referred to as surrender charges)

e. Other expected assessments and credits, however characterized.

24. The amortization method based on the present value of estimated gross profits described in paragraphs 22 and 23 of this Statement differs from that provided in Statement 60, which is based on expected premium revenues. This Statement does not define the costs to be included in acquisition costs but does describe those that are not eligible to be capitalized under this Statement. Acquisition costs are addressed in paragraphs 28-31 of Statement 60. Acquisition costs that vary in a constant relationship to premiums or insurance in force, are recurring in nature, or tend to be incurred in a level amount from period to period shall be charged to expense in the period incurred.

25. In computing amortization, interest shall accrue to the unamortized balance of capitalized acquisition costs and unearned revenues at the rate used to discount expected gross profits. Estimates of expected gross profit used as a basis for amortization shall be evaluated regularly, and the total amortization recorded to date shall be adjusted by a charge or credit to the statement of earnings if actual experience or other evidence suggests that earlier estimates should be revised. The interest rate used to compute the present value of revised estimates of expected gross profits shall be either the rate in effect at the inception of the book of contracts or the latest revised rate applied to the remaining benefit period. The approach selected to compute the present value of revised estimates shall be applied consistently in subsequent revisions to computations of expected gross profits.

Statutory Issue Paper No. 72

Statutory Surplus

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 72

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance for capital stock, paid-in or contributed surplus and organizational surplus, and unassigned surplus is provided in Chapter 23, Capital Stock, Chapter 24, Paid-In or Contributed Surplus and Organizational Surplus, and Chapter 25, Unassigned Funds (Surplus) of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices and Procedures Manual) and in Chapter 26, Capital Stock, Chapter 27, Paid-In or Contributed Surplus and Organizational Surplus and Chapter 28, Unassigned Funds (Surplus) of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual).

2. GAAP does not provide specific guidance on surplus but rather provides guidance on shareholders' equity which encompasses capital stock, additional paid in capital and retained earnings. The AICPA Audit and Accounting Guide: Stock Life Insurance Companies (AICPA Life Audit and Accounting Guide) and the AICPA Audit and Accounting Guide: Property & Casualty Insurance Companies (AICPA P&C Audit and Accounting Guide) contain several references to surplus, however, they do not provide specific guidance on surplus.

3. The purpose of this issue paper is to establish statutory accounting principles for statutory surplus that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. Statutory surplus of a reporting entity consists of the following:

a. capital stock;

b. treasury stock;

c. gross paid-in and contributed surplus;

d. surplus notes;

e. unassigned funds (surplus);

f. special surplus funds;

g. other than special surplus funds;

Capital Stock

5. The articles of incorporation set forth the number of authorized shares of capital stock and the par value of each share. The capital stock account represents the number of shares issued times the par value of each share. When no par value is set forth, the reporting entity shall declare a "stated value" and record such amount in the capital stock account. Changes in the par value of a reporting entity's capital stock shall be reflected as a reclassification between the capital stock account and gross paid-in and contributed surplus.

6. Notes or other receivables received for the issuance of capital stock satisfied by receipt of cash or readily marketable securities prior to the filing of the annual statement shall be treated as a Type I subsequent event in accordance with *Issue Paper No. 9—Subsequent Events* (Issue Paper No. 9) and as such shall be considered an admitted asset based on the evidence of collection and approval of the domiciliary commissioner. To the extent that the notes or other receivables are not satisfied, they shall be nonadmitted.

Treasury Stock

7. Treasury stock is capital stock that has been issued and subsequently reacquired by the reporting entity. It is held for either reissuance or cancellation in the future. When a reporting entity's stock is acquired for purposes other than retirement, or when ultimate disposition has not yet been decided, the cost of acquired stock shall be reported as treasury stock which reduces statutory surplus. The acquisition of treasury stock has no effect on either the number of shares issued or the amount of paid up capital shown in the capital stock account. Cancellation of treasury stock shall reduce the capital stock account by the par value or stated value and reduce paid-in or contributed surplus by the excess of cost over par value or stated value.

Gross Paid-in and Contributed Surplus

8. Gross paid-in and contributed surplus is the amount of capital received in excess of the par value of the stock issued. Changes in the par value of a reporting entity's capital stock shall be reflected as a reclassification between the capital stock account and gross paid-in and contributed surplus. Forgiveness of a reporting entity's obligations to its parent or other stockholders shall be accounted for as contributed surplus.

9. Notes or other receivables received as additional capital contributions satisfied by receipt of cash or readily marketable securities prior to the filing of the annual statement shall be treated as a Type I subsequent event in accordance with Issue Paper No. 9 and as such shall be considered an admitted asset based on the evidence of collection and approval of the domiciliary commissioner. To the extent that the notes or other receivables are not satisfied, they shall be nonadmitted.

10. Real estate or other assets received as additional capital contributions are nonreciprocal transfers as defined in *Issue Paper No. 73—Nonmonetary Transactions*.

11. Stock purchase warrants issued in return for cash shall be credited to gross paid-in and contributed surplus. When debt instruments are issued with conversion features, no value shall be assigned to the conversion features unless the conversion feature is clearly separable from the debt obligation in the form of a detachable stock purchase warrant. In such instances the relative fair value of the detachable stock purchase warrant at time of issue shall be credited to gross paid-in and contributed surplus.

Surplus Notes

12. Surplus notes are financial instruments that are subject to strict control by the commissioner of the reporting entity's state of domicile and have been approved by the commissioner as to form and content. These instruments are commonly referred to as surplus notes but are also referred to as surplus debentures or contribution certificates. *Issue Paper No. 41—Surplus Notes* (Issue Paper No. 41) provides

the specific characteristics of surplus notes and provides accounting guidance for surplus notes. Only notes meeting the requirements of Issue Paper No. 41 shall be accounted for as surplus notes.

Unassigned Funds (Surplus)

13. Unassigned funds (surplus) represents the undistributed and unappropriated amount of surplus at the balance sheet date. Certain components of unassigned funds (surplus) are addressed in more detail in other issue papers. Unassigned funds (surplus) is comprised of:

a. Net Income
Net income resulting from insurance and other operating activities of the reporting entity since its inception.

b. Unrealized Capital Gains and Losses on Investments
The cumulative unrealized capital gain or loss that results from differences between the prescribed statement value of investments carried at market value and the cost of those investments is a component of unassigned funds (surplus). This component changes as periodic unrealized gains and losses are credited or charged directly to unassigned funds (surplus).

c. Effect of Exchange Rate Fluctuations
The cumulative gain or loss due to translating foreign operations to U.S. dollars and changes in balance sheet asset and liability values due to foreign currency translation are recorded as unrealized capital gains and losses and therefore are a component of unassigned funds (surplus). This component changes as the exchange rates fluctuate.

d. Nonadmitted Assets
The nonadmitted values of assets owned by a reporting entity are a reduction of unassigned funds (surplus). This component of unassigned funds (surplus) changes as nonadmitted asset values change. Changes in nonadmitted asset values are charged or credited directly to unassigned funds (surplus).

e. Provision for Reinsurance
A reporting entity must establish a statutory liability, provision for reinsurance, for unsecured reinsurance recoverables from unauthorized reinsurers and certain overdue balances from authorized reinsurers. The liability is charged directly to unassigned funds (surplus). Therefore, at any point in time there is a reduction of unassigned funds (surplus) equal to a reporting entity's liability for unauthorized reinsurance.

f. Asset Valuation Reserves
Where an Asset Valuation Reserve is required to be recorded as a statutory liability, there is a reduction of unassigned funds (surplus) in an amount equal to the liability. Changes to the Asset Valuation Reserve are charged or credited directly to unassigned funds (surplus).

g. Separate Accounts
A life insurer's balance sheet includes the total assets and liabilities of any separate accounts business which it maintains and, therefore, the surplus, if any, of its separate accounts business. Changes in the surplus of the separate accounts business of an insurer are charged or credited directly to unassigned funds (surplus).

h. Subscribers Savings Accounts
Subscribers Savings Accounts (SSA) are unique to reciprocals. SSAs represent a portion of a reciprocal insurance company's surplus that has been identified as subscribers (policyholders) accounts. When the source of amounts credited to the subscriber accounts

is from the reciprocal's operations, the amounts are reported as unassigned funds (surplus).

i. Dividends to Stockholders

Dividends declared are charged directly to unassigned funds (surplus) on the declaration date and are carried as a liability until paid. The amount of the dividend is the cash paid if it is a cash dividend, the fair market value of the assets distributed if it is property dividend, or the par value of the company's stock if it is a stock dividend. A stock dividend is recorded as a transfer from unassigned funds (surplus) to capital stock. Stock dividends have no effect on total capital and surplus while other forms of dividends reduce surplus. Forgiveness by a reporting entity of any debt, surplus note or other obligation of its parent or other stockholders shall be accounted for as a dividend. Dividends paid to related parties are subject to the requirements of *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*.

j. Change in Accounting Principles

The effects of a change in accounting principle or the application of an accounting principle, such as a change in reserve account because of a change in valuation basis, are reported as a charge or credit to unassigned funds (surplus). The effect of these changes shall not be included in the determination of net income or loss.

k. Correction of an Error

Corrections of errors in previously reported financial statements are charged or credited directly to unassigned funds (surplus). The effect of corrections of errors shall not be included in the determination of net income or loss.

l. Stock Issuance Expenses

Expenses relating to the issuance of capital stock, for example underwriting commissions and filing fees are charged to unassigned funds (surplus).

m. Change in Surplus as a Result of Reinsurance

Life and accident and health insurers report increases in surplus that result from certain types of reinsurance transactions on a net of tax basis. As profits emerge from the ceded business the increase in surplus is amortized to income as described in paragraph 39.

n. Changes in Deferred Tax Assets and Deferred Tax Liabilities

Consistent with the conclusions reached in *Issue Paper No. 83—Accounting for Income Taxes*, changes in deferred tax assets and deferred tax liabilities, including changes attributable to changes in tax rates and changes in tax status, if any, shall be recognized as a separate component of unassigned funds (surplus).

o. Other

This category includes other gains and losses in surplus not specifically identified elsewhere in this issue paper including but not limited to; net proceeds from life insurance on employees and unearned compensation relating to stock issuances made under compensatory Employee Stock Ownership Plans, Stock Option Plans and Stock Purchase Plans.

Special Surplus Funds

14. A reporting entity may establish a segregated surplus account to provide for contingencies. Surplus thus appropriated is called appropriated surplus or special surplus funds. Surplus resulting from any retroactive reinsurance transaction entered by a property and casualty insurer must be recorded as an appropriation of surplus by the ceding company (special surplus from retroactive reinsurance account).

Voluntary and general contingency reserves which are not actual liabilities of the reporting entity are shown as appropriated surplus or special surplus funds.

Other Than Special Surplus Funds

15. Amounts provided to reporting entities, other than stock companies, in the organization stage to defray the expenses and meet initial minimum surplus requirements required to obtain a license to do the business of insurance shall be reported as a separate component of surplus called Other than Special Surplus Funds. Examples of these types of deposits include but are not limited to: guaranty fund notes, contribution certificates, and subscriber accounts that represent individual subscriber contributions.

Changes in Statutory Surplus

16. The components of the change in the capital and surplus accounts shall be presented for each year for which an income statement is presented.

Disclosure

17. The financial statements shall disclose the following items:

a. the number of shares of each class of capital stock authorized, issued and outstanding as of the balance sheet date and the par value or stated value of each class;

b. the dividend rate, liquidation value and redemption schedule (including prices and dates) of any preferred stock issues;

c. dividend restrictions, if any, and an indication if the dividends are cumulative;

d. the portion of the profits that may be paid as ordinary dividends to stockholders;

e. a description of any restrictions placed on the unassigned funds (surplus) funds including for whom the surplus is being held;

f. for mutual reciprocals and similarly organized entities, the total amount of advances to surplus not repaid, if any;

g. the total amount of stock held by the reporting entity, including stock of affiliated entities, for special purposes such as conversion of preferred stock, employee stock options and stock purchase warrants;

h. a description of the reasons for changes in the balances of any special surplus funds from the prior period;

i. the cumulative portion of unassigned funds (surplus) represented or reduced by each of the following items:

   i. unrealized gains and losses;
   ii. nonadmitted asset values;
   iii. separate account business;
   iv. asset valuation reserves;
   v. provision for reinsurance;

j. For reciprocal insurance companies only:

   i. the amount of surplus identified as subscriber savings accounts;
   ii. the source of the funds (either from the reciprocal's operations or contributed by the individual subscriber) and, the reporting location in surplus;

iii. the conditions upon which the balances are paid to the subscribers;

k. Disclosures required by *Issue Paper No. 41—Surplus Notes*;

l. Disclosures required by *Issue Paper No. 9—Subsequent Events*.

DISCUSSION

18. The statutory accounting principles set forth in this issue paper adopt current statutory accounting guidance and are also consistent with the statutory guidance for surplus notes set forth in Issue Paper No. 41.

19. This issue paper is consistent with the requirements of the Annual Statement Instructions that the changes in the capital and surplus accounts be reflected for each year for which an income statement is presented. This is consistent with *Accounting Principles Board Opinion No. 12, Omnibus Opinion - 1967* (APB 12) paragraphs 9 and 10. These paragraphs are adopted with modification to eliminate the option of disclosing changes in the notes to the financial statements rather than in the Statement of Capital and Surplus. This issue paper is consistent with the disclosure requirements of paragraphs 10 and 11 of *Accounting Principles Board Opinion No. 10, Omnibus Opinion -1966* (APB 10). Those provisions of APB 10 are adopted herein. This issue paper also adopts paragraph 28 of *Accounting Principles Board Opinion No. 9, Reporting the Results of Operations* and *FASB Emerging Issues Task Force Issue No. 88-9, Put Warrants,* with a modification to reject guidance related to earnings per share.

20. This issue paper expands current statutory accounting to require disclosure of the reasons for changes in the balance of special surplus funds and the components of unassigned funds (surplus) as of the date of the financial statements. This change was made to enhance comparability of financial statements. To the extent that disclosures required by this issue paper are made within specific notes, schedules, or exhibits to the financial statements, those disclosures are not required to be duplicated in a separate note. Annual statutory financial statements which are not accompanied by Annual Statement exhibits and schedules (e.g., annual audit reports) shall include all disclosures required by this issue paper.

21. This issue paper rejects *FASB Emerging Issue Task Force Issue No. 85-1*, *Classifying Notes Received for Capital Stock* (EITF 85-1), which generally requires notes received as capital contributions to be recorded as a debit to equity rather than as an asset. Paragraphs 6 and 9 of this issue paper require that such notes are recorded as admitted assets if they are satisfied by receipt of cash or readily marketable securities prior to the filing of the statement. To the extent that the notes or other receivables are not satisfied, they shall be nonadmitted. This issue paper also rejects *FASB Emerging Issue Task Force Issue No. 85-2, Classification of Costs Incurred in a Takeover Defense* and *FASB Technical Bulletin No. 85-6, Accounting for a Purchase of Treasury Shares at a Price Significantly in Excess of the Current Market Price of the Shares and the Income Statement Classification of Costs Incurred in Defending against a Takeover Attempt.*

22. This issue paper adopts paragraph 12 of *Accounting Principles Board Opinion No. 6*, *Status of Accounting Research Bulletins* (APB 6) which provides accounting guidance for treasury stock transactions with modification to eliminate the option of recording treasury stock as an asset. Current statutory guidance is limited on recording transactions involving treasury stock. This issue paper rejects paragraphs 1 through 11 and paragraphs 13 through 24 of APB 6.

23. Current statutory accounting does not address stock purchase warrants. The conclusions reached in this issue paper are consistent with *APB Opinion No. 14*, *Accounting for Convertible Debt and Debt and Debt Issued with Stock Purchase Warrants* (APB 14) which was adopted in *Issue Paper No. 80—. Disclosures* regarding stock purchase warrants required by this issue paper are an expansion of current statutory guidance.

24. This issue paper rejects *Accounting Research Bulletin No. 43*, Chapter 1, *Prior Opinions* (ARB 43). The underlying concepts addressed by ARB 43, Chapter 1, are addressed within other relevant GAAP literature to the extent they are applicable.

25. Paragraph 14 of this issue paper addresses appropriated surplus and special surplus funds. This statutory accounting treatment is consistent with paragraph 15 of *FASB Statement No. 5*, *Accounting For Contingencies*, (FAS 5) and therefore paragraph 15 of FAS 5 is adopted herein.

26. The changes to current statutory accounting referred to in paragraphs 20 through 23 of this issue paper were made to provide guidance where current statutory is silent and practice may be diverse. Providing statutory guidance to be followed by all reporting entities meets the objective of the Statement of Concepts which states:

> Consistency
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.

27. The statutory accounting principles set forth in this issue paper are also consistent with references to surplus found in the AICPA Life Audit and Accounting Guide and the AICPA P&C Audit and Accounting Guide. Although GAAP does not specifically address surplus, statutory surplus is not comparable to stockholders' equity under GAAP. Stockholders' equity is meant to be a measure of the net equity in a reporting entity held by the owners, while statutory surplus is meant to provide an indication of the excess of assets readily available to meet policyholder obligations over those obligations.

28. Several components of the surplus section of a reporting entity's statutory balance sheet are also components of the stockholders' equity section of the reporting entity's GAAP balance sheet.

a. Capital stock and treasury stock are treated consistently between statutory surplus and stockholders' equity;

b. Gross paid-in and contributed surplus for statutory reporting purposes is consistent with the accounting treatment afforded to additional paid in capital in a reporting entity's stockholders' equity under GAAP reporting.

29. As discussed in Issue Paper No. 41, GAAP treats surplus notes as liabilities and not as equity whereas Issue Paper No. 41 as well as current statutory guidance account for the notes as surplus.

30. Statutory accounting utilizes unassigned funds (surplus) to account for several additional components of policyholder surplus. These items include net income, unrealized gains and losses on investments and unrealized gains and losses resulting from exchange rate fluctuations, nonadmitted asset values, certain statutory liabilities such as the asset valuation reserve and the provision for reinsurance, the effects of changes in accounting principles and corrections of errors, appropriations of surplus, separate accounts, subscriber savings accounts, stock issuance expenses and dividends to stockholders.

31. GAAP requires some of the items in unassigned funds (surplus) to be reflected in retained earnings while others are reported as a separate and distinct component of stockholders' equity. Those items that are accounted for as part of retained earnings include:

a. net income;

b. effect of changes in accounting principles;

c. corrections of errors;

d. dividends to stockholders.

GAAP distinguishes between stock dividends and stock splits for purposes of reclassifications between paid in capital and retained earnings although total stockholders' equity is not affected. This issue paper adopts paragraphs 1 through 4 and 10 through 16 of *Accounting Research Bulletin No. 43, Chapter 7B, Stock Dividends and Stock Split-ups.*

32. Those items in unassigned funds (surplus) that are reported as separate and distinct components of stockholders' equity under GAAP include:

a. unrealized gain or loss on investments;

b. unrealized gain or loss resulting from exchange rate fluctuations.

The amount of unrealized gains or losses on investments may differ between GAAP and statutory reporting because of the amounts at which investments are reported in the balance sheet under the different bases of accounting. Unrealized gains and losses relating to exchange rate fluctuations will differ as well because GAAP requires certain types of gains and losses relating to exchange rate fluctuations to be charged or credited to operations in the period of the change.

33. GAAP does not recognize statutory liabilities such as the provision for reinsurance or the asset valuation reserve and therefore those items are not components of stockholders' equity whereas they are components of unassigned funds (surplus).

34. For GAAP, stock issuance expenses are accounted as a reduction of additional paid in capital whereas for statutory purposes they are accounted for as a reduction of unassigned funds (surplus).

Drafting Notes/Comments

- *Issue Paper No. 3—Accounting Changes*, provides guidance on reporting changes in accounting principles and corrections of errors.
- *Issue Paper No. 84—Quasi-reorganizations*, permits adjustments to surplus and capital accounts for the effects of a quasi-reorganization in limited situations.
- *Issue Paper No. 41—Surplus Notes*, provides the accounting and disclosure requirements for such instruments.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

35. Chapter 23, Capital Stock, of the P&C Accounting Practices and Procedures Manual provides the following guidance:

> The articles of incorporation set forth the number of authorized shares of capital stock and the par value of each share, and the number of shares to be issued and sold so as to provide at least the minimum paid-up capital.

Minimum Capital

Many states require that, upon the organization or admission of an insurance company, a minimum amount of paid-up capital must be established and maintained for that particular company at all future times. If capital exceeds the minimum required, some states may permit reductions of capital with the commissioner's consent.

Minimum requirements may be based on the number of lines of business a company writes with a minimum amount for the first line and an additional amount for each line. Other states may require a fixed amount for a certain type of company. The requirements of any jurisdiction are intended, in accordance with sound business practices, to meet the needs of the proposed business.

Par Value Requirements

Traditionally, insurance companies have issued one class of stock, par value common stock, and many states have statutes or rules establishing the minimum par value per share.

In recent years, some states have begun permitting insurers to issue the same classes of stock as noninsurers. This includes issuing of common stock with no par value. The par value of a company's common stock must be consistent with the statutes and regulations of the domiciliary state.

The statues and regulations of some jurisdictions permit an insurer to issue preferred stock. They should be reviewed carefully prior to the issuance of any preferential shares.

Original Stock Sale

Most states have detailed regulations with regard to the original sale of a company's stock. These regulations may include, but are not necessarily limited to, provisions relating to the following:

1. Organization permits and certificate of authority;

2. Registration of securities;

3. Form of subscription agreement and subscription requirements;

4. Promoter stock;

5. Consideration for shares;

6. Payment for shares;

7. Form of certificates representing shares;

8. Deposit and escrow requirements;

9. Fractional shares;

10. Liability of subscribers and shareholders for unpaid shares;

11. Shareholders' pre-emptive rights;

12. Organization expenses and liability of incorporators.

Prior to any organization activity, any individual or group of individuals desiring to establish an insurance company should consult with the regulatory authority of the state in which it will be domiciled. Establishing an insurance company is a complex procedure and careful attention must be paid to the particular requirements of the state of domicile.

> Subsequent Stock Issues
>
> The statutes and regulations of the domiciliary state should be consulted prior to the offering or issuance of any stock.
>
> Treasury Stock
>
> Treasury stock is capital stock of the company that has been issued, fully paid for, and subsequently reacquired by the company. It is held for either reissuance or cancellation in the future.
>
> An insurance company is customarily restricted in the amount of treasury stock it is authorized to hold, and in the reasons for holding such stock. The restrictions of some states permit an insurance company to own treasury stock only when the company's net assets exceed the sum of its paid-up capital and its required surplus, after deducting the surplus attributable to unrealized appreciation in value or revaluation of the company's assets, and any increase arising from the surrender of the company's own shares.
>
> Statutes and regulations of the various jurisdictions may vary. In some states, recently organized insurers may only acquire treasury stock with the permission of the state regulatory authority. Reporting requirements have also been promulgated. Statutes may provide that such acquisition be approved by the stockholders or by the board of directors, and require sufficient surplus to cover the acquisition. Some states permit acquisition of the company's own shares without stockholder or board approval for the following purposes:
>
> 1. Redemption or purchase of its redeemable shares at a cost not to exceed the redemption price;
> 2. Elimination of fractional shares;
> 3. Collection or compromise of debt to the corporation;
> 4. Payment to dissenting stockholders entitled to payment for their shares.
>
> The acquisition of treasury stock has no effect on either the number of shares issued or the amount of paid-up capital shown in the capital stock account. However, the use of treasury stock for the cancellation of capital stock does reduce the capital stock account. Treasury stock is reported as a reduction of surplus.

Chapter 26, Capital Stock, of the Life/A&H Accounting Practices and Procedures Manual contains similar guidance.

36. Chapter 24, Paid-In or Contributed Surplus and Organizational Surplus, of the P&C Accounting Practices and Procedures Manual provides the following guidance:

> This chapter discusses paid-in or contributed surplus stock companies and organizational surplus for mutual companies, the amounts required upon incorporation, and the amounts to be maintained at all times.
>
> Besides paid-in capital (common stock), stock insurance companies are required to have a minimum amount of initial paid-in surplus. Mutual companies, which, because of their corporate structure, do not issue capital stock are required to have a minimum amount of initial organizational surplus. Most states require companies to maintain a minimum amount of surplus.
>
> Initial contributed or organizational surplus is obtained to provide both protection to the policyholders and the necessary working capital with which a company can pay the expense of commencing business. The minimum surplus a company must have and at all times maintain is customarily somewhat less than the initial amount required to obtain a certificate of authority.

> While paid-in or organizational surplus will not be decreased (except upon a return of original investment), unassigned surplus deficits are subtracted from the amount of original surplus to determine if a company has fallen below the required minimum surplus.
>
> Surplus, for purposes of meeting the minimum requirements, consists of:
>
> Paid-in or contributed surplus for stock companies;
>
> Guaranty fund surplus for mutual companies;
>
> Subordinated surplus debentures, notes, or similar instruments;
>
> Special or appropriated surplus;
>
> Unassigned surplus;
>
> Organizational surplus for mutual companies.
>
> Minimum Surplus Requirements - Stock Companies
>
> Most states require a minimum surplus at the time of organization. This amount, which is generally represented by paid-in surplus, may be determined by the nature of the company or by the number of lines a company writes. State statutes may further require a minimum surplus to be maintained permanently.
>
> Minimum Surplus Requirements - Mutual Companies
>
> Mutual companies, upon organization, are required to have an organizational surplus which usually conforms to the capital required of a stock company. In addition to this permanent surplus, an expendable surplus may also be required at the time of organization. Some states do not require a permanent surplus for a mutual company if the assessment liability of its members is unlimited. The statutes and regulations of the state of domicile should be consulted with regard to the appropriate requirements.
>
> The funds necessary to meet initial surplus requirements will generally be generated either by applications for insurance or by contribution notes.
>
> Minimum Surplus Requirements - Reciprocals
>
> State statutes should be reviewed for surplus requirements of reciprocals, which are usually similar to the requirements for mutual companies.
>
> Capital or Surplus Impairment
>
> State statutes vary widely with regard to the impairment of capital or minimum surplus in a stock company or a permanent surplus in a mutual company. In most cases, an order or notice is issued requiring correction of the impairment. Correcting such an impairment may entail issuing new capital stock, surplus or contribution notes, subordinated debentures, or some other means such as a contribution to paid-in surplus. If time limitations are not met, further action will be taken.

Chapter 27, Paid-In or Contributed Surplus and Organizational Surplus, of the Life/A&H Accounting Practices and Procedures Manual contains similar guidance.

37. Chapter 25, Unassigned Funds (Surplus), of the P&C Accounting Practices and Procedures Manual provides the following guidance:

Unassigned funds (surplus) is the undistributed and unappropriated amount of surplus and includes net income as well as the following items.

Unrealized Capital Gains and Losses on Investments

The annual statement includes a framework for calculating the unrealized capital gains and losses. Unrealized capital gains and losses result from a change in the prescribed statement value of investments between reporting dates. The change in the net unrealized capital gain or loss is a direct credit or charge to unassigned surplus.

Change in Nonadmitted Assets

The change in nonadmitted assets between the current and prior years statement is charged or credited directly to unassigned surplus. (See Chapter 9-Nonadmitted Assets.)

Change in Liability for Unauthorized Reinsurance

Where credit is not allowed for unauthorized reinsurance, the ceding insurer must establish a liability. Any change in the liability should be charged or credited directly to unassigned surplus. (See Chapter 22-Reinsurance.)

Change in Foreign Exchange Adjustment

Assets and liabilities in foreign currency are subject to adjustment to the prevailing foreign exchange rate. The change in the foreign exchange adjustment between the current and prior statement is charged or credited directly to unassigned surplus. (See Chapter 13-Other Liabilities.)

Change in Excess of Statutory Reserves Over Statement Reserves

Certain liability and compensation loss and loss expense reserves are subject to statutory minimums. The change in such statutory reserve between the current and prior years statement is charged or credited directly to unassigned surplus. (See Chapter 10-Losses.)

Dividends to Stockholders

Dividends to stockholders may only be paid from unassigned surplus. The amount available may be affected by numerous factors; for example, the insurance laws of the state of domicile, the existence of contractual commitment such as a borrowing agreement, etc. The corporation, as a matter of policy through its board of directors, may limit the amount of dividends and retain profits.

Dividends declared by the board are charged directly to unassigned surplus and are carried as a liability in the balance sheet until paid. The amount of the dividend is the actual amount paid in cash, the fair market value of the property, or the par value of the company's stock. A stock dividend is recorded as a transfer from unassigned surplus to capital.

Stock Issuance Expenses

Expenses relating to the issuance of capital stock, for example underwriting commissions and filing fees, are chargeable to the unassigned surplus account and not to paid-in surplus.

Appropriations of Surplus

A company may establish a segregated surplus account to provide for contingencies. Surplus thus segregated is called appropriated surplus or special surplus funds. Voluntary and general contingency reserves which are not actual liabilities of the company should be shown as appropriated surplus or as special surplus funds. An appropriation of surplus is recorded as a transfer from unassigned surplus to special surplus funds.

Subscribers Savings Accounts

Subscribers Savings Accounts (SSA) represent a portion of a reciprocal insurance company's surplus that has been identified as subscribers (policyholders) accounts. SSA is unique to reciprocals as the policyholders are also the owners of the company.

There are two sources for deposits to subscriber accounts. In the first, the individual subscriber may be the source of certain deposits to subscriber accounts, as some reciprocals may require subscriber contributions to join the reciprocal. In the second, the reciprocal is the source, by identifying as SSA a portion of its unassigned surplus generated from its operations. The source of SSA has a bearing on the proper financial statement presentation.

When the source of amounts credited to the subscriber accounts is the individual subscriber, these amounts should be reported in Other Than Special Surplus.

When the source of amounts credited to the subscriber accounts is from the reciprocals operations, it is appropriate to report these amounts as Unassigned Surplus. In this case, the individual subscriber accounts are merely an internal recordkeeping device and not an indicator of restrictions on the funds, or an obligation to pay these amounts to the subscribers. Reciprocal-generated funds that are identified as SSA are an integral part of the company's operational surplus and are fully available to meet the obligations of the reciprocal. Therefore, when the source of SSA is the reciprocal, financial statement presentation should report SSA as part of the Unassigned Surplus. The Notes to Financial Statements should also disclose pertinent information concerning amounts identified as SSA and conditions of repayment. The amount of surplus from operations that is identified as SSA is generally at the determination of the management of the company and its Board of Directors.

SSA balances may be paid, depending upon domiciliary state law, to subscribers upon termination of their association with the company, regardless of the source of the SSA. In this instance, any unpaid amounts owed to terminated subscribers must be reported as a liability.

Also, if deemed prudent by the company management, periodic partial payments from SSA may be made to subscribers under certain predetermined situations. For example, distributions may be made to those subscribers whose account balances exceed an established threshold. If the company has declared that it will distribute a certain amount of its Unassigned Surplus identified as SSA, but has not actually distributed the amounts by the next reporting date then the company should decrease Unassigned Surplus by the amount approved and report the unpaid amount as a liability. Other than these instances, SSA is typically not owed to the subscribers, and should not be treated as a liability.

Chapter 28, Unassigned Funds (Surplus), of the Life/A&H Accounting Practices and Procedures Manual contains similar guidance.

38. The NAIC Annual Statement Instructions require the following disclosures regarding capital and surplus and policyholders' dividend restrictions.

Instruction:

a. Shareholders' dividends - State terms of dividend restrictions, if any; indicate if dividends are cumulative and indicate what proportion of the profits of the company may be paid to stockholders.

b. For each issue of preferred stock, indicate exact description of issue, dividend rate, par value, stated value and liquidation value. If the preferred stock is redeemable, indicate the redemption prices and dates.

c. Unassigned surplus - Describe any restrictions which have been placed on the unassigned surplus funds. Indicate for whom the surplus is being held, and for mutual companies only, the total amount of advances to surplus not repaid, if any.

d. Indicate the total amount of stock held by the company, including stock of affiliated companies, for special purposes such as conversion of preferred stock and employee stock options.

39. Section 4 of the Life and Health Reinsurance Agreements Model Regulation provides the following guidance for ceded reinsurance:

> C(1) Agreements entered into after the effective date of this regulation which involve the reinsurance of business issued prior to the effective date of the agreements, along with any subsequent amendments thereto, shall be filed by the ceding company with the commissioner within thirty (30) days from its date of execution. Each filing shall include data detailing the financial impact of the transaction. The ceding insurer's actuary who signs the financial statement actuarial opinion with respect to valuation of reserves shall consider this regulation and any applicable actuarial standards of practice when determining the proper credit in financial statements filed with this department. The actuary should maintain adequate documentation and be prepared upon request to describe the actuarial work performed for inclusion in the financial statements and to demonstrate that such work conforms to this regulation.
>
> C(2) Any increase in surplus net of federal income tax resulting from arrangements described in Subsection C(1) shall be identified separately on the insurer's statutory financial statement as a surplus item (aggregate write-ins for gains and losses in surplus in the Capital and Surplus Account, page 4 of the Annual Statement) and recognition of the surplus increase as income shall be reflected on a net of tax basis in the "Reinsurance ceded" line, page 4 of the Annual Statement as earnings emerge from the business reinsured.
>
> {For example, on the last day of calendar year N, company XYZ pays a $20 million initial commission and expense allowance to company ABC for reinsuring an existing block of business. Assuming a 34% tax rate, the net increase in surplus at inception is $13.2 million ($20 million - $6.8 million) which is reported on the "Aggregate write-ins for gains and losses in surplus" line in the Capital and Surplus account. $6.8 million (34% of $20 million) is reported as income on the "Commissions and expense allowances on reinsurance ceded" line of the Summary of Operations.
>
> At the end of year N+1 the business has earned $4 million. ABC has paid $.5 million in profit and risk charges in arrears for the year and has received a $1 million experience refund. Company ABC's annual statement would report $1.65 million (66% of ($4 million - $1 million - $.5 million) up to a maximum of $13.2 million) on the "Commissions and expense allowance on reinsurance ceded" line of the Summary of Operations, and -$1.65 million on the "Aggregate write-ins for gains and losses in surplus" line of the Capital and Surplus account. The experience refund would be reported separately as a miscellaneous income item in the Summary of Operations.}

40. The Annual Statement Instructions require the following disclosures for Subscriber Savings Accounts:

> Instruction:
>
> For reciprocal insurance companies only, describe the amount of surplus identified as subscriber savings accounts; indicate the source of the funds (either from the reciprocal's operations or contribution by the individual subscriber) and, the reporting location in surplus; and describe the conditions upon which the balances are paid to the subscribers.
>
> Illustration:
>
> At December 31, 19XX the Company has $_____ identified to subscriber savings accounts. Of this amount, $_____ is from company operations and is reported in Unassigned Funds (Page 3, Line 24C). The balance identified to subscriber savings account, $____, was contributed directly by subscribers and is separately reported in Other Than Special Surplus Funds (Page 3,

Line 23C). The subscriber savings account balances are paid to the subscribers upon the termination from the Company.

Generally Accepted Accounting Principles

41. ARB 43, Chapter 1, *Prior Opinions,* provides the following guidance:

1. Unrealized profit should not be credited to income account of the corporation either directly or indirectly, through the medium of charging against such unrealized profits amounts which would ordinarily fall to be charged against income account. Profit is deemed to be realized when a sale in the ordinary course of business is effected, unless the circumstances are such that the collection of the sale price is not reasonably assured. An exception to the general rule may be made in respect of inventories in industries (such as packing-house industry) in which owing to the impossibility of determining costs it is a trade custom to take inventories at net selling prices, which may exceed cost.

2. Capital surplus, however created, should not be used to relieve the income account of the current or future years of charges which would otherwise fall to be made there against. This rule might be subject to the exception that where, upon reorganization, a reorganized company would be relieved of charges which would require to be made against income if the existing corporation were continued, it might be regarded as permissible to accomplish the same result without reorganization provided the facts were as fully revealed to and the action as formally approved by the shareholders as in reorganization.

3. Earned surplus of a subsidiary company created prior to acquisition does not form a part of the consolidated earned surplus of the parent company and subsidiaries; nor can any dividend declared out of such surplus properly be credited to the income account of the parent company.

4. While it is perhaps in some circumstances permissible to show stock of a corporation held in its own treasury as an asset, if adequately disclosed, the dividends on stock so held should not be treated as a credit to the income account of the company.

5. Notes or accounts receivable due from officers, employees, or affiliated companies must be shown separately and not included under a general heading such as notes receivable or accounts receivable.

6. If capital stock is issued nominally for the acquisition of property and it appears that at about the same time, and pursuant to a previous agreement or understanding, some portion of the stock so issued is donated to the corporation, it is not permissible to treat the par value of the stock nominally issued for the property as the cost of that property. If stock so donated is subsequently sold, it is not permissible to treat the proceeds as a credit to surplus of the corporation.

Section B -- Opinion Issued by Predecessor Committee

1. Following an inquiry made by the New York Stock Exchange, a predecessor committee on accounting procedure in 1938 issued the following report:

“Profits or Losses on Treasury Stock”

2. “The executive committee of the American Institute of Accountants has directed that the following report of the committee on accounting procedure, which it received at a meeting on April 8, 1938, be published, without approval or disapproval of the committee, for the information of members of the Institute:

> To the Executive Committee,
> American Institute of Accountants:
>
> 3. "This committee has had under consideration the question regarding treatment of purchase and sale by a corporation of its own stock, which was raised during 1937 by the New York Stock Exchange with the Institute's special committee on cooperation with stock exchanges.
>
> 4. "As a result of discussions which then took place, the special committee on cooperation with stock exchanges made a report which was approved by the committee on accounting procedure and the executive committee, and a copy of which was furnished to the committee on stock list of the New York Stock Exchange. The question raised was stated in the following form:
>
> 5. "Should the difference between the purchase and resale prices of a corporation's own common stock be reflected in earned surplus (either directly or through inclusion in the income account) or should such difference be reflected in capital surplus?"
>
> 6. "The opinion of the special committee on cooperation with stock exchanges reads in part as follows:
>
> 7. "Apparently there is general agreement that the difference between the purchase price and the stated value of a corporation's common stock purchased and retired should be reflected in capital surplus. Your committee believes that while the net asset value of the shares of common stock outstanding in the hands of the public may be increased or decreased by such purchase and retirement, such transactions relate to the capital of the corporation and do not give rise to corporate profits or losses. Your committee can see no essential difference between (a) the purchase and retirement of a corporation's own common stock and the subsequent issue of common shares, and (b) the purchase and resale of its own common stock."
>
> 8. "This committee is in agreement with the views thus expressed; it is aware that such transactions have been held to give rise to taxable income, but it does not feel that such decisions constitute any bar to the application of correct accounting procedure as above outlined.
>
> 9. "The special committee on cooperation with stock exchanges continued and concluded its report with the following statement:
>
> 10. "Accordingly, although your committee recognizes that there may be cases where the transactions involved are so inconsequential as to be immaterial, it does not believe that, as a broad general principle, such transactions should be reflected in earned surplus (either directly or through inclusion in the income account)."
>
> 11. "This committee agrees with the special committee on cooperation with stock exchanges, but thinks it desirable to point out that the qualification should not be applied to any transaction which, although in itself inconsiderable in amount, is a part of a series of transactions which in the aggregate are of substantial importance.
>
> 12. "This committee recommends that the views expressed be circulated for the information of members of the Institute."

42. APB 12, *Omnibus Opinion 1967*, provides the following guidance:

> 9. Paragraph 7 of *APB Opinion No. 9, Reporting the Results of Operations*, states that "The statement of income and the statement of retained earnings (separately or combined) are designed to reflect, in a broad sense, the 'results of operations'." Paragraph 28 of APB Opinion No. 9 states that certain capital transactions ". . . should be excluded from the determination of net income or the results of operations under all circumstances." Companies generally have reported the current year's changes in stockholders' equity accounts other than retained earnings in separate statements or notes to the financial statements when presenting both financial position and results of operations for one or more years. A question has arisen as to whether,

because of the language of APB Opinion No. 9, changes in stockholders' equity accounts other than retained earnings are required to be reported.

10. When both financial position and results of operations are presented, disclosure of changes in the separate accounts comprising stockholders' equity (in addition to retained earnings) and of the changes in the number of shares of equity securities during at least the most recent annual fiscal period and any subsequent interim period presented is required to make the financial statements sufficiently informative. Disclosure of such changes may take the form of separate statements or may be made in the basic financial statements or notes thereto.

43. *Accounting Principles Board Opinion No. 9*, *Reporting the Results of Operations*, provides the following guidance:

Capital Transactions

28. The Board reaffirms the conclusion of the former committee on accounting procedure that the following should be excluded from the determination of net income or the results of operations under all circumstances: (a) adjustments or charges or credits resulting from transactions in the company's own capital stock, 5 (b) transfers to and from accounts properly designated as appropriated retained earnings (such as general purpose contingency reserves or provisions for replacement costs of fixed assets) and (c) adjustments made pursuant to a quasi-reorganization.

44. APB 10, Omnibus Opinion - 1966 requires the following disclosures for liquidation preferences:

10. Companies at times issue preferred (or other senior) stock which has a preference in involuntary liquidation considerably in excess of the par or stated value of the shares. The relationship between this preference in liquidation and the par or stated value of the shares may be of major significance to the users of the financial statements of those companies and the Board believes it highly desirable that it be prominently disclosed. Accordingly, the Board recommends that, in these cases, the liquidation preference of the stock be disclosed in the equity section of the balance sheet in the aggregate, either parenthetically or "in short," rather than on a per share basis or by disclosure in notes.

11. In addition, the financial statements should disclose, either on the face of the balance sheet or in notes pertaining thereto:

a. the aggregate or per share amounts at which preferred shares may be called or are subject to redemption through sinking fund operations or otherwise;
b. the aggregate and per share amounts of arrearages in cumulative preferred dividends.

45. FAS 5 provides the following guidance with respect to appropriations of retained earnings:

Appropriation of Retained Earnings

15. Some enterprises have classified a portion of retained earnings as "appropriated" for loss contingencies. In some cases, the appropriation has been shown outside the stockholders' equity section of the balance sheet. Appropriation of retained earnings is not prohibited by this Statement provided that it is shown within the stockholders' equity section of the balance sheet and is clearly identified as an appropriation of retained earnings. Costs or losses shall not be charged to an appropriation of retained earnings, and no part of the appropriation shall be transferred to income.

46. *APB 6*, *Status of Accounting Research Bulletins* provides the following guidance for treasury stock transactions:

12. The Board considers that the following accounting practices, in addition to the accounting practices indicated in Chapter 1B, are acceptable, and that they appear to be more in accord with current developments in practice:

a. When a corporation's stock is retired, or purchased for constructive retirement (with or without an intention to retire the stock formally in accordance with applicable laws):

i. an excess of purchase price over par or stated value may be allocated between capital surplus and retained earnings. The portion of the excess allocated to capital surplus should be limited to the sum of (a) all capital surplus arising from previous retirements and net "gains" on sales of treasury stock of the same issue and (b) the prorata portion of capital surplus paid in, voluntary transfers of retained earnings, capitalization of stock dividends, etc., on the same issue. For this purpose, any remaining capital surplus applicable to issues fully retired (formal or constructive) is deemed to be applicable prorata to shares of common stock. Alternatively, the excess may be charged entirely to retained earnings in recognition of the fact that a corporation can always capitalize or allocate retained earnings for such purposes.

ii. an excess of par or stated value over purchase price should be credited to capital surplus.

b. When a corporation's stock is acquired for purposes other than retirement (formal or constructive), or when ultimate disposition has not yet been decided, the cost of acquired stock may be shown separately as a deduction from the total of capital stock, capital surplus, and retained earnings, or may be accorded the accounting treatment appropriate for retired stock, or in some circumstances may be shown as an asset in accordance with paragraph 4 of Chapter 1A of ARB 43. "Gains" on sales of treasury stock not previously accounted for as constructively retired should be credited to capital surplus; "losses" may be changed to capital surplus to the extent that previous net "gains" from sales or retirements of the same class of stock are included therein, otherwise to retained earnings.

c. Treasury stock delivered to effect a "pooling of interests" should be accounted for as though it were newly issued, and the cost thereof should receive the accounting treatment appropriate for retired stock.

13. Laws of some states govern the circumstances under which a corporation may acquire its own stock and prescribe the accounting treatment therefore. Where such requirements are at variance with paragraph 12, the accounting should conform to the applicable law. When state laws relating to acquisition of stock restrict the availability of retained earnings for payment of dividends or have other effects of a significant nature, these facts should be disclosed.

47. *EITF 85-1*, *Classifying Notes Received for Capital Stock, provides the following guidance*.

Issue
An enterprise receives a note, rather than cash, as a contribution to its equity. The transaction may be a sale of capital stock or a contribution to paid-in capital.

The issue is whether an enterprise should report the note receivable as a reduction of shareholders' equity or as an asset.

EITF Discussion
The Task Force reached a consensus that reporting the note as an asset is generally not appropriate, except in very limited circumstances when there is substantial evidence of ability and intent to pay within a reasonably short period of time. Some Task Force members would require collateralization, or payment of the note prior to issuance of the financial statements, to permit asset recognition.

The SEC requires that public companies report notes received in payment for the enterprise's stock as a deduction from shareholders' equity. Task Force members confirmed that the predominant practice is to offset the notes and stock in the equity section. However, such notes may be recorded as an asset if collected in cash prior to issuance of the financial statements.

Some Task Force members stated that they were aware of very few cases in which nonpublic companies reported such notes as an asset except in circumstances in which they (1) were secured by irrevocable letters of credit or other liquid collateral or were discountable at a bank and (2) included a stated maturity in a reasonably short period of time.

The SEC Observer stated that, for registrants, exceptions to the general rule would be very rare.

Status
No further EITF discussion is planned.

48. *ARB 43, Chapter 7B, Stock Dividends and Split-ups,* provides the following guidance:

Section B -- Stock Dividends and Stock Split-ups

1. The term stock dividend as used in this section refers to an issuance by a corporation of its own common shares to its common shareholders without consideration and under conditions indicating that such action is prompted mainly by a desire to give the recipient shareholders some ostensibly separate evidence of a part of their respective interests in accumulated corporate earnings without distribution of cash or other property which the board of directors deems necessary or desirable to retain in the business.

2. The term stock split-up as used in this chapter refers to an issuance by a corporation of its own common shares to its common shareholders without consideration and under conditions indicating that such action is prompted mainly by a desire to increase the number of outstanding shares for the purpose of effecting a reduction in their unit market price and, thereby, of obtaining wider distribution and improved marketability of the shares.

3. This chapter is not concerned with the accounting for a distribution or issuance to shareholders of (a) shares of another corporation theretofore held as an investment, or (b) shares of a different class, or (c) rights to subscribe for additional shares or (d) shares of the same class in cases where each shareholder is given an election to receive cash or shares.

4. The discussion of accounting for stock dividends and split-ups that follows is divided into two parts. The first deals with the problems of the recipient. The second deals with the problems of the issuer.

As to the Issuer
Stock dividends

10. As has been previously stated, a stock dividend does not, in fact, give rise to any change whatsoever in either the corporation’s assets or its respective shareholders’ proportionate interests therein. However, it cannot fail to be recognized that, merely as a consequence of the expressed purpose of the transaction and its characterization as a dividend in related notices to shareholders and the public at large, many recipients of stock dividends look upon them as distributions of corporate earnings and usually in an amount equivalent to the fair value of the additional shares received. Furthermore, it is to be presumed that such views of recipients are materially strengthened in those instances, which are by far the most numerous, where the issuances are so small in comparison with the shares previously outstanding that they do not have any apparent effect upon the share market price and, consequently, the market value of the shares previously held remains substantially unchanged. The committee therefore believes that where these circumstances exist the corporation should in the public interest account for the transaction by transferring from earned surplus to the category of permanent capitalization (represented by the capital stock and capital surplus accounts) an amount equal to the fair value of the additional shares issued. Unless this is done, the amount of earnings which the shareholder may believe to have been distributed to him will be left, except to the extent

otherwise dictated by legal requirements, in earned surplus subject to possible further similar stock issuances or cash distributions.

11. Where the number of additional shares issued as a stock dividend is so great that it has, or may reasonably be expected to have, the effect of materially reducing the share market value, the committee believes that the implications and possible constructions discussed in the preceding paragraph are not likely to exist and that the transaction clearly partakes of the nature of a stock split-up as defined in paragraph 2. Consequently, the committee considers that under such circumstances there is no need to capitalize earned surplus, other than to the extent occasioned by legal requirements. It recommends, however, that in such instances every effort be made to avoid the use of the word dividend in related corporate resolutions, notices, and announcements and that, in those cases where because of legal requirements this cannot be done, the transaction be described, for example, as a split-up effected in the form of a dividend.

12. In cases of closely-held companies, it is to be presumed that the intimate knowledge of the corporations' affairs possessed by their shareholders would preclude any such implications and possible constructions as are referred to in paragraph 10. In such cases, the committee believes that considerations of public policy do not arise and that there is no need to capitalize earned surplus other than to meet legal requirements.

13. Obviously, the point at which the relative size of the additional shares issued becomes large enough to materially influence the unit market price of the stock will vary with individual companies and under differing market conditions and, hence, no single percentage can be laid down as a standard for determining when capitalization of earned surplus in excess of legal requirements is called for and when it is not. However, on the basis of a review of market action in the case of shares of a number of companies having relatively recent stock distributions, it would appear that there would be few instances involving the issuance of additional shares of less than, say, 20% or 25% of the number previously outstanding where the effect would not be such as to call for the procedure referred to in paragraph 10.

14. The corporate accounting recommended in paragraph 10 will in many cases, probably the majority, result in the capitalization of earned surplus in an amount in excess of that called for by the laws of the state of incorporation; such laws generally require the capitalization only of the par value of the shares issued, or, in the case of shares without par value, an amount usually within the discretion of the board of directors. However, these legal requirements are, in effect, minimum requirements and do not prevent the capitalization of a larger amount per share.

Stock Split-ups

15. Earlier in this chapter a stock split-up was defined as being confined to transactions involving the issuance of shares, without consideration moving to the corporation, for the purpose of effecting a reduction in the unit market price of shares of the class issued and, thus, of obtaining wider distribution and improved marketability of the shares. Where this is clearly the intent, no transfer from earned surplus to capital surplus or capital stock account is called for, other than to the extent occasioned by legal requirements. It is believed, however, that few cases will arise where the aforementioned purpose can be accomplished through an issuance of shares which is less than, say, 20% or 25% of the previously outstanding shares.

16. The committee believes that the corporation's representations to its shareholders as to the nature of the issuance is one of the principal considerations in determining whether it should be recorded as a stock dividend or a split-up. Nevertheless, it believes that the issuance of new shares in ratios of less than, say, 20% or 25% of the previously outstanding shares, or the frequent recurrence of issuances of shares, would destroy the presumption that transactions represented to be split-ups should be recorded as split-ups.

Statutory Issue Paper No. 73

Nonmonetary Transactions

STATUS
Finalized March 16, 1998

Current Authoritative Guidance for Nonmonetary Transactions: SSAP No. 95
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 28

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance does not establish a general rule for accounting for nonmonetary transactions. Current statutory accounting guidance regarding nonmonetary transactions related to assets transferred between affiliates is provided in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies (Life/A&H and P&C Accounting Practices & Procedures Manuals).

2. GAAP addresses accounting for nonmonetary transactions primarily in *Accounting Principles Board Opinion No. 29*, *Accounting for Nonmonetary Transactions* (APB 29), *FASB Interpretation No. 30*, *Accounting for Involuntary Conversions of Nonmonetary Assets to Monetary Assets* (FIN 30), *FASB Emerging Issues Task Force Issue No. 86-29*, *Nonmonetary Transactions: Magnitude of Boot and the Exceptions to the Use of Fair Value* (EITF 86-29) and in *FASB Emerging Issues Task Force Issue No. 93-11*, *Accounting for Barter Transactions Involving Barter Credits* (EITF 93-11). GAAP addresses accounting for stock dividends and stock splits in *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins* (ARB 43).

3. The purpose of this issue paper is to establish statutory accounting principles for nonmonetary transactions that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. The definitions of certain terms used in this issue paper are:

a. Monetary assets and liabilities are assets and liabilities whose amounts are fixed in terms of units of currency by contract or otherwise. Examples are cash; amounts due from agents, brokers, and intermediaries; policy loans; accounts payable and other amounts receivable or payable in cash.

b. Nonmonetary assets and liabilities are assets and liabilities other than monetary ones. Examples are investments in common stocks; furniture fixtures and equipment; real estate and liabilities for rent collected in advance.

c. Exchange (or exchange transaction) is a reciprocal transfer between a reporting entity and another entity that results in the reporting entity acquiring assets or services or satisfying liabilities by surrendering other assets or services or incurring other obligations.

d. Nonreciprocal transfer is a transfer of assets or services in one direction, either from a reporting entity to its owners (whether or not in exchange for their ownership interests) or another entity, or from owners or another entity to the reporting entity. A reporting entity's reacquisition of its outstanding stock is an example of a nonreciprocal transfer.

5. Except as addressed in other issue papers, as discussed in paragraph 11 of this issue paper, nonmonetary transactions shall be accounted for in accordance with APB 29 which is excerpted in paragraph 20 of this issue paper. The accounting for such transactions shall be based on the fair values, as defined in APB 29, paragraph 25, of the assets (or services) involved. In a reciprocal transfer, the fair value of the asset surrendered shall be used to measure the cost unless the fair value of the asset received is more clearly evident. A nonmonetary asset received in a nonreciprocal transfer shall be recorded at the fair value of the asset received. A nonmonetary asset transferred to a stockholder or other entity in a nonreciprocal transfer shall be accounted for at the fair value of the asset transferred and a gain or loss on disposition of the asset recognized for the difference, if any, between fair value and carrying value of the asset transferred.

6. Fair value of assets received or transferred in a nonreciprocal transfer shall be measured based on statutory accounting principles for the type of asset transferred. Accordingly, the value shall be determined in accordance with *Issue Paper No. 26—Bonds, Excluding Loan-Backed and Structured Securities, Issue Paper No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)*, *Issue Paper No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities), Issue Paper No. 37—Mortgage Loans*, *Issue Paper No. 39—Reverse Mortgages, Issue Paper No. 40—Real Estate Investments, Issue Paper No. 43—Loan-Backed and Structured Securities* or other applicable statement. The guidance provided in *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* shall be followed in accounting for nonreciprocal transactions.

7. Stock received in the form of a stock dividend or stock split shall not result in the recognition of income. The cost basis of stock held shall be reallocated ratably to the total shares held after receipt of the stock dividend or stock split.

8. Involuntary conversions of nonmonetary assets to monetary assets (for example, as a result of total or partial destruction, theft, seizure, or condemnation) are monetary transactions for which gain or loss shall be recognized even though a reporting entity reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets. In some cases, a nonmonetary asset may be destroyed or damaged in one accounting period, and the amount of monetary assets to be received is not determinable until a subsequent accounting period. In those cases, gain or loss shall be recognized in accordance with the conclusions in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5) or *Issue Paper No. 20—Gain Contingencies* (Issue Paper No. 20), as applicable. Gain or loss resulting from an involuntary conversion of a nonmonetary asset to monetary assets shall be reported consistently with the reporting entity's reporting of continuing operations and disclosed in the notes to financial statements in accordance with *Issue Paper No. 24—Discontinued Operations and Extraordinary Items* (Issue Paper No. 24).

9. A difference between the amount of gain or loss recognized for tax purposes and that recognized for accounting purposes may constitute a temporary difference to be accounted for in accordance with *Issue Paper No. 83—Accounting for Income Taxes*.

Disclosure

10. A reporting entity that engages in a nonmonetary transaction during a period shall disclose in the financial statements or notes thereto the nature of the transaction, the basis of accounting for the assets transferred, and gains or losses recognized on transfers.

DISCUSSION

11. Although not meant to be all inclusive, accounting for specific nonmonetary transactions and unique circumstances is addressed in the following issue papers:

- *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (Issue Paper No. 25),
- *Issue Paper No. 68—Business Combinations and Goodwill*,
- *Issue Paper No. 72—Statutory Surplus*,
- *Issue Paper No. 78—Employee Stock Ownership Plans*, and
- *Issue Paper No. 82—Stock Option and Stock Purchase Plans*.

12. This issue paper establishes a general rule for accounting for nonmonetary transactions not specifically addressed in the issue papers noted above and expands on current statutory guidance to establish guidance for stock dividends and stock splits received, other types of nonmonetary transactions and involuntary conversions of nonmonetary assets to monetary assets. The guidance established in this issue paper is consistent with the guidance provided in Issue Paper No. 30 which addresses cash dividends and requires that dividends on common stock be recorded as investment income when declared with a corresponding receivable to be extinguished upon receipt of cash. This issue paper also expands the disclosure requirements related to nonmonetary transactions.

13. This issue paper adopts APB 29.

14. This issue paper adopts ARB 43, Chapter 7, Section B paragraphs 1-9 as such relates to the receipt of stock in the form of a stock dividend or stock split. This conclusion is consistent with the recognition concept included in the Statement of Concepts which states *"Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed"*.

15. This issue paper adopts FIN 30 with modification to provide that gain or loss contingencies be recognized in accordance with the conclusions in Issue Paper No. 5 or Issue Paper No. 20, as applicable, and that gain or loss resulting from an involuntary conversion of nonmonetary assets to monetary assets be accounted for in continuing operations and disclosed in accordance with Issue Paper No. 24.

16. This issue paper adopts EITF 86-29 and EITF 93-11 consistent with the general rule discussed in paragraph 12 above.

17. This issue paper rejects paragraph 16 of *Accounting Principles Board Opinion No. 6*, *Status of Accounting Research Bulletins* and *Emerging Issues Task Force No. 96-4, Accounting for Reorganizations Involving a Non-Pro Rata Split-off of Certain Nonmonetary Assets to Owners*

18. The conclusions above are consistent with the recognition concept included in the Statement of Concepts. The recognition concept states:

> The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the

balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., excess of statutory reserves over statement reserves, interest maintenance reserves, asset valuation reserves, and others).

Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

SAP income reflects the extent that changes have occurred in SAP assets and liabilities for current period transactions, except changes in capital resulting from receipts or distributions to owners. SAP income also excludes certain other direct charges to surplus which are not directly attributable to the earnings process, (e.g., changes in non-admitted assets).

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

19. Current statutory guidance does not establish a general rule for accounting for nonmonetary transactions. Current statutory accounting guidance regarding nonmonetary transactions related to assets transferred between affiliates is addressed in Issue Paper No. 25.

Generally Accepted Accounting Principles

20. APB 29 provides the following guidance:

> INTRODUCTION
>
> 1. Most business transactions involve exchanges of cash or other monetary assets or liabilities[1] for goods or services. The amount of monetary assets or liabilities exchanged generally provides an objective basis for measuring the cost of nonmonetary assets or services received by an enterprise as well as for measuring gain or loss on nonmonetary assets transferred from an enterprise. Some transactions, however, involve either (a) an exchange with another entity (reciprocal transfer[1]) that involves principally nonmonetary assets or liabilities[1] or (b) a transfer of nonmonetary assets for which no assets are received or relinquished in exchange (nonreciprocal transfer[1]). Both exchanges and nonreciprocal transfers that involve little or no monetary assets or liabilities are referred to in this section as nonmonetary transactions.
>
> [1] See paragraph 3 of this Opinion for definitions of these terms.
>
> 2. Questions have been raised concerning the determination of the amount to assign to a nonmonetary asset transferred to or from an enterprise in a nonmonetary transaction and also concerning the recognition of a gain or loss on a nonmonetary asset transferred from an enterprise in a nonmonetary transaction. Practice has varied; some nonmonetary transactions have been accounted for at the estimated fair value of the assets transferred and some at the amounts at which the assets transferred were previously recorded. This opinion sets forth the views of the Board on accounting for nonmonetary transactions.

Definitions

3. The meanings of certain terms used in this section are:

   a. Monetary assets and liabilities are assets and liabilities whose amounts are fixed in terms of units of currency by contract or otherwise. Examples are cash, short- or long-term accounts and notes receivable in cash, and short- or long-term accounts and notes payable in cash.[2]

   b. Nonmonetary assets and liabilities are assets and liabilities other than monetary ones. Examples are inventories; investments in common stocks; property, plant and equipment; and liabilities for rent collected in advance.[2]

   c. Exchange (or exchange transaction) is a reciprocal transfer between an enterprise and another entity that results in the enterprise's acquiring assets or services or satisfying liabilities by surrendering other assets or services or incurring other obligations.[3]

   d. Nonreciprocal transfer[3] is a transfer of assets or services in one direction, either from an enterprise to its owners (whether or not in exchange for their ownership interests) or another entity or from owners or another entity to the enterprise. An entity's reacquisition of its outstanding stock is an example of a nonreciprocal transfer.

   e. Productive assets are assets held for or used in the production of goods or services by the enterprise. Productive assets include an investment in another entity if the investment is accounted for by the equity method but exclude an investment not accounted for by that method. Similar productive assets are productive assets that are of the same general type, that perform the same function or that are employed in the same line of business.

Applicability

4. This Opinion does not apply to the following transactions:

   a. A business combination accounted for by an enterprise according to the provisions of *APB Opinion No. 16, Business Combinations*,

   b. A transfer of nonmonetary assets solely between companies or persons under common control, such as between a parent company and its subsidiaries or between two subsidiary corporations of the same parent, or between a corporate joint venture and its owners,

[2] *APB Statement No. 3, Financial Statements Restated for General Price-Level Changes,* paragraphs 17-19, and Appendix B, contains a more complete explanation of monetary and nonmonetary items.

[3] *APB Statement No. 4, Basic Concepts and Accounting Principles Underlying Financial Statements of Business Enterprises*, paragraphs 180-183, contains a more complete explanation of exchanges and nonreciprocal transfers.

c. Acquisition of nonmonetary assets or services on issuance of the capital stock of an enterprise,[4] and

[4] The Board has deferred consideration of accounting for those transactions pending completion and consideration of Accounting Research Studies on intercorporate investments and stockholders' equity except to the extent they are covered in *APB Opinion No. 25, Accounting for Stock Issued to Employees*.

d. Stock issued or received in stock dividends and stock splits which are accounted for in accordance with ARB No. 43, Chapter 7B.

This Opinion applies to regulated companies in accordance with the Addendum to *APB Opinion No. 2, Accounting for the Investment Credit, 1962* and it amends *APB Statement No. 4, Basic Concepts and Accounting Principles Underlying Financial Statements of Business Enterprises*, to the extent it relates to measuring transfers of certain nonmonetary assets. Some exchanges of nonmonetary assets involve a small monetary consideration, referred to as “boot,” even though the exchange is essentially nonmonetary. This Opinion also applies to those transactions. For purposes of applying this Opinion, events and transactions in which nonmonetary assets are involuntarily converted (for example, as a result of total or partial destruction, theft, seizure, or condemnation) to monetary assets that are then reinvested in other nonmonetary assets--are monetary transactions since the recipient is not obligated to reinvest the monetary consideration in other nonmonetary assets.

DISCUSSION

Present Accounting for Nonmonetary Transactions

5. Nonreciprocal Transfers with Owners. Some nonmonetary transactions are nonreciprocal transfers between an enterprise and its owners. Examples include (a) distribution of nonmonetary assets, such as marketable equity securities, to stockholders as dividends, (b) distribution of nonmonetary assets, such as marketable equity securities, to stockholders to redeem or acquire outstanding capital stock of the enterprise, (c) distribution of nonmonetary assets, such as capital stock of subsidiaries, to stockholders in corporate liquidations or plans of reorganization that involve disposing of all or a significant segment of the business (the plans are variously referred to as spin-offs, split-ups, and split-offs), and (d) distribution of nonmonetary assets to groups of stockholders, pursuant to plans of rescission or other settlements relating to a prior business combination, to redeem or acquire shares of capital stock previously issued in a business combination. Accounting for decreases in owners' equity that result from nonreciprocal nonmonetary transactions with owners has usually been based on the recorded amount of the nonmonetary assets distributed.

6. Nonreciprocal Transfers with Other Than Owners. Other nonmonetary transactions are nonreciprocal transfers between an enterprise and entities other than its owners. Examples are the contribution of nonmonetary assets by an enterprise to a charitable organization and the contribution of land by a governmental unit for construction of productive facilities by an enterprise. Accounting for nonmonetary assets received in a nonreciprocal transfer from an entity other than an owner has usually been based on fair value of the assets received while accounting for nonmonetary assets transferred to another entity has usually been based on the recorded amount of the assets relinquished.

7. Nonmonetary Exchanges. Many nonmonetary transactions are exchanges of nonmonetary assets or services with another entity. Examples include (a) exchange of product held for sale in the ordinary course of business (inventory) for dissimilar property as a means of selling the product to a customer, (b) exchange of product held for sale in the ordinary course of business (inventory) for similar product as an accommodation - that is, at least one party to the exchange reduces transportation costs, meets immediate inventory needs, or otherwise reduces

costs or facilitates ultimate sale of the product–and not as a means of selling the product to a customer, and (c) exchange of productive assets–assets employed in production rather than held for sale in the ordinary course of business - for similar productive assets or for an equivalent interest in similar productive assets. Examples of exchanges in category (c) include the trade of player contracts by professional sports organizations, exchange of leases on mineral properties, exchange of one form of interest in an oil producing property for another form of interest, exchange of real estate for real estate. Accounting for nonmonetary assets acquired in a nonmonetary exchange has sometimes been based on the fair value of the assets relinquished and sometimes on the recorded amount of the assets relinquished.

Differing Views

8. Views of accountants differ as to appropriate accounting for all of the types of nonmonetary transactions described in paragraphs 5-7.

9. Nonreciprocal Transfers of Nonmonetary Assets to Owners. Some believe that accounting for nonreciprocal transfers of nonmonetary assets to owners should be based on the carrying amount of the nonmonetary assets transferred because only that method is consistent with the historical cost basis of accounting.

10. Others believe that accounting for transfers of nonmonetary assets to reduce certain owners' interests other than through a reorganization, liquidation, or rescission of a prior business combination should be based on the fair value of the nonmonetary assets distributed or the fair value of the stock representing the owners' equity eliminated, whichever is more clearly evident. In their view, disposing of the value represented by a nonmonetary asset is a significant economic event, and the unrecorded increase or decrease that has resulted in the value of the nonmonetary asset since its acquisition should be recognized.

11. Many who agree with accounting based on fair value for a nonreciprocal transfer of a nonmonetary asset that reduces certain owners' interests also believe that distributing a nonmonetary asset as an ordinary dividend (but not distributing a nonmonetary asset as a liquidating dividend or in a spin-off, reorganization or similar distributions) may be regarded as equivalent to an exchange with owners and therefore recorded at the fair value of the nonmonetary asset distributed, particularly if the dividend is distributable as either cash or the nonmonetary asset at the election of the owner. They believe that failure to recognize the fair value of nonmonetary assets transferred may both misstate the dividend and fail to recognize gains and losses on nonmonetary assets that have already been earned or incurred by the enterprise and should be recognized on distributing the assets for dividend purposes.

12. Others generally agree with the view that nonreciprocal transfers of nonmonetary assets to certain owners should be accounted for at fair value but believe that dividends and other prorata distributions to owners are essentially similar to liquidating dividends or distributions in spin-offs and reorganizations and should be accounted for at the recorded amount of the asset transferred.

13. Nonreciprocal Receipts of Nonmonetary Assets. Many believe that a nonmonetary asset received in a nonreciprocal transfer from other than owners should be recorded at fair value because fair value is the only value relevant to the recipient enterprise. Others believe that such nonmonetary assets should be recorded at a nominal value since fair value cannot be reasonably determined in view of performance obligations usually agreed to by the recipient as a consideration for the transfer.

14. Nonreciprocal Transfers of Nonmonetary Assets to Other Than Owners. Some believe that accounting for a nonreciprocal transfer of a nonmonetary asset to an entity other than an owner should be based on the carrying amount of the asset transferred because only that method is consistent with the historical cost basis of accounting. Others believe that failure to recognize the fair value of a nonmonetary asset transferred may both understate (or overstate) expenses incurred and fail to recognize gains or losses on nonmonetary assets that have already

been earned or incurred by the enterprise and should be recognized when the transfer of the asset is recognized as an expense.

15. Exchange Transactions. Some believe that accounting for an exchange of nonmonetary assets between an enterprise and another entity (an enterprise or individual acting in a capacity other than a stockholder of the enterprise) should be based on the fair values of the assets involved, while others believe that accounting for the exchange should be based on the carrying amount of the asset transferred from the enterprise. Those who advocate the former view believe it to be the only method consistent with the accounting principle that an asset acquired should be recorded at its cost as measured by the fair value of the asset relinquished to acquire it. Those advocating the latter view believe that revenue should be recognized only if an exchange involves monetary assets; therefore recognizing fair value is inappropriate unless a monetary asset is received in an exchange.

16. Many accountants who accept the concept that accounting for an exchange of nonmonetary assets should be based on fair value believe that problems of measurement and questions about the conditions for recognizing revenue require modification of the concept in two types of exchanges. They therefore conclude that:

a. Fair values should not be recognized if an enterprise exchanges product or property held for sale in the ordinary course of business for product or property to be sold in the same line of business. The emphasis in that exchange, in their view, is on developing economical ways to acquire inventory for resale to customers rather than on marketing inventory to obtain revenue from customers. Therefore, "swapping" inventories between enterprises that are essentially competitors and not customers of each other is merely an incidental early stage of an earning process, and revenue should not be recognized until the time of sale of the exchanged products (in the same or another form) to a customer of the enterprise.

b. Fair value should not be recognized if an enterprise exchanges a productive asset for a similar productive asset or an equivalent interest in the same or similar productive asset. Therefore, revenue should not be recognized merely because one productive asset is substituted for a similar productive asset but rather should be considered to flow from the production and sale of the goods or services to which the substituted productive asset is committed.

17. Fair Value Not Determinable. General agreement exists that a nonmonetary transaction, regardless of form, should not be recorded at fair value if fair value is not determinable within reasonable limits. Major uncertainties concerning realizability of the fair value proposed to be assigned to a nonmonetary asset received in a nonmonetary transaction are indicative of an inability to determine fair value within reasonable limits. Some believe that only an exchange transaction between parties with essentially opposing interests provides an independent test of fair value to be used in measuring the transaction; therefore fair value is determinable within reasonable limits only in a negotiated exchange transaction. Others believe that fair value in a nonreciprocal transfer is also often determinable within reasonable limits and should be recognized in certain types of transactions.

OPINION

Basic Principle

18. The Board concludes that in general accounting for nonmonetary transactions should be based on the fair values[5] of the assets (or services) involved which is the same basis as that used in monetary transactions. Thus, the cost of a nonmonetary asset acquired in exchange for another nonmonetary asset is the fair value of the asset surrendered to obtain it, and a gain or loss should be recognized on the exchange. The fair value of the asset received should be used to measure the cost if it is more clearly evident than the fair value of the asset surrendered. Similarly, a nonmonetary asset received in a nonreciprocal transfer should be recorded at the fair value of the asset received. A transfer of a nonmonetary asset to a stockholder or to another entity in a nonreciprocal transfer should be recorded at the fair value of the asset transferred, and a gain or loss should be recognized on the disposition of the asset. The fair value of an entity's own stock reacquired may be a more clearly evident measure of the fair value of the asset distributed in a nonreciprocal transfer if the transaction involves distribution of a nonmonetary asset to eliminate a disproportionate part of owners' interests (that is, to acquire stock for the treasury or for retirement).

[5] See paragraph 25 for determination of fair value.

19. The Board believes that certain modifications of the basic principle are required to accommodate problems of measurement and questions about the conditions for recognizing revenue. These modifications are specified in paragraphs 20-23.

Modifications of the Basic Principle

20. Fair Value Not Determinable. Accounting for a nonmonetary transaction should not be based on the fair values of the assets transferred unless those fair values are determinable within reasonable limits (paragraph 25).

21. Exchanges. If the exchange is not essentially the culmination of an earning process, accounting for an exchange of a nonmonetary asset between an enterprise and another entity should be based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) of the nonmonetary asset relinquished. The Board believes that the following two types of nonmonetary exchange transactions do not culminate an earning process:

a. An exchange of a product or property held for sale in the ordinary course of business for a product or property to be sold in the same line of business to facilitate sales to customers other than the parties to the exchange, and

b. An exchange of a productive asset not held for sale in the ordinary course of business for a similar productive asset or an equivalent interest in the same or similar productive asset (similar productive asset is defined in paragraph 3 and examples are given in paragraph 7).[6]

[6] The fact that an exchange of productive assets is not a taxable transaction for tax purposes may be evidence that the assets exchanged are similar for purposes of applying this Opinion.

22. The exchanges of nonmonetary assets that would otherwise be based on recorded amounts (paragraph 21) may include an amount of monetary consideration. The Board believes that the recipient of the monetary consideration has realized gain on the exchange to the extent that the amount of the monetary receipt exceeds a proportionate share of the recorded amount of

the asset surrendered. The portion of the cost applicable to the realized amount should be based on the ratio of the monetary consideration to the total consideration received (monetary consideration plus the estimated fair value of the nonmonetary asset received) or, if more clearly evident, the fair value of the nonmonetary asset transferred. The Board further believes that the entity paying the monetary consideration should not recognize any gain on a transaction covered in paragraph 21 but should record the asset received at the amount of the monetary consideration paid plus the recorded amount of the nonmonetary asset surrendered. If a loss is indicated by the terms of a transaction described in this paragraph or in paragraph 21, the entire indicated loss on the exchange should be recognized.

23. Nonreciprocal Transfers to Owners. Accounting for the distribution of nonmonetary assets to owners of an enterprise in a spin-off or other form of reorganization or liquidation or in a plan that is in substance the rescission of a prior business combination should be based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) of the nonmonetary assets distributed. A prorata distribution to owners of an enterprise of shares of a subsidiary or other investee company that has been or is being consolidated or that has been or is being accounted for under the equity method is to be considered to be equivalent to a spin-off. Other nonreciprocal transfers of nonmonetary assets to owners should be accounted for at fair value if the fair value of the nonmonetary asset distributed is objectively measurable and would be clearly realizable to the distributing entity in an outright sale at or near the time of the distribution.

Applying the Basic Principle

24. The Board's conclusions modify to some extent existing practices as described in paragraphs 5-7. The conclusions are based on supporting reasons given in paragraphs 8-17.

25. Fair value of a nonmonetary asset transferred to or from an enterprise in a nonmonetary transaction should be determined by referring to estimated realizable values in cash transactions of the same or similar assets, quoted market prices, independent appraisals, estimated fair values of assets or services received in exchange, and other available evidence. If one of the parties in a nonmonetary transaction could have elected to receive cash instead of the nonmonetary asset, the amount of cash that could have been received may be evidence of the fair value of the nonmonetary assets exchanged.

26. Fair value should be regarded as not determinable within reasonable limits if major uncertainties exist about the realizability of the value that would be assigned to an asset received in a nonmonetary transaction accounted for at fair value. An exchange involving parties with essentially opposing interests is not considered a prerequisite to determining a fair value of a nonmonetary asset transferred; nor does an exchange insure that a fair value for accounting purposes can be ascertained within reasonable limits. If neither the fair value of a nonmonetary asset transferred nor the fair value of a nonmonetary asset received in exchange is determinable within reasonable limits, the recorded amount of the nonmonetary asset transferred from the enterprise may be the only available measure of the transaction.

27. A difference between the amount of gain or loss recognized for tax purposes and that recognized for accounting purposes may constitute a temporary difference to be accounted for according to *FASB Statement No. 109, Accounting for Income Taxes*.

Disclosure

28. An enterprise that engages in one or more nonmonetary transactions during a period should disclose in financial statements for the period the nature of the transactions, the basis of accounting for the assets transferred, and gains or losses recognized on transfers.[7]

[7] *Paragraph 12 of ARB No 51, Consolidated Financial Statements*, includes additional disclosures that are preferred if a parent company disposes of a subsidiary during the year.

21. ARB 43, Chapter 7, Section B provides the following guidance (only the pertinent excerpts are included below):

As to the Recipient

5. One of the basic problems of accounting is that of income determination. Complete discussion of this problem is obviously beyond the scope of this chapter. Basically, income is a realized gain and in accounting is recognized, recorded, and stated in accordance with certain principles as to time and amount.

6. If there is an increase in the market value of his holdings, such unrealized appreciation is not income. In the case of a stock dividend or split-up, there is no distribution, division, or severance of corporate assets. Moreover, there is nothing resulting therefrom that the shareholder can realize without parting with some of his proportionate interest in the corporation.

7. The foregoing are important points to be considered in any discussion of the accounting procedures to be followed by the recipient of a stock dividend or split-up since many arguments put forward by those who favor recognizing stock dividends as income are in substance arguments for the recognition of corporate income as income to the shareholder as it accrues to the corporation, and prior to its distribution to the shareholder; the acceptance of such arguments would require the abandonment of the separate entity concept of corporation accounting.

8. The question as to whether or not stock dividends are income has been extensively debated; the arguments pro and con are well known.[1] The situation cannot be better summarized, however, than in the words approved by Mr. Justice Pitney in Eisner v. Macomber, 252 U.S. 189, wherein it was held that stock dividends are not income under the Sixteenth Amendment, as follows:

> "A stock dividend really takes nothing from the property of the corporation and adds nothing to the interests of the stockholders. Its property is not diminished and their interests are not increased ... the proportional interest of each shareholder remains the same. The only change is in the evidence which represents that interest, the new shares and the original shares together representing the same proportional interests that the original shares represented before the issue of the new ones."

[1] See, for instance, Freeman, "Stock Dividends and the New York Stock Exchange," American Economic Review, December, 1931 (pro), and Whitaker, "Stock Dividends, Investment Trusts, and the Exchange," American Economic Review, June, 1931 (con).

9. Since a shareholder's interest in the corporation remains unchanged by a stock dividend or split-up except as to the number of share units constituting such interest, the cost of the shares previously held should be allocated equitably to the total shares held after receipt of the stock dividend or split-up. When any shares are later disposed of, a gain or loss should be determined on the basis of the adjusted cost per share.

22. FIN 30 provides the following guidance (only the pertinent excerpts are included below):

> 1. The FASB has been asked whether gain or loss results from an involuntary conversion of a nonmonetary asset to monetary assets if the monetary assets are subsequently reinvested in a similar nonmonetary asset.[1] Generally, if a nonmonetary asset is involuntarily converted, gain or loss for the difference between the cost[2] of the nonmonetary asset and the amount of monetary assets received has been recognized in income in the period of the involuntary conversion. In other cases, that difference has been accounted for as an adjustment to the cost basis of a nonmonetary asset that is subsequently acquired as replacement property.
>
> [1] The terms "nonmonetary" and "monetary" as used in this Interpretation have the same meaning as those terms have in *APB Opinion No. 29, Accounting for Nonmonetary Transactions*.
>
> [2] As used in this Interpretation, the term cost refers to the cost of a nonmonetary asset or to its carrying amount, if different.
>
> INTERPRETATION
>
> 2. Involuntary conversions of nonmonetary assets to monetary assets are monetary transactions for which gain or loss shall be recognized even though an enterprise reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets. As discussed in paragraph 11 of this Interpretation, however, the requirement to recognize gain does not apply to certain involuntary conversions of LIFO inventories.[3]
>
> [3] Paragraph 14.b. of *APB Opinion No. 28, Interim Financial Reporting*, provides an exception for the liquidation of a LIFO inventory at an interim date if replacement is expected by year-end. Accordingly, that exception applies to an involuntary conversion of a LIFO inventory if replacement is expected by year-end.
>
> 3. In some cases, a nonmonetary asset may be destroyed or damaged in one accounting period, and the amount of monetary assets to be received is not determinable until a subsequent accounting period. In those cases, gain or loss shall be recognized in accordance with *FASB Statement No. 5, Accounting for Contingencies.*
>
> 4. Gain or loss resulting from an involuntary conversion of a nonmonetary asset to monetary assets shall be classified in accordance with the provisions of *APB Opinion No. 30, Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions*.
>
> 5. Gain or loss resulting from an involuntary conversion of a nonmonetary asset to monetary assets that is not recognized for income tax reporting purposes in the same period in which the gain or loss is recognized for financial reporting purposes is a temporary difference for which comprehensive recognition of deferred taxes, as described in *FASB Statement No. 109, Accounting for Income Taxes*, is required.

23. EITF 86-29 provides the following guidance (only the pertinent excerpts are included below):

> ISSUE
>
> The basic principle contained in Opinion 29 is that the exchange of nonmonetary assets should be recorded at fair value. Certain modifications to that basic principle are contained in paragraphs 21 and 22 of Opinion 29. (The Task Force previously discussed certain aspects of those modifications in Issues No. 84-29, "Gain and Loss Recognition on Exchanges of Productive Assets and the Effect of Boot," and No. 85-43, "Sale of Subsidiary for Equity Interest in Buyer.")

The issues are (1) how the accounting for certain nonmonetary transactions should be affected by the magnitude of boot and (2) how the exceptions to the use of fair value should be applied.

EITF DISCUSSION

The Task Force reached a consensus that the decision as to whether an exchange involving products or properties held for sale (paragraph 21.a. of Opinion 29) should be measured using the recorded amounts or fair value depends on whether the products or properties received will be sold in the same line of business as the products or properties given up.

Further, the Task Force reached a consensus that the decision as to whether an exchange of similar productive assets (paragraph 21.b.) should be measured using the recorded amounts or fair value should be based on a "same line of business" test.

Some Task Force members expressed the view that the exchange of a controlled business (as defined in ARB 51) for an investment in an entity that is not controlled, but is in the same line of business, would not necessarily meet the definition of a similar productive asset and would have to be evaluated based on individual facts and circumstances. No consensus was reached on this issue.

The Task Force reached a consensus that a product or property held for sale and exchanged for a productive asset did not fall within the modifications to the basic principle of Opinion 29 (even if they were in the same line of business) and should be recorded at fair value.

The Task Force discussed an exchange of nonmonetary assets that would otherwise be based on recorded amounts but that also involves boot, reached a consensus that the transaction should be considered monetary (rather than nonmonetary) if the boot is significant, and agreed that "significant" should be defined as at least 25 percent of the fair value of the exchange. As a monetary transaction, both parties would record the exchange at fair value. If the boot in a transaction is less than 25 percent, the pro rata gain recognition guidance in paragraph 22 of Opinion 29 should be applied by the receiver of boot, and the payer of boot would not recognize a gain. The Task Force acknowledged that the ability to satisfactorily measure fair value is a prerequisite to the use of fair value.

The Task Force also discussed various exchanges involving investments accounted for by consolidation and by the equity method. The Task Force reached a consensus that an enterprise should account for an exchange of securities in which it acquires control of a subsidiary as a business combination in accordance with Opinion 16. An enterprise should account for an exchange of securities accounted for by consolidation or by the equity method for an investment in which it does not acquire control of a business but for which it will account by the equity method, as a nonmonetary transaction in accordance with Opinion 29. The Task Force noted that the provisions of this consensus were not intended to apply to exchanges involving joint ventures or the acquisition of a minority interest.

Additionally, several Task Force members and the SEC Observer expressed concern that a literal application of the consensus to an exchange in which an enterprise acquires control of a business could result in the recognition of gain on transactions that are in substance an exchange of similar productive assets or result in a 100 percent write-up of an asset in circumstances in which an entity has not transferred control of the asset. For example, Company A transfers an asset to Company B in exchange for shares of Company B. As a result of the exchange, Company A acquires control of Company B; Company A also indirectly retains control of the asset received by Company B. The Task Force agreed that Company A should account for this transaction as a partial sale (to minority shareholders of Company B), and gain recognition should be limited to that portion of the asset treated as sold. If Company B accounts for the exchange at fair value, profit applicable to the portion of the asset indirectly controlled by Company A would be eliminated in Company A's consolidation of Company B.

Further, the Task Force observed that the consensus is not intended to change the application of Opinion 16 or to eliminate the need to exercise judgment in those circumstances in which the substance of a transaction indicates that fair value accounting is not appropriate. That is, if Opinion 16 is to apply, the substance of the transaction must be a business combination.

STATUS

Issues relating to the exchange of real estate involving boot were discussed in Issue No. 87-29, “Exchange of Real Estate Involving Boot.” For that Issue, the Task Force reached a consensus that a transaction involving an exchange of similar real estate that is considered a monetary transaction under Issue 86-29 because boot is at least 25 percent of the fair value of the exchange would be allocated between two components: a monetary portion and a nonmonetary portion. (An exchange of similar real estate is defined in Issue 87-29 as an exchange of either (a) real estate held for sale in the ordinary course of business for real estate to be sold in the same line of business or (b) real estate not held for sale in the ordinary course of business for similar real estate.) The allocation between the monetary and nonmonetary portions of the transaction should be based on their relative fair values at the time of the transaction. For the receiver of boot, the monetary portion would be accounted for under Statement 66 as the equivalent of a sale of an interest in the underlying real estate, and the nonmonetary portion would be accounted for under paragraph 21 of Opinion 29. For the payer of boot, the monetary portion would be accounted for as an acquisition of real estate, and the nonmonetary portion would be accounted for under paragraph 21 of Opinion 29. Exhibit 87-29A presents an example of the application of the consensus reached on Issue 87-29.

No further EITF discussion is planned.

24. EITF 93-11 provides the following guidance (only the pertinent excerpts are included below):

ISSUE

In a barter transaction involving barter credits, an enterprise enters into a transaction to exchange a nonmonetary asset (for example, inventory) for barter credits. Those transactions may occur directly between principals to the transaction or include a third party whose business is to facilitate those types of exchanges (for example, a barter company).

The barter credits can be used to purchase goods or services, such as advertising time, from either the barter company or members of its barter exchange network. The goods and services to be purchased may be specified in a barter contract or limited to items made available by members of the exchange network. Some arrangements may require the payment of cash in addition to the barter credits to purchase goods or services. Barter credits also may have a contractual expiration date, at which time they become worthless.

The issue is whether Opinion 29 should be applied to an exchange of a nonmonetary asset for barter credits and, if so, the amount of profit or loss, if any, that should be recognized.

EITF DISCUSSION

The Task Force reached a consensus that transactions in which nonmonetary assets are exchanged for barter credits should be accounted for under Opinion 29. An impairment of the nonmonetary asset exchanged should be recognized prior to recording the exchange if the fair value of that asset is less than its carrying amount. The impairment should be measured as the amount by which the carrying amount of the asset exceeds its fair value. Recognition of an impairment loss also would be required in an exchange of assets or contractual rights not reported in the balance sheet (for example, operating leases) if the transferor is not relieved of primary liability for the related obligation. The definition of fair value in paragraph 13 of Statement 15 may be useful in determining the fair value of the nonmonetary asset. The Task Force noted that fair value should not be based on an estimate of the value of the barter credits to be received. After an impairment is recognized, the reduced carrying amount of the nonmonetary asset becomes its new cost. [Note: See STATUS section.]

If an exchange involves the transfer or assumption of an operating lease, impairment of that lease should be measured as the amount of the remaining lease costs (discounted rental payments and unamortized leasehold improvements) in excess of the discounted amount of probable sublease rentals for the remaining lease term. [Note: See STATUS section.]

The Task Force also reached a consensus that in reporting the exchange of a nonmonetary asset for barter credits, it should be presumed that the fair value of the nonmonetary asset exchanged is more clearly evident than the fair value of the barter credits received and that the barter credits should be reported at the fair value of the nonmonetary asset exchanged. The Task Force noted, however, that that presumption might be overcome if an entity can convert the barter credits into cash in the near term, as evidenced by a historical practice of converting barter credits into cash shortly after receipt, or if independent quoted market prices exist for items to be received upon exchange of the barter credits. It also should be presumed that the fair value of the nonmonetary asset does not exceed its carrying amount unless there is persuasive evidence supporting a higher value. An impairment loss on the barter credits should be recognized if it subsequently becomes apparent that (1) the fair value of any remaining barter credits is less than the carrying amount or (2) it is probable that the enterprise will not use all of the remaining barter credits.

STATUS

In March 1995, the FASB issued Statement 121 which requires that long-lived assets and certain identifiable intangibles to be held and used be reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Statement 121 establishes accounting standards for the recognition and measurement of impairment losses and sets forth an approach to determining an asset's fair value. Statement 121 also requires that long-lived assets and certain identifiable intangibles to be disposed of be reported at the lower of carrying amount or fair value less cost to sell.

No further EITF discussion is planned.

Statutory Issue Paper No. 74

Life, Deposit-Type and Accident and Health Reinsurance

STATUS
Finalized March 16, 1998

Original SSAP: SSAP No. 61; Current Authoritative Guidance: SSAP No. 61R
This issue paper may not be directly related to the current authoritative statement.

Type of Issue:
Life Specific

SUMMARY OF ISSUE

1. Reinsurance is an agreement by which a reporting entity transfers all or part of its risk under a contract to another reporting entity. Current statutory guidance on the accounting for life and accident and health reinsurance is contained in Chapters 17, 21 and 24 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual).

2. GAAP guidance on the accounting for life and accident and health reinsurance is primarily contained in *FASB Statement No. 113*, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113). In several instances*,* FAS 113 differs from the current statutory guidance.

3. The purpose of this issue paper is to establish statutory accounting principles for reinsurance of life, deposit-type and accident and health contracts that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. This issue paper applies to life and accident and health contracts and deposit-type contracts as defined in *Issue Paper No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force* (Issue Paper No. 50). The provisions of Chapter 24 of the Life/A&H Accounting Practices and Procedures Manual (Chapter 24) and the accounting related items in the proposed Actuarial Guideline JJJ - *Guideline Concerning Questions and Answers Related to the Life and Health Reinsurance Agreements Model Regulation* (the proposed Actuarial Guideline JJJ), which provided further clarification of reinsurance accounting as provided in Chapter 24, are adopted as the statutory accounting principles for life and accident and health reinsurance except that all deposit-type contracts reinsured are to be accounted for under the Deposit Accounting section of Chapter 24. Goodwill resulting from the deferral of losses by the assuming entity at the inception of assumption reinsurance agreements shall be included in the total goodwill of a reporting entity when calculating the amount of goodwill that is a nonadmitted asset pursuant to *Issue Paper No. 68—Business Combinations and Goodwill*.

5. With respect to other accounting matters, the provisions of Chapter 17 (included in paragraph 14 of this issue paper) of the Life/A&H Accounting Practices and Procedures Manual that relate to reinsurance in unauthorized companies and funds held under reinsurance treaties with unauthorized reinsurers are adopted as statutory accounting principles. The provisions of Chapter 21 (included in paragraph 15 of this issue paper) of the Life/A&H Accounting Practices and Procedures Manual that relate to commissions and expense allowances on ceded and assumed reinsurance are adopted as statutory accounting principles. In addition, the Annual Statement Instructions require reinsurance disclosures in

notes 10 through 15 to the Annual Statement. These disclosures (included in paragraph 18 of this issue paper) are also adopted as statutory accounting principles.

6. If it is probable that reinsurance recoverables on paid or unpaid claim or benefit payments will be uncollectible, consistent with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets,* amounts shall be written off through a charge to the Statement of Operations by reversing the accounts previously utilized to establish the reinsurance recoverable.

DISCUSSION

7. The statutory accounting for life and accident and health reinsurance was recently revised through amendments to Chapter 24 and further clarified by the proposed Actuarial Guideline JJJ. The GAAP guidance for life and accident and health reinsurance is contained principally within FAS No. 113 which is adopted with modification for property and casualty reinsurance in *Issue Paper No. 75—Property and Casualty Reinsurance* and by this issue paper for life, deposit-type and accident and health reinsurance. This issue paper applies to all accident and health reinsurance written by life and health and property and casualty insurers. The statutory accounting principles established by this issue paper differ substantially from GAAP, reflecting much more detailed guidance as follows:

a. Reserve credits taken by ceding entities as a result of reinsurance contracts are netted against the ceding entity's policy and claim reserves and unpaid claims. Under GAAP, reinsurance recoverables are reported as assets.

b. For statutory reporting, first year and renewal ceding commissions on indemnity reinsurance of new business (ceding commissions on ceded in-force business are included in the calculation of initial gain or loss, see paragraph 7.d.) are recognized as income. Under GAAP, ceding commissions are reported first as a reduction of deferred acquisition costs (DAC) and then if DAC is completely eliminated any excess is established as unearned revenue.

c. As discussed in Issue Paper No. 50, statutory accounting defines deposit-type contracts as those contracts which do not include any mortality or morbidity risk. GAAP defines investment contracts as those that do not subject the reporting entity to significant policyholder mortality or morbidity risk. (The distinction is any mortality or morbidity risk for statutory purposes vs. significant mortality or morbidity risk for GAAP purposes.) Therefore, a contract may be considered an investment contract for GAAP purposes, and that same contract may be considered other than deposit-type for statutory purposes. A reinsurance treaty covering contracts that have insignificant mortality or morbidity risk (i.e., contracts classified as other than deposit-type contracts for statutory purposes, but investment contracts for GAAP purposes) that does not transfer that mortality or morbidity risk, but does transfer all of the significant risk inherent in the business being reinsured (e.g., lapse, credit quality, reinvestment or disintermediation risk) qualifies for reinsurance accounting for statutory reporting purposes, but would not qualify for reinsurance accounting treatment for GAAP purposes.

d. For statutory reporting, initial gains or losses on indemnity reinsurance of in-force blocks of business have unique accounting treatment. A portion of the initial gains or losses (equal to the tax effect of the initial gain or loss in surplus) is reported as commissions and expense allowances on reinsurance ceded in the statement of operations. The remainder of the initial gains or losses is reported on a net-of-tax basis as a write-in for gain or loss in surplus in the Capital and Surplus Account. In subsequent years, the ceding entity recognizes income on the reinsurance ceded line for the net-of-tax profits that emerged on the reinsured block of business with a corresponding decrease in the write-in for gain or loss in surplus. Under GAAP, the cost of reinsurance is amortized to income over the life of the reinsured contracts or the reinsurance contract period, depending on whether the reinsurance contract is long or short-duration. The difference, if any, between amounts paid for a reinsurance contract and the amount of the liabilities for policy benefits relating to the underlying reinsured contracts is part of the estimated cost to be amortized.

e. Statutory accounting prohibits recognition of a gain or loss in connection with the sale, transfer or reinsurance of an in-force block of business between affiliated entities in a non-economic transaction. Any difference between the assets transferred by the ceding entity and the liabilities, including unamortized IMR, shall be deferred and amortized under the interest method. Under GAAP, such transactions are treated as capital contributions or dividends.

f. Statutory accounting requires that a liability be established through a provision reducing surplus for unsecured reinsurance recoverables from unauthorized reinsurers. Under GAAP, no such liability is required. However, both statutory accounting and GAAP require an assessment of the collectibility of recorded reinsurance recoverables.

g. Statutory accounting as defined in Chapter 24 prescribes offsetting certain reinsurance premiums. However, FAS 113 states that for GAAP, offsets can occur only when a right of setoff exists.

8. Amounts due from reinsurers on paid claims and benefits are reported as assets under both statutory accounting and GAAP. Reserve credits deducted by ceding entities from their direct and assumed policy and claim reserves and unpaid claims represent amounts that will be recovered from reinsurers. These reinsurance recoverables meet the statutory definition of an asset established in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets;* however, this asset will continue to be presented as a contra liability in statutory financial statements because a change to “gross” presentation would necessitate extensive changes in and restatement of the reporting of ceded reinsurance in schedules and exhibits of the NAIC Annual Statement.

9. This issue paper maintains current statutory accounting principles that require that losses to the assuming entity at the inception of assumption reinsurance agreements (i.e., liabilities exceed assets) be deferred as goodwill and amortized over the life of the policies, but for a period not to exceed 10 years. This issue paper clarifies that goodwill recorded by an assuming entity related to an assumption reinsurance agreement shall be considered with goodwill of an entity in determining the amount of goodwill to be nonadmitted. If assets exceed liabilities at the inception of the assumption reinsurance agreement, the assuming entity shall record a deferred liability and amortize the amount using the interest method over the expected life of the business, but for a period not to exceed 10 years.

10. *Issue Paper No. 52—Deposit-Type Contracts* (Issue Paper No. 52) establishes statutory accounting principles for income recognition and policy reserves for deposit-type contracts. Under Issue Paper No. 52, reinsurance of deposit-type contracts, which by definition do not have insurance risk, will be accounted for under the provisions of the Deposit Accounting section of Chapter 24. This is consistent with the GAAP treatment of investment contracts under FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments, but is inconsistent with reinsurance accounting treatment in Chapter 24 which would allow for reinsurance accounting treatment if the risks other than mortality and morbidity were transferred.

11. The impact of gains or losses from reinsurance of in-force blocks of business can be effectively monitored because such gains and losses are shown as a single line item in the surplus section.

12. The statutory accounting for non-economic assumption reinsurance transactions between affiliated entities is consistent with *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*.

13. The statutory requirement to establish a liability, Reinsurance in Unauthorized Companies, for unsecured reinsurance recoverables from unauthorized reinsurers is contained in various state statutes, the Life/A&H Accounting Practices and Procedures Manual (Chapter 17) and the Instructions to the Life, Accident and Health Annual Statement, Schedule S - Part 3. This requirement maintains current statutory accounting, and is consistent with the recognition concept and conservatism concept in the Statement of Concepts, which also allows for certain mandated liabilities.

> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., excess of statutory over statement reserves, interest maintenance reserves, asset valuation reserves, and others).
>
> Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholders obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.

Drafting Notes/Comments

- Deposit accounting for Property and Casualty Companies is currently being considered by the AICPA. Codification may have to be amended to acknowledge an additional SAP/GAAP difference should the AICPA adopt guidance for Life Insurance Companies that differs from Chapter 24.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

14. Chapter 17 of the Life/A&H Accounting Practices and Procedures Manual provides the following guidance on reinsurance in unauthorized companies:

> Reinsurance in Unauthorized Companies
>
> This liability is established to offset credit taken in various balance sheet accounts for reinsurance ceded to unauthorized reinsurers. Credit for reinsurance with unauthorized companies also may be permitted if the ceding company holds securities or cash of the assuming company equal to the reserve credit taken. Such deposits are to be held under the control of the ceding company. Additionally, any securities held under such an arrangement must be investments that the ceding company is allowed to make under the provision of the investment sections of the insurance statutes. Other permissible arrangements include irrevocable trusts or "clean" letters of credit. If the assuming company is not licensed or is not an authorized reinsurer in the domiciliary state of the ceding company or if the reinsurance does not meet required standards, the ceding company must set up a net liability equal to the following:
>
> 1. Reserve credits taken including any Interest Maintenance Reserve (IMR) liability adjustment, plus
>
> 2. Claim liability credits taken on paid and unpaid (in course of settlement) claims recoverable, plus
>
> 3. Other asset increases or liability reductions resulting from amounts recoverable from the assuming company including commissions, expense allowances, modified coinsurance

reserve adjustments, experience rating refunds, and estimated incurred but not reported claim liabilities, less

4. Deposits by or funds withheld from the reinsurer, as provided for in the reinsurance treaty, pledged as security for the payment of reinsurance obligations. Such deposits or funds are typically held by the ceding company or are placed in a trust or custodial agreement. Amounts placed in trust or custodial accounts are held subject to withdrawal by, and under the control of, the ceding insurer, less

5. Amounts of reinsurance recoverables covered by a clean, irrevocable letter of credit issued by a qualified banking institution, less

6. Amounts contractually due the assuming company.

The net liability defined above should never be less than zero for any particular reinsurer. Caution should be exercised in taking credit for items in 4, 5, and 6 above since state requirements vary considerably. The change in liability for unauthorized reinsurance is a direct charge or credit to surplus.

Funds Held Under Reinsurance Treaties with Unauthorized Reinsurers

This liability is for funds deposited by or contractually withheld from unauthorized reinsurers. Please note that the withholding of reinsurance premiums represents only one method of securing net reinsurance liabilities. Letters of credit from or funds escrowed in a financial institution represent two other commonly accepted methods.

15. Chapter 21 of the Life/A&H Accounting Practices and Procedures Manual provides the following guidance on expense allowances and reinsurance commissions:

Expense Allowances on Reinsurance

For reinsurance it is common for the assuming insurer to provide an expense allowance to cover expenses of the ceding insurer. The allowance is frequently nonspecific with respect to premium taxes and other general expenses of the ceding insurer and it is usually combined with and accounted for as part of the commissions on reinsurance assumed or ceded.

The portion of reinsurance expense allowances which represents specific reimbursement of premium taxes should be accounted for as premium tax. Any portion specifically reimbursing general expenses should be accounted for as other general expense. Each should be excluded from commissions and expense allowances on reinsurance assumed or ceded.

Reinsurance Commission Accounting Practices

Under current statutory accounting practices and procedures, commissions on direct business, commissions and expense allowances on reinsurance assumed, and commissions and expense allowances on reinsurance ceded are each accounted for separately in the Summary of Operations and on the balance sheet. Accordingly, commissions and expense allowances on reinsurance ceded are reported as income or revenue earned in the Summary of Operations and the balance sheet provision for due and accrued amounts is reported as an asset. This differs from the more customary statutory accounting practice of reporting insurance transactions net of reinsurance in the Summary of Operations and on the balance sheet with reliance upon supporting exhibits for the reinsurance information.

16. Chapter 24 of the Life/A&H Accounting Practices and Procedures Manual provides statutory accounting guidance for life and accident and health reinsurance. A portion of that guidance is excerpted below:

A. Indemnity Reinsurance

Transfer of Risk

Reinsurance agreements must transfer risk from the ceding company to the reinsurer in order to receive the reinsurance accounting treatment discussed in this chapter. If the terms of the agreement violate the risk transfer criteria contained herein, i.e., limits or diminishes the transfer of risk by the ceding company to the reinsurer, the agreement shall be accounted for as discussed in the Deposit Accounting section below. In addition, any contractual feature that delays timely reimbursement, violates the conditions of reinsurance accounting.

This paragraph applies to all life and accident and health reinsurance agreements except for yearly renewable term reinsurance agreements and non-proportional reinsurance agreements such as stop loss and catastrophe reinsurance. All reinsurance agreements covering insurance products or similar products of the type identified in A(6) of Appendix A shall follow the guidance for reinsurance accounting contained in this chapter provided the reinsurance agreement (1) transfers significant insurance risk and (2) does not contain any of the conditions set forth in Appendix A. All products not of the type identified in A(6) of Appendix A or covered in the following two paragraphs, shall follow the guidance for reinsurance accounting contained in this chapter provided that the agreement (1) transfers one or more of the risk categories described in A(6) and (2) does not contain any of the conditions set forth in Appendix A. Contracts that fail to meet the requirements for reinsurance accounting shall follow the guidance contained in the Deposit Accounting section.

Yearly renewable term reinsurance agreements that transfer a proportionate share of mortality or morbidity risk inherent in the business being reinsured and do not contain any of the conditions described in Appendix A(2), (3), (4), (8), (9), (10) or (11), shall follow the guidance for reinsurance accounting. Contracts that fail to meet the requirements for reinsurance accounting shall follow the guidance contained in the Deposit Accounting section.

For non-proportional reinsurance agreements such as stop loss and catastrophe reinsurance agreements, contract terms should be evaluated to assess whether they transfer significant risk to the reinsurer. For example, prepayment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding company limits the risk to the reinsurer. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payment to the ceding company depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Reinsurance accounting shall apply to all non-proportional agreements that transfer significant risk and do not contain any provisions that protect the reinsurer from incurring a loss. Contracts that fail to meet the requirements for reinsurance accounting shall follow the guidance contained in the Deposit Accounting section.

Accounting and Reporting of Reinsurance

The obligation of reporting reinsurance in force and of determining unpaid premiums and incurred claims and other balances is generally on the ceding company because it knows the current status of the policies it has written directly and reinsured. A lag will develop between the time of the entry of the underlying policy transaction on the books of the ceding company and the transmittal of information and its entry on the books of the assuming company. The assuming company shall estimate any material unreported premiums and related costs, since it alone has the responsibility for determining its own financial condition and for preparing accurate financial statements.

The ceding company must report these items in its balance sheet:

1. Credits (deductions) to its policy and claim reserves and unpaid claims;
2. Premiums or other amounts payable on reinsured risks;
3. Amounts recoverable on claims, surrender values, dividends, experience rating refunds, taxes, commissions, and other expenses;
4. Modified coinsurance reserves; and
5. Amounts receivable or payable for funds withheld.

Similarly, in its balance sheet, the assuming company must report:

1. Reserves for reinsurance assumed reduced by any modified coinsurance reserves;
2. Reinsurance premiums receivable or other amounts receivable
3. Amounts payable for claims, surrender values, dividends, experience rating refunds, taxes, commissions, and other expenses; and
4. Amounts receivable or payable for funds withheld by the ceding company.

While the various balances that a company (ceding or assuming) has with its reinsurance partners will result in a net amount, the proper way to report them is in their separate classifications. The balances of one company shall not be netted against those of any other company. Each reinsurance agreement must be accounted for separately.

Reinsurance Premiums

For all reinsurance arrangements, the assuming company must report premiums under the terms of the reinsurance contract as income and establish any asset or liability consistent with the methods and assumptions used to establish its policy reserves and guidance contained in Chapter 18, Premium Income, of this manual. The ceding company shall reduce premium income by the amounts paid or payable to the reinsurers. The ceding company shall reduce its deferred and uncollected premiums reported as an asset and the assuming company shall record an asset for premiums payable to the reinsurer on those insurance policies with premiums collected on a basis more frequent than annual covered by the reinsurance arrangement. On those insurance policies covered by the reinsurance arrangement with premiums collected annually, the ceding company shall establish a liability and the assuming company shall record an asset for premiums payable to the reinsurer.

Reinsurance Benefit Payments

Policy benefit payments paid or payable by the reinsurer shall be reported in the Summary of Operations and reduces the ceding company's reported benefit payments. The reinsurer shall establish a liability for its share of any unpaid claim payments and the ceding company shall reduce any policy and contract claim liability with respect to the reinsured policies or establish a receivable for the amount due from the reinsurer for claims paid.

Expenses

The taxes, commissions, and other expenses that will be paid by the assuming company to the ceding company are agreed upon when the reinsurance agreement is negotiated. These items are calculated in accordance with the reinsurance agreement and usually relate to premiums or claims or both. At the statement date, the amount of unpaid expenses is generally based upon the amount of premiums and claims unpaid at that date.

Some coinsurance contracts provide that the assuming company pay to the ceding company a commission that exceeds the first-year premium. In the absence of any guarantees for payment of future premiums (for example, persistency guarantees), these commissions are accounted for on the cash basis. If, however, the ceding company guarantees that premiums will be paid in the future, which, in essence, returns the excess commission, it must record the excess commission as a liability. This liability is then to be released as future premiums are paid to the assuming company. The rate of release is determined in accordance with the anticipated experience and reasonable commission rate for first-year and renewal premiums. Excess commissions such as these are nothing more than a means of financing for the ceding company.

If renewal expense allowances in any accounting period are not sufficient to cover anticipated allocable renewal expenses of the ceding insurer on the portion of the business reinsured, a liability is to be established by the ceding company for the present value of the shortfall. In establishing this liability, assumptions are to be used equal to the applicable statutory reserve basis on the business reinsured. Anticipated allocable expenses includes commissions, premium taxes and direct expenses including, but not limited to, billing, valuation, claims and maintenance expected by the company at the time the business is reinsured.

Experience Refunds

Some reinsurance contracts, generally proportional reinsurance, provide that the reinsurer will refund an agreed upon portion of its profit to the ceding company. The reinsurance contract will provide the calculation and the factors to be included.

If the contract provides for experience refunds, the ceding company must record, as an asset, the amount of the refund receivable as of the statement date, but reduced by any amount that is contingent upon future experience. The assuming company is also required to record, as a liability, the amount of the refund calculated at the statement date, but without regard to any effects that future experience might have.

Credits for Ceded Reinsurance

The credit taken by the ceding company under the coinsurance arrangement is calculated using the same methodology and assumptions used in determining its policy and claim reserves. It is, of course, only for the percentage of the risk that was reinsured. Under modified coinsurance, the reserve credit is reduced by the modco deposit retained by the ceding company. If the company reinsures on a yearly renewable term basis, it is itself buying insurance for the portion of the ceded amount at risk. The amount of yearly renewable term reinsurance that is required on a given policy generally decreases each year as the company's reserve increases. The net amount at risk may increase, however, on interest sensitive products such as universal life. The amount at risk on accident and health yearly renewal term reinsurance will remain level and the reinsurance premium increases each year.

The reserve credit taken by the ceding company is reported as a reduction to the reserves and not as an asset of the company. The ceding company's reserve credit and assuming company's reserve for yearly renewable term reinsurance shall be computed as the one year term mean reserve on the amount of insurance ceded. The ceding company must use the same mortality and interest bases which were used for valuing the original policy before reinsurance. The credit may also be computed on a pro rata basis if the result is not materially different from the credit computed on the mean reserve basis. For all types of reinsurance, the ceding company also takes credit for other amounts due from the reinsurer such as unpaid claims and claims incurred but not reported. If contemplated by the reinsurance contract, recognition of related assets and liabilities must occur (policy loans, due and deferred premiums, etc.).

Non-proportional reinsurance is generally purchased in order to safeguard the company's aggregate loss potential. This form of reinsurance is entered into on an annual basis to limit the claims experience of the company and thereby protect its financial integrity. When the period of the arrangement exceeds one year, the contract must be carefully reviewed to determine if the end result more closely follows proportional reinsurance. No reserve credit is taken for non-proportional reinsurance unless the aggregate attachment point has in fact been penetrated. In order for a company to reflect reserve credits on a prospective basis, the company will need to demonstrate that the present value of expected recoveries using realistic assumptions and not statutory assumptions required for the underlying policy reserves, to be realized from the reinsurer is in excess of the present value of the reinsurance premiums guaranteed to be paid by the ceding insurer under the terms of the contract. Because non-proportional reinsurance aggregates experience, and does not indemnify the ceding insurer for each policy loss, the use of statutory assumptions underlying the insured policies is inappropriate for determining any reserve credit to be taken by the ceding insurer. Historical experience, pricing assumptions and asset shares should be considered in determining if the reinsurer may be reasonably expected to pay any claims. The reserve credit taken may only reflect these reasonable expectations. This treatment of non-proportional reinsurance is similar to the way property and casualty (P&C) reinsurance is considered. This is because these modes of reinsurance more closely follow P&C indemnification principles than life insurance formula basis, and because these coverages are very similar to excess insurance on P&C products. In determining the appropriate reserve credit, the probability of a loss penetrating to the reinsurer's level of coverage (using reasonable assumptions) must be multiplied by the expected amount of recovery. This is the same as reserve credits on coinsurance where the probability of a claim (i.e., mortality) is multiplied by the expected return (i.e., death benefit). In that the coverage is for aggregate experience, the mortality assumptions underlying any one policy risk is inappropriate to analyze the appropriate credits for non-proportional coverage.

Accounting for Interest Maintenance Reserve (IMR)

The interest-related gain or loss (net of taxes) associated with the sale, transfer or reinsurance of a block of liabilities must be credited or charged to the IMR in accordance with the IMR instructions contained in the NAIC Annual Statement Instructions Manual.

Reserves for Reinsurance Assumed

In assuming any insurance risks, the assuming company is required to establish policy reserves that are consistent with its obligations. The reserves it must establish, therefore, are also dependent upon the arrangement of reinsurance that is used. For risks transferred under the reinsurance arrangement, policy and claim reserves must be at least equal to the required reserves calculated using the same methodology and assumptions that would be used if the reinsurer had written the risk directly.

Accounting for Modified Coinsurance Arrangements

When the intent of the parties and the terms of the reinsurance contract are to enter into a modified coinsurance arrangement, the following accounting applies.

Ceding Company

In a modified coinsurance arrangement, the ceding company retains the assets equal to the modified coinsurance reserve. This reserve represents a prepayment of the reinsurer's future obligation. Premiums paid or payable to the reinsurer net of any experience refunds shall result in the reduction of premium income. Policy benefit payments paid by the reinsurer shall reduce the ceding company's reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the Summary of Operations as earned. The modified coinsurance reserve is included in the category of policy reserves. The modified coinsurance reserve adjustment from period-to-period shall be reported separately in the Summary of Operations.

Assuming Company (Reinsurer)

Premiums received or receivable by the reinsurer shall increase premium income net of any experience refunds and policy benefit payments paid by the reinsurer shall increase the reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the Summary of Operations when payable. The statutory policy reserves excludes the modified coinsurance reserve. The modified coinsurance reserve adjustment from period-to-period shall be reported separately in the Summary of Operations. The reinsurer's accounting of its obligations shall be consistent with the ceding company's accounting for the transfer of the obligations.

Accounting for Coinsurance With Funds Withheld Arrangements

When the intent of the parties and the terms of the reinsurance contract are to enter into a coinsurance arrangement with funds withheld, the following accounting applies.

Ceding Company

Premiums paid or payable to the reinsurer net of any experience refunds shall reduce premium income. Policy benefit payments paid by the reinsurer shall reduce the ceding company's reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the Summary of Operations as earned. A net reduction to policy reserves shall be taken for the portion of the obligation assumed by the reinsurer. Any amounts withheld by the ceding company shall be recorded as a separate liability. Any interest due or payable on the amounts withheld shall be recorded as interest on indebtedness.

Assuming Company (Reinsurer)

Premiums received or receivable by the reinsurer net of any experience refunds shall increase premium income and policy benefit payments paid by the reinsurer shall increase the reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the Summary of Operations when payable. The reinsurer shall record its share of the statutory policy reserves attributable to the business identified in the contract. Any funds withheld by the ceding company shall be recorded as an accounts receivable. Any interest earned or receivable on the funds withheld shall be recorded as miscellaneous income.

Uncollectible Reinsurance

The ceding and assuming companies must determine if reinsurance receivables are collectible. To the extent that the amounts are determined to be uncollectible, these amounts shall be charged to operations. Companies must write off uncollectible reinsurance receivables through the accounts previously utilized to establish the receivables.

Unauthorized Reinsurance

If the reinsurer is not authorized to do business, or is not otherwise approved, the reinsurance is considered to be unauthorized. The Model Law on Credit for Reinsurance specifying the conditions under which reinsurance credit may be taken, shall be followed. (For further discussion of the liability for unauthorized reinsurance see Chapter 17).

Gains and Losses on Indemnity Reinsurance

Under an indemnity reinsurance arrangement the ceding company continues to be liable to the policyholders and the reinsurer has no obligations to them except in the case of cut-through agreements. Typically the ceding company will continue to perform all functions in connection with claims and other policyholder services. Gains and losses on indemnity reinsurance are defined as the net experience under the reinsurance contract within a calendar year. Net experience (underwriting gains or loss) includes ceded premiums, claims, expense allowances, reserve adjustments, any IMR liability adjustment and experience refunds and dividends.

Losses that occur in any year of an indemnity reinsurance contract are immediately recognized. For reinsurance of in-force blocks of business, gains that occur in the initial calendar year are accounted for in accordance with Section 4, subsection C of Appendix B.

For indemnity reinsurance agreements entered into for other than in-force blocks of business, the gains and losses are immediately recognized by the ceding and assuming company.

Recaptures and Commutations

A recapture or a commutation of a reinsurance agreement is a transaction which results in the complete and final settlement and discharge of all present and future obligations between the parties arising out of the agreement or a portion of the agreement. Reasons for commuting reinsurance agreements often include: perceived financial instability of the reinsurer, inefficiencies associated with the runoff of longer tailed liabilities, or significantly different evaluation of ultimate loss costs. The assumed reserves and reserve credits taken are eliminated by the reinsurer and ceding insurer, respectively. The reinsurer and ceding insurer must also make any required IMR liability adjustment changes. Any net gain or loss is reported in the Summary of Operations.

Deposit Accounting

To the extent that a reinsurance contract does not, despite its form, provide for sufficient transfer of risk, amounts paid are to be accounted for and reported as deposits in the NAIC annual and interim financial statements in the following manner:

1. At the outset of the reinsurance contract the net consideration paid by the ceding company (premiums less commissions or other allowances) shall be recorded as a deposit on the ceding company's books and as a liability on the assuming company's books. The deposit may be reported as an asset in the ceding company's statement if (a) the assuming company is licensed, accredited or otherwise qualified in the ceding company's state of domicile under Section 1 of the NAIC Model Law on Credit for Reinsurance or (b) there are funds held by or on behalf of the ceding company which meet the requirements of Section 2 of that law. Throughout the life of the contract receipts and disbursements shall be recorded through the deposit/liability accounts. Income and losses shall be recognized by a party when, according to the terms of the contract, it has earned the amount and the other party has no recourse to repayment of such amount in future periods. When the contract is completed, or when there is a loss payment in excess of the deposit, any difference between consideration and recoveries shall be recorded as other miscellaneous insurance income or miscellaneous insurance loss.

2. No deduction shall be made from the policy or claim reserves on the ceding company's balance sheet, schedules and exhibits.

3. The assuming company shall record net considerations to be returned to the ceding company as liabilities.

B. Assumption Reinsurance

A company may sell all or part of a block of insurance business through an assumption reinsurance agreement. Typically, under an assumption reinsurance arrangement, the reinsurance contract is intended to effect a novation, thereby to extinguish the ceding company's liability to the policyholder. Assumption reinsurance requires that the reinsurer issue assumption certificates to the existing policyholders and take over responsibility for policyholder services. On occasion, the reinsurer will contract with the original company to continue to provide such services on a fee basis or may contract with a third party. Regulatory approval of assumption reinsurance arrangements is usually required. Approval is also usually required from the policyholders, who have a predetermined time period in which to accept or reject the reinsurance transfer. After the deadline has passed, approval is considered implied for all outstanding responses. For those policyholders that reject the transfer, the reinsurance agreement typically converts to a indemnity arrangement. Under this circumstance, reinsurance accounting, as defined earlier in this chapter, is to be followed.

Accounting for Assumption Reinsurance Transactions

Accounting for assumption reinsurance transactions involves all existing assets and liabilities with respect to the assumed policies. This involves policy reserves, policy loans, net due and deferred premiums, dividend accumulations, dividend liability, policy claims, advance premiums, unearned interest on policy loans, etc. The total effect of all of these assets and liabilities is collectively referred to as net policy liabilities.

Typically, because a block of in-force business has value, the sale transaction will result in a gain to the ceding company. If the policies are somewhat mature and have reasonably large net policy liabilities, the transaction probably will result in a transfer of cash or other assets by the ceding company. In this case, the net policy liabilities released by the ceding company will be greater than the value of the assets transferred. If the policies are young and have very small net policy liabilities, the assuming company may pay some amount in the purchase. The ceding company is to follow accounting for indemnity reinsurance for the policies sold until it has been formally relieved of the legal liability by either consent from the policyholders or when the expiration period for objecting to the transfer has expired. Upon release of the liability or risk, the ceding company shall recognize any gain or loss immediately. The gain or loss shall be the difference between the book value of the assets and liabilities including any unamortized IMR allocated or related to the block of business transferred. Direct and ceded balances are to be eliminated and gains are to be taken into income proportionally as the policyholders approve the transfer or at the end of the response period.

The assuming company is to value the assets acquired at the date of acquisition at their market values, and the reserves are to be established according to statutory requirements based on the benefits in the individual policies reinsured. If the liabilities exceed the assets, the difference represents goodwill that must be amortized using the interest method over the life of the policies, but for a period not to exceed 10 years. If the assets exceed the liabilities, the assuming company shall record a deferred liability and amortize the amount using the interest method over the expected life of the business but not to exceed ten years.

Upon initiation of the assumption reinsurance contract, the ceding and assuming companies are to report all balances reinsured as direct adjustments to the Balance Sheet. Any net gain or loss is reported as miscellaneous income when recognized.

Accounting for Non-economic Assumption Reinsurance Transactions

When the sale, transfer, or reinsurance of an in-force block of business occurs between affiliated companies that is not an economic transaction, the ceding and assuming company shall not recognize any gain or loss. The statutory liabilities and any unamortized IMR shall be transferred from the ceding company to the assuming company without adjustment. The assuming company shall amortize any transferred IMR at the same rate or amount that would have occurred for the ceding company. To the extent that the value of the assets transferred by the ceding company or the net asset value recorded by the assuming company differs from the liabilities including any unamortized IMR, the ceding and assuming company shall defer and amortize their respective differences consistent with the interest method described for non-affiliated transactions.

Effective Date

The revised accounting and reporting practices set forth in this chapter that were adopted on December 4, 1995, shall be effective for all accounting periods beginning on or after January 1, 1996, and shall apply to reinsurance agreements entered into or amended on or after January 1, 1996. The revised accounting and reporting practices shall not apply to reinsurance agreements in force on January 1, 1996.

For accounting periods commencing on or after January 1, 1996, agreements which were: (a) entered into on or after January 1, 1996, and which do not transfer risk shall be accounted for as deposits; (b) amended on or after January 1, 1996, and which do not transfer risk shall be accounted for prospectively as deposits with the appropriate reclassification of outstanding reinsurance balances as deposits with no surplus impact; or (c) amended on or after January 1, 1996, a change in accounting principle associated with the revised accounting in this chapter shall be applied prospectively with no adjustment to surplus. Not withstanding the effective dates noted above, any insurer which has previously been subject to compliance with the Life and Health Reinsurance Agreements Model Regulation or substantially similar regulation shall be guided by the effective date of the regulation.

CHAPTER 24 — APPENDIX A

The contents of this appendix is taken from the Life and Health Reinsurance Agreements Model Regulation.

Section 4. Accounting Requirements

A. No insurer subject to this regulation shall, for reinsurance ceded, reduce liability or establish any asset in any financial statement filed with the Department if, by the terms of the reinsurance agreement, in substance or effect, any of the following conditions exist:

(1) Renewal expense allowances provided or to be provided to the ceding ins by the reinsurer in any accounting period are not sufficient to cover anticipated allocable renewal expenses of the ceding insurer on the portion of the business reinsured, unless a liability is established for the present value of the shortfall (using assumptions equal to the applicable statutory reserve basis on the business reinsured). Those expenses include commissions, premium taxes and direct expenses including, but not limited to, billing, valuation, claims and maintenance expected by the company at the time the business is reinsured;

(2) The ceding insurer can be deprived of surplus or assets at the reinsurer’s option or automatically upon the occurrence of some event, such as the insolvency of the ceding insurer, except that termination of the reinsurance agreement by the reinsurer for nonpayment of reinsurance premiums or other amounts due, such as modified coinsurance reserve adjustments, interest and adjustments on funds withheld, and tax reimbursements, shall not be considered to be such a deprivation of surplus or assets;

(3) The ceding insurer is required to reimburse the reinsurer for negative experience under the reinsurance agreement, except that neither offsetting experience refunds against current and prior years’ losses under the agreement nor payment by the ceding insurer of an amount equal to current and prior years’ losses under the agreement upon voluntary termination of in force reinsurance by the ceding insurer shall be considered such a reimbursement to the reinsurer for negative experience. Voluntary termination does not include situations where termination occurs because of unreasonable provisions which allow the reinsurer to reduce its risk under the agreement. An example of such a provision is the right of the reinsurer to increase reinsurance premiums or risk and expense charges to excessive levels forcing the ceding company to prematurely terminate the reinsurance treaty;

(4) The ceding insurer must, at specific points in time scheduled in the agreement, terminate or automatically recapture all or part of the reinsurance ceded;

(5) The reinsurance agreement involves the possible payment by the ceding insurer to the reinsurer of amounts other than from income realized from the reinsured policies. For example, it is improper for a ceding company to pay reinsurance premiums, or other fees or charges to a reinsurer which are greater than the direct premiums collected by the ceding company;

(6) The treaty does not transfer all of the significant risk inherent in the business being reinsured. The following table identifies for a representative sampling of products or type of business, the risks which are considered to be significant. For products not specifically included, the risks determined to be significant shall be consistent with this table.

Risk categories:

(a) Morbidity

(b) Mortality

(c) Lapse

This is the risk that a policy will voluntarily terminate prior to the recoupment of a statutory surplus strain experienced at issue of the policy.

(d) Credit Quality (Cl)

This is the risk that invested assets supporting the reinsured business will decrease in value. The main hazards are that assets will default or that there will be a decrease in earning power. It excludes market value declines due to changes in interest rate.

(e) Reinvestment (C3)

This is the risk that interest rates will fall and funds reinvested (coupon payments or monies received upon asset maturity or call) will therefore earn less than expected. If asset durations are less than liability durations, the mismatch will increase.

(f) Disintermediation (C3)

This is the risk that interest rates rise and policy loans and surrenders increase or maturing contracts do not renew at anticipated rates of renewal. If asset durations are greater than the liability durations, the mismatch will increase. Policyholders will move their funds into new products offering higher rates. The company may have to sell assets at a loss to provide for these withdrawals.

*LTC = Long Term Care Insurance

LTD = Long Term Disability Insurance

(7) (a) The credit quality, reinvestment, or disintermediation risk is significant for the business reinsured and the ceding company does not (other than for the classes of business excepted in Paragraph (7)(b)) either transfer the underlying assets to the reinsurer or legally segregate such assets in a trust or escrow account or otherwise establish a mechanism satisfactory to the commissioner which legally segregates, by contract or contract provision, the underlying assets.

(b) Notwithstanding the requirements of Paragraph (7)(a), the assets supporting the reserves for the following classes of business and any classes of business which do not have a significant credit quality, reinvestment or disintermediation risk may be held by the ceding company without segregation of such assets:

- Health Insurance—LTC/LTD
- Traditional Non-Par Permanent

- Traditional Par Permanent
- Adjustable Premium Permanent
- Indeterminate Premium Permanent
- Universal Life Fixed Premium
  (no dump-in premiums allowed)

The associated formula for determining the reserve interest rate adjustment must use a formula which reflects the ceding company's investment earnings and incorporates all realized and unrealized gains and losses reflected in the statutory statement. The following is an acceptable formula:

$$\text{Rate} = \frac{2\,(I + CG)}{X+Y-I-CG}$$

Where:

I is the net investment income (Exhibit 2, Line 16, Column 7)

CG is capital gains less capital losses (Exhibit 4, Line 10, Column 6)

X is the current year cash and invested assets (Page 2, Line 10A, Column 1) plus investment income due and accrued (Page 2, Line 16, Column 1) less borrowed money (Page 3, Line 22, Column 1)

Y is the same as X but for the prior year

Drafting Note: Line references are for the 1992 annual statement. Line references may be deleted or should be updated if regulation is adopted after calendar year 1992. Be aware that annual statement line references may change from year to year.

(8) Settlements are made less frequently than quarterly or payments due from the reinsurer are not made in cash within ninety (90) days of the settlement date.

(9) The ceding insurer is required to make representations or warranties not reasonably related to the business being reinsured.

(10) The ceding insurer is required to make representations or warranties about future performance of the business being reinsured.

(11) The reinsurance agreement is entered into for the principal purpose of producing significant surplus aid for the ceding insurer, typically on a temporary basis, while not transferring all of the significant risks inherent in the business reinsured and, in substance or effect, the expected potential liability to the ceding insurer remains basically unchanged.

CHAPTER 24 — APPENDIX B

B. Notwithstanding Subsection A, an insurer subject to this regulation may, with the prior approval of the commissioner, take such reserve credit or establish such asset as the commissioner may deem consistent with the Insurance Law (or Code), Rules or Regulations, including actuarial interpretations or standards adopted by the Department.

C. (1) Agreements entered into after the effective date of this regulation which involve the reinsurance of business issued prior to the effective date of the agreements, along with any subsequent amendments thereto, shall be filed by the ceding company with the commissioner within thirty (30) days from its date of execution. Each filing shall include data detailing the financial impact of the transaction. The ceding insurer's actuary who signs the financial statement actuarial opinion with respect to valuation of reserves shall consider this regulation and any applicable actuarial standards of practice when determining the proper credit in financial statements filed with this department. The actuary should maintain adequate documentation and be prepared upon request to describe the actuarial work performed for inclusion in the financial statements and to demonstrate that such work conforms to this regulation.

(2) Any increase in surplus net of federal income tax resulting from arrangements described in Subsection C(1) shall be identified separately on the insurer's statutory financial statement as a surplus item (aggregate write-ins for gains and losses in surplus in the Capital and Surplus Account, page 4 of the Annual Statement) and recognition of the surplus increase as income shall be reflected on a net of tax basis in the "Reinsurance ceded" line, page 4 of the Annual Statement as earnings emerge from the business reinsured.

{For example, on the last day of calendar year N, company XYZ pays a $20 million initial commission and expense allowance to company ABC for reinsuring an existing block of business. Assuming a 34% tax rate, the net increase in surplus at inception is $13.2 million ($20 million—$6.8 million) which is reported on the "Aggregate write-ins for gains and losses in surplus" line in the Capital and Surplus account. $6.8 million (34% of $20 million) is reported as income on the "Commissions and expense allowances on reinsurance ceded" line of the Summary of Operations.

At the end of year N+1 the business has earned $4 million. ABC has paid $.5 million in profit and risk charges in arrears for the year and has received a $1 million experience refund. Company ABC's annual statement would report $1.65 million (66% of [$4 million—$1 million—$.5 million] up to a maximum of $13.2 million) on the "Commissions and expense allowance on reinsurance ceded" line of the Summary of Operations, and—$1.65 million on the "Aggregate write-ins for gains and losses in surplus" line of the Capital and Surplus account. The experience refund would be reported separately as a miscellaneous income item in the Summary of Operations.}

17. The proposed Actuarial Guideline JJJ, which follows, provided further clarification of reinsurance accounting:

Draft: 11/17/95

Adopted by the Life and Health Actuarial (Technical) Task Force on 12/1/95

ACTUARIAL GUIDELINE JJJ

GUIDELINE CONCERNING QUESTIONS AND ANSWERS RELATED
TO THE LIFE AND HEALTH REINSURANCE AGREEMENTS
MODEL REGULATION

Background

In September 1992 a revision of the Life and Health Reinsurance Agreements Model Regulation was adopted by the NAIC. Since then a number of questions have arisen by regulators regarding its application and interpretation. In early 1994 the Reinsurance Working Group was formed and charged by the Life and Health Actuarial (Technical) Task Force to provide guidance in interpreting provisions of the model regulation. This charge is being met through the completion of this Guideline in the form of a Q&A document which discusses and adds a degree of insight into certain aspects of the regulation. This document is not intended to expand the content of the model regulation. Each state will retain the authority and ability to independently interpret its own regulation. This document gives some insight into the intent of the original drafters of the model regulation and provides interpretive guidance regarding certain of its provisions.

Text

Section 3

Question: Aside from assumption reinsurance, what other type of reinsurance is exempt from the model regulation?

Answer: The model exempts all yearly renewable term (YRT) and certain nonproportional reinsurance arrangements, such as stop loss and catastrophic reinsurance. The purpose behind the exemption of these types of arrangements was because these did not normally provide significant surplus relief and therefore were not the target of this regulation. Users of the regulation should, however, be cautious of any reinsurance arrangements which could be created to misstate a company's true financial position or attempt to circumvent the regulation by artificially labeling an agreement YRT. If a YRT provides incidental reserve credits for the ceding insurer's net amount at risk for the year with no other "allowance" to enhance surplus, or a catastrophic arrangement which takes a reserve credit for actual losses beyond the attachment point or the unearned premium reserve (UPR) of the current year's premium, there will most likely be no regulatory concern. The NAIC Examiners Handbook (Part 5–Reinsurance section) provides significant insight into all reinsurance agreements, whether covered by this regulation or not. Section II(B)(4) provides discussion on a reinsurance agreement's effect on surplus and provides areas of concern to the regulator in determining a bona fide transfer of risk. Additional pertinent information is contained in the reinsurance chapter of the NAIC Accounting Practices and Procedures Manual which provides accounting guidance.

Section 4A

Question: What is disallowed in the case of non-complying coinsurance with funds withheld treaties? modified coinsurance treaties?

Answer: The underlying intent of the section is to ensure that a company's financial condition is appropriately stated and not distorted by artificially enhancing surplus through "reinsurance" arrangements that do not fully transfer risks to the reinsurer or which otherwise fail to comply with the standards contained in the regulation. Therefore, all reserve credits, liability reductions or assets established by the ceding insurer that are supported by or conditioned on the treaty should be non-admitted to the extent called for in the regulation for any reinsurance agreement that does not comply with Section 4A.

If a reinsurance agreement is such that one or more of its terms violates or fails to comply with the provisions of the model regulation, a company should not include any liability reduction or any asset recognition in any financial statement. A liability reduction or asset may appear in the financial statement in various forms: reserve credits, receivables or transferred funds.

Funds that have been received or credited by the ceding insurer, such as commissions or other front end allowances, regardless of the name given it, shall not be recognized as a surplus enhancement on the annual statement. If so reported, the entire value of such funds currently reported should be non-admitted.

Both forms of coinsurance, funds withheld and modified coinsurance, have an implicit or explicit reserve credit being taken. A modified coinsurance (modco) deposit is also reflected within the same line as an offset to the reserve credit. This ultimately reflects aggregate reserves being reported as if there were no reinsurance. So long as the modco deposit is for the sole purpose of paying FUTURE claims, the modco deposit may be offset against the implicit reserve credit with no additional penalty (other than the nonadmission of any front end allowance as discussed above) being assessed against the ceding insurer.

With regard to coinsurance with funds withheld, the reserve credit taken will be initially nonadmitted. The funds withheld may serve several purposes. It may be funds withheld which the ceding company owes to the reinsurer as a liability payable, such as the last accounting quarter's premium payable. The funds may also be used, similar to modco, to hold funds to be applied against FUTURE claim payments, with the funds having no other liability. To the extent that funds are available solely for paying future claims, such amount may be used to reduce the otherwise nonadmitted reserve credit. Care must be taken that no reduction in the nonadmitted reserve credit be taken when funds serve another purpose, such as being payable to the reinsurer, in addition to the reinsurer's obligation to pay claims.

An insurer is legally able to enter into contracts with other entities, including other insurers. The provisions of such a contract will be required to be accounted for based on the terms and conditions of the agreement. If the agreement meets the conditions of an acceptable reinsurance arrangement, the ceding insurer is afforded the additional benefit of being able to reduce its otherwise required statutory liabilities by a reserve "credit." If the agreement does not meet the conditions of this regulation, no reserve credit, whether as an asset or as an offset to liability, may be taken. This treatment does not rescind or otherwise eliminate the existence of the contract. Additional pertinent information is contained in the reinsurance chapter of the NAIC Accounting Practices and Procedures Manual which provides accounting guidance for such agreements.

Section 4A(1)

Question: What should be included in the renewal expense allowances with regard to direct expenses? An allocation of salaries? Computer usage? Or just marginal expenses directly related to the business reinsured such as claim payment expenses, postage, etc.? Should the renewal expense allowances cover actual anticipated allocable expenses of a small company in a start-up mode (i.e. high expenses) or should they be based on what expected expenses would be once the company is more mature?

Answer: The primary purpose of the model regulation is to prohibit credit for reinsurance under financial arrangements where the ceding company enters into an agreement for the principal purpose of producing significant surplus aid for the ceding insurer on a temporary basis, while not transferring all of the significant risks inherent in the business being reinsured.

Section 4A(1) implements the purpose of the model by prohibiting credit for reinsurance in certain instances where the ceding insurer is afforded a large ceding commission at the inception of the agreement resulting in a significant increase in surplus only to have the surplus increase be drained away in subsequent periods because renewal expense allowances provided under the agreement are insufficient to cover the direct allocable costs estimated at the time the business is reinsured, which are anticipated to be incurred by the ceding insurer in maintaining the business reinsured.

The model allows an exception to complete disallowance of credit for reinsurance in situations where the ceding insurer reflects a liability for the present value of the shortage between renewal expense allowances provided under the agreement and the direct allocable costs expected in the future by the insurer in maintaining the business reinsured. This liability must be calculated using actuarial assumptions that are consistent with those utilized in the statutory reserve calculation. The expenses to be accounted for in establishing this liability should represent all costs of the ceding insurer in servicing the business that is subject to the agreement.

In determining what the ceding insurer should include in the renewal expenses with regard to direct expenses, there should be an allocation of all renewal expenses anticipated at the time the business is reinsured including salaries, computer usage, postage, etc. This comprehensive calculation should be done regardless of whether a company is in a start-up mode (and experiencing high expenses) or is otherwise more mature but, recognizing that the anticipated expense levels may be estimated, a comparison with pricing assumptions may be considered in determining the reasonableness of such assumptions.

If insurance department staff encounter an agreement that does not comply with Section 4A(1) of the model, this area of non-compliance should be addressed by the posting of a reserve for the present value of the deficiency rather than denial for credit for reinsurance, assuming that no other area of non-compliance is encountered with the agreement and that the assets received corresponding to the ceding commission are in compliance with other statutes and regulations. For example, the assets received corresponding to the ceding commission must be admissible and not subject to repayment to the reinsurer.

NOTE: Some states have adopted versions of the model regulation that do not allow partial credit when renewal expense allowances are deficient. In those states complete disallowance of reinsurance credit would result for treaties that do not comply with the renewal expense allowance requirement.

Section 4A(2)

Question: With regard to existing business, should the coinsurance reserve percentage or the coinsurance reserve amount not be allowed to increase in a combination coinsurance/modified coinsurance treaty? How would the rule be applicable to the difference between the total reserve and the amount of funds withheld in a coinsurance with funds withheld treaty?

Answer: Section 4A(2) disallows reinsurance credit if the ceding company can be deprived of assets at the reinsurer’s option or automatically upon the occurrence of some event. Thus a provision in a coinsurance with funds withheld treaty that allows the reinsurer to convert the treaty to coinsurance at some later date would be in violation of the model regulation. Although the parties could have entered into a coinsurance agreement at its inception, regulators are concerned that the reinsurer would take assets from the ceding company at a time that would be to the detriment of the ceding company’s policyholders.

Under a combination coinsurance/modified coinsurance (co/modco) arrangement the ceding company and the reinsurer both establish reserves for future claim payments. When a claim becomes payable, the reserves held by each party must be used proportionally to pay the claim. Treaty provisions that adjust the reserves each party holds in lieu of transferring funds owed to the reinsurer are acceptable. However, adjustment of reserves in lieu of payment when funds are owed to the ceding company is a violation of the model regulation since it is a depletion of the ceding company’s assets. This is the case even if the agreement provides for this adjustment at inception and never requires a payment to be owed by the reinsurer. Noncompliance with the model regulation would exist if both the coinsurance amount and the coinsurance percentage (for existing business) were allowed to increase on any settlement date.

Under a coinsurance with funds withheld treaty the reinsurer establishes the entire amount of reserve liability on its share of reinsured policies, but the ceding company withholds assets from the reinsurer, typically in an amount less than the reserves, to offset future obligations. There is no duty on the part of the reinsurer to maintain the book value of the withheld assets at a certain level as there is under co/modco, where the book value of the assets supporting the modco reserves must equal the modco reserves. Provided the withheld assets are not withheld for any purpose other than the payment of future claims, it is not a violation of the model regulation for the reinsurer to require full use of withheld assets for the payment of claims prior to using any other assets owned by the reinsurer.

Section 4A(2) and 4A(5)

Question: Should a reinsurer have a unilateral right to establish underlying cost of insurance rates or credited interest rates for policies that are wholly or partially reinsured?

Answer: No, only the ceding company has the contractual relationship with the insured and the right to set the cost of insurance rates charged policyholders and to set the rates of interest credited to them. However, a representation (but not a warranty) that the ceding company shall vary nonguaranteed elements reinsured in a manner consistent with the ceding company’s documented procedures at the time the agreement was entered into does not violate the requirements of the regulation.

Question: May a reinsurance contract allow the reinsurer to increase the cost of insurance that the ceding company must pay under the treaty?

Answer: So long as the aggregate amounts payable by the ceding company in any settlement period do not exceed the income of the reinsured policies during that period, the treaty's structure would not be in violation of Section A(5) of the model regulation. There is not compliance with Section A(5) if any increases could exceed income.

Question: If a reinsured policy allows the ceding company to guarantee rates of interest to be credited to the policyholder that are greater than those guaranteed by the policy, may a reinsurance contract allow the reinsurer to limit its participation in the credited rate as long as it at least provides for the amount based on the rate guaranteed in the contract?

Answer: Again, so long as there is no possibility that the ceding company will have to make payments for which it is not fully reimbursed, no violation exists. Otherwise, the treaty would not be in compliance with Sections 4A(2) and 4A(5).

Section 4A(7)

Question: Is asset segmentation an acceptable mechanism for legal segregation of assets?

Answer: Generally no. Segmentation involves the allocation of a company's general account investment earnings over several lines of business, or various groups of policies within those lines, such that the performance of one corporate bond, for example, may affect the earnings of several segments within a company. The accounting for the segmentation is largely internal, and the detail of the record-keeping varies from company to company.

The fundamental purpose of the requirement for a reinsurance treaty to employ the use of a segregated asset portfolio (SAP) is that all payments (interest, benefits, allowances, etc.) must be made from the SAP, to eliminate any problems that could arise in determining what asset or assets should be sold, and to avoid disputes in the event of insolvency. Any sale of assets that could affect policies not subject to reinsurance, or policies subject to reinsurance with other reinsurers is problematic.

In addition, auditing the performance of a treaty using traditional segmentation methods would be extremely difficult and prone to disagreement, which could provide a reinsurer with broad leverage to contest amounts due that reinsurer, especially in the event of insolvency or rehabilitation of the ceding company.

It is important to determine that the arrangement in place does in fact transfer all of the risks of the underlying assets supporting the reinsured business to the reinsurer.

Question: If some policies out of a group of similar policies are fully or partially reinsured, and the remainder are not, must the assets supporting the reinsured policies be legally segregated from those supporting the business that is not?

Answer: Yes. Assets supporting policies that are not reinsured may not be part of an SAP.

Question: If a percentage of all policies in a block of business is reinsured, must the company segregate that percentage of the assets supporting the business, or can it segregate all the assets?

Answer: The company may segregate only assets supporting the reinsured portion or the segregated asset portfolio may represent the entire block of business if the reinsured portion is the same for all policies. In the later case, the reinsurer would take its proportionate share of the SAP performance.

Question: If the ceding company cedes a portion of each policy in a block of business to one reinsurer and a portion to another, while retaining some itself, does it have to segregate assets separately for each reinsurer, or is it acceptable to have all the assets segregated together with each reinsurer responsible for its portion of the investment risk?

Answer: The ceding company should not segregate assets separately for each reinsurer if the treaties are virtually identical.

Question: At the time assets are legally segregated under a coinsurance with funds withheld treaty, should they be valued at market value, statutory value or some combination?

Answer: The assets should be valued at their statutory admitted assets value.

Question: When the assets are legally segregated, how are the funds withheld payables and receivables reported?

Answer: The payables and receivables are recorded in the same manner as in a funds withheld treaty where the assets are not legally segregated and will usually mirror the value of the funds withheld account. However, the funds withheld account, which reflects the statutory admitted value of the assets in the SAP, will fluctuate, and thus may differ from the reserves on the reinsured business.

Section 4A(8)

Question: Can a company get around this provision if its treaty states that amounts receivable from the reinsurer are payable (due) at a later date?

Answer: No. All amounts receivable from reinsurers are nonadmitted if not paid within 90 days after the end of the period in which the amounts became receivable. The period may not be longer than one quarter (3 months). These amounts include ceding commissions withheld by reinsurers. A ceding commission is an amount that should be paid “up front” and not over time. Furthermore, arguments that the ceding commission was in fact paid but was then deposited with the reinsurer to create a funds withheld from ceding insurer account are unacceptable. Paid means paid.

Question: Does this section permit modco with funds withheld, since this type of reinsurance involves a receivable from the reinsurer?

Answer: Since the funds withheld would be structured as a receivable, the treaty would be in violation of this section.

Section 4A(9)

Question: Can a treaty impose specific controls on the way the ceding company conducts its business? Examples of such controls include the following:

a. Limits on the amount of dividends to be paid to stockholders in any year.
b. Limits on the amount of new business to be issued in any year.
c. Under certain conditions, the right of the reinsurer to replace the ceding company’s investment manager.
d. Restrictions on the types of investments to be held by the ceding company.
e. Increased risk charges under certain circumstances, such as risk based capital ratios falling to a specified level.

Answer: Treaty provisions such as those illustrated above appear frequently. They represent an understanding between the ceding company and the reinsurer at inception of the treaty. The impact and intent of the provisions must be analyzed to determine that they do not relate to general business practices of the ceding company, and are reasonably related to the business being reinsured; provisions that only apply to the business reinsured would generally not be in violation of Section 4A(9).

Section 4A(10)

Question: When, if ever, may references to projections be made in a reinsurance treaty?

Answer: Accounting Requirement A-10 prohibits treaty provisions where "the ceding insurer is required to make representations or warranties about the future performance of the business being reinsured." (It should be noted that "representations or warranties" need not appear in a treaty section entitled "Representations and Warranties" to be considered as such.)

Provisions relating to projections appear in the following forms:

a. Tables of scheduled amounts, typically showing the amount of outstanding surplus relief expected at different times during the life of the treaty, clearly drawn from projections of future profitability of the block of business being reinsured, but not identified as such. This does not represent violations of either Accounting Requirement A-9 or of Accounting Requirement A-10, because they were agreed to at inception of the treaty, and are reasonably related to the business being reinsured. However, the treaty must clearly disclose that these tables do not constitute a guarantee as to the future profitability of the business reinsured.

b. Statements acknowledging that, at inception of the treaty, the reinsurer has received and reviewed projections of the future profitability of the business being reinsured. Such statements do not represent a violation of Accounting Requirement A-9 as long as:

    1. there is no language in the treaty implying reliance by the reinsurer on such projections, and
    2. language is included stating, in essence, that the reinsurer acknowledges that the ceding insurer is unable to make any guarantees regarding the future profitability of the business being reinsured.

c. Statements requiring that, if "projected results are not met," the reinsurer will take some form of action, such as an increased risk charge. The statements differ from those discussed in Paragraph a. above in that numerical values (drawn form the projections) are not shown in the treaty. Language of this type would be in violation of Accounting Requirement A-10 because it implies a warranty about the future performance of the business being reinsured, on the basis of projections that are not part of the contract.

18. The Annual Statement Instructions require the following disclosures related to reinsurance. Notes 10-12 relate to all reserves including direct, assumed and ceded business. Notes 13-15 relate specifically to reinsurance.

10. Life and Annuities Reserves

Instruction:

A. Describe reserve practices concerning the following:

Waiver of deduction of deferred fractional premiums upon death of insured;
Return of portion of final premium for periods beyond the date of death; and

Note if any surrender value is promised in excess of the reserve as legally computed.

B. State methods employed in the valuation of substandard policies.

C. State the amount of insurance, if any, for which the gross premiums are less than the net premiums according to the standard of valuation required by this state. If not reported in Exhibit 8, Section G, Line 10700001, state the amount of reserves and indicate where reported.

D. Have the Tabular Interest (Page 7, Part A, Line 4), Tabular Less Actual Reserve Released (Page 7, Part A, Line 5) and Tabular Cost (Page 7, Part A, Line 9) been determined by formula as described for these lines in the instructions for Page 7 or from the basic data for such items?

E. Describe the method of determination of Tabular Interest on funds not involving life contingencies under Page 7, Part B, Line 3.

F. Disclose the nature of significant other increases (net) under Page 7, Part B, Line 5.

Illustration:

A. The Company waives deduction of deferred fractional premiums upon death of insured and returns any portion of the final premium beyond the date of death. Surrender values are not promised in excess of the legally computed reserves.

B. Extra premiums are charged for substandard lives for policies issued prior to July 1, 19__, plus the gross premium for a rated age.

Mean reserves are determined by computing the regular mean reserve for the plan at the rated age and holding, in addition, one-half (1/2) of the extra premium charge for the year. Policies issued after July 1, 19__, for substandard lives, are charged an extra premium plus the regular premium for the true age. Mean reserves are based on appropriate multiples of standard rates of mortality.

C. As of December 31, 19__, the Company had $__________ of insurance in force for which the gross premiums are less than the net premiums according to the standard valuation set by the State of ________________. Reserves to cover the above insurance totaled $__________ at year-end and are reported in Exhibit 8, Sections A and B.

D. The Tabular Interest (Page 7, Part A, Line 4) has been determined by formula as described in the instructions for Page 7 (or, alternatively, from the basic date for the calculation of policy reserves).

The Tabular Less Actual Reserve Released (Page 7, Part A, Line 5) has been determined by formula as described in the instructions for Page 7 (or, alternatively, from the basic data for the calculation of reserves and the actual reserves released).

The Tabular Cost (Page 7, Part A, Line 9) has been determined by formula as described in the instructions for Page 7 (or, alternatively, from the basic data for the calculation of policy reserves).

E. For the determination of Tabular Interest on funds not involving life contingencies under Page 7, Part B, Line 3, for each valuation rate of interest, the tabular interest is calculated as one hundredth of the product of such valuation rate of interest times the mean of the amount of funds subject to such valuation rate of interest held at the beginning and end of the year of valuation. The total amount of all such products is entered under Page 7, Part B, Line 3.

F. The details for “Other Increases” (net) under Page 7, Part B, Line 5 are:

	1	2	ORDINARY				GROUP	
			3	4	5	6	7	8
ITEM	Total	Industrial Life	Life Insurance	Individual Annuities	Supplementary Contracts	Credit Life Group and Individual	Life Insurance	Annuities
5.01								
5.02								
5.03								
5.04

5.99 Total								

11. Analysis of Annuity Actuarial Reserves and Deposit Liabilities by Withdrawal Characteristics

Instruction:

Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:

1. Subject to discretionary withdrawal:
   - 1.1 – With market value adjustment.
   - 1.2 – At book value less current surrender charge of 5% or more.
   - 1.3 – At market value.
   - 1.4 – Total with adjustment or at market value.
   - 1.5 – At book value without adjustment (minimal or no charge or adjustment).

2. Not subject to discretionary withdrawal.
3. Total (gross).
4. Reinsurance ceded.
5. Total (net) (3) – (4).
   Reconcile the total annuity reserves and deposit fund liabilities amount disclosed in this note to the appropriate sections of Exhibit 8 and Exhibit 10, Line 19, Column 1 of the Life, Accident & Health Annual Statement and the corresponding lines in the Separate Accounts Statement.

A. Withdrawal Characteristic Classification Instructions:

1. Classify annual statement liabilities as “subject to discretionary withdrawal with market value adjustments” (1.1 above) where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and:

   (a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the insurer. The adjustments either may be based on the insurer’s own investment experience with an assumed duration to the average maturity of the underlying assets, or related to an index, or related to the maturity date of the liability; or

(b) In installments over five years or more, with or without a reduction in the interest rate during the installment period.

2. Classify annual statement liabilities as “subject to discretionary withdrawal at book value less surrender charge” (1.2 above) where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as provided in (4)(d) below.

3. Classify annual statement liabilities as “subject to discretionary withdrawal at market value” (1.3 above) where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current market value, and the liabilities are stated at the current market value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk.

4. Classify all other annual statement liabilities as “subject to discretionary withdrawal at book value (minimal or no charge or adjustments)” (1.5 above) where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

(a) In a lump sum without adjustment; or

(b) In installments over less than five years, with or without a reduction in interest rate during the installment period; or

(c) In a lump sum subject to a fixed surrender charge of less than 5%; or

(d) In a lump sum subject to a surrender charge, but such charge is waived if the credited rate falls below a specified “bail out” rate and the “bail out” rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues; or

(e) All others.

(The one year period from statement date covers both contracts with specified maturity dates on which withdrawal is permitted in accordance with (a) or (b) and contracts providing for a surrender charge which decreases by duration.)

B. Additional Instructions:

1. The annual statement liabilities to be covered by this note are both those actuarial reserves and deposit fund liabilities reported in the Life, Accident & Health Statement and those reported in the Separate Accounts Statement. Include actuarial reserves for annuities (other than disability annuities) and supplementary contracts with life contingencies reported in Exhibit 8; actuarial reserves for annuities, certain supplementary contracts without life contingencies, and deposit fund liabilities for annuities reported in Exhibit 10. Include all annuity actuarial reserves and deposit liabilities reported in the Separate Accounts Statement in this note.

2. Separate each actuarial reserve or deposit fund liability by its withdrawal characteristics, e.g., subject to discretionary withdrawal – with adjustment, etc. If a product contains more than one type of provision for either the individual policyholder or the participant to withdraw funds from the insurer, e.g., routine

withdrawals are at book value, other withdrawals are at market value, separate the product’s reserves into the appropriate categories. Shared employer group or jointly underwritten arrangements are to be reported as direct business.

3. Briefly describe the methods of estimation utilized to complete this disclosure if more precise information was unavailable.

Illustration:

Withdrawal Characteristics of Annuity Actuarial Reserves and Deposit Liabilities

		(1) Amount	(2) % of Total
1.	Subject to discretionary withdrawal:		
	1.1 – With market value adjustment	$________	________%
	1.2 – At book value less current surrender charge of 5% of more	________	________
	1.3 – At market value	________	________
	1.4– Total with adjustment or at market value	________	________
	1.5 – At book value without adjustment (minimal or no charge or adjustment)	________	________

12. Premium and Annuity Considerations Deferred and Uncollected

Instruction:

If the company has reported on Page 2, life insurance premiums and annuity considerations deferred and uncollected on policies in force December 31 of current year, show separately the amounts and the loading excluded for each of the following lines of business: industrial business, ordinary new business, ordinary renewal, credit life, group life, and group annuity.

Illustration:

Deferred and uncollected life insurance premiums and annuity considerations as of December 31, 19XX, were as follows:

	Type	(1) Gross	(2) Net of Loading
i.	Industrial	$__________	$__________
ii.	Ordinary new business	__________	__________
iii.	Ordinary renewal	__________	__________
iv.	Credit Life	__________	__________
v.	Group Life	__________	__________
vi.	Group Annuity	__________	__________
vii.	Totals	$__________	$__________

13. Ceded Reinsurance Report

Section 1 – General Interrogatories

A. Are any of the reinsurers, listed in Schedule S as non-affiliated, owned in excess of 10% or controlled, either directly or indirectly, by the company or by any representative, officer, trustee, or director of the company? Yes ( ) No ( ) If yes, give full details.

B. Have any policies issued by the company been reinsured with a company chartered in a country other than the United States (excluding U.S. Branches of such companies) which is owned in excess of 10% or controlled directly or indirectly by an insured, a beneficiary, a creditor or an insured or any other person not primarily engaged in the insurance business? Yes () No ( ) If yes, give full details.

Section 2 – Ceded Reinsurance Report – Part A

A. Does the company have any reinsurance agreements in effect under which the reinsurer may unilaterally cancel any reinsurance for reasons other than for nonpayment of premium or other similar credits? Yes ( ) No ( )

i) If yes, what is the estimated amount of the aggregate reduction in surplus of a unilateral cancellation by the reinsurer as of the date of this statement, for those agreements in which cancellation results in a net obligation of the company to the reinsurer, and for which such obligation is not presently accrued? Where necessary, the company may consider the current or anticipated experience of the business reinsured in making this estimate. $________________

ii) What is the total amount of reinsurance credits taken, whether as an asset or as a reduction of liability, for these agreements in this statement? $________________

B. Does the company have any reinsurance agreements in effect such that the amount of losses paid or accrued through the statement date may result in a payment to the reinsurer of amounts which, in aggregate and allowing for offset of mutual credits from other reinsurance agreements with the same reinsurer, exceed the total direct premium collected under the reinsured policies? Yes ( ) No ( ) If yes, give full details.

Section 3 – Ceded Reinsurance Report – Part B

A. What is the estimated amount of the aggregate reduction in surplus, (for agreements other than those under which the reinsurer may unilaterally cancel for reasons other than for nonpayment of premium or other similar credits that are reflected in Section 2 above) of termination of ALL reinsurance agreements, by either party, as of the date of this statement? Where necessary, the company may consider the current or anticipated experience of the business reinsured in making this estimate. $_________________

B. Have any new agreements been executed or existing agreements amended, since January 1 of the year of this statement, to include policies or contracts which were in force or which had existing reserves established by the company as of the effective date of the agreement? Yes ( ) No ( )

If yes, what is the amount of reinsurance credits, whether an asset or a reduction of liability, taken for such new agreements or amendments? $__________________

14. Uncollectible Reinsurance

Instruction:

Describe uncollectible reinsurance written off during the year reported in the following annual statement classifications, including the name or names of the reinsurer(s):

1. Claims incurred;
2. Claim adjustment expenses incurred;
3. Premiums earned;
4. Other.

Illustration:

i. The Company has written off in the current year reinsurance balances due from the companies listed below, the amount of: $______
which is reflected as:

ii. Losses incurred $______
iii. Loss adjustment expenses incurred $______
iv. Premiums earned $______
v. Other $

Company	Amount
XYZ	$
ZYX	$

15. Commutation of Ceded Reinsurance

Instruction:

Describe commutation of ceded reinsurance during the year reported in the following annual statement classifications, including the name or names of the reinsurer(s):

1. Claims incurred;
2. Claim adjustment expenses incurred;
3. Premiums earned;
4. Other.

Illustration:

Commutation of Reinsurance Reflected in Income and Expenses.

The company has reported in its operations in the current year as a result of commutation of reinsurance with the companies listed below, amounts which are reflected as:

i. Losses incurred $_____
ii. Loss adjustment expenses incurred $_____
iii. Premiums earned $_____
iv. Other $_____

Company	Amount
XYZ	$_____
ZYX	$_____

Generally Accepted Accounting Principles

19. FAS 113 contains the following guidance with respect to reporting assets and liabilities related to reinsurance transactions:

> Reporting Assets and Liabilities Related to Reinsurance Transactions
>
> 14. Reinsurance contracts that are legal replacements of one insurer by another (often referred to as assumption and novation) extinguish the ceding company's liability to the policyholder and result in removal of related assets and liabilities from the financial statements of the ceding enterprise. Reinsurance contracts in which a ceding enterprise is not relieved of the legal liability to its policyholder do not result in removal of the related assets and liabilities from the ceding enterprise's financial statements. Ceding enterprises shall report estimated reinsurance receivables arising from those contracts separately as assets. Amounts paid to the reinsurer relating to the unexpired portion of reinsured contracts (prepaid reinsurance premiums) also shall be reported separately as assets.
>
> 15. Amounts receivable and payable between the ceding enterprise and an individual reinsurer shall be offset only when a right of offset exists, as defined in Interpretation 39.
>
> 16. The amounts of earned premiums ceded and recoveries recognized under reinsurance contracts either shall be reported in the statement of earnings, as separate line items or parenthetically, or those amounts shall be disclosed in the footnotes to the financial statements.

20. FAS 113 contains the following guidance with respect to reinsurance of long-duration contracts:

> Reinsurance of Long-Duration Contracts
>
> 12. Indemnification of the ceding enterprise against loss or liability relating to insurance risk in reinsurance of long-duration contracts requires the reasonable possibility that the reinsurer may realize significant loss from assuming insurance risk as that concept is contemplated in Statement 60 and FASB Statement No. 97, *Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*. Statement 97 defines long-duration contracts that do not subject the insurer to mortality or morbidity risks as investment contracts. Consistent with that definition, a contract that does not subject the reinsurer to the reasonable possibility of significant loss from the events insured by the underlying insurance contracts does not indemnify the ceding enterprise against insurance risk.
>
> 13. The evaluation of mortality or morbidity risk in contracts that reinsure policies subject to Statement 97 shall be consistent with the criteria in paragraphs 7 and 8 of that Statement. Evaluation of the presence of insurance risk in contracts that reinsure other long-duration contracts (such as those that reinsure ordinary life contracts or contracts

that provide benefits related only to illness, physical injury, or disability) also shall be consistent with those criteria.

Recognition of Revenues and Costs for Reinsurance of Long-Duration Contracts

25. Amortization of the estimated cost of reinsurance of long-duration contracts that meets the conditions for reinsurance accounting depends on whether the reinsurance contract is long duration or short duration. The cost shall be amortized over the remaining life of the underlying reinsured contracts if the reinsurance contract is long duration, or over the contract period of the reinsurance if the reinsurance contract is short duration. Determining whether a contract that reinsures a long-duration insurance contract is long duration or short duration in nature is a matter of judgment, considering all of the facts and circumstances. The assumptions used in accounting for reinsurance costs shall be consistent with those used for the reinsured contracts. The difference, if any, between amounts paid for a reinsurance contract and the amount of the liabilities for policy benefits relating to the underlying reinsured contracts is part of the estimated cost to be amortized.

Statutory Issue Paper No. 75

Property and Casualty Reinsurance

STATUS
Finalized March 16, 1998

Original SSAP: SSAP No.62; Current Authoritative Guidance: SSAP No. 62R

This issue paper may not be directly related to the current authoritative statement.

Type of Issue:
Property and Casualty

SUMMARY OF ISSUE

1. Reinsurance is the assumption by an insurer of all or part of a risk undertaken originally by another insurer. Current statutory guidance on the accounting for property and casualty reinsurance is contained in Chapters 7, 8, and 22 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices and Procedures Manual).

2. GAAP guidance on the accounting for property and casualty reinsurance is primarily contained in FASB Statement No. 113, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113*)* and Emerging Issues Task Force Issue No. 93-6, *Accounting for Multiple-Year Retrospectively Rated Contracts by Ceding and Assuming Enterprises* (EITF 93-6). In certain instances*,* FAS 113 differs from the current statutory guidance.

3. The purpose of this issue paper is to establish statutory accounting principles for property and casualty reinsurance that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. This issue paper applies to property and casualty contracts as defined in *Issue Paper No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force*. The provisions of Chapter 8 of the P&C Accounting Practices and Procedures Manual that relate to reinsurance recoverable on paid losses (included in paragraph 16 of this issue paper) and Chapter 22 of the P&C Accounting Practices and Procedures Manual (Chapter 22) are adopted as the statutory accounting principles for property and casualty reinsurance except as modified in paragraph 5 below. In addition, the Annual Statement Instructions that require reinsurance disclosures in notes 11, 12, 13, 15, 16 and 17 to the Annual Statement are also adopted as statutory accounting principles.

5. Ceded reinsurance premiums payable (net of ceding commission) shall be classified as a liability. Consistent with *Issue Paper No. 76—Offsetting and Netting of Assets and Liabilities* (Issue Paper No. 76), ceded reinsurance premiums payable may be deducted from amounts due from the reinsurer, such as amounts due on assumed reinsurance, when a legal right of offset exists.

6. Notwithstanding the fact that reinsurance recoverables on paid losses may meet the criteria for offsetting under the provisions of Issue Paper No. 76, reinsurance recoverables on paid losses are to be reported as an asset without any available offset.

7. The Property and Casualty Annual Statement Instructions to Schedule F provide for a minimum reserve for uncollectible reinsurance with an additional reserve required if a company's experience indicates that a higher amount should be provided. The excess reserve over the minimum amount should

be charged through the Statement of Operations by reversing the accounts previously utilized to establish the reinsurance recoverable.

DISCUSSION

8. Statutory accounting for property and casualty reinsurance was recently revised through amendments to Chapter 22. These amendments adopted FAS 113 with modification and EITF 93-6 with modification. This issue paper rejects AICPA Statement of Position No. 92-5*, Accounting for Foreign Property and Liability Reinsurance*. As a result, the statutory accounting principles established by this issue paper are generally consistent with GAAP except for the following significant exceptions:

a. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be presented as a contra-liability netted against the liability for gross losses and loss adjustment expenses. Under GAAP, these recoverables are reported as assets.

b. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of unearned premiums whereas under GAAP, the unamortized portion of the amount paid for prospective reinsurance is recorded as a prepaid asset.

c. The gain created by a retroactive reinsurance contract because the amount paid to the reinsurer is less than the gross liabilities for losses and loss adjustment expenses ceded to the reinsurer is reported in the income statement as a write-in gain in “other income” by the ceding entity and a write-in loss by the assuming entity. The gain created by a retroactive reinsurance contract is restricted as a special surplus account until the actual retroactive reinsurance recovered is in excess of the consideration paid. Under GAAP, gains arising from retroactive reinsurance contracts are deferred and recognized over the settlement period.

d. Statutory accounting requires that a liability be established through a provision reducing surplus for unsecured reinsurance recoverables from unauthorized reinsurers and for certain overdue balances due from authorized reinsurers. Under GAAP, no such liability is required. However, both statutory accounting and GAAP require an assessment of the collectibility of recorded reinsurance recoverables.

e. Some reinsurance treaties contain adjustable features that provide for adjustment of commission, premium or amount of coverage, based on loss experience. Chapter 22 and EITF 93-6 require recognition of these adjustable features in the period in which the loss event(s) giving rise to the adjustment occurs. Under EITF 93-6, the asset or liability arising from the adjustable feature may be computed under the assumption that the treaty will be terminated prior to the end of its term if such termination is permitted under the contract and to do so results in a lower asset or liability (“lesser of” provision). Statutory accounting requires that the asset or liability arising from the adjustable feature be computed based on experience to date under the contract, and the impact of early termination may only be considered at the time the contract has actually been terminated.

f. Structured settlements are addressed in *Issue Paper No. 65—Property and Casualty Contracts* (Issue Paper No. 65). Statutory accounting and FAS 113 are consistent in accounting for structured settlement annuities where the reporting entity is the owner and payee, and where the claimant is the payee and the reporting entity has been released from its obligation. FAS 113 distinguishes structured settlement annuities where the claimant is the payee and a legally enforceable release from the reporting entity’s liability is obtained from those where the claimant is the payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the reporting entity has not been released from its obligation.

9. Reinsurance recoverables on paid losses and loss adjustment expenses are reported as an asset under both statutory accounting and GAAP. Reinsurance recoverables on unpaid losses and loss adjustment expenses also meet the statutory definition of an asset established in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets*; however, this asset will continue to be presented as a contra-liability in statutory financial statements because a change to "gross" presentation would necessitate extensive changes in and restatement of the reporting of ceded reinsurance in schedules and exhibits of the Annual Statement. This "net" presentation is consistent with the reporting of salvage and subrogation established by *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses*. Statutory requirements for offsetting and netting are addressed in Issue Paper No. 76.

10. The statutory reporting of amounts paid for prospective reinsurance contracts that have not been amortized to income described in subparagraph 8.b. is consistent with the "net" reporting discussed in paragraph 9.

11. The statutory accounting for gains and losses resulting from retroactive reinsurance contracts is consistent with the Statement of Concepts which states:

> The cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance.

12. The statutory requirement to establish a liability, Provision for Reinsurance, for unsecured reinsurance recoverables from unauthorized reinsurers and overdue balances from authorized reinsurers is contained in the Instructions to the Property and Casualty Annual Statement, Schedule F - Part 7 which are adopted in this issue paper as part of Chapter 22. The Schedule F provision for reinsurance was maintained as part of statutory accounting as an added measure of conservatism consistent with the Statement of Concepts. Maintaining this conservatism was deemed appropriate as there is no other apparent independent measure of the adequacy of the estimates. Maintaining this requirement is in contrast to the elimination of the excess statutory reserve in Issue Paper No. 65. It was determined that sufficient information is available to regulators regarding the adequacy of reserves such that the additional conservatism provided by the excess statutory reserve is no longer justified. Paragraph 7 of this issue paper requires that any portion of reinsurance recoverables deemed to be uncollectible as a result of a reporting entity's experience being higher that the amounts provided by the minimum Schedule F provision shall be written off through a charge to operations, whereas current statutory accounting would require any additional amount to be added to the Schedule F provision resulting in a direct charge to surplus. This change was made to reflect known losses as charges to operations as opposed to direct charges to surplus.

13. Statutory accounting requires the calculation related to adjustable features to be computed based on experience to date because, from a regulatory standpoint, it is improper to recognize the favorable impact of early termination of the contract until such time as the contract is actually terminated.

14. Ceded reinsurance premiums payable are no longer deducted from agents' balances and uncollected premiums because this payable meets the definition of a liability as established in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* and it does not meet the criteria for offsetting under the provisions of Issue Paper No. 76.

Drafting Notes/Comments

- Reinsurance for life and accident and health contracts is addressed in *Issue Paper No. 74—Life and Accident and Health Reinsurance*.

- Structured settlements for property and casualty insurers are addressed in *Issue Paper No. 65—and Casualty Contracts*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

15. Chapter 7 of the P&C Accounting Practices and Procedures Manual, Agents' Balance or Uncollected Premiums, provides the following guidance on ceded premiums payable:

> Ceded Reinsurance Premiums Payable
>
> Ceded reinsurance premiums payable are those premiums that are due to other insurance companies for coverages purchased to reduce the ceding company's liability. Ceded reinsurance premiums payable are deducted from agents' balances or uncollected premiums in the balance sheet. (See Chapter 22 - Reinsurance.)

16. Chapter 8 of the P&C Accounting Practices and Procedures Manual provides the following guidance on reinsurance recoverable on paid losses:

> (f) Funds held or deposited with reinsured companies, whether they are premiums withheld for unearned premium and outstanding loss reserves or advances for loss payments, are admitted assets provided they do not exceed the liabilities they secure and provided the reinsured is solvent. Those funds which are in excess of the liabilities, and any funds held by insolvent reinsureds, should be nonadmitted.
>
> (h) Reinsurance recoverable on loss payments is an admitted asset. Unauthorized reinsurance is included in this asset and reflected separately as a liability to the extent required. Penalty for overdue on authorized companies will be reflected as a liability. (See Chapter 22 - Reinsurance.)

17. The guidance for calculating the penalty for unauthorized reinsurance and the penalty for overdue balances from authorized reinsurers is contained in the Annual Statement Instructions.

18. The current statutory accounting for property and casualty reinsurance is contained in the P&C Accounting Practices and Procedures Manual, Chapter 22, Reinsurance. Chapter 22 provides the following guidance with respect to the determination of whether a reinsurance contract qualifies for reinsurance accounting:

> Reinsurance Contracts Must Include Transfer of Risk
>
> The essential ingredient of a reinsurance contract is the shifting of risk. The essential element of every true reinsurance contract is the undertaking by the reinsurer to indemnify the ceding insurer (i.e., reinsured company), not only in form but in fact, against loss or liability by reason of the original insurance. Unless the so-called reinsurance contract contains this essential element of risk transfer, no credit whatsoever shall be allowed on account thereof in any accounting or financial statement of the ceding insurer**.**
>
> Insurance risk involves uncertainties about both (a) the ultimate amount of net cash flows from premiums, commissions, claims and claims settlement expenses (underwriting risk) and (b) the timing of the receipt and payment of those cash flows (timing risk). Actual or imputed investment returns are not an element of insurance risk. Insurance risk is fortuitous - the possibility of adverse events occurring is outside the control of the insured.
>
> Determining whether a contract with a reinsurer provides indemnification against loss or liability (transfer of risk) relating to insurance risk requires a complete understanding of that contract and other contracts or agreements between the ceding company and related reinsurers. A complete understanding includes an evaluation of all contractual features that (a) limit the amount of

insurance risk to which the reinsurer is subject (such as through experience refunds, cancellation provisions, adjustable features, or additions of profitable lines of business to the reinsurance contract) or (b) delay the timely reimbursement of claims by the reinsurer (such as through payment schedules or accumulating retentions from multiple years).

Indemnification of the ceding company against loss or liability relating to insurance risk in reinsurance requires both of the following:

1. The reinsurer assumes significant insurance risk under the reinsured portions of the underlying insurance contracts.

2. It is reasonably possible that the reinsurer may realize a significant loss from the transaction.

A reinsurer shall not be considered to have assumed significant insurance risk under the reinsured contracts if the probability of a significant variation in either the amount or timing of payments by the reinsurer is remote. Implicit in this condition is the requirement that both the amount and timing of the reinsurers payments depend on and directly vary with the amount and timing of claims settled by the ceding company. Contractual provisions that delay timely reimbursement to the ceding company would prevent this condition from being met.

The ceding company's evaluation of whether it is reasonably possible for a reinsurer to realize a significant loss from the transaction shall be based on the present value of all cash flows between the ceding and assuming companies under reasonably possible outcomes, without regard to how the individual cash flows are described or characterized. An outcome is reasonably possible if its probability is more than remote. The same interest rate shall be used to compute the present value of cash flows for each reasonably possible outcome tested. A constant interest rate shall be used in determining those present values because the possibility of investment income varying from expectations is not an element of insurance risk. Judgment is required to identify a reasonable and appropriate interest rate.

Significance of loss shall be evaluated by comparing the present value of all cash flows, determined as described in the above paragraph, with the present value of the amounts paid or deemed to have been paid to the reinsurer. If, based on this comparison, the reinsurer is not exposed to the reasonable possibility of significant loss, the ceding company shall be considered indemnified against loss or liability relating to insurance risk only if substantially all of the insurance risk relating to the reinsured portions of the underlying insurance contracts has been assumed by the reinsurer. In this narrow circumstance, the reinsurers economic position is virtually equivalent to having written the insurance contract directly. This condition is met only if insignificant insurance risk is retained by the ceding company on the reinsured portions of the underlying insurance contracts, so that the reinsurers exposure to loss is essentially the same as the insurers.

Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding company. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurers payment to the ceding company depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Therefore, any feature that may affect the timing of the reinsurers reimbursement to the ceding company should be closely scrutinized.

19. The effective date for adopting the accounting and reporting requirements outlined in paragraph 18 are contained in Chapter 22 as follows:

> Effective Date: Transition Rule
>
> The revised accounting and reporting practices set forth in this chapter that were adopted on September 18, 1994 shall be effective for all accounting periods beginning on or after January 1, 1995 and shall apply to: (a) reinsurance contracts entered into, renewed, or amended on or after January 1, 1994, (an amendment is any revision or adjustment of contractual terms, but the payment of premiums or reimbursement of losses recoverable under the contract shall not constitute an amendment); and (b) reinsurance contracts in force on January 1, 1995 which cover losses occurring or claims made on or after that date on policies reinsured under such contracts.
>
> The revised accounting and reporting provisions shall not apply to: (a) reinsurance contracts which cover only losses occurring or claims made before January 1, 1994 and which were entered into before January 1, 1994, and were not subsequently renewed or amended; and (b) reinsurance contracts that expired before, and were not renewed or amended after, January 1, 1995.
>
> Previously reported amounts relating to contracts to which these revised accounting practices are not applicable shall not be restated. However, for accounting periods commencing on and after January 1, 1995, balances relating to contracts which were entered into, renewed or amended on or after January 1, 1994 and which do not transfer insurance risk shall be reclassified as deposits and shall be accounted for and reported in the manner described under the caption "Reinsurance Contracts Must Include Transfer of Risk".
>
> Insurers may elect to comply with these revised accounting practices for accounting periods commencing before January 1, 1995.

20. Chapter 22 requires the following accounting for reinsurance contracts that do not qualify for reinsurance accounting (i.e., do not transfer insurance risk):

> To the extent that a reinsurance contract does not, despite its form, transfer both components of insurance risk, all or part of the contract shall be accounted for and reported as deposits in the NAIC annual and interim financial statements in the following manner:
>
> 1. At the outset of the reinsurance contract the net consideration paid by the ceding company (premiums less commissions or other allowances) shall be recorded as a deposit on the ceding company's books and as a liability on the assuming company's books. The deposit may be reported as an admitted asset in the ceding company's annual statement (as a write-in item for other-than-invested assets) if (a) the assuming company is licensed, accredited or otherwise qualified in the ceding company's state of domicile under Section 1 of the NAIC Model Law on Credit for Reinsurance or (b) there are funds held by or on behalf of the ceding company which meet the requirements of Section 2 of that law. Throughout the life of the contract receipts and disbursements shall be recorded through the deposit/liability accounts. When the contract is completed, or when there is a loss payment in excess of the deposit, any difference between consideration and recoveries shall be recorded as other income or loss.
>
> 2. No deduction shall be made from the loss and loss adjustment expense reserves on the ceding company's balance sheet, schedules and exhibits.
>
> 3. The assuming company shall record net consideration to be returned to the ceding company as liabilities.

21. Chapter 22 requires the following accounting for reinsurance contracts that qualify for reinsurance accounting (i.e., transfer insurance risk).The guidance for retroactive reinsurance contracts was revised by the Property Casualty Reinsurance Study Group at its December 13, 1995 meeting. This

guidance was adopted by the membership of the NAIC at the March 1996 Plenary Session. Changes adopted have been underlined and struckthrough in this paragraph.

Accounting for Reinsurance

Reinsurance recoverables shall be recognized in a manner consistent with the liabilities (including estimated amounts for claims incurred but not reported) relating to the underlying reinsured contracts. Assumptions used in estimating reinsurance recoverables shall be consistent with those used in estimating the related liabilities. Accounting for members of a reinsurance pool shall follow the accounting for the pool member which wrote the underlying policy.

Accounting for reinsurance depends on whether the contract is considered prospective or retroactive. Prospective reinsurance is reinsurance in which a reinsurer agrees to reimburse a ceding company for losses that may be incurred as a result of future insurable events covered under contracts subject to the reinsurance. Retroactive reinsurance is reinsurance in which a reinsurer agrees to reimburse a ceding company for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance. A reinsurance contract may include both prospective and retroactive reinsurance provisions.

The distinction between prospective and retrospective reinsurance contracts is based on whether the contract reinsures future or past insured events covered by the underlying insurance policies. For example, in occurrence-based insurance, the insured event is the occurrence of a loss covered by the insurance contract. In claims-made insurance, the insured event is the reporting to the insurer, within the period specified by the policy, of a claim for a loss covered by the insurance contract. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance contract is a retroactive contract. (However, a reinsurance contract that reinsures claims reported to an insurer that are covered under currently effective claims-made insurance policies is a prospective reinsurance contract.)

It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the contract is substantively prospective must be determined based on the facts and circumstances. However, except as respects business assumed by a U.S. reinsurer from ceding companies domiciled outside the U.S. and not affiliated with such reinsurer, or business assumed by a U.S. reinsurer where either the lead reinsurer or a majority of the capacity on the contract is domiciled outside the U.S. and is not affiliated with such reinsurer, if a contract entered into, renewed or amended on or after January 1, 1994 has not been finalized, reduced to a written form and signed by the parties within nine months after the commencement of the policy period covered by the reinsurance arrangement, then the arrangement is presumed to be retroactive and must be accounted for as a retroactive reinsurance contract. This presumption shall not apply to: (a) facultative reinsurance contracts; nor to (b) reinsurance contracts with more than one reinsurer which are signed by the lead reinsurer (i.e. the reinsurer setting the terms of the contract for the reinsurers) within nine months after the commencement of the policy period covered by the reinsurance contract; nor to (c) reinsurance contracts with more than one reinsurer (whether signed by the lead reinsurer or not) which were entered into, renewed or amended on or before December 31, 1996, (and which were not renewed or amended after that date) if reinsurers representing more than 50% of the capacity on the contract have signed cover notes, placement slips or similar documents describing the essential terms of coverage and exclusions within nine months after the commencement of the policy period covered by the reinsurance arrangement.

When practicable, prospective and retroactive provisions included within a single contract shall be accounted for separately. If separate accounting for prospective and retroactive provisions included within a single contract is impracticable, the contract shall be accounted for as a retroactive contract provided the conditions for reinsurance accounting are met.

Accounting for Prospective Reinsurance Contracts

Amounts paid for prospective reinsurance that meets the conditions for reinsurance accounting shall be reported as a reduction of written and earned premiums by the ceding company and shall be earned over the remaining contract period in proportion to the amount of reinsurance protection provided. If the amounts paid are subject to adjustment and can be reasonably estimated, the basis for amortization shall be the estimated ultimate amount to be paid.

Changes in amounts of estimated reinsurance recoverables shall be recognized as a reduction of gross losses and loss expenses incurred in the current periods statement of income. Reinsurance recoverables on paid losses shall be reported as an asset, reinsurance recoverables on loss and loss adjustment expense payments, in the balance sheet. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be netted against the liability for gross losses and loss adjustment expenses.

Accounting for Retroactive Reinsurance Contracts

Certain reinsurance contracts which transfer both components of insurance risk cover liabilities which occurred prior to the effective date of the contract. Due to potential abuses involving the creation of surplus to policyholders, and the distortion of underwriting results, a special accounting treatment for such agreements is warranted.

Effective for accounting periods commencing on or after January 1, 1995, all retroactive reinsurance contracts entered into, renewed or amended on or after January 1, 1994 (including subsequent development of such transactions) must be fully disclosed in the NAIC annual and interim financial statements required to be filed and shall be accounted for and reported in the following manner:

1. The ceding company must record, without recognition of the retroactive reinsurance, its loss and loss expense reserves on a gross basis on its balance sheet and in all schedules and exhibits.

2. The assuming company must exclude the retroactive reinsurance from its loss and loss expense reserves and from its schedules and exhibits.

3. The ceding company and the assuming company must report by write-in item on Page 3, the total amount of all retroactive reinsurance, identified as “retroactive reinsurance reserve ceded or assumed”, recorded as a contra-liability by the ceding company and as a liability by the assuming company.

4. The ceding company must, by write-in item on Page 3, restrict surplus resulting from any retroactive reinsurance as a special surplus fund, designated as “special surplus from retroactive reinsurance account”.

5. The surplus gain from any retroactive reinsurance may not be classified as unassigned funds [considered earned surplus] until such time as the actual retroactive reinsurance-recovered is in excess of the consideration paid.

6. The “special surplus from retroactive reinsurance account” for each respective retroactive reinsurance contract shall be reduced at the time the ceding company begins to recover funds from the assuming company in amounts exceeding the consideration paid by the ceding company under such agreement, or adjusted as provided in paragraph 10 below.

7. For each agreement, the reduction in the “special surplus from retroactive reinsurance” account must be limited to the lesser of:

    (a) the actual amount recovered in excess of consideration paid; or

(b) the initial surplus gain resulting from the respective retroactive reinsurance contract.

Any remaining balance in the "retroactive reinsurance reserve ceded or assumed", account derived from any such agreement must be returned to unassigned funds upon elimination of all policy obligations subject to the retroactive reinsurance contract.

8. The ceding company shall report the initial gain arising from a retroactive reinsurance transaction (i.e., the difference between the consideration paid to the reinsurer and the total reserves ceded to the reinsurer) as a write-in item on Page 4, to be identified as "Retroactive Reinsurance Gain" and included under "Other Income" in the Underwriting and Investment Exhibit Statement of Income.

9. The assuming company shall report the initial loss arising from a retroactive reinsurance transaction, as defined in the preceding paragraph 8, as a write-in item on Page 4, to be identified as Retroactive Reinsurance Loss and included under Other Income in the Underwriting and Investment Exhibit Statement of Income.

10. Any subsequent increase or reduction in the total reserves ceded under a retroactive reinsurance agreement shall be reported in the manner described in the preceding paragraphs 8 and 9, in order to recognize the gain or loss arising from such increase or reduction in reserves ceded. The "Special Surplus from Retroactive Reinsurance Account" write-in entry on Page 3 and the pertinent entry in the Notes to the Financial Statement shall be adjusted, upward or downward, to reflect such increase or reduction in reserves ceded. The "Special Surplus from Retroactive Reinsurance Account" write-in entry must be equal to or less than the total ceded reserves under all retroactive reinsurance agreements in-force as of the date of the financial statement. Special surplus arising from a retroactive reinsurance transaction shall be considered to be earned surplus (i.e., transferred to Unassigned Funds) only when cash recoveries from the assuming company exceed the consideration paid by the ceding company as respects such retroactive reinsurance transaction.

11. Each retroactive reinsurance contract shall be included in the Notes to Financial Statements relating to "Ceded or Assumed Unpaid Loss and Loss Adjustment Expenses".

12. The consideration paid for a retroactive reinsurance contract shall be reported as a decrease in Exhibit 3 ledger assets by the ceding company and as an increase in Exhibit 3 ledger assets by the assuming company (as a write-in item).

(For an illustration of ceding company accounting entries see Question 33 in Appendix A.)

This procedure regarding accounting for retroactive reinsurance contracts shall not apply to the following types of contracts (which shall be accounted for as prospective reinsurance contracts):

1. Structured settlement annuities for individual claims purchased to implement settlements of policy obligations;

2. Novations, i.e. (a) transactions in which the original direct insurer's obligations are completely extinguished, resulting in no further exposure to loss arising on the business novated or (b) transactions in which the original assuming company's obligations are completely extinguished, resulting in no further exposure to loss arising on the business novated, provided that (i) the parties to the transaction are not affiliates (or if affiliates, that the transaction has the prior approval of the domiciliary regulators of the parties) and (ii) the accounting for

the original reinsurance agreement will not be altered from retroactive to prospective

3. The termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business; or

4. Intercompany reinsurance contracts, and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction.

Except for its accounting and reporting provisions, this procedure regarding retroactive reinsurance shall not apply to transactions transferring liabilities in connection with a court-ordered rehabilitation, liquidation or receivership with written approval of the ceding company's domiciliary commissioner.

Retroactive reinsurance contracts resulting in surplus gain to the ceding company (with or without risk transfer) entered into between affiliates or between insurers "under common control" (as those terms are defined in the NAIC Model Insurance Holding Company Regulatory Act) shall be reported in annual and interim statements as follows:

1. The consideration paid by the ceding company shall be recorded as a deposit and reported as a non-admitted asset in Exhibit 1; and

2. No deduction shall be made from loss and loss adjustment expense reserves on the ceding company's balance sheet, schedules and exhibits.

Required Terms for Reinsurance Contracts

In addition to credit for reinsurance requirements applicable to reinsurance transactions generally, no credit or deduction from liabilities shall be allowed for reinsurance recoverable in annual or interim statements required to be filed by the ceding company where the agreement was entered into after the effective date of these requirements unless each of the following conditions is satisfied:

1. The contract must contain an acceptable insolvency clause.

2. Recoveries due the ceding company must be available without delay for payment of losses and claim obligations incurred under the agreement, in a manner consistent with orderly payment of incurred policy obligations by the ceding company.

3. The agreement shall constitute the entire contract between the parties and must provide no guarantee of profit, directly or indirectly, from the reinsurer to the ceding company or from the ceding company to the reinsurer.

4. The agreement must provide for reports of premiums and losses, and payment of losses, no less frequently than on a quarterly basis. The report of premiums and losses shall set forth the ceding company's total loss and loss expense reserves on the policy obligations subject to the agreement, so that the respective obligations of the ceding company and reinsurer will be recorded and reported on a basis consistent with this manual.

5. With respect to retroactive reinsurance contracts the following additional conditions apply. The consideration to be paid by the ceding company for the retroactive reinsurance must be a sum certain stated in the agreement. Direct or indirect compensation to the ceding company or reinsurer is prohibited. Any provision for subsequent adjustment on the basis of actual experience in regard to policy obligations transferred, or on the basis of any other formula, is prohibited in connection with a retroactive reinsurance transaction, except that

provision may be made for the ceding company's participation in the reinsurer's ultimate profit, if any, under the agreement. A retroactive reinsurance contract may not be canceled or rescinded without the approval of the commissioner of the domiciliary state of the ceding company.

Characteristics of Reinsurance Contracts

Each reinsurance contract may be individually drafted. Commonly included contract provisions that may affect accounting practices include:

1. Reporting responsibility of the ceding insurer. Should be clearly spelled out both as to details required and time schedules.

2. Payment terms. Time schedules, currencies intended and the rights of the parties to withhold funds should be established.

3. Payment of premium taxes. Customarily the responsibility of the ceding company, a recital of nonliability of the reinsurer may be found.

4. Termination. May be on a "cut-off" or "run-off" basis. A "cut-off" provision stipulates that the reinsurer shall not be liable for loss as a result of occurrences taking place after the date of termination. A "run-off" provision stipulates that the reinsurer shall remain liable for loss under reinsured policies in force at the date of termination as a result of occurrences taking place after the date of termination until such time as the term of the policy expires.

5. Insolvency clause. Should provide for the survival of the reinsurer's obligations in the event of insolvency of the ceding company, without diminution because of the insolvency.

Reinsurance contracts shall not permit entry of an order of rehabilitation or liquidation to constitute an anticipatory breach by the insurer nor grounds for retroactive revocation or retroactive cancellation of any contracts of the insurer.

Reinsurance Assumed

The segregation of premiums, losses and expenses arising from reinsurance assumed transactions is required for the Underwriting and Investment Exhibit of the annual statement.

Non-proportional assumed reinsurance transactions should be included in the reinsurance lines of business in the annual statement under four subcategories while all proportional reinsurance (first dollar pro-rata reinsurance) must be allocated to the appropriate lines of business.

Reinsurance premiums receivable at the end of the accounting period are combined with direct business receivables and reported as "Agents' balances or uncollected premiums". Where the ceding insurer withholds premium funds pursuant to the terms of the reinsurance contract, such assets should be shown by the assuming company as "Funds held by or deposited with reinsured companies". Reinsurance premiums more than 90 days overdue should not be included as receivable except (a) to the extent the assuming insurer maintains unearned premium and loss reserves as to the ceding insurer, under normal principles of offset accounting, or (b) where the ceding insurer is licensed and in good standing in assuming insurer's state of domicile. Reinsurance premiums are due pursuant to the original contract terms (as the contract stood on the date of execution); in the absence of a specific contract date, reinsurance premiums will be deemed due thirty (30) days after the date on which (1) notice or demand of premium due is provided to the ceding insurer or (2) the assuming insurer books the premium (See Chapter 9 - Nonadmitted Assets).

A lag will develop between the time of the entry of the underlying policy transaction on the books of the ceding insurer and the transmittal of information and its entry on the books of the assuming company. Assuming companies shall estimate such unreported premiums and related costs to the extent necessary to prevent material distortions in the loss development contained in the assuming company's annual statement schedules where calendar year premiums are compared to accident year losses.

Amounts payable by reinsurers on losses are generally classified in the annual statement as unpaid losses. Assumed reinsurance payable on paid losses should be classified as a separate liability item on the balance sheet. IBNR losses on assumed reinsurance business are netted with ceded losses on the balance sheet but are shown separately by annual statement line of business in the Underwriting and Investment Exhibit.

Reinsurance Ceded

The Underwriting and Investment Exhibit of the annual statement presents segregated data on the premiums, losses and expenses from reinsurance ceded transactions in a manner similar to reinsurance assumed.

Ceded reinsurance transactions should be included in the annual statement line of business which relates to the direct or assumed transactions creating the cession or retrocession.

Premiums due reinsurers ("ceded balances payable") are shown as contra assets contained in "Agents' balances or uncollected premiums." Amounts that are withheld by the ceding company from sums that would otherwise be payable under the reinsurance contract are reportable as "Funds held by company under reinsurance treaties."

Adjustable Feature/Retrospective Rating

Reinsurance treaties may provide for adjustment of commission, premium, or amount of coverage, based on loss experience. Examples are:

1. Commission Adjustments:

   Contingent or Straight Profit—The reinsurer returns to the ceding company a stipulated percentage of the profit produced by the business assumed from the ceding insurer. Profit may be calculated for any specified period of time, but the calculation is often based on an average over a period of years.

   Sliding Scale—A provisional rate of commission is paid over the course of the treaty, with a final adjustment based on the experience of the business ceded under the treaty.

   An accrual shall be maintained for these adjustable features based upon the experience recorded for the period.

2. Premium Adjustments:

   The initial provisional or deposit premium is recalculated retrospectively, based on loss experience under the treaty during a specified period of time; the calculation is often based on an average over a period of years.

   If the reinsurance treaty incorporates an obligation on the part of the ceding company to pay additional premium to the assuming company based upon loss experience under the treaty, a liability in the amount of such additional premium shall be recognized by the ceding company during the accounting period in which the loss event(s) giving rise to the obligation to pay such additional premium occur(s). The assuming company shall recognize an asset in the same amount.

If the reinsurance treaty incorporates an obligation on the part of the assuming company to refund to the ceding company any portion of the consideration received by the assuming company based upon loss experience under the treaty, an asset in the amount of any such refund shall be recognized by the ceding company during the accounting period in which the loss event(s) giving rise to the obligation to make such refund occur(s). The assuming company shall recognize a liability in the same amount.

3. Adjustments in the Amount of Coverage:

The amount of coverage available for future periods is adjusted, upward or downward, based on loss experience under the treaty during a specified period of time.

If the reinsurance treaty incorporates a provision under which the reinsurance coverage afforded to the ceding company may be increased or reduced based upon loss experience under the treaty, an asset or a liability shall be recognized by the ceding company in an amount equal to that percentage of the consideration received by the assuming company which the increase or reduction in coverage represents of the amount of coverage originally afforded. Such asset or liability shall be recognized during the accounting period in which the loss event(s) (or absence thereof) giving rise to the increase or decrease in reinsurance coverage occur(s), and shall be amortized over all accounting periods for which the increased or reduced coverage is applicable. The term “consideration” shall mean, for this purpose, the annualized deposit premium for the period used as the basis for calculating the adjustment in the amount of coverage to be afforded thereafter under the treaty.

Effective Date

The accounting and reporting provisions set forth in paragraphs 1, 2 and 3 above shall be effective for all accounting periods beginning on or after January 1, 1996, and shall apply to reinsurance contracts entered into, renewed or amended on or after January 1, 1994.

Commissions

Commissions payable on reinsurance assumed business should be included as an offset to “Agents” Balances or Uncollected Premiums. Commissions receivable on reinsurance ceded business should be included as an offset to “Ceded Reinsurance Balances Payable”. (See Chapter 18 - Commissions.)

If the ceding commission paid under a non-proportional reinsurance contract exceeds the anticipated acquisition cost of the business ceded, the ceding company shall establish a liability, equal to the difference between the anticipated acquisition cost and the reinsurance commissions received, to be amortized pro rata over the life of the reinsurance contract.

Those reinsurance contracts drafted in form as pro rata but which, in fact, contain per loss deductibles to be retained by the ceding carrier shall be considered non-proportional for the purposes of the paragraph above.

Provision for Reinsurance

The liability “Provision for Reinsurance” is reflected on page three of the Annual Statement, and the change between years is recorded as a gain or loss directly to surplus.

The details of this calculation can be found in Schedule “F-Part 7” of the Annual Statement. The appropriate instructions for calculating this liability can be found in the Instructions to the Annual Statement.

This provision is calculated separately for unauthorized and authorized companies in Schedule F. An authorized reinsurer is one that is licensed, accredited or approved by the ceding insurers state of domicile; an unauthorized reinsurer is not so licensed, accredited or approved.

Disputed Items

Occasionally a reinsurer will question whether an individual claim is covered under a reinsurance contract or may even attempt to nullify an entire treaty. A ceding insurer, depending upon the individual facts, may or may not choose to continue to take credit for such disputed balances. The Annual Statement Instructions require notification of a dispute by a formal written communication from the reinsurer denying the validity of coverage. Additionally, the "Notes to Financial Statements" require footnote disclosure of material amounts and the status of disputed items. Furthermore, a ceding insurer may take no credit whatsoever for reinsurance recoverables in dispute with an affiliate.

Commutations

A commutation of a reinsurance contract is a transaction which results in the complete and final settlement and discharge of all present and future obligations between the parties arising out of the agreement.

Reasons for commuting reinsurance contracts often include: (1) perceived financial instability of the reinsurer, (2) inefficiencies associated with the runoff of longer tailed liabilities, (3) significantly different evaluation of ultimate loss costs or (4) the reinsurers withdrawal from the reinsurance marketplace.

In commutation agreements, the present value of the reinsurers estimated ultimate losses are paid by the reinsurer to the ceding insurer. The ceding insurer immediately establishes the ultimate loss reserve as its liability and the cash received as a negative paid loss, thus creating a reduction in policyholders surplus equal to the difference between the ultimate and present value of the loss reserve.

The reinsurer, on the other hand, has eliminated a loss reserve carried at ultimate cost for a cash payout calculated at present value. The result is an increase in policyholders surplus equal to the difference between the ultimate and present value of the loss reserves.

Commuted balances must be accounted for by writing them off through the accounts, exhibits and schedules in which they were originally recorded.

Uncollectible Reinsurance

Uncollectible reinsurance balances must be accounted for by writing them off through the accounts, exhibits and schedules in which they were originally recorded.

22. Chapter 22 requires the following disclosures with respect to reinsurance. The guidance for retroactive reinsurance contracts was revised by the Property Casualty Reinsurance Study Group at their December 13, 1995 meeting. This guidance was adopted by the membership of the NAIC at the March 1996 Plenary Session. Changes adopted have been underlined and struckthrough in this paragraph.

Reporting of Reinsurance Transactions

Ceded reinsurance disclosures in the Notes to Financial Statements of the annual statement indicates the impact on the insurers surplus if all its reinsurance were canceled. The effect of return commissions, sliding scale commissions, as well as minimum and maximum commissions, is required to be calculated and then measured as factors reducing surplus.

Portfolio reinsurance is the transfer of the entire liability of an insurer for in force policies or outstanding losses, or both, as respects a described segment of the insurers business. Loss portfolio transfers are to be accounted for as retroactive reinsurance which is discussed earlier in this chapter.

A specific interrogatory requires information on reinsurance of risk accompanied by an agreement to release the reinsurer from liability, in whole or in part, from any loss that may occur on the risk or portion thereof.

A commonly accepted practice among affiliated insurers is the sharing of underwriting results ("pooling") in accordance with predetermined ratios. This is normally accomplished by a procedure whereby all affiliated insurers reinsure their direct business with the major insurers. Business is then retroceded to the affiliates so that each member of the group receives its predetermined share of the gross group business.

Detailed disclosure of certain reinsurance transactions is required in various notes to financial statements. These include retroactive reinsurance, unsecured reinsurance recoverables, reinsurance recoverables in dispute, write off of uncollectible reinsurance, and reinsurance commutations.

23. Chapter 22 provides the following guidance on the National Flood Insurance Program:

National Flood Insurance Program

This program was created by the Federal Emergency Management Agency (FEMA) and is designed to involve private insurers in a "write-your-own" (WYO) flood insurance program financially backed by FEMA at no risk to the insurer. To become a participating WYO company, the insurer signs a document with the Federal Insurance Administration (FIA) of the Federal Emergency Management Agency known as the Financial Assistance/Subsidy Arrangement.

Premium rates are set by FEMA. The WYO participating companies write the flood insurance coverage qualifying for the program on their own policies, perform their own underwriting, premium collections, claim payments, administration, and premium tax payments for policies written under the program.

Monthly accountings are made to FIA and participants are allowed to draw upon FEMA letters of credit for deficiencies of losses, loss expenses and administrative expenses in excess of premiums, subject to certain percentage limitations on expenses.

For purposes of statutory reporting in the WYO participating insurers' annual statements, balances due from or to FEMA should be treated as ceded reinsurance balances receivable or payable in Schedule F, FEMA should be identified as the reinsurer and assigned the NAIC Company Code 46990.

24. The Annual Statement Instructions require the following disclosures related to reinsurance:

11. Unsecured Reinsurance Recoverables

Instruction:

If the company has with any individual reinsurers, authorized or unauthorized, an unsecured aggregated recoverables losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium that exceeds 3% of the company's policyholder surplus, list each individual reinsurer and the unsecured aggregated recoverable pertaining to that reinsurer. If the individual reinsurer is part of a group, list the individual reinsurers, each of its related group members having reinsurance with the reporting company, and the total unsecured aggregate recoverables for the entire group.

Include: The NAIC group code number, where appropriate, and the Federal Employer Identification Number for each individual company.

12. Reinsurance Recoverable in Dispute

Instruction:

Reinsurance recoverable on paid and unpaid (including IBNR) losses in dispute by reason of notification, arbitration or litigation shall be identified in the schedule if the amounts in dispute from any company (and/or affiliate) exceeds 5% of the ceding company's policyholders surplus or if the aggregate of all disputed items exceeds 10% of the ceding company's policyholder surplus. "Notification" means a formal written communication from a reinsurer denying the validity of the coverage.

Illustration:

Name of Reinsurer	Total Amount in Dispute (Including IBNR)	Notification	Arbitration	Litigation
A - Reinsurer	$10,000			$10,000
B - Reinsurer	$20,000		$10,000	$10,.000
C - Reinsurer	$30,000	$30,000		

13. Reinsurance Assumed and Ceded

a. Instruction:

Report the maximum amount of return commission which would have been due reinsurers if they or you had canceled all of your company's reinsurance or if you or a receiver had canceled all of your company's insurance assumed as of the end of the period covered by this annual statement with the return of the unearned premium reserve. Equity amounts should be computed by applying the fixed or provisional commission rate for each contract to the unearned premium reserve. Line (iii) of Column 5 plus Line (iv) must equal Page 3, Column 1, Line 9.

c. Instruction:

Disclose all contracts of reinsurance covering losses that have occurred prior to the inception of the contract that have not been accounted for in conformity with the instructions contained in the NAIC *Accounting Practices and Procedures* manual, Chapter 22.

Illustration:

All contracts of reinsurance covering losses that have occurred prior to the inception of the contract have been accounted for in conformity with the instructions contained in the NAIC *Accounting Policies and Procedures* manual, Chapter 22, except for the following:

15. Uncollectible Reinsurance

Instruction:

Describe uncollectible reinsurance written off during the year reported in the following annual statement classifications, including the names or names of the reinsurer(s):

1. Losses incurred;
2. Loss adjustment expenses incurred;
3. Premiums earned;
4. Other.

i. Losses incurred $ __________
ii. Loss adjustment expenses incurred $ __________
iii. Premiums earned $ __________
iv. Other $ __________

Company	Amount
XYZ	$ _______
ZYX	$ _______

17. Retroactive Reinsurance

Instruction:

The following shall be completed for all retroactive reinsurance contracts that transfer liabilities for losses that have already occurred and that will generate special surplus transactions. Transactions utilizing "Deposit Accounting" shall not be reported in this note.

The insurer (assuming or ceding) shall assign a unique number to each retroactive reinsurance contract and shall utilize this number for as long as the contract exists. The summary (aggregate of all retroactive reinsurance contracts) is to be reported in the form below. For further guidance, refer to Chapter 22 of the NAIC *Accounting Policies and Procedures* manual. Analysis in a similar format on individual retroactive reinsurance contracts may be necessary upon request.

25. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies provide the following guidance for line 3 of Schedule F-Part 7, Provision for Overdue Reinsurance:

> Line 3 - Line 1 x Line 2
> If the company's experience indicates that a higher amount should be provided, such higher amount should be entered

Generally Accepted Accounting Principles

26. As noted in paragraph 8, FAS 113 is generally consistent with Chapter 22. The paragraphs that follow are excerpts from FAS 113 which provide guidance on areas that differ from Chapter 22 (see paragraph 8 for a summary of differences).

27. FAS 113 eliminated the practice of insurance enterprises of reporting assets and liabilities relating to reinsured contracts net of the effects of reinsurance:

> Reporting Assets and Liabilities Related to Reinsurance Transactions
>
> 14. Reinsurance contracts that are legal replacements of one insurer by another (often referred to as assumption and novation) extinguish the ceding enterprise's liability to the policyholder and result in removal of related assets and liabilities from the financial statements of the ceding enterprise. Reinsurance contracts in which a ceding enterprise is not relieved of the legal liability to its policyholder do not result in removal of the related assets and liabilities from the ceding enterprise's financial statements. Ceding enterprises shall report estimated reinsurance receivables arising from those contracts separately as assets. Amounts paid to the reinsurer relating to the unexpired portion of reinsured contracts (prepaid reinsurance premiums) also shall be reported separately as assets.
>
> 15. Amounts receivable and payable between the ceding enterprise and an individual reinsurer shall be offset only when a right of setoff exists, as defined in Interpretation 39.
>
> 16. The amounts of earned premiums ceded and recoveries recognized under reinsurance contracts either shall be reported in the statement of earnings, as separate line items or parenthetically, or those amounts shall be disclosed in the footnotes to the financial statements.

28. FAS 113 contains the following guidance on retroactive reinsurance agreements:

> 22. Amounts paid for retroactive reinsurance that meets the conditions for reinsurance accounting shall be reported as reinsurance receivables to the extent those amounts do not exceed the recorded liabilities relating to the underlying reinsured contracts. If the recorded liabilities exceed the amounts paid, reinsurance receivables shall be increased to reflect the difference and the resulting gain deferred. The deferred gain shall be amortized over the estimated remaining settlement period. If the amounts and timing of the reinsurance recoveries can be reasonably estimated, the deferred gain shall be amortized using the effective interest rate inherent in the amount paid to the reinsurer and the estimated timing and amounts of recoveries from the reinsurer (the interest method). Otherwise, the proportion of actual recoveries to total estimated recoveries (the recovery method) shall determine the amount of amortization.
>
> 23. If the amounts paid for retroactive reinsurance exceed the recorded liabilities relating to the underlying reinsured contracts, the ceding enterprise shall increase the related liabilities or reduce the reinsurance receivable or both at the time the reinsurance contract is entered into, so that the excess is charged to earnings.
>
> 24. Changes in the estimated amount of the liabilities relating to the underlying reinsured contracts shall be recognized in earnings in the period of the change. Reinsurance receivables shall reflect the related change in the amount recoverable from the reinsurer, and a gain to be deferred and amortized, as described in paragraph 22, shall be adjusted or established as a result.[6] When changes in the estimated amount recoverable from the reinsurer or in the timing of receipts related to that amount occur, a cumulative amortization adjustment shall be recognized in earnings in the period of the change so that the deferred gain reflects the balance that would have existed had the revised estimate been available at the inception of the reinsurance transaction.

[6] Decreases in the estimated amount of the liabilities shall reduce the related amount recoverable from the reinsurer and accordingly reduce previously deferred gains. However, if the revised estimate of the liabilities is less than the amounts paid to the reinsurer, a loss shall not be deferred. The resulting difference shall be recognized in earnings immediately as described in paragraph 23.

29. EITF 93-6 contains the following guidance on multiple-year retrospectively rated reinsurance contracts:

> ISSUE
>
> An insurer (ceding enterprise) may enter into a multiple-year retrospectively rated reinsurance contract (RRC) with a reinsurer (assuming enterprise). Examples of these contracts may include transactions referred to as "funded catastrophe covers." These contracts include a "retrospective rating" provision that provides for at least one of the following based on contract experience: (1) changes in the amount or timing of future contractual cash flows, including premium adjustments, settlement adjustments, or refunds to the ceding enterprise, or (2) changes in the contract's future coverage. A critical distinguishing feature of these contracts is that part or all of the retrospective rating provision is obligatory such that the retrospective rating provision creates future rights and obligations as a result of past events. A retrospectively rated contract that could be canceled by either party without further obligation is not covered by this Issue.
>
> The issues are (1) to the extent that the ceding enterprise has an obligation to make payments to the reinsurer that would not have been required absent experience to date under the contract (for example, payments that would not have been required if losses had not been experienced), whether the ceding enterprise should recognize a liability and the assuming enterprise should recognize an asset, (2) to the extent that a ceding enterprise would be entitled to receive a payment from the reinsurer based on experience to date under the contract (for example, the ceding enterprise would receive a payment if no future losses occur), whether the ceding enterprise should recognize an asset and the assuming enterprise should recognize a liability, and (3) how to account for changes in coverage based on past experience under the contract.
>
> EITF DISCUSSION
>
> The Task Force reached a consensus that in order to be accounted for as reinsurance, a contract that reinsures risks arising from short-duration insurance contracts must meet all of the following conditions: (1) the contract must qualify as a short-duration contract under paragraph 7.a. of Statement 60, (2) the contract must not contain features that prevent the risk transfer criteria in paragraphs 8-13 of Statement 113 from being reasonably applied (and those criteria must be met), and (3) the ultimate premium expected to be paid or received under the contract must be reasonably estimable and allocable in proportion to the reinsurance protection provided as required by paragraph 14.a. and 14.b. of Statement 60 and paragraph 21 of Statement 113. If any of these conditions are not met, a deposit method of accounting should be applied by the ceding and assuming enterprises. With respect to condition (2) above, a Task Force member asked whether a contract could be split for purposes of evaluating risk transfer. An FASB staff representative responded that Statement 113 applies to "a contract" and that determining the substance of a contract is a judgmental matter. If an agreement with a reinsurer consists of both risk transfer and nonrisk transfer coverages that have been combined into a single legal document, those coverages must be considered separately for accounting purposes. The FASB staff representative noted that paragraphs 59 and 60 of Statement 113 indicate that the Board did not intend for different kinds of exposures combined in a program of reinsurance to be evaluated for risk transfer and accounted for together because that would allow contracts that do not meet the conditions for reinsurance accounting to be accounted for as reinsurance by being designated as part of a program that in total meets the conditions for reinsurance accounting.
>
> For contracts that meet all of the conditions described above, the Task Force reached the following consensuses:
>
> Issue 1. The ceding enterprise should recognize a liability and the assuming enterprise should recognize an asset to the extent that the ceding enterprise has an obligation to pay cash (or other consideration) to the reinsurer that would not have been required absent experience under the contract. The amount recognized in the current period should be computed, using a with-and-

without method, as the difference between the ceding enterprise's total contract costs before and after the experience under the contract as of the reporting date, including costs such as premium adjustments, settlement adjustments, and impairments of coverage. The amount of premium expense related to impairments of coverage should be measured in relation to the original contract terms. Future experience under the contract (that is, future losses and future premiums that would be paid regardless of past experience) should not be considered in measuring the amount to be recognized.

In applying the consensus reached in Issue 1, if the ceding enterprise could terminate the contract prior to the end of its term and if termination would change the amounts paid (for example, if terminating the contract would cost less than continuing the contract in force), the liability resulting from the contract should be measured as follows:

1. If a decision to terminate has been made, the measurement should be based on an assumption of termination and experience to date.

2. Otherwise, the measurement should be based on the lesser of the following:

   a. The total incremental cost that would be paid based on the with-and-without calculation assuming experience to date and assuming termination (that is, excluding the effects of future losses and future premiums that would have been paid regardless of experience to date) or

   b. The total incremental cost that would be paid based on the with-and-without calculation assuming experience to date and assuming no termination (that is, excluding the effects of future losses and future premiums that would have been paid regardless of experience to date).

Issue 2. The ceding enterprise should recognize an asset and the assuming enterprise should recognize a liability to the extent that any cash (or other consideration) would be payable from the assuming enterprise to the ceding enterprise based on experience to date under the contract.

Issue 3. The ceding enterprise and the assuming enterprise should account for changes in coverage in the same manner as changes in other contract costs. For example, the effects of decreases in coverage without a commensurate reduction in premium should be recognized as a loss by the ceding enterprise and as a gain by the assuming enterprise when the event causing the decrease in coverage takes place.

The Task Force noted that deposit accounting cannot be used to avoid loss recognition that would otherwise be required (for example, the ceding enterprise has no future coverage relating to the deposit with the reinsurer and therefore the deposit is not recoverable).

The provisions of these consensuses are effective as of July 22, 1993 (for example, they are to be initially applied no later than the third quarter of 1993 for calendar-year enterprises) and are to be initially applied in one of two ways:

1. By recognition of the net effect of applying the provisions at the beginning of an enterprise's current fiscal year as a cumulative effect of a change in accounting principle in accordance with paragraph 20 of Opinion 20. Under this approach, the disclosures required by paragraph 21 of Opinion 20 would be required as long as the income statement for the current fiscal year is presented. The Task Force noted that the provisions of Statement 3 apply to all interim periods presented.

2. By restatement of financial statements for all periods presented as long as that restatement is not prohibited by Statement 113.

The SEC Observer stated that in addition to the disclosures provided under Opinion 20, the SEC staff will require registrants to disclose the nature and the significance of the transactions giving rise to the change. The SEC Observer also noted that registrants would be required to make SAB 74 disclosures for the financial statements filed prior to the period in which this change is adopted.

The Task Force requested that the FASB staff views on Issue 93-6, distributed to the Task Force as Supplement No. 1 (Revised) to the Issue Summary and the FASB Viewpoints article, "Accounting for Reinsurance: Questions and Answers about Statement 113," be included in Appendix D of EITF Abstracts. [Note: See Appendix D, Topics No. 34 and 35.]

STATUS

A related issue was discussed in Issue No. 93-14, "Accounting for Multiple-Year Retrospectively Rated Insurance Contracts by Insurance Enterprises and Other Enterprises." That Issue considers how a multiple-year retrospectively rated contract arising from an insurance transaction that is not a reinsurance contract should be accounted for. The consensuses reached in Issue 93-14 were consistent with those reached in this Issue.

No further EITF discussion is planned.

National Association of Insurance Commissioners

Accounting Practices and Procedures Manual

As of March 2015

Volume III

NAIC

National Association *of* Insurance Commissioners

The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

Accounting & Reporting
Information about statutory accounting principles and the procedures necessary for filing financial annual statements and conducting risk-based capital calculations.

Consumer Information
Important answers to common questions about auto, home, health and life insurance — as well as buyer's guides on annuities, long-term care insurance and Medicare supplement plans.

Financial Regulation
Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

Legal
Comprehensive collection of NAIC model laws, regulations and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

Market Regulation
Regulatory and industry guidance on market-related issues, including antifraud, product filing requirements, producer licensing and market analysis.

NAIC Activities
NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

Special Studies
Studies, reports, handbooks and regulatory research conducted by NAIC members on a variety of insurance-related topics.

Statistical Reports
Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health and life insurance.

Supplementary Products
Guidance manuals, handbooks, surveys and research on a wide variety of issues.

Capital Markets & Investment Analysis
Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

White Papers
Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

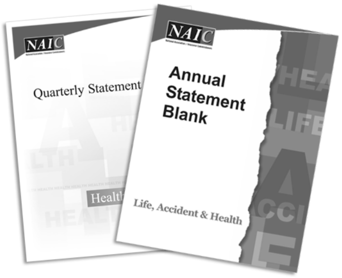
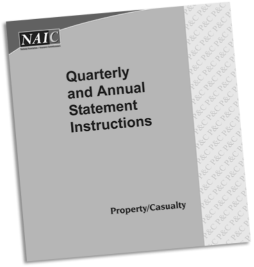
Companion Products

The following companion products provide additional information on the same or similar subject matter. Many customers who purchase the ***Accounting Practices and Procedures Manual*** also obtain one or more of the following products:



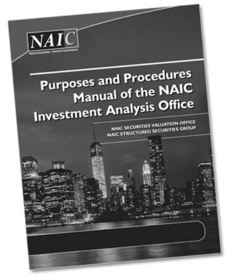
Quarterly Statement
Health
Annual Statement Blank
Life, Accident & Health

Annual and Quarterly Statement Blanks
To be used with its companion products, this publication provides the appropriate format for filing quarterly and annual statement data with the states and the NAIC. Proper use allows users to identify system changes that can improve the method in which data is first collected, and allows users to ascertain if their annual statement software vendor has also complied with NAIC requirements. Updated annually.



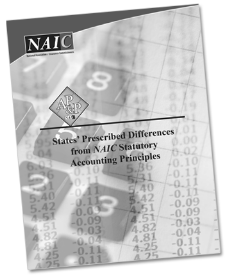
Quarterly and Annual Statement Instructions
Property/Casualty

Annual and Quarterly Statement Instructions
Includes a summary of changes to the instructions for the following year. When used with its companion products, it allows for proper preparation of annual and quarterly statements, including all supplemental information that must also be filed to remain in compliance with NAIC mandates. Instructions provide guidance for completing the various pages of the statements when the line descriptions are not self-explanatory. Updated annually.



Purposes and Procedures Manual of the NAIC Investment Analysis Office
NAIC SECURITIES VALUATION OFFICE
NAIC STRUCTURED SECURITIES GROUP

Purposes and Procedures Manual of the NAIC Securities Valuation Office
This publication is the primary source for insurers to comply with regulatory reporting requirements. Contains the NAIC's credit assessment methodologies and valuation policies, and takes precedence over other SVO publications covering a number of categories. Subscribers receive periodic email alerts relating to regulatory developments concerning securities. These alerts will be sent directly from the NAIC's Securities Valuation Office. Electronic format only. Updated biannually.



States' Prescribed Differences from NAIC Statutory Accounting Principles
The Accounting Practices and Procedures Manual presents a comprehensive basis of accounting that should be followed if not in conflict with state statutes and/or regulations. Should the domiciliary state set forth accounting guidance that differs from the AP&P Manual, disclosures of such must be made. This publication provides information regarding each state's prescribed differences from NAIC statutory accounting principles, including a citation to the respective state statute and/or regulation. Updated annually.

How to Order

☎ 816.783.8300 ✉ prodserv@naic.org 🖱 http://store.naic.org

International orders must be prepaid, including shipping charges. Please contact an NAIC Customer Service Representative, Monday - Friday, 8:30 am - 5 pm CT.

MAINTENANCE PROCESS

The Statutory Accounting Principles (E) Working Group maintains codified statutory accounting principles (SAP) by concluding on generally accepted accounting principles (GAAP) or addressing new statutory accounting issues. As items are adopted, updates to the Manual are posted to the password-protected website listed below.

Website: **www.naic.org/committees_e_app_manual_updates.htm**

User ID and password for updates to the Manual adopted after the NAIC Spring 2014 National Meeting through the Spring 2015 National Meeting:

User ID: **RECOGNITION** (enter exactly as presented – case sensitive)
Password: **2015STATUTORY** (enter exactly as presented – case sensitive)

Email Notification
Should you wish to be notified by the NAIC when the password-protected website is updated, visit the website listed above and follow the link to sign up for email notification of updates to the statutory accounting website. The NAIC will retain the database; therefore, if you were receiving notifications via email in 2014, there is no need to resubmit your request in 2015.

Password for updates adopted after the NAIC Spring 2015 National Meeting through the Spring 2016 National Meeting requires purchase of the 2016 Manual.

Access to new updates adopted after the NAIC Spring 2015 National Meeting will be included with the pre-purchase of the subsequent year's Manual (March 2016 publication). Purchasers of the 2016 Manual may enter the password-protected NAIC website and download updates finalized after the NAIC Spring 2015 National Meeting through the Spring 2016 National Meeting.

Ordering Information: You may pre-purchase the March 2016 *Accounting Practices and Procedures Manual* by contacting an NAIC representative at 816.783.8300, http://www.naic.org/store_home.htm or e-mail at prodserv@naic.org. The March 2016 *Accounting Practices and Procedures Manual* will be delivered in two parts, first the User ID and Password required to obtain access to the updates website, and then the Manual in March 2016. Please contact an NAIC representative as indicated above with any questions on this process.

DEDICATION

The *Accounting Practices and Procedures Manual* is dedicated to Norris Clark, California Department of Insurance (retired), Chair of the Codification of Statutory Accounting Principles Working Group, and its successors, the Statutory Accounting Principles and Emerging Accounting Issues (E) Working Groups from September 1994 through July 2004, and to Joseph Fritsch, New York Department of Financial Services (retired), Chair of the Statutory Accounting Principles (E) Working Group from 2004 through December 2012.

Your dedication, leadership, intelligence and passion were the driving forces behind the creation and continued development of the comprehensive statutory accounting and financial reporting model presented in this publication. Your contributions throughout the years are appreciated and will not be forgotten.

INT 02-21	Accounting for Prepaid Loss Adjustment Expenses and Claim Adjustment Expenses
INT 03-01	Application of SSAP No. 35 to the Florida Hurricane Catastrophe Fund
INT 03-03	Admissibility of Investments Recorded Based on the Audited GAAP Equity of the Investee when a Qualified Opinion is Provided
INT 03-05	EITF 01-07: Creditor’s Accounting for a Modification or Exchange of Debt Instruments
INT 03-12	EITF 02-4: Determining Whether a Debtor’s Modification or Exchange of Debt Instruments is within the Scope of FASB Statement No. 15
INT 03-16	Contribution of Stock
INT 03-17	Classification of Liabilities from Extra Contractual Obligation Lawsuits
INT 03-18	Accounting for a Change in the Additional Minimum Liability in SSAP No. 8—Pensions (SSAP No. 8)
INT 04-01	Applicability of New GAAP Disclosures Prior to NAIC Consideration
INT 04-02	Surplus Notes Issued by Entities Under Regulatory Action
INT 04-03	Clarification for Calculating the Additional Minimum Pension Liability Under SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8, paragraph 16.f.
INT 04-05	Clarification of SSAP No. 5R Guidance on when a Judgment is Deemed Rendered
INT 04-07	EITF 02-15: Determining Whether Certain Conversions of Convertible Debt to Equity Securities Are Within the Scope of FASB Statement No. 84
INT 04-10	EITF 02-18: Accounting for Subsequent Investments in an Investee after Suspension of Equity Method Loss Recognition

Table of Contents

No.	Title
INT 04-12	EITF 03-4: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan
INT 04-13	EITF 03-5: Applicability of AICPA Statement of Position 97-2 to Non-Software Deliverables in an Arrangement Containing More-Than-Incidental Software
INT 04-15	EITF 03-07: Accounting for the Settlement of the Equity-Settled Portion of a Convertible Debt Instrument That Permits or Requires the Conversion Spread to Be Settled in Stock (Instrument C of Issue No. 90-19)
INT 04-18	EITF 00-21: Revenue Arrangements with Multiple Deliverables
INT 04-20	EITF 01-08: Determining Whether an Arrangement Contains a Lease
INT 05-04	Extension of Ninety-day Rule for the Impact of Hurricane Katrina, Hurricane Rita and Hurricane Wilma
INT 05-06	Earned But Uncollected Premium
INT 06-14	Reporting of Litigation Costs Incurred for Lines of Business in which Legal Expenses Are the Only Insured Peril
INT 07-03	EITF 06-3: How Taxes Collected from Customers and Remitted to Governmental Authorities Should Be Presented in the Income Statement (That is, Gross versus Net Presentation)
INT 08-02	EITF 06-8: Applicability of the Assessment of a Buyer's Continuing Investment under FASB Statement No. 66 for Sales of Condominiums
INT 08-03	EITF 06-9: Reporting a Change in (or the elimination of) a Previously Existing Difference between the fiscal Year-End of a Parent Company and That of a Consolidated Entity or between the Reporting Period of an Investor and That of an Equity Method Investee
INT 08-04	EITF 07-3: Accounting for Nonrefundable Advance Payments for Goods or Services Received for Use in Future Research and Development Activities
INT 08-06	FSP EITF 00-19-2: Accounting for Registration Payment Arrangements
INT 08-07	EITF 07-6: Accounting for the Sale of Real Estate Subject to the Requirements of FASB Statement No. 66 When the Agreement Includes a Buy-Sell Clause
INT 08-08	Balance Sheet Presentation of Funding Agreements Issued to a Federal Home Loan Bank
INT 08-10	Contractual Terms of Investments and Investor Intent
INT 09-03	EITF 08-7: Accounting for Defensive Intangible Assets
INT 09-04	Application of the Fair Value Definition
INT 09-05	EITF 08-3: Accounting by Lessees for Maintenance Deposits
INT 13-01	Extension of Ninety-Day Rule for the Impact of Hurricane/Superstorm Sandy
INT 13-04	Accounting for the Risk-Sharing Provisions of the Affordable Care Act

How to Use This Manual

The contents of this manual are arranged as follows:

Volume I:

- Table of Contents
- Summary of Changes
- Preamble
- Statements of Statutory Accounting Principles
- Index to the Statements of Statutory Accounting Principles
- Glossary
- Appendix A – Excerpts of NAIC Model Laws
- Appendix B – Interpretations of the Emerging Accounting Issues (E) Working Group

Volume II:

- Appendix C – Actuarial Guidelines
- Appendix D – GAAP Cross-Reference to SAP
- Appendix E – Issue Papers 1-75

Volume III:

- Appendix E – Issue Papers 76-150
- Appendix F – Policy Statements
- Appendix G – Implementation Guide for the Model Audit Rule
- Appendix H – Superseded SSAPs and Nullified Interpretations (This appendix is no longer included within the printed Manual but is still accessible within the AP&P Folio View CD-ROM and on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage, www.naic.org/committees_e_app_manual_updates.htm).

The arrangement of material as indicated above is included in the Table of Contents at the front of each Volume. A detailed Table of Contents also proceeds each section covering the material within.

Summary of Changes:

This section provides a summary of the changes that were made to the As of March 2014 version of the *Accounting Practices and Procedures Manual* to create the As of March 2015 version. This is divided into substantive revisions to statutory accounting principles, nonsubstantive revisions to statutory accounting principles, and revisions to the appendices included in the Manual. This is a key resource for users who are looking to identify changes from the prior edition.

Preamble:

Each and every user of the Manual should read this section. Many regulators consider this document one of the most important parts of the Manual as it provides the foundation for statutory accounting principles (SAP). Some of the significant topics covered in the Preamble include codification project background, statement of concepts, statutory hierarchy, materiality and disclosures.

Statements of Statutory Accounting Principles:

As indicated by the Statutory Hierarchy, the Statements of Statutory Accounting Principles (SSAPs) are the primary authoritative statutory accounting practices and procedures promulgated by the NAIC. These statements are the result of issue papers that have been exposed for public comment and finalized. Finalized issue papers are in Appendix E and ARE NOT authoritative. While it is not intended that there be any significant differences between an underlying issue paper and the resultant SSAP, if differences exist, the SSAP prevails and shall be considered definitive. Readers may use the NAIC website to keep abreast of substantive and nonsubstantive

changes to the SSAPs. Completely superseded SSAPs are no longer authoritative and have been removed from the printed Manual but are available for reference on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage (www.naic.org/committees _e_app_manual_updates.htm). The completely superseded SSAPs have been retained in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

The cover page of each SSAP contains a STATUS section that can affect the implementation of each SSAP. The STATUS section contains the following:

> TYPE OF ISSUE – SSAPs designated as Common Area apply to all insurers. Although the nomenclature or terms provided in the prescribed annual statement forms may vary among different types of insurers, only one set of nomenclature or terms may have been used in the SSAP. For example, the Statement of Income found in the Property and Casualty Annual Statement shall be considered as synonymous with the Summary of Operations found in the Life and Health Annual Statement.
>
> ISSUED – Date when the SSAP was adopted by the NAIC. SSAPs designated with Initial Draft were adopted by the NAIC Plenary in March 1998 as part of the Codification Project (SSAP Nos. 1-73). The date included for SSAP No. 74, and subsequent SSAPs, denotes when the Statutory Accounting Principles (E) Working Group adopted the SSAP.
>
> EFFECTIVE DATE – Date representing when the SSAP is effective. Many times there are additional details relative to the transition provided within the SSAP.
>
> AFFECTS/AFFECTED BY – A useful tool for tracking relationships between statements and interpretations is contained within these sections. The "affects" section is used when a SSAP substantively amends or supersedes previously issued SSAPs. Nullified INTs are also noted in this section. Readers are referenced to another SSAP in the "affected by" section if the SSAP has been substantively amended or superseded. Text within paragraphs substantively amended or superseded may also be "shaded" to notify readers that revised guidance is available.
>
> INTERPRETED BY – This section includes a reference to the applicable Interpretation (INT) of the Emerging Accounting Issues (E) Working Group contained within Appendix B of the Manual which provides interpretative guidance as a result of issues raised by users of the Manual or related GAAP guidance. INTs are generally effective when adopted. Readers should note that the Manual only contains the INTs finalized through December 2014 due to the fact that the Manual is published annually. Readers may use the NAIC website, as indicated on the inside front cover of the Manual, to keep abreast of recently issued INTs.

Refer to the Relevant Literature and Effective Date and Transition sections of the SSAP for details of substantive and nonsubstantive changes.

Appendix A – Excerpts of NAIC Model Laws:

In most cases, the source document for information included in Appendix A is an NAIC Model Regulation or Law. These Appendices are referenced by specific SSAPs and should only be used in context of the Appendix and the SSAP that references it.

Appendix B – Interpretations of the Emerging Accounting Issues (E) Working Group:

The Emerging Accounting Issues (E) Working Group (EAIWG) is responsible for responding to SAP questions that generally relate to application, interpretation and clarification. Appendix B includes the final interpretations of the EAIWG through December 2014. Once an INT is

finalized, the related SSAP will contain reference to the applicable INT. Interpretations that have been nullified are removed from the printed Manual and posted for reference on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage (www.naic.org/committees_e_app_manual_updates.htm). The nullified INTs are retained in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

Appendix C – Actuarial Guidelines:

The NAIC Life Actuarial (A) Task Force and Health Actuarial (B) Task Force have been asked on many occasions to assist a particular state insurance department in interpreting a statute dealing with an actuarial topic relative to an unusual policy form or situation not contemplated at the time of original drafting of a particular statute. The Life Actuarial (A) Task Force and Health Actuarial (B) Task Force, in developing interpretations or guidelines, must often consider the intent of the statute, the reasons for initially adopting the statute and the current situation. The Life Actuarial (A) Task Force and Health Actuarial (B) Task Force feel that for those situations which are sufficiently common to all states, the publishing of actuarial guidelines on these topics would be beneficial to the regulatory officials in each state and would promote uniformity in regulation which is beneficial to everyone. To this end, the Life Actuarial (A) Task Force and Health Actuarial (B) Task Force have developed certain actuarial guidelines and will continue to do so as the need arises. The guidelines are not intended to be viewed as statutory revisions but merely a guide to be used in applying a statute to a specific circumstance.

Appendix D – GAAP Cross-Reference to SAP:

As expressed in the Statement of Concepts, SAP utilizes the framework established by Generally Accepted Accounting Principles (GAAP). Appendix D includes GAAP pronouncements that have been considered in the development of SAP. This listing includes GAAP pronouncements issued through December 2014. This Appendix is a valuable and efficient tool for readers who are interested in the status of a particular GAAP pronouncement in the SAP model.

Appendix E – Issue Papers:

This section includes all of the issue papers associated with SSAPs adopted by the Statutory Accounting Principles (E) Working Group through December 2014. The issue papers are used as the first step in developing new SSAPs and contain a recommended conclusion, discussion and relevant literature section. Issue papers **DO NOT** constitute an authoritative level of statutory accounting, as supported by the statutory hierarchy, and should only be used as reference material. Nevertheless, issue papers are an important part of the Manual because they reference the history and discussion of the related SSAP. The "Relevant Statutory Accounting and GAAP Guidance" section of the issue paper contains excerpts of accounting guidance in place at the time the Statutory Accounting Principles (E) Working Group considered (but not necessarily adopted) when forming the conclusions reached in the resultant SSAP.

Appendix F – Policy Statements:

This section includes the NAIC Policy Statements applicable to SAP. These statements provide the basis by which SAP is maintained, documentation of the agenda process and other important issues that affect this manual.

Appendix G – Implementation Guide for Model Audit Rule:

This section includes the NAIC Implementation Guide for the Model Audit Law. This section is for informational purposes. The Implementation Guide should not be viewed as a requirement of complying with the *Accounting Practices and Procedures Manual.*

Appendix H – Completely Superseded SSAPs and Nullified Interpretations

In 2013, the Statutory Accounting Principles (E) Working Group adopted a proposal to remove completely superseded SSAPs and nullified interpretations (INTs) from the printed Manual and

include these items on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage (www.naic.org/committees_e_app_manual_updates.htm). By including on this password-protected updates page, all who annually subscribe to the printed *Accounting Practices and Procedures Manual* will continue to have access to the superseded and nullified guidance for historical purposes. The completely superseded SSAPs and nullified INTs have been retained in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

How to Use this Manual …

... to account for a certain item under NAIC SAP

As the SSAPs represent the highest level of NAIC statutory authority, readers should begin their search there. The Index to SSAPs is a useful tool to identify which SSAP(s) address the issue. Once the pertinent SSAP has been identified, it can be used to locate other documents that may also address the issue. On the SSAP cover page, readers will be referred to other SSAPs if there have been substantive changes made to it or INTs if there have been interpretations of the SSAP. Within the body of the SSAP, readers may be referred to Appendix A or C for further guidance. There is a reference located at the end of each SSAP to issue paper(s) used in the development of the SSAP. The DISCUSSION section of the issue paper provides documentation supporting the conclusions reached in the SSAP. As supported by the statutory hierarchy, readers should only utilize the issue papers as support to the SSAP as they ARE NOT authoritative. The Statutory Hierarchy contains a detailed listing of levels of authoritative literature.

... to compare SAP to GAAP for a particular issue

Appendix D is an excellent reference for users who are interested in determining how SAP addresses an issue that has been adopted by GAAP. Appendix D provides a reference to the SSAP or INT that addresses a particular GAAP pronouncement. As indicated in the Preamble, users should not utilize GAAP until and unless adopted by the NAIC. Within the body of the applicable SSAP or INT, readers will find documentation as to the reason for adoption, rejection, or adoption with modification of a particular GAAP pronouncement.

... to identify the relationship between the Manual and State law

Once a reader has identified the accounting treatment for a particular transaction or issue within the Manual, one must consider the effect of state law. That is, the Manual is not intended to preempt states' legislative and regulatory authority. It is intended to establish a comprehensive basis of accounting recognized and adhered to if not in conflict with state statutes and/or regulations, or when the state statutes and/or regulations are silent. For instance, if a state prohibits the admission of goodwill, insurers domiciled in that state are required to nonadmit all goodwill instead of following the NAIC guidance contained within *SSAP No. 68—Business Combinations and Goodwill*. Insurers should refer to their state laws and regulations regarding deviations from this manual.

... to obtain updates to the latest published Manual

The Manual contains information as of December 2014. Please note that there will be modifications to the accounting pronouncements included in the Manual from year to year, as such guidance is subject to the maintenance process. To address this, the NAIC has a website dedicated to providing updates on the latest information impacting statutory accounting. A user must pre-order the As of March 2016 Manual in order to obtain access to the changes occurring during 2015 that are maintained within this password-protected website. Once access is granted, a user may enter the website and download an issue paper, statement of statutory accounting principles, appendix or interpretation that affects the Manual. This website also includes the latest minutes of the Statutory Accounting Principles (E) Working Group and Emerging Accounting Issues (E) Working Group. To learn more about how to obtain updates to the latest published Manual, refer to the Maintenance Process page, which precedes the Table of Contents.

... to learn how changes are made to the Manual and how to stay abreast of such changes

Appendix F contains several NAIC Policy Statements that document the process by which the Manual will be modified. It also outlines the process by which the Statutory Accounting Principles (E) Working Group and the Emerging Accounting Issues (E) Working Group will conduct their business. Readers are able to track the development of SAP by attending the national meetings of the working groups or through use of the NAIC website. Further details regarding the website can be found at www.naic.org.

... to contact the NAIC regarding questions about the Manual

The following NAIC staff may be contacted regarding questions about the Manual:

Summary of Changes to the *As of March 2014 Version* of the *Accounting Practices and Procedures Manual* included in the *As of March 2015 Version*

The following represents a summary of the changes that were made to the *As of March 2014* version of the *Accounting Practices and Procedures Manual* (Manual) to create the *As of March 2015* version.

The first section summarizes substantive revisions to statutory accounting principles. Substantive revisions introduce original or modified accounting principles. Substantive revisions can be reflected in an existing SSAP or a new SSAP. When substantive revisions are made to an existing SSAP, the front of the SSAP identifies the substantive changes and effective date of the substantive revisions. If substantive revisions in an existing SSAP are depicted by underlines (new language) and strikethroughs (removed language), this tracking will not be shown in subsequent manuals. Substantively revised SSAPs and new SSAPs usually refer to a corresponding issue paper that will reflect the substantive revisions for historical purposes. If language in an existing SSAP is superseded, the superseded language is shaded, with the reader referred to the new or substantively revised SSAP. SSAPs that are completely superseded and interpretations that are nullified are included in Appendix H.

The second section summarizes the nonsubstantive revisions to statutory accounting principles. Nonsubstantive changes are characterized as language clarifications which do not modify the original intent of a SSAP, or changes to reference material. Nonsubstantive changes are depicted by underlines (new language) and strikethroughs (removed language) and will not be shown as marked in subsequent manuals.

The third section summarizes any revisions to the appendices in the Manual.

1. Substantive Revisions – Statutory Accounting Principles		
Section	**Reference**	**Description**
SSAP No. 40R SSAP No. 48	2013-17	Revisions related to wholly-owned single real estate held in an LLC, which meets specific conditions, with an effective date of Jan. 1, 2015.
SSAP No. 106 SSAP No. 35R	2014-01 2014-13	New SSAP moves guidance on the Affordable Care Act Section 9010 from SSAP No. 35R and includes nonsubstantive edits to the disclosures.
SSAP No. 107 SSAP No. 35R	2014-12 2013-28	New SSAP addresses the risk-sharing provisions of the Affordable Care Act known as risk adjustment, reinsurance and risk corridors. With this adoption, the disclosures previously located within SSAP No. 35R are moved to this SSAP and INT 13-04 is nullified.
2. Nonsubstantive Revisions – Statutory Accounting Principles		
Section	**Reference**	**Description**
Preamble	2013-35	Revisions clarify that as of Sept. 15, 2009, AICPA SOPs will no longer be reviewed for statutory accounting.
SSAP No. 1 SSAP No. 4	2014-16	Revisions clarify the guidance for restricted assets.
SSAP No. 3 SSAP No. 68	2013-29	Revisions clarify that the disclosure exemption for mergers with shell entities does not change the Jan. 1 date to determine the cumulative effect in accounting principle.
SSAP No. 11	2014-07	Revisions identify the adoption of specific paragraphs from *Accounting Principles Board Opinion (APB) 12, Omnibus Opinion – 1967* and add guidance to reflect previously adopted GAAP, with minor technical edits.
SSAP No. 16R	2014-04	Revisions make the capitalization policy disclosure consistent with other SSAPs.

SSAP No. 19 SSAP No. 22	2014-05	Revisions adopt with modification *ASU 2014-05–Service Concession Arrangements* to clarify that service concession arrangements are not within the scope of SSAP No. 22 and shall not be recognized as property, plant or equipment in SSAP No. 19.
SSAP No. 26 SSAP No. 43R	2014-02	Revisions incorporate a new “structured note” disclosure and clarify that the guidance in SSAP No. 43R pertains to structured securities, not structured notes.
SSAP No. 35R	2013-28	Revisions include disclosures pertaining to the risk-sharing provisions of the Affordable Care Act programs (risk adjustment, reinsurance and risk corridors). These disclosures were subsequently moved to SSAP No. 107.
SSAP No. 55	2014-19	Revisions clarify that claims-related losses for extra contractual obligations and bad faith lawsuits are to be included in losses. Also, technical revisions related to prepaid adjustment expenses.
SSAP No. 56	2014-18	Revisions clarify the reporting of separate accounts disclosures.
SSAP No. 57	2014-06	Revisions to the disclosure requirements, with corresponding terminology revisions.
SSAP No. 86	2013-32	Revisions adopt *ASU 2013-10–Inclusion of the Fed Funds Effective Swap Rate (or Overnight Index Swap Rate) as a Benchmark Interest Rate for Hedge Accounting Purposes.* This ASU defines a benchmark interest rate and eliminates the restriction on different rates for similar hedges.
	2014-09	Revisions reject *ASU 2014-03–Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps—Simplified Hedge Accounting Approach (PCC)* as not applicable.
	2014-11	Revisions clarify the reporting of derivatives between Schedule DB and the balance sheet.
SSAP No. 92 SSAP No. 102	2013-37	Revisions adopt by reference *ASU 2011-09–Disclosures about an Employer’s Participation in a Multiemployer Plan* and incorporate limited additional disclosures for multiemployer plans.
SSAP No. 97	2013-31	Revisions add reference in Appendix B – Determining the Valuation Method, to the SSAP’s downstream holding company guidance.
SSAP No. 101	2014-20	Revisions clarify the RBC authorized control level used in the DTA calculation.
SSAP No. 104R	2014-17	Revisions adopt *ASU 2014-12–Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period* with an effective date of Jan. 1, 2016, with early adoption permitted.
3. Revisions to the Appendices		
Section	**Reference**	**Description**
Appendix A	2014-21	Revisions incorporate changes to *Appendix A-010: Minimum Reserve Standards for Individual and Group Health Insurance Contracts* to allow the 2012 Group Long-Term Disability Table adopted by the Health Actuarial (B) Task Force with a Jan. 1, 2017, effective date and early adoption permitted.

Appendix B	2013-04 (EAIWG) 2014-12 (SAPWG) 2014-26 (SAPWG)	*INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act* was adopted to provide temporary guidance on the risk-sharing provisions. This INT was subsequently nullified by SSAP No. 107 and moved to Appendix H. Placement revisions move GAAP guidance identified as rejected from INT 99-00 into Issue Paper No. 99. INT 99-00 was nullified and moved to Appendix H.
Appendix C	2014-22	*Actuarial Guideline XLVII: Application of Company Experience in the Calculation of Claim Reserves Under the 2012 Group Long-Term Disability Valuation Table* has been added. *Actuarial Guideline XLVIII: Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued Under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (Model 830) has been added. Actuarial Interpretations 38 through 41 have been added to Appendix C2.
Appendix D	2013-35	Revisions update the appendix based on the consideration of GAAP through the statutory review process. These revisions are not tracked as changes. Additionally, revisions clarify that as of Sept. 15, 2009, AICPA SOPs will no longer be reviewed for statutory accounting.
Appendix E	2013-34 2014-03 2014-14 2013-35 2014-26 2014-08 2014-01 2014-13 2013-17 2014-12	Revisions reflect the rejection of the following GAAP guidance as not applicable to statutory accounting in *Issue Paper No. 99—Nonapplicable GAAP Pronouncements* (Issue Paper No. 99): • *ASU 2012-04–Technical Corrections and Improvements* • *ASU 2013-12–Definition of a Public Business Entity, An Addition to the Master Glossary* • *ASU 2014-10–Development Stage Entities* • *SOP 09-1–Performing Agreed-Upon Procedures Engagements That Address the Completeness, Accuracy, or Consistency of XBRL-Tagged Data* Placement revisions move GAAP guidance identified as rejected from INT 99-00 into Issue Paper No. 99. Additionally, revisions add reference of the original SSAP that corresponds with each issue paper, as well as the current authoritative SSAP guidance. The following issue papers were adopted or amended: • *Issue Paper No. 148—Affordable Care Act Section 9010 Assessment* • *Issue Paper No. 149—Wholly-Owned Single Real Estate Property in an LLC* • *Issue Paper No. 150—Accounting for the Risk-Sharing Provisions of the Affordable Care Act*
Appendix F	N/A	No revisions have been made to this appendix.
Appendix G	N/A	No revisions have been made to this appendix.
Appendix H	2014-26 2013-04 (EAIWG) 2014-12 (SAPWG)	Revisions add nullified INTs: • *INT 99-00: Compilation of Rejected EITFs* • *INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act*

This page intentionally left blank.

Appendix E
Statutory Issue Papers

Introduction

Appendix E includes all of the issue papers associated with SSAPs adopted through December 2014. The issue papers are used as the first step in developing new or substantively revised SSAPs and contain a recommended conclusion, discussion, and relevant literature section. While the issue papers do not constitute an authoritative level of statutory accounting guidance, as defined by the statutory hierarchy, they are an important part of this Manual because they reference the history and discussion of the related SSAP.

Statutory Issue Paper No. 76

Offsetting and Netting of Assets and Liabilities

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 64

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance does not provide guidance on the reporting of assets and liabilities when a valid right of setoff exists (offsetting). As a result amounts are not consistently netted for statutory reporting. However, current statutory accounting does require that certain assets and liabilities be shown as a net amount for reporting purposes (netting) regardless of whether a valid right of setoff exists.

2. GAAP guidance on offsetting is provided in paragraph 7 of *Accounting Principles Board Opinion No. 10*, *Omnibus Opinion - 1966* (APB 10) and *FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts* (FIN 39). This guidance allows offsetting only when a valid right of setoff exists and specified conditions are met or where netting is specifically permitted by other GAAP pronouncements. FIN 39 defines the conditions under which a valid right of setoff exists.

3. The purpose of this issue paper is to establish statutory accounting principles on offsetting assets and liabilities that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts) and to provide a reporting mechanism for the netting of assets and liabilities when required by this codification.

SUMMARY CONCLUSION

4. Assets and liabilities shall be offset and reported net only when a valid right of setoff exists except as provided for in paragraphs 5 and 7. A right of setoff is a reporting entity's legal right, by contract or otherwise, to discharge all or a portion of the debt owed to another party by applying against the debt an amount that the other party owes to the reporting entity. A valid right of setoff exists only when all the following conditions are met:

   a. Each of the two parties owes the other determinable amounts. An amount shall be considered determinable for purposes of this provision when it is reliably estimable by both parties to the agreement.

   b. The reporting party has the right to setoff the amount owed with the amount owed by the other party.

   c. The reporting party intends to setoff.

   d. The right of setoff is enforceable by law.

5. Assets and liabilities that meet the criteria for offset shall not be netted when prohibited by specific issue papers. An example of such is in the case of reinsurance recoverables on paid losses and ceded premiums payable as provided for in *Issue Paper No. 75—Property and Casualty Reinsurance* (Issue Paper No. 75).

6. Amounts due to or from affiliates shall be offset and reported net only when the provisions of paragraph 4 above are met.

7. Netting of assets and liabilities for reporting purposes when no valid right of setoff exists shall be allowed only when provided for by specific issue papers. An example of such is in the case of real estate investments required to be shown net of encumbrances as provided for in *Issue Paper No. 40—Real Estate Investments* (Issue Paper No. 40).

DISCUSSION

8. The conclusions above require offsetting when a valid right of setoff exists, unless prohibited in specific issue papers. This issue paper adopts paragraphs 1, 7, and 13 of APB 10 and FIN 39 with a modification to prohibit offsetting as provided in specific issue papers and require netting when provided in specific issue papers. GAAP uses the same criteria to permit offsetting as described in paragraph 4 of this issue paper and also permits netting where existing GAAP literature specifically prescribes it. Because this modification exists, there will be circumstances where items are offset under GAAP but not under statutory accounting principles.

9. Likewise, there are instances as provided for in specific issue papers where balances which do not meet the criteria in paragraph 4 are shown net for statutory reporting purposes where existing GAAP literature would not allow the amounts to be reflected as a single net balance. This difference is reflective of the varying objectives of regulation.

10. *FASB Interpretation No. 41, Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements* (FIN 41) is a further interpretation of paragraph 7 of APB 10 and FIN 39. The guidance adopted in *Issue Paper No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements* (Issue Paper No. 45) is consistent with FIN 41. However, Issue Paper No. 45 did not adopt FIN 41 because offsetting was not addressed in its entirety in the paper. The adoption of paragraph 7 of APB 10 and FIN 39 make it appropriate to adopt FIN 41 in this issue paper. This issue paper also adopts *FASB Emerging Issues Task Force No. 86-25, Offsetting Foreign Currency Swaps*.

11. The statutory principles outlined in the conclusion above are consistent with the consistency concept in the Statement of Concepts. A pertinent excerpt follows:

> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles.

12. The conclusions reached in this issue paper are consistent with the definition of liabilities in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5) which defines a liability as *certain or probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transaction(s) or event(s)* and the definition of assets in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4) which defines an asset as *probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events*. Assets and liabilities exist independent of each other unless the requirements of paragraph 4 of this issue paper are met.

Drafting Notes/Comments

- *Issue Paper No. 2—Definition of Cash* requires netting cash accounts with positive and negative balances.

- *Issue Paper No. 40—Real Estate Investments* requires encumbrances on real estate investments to be netted against the investment.
- *Issue Paper No. 74—Life, Deposit-Type and Accident and Health Reinsurance* prohibits offsetting of reinsurance recoverables on paid losses with ceded premiums payable and requires due premiums from policyholders to be netted with premiums due the reinsurer.
- *Issue Paper No. 75—Property and Casualty Reinsurance* prohibits offsetting of reinsurance recoverables on paid losses with ceded premiums payable.
- *Issue Paper No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements* addresses FIN 41, *Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements*.

RELEVANT STATUTORY AND GAAP GUIDANCE

Statutory Accounting

13. The Property and Casualty Accounting Practices and Procedures Manual (P&C Accounting Practices and Procedures Manual), Chapter 22, Reinsurance, provides the following guidance:

> Accounting for Prospective Reinsurance Contracts:
>
> Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of written and earned premiums by the ceding company and shall be earned over the remaining contract period in proportion to the amount of reinsurance protection provided. If the amounts paid are subject to adjustment and can be reasonably estimated, the basis for amortization shall be the estimated ultimate amount to be paid.
>
> Changes in amounts of estimated recoverables shall be recognized as a reduction of gross losses and loss expenses incurred in the current period's statement of income. Reinsurance recoverables on paid losses shall be reported as an asset, "reinsurance recoverables on loss and loss adjustment expense payments", in the balance sheet. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be netted against the liability for gross losses and loss adjustment expenses.
>
> Accounting for Retroactive Reinsurance Contracts:
>
> Certain reinsurance contracts which transfer both components of insurance risk cover liabilities which occurred prior to the effective date of the contract. Due to potential abuses involving the creation of surplus to policyholders, and the distortion of underwriting results, a special accounting treatment for such agreements is warranted.
>
> Effective for accounting periods commencing on or after January 1, 1995, all retroactive reinsurance contracts entered into, renewed or amended on or after January 1, 1994 (including subsequent development of such transactions) must be fully disclosed in the NAIC annual and interim financial statements required to be filed and shall be accounted for in the following manner:
>
> 1. The ceding company must record, without recognition of the retroactive reinsurance, its loss and loss expense reserves on a gross basis on its balance sheet and in all schedules and exhibits.
>
> 2. The assuming company must exclude the retroactive reinsurance from its loss and loss expense reserves and from its schedules and exhibits.
>
> 3. The ceding company and the assuming company must report by write-in item on Page 3, the total amount of all retroactive reinsurance, identified as "retroactive reserve ceded or assumed" recorded as a contra-liability by the ceding company and as a liability by the assuming company.

14. The P&C Accounting Practices and Procedures Manual, Chapter 4, Real Estate, provides the following guidance:

> Book Value
>
> In general, book value refers to amounts at which individual items are stated in books of account of in financial statements. For real estate that is occupied by the company, and for investment in real estate, this would be cost or other basic value, stated net of any encumbrances, plus additions and increases by adjustments, less retirements and decreases by adjustments, including depreciation. Encumbrances include mortgages and other related debt, and may also include accrued costs of acquisition or construction.
>
> Statement Value
>
> Real estate shall be shown net of any encumbrance. The instructions for the annual statement require that the admitted value of properties occupied by the company (home office real estate) shall not exceed actual costs, plus capitalized improvement, less normal depreciation. This formula is to apply whether the property is held directly or indirectly by the company.

Similar guidance is provided in The Accounting Practices and Procedures Manual for Life, Accident and Health Insurance Companies, Chapter 4, Real Estate.

Generally Accepted Accounting Principles

15. Paragraph 7 of APB 10 provides the following guidance:

> 1. It is a general principle of accounting that the offsetting of assets and liabilities in the balance sheet is improper except where a right of setoff exists. Accordingly, the offset of cash or other assets against the tax liability or other amounts owing to governmental bodies is not acceptable except in the circumstances described in paragraph 3 below.
>
> 2. Most securities now issued by governments are not by their terms designed specifically for the payment of taxes and, accordingly, should not be deducted from taxes payable on the balance sheet.
>
> 3. The only exception to this general principle occurs when it is clear that a purchase of securities (acceptable for the payment of taxes) is in substance an advance payment of taxes that will be payable in the relatively near future, so that in the special circumstances the purchase is tantamount to the prepayment of taxes. This occurs at times, for example, as an accommodation to a local government and in some instances when governments issue securities that are specifically designated as being acceptable for the payment of taxes of those governments.

16. FIN 39 provides the following guidance:

> INTERPRETATION
>
> General Principle
>
> 5. Opinion 10, paragraph 7, states that “it is a general principle of accounting that the offsetting of assets and liabilities in the balance sheet is improper except where a right of setoff exists.” A right of setoff is a debtor's legal right, by contract or otherwise, to discharge all or a portion of the debt owed to another party by applying against the debt an amount that the other party owes to the debtor. A right of setoff exists when all of the following conditions are met:
>
> a. Each of two parties owes the other determinable amounts.
> b. The reporting party has the right to set off the amount owed with the amount owed by the other party.
> c. The reporting party intends to set off.

d. The right of setoff is enforceable at law.

A debtor having a valid right of setoff may offset the related asset and liability and report the net amount.

6. Generally, debts may be set off if they exist between mutual debtors each acting in its capacity as both debtor and creditor. In particular cases, however, state laws about the right of setoff may provide results different from those normally provided by contract or as a matter of common law. Similarly, the U.S. Bankruptcy Code imposes restrictions on or prohibitions against the right of setoff in bankruptcy under certain circumstances. Legal constraints should be considered to determine whether the right of setoff is enforceable.

Special Applications

7. Various accounting pronouncements specify accounting treatments in circumstances that result in offsetting or in a presentation in a statement of financial position that is similar to the effect of offsetting. This Interpretation does not modify the accounting treatment in the particular circumstances prescribed by any of the following pronouncements:

FASB Statements and Interpretations
APB Opinions
Accounting Research Bulletins
FASB Technical Bulletins
AICPA Accounting Interpretations
AICPA Audit and Accounting Guides
AICPA Industry Audit Guides
AICPA Statements of Position

Examples of those pronouncements are:
FASB Statement No. 13, Accounting for Leases (leveraged leases, paragraphs 42-47)
FASB Statement No. 87, Employers' Accounting for Pensions (accounting for pension plan assets and liabilities)
FASB Statement No. 106, Employers' Accounting for Postretirement Benefits Other Than Pensions (accounting for plan assets and liabilities)
FASB Statement No. 109, Accounting for Income Taxes (net tax asset or liability amounts reported)
APB Opinion No. 30, Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions (reporting of discontinued operations)
AICPA Audit and Accounting Guides, Audits of Brokers and Dealers in Securities (trade date accounting for trading portfolio positions), *and Construction Contractors and Audits of Federal Government Contractors* (advances received on construction contracts)
AICPA Industry Audit Guide, Audits of Banks (reciprocal balances with other banks)

Statutory Issue Paper No. 77

Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 1

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. GAAP guidance for the disclosure of accounting policies is contained in *Accounting Principles Board Opinion No. 22*, *Disclosure of Accounting Policies* (APB 22). This guidance requires the identification and description of accounting principles followed by a company and the methods of applying those principles that materially affect the determination of financial position or results of operations. Current statutory guidance requires a general disclosure that the financial statements have been prepared in accordance with the Annual Statement Instructions and Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies (Life/A&H and P&C Accounting Practices and Procedures Manuals) except to the extent state laws differ. The impact of such deviations is required to be disclosed if material. The disclosure of certain accounting policies within specific notes to the Annual Statement is required by the Annual Statement Instructions.

2. GAAP guidance for the disclosure of permitted accounting practices is contained in *AICPA Statement of Position No. 94-5*, *Disclosure of Certain Matters in the Financial Statements of Insurance Enterprises* (SOP 94-5). This guidance requires the disclosure of those permitted statutory accounting practices that have a material impact on statutory surplus or risk based capital or when prescribed statutory accounting practices do not address the accounting for the transaction. Current statutory guidance is contained in the Annual Statement Instructions for both Property and Casualty and Life, Accident and Health Insurance Companies (Annual Statement Instructions), *Notes to the Financial Statements.* This guidance requires the disclosure of any accounting practices not in conformity with the Annual Statement Instructions and the Accounting Practices and Procedures Manuals.

3. GAAP guidance for the disclosure of risk and uncertainties is contained in *AICPA Statement of Position No. 94-6*, *Disclosure of Certain Significant Risks and Uncertainties* (SOP 94-6*)*. This guidance requires the disclosure about risks and uncertainties in four areas at the date of the financial statements: nature of operations, use of estimates in the preparation of financial statements, certain significant estimates, and current vulnerability due to certain concentrations. Current statutory guidance requires certain specific disclosures of risks and uncertainties, however, the requirements are not as broad as those of SOP 94-6.

4. The purpose of this issue paper is to establish statutory accounting principles for the disclosure of accounting policies, risks and uncertainties, and other disclosures that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

5. Except as noted in paragraph 8, the disclosure requirements of paragraphs 6-21 of this issue paper do not apply to quarterly financial statements. To the extent that disclosures required by this or any other

issue paper are made within specific notes, schedules or exhibits to the financial statements, those disclosures are not required to be duplicated in a separate note. Annual statutory financial statements which are not accompanied by Annual Statement exhibits and schedules (e.g., annual audit report) shall include all disclosures required by this statement.

Accounting Policies

6. For the purposes of this issue paper, accounting polices are defined as the specific accounting principles and the methods of applying those principles that are utilized in preparing the statutory financial statements.

7. Disclosure shall be made of all accounting policies that affect the assets, liabilities, capital and surplus or results of operations of the reporting company. The disclosure should encompass important judgments as to the appropriateness of principles relating to recognition of revenue particularly when selecting between acceptable alternatives, or methods particular to the business.

8. Disclosure of accounting policies generally should be made in a separate *Summary of Significant Accounting Policies* preceding the notes to the financial statements or as the initial note. If the reporting entity has changed the accounting policies since the end of its preceding year, the changes shall be disclosed in the quarterly financial statements.

9. NAIC statutory accounting practices and procedures are those that are set forth in the Accounting Practices and Procedures Manual. If a reporting entity employs accounting practices that depart from NAIC accounting practices and procedures, disclosure of the following information about those accounting practices that affect statutory surplus or risk-based capital shall be made:

a. A description of the accounting practice.

b. A statement that the accounting practice differs from NAIC statutory accounting practices and procedures.

c. The monetary effect on statutory surplus of using an accounting practice which differs from NAIC statutory accounting practices and procedures.

10. Disclosure of the following information shall be made about accounting practices when NAIC statutory accounting practices and procedures do not address the accounting for the transaction:

a. A description of the transaction and of the accounting practice used.

b. A statement that NAIC statutory accounting practices and procedures do not address the accounting for the transaction.

Risks and Uncertainties

11. Companies shall make disclosures in their financial statements about risks and uncertainties existing as of the date of those statements in the following areas:

a. Nature of operations

b. Use of estimates in the preparation of financial statements

c. Certain significant estimates

d. Current vulnerability due to certain concentrations

12. *Nature of Operations*: Financial statements should include a description of the ownership and relationships of the reporting entity and all affiliated companies, and a description of the major products

or services the reporting entity sells or provides and its principal markets, including the locations of those markets. If the entity operates in more than one business, the disclosure should also indicate the relative importance of its operations in each business and the basis for the determination (e.g., assets, revenues, or earnings). Disclosures about the nature of operations need not be quantified; relative importance could be conveyed by use of terms such as predominately, about equally, or major.

13. *Use of Estimates in the Preparation of Financial Statements*: Financial statements shall include an explanation that the preparation of financial statements in conformity with the Annual Statement Instructions and Accounting Practices and Procedures Manuals requires the use of management's estimates.

14. *Certain Significant Estimates*: Disclosure regarding an estimate should be made when known information available prior to issuance of the financial statements indicates that both of the following criteria are met:

a. It is at least reasonably possible that the estimate of the effect on the financial statements of a condition, situation, or set of circumstances that existed at the date of the financial statements will change in the near term due to one or more future confirming events.

b. The effect of the change would be material to the financial statements.

The disclosure should indicate the nature of the uncertainty and include an indication that it is at least reasonably possible that a change in the estimate will occur in the near term (generally, a period of time not to exceed one year from the date of the financial statements). If the estimate involves a loss contingency as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies, and Impairments of Assets* (Issue Paper No. 5), the disclosure shall include an estimate of the possible loss or range of loss, or state that such an estimate cannot be made. Reporting entities should disclose the factors that cause the estimate to be sensitive to change.

15. *Current Vulnerability Due to Certain Concentrations*: Vulnerability from concentrations arises because an entity is exposed to risk of loss greater than it would have had it mitigated its risk through diversification. Such risks manifest themselves differently, depending on the nature of the concentration, and vary in significance.

16. Financial statements shall disclose the concentrations described in paragraph 17 of this issue paper if, based on information known to management prior to issuance of the financial statements, all of the following criteria are met:

a. The concentration exists at the date of the financial statements.

b. The concentration makes the enterprise vulnerable to the risk of a near-term severe (more than material but less than catastrophic) impact.

c. It is at least reasonably possible that the events that could cause the severe impact will occur in the near term.

17. Concentrations, including known group concentrations, described below require disclosure if they meet the criteria of paragraph 16 of this issue paper. (Group concentrations exist if a number of counterparties or items that have similar economic characteristics collectively expose the reporting entity to a particular kind of risk.) Some concentrations may fall into more than one category.

a. *Concentrations in the volume of business transacted with a particular customer, supplier, or lender*. The potential for the severe impact can result, for example, from total or partial loss of the business relationship. For the purposes of this issue paper, it is always considered at least reasonably possible that any customer will be lost in the near term.

b. *Concentrations in revenue from particular products or services*. The potential for severe impact can result, for example, from volume or price changes for a particular source of revenue.

c. Concentrations in the available sources of materials, labor, services, licenses, or other rights used in the entity's operations. The potential for severe impact can result, for example, from changes in the availability to the entity of a resource or a right.

d. *Concentrations in the market or geographic area in which an entity conducts its operations*. The potential for severe impact can result, for example, from negative effects of the economic and political forces within the market or geographic area. For the purposes of this issue paper, it is always considered at least reasonably possible that operations located outside an entity's home country will be disrupted in the near term.

Other Disclosures

18. Separate issue papers have disclosure requirements specific to the topics addressed in those issue papers. Additional disclosure requirements not addressed in other issue papers are included herein.

19. For each year that a balance sheet is presented, reporting entities shall disclose the following information in the notes to the financial statements:

a. Amounts not recorded in the financial statements that represent segregated funds held for others, the nature of the assets and the related fiduciary responsibilities associated with such assets. One example of such an item is escrow accounts held by title insurance companies.

b. The amount and nature of any assets pledged to others as collateral.

20. The financial statements shall disclose forward commitments which are not derivative instruments (e.g., the commitment to purchase a GNMA security two months after the commitment date, or a private placement six months after the commitment date).

Supplemental Investment Disclosure

21. For the current year, reporting entities shall disclose the information required by Appendix A-001, Investments of Insurers. A Summary Investment Schedule and Investment Risk Interrogatories shall be filed with the audited statutory financial statements. The Summary Investment Schedule shall be filed with the Annual Statement whereas the interrogatories shall be filed as a supplement to the Annual Statement by April 1 for the applicable reporting period.

DISCUSSION

22. This issue paper adopts APB 22, Accounting Research Bulletin No. 43, Chapter 2A, *Form of Statements – Comparative Financial Statements*, SOP 94-5 and SOP 94-6. The disclosures related to loss reserves adopted in *Issue Paper No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (Issue Paper No. 55), are consistent with the guidance in SOP 94-5. However, Issue Paper No. 55 did not adopt SOP 94-5 because it was to be addressed in its entirety in this issue paper.

23. The statutory principles outlined in the conclusion above expand current statutory guidance relative to accounting policies, risks and uncertainties and other disclosures as follows:

a. Paragraph 7 of this issue paper requires disclosure of all accounting policies that affect the assets, liabilities, capital and surplus or results of operations in all statutory financial statements. Current statutory guidance requires disclosure of certain accounting policies in the notes to the Annual Statement as well as disclosure of all accounting policies that affect the assets, liabilities, capital and surplus or results of operations but only to the extent those financial statements are audited.

b. Paragraph 11 requires the disclosure of certain risks and uncertainties existing at the date of the financial statements. Current statutory guidance requires this disclosure in statutory financial statements to the extent those financial statements are audited. This issue paper expands that requirement to include annual statement filings.

These changes were made to enhance the usefulness of financial statements to regulators and other users.

24. The statutory principles outlined in paragraphs 9 and 10 in the conclusion above expand current statutory guidance by requiring disclosure of accounting practices that depart from NAIC accounting practices and procedures and that have an effect on risk based capital or statutory surplus. This change was made because risk based capital is viewed as a primary indicator of a reporting entity's solvency.

25. The disclosure requirements of this issue paper are consistent with the Statement of Concepts which states *"... management must supplement the financial statements with sufficient disclosures (e.g., notes to financial statements, management discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided."*

26. The conclusions reached in this issue paper are consistent with GAAP except to the extent they are not required to be made in interim statutory financial statements. GAAP requires these disclosures in all financial statements regardless of the period.

27. The information required by this issue paper provides disclosure in those circumstances where the accompanying exhibits and schedules are not part of the company's financial statements (e.g., annual audit report) and is not intended to provide duplicative presentation in the annual statement filings.

Drafting Notes/Comments

- The disclosure requirements of this issue paper relative to risks and uncertainties are separate from and do not change in any way the requirements or criteria of Issue Paper No. 5.
- Disclosures relating to environmental liabilities are addressed in *Issue Paper No. 65—Property Casualty Contracts.*

RELEVANT STATUTORY AND GAAP GUIDANCE

Statutory Accounting

28. The Annual Statement Instructions for both Property and Casualty and Life, Accident and Health Insurance Companies (Notes to the Financial Statements) provide the following guidance:

1. Basis of Presentation

Instruction:

Indicate that the statement has been completed in accordance with the NAIC *Annual Statement Instructions* and *Accounting Practices and Procedures* manuals except to the extent that state law differs. Note any deviations from the rules to the extent this deviation impacts the financial information contained in the annual statement.

Illustration:

The accompanying financial statements of the Company have been prepared in conformity with the *Annual Statement Instructions* and *Accounting Practices and Procedures* Annual Statement Instructions except for the following item(s) which resulted in surplus being increased (decreased) by $__________. The deviation(s) are as follows:

Generally Accepted Accounting Principles

29. APB 22 provides the following guidance (note all references to statement of changes in financial position have been amended to statement of cash flows by FASB Statement No. 95, *Statement of Cash Flows*):

> DISCUSSION
>
> 5. Financial statements are the end product of the financial accounting process, which is governed by generally accepted accounting principles on three levels: pervasive principles, broad operating principles, and detailed principles.[1] Applying generally accepted accounting principles requires that judgment be exercised as to the relative appropriateness of acceptable alternative principles and methods of application in specific circumstances of diverse and complex economic activities. Although the combined efforts of professional accounting bodies, of business, and of the regulatory agencies have significantly reduced the number of acceptable alternatives and are expected to reduce the number further, judgment must nevertheless be exercised in applying principles at all three levels.
>
> [1] See *APB Statement No. 4, Basic Concepts and Accounting Principles Underlying Financial Statements of Business Enterprises*, Chapter 6, 7, and 8. This Opinion amends Statement No. 4 insofar as it relates to disclosure of accounting policies.
>
> 6. The accounting policies of a reporting entity are the specific accounting principles and the methods of applying those principles that are judged by the management of the entity to be the most appropriate in the circumstances to present fairly financial position, cash flows, and results of operations in accordance with generally accepted accounting principles and that, accordingly, have been adopted for preparing the financial statements.
>
> 7. The accounting policies adopted by a reporting entity can affect significantly the presentation of its financial position, cash flows, and results of operations. Accordingly, the usefulness of financial statements for purposes of making economic decisions about the reporting entity depends significantly upon the user's understanding of the accounting policies followed by the entity.
>
> OPINION
>
> Applicability
>
> 8. The Board concludes that information about the accounting policies adopted by a reporting entity is essential for financial statement users. When financial statements are issued purporting to present fairly financial position, cash flows, and results of operations in accordance with generally accepted accounting principles, a description of all significant accounting policies of the reporting entity should be included as an integral part of the financial statements. In circumstances where it may be appropriate to issue one or more of the basic financial statements without the others, purporting to present fairly the information given in accordance with generally accepted accounting principles, statements so presented should also include disclosure of the pertinent accounting policies.

9. The Board also concludes that information about the accounting policies adopted and followed by not-for-profit entities should be presented as an integral part of their financial statements.

10. The provisions of paragraphs 8 and 9 above are not intended to apply to unaudited financial statements issued as of a date between annual reporting dates (e.g., each quarter) if the reporting entity has not changed its accounting policies since the end of its preceding fiscal year. [2]

[2] The Board recognizes also that it may be appropriate to omit disclosure in some other circumstances for example, from financial statements restricted to internal use only (see Statement on Auditing Procedures No. 38, paragraphs 5 and 6) and from certain special reports in which incomplete or no financial presentations are made (see Statement on Auditing Procedures No. 33, Chapter 13, paragraphs 9 and 10).

11. This Opinion does not supersede any prior pronouncement of the American Institute of Certified Public Accountants relating to disclosure requirements.

Content

12. Disclosure of accounting policies should identify and describe the accounting principles followed by the reporting entity and the methods of applying those principles that materially affect the determination of financial position, cash flows, or results of operations. In general, the disclosure should encompass important judgments as to appropriateness of principles relating to recognition of revenue and allocation of asset costs to current and future periods; in particular, it should encompass those accounting principles and methods that involve any of the following:

a. A selection from existing acceptable alternatives;

b. Principles and methods peculiar to the industry in which the reporting entity operates, even if such principles and methods are predominantly followed in that industry;

c. Unusual or innovative applications of generally accepted accounting principles (and, as applicable, of principles and methods peculiar to the industry in which the reporting entity operates).

13. Examples of disclosures by a business entity commonly required with respect to accounting policies would include, among others, those relating to basis of consolidation, depreciation methods, amortization of intangibles, inventory pricing, accounting for research and development costs (including basis for amortization), translation of foreign currencies, recognition of profit on long-term construction-type contracts, and recognition of revenue from franchising and leasing operations. This list of examples is not all-inclusive.

14. Financial statement disclosure of accounting policies should not duplicate details (e.g., composition of inventories or of plant assets) presented elsewhere as part of the financial statements. In some cases, the disclosure of accounting policies should refer to related details presented elsewhere as part of the financial statements; for example, changes in accounting policies during the period should be described with cross-reference to the disclosure required by APB Opinion No. 20, Accounting Changes, of the current effect of the change and of the pro forma effect of retroactive application.

Format

15. The Board recognizes the need for flexibility in matters of format (including the location) of disclosure of accounting policies provided that the reporting entity identifies and describes its significant accounting policies as an integral part of its financial statements in accordance with

the foregoing guides in this Opinion. The Board believes that the disclosure is particularly useful if given in a separate Summary of Significant Accounting Policies preceding the notes to financial statements or as the initial note. Accordingly, it expresses its preference for that format under the same or a similar title.

30. SOP 94-6 provides the following guidance:

Introduction
.01 The volatile business and economic environment underscores a need for improved disclosure about the significant risks and uncertainties that face reporting entities. In 1987, the AICPA issued the Report of the Task Force on Risks and Uncertainties (the Report), which was intended to help standards setting bodies and others identify practical methods of improving the information communicated to users of financial statements to help them assess those risks and uncertainties. This Statement of Position (SOP) is largely based on the Report. The central feature of this SOP's disclosure requirements is selectivity: specified criteria serve to screen the host of risks and uncertainties that affect every entity so that required disclosures are limited to matters significant to a particular entity.

.02 The disclosures focus primarily on risks and uncertainties that could significantly affect the amounts reported in the financial statements in the near term or the near-term functioning of the reporting entity. The risks and uncertainties this SOP deals with can stem from the nature of the entity's operations, from the necessary use of estimates in the preparation of the entity's financial statements, and from significant concentrations in certain aspects of the entity's operations.

Scope
.03 This SOP applies to financial statements prepared in conformity with generally accepted accounting principles (GAAP) applicable to nongovernmental entities. It applies to all entities that issue such statements[1] While this SOP applies to complete interim financial statements, it does not apply to condensed or summarized interim financial statements. If comparative financial statements are presented, the disclosure requirements apply only to the financial statements for the most recent fiscal period presented.

[1] However, see *Accounting Principles Board (APB) Opinion No. 28, Interim Financial Reporting*, paragraph 30, for guidance on disclosure of contingencies in summarized interim financial information of publicly traded companies.

.04 The disclosure requirements do not encompass risks and uncertainties that might be associated with management or key personnel, proposed changes in government regulations; proposed changes in accounting principles,[2] or deficiencies in the internal control structure. Nor do they encompass the possible effects of acts of God, war, or sudden catastrophes.

Relationship to Other Pronouncements
.05 The disclosure requirements of this SOP in many circumstances are similar to or overlap the disclosure requirements in certain pronouncements of the Financial Accounting Standards Board (FASB), such as *FASB Statement of Financial Accounting Standards No. 5, Accounting for Contingencies,* and, for public business enterprises, FASB Statement No. 14, Financial Reporting for Segments of a Business Enterprise. The disclosure requirements of this SOP in many circumstances also are similar to or overlap the disclosure requirements in certain pronouncements of the Securities and Exchange Commission (SEC). This SOP does not alter the requirements of any FASB or SEC pronouncement.

.06 Certain disclosure requirements in this SOP supplement the requirements of other authoritative pronouncements. In many cases, however, the disclosure requirements in this SOP, particularly those relating to certain significant estimates, will be met or partly met by compliance with such other pronouncements.

Definitions

.07 This SOP uses the following terms with the definitions indicated:

Near term. A period of time not to exceed one year from the date of the financial statements.

Severe impact. (Used in reference to current vulnerability due to certain concentrations. See paragraph .21.) A significant financially disruptive effect on the normal functioning of the entity. Severe impact is a higher threshold than material. Matters that are important enough to influence a user's decisions are deemed to be material,[3] yet they may not be so significant as to disrupt the normal functioning of the entity. Some events are material to an investor because they might affect the price of an entity's capital stock or its debt securities, but they would not necessarily have a severe impact on (disrupt) the enterprise itself. The concept of severe impact, however, includes matters that are less than catastrophic.[4]

[2] SEC Staff Accounting Bulletin 74 requires disclosure, both in Management's Discussion and Analysis (MD&A) and in the notes to the financial statements, concerning accounting standards that have been issued but that have not yet been adopted. Also, Auditing Interpretation No. 3 of SAS No. 1, section 410, "The Impact on an Auditor's Report of an FASB Statement Prior to the Statement's Effective Date" (AICPA, *Professional Standards,* vol. 1, AU section 9410.13-.18) addresses reporting considerations when financial statements will have to be restated in the future because an authoritative accounting pronouncement that is not yet effective will require retroactive application of its provisions by prior-period adjustment.

[3] *FASB Concepts Statement No. 2*, *Qualitative Characteristics of Accounting Information,* defines *materiality* as "the magnitude of an omission or misstatement of accounting information that, in the light of surrounding circumstances, makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or misstatement."

[4] Matters that are catastrophic include, for example, those that would result in bankruptcy.

Conclusions

.08 The Accounting Standards Executive Committee (AcSEC) Of the AICPA has concluded that reporting entities should make disclosures in their financial statements beyond those now required or generally made in financial statements about the risks and uncertainties existing as of the date of those statements in the following areas:

a. Nature of operations

b. Use of estimates in the preparation of financial statements

c. Certain significant estimates

d. Current vulnerability due to certain concentrations

These four areas of disclosure are not mutually exclusive. The information required by some may overlap. Accordingly; the disclosures required by this SOP may be combined in various ways, grouped together, or placed in diverse parts of the financial statements, or included as part of the disclosures made pursuant to the requirements of other authoritative pronouncements.

.09 The following detailed discussion of the four areas of disclosure enumerated in paragraph .08 should be read in conjunction with the "Illustrative Disclosures" in appendix A [paragraph .27] of this SOP, which provide guidance for implementing them.

Nature of Operations

.10 Financial statements should include a description of the major products or services the reporting entity sells or provides and its principal markets including the locations of those markets. If the entity operates in more than one business, the disclosure should also indicate the relative importance of its operations in each business and the basis for the determination for example assets, revenues, or earnings. Not-for-profit organizations' disclosures should briefly describe the principal services performed by the entity and the revenue sources for the entity's services. Disclosures about the nature of operations need not be quantified; relative importance could be conveyed by use of terms such as predominately, about equally, or major and other.[5]

Use of Estimates in the Preparation of Financial Statements

.11 Financial statements should include an explanation that the preparation of financial statements in conformity with GAAP requires the use of management's estimates.

Certain Significant Estimates

.12 Various accounting pronouncements require disclosures about uncertainties addressed by those pronouncements. In particular, paragraphs 9-12, and 17.b. and footnote 6 of FASB Statement No. 5 specify disclosures to be made about contingencies [6] that exist at the date of the financial statements. The disclosure requirements of paragraphs 9-12 of Statement No. 5 are further clarified in *FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss.* In addition to disclosures required by FASB Statement No. 5 and other accounting pronouncements, this SOP requires disclosures regarding estimates used in the determination of the carrying amounts of assets or liabilities or in disclosure of gain or loss contingencies, as described below

.13 Disclosure regarding an estimate should be made when known information available prior to issuance of the financial statements indicates that both of the following criteria are met:

a. It is at least reasonably possible[7] that the estimate of the effect on the financial statements of a condition, situation, or set of circumstances that existed at the date of the financial statements will change in the near term due to one or more future confirming events.

b. The effect of the change would be material to the financial statements.

[5] See paragraph B-17 in appendix B [paragraph .28] for a comparison of this SOP's disclosure requirements concerning nature of operations with the disclosure requirements for public companies in *FASB Statement No. 14, Financial Reporting for Segments of a Business Enterprise.*

[6] FASB Statement No. 5 defines a contingency as "an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a 'gain contingency') or loss (hereinafter a 'loss contingency') to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability."

[7] The term reasonably possible is used in this SOP consistent with its use in FASB Statement No. 5 to mean that the chance of a future transaction or event occurring is more than remote but less than likely.

.14 The disclosure should indicate the nature of the uncertainty and include an indication that it is at least reasonably possible[8] that a change in the estimate will occur in the near term.[9] If the estimate involves a loss contingency covered by FASB Statement No. 5, the disclosure also should include an estimate of the possible loss or range of loss, or state that such an estimate cannot be made. Disclosure of the factors that cause the estimate to be sensitive to change is encouraged but not required.

.15 Many entities use risk-reduction techniques to mitigate losses or the uncertainty that may result from future events. If the entity determines that the criteria in paragraph .13 are not met as a result of risk-reduction techniques, the disclosures described in paragraph .14 and disclosure- of the risk reduction techniques are encouraged but not required.

.16 This SOP's disclosure requirements are separate from and do not change in any way the disclosure requirements or criteria of FASB Statement No. 5; rather, the disclosures required under this SOP supplement the disclosures required under Statement No. 5 as follows:

- If an estimate (including estimates that involve contingencies covered by FASB Statement No. 5) meets the criteria for disclosure under paragraph .13 of this SOP, this SOP requires disclosure of an indication that it is at least reasonably possible that a change in the estimate will occur in the near term; FASB Statement No. 5 does not distinguish between near-term and long-term contingencies.
- An estimate that does not involve a contingency covered by Statement No. 5, such as estimates associated with long-term operating assets and amounts reported under profitable long-term contracts, may meet the criteria in paragraph .13. This SOP requires disclosure of the nature of the estimate and an indication that it is at least reasonably possible that a change in the estimate will occur in the near term.

.17 Whether an estimate meets the criteria for disclosure under this SOP does not depend on the amount that has been reported in the financial statements, but rather on the materiality of the effect that using a different estimate would have had on the financial statements. Simply because an estimate resulted in the recognition of a small financial statement amount, or no amount, does not mean that disclosure is not required under this SOP.

.18 The following are examples of assets and liabilities and related revenues and expenses, and of disclosure of gain or loss contingencies included in financial statements that, based on facts and circumstances existing at the date of the financial statements, may be based on estimates that are particularly sensitive to change in the near term:

- Inventory subject to rapid technological obsolescence
- Specialized equipment subject to technological obsolescence
- Valuation allowances for deferred tax assets based on future taxable income
- Capitalized motion picture film production costs
- Capitalized computer software costs
- Deferred policy acquisition costs of insurance enterprises
- Valuation allowances for commercial and real estate loans
- Environmental remediation-related obligations
- Litigation-related obligations
- Contingent liabilities for obligations of other entities

[8] The words reasonably possible need not be used in the disclosures required by this SOP

[9] FASB Statement No. 5 states in paragraph 17.b .that "adequate disclosure shall be made of contingencies that might result in gains, but care shall be exercised to avoid misleading implications as to the likelihood of realization"

- Amounts reported for long-term obligations, such as amounts reported for pensions and postemployment benefits
- Estimated net proceeds recoverable, the provisions for expected loss to be incurred, or both, on disposition of a business or assets
- Amounts reported for long-term contracts

The above list is not intended to be all-inclusive.

.19 The following are examples of events or changes in circumstances that indicate that an estimate associated with the carrying amount of a long-lived asset may be particularly sensitive to change in the near term:[10]

a. A significant decrease in the market value of an asset

b. A significant change in the extent or manner in which an asset is used

c. A significant adverse change in legal factors or in the business climate that affects the value of an asset

d. An accumulation of costs significantly in excess of the amount originally expected to acquire or construct an asset

e. A history of losses associated with an asset, a projection or forecast (if either is available) that demonstrates continuing losses associated with an asset, or both

[10] On November 29, 1993, the FASB issued an exposure draft of a proposed Statement of Financial Accounting Standards, Accounting for the Impairment of Long-Lived Assets. This list was derived from the list in the FASB exposure draft of examples of events or changes in circumstances that indicate that the recoverability of the carrying amount of a long-lived asset should be assessed for impairment. Any final Statement may contain additional or revised examples.

Current Vulnerability Due to Certain Concentrations

.20 Vulnerability from concentrations arises because an entity is exposed to risk of loss greater than it would have had it mitigated its risk through diversification. Such risks of loss manifest themselves differently, depending on the nature of the concentration, and vary in significance.

.21 Financial statements should disclose the concentrations described in paragraph .22 if, based on information known to management prior to issuance of the financial statements, all of the following criteria are met:

a. The concentration exists at the date of the financial statements.

b. The concentration makes the enterprise vulnerable to the risk of a near-term severe impact.

c. It is at least reasonably possible that the events that could cause the severe impact will occur in the near term.

.22 Concentrations, including known group concentrations, described below require disclosure if they meet the criteria of paragraph .21. (Group concentrations exist if a number of counterparties or items that have similar economic characteristics collectively expose the reporting entity to a particular kind of risk.) Some concentrations may fall into more than one category.

a. Concentrations in the volume of business transacted with a particular customer, supplier, lender, grantor, or contributor. The potential for the severe impact can result, for example, from total or partial loss of the business relationship. For purposes of this SOP, it is always considered at least reasonably possible that any customer, grantor, or contributor will be lost in the near term.

b. Concentrations in revenue from particular products, services, or fund-raising events. The potential for the severe impact can result, for example, from volume or price changes or the loss of patent protection for the particular source of revenue.

c. Concentrations in the available sources of supply of materials, labor, or services, or of licenses or other rights used in the entity's operations. The potential for the severe impact can result, for example, from changes in the availability to the entity of a resource or a right.

d. Concentrations in the market or geographic area [11] in which an entity conducts its operations. The potential for the severe impact can result, for example, from negative effects of the economic and political forces within the market or geographic area. For purposes of this SOP, it is always considered at least reasonably possible that operations located outside an entity's home country will be disrupted in the near term.

[11] *FASB Statement No. 14, Financial Reporting for Segments of a Business Enterprise*, paragraph 34, provides guidance on determining foreign geographic areas

.24 Disclosure of concentrations meeting the criteria of paragraph .21 should include information that is adequate to inform users of the general nature of the risk associated with the concentration. For those concentrations of labor (paragraph .22c) subject to collective bargaining agreements and concentrations of operations located outside of the entity's home country (paragraph .22d) that meet the criteria of paragraph .21, the following specific disclosures are required:

- For labor subject to collective bargaining agreements, disclosure should include both the percentage of the labor force covered by a collective bargaining agreement and the percentage of the labor force covered by a collective bargaining agreement that will expire within one year.
- For operations located outside the entity's home country, disclosure should include the carrying amounts of net assets and the geographic areas in which they are located.

Adequate information about some concentrations may already be presented in diverse parts of the financial statements. For example, adequate information about assets or operations located outside the entity's home country may be included in disclosures made to comply with FASB Statement No. 14. In accordance with paragraph .08 of this SOP, such information need not be repeated.

Application of Disclosure Criteria

.25 An assessment of whether a disclosure is required should not be found to be in error simply as a result of future events; For example, reporting a concentration not followed by a severe impact does not imply that the disclosure should not have been made, because something that has only a reasonably possible chance of occurring obviously might not occur. Similarly, the occurrence of a severe impact related to a concentration not disclosed in the prior-year financial statements would not suggest noncompliance with this SOP s requirements if an appropriate judgment had been made that a near term severe impact was not at least reasonably possible at the prior reporting date. In addition, a severe impact may arise from a concentration of which management did not have knowledge at the time the financial statements were issued.

31. SOP 94-5 provides the following guidance:

Introduction
.01 Most of the accounting principles related to disclosures for insurance enterprises were promulgated over twenty years ago when the insurance regulatory and business environments were less complex and volatile. Accordingly, the AICPA Accounting Standards Executive Committee (AcSEC) added a project to its agenda to consider whether new disclosures should be required in insurance enterprises' financial statements. This statement of position (SOP) is a result of that project.

.02 This SOP applies to annual and complete sets of interim financial statements prepared in conformity with generally accepted accounting principles (GAAP) of life and health insurance enterprises (including mutual life insurance enterprises), property and casualty insurance enterprises, reinsurance enterprises, title insurance enterprises, mortgage guaranty insurance enterprises, financial guaranty insurance enterprises, assessment enterprises, fraternal benefit societies, reciprocal or interinsurance exchanges, pools other than public-entity risk pools, syndicates, and captive insurance companies. Furthermore, AICPA Auditing Interpretation No. 12, "Evaluation of the Appropriateness of Informative Disclosures in Insurance Enterprises' Financial Statements Prepared on a Statutory Basis" (AICPA, *Professional Standards, vol. 1,* AU section 9623.60.79), requires auditors to apply the same disclosure criteria for statutory financial statements as they do for financial statements prepared in conformity with GAAP.

Relationship to Other Pronouncements
.03 In some circumstances, the disclosure requirements in this SOP may be similar to, or overlap, the disclosure requirements in certain other authoritative accounting pronouncements issued by the Financial Accounting Standards Board (FASB), the American Institute of Certified Public Accountants (AICPA), and the Securities and Exchange Commission (SEC). For example—

- *FASB Statement of Financial Accounting Standards No. 5, Accounting for Contingencies,* requires certain disclosures related to loss contingencies, including catastrophe losses of property and casualty insurance companies.
- *FASB Statement No. 60*, *Accounting and Reporting by Insurance Enterprises,* requires certain disclosures about liabilities for unpaid claims and claim adjustment expenses and statutory capital.
- *FASB Statement No. 113*, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts*, requires certain disclosures about reinsurance transactions.
- *AICPA Statement of Position 94-6*, *Disclosure* of *Certain Significant Risks and Uncertainties* requires disclosures about certain significant estimates.

The SEC Securities Act Guide 6, *Disclosures Concerning Unpaid Claims and Claim Adjustment Expenses of Property-Casualty Insurance Underwriters,* requires disclosures of information about liabilities for unpaid claims and claim adjustment expenses.

The disclosure requirements in this SOP supplement the disclosure requirements in other authoritative pronouncements. This SOP does not alter the requirements of any FASB or SEC pronouncement.

Conclusions
.04 The disclosure requirements in this section should be read in conjunction with appendix A, "Illustrative Disclosures" [paragraph .13], and appendix B, "Discussion of Conclusions" [paragraph .14], of this SOP.

Permitted Statutory Accounting Practices
.05 Insurance enterprises currently prepare their statutory financial statements in accordance with accounting principles and practices prescribed or permitted by the insurance department of their state of domicile. The National Association of Insurance Commissioners (NAIC) currently

has a project under way to codify statutory accounting practices through a complete revision of its *Accounting Practices and Procedures Manuals,* that, when complete, is expected to replace prescribed or permitted statutory accounting practices as the statutory basis of accounting for insurance enterprises (referred to hereafter as the "codification"). Therefore, the codification will likely result in changes to what is currently considered a prescribed statutory accounting practice. Furthermore, postcodification permitted statutory accounting practices will be exceptions to the statutory basis of accounting.

.06 Prescribed precodification statutory accounting practices include state laws, regulations, and general administrative rules applicable to all insurance enterprises domiciled in a particular state, NAIC *Annual Statement Instructions;* the NAIC *Accounting Practices and Procedures Manuals;* the *Securities Valuation Manual* (published by the NAIC Securities Valuation Office); NAIC official proceedings; and the NAIC *Examiners' Handbook.*

.07 Permitted statutory accounting practices include practices not described in paragraph .06 but allowed by the domiciliary state insurance department. Insurance enterprises may request permission from the domiciliary state insurance department to use a specific accounting practice in the preparation of their statutory financial statements (a) when the enterprise wishes to depart from the prescribed statutory accounting practices, or (b) when prescribed statutory accounting practices do not address the accounting for the transaction.

.08 The disclosures in this paragraph should be made for permitted statutory accounting practices for the most recent fiscal year presented regardless of when the permitted statutory accounting practice was initiated. Insurance enterprises should disclose the following information about permitted statutory accounting practices that individually or in the aggregate materially affect statutory surplus or risk-based capital, including GAAP practices when the permitted practices differ from the prescribed statutory accounting practices:

a. A description of the permitted statutory accounting practice

b. A statement that the permitted statutory accounting practice differs from prescribed statutory accounting practices

c. The monetary effect on statutory surplus

Insurance enterprises should disclose the following information about permitted statutory accounting practices, excluding GAAP practices used when prescribed statutory accounting practices do not address the accounting for the transaction:

a. A description of the transaction and of the permitted statutory accounting practice used

b. A statement that prescribed statutory accounting practices do not address the accounting for the transaction

APPENDIX A

Illustrative Disclosures

A-l. The illustrations included in this appendix are guides to implementation of the disclosures required by this SOP. Insurance enterprises are not required to display the information contained herein in the specific manner or in the degree of detail illustrated. Alternative disclosure presentations are permissible if they satisfy the disclosure requirements of this SOP.

Permitted Statutory Accounting Practices

A-2. The following is an illustration of disclosures that an insurance enterprise would make before the codification is complete, to meet the requirements of paragraph .08 of this SOP.

> *Note X. Permitted Statutory Accounting Practices*
> Property and Casualty Company, Inc., domiciled in ABC State, prepares its statutory financial statements in accordance with accounting practices prescribed or permitted by the ABC State Insurance Department. Prescribed statutory accounting practices include a variety of publications of the National Association of Insurance Commissioners (NAIC), as well as state laws, regulations, and general administrative rules. Permitted statutory accounting practices encompass all accounting practices not so prescribed.
>
> The company received written approval from the ABC State Insurance Department to discount loss reserves at a rate of X percent for statutory accounting purposes, which differs from prescribed statutory accounting practices. Statutory accounting practices prescribed by ABC state require that loss reserves be discounted at Y percent. As of December 31, 19X3, that permitted transaction increased statutory surplus by $XX million over what it would have been had prescribed accounting practice been followed.

Statutory Issue Paper No. 78

Employee Stock Ownership Plans

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 12

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for the plan sponsors' accounting for Employee Stock Ownership Plans (ESOPs) is provided in the Accounting Practices and Procedures Manuals for Life and Accident and Health (Life/A&H Accounting Practices and Procedures Manual) and for Property and Casualty Insurance Companies (P & C Accounting Practices and Procedures Manual). This guidance provides that debt obligations of ESOPs must be recorded as debt obligations of company sponsors, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company or the sale or exchange of the company's securities.

2. GAAP addresses the plan sponsors' accounting for ESOPs in *AICPA Statement of Position 93-6, Employers' Accounting for Employee Stock Ownership Plans* (SOP 93-6) and *FASB Emerging Issues Task Force Issue No. 89-11*, *Sponsor's Balance Sheet Classification of Capital Stock with a Put Option Held by an Employee Stock Ownership Plan* (EITF 89-11).

3. The purpose of this issue paper is to establish statutory accounting principles for the plan sponsors' accounting for ESOPs that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). It does not address financial reporting by ESOPs.

SUMMARY CONCLUSION

4. An ESOP is an employee benefit plan that is described by the Employee Retirement Income Security Act of 1974 (ERISA) and the Internal Revenue Code of 1986 as a stock bonus plan, or a combination stock bonus and money purchase pension plan, designed to invest primarily in employer stock. For such plans, reporting entities shall adopt SOP 93-6 except that debt obligations of ESOPs shall be reported consistent with *Issue Paper No. 80—Debt* (Issue Paper No. 80) and the related income tax effects shall be accounted for consistent with *Issue Paper No. 83—Accounting for Income Taxes* (Issue Paper No. 83), as further clarified in this issue paper. There are two basic forms of ESOPs: nonleveraged and leveraged. A summary of the financial reporting for each is provided below.

Leveraged ESOPs

5. A leveraged ESOP borrows money to acquire shares of the employer company (sponsor). The money may be borrowed from the plan sponsor or from an outside lender, with or without a guarantee from the plan sponsor. The debt usually is collateralized by the employer's shares. As required by Issue Paper No. 80, debt obligations of ESOPs shall be reported as borrowed money by company sponsors, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company, or the sale or exchange of the company's securities.

6. The sponsor shall report the issuance of shares or the sale of treasury shares to an ESOP when they occur. The consideration recorded for the stock issued is unearned compensation and the unearned ESOP shares shall be reported as a separate reduction of surplus as a component of unassigned funds.

7. The unearned shares initially held by the ESOP in a suspense account are called suspense or unallocated shares. As the debt is repaid (generally from employer contributions and dividends on the employer's stock) suspense shares are released and must be allocated to individual accounts as of the end of the ESOP's fiscal year. As ESOP shares are committed to be released, unearned ESOP shares should be credited and, depending on the purpose for which the shares are released, either (a) compensation cost, (b) dividends payable, or (c) compensation liabilities should be charged as outlined in paragraph 26 of this issue paper.

8. Because employers control the use of dividends on unallocated shares, dividends on unallocated shares are not considered dividends for financial reporting purposes (although such dividends are generally subject to normal dividend requirements under state statutes or regulations). Dividends on unallocated shares used to pay debt service should be reported as a reduction of debt or of accrued interest payable. Dividends on unallocated shares paid to participants or added to participant accounts should be reported as compensation cost. Dividends on allocated shares should be charged to unallocated surplus.

9. If the ESOP sells the suspense shares and uses the proceeds to repay the debt, the employer shall report the release of the suspense shares as a credit to unearned ESOP shares based on the cost of the shares to the ESOP, charge debt, and accrued interest payable and recognize the difference in paid-in capital. However, if there is a difference between the amount paid to an outside lender and the net carrying amount of the debt, such difference shall be reported as a capital gain or loss on extinguishment of debt as defined in Issue Paper No. 80 and, accordingly, shall be charged to operations and disclosed in the notes to the financial statements in accordance with *Issue Paper No. 24—Discontinued Operations and Extraordinary Items* (Issue Paper No. 24).

10. If an employer reacquires the suspense shares from the ESOP, the purchase of the shares should be accounted for as a treasury stock transaction as outlined in paragraph 26 of this issue paper.

Nonleveraged ESOPs

11. Employers with nonleveraged ESOPs should report compensation cost equal to the contribution called for in the period under the plan as outlined in paragraph 26 of this issue paper.

12. Employers with nonleveraged ESOPs should charge dividends on shares held by the ESOPs to unallocated surplus, except that dividends on suspense account shares of a pension reversion ESOP should be accounted for the same way as dividends on suspense account shares of leveraged ESOPs.

Pension Reversion ESOPs

13. Pension reversion ESOPs are created by transferring the assets of a defined benefit pension plan to an existing or newly created ESOP and may be leveraged or nonleveraged. Pension reversion ESOPs should be accounted for as outlined in paragraph 26 of this issue paper.

Issues Related to Accounting for Income Taxes

Leveraged ESOPs

14. The amount of ESOP-related expense for a leveraged ESOP for a period may differ from the amount of the ESOP-related income tax deduction (prescribed by income tax rules and regulations) for that period. Such differences should be reported in accordance with Issue Paper No. 83.

15. If the cost of shares committed to be released is greater than their fair value, the employer should credit the tax effect of the amount by which the deductible expense exceeds the book expense to unassigned funds. Conversely, if the cost of shares committed to be released is less than their fair value,

the employer should charge the tax effect of the amount by which the book expense exceeds the deductible expense to unassigned funds to the extent of previous credits to unassigned funds related to cost exceeding fair value of ESOP shares committed to be released in previous periods.

16. Furthermore, the tax benefit of tax-deductible dividends on allocated ESOP shares should be recorded as a reduction of income tax expense allocated to continuing operations.

Nonleveraged ESOPs

17. Employers with nonleveraged ESOPs may accrue compensation cost for financial reporting purposes earlier than the cost is deductible for income tax purposes. Accruing the compensation cost earlier for financial reporting purposes creates a temporary difference that shall be accounted for in accordance with Issue Paper No. 83.

Other

18. Under federal income tax regulations, employer securities (such as convertible preferred stock) that are held by participants in an ESOP and that are not readily tradable on an established market must include a put option. Securities subject to such repurchase obligations shall be reported as outstanding and as a component of surplus. The repurchase obligation shall be disclosed in accordance with paragraph 19 below.

Disclosures

19. An employer sponsoring an ESOP shall disclose the following information about the plan, if applicable.

a. A description of the plan, the basis for determining contributions, including the employee groups covered, and the nature and effect of significant matters affecting comparability of information for all periods presented. For leveraged ESOPs and pension reversion ESOPs, the description should include the basis for releasing shares and how dividends on allocated and unallocated shares are used;

b. A description of the accounting policies followed for ESOP transactions, including the method of measuring compensation and the classification of dividends on ESOP shares;

c. The amount of compensation cost recognized during the period;

d. The number of allocated shares, committed-to-be-released shares, and suspense shares held by the ESOP at the balance sheet date;

e. The fair value of unearned ESOP shares at the balance sheet date;

f. The existence and nature of any repurchase obligation, including disclosure of the fair value of the shares allocated as of the balance sheet date, which are subject to a repurchase obligation.

DISCUSSION

20. The Life/A&H Accounting Practices and Procedures Manual and the P & C Accounting Practices and Procedures Manual provide that debt obligations of Employee Stock Ownership Plans (ESOPs) must be recorded as debt obligations of company sponsors, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company or the sale or exchange of the company's securities. This issue paper is consistent with current statutory guidance. It expands on current statutory guidance to address the accounting for ESOPs in greater detail and to expand the disclosure requirements for ESOPs.

21. This issue paper adopts the GAAP guidance set forth in SOP 93-6 except for:

a. Paragraphs 13 and 25 to the extent that those paragraphs require reporting all debt obligations of an ESOP as liabilities. Statutory accounting provides an exception in situations where the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company or the sale or exchange of the company's securities. Pursuant to current statutory guidance and Issue Paper No. 80, such obligations do not meet the definition of liabilities (of the sponsor) as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets*.

b. Paragraphs 28-34 and paragraphs 44 and 53.b. as they relate to the calculation and reporting of earnings per share.

c. Paragraph 37 as it relates to reporting gains and losses on extinguishment of debt. Such gains and losses shall be accounted for and disclosed consistent with Issue Paper No. 24.

22. Under federal income tax regulations, employer securities (such as convertible preferred stock) that are held by participants in an ESOP and that are not readily tradable on an established market must include a put option. Pursuant to Securities and Exchange Commission (SEC) *Codification of Financial Reporting Policies*, Section 211 - Redeemable Preferred Stocks, SEC reporting companies are required to report such securities outside of permanent equity for GAAP reporting purposes. The SEC states that there is a significant difference between a security with mandatory redemption requirements or whose redemption is outside the control of the issuer and conventional equity capital. The SEC believes that it is necessary to highlight the future cash obligations attached to this type of security so as to distinguish it from permanent capital. There is no such requirement for non-SEC reporting companies. Paragraph 18 of this issue paper requires reporting of such securities consistent with the GAAP requirements for non-SEC reporting companies and is consistent with the accounting for capital stock as discussed in *Issue Paper No. 72—Statutory Surplus*. Additionally, paragraph 19 of this issue paper requires disclosure of the existence and nature of any repurchase obligation. EITF 89-11 addresses the accounting for SEC reporting companies and is therefore rejected.

23. This issue paper is consistent with the reporting of ESOP debt as discussed in Issue Paper No. 80.

24. The conclusions above are consistent with the Statement of Concepts which states:

Objectives of Statutory Financial Reporting

The primary responsibility of each state insurance department is to regulate insurance companies in accordance with state laws with an emphasis on solvency for the protection of policyholders. The ultimate objective of solvency regulation is to ensure that policyholder, contractholder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety. The cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders. An accounting model based on the concepts of conservatism, consistency, and recognition is essential to useful statutory financial reporting.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

25. The P & C Accounting Practices and Procedures Manual, Chapter 13 and the Life/A&H Accounting Practices and Procedures Manual, Chapter 17 include the following guidance in (only the pertinent excerpts are included below):

Debt Obligations of Employee Stock Ownership Plans (ESOP)

Insurance company sponsors of ESOP's must record the debt obligations of such ESOP's on the books of the company in all situations, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company's stock, contributions from the company, or the sale or exchange of the company's securities.

Generally Accepted Accounting Principles

26. SOP 93-6 provides the following guidance related to debt obligations of ESOPs (only the pertinent excerpts are included below):

Scope

1. This statement of position (SOP) provides guidance on employers' accounting for employee stock ownership plans (ESOPs). It applies to all employers with ESOPs, both leveraged and nonleveraged. It does not address financial reporting by ESOPs.[1]

[1] Financial reporting by ESOPs is discussed in the AICPA Audit and Accounting Guide *Audits of Employee Benefit Plans*.

2. An ESOP is an employee benefit plan that is described by the Employee Retirement Income Security Act of 1974 (ERISA) and the Internal Revenue Code (IRC) of 1986 as a stock bonus plan, or combination stock bonus and money purchase pension plan, designed to invest primarily in employer stock.

3. This SOP supersedes American Institute of Certified Public Accountants (AICPA) SOP 76-3, *Accounting Practices for* Certain *Employee Stock Ownership Plans,* and affects certain Emerging Issues Task Force (EITF) consensuses. A list of the documents affected is provided in appendix D of this SOP.

Background

4. SOP 76-3 was issued in December 1976, primarily to deal with accounting and reporting issues relevant to employers with leveraged ESOPs, and it has been the primary source of guidance on the subject.

5. Since the issuance of SOP 76-3, Congress has revised laws concerning ESOPs several times and the Internal Revenue Service (IRS) and the U.S. Department of Labor have issued many regulations covering the operation of plans, which actions have resulted in changes in the way ESOPs may operate and the reasons they are established by companies. Those changes, the most significant of which are described in Appendix C, were factors in the growth in the number of plans from fewer than 2,500 plans in 1976 to nearly 10,000 at the end of 1990.[2]

[2] Statistics from an unpublished study completed in 1991 by the National Center for Employer Ownership, Oakland, Calif.

6. The increase in the number of ESOPs since the issuance of SOP 76-3 was matched by an increase in their complexity. It is no longer possible to describe a typical ESOP. ESOPs are used for many purposes in addition to furthering employee ownership, some of which were not contemplated when SOP 76-3 was issued. These include the following:

- To fund a matching program for a sponsor's 401(k) saving plan, formula-based profit-sharing plan, and other employee benefits
- To raise new capital or to create a marketplace for the existing stock
- To replace lost benefits from the termination of other retirement plans or provide benefits under postretirement benefit plans, particularly medical benefits
- To be part of the financing package in leveraged buy-outs
- To provide a tax-advantaged means for owners to terminate their ownership
- To be part of a long-term program to restructure the equity section of a plan sponsor's balance sheet
- To defend the company against hostile takeovers

7. The borrowing arrangements used by leveraged ESOPs have also become more diverse. When SOP 76- 3 was issued, most leveraged ESOPs borrowed from outside lenders, and the loan terms were relatively simple. Since then, internally leveraged ESOPs (ESOPs that borrow from the sponsor) have become more common. Furthermore, some ESOP loans are now structured so that a large portion of the debt service will be paid with dividends on shares held by the ESOP rather than with employer contributions.

8. Employers' accounting for ESOP transactions, particularly the measurement of compensation cost and the treatment of dividends on shares held by an ESOP, has been a source of accounting controversy for many years. Even when SOP 76-3 was issued, there was disagreement about some ESOP issues.[3] Changes in laws and regulations that apply to ESOPs and the increased diversity in the structure and purpose of ESOPs have called new attention to the limitations of SOP 76-3. Furthermore, SOP 76-3 does not address some of the accounting issues presented by the new ESOPs. Although the EITF has addressed a number of ESOP issues, it has done so on an ad hoc basis.

[3] Paragraph 13 of SOP 76-3 presents a minority view that disagrees with that SOP's recommendations on reporting dividends paid and earnings per share.

9. Therefore, the Accounting Standards Executive Committee (AcSEC) undertook this project to reconsider SOP 76-3 and to consider current ESOP issues that are not specifically addressed in the accounting literature. AcSEC's objective in issuing this SOP is to enhance the relevance and representational faithfulness of financial statements of employers that sponsor ESOPs.

10. There are two basic forms of ESOP: nonleveraged and leveraged. This SOP addresses the financial reporting for each separately.

Conclusions

11. The following conclusions should be read in conjunction with the "Discussion of Conclusions" beginning with paragraph 59 of this SOP. That section explains considerations that were deemed significant by members of AcSEC in reaching the conclusions.

Leveraged ESOPs

12. Unlike other kinds of employee benefit plans, an ESOP is permitted by ERISA to borrow from a related party or with the assistance of a related party. A leveraged ESOP borrows money to acquire shares of the employer company. The debt usually is collateralized by the employer's shares. The shares initially held by the ESOP in a suspense account are called *suspense shares.*[4] The debt is generally repaid by the ESOP from employer contributions and dividends on the employer's stock. As the debt is repaid, suspense shares are released from the suspense account, and the released shares must be allocated to individual accounts as of the end of the ESOP's fiscal year. The money can be borrowed by the ESOP from the sponsor, with or without

a related outside loan, or directly from an outside lender. Outside loans to the ESOP are generally guaranteed by the sponsor.

[4] Terms defined in the glossary are in italicized type the first time they appear in this SOP.

Reporting the Purchase of Shares by ESOPs

13. An employer should report the issuance of shares or the sale of treasury shares to an ESOP when they occur and should report a corresponding charge to unearned ESOP shares, a contra-equity account. That account should be presented as a separate item in the balance sheet. Furthermore, even if a leveraged ESOP buys outstanding shares of employer stock on the market rather than from the employer, the employer should charge unearned ESOP shares and credit either cash or debt, depending on whether the ESOP is internally or externally leveraged (see paragraph 24).

Reporting the Release of ESOP Shares

14. ESOP shares are released for different purposes: to compensate employees directly, to settle employer liabilities for other employee benefits, and to replace dividends on *allocated shares* that are used for debt service. As ESOP shares are committed to be released, unearned ESOP shares should be credited and, depending on the purpose for which the shares are released, either (a) compensation cost, (b) dividends payable, or (c) compensation liabilities should be charged. Regardless of the account charged, the amount of the charge should be based on fair values[5] of *committed-to-be-released shares.*

[5] Paragraph 20 of this SOP contains guidance on fair value.

15. Under this SOP, when shares are committed to be released, rather than when shares are legally released, is significant for accounting purposes. That refinement was made in recognition of the fact that ESOP shares are legally released from an ESOP's suspense account (and from serving as collateral for ESOP debt) when debt payments are made, but the employee service to which the shares released relates is continuous. Accordingly, for purposes of reporting compensation cost and satisfaction of liabilities under this SOP, accounting recognition should occur when shares are committed to be released, which may occur before the shares are legally released. Shares that have not been legally released, but that relate to employee services rendered during an accounting period (interim or annual) ending before the related debt service payment is made, should be considered committed to be released. The periods of employee service to which shares relate is generally specified in the ESOP documents.

16. Some employers establish ESOPs that are not linked to any other employee benefit or compensation promise; therefore, the ESOP shares directly compensate the employees. For ESOP shares committed to be released to compensate employees directly, the employer should recognize compensation cost equal to the fair value of the shares committed to be released. The shares generally should be deemed to be committed to be released ratably during an accounting period as the employees perform services, and, accordingly, average fair values should be used to determine the amount of compensation cost to recognize each reporting period (interim or annual). The amount of compensation cost recognized in previous interim periods should not be adjusted for subsequent changes in the fair value of shares.

17. Some employers agree to provide a specified or determinable benefit, such as a contribution to a 401(k) plan or to a formula profit-sharing plan, to employees and use the ESOP to partially or fully fund the benefit. Employers should recognize compensation cost and liabilities

associated with providing such benefits to employees in the same manner they would had an ESOP not been used to fund the benefit. For ESOP shares committed to be released to settle liabilities for such benefits, employers should report satisfaction of the liabilities when the shares are committed to be released to settle the liability. The number of shares released to settle the liability is based on the fair value of shares as of dates specified by the employers, which are usually specified in the ESOP documents.

18. The IRC allows employers to use dividends on ESOP shares that have been allocated to participants for debt service if participants are allocated shares of employer stock with a fair value no less than the amount of the dividends used for debt service. If shares released will include shares designated to replace *dividends on previously allocated shares used for debt service,* employers should report the settlement of the dividend payable when the shares are committed to be released to replace the dividends on shares used for debt service. (See paragraphs 21 and 22; only dividends on allocated shares should be charged to retained earnings.) The number of shares committed to be released to replace the dividends on allocated shares used for debt service is based on the fair value of shares as of dates specified by the employer, which are usually specified in the ESOP documents based on the employer's interpretation of current IRS regulations.

19. Unearned ESOP shares should be credited as shares are committed to be released based on the cost of the shares to the ESOP. Employers should charge or credit the difference between the fair value of shares committed to be released and the cost of those shares to the ESOP to shareholders' equity in the same manner as gains and losses on sales of treasury stock (generally to additional paid-in capital).

Fair Value

20. The fair value of ESOP shares is needed to apply certain provisions of this SOP. The fair value of an ESOP share is the amount the seller could reasonably expect to receive for it in a current sale between a willing buyer and a willing seller, that is, other than a forced or liquidation sale. For shares that are traded, the price in the most active market should be used to measure fair value. If there is no market price, the employer's best estimate of fair value should be used. The use of independent experts may be necessary to estimate fair value. For example, the amount determined in a recent (within twelve months of the employer's year-end) independent stock valuation report may aid in determining the best estimate of fair value.

Reporting Dividends on ESOP Shares

21. Because employers control the use of dividends on unallocated shares, dividends on unallocated shares are not considered dividends for financial reporting purposes. Dividends on unallocated shares used to pay debt service should be reported as a reduction of debt or of accrued interest payable. Dividends on unallocated shares paid to participants or added to participant accounts should be reported as compensation cost.

22. Dividends on allocated shares should be charged to retained earnings. The dividends payable may be satisfied either by contributing cash to the participant accounts, by contributing additional shares to participant accounts, or by releasing shares from the ESOP's suspense account to participant accounts (see paragraph 18).

Reporting Redemptions of ESOP Shares

23. Regardless of whether an ESOP is leveraged of nonleveraged, employers are required to give a put option to participants holding ESOP shares that are not readily tradable, which on exercise requires employers to repurchase the shares at fair value. Furthermore, public company sponsors sometimes offer cash redemption options to participants who are eligible to withdraw traded shares from their accounts. Employers should report the satisfaction of such option exercises as purchases of treasury stock.

Reporting of Debt and of Interest

24. For purposes of applying this SOP, ESOP debt is characterized as follows:

- *Direct loan* — A loan made by a lender other than the employer to the ESOP. Such loans often include some formal guarantee or commitment by the employer.
- *Indirect loan* — A loan made by the employer to the ESOP, with a related outside loan to the employer.
- *Employer loan* — A loan made by the employer to the ESOP, with no related outside loan.

ESOPs with indirect loans and employer loans are often referred to as internally leveraged.

25. Employers that sponsor an ESOP with a direct loan should report the obligations of the ESOP to the outside lender as liabilities. Furthermore, employers should accrue interest cost on the debt and should report cash payments to the ESOP that are used by the ESOP to service debt, regardless of whether the source of cash is employer contributions or dividends, as reductions of the debt and accrued interest payable when the ESOP makes the payments to the outside lender.

26. Employers that sponsor an ESOP with an indirect loan should report outside loans as liabilities. Employers should not report a loan receivable from the ESOP as an asset and should, therefore, not recognize interest income on such receivable. Employers should accrue interest cost on the outside loan and should report loan payments as reductions of the principal and accrued interest payable. Contributions to the ESOP and the concurrent payments from the ESOP to the employer for debt service would not be recognized in the employer's financial statements.

27. Employers that sponsor an ESOP with an employer loan should not report the ESOP's note payable and the employer's note receivable in the employer's balance sheet. Accordingly, employers should not recognize interest cost or interest income on an employer loan.

Earnings per Share

28. For purposes of computing primary and fully diluted earnings per share (EPS), ESOP shares that have been committed to be released should be considered outstanding. ESOP shares that have not been committed to be released should not be considered outstanding.

29. Employers with ESOPs that hold convertible preferred stock may encounter unique EPS issues. The remainder of this section provides guidance on how to deal with some of those issues, particularly the following:

- Whether convertible preferred shares held by an ESOP should be considered common stock equivalents
- How to determine the number of shares assumed to be outstanding in the if-converted EPS computations
- How earnings applicable to common stock in if-converted EPS computations should be adjusted for dividends on allocated shares used for debt service
- Whether prior periods' EPS should be restated for changes in conversion rates

This SOP does not provide a step-by-step discussion of how to apply the if-converted method to compute EPS and does not address all possible EPS questions that may arise. Accounting Principles Board (APB) Opinion No. 15, *Earnings per Share*; the AICPA's accounting Interpretations of that Opinion; and illustrations 4 and 5 in appendix A of this SOP provide additional guidance.

30. *Common Stock Equivalents.* APB Opinion No. 15 requires that a convertible security, which at the time of issuance has terms that make it for all practical purposes substantially the equivalent to a common stock, should be regarded as a common stock equivalent. For convertible preferred stock not held by an ESOP, an effective yield test is applied to the securities at the time of issuance to determine whether the securities should be considered common stock equivalents. However, the terms of convertible preferred shares held by ESOPs generally differ from other convertible preferred stock in two ways:

a. Convertible preferred shares held by ESOPs generally cannot remain outstanding indefinitely.

b. ESOP participants cannot withdraw their convertible preferred shares from the plan; the terms generally require participants to redeem the shares with the employer or convert the shares to common stock when participants withdraw their account balances from the ESOP plan. (Whether a participant chooses redemption of conversion depends on the value of the employer's common stock in relation to the stated minimum value of the convertible preferred stock.)

ESOP shares with such characteristics should always be considered common stock equivalents. However, if the convertible preferred shares held by an ESOP may be withdrawn from the plan and sold to someone other than the employer or other ESOP participants, the employer should apply the effective yield test to determine whether the shares should be considered common stock equivalents.

31. *Number of Shares Outstanding.* Under this SOP, ESOP shares are not considered outstanding until they are committed to be released. For ESOP shares considered common stock equivalents, the number of common shares that would be issued on conversion of the convertible shares held by an ESOP that have been committed to be released should be deemed outstanding in the if-converted EPS computations for both primary and fully diluted EPS if the effect is dilutive. Convertible preferred shares held by the ESOP that have not been committed to be released should not be considered outstanding and, accordingly, would be excluded from the if-converted computations for both primary and fully diluted EPS.

32. When participants withdraw account balances containing convertible preferred shares from an ESOP, they may be entitled to receive common shares or cash with a value equal to either the fair value of the convertible preferred shares of a stated minimum value per share. Accordingly, if the value of the common stock issuable is less than the stated minimum value or the fair value of the preferred, participants may receive common shares or cash with a value greater than the value of the common shares issuable at the stated conversion rate. In determining EPS, the employer should presume that such a shortfall will be made up with shares of common stock. However, that presumption may be overcome if past experience or a stated policy provides a reasonable basis to believe that the shortfall will be paid in cash.[6] In applying the if-converted method, the number of common shares issuable on assumed conversion, which should be included in the denominator of the EPS calculation, should be the greater of (a) the shares issuable at the stated conversion rate and (b) the shares issuable if the participants were to withdraw the shares from their accounts. Shares issuable on assumed withdrawal should be computed for primary earnings based on the ratio of (a) the average fair value of the convertible stock or, if greater, its stated minimum value, to (b) the average fair value of the common stock. For fully diluted EPS, the ratio should be (a) the end-of-period fair value of the convertible stock or, if greater, the stated minimum value, to (b) the end-of-period value of the common stock, if that ratio is more dilutive than the primary EPS ratio. The appropriate ratios should then be applied to the shares issuable at the state conversion rate to determine the number of shares issuable on assumed withdrawal.

[6] Financial Accounting Standards Board (FASB) Interpretation No. 31, *Treatment of Stock Compensation Plan in EPS Computations,* used such a presumption for stock appreciation rights and other variable plan awards.

33. *Adjustments to Earnings.* Employers that use dividends on allocated ESOP shares to pay debt service should adjust earnings applicable to common shares in the if-converted computation for the difference (net of income taxes) between the amount of compensation cost reported and the amount of compensation cost that would have been reported if the allocated shares had been converted to common stock at the beginning of the period.

34. *Changes in Conversion Rates.* In consonance with paragraphs 56-58 of APB Opinion 15, prior period EPS should not be restated for changes in the conversion rates.

Accounting for Terminations

35. Upon termination of a leveraged ESOP, either in whole or in part, all outstanding debt related to the shares being terminated must be repaid or refinanced. An ESOP may repay the debt using an employer contribution to the plan, dividends on ESOP shares, the proceeds from selling suspense shares to the employer or to another party, or some combination of these. The law limits the shares employers may reacquire to the number of shares with a fair value equal to the applicable unpaid debt and requires that the remaining shares, if any, be allocated to participants.

36. If the employer makes a contribution to the ESOP or pays dividends on unallocated shares that are used by the ESOP to repay the debt, the employer should charge the debt and accrued interest payable when the ESOP makes the payment to the outside lender. Similarly, an employer sponsoring an ESOP with an indirect loan should report loan repayments as reductions of the debt and accrued interest payable.

37. If the ESOP sells the suspense shares and used the proceeds to repay the debt, the employer should report the release of the suspense shares as a credit to unearned ESOP shares based on the cost of the shares to the ESOP, charge debt, and accrued interest payable, and recognize the difference in paid-in capital. However, if there is a difference between the amount paid to an outside lender and the net carrying amount of the debt, paragraph 20 of APB Opinion No. 26, *Early Extinguishment of Debt,* as amended by FASB Statement of Financial Accounting Standards No. 4, *Reporting Gains and Losses from Extinguishment of Debt,* requires that difference to be included in the employer's income when the debt is extinguished.

38. If an employer reacquires the suspense shares from the ESOP, the purchase of the shares should be accounted for as a treasury stock transaction. The treasury stock should be reported at the fair value of the shares at the reacquisition date. Unearned ESOP shares should be credited for the cost of the shares, and the difference should be recognized in additional paid-in capital.

39. If the fair value of the suspense shares on the termination date is more than the unpaid debt balance, the release of the remaining suspense shares to participants should be charged to compensation in accordance with paragraphs 14-18 of this SOP. That is, compensation cost should equal the fair value of the shares at the date the ESOP debt is extinguished, because that is when the shares are committed to be released.

Nonleveraged ESOPs

40. An employer with a nonleveraged ESOP periodically contributes its shares or cash to its ESOP on behalf of employees. The shares contributed or acquired with the cash contributed, which may be outstanding shares, treasury shares, or newly issued shares, are allocated to participant accounts and held by the ESOP until distributed to the employees at a future date, such as on the date of termination or retirement. The shares of employer stock obtained by the nonleveraged ESOP must be allocated to individual participant accounts as of the end of the ESOP's fiscal year.

Reporting Purchase of Shares by ESOPs

41. Employers with nonleveraged ESOPs should report compensation cost equal to the contribution called for in the period under the plan. Compensation cost should be measured as the fair value of the shares contributed to or committed to be contributed to the ESOP or as the cash contributed to or committed to be contributed to the ESOP, as appropriate under the terms of the plan.

Reporting Dividends on ESOP Shares

42. Employers with nonleveraged ESOPs should charge dividends on shares held by the ESOPs to retained earnings, except that dividends on suspense account shares of a pension reversion ESOP should be accounted for the same way as dividends on suspense account shares of leveraged ESOPs.

Reporting Redemptions of ESOP Shares

43. Regardless of whether an ESOP is leveraged or nonleveraged, employers are required to give a put option to participants holding ESOP shares that are not readily tradable, which on exercise requires the employer to repurchase the shares at fair value. Furthermore, public company sponsors sometimes offer cash redemption options to participants who are eligible to withdraw traded shares from their accounts, which on exercise requires the employer to repurchase the shares at fair value. Employers should report the satisfaction of such option exercises as purchases of treasury stock.

Earnings per Share

44. All shares held by a nonleveraged ESOP should be treated as outstanding in computing the employer’s EPS, except the suspense account shares of a pension reversion ESOP, which should not be treated as outstanding until they are committed to be released for allocation to participant accounts. If a nonleveraged ESOP holds convertible preferred stock, the guidance in paragraphs 29-34 of this SOP for leveraged ESOPs should be considered.

Pension Reversion ESOPs

45. An employer that terminates a defined benefit pension plan may avoid part of the excise tax on an asset reversion by transferring the assets to an existing or newly created ESOP, which could be either leveraged or nonleveraged. The reverted assets may be used either to purchase shares of the employer stock or to retire existing ESOP debt.

46. If the assets from the pension plan are used by the ESOP to purchase employer shares, the employer should report the share issuance the same way as other share issuances to an ESOP. The issuance of shares or the sale of treasury shares to the ESOP should be recognized when it occurs, and a corresponding charge to unearned ESOP shares, a contra-equity account, should be reported. If the shares are purchased on the market, the employer should similarly charge unearned ESOP shares. (The credit would be to cash.)

47. Because the number of shares the ESOP acquires in a pension plan reversion is usually more than the IRS permits to be allocated to participant accounts in a single year, some of the shares are held in a suspense account until they are committed to be released in future years for allocation to participant accounts. The guidance in this SOP, for shares held by leveraged ESOPs, should be applied to suspense account shares.

48. If the assets from the pension plan reversion are used to repay the debt of an existing ESOP, ESOP shares are committed to be released from suspense. In such situations, the guidance for leveraged ESOPs in this SOP should be followed. The employer should reduce the debt as it is repaid and reduce unearned ESOP shares as shares are committed to be released. How the committed-to-be-released shares are used determines what accounts are charged upon release of shares (see paragraphs 14-18).

Issues Related to Accounting for Income Taxes

Leveraged ESOPs

49. For employers with leveraged ESOPs, the amount of ESOP-related expense reported under this SOP for a period may differ from the amount of the ESOP-related income tax deduction (prescribed by income tax rules and regulations) for that period. Differences result if (a) the fair value of shares committed to be released differs from the cost of those shares to the ESOP and (b) the timing of expense recognition is different for income tax and financial reporting purposes. Such differences should be reported in accordance with *FASB Statement No. 109*, *Accounting for Income Taxes.* Similar differences arise from employee stock options. Paragraph 36.e. of Statement No. 109 requires that the tax effects of expenses for employee stock options recognized differently for financial reporting and tax purposes be recognized in the related component of shareholders' equity.

50. In accordance with paragraph 36.e. of Statement No. 109, if the cost of shares committed to be released is greater than their fair value, the employer should credit the tax effect of the amount by which the deductible expense exceeds the book expense to shareholders' equity. Conversely, if the cost of shares committed to be released is less than their fair value, the employer should charge the tax effect of the amount by which the book expense exceeds the deductible expense to shareholders' equity to the extent of previous credits to shareholders' equity related to cost exceeding fair value of ESOP shares committed to be released in previous periods.

51. Furthermore, the tax benefit of tax-deductible dividends on allocated ESOP shares should be recorded as a reduction of income tax expense allocated to continuing operations. Under paragraph 36.f. of FASB Statement No. 109, the tax benefit of tax-deductible dividends on unallocated ESOP shares that are charged to retained earnings should be credited to shareholders' equity. However, because dividends on unallocated shares would not be charged to retained earnings under this SOP, paragraph 36.f. of Statement No. 109 would not apply to ESOP shares accounted for under this SOP.

Nonleveraged ESOPs

52. Employers with nonleveraged ESOPs may accrue compensation cost for financial reporting purposes earlier than the cost is deductible for income tax purposes. Accruing the compensation cost earlier for financial reporting purposes creates a temporary difference under Statement No. 109.

Disclosures

53. An employer sponsoring an ESOP should disclose the following information about the plan, if applicable:

a. A description of the plan, the basis for determining contributions, including the employee groups covered, and the nature and effect of significant matters affecting comparability of information for all periods presented. For leveraged ESOPs and pension reversion ESOPs, the description should include the basis for releasing shares and how dividends on allocated and unallocated shares are used.

b. A description of the accounting policies followed for ESOP transactions, including the method of measuring compensation, the classification of dividends on ESOP shares, and the treatment of ESOP shares for EPS computations. If the employer has both old ESOP shares for which it does not adopt the guidance in this SOP and new ESOP shares for which the guidance in the SOP is required (see paragraphs 54 and 55), the accounting policies for both blocks of shares shall be described.

c. The amount of compensation cost recognized during the period.

d. The number of allocated shares, committed-to-be-released shares, and suspense shares held by the ESOP at the balance-sheet date. This disclosure should be made separately for shares accounted for under this SOP and for grandfathered ESOP shares (see paragraphs 54 and 55).

e. The fair value of unearned ESOP shares at the balance-sheet date for shares accounted for under this SOP. (Future tax deductions will be allowed only for the ESOP's cost of unearned ESOP shares.) This disclosure need not be made for old ESOP shares for which the employer does not apply the guidance in this SOP (see paragraphs 55 and 56).

f. The existence and nature of any repurchase obligation, including disclosure of the fair value[7] of the shares allocated as of the balance-sheet date, which are subject to a repurchase obligation.

[7] See paragraph 20 for guidance on fair value.

Debt

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 15

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting guidance for debt is provided in the Accounting Practices and Procedures Manuals for Life and Accident and Health (Life/A&H Accounting Practices and Procedures Manual) and for Property and Casualty Insurance Companies (P & C Accounting Practices and Procedures Manual). This guidance provides that debt be reported at the unpaid amount at the balance sheet date. Loans secured by mortgages on company real estate are treated as a reduction from the asset value of such real estate. Additionally, debt obligations of Employee Stock Ownership Plans ("ESOP") must be recorded as debt obligations of company sponsors, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company or the sale or exchange of the company's securities. See *Issue Paper No. 41—Surplus Notes* (Issue Paper No. 41) for discussion of surplus notes.

2. GAAP addresses accounting for debt in *Accounting Principles Board Opinion No. 14*, *Accounting for Convertible Debt and Debt Issued with Stock Purchase Warrants* (APB 14), *Accounting Principles Board Opinion No. 21*, *Interest on Receivables and Payables* (APB 21)*, Accounting Principles Board Opinion No. 26*, *Early Extinguishment of Debt* (APB 26), *FASB Statement No. 4*, *Reporting Gains and Losses from Extinguishment of Debt* (FAS 4), *FASB Statement No. 47*, *Disclosure of Long Term Obligations* (FAS 47), *FASB Statement No. 76*, *Extinguishment of Debt* (FAS 76), *FASB Statement No. 84*, *Induced Conversions of Convertible Debt* (FAS 84) and in *AICPA Statement of Position 93-6, Employers' Accounting for Employee Stock Ownership Plans* (SOP 93-6).

3. The purpose of this issue paper is to establish statutory accounting principles for debt that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. Debt shall be reported as a liability unless it is debt on real estate (i.e., reported as a reduction in the carrying value of real estate) in accordance with *Issue Paper No. 40—Real Estate Investments* (Issue Paper No. 40), or is offset against another asset in accordance with *Issue Paper No. 76—Offsetting and Netting of Assets and Liabilities* (Issue Paper No. 76) or is specified elsewhere within the codification. Instruments that meet the requirements to be recorded as surplus as specified in *Issue Paper No. 41—Notes*, are not considered debt. Interest on debt shall be accrued over the life of the debt and charged to operations, except when capitalized in accordance with *Issue Paper No. 44—Capitalization of Interest* (Issue Paper No. 44). Interest payable shall include interest payable on all debt reported as a liability, approved interest on surplus notes and interest payable on debt reported as a reduction in the carrying value of real estate.

5. Debt discount or premium, if any, shall be reported in the balance sheet as a direct deduction from or addition to the face amount of the note. Such discount or premium shall be amortized over the life of the note using the interest method.

6. Debt issuance costs (i.e., loan fees, legal fees, etc.) do not meet the definition of an asset as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4). Accordingly, such costs shall be charged to operations.

7. Debt obligations of ESOPs shall be reported as borrowed money by company sponsors, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company or the sale or exchange of the company's securities. ESOPs are addressed in *Issue Paper No. 78—Employee Stock Ownership Plans*.

8. Debt which is subject to a troubled debt restructuring shall be accounted for in accordance with *Issue Paper No. 36—Troubled Debt Restructurings* (Issue Paper No. 36).

9. Convertible debt securities that are convertible into common stock of the issuer or an affiliated company at a specified price at the option of the holder and which are sold at a price not significantly in excess of the face amount shall be accounted for solely as debt at the time of issuance. An expense shall be recognized, equal to the fair value of additional securities granted or other consideration issued to induce conversion subsequent to the issuance of convertible debt securities.

10. Proceeds from debt issued with detachable stock purchase warrants shall be allocated based on the relative fair value of the two securities at the time of issuance. The value attributable to the warrants shall be accounted for as paid-in capital.

11. Other types of debt securities shall be accounted for in accordance with the substance of the transaction.

12. Debt shall be considered extinguished if the debtor is relieved of primary liability for the debt by the creditor and it is probable that the debtor will not be required to make future payments as guarantor of the debt. Even if the creditor does not relieve the debtor of its primary obligation, such debt shall be considered extinguished if the debtor irrevocably places cash or other monetary assets (that are essentially risk free as to the amount, timing, and collection of interest and principal) in a trust to be used solely for satisfying scheduled payments of both interest and principal of a specific obligation and the possibility that the debtor will be required to make future payments with respect to that debt is remote. The monetary assets held by the trust shall provide cash flows (from interest and maturity of those assets) that approximately coincide, as to timing and amount, with the scheduled interest and principal payments on the debt that is being extinguished. Gains and losses from extinguishment of debt are capital gains or losses, and shall be charged to operations in accordance with *Issue Paper No. 24—Discontinued Operations and Extraordinary Items* (Issue Paper No. 24).

13. The financial statements or notes thereto shall disclose the following items related to debt:

- date issued;
- pertinent information concerning the kind of borrowing (e.g. debentures, commercial paper outstanding, bank loans, lines of credit, etc.);
- face amount of the debt;
- carrying value of debt;
- the rate at which interest accrues;
- the effective interest rate;
- the combined aggregate amount of maturities and sinking fund requirements for each of the five years following the latest balance sheet presented;

- collateral requirements;
- a summary of significant debt terms and covenants and any violations;
- interest paid in the current year;
- if debt was considered to be extinguished by in-substance defeasance prior to the effective date of this issue paper and any of the debt remains outstanding, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period; and
- if assets are set aside after the effective date of this issue paper solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets

DISCUSSION

14. This issue paper adopts current statutory guidance for debt. It expands on current statutory guidance to address the accounting for debt discount and premium, debt issuance costs, convertible debt securities, debt issued with detachable stock purchase warrants and extinguishment of debt. It also expands current statutory guidance to address disclosure requirements regarding the carrying value of the debt, effective interest rate, combined aggregate amount of maturities and sinking fund requirements for each of the five years following the latest balance sheet presented and interest paid in the current year.

15. This issue paper adopts APB 14 and FAS 84. The requirement in paragraph 13 to disclose the aggregate amount of maturities and sinking fund requirements for each of the next five years is consistent with subparagraph 10b of *FASB Statement No. 47*, *Disclosure of Long Term Obligations*.

16. This issue paper adopts APB 21 with a modification to require that debt issuance costs be charged to operations. These costs represent deferred charges which are immediately expensed for statutory accounting, whereas GAAP requires that such costs be reported on the balance sheet as deferred charges and be recognized over the period of the borrowing as an adjustment to the effective interest rate. Immediately expensing debt issuance costs is consistent with the Statement of Concepts which states "Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment".

17. This issue paper rejects FAS 4 and *FASB Statement No. 64*, *Extinguishment of Debt Made to Satisfy Sinking Fund Requirements—an Amendment of FASB Statement No. 4*. This issue paper also rejects *FASB Emerging Issues Task Force No. 84-40, Long-Term Debt Repayable by a Capital Stock*.

18. This issue paper adopts APB 26 with modification to require that gains and losses from extinguishment of debt be reported as capital gains or losses, and charged to operations in accordance with Issue Paper No. 24. This issue paper adopts paragraphs 13 and 25 of SOP 93-6 with a modification to exclude debt obligations when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company's stock, contributions from the company or the sale or exchange of the company's securities. Such obligations do not meet the definition of liabilities (of the sponsor) as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5). This issue paper rejects paragraph 37 of SOP 93-6 as it relates to reporting gain and losses on extinguishment of debt. Such gains and losses shall be accounted for consistent with Issue Paper No. 24. SOP 93-6 will be addressed in its entirety in Issue Paper No. 78.

19. This issue paper adopts *FASB Emerging Issues Task Force No. 90-19, Convertible Bonds with Issuer Option to Settle for Cash upon Conversion*, with a modification to reject guidance related to earnings per share and *FASB Technical Bulletin No. 80-1*, *Early Extinguishment of Debt through Exchange for Common or Preferred Stock*, with a modification to reject guidance related to classification of the loss as an extraordinary item.

20. Additionally, this issue paper adopts the following pronouncements which clarify and/or provide guidance in certain circumstance (such pronouncements are not reproduced herein due to length and limited scope):

Accounting Principles Board Opinion No. 12, paragraphs 16 and 17, Omnibus Opinion – 1967
AICPA Accounting Interpretations of APB 21, Interest on Receivables and Payables
AICPA Accounting Interpretations of APB 26, Early Extinguishment of Debt
FASB Emerging Issues Task Force No. 85-9, Revenue Recognition on Options to Purchase Stock of Another Entity
FASB Emerging Issues Task Force No. 85-17, Accrued Interest upon Conversion of Convertible Debt
FASB Emerging Issues Task Force No. 85-29, Convertible Bonds with a "Premium Put"
FASB Emerging Issues Task Force No. 86-8, Sale of Bad-Debt Recovery Rights
FASB Emerging Issues Task Force No. 86-15, Increasing-Rate Debt
FASB Emerging Issues Task Force No. 86-18, Debtor's Accounting for a Modification of Debt Terms
FASB Emerging Issues Task Force No. 86-28, Accounting Implications of Indexed Debt Instruments
FASB Emerging Issues Task Force No. 86-36, Invasion of a Defeasance Trust
FASB Emerging Issues Task Force No. 95-15, Recognition of Gain or Loss When a Binding Contract Requires a Debt Extinguishment to Occur at a Future Date for a Specified Amount

21. This issue paper is consistent with the reporting for surplus notes as addressed in Issue Paper No. 41, the reporting of encumbrances on real estate as discussed in Issue Paper No. 40, the offsetting of assets and liabilities as addressed in Issue Paper No. 76 and the reporting of gains and losses on troubled debt restructurings as discussed in Issue Paper No. 36.

22. The conclusions above are consistent with the Statement of Concepts which states:

> Objectives of Statutory Financial Reporting
>
> The primary responsibility of each state insurance department is to regulate insurance companies in accordance with state laws with an emphasis on solvency for the protection of policyholders. The ultimate objective of solvency regulation is to ensure that policyholder, contractholder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety. The cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders. An accounting model based on the concepts of conservatism, consistency, and recognition is essential to useful statutory financial reporting.

Drafting Notes/Comments

- Reverse repurchase agreements are addressed in *Issue Paper No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements*.
- Pledged assets are addressed in *Issue Paper No. 77—Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

23. The P & C Accounting Practices and Procedures Manual includes the following guidance in Chapter 13 (only the pertinent excerpts are included below):

Borrowed Money

Borrowed money includes liabilities for loans except those secured by mortgages on company real estate and surplus loans. The amount to be reported is the amount unpaid at the balance sheet date. Resolution authorizing borrowed money are usually shown in the minutes of the board of directors, executive, investment, or finance committees.

Loans secured by mortgages on company real estate are treated as a reduction from the asset value of such real estate rather than as "Borrowed Money." For further discussion, see Chapter 4-Real Estate.

Surplus loans, i.e., subordinated surplus debentures, are covered in Chapter 24-Paid-In or Contributed Surplus.

Interest Payable

Interest payable includes interest on "Borrowed Money" as well as interest on real estate and surplus loans. It also includes interest on funds held as a deposit or security, such as those held by a ceding company against a reinsurer. Further treatment of funds held by a ceding company may be found in Chapter 22-Reinsurance.

The interest on "Borrowed Money" is also shown parenthetically as part of the caption of this liability item in the annual statement.

Debt Obligations of Employee Stock Ownership Plans (ESOP)

Insurance company sponsors of ESOP's must record the debt obligations of such ESOP's on the books of the company in all situations, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company's stock, contributions from the company, or the sale or exchange of the company's securities.

24. The Life/A&H Accounting Practices and Procedures Manual includes the following guidance in Chapter 17 (only the pertinent excerpts are included below):

Borrowed Money

Borrowed money is debt, other than subordinated surplus debentures, contribution notes, or similar indebtedness. The amount to be reported is the amount unpaid at the balance sheet date plus the related accrued interest. See Chapter 27 for a discussion of subordinated surplus debentures, etc.

Debt Obligations of Employee Stock Ownership Plans (ESOP)

Insurance company sponsors of ESOP's must record the debt obligations of such ESOP's on the books of the company in all situations, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company's stock, contributions from the company, or the sale or exchange of the company's securities.

25. The NAIC Annual Statement Instructions (Annual Statement Instructions) for Property and Casualty Insurance Companies provide the following guidance. Substantially similar guidance is provided in the Annual Statement Instructions for Life and Accident and Health Insurance Companies.

7. Borrowed Money

Instruction:

Furnish pertinent information concerning the kind of borrowing (e.g., debentures, commercial paper outstanding, bank loan, lines of credit, etc.). Indicate redemption price, if any, interest features, collateral requirements, maturity date, etc., for money borrowed by the company. Also include information regarding material loan provisions (i.e., convenants) that must be satisfied or maintained on a continuing basis and indicate if the society is in violation of any such loan provisions. Identify the terms of reverse repurchase agreements whose amounts have been included in the liability for borrowed money.

Generally Accepted Accounting Principles

26. APB 14 provides the following guidance (only the pertinent excerpts are included below):

CONVERTIBLE DEBT

Discussion

3. Convertible debt securities discussed herein are those debt securities which are convertible into common stock of the issuer or an affiliated company at a specified price at the option of the holder and which are sold at a price or have a value at issuance not significantly in excess of the face amount. The terms of such securities generally include (1) an interest rate which is lower than the issuer could establish for nonconvertible debt, (2) an initial conversion price which is greater than the market value of the common stock at time of issuance, and (3) a conversion price which does not decrease except pursuant to antidilution provisions. In most cases such securities also are callable at the option of the issuer and are subordinated to nonconvertible debt.

7. The most important reason given for accounting for convertible debt solely as debt is the inseparability of the debt and the conversion option. A convertible debt security is a complex hybrid instrument bearing an option, the alternative choices of which cannot exist independently of one another. The holder ordinarily does not sell one right and retain the other. Furthermore the two choices are mutually exclusive; they cannot both be consummated. Thus, the security will either be converted into common stock or be redeemed for cash. The holder cannot exercise the option to convert unless he forgoes the right to redemption, and vice versa.

Opinion

12. The Board is of the opinion that no portion of the proceeds from the issuance of the types of convertible debt securities described in paragraph 3 should be accounted for as attributable to the conversion feature. In reaching this conclusion, the Board places greater weight on the inseparability of the debt and the conversion option (as described in paragraph 7) and less weight on practical difficulties.

DEBT WITH STOCK PURCHASE WARRANTS

Opinion

16. The Board is of the opinion that the portion of the proceeds of debt securities issued with detachable stock purchase warrants which is allocable to the warrants should be accounted for as paid-in capital. The allocation should be based on the relative fair values of the two securities at time of issuance.[2] Any resulting discount or premium on the debt securities should be accounted for as such.[3] The same accounting treatment applies to issues of debt securities (issued with detachable warrants) which may be surrendered in settlement of the exercise price of the warrant. However, when stock purchase warrants are not detachable from the debt and the debt security must be surrendered in order to exercise the warrant, the two securities taken together are substantially equivalent to convertible debt and the accounting specified in paragraph 12 should apply.

[2] The time of issuance generally is the date when agreement as to terms has been reached and announced, even though the agreement is subject to certain further actions, such as directors' or stockholders' approval. APB 14 Footnote 3

[3] See Chapter 15 of ARB No. 43 (as amended by paragraph 19 of APB Opinion No. 6 and paragraph 17 of APB Opinion No. 9) and paragraphs 16 and 17 of APB Opinion No. 12.

17. When detachable warrants are issued in conjunction with debt as consideration in purchase transactions, the amounts attributable to each class of security issued should be determined separately, based on values at the time of issuance.[2] The debt discount or premium is obtained by comparing the value attributed to the debt securities with the face amount thereof.

OTHER TYPES OF DEBT SECURITIES

Opinion

18. The Board recognizes that it is not practicable in this Opinion to discuss all possible types of debt with conversion features, debt issued with stock purchase warrants, or debt securities with a combination of such features. Securities not explicitly discussed in this Opinion should be dealt with in accordance with the substance of the transaction. For example, when convertible debt is issued at a substantial premium, there is a presumption that such premium represents paid-in capital.

27. APB 21 provides the following guidance (only the pertinent excerpts are included below):

> Opinion
>
> 15. Amortization of discount and premium. With respect to a note which by the provisions of this Opinion requires the imputation of interest, the difference between the present value and the face amount should be treated as discount or premium[8] and amortized as interest expense or income over the life of the note in such a way as to result in a constant rate of interest when applied to the amount outstanding at the beginning of any given period. This is the "interest" method described in and supported by paragraphs 16 and 17 of *APB Opinion No. 12, Omnibus Opinion--1967*. However, other methods of amortization may be used if the results obtained are not materially different from those which would result from the "interest" method.
>
> [8] Differences between the recognition for financial accounting purposes and income tax purposes of discount or premium resulting from determination of the present value of a note should be treated as timing differences in accordance with *APB Opinion No. 11, Accounting for Income Taxes*.
>
> 16. Statement presentation of discount and premium. The discount or premium resulting from the determination of present value in cash or non-cash transactions is not an asset or liability separable from the note which gives rise to it. Therefore, the discount or premium should be reported in the balance sheet as a direct deduction from or addition to the face amount of the note. It should not be classified as a deferred charge or deferred credit. The description of the note should include the effective interest rate; the face amount should also be disclosed in the financial statements or in the notes to the statements.[9] Amortization of discount or premium should be reported as interest in the statement of income. Issue costs should be reported in the balance sheet as deferred charges.
>
> [9] Refer to the Appendix for illustrations of balance sheet presentation.

28. APB 26 provides the following guidance (only the pertinent excerpts are included below):

> Opinion
>
> 19. Reduction of alternatives. The Board concludes that all extinguishments of debt before scheduled maturities are fundamentally alike. The accounting for such transactions should be the same regardless of the means used to achieve the extinguishment.
>
> 20. Disposition of amounts. A difference between the reacquisition price and the net carrying amount of the extinguished debt should be recognized currently in income of the period of extinguishment as losses or gains and identified as a separate item.[1] The criteria in APB Opinion No. 9 should be used to determine whether the losses or gains are ordinary or extraordinary items. Gains and losses should not be amortized to future periods.
>
> [1] If upon extinguishment of debt, the parties also exchange unstated (or stated) rights or privileges, the portion of the consideration exchanged allocable to such unstated (or stated) rights or privileges should be given appropriate accounting recognition. Moreover, extinguishment transactions between related entities may be in essence capital transactions.

> 21. Convertible debt. The extinguishment of convertible debt before maturity does not change the character of the security as between debt and equity at that time. Therefore, a difference between the cash acquisition price of the debt and its net carrying amount should be recognized currently in income in the period of extinguishment as losses or gains.

29. FAS 47 provides the following guidance (only the pertinent excerpts are included below):

> 10. The following information shall be disclosed for each of the five years following the date of the latest balance sheet presented:
>
> b. The combined aggregate amount of maturities and sinking fund requirements for all long-term borrowings

30. FAS 84 provides the following guidance (only the pertinent excerpts are included below):

> APPLICABILITY AND SCOPE
>
> 2. This Statement applies to conversions of convertible debt to equity securities pursuant to terms that reflect changes made by the debtor to the conversion privileges provided in the terms of the debt at issuance (including changes that involve the payment of consideration) for the purpose of inducing conversion. This Statement applies only to conversions[2] that both (a) occur pursuant to changed conversion privileges that are exercisable only for a limited period of time and (b) include the issuance of all of the equity securities issuable pursuant to conversion privileges included in the terms of the debt at issuance for each debt instrument that is converted. The changed terms may involve reduction of the original conversion price thereby resulting in the issuance of additional shares of stock, issuance of warrants or other securities not provided for in the original conversion terms, or payment of cash or other consideration to those debt holders who convert during the specified time period. This Statement does not apply to conversions pursuant to other changes in conversion privileges or to changes in terms of convertible debt instruments that are different from those described in this paragraph.
>
> [2] For purposes of this Statement, a conversion includes an exchange of a convertible debt instrument for equity securities or a combination of equity securities and other consideration, whether or not the exchange involves legal exercise of the contractual conversion privileges included in terms of the debt.
>
> STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING
>
> Recognition of Expense upon Conversion
>
> 3. When convertible debt is converted to equity securities of the debtor pursuant to an inducement offer described in paragraph 2 of this Statement, the debtor enterprise shall recognize an expense equal to the fair value of all securities and other consideration transferred in the transaction in excess of the fair value of securities issuable pursuant to the original conversion terms. The expense shall not be reported as an extraordinary item.
>
> 4. The fair value of the securities or other consideration shall be measured as of the date the inducement offer is accepted by the convertible debt holder. Normally this will be the date the debt holder converts the convertible debt into equity securities or enters into a binding agreement to do so.

31. SOP 93-6 provides the following guidance related to debt obligations of ESOPs (only the pertinent excerpts are included below):

Leveraged ESOPs

12. Unlike other kinds of employee benefit plans, an ESOP is permitted by ERISA to borrow from a related party or with the assistance of a related party. A leveraged ESOP borrows money to acquire shares of the employer company. The debt usually is collateralized by the employer's shares. The shares initially held by the ESOP in a suspense account are called *suspense shares*.[4] The debt is generally repaid by the ESOP from employer contributions and dividends on the employer's stock. As the debt is repaid, suspense shares are released from the suspense account, and the released shares must be allocated to individual accounts as of the end of the ESOP's fiscal year. The money can be borrowed by the ESOP from the sponsor, with or without a related outside loan, or directly from an outside lender. Outside loans to the ESOP are generally guaranteed by the sponsor.

[4] Terms defined in the glossary are in italicized type the first time they appear in this SOP.

Reporting the Purchase of Shares by ESOPs

13. An employer should report the issuance of shares or the sale of treasury shares to an ESOP when they occur and should report a corresponding charge to unearned ESOP shares, a contra-equity account. That account should be presented as a separate item in the balance sheet. Furthermore, even if a leveraged ESOP buys outstanding shares of employer stock on the market rather than from the employer, the employer should charge unearned ESOP shares and credit either cash or debt, depending on whether the ESOP is internally or externally leveraged (see paragraph 24).

Reporting of Debt and of Interest

24. For purposes of applying this SOP, ESOP debt is characterized as follows:

- *Direct loan* - A loan made by a lender other than the employer to the ESOP. Such loans often include some formal guarantee or commitment by the employer.
- *Indirect* loan - A loan made by the employer to the ESOP, with a related outside loan to the employer.
- *Employer loan* - A loan made by the employer to the ESOP, with no related outside loan.

ESOPs with indirect loans and employer loans are often referred to as internally leveraged.

25. Employers that sponsor an ESOP with a direct loan should report the obligations of the ESOP to the outside lender as liabilities. Furthermore, employers should accrue interest cost on the debt and should report cash payments to the ESOP that are used by the ESOP to service debt, regardless of whether the source of cash is employer contributions or dividends, as reductions of the debt and accrued interest payable when the ESOP makes the payments to the outside lender.

26. Employers that sponsor an ESOP with an indirect loan should report outside loans as liabilities. Employers should not report a loan receivable from the ESOP as an asset and should, therefore, not recognize interest income on such receivable. Employers should accrue interest cost on the outside loan and should report loan payments as reductions of the principal and accrued interest payable. Contributions to the ESOP and the concurrent payments from the ESOP to the employer for debt service would not be recognized in the employer's financial statements.

27. Employers that sponsor an ESOP with an employer loan should not report the ESOP's note payable and the employer's note receivable in the employer's balance sheet. Accordingly, employers should not recognize interest cost or interest income on an employer loan.

Accounting for Terminations

35. Upon termination of a leveraged ESOP, either in whole or in part, all outstanding debt related to the shares being terminated must be repaid or refinanced. An ESOP may repay the debt using an employer contribution to the plan, dividends on ESOP shares, the proceeds from selling suspense shares to the employer or to another party, or some combination of these. The law limits the shares employers may reacquire to the number of shares with a fair value equal to the applicable unpaid debt and requires that the remaining shares, if any, be allocated to participants.

36. If the employer makes a contribution to the ESOP or pays dividends on unallocated shares that are used by the ESOP to repay the debt, the employer should charge the debt and accrued interest payable when the ESOP makes the payment to the outside lender. Similarly, an employer sponsoring a ESOP with an indirect loan should report loan repayments as reductions of the debt and accrued interest payable.

37. If the ESOP sells the suspense shares and used the proceeds to repay the debt, the employer should report the release of the suspense shares as a credit to unearned ESOP shares based on the cost of the shares to the ESOP, charge debt, and accrued interest payable, and recognize the difference in paid-in capital. However, if there is a difference between the amount paid to an outside lender and the net carrying amount of the debt, paragraph 20 of *APB Opinion No. 26*, *Early Extinguishment of Debt*, as amended by *FASB Statement of Financial Accounting Standards No. 4, Reporting Gains and Losses from Extinguishment of Debt,* requires that difference to be included in the employer's income when the debt in extinguished.

38. If an employer reacquires the suspense shares from the ESOP, the purchase of the shares should be accounted for as a treasury stock transaction. The treasury stock should be reported at the fair value of the shares at the reacquisition date. Unearned ESOP shares should be credited for the cost of the shares, and the difference should be recognized in additional paid-in capital.

39. If the fair value of the suspense shares on the termination date is more than the unpaid debt balance, the release of the remaining suspense shares to participants should be charged to compensation in accordance with paragraphs 14 to 18 of this SOP. That is, compensation cost should equal the fair value of the shares at the date the ESOP debt is extinguished, because that is when the shares are committed to be released.

Statutory Issue Paper No. 81

Foreign Currency Transactions and Translations

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 23

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. A foreign currency transaction is a transaction denominated in a currency other than the reporting entity's functional currency. The reporting entity's functional currency is defined as the currency of the primary economic environment in which the reporting entity operates. Foreign currency translation is the translation of financial statements, denominated in the reporting entity's functional currency, into U.S. dollars prior to their incorporation into financial statements through consolidation or the equity method of accounting.

2. Current statutory guidance for accounting for foreign currency transactions is provided in Chapters 13 and 25 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices and Procedures Manual) and Chapter 8 of the Accounting Practices and Procedures Manual for Life, Accident, and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual). This guidance requires foreign currency transactions to be recorded in U.S. dollars at the exchange rate in effect at the time of the transaction. At each subsequent statement date, all net assets recorded in each foreign currency are converted to U.S. dollars at the exchange rate in effect at the statement date. Property and casualty insurers record a change in net assets due to changes in foreign exchange rates between the original transaction date and the current statement date as an additional and separate asset or liability with a corresponding adjustment made directly to surplus. Life and accident and health insurers record an additional and separate asset or liability with a corresponding entry to capital gain or loss.

3. Limited statutory guidance for accounting for foreign currency transactions is also provided in the *Purposes and Procedures Manual of the NAIC Securities Valuation Office* (SVO Purposes and Procedures). This guidance requires that market values for securities payable in other than U.S. dollars to be computed by obtaining a quotation in the foreign currency from a reputable source and converting that quotation into U.S. dollars using the exchange rates published in the Valuation of Securities Manual.

4. GAAP guidance for accounting for foreign currency transactions is provided in *FASB Statement No. 52*, *Foreign Currency Translation* (FAS 52). This guidance requires each asset, liability, revenue, expense, gain, or loss arising from a transaction to be measured and recorded in the functional currency of the recording entity by use of the exchange rate in effect at that date. Subsequently, at each balance sheet date, assets and liabilities that are denominated in a currency other than the functional currency of the recording entity are adjusted to reflect the current exchange rate. Any changes in the assets or liabilities from the date of the original transaction to the balance sheet date resulting from exchange rate fluctuations, are included in net income for the period in which the change occurred.

5. GAAP guidance for accounting for foreign currency translation is also provided in FAS 52. This guidance requires all assets and liabilities to be translated at the exchange rate at the balance sheet date, while revenues, expenses, gains, and losses are translated at the exchange rate in effect at the dates on which the transactions were recognized. Because translation at the exchange rates at the dates the

numerous revenues, expenses, gains, and losses are recognized is generally impractical, an appropriately weighted average exchange rate for the period may be used to translate those elements.

6. The purpose of this issue paper is to establish statutory accounting principles for accounting for foreign currency transactions and translation that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

7. For the purposes of this issue paper, a U.S. domiciled entity's reporting currency shall be defined as the U.S. dollar, regardless of the primary economic environment in which the reporting entity operates. In order to ensure consistency, all elements of statutory financial statements shall be reported in U.S. dollars.

8. Each foreign currency transaction shall be examined and a determination made if the foreign currency transaction was made in support of insurance operations denominated in the same foreign currency. For example, some reporting entities engage in operations in foreign countries with the premiums collected and claims paid in local currency. As in any insurance operation there will at times be uncollected premiums, policy reserves, unpaid claims, and other incomplete transactions that must be recorded in the reporting entity's balance sheet. Premiums, reserves, and claims normally are recorded in U.S. dollars at the rate of exchange that is in effect at the time the policy is written, or when the claim is incurred. Changes in exchange rates, while not affecting the foreign policyholder, do affect the value of the foreign business as it is recorded in U.S. dollars.

9. Foreign currency transactions made in support of insurance operations denominated in the same foreign currency, such as foreign branches, shall be accounted for as follows:

a. Canadian Insurance Operations

Canadian insurance operations, resulting in less than 10% of the reporting entity's admitted assets, less than 10% of the reporting entity's liabilities and less than 10% of the reporting entity's net premium, can be translated to U.S. dollars by making an adjustment to the net assets of the foreign operation. The adjustment is calculated by summarizing the assets and liabilities in the foreign currency and in U.S. dollars. The net value is converted to U.S. dollars at the current rate of exchange and compared with the net value in U.S. dollars recorded by the reporting entity. Any difference in the net value to current exchange rates is recorded as a separate asset or liability and the change in the foreign exchange adjustment is recorded as an unrealized capital gain or loss.

b. All Other Foreign Insurance Operations

All other foreign insurance operations must be translated to U.S. dollars as follows: each financial statement line shall be translated to U.S. dollars by applying the following exchange rates: 1) for assets and liabilities, the exchange rate at the balance sheet date shall be used and 2) for revenues, expenses, gains, losses and surplus adjustments, the exchange rate at the dates on which those elements are recognized shall be used. Because translation at the exchange rates at the dates the numerous revenues, expenses, gains, losses and surplus adjustments are recognized is generally impractical, an appropriately weighted average exchange rate for the period may be used to translate those elements. Gains or losses due to translating foreign operations to U.S. dollars shall be recorded as an unrealized capital gain or loss.

10. All other foreign currency transactions shall be accounted for as follows:

a. Assets and liabilities denominated in foreign currencies shall be accounted for at their U.S. dollar equivalent values using exchange rates at the balance sheet date. Income and expenses recognized during an accounting period shall be recorded at an appropriately weighted average exchange rate.

b. Changes in balance sheet asset and liability values due to fluctuations in foreign currency exchange rates shall be recorded as unrealized capital gains and losses until the asset is sold or exchanged or the liability is settled. Upon settlement, previously recorded unrealized capital gains and losses shall be reversed and the foreign exchange profit or loss for the entire holding period shall be recorded as a realized capital gain or loss.

c. Transactions involving settlement in cash, such as purchases, payment of expenses, sales, and receipt of income, shall be recorded at their U.S. dollar equivalent value based on the foreign currency exchange rate as of the transaction date. Any foreign currency exchange gains or losses on purchases, payment of expenses, sales, maturities or changes in income or expense accruals should be recorded as capital gain or loss realized on the purchase, sale or maturity.

11. Nominal information such as par value of investments may be expressed in the foreign currency or U.S. dollar equivalent (description of issue), but where the information is displayed comparatively (column of par values), U.S. dollar equivalent amount should be used. The U.S. dollar equivalent amount is translated utilizing the exchange rate at the balance sheet date. Ratios and factors should be based on data that is entirely consistent with respect to currency.

12. A currency in a highly inflationary environment (one that has cumulative inflation of approximately 100% or more over a three year period) is not considered stable enough to serve as a functional currency and the more stable currency of the reporting parent is to be used instead. If a reporting entity's books of record are not maintained in its functional currency, remeasurement into the functional currency is required. That remeasurement is required before translation into the reporting currency. The remeasurement process is intended to produce the same result as if the reporting entity's books of record had been maintained in the functional currency. The remeasurement of and subsequent accounting for transactions denominated in a currency other than the functional currency shall be in recognized as a realized gain or loss in the statement of operations.

DISCUSSION

13. This issue paper rejects current statutory accounting principles. Current statutory guidance for property and casualty insurers provides that fluctuations in the value of assets and liabilities be summarized and recorded as a net asset or liability with an offsetting adjustment made directly to surplus. Current statutory guidance for life and accident and health insurers provides that fluctuations in the values of assets and liabilities be summarized and recorded as a net asset or liability with a corresponding entry recorded as a capital gain or loss. The conclusions reached in this issue paper require all assets and liabilities to be translated at the exchange rate in effect at the balance sheet date with the corresponding entry recorded as an unrealized gain or loss (see paragraph 14 for reference to exemption for certain Canadian branch operations). This change to require life and accident and health insurers to reflect the translation gain or loss as unrealized was made to conform accounting treatment for the translation adjustment between property and casualty insurers and life and health insurers. Requiring all assets and liabilities to be translated at the exchange rate in effect at the balance sheet date provides more meaningful information to regulators and other financial statement users. The statutory principles outlined in the conclusion above are consistent with draft statutory guidance prepared by the Invested Assets Working Group of the Valuation of Securities (EX4) Task Force.

14. Subparagraph 9.a. of this issue paper affords different treatment to certain Canadian branch operations. As a matter of historic practice, U.S. reporting entities have treated Canadian branch operations in their statutory statements as if they were U.S. dollar denominated operations. This practice was established at a time when the Canadian and U.S. dollars were at or close to equivalent. The cost of translating each line item for immaterial Canadian operations is perceived to exceed the benefits of line-by-line exactness. Consideration has also been given to the impact on risk-based capital and the asset valuation reserve of reporting entities under the provisions of subparagraph 9 a. and the impact is not considered to be material.

15. The statutory principles outlined in the conclusion above are not consistent with current GAAP as follows:

a. Subparagraph 9.a. Allows changes in balance sheet asset and liability values due to exchange rate fluctuations of a reporting entity's Canadian insurance operations comprising less than 10% of the reporting entity's admitted assets and liabilities and net premium to be recorded as unrealized capital gains or losses with a corresponding adjustment made to a net asset or liability. GAAP requires each asset and liability account to be adjusted.

b. Paragraph 10 allows changes in balance sheet asset and liability values due to exchange rate fluctuations to be recorded as unrealized capital gains or losses. GAAP requires that fluctuations in asset values that arose as a result of transactions denominated in a foreign currency be recorded as part of net income. GAAP requires that a gain or loss resulting from translating the financial statements of an operation that has a functional currency other than the U.S. dollar be recorded as unrealized. Recording gains and losses as a result of fluctuations in exchange rates as unrealized gains and losses for statutory purposes affords these fluctuations the same accounting treatment as fluctuations in the market values of equity securities.

This issue paper rejects FAS 52, *Foreign Currency Translation, FASB Emerging Issues Task Force No. 87-12, Foreign Debt-for-Equity Swaps, FASB Emerging Issues Task Force No. 87-26, Hedging of Foreign Currency Exposure with a Tandem Currency, FASB Emerging Issues Task Force No. 92-4, Accounting for a Change in Functional Currency When an Economy Ceases to Be Considered Highly Inflationary, FASB Emerging Issues Task Force No. 95-2, Determination of What Constitutes a Firm Commitment for Foreign Currency Transactions Not Involving a Third Party, FASB Emerging Issues Task Force No. 96-15, Accounting for the Effects of Changes in Foreign Currency Exchange Rates on Foreign-Currency-Denominated Available-for-Sale Debt Securities and FASB Interpretation No. 37, Accounting for Translation Adjustments upon Sale of Part of an Investment in a Foreign Entity, an interpretation of FASB Statement No. 52, and Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins*, Chapter 12.

16. The statutory principles outlined in the conclusion above are consistent with the recognition and consistency concepts in the Statement of Concepts. Pertinent excerpts follow:

> Consistency
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles.
>
> Recognition
> The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise.

Drafting Notes/Comments

- Forward exchange contracts are addressed in a separate issue paper.

RELEVANT STATUTORY AND GAAP GUIDANCE

Statutory Accounting

17. The P&C Accounting Practices and Procedures Manual, Chapter 13, Other Liabilities, provides the following guidance:

> Net Adjustments in Assets and Liabilities Due to Foreign Exchange Rates
>
> An insurance company may have assets or liabilities payable in foreign currencies.
>
> Differences between the exchange rates when the original entries were recorded and the current statement date result in changes in net asset value. Reductions in net asset value are shown under this caption, while increases are recorded as an asset under aggregate write-ins for other-than-invested assets. If different foreign currencies are involved, the assets and liabilities must be segregated accordingly and applied against the proper exchange rate. The exchange rates to be used are those published in the NAIC *Valuation of Securities* manual.

18. The P&C Accounting Practices and Procedures Manual, Chapter 25, Unassigned Funds (Surplus) provides the following guidance with respect to foreign exchange adjustments:

> Change in Foreign Exchange Adjustment
>
> Assets and liabilities in foreign currency are subject to adjustment to the prevailing foreign exchange rate. The change in the foreign exchange adjustment between the current and prior statement is charged or credited directly to unassigned surplus. (See Chapter 13-Other Liabilities.)

19. The Life/A&H Accounting Practices and Procedures Manual, Chapter 8, Other Admitted Assets, provides the following guidance:

> Foreign Exchange Adjustment
>
> Some insurers engage in operations in foreign countries, with the premiums collected and claims paid in the local currency. As in any insurance operations there will at all times be uncollected premiums, policy reserves, unpaid claims, and other incomplete transactions that must be recorded in the insurer's balance sheet in the annual statement.
>
> For ease in maintaining policy records, the premiums, reserves and claims normally are recorded in U.S. dollars at the rate of exchange that is in effect at the time the policy is written, or when the company receives notification of the claim. Changes in exchange rates, while not affecting the foreign policyholder, do affect the value of the foreign business as it is recorded in U.S. dollars. Because of the constant fluctuations in the foreign currencies' exchange rates, it may be confusing and unduly burdensome to adjust individual policy and claims records to current rates. Most companies, therefore, make such adjustment to the net balance of the assets and liabilities in each foreign currency.
>
> The adjustment is calculated by summarizing the assets and liabilities in each foreign currency and in U.S. dollars, as recorded in the company's policy and claim records. The net value in the foreign currency is converted to U.S. dollars at the current rate of exchange and compared with the net value in U.S. dollars recorded by the company. Any difference in adjustment of the net value to current exchange rates is recorded as a separate asset or liability if the current rate is greater or less than the rate used by the company.
>
> Change in foreign exchange adjustments generally are reported as capital gain or loss.

20. The SVO Purposes and Procedures Manual, Section 1, provides the following guidance:

> Market values for securities payable in other than U.S. dollars will be computed by obtaining a quotation in the foreign currency from a reputable source and converting that quotation into U.S. dollars using the exchange rates published in the VOS Manual.

Generally Accepted Accounting Principles

21. FAS 52 provides the following guidance:

> STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING
>
> Objectives of Translation
>
> 4. Financial statements are intended to present information in financial terms about the performance, financial position, and cash flows of an enterprise. For this purpose, the financial statements of separate entities within an enterprise, which may exist and operate in different economic and currency environments, are consolidated and presented as though they were the financial statements of a single enterprise. Because it is not possible to combine, add, or subtract measurements expressed in different currencies, it is necessary to translate into a single reporting currency [2] those assets, liabilities, revenues, expenses, gains, and losses that are measured or denominated in a foreign currency [3]. However, the unity presented by such translation does not alter the underlying significance of the results and relationships of the constituent parts of the enterprise. It is only through the effective operation of its constituent parts that the enterprise as a whole is able to achieve its purpose. Accordingly, the translation of the financial statements of each component entity of an enterprise should accomplish the following objectives:
>
> a. Provide information that is generally compatible with the expected economic effects of a rate change on an enterprise's cash flows and equity
>
> b. Reflect in consolidated statements the financial results and relationships of the individual consolidated entities as measured in their functional currencies in conformity with U.S. generally accepted accounting principles
>
> [2] For convenience, this Statement assumes that the enterprise uses the U.S. dollar (dollar) as its reporting currency. However, a currency other than the dollar may be the reporting currency in financial statements that are prepared in conformity with U.S. generally accepted accounting principles. For example, a foreign enterprise may report in its local currency in conformity with U.S. generally accepted accounting principles. If so, the requirements of this Statement apply.
>
> [3] To measure in foreign currency is to quantify an attribute of an item in a unit of currency other than the reporting currency. Assets and liabilities are denominated in a foreign currency if their amounts are fixed in terms of that foreign currency regardless of the exchange rate changes. An asset or liability may be both measured and denominated in one currency, or it may be measured in one currency and denominated in another. To illustrate: Two foreign branches of a U.S. Company, one Swiss and one German, purchase identical assets on credit from a Swiss vendor at identical prices stated in Swiss francs. The German branch measures the cost (an attribute) of that asset in German marks. Although the corresponding liability is also measured in marks, it remains denominated in Swiss francs since the liability must be settled in a specific number of Swiss francs. The Swiss branch measures the asset and liability in Swiss francs. Its liability is both measured and denominated in Swiss francs. Although assets and liabilities can be measured in various currencies, rights to receive or obligations to pay fixed amounts of a currency are, by definition, denominated in that currency.
>
> The Functional Currency
>
> 5. The assets, liabilities, and operations of a foreign entity shall be measured using the functional currency of that entity. An entity's functional currency is the currency of the primary economic environment in which the entity operates; normally, that is the currency of the environment in which an entity primarily generates and expends cash. Appendix A provides guidance for determination of the functional currency. The economic factors cited in Appendix A,

and possibly others, should be considered both individually and collectively when determining the functional currency.

6. For an entity with operations that are relatively self-contained and integrated within a particular country, the functional currency generally would be the currency of that country. However, a foreign entity's functional currency might not be the currency of the country in which the entity is located. For example, the parent's currency generally would be the functional currency for foreign operations that are a direct and integral component or extension of the parent company's operations.

7. An entity might have more than one distinct and separable operation, such as a division or branch, in which case each operation may be considered a separate entity. If those operations are conducted in different economic environments, they might have different functional currencies.

8. The functional currency (or currencies) of an entity is basically a matter of fact, but in some instances the observable facts will not clearly identify a single functional currency. For example, if a foreign entity conducts significant amounts of business in two or more currencies, the functional currency might not be clearly identifiable. In those instances, the economic facts and circumstances pertaining to a particular foreign operation shall be assessed in relation to the Board's stated objectives for foreign currency translation (paragraph 4). Management's judgment will be required to determine the functional currency in which financial results and relationships are measured with the greatest degree of relevance and reliability.

9. Once the functional currency for a foreign entity is determined, that determination shall be used consistently unless significant changes in economic facts and circumstances indicate clearly that the functional currency has changed. Previously issued financial statements shall not be restated for any change in the functional currency.

10. If an entity's books of record are not maintained in its functional currency, remeasurement into the functional currency is required. That remeasurement is required before translation into the reporting currency. If a foreign entity's functional currency is the reporting currency, remeasurement into the reporting currency obviates translation. The remeasurement process is intended to produce the same result as if the entity's books of record had been maintained in the functional currency. The remeasurement of and subsequent accounting for transactions denominated in a currency other than the functional currency shall be in accordance with the requirements of this Statement (paragraphs 15 and 16). Appendix B provides guidance for remeasurement into the functional currency.

The Functional Currency in Highly Inflationary Economies

11. The financial statements of a foreign entity in a highly inflationary economy shall be remeasured as if the functional currency were the reporting currency. Accordingly, the financial statements of those entities shall be remeasured into the reporting currency according to the requirements of paragraph 10. For the purposes of this requirement, a highly inflationary economy is one that has cumulative inflation of approximately 100 percent or more over a 3-year period.

Translation of Foreign Currency Statements

12. All elements of financial statements shall be translated by using a current exchange rate. For assets and liabilities, the exchange rate at the balance sheet date shall be used. For revenues, expenses, gains, and losses, the exchange rate at the dates on which those elements are recognized shall be used. Because translation at the exchange rates at the dates the numerous revenues, expenses, gains, and losses are recognized is generally impractical, an appropriately weighted average exchange rate for the period may be used to translate those elements.

13. If an entity's functional currency is a foreign currency, translation adjustments result from the process of translating that entity's financial statements into the reporting currency. Translation adjustments shall not be included in determining net income but shall be reported separately and accumulated in a separate component of equity.

14. Upon sale or upon complete or substantially complete liquidation of an investment in a foreign entity, the amount attributable to that entity and accumulated in the translation adjustment component of equity shall be removed from the separate component of equity and shall be reported as part of the gain or loss on sale or liquidation of the investment for the period during which the sale or liquidation occurs.

Foreign Currency Transactions

15. Foreign currency transactions are transactions denominated in a currency other than the entity's functional currency. Foreign currency transactions may produce receivables or payables that are fixed in terms of the amount of foreign currency that will be received or paid. A change in exchange rates between the functional currency and the currency in which a transaction is denominated increases or decreases the expected amount of functional currency cash flows upon settlement of the transaction. That increase or decrease in expected functional currency cash flows is a foreign currency transaction gain or loss that generally shall be included in determining net income for the period in which the exchange rate changes. Likewise, a transaction gain or loss (measured from the transaction date or the most recent intervening balance sheet date, whichever is later) realized upon settlement of a foreign currency transaction generally shall be included in determining net income for the period in which the transaction is settled. The exceptions to this requirement for inclusion in net income of transaction gains and losses are set forth in paragraphs 20 and 21 and pertain to certain intercompany transactions and to transactions that are designated as, and effective as, economic hedges of net investments and foreign currency commitments.

16. For other than forward exchange contracts (paragraphs 17-19), the following shall apply to all foreign currency transactions of an enterprise and its investees:

a. At the date the transaction is recognized, each asset, liability, revenue, expense, gain, or loss arising from the transaction shall be measured and recorded in the functional currency of the recording entity by use of the exchange rate in effect at that date (paragraphs 26-28).
b. At each balance sheet date, recorded balances that are denominated in a currency other than the functional currency of the recording entity shall be adjusted to reflect the current exchange rate.

Transaction Gains and Losses to Be Excluded from Determination of Net Income

20. Gains and losses on the following foreign currency transactions shall not be included in determining net income but shall be reported in the same manner as translation adjustments (paragraph 13):

a. Foreign currency transactions that are designated as, and are effective as, economic hedges of a net investment in a foreign entity, commencing as of the designation date
b. Intercompany foreign currency transactions that are of a long-term-investment nature (that is, settlement is not planned or anticipated in the foreseeable future), when the entities to the transaction are consolidated, combined, or accounted for by the equity method in the reporting enterprise's financial statements

21. A gain or loss on a forward contract or other foreign currency transaction that is intended to hedge an identifiable foreign currency commitment (for example, an agreement to purchase or sell equipment) shall be deferred and included in the measurement of the related foreign currency transaction (for example, the purchase or the sale of the equipment). Losses shall not

be deferred, however, if it is estimated that deferral would lead to recognizing losses in later periods. A foreign currency transaction shall be considered a hedge of an identifiable foreign currency commitment provided both of the following conditions are met:

a. The foreign currency transaction is designated as, and is effective as, a hedge of a foreign currency commitment.
b. The foreign currency commitment is firm.

The required accounting shall commence as of the designation date. The portion of a hedging transaction that shall be accounted for pursuant to this paragraph is limited to the amount of the related commitment. If a hedging transaction that meets conditions (a) and (b) above exceeds the amount of the related commitment, the gain or loss pertaining to the portion of the hedging transaction in excess of the commitment shall be deferred to the extent that the transaction is intended to provide a hedge on an after-tax basis. A gain or loss so deferred shall be included as an offset to the related tax effects in the period in which such tax effects are recognized; consequently, it shall not be included in the aggregate transaction gain or loss disclosure required by paragraph 30. A gain or loss pertaining to the portion of a hedging transaction in excess of the amount that provides a hedge on an after-tax basis shall not be deferred. Likewise, a gain or loss pertaining to a period after the transaction date of the related commitment shall not be deferred. If a foreign currency transaction previously considered a hedge of a foreign currency commitment is terminated before the transaction date of the related commitment, any deferred gain or loss shall continue to be deferred and accounted for in accordance with the requirements of this paragraph.

Exchange Rates

26. The exchange rate is the ratio between a unit of one currency and the amount of another currency for which that unit can be exchanged at a particular time. If exchangeability between two currencies is temporarily lacking at the transaction date or balance sheet date, the first subsequent rate at which exchanges could be made shall be used for purposes of this Statement. If the lack of exchangeability is other than temporary, the propriety of consolidating, combining, or accounting for the foreign operation by the equity method in the financial statements of the enterprise shall be carefully considered (ARB 43, Chapter 12, paragraph 8).

27. The exchange rates to be used for translation of foreign currency transactions and foreign currency statements are as follows:

a. Foreign Currency Transactions - The applicable rate at which a particular transaction could be settled at the transaction date shall be used to translate and record the transaction. At a subsequent balance sheet date, the current rate is that rate at which the related receivable or payable could be settled at that date.
b. Foreign Currency Statements - In the absence of unusual circumstances, the rate applicable to conversion of a currency for purposes of dividend remittances shall be used to translate foreign currency statements.[4]

[4] If unsettled intercompany transactions are subject to and translated using preference or penalty rates, translation of foreign currency statements at the rate applicable to dividend remittances may cause a difference between intercompany receivables and payables. Until that difference is eliminated by settlement of the intercompany transaction, the difference shall be treated as a receivable or payable in the enterprise's financial statements.

28. If a foreign entity whose balance sheet date differs from that of the enterprise is consolidated or combined with or accounted for by the equity method in the financial statements of the enterprise, the current rate is the rate in effect at the foreign entity's balance sheet date for purposes of applying the requirements of this Statement to that foreign entity.

Use of Averages or Other Methods of Approximation

29. Literal application of the standards in this Statement might require a degree of detail in record keeping and computations that could be burdensome as well as unnecessary to produce reasonable approximations of the results. Accordingly, it is acceptable to use averages or other methods of approximation. For example, the propriety of using average rates to translate revenue and expense amounts is noted in paragraph 12. Likewise, the use of other time-and effort-saving methods to approximate the results of detailed calculations is permitted.

Disclosure

30. The aggregate transaction gain or loss included in determining net income for the period shall be disclosed in the financial statements or notes thereto. For that disclosure, gains and losses on forward contracts determined in conformity with the requirements of paragraphs 18 and 19 shall be considered transaction gains or losses. Certain enterprises, primarily banks, are dealers in foreign exchange. Although certain gains or losses from dealer transactions may fit the definition of transaction gains or losses in this Statement, they may be disclosed as dealer gains or losses rather than as transaction gains or losses.

31. An analysis of the changes during the period in the separate component of equity for cumulative translation adjustments shall be provided in a separate financial statement, in notes to the financial statements, or as part of a statement of changes in equity. At a minimum, the analysis shall disclose:

a. Beginning and ending amount of cumulative translation adjustments
b. The aggregate adjustment for the period resulting from translation adjustments (paragraph 13) and gains and losses from certain hedges and intercompany balances (paragraph 20)
c. The amount of income taxes for the period allocated to translation adjustments (paragraph 24)
d. The amounts transferred from cumulative translation adjustments and included in determining net income for the period as a result of the sale or complete or substantially complete liquidation of an investment in a foreign entity (paragraph 14)

32. An enterprise's financial statements shall not be adjusted for a rate change that occurs after the date of the enterprise's financial statements or after the date of the foreign currency statements of a foreign entity if they are consolidated, combined, or accounted for by the equity method in the financial statements of the enterprise. However, disclosure of the rate change and its effects on unsettled balances pertaining to foreign currency transactions, if significant, may be necessary.

OTHER SOURCES OF INFORMATION

22. The Invested Assets Working Group of the Valuation of Securities (EX4) Task Force presented the following draft guidance to the Blanks Task Force:

Attachment A

NAIC ACCOUNTING PRINCIPLES ACCOUNTING FOR INVESTMENTS DENOMINATED IN FOREIGN CURRENCY OTHER THAN INVESTMENTS HELD IN SUPPORT OF INSURANCE BUSINESS DENOMINATED IN THE SAME FOREIGN CURRENCY

Investments denominated in foreign currencies other than investments held in support of insurance business denominated in the same foreign currency, should be accounted for at their

U.S. dollar equivalent values. Income recognized during an accounting period should be recorded at its weighted average U.S. dollar equivalent value, and balance sheet data should be recorded at its U.S. dollar equivalent value as of the balance sheet date.

Changes in balance sheet investment value due to foreign currency translation should be recorded as unrealized capital gains and losses on such investment until the investment is repaid or sold. Upon sale or repayment previously recorded unrealized capital gains and losses should be reversed and the foreign exchange profit or loss for the entire holding period should be recorded as a realized capital gain or loss.

Transactions involving settlement in cash, such as purchases, sales, and receipt of income, should be recorded at their U.S. dollar equivalent value based on the foreign currency exchange rate as of the transaction date. Any foreign currency exchange gains or losses on purchases, sales, maturities or changes in income accruals should be recorded as capital gain or loss realized on the purchase, sale or maturity or as adjustments to income respectively.

Nominal information such as par value may be expressed in the foreign currency or U.S. dollar equivalent (description of issue), but where the information is displayed comparatively (column of par values), U.S. dollar equivalent amount should be used. Ratios and factors should be based on data that is entirely consistent with respect to currency.

Attachment B

ACCOUNTING FOR INVESTMENTS DENOMINATED IN FOREIGN CURRENCY HELD IN SUPPORT OF INSURANCE BUSINESS DENOMINATED IN THE SAME FOREIGN CURRENCY

Some insurers engage in operations in foreign countries with the premiums collected and claims paid in local currency. As in any insurance operation there will at times be uncollected premiums policy reserves, unpaid claims, and other incomplete transactions that must be recorded in the insurer's balance sheet in the annual statement. For ease in maintaining policy records, the premiums reserves, and claims normally are recorded in U.S. dollars at the rate of exchange that is in effect at the time the policy is written, or when the company receives notification of the claim. Changes in exchange rates, while not affecting the foreign policyholder, do affect the value of the foreign business as it is recorded in U.S. dollars.

Canadian operations, comprising less than 10% of the insurance company’s assets or liabilities can be translated to U.S. dollars by making an adjustment to the net assets of the foreign operation. The adjustment is calculated by summarizing the assets and liabilities in the foreign currency and in U.S. dollars. The net value is converted to U.S. dollars at the current rate of exchange and compared with the net value in U.S. dollars recorded by the company. Any difference in the net value to current exchange rates is recorded as a separate asset or liability and the change in the foreign exchange adjustment is recorded as an unrealized capital gain or loss.

All other foreign operations must be translated to U.S. dollars in accordance with the provisions of Financial Accounting Standards Board Statement of Financial Accounting Standard (FAS) No. 52, Foreign Currency Translation. FAS 52 requires each financial statement line to be translated to U.S. dollars by applying the following exchange rates: l) the current exchange rate at the balance sheet date to assets and liabilities and 2) a weighted average rate to revenue, expenses, gains, losses and surplus adjustments. The weighted-average rate is aimed at approximating the translation that would have been achieved had the current rate at the time of each translation been applied. Gains or losses due to translating foreign operations to U.S. dollars should be recorded as an unrealized capital gain or loss.

Statutory Issue Paper No. 82

Stock Options and Stock Purchase Plans

STATUS
Finalized March 16, 1998

Current Authoritative Guidance for Stock Options and Stock Repurchase Plans: SSAP No. 104R
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 13

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory guidance provides for disclosures concerning deferred compensation plans such as profit sharing, stock options or incentive plans in the NAIC Annual Statement Instructions. However, specific guidance regarding the accounting for such plans is not currently provided.

2. GAAP addresses the accounting for stock issued to employees in *Accounting Principles Board Opinion No. 25*, *Accounting for Stock Issued to Employees* (APB 25), *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins* (ARB 43), *Accounting Interpretation of Accounting Principles Board Opinion No. 25*, *Accounting for Stock Issued to Employees* (AIN-APB 25), *FASB Interpretation No. 28*, *Accounting for Stock Appreciation Rights and Other Variable Stock Option or Award Plans* (FIN 28), *FASB Interpretation No. 38*, *Determining the Measurement Date for Stock Option, Purchase, and Award Plans Involving Junior Stock* (FIN 38) and *FASB Statement No. 123*, *Accounting for Stock-Based Compensation* (FAS 123).

3. This purpose of this issue paper is to establish statutory accounting principles for employee stock options and stock purchase plans that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. A plan is any arrangement to issue stock to officers and employees, as a group or individually. Stock purchase and stock option plans shall be classified as either compensatory or noncompensatory. A reporting entity recognizes no compensation expense for services received in return for stock issued through noncompensatory plans. Stock purchase and stock option plans which do not meet the criteria of a noncompensatory plan shall be classified as compensatory. A reporting entity recognizes compensation cost for stock issued through compensatory plans.

Noncompensatory Plans

5. The following four characteristics are essential in a noncompensatory plan:

a. substantially all full-time employees meeting limited employment qualifications may participate (employees owning a specified percent of the outstanding stock and executives may be excluded);

b. stock is offered to eligible employees equally or based on a uniform percentage of salary or wages (the plan may limit the number of shares of stock that an employee may purchase through the plan);

c. the time permitted for exercise of an option or purchase right is limited to a reasonable period; and

d. the discount from the market price of the stock is no greater than would be reasonable in an offer of stock to stockholders or others.

Compensatory Plans

6. Consideration that a reporting entity receives for stock issued through employee stock option, purchase, and award plans in the form of services shall be measured by the fair value of the stock at the measurement date less the amount, if any, that the employee is required to pay.

7. The measurement date for determining compensation cost in stock option, purchase, and award plans is the first date on which are known both (1) the number of shares that an individual employee is entitled to receive and (2) the option or purchase price, if any. That date for many or most plans is the date an option or purchase right is granted or stock is awarded to an individual employee. However, the measurement date may be later than the date of grant or award in plans with variable terms that depend on events after the date of grant or award. Thus, a reporting entity recognizes compensation cost for stock issued through compensatory plans unless the employee pays an amount that is at least equal to the quoted market price of the stock at the measurement date.

8. Compensation cost in stock option, purchase, and award plans shall be recognized as an expense of one or more periods in which an employee performs services and also as part or all of the consideration received for stock issued to the employee through a plan. The grant or award may specify the period or periods during which the employee performs services, or the period or periods may be inferred from the terms or from the past pattern of grants or awards. An employee may perform services in several periods before a reporting entity issues stock for those services. The reporting entity shall accrue compensation expense in each period in which the services are performed. If the measurement date is later than the date of grant or award, a reporting entity shall record the compensation expense each period from date of grant or award to date of measurement based on the fair value of the stock at the end of each period.

9. Quoted market prices in active markets are the best evidence of fair value and are to be used as fair value, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information available in the circumstances.

10. If stock is issued in a plan before some or all of the services are performed, part of the consideration recorded for the stock issued is unearned compensation and shall be reported as a component of unassigned funds. The unearned compensation should be accounted for as expense of the period or periods in which the employee performs service.

Accounting for Income Tax Benefits

11. A reporting entity may obtain an income tax benefit related to stock issued to an employee through a stock option, purchase, or award plan. Generally, the reporting entity is entitled to a deduction for income tax purposes of the amount that an employee reports as ordinary income, and the deduction is allowable to the corporation in the year in which the amount is includable in the gross income of the employee. Thus, the amount and timing of the deduction for income tax purposes, if any, may differ from the related compensation expense recognized in the financial statements. For example, the reporting entity may be entitled to a deduction for income tax purposes even though no compensation expense is recognized in measuring net income.

12. The income tax reduction, if any, related to a stock option, purchase, or award plan shall be accounted for within one or more of the following three components:

a. Income tax expense for a period shall be reduced by no more than the income tax reduction related to the stock option, purchase, or award plan that is proportionate to compensation expense recognized during the period, for such plan.

b. Compensation expense that is deductible in the income tax return for a period different from the one in which such expense is reported in measuring net income results in a temporary difference. Deferred income taxes shall be recognized for such differences and included with all deferred income taxes as a separate component of gains and losses in surplus consistent with *Issue Paper No. 83—Accounting for Income Taxes*.

c. The remainder of the income tax reduction, if any, is related to an amount that is deductible for income tax purposes but does not affect net income. The remainder of the income tax reduction shall not be included in income, but shall be added to capital stock or gross paid-in and contributed surplus in the period of the income tax reduction. Conversely, a tax reduction may be less than if recorded compensation expenses were deductible for income tax purposes. If so, the reporting entity may deduct the difference from capital stock or gross paid-in and contributed surplus in the period of the income tax reduction, to the extent that income tax reductions under the same or similar compensatory stock option, purchase, or award plans have been included in capital stock or gross paid-in and contributed surplus.

13. In certain situations, it may be advantageous to the reporting entity to compensate an employee to make an option that is detrimental to him but advantageous to the company. A reporting entity may, either by cash payment or otherwise reimburse an employee for his action related to a stock option, purchase, or award plan that results in a reduction of income taxes of the reporting entity; for example, in incentive stock purchase plans a reduction in the purchase price of stock is allowed. The reporting entity shall include any such reimbursement as an expense.

14. Stock option, purchase, and award plans of the principal stockholder (i.e., a holding company) or equity instruments granted or otherwise transferred directly to an employee by a principal stockholder shall be treated as contributed surplus by the principal stockholder with the offsetting charge accounted for in accordance with this issue paper, unless such transfers are clearly for a purpose other than compensation for services rendered the reporting entity.

15. Compensation expense related to stock appreciation rights and other variable stock option or award plans shall be measured at the end of each period as the amount by which the quoted market value of the shares of the enterprise's stock covered by a grant exceeds the option price or value specified under the plan and should be accrued as a charge to expense over the periods the employee performs the related services. Changes in the quoted market value should be reflected as an adjustment of accrued compensation and compensation expense in the periods in which the changes occur until the date the number of shares and purchase price, if any, are both known.

Disclosure

16. The notes to financial statements shall disclose deferred stock compensation plans for employees such as profit sharing, stock options or incentive plans. If warranted by materiality, the following information with regard to stock options shall be furnished and analogous information shall be supplied for warrants or rights:

a. A brief description of the terms of each option arrangement including the title and amount of securities to option; the year or years during which the options were granted; and the year or years during which the optionees became, or will become, entitled to exercise the options;

b. The number of shares under option at the end of the statement year; the number of shares with respect to which options became exercisable during the year; and the number of shares with respect to which options were exercised during the year; and the option price and fair market value thereof, per share, and in total for each of the three categories;

c. The required information may be summarized as appropriate with respect to each of these categories. The above information shall be supplied whether the stock involved relates to the company, the parent of the company, a subsidiary of the company, or an affiliated corporation. The information shall be shown separately for (1) agents and brokers and (2) employees and others.

DISCUSSION

17. Current statutory guidance provides for disclosures concerning deferred compensation plans such as profit sharing, stock options or incentive plans in the Annual Statement Instructions. This issue paper is consistent with such guidance. This issue paper expands current statutory guidance to provide specific guidance regarding the accounting for such plans. *Issue Paper No. 78—Employee Stock Ownership* Plans (Issue Paper No. 78) addresses the accounting for Employee Stock Ownership Plans by the plan sponsor.

18. This issue paper rejects FAS 123. FAS 123 encourages, but does not require, that companies report stock based compensation plans using a fair value method of accounting versus the intrinsic value method of accounting promulgated in APB 25. The differences between these two methods of accounting primarily affect the accounting related to stock option plans. Under the intrinsic value method of accounting, the compensation cost of such plans is measured by the excess, if any, of the market price of the underlying stock versus the exercise price of the option at the measurement date. The fair value method of accounting requires that a fair value be determined for the options, generally by utilization of option-pricing models or other valuation techniques, and that the fair value be charged to compensation cost with a corresponding credit to paid in capital. The fair value method of accounting for these plans is rejected because it does not reflect a change in statutory assets or liabilities. Consistent with rejection of FAS 123, the disclosure requirements in the conclusion above retain the current statutory requirements.

19. This issue paper adopts GAAP guidance set forth in APB 25 except for paragraph 19 regarding disclosure. The disclosure required by this issue paper is consistent with the disclosure requirements of ARB 43, Chapter 13B, prior to its amendment by FAS 123. This issue paper adopts GAAP guidance set forth in ARB 43 with modification to exclude the additions to paragraph 2 and the deletion of paragraph 15 pursuant to FAS 123. This issue paper also adopts the GAAP guidance set forth in AIN-APB 25. This issue paper also adopts the GAAP guidance set forth in FIN 28 and FIN 38.

20. Additionally, this issue paper adopts the following pronouncements which clarify and/or provide guidance in certain circumstances (such pronouncements are not reproduced herein due to length and limited scope):

FASB Emerging Issues Task Force Issue No. 84-13, Purchase of Stock Options and Stock Appreciation Rights in a Leveraged Buyout
FASB Emerging Issues Task Force Issue No. 84-18, Stock Option Pyramiding

FASB Emerging Issues Task Force Issue No. 87-6, Adjustments Relating to Stock Compensation Plans
FASB Emerging Issues Task Force Issue No. 87-23, Book Value Stock Purchase Plans
FASB Emerging Issues Task Force Issue No. 87-33, Stock Compensation Issues Related to Market Decline
FASB Emerging Issues Task Force Issue No. 88-6, Book Value Plans in an Initial Public Offering

> *FASB Emerging Issues Task Force Issue No. 90-7, Accounting for a Reload Stock Option*
> *FASB Emerging Issues Task Force Issue No. 90-9, Changes to Fixed Employee Stock Option Plans as a Result of Equity Restructuring*
> *FASB Emerging Issues Task Force Issue No. 94-6, Accounting for the Buyout of Compensatory Stock Options*
> *FASB Emerging Issues Task Force Issue No. 95-16, Accounting for Stock Compensation Arrangements with Employer Loan Features under APB Opinion No. 25*

This issue paper rejects the following pronouncements:

> *FASB Emerging Issues Task Force Issue No. 96-3, Accounting for Equity Instruments That Are Issued for Consideration Other Than Employee Services Under FASB Statement No. 123*
> *FASB Emerging Issues Task Force Issue No. 96-18, Accounting for Equity Instruments with Variable Terms That Are Issue For Consideration Other Than Employee Services Under FASB Statement No. 123*

21. The conclusions above are consistent with the consistency and recognition concepts in the Statement of Concepts. Pertinent excerpts follow:

> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.
>
> Recognition
>
> The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.
>
> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.
>
> Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., excess of statutory reserves over statement reserves, interest maintenance reserves, asset valuation reserves, and others).
>
> Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.
>
> SAP income reflects the extent that changes have occurred in SAP assets and liabilities for current period transactions, except changes in capital resulting from receipts or distributions to

owners. SAP income also excludes certain other direct charges to surplus which are not directly attributable to the earnings process, (e.g., changes in non-admitted assets).

Drafting Notes/Comments

- *Issue Paper No. 78—Employee Stock Ownership Plans* addresses the accounting for Employee Stock Ownership Plans by the plan sponsor.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

22. The Life Annual Statement Instructions provide the following guidance (only the pertinent excerpts are included below):

> 6. Retirement Plans, Deferred Compensation and Other Postretirement Benefit Plans
>
> b. Deferred Compensation Plans
>
> 1. Indicate if the company has deferred compensation plans for officers or employees such as profit sharing, stock options or incentive plans.
>
> 2. If warranted by materiality, the following information with regard to stock options should be furnished and analogous information should be supplied for warrants or rights:
>
> a. A brief description of the terms of each option arrangement including the title and amount of securities to option; the year or years during which the options were granted; and the year or years during which the optionees became, or will become, entitled to exercise the options.
>
> b. The number of shares under option at the end of the statement year; the number of shares with respect to which options became exercisable during the year; and the number of shares with respect to which options were exercised during the year; and the option price and fair market value thereof, per share, and in total for each of the three categories.
>
> Options to buy stock are deemed to be granted on the date that a designated number of shares are assigned to a specific individual, notwithstanding the stipulation at that time that such options are not exercisable until certain attached conditions are met, such as those relating to persistency of insurance produced by the optionee or his continuance in employment for a period of years.
>
> The required information may be summarized as appropriate with respect to each of these categories. The above information should be supplied whether the stock involved relates to the company, the parent of the company, a subsidiary of the company, or an affiliated corporation. The information should be shown separately for (1) agents and brokers and (2) employees and others.

The Property and Casualty Annual Statement Instructions contain similar guidance.

Generally Accepted Accounting Principles

23. ARB 43 provides the following guidance (only the pertinent excerpts are included below):

> Chapter 13: COMPENSATION:
>
> Section B -- Compensation Involved in Stock Option and Stock Purchase Plans
>
> 1. The practice of granting to officers and other employees options to purchase or rights to subscribe for shares of a corporation's capital stock has been followed by a considerable number of corporations over a period of many years. To the extent that such options and rights involve a measurable amount of compensation, this cost of services received should be accounted for as such. The amount of compensation involved may be substantial and omission of such costs from the corporation's accounting may result in overstatement of net income to a significant degree. Accordingly, consideration is given herein to the accounting treatment of compensation represented by stock options or purchase rights granted to officers and other employees.[1]
>
> [1] Bulletin 37, "Accounting for Compensation in the Form of Stock Options," was issued in November, 1948. Issuance of a revised bulletin in 1953 and its expansion to include stock purchase plans were prompted by the very considerable increase in the use of certain types of option and purchase plans following the enactment in 1950 of Section 130A of the Internal Revenue Code. This section granted specialized tax treatment to employee stock options if certain requirements were met as to the terms of the option, as to the circumstances under which the option was granted and could be exercised and as to the holding and disposal of the stock acquired thereunder. In general, the effect of Section 130A is to eliminate or minimize the amount of income taxable to the employee as compensation and to deny to the issuing corporation any tax deduction in respect of such restricted options. In 1951, Federal Salary Stabilization Board issued rules and regulations relating to stock options and purchase rights granted to employees whereby options generally comparable in nature to the restricted stock options specified in Section 130A might be considered for its purposes not to involve compensation, or to involve compensation only in limited amounts.
>
> 2. For convenience, this section will discuss primarily the problems of compensation raised by stock option plans. However, the committee feels that substantially the same problems may be encountered in connection with stock purchase plans made available to employees, and the discussion below is applicable to such plans also. *FASB Statement No. 123, Accounting for Stock-Based Compensation,* specifies a fair value based method of accounting for stock-based compensation plans and encourages entities to adopt that method for all arrangements under which employees receive shares of stock or other equity instruments of the employer or the employer incurs liabilities to employees in amounts based on the price of the employer's stock. However, Statement 123 permits an employer in determining its net income to continue to apply the accounting provisions of this section and Opinion 25 to all its stock-based employee compensation arrangements. Entities that continue to apply this section and Opinion 25 shall comply with the disclosure requirements of Statement 123.
>
> Rights Involving Compensation
>
> 3. Stock options involving an element of compensation usually arise out of an offer or agreement by an employer corporation to issue shares of its capital stock to one or more officers or other employees (hereinafter referred to as grantees) at a stated price. The grantees are accorded the right to require issuance of the shares either at a specified time or during some determinable period. In some cases the grantee's options are exercisable only if at the time of exercise certain conditions exist, such as that the grantee is then or until a specified date has been an employee. In other cases, the grantees may have undertaken certain obligations, such as to remain in the employment of the corporation for at least a specified period, or to take the shares only for investment purposes and not for resale.
>
> Rights Not Involving Compensation

> 4. Stock option plans in many cases may be intended not primarily as a special form of compensation but rather as an important means of raising capital, or as an inducement to obtain greater or more widespread ownership of the corporation's stock among its officers and other employees. In general, the terms under which such options are granted, including any conditions as to exercise of the options or disposal of the stock acquired, are the most significant evidence ordinarily available as to the nature and purpose of a particular stock option or stock option plan. In practice, it is often apparent that a particular option or plan involves elements of two or more of the above purposes. Where the inducements are not larger per share than would reasonably be required in an offer of shares to all shareholders for the purpose of raising an equivalent amount of capital, no compensation need be presumed to be involved.
>
> 5. Stock purchase plans also are frequently an integral part of a corporation's program to secure equity capital or to obtain widespread ownership among employees, or both. In such cases, no element of compensation need be considered to be present if the purchase price is not lower than is reasonably required to interest employees generally or to secure the contemplated funds.
>
> Other Considerations
>
> 14. Upon exercise of an option the sum of the cash received and the amount of the charge to income should be accounted for as the consideration received on issuance of the stock.
>
> 15. In connection with financial statements, disclosure should be made as to the status of the option or plan at the end of the period of report, including the number of shares under option, the option price, and the number of shares as to which options were exercisable. As to options exercised during the period, disclosure should be made of the number of shares involved and the option price thereof.

24. APB 25, prior to amendment by FAS 123 as FAS 123 is rejected in this issue paper, provides the following guidance (only the pertinent excerpts are included below):

> 1. Many corporations have adopted various plans, contracts, and agreements to compensate officers and other employees by issuing to them stock of the employer corporation. Under traditional stock option and stock purchase plans an employer corporation grants options to purchase a fixed number of shares of stock of the corporation at a stated price during a specified period or grants rights to purchase shares of stock of the corporation at a stated price, often at a discount from the market price of the stock at the date the rights are granted. Stock options and purchase rights are normally granted for future services of employees. *Accounting Research Bulletin No. 43, Chapter 13B, Compensation Involved in Stock Option and Stock Purchase Plans (1953*), contains the principles of accounting for those plans (reproduced in Appendix B).
>
> 2. Among traditional plans not described in Chapter 13B of ARB No. 43 are plans in which an employer corporation awards to employees shares of stock of the corporation for current or future services. Some corporations have replaced or supplemented traditional plans with more complex plans, contracts, and agreements for issuing stock. An arrangement may be based on variable factors that depend on future events; for example, a corporation may award a variable number of shares of stock or may grant a stock option with a variable option price. Other arrangements combine the characteristics of two or more types of plans, and some give an employee an election.
>
> 3. Accounting for employee services received as consideration for stock issued is included in an accounting research study[1] on stockholders' equity that is in process.

[1] Accounting research studies are not pronouncements of the Board or of the Institute but are published for the purpose of stimulating discussion on important accounting matters.

4. This Opinion deals with some aspects of accounting for stock issued to employees through both noncompensatory and compensatory plans (a plan is any arrangement to issue stock to officers and employees, as a group or individually). ARB No. 43, Chapter 13B remains in effect for traditional stock option and stock purchase plans except that the measure of compensation is redefined in this Opinion. This Opinion recognizes certain practices that evolved after Chapter 13B of ARB No. 43 was adopted and applies the principles of that chapter to other plans in which the number of shares of stock that may be acquired by or awarded to an employee and the option or purchase price, if any, are known or determinable at the date of grant or award. It also specifies the accounting for (a) plans in which either the number of shares of stock or the option or purchase price depends on future events and (b) income tax benefits related to stock issued to employees through stock option, purchase, and award plans. Appendix A to the Opinion illustrates measuring and accounting for compensation under typical plans.

Differing Views

5. Some accountants believe that compensation cost for all compensatory plans should be recorded at the date of grant or not later than the date of exercise. They believe that past experience and outside evidence of values can overcome difficulties in measuring compensation. Other accountants believe that compensation need not be recorded if an employee pays an amount that is at least equal to the market price of the stock at the date of grant and that problems in accounting for compensation plans pertain to plans in which the number of shares of stock or the option or purchase price cannot be determined until after the date of grant or award. Still other accountants, although they agree in principle with the first group, believe that progress will result from specifying the accounting for plans with variable factors but leaving Chapter 13B of ARB No. 43 in effect with modifications while the entire topic of accounting for compensation involving stock is studied.

6. Some accountants believe that a tax benefit attributable to compensation that is deductible in computing taxable income but is not recorded as an expense of any period results from a permanent difference. The benefit should therefore be recorded under paragraphs 33 and 34 of *APB Opinion No 11, Accounting for Income Taxes*, as a reduction of income tax expense for the period that the benefit is received. Other accountants believe that the tax benefit results from issuing stock and should be accounted for as an adjustment of capital in addition to par or stated value of capital stock in accordance with paragraph 52 of APB Opinion No. 11.

OPINION

Noncompensatory Plans

7. Paragraphs 4 and 5 of Chapter 13B of ARB No. 43 describe stock option and stock purchase plans that may not be intended primarily to compensate employees. An employer corporation recognizes no compensation for services in computing consideration received for stock that is issued through noncompensatory plans. The Board concludes that at least four characteristics are essential in a noncompensatory plan: (a) substantially all full-time employees meeting limited employment qualifications may participate (employees owning a specified percent of the outstanding stock and executives may be excluded), (b) stock is offered to eligible employees equally or based on a uniform percentage of salary or wages (the plan may limit the number of shares of stock that an employee may purchase through the plan), (c) the time permitted for exercise of an option or purchase right is limited to a reasonable period, and (d) the discount from the market price of the stock is no greater than would be reasonable in an offer of stock to stockholders or others. An example of a noncompensatory plan is the "statutory" employee stock purchase plan that qualifies under Section 423 of the Internal Revenue Code.

Compensatory Plans

8. Plans that do not possess the four characteristics of noncompensatory plans are classified as compensatory plans. Since the major principles of Chapter 13B of ARB No. 43 are

not changed, classification as a compensatory plan does not necessarily require that compensation cost be recognized.[2]

[2] All compensation arrangements involving stock, regardless of the name given, should be accounted for according to their substance. For example, an arrangement in which the consideration for stock issued to an employee is a nonrecourse note secured by the stock issued may be in substance the same as the grant of a stock option and should be accounted for accordingly. The note should be classified as a reduction of stockholders' equity rather than as an asset.

9. Services as Consideration for Stock Issued. The consideration that a corporation receives for stock issued through a stock option, purchase, or award plan consists of cash or other assets, if any, plus services received from the employee.

10. Measuring Compensation for Services. Compensation for services that a corporation receives as consideration for stock issued through employee stock option, purchase, and award plans should be measured by the quoted market price of the stock at the measurement date less the amount, if any, that the employee is required to pay. That is the principle in Chapter 13B of ARB No. 43 with two modifications: (a) the meaning of fair value of stock for compensatory plans is narrowed and (b) the measurement date for plans with a variable number of shares of stock or a variable option or purchase price is different.

a. Quoted market price is substituted for fair value. The Board acknowledges the conclusion in Chapter 13B that "market quotations at a given date are not necessarily conclusive evidence" of fair value of shares of stock but concludes that, for purposes of this Opinion, the unadjusted quoted market price of a share of stock of the same class that trades freely in an established market should be used in measuring compensation. An employee's right to acquire or receive shares of stock is presumed to have a value and that value stems basically from the value of the stock to be received under the right. However, the value of the right is also affected by various other factors, some of which tend to diminish its value and some of which tend to enhance it. Those opposing factors include a known future purchase price (or no payment), restrictions on the employee's right to receive stock, absence of commissions on acquisition, different risks as compared with those of a stockholder, tax consequences to the employee, and restrictions on the employee's ability to transfer stock issued under the right. The effects of the opposing factors are difficult to measure, and a practical solution is to rely on quoted market price to measure compensation cost related to issuing both restricted (or letter) and unrestricted stock through stock option, purchase, or award plans. If a quoted market price is unavailable, the best estimate of the market value of the stock should be used to measure compensation.

b. The measurement date for determining compensation cost in stock option, purchase, and award plans is the first date on which are known both (1) the number of shares that an individual employee is entitled to receive and (2) the option or purchase price, if any. That date for many or most plans is the date an option or purchase right is granted or stock is awarded to an individual employee and is therefore unchanged from Chapter 13B of ARB No. 43. However, the measurement date may be later than the date of grant or award in plans with variable terms that depend on events after date of grant or award.

Thus a corporation recognizes compensation cost for stock issued through compensatory plans unless the employee pays an amount that is at least equal to the quoted market price of the stock at the measurement date.

11. Applying the measurement principle--The following supplements paragraph 10 for special situations in some plans.

a. Measuring compensation by the cost to an employer corporation of reacquired (treasury) stock that is distributed through a stock option, purchase, or award plan is not acceptable practice. The only exception is that compensation cost under a plan with all the provisions described in paragraph 11.c. may be measured by the cost of stock that the corporation (1) reacquires during the fiscal period for which the stock is to be awarded and (2) awards shortly thereafter to employees for services during that period.

b. The measurement date is not changed from the grant or award date to a later date solely by provisions that termination of employment reduces the number of shares of stock that may be issued to an employee.

c. The measurement date of an award of stock for current service may be the end of the fiscal period, which is normally the effective date of the award, instead of the date that the award to an employee is determined if (1) the award is provided for by the terms of an established formal plan, (2) the plan designates the factors that determine the total dollar amount of awards to employees for the period (for example, a percent of income), although the total amount or the individual awards may not be known at the end of the period, and (3) the award pertains to current service of the employee for the period.

d. Renewing a stock option or purchase right or extending its period establishes a new measurement date as if the right were newly granted.

e. Transferring stock or assets to a trustee, agent, or other third party for distribution of stock to employees under the terms of an option, purchase, or award plan does not change the measurement date from a later date to the date of transfer unless the terms of the transfer provide that the stock (1) will not revert to the corporation, (2) will not be granted or awarded later to the same employee on terms different from or for services other than those specified in the original grant or award, and (3) will not be granted or awarded later to another employee.

f. The measurement date for a grant or award of convertible stock or (stock that is otherwise exchangeable for other securities of the corporation) is the date on which the ratio of conversion (or exchange) is known unless other terms are variable at that date (paragraph 10.b.). The higher of the quoted market price at the measurement date of (1) the convertible stock granted or awarded or (2) the securities into which the original grant or award is convertible should be used to measure compensation.

g. Cash paid to an employee to settle an earlier award of stock or to settle a grant of option to the employee should measure compensation cost. If the cash payment differs from the earlier measure of the award of stock or grant of option, compensation cost should be adjusted (paragraph 15). The amount that a corporation pays to an employee to purchase stock previously issued to the employee through a compensation plan is “cash paid to an employee to settle an earlier award of stock or to settle a grant of option” if stock is reacquired shortly after issuance. Cash proceeds that a corporation receives from sale of awarded stock or stock issued on exercise of an option and remits to the taxing authorities to cover required withholding of income taxes on an award is not “cash paid to an employee to settle an earlier award of stock or to settle a grant of option” in measuring compensation cost.

h. Some plans are a combination of two or more types of plans. An employer corporation may need to measure compensation for the separate parts. Compensation cost for a combination plan permitting an employee to elect one part should be measured according to the terms that an employee is most likely to elect based on the facts available each period.

12. Accruing Compensation Cost. Compensation cost in stock option, purchase, and award plans should be recognized as an expense of one or more periods in which an employee performs services and also as part or all of the consideration received for stock issued to the employee through a plan. The grant or award may specify the period or periods during which the employee performs services, or the period or periods may be inferred from the terms or from the past pattern of grants or awards (ARB No. 43, Chapter 13B, paragraph 14; APB Opinion No. 12, Omnibus Opinion--1967, paragraph 6).

13. An employee may perform services in several periods before an employer corporation issues stock to him for those services. The employer corporation should accrue compensation expense in each period in which the services are performed. If the measurement date is later than the date of grant or award, an employer corporation should record the compensation expense each period from date of grant or award to date of measurement based on the quoted market price of the stock at the end of each period.

14. If stock is issued in a plan before some or all of the services are performed,[3] part of the consideration recorded for the stock issued is unearned compensation and should be shown as a separate reduction of stockholders' equity. The unearned compensation should be accounted for as expense of the period or periods in which the employee performs service.

[3] State law governs the issuance of a corporation's stock including the acceptability of issuing stock for future services.

15. Accruing compensation expense may require estimates, and adjustment of those estimates in later periods may be necessary (*APB Opinion No. 20, Accounting Changes*, paragraphs 31-33. For example, if a stock option is not exercised (or awarded stock is returned to the corporation) because an employee fails to fulfill an obligation, the estimate of compensation expense recorded in previous periods should be adjusted by decreasing compensation expense in the period of forfeiture.

16. Accounting for Income Tax Benefits. An employer corporation may obtain an income tax benefit related to stock issued to an employee through a stock option, purchase, or award plan. A corporation is usually entitled to a deduction for income tax purposes of the amount that an employee reports as ordinary income, and the deduction is allowable to the corporation in the year in which the amount is includable in the gross income of the employee. Thus, a deduction for income tax purposes may differ from the related compensation expense that the corporation recognizes,[4] and the deduction may be allowable in a period that differs from the one in which the corporation recognizes compensation expense in measuring net income.

[4] A corporation may be entitled to a deduction for income tax purposes even though it recognizes no compensation expenses in measuring net income.

17. An employer corporation should reduce income tax expense for a period by no more of a tax reduction under a stock option, purchase, or award plan than the proportion of the tax reduction that is related to the compensation expense for the period. Compensation expenses that are deductible in a tax return in a period different from the one in which they are reported as expenses in measuring net income result in temporary differences, and deferred taxes should be recorded in accordance with the provisions of *FASB Statement No. 109, Accounting for Income Taxes*. The remainder of the tax reduction, if any, is related to an amount that is deductible for income tax purposes but does not affect net income. The remainder of the tax reduction should

not be included in income but should be added to capital in addition to par or stated value of capital stock in the period of the tax reduction. Conversely, a tax reduction may be less than if recorded compensation expenses were deductible for income tax purposes. If so, the corporation may deduct the difference from additional capital in the period of the tax reduction to the extent that tax reductions under the same or similar compensatory stock option, purchase, or award plans have been included in additional capital.

18. A corporation may, either by cash payment or otherwise--for example, by allowing a reduction in the purchase price of stock--reimburse an employee for his action related to a stock option, purchase, or award plan that results in a reduction of income taxes of the corporation. The corporation should include the reimbursement in income as an expense.

19. Disclosure. ARB No. 43 Chapter 13B, specifies in paragraph 15 the disclosures related to stock option and stock purchase plans that should be made in financial statements.[5]

[5] Other disclosure requirements are in Regulation S-X for financial statements filed with the Securities and Exchange Commission and in listing agreements of the stock exchanges for financial statements included in annual reports to stockholders.

25. AIN-APB 25 provides the following guidance (only the pertinent excerpts are included below):

1. STOCK PLANS ESTABLISHED BY A PRINCIPAL STOCKHOLDER

Question--Accounting for compensatory and noncompensatory stock option, purchase and award plans adopted by a corporation is discussed in APB Opinion No. 25 and ARB No. 43, Chapter 13B. Should a corporation account for plans or transactions (“plans”), if they have characteristics otherwise similar to compensatory plans adopted by corporations, that are established or financed by a principal stockholder (i.e., one who either owns 10% or more of the corporation's common stock or has the ability, directly or indirectly, to control or influence significantly the corporation)?

Interpretation--It is difficult to evaluate a principal stockholder's intent when he establishes or finances a plan with characteristics otherwise similar to compensatory plans generally adopted by corporations. A principal stockholder may be satisfying his generous nature, settling a moral obligation, or attempting to increase or maintain the value of his own investment. If a principal stockholder's intention is to enhance or maintain the value of his investment by entering into such an arrangement, the corporation is implicitly benefiting from the plan by retention of, and possibly improved performance by, the employee. In this case, the benefits to a principal stockholder and to the corporation are generally impossible to separate. Similarly, it is virtually impossible to separate a principal stockholder's personal satisfaction from the benefit to the corporation. *Accounting Principles Board Statement No. 4, Basic Concepts and Accounting Principles Underlying Financial Statements of Business Enterprises*, paragraph 127 states that “Financial accounting emphasizes the economic substance of events even though the legal form may differ from the economic substance and suggest different treatment.”

The economic substance of this type of plan is substantially the same for the corporation and the employee, whether the plan is adopted by the corporation or a principal stockholder. Consequently, the corporation should account for this type of plan when one is established or financed by a principal stockholder unless (1) the relationship between the stockholder and the corporation's employee is one which would normally result in generosity (i.e., an immediate family relationship), (2) the stockholder has an obligation to the employee which is completely unrelated to the latter's employment (e.g., the stockholder transfers shares to the employee because of personal business relationships in the past, unrelated to the present employment situation), or (3) the corporation clearly

> does not benefit from the transaction (e.g., the stockholder transfers shares to a minor employee with whom he has had a close relationship over a number of years).
>
> This type of plan should be treated as a contribution to capital by the principal stockholder with the offsetting charge accounted for in the same manner as compensatory plans adopted by corporations.
>
> Compensation cost should be recognized as an expense of one or more periods in accordance with the provisions of APB Opinion No. 25, paragraphs 12-15.
>
> The corporation should account for tax benefits, if any, from this type of plan in accordance with the provisions of APB Opinion No. 25, paragraphs 16-18. If the corporation receives no tax benefit from this type of plan, but would have received such benefit had the plan been adopted by the corporation, the absence of such tax benefit is one of the variables in estimating the plan's cost to the corporation (see APB Opinion No. 16, paragraph 89).

26. FIN 28, prior to amendment by FAS 123 as FAS 123 is rejected in this issue paper, provides the following guidance (only the pertinent excerpts are included below):

> FIN 28 Summary
>
> This Interpretation clarifies aspects of accounting for compensation related to stock appreciation rights and other variable stock option or award plans. The Interpretation specifies that compensation should be measured at the end of each period as the amount by which the quoted market value of the shares of the enterprise's stock covered by a grant exceeds the option price or value specified under the plan and should be accrued as a charge to expense over the periods the employee performs the related services. Changes in the quoted market value should be reflected as an adjustment of accrued compensation and compensation expense in the periods in which the changes occur until the date the number of shares and purchase price, if any, are both known.
>
> INTRODUCTION
>
> 1. The FASB has been asked to clarify whether the provisions of *APB Opinion No. 25, Accounting for Stock Issued to Employees*, apply to stock appreciation rights and, if so, how the Opinion should be applied. Similar questions have been raised about awards under other stock compensation plans with variable terms, that is, plans for which the number of shares of stock the employee may receive, the price per share the employee must pay, or both the number of shares and the price are unknown at the date of grant or award. Appendix A provides additional background information about these matters. Appendix B illustrates applications of this Interpretation.
>
> INTERPRETATION
>
> 2. APB Opinion No. 25 applies to plans for which the employer's stock is issued as compensation or the amount of cash paid as compensation is determined by reference to the market price of the stock or to changes in its market price. Plans involving stock appreciation rights and other variable plan awards[1] are included in those plans dealt with by Opinion No. 25. When stock appreciation rights or other variable plan awards are granted, an enterprise shall measure compensation as the amount by which the quoted market value of the shares of the enterprise's stock covered by the grant exceeds the option price or value specified, by reference to a market price or otherwise, subject to any appreciation limitations under the plan. Changes, either increases or decreases, in the quoted market value of those shares between the date of grant and the measurement date[2] result in a change in the measure of compensation for the right or award.

[1] Plans for which the number of shares of stock that may be acquired by or awarded to an employee or the price or both are not specified or determinable until after the date of grant or award are referred to in this Interpretation as "variable plan awards." However, plans described in paragraph 11.c. of Opinion No. 25 (see paragraph 12 in Appendix A of this Interpretation) and book value stock option, purchase, or award plans are not covered by this Interpretation. Plans under which an employee may receive cash in lieu of stock or additional cash upon the exercise of a stock option are variable plans for purposes of this Interpretation if the amount is contingent on the occurrence of future events.

[2] Paragraph 10 of Opinion No. 25 defines the measurement date as "the first date on which are known both (1) the number of shares that an individual employee is entitled to receive and (2) the option or purchase price, if any." Generally, the number of shares of stock that may be acquired or awarded under stock appreciation rights and many other variable plan awards are not known until the date that they are exercised.

3. Compensation determined in accordance with paragraph 2 shall be accrued as a charge to expense over the period or periods the employee performs the related services (hereinafter referred to as the "service period"). If the stock appreciation rights or other variable plan awards are granted for past services, compensation shall be accrued as a charge to expense of the period in which the rights or awards are granted. If the service period is not defined in the plan or some other agreement, such as an employment agreement, as a shorter or previous period, the service period shall be presumed to be the vesting period.[3]

[3] For purposes of this Interpretation, stock appreciation rights and other variable plan awards become vested when the employee's right to receive or retain shares or cash under the rights or awards is not contingent upon the performance of additional services. Frequently, the vesting period is the period from the date of grant to the date the rights or awards become exercisable.

4. Compensation accrued during the service period in accordance with paragraph 3 shall be adjusted in subsequent periods up to the measurement date[4] for changes, either increases or decreases, in the quoted market value of the shares of the enterprise's stock covered by the grant but shall not be adjusted below zero. The offsetting adjustment shall be made to compensation expense of the period in which changes in the market value occur. Except as provided in paragraph 5, the accrued compensation for a right that is forfeited or canceled shall be adjusted by decreasing compensation expense in the period of forfeiture, in accordance with paragraph 15 of APB Opinion No. 25.

[4] See footnote 2.

5. For purposes of applying paragraph 11.h.[5] of APB Opinion No. 25, compensation expense for a combination plan[6] involving stock appreciation rights or other variable plan awards (including those that are granted after the date of grant of related stock options) shall be measured according to the terms the employee is most likely to elect based on the facts available each period. An enterprise shall presume that the employee will elect to exercise the stock appreciation rights or other variable plan awards, but the presumption may be overcome if past experience or the terms of a combination plan that limit the market appreciation available to the employee in the stock appreciation rights or other variable plan awards provide evidence that the employee will elect to exercise the related stock option. If an enterprise has been accruing compensation for a stock appreciation right or other variable plan award and a change in circumstances provides evidence that the employee will likely elect to exercise the related stock option, accrued compensation recorded for the right or award shall not be adjusted.[7] If the employee elects to exercise the stock option, the accrued compensation recorded for the right or award shall be recognized as a consideration for the stock issued. If all parts of the grant or award (e.g., both the option and the right or award) are forfeited or canceled, accrued compensation shall be adjusted by decreasing compensation expense in that period.

> [5] See paragraph 13 in Appendix A of this Interpretation.
>
> [6] See paragraph 10 in Appendix A of this Interpretation.
>
> [7] A change in the circumstances may be indicated by market appreciation in excess of any appreciation limitations under the plan or the cancellation or forfeiture of the stock appreciation right or other variable plan award without a concurrent cancellation or forfeiture of the related stock option. A subsequent decrease in market value that reduces the appreciation to a level below the limitations under the plan would require adjustment of accrued compensation in accordance with paragraph 4 of this Interpretation if evidence then indicates that the employee will elect to exercise the stock appreciation right or other variable plan award.

27. FIN 38, prior to amendment by FAS 123 as FAS 123 is rejected in this issue paper, provides the following guidance (only the pertinent excerpts are included below):

> FIN 38 Summary
>
> *APB Opinion No. 25, Accounting for Stock Issued to Employees*, specifies that the measurement date for determining compensation cost in stock option, purchase, and award plans is the first date on which are known both (a) the number of shares that an individual employee is entitled to receive and (b) the option or purchase price, if any. Opinion 25 also specifies that the measurement date for a grant or award of convertible stock is the date on which the ratio of conversion is known unless other terms are variable at that date. Questions have been raised about determining the measurement date for stock option, purchase, and award plans involving junior stock, a separate class of stock issued to certain employees that is subordinate to an employer's regular common stock but is convertible into common stock if specified future events occur. This Interpretation clarifies that the measurement date for grants under stock option, purchase, and award plans involving junior stock is the date on which the number of shares of the employer's regular common stock that an employee is entitled to receive in exchange for the junior stock is known. This Interpretation is effective for grants made to employees on or after March 14, 1984 under stock option, purchase, and award plans involving junior stock.
>
> INTRODUCTION
>
> 1. The Board has been asked to clarify certain provisions of APB Opinion No. 25, Accounting for Stock Issued to Employees, relating to determining the measurement date for grants made to employees under stock option, purchase, and award plans involving junior stock. As used in this Interpretation, the term junior stock refers to a specific type of stock issued to employees that generally is subordinate to an employer's regular common stock with respect to voting, liquidation, and dividend rights and is convertible[1] into regular common stock if certain performance goals are achieved or if certain transactions occur. Junior stock generally is not transferable, except back to the issuing enterprise, and has a fair value lower than regular common stock because of its subordinate rights and the uncertainty of conversion to regular common stock.
>
> [1] Junior stock that is not convertible per se but that has restrictions that lapse (such as restrictions that lapse when certain performance goals are achieved) so that it ultimately becomes regular common stock is considered to be convertible for purposes of applying this Interpretation.
>
> 2. Stock option, purchase, and award plans involving junior stock are designed to provide that an employer ultimately will issue shares of regular common stock to employees. Those plans are variable plans[2] because the number of shares of regular common stock that an individual employee is entitled to receive is not known until certain performance goals are achieved or certain transactions occur. Therefore, for purposes of measuring compensation cost under Opinion 25, the measurement date for grants under stock option, purchase, and award plans

involving junior stock is the first date on which are known both the number of shares of the employer's regular common stock that an employee is entitled to receive in exchange for the junior stock and the option or purchase price, if any.

[2] The term variable plan, as used in this Interpretation, is defined in paragraph 14.

3. In considering the convertible features of junior stock, paragraph 11.f. of Opinion 25 indicates that the measurement date for a grant or award of convertible stock is the date on which the ratio of conversion is known, unless other terms are variable at that date. Because conversion of junior stock to regular common stock generally is contingent on achieving certain performance goals or on certain transactions occurring, the conversion ratio[3] is not known with certainty until those future events occur. After those goals are achieved or those transactions occur, the conversion ratio is determinable and, accordingly, the number of shares of regular common stock that an individual is entitled to receive is known.

[3] If junior stock becomes convertible only to an equal number of shares of regular common stock upon achieving certain performance goals, the conversion ratio is either one-to-zero or one-to-one; some junior stock plans provide for different ratios of conversion depending on the level of performance attained.

4. Compensation cost for stock option, purchase, and award plans involving junior stock shall be accrued according to the provisions of paragraphs 2-4 of *FASB Interpretation No. 28, Accounting for Stock Appreciation Rights and Other Variable Stock Option or Award Plans*, and paragraph 11.g. of Opinion 25. However, the provisions of paragraph 2 of Interpretation 28 shall be applied only when it becomes probable[4] that certain performance goals will be achieved or certain transactions will occur; that probability may or may not be present at the date junior stock is issued.

[4] Probable is used here, consistent with its use in FASB Statement No. 5, Accounting for Contingencies, to mean that it is likely that certain performance goals will be achieved or certain transactions will occur.

5. Stock option, purchase, and award plans involving junior stock generally are based on certain performance goals being achieved or certain transactions occurring within specific periods. Some plans, however, do not specify a period during which those future events must occur. If it is probable that the future event will occur at some time, compensation cost shall be charged to expense over the period from the date the future event becomes probable to the date the future event is most likely to occur or the end of any required service period.[5] Other plans provide for different ratios of conversion of junior stock to regular common stock within a specific period based on variable performance goals. If achieving more than one performance goal is probable, compensation cost shall be based on the highest ratio of conversion of junior stock to regular common stock attributable to those goals whose achievement is probable. However, the final measure of compensation cost shall be based on the ratio of conversion attributable to the performance goal achieved at the measurement date. For all plans, total compensation shall be based on the market price of the regular common stock as of the date compensation cost is determined.

[5] The term service period, as used in this Interpretation, is defined in paragraph 16.

6. Total compensation cost shall be the amount by which the market price at the measurement date of the employer's regular common stock that an employee is entitled to receive exceeds the amount that the employee paid or will pay for the junior stock. If vesting provisions cause junior stock to become convertible to regular common stock after the measurement date, compensation cost shall be recognized during the period from (a) the first date that it becomes probable that the future events will occur or the date the events have occurred to (b) the date that junior stock becomes convertible or the end of the service period, whichever occurs first. If junior stock does not become convertible to regular common stock but cash is paid to an employee to purchase previously issued junior stock, total compensation cost is the amount by which cash paid to the employee exceeds the amount initially paid by the employee for the junior stock.

28. FAS 123 provides the following guidance (only the pertinent excerpts are included below):

INTRODUCTION

1. This Statement establishes a fair value[1] based method of accounting for **stock-based compensation plans**. It encourages entities to adopt that method in place of the provisions of *APB Opinion No. 25*, *Accounting for Stock Issued to Employees,* for all arrangements under which employees receive shares of stock or other equity instruments of the employer or the employer incurs liabilities to employees in amounts based on the price of its stock.

[1] Terms defined in Appendix E, the glossary, are set in boldface type the first time they appear.

2. This Statement also establishes fair value as the measurement basis for transactions in which an entity acquires goods or services from nonemployees in exchange for equity instruments. This Statement uses the term *compensation* in its broadest sense to refer to the consideration paid for goods or services, regardless of whether the supplier is an employee or not. For example, employee compensation includes both cash salaries or wages and other consideration that may be thought of more as means of attracting, retaining and motivating employees than as direct payment for services rendered.

3. Opinion 25, issued in 1972, requires compensation cost[2] for stock-based employee compensation plans to be recognized based on the difference, if any, between the quoted market price of the stock and the amount an employee must pay to acquire the stock. Opinion 25 specifies different dates for the pertinent quoted market price of the stock used in measuring compensation cost, depending on whether the terms of an award[3] are fixed or variable, as those terms are defined in Opinion 25.

[2] This Statement refers to recognizing *compensation cost* rather than *compensation expense* because part of the amount recognized in a period may be capitalized as part of the cost to acquire an asset, such as inventory.

[3] The Statement used the term award as the collective noun for multiple instruments with the same terms granted at the same time either to a single employee or to a group of employees. An award may specify multiple vesting dates, referred to as graded vesting, and different parts of an award may have different expected lives.

4. Since 1972, stock options and other forms of stock-based employee compensation plans have become increasingly common. Also, option-pricing models have become widely used for measuring the value of stock options and similar equity instruments other than those issued to employees as compensation. Opinion 25 has been criticized for producing anomalous results and for providing little general guidance to use in deciding how to account for new forms of stock-based employee compensation plans. Several FASB Interpretations and Technical Bulletins have dealt with specific kinds of plans, and the Emerging Issues Task Force has considered numerous related issues.

5. Because of the perceived deficiencies in Opinion 25, early in the 1980s the AICPA's Accounting Standards Executive Committee, the staff of the Securities and Exchange Commission, most of the larger accounting firms, industry representatives and others asked the Board to reconsider the accounting specified in Opinion 25. This Statement, which is the result of that reconsideration, establishes an accounting method based on the fair value of equity instruments awarded to employees as compensation that mitigates many of the deficiencies in Opinion 25. The Board encourages entities to adopt the new method. However, this Statement permits an entity in determining its net income to continue to apply the accounting provisions of Opinion 25 to its stock-based employee compensation arrangements. An entity that continues to apply Opinion 25 must comply with the disclosure requirements of this Statement, which supersede the disclosure requirements of paragraph 19 of Opinion 25. This Statement also supersedes or amends other accounting pronouncements listed in Appendix D. Appendix A explains the reasons the Board decided not to require recognition of compensation cost for stock-based employee compensation arrangements measured in accordance with the fair value based method described in this Statement.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Scope and Alternative Accounting Methods

6. This Statement applies to all transactions in which an entity acquires goods or services by issuing equity instruments[4] or by incurring liabilities to the supplier in amounts based on the price of the entity's common stock or other equity instruments. Therefore, it applies to all transactions in which an entity grants shares of its common stock, stock options, or other equity instruments to its employees, except for equity instruments held by an employee stock ownership plan.[5]

[4] An entity may conditionally transfer an equity instrument to another party under an arrangement that permits that party to choose at a later date of for a specified time whether to deliver the consideration for it or to forfeit the right to the conditionally transferred instrument with no further obligation. In that situation, the equity instrument is not *issued* until the issuing entity has received the consideration, such as cash, an enforceable right to receive cash, other financial instruments, goods, or services, agreed to by the parties to the transaction. For that reason, this Statement does not use the term *issued* for the grant of stock options or other equity instruments subject to service or performance conditions (or both) for vesting.

[5] *AICPA Statement of Position No. 93-6*, *Employers' Accounting for Employee Stock Ownership Plans,* specifies the accounting by employers for employee stock ownership plans.

7. The accounting for all stock-based compensation arrangements with employees or others shall reflect the inherent rights and obligations, regardless of how those arrangements are described. For example, the rights and obligations embodied in a transfer to stock to an employee for consideration of a nonrecourse note are substantially the same as if the transaction were structured as the grant of a stock option, and the transaction shall be accounted for as such. The terms of the arrangement may affect the fair value of the stock options or other equity instruments and shall be appropriately reflected in determining that value. For example, whether an employee who is granted an implicit option structured as the exchange of shares of stock for a nonrecourse note is required to pay nonrefundable interest on the note affects the fair value of the implicit option.

Accounting for Transactions with Other Than Employees

8. Except for transactions with employees that are within the scope of Opinion 25, all transactions in which goods or services are the consideration received for the issuance of equity instruments shall be accounted for based on the fair value of the consideration received or the fair value of the equity instruments issued, whichever is more reliably measurable. The fair value of goods or services received from suppliers other than employees frequently is reliably measurable and therefore indicates the fair value of the equity instruments issued. The fair value

of the equity instruments issued shall be used to measure the transaction if that value is more reliably measurable than the fair value of the consideration received.[6] A common example of the latter situation is the use of the fair value of tradable equity instruments issued in a purchase business combination to measure the transaction because the value of the equity instruments issued is more reliably measurable than the value of the business acquired.

[6] The consideration received for issuing equity instruments, like the consideration involved in a repurchase of treasury shares, may include intangible rights. *FASB Technical Bulletin No. 85-6*, *Accounting for a Purchase of Treasury Shares at a Price Significantly in Excess of the Current Market Price of the Shares and the Income Statement Classification of Costs Insured in Defending Against a Takeover Attempt,* provides pertinent guidance.

9. This Statement uses the term *fair value* for assets and financial instruments, including bother liability and equity instruments, with the same meaning as in *FASB Statement No. 121*, *Accounting for the Impairment of Long-Lived Assets and for Long-Live Assets to be Disposed Of*, Statement 121 says that the fair value of an asset is

> ...the amount at which the asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information available in the circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis [paragraph 7].

10. If the fair value of the goods or services received is not reliably measurable, paragraph 8 of this Statement requires that the measure of the cost of goods or services acquired in a transaction with other than an employee is based on the fair value of the equity instruments issued. However, this Statement does not prescribe the **measurement date**, that is, the date of the stock price on which the fair value of the equity instrument is based, for a transaction with a nonemployee (paragraphs 70-73).

Accounting for Transactions with Employees

11. This Statement provides a choice of accounting methods for transactions with employees that are within the scope of Opinion 25. Paragraphs 16-44 of this Statement describe a method of accounting based on the fair value, rather than the **intrinsic value**, of an employee stock option or a similar equity instrument. The Board encourages entities to adopt the fair value based method of accounting, which is preferable to the Opinion 25 method for purposes of justifying a change in accounting principle under *APB Opinion No. 20*, *Accounting Changes*.[7] However, an entity may continue to apply Opinion 25 in accounting for its stock-based employee compensation arrangements. An entity that does so shall disclose pro forma net income and, if presented, earnings per share, determined as if the fair value based method had been applied in measuring compensation cost (paragraph 45).

[7] Opinion 20, paragraph 8, provides that initial adoption of an accounting principle for a transaction that the entity has not previously had to account for is not a change in accounting principle.

12. The fair value based method described in paragraphs 16-44 of this Statement applies for (a) measuring stock-based employee compensation cost by an entity that adopts that method for accounting purposes and (b) determining the pro forma disclosures required of an entity that measures stock-based employee compensation cost in accordance with the intrinsic value based

method in Opinion 25. Neither those paragraphs (16-44) nor subsequent paragraphs (45-54) of this Statement affect application of the *accounting provisions* of Opinion 25 by an entity that continues to apply it in determining reported net income.

13. For convenience, in describing the fair value based method, paragraphs 16-44 of this Statement refer only to *recognition* or *accounting* requirements. However, those provisions apply equally in determining the pro forma amounts that must be disclosed if an entity continues to apply Opinion 25.

14. An entity shall apply the same accounting method—either the fair value based method described in this Statement or the intrinsic value based method in Opinion 25—in accounting for all of its stock-based employee compensation arrangements. Once an entity adopts the fair value based method for those arrangements, that election shall not be reversed.[8]

15. Equity instruments granted or otherwise transferred directly to an employee by a **principal stockholder** are stock-based employee compensation to be accounted for by the entity under either Opinion 25 or this Statement, whichever method the entity is applying, unless the transfer clearly is for a purpose other than compensation.[9] The substance of a transaction in which a principal stockholder directly transfers equity instruments to an employee as compensation is that the principal stockholder makes a capital contribution to the entity and the entity awards equity instruments to its employee. An example of a situation in which a direct transfer of equity instruments to an employee from a principal stockholder is not compensation cost is a transfer to settle an obligation of the principal stockholder unrelated to employment by the reporting entity.

[8] APB Opinion No. 22, *Disclosure of Accounting Policies,* requires an entity to include a description of all significant accounting policies as an integral part of the financial statements. The method used to account for stock-based employee compensation arrangements is an accounting policy to be included in that description.

[9] That accounting has been required since 1973 in accordance with AICPA Accounting Interpretation 1, “Stock Plans Established by a Principal Stockholder,” of Opinion 25.

VALUATION OF EQUITY INSTRUMENTS ISSUED FOR EMPLOYEE SERVICES

Measurement Basis

16. Frequently, part or all of the consideration received for equity instruments issued to employees is past or future employee services. Equity instruments issued to employees and the cost of the services received as consideration shall be measured and recognized based on the fair value of the equity instruments issued. The portion of the fair value of an equity instrument attributed to employee services is net of the amount, if any, that employees pay for the instrument when it is granted. Paragraphs 17-25 of this Statement provide guidance on how to measure the fair value of stock-based employee compensation. Paragraphs 26-33 provide guidance on how to attribute compensation cost to the periods in which employees render the related services. Appendix B, which is an integral part of this Statement, provides additional guidance on both measurement and attribution of employee compensation cost.

Measurement Objective and Date

17. The objective of the measurement process is to estimate the fair value, based on the stock price at the **grant date**, of stock options or other equity instruments to which employees become entitled when they have rendered the requisite service and satisfied any other conditions necessary to earn the right to benefit from the instruments (for example, to exercise stock options or to sell shares of stock). Restrictions that continue in effect after employees have earned the rights to benefit from their instruments, such as the inability to transfer **vested** employee stock options to third parties, affect the value of the instruments actually issued and therefore are

reflected in estimating their fair value. However, restrictions that stem directly from the forfeitability of instruments to which employees have not yet earned the right, such as the inability either to exercise a nonvested option or to sell **nonvested stock**, do not affect the value of the instruments issued at the vesting date, and their effect therefore is not included in that value. Instead, no value is attributed to instruments that employees forfeit because they fail to satisfy specified service- or performance-related conditions.

Measurement Methods

Awards That Call for Settlement by Issuing Equity Instruments

18. The fair value of a share of nonvested stock awarded to an employee shall be measured at the market price (or estimated market price, if the stock is not publicly traded) of a share of the same stock as if it were vested and issued on the grant date. Nonvested stock granted to employees usually is referred to as **restricted stock**, but this Statement reserves that term for shares whose sale is contractually or governmentally restricted after the shares are vested and fully outstanding. The fair value of a share of restricted stock awarded to an employee, that is, a share that will be restricted after the employee has a vested right to it, shall be measured at its fair value, which is the same amount as a share of similarly restricted stock issued to nonemployees.

19. The fair value of a stock option (or its equivalent) granted by a **public entity** shall be estimated using an option-pricing model (for example, the Black-Scholes or a binomial model) that takes into account as of the grant date the exercise price and expected life of the option, the current price of the underlying stock and its expected **volatility**, expected dividends on the stock (except as provided in paragraphs 32 and 33), and the risk-free interest rate for the expected term of the option. For options that a U.S. entity grants on its own stock, the risk-free interest rate used shall be the rate currently available on zero-coupon U.S. government issues with a remaining term equal to the expected life of the options. Guidance on selecting other assumptions is provided in Appendix B. The fair value of an option estimated at the grant date shall not be subsequently adjusted for changes in the price of the underlying stock or its volatility, the life of the option, dividends on the stock or the risk-free interest rate.

20. A **nonpublic entity** shall estimate the value of its options based on the factors described in the preceding paragraph, except that a nonpublic entity need not consider the expected volatility of its stock over the expected life of the option. The result of excluding volatility in estimating an option's value is an amount commonly termed **minimum value**.

21. It should be possible to reasonably estimate the fair value of most stock options and other equity instruments at the date they are granted. Appendix B illustrates techniques for estimating the fair values of several options with complicated features. However, in unusual circumstances, the terms of a stock option or other equity instrument may make it virtually impossible to reasonably estimate the instrument's fair value at the date it is granted. For example, it may be extremely difficult, if not impossible, to reasonably estimate the fair value of a stock option whose exercise price decreases (or increases) by a specified amount with specified changes in the price of the underlying stock. Similarly, it may not be possible to reasonably estimate the value of a convertible instrument if the conversion ratio depends on the outcome of future events.

22. If it is not possible to reasonably estimate the fair value of an option or other equity instrument at the grant date, the final measure of compensation cost shall be the fair value based on the stock price and other pertinent factors at the first date at which it is possible to reasonably estimate that value. Generally, that is likely to be the date at which the number of shares to which an employee is entitled and the exercise price are determinable. Estimates of compensation cost for periods during which it is not possible to determine fair value shall be based on the current intrinsic value of the award, determined in accordance with the terms that would apply if the option or similar instrument had been currently exercised.

23. If an employee stock purchase plan satisfies all of the following criteria, the plan is not compensatory. Therefore, the discount from market price merely reduces the proceeds from issuing the related shares of stock.

a) The plan incorporates no option features other than the following, which may be incorporated:

(1) Employees are permitted a short period of time—not exceeding 31 days—after the purchase price has been fixed to enroll in the plan.

(2) The purchase price is based solely on the stock's market price at date of purchase, and employees are permitted to cancel participation before the purchase date and obtain a refund of amounts previously paid (such as those paid by payroll withholdings).

b) The discount from the market price does not exceed the greater of (1) a per-share discount that would be reasonable in a recurring offer of stock to stockholders or others or (2) the per-share amount of stock issuance costs avoided by not having to raise a significant amount of capital by a public offering. A discount of 5 percent or less from the market price shall be considered to comply with this criterion without further justification.

c) Substantially all full-time employees that meet limited employment qualifications may participate on an equitable basis.

24. A plan provision that establishes the purchase price as an amount based on the lesser of the stock's market price at date of grant or its market price at date of purchase is, for example, an option feature that causes the plan to be compensatory. Similarly, a plan in which the purchase price is based on the stock's market price at date of grant and that permits a participating employee to cancel participation before the purchase date and obtain a refund of amounts previously paid is a compensatory plan.

Awards That Call for Settlement in Cash

25. Some awards of stock-based compensation result in the entity's incurring a liability because employees can compel the entity to settle the award by transferring its cash or other assets to employees rather than by issuing equity instruments. For example, an entity may incur a liability to pay an employee either on demand or at a specified date an amount to be determined by the increase in the entity's stock price from a specified level. The amount of the liability for such an award shall be measured each period based on the current stock price. The effects of change in the stock price during the **service period** are recognized as compensation cost over the service period in accordance with the method illustrated in *FASB Interpretation No. 28*, *Accounting for Stock Appreciation Rights and Other Variable Stock Option or Award Plans.* Changes in the amount of the liability due to stock price changes after the service period are compensation cost of the period in which the changes occur.

Recognition of Compensation Cost

26. The total amount of compensation cost recognized for an award of stock-based employee compensation shall be based on the number of instruments that eventually vest. No compensation cost is recognized for awards that employees forfeit either because they fail to satisfy a service requirement for vesting, such as for a **fixed award**, or because the entity does not achieve a **performance condition**, unless the condition is a target stock price or specified amount of intrinsic value on which vesting or exercisability is conditioned. For awards with the latter condition, compensation cost shall be recognized for awards to employees who remain in service for the requisite period regardless of whether the target stock price or amount of intrinsic value is reached.[10] Previously recognized compensation cost shall not be reversed if a vested employee stock option expires unexercised.

[10] The existence of a target stock price that must be achieved to make an option exercisable generally affect the value of the option. Option-pricing models have been adapted to value many of those *path-dependent* options.

27. For purposes of this Statement, a stock-based employee compensation award becomes vested when an employee's right to receive or retain shares of stock or cash under the award is not contingent on the performance of additional services. Typically, an employee stock option that is vested also is immediately exercisable. However, if performance conditions affect either the exercise price or the exercisability date, the service period used for attribution purposes shall be consistent with the assumptions used in estimating the fair value of the award. Paragraphs 209 and 310 in Appendix B illustrate how to account for an option whose exercise price depends on a performance condition.

28. An entity may choose at the grant date to base accruals of compensation cost on the best available estimate of the number of options or other equity instruments that are expected to vest and to revise that estimate, if necessary, if subsequent information indicates that actual forfeitures are likely to differ from initial estimates. Alternatively an entity may begin accruing compensation cost as if all instruments granted that are subject only to a service requirement are expected to vest. The effect of actual forfeitures would then be recognized as they occur. Initial accruals of compensation cost for an award with a performance condition that will determine the number of options or shares to which all employees receiving the award will be entitled shall be based on the best estimate of the outcome of the performance condition, although forfeitures by individual employees may either be estimated at the grant date or recognized only as they occur.[11]

[11] For convenience, the remainder of this document refers to options or shares *expected to vest* because referring specifically to both acceptable methods of accounting for forfeitures by individual employees each time the point is mentioned would be too unwieldy.

29. Compensation cost estimated at the grant date for the number of instruments that are expected to vest based on performance-related conditions, as well as those in which vesting is contingent only on future service for which the entity chooses to estimate forfeitures at the grant date pursuant to paragraph 28, shall be adjusted for subsequent changes in the expected or actual outcome of service- and performance-related conditions until the vesting date. The effect of a change in the estimated number of shares or options expected to vest is a change in an estimate, and the cumulative effect of the change on current and prior periods shall be recognized in the period of the change.

30. The compensation cost for an award of equity instruments to employees shall be recognized over the period(s) in which the related employee services are rendered by a charge to compensation cost and a corresponding credit to equity (paid-in capital) if the award is for future service. If the service period is not defined as an earlier or shorter period, the service period shall be presumed to be the period from the grant date to the date that the award is vested and its exercisability does not depend on continued employee service (paragraph 27). If an award is for past services, the related compensation cost shall be recognized in the period in which it is granted.

31. Compensation cost for an award with a graded vesting schedule shall be recognized in accordance with the method described in Interpretation 28 if the fair value of the award is determined based on different expected lives for the options that vest each year, as it would be if the award is viewed as several separate awards, each with a different vesting date. If the expected life or lives of the award is determined in another manner, the related compensation cost may be recognized on a straight-line basis. However, the amount of compensation cost

recognized at any date must at least equal the value of the vested portion of the award at that date. Appendix B illustrates application of both attribution methods to an award accounted for by the fair value based method.

32. Dividends or dividend equivalents paid to employees on the portion of an award of stock or other equity instruments that vests shall be charged to retained earnings. Nonforfeitable dividends or dividend equivalents paid on shares of stock that do not vest shall be recognized as additional compensation cost. The choice of whether to estimate forfeitures at the grant date or to recognize the effect of forfeitures as they occur described in paragraph 28 also applies to recognition of nonforfeitable dividends paid on shares that do not vest.

33. If employees received only the dividends declared on the class of stock granted to them after the stock becomes vested, that value of the award at the grant date shall be reduced by the present value of dividends expected to be paid on the stock during the vesting period, discounted at the appropriate risk-free interest rate. The fair value of an award of stock options on which dividend equivalents are paid to employees or are applied to reduce the exercise price pursuant to antidilution provisions shall be estimated based on a dividend payment of zero.

Additional Awards and Modifications of Outstanding Awards

34. The fair value of each award of equity instruments, including an award of **reload options**, shall be measured separately based on its terms and the current stock price and related factors at the date it is granted.

35. A modification of the terms of an award that makes it more valuable shall be treated as an exchange of the original award for a new award. In substance, the entity repurchases the original instrument by issuing a new instrument of greater value, incurring additional compensation cost for that incremental value. The incremental value shall be measured by the difference between (a) the fair value of the modified option determined in accordance with the provisions of this Statement and (b) the value of the old option immediately before its terms are modified, determined based on the shorter of (1) its remaining expected life or (2) the expected life of the modified option. Appendix B provides further guidance on and illustrates the accounting for modifications of both vested and nonvested options.

36. Exchanges of options or changes to their terms in conjunction with business combinations, spin-offs, or other equity restructurings, except for those made to reflect the terms of the exchange of shares in a business combination accounted for as a pooling of interests, are modifications for purposes of this Statement. However, a change to the terms of an award in accordance with antidilution provisions that are designed, for example, to equalize an option’s value before and after a stock split or a stock dividend is not a modification of an award for purposes of this Statement.

Settlements of Awards

37. An entity occasionally may repurchase equity instruments issued to employees after the employees have vested rights to them. The amount of cash or other assets paid (or liabilities incurred) to repurchase an equity instrument shall be charged to equity, provided that the amount paid does not exceed the value of the instruments repurchased. For example, an entity that repurchases for $10 a share of stock on the date it becomes vested does not incur additional compensation cost if the market price of the stock is $10 at that date. However, if the market price of the stock is only $8 at that date, the entity incurs an additional $2 ($10 - $8) of cost. An entity that settles a nonvested award for cash has, in effect, vested the award, and the amount of compensation cost measured at the grant date but not yet recognized shall be recognized at the date of repurchase.

38. For employee stock options, the incremental amount, if any, to be recognized as additional compensation cost upon cash settlement shall be determined based on a comparison of the amount paid with the value of the option repurchased, determined based on the remainder

of its original expected life at that date. As indicated in paragraph 37, if stock options are repurchased before they become vested, the amount of unrecognized compensation cost shall be recognized at the date of the repurchase.

39. The accounting shall reflect the terms of a stock-based compensation plan as those terms are mutually understood by the employer and the employees who receive awards under the plan. Generally, the written plan provides the best evidence of its terms. However, an entity's past practice may indicate that the **substantive terms** of a plan differ from its written terms. For example, an entity that grants a **tandem award** consisting of either a stock option or a cash stock appreciation right (SAR) is obligated to pay cash on demand if the choice is the employee's, and the entity thus incurs a liability to the employee. In contract, if the choice is the entity's, it can avoid transferring its assets by choosing to settle in stock, and the award qualifies as an equity instrument. However, if an entity that nominally has the choice of settling awards by issuing stock generally settles in cash, or if the entity generally settles in cash whenever an employee asks for cash settlement, the entity probably is settling a substantive liability rather than repurchasing an equity instrument. The substantive terms shall be the basis for the accounting.

40. To restrict control to a limited group, for example, the members of a particular family, a nonpublic entity may obligate itself to repurchase its equity instruments for their fair value at the date of repurchase. In practice, such an obligation is not deemed to convert the stock to a liability. This Statement is not intended to change that view of the effect of a fair value repurchase agreement for a nonpublic entity. Thus, a nonpublic entity may grant or otherwise issue to employees equity instruments subject to such a repurchase agreement. The repurchase agreement does not convert those equity instruments to liabilities, provided that the repurchase price is the fair value of the stock at the date of repurchase.

Accounting for Tax Consequences of Equity Instruments Awarded to Employees

41. Income tax regulations specify allowable tax deductions for stock-based employee compensation arrangements in determining an entity's income tax liability. Compensation cost recognized under this Statement is measured based on the fair value of an award to an employee. Under existing U.S. tax law, allowable tax deductions are generally measured at a specified date as the excess of the market price of the related stock over the amount the employee is required to pay for the stock (that is, at intrinsic value). The **time value** component of the fair value of an option is not tax deductible. Therefore, tax deductions generally will arise in different amounts and in different periods from compensation cost recognized in financial statements.

42. The cumulative amount of compensation cost recognized for a stock-based award that ordinarily results in a future tax deduction under existing tax law shall be considered to be a deductible temporary difference in applying *FASB Statement No. 109*, *Accounting for Income Taxes*. The deferred tax benefit (or expense) that results from increases (or decreases) in that temporary difference, for example, as additional service is rendered and the related cost is recognized, shall be recognized in the income statement. Recognition of compensation cost for an award that ordinarily does not result in tax deductions under existing tax law shall not be considered to result in a deductible temporary difference in applying Statement 109. A future event, such as an employee's disqualifying disposition of stock under existing U.S. tax law, can give rise to a tax deduction for an award that ordinarily does not result in a tax deduction. The tax effects of such an event shall be recognized only when it occurs.

43. Statement 109 requires a deferred tax asset to be evaluated for future realization and to be reduced by a valuation allowance if, based on the weight of the available evidence, it is more likely than not that some portion or all of the deferred tax asset will not be realized. Differences between (a) the deductible temporary difference computed pursuant to paragraph 42 and (b) the tax deduction inherent in the current fair value of the entity's stock shall not be considered in measuring either the gross deferred tax asset of the need for a valuation allowance for a deferred tax asset recognized under this Statement.

44. If a deduction reported on a tax return for a stock-based award exceeds that cumulative compensation cost for that award recognized for financial reporting, the tax benefit for that excess deduction shall be recognized as additional paid-in capital. If the deduction reported on a tax return is less than the cumulative compensation cost recognized for financial reporting, the write-off of a related deferred tax asset in excess of the benefits of the tax deduction, net of the related valuation allowance, if any, shall be recognized in the income statement except to the extent that there is remaining additional paid-in capital from excess tax deductions from previous stock-based employee compensation awards accounted for in accordance with the fair value based method in this Statement. In that situation, the amount of the write-off shall be charged against that additional paid-in capital.

Disclosures

45. Regardless of the method used to account for stock-based employee compensation arrangements, the financial statements of an entity shall include the disclosures specified in paragraphs 46-48. In addition, an entity that continues to apply Opinion 25 shall disclose for each year for which an income statement is provided the pro forma net income and, if earnings per share is presented, pro forma earnings per share, as if the fair value based accounting method in this Statement had been used to account for stock-based compensation cost. Those pro forma amounts shall reflect the difference between compensation cost, if any, included in net income in accordance with Opinion 25 and the related cost measured by the fair value based method, as well as additional tax effects, if any, that would have been recognized in the income statement if the fair value based method had been used. the required pro forma amounts shall reflect no other adjustments to reported net income or earnings per share.

46. An entity with one or more stock-based compensation plans shall provide a description of the plan(s), including the general terms of awards under the plan(s), such as vesting requirements, the maximum term of options granted, and the number of shares authorized for grants of options or other equity instruments. An entity that uses equity instruments to acquire goods or services other than employee services shall provide disclosures similar to those required by this paragraph and paragraphs 47 and 48 to the extent that those disclosures are important in understanding the effects of those transactions on the financial statements.

47. The following information shall be disclosed for each year for which an income statement is provided:

a. The number and weighted-average exercise prices of options for each of the following groups of options: (1) those outstanding at the beginning of the year, (2) those outstanding at the end of the year, (3) those exercisable at the end of the year, and those (4) granted, (5) exercised, (6) forfeited, or (7) expired during the year.

b. The weighted-average grant-date fair value of options granted during the year. If the exercise prices of some options differ from the market price of the stock on the grant date, weighted-average exercise prices and weighted-average fair values of options shall be disclosed separately for options whose exercise price (1) equals, (2) exceeds, or (3) is less than the market price of the stock on the grant date.

c. The number and weighted-average grant-date fair value of equity instruments other than options, for example, shares of nonvested stock, granted during the year.

d. A description of the method and significant assumptions used during the year to estimate the fair values of options, including the following weighted-average information: (1) risk-free interest rate, (2) expected life, (3) expected volatility, and (4) expected dividends.

e. Total compensation cost recognized in income for stock-based employee compensation awards.

f. The terms of significant modifications of outstanding awards.

An entity that grants options under multiple stock-based employee compensation plans shall provide the foregoing information separately for different types of awards to the extent that the differences in the characteristics of the awards make separate disclosure important to an understanding of the entity's use of stock-based compensation. For example, separate disclosure of weighted-average exercise prices at the end of the year for options with a fixed exercise price and those with an indexed exercise price is likely to be important, as would segregating the number of options not yet exercisable into those that will become exercisable based solely on employees rendering additional service and those for which an additional condition must be met for the options to become exercisable.

48. For options outstanding at the date of the latest statement of financial position presented, the range of exercise prices (as well as the weighted-average exercise price) and the weighted-average remaining contractual life shall be disclosed. If the range of exercise prices is wide (for example, the highest exercise price exceeds approximately 150 percent of the lowest exercise price), the exercise prices shall be segregated into ranges that are meaningful for assessing the number and timing of additional shares that may be issued and the cash that may be received as a result of option exercises. The following information shall be disclosed for each range:

a. The number, weighted-average exercise price, and weighted-average remaining contractual life of options outstanding

b. The number and weighted-average exercise price of options currently exercisable.

Earnings per Share Implications

49. *APB Opinion No. 15*, *Earnings per Share*, requires that employee stock options, nonvested stock, and similar equity instruments granted to employees be treated as common stock equivalents in computing earnings per share. The number of nonvested equity instruments used in computing primary earnings per share shall be the same as the number that are used in measuring the related compensation cost in accordance with this Statement. Fully diluted earnings per share shall continue to be based on the actual number of options or shares granted and not yet forfeited, unless doing so would be antidilutive. If vesting is contingent on other factors, such as the level of future earnings, the shares or options shall be treated as contingent shares in accordance with paragraph 62 of Opinion 15. AICPA Accounting Interpretation 91, "Earnings Conditions," of Opinion 15 provides additional guidance on applying paragraph 62 of Opinion 15 to stock-based employee compensation plans. If stock options or other equity instruments are granted during a period, the shares issuable shall be weighted to reflect the portion of the period during which the equity instruments were outstanding.

50. In applying the treasury stock method of Opinion 15, the assumed proceeds shall be the sum of (a) the amount, if any, the employee must pay, (b) the amount of compensation cost attributed to future services and not yet recognized, and (c) the *Interpretation No. 31*, *Treatment of Stock Compensation Plans in EPS Computations,* provides detailed examples of the treatment of stock compensation plans accounted for under Opinion 25 in earnings per share computations. Although the related cost and tax amounts will differ if the fair value based accounting method in this Statement is applied, the principles in Interpretation 31 remain applicable.

Effective Date and Transition

51. The requirement in paragraph 8 of this Statement shall be effective for transactions entered into after December 15, 1995.

52. The recognition provisions of this Statement may be adopted upon issuance. Regardless of when an entity initially adopts those provisions, they shall be applied to all awards granted after the beginning of the fiscal year in which the recognition provisions are first applied. The recognition provisions shall not be applied to awards granted in fiscal years before the year of initial adoption except to the extent that prior years' awards are modified or settled in cash after the beginning of the fiscal year in which the entity adopts the recognition provisions. Accounting for modifications and settlements of awards initially accounted for in accordance with Opinion 25 is discussed and illustrated in Appendix B.

53. The disclosure requirements of this Statement shall be effective for financial statements for fiscal years beginning after December 15, 1995, or for the fiscal year for which this Statement is initially adopted for recognizing compensation cost, whichever comes first. The disclosure requirements need not be applied in an interim report unless a complete set of financial statements is presented for that period. Pro forma disclosures for awards granted in the first fiscal year beginning after December 15, 1994 need not be included in financial statements for that fiscal year but shall be presented subsequently whenever financial statements for that fiscal year are presented for comparative purposes with financial statements for a later fiscal year.

54. During the initial phase-in period, the effects of applying this Statement for either recognizing compensation cost or providing pro forma disclosures are not likely to be representative of the effects on reported net income for future years, for example, because options vest over several years and additional awards generally are made each year, If that situation exists, the entity shall include a statement to that effect. The entity also may wish to provide supplemental disclosure of the effect of applying the fair value based accounting method to all awards made in fiscal years beginning before the date of initial adoption that were not vested at that date.

Statutory Issue Paper No. 83

Accounting for Income Taxes

STATUS
Finalized March 16, 1998

Current Authoritative Guidance for Income Taxes: SSAP No. 101
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 10

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Current statutory accounting principles, as applied to income taxes, generally only reflect a reporting entity's incurred current taxes and do not consider the tax effects of differences between statutory accounting income and taxable income. While there have always been differences between statutory accounting income and taxable income, tax law changes since 1984 have resulted in greater differences between the two accounting methods. As a result, statutory surplus does not clearly reflect a reporting entity's ultimate income tax obligation for transactions recorded in the financial statements.

2. GAAP guidance on accounting for income taxes is provided in *FASB Statement No. 109, Accounting for Income Taxes* (FAS 109).

3. Current statutory accounting guidance is not specific with respect to:

a. The definition of incurred taxes as it relates to accounting for tax contingencies and the "true-up" portion of the equity tax of mutual life insurance companies and

b. The criteria for admissibility of income tax recoverables from the Internal Revenue Service (IRS) and the definition of "settled within a reasonable time" as applied to recoverables from a reporting entity's parent pursuant to a written income tax allocation agreement.

4. The purpose of this paper is to establish statutory accounting principles for income taxes that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

5. For purposes of statutory accounting, "income taxes incurred" includes current income taxes, the amount of federal and foreign income taxes paid (recovered) or payable (recoverable) for the current year. Current income taxes are defined as:

a. Current year estimates of federal and foreign income taxes (including the equity tax of a mutual life insurer and the "true-up" of such tax), based on tax returns for the current year, and tax contingencies for current and all prior years, to the extent not previously provided, computed in accordance with *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No. 5) and

b. Amounts incurred or received during the current year relating to prior periods, to the extent not previously provided, as such amounts are deemed to be changes in accounting estimates as defined in *Issue Paper No. 3—Accounting Changes* (Issue Paper No. 3).

6. Additionally, for purposes of statutory accounting, a reporting entity's Statement of Assets, Liabilities, Surplus and Other Funds, shall include deferred income tax assets (DTAs) and liabilities (DTLs). DTAs and DTLs are the expected future tax consequences of temporary differences generated by statutory accounting, as defined in paragraph 11 of FAS 109. FAS 109 is excerpted in paragraph 50 of this issue paper.

7. A reporting entity's deferred tax assets and liabilities are computed as follows:

a. Temporary differences are identified and measured using a "balance sheet" approach whereby statutory and tax basis balance sheets are compared,

b. Temporary differences include unrealized gains and losses and nonadmitted assets but do not include asset valuation reserve (AVR), interest maintenance reserve (IMR), Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased,

c. Total DTAs and DTLs are computed using enacted tax rates and

d. Consistent with FAS 109, a DTL is not recognized for amounts described in paragraph 31 of FAS 109.

8. Changes in DTAs and DTLs, including changes attributable to changes in tax rates and changes in tax status, if any, shall be recognized as a separate component of gains and losses in unassigned funds (surplus).

9. Gross DTAs shall be admitted in an amount equal to the sum of:

a. Federal income taxes paid in prior years that can be recovered through loss carrybacks for existing temporary differences that reverse by the end of the subsequent calendar year,

b. The lesser of:

i. The amount of gross DTAs, after the application of paragraph 9.a., expected to be realized within one year of the balance sheet date, or

ii. Ten percent of statutory capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net DTAs, EDP equipment and operating system software and any net positive goodwill; and

c. The amount of gross DTAs, after the application of paragraphs 9.a. and 9.b., that can be offset against existing DTLs.

10. In computing a reporting entity's gross DTA pursuant to paragraph 9;

a. Existing temporary differences that reverse by the end of the subsequent calendar year shall be determined in accordance with paragraphs 228 and 229 of FAS 109;

b. In determining the amount of federal income taxes that can be recovered through loss carrybacks, the amount and character (i.e., ordinary versus capital) of the loss carrybacks and the impact, if any, of the Alternative Minimum Tax shall be determined in accordance with the provisions of the Internal Revenue Code, and regulations thereunder;

c. The amount of carryback potential that may be considered in calculating the gross DTAs of a reporting entity in subparagraph 9.a. above, that files a consolidated income tax return with one or more affiliates, may not exceed the amount that the reporting entity could reasonably expect to have refunded by its parent; and

d. The phrases "reverse by the end of the subsequent calendar year" and "realized within one year of the balance sheet date" are intended to accommodate interim reporting dates and reporting entities that file on an other than calendar year basis for federal income tax purposes.

11. Current income tax recoverables are defined to include all current income taxes, including interest, reasonably expected to be recovered in a subsequent accounting period, whether or not a return or claim has been filed with the taxing authorities. Current income tax recoverables are assets, as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* (Issue Paper No. 4), and are reasonably expected to be recovered if the refund is attributable to an overpayment of estimated tax payments, an error, a carryback, as defined in paragraph 289 of FAS 109, or an item for which the reporting entity has *substantial authority,* as defined in paragraph 52 of this issue paper.

12. In the case of a reporting entity that files a consolidated income tax return with one or more affiliates, income tax transactions (including payment of tax contingencies to its parent) between the affiliated parties shall be recognized if:

a. Such transactions are *economic transactions* as defined in *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (Issue Paper No. 25),

b. Are pursuant to a written income tax allocation agreement and

c. Income taxes incurred are accounted for in a manner consistent with the principles of FAS 109, as modified by this issue paper.

Amounts owed to a reporting entity pursuant to a recognized transaction shall be treated as a loan or advance, and nonadmitted, pursuant to Issue Paper No. 25, to the extent that the recoverable is not settled within 90 days of the filing of a consolidated income tax return, or where a refund is due the reporting entity's parent, within 90 days of the receipt of such refund.

13. Income taxes incurred shall be allocated to net income and realized capital gains or losses in a manner consistent with paragraph 38 of FAS 109. Furthermore, income taxes incurred or received during the current year attributable to prior years shall be allocated, to the extent not previously provided, to net income in accordance with Issue Paper No. 3 unless attributable, in whole or in part, to realized capital gains or losses, in which case, such amounts shall be apportioned between net income and realized capital gains and losses, as appropriate.

14. Income taxes incurred in interim periods shall be computed using an estimated annual effective current tax rate for the annual period in accordance with the methodology described in paragraphs 19 and 20 of *Accounting Principles Board Opinion No. 28*, *Interim Financial Reporting* (APB 28). Estimates of the annual effective tax rate at the end of interim periods are, of necessity, based on estimates and are subject to subsequent refinement or revision. If a reliable estimate cannot be made, the actual effective tax rate for the year-to-date may be the best estimate of the annual effective tax rate. If a reporting entity is unable to estimate a part of its "ordinary" income (or loss) or the related tax (or benefit) but is otherwise able to make a reliable estimate, the tax (or benefit) applicable to the item that cannot be estimated shall

be reported in the interim period in which the item is reported. APB 28 is excerpted in paragraph 51 of this issue paper.

15. Statutory financial statement disclosure shall be made in a manner consistent with the provisions of paragraphs 43-45 and 48 of FAS 109. However, required disclosures with regard to a reporting entity's valuation allowance shall be replaced with disclosures relating to the nonadmittance of some portion or all of a reporting entity's DTAs. Additionally, to the extent that the sum of a reporting entity's "income taxes incurred" (i.e., current income taxes) and the change in its DTAs and DTLs is different from the result obtained by applying the federal statutory rate to its pretax net income, a reporting entity shall disclose the nature of the significant reconciling items. Current statutory financial statement disclosure, as it relates to intercompany tax allocation agreements, is retained. Current statutory financial statement disclosure is excerpted in paragraphs 42 and 43 of this issue paper. Paragraphs 16-21 describe the disclosure requirements as modified for the difference between the requirements of FAS 109 and those prescribed by this issue paper.

16. The components of the net DTA or DTL recognized in a reporting entity's balance sheet shall be disclosed as follows:

a. The total of all DTAs (admitted and nonadmitted);

b. The total of all DTLs;

c. The total DTAs nonadmitted as the result of the application of paragraph 9; and

d. The net change during the year in the total DTAs nonadmitted.

17. To the extent that DTLs are not recognized for amounts described in paragraph 31 of FAS 109, the following shall be disclosed:

a. A description of the types of temporary differences for which a DTL has not been recognized and the types of events that would cause those temporary differences to become taxable;

b. The cumulative amount of each type of temporary difference;

c. The amount of the unrecognized DTL for temporary differences related to investments in foreign subsidiaries and foreign corporate joint ventures that are essentially permanent in duration if determination of that liability is practicable or a statement that determination is not practicable; and

d. The amount of the DTL for temporary differences other than those in item c. above that is not recognized in accordance with the provisions of paragraphs 31 of FAS 109.

18. The significant components of income taxes incurred (i.e., current income tax expense) and the changes in DTAs and DTLs shall be disclosed. Those components would include, for example:

a. Current tax expense or benefit;

b. The change in DTAs and DTLs (exclusive of the effects of other components listed below);

c. Investment tax credits;

d. The benefits of operating loss carryforwards; and

e. Adjustments of a DTA or DTL for enacted changes in tax laws or rates or a change in the tax status of the reporting entity.

19. Additionally, to the extent that the sum of a reporting entity's income taxes incurred and the change in its DTAs and DTLs is different from the result obtained by applying the federal statutory rate to its pretax net income, a reporting entity shall disclose the nature of the significant reconciling items.

20. A reporting entity shall also disclose the following:

a. The amounts, origination dates and expiration dates of operating loss and tax credit carryforwards available for tax purposes; and

b. The amount of federal income taxes incurred in the current year and each preceding year, which are available for recoupment in the event of future net losses.

21. If a reporting entity's federal income tax return is consolidated with those of any other entity or entities, the following shall be disclosed:

a. A list of names of the entities with whom the reporting entity's federal income tax return is consolidated for the current year; and

b. The substance of the written agreement, approved by the reporting entity's Board of Directors, which sets forth the manner in which the total combined federal income tax for all entities is allocated to each entity which is a party to the consolidation. (If no written agreement has been executed, give an explanation of why such an agreement has not been executed.) Additionally, the disclosure shall include the manner in which the entity has an enforceable right to recoup federal income taxes in the event of future net losses which it may incur or to recoup its net losses carried forward as an offset to future net income subject to federal income taxes.

DISCUSSION

22. Statutory accounting principles with respect to income taxes incurred (i.e., current income taxes), as set forth in this issue paper, differ from current statutory guidance as follows:

a. The definition of current income taxes is clarified by defining such taxes to include current year estimates of federal and foreign income taxes, based on tax returns for the current year, tax contingencies computed in accordance with Issue Paper No. 5, and all amounts incurred or received during the current year relating to prior periods, to the extent not previously provided, as such amounts are deemed to be changes in accounting estimates as defined in Issue Paper No. 3. In the case of a mutual life insurance company, current income tax includes the reporting entity's best estimate of its equity tax for the current year, after recomputation (i.e., including the "true-up") in accordance with the guidance contained in Emerging Accounting Issues Working Group Positions 86-1, True-up of Federal Income Taxes for Mutual Life Insurance Companies, and 95-3 & 4, Equity Tax.

b. The definition of current income tax recoverables is modified by defining such amounts as including all current income taxes reasonably expected to be received in a subsequent period, whether or not a return or claim has been filed with the taxing authorities. The criteria for admissibility of current income tax recoverables is also modified by admitting them if they are reasonably expected to be recovered pursuant to Issue Paper No. 4.

c. Statutory accounting principles with respect to the recognition of income tax transactions between affiliated parties that file a consolidated income tax return are modified to ensure that such transactions are recognized consistently among all reporting entities.

d. Statutory accounting principles with respect to the computation of income taxes incurred in interim periods is modified by requiring the use of the estimated annual effective tax rate for purposes of computed income taxes incurred in interim periods as such a method allows for the comparison of income tax rates among reporting entities, recognizes that an interim period is an integral part of the annual accounting period, and adopts paragraphs 19 and 20 of APB 28.

e. Financial statement disclosure is expanded to include disclosure of the components of current income tax expense, DTAs and DTLs, information as to the portion of a reporting entity's DTAs that are nonadmitted and, items for which DTLs have not been established in order to provide meaningful information to the users of a reporting entity's financial statements.

f. Current statutory accounting practice of recording extraordinary amounts of taxes relating to prior years as a component of gains and losses in surplus has been changed to provide that all changes in estimates of income taxes incurred will be recorded in statutory income consistent with Issue Paper No. 3.

23. The definition of current income taxes is clarified to ensure that current income taxes incurred are computed in accordance with the Statement of Concepts, to enhance the comparability of financial statements, and, with respect to the inclusion of tax contingencies, to ensure consistency with the recognition principle of the Statement of Concepts which requires the recognition of liabilities as they are incurred.

24. The definition of current income tax recoverables, and their admissibility, is modified by defining such amounts as including all current income taxes reasonably expected to be received in a subsequent period, whether or not a return or claim has been filed with the taxing authorities, so that such amounts are recorded and admitted based on reasonably objective criteria (i.e., expectation of recovery) and not predicated on subjective criteria (e.g., receipt within a specific timeframe). Current statutory accounting principles' use of subjective criteria precludes reporting entities that are continually under Internal Revenue Service (IRS) audit pursuant to the Coordinated Examination Program from admitting valid income tax recoverables since the IRS will not refund such amounts until an audit is completed. As a result, many of these taxpayers do not file amended income tax returns but rather present these valid claims to the IRS during the audit as "affirmative adjustments".

25. The principles of FAS 109, including the recognition of DTAs and DTLs, are adopted with the following modifications:

a. For purposes of this issue paper, income taxes do not include state income taxes. State income taxes (including franchise taxes) shall be computed in accordance with Issue Paper No. 5 and shall be limited to (a) taxes due as a result of the current year's taxable income calculated in accordance with state laws and regulations and (b) amounts incurred or received during the current year relating to prior periods, to the extent not previously provided as such amounts are deemed to be changes in accounting estimates. Property and casualty insurance companies shall report state income taxes as other underwriting expenses under the caption "Taxes, licenses, and fees." Life and accident and health insurance companies shall report such amounts as general expense under the "Insurance taxes, licenses, and fees, excluding federal income taxes." Other health entities shall report such amounts as general administration expenses under the caption "Taxes, licenses, and fees." State income taxes are excluded from the definition of income taxes to ensure comparability of financial statements, since such taxes are generally not significant to the surplus of a reporting entity and, since not all state taxes are based on income.

b. In order to ensure that a reporting entity's surplus is conservatively measured, the *more likely than not* criteria of paragraph 17.e. of FAS 109 is replaced by the realization criteria in paragraph 9 of this issue paper.

c. DTAs are not reduced by a valuation allowance. Instead, that portion of a reporting entity's DTAs that is not realizable pursuant to this issue paper is nonadmitted.

d. Temporary differences do not include AVR, IMR, Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased. Current statutory guidance on the accounting for "tax and loss" bonds is excerpted in paragraph 40 of this issue paper.

e. Changes in DTAs and DTLs, including amounts attributable to changes in tax rates and changes in tax status are not included in net income in accordance with paragraphs 27 and 28 of FAS 109, but rather are allocated to gains and losses in surplus pursuant to this issue paper.

f. Paragraphs 29-30, 36-37, 39, 41-42, 46 and 49-59 of FAS 109 are not adopted, inasmuch as they are not applicable to insurance companies or are inconsistent with other statutory accounting principles. Paragraph 47 of FAS 109 is adopted with modification to provide for the disclosures required for non-public reporting entities.

26. The recognition of DTAs and DTLs is consistent with the Statement of Concepts and Issue Paper Nos. 4 and 5, respectively. While Emerging Accounting Issues Working Group Position EI 89-2, Establishing a Liability for Deferred Federal Income Taxes for Statutory Accounting Purposes allows the recording of DTLs, this issue paper requires the recording of DTLs. In defining the objectives of statutory financial reporting the Statement of Concepts states:

> The primary responsibility of each state insurance department is to regulate insurance companies in accordance with state laws with an emphasis on solvency for the protection of policyholders. The ultimate objective of solvency regulation is to ensure that policyholder, contractholder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety. The cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders. An accounting model based on the concepts of conservatism, consistency, and recognition is essential to useful statutory financial reporting.

27. Recognition of DTAs and DTLs and the requisite determination that the temporary differences underlying DTAs and DTLs will result in taxable or deductible amounts ensures that statutory surplus reflects the tax consequences of recorded events and is consistent with the assumptions inherent in the financial statements that the reported assets and liabilities will be recovered and settled, respectively. The conclusion reached with respect to the nonadmissibility of Section 847 deposits in Emerging Accounting Issues Working Group Position EI-93-4, Section 847 Deposits, need not be revisited as the tax effect of loss reserve discounting (i.e., a DTA) will be recognized, subject to a nonadmissibility test.

28. DTAs embody the three characteristics of assets, as described in Issue Paper No. 4, for the following reasons:

a. A DTA "embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows" inasmuch as deductible temporary differences reduce taxable income and taxes payable in future years thereby contributing indirectly to future net cash inflows,

b. A reporting entity has exclusive rights to the future benefit associated with its DTA and

c. A DTA is the tax effect of the difference between the tax basis of an asset or liability and its reported amount in the financial statements, and is therefore attributable to a "transaction or other event giving rise to the entity's right to or control of the benefit [that] has already occurred."

29. DTLs embody the three characteristics of liabilities, as described in Issue Paper No. 5, for the following reasons:

a. Inasmuch as a DTL stems from a legal obligation imposed by a taxing authority, it "embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand,"

b. While a reporting entity may be able to delay the future reversal of the temporary differences, a DTL embodies a reporting entity's duty or responsibility to pay a tax "leaving it little or no discretion to avoid the future sacrifice," and

c. A DTL is the tax effect of the difference between the tax basis of an asset or liability and its reported amount in the financial statements, and is therefore attributable to a "transaction or other event obligating the entity [that] has already happened."

30. Temporary differences do not include differences, such as AVR, IMR, Schedule F penalties, or tax-exempt interest, inasmuch as these differences do not result in taxable or deductible amounts in future years when the related asset or liability for statutory reporting purposes is recovered or settled. Additionally, IMR is excluded from the definition of temporary differences since it is already net of current taxes paid (i.e., in essence a deferred tax has already been recorded). To the extent that a U.S. mortgage guaranty insurer has purchased "tax and loss" bonds, corresponding amounts of its statutory contingency reserve are excluded from the definition of temporary differences in order to preserve the statutory admissibility of "tax and loss" bonds and to ensure that the tax effect of the reserve is not double counted in a mortgage guaranty insurer's surplus.

31. By adoption of the principles of FAS 109, as modified in this issue paper, temporary differences include unrealized gains and losses. As a result, unrealized gains and losses of reporting entities shall be recorded, net of any allocated DTA or DTL, in gains and losses in surplus. The amount allocated shall be computed in a manner consistent with paragraph 38 of FAS 109.

32. This statement rejects *FASB Interpretation No. 18*, *Accounting for Income Taxes in Interim Periods…an interpretation of APB Opinion No. 28*.

33. The following lists Accounting Principles Board Opinions that are adopted or rejected by this statement:

a. *Accounting Principles Board Opinion No. 2, Accounting for the "Investment Credit,"* paragraphs 9-15 are adopted with modification to utilize the cost reduction method only and rejects all other paragraphs;

b. *Accounting Principles Board Opinion No. 4 (Amending No. 2), Accounting for the "Investment Credit,"* is rejected in its entirety;

c. *Accounting Principles Board Opinion No. 10, Omnibus Opinion—1966,* paragraph 6 is adopted;

d. *Accounting Principles Board Opinion No. 23, Accounting for Income Taxes—Special Areas,* paragraphs 1-3, 5-9, 12-13, and 15-18 are adopted, and paragraphs 19-25, and 31-33 are rejected;

e. *Accounting Principles Board Opinion No. 28, Interim Financial Reporting,* paragraphs 19 and 20 are adopted and all other paragraphs rejected;

34. The following lists FASB Technical Bulletins that are adopted or rejected by this statement:

a. *FASB Technical Bulletin No. 79-9*, *Accounting in Interim Periods for Changes in Income Tax Rates* is rejected in its entirety;

b. *FASB Technical Bulletin No. 82-1*, *Disclosure of the Sale or Purchase of Tax Benefits through Tax Leases* is adopted in its entirety.

35. The following lists FASB Emerging Issues Task Force Issues that are adopted or rejected by this statement:

a. *FASB Emerging Issues Task Force No. 91-8*, *Application of FASB Statement No. 96 to a State Tax Based on the Greater of a Franchise Tax or an Income Tax*, is rejected in its entirety;

b. *FASB Emerging Issues Task Force No. 92-8*, *Accounting for the Income Tax Effects under FASB Statement No. 109 of a Change in Functional Currency When an Economy Ceases to Be Considered Highly Inflationary*, is adopted in its entirety;

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

37. Chapter 20, Federal Income Taxes, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies (P&C Accounting Practices and Procedures Manual) provides the following guidance:

> Beginning with the Revenue Act of 1921, the Internal Revenue Code incorporates certain sections which govern the federal income taxation of property/liability insurance companies. The 1986 Tax Reform Act ("TRA") dramatically changed the manner in which such insurers are taxed, repealing Sections 821 through 826 of the Code and eliminating the differences that previously existed in the taxation of mutual and stock property/liability companies. The taxation of property/liability insurers is governed by Section 831 and 832 of the Internal Revenue Code of 1986.
>
> With the enactment of the TRA, not only were the differences in tax treatment between mutual and stock companies eliminated, but, for the first time, a single property/liability tax return was developed — Form 1120-PC. Gone are the Protection Against Loss ("PAL") account and Form 1120M for mutual property/liability insurers, although provisions concerning the runoff of existing PAL accounts still exist.
>
> Section 832 of the Code continues to define "gross income" as:
>
> "A combined gross amount earned during the taxable year, from investment income and from underwriting income as provided in this subsection, computed on the basis of the underwriting and investment exhibit of the annual statement approved by the National Association of Insurance Commissioners. . ."
>
> Small insurers continue to be eligible for different tax treatment, although they were also affected by the TRA. Any property/liability company with less than $350,000 per year in (the greater of) net written or direct written premiums is exempt from federal income taxation under Code Section 501(c)(15). Property/liability insurers with net written premiums or direct written premiums (whichever is greater) in excess of $350,000, but less than $1,200,000, may make an election to be taxed only on taxable investment income. In the case of a member of a controlled group of corporations, the direct or net written premiums of the controlled group are aggregated in order to determine if the company may make the election. The ownership test for a control group is 50%, rather than 80%, for purposes of determining eligibility for the small company provision.
>
> Each company must establish an appropriate liability for federal income taxes payable in its annual statement. This liability must be sufficient to cover computed taxes for current and prior years that are currently payable (total income tax less estimated tax payments), and any additional taxes the company expects to pay.
>
> This chapter considers the method of accounting for federal income tax, and the differences between annual statement "net income" and "taxable income."

Method of Accounting for Federal Income Taxes

As mentioned above, the statutory method of accounting as used in the annual statement plays the key role in determining the federal income tax liability of property/liability insurers. The insurance sections of the Internal Revenue Code in general provide that taxable income should be computed on the basis of the underwriting and investment exhibits of the annual statement except where such basis conflicts with other preemptive provisions of the Code. Such preemptive provisions have been dramatically increased as a result of the 1986 TRA.

Differences Between Annual Statement "Net Income" and "Taxable Income"

Due to specific Internal Revenue Code provisions which affect determination of taxable income, there have always been differences between annual statement "net income" and "taxable income," such as tax exempt interest income, depreciation expense, etc.

The TRA, however, introduced four major provisions at variance with annual statement accounting which increase the taxable income of property/liability insurers:

1. Discounting of loss reserves. Property/liability insurers are required to discount loss and loss adjustment expense reserves in the following manner:

   - The discount rate is a moving average of the mid-term applicable federal rate under Code Section 1274, which fluctuates from year to year;

   - The payout period is based on industry averages, but the company may elect to use its own experience;

   - The maximum payout period for former Schedule O lines is three years and ten years for all lines that were reported in Schedule P before the 1989 annual statement; and

   - There is an extension of the 10-year payout period for certain reserves remaining at the end of ten years.

     The impact of discounting is to spread the deduction for ultimate incurred losses and loss adjustment expenses over a number of years to reflect the assumed investment earnings on those reserves.

2. Revenue Offset. Property/liability insurers must include in taxable income annually 20% of the increase (decrease) in their unearned premium reserves.

   There is also a transition rule whereby 20% of a company's unearned premium reserve at the end of 1986 is includable in taxable income ratably over a six year period beginning in 1987.

3. Proration. Property/liability insurers are now required to reduce their deduction for losses incurred by 15% of the sum of the tax exempt interest and the deduction for dividends received. This proration rule does not apply to tax exempt interest and the deductible portion of dividends received or accrued on stock or obligations acquired by the insurer before August 8, 1986.

4. Alternative Minimum Tax. A new corporate tax concept was introduced wherein a tax is imposed on a company's "economic" income at a reduced rate of 20%. The corporation's tax liability will be the higher of the regular tax or this alternative minimum tax.

   Certain tax preference items are added to a company's (or a group's) consolidated taxable income resulting in alternative minimum taxable income. Tax preferences should include:

- 50% of excess of book income over taxable income adjusted for other tax preferences.

- Interest on certain private activity municipal bonds issued after August 8, 1986.

- Accelerated depreciation on real and personal property, to the extent it is in excess of depreciation calculated under an alternative method.

Book income is annual statement net income for mutual insurance companies. For stock insurers that file GAAP financial statements, book income is GAAP net income. Beginning in 1990, this preference will be based on adjusted current earnings ("ACE"), similar to earnings and profits, rather than statutory income. Also in 1990, the preference will equal 75% of the excess of ACE over taxable income, plus other preferences.

(The Superfund Revenue Act of 1986 requires corporations to pay an "environmental" tax, set at an annual rate of $12 per $10,000 of alternative minimum taxable income, payable even if the corporation pays no alternative minimum tax. This tax of .12% is levied on a corporation's modified alternative minimum taxable income over $2,000,000.)

Other Additions To Annual Statement "Net Income"

Examples of additions are:

1. Provisions for federal income taxes deducted in the annual statement;

2. Excess of realized capital losses over realized capital gains in the annual statement;

3. Gain on sale of capital assets in excess of annual statement gain;

4. Excess of annual statement depreciation and amortization over tax depreciation and amortization;

5. Cost of assets, leasehold improvements, acquisition of leases, and special assessments on real estate owned, which have been included as expenses in the annual statement, but which are capital improvements for tax purposes;

6. Charitable donations exceeding deductible limits;

7. Premiums for officers' or employees' life insurance policies where the company is the beneficiary;

Deductions From Annual Statement "Net Income"

Examples of deductions are:

1. Tax-exempt interest as reduced by proration;

2. Dividends received deduction as reduced by proration;

3. Excess of tax depreciation and amortization over annual statement depreciation and amortization;

4. Carry-forward of any allowable deductions, such as excess charitable contributions;

5. Operating or capital loss carry-forwards allowable to the company;

6. Federal income tax refunds included in "net income";

7. Items previously not deductible for tax purposes that were charged to annual statement in prior years;

8. Loss on sale of capital assets in excess of annual statement loss.

* See above for discounting, revenue offset, proration and anticipation of salvage and subrogation.

Reporting Federal Income Taxes

Federal income taxes can appear in the following places in the annual statement:

Recoverable federal income taxes are allowable as an admitted asset and appear as an asset on the balance sheet. Note, however, that the NAIC does not recognize as an admitted deferred asset “special estimated tax payments” authorized by Section 847 of the Internal Revenue Code.

Federal income taxes due or accrued are included as a liability on the “Liabilities, Surplus and Other Funds” page of the balance sheet.

Federal income taxes incurred during the year are reported as a deduction from income in the Underwriting and Investment Exhibit of the Statement of Income.

Federal income taxes incurred or refunded during the year relating to prior period adjustments are to be included with current year provisions for taxes, but in some instances, if material, they may be charged or credited directly to unassigned surplus in the capital and surplus account.

Also, a footnote to the Statement of Income discloses the amount of federal income taxes incurred and available for recoupment in the event of future net losses. Further, it discloses the amount of any net losses carried forward and available to offset future net income subject to federal income taxes.

Federal income taxes paid are included in the Statement of Changes in Financial Position.

General Interrogatories include a series of questions regarding federal income taxes. They disclose whether a consolidated return is filed and, if so, the methods used to allocate the taxes between the companies. (See Chapter 8-Other Admitted Assets.)

Federal Income Tax Recoverable - Consolidated Return

In the case of an insurer that is a party to a consolidated tax return with one or more affiliates, the caption for federal income tax recoverable should reflect the source of the recoverable such as “Federal Income Tax Recoverable - Parent.”

Insurers may recognize intercompany transactions arising from income tax allocations among companies participating on a consolidated tax return provided the following conditions are met:

1. There is a written agreement describing the method of allocation and the manner in which intercompany balances will be settled, and

2. Such agreement requires that any intercompany balance will be settled within a reasonable time following the filing of the consolidated tax return, and

3. Such agreement complies with regulations promulgated by the Internal Revenue Service, and

4. Any receivables arising out of such allocation meet the criteria for admitted assets as prescribed by the domiciliary state of the insurer, and

5. Liabilities which offset the related intercompany receivables are established by other companies participating in the consolidated tax return.

38. Chapter 23, Federal Income Taxes, of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual) provides the following guidance:

Introduction

With the passage of the Deficit Reduction Act of 1984, Congress substantially changed the taxation of life insurance companies under the U.S. Internal Revenue Code. From 1958 through 1983, life insurance companies were taxed under the provisions of the Life Insurance Company Income Tax Act of 1959 which prescribed a complex three phase taxing formula unique to such companies. The 1984 Act mandated a simpler single-phase basis of taxation which essentially parallels the taxation of the income of other corporations. Subsequent modifications have retained the basic single-phase system.

However, there are several aspects of determining life insurance company taxable income that are unique to the life insurance industry. The most notable of these are deductions for increases in life insurance company reserves, deductions for dividends to policyholders, the special treatment of the company's share of tax exempt interest and dividends received deduction, and the small life insurance company deduction.

Definition of a Life Insurance Company for Federal Income Tax Purposes

To obtain the special treatment afforded life insurance companies under the Internal Revenue Code, a business enterprise must meet the Internal Revenue Code's definition of a life insurance company. A life insurance company is defined as a company for which, during the taxable year, more than half of its business is the issuance of insurance and annuity contracts or the reinsuring of risks underwritten by insurance companies, provided that more than 50% of its total reserves consist of life insurance reserves and unearned premiums and unpaid losses on noncancellable life, accident, or health policies. As a result of this definition in the Internal Revenue Code, companies that are incorporated as life insurance companies under applicable state insurance laws may not qualify as life insurance companies for federal income tax purposes.

Deduction for Increase in Reserves

Life insurance companies are permitted deductions in each tax year for the net amount of the increase in:

- Life insurance reserves (as defined in the Internal Revenue Code).
- Unearned premiums and unpaid losses not included in life insurance reserves.
- Other items set forth in the Internal Revenue Code.

In general, a life insurance reserve is defined in the Internal Revenue Code as a liability amount which is required by state law and which:

- Is computed or estimated on the basis of recognized mortality or morbidity tables and assumed rates of interest, and
- Recognizes the company's future liability for unaccrued claims from life insurance, annuity, and noncancellable accident and health insurance contracts.

Noncancellable accident and health insurance is defined to include guaranteed renewable accident and health insurance.

Calculation of Life Insurance Reserves for Deduction Purposes

Prior to the 1984 Act, a life insurance company's reserves for federal income tax purposes were generally based upon those held in its statutory annual statement. As a result of the 1984 Act, federal standards were established for the calculation of life insurance reserves for income tax purposes and may be summarized as follows:

- The reserve calculation method is specified—in general, a company is to use the Commissioners' Reserve Valuation Method (CRVM) for life insurance contracts, the Commissioners' Annuity Reserve Valuation Method (CARVM) for annuity contracts and a two-year full preliminary term for noncancellable accident and health insurance.

- The interest rate is specified—beginning in 1988 it has been the greater of:

  An interest rate determined by the Internal Revenue Service based on an average of monthly interest rates for certain Treasury obligations, referred to as the "applicable federal interest rate" (AFR), or

  The "prevailing state assumed interest rate", i.e., the highest interest rate which at least 26 states permit to be used for statutory annual statement reserves for such contracts.

- The mortality/morbidity basis is specified—the "prevailing commissioners' standard tables for mortality and morbidity", i.e., the most recent tables adopted by the NAIC which at least 26 states permit to be used for reserve determination for such contracts. In the event there are no "prevailing commissioners' standard tables", the Secretary of the Treasury is authorized to specify the mortality or morbidity tables to be used.

Life insurance companies are permitted to use the larger of the reserve amount calculated by the foregoing rules or the net surrender value of the contract to determine the reserve deduction for the tax year. In any event, the tax reserve cannot exceed the reserve amount shown on the company's annual statement.

As a result of legislation in 1986, certain other reserves which generally are not discounted for annual statement purposes, such as accident and health unpaid claims, now must be discounted for tax deduction purposes using a discounting method and rate specified by the Internal Revenue Code.

Deduction for Policyholder Dividends

As a result of the 1984 Act, the deduction by a stock life insurance company for policyholder dividends paid or accrued during a taxable year generally is not subject to limitation. However, a mutual life insurance company is required by the Internal Revenue Code to reduce its deduction for policyholder dividends (and, next, its deduction for increase in reserves) by an amount referred to as the "differential earnings amount." According to the 1984 Act Congressional Conference Report, "...This reduction reflects recognition that, to some extent, policyholder dividends paid by mutual companies are distributions of the companies' earnings to the policyholders as owners..."

The Internal Revenue Code's definition of "policyholder dividends" includes the following items:

- Amounts returned to policyholders where the amounts so returned were not fixed in the policy but, instead, depended on the experience of the company or the discretion of management.

- Excess interest, defined as any amount in the nature of interest paid or credited to policyholders in excess of the prevailing state assumed interest rate (rather than in excess of the minimum rate guaranteed in the contract).

- Premium adjustments, defined as any reduction in the premiums which would have been required to be paid under the contracts.

- Experience-rated refunds, defined as including a refund based on the experience of the policyholder.

Under the Internal Revenue Code, the differential earnings amount for mutual companies is determined by multiplying an individual company's "average equity base" for the taxable year by the "differential earnings rate." The average equity base is an amount calculated by each mutual company. It is based on specific rules in the Internal Revenue Code and includes a company's capital and surplus. The differential earnings rate is computed by the Internal Revenue Service based on information reported by all mutual life insurance companies and the 50 largest stock life insurance companies. The rate for each year is announced by the Internal Revenue Service.

Company's Share of Tax-Exempt Interest and Dividends-Received Deduction

In determining taxable income for most corporations, tax exempt interest is excluded and a deduction is allowed for a percent of United States source dividend income received. However, special rules apply as to life insurance companies. Life insurance companies are allowed to reduce taxable income by only the "company's share" of the tax exempt interest and the dividends received deduction. The "company's share" is calculated using specific rules in the Internal Revenue Code.

Small Life Insurance Company Deduction

For life insurance companies with assets of less than $500 million, a special small company deduction from taxable income is allowed. The deduction is equal to 60% of tentative life insurance company taxable income up to $3 million. This deduction is reduced by 15% of tentative life insurance company taxable income between $3 million and $15 million (at $15 million, the deduction becomes zero). For purposes of the $500 million asset ceiling, all members of a controlled group, including nonlife insurance companies, are treated as one company.

Other Considerations

Alternative Minimum Tax

The Tax Reform Act of 1986 replaced the prior add-on minimum tax with a new alternative minimum tax (AMT) on corporations. The AMT is, in substance, an alternative tax calculation which applies if it exceeds the regular tax.

The AMT is applicable to all companies, including life insurance companies, and is intended to ensure that no taxpayer with substantial economic income can avoid income tax through the use of exclusions, deductions, and credits. The AMT is equal to 20% of the recomputed taxable income that recognizes certain adjustments and items of tax preference. The significant adjustment for life insurance companies for the tax years 1987, 1988, and 1989 was the book income adjustment. This adjustment increases (but does not decrease) the alternative minimum taxable income by 50% of the difference between pretax financial statement income and taxable income. Another adjustment, applicable only to mutual companies, limits the reduction in book income for policyholder dividends.

Starting with 1990, the calculation of alternative minimum taxable income has been based on an earnings and profits concept rather than a book income adjustment. Among the adjustments for tax years beginning after 1989 that are of importance to life insurance companies are a requirement to amortize acquisition costs, the addback of the company's share of tax exempt interest and the dividends received deduction, and the addback of the small company deduction.

Policyholders' Surplus Account

A stock life insurance company may be required to maintain a memorandum account for tax purposes called the "policyholders' surplus account." The policyholders' surplus account represents, in effect, income of a stock life insurance company for which tax was deferred under pre-1984 tax rules. Under the 1984 Act, there can be no additions to the policyholders' surplus account after 1983. However, reductions in the policyholders' surplus account are included in taxable income in the year in which such reductions occur (referred to as "Phase III income").

Phase III income can occur as a result of any of the following circumstances:

- The company makes certain distributions to shareholders, either as dividends or redemptions of stock, which are in excess of the shareholders' surplus account and are considered as reductions of the policyholders' surplus account.

- The policyholders' surplus account exceeds certain maximums based on net premiums and life insurance reserves.

- The company ceases to qualify as a life insurance company for tax purposes.

Statutory Treatment of Federal Income Taxes

In addition to United States income taxes, federal income taxes in the annual statement include income taxes levied by foreign countries and United States possessions. The handling of federal income taxes can appear in different places in the annual statement. These places are:

- Federal income tax recoverable is reported as an asset subject to asset admissibility criteria.

- Federal income taxes due or accrued are reported as a liability.

- Federal income taxes incurred during the year (excluding tax on capital gains) are deducted in the Summary of Operations.

- Federal income taxes incurred during the year relating to prior-period adjustments generally are included with current year taxes. However, in extraordinary instances it may be appropriate to charge such adjustments directly to the surplus account.

- Federal income taxes incurred during the year on capital gains are shown as a reduction of Gross Capital Gains and Losses on Investments.

Insurers may recognize transactions arising from income tax allocations among companies participating in a consolidated return, provided certain conditions are met.

39. Chapter 19, Expenses, of the P&C Accounting Practices and Procedures Manual provides the following guidance with respect to state income taxes:

Expense Group Classifications

Expenses for fire and casualty insurance companies are allocated to expense groups as follows:

B. Other Underwriting Expenses

Other underwriting expenses are classified into three categories as follows:

3. Taxes, Licenses, and Fees

These are state and local insurance taxes, insurance department licenses and fees, allocable payroll taxes, and all other taxes excluding federal and foreign income and real estate taxes.

All other taxes might include: (1) qualifying bond premiums; (2) statement publication fees; (3) advertising required by law; (4) personal property taxes; (5) state income taxes; (6) capital stock taxes; (7) business or corporation licenses or fees; (8) marine profits taxes; (9) documentary stamps on reinsurance; (10) guaranty association assessments; and (11) any other taxes.

Real estate taxes on investment properties are generally included with investment expenses, and capital stock taxes and apportioned payroll taxes may be reported as investment expenses.

40. Appendix A, Mortgage Guaranty Insurance Accounting Principles Supplement of the P&C Accounting Practices and Procedures Manual provides the following guidance with respect to “tax and loss” bonds of U.S. mortgage guaranty insurance companies:

BONDS

U.S. Mortgage Guaranty Tax and Loss Bonds

To obtain a current federal income tax benefit derived from annual additions to the statutory contingency reserve (for tax purposes, the “mortgage guaranty account”), mortgage guaranty insurers must purchase “tax and loss” bonds to the extent of such benefits. These bonds are noninterest bearing obligations of the U.S. Treasury, and mature 10 years after issue. The usual purpose of “tax and loss” bonds is to satisfy taxes that will be due in 10 years when the tax benefit is reversed; however, the bonds may be redeemed earlier in the event of excess underwriting losses. (See chapter on Contingency Reserve.) These bonds are carried as an asset for statutory purposes allowing mortgage insurers to conserve capital.

FEDERAL INCOME TAXES

Contingency Reserve (for Tax Purposes, the “Mortgage Guaranty Account”)

Under IRS Code Section 832(e), mortgage guaranty insurers are permitted to deduct from gross income the annual addition to the contingency reserve. The tax deduction is generally an amount equal to (a) 50% of earned premium or (b) taxable income as computed prior to this special deduction if less than 50% of earned premium. Annual deductions not utilized for tax purposes during the current period may be carried forward for eight years on a basis similar to net operating losses. The amount deducted must be restored to gross income after ten years; however, the amount may be restored to gross income at an earlier date in the event of a taxable net operating loss.

The tax deduction is permitted only if special “U.S. Mortgage Guaranty Tax and Loss Bonds” are purchased in an amount equal to the tax benefit derived from the deduction (see section on “Bonds”). Upon redemption the “tax and loss” bonds can be used to satisfy the additional tax liability that arises when the deduction is restored to income.

The purchase of “tax and loss” bonds will often defer the entire tax expense that would otherwise be payable on the current year’s taxable income.

41. Chapter 22, General Expenses and Taxes, Licenses and Fees of the Life/A&H Accounting Practices and Procedures Manual contains the following guidance with respect to state income taxes:

Classification of Expenses

The following points should be noted with respect to specific classifications of expenses:

12. Taxes, licenses and fees generally include all payments to federal, state, local, and foreign governments with the exception of federal income taxes.

Taxes, Licenses, and Fees Due or Accrued

Taxes, licenses, and fees which are unpaid but applicable to the accounting period should be accrued and reported as a liability in the balance sheet. With respect to premium taxes and state income taxes, the amount accrued should relate to the related premiums or taxable income recorded in the period, less, of course, prepayments of those taxes. Payroll taxes accrued should include all unpaid taxes applicable to salaries and wages which have been paid, plus taxes applicable to accrued payroll.

42. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies provides the following guidance with respect to federal income taxes:

UNDERWRITING AND INVESTMENT EXHIBIT

STATEMENT OF INCOME

Line 15 - Federal and Foreign Income Taxes Incurred

Include: Current year provisions for federal and foreign income taxes, and federal and foreign income taxes incurred or refunded during the year relating to prior period adjustments. In some instances such prior period adjustments, if material, may be charged or credited directly to Unassigned Surplus in the “Capital and Surplus Account.”

The statutory method of accounting as used in the annual statement plays the key role in determining the federal income tax liability of property and casualty insurance companies. The insurance sections of the Internal Revenue Code, in general, provide that taxable income should be computed on the basis of the underwriting and investment exhibits of the annual statement except where such basis conflicts with other preemptive provisions of the Internal Revenue Code.

The amount of this item equals Line 14 of Exhibit 2, adjusted for reserves in Line 6 on page 3 of the current and prior years’ statements, and recoverables in Line 14, Column 4 on Page 2 of current and prior years’ statements.

The amount of this item equals Line 9, Page 5, adjusted for reserves in Line 6 on Page 3 of the current and prior years’ statements, and recoverables in Line 14, Column 4 on Page 2 of current and prior years’ statements.

CAPITAL AND SURPLUS ACCOUNT

Line 29 - Extraordinary Amounts of Taxes for Prior Years

Include: Interest and expenses related to prior year taxes on this line.

ASSETS, PAGE 2

Line 14 - Federal Income tax Recoverable

In the case on an insurer that is a party to a consolidated tax return with one or more affiliates, the caption for Federal Income Tax Recoverable should reflect the source of the recoverable; e.g., Federal Income Tax Recoverable - Parent.

Insurers may recognize intercompany transactions arising from income tax allocations among companies participating in a consolidated income tax return, provided the following conditions are met:

1. There is a written agreement describing the method of allocation and the manner in which intercompany balances will be settled, and

2. Such agreement requires that any intercompany balance will be settled within a reasonable time following the filing of the consolidated tax return, and

3. Such agreement complies with regulations promulgated by the Internal Revenue Service, and

4. Any receivables arising out of such allocation meet the criteria for admitted assets as prescribed by the domiciliary state of the insurer, and

5. Liabilities which offset the related intercompany receivables are established by other companies participating in the consolidated tax return.

NOTES TO FINANCIAL STATEMENTS

4. Federal Income Tax Allocation

Instruction:

a. If the company’s federal income tax return is combined with those of any other entity or entities, provide the following:

1. A list of names of the entities with whom the company’s federal income tax return is combined for the current year.

2. The substance of the written agreement, approved by the company’s Board of Directors, which sets forth the manner in which the total combined federal income tax for all entities is allocated to each entity which is a party to the consolidation. (If no written agreement has been executed, give an explanation of why such an agreement has not been executed.) Describe the method of allocation, setting forth the manner in which the company has an enforceable right to recoup federal income taxes in the event of future net losses which it may incur or to recoup its net losses carried forward as an offset to future net income subject to federal income taxes.

b. If the company incurred federal income taxes which are available for recoupment in the event of future net losses, indicate the amount available for recoupment from the current year, the first preceding year, and the second preceding year.

c. If the company incurred net losses which are carried forward and are available to offset future net income subject to income taxes, indicate the amounts carried forward from the current year and each of the six years preceding the current year.

Illustration:

a. 1. The Company's federal income tax return is combined with the following entities:

The Affiliated Company

2. The method of allocation between the companies is subject to written agreement, approved by the Board of Directors. Allocation is based upon separate return calculations with current credit for net losses. Intercompany tax balances are settled annually in the first quarter.

b. The amount of federal income taxes incurred and available for recoupment in the event of future net losses is:
current year $ __________; first preceding year $ ___________;
second preceding year $ __________

c. The amount of net losses carried forward and available to offset future net income subject to federal income taxes is:
current year $ _________; first preceding year $_________;
second preceding year $_________; third preceding year $_________;
fourth preceding year $_________; fifth preceding year $_________;
sixth preceding year $_________

43. The NAIC Annual Statement Instructions for Life and Accident and Health Insurance Companies provides the following guidance with respect to federal income taxes:

SUMMARY OF OPERATIONS (EXCLUDING UNREALIZED CAPITAL GAINS & LOSSES)

Line 30 - Federal Income Taxes Incurred

Include: Income and excess profits taxes, of any foreign country or of any possession of the U.S., incurred on operations.

Exclude: Taxes on capital gains and Extraordinary amounts of taxes relating to prior years.

The total of the amount in Line 30 minus extraordinary amounts of taxes reported in the "Details of Write-ins Aggregated at Line 46 for Gains and Losses in Surplus" on Line 46 plus Exhibit 3, Footnote (a), Line 1, Column B should be equal to Exhibit 12, Line 23.2 plus Page 3, Line 14A, current year, plus Page 2, Line 14, prior year, minus Page 3, Line 14A, prior year, minus Page 2, Line 14, Column 4, current year.

ASSETS, PAGE 2

Line 14 - Federal Income Tax Recoverable

In the case on an insurer that is a party to a consolidated tax return with one or more affiliates, the caption for Federal Income Tax Recoverable should reflect the source of the recoverable; e.g., Federal Income Tax Recoverable - Parent.

Insurers may recognize intercompany transactions arising from income tax allocations among companies participating in a consolidated income tax return, provided the following conditions are met:

1. There is a written agreement describing the method of allocation and the manner in which intercompany balances will be settled, and

2. Such agreement requires that any intercompany balance will be settled within a reasonable time following the filing of the consolidated tax return, and

3. Such agreement complies with regulations promulgated by the Internal Revenue Service, and

4. Any receivables arising out of such allocation meet the criteria for admitted assets as prescribed by the domiciliary state of the insurer, and

5. Liabilities which offset the related intercompany receivables are established by other companies participating in the consolidated tax return.

NOTES TO FINANCIAL STATEMENTS

5. Federal Income Tax Allocation

Instruction:

If the company's federal income tax return is combined with those of any other entity or entities, provide the following:

a. A list of names of the entities with whom the company's federal income tax return is combined for the current year.

b. The substance of the written agreement, approved by the company's Board of Directors, which sets forth the manner in which the total combined federal income tax for all entities is allocated to each entity which is a party to the consolidation. (If no written agreement has been executed, give an explanation of why such an agreement has not been executed.) Describe the method of allocation, setting forth the manner in which the company has an enforceable right to recoup federal income taxes in the event of future net losses which it may incur or to recoup its net losses carried forward as an offset to future net income subject to federal income taxes.

Illustration:

a. The Company's federal income tax return is combined with the following entities:

The Affiliated Company

b. The method of allocation between the companies is subject to written agreement, approved by the Board of Directors. Allocation is based upon separate return calculations with current credit for net losses. Intercompany tax balances are settled annually in the first quarter.

44. Emerging Accounting Issues Working Group Position EI-86-1, *True-up of Federal Income Taxes for Mutual Life Insurance Companies*, provides the following guidance:

True–Up of Federal Income Taxes for Mutual Life Insurance Companies

The second issue discussed was adjustment of the ownership differential earnings amount provided under the Deficit Reduction Act of 1984. Attached to these minutes is a memorandum prepared by Ernst & Whinney which provided the background material for the discussion.

Accounting issues discussed were as follows:

1. What is the most appropriate option for mutual life insurers to adopt in accruing for 1984 and 1985 in the absence of an announced differential rate by the U.S. Treasury?

2. Should the adjustments to federal income taxes of prior years' tax liability relative to the true–up be reported through operations or as a direct charge to surplus?

The working group concluded the following:

1. "Best estimates" should be used in accruing for the 1984 and 1985 tax liabilities in the absence of an announced differential rate by the U.S. Treasury.

2. Adjustments of prior years' tax liability relative to the true–up should be reported through the operations statement.

45. Emerging Accounting Issues Working Group Position EI 87-6, *Accounting for the Impact of the Tax Reform Act of 1986*, provides the following guidance (However, note that reference to the FASB relates to consideration of deferred taxes pursuant to *FASB Statement of Financial Accounting Standards No. 96*, *Accounting for Income Taxes*, which was superseded by FAS 109):

Accounting for Impact of the Tax Reform Act of 1986 (Loss Reserves Discounting)

The question of accounting on a statutory basis for the implications of tax reform was initially raised by Mary Jan Robertson, Vice President–Controller of United Capital Insurance Company. Subsequent to, and, independent of her request, tax reform impact questions were also referred to the Emerging Issues Working Group by action of the Financial Condition (EX4) Subcommittee.

The Tax Reform Act of 1986 made significant changes in the taxation of property and casualty insurance companies. Among the changes are "fresh start" provisions, loss reserve discounting, limitation in the deduction of the unearned premium, taxation of a portion of previously tax–exempt income, imposition of an alternative minimum tax in some cases and lower rates. The act changes the timing of tax payments and taxable income may be considerably higher than before, particularly in the first few years:

The working group considered the following issues:

1. Should the loss reserve discounting required for federal tax purposes be reflected in the insurer's statutory statement?

   The working group concluded that loss reserve discounting required for federal tax purposes was not an acceptable statutory accounting treatment.

2. Should a deferred tax asset, i.e., prepaid income taxes, arising from current timing differences be permitted on a statutory basis?

   The consensus of the working group was that a deferred tax asset should not be permitted for statutory accounting purposes. The consensus was based, among other things, on the following:

   a. The asset is not convertible to cash; it generally only reflects timing differences.

   b. The asset is not recoverable within a definitive and short (1 to 2 years) time frame nor is the value readily determinable.

   c. Statutory accounting has not previously recognized prepaid or deferred liability items (e.g., prepaid rent and deferred acquisition expenses).

> d. In the majority of companies, i.e., those with growing premium volume and increasing loss reserve levels, the deferred tax asset would continually grow, probably to a very significant size.
>
> The Financial Accounting Standard Board (FASB) has also reviewed this issue. FASB may allow some balance sheet recognition of a deferred tax asset, but it will be limited to a 3–year carryback amount if the amount and calculation thereof is clearly demonstrable. The working group believes in most cases, this will provide insignificant relief to property/casualty insurers.
>
> The working group recommends to all insurance departments and to the NAIC Examiner Team that their financial analysis process take into consideration the impact on surplus caused by the new tax law. In some cases, effective tax rates will be very high, in excess of 100%, and that obviously will impact surplus. As a result, IRIS tests and other financial ratios which are surplus dependent may be distorted. Examiners and analysts should be cognizant of tax impact when evaluating companies. In certain situations, analytical recognition of additional equity resulting from deferred or prepaid taxes should be considered when determining financial stability and writing capacity. The working group believes this will be very pertinent with respect to new, growing companies writing long tail lines and to small, monoline, professional malpractice companies.

46. Emerging Accounting Issues Working Group Position EI 89-2, *Establishing a Liability for Deferred Federal Income Taxes for Statutory Accounting Purposes*, provides the following guidance on deferred taxes:

> Establishing a Liability for Deferred Federal Income Taxes for Statutory Accounting Purposes
>
> The issue summary for this topic was also prepared by Mr. Schaefer of the Michigan Insurance Bureau. A Michigan property and casualty insurer had established a liability for deferred federal income taxes consisting of a protection against loss account, unrealized gains from securities purchased at a discount and unrealized gains or losses from the write-up or write-down of the market value on stocks. While statutory accounting allows the deferral of taxes through the establishment of a P.A.L. account, the 1986 Tax Reform Act repealed the deduction for such an account.
>
> The issue identified was:
>
> Should the reporting of a liability for deferred federal income taxes be allowed under statutory accounting principles?
>
> The working group concluded that while the existing accounting does not prohibit the establishment of a deferred tax liability, such a liability is not required. If an insurer does establish such a liability, it should be done on a consistent basis from year to year. In accordance with present annual statement instructions, it should not be included in the federal income tax liability.

47. Emerging Accounting Issues Working Group Position EI 93-4, *Section 847 Deposits*, provides the following guidance on the asset admissibility of these deposits:

> 2. Section 847 Deposits (Prepaid Federal Income Taxes)
>
> This issue submitted by Dakota Truck Underwriters (Attachment B) was first considered by the working group in September 1993 (EI 93-3). The discussion at that meeting revealed that additional research was needed to provide information to the working group. John Baily (Coopers & Lybrand) summarized the result of such research (Attachment C). He indicated that this issue was not unlike the general issue of deferred tax assets considered and rejected by the working group previously.

> The working group voted to reject the recommendation to allow reciprocal insurers an admitted asset for Section 847 deposits. The working group also reiterated its position against deferred taxes for statutory purposes.

48. Emerging Accounting Issues Working Group Position EI 95-3, *Equity Tax*, provides the following guidance on statutory accounting for a mutual life insurer's equity tax:

> Norris Clark (Calif.) summarized an issue submitted by Martin Carus (N.Y.) (Attachment A) regarding a component of federal income taxes for mutual life insurance companies commonly referred to as the "equity tax." The question is whether it is more appropriate to charge that component of federal income taxes directly to surplus or through operations as income tax expense.
>
> Armand de Palo (The Guardian Life Insurance Company of America) was recognized to present some additional information in support for charging the "equity tax" directly to surplus (Attachment B). Mr. Clark distributed minutes from a 1986 meeting of the working group (Attachment C) that include a discussion of this topic, and a recent letter received from John J. Palmer (Life of Virginia) concerning the issue (Attachment D).
>
> After further discussion, the working group reached a tentative consensus that this component of federal income taxes should be recorded as tax expense in the summary of operations and should not be charged directly to surplus. The issue will be further discussed at the Winter National Meeting in San Antonio in anticipation of reaching a final consensus.

49. Emerging Accounting Issues Working Group Position EI 95-4, *Equity Tax*, provides the following guidance on statutory accounting for a mutual life insurer's equity tax:

> 1. Equity Tax
>
> Norris Clark (Calif.) summarized the issue and reviewed the preliminary consensus from the Fall National Meeting that the component of federal income taxes known as the "equity tax" should be recorded as tax expense in the summary of operations and should not be charged directly to surplus.
>
> After further discussion the working group affirmed the preliminary conclusion.

Generally Accepted Accounting Principles

50. FAS 109 provides the following relevant guidance:

> **STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING**
>
> **SCOPE**
>
> 3. This Statement establishes the standards of financial accounting and reporting for income taxes that are currently payable and for the tax consequences of:
>
> a. Revenues, expenses, gains, or losses that are included in taxable income of an earlier or later year than the year in which they are recognized in financial income
> b. Other events that create differences between the tax bases of assets and liabilities and their amounts for financial reporting
> c. Operating loss or tax credit carrybacks for refunds of taxes paid in prior years and carryforwards to reduce taxes payable in future years.
>
> **Objectives and Basic Principles**
>
> 6. One objective of accounting for income taxes is to recognize the amount of taxes payable or refundable for the current year. A second objective is to recognize deferred tax liabilities and

assets for the future tax consequences of events[3] that have been recognized in an enterprise's financial statements or tax returns.

[3] Some events do not have tax consequences. Certain revenues are exempt for taxation and certain expenses are not deductible. In the United States, for example, interest earned on certain municipal obligations is not taxable and fines are not deductible.

7. Ideally, the second objective might be stated more specifically to recognize the *expected* future tax consequences of events that have been recognized in the financial statements or tax returns. However, the objective is realistically constrained because (a) the tax payment or refund that results from a particular tax return is a joint result of all the items included in that return, (b) taxes that will be paid or refunded in future years are the joint result of events of the current or prior years and events of future years, and (c) information available about the future is limited. As a result, attribution of taxes to individual items and events is arbitrary and, except in the simplest situations, requires estimates and approximations.

8. To implement the objectives in light of these constraints, the following basic principles (the only exceptions are identified in paragraph 9) are applied in accounting for income taxes at the date of the financial statements:

a. A current tax liability or asset is recognized for the estimated taxes payable or refundable on tax returns for the current year.
b. A deferred tax liability or asset is recognized for the estimated future tax effects attributable to temporary differences and carryforwards.
c. The measurement of current and deferred tax liabilities and assets is based on provisions of the enacted law; the effects of future changes in tax laws or rates are not anticipated.
d. The measurement of deferred tax assets is reduced, if necessary, by the amount of any tax benefits that, based on available evidence, are not expected to be realized.

9. The only exceptions in applying those basic principles are that this Statement:

a. Continues certain exceptions to the requirements for recognition of deferred taxes for the areas addressed by APB Opinion No. 23*, Accounting for Income Taxes - Special Areas*, as amended by this Statement (paragraphs 31-34)
b. Provides special transitional procedures for temporary differences related to deposits in statutory reserve funds by U.S. steamship enterprises (paragraph 32)
c. Does not amend accounting for leveraged leases as required by FASB Statement No. 13, *Accounting for Leases*, and FASB Interpretation No. 21, *Accounting for Leases in a Business Combination* (paragraphs 256-258)
d. Prohibits recognition of a deferred tax liability or asset related to goodwill (or the portion thereof) for which amortization is not deductible for tax purposes (paragraph 30)
e. Does not amend Accounting Research Bulletin No. 51, *Consolidated Financial Statements,* for income taxes paid on intercompany profits on assets remaining within the group, and prohibits recognition of a deferred tax asset for the difference between the tax basis of the assets in the buyer's tax jurisdiction and their cost as reported in the consolidated financial statements
f. Prohibits recognition of a deferred tax liability or asset for differences related to assets and liabilities that, under FASB Statement No. 52, *Foreign Currency Translation,* are remeasured from the local currency into the functional currency using historical exchange rates that result from (1) changes in exchange rates or (2) indexing for tax purposes.

Temporary Differences

10. Income taxes currently payable[4] for a particular year usually include the tax consequences of most events that are recognized in the financial statements for that year. However, because tax laws and financial accounting standards differ in their recognition and measurement of assets, liabilities, equity, revenues, expenses, gains, and losses, differences arise between:

a. The amount of taxable income and pretax financial income for a year
b. The tax bases of assets or liabilities and their reported amounts in financial statements.

[4] References in this Statement to income taxes currently payable and (total) income tax expense are intended to include also income taxes currently refundable and (total) income tax benefit, respectively.

11. An assumption inherent in an enterprise's statement of financial position prepared in accordance with generally accepted accounting principles is that the reported amounts of assets and liabilities will be recovered and settled, respectively. Based on that assumption, a difference between the tax basis of an asset or a liability and its reported amount in the statement of financial position will result in taxable or deductible amounts in some future year(s) when the reported amounts of assets are recovered and the reported amounts of liabilities are settled. Examples follow:

a. Revenues or gains that are taxable after they are recognized in financial income. An asset (for example, a receivable from an installment sale) may be recognized for revenues or gains that will result in future taxable amounts when the asset is recovered.
b. Expenses or losses that are deductible after they are recognized in financial income. A liability (for example, a product warranty liability) may be recognized for expenses or losses that will result in future tax deductible amounts when the liability is settled.
c. Revenues or gains that are taxable before they are recognized in financial income. A liability (for example, subscriptions received in advance) may be recognized for an advance payment for goods or services to be provided in future years. For tax purposes, the advance payment is included in taxable income upon the receipt of cash. Future sacrifices to provide goods or services (or future refunds to those who cancel their orders) will result in future tax deductible amounts when the liability is settled.
d. Expenses or losses that are deductible before they are recognized in financial income. The cost of an asset (for example, depreciable personal property) may have been deducted for tax purposes faster than it was depreciated for financial reporting. Amounts received upon future recovery of the amount of the asset for financial reporting will exceed the remaining tax basis of the asset, and the excess will be taxable when the asset is recovered.
e. A reduction in the tax basis of depreciable assets because of tax credits.[5] Amounts received upon future recovery of the amount of the asset for financial reporting will exceed the remaining tax basis of the asset, and the excess will be taxable when the asset is recovered.
f. ITC accounted for by the deferral method. Under Opinion 2, ITC is viewed and accounted for as a reduction of the cost of the related asset (even though, for financial statement presentation, deferred ITC may be reported as deferred income). Amounts received upon future recovery of the reduced cost of the asset for financial reporting will be less than the tax basis of the asset, and the difference will be tax deductible when the asset is recovered.

g. An increase in the tax basis of assets because of indexing whenever the local currency is the functional currency. The tax law for a particular tax jurisdiction might require adjustment of the tax basis of a depreciable (or other) asset for the effects of inflation. The inflation-adjusted tax basis of the asset would be used to compute future tax deductions for depreciation or to compute gain or loss on sale of the asset. Amounts received upon future recovery of the local currency historical cost of the asset will be less than the remaining tax basis of the asset, and the difference will be tax deductible when the asset is recovered.

h. Business combinations accounted for by the purchase method. There may be differences between the assigned values and the tax bases of the assets and liabilities recognized in a business combination accounted for as a purchase under APB Opinion No. 16, Business Combinations. Those differences will result in taxable or deductible amounts when the reported amounts of the assets and liabilities are recovered and settled, respectively.

[5] The Tax Equity and Fiscal Responsibility Act of 1982 provided taxpayers with the choice of either (a) taking the full amount of Accelerated Cost Recovery System (ACRS) deductions and a reduced tax credit (that is, investment tax credit and certain other tax credits) or (b) taking the full tax credit and a reduced amount of ACRS deductions.

Recognition and Measurement

16. An enterprise shall recognize a deferred tax liability or asset for all temporary differences[6] and operating loss and tax credit carryforwards in accordance with the provisions of paragraph 17. Deferred tax expense or benefit is the change during the year in an enterprise's deferred tax liabilities and assets.[7] For deferred tax liabilities and assets acquired in a purchase business combination during the year, it is the change since the combination date. Total income tax expense or benefit for the year is the sum of deferred tax expense or benefit and income taxes currently payable or refundable.

[6] Refer to paragraph 9. A deferred tax liability shall be recognized for the temporary differences addressed by Opinion 23 in accordance with the requirements of this Statement (paragraphs 31-34) and that Opinion, as amended.

[7] Paragraph 230 addresses the manner of reporting the transaction gain or loss that is included in the net change in a deferred tax liability or asset when the reporting currency is the functional currency.

17. Deferred taxes shall be determined separately for each tax-paying component (an individual entity or group of entities that is consolidated for tax purposes) in each tax jurisdiction. That determination includes the following procedures:

a. Identify (1) the types and amounts of existing temporary differences and (2) the nature and amount of each type of operating loss and tax credit carryforward and the remaining length of the carryforward period

b. Measure the total deferred tax liability for taxable temporary differences using the applicable tax rate (paragraph 18)

c. Measure the total deferred tax asset for deductible temporary differences and operating loss carryforwards using the applicable tax rate

d. Measure deferred tax assets for each type of tax credit carryforward

e. Reduce deferred tax assets by a valuation allowance if, based on the weight of available evidence, it is *more likely than not* (a likelihood of more than 50 percent) that some portion or all of the deferred tax assets will not be realized. The valuation allowance should be sufficient to reduce the deferred tax asset to the amount that is more likely than not to be realized.

18. The objective is to measure a deferred tax liability or asset using the enacted tax rate(s) expected to apply to taxable income in the periods in which the deferred tax liability or asset is expected to be settled or realized. Under current U.S. federal tax law, if taxable income exceeds a specified amount, all taxable income is taxed, in substance, at a single flat rate. That rate shall be used for measurement of a deferred tax liability or asset by enterprises for which graduated tax rates are not a significant factor. Enterprises for which graduated tax rates are a significant factor shall measure a deferred tax liability or asset using the average graduated tax rate applicable to the amount of estimated annual taxable income in the periods in which the deferred tax liability or asset is estimated to be settled or realized (paragraph 236). Other provisions of enacted tax laws should be considered when determining the tax rate to apply to certain types of temporary differences and carryforwards (for example, the tax law may provide for different tax rates on ordinary income and capital gains). If there is a phased-in change in tax rates, determination of the applicable tax rate requires knowledge about when deferred tax liabilities and assets will be settled and realized.

19. In the U.S. federal tax jurisdiction, the applicable tax rate is the regular tax rate, and a deferred tax asset is recognized for alternative minimum tax credit carryforwards in accordance with the provisions of paragraph 17.d. and 17.e. of this Statement. If alternative tax systems exist in jurisdictions other than the U.S. federal jurisdiction, the applicable tax rate is determined in a manner consistent with the tax law after giving consideration to any interaction (that is, a mechanism similar to the U.S. alternative minimum tax credit) between the two systems.

20. All available evidence, both positive and negative, should be considered to determine whether, based on the weight of that evidence, a valuation allowance is needed. Information about an enterprise's current financial position and its results of operations for the current and preceding years ordinarily is readily available. That historical information is supplemented by all currently available information about future years. Sometimes, however, historical information may not be available (for example, start-up operations) or it may not be as relevant (for example, if there has been a significant, recent change in circumstances) and special attention is required.

21. Future realization of the tax benefit of an existing deductible temporary difference or carryforward ultimately depends on the existence of sufficient taxable income of the appropriate character (for example, ordinary income or capital gain) within the carryback, carryforward period available under the tax law. The following four possible sources of taxable income may be available under the tax law to realize a tax benefit for deductible temporary differences and carryforwards:

a. Future reversals of existing taxable temporary differences
b. Future taxable income exclusive of reversing temporary differences and carryforwards
c. Taxable income in prior carryback year(s) if carryback is permitted under the tax law
d. Tax-planning strategies (paragraph 22) that would, if necessary, be implemented to, for example:
   (1) Accelerate taxable amounts to utilize expiring carryforwards
   (2) Change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss
   (3) Switch from tax-exempt to taxable investments.

Evidence available about each of those possible sources of taxable income will vary for different tax jurisdictions and, possibly, from year to year. To the extent evidence about one or more sources of taxable income is sufficient to support a conclusion that a valuation is not necessary, other sources need not be considered. Consideration of each source is required, however, to determine the amount of the valuation allowance that is recognized for deferred tax assets.

22. In some circumstances, there are actions (including elections for tax purposes) that (a) are prudent and feasible, (b) an enterprise ordinarily might not take, but would take to prevent an operating loss or tax credit carryforward from expiring unused, and (c) would result in realization

of deferred tax assets. This Statement refers to those actions as tax-planning strategies. An enterprise shall consider tax-planning strategies in determining the amount of valuation allowance required. Significant expenses to implement a tax-planning strategy or any significant losses that would be recognized if that strategy were implemented (net of any recognizable tax benefits associated with those expenses or losses) shall be included in the valuation allowance. Refer to paragraphs 246-251 for additional guidance.

23. Forming a conclusion that a valuation allowance is not needed is difficult when there is negative evidence such as cumulative losses in recent years. Other examples of negative evidence include (but are not limited to) the following:

a. A history of operating loss or tax credit carryforwards expiring unused
b. Losses expected in early future years (by a presently profitable entity)
c. Unsettled circumstances that, if unfavorably resolved, would adversely affect future operations and profit levels on a continuing basis in future years
d. A carryback, carryforward period that is so brief that it would limit realization of tax benefits if (1) a significant deductible temporary difference is expected to reverse in a single year or (2) the enterprise operates in a traditionally cyclical business.

24. Examples (not prerequisites) of positive evidence that might support a conclusion that a valuation allowance is not needed when there is negative evidence include (but are not limited to) the following:

a. Existing contracts or firm sales backlog that will produce more than enough taxable income to realize the deferred tax asset based on existing sales prices and cost structures
b. An excess of appreciated asset value over the tax basis of the entity's net assets in an amount sufficient to realize the deferred tax asset
c. A strong earnings history exclusive of the loss that created the future deductible amount (tax loss carryforward or deductible temporary difference) coupled with evidence indicating that the loss (for example, an unusual, infrequent, or extraordinary item) is an aberration rather than a continuing condition.

25. An enterprise must use judgment in considering the relative impact of negative and positive evidence. The weight given to the potential effect of negative and positive evidence should be commensurate with the extent to which it can be objectively verified. The more negative evidence that exists (a) the more positive evidence is necessary and (b) the more difficult it is to support a conclusion that a valuation allowance is not need for some portion or all of the deferred tax asset.

An Enacted Change in Tax Laws or Rates

27. Deferred tax liabilities and assets shall be adjusted for the effect of a change in tax laws or rates. The effect shall be included in income from continuing operations for the period that includes the enactment date.

A Change in Tax Status of an Enterprise

28. An enterprise's tax status may change from nontaxable to taxable or from taxable to nontaxable. An example is a change from a partnership to a corporation and vice versa. A deferred tax liability or asset shall be recognized for temporary differences in accordance with the requirements of this Statement at the date that a nontaxable enterprise becomes a taxable enterprise. A deferred tax liability or asset shall be eliminated at the date an enterprise ceases to be a taxable enterprise. In either case, the effect of (a) an election for a voluntary change in tax status is recognized on the approval date or on the filing date if approval is not necessary and (b) a change in tax status that results from a change in tax law is recognized on the enactment date.

The effect of recognizing or eliminating the deferred tax liability or asset shall be included in income from continuing operations.

Opinion 23 and U.S. Steamship Enterprise Temporary Differences

31. A deferred tax liability is not recognized for the following types of temporary differences unless it becomes apparent that those temporary differences will reverse in the foreseeable future:

a. An excess of the amount for financial reporting over the tax basis of an investment in a foreign subsidiary or a foreign corporate joint venture as defined in *APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock,* that is essentially permanent in duration.
b. Undistributed earnings of a domestic subsidiary or a domestic corporate joint venture that is essentially permanent in duration that arose in fiscal years beginning on or before December 15, 1992[9]
c. "Bad Debt reserves" for tax purposes of U.S. savings and loan associations (and other "qualified thrift lenders) that arose in tax years beginning before December 31, 1987 (that is, the base year amount)
d. "Policyholders' surplus" of stock life insurance companies that arose in fiscal years beginning on or before December 15, 1992.

The indefinite reversal criterion of Opinion 23 shall not be applied to analogous types of temporary differences.

[9] A last-in, first-out (LIFO) pattern determines whether reversals pertain to differences that arose in fiscal years beginning on or before December 15, 1992.

32. A deferred tax liability shall be recognized for the following types of taxable temporary differences:

a. An excess of the amount for financial reporting over the tax basis of an investment in a domestic subsidiary that arises in fiscal years beginning after December 15, 1992
b. An excess of the amount for financial reporting over the tax basis of an investment in a 50-percent-or-less-owned investee except as provided in paragraph 31.a. and 31.b. for a corporate joint venture that is essentially permanent in duration
c. "Bad debt reserves" for tax purposes of U.S. savings and loan associations (and other "qualified" thrift lenders) that arise in tax years beginning after December 31, 1987 (that is, amounts in excess of the base-year amount).

The tax effects of temporary differences related to deposits in statutory reserve funds by U.S. steamship enterprises that arose in fiscal years beginning on or before December 15, 1992 and that were not previously recognized shall be recognized when those temporary differences reverse or in their entirety at the beginning of the fiscal year for which this Statement is first applied.

33. Whether an excess of the amount for financial reporting over the tax basis of an investment in a more-than-50-percent-owned domestic subsidiary is a taxable temporary difference must be assessed. It is not a taxable temporary difference if the tax law provides a means by which the reported amount of that investment can be recovered tax-free and the enterprise expects that it will ultimately use that means. For example, under current U.S. federal tax law:

a. An enterprise may elect to determine taxable gain or loss on the liquidation of an 80-percent-or-more-owned subsidiary by reference to the tax basis of the subsidiary's net assets rather than by reference to the parent company's tax basis for the stock of that subsidiary.

b. An enterprise may execute a statutory merger whereby a subsidiary is merged into the parent company, the minority shareholders receive stock of the parent, the subsidiary's stock is cancelled, and no taxable gain or loss results if the continuity of ownership, continuity of business enterprise, and certain other requirements of the tax law are met.

Some elections for tax purposes are available only if the parent company owns a specified percentage of the subsidiary's stock. The parent company sometimes may own less than that specified percentage, and the price per share to acquire a minority interest may significantly exceed the per share equivalent of the amount reported as minority interest in the consolidated financial statements. In those circumstances, the excess of the amount for financial reporting over the tax basis of the parent's investment in the subsidiary is not a taxable temporary difference if settlement of the minority interest is expected to occur at the point in time when settlement would not result in a significant cost. That could occur, for example, toward the end of the life of the subsidiary, after it has recovered and settled most of its assets and liabilities, respectively. The fair value of the minority interest ordinarily will approximately equal its percentage of the subsidiary's net assets if those net assets consist primarily of cash.

34. A deferred tax asset shall be recognized for an excess of the tax basis over the amount for financial reporting of an investment in a subsidiary or corporate joint venture that is essentially permanent in duration only if it is apparent that the temporary difference will reverse in the foreseeable future. The need for a valuation allowance for that deferred tax asset and other deferred tax assets related to Opinion 23 temporary differences (for example, a deferred tax asset for foreign tax credit carryforwards or for a savings and loan association's bad-debt reserve for financial reporting) shall be assessed. Paragraph 21 identifies four sources of taxable income to be considered in determining the need for and amount of a valuation allowance for those and other deferred tax assets. One source is future reversals of temporary differences. Future reversals of taxable differences for which a deferred tax liability has not been recognized based on the exceptions cited in paragraph 31, however, shall not be considered. Another source is future taxable income exclusive of reversing temporary differences and carryforwards. Future distributions of future earnings of a subsidiary or corporate joint venture, however, shall not be considered except to the extent that a deferred tax liability has been recognized for existing undistributed earnings or earnings have been remitted in the past.

Intraperiod Tax Allocation

35. Income tax expense or benefit for the year shall be allocated among continuing operations, discontinued operations, extraordinary items, and items charged or credited directly to shareholders' equity (paragraph 36). The amounts allocated to continuing operations is the tax effect of the pretax income or loss from continuing operations that occurred during the year, plus or minus income tax effects of (a) changes in circumstances that cause a change in judgment about the realization of deferred tax assets in future years (paragraph 26), (b) changes in tax laws or rates (paragraph 27), (c) changes in tax status (paragraph 28), and (d) tax-deductible dividends paid to shareholders (except as set forth in paragraph 36 for dividends paid on unallocated shares held by an employer stock ownership plan [ESOP] or any other stock compensation arrangement). The remainder is allocated to items other than continuing operations in accordance with the provisions of paragraph 38.

36. The tax effects of the following items occurring during the year are charged or credited directly to related components of shareholders' equity:

a. Adjustments of the opening balance of retained earnings for certain changes in accounting principles or a correction of an error

b. Gains and losses included in comprehensive income but excluded from net income (for example, translation adjustments under Statement 52 and changes in the carrying amount of marketable securities under FASB Statement No. 12, Accounting for Certain Marketable Securities)
c. An increase or decrease in contributed capital (for example, deductible expenditures reported as a reduction of the proceeds from issuing capital stock)
d. An increase in the tax basis of assets acquired in a taxable business combination accounted for as a pooling of interests and for which a tax benefit is recognized at the date of the business combination
e. Expenses for employee stock options recognized differently for financial reporting and tax purposes (refer to paragraph 17 of APB Opinion No. 25, Accounting for Stock Issued to Employees)
f. Dividends that are paid on unallocated shares held by an ESOP and that are charged to retained earnings
g. Deductible temporary differences and carryforwards that existed at the date of a quasi reorganization (except as set forth in paragraph 39).

37. The tax benefit of an operating loss carryforward or carryback (other than those carryforwards referred to at the end of this paragraph) shall be reported in the same manner as the source of the income or loss in the current year and not in the same manner as (a) the source of the operating loss carryforward or taxes paid in a prior year or (b) the source of expected future income that will result in realization of a deferred tax asset for an operating loss carryforward from the current year. The only exceptions are as follows:

a. Tax effects of deductible temporary differences and carryforwards that existed at the date of a purchase business combination and for which a tax benefit is initially recognized in subsequent years in accordance with the provisions of paragraph 30
b. Tax effects of deductible temporary differences and carryforwards that are allocated to shareholders' equity in accordance with the provisions of paragraph 36 (items c. and e.-g.).

38. If there is only one item other than continuing operations, the portion of income tax expense or benefit for the year that remains after the allocation to continuing operations is allocated to that item. If there are two or more items other than continuing operations, the amount shall be allocated among those other items in proportion to their individual effects on income tax expense or benefit for the year. When there are two or more items other than continuing operations, the sum of the separately calculated, individual effects of each item sometimes may not equal the amount of income tax expense or benefit for the year that remains after the allocation to continuing operations. In those circumstances, the procedures to allocate the remaining amount to items other than continuing operations are as follows:

a. Determine the effect on income tax expense or benefit for the year of the total net loss for all net loss items
b. Apportion the tax benefit determined in (a) ratably to each net loss item
c. Determine the amount that remains, that is, the difference between (1) the amount to be allocated to all items other than continuing operations and (2) the amount allocated to all net loss items
d. Apportion the tax expense determined in (c) ratably to each net gain item.

39. The tax benefits of deductible temporary differences and carryforwards as of the date of a quasi reorganization as defined and contemplated in ARB No. 43, Chapter 7, “Capital Accounts,” ordinarily are reported as a direct addition to contributed capital if the tax benefits are recognized in subsequent years. The only exception is for enterprises that have previously both adopted Statement 96 and effected a quasi reorganization that involves only the elimination of a deficit in retained earnings by a concurrent reduction in contributed capital prior to adopting this Statement. For those enterprises, subsequent recognition of the tax benefit of prior deductible temporary differences and carryforwards is included in income and reported as required by

paragraph 37 (without regard to the referenced exceptions) and then reclassified from retained earnings to contributed capital. Those enterprises should disclose (a) the date of the quasi reorganization, (b) the manner of reporting the tax benefits and that it differs from present accounting requirements for other enterprises and (c) the effect of those tax benefits on income from continuing operations, income before extraordinary items, and on net income (and on related per share amounts).

Separate Financial Statements of a Subsidiary

40. The consolidated amount of current and deferred tax expense for a group that files a consolidated tax return shall be allocated among the members of the group when those members issue separate financial statements. This Statement does not require a single allocation method. The method adopted, however, shall be systematic, rational, and consistent with the broad principles established by this Statement. A method that allocates current and deferred taxes to members of the group by applying this Statement to each member as if it were a separate taxpayer[10] meets those criteria. Examples of methods that are not consistent with the broad principles established by this Statement include:

a. A method that allocates only current taxes payable to a member of the group that has taxable temporary differences
b. A method that allocates deferred taxes to a member of the group using a method fundamentally different from the asset and liability method described in this Statement (for example, the Opinion 11 deferred method)
c. A method that allocates no current or deferred tax expense to a member of the group that has taxable income because the consolidated group has no current or deferred tax expense.

[10] In that situation. the sum of the amounts allocated to individual members of the group may not equal the consolidated amounts. That may also be the result when there are intercompany transactions between members of the consolidated group. The criteria are satisfied, nevertheless, after giving effect to the type of adjustments (including eliminations) normally present in preparing consolidated financial statements.

41. In a classified statement of financial position, an enterprise shall separate deferred tax liabilities and assets into a current amount and a noncurrent amount. Deferred tax liabilities and assets shall be classified as current or noncurrent based on the classification of the related asset or liability for financial reporting. A deferred tax liability or asset that is not related to an asset or liability for financial reporting (paragraph 15), including deferred tax assets related to carryforwards, shall be classified according to the expected reversal date of the temporary difference pursuant to *FASB Statement No. 37, Balance Sheet Classification of Deferred Income Taxes.* The valuation allowance for a particular tax jurisdiction shall be allocated between current and noncurrent deferred tax assets for that tax jurisdiction on a pro rata basis.

42. For a particular tax-paying component of an enterprise and within a particular tax jurisdiction, (a) all current deferred tax liabilities and assets shall be offset and presented as a single amount and (b) all noncurrent deferred tax liabilities and assets shall be offset and presented as a single amount. However, an enterprise shall not offset deferred tax liabilities and assets attributable to different tax-paying components of the enterprise or to different tax jurisdictions.

Financial Statement Disclosure

43. The components of the net deferred tax liability or asset recognized in an enterprise's statement of financial position shall be disclosed as follows:

a. The total of all deferred tax liabilities measured in procedure (b) of paragraph 17

b. The total of all deferred tax assets measured in procedures (c) and (d) of paragraph 17
c. The total valuation allowance recognized for deferred tax assets determined in procedure (e) of paragraph 17.

The net change during the year in the total valuation allowance also shall be disclosed. A public enterprise shall disclose the approximate tax effect of each type of temporary difference and carryforward that gives rise to a significant portion of deferred tax liabilities and deferred tax assets (before allocation of valuation allowances). A nonpublic enterprise shall disclose the types of significant temporary differences and carryforwards but may omit disclosure of the tax effects of each type. A public enterprise that is not subject to income taxes because its income is taxed directly to its owners shall disclose that fact and the net difference between the tax bases and the reported amounts of the enterprise's assets and liabilities.

44. The following information shall be disclosed whenever a deferred tax liability is not recognized because of the exceptions to comprehensive recognition of deferred taxes for any of the areas addressed by Opinion 23 (as amended by this Statement) or for deposits in statutory reserve funds by U.S. steamship enterprises:

a. A description of the types of temporary differences for which a deferred tax liability has not been recognized and the types of events that would cause those temporary differences to become taxable
b. The cumulative amount of each type of temporary difference
c. The amount of the unrecognized deferred tax liability for temporary differences related to investments in foreign subsidiaries and foreign corporate joint ventures that are essentially permanent in duration if determination of that liability is practicable or a statement that determination is not practicable
d. The amount of the deferred tax liability for temporary differences other than those in (c) above (that is, undistributed domestic earnings, the bad-debt reserve for tax purposes of a U.S. savings and loan association or other qualified thrift lender, the policyholders' surplus of a life insurance enterprise, and the statutory reserve funds of a U.S. steamship enterprise) that is not recognized in accordance with the provisions of paragraphs 31 and 32.

45. The significant components of income tax expense attributable to continuing operations for each year presented shall be disclosed in the financial statements or notes thereto. Those components would include, for example:

a. Current tax expense or benefit
b. Deferred tax expense or benefit (exclusive of the effects of other components listed below)
c. Investment tax credits
d. Government grants (to the extent recognized as a reduction of income tax expense)
e. The benefits of operating loss carryforwards
f. Tax expense that results from allocating certain tax benefits either directly to contributed capital or to reduce goodwill or other noncurrent intangible assets of an acquired entity
g. Adjustments of a deferred tax liability or asset for enacted changes in tax laws or rates or a change in the tax status of the enterprise
h. Adjustments of the beginning-of-the-year balance of a valuation allowance because of a change in circumstances that causes a change in judgment about the realizability of the related deferred tax asset in future years.

46. The amount of income tax expense or benefit allocated to continuing operations and the amounts separately allocated to other items (in accordance with the provisions of paragraphs 35-39) shall be disclosed for each year for which those items are presented.

47. A public enterprise shall disclose a reconciliation using percentages or dollar amounts of (a) the reported amount of income tax expense attributable to continuing operations for the year to (b) the amount of income tax expense that would result from applying domestic federal statutory tax rates to pretax income from continuing operations. The “statutory” tax rates shall be the regular tax rates if there are alternative tax systems. The estimated amount and the nature of each significant reconciling item shall be disclosed. A nonpublic enterprise shall disclose the nature of significant reconciling items but may omit a numerical reconciliation. If not otherwise evident from the disclosures required by this paragraph and paragraphs 43-46, all enterprises shall disclose the nature and effect of any other significant matters affecting comparability of information for all periods presented.

48. An enterprise shall disclose (a) the amounts and expiration dates of operating loss and tax credit carryforwards for tax purposes and (b) any portion of the valuation allowance for deferred tax assets for which subsequently recognized tax benefits will be allocated to reduce goodwill or other noncurrent intangible assets of an acquired entity or directly to contributed capital (paragraphs 30 and 36).

49. An entity that is a member of a group that files a consolidated tax return shall disclose in its separately issued financial statements:

a. The aggregate amount of current and deferred tax expense for each statement of earnings presented and the amount of any tax-related balances due to or from affiliates as of the date of each statement of financial position presented

b. The principal provisions of the method by which the consolidated amount of current and deferred tax expense is allocated to members of the group and the nature and effect of any changes in that method (and in determining related balances to or from affiliates) during the years for which the disclosures in (a) above are presented.

Effective Date and Transition

50. This Statement shall be effective for fiscal years beginning after December 15, 1992. Earlier application is encouraged. Financial statements for any number of consecutive fiscal years before the effective date may be restated to conform to the provisions of this Statement. Initial application of this Statement shall be as of the beginning of an enterprise's fiscal year (that is, if the Statement is adopted prior to the effective date and during an interim period other than the first interim period, all prior interim periods of that fiscal year shall be restated). Application of the requirements for recognition of a deferred tax liability or asset for a restated interim or annual period shall be based on the facts and circumstances as they existed at that prior date and without the benefit of hindsight.

51. The effect of initially applying this Statement shall be reported as the effect of a change in accounting principle in a manner similar to the cumulative effect of a change in accounting principle (APB Opinion No. 20, Accounting Changes, paragraph 20) except for initially recognized tax benefits of the type required by this Statement to be excluded from comprehensive income. If the earliest year restated is not presented in the financial statements, the beginning balance of retained earnings and, if necessary, any other components of shareholders' equity for the earliest year presented shall be adjusted for the effect of the restatement as of that date. Paragraph 30 addresses the manner of reporting acquired tax benefits initially recognized subsequent to a business combination and paragraph 36 identifies five items ((c)-(g)) for which tax benefits are excluded from comprehensive income and allocated directly to contributed capital or retained earnings. Pro forma effects of retroactive application (Opinion 20, paragraph 21) are not required if statements of earnings presented for prior years are not restated.

52. When initially presented, the financial statements for the year this Statement is first adopted shall disclose:

a. The effect, if any, of adopting this Statement on pretax income from continuing operations (for example, the effect of adjustments for prior purchase business combinations and for regulated enterprises) for the year of adoption if restated financial statements for the prior year are not presented

b. The effect of any restatement on income from continuing operations, income before extraordinary items, and net income (and on related per share amounts) for each year for which restated financial statements are presented.

Prior Business Combinations

53. If financial statements for prior years are restated, all purchase business combinations that were consummated in those prior years shall be remeasured in accordance with the requirements of this Statement.

54. For a purchase business combination consummated prior to the beginning of the year for which this Statement is first applied, any balance remaining as of that date for goodwill or negative goodwill shall not be adjusted to equal the amount it would be if financial statements for the year of the combination and subsequent years were restated. However, except for leveraged leases and except as provided in paragraph 55, (a) remaining balances as of the date of initially applying this Statement for assets and liabilities acquired in that combination shall be adjusted from their net-of-tax amounts to their pretax amounts and (b) any differences between those adjusted remaining balances and their tax bases are temporary differences. A deferred tax liability or asset shall be recognized for those temporary differences pursuant to the requirements of this Statement as of the beginning of the year for which this Statement is first applied.

55. If, for a particular business combination, determination of the adjustment for any or all of the assets and liabilities referred to in paragraph 54 is impracticable, either because the necessary information is no longer available or because the cost to develop that information is excessive, none of the remaining balances of any assets and liabilities acquired in that combination shall be adjusted to pretax amounts, that is, all remaining amounts that were originally assigned on a net-of-tax basis pursuant to paragraph 89 of Opinion 16 shall not be adjusted. Any differences between those unadjusted remaining balances and their tax bases are temporary differences, and a deferred tax liability or asset shall be recognized for those temporary differences pursuant to the requirements of this Statement as of the beginning of the year for which this Statement is first applied.

56. The net effect of the adjustments required by paragraphs 54 and 55 shall be included in the effect of initially applying this Statement and reported in accordance with the provisions of paragraph 51.

Assets of Regulated Enterprises Reported on a Net-of-Tax or After-Tax Basis

57. Some regulated enterprises that apply Statement 71 have accounted for certain components of construction in progress on either a net-of-tax or after-tax basis, or both. Upon initial application of this Statement, those enterprises shall make appropriate adjustments required by this Statement to account for the net-of-tax and after-tax components of construction in progress as if the requirements of this Statement were applied to that construction in progress in all prior years. Except as provided in paragraph 58, the reported amount of plant in service at the beginning of the year for which this Statement is first applied shall be similarly adjusted.

58. If determination of the adjustment to plant in service referred to in paragraph 57 is impracticable, either because the necessary information is no longer available or because the cost to develop that information is excessive, any difference between the reported amount and the tax basis of that plant in service is a temporary difference, and a deferred tax liability shall be recognized for that temporary difference. If, as a result of an action by a regulator, it is probable that amounts required for settlement of that deferred tax liability will be recovered from customers through future rates, an asset and the related deferred tax liability for that additional temporary difference shall be recognized for that probable future revenue.

> 59. The net effect of the adjustments required by paragraphs 57 and 58 shall be included in the effect of initially applying this Statement and reported in accordance with the provisions of paragraph 51.
>
> 289. **GLOSSARY**
>
> **Carrybacks**
>
> Deductions or credits that cannot be utilized on the tax return during a year that may be carried back to reduce taxable income or taxes payable in a prior year. An operating loss carryback is an excess of tax deductions over gross income in a year; a tax credit carryback is the amount by which tax credits available for utilization exceed statutory limitations. Different tax jurisdictions have different rules about whether excess deductions or credits may be carried back and the length of the carryback period.
>
> **Carryforwards**
>
> Deductions or credits that cannot be utilized on the tax return during a year that may be carried forward to reduce taxable income or taxes payable in a future year. An operating loss carryforward is an excess of tax deductions over gross income in a year; a tax credit carryforward is the amount by which tax credits available for utilization exceed statutory limitations. Different tax jurisdictions have different rules about whether excess deductions or credits may be carried forward and the length of the carryforward period. The terms carryforward, operating loss carryforward, and tax credit carryforward refer to the amounts of those items, if any, reported in the tax return for the current year.

51. APB 28 provides the following guidance (However, note that FAS 109 supersedes APB Opinion Nos. 11 and 24 and amends APB Opinion No. 23);

> 19. In reporting interim financial information, income tax provisions should be determined under the procedures set forth in APB Opinion Nos. 11, 23, and 24. At the end of each interim period the company should make its best estimate of the effective tax rate expected to be applicable for the full fiscal year. The rate so determined should be used in providing for income taxes on a current year-to-date basis. The effective tax rate should reflect anticipated investment tax credits, foreign tax rates, percentage depletion, capital gains rates, and other available tax planning alternatives. However, in arriving at this effective tax rate no effect should be included for the tax related to significant unusual or extraordinary items that will be separately reported or reported net of their related tax effect in reports for the interim period or for the fiscal year.[2]
>
> [2] Disclosure should be made of the reasons for significant variations in the customary relationship between income tax expense and pretax accounting income, if they are not otherwise apparent from the financial statements or from the nature of the entity's business (refer to FASB Statement No. 109, *Accounting for Income Taxes,* paragraph 47).
>
> 20. The tax effects of losses that arise in the early portion of a fiscal year should be recognized only when the tax benefits are expected to be (a) realized during the year or (b) recognizable as a deferred tax asset at the end of the year in accordance with the provisions of Statement 109. An established seasonal pattern of loss in early interim periods offset by income in later interim periods should constitute evidence that realization is more likely than not, unless other evidence indicates the established seasonal pattern will not prevail. The tax effects of losses incurred in early interim periods may be recognized in a later interim period of a fiscal year if their realization, although initially uncertain, later becomes more likely than not. When the tax effects of losses that arise in the early portions of a fiscal year are not recognized in that interim period, no tax provision should be made for income that arises in later interim periods until the tax effects of the previous interim losses are utilized.[3] The tax effect of a valuation allowance expected to be necessary for a deferred tax asset at the end of the year for originating deductible temporary differences and carryforwards during the year should be included in the effective tax

rate. The effect of a change in the beginning-of-the-year balance of a valuation allowance as a result of a change in judgment about the realizability of the related deferred tax asset in future years shall not be apportioned among interim periods through an adjustment of the effective tax rate but shall be recognized in the interim period in which the change occurs. The effects of new tax legislation shall not be recognized prior to enactment. The tax effect of a change in tax laws or rates on taxes currently payable or refundable for the current year shall be reflected after the effective dates prescribed in the statutes in the computation of the annual effective tax rate beginning no earlier than the first interim period that includes the enactment date of the new legislation. The effect of a change in tax laws or rates on a deferred tax liability or asset shall not be apportioned among interim periods through an adjustment of the annual effective tax rate. The tax effect of a change in tax laws or rates on taxes payable or refundable for a prior year shall be recognized as of the enactment date of the change as tax expense (benefit) for the current year.

[3] The tax benefits of interim losses accounted for in this manner would not be reported as extraordinary items in the results of operations of the interim period.

OTHER SOURCES OF INFORMATION

52. Federal Income Tax Regulation Section 1.6662-4(d) provides the following guidance:

(d) Substantial authority (1) *Effect of having substantial authority*. If there is substantial authority for the tax treatment of an item, the item is treated as if it were shown properly on the return for the taxable year in computing the amount of the tax shown on the return. Thus, for purposes of section 6662(d), the tax attributable to the item is not included in the understatement for that year. (For special rules relating to tax shelter items see section 1.6662-4(g).)

(2) *Substantial authority standard*. The substantial authority standard is an objective standard involving an analysis of the law and application of the law to relevant facts. The substantial authority standard is less stringent than the “more likely than not” standard (the standard that is met when there is a greater than 50-percent likelihood of the position being upheld), but more stringent than the reasonable basis standard (the standard which, if satisfied, generally will prevent imposition of the penalty under section 6662(b)(1) for negligence). The possibility that a return will not be audited or, if audited, that an item will not be raised on audit, is not relevant in determining whether the substantial authority standard (or the reasonable basis standard) is satisfied.

(3) *Determination of whether substantial authority is present*. (i) Evaluation of authorities. There is substantial authority for the tax treatment of an item only if the weight of the authorities supporting the treatment is substantial in relation to the weight of authorities supporting contrary treatment. All authorities relevant to the tax treatment of an item, including the authorities contrary to the treatment, are taken into account in determining whether substantial authority exists. The weight of authorities is determined in light of the pertinent facts and circumstances in the manner prescribed by paragraph (d)(3)(ii) of this section. There may be substantial authority for more than one position with respect to the same item. Because the substantial authority standard is an objective standard, the taxpayer's belief that there is substantial authority for the tax treatment of an item is not relevant in determining whether there is substantial authority for that treatment.

(ii) Nature of analysis. The weight accorded an authority depends on its relevance and persuasiveness, and the type of document providing the authority. For example, a case or revenue ruling having some facts in common with the tax treatment at issue is not particularly relevant if the authority is materially distinguishable on its facts, or is otherwise inapplicable to the tax treatment at issue. An authority that merely states a conclusion ordinarily is less persuasive than one that reaches its conclusion by cogently relating the applicable law to pertinent facts. The weight of an authority from which information has been deleted, such as a private letter ruling, is diminished to the extent that the deleted information may have affected the authority's conclusions. The type of document also must be considered. For example, a revenue ruling is accorded greater weight than a private letter ruling addressing the same issue. An older private letter ruling, technical advice memorandum, general counsel memorandum or action on decision generally must be accorded less weight than a more recent one. Any document described in the preceding sentence that is more than 10 years old generally is accorded very little weight. However, the persuasiveness and relevance of a document, viewed in light of subsequent developments, should be taken into account along with the age of the document. There may be substantial authority for the tax treatment of an item despite the absence of certain types of authority. Thus, a taxpayer may have substantial authority for a position that is supported only by a well-reasoned construction of the applicable statutory provision.

Statutory Issue Paper No. 84

Quasi-Reorganizations

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 72

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Readjustments of additional paid in capital as if a reporting entity were reorganized but without the occurrence of a formal reorganization are considered to be quasi-reorganizations. Generally, quasi-reorganizations result in the elimination of a deficit retained earnings and establishment of a new basis for assets and liabilities. Current statutory accounting guidance does not address quasi-reorganizations.

2. GAAP addresses accounting for quasi-reorganizations in *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins* (ARB 43) and in Accounting Research Bulletin No. 46, *Discontinuance of Dating Earned Surplus* (ARB 46). Guidance is also provided in the Securities and Exchange Commission *Codification of Financial Reporting Policies*, Section 210 and in the Staff Accounting Bulletins--Codification.

3. The purpose of this issue paper is to establish statutory accounting principles for quasi-reorganizations that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. Restatement of gross paid in and contributed surplus and unassigned funds (surplus) under a quasi-reorganization shall be permitted only if the criteria in both subparagraphs 4 a and 4 b and either subparagraph 4 c or 4 d are met:

a. Such restatement is approved in writing by the domiciliary Commissioner;

b. An 80% or greater change in the ultimate ownership of the reporting entity has occurred within six months prior to approval of such restatement;

c. A new business plan has been adopted that results in a substantive change in the operations and business mix of the reporting entity and the situation or circumstances that gave rise to the negative unassigned funds (surplus) will not be part of the ongoing operations;

d. The reporting entity is a shell company with no existing operations, inforce policies or outstanding claims.

5. As defined in *Issue Paper No. 72—Statutory Surplus*, unassigned funds (surplus) represents the undistributed and unappropriated amount of surplus at the balance sheet date. In no instance shall restatement result in the unassigned funds (surplus) account being greater than zero or the gross paid in and contributed surplus account being less than zero immediately following the restatement. Total surplus

as regards policyholders shall remain unchanged following such restatement. The following components of unassigned funds (surplus) shall be considered in determining the amount available for restatement:

a. Net Income
b. Effect of Exchange Rate Fluctuations
c. Dividends to Stockholders
d. Change in Accounting Principles
e. Correction of an Error
f. Stock Issuance Expenses

6. The assets and liabilities of the reporting entity shall continue to be carried at historical cost or other value required under statutory accounting principles. No adjustments to assets or liabilities shall be made to reflect the effect of a quasi-reorganization.

7. The impact of the restatement shall be disclosed in the notes to financial statements as long as financial statements for the period of the reorganization are presented. The effective date of the reorganization shall be disclosed for a period of ten years following the reorganization.

DISCUSSION

8. Current statutory accounting guidance does not address quasi-reorganizations. Quasi-reorganization is a concept in GAAP that is intended to apply in very limited situations. The effect in GAAP accounting for a quasi-reorganization is to eliminate negative retained earnings by capitalizing negative retained earnings to paid-in capital; and, to adjust net assets downward, but not upward, to fair value (i.e., individual assets may be written up or liabilities reduced as appropriate, but only to the extent that the aggregate net adjustment does not increase net assets). Quasi-reorganizations are initiated for various purposes, including to facilitate the payment of dividends by a reporting entity that is currently profitable but has negative retained earnings prior to the quasi-reorganization.

9. The conclusion permits the restatement of gross paid in and contributed surplus and unassigned funds (surplus) under a quasi-reorganization in certain limited circumstances. The conclusion also requires that total surplus as regards policyholders remain unchanged following such restatement and that the assets and liabilities of the reporting entity be carried at historical cost or other value required under statutory accounting principles and not revalued pursuant to a quasi-reorganization. This conclusion allows regulatory flexibility in instances where there has been a change in the ultimate ownership, the business plan of the reporting entity has substantively changed the operations and business mix of the reporting entity and the situation or circumstances that gave rise to the negative unassigned funds (surplus) will not be part of the ongoing operations, or the reporting entity is a shell company with no existing operations or outstanding policies. This conclusion is consistent with the regulatory need for consistent data on a year-to-year basis in order to monitor performance of insurance enterprises on a continuing basis. The conclusion is also consistent with the requirement to retain the historical basis of reporting following a business combination as discussed in *Issue Paper No. 68—Business Combinations and Goodwill*.

10. This issue paper adopts Chapter 7, Section A of ARB 43 with a modification to permit restatement of gross paid in and contributed surplus and unassigned funds (surplus) only in certain limited circumstances. In addition, this issue paper requires that the assets and liabilities of the reporting entity continue to be carried at historical cost or other value required under statutory accounting principles and that no changes to total surplus as regards policyholders are to be made to reflect the effect of a quasi-reorganization. This issue paper adopts ARB 46 with modification to require disclosure of the impact of the restatement in the notes to financial statements as long as financial statements for the period of reorganization are presented.

11. The statutory accounting principles outlined in the conclusion above are consistent with the conservatism concept in the Statement of Concepts, as follows:

> Conservatism
>
> Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.

> Consistency
>
> The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.

Generally Accepted Accounting Principles
12. ARB 43 provides the following guidance (only the pertinent excerpts are included below):

> Chapter 7: CAPITAL ACCOUNTS
> Section A -- Quasi-Reorganization or Corporate Readjustment
>
> (Amplification of Institute Rule No. 2 of 1934)
>
> 1. A rule was adopted by the Institute in 1934 which read as follows:
>
> "Capital surplus, however created, should not be used to relieve the income account of the current or future years of charges which would otherwise fall to be made thereagainst. This rule might be subject to the exception that where, upon reorganization, a reorganized company would be relieved of charges which would require to be made against income if the existing corporation were continued, it might be regarded as permissible to accomplish the same result without reorganization provided the facts were as fully revealed to and the action as formally approved by the shareholders as in reorganization."[1]
>
> [1] See chapter 1A, paragraph 2.
>
> 2. Readjustments of the kind mentioned in the exception to the rule fall in the category of what are called quasi-reorganizations. This section does not deal with the general question of quasi-reorganizations, but only with cases in which the exception permitted under the rule of 1934 is availed of by a corporation. Hereinafter such cases are referred

to as readjustments. The problems which arise fall into two groups: (a) what may be permitted in a readjustment and (b) what may be permitted thereafter.

Procedure in Readjustment

3. If a corporation elects to restate its assets, capital stock, and surplus through a readjustment and thus avail itself of permission to relieve its future income account or earned surplus account of charges which would otherwise be made thereagainst, it should make a clear report to its shareholders of the restatements proposed to be made, and obtain their formal consent. It should present a fair balance sheet as at the date of the readjustment, in which the adjustment of carrying amounts is reasonably complete, in order that there may be no continuation of the circumstances which justify charges to capital surplus.

4. A write-down of assets below amounts which are likely to be realized thereafter, though it may result in conservatism in the balance sheet at the readjustment date, may also result in overstatement of earnings or of earned surplus when the assets are subsequently realized. Therefore, in general, assets should be carried forward as of the date of readjustment at fair and not unduly conservative amounts, determined with due regard for the accounting to be employed by the company thereafter. If the fair value of any asset is not readily determinable a conservative estimate may be made, but in that case the amount should be described as an estimate and any material difference arising through realization or otherwise and not attributable to events occurring or circumstances arising after that date should not be carried to income or earned surplus.

5. Similarly, if potential losses or charges are known to have arisen prior to the date of readjustment but the amounts thereof are then indeterminate, provision may properly be made to cover the maximum probable losses or charges. If the amounts provided are subsequently found to have been excessive or insufficient, the difference should not be carried to earned surplus nor used to offset losses or gains originating after the readjustment, but should be carried to capital surplus.

6. When the amounts to be written off in a readjustment have been determined, they should be charged first against earned surplus to the full extent of such surplus; any balance may then be charged against capital surplus. A company which has subsidiaries should apply this rule in such a way that no consolidated earned surplus survives a readjustment in which any part of losses has been charged to capital surplus.

7. If the earned surplus of any subsidiaries cannot be applied against the losses before resort is had to capital surplus, the parent company's interest in such earned surplus should be regarded as capitalized by the readjustment just as surplus at the date of acquisition is capitalized, so far as the parent is concerned.

8. The effective date of the readjustment, from which the income of the company is thereafter determined, should be as near as practicable to the date on which formal consent of the stockholders is given, and should ordinarily not be prior to the close of the last completed fiscal year.

Procedure after Readjustment

9. When the readjustment has been completed, the company's accounting should be substantially similar to that appropriate for a new company.

10. After such a readjustment earned surplus previously accumulated cannot properly be carried forward under that title. A new earned surplus account should be established, dated to show that it runs from the effective date of the readjustment, and this dating should be disclosed in financial statements until such time as the effective date is no longer deemed to possess any special significance.

> 11. Capital surplus originating in such a readjustment is restricted in the same manner as that of a new corporation; charges against it should be only those which may properly be made against the initial surplus of a new corporation.
>
> 12. It is recognized that charges against capital surplus may take place in other types of readjustments to which the foregoing provisions would have no application. Such cases would include readjustments for the purpose of correcting erroneous credits made to capital surplus in the past. In this statement the committee has dealt only with that type of readjustment in which either the current income or earned surplus account or the income account of future years is relieved of charges which would otherwise be made thereagainst.

13. ARB 46 provides the following guidance (only the pertinent excerpts are included below):

> 1. Paragraph 10 of Chapter 7(a), Quasi-Reorganization or Corporate Readjustment, of Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, reads as follows:
>
>> After such a readjustment earned surplus previously accumulated cannot properly be carried forward under that title. A new earned surplus account should be established, dated to show that it runs from the effective date of the readjustment, and this dating should be disclosed in financial statements until such time as the effective date is no longer deemed to possess any special significance.
>
> 2. The committee believes that the dating of earned surplus following a quasi-reorganization would rarely, if ever, be of significance after a period of ten years. It also believes that there may be exceptional circumstances in which the discontinuance of the dating of earned surplus could be justified at the conclusion of a period less than ten years.

OTHER SOURCES OF INFORMATION

14. Securities and Exchange Commission *Codification of Financial Reporting Policies*, Section 210 provides the following guidance (only the pertinent excerpts are included below):

> 210 Quasi-Reorganization ASR 25:
> Inquiry has been made from time to time as to the conditions under which a quasi-reorganization has come to be applied in accounting to the corporate procedures in the course of which a company, without the creation of new corporate entity and without the intervention of formal court proceedings, is enabled to eliminate a deficit whether resulting from operations or the recognition of other losses or both and to establish a new earned surplus account for the accumulation of earnings subsequent to the date selected as the effective date of the quasi-reorganization.
> It has been the Commission’s view for some time that a quasi-reorganization may not be considered to have been effected unless at least all of the following conditions exist:
> (1) Earned surplus, as of the date selected, is exhausted;
> (2) Upon consummation of the quasi-reorganization, no deficit exists in any surplus account;
> (3) The entire procedure is made known to all persons entitled to vote on matters of general corporate policy and the appropriate consents to the particular transactions are obtained in advance in accordance with the applicable law and charter provisions;
> (4) The procedure accomplishes, with respect to the accounts, substantially what might be accomplished in a reorganization by legal proceedings---namely, the restatement of assets in terms of present conditions as well as appropriate modifications of capital and capital surplus, in order to obviate so far as possible the necessity of future reorganizations of like nature.
> It is implicit in such a procedure that reductions in the carrying value of assets at the effective date may not be made beyond a point which gives appropriate recognition to conditions which appear to have resulted in relatively permanent reductions in asset values; as for example, complete or partial obsolescence, lessened utility value, reduction in investment value due to changed economic conditions, or, in the case of current assets, declines in indicated realization value. It is also implicit in a procedure of this kind that it is not to be employed recurrently but only

under circumstances which would justify an actual reorganization or formation of a new corporation, particularly if the sole or principal purpose of the quasi-reorganization is the elimination of a deficit in earned surplus resulting from operating losses.
In the case of the quasi-reorganization of a parent company, it is an implicit result of such procedure that the effective date should be recognized as having the significance of a date of acquisition of control of subsidiaries. Likewise, in consolidated statements, earned surplus of subsidiaries at the effective date should be excluded from earned surplus on the consolidated balance sheet.

15. The Securities and Exchange Commission Staff Accounting Bulletins--Codification provides the following guidance (only the pertinent excerpts are included below):

S.Quasi-Reorganization

Facts:

As a consequence of significant operating losses and/or recent write-downs of property, plant and equipment, a company's financial statements reflect an accumulated deficit. The company desires to eliminate the deficit by reclassifying amounts from paid-in-capital. In addition, the company anticipates adopting a discretionary change in accounting principles[1] that will be recorded as a cumulative-effect type of accounting change. The recording of the cumulative effect will have the result of increasing the company's retained earnings.

[1] Discretionary accounting changes require the filing of a preferability letter by the registrant's independent accountant pursuant to Item 601 of Regulation S-K and Rule 10-01(b)(6) of Regulation S-X, 17 CFR §§229.601 and 210.10-01(b)(^), respectively.

Question 1:

May the company reclassify its capital accounts to eliminate the accumulated deficit without satisfying all of the conditions enumerated in Section 210[2] of the Codification of Financial Reporting Policies for a quasi-reorganization?

[2] Accounting Series Release No. 25 (May 29, 1941).

Interpretive Response:

No. The staff believes a deficit reclassification of any nature is considered to be a quasi-reorganization. As such, a company may not reclassify or eliminate a deficit in retained earnings unless all requisite conditions set forth in Section 210[3] for a quasi-reorganization are satisfied.[4]

[3] Section 210 indicates the following conditions under which a quasi-reorganization can be effected without the creation of a new corporate entity and without the intervention of formal court proceedings:

(1) Earned surplus, as of the date selected, is exhausted;
(2) Upon consummation of the quasi-reorganization, no deficit exists in any surplus account;
(3) The entire procedure is made known to all persons entitled to vote on matters of general corporate policy and the appropriate consents to the particular transactions are obtained in advance in accordance with the applicable laws and charter provisions;
(4) The procedure accomplishes, with respect to the accounts, substantially what might be accomplished in a reorganization by legal proceedings--namely, the restatement of assets in terms of present conditions as well as appropriate modifications of capital and capital

surplus, in order to obviate so far as possible the necessity of future reorganizations of like nature.

[4] In addition, Accounting Research Bulletin (ARB) No. 43, Chapter 7A, outlines procedures that must be followed in connection with and after a quasi-reorganization.

Question 2:

Must the company implement the discretionary change in accounting principle simultaneously with the quasi-reorganization or may it adopt the change after the quasi-reorganization has been effected?

Interpretive Response:

The staff has taken the position that the company should adopt the anticipated accounting change prior to or as an integral part of the quasi-reorganization. Any such accounting change should be effected by following generally accepted accounting principles with respect to the change.[5]

Chapter 7A of Accounting Research Bulletin (ARB) No. 43 indicates that, following a quasi-reorganization, a "company's accounting should be substantially similar to that appropriate for a new company." The staff believes that implicit in this "fresh-start" concept is the need for the company's accounting principles in place at the time of the quasi-reorganization to be those planned to be used following the reorganization to avoid a misstatement of earnings and retained earnings after the reorganization.[6] Chapter 7A of ARB No. 43 states, in part, "... in general, assets should be carried forward as of the date of the readjustment at fair and not unduly conservative amounts, determined with due regard for the accounting to be employed by the Company thereafter (emphasis added)."

In addition, the staff believes that adopting a discretionary change in accounting principle that will be reflected in the financial statements within 12 months following the consummation of a quasi-reorganization leads to a presumption that the accounting change was contemplated at the time of the quasi-reorganization.[7]

[5] Accounting Principles Board Opinion No. 20 provides accounting principles to be followed when adopting accounting changes. In addition, many newly-issued accounting pronouncements provide specific guidance to be followed when adopting the accounting specified in such pronouncements.

[6] Certain newly-issued accounting standards do not require adoption until some future date. The staff believes, however, that if the registrant intends or is required to adopt those standards within 12 months following the quasi-reorganization, the registrant should adopt those standards prior to or as an integral part of the quasi-reorganization. Further, registrants should consider early adoption of standards with effective dates more than 12 months subsequent to a quasi-reorganization.

[7] Certain accounting changes require restatement of prior financial statements. The staff believes that if a quasi-reorganization had been recorded in a restated period, the effects of the accounting change on quasi-reorganization adjustments should also be restated to properly reflect the quasi-reorganization in the restated financial statements.

Question 3:

In connection with a quasi-reorganization, may there be a write-up of net assets?

Interpretive Response:

No. The staff believes that increases in the recorded values of specific assets (or reductions in liabilities) to fair value are appropriate providing such adjustments are factually supportable, however, the amount of such increases are limited to offsetting adjustments to reflect decreases in other assets (or increases in liabilities) to reflect their new fair value. In other words, a quasi-reorganization should not result in a write-up of net assets of the registrant. (Added by SAB No. 78, 8/25/88.)

Question 4:

The interpretive response to question 1 indicates that the staff believes that a deficit reclassification of any nature is considered to be a quasi-reorganization, and accordingly, must satisfy all the conditions of Section 210.[8] Assume a company has adopted Statement of Financial Accounting Standards ("SFAS") No. 96, has satisfied all the requisite conditions of Section 210, and has eliminated a deficit in retained earnings by a concurrent reduction in paid-in capital, but did not need to restate assets and liabilities by a charge to capital because assets and liabilities were already stated as fair values. How should the company reflect the tax benefits of operating loss or tax credit carryforwards for financial reporting purposes that existed as of the date of the quasi-reorganization when such tax benefits are subsequently recognized for financial reporting purposes?

[8] Supra Note 3.

Interpretive Response:

The staff believes SFAS No. 96 requires that any subsequently recognized tax benefits of operating loss or tax credit carryforwards that existed as of the date of a quasi-reorganization be reported as a direct addition to paid-in capital. The staff believes that this position is consistent with the "new company" or "fresh-start" concept embodied in Section 210,[9] and in existing accounting literature regarding quasi-reorganizations, and with the FASB staff's justification for such a position when they stated that a "new enterprise would not have tax benefits attributable to operating losses or tax credits that arose prior to its organization date.[10]

[9] Section 210 discusses the "conditions under which a quasi-reorganization has come to be applied in accounting to the corporate procedures in the course of which a company, without creation of new corporate entity and without intervention of formal court proceedings, is enabled to eliminate a deficit whether resulting from operations or recognition of other losses or both and to establish a new earned surplus account for the accumulation of earnings subsequent to the date selected as the effective date of the quasi-reorganization." It further indicates that "it is implicit in a procedure of this kind that it is not to be employed recurrently but only under circumstances which would justify an actual reorganization or formation of a new corporation, particularly if the sole purpose of the quasi-reorganization is the elimination of a deficit in earned surplus resulting from operating losses."[Emphasis added.]

[10] Special Report: A Guide to Implementation of Statement 96 on Accounting for Income Taxes; Financial Accounting Standards Board (March 1989); question 26, page 36 and 37, states in part: "ARB No. 43, Chapter 7, "Capital Accounts," states that after a quasireorganization, the enterprise's accounting should be substantially similar to that appropriate for a new enterprise. As such, any subsequently recognized tax benefit of an operating loss or tax credit carryforward for financial reporting that existed at the date of a quasi reorganization should not be included in the determination of income of the "new" enterprise, regardless of whether losses that gave rise to an operating loss carryforward were charged to income prior to the quasi reorganization or directly

to contributed capital as part of the quasi reorganization. A new enterprise would not have tax benefits attributable to operating losses or tax credits that arose prior to its organization date."

The FASB recognized that a practice existed of recording deficit elimination type quasi-reorganizations without evaluating the concurrent need to restate assets and liabilities to fair values, and provided guidance on accounting for the tax benefits of carryforward items subsequent to such an event.[11] This practice and accounting is not permitted by Section 210, and accordingly, is not appropriate for registrants. The staff believes that all registrants that comply with the requirements of Section 210 in effecting a quasi-reorganization should apply the accounting required by the first sentence of paragraph 54 of SFAS No. 96 for the tax benefits of tax carryforward items.[12] Therefore, even though the only effect of a quasi-reorganization is the elimination of a deficit in retained earnings because assets and liabilities are already stated at fair values and the revaluation of assets and liabilities is unnecessary (or a write up of net assets is prohibited as indicated in the interpretive response to question 3 above), subsequently recognized tax benefits of operating loss or tax credit carryforward items should be recorded as a direct addition to paid-in capital.

[11] SFAS No. 96 (December 1987); paragraph 54, states: "Some quasi reorganization involve only the elimination of a deficit in retained earnings by a concurrent reduction in contributed capital. For that type of reorganization, subsequent recognition of the tax benefit of a prior operating loss or tax credit carryforward for financial reporting is reported as required by paragraph 52 and then reclassified from retained earnings to contributed capital." [Emphasis added.] Also, Supra Note 10.

[12] The first sentence or paragraph 54 of SFAS No. 96 states: "The tax benefit of an operating loss or tax credit carryforward for financial reporting as of the date of a quasi-reorganization as defined and contemplated (involving write-offs directly to contributed capital) in ARB No. 43, Chapter 7, "Capital Accounts," is reported as a direct addition to contributed capital if the tax benefits are recognized in subsequent years".

Question 5:

If a company had previously recorded a quasi-reorganization that only resulted in the elimination of a deficit in retained earnings, may the company reverse such entry and "undo" its quasi-reorganization?

Interpretive Response:

No. The staff believes APB Opinion No. 20 would preclude such a change in accounting. It states: "a method of accounting that was previously adopted for a type of transaction or event which is being terminated or which was a single, nonrecurring event in the past should not be changed." [Emphasis added.][13]

Derivative Instruments

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 27 and SSAP No. 86

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Chapter 8 of the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies (Life/A&H and P&C Accounting Practices and Procedures Manuals) contains guidance on accounting for derivative instruments. This guidance provides two alternatives for accounting for derivative instruments: (a) Hedge accounting, or (b) Immediate recognition (mark to market) accounting. Specific accounting guidance for Income Generation Transactions was adopted by the Financial Condition (EX4) Subcommittee on December 14, 1996.

2. GAAP is not applied uniformly for different types of derivatives because there is no comprehensive authoritative accounting guidance. To the extent that specific accounting guidance does not exist for some derivatives, practice is based on analogy to the literature that does exist for other derivatives. The key GAAP accounting literature applicable to derivatives, which is primarily addressed in *FASB Statement No. 80*, *Accounting for Futures Contracts* (FAS 80), *FASB Statement No. 52*, *Foreign Currency Translation* (FAS 52), and *FASB Emerging Issues Task Force Issue No. 84-36*, *Interest Rate Swap Transactions* (EITF 84-36), is based on hedge accounting for futures and foreign exchange contracts, settlement accounting for interest rate swaps and mark to market accounting.

3. The purpose of this issue paper is to establish statutory accounting principles for derivative instruments (hereinafter referred to as derivatives), that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

4. This issue paper adopts the Derivative Instruments guidance of Chapter 8 of the Life/A&H and P&C Accounting Practices and Procedures Manuals. Paragraphs 6 through 10 herein summarize the key provisions of the guidance. Derivatives shall be defined as swaps, options, forwards, futures, caps, floors, and collars. The following are general definitions for these derivative instruments:

a. Swaps: Swaps are contracts to exchange, for a period of time, the investment performance of one underlying instrument for the investment performance of another underlying instrument, typically without exchanging the instruments themselves. Swaps can be viewed as a series of forward contracts that settle in cash rather than by physical delivery. Swaps generally are negotiated over-the-counter directly between the dealer and the end user. Interest rate swaps are the most common form of swap contract. However, foreign currency and commodity swaps also are common;

b. Options: Options are contracts that give the option holder (purchaser of the option rights) the right, but not the obligation, to enter into a transaction with the option writer (seller of the option rights) on terms specified in the contract. A call option allows the holder to buy the underlying instrument, while a put option allows the holder to sell the underlying instrument. Options are traded on exchanges and over the counter;

c. Forwards: Forward contracts are agreements (other than a futures) between two parties that commit one party to purchase and the other to sell the instrument or commodity underlying the contract at a specified future date. Forward contracts fix the price, quantity, quality, and date of the purchase and sale. Some forward contracts involve the initial payment of cash and may be settled in cash instead of by physical delivery of the underlying instrument;

d. Futures: Futures are standardized forward contracts traded on organized exchanges. Each exchange specifies the standard terms of futures contracts it sponsors. Futures contracts are available for a wide variety of underlying instruments, including insurance, agricultural commodities, minerals, debt instruments (such as U.S. Treasury bonds and bills), composite stock indices, and foreign currencies;

e. Caps: Caps are option contracts in which the cap writer (seller), in return for a premium, agrees to limit, or cap, the cap holder's (purchaser) risk associated with an increase in a reference rate or index. For example, in an interest rate cap, if rates go above a specified interest rate level (the strike price or the cap rate), the cap holder is entitled to receive cash payments equal to the excess of the market rate over the strike price multiplied by the notional principal amount. Because a cap is an option-based contract, the cap holder has the right but not the obligation to exercise the option. If rates move down, the cap holder has lost only the premium paid. A cap writer has virtually unlimited risk resulting from increases in interest rates above the cap rate;

f. Floors: Floors are option contracts in which the floor writer (seller), in return for a premium, agrees to limit the risk associated with a decline in a reference rate or index. For example, in an interest rate floor, if rates fall below an agreed rate, the floor holder (purchaser) will receive cash payments from the floor writer equal to the difference between the market rate and an agreed rate multiplied by the notional principal amount;

g. Collars: A collar is a combination of a cap and a floor (one purchased and one written). A collar fixes the rate between two levels (the strike prices of the cap and the floor).

5. To the extent a derivative is in an asset position, the instrument meets the definition of an asset as defined in *Issue Paper No. 4—Definition of Assets and Nonadmitted Assets* and, subject to certain limitations, meets the criteria for an admitted asset as specified in that same paper. To the extent a derivative is in a liability position, the instrument meets the definition of a liability as defined in *Issue Paper No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets* (Issue Paper No 5).

6. Hedging transaction is defined as a derivative transaction which is entered into and maintained to reduce: (a) the risk of a change in the value, yield, price, cash flow, or quantity of assets or liabilities which the reporting entity has acquired or incurred or anticipates acquiring or incurring, or (b) the currency exchange rate risk or the degree of exposure as to assets or liabilities which a reporting entity has acquired or incurred or anticipates acquiring or incurring. Derivatives used by reporting entities in hedging activities shall be accounted for in a manner consistent with the item hedged. For example, if the item being hedged is accounted for at amortized cost, the hedging derivative also is accounted for at amortized cost. If the item being hedged is accounted for at market value, the hedging derivative also is accounted for at market value.

7. To qualify for hedge accounting, the derivative shall be designated as a hedge of a specific asset, liability, or anticipated transaction. The specific asset, liability, or anticipated transaction to be hedged must expose the reporting entity to a risk and the designated derivative transaction must reduce that

exposure. Examples of items that expose the reporting entity to risk include change in the value, yield, price, cash flow, or quantity of, or degree of exposure with respect to assets, liabilities, or future cash flows which a reporting entity has acquired or incurred, or anticipates acquiring or incurring. To satisfy the condition of risk reduction, the reporting entity shall demonstrate how the derivative instrument reduces risk by using an appropriate method. There are a variety of methods available that can be used to demonstrate risk reduction, including methods which analyze the correlation of gains and losses on the derivative in relation to the losses and gains on the hedged asset, liability, or future cash flow. Included in the concept of hedge accounting is the notion of settlement accounting for interest rate swaps that are matched through designation with an asset or a liability on the balance sheet. Under settlement accounting, periodic net cash settlements under the swap agreement are recognized in income when they accrue.

8. Reporting entities shall set specific criteria at the inception of the hedge as to what will be considered effective in measuring the hedge and apply those criteria in the ongoing assessment of actual hedge results. For example, if correlation is used to measure the effectiveness of a hedge, high correlation of changes in the fair value of the derivative and the fair value of the item being hedged should be probable so that such changes will substantially offset each other throughout the hedge period. Other methods used should demonstrate a similar result to be considered effective. Also, at the inception of the hedge, formal documentation of the hedging instrument and the related hedged item, including the nature of the risk being hedged, shall be drafted and retained for future reference. Upon termination of the derivative that qualifies for hedge accounting, the gain or loss shall adjust the basis of the hedged item. If the item being hedged is subject to IMR, the gain or loss on the hedging derivative instrument shall be subject to IMR upon termination. Reporting entities shall account for a derivative at estimated fair value if it ceases to be effective as a hedge (that is, the gains and losses on the derivative no longer offset the losses and gains on the hedged instrument) and recognize the gain or loss currently in earnings.

9. Alternatively, reporting entities may mark derivatives to market (immediate recognition method) from inception to termination. Generally, this alternative is used where it is impractical to allocate gains and losses to specific hedged assets, liabilities, or future cash flows. This alternative shall be used for derivatives that are entered into for other-than-hedging purposes, when a portfolio has been hedged and the reporting entity is unable to assign the hedging instrument to specific assets and liabilities, or for derivatives that are not specifically addressed elsewhere in this guidance.

10. Other-than-hedging is defined as any transaction which does not qualify for hedge accounting, including active derivatives trading by a reporting entity who enters into derivatives for purposes of generating profits on short-term differences in market movements and not for risk reduction purposes. Unrealized gains and losses cannot be deferred when categorized as other-than-hedging.

11. The reporting entity’s choice between accounting methods discussed in paragraphs 6 through 9 (hedge versus immediate recognition) shall be applied consistently for each individual instrument over the life of the derivative. A change in method shall be justified by a significant change in circumstance.

Income Generation Transactions

12. Income generation transactions are defined as derivative instruments written or sold to generate additional income or return to the reporting entity. They include covered options, caps, and floors (e.g., a reporting entity writes an equity call option on stock which it already owns).

13. Because these transactions require writing derivatives, they expose the reporting entity to potential future liabilities for which the reporting entity receives a premium up front. Because of this risk, dollar limitations and additional constraints are imposed requiring that the transactions be “covered” (i.e., offsetting assets can be used to fulfill potential obligations). To this extent, the combination of the derivative and the covering asset works like a reverse hedge where an asset owned by the reporting entity in essence hedges the derivative risk.

14. As with derivatives in general, these instruments include a wide variety of terms regarding maturities, range of exercise periods and prices, counterparties, underlying instruments, etc.

15. The principal features of income generation transactions are:

a. Premium received is initially recorded as a deferred liability;

b. The accounting of the covering asset or underlying interest controls the accounting of the derivative. The covering asset/underlying interest is accounted at either mark-to-market (e.g., common stocks) or (amortized) cost (e.g., bonds);

c. The gain/loss on termination of the derivative is a capital item. For life insurance companies, it shall be subject to IMR treatment if interest rate related;

d. For options which are exercised, the remaining premium shall adjust the proceeds (cost) associated with the exercise resulting in no explicit gain or loss reported for the derivative itself.

16. The principal features of written fixed income covered call options are:

a. The general approach is to value at cost (i.e., consideration received) without amortization over the life of the contract;

b. An alternative to the general approach combines the accounting of the written option with the covering asset and then uses standard accounting for callable bonds (yield to worst amortization) on the adjusted asset. This method prevents the possibility of future loss recognition upon exercise while at the same time providing recognition of the income feature of the option over time. This approach would appear most relevant for longer-lived covered European call options, which are in substance like callable bonds;

c. For life insurance companies, the gain or loss flows through the IMR if the covering asset or underlying interest is subject to the IMR using callable bond rules to determine the remaining life;

d. Reporting entities are responsible for timely recognition of any probable losses that may occur as a result of the strategy. If the exercise price is below the covering asset's book value, the asset shall be evaluated for write down or disclosure treatment in accordance with Issue Paper No. 5. All relevant factors such as whether the option is currently exercisable, the fair value of the bond relative to its exercise price, to what extent the statement value of the option premium offsets any loss on the asset, or how any IMR transaction on exercise would affect surplus and income shall be considered.

17. Written fixed income covered call options shall be accounted for as follows:

STATUS OF OPTION	COVERING ASSET VALUED AT AMORTIZED COST	COVERING ASSET VALUED AT MARKET VALUE
Open	Record premium as deferred liability. Carry at consideration received. (1) Alternatively, attach premium to covering asset and amortize (under yield to worse scenario) using standard callable bond accounting . (2)	Record premium as deferred liability. Mark to market with changes in market value recorded as unrealized adjustments to surplus – gain/loss.
Closed – Expired	Premium received recognized as realized capital gain. Gain from expiration to flow through IMR, if applicable. (3)	Premium received recognized as realized capital gain.
Closed – Exercised	Adjust disposition proceeds. (Include in capital gain/loss of disposed asset.) Gain or loss from disposition to flow through IMR, if applicable. (3)	Adjust disposition proceeds. (Include in capital gain/loss of disposed asset.)
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain or loss from disposition to flow through IMR, if applicable. (3)	Recognize net amount as realized capital gain/loss.

Notes:

1. A general statement will be added to the instructions stating that reporting entities writing options for income generation purposes are responsible for the timely recognition of any probable losses that may occur as a result of the strategy due to holding and accounting for options on Schedule DB – Part B.

2. Report derivative and its market value on Schedule DB – Part B. Include accounting on Schedule D – Part 1.

3. If premium is attached to covering asset, the accounting treatment for the covering asset applies.

18. The principal features of written covered put options are:

a. The accounting for the underlying interest instead of the covering asset governs the accounting of the written put while it is open. For example, if a reporting entity wrote a put requiring it to purchase a certain common stock (underlying interest) at a specific price, the reporting entity might cover that option by holding cash or cash equivalents (covering asset). The accounting for the common stock would govern the accounting of the option in this case;

b. As with covered call writing for life insurance companies, gain/loss on termination may be subject to IMR over the remaining life of the underlying interest;

c. As with covered call writing, reporting entities writing put options for income generation purposes are responsible for timely recognition of any probable losses that may occur as a result of the strategy;

19. Written covered put options shall be accounted for as follows:

STATUS OF OPTION	UNDERLYING INTEREST VALUED AT AMORTIZED COST	UNDERLYING INTEREST VALUED AT MARKET VALUE
Open	Record premium as deferred liability. Carry at consideration received. (1)	Record premium as deferred liability. Mark to market with changes in market value recorded as unrealized adjustments to surplus – gain/loss.
Closed – Expired	Premium received recognized as realized capital gain. Gain from expiration to flow through IMR, if applicable.	Premium received recognized as realized capital gain.
Closed – Exercised	Adjust acquisition cost by premium received.	Adjust acquisition cost by premium received.
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain or loss from disposition to flow through IMR, if applicable.	Recognize net amount as realized capital gain/loss.

Notes:

1. Reporting entities writing options for income generation purposes are responsible for the timely recognition of any probable losses that may occur as a result of the strategy due to holding and accounting for options on Schedule DB – Part B.

20. The principal features of written fixed income caps and floors are:

a. The value of the premium received shall be amortized into income over the life of the contract. For caps and floors, where the reporting entity is selling off possible excess interest/income, the value of the covering asset is not relevant;

b. Again, gain/loss may be subject to IMR. The expected maturity would be the derivative contract's maturity.

21. Written fixed income caps and floors shall be accounted for as follows:

STATUS OF OPTION	COVERING ASSET VALUED AT AMORTIZED COST	COVERING ASSET VALUED AT MARKET VALUE
Open	Record premium as deferred liability. Carry at amortized value. (Alternatively carry at consideration received if within 1 year of maturity.) Amortize over life of contract to produce constant yield. Record any interest expense as "Other Investment Income" – negative value.	Record premium as deferred liability. Mark to market with changes in market value recorded as unrealized adjustments to surplus – gain/loss.
Closed – Matured	Would usually mature at zero amortized value. Any remaining unamortized value recognized as ordinary income through a final amortization adjustment.	Premium received recognized as realized capital gain.
Closed – Exercised	Not applicable.	Not applicable.
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain/loss on termination to flow through IMR, if applicable.	Recognize net amount as realized capital gain/loss.

22. Examples of accounting and presentation based on varying assumptions can be found in the October 1, 1996 minutes of the Accounting Practices and Procedures (EX4) Task Force.

Disclosure Requirements

23. Reporting entities shall disclose the following for all derivative contracts outstanding:

a. Disclosures by category of instrument:

i. Notional or contract amounts;
ii. Carrying and fair values;
iii. A description of the accounting policies for derivatives;

iv. A discussion of the market risk, credit risk, and cash requirements of the derivative instruments.

b. General Disclosures:

i. A description of the reporting entity's objectives for holding or issuing the derivatives, the context needed to understand those objectives, and its strategies for achieving those objectives, including the classes of derivatives used;

ii. A description of how each category of derivative is reported in the financial statements including the policies for recognizing (or reasons for not recognizing) and measuring the derivatives held or issued, and when recognized, where those instruments and related gains and losses are reported.

24. Reporting entities shall disclose the following for derivatives held for other-than-hedging purposes:

a. Average fair value of the derivative instruments during the reporting period together with the related end-of-period fair value distinguishing between assets and liabilities;

b. Net gains or losses disaggregated by class, business activity or other category that is consistent with the management of those activities and where the net gains or losses are reported.

25. The financial statements shall disclose details of covered items and/or written transactions to allow evaluation of cash flow implications for all written covered options used for income generation.

DISCUSSION

26. The Summary Conclusion adopts the aforementioned sections of current statutory accounting principles (Chapter 8) for derivatives including insurance futures and insurance futures options. These principles are consistent with the Statement of Concepts because they provide recognition of derivatives as assets or liabilities, and recognition of income (gains) or expense (losses) based on how the reporting entity uses the derivative to reduce risk related to an existing exposure. It also provides a consistent approach to accounting for the many types of derivatives currently available to reporting entities.

27. This issue paper clarifies that the immediate recognition method of accounting (mark to market) shall be applied in situations where a reporting entity enters into a derivative for other-than-hedging purposes, when a portfolio has been hedged, or for derivatives that are not specifically addressed elsewhere in this guidance. Other-than-hedging is defined as any transaction which does not qualify for hedge accounting, including active derivatives trading by a reporting entity who enters into derivatives for purposes of generating profits on short-term differences in market movements and not for risk reduction purposes. This clarification is added so that unrealized gains and losses, particularly losses, cannot be deferred when categorized as other-than-hedging. This is consistent with the conservatism concept in the Statement of Concepts. Further, the immediate recognition method of accounting is not precluded from being utilized in situations where the derivative qualifies for hedge accounting.

28. This issue paper also provides that the determination of hedge accounting or immediate recognition accounting shall be made for each individual instrument. A reporting entity may utilize immediate recognition accounting for certain derivatives within a category and hedge accounting for other derivatives within that same category. This is a change from current statutory accounting principles, which provide that the categories to which immediate recognition accounting treatment is applied should be consistent from period to period.

29. While there is a separate section in the current statutory accounting guidance for insurance futures and related instruments, the accounting is similar to that of other derivatives. Therefore, the conclusion does not differentiate futures or options accounting from insurance futures or insurance futures options accounting, however, the distinctions in current statutory guidance in accounting and reporting for these instruments are adopted. The separate section for insurance futures and insurance futures options was incorporated into the current Life/A&H and P&C Accounting Practices & Procedures Manuals because insurance futures are viewed by insurance regulators as insurance-related transactions and not as investment-related transactions. As a result, insurance futures and insurance futures options are reported on Schedule DC and not Schedule DB as for other non-insurance derivatives. Also, income related to insurance futures and insurance futures options is reported as an aggregate write-in for miscellaneous income not as investment income and any asset is recorded as an aggregate write-in for other-than-invested assets.

30. Current statutory accounting does not specifically address settlement accounting for interest rate swaps. Under certain conditions (as set forth in EITF Issue No. 84-36), GAAP permits settlement accounting for interest rate swaps. Therefore, EITF Issue Nos. 84-36 and 84-7 are adopted.

31. Under settlement accounting, periodic net cash settlements under the swap agreement are recognized in income when they accrue. Settlement accounting is considered a conservative approach, and in many instances, produces an accounting result which is similar to hedge accounting. Such accounting is widely accepted in practice and provides an accounting approach that is consistent with the purpose of entering into such an instrument; that is, to change the interest rate characteristics of the balance sheet item to which it is matched. When this issue paper refers to hedge accounting, it encompasses the notion of settlement accounting for interest rate swaps that are matched through designation with an asset or a liability on the balance sheet.

32. The accounting and reporting for derivative instruments used for income generation is intended to meet (1) regulatory needs focusing on company and industry solvency, (2) company needs focusing on administrative and cost considerations, and (3) the general need to provide meaningful and relevant information regarding the substance of the transactions and holdings for all users of the financial statements.

a. The approach is conservative and reduces the potential for income manipulation. Income is not recognized early in the holding period only to be reversed by future losses. This consideration is particularly important for options which could have lower exercise prices than the combined statement values of the derivative and the covering asset;

b. The approach is reasonably simple and consistent with Statutory accounting. It builds on accounting guidance which already exists in the NAIC Accounting Practices and Procedures Manual and in the Annual Statement Instructions regarding hedging;

c. The approach looks to the substance of the transactions involved:

   i. It matches the accounting of the derivative with the accounting of the covering asset or underlying interest;

   ii. It includes an alternative treatment which combines the derivative with the covering asset. This results in a treatment analogous to callable bonds where the option feature is combined with the asset rather than in two pieces;

   iii. It allows for recognition of the time value/interest rate factor implicit in the pricing of these instruments, particularly relevant for derivatives with longer maturities.

33. Under GAAP, although there is no authoritative accounting guidance for written covered options, written options are generally reported at fair value with changes in fair value reported in earnings because written options do not qualify for hedge accounting except to the extent of the premium received. However, certain GAAP practice considers that the writer will never sustain a loss on a written covered option if the strike price of the option exceeds the book value of the covered asset, and the writer intends to deliver the covered asset if the option is exercised instead of settling the option in cash. Under these circumstances, certain GAAP practice includes carrying the option at cost with the option premium recorded in income when the options is exercised, at its expiration, or, if designated as a hedge, deferred as an adjustment of the cost of the covered asset.

34. Based on the inconsistency in the accounting results and the uncertainty surrounding the GAAP accounting for derivatives, other GAAP pronouncements are rejected as discussed below. Although some view GAAP accounting for derivatives as more conservative because of the stricter requirements of hedge accounting, statutory requirements are sufficiently restricted so that they are consistent with the conservatism and recognition principles of the Statement of Concepts.

35. GAAP is not applied uniformly for different types of derivatives because there is no comprehensive authoritative accounting guidance. Under GAAP, there are different rules for different derivatives and there are different rules for different uses of derivatives. To the extent that specific GAAP accounting guidance does not exist for some derivatives, practice is based on analogy to the literature that does exist for other derivatives. Also, the accounting for futures, forwards, options and swaps differs depending on whether these instruments are denominated in a domestic currency or in a foreign currency. The guidance in FAS 80 is used for futures contracts, and, by analogy, for certain other derivatives when they are denominated in the domestic currency of the entity. Although certain of the notions of designation, risk reduction and correlation from FAS 80 are incorporated in this paper, FAS 80 is rejected since statutory accounting principles as clarified herein provide sufficient guidance for hedge accounting. Consistent with *Issue Paper No. 81—Foreign Currency Transactions and Translations*, FAS 52 is rejected for reasons set forth in that paper. However, some of the elements of FAS 52 have been incorporated into this paper. The guidance in FAS 52 generally is applied when these instruments are denominated in a foreign currency that is not the functional currency of the entity. Also, this issue paper rejects the following GAAP pronouncements, which are limited to very narrow situations for which the broad accounting described in this issue paper is sufficient (such pronouncements are not reproduced herein due to length and limited scope):

- *FASB Emerging Issues Task Force No. 84-14, Deferred Interest Rate Setting*
- *FASB Emerging Issues Task Force Issue No. 86-34, Futures Contracts Used as Hedges of Anticipated Reverse Repurchase Transactions*
- *FASB Emerging Issues Task Force Issue No. 87-2, New Present Value Method of Valuing Speculative Foreign Exchange Contracts*
- *FASB Emerging Issues Task Force Issue No. 88-8, Mortgage Swaps*
- *FASB Emerging Issues Task Force Issue No. 90-17, Hedging Foreign Currency Risk with Purchased Options*
- *FASB Emerging Issues Task Force Issue No. 91-1, Hedging Intercompany Foreign Currency Risks*
- *FASB Emerging Issues Task Force Issue No. 91-4, Hedging Foreign Currency Risks with Complex Options and Similar Transactions*
- *FASB Emerging Issues Task Force Issue No. 95-11, Accounting for Derivative Instruments Containing both a Written Option-Based Component and a Forward-Based Component*
- *FASB Emerging Issues Task Force Issue No. 96-11, Accounting for Forward Contracts and Purchase Options to Acquire Securities Covered Under FASB Statement No. 115*

36. Because of inconsistencies in the accounting for derivatives, the FASB has been involved in a long-term project to address the accounting for off-balance-sheet financial instruments and is currently involved in deliberations to change the current accounting for derivatives under GAAP.

Disclosure Requirements

37. The disclosures required by FAS 105 cover financial instruments with off-balance-sheet risk of accounting loss. The scope includes derivatives with off-balance sheet risk as well as other types of financial instruments. FAS 105 is adopted for all financial instruments with off-balance-sheet risk with the following modifications:

a. The disclosures required in paragraph 17 shall distinguish between derivatives entered into for hedging purposes and for other-than-hedging purposes;

b. Paragraph 19 is rejected. It addresses voluntary disclosures not required by this issue paper.

38. FAS 119 extends the requirements of FAS 105 to all derivatives and requires additional disclosures. FAS 119 is adopted with the following modifications:

a. The disclosures required in paragraph 8 shall distinguish between derivatives entered into for hedging purposes and for other-than-hedging purposes;

b. The disclosures required for trading derivatives by paragraph 10 shall be required for derivatives entered into for other-than-hedging purposes;

c. Only the required disclosures in FAS 119 are adopted by this issue paper not the voluntary quantitative or qualitative disclosures. Therefore, paragraphs 12 and 13 are rejected.

39. Current statutory guidance provides specific information relating to derivatives in Schedules DB and DC of the Annual Statement. GAAP requires disclosures about derivative financial instruments in accordance with FAS 119. FAS 119 requires a distinction between derivatives used for trading and other than trading purposes for purposes of disclosure in the notes to the financial statements. Other information is required in the notes, such as notional amounts, carrying and fair values by category of derivative, a description of the accounting policies for derivatives, market and credit risk as well as other optional quantitative and qualitative information. Most of the required disclosures can be derived from information provided on Schedules DB and DC of the Annual Statement. The disclosure requirements are not intended to provide duplicative presentation in the annual statement filings but are required in those circumstances where the accompanying exhibits which contain certain required disclosures are not part of the reporting entity's financial statements (e.g., annual audit report). The disclosures required by FAS 119 are modified in that the classification of the disclosures shall be based on the accounting methodology adopted for the instrument based on hedge accounting or immediate recognition accounting, rather than on the notions of trading and other than trading in FAS 119.

Drafting Notes

- The accounting for investments in mortgage backed securities, collateralized mortgage obligations, real estate mortgage investment conduits, interest-only securities and principal-only securities, among others, is primarily addressed in *Issue Paper No. 43—Loan-Backed and Structured Securities.*

- The Invested Asset Working Group of the Valuation of Securities (EX4) Task Force met on June 2, 1996 and considered four derivatives projects. In October of 1996, the Blanks Task Force will consider incorporation of certain changes to current derivatives guidance, a summary of which is provided in paragraph 49.

RELEVANT STATUTORY AND GAAP GUIDANCE

Statutory Accounting

40. Chapter 8 in the Life/A&H and P&C Accounting Practices and Procedures Manuals contains the following guidance relating to derivative instruments:

> Derivative Instruments
>
> Derivative instruments are reported in Schedule DB of the annual statement using the definitions below. Specific accounting procedures for each derivative instrument will depend on the definition below that best describes the instrument. State investment laws and regulations should be consulted for applicable limitations on the use of derivative instruments.
>
> Definitions:
>
> "Underlying Interest" means the asset(s), liability(ies) or other interest(s) underlying a Derivative Instrument, including, but not limited to, any one or more securities, currencies, rates, indices, commodities, Derivative Instruments or other financial market instruments.
>
> "Option" means an agreement giving the buyer the right to buy or receive, sell or deliver, enter into, extend or terminate, or effect a cash settlement based on the actual or expected price level, performance or value of, one or more Underlying Interests.
>
> "Cap" means an agreement obligating the seller to make payments to the buyer, each payment under which is based on the amount, if any, that a reference price, level, performance or value of one or more Underlying Interests exceeds a predetermined number, sometimes called the strike/cap rate or price.
>
> "Floor" means an agreement obligating the seller to make payments to the buyer, each payment under which is based on the amount, if any, that a predetermined number, sometimes called the strike/floor rate or price, exceeds a reference price, level, performance or value of one or more Underlying Interests.
>
> "Collar" means an agreement to receive payments as the buyer of an Option, Cap or Floor and to make payments as the seller of a different Option, Cap or Floor.
>
> "Swap" means an agreement to exchange or net payments at one or more times based on the actual or expected price, level, performance or value of one or more Underlying Interests.
>
> "Forward" means an agreement (other than a Futures) to make or take delivery of, or effect a cash settlement based on the actual or expected price, level, performance or value of, one or more Underlying Interests.
>
> "Futures" means an agreement traded on an exchange, board of trade or contract market, to make or take delivery of, or effect a cash settlement based on the actual or expected price, level, performance or value of, one or more Underlying Interests.
>
> General Accounting Guidance:
>
> Hedging:
> Derivative instruments used by insurers in hedging transactions should be accounted for in a manner consistent with the item hedged prior to termination. Upon termination, the gains and losses from the derivative instrument will adjust the basis of the hedged item.

Alternatively, companies may mark derivative instruments of a given type to market from inception to termination with gains and losses recognized currently. Generally this alternative is used where it is impractical to allocate gains and losses to specific hedged assets or liabilities. The accounting treatment and categories to which this accounting treatment is applied should be consistent from period to period. However, derivative instruments hedging items which are subject to IMR will follow hedge accounting (amortized book value) while the instruments are still open and that the gains/losses will be subject to IMR upon termination.

For a derivative instrument to qualify for hedge accounting, the item to be hedged must expose the company to a risk and the designated derivative transaction must reduce that exposure. Examples include the risk of a change in the value, yield, price, cash flow, or quantity of, or degree of exposure with respect to assets, liabilities or future cash flows which an insurer has acquired or incurred, or anticipates acquiring or incurring.

A company should set specific criteria at the inception of the hedge as to what will be considered effective in measuring the hedge and then apply those criteria in the ongoing assessment based on actual hedge results. Insurers should account for a derivative instrument at market value if it ceases to be "effective" as a hedge and recognize the gain or loss currently to the extent it has not been offset by the effects of changes on the hedged item.

Documentation Guidance:

An insurer shall maintain documentation and records relating to derivative instruments opened during the year, instruments outstanding at year end, and instruments terminated during the year. Minimum required documentation is as follows:

(a) For derivative instruments opened during the year:

(1) A description, for each instrument, of the purpose of the transaction, including:

- A brief description of the assets and/or liabilities hedged by the instrument.
- A brief description of the manner in which the instrument reduces risk.
- A reference to the company's hedge program under which such transaction is internally authorized.

(2) Signature of approval, for each instrument, by person(s) authorized, either by the insurer's board of directors or a committee authorized by the board, to approve such transactions.

(3) A description, for each instrument, of the nature of the transaction, including:

- The date of the transaction.
- A complete and accurate description of the specific derivative instrument, including description of the underlying securities, currencies, rates, indices, commodities, derivative instruments, or other financial market instruments.
- Number of contracts or notional amount.
- Date of maturity, expiry or settlement.
- Strike price, rate or index, (opening price for futures contracts).
- Counterparty, or exchange on which the transaction was traded.
- Cost or consideration received, if any, for opening transaction.

(4) A description of the company methodology used to verify that opening transactions do not exceed limitations promulgated by the insurers state of domicile.

(b) For derivative instruments terminated during the year:

(1) Signature of approval, for each instrument, by person(s) authorized, either by the insurer's board of directors or a committee authorized by the board, to approve such transactions.

(2) A description, for each instrument, of the nature of the transaction, including:

- The date of the transaction.
- A complete and accurate description of the specific derivative instrument, including description of the underlying securities, currencies, rates, indices, commodities, derivative instruments, or other financial market instruments.
- Number of contracts or notional amount.
- Date of maturity, expiry or settlement.
- Strike price, rate or index, (termination price for futures contracts).
- Counterparty, or exchange on which the transaction was traded.
- Consideration paid or received, if any, on termination.

(3) Description of company methodology to verify that derivative instruments were effective hedges.

(4) Identification of any derivative instruments that ceased to be effective as hedges.

(c) For derivative instruments open at year end:

(1) A description of the methodology used to verify the continued effectiveness of hedges.

(2) An identification of any derivative instruments which have ceased to be effective as hedges.

(3) A description of company methodology to determine market values of derivative instruments.

(4) Copy of Master Agreements, if any, where indicated on Schedule DB Part E Section 1.

Specific Accounting Procedures for Derivative Instruments

(a) Call and Put Options, Caps, and Floors:

(1) Accounting at Date of Acquisition (purchase) or Issuance (written):

The premium paid or received for purchasing or writing a call option, put option, cap or floor shall be carried as an asset (purchase) or liability (written) on the balance sheet (Aggregate Write-in for Invested Asset (or) Liability).

(2) Statement Value:

- Open derivative instruments hedging items carried at amortized cost (where company does not elect to recognize gain/loss currently):
    - Options, caps and floors purchased or written shall be valued at amortized cost in a manner consistent with the hedged item.
    - The amortization period and methods used should in general result in a constant effective yield over the life of the hedged item or program. (For floating rate securities, the estimated effective yield should be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change.) Specific treatment includes:
        - Holdings in derivative instruments purchased or written within a year of maturity or expiry need not be amortized;
        - For anticipatory hedges, the derivative instrument may be carried at cost until the anticipated hedged transaction occurs or it is determined that the hedge was not effective;
        - For other derivative instruments, the amortization period is usually from date of acquisition (issuance) of the derivative instrument to maturity of the hedged item or program.
    - For hedges where the cost of the derivative instrument is combined with the hedged item, the statement value would be zero. The market value of the hedging and hedged items will be determined and reported separately.
    - If during the life of the derivative instrument, it is no longer effective as a hedge, valuation at amortized cost ceases and the derivative instrument shall be valued at its current market value (marked to market) with gains and losses recognized as adjustments to surplus to the extent they ceased to be effective hedges.
    - Open derivative instruments hedging items carried at market value, (where company does not elect to recognize gain/loss currently):
        - Options, caps or floors purchased or written shall be valued at current market value (marked to market) with changes in market value recognized currently consistent with the hedged item.
        - Usually this will result in unrealized gain/loss treatment with adjustment to surplus.

    - For hedges where the cost of the derivative instrument is combined with the hedged item, the market value of the hedging and hedged items will be determined and reported separately. The cost (book value) basis used to figure gain/loss on the derivative instrument will be zero.

  - Companies which elect to recognize gain/loss currently on derivative instruments acting as hedges shall make that determination at the start of the transaction and shall apply the methodology consistently between periods and by category.

    - For hedges of items which are not subject to IMR, options, caps or floors purchased or written shall be valued at current market value (marked to market) with unrealized gains/losses recognized as adjustments to surplus.

    - For hedges of items which are subject to IMR, options, caps and floors purchased or written shall be valued at amortized cost as in (2)(a) above.

(3) Cash Flows and Income:

- Where the cost of the derivative instrument is not combined with the hedged item:

  - Amortization of premium or discount on derivative instruments is an adjustment to net investment (operating) income through Exhibit 2;

  - Periodic cash flows and accruals of income/expense are to be reported in a manner consistent with the hedged item, usually as other investment income (operating income) to be reported in Exhibit 2.

- Where the cost of the derivative instrument is combined with the hedged item, the cash flows and income of the derivative instrument on Schedule DB will be zero. All related amortization and cash flow accounting will be reported with the hedged item instead of with the derivative instrument.

(4) Gain/Loss on Termination (includes closing, exercise, maturity, and expiry):

- Exercise of an Option: The remaining book value of the derivative instrument shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate.

- Sale, maturity, expiry, or other closing transaction of a derivative instrument which is an effective hedge — Any gain or loss on the transaction will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate.

- Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

- Where it is impractical to allocate gains or losses from effective hedges to specific hedged assets or liabilities, the company may recognize (realize) the gain/loss on termination in net income. Companies which elect to recognize gain/loss on derivative instruments acting as hedges shall make that determination at the start of the derivative transaction and shall apply the methodology consistently between periods and by investment category.

  - For insurers subject to IMR the gain/loss will be subject to IMR if the hedged items are subject to IMR.

(b) Swaps, Collars and Forwards:

An interest rate swap is a contractual agreement between two parties to exchange interest rate payments (usually fixed for variable) based on a specified amount of underlying assets or liabilities (known as the notional amount) for a specified period. The swap does not involve an exchange of principal. The result of these transactions is to transform payments from a variable rate to a fixed rate, from a fixed rate to a variable rate or from one variable rate index to another variable rate index.

Interest rate swaps have historically been entered into for the purpose of lowering borrowing costs, obtaining otherwise unavailable financing terms, and/or improving asset and liability management through a reduction of an entity’s exposure to interest rate risk. Banks and brokers will enter into an interest rate swap with an interested party before a swap partner is found, creating a swap portfolio. This activity allows the corporation that desires a swap transaction immediate access to the market. This secondary market also allows a swap participant a vehicle to unwind or reverse swap positions it no longer wants or receive cash if the position to be disposed of is favorable in relation to the current market.

While swaps may involve the trading of interest on liabilities or assets, insurance industry members have used swaps to match return on assets to contract obligations. Insurers also have acted as an intermediary or broker in the process of arranging a swap. Swaps may involve long periods of time and significant amounts of interest on substantial notional amounts. Unmatched or naked swaps are sometimes written where no underlying asset or liability exists.

The risk to the parties of a swap agreement is reduced by the fact that no transfer of principal is involved. The cash exchanged between the parties is usually the net interest differential only.

In general, interest rate swaps are off-balance-sheet items, disclosed in the footnotes to the financial statements. With respect to the income statement, swap payments flow through other income or expense. The recording of capital gains or losses arises only in the event that one party to a swap agreement defaults. In such a circumstance, the defaulting party is required to make a lump sum payment to the other party in exchange for the release of their obligations under the contract. The amount of the lump sum payment represents the capital gain/loss recorded by each party.

(1) Accounting at Date of Opening Position:

Any premium paid or received at date of opening shall be carried as an asset (paid) or liability (received) on the balance sheet (Aggregate Write-in for Invested Asset (or) Liability).

(2) Statement Value:

- Open derivative instruments hedging items carried at amortized cost (where the company does not elect to recognize gain/loss currently):
  - Swaps, collars and forwards shall be valued at amortized cost in a manner consistent with hedged item.
  - The amortization period and methods used should in general result in a constant effective yield over the life of the hedged item or program. (For floating rate securities the estimated effective yield should be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change.) Specific treatment includes:
    - Holdings in derivative instruments purchased or written within a year of maturity or expiry need not be amortized;
    - For anticipatory hedges, the derivative instrument may be carried at cost until the anticipated hedged transaction occurs or it is determined that the hedge was not effective;
    - For other derivative instruments the amortization period is usually from date of acquisition (issuance) of the derivative instrument to maturity of the hedged item or program.
  - For hedges where the cost of the derivative instrument is combined with the hedged item, the statement value would be zero. The market value of the hedging and hedged items will be determined and reported separately.
  - If during the life of the derivative instrument it is no longer effective as a hedge, valuation at amortized cost ceases and the derivative instrument shall be valued at its current market value (marked to market) with gains and losses recognized as adjustments to surplus to the extent that it ceased to be an effective hedge.
- Open derivative instruments hedging items carried at market value (where company does not elect to recognize gain/loss currently):
  - Swaps, collars or forwards shall be valued at current market value (marked to market) with changes in market value recognized currently consistent with the hedged item.

    - Usually this will result in unrealized gain/loss treatment with adjustment to surplus.

    - For hedges where the derivative instrument is combined with the hedged item, the market value of the hedging and hedged items will be determined and reported separately. The cost (book value) basis used to figure gain/loss on the derivative instrument will be zero.

- Open foreign currency swap and forward contracts hedging foreign currency exposure on items denominated in a foreign currency and translated into U.S. dollars (where the company does not elect to recognize gain/loss currently):

    - The foreign exchange premium (discount) on the currency contract will be amortized into income over the life of the contract. The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened.

        - Amortization is not required if the contract was entered into within a year of maturity.

    - A foreign currency translation adjustment should be reflected as an unrealized gain/loss (surplus adjustment) using the same procedures as done to translate the hedged item.

    - The unrealized gain/loss for the period equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the prior period end spot rate.

    - The statement value of the currency contract equals the amortized (premium) discount plus the cumulative unrealized gain/(loss) on the contract. The cumulative unrealized gain/(loss) equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened.

    - Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on anticipated firm commitments may be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs.

    - For hedges where the cost of the foreign currency contract is combined with the hedged item, the statement value would be zero. The market value of the hedging and hedged items will be determined and reported separately.

    - If during the life of the currency contract it is not effective as a hedge, valuation at amortized cost ceases. To the extent it ceased to be an effective hedge, a cumulative unrealized gain/loss will be recognized as an adjustment to surplus equal to the notional amount times the difference between the forward rate available for the remaining maturity of the contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.

- Companies which elect to recognize gain/loss currently on derivative instruments acting as hedges shall make that determination at the start of the transaction and shall apply the methodology consistently between periods and by category.

    - For hedges of items which are not subject to IMR, derivative instruments shall be valued at current market value (marked to market) with unrealized gains/losses recognized as adjustments to surplus.

    - For hedges of items which are subject to IMR, derivative instruments shall be valued at amortized cost as in (2)(a) above.

(3) Cash Flows and Income:

- Where the cost of the derivative instrument is not combined with the hedged item:

    - Amortization of premium or discount on derivative instruments is an adjustment to net investment (operating) income through Exhibit 2.

    - Periodic cash flows and accruals of income/expense are to be reported in a manner consistent with the hedged item, usually as other investment income (operating income) to be reported in Exhibit 2.

- Where the cost of the derivative instrument is combined with the hedged item, the cash flows and income of the derivative instrument on Schedule DB will be zero. All related amortization and cash flow accounting will be reported with the hedged item instead of with the derivative instrument.

(4) Gain/Loss on Termination (includes closing, exercise, maturity, and expiry):

- Exercise — The remaining book value of the derivative instrument shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate.

- Sale, maturity, expiry, or other closing transaction of a derivative instrument which is an effective hedge — Any gain or loss on the transaction will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate.

- Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

- Where it is impractical to allocate gains or losses from effective hedges to specific hedged assets or liabilities, the company may recognize (realize) the gain/loss on termination in net income. Companies which elect to recognize gain/loss on derivative instruments acting as hedges shall make that determination at the start of the derivative transaction and shall apply the methodology consistently between periods and by investment category.

  - For insurers subject to IMR the gain/loss will be subject to IMR if the hedged items are subject to IMR.

(c) Futures

(1) Accounting at Date of Acquisition:

Positions in futures contracts shall be initially valued at the amount of cash deposits (i.e., basis or book value of the contract), if any, placed with a broker. Subsequent additions (reductions) in cash deposits plus changes in contract value from date of contract opening (i.e., variation margin) paid (received) will increase (decrease) the book value of the futures contract.

(2) Statement Value:

- Hedges of Items Carried at Amortized Cost (where the company does not elect to recognize gain/loss currently):

  - Futures shall be valued at book value.

  - Book value of open futures contracts need not be amortized.

  - For hedges where the cost of the futures contract is combined with the hedged item, the statement value would be equal to cash deposits outstanding. The market value of the hedging and hedged items will be determined and reported separately. Market value on futures contracts is limited to the value of the cash deposits outstanding.

  - If during the life of the futures contract it is no longer effective as a hedge, valuation at book value (deferral accounting) ceases. A gain/(loss) equal to the variation margin received (paid) shall be recognized as an adjustment to surplus to the extent it ceased to be an effective hedge. Statement value will be limited to the cash deposits outstanding.

- Hedges of Items carried at Market Value (where company does not elect to recognize gain/loss currently):

    - Changes in contract value from date of contract opening (i.e., variation margin) shall be recognized currently consistent with the hedged item. Statement value will be limited to the cash deposits outstanding.

    - Usually this will result in unrealized gain/loss treatment with adjustment to surplus.

    - For hedges where the variation margin of the futures contract is combined with the hedged item, the market value of the hedging and hedged items will be determined and reported separately.

- Open foreign currency futures contracts hedging foreign currency exposure on item(s) denominated in a foreign currency and translated into U.S. dollars (where the company does not elect to recognize gain/loss currently):

    - The foreign exchange premium (discount) on the currency contract will be amortized into investment income over the life of the contract. The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened. The cumulative income recognized since the contract was opened should be reported as recognized variation margin received or (paid).

        - Amortization is not required if the contract was entered into within a year of maturity.

    - A foreign currency translation adjustment should be reflected as an unrealized gain/loss (surplus adjustment) using the same procedures as is done to translate the hedged item. The cumulative unrealized gain/(loss) which equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened should be reported as recognized variation margin received or (paid).

    - The statement value of the currency futures contract is book value, including any increase (decrease) for amortization of foreign exchange (premium) discount ((c)(i) above) plus the foreign exchange translation gain/(loss) ((c)(ii) above), which is reported as deferred variation margin.

    - Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on anticipated firm commitments may be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs.

- For hedges where the variation margin of the foreign currency contract is combined with the hedged item, the statement value would equal the cash deposits outstanding. The market value of the hedging and hedged items will be determined and reported separately. Market value on futures contracts is limited to the value of the cash deposits outstanding.

- If during the life of the currency contract it is not effective as a hedge, valuation at amortized cost ceases. To the extent it ceased to be an effective hedge, a cumulative unrealized gain/loss will be recognized as an adjustment to surplus equal to the notional amount times the difference between the forward rate available for the remaining maturity of the contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.

- Companies which elect to recognize gain/loss currently on futures contracts acting as hedges shall make that determination at the start of the transaction and shall apply the methodology consistently between periods and by category.

  - For hedges of items which are not subject to IMR, changes in contract value from date of contract opening (i.e., variation margin) shall be recognized currently as unrealized gain/loss adjustment to surplus. Statement value will be limited to the cash deposits outstanding.

  - For hedges of items which are subject to IMR, derivative instruments shall be valued at amortized cost as in (2)(a) above.

(3) Gain/Loss on Termination:

- Settlement at maturity of a futures contract — The remaining variation margin of the futures contract shall become an adjustment to the cost or proceeds of the hedged item(s) received, disposed of or held, individually or in aggregate.

- Sale or other closing transaction of a futures contract which is an effective hedge — any gain or loss on the transaction will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate.

- Gain/loss on termination of futures contracts will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

- Where it is impractical to allocate gains or losses from effective hedges to specific hedged assets or liabilities, the company may recognize (realize) the gain/loss on termination in net income. Companies which elect to recognize gain/loss on futures contracts acting as hedges shall make that determination at the start of the derivative transaction and shall apply the methodology consistently between periods and by investment category.

- For insurers subject to IMR the gain/loss will be subject to IMR if the hedged items are subject to IMR.

41. Chapter 8 in the Life/A&H and P&C Accounting Practices and Procedures Manuals contain the following guidance relating to insurance futures and insurance future options:

> Insurance Futures and Insurance Futures Options
>
> The statutes, regulations and administrative rulings of the insurers domiciliary state establish the authority to engage in transactions with respect to insurance futures and insurance futures options. In the absence of specific written authority, the Insurance Department of the insurers domiciliary state should be consulted as to such authority.
>
> In those jurisdictions which authorize transactions with respect to insurance futures and insurance futures options, an insurance company is generally permitted, subject to applicable quantitative limitations, to use such instruments to hedge against adverse development in its incurred losses. This strategy typically would involve any or a combination of (i) the purchase of insurance futures contracts, (ii) the purchase of a call option on insurance futures contracts, or (iii) the sale (writing) of a put option on insurance futures contracts.
>
> Insurance Futures Contracts:
>
> An insurance futures contract is a futures contract based on an underlying index of performance of insurance contracts (policies) or factors relating thereto. An insurance futures contract also may be defined more specifically under the statutes, regulations and administrative rulings of a particular state. In connection with a given insurance futures position, an insurer is required by the listing exchange to maintain a margin deposit with respect to the underlying insurance futures contracts purchased.
>
> An insurer should report the amount of any margin deposit as an asset on its balance sheet, which deposit should be reflected as an aggregate write-in for other-than-invested assets. The specific statutory accounting treatment of increases or decreases in the value of the subject contracts will depend on whether the insurance futures position constitutes a hedge of the insurers incurred losses. The determination of whether an insurance futures position constitutes a hedge is typically determined pursuant to the statutes, rules and administrative rulings of an insurers domiciliary state. Although many states prohibit an insurer from taking an insurance futures position that does not constitute a hedge, the following presents both hedge accounting and other-than-hedge accounting treatment. Other-than-hedge accounting should be used in the event that an original hedge position loses its character as such, until such time as the position is terminated as required by state law.
>
> Insurance Futures - Hedge Accounting:
>
> The following treatment would be applicable to insurance futures positions that effectively hedge an insurers incurred losses. With respect to any insurance futures position which corresponds to incurred losses for the current reporting period, any increases (decreases) in the value of the insurance futures contracts should be reported as an increase (decrease) in the insurers other income, as an aggregate write-in for miscellaneous income for the subject period. With respect to any insurance futures position which corresponds to a period beyond the current reporting period, any increases (decreases) in the value of the underlying insurance futures contracts should be reported as a direct increase (decrease) in the insurers surplus, as an aggregate write-in for gains and losses in surplus. When such insurance futures position thereafter corresponds to a current reporting period, the initial increase (decrease) in direct surplus should be reversed and such amount should be appropriately reported as an increase (decrease) to the insurers other income, as an aggregate write-in for miscellaneous income for the current period, along with any current changes in value of the insurance futures contracts. In either of the foregoing instances, the increase (decrease) in the market value of the insurance futures contracts should either (i) increase (decrease) the aggregate write-in for other-than-invested assets, to the extent that such

increase (decrease) effects the corresponding margin deposit, or (ii) increase (decrease) cash or other assets, to the extent of mark-to-market payments that are not maintained as a margin deposit. When the insurance futures position is eventually closed, any corresponding margin balance (i.e., aggregate write-in for other-than-invested assets) shall be transferred to the insurers cash or other assets, as appropriate.

Insurance Futures – Other-Than-Hedge Accounting:

If the insurance futures position is no longer effective as a hedge, any increases (decreases) in the value of the insurance futures contracts should be reported as an aggregate write-in for miscellaneous income. When the insurance futures positions eventually close, any corresponding margin balance (i.e., aggregate write-in for other-than-invested assets) should be transferred to the insurers cash or other assets, as appropriate.

Options on Insurance Futures Contracts:

An insurance futures option is either a put or call option on an insurance futures contract. An insurance futures call option is a contract under which the holder has the right to purchase the underlying insurance futures contract covered by the option at a stated price (strike price) on or before a fixed expiration date. An insurance futures put option gives the holder the right to sell the underlying insurance futures contract. The consideration paid (received) for the purchase (sale) of an insurance futures option is referred to as a premium. Because all insurance futures options relate to an underlying insurance futures contract, the statutory accounting treatment of insurance futures options generally follows the treatment afforded insurance futures contracts.

An insurer should report the amount of any premium paid for an insurance futures option as an asset on its balance sheet, which premium should be reflected as an aggregate write-in for other-than-invested assets. Similarly, an insurer should report the amount of any premium received for the sale (writing) of an insurance futures option as a liability on its balance sheet, which premium should be reflected as an aggregate write-in for liabilities. The specific statutory accounting treatment of increases or decreases in the market value of the subject insurance futures option will depend on whether such position constitutes a hedge of the insurers incurred losses. As with insurance futures contracts, the determination of whether a particular position constitutes a hedge is typically determined pursuant to the statutes, rules and administrative rulings of an insurers domiciliary state. Although many states prohibit an insurer from taking an insurance futures option position that does not constitute a hedge, the following presents both hedge accounting and other-than-hedge accounting treatment. Other-than-hedge accounting should be used in the event that an original hedge position loses its characters as such, until such time as the position is terminated as required by state law.

Options on Insurance Futures Contracts - Hedge Accounting:

The following treatment would be applicable to insurance futures options positions that effectively hedge an insurers incurred losses.

(a) Purchase of Call Options — With respect to any call option which corresponds to incurred losses for the current reporting period, any increases (decreases) in the market value of the option should be reported as an increase (decrease) in the insurers other income, as an aggregate write-in for miscellaneous income for the subject period. With respect to any call option which corresponds to a period beyond the current reporting period, any increases (decreases) in the market value of the underlying option should be reported as a direct increase (decrease) in the insurer’s surplus, as an aggregate write-in for gains and losses in surplus. When such option thereafter corresponds to a current reporting period, the initial increase (decrease) in direct surplus should be reversed and such amount should be appropriately reported as an increase (decrease) to the insurer’s other income, as an aggregate write-in for miscellaneous income for the current period, along with any current changes in the market value of the option.

If the option position is terminated through a closing transaction, the corresponding balance of the asset (i.e., aggregate write-in for other-than-invested assets) should be eliminated, with a corresponding charge to cash or other assets, as appropriate. If the option is exercised, the corresponding balance of the asset should be eliminated, with a corresponding charge to either (i) insurance futures margin (i.e., aggregate write-in for other-than-invested assets), to the extent of margin deposit requirements, or (ii) cash or other assets, as appropriate. If the option expires, the corresponding balance of the asset should be eliminated, with an appropriate decrease to the insurer's other income, as an aggregate write-in for miscellaneous income.

(b) Sale (Writing) of Put Options — The statutory accounting treatment for the sale (writing) of insurance futures put options is essentially the mirror image of the foregoing treatment presented with respect to purchased call options. Upon termination (through a closing transaction), exercise or expiry of the put option, the corresponding balance of the liability (i.e., aggregate write-in for liabilities) should be eliminated, in the mirror image of the foregoing treatment.

Options on Insurance Futures Contracts – Other-Than-Hedge Accounting:

If the insurance futures option position is no longer effective as a hedge, any increases (decreases) in the value option should be reported as an aggregate write-in for miscellaneous income.

42. The NAIC Annual Statement Instructions for both Life, Accident and Health and Property and Casualty companies require the following disclosures for derivative instruments:

Instruction:

Disclose the following information by category of derivative financial instrument:

a. A description of the Company's objectives for holding or issuing derivative financial instruments, the context needed to understand those objectives, and its strategies for achieving those objectives including the classes of derivative financial instrument used.

b. The nature and terms of derivative financial instruments, including, at a minimum, a discussion of: 1) the credit and market risk of those instruments, and 2) the cash requirements of those instruments (including the effects of possible termination payments).

Illustration for Interest Rate Swaps (Companies should modify the following to reflect appropriately their own circumstances):

The Company uses interest rate swaps to reduce market risks from changes in interest rates and to alter interest rate exposures arising from mismatches between assets and liabilities. Under interest rate swaps, the Company agrees with other parties to exchange, at specified intervals, the difference between fixed-rate and floating-rate interest amounts calculated by reference to an agreed notional principal amount. Generally, no cash is exchanged at the outset of the contract and no principal payments are made by either party. A single net payment is usually made by one counterparty at each due date. See Schedule DB.

The Company is exposed to credit-related losses in the event of nonperformance by counterparties to financial instruments, but it does not expect any counterparties to fail to meet their obligations given their high credit ratings. The credit exposure of interest rate swaps is represented by the fair value (market value) of contracts with a positive fair value (market value) at the reporting date.

Illustration for All Other Derivatives Listed in Schedule DB (Caps, Collars, Futures, etc.):

The note(s) may resemble the illustration for interest rate swaps. For additional illustrations, see C.M. Antis' *Financial Accounting Series Special Report, Illustrations of Financial Instrument Disclosures* (No. 144-c), December 1994, published by the Financial Accounting Standards Board.

43. The following guidance for derivatives used for income generation was adopted by the Financial Condition (EX4) Subcommittee on December 14, 1996:

INCOME GENERATION ACCOUNTING PROJECT
EXECUTIVE SUMMARY
JULY 10, 1996

INTRODUCTION

Income Generation transactions are ones where the company writes (or sells) derivative instruments to generate additional income or return to the company. They include covered options, caps and floors such as when a company writes an equity call option on stock which it already owns. Currently they represent a small portion of the insurance industry's derivative activity in terms of number of companies involved, number of transactions, and dollar amounts involved. The possibility of greater company involvement in the future exists given recent guidance and inclusion in the Model Investment Law.

Because these transactions involve writing derivative transactions, they expose the company to potential future liabilities for which the company receives a premium up front. Because of this risk, state laws and the Model Investment Law impose dollar limitations and additional constraints requiring that they be "covered," i.e., that there be offsetting assets which can be used to fulfill potential obligations. To this extent the combination of instruments works like a reverse hedge where an asset owned by the company in essence hedges the derivative risk.

As with derivatives in general these instruments include a wide variety of terms regarding maturities, range of exercise periods and prices, counterparties, underlying instruments, etc.

GENERAL ATTRIBUTES

The proposed accounting and reporting approach is intended to meet (1) Regulatory needs focusing on company and Industry solvency (2) company needs focusing on administrative and cost considerations, and (3) the general need to provide meaningful and relevant information regarding the substance of the transactions and holdings for all users of the financial statements.

1. The approach is conservative and reduces the potential for income manipulation. Income is not recognized early in the holding period only to be reversed by future losses. This consideration is particularly important for options which could have lower exercise prices than the combined statement values of the derivative and the covering asset.

2. The approach is reasonably simple and consistent with Statutory accounting. It builds on accounting guidance which already exists in the *NAIC Accounting Practices and Procedures Manual* and in the *Annual Statement Instructions* regarding hedging.

3. The approach looks to the substance of the transactions involved.

   - It matches the accounting of the derivative with the accounting of the covering asset or underlying interest.

- It includes an alternative treatment which combines the derivative with the covering asset. This results in a treatment analogous to callable bonds where the option feature is combined with the asset rather than in two pieces.
- It allows for recognition of the time value/interest rate factor implicit in the pricing of these instruments, particularly relevant for derivatives with longer maturities.

ACCOUNTING SPECIFICS

The accounting specifics attached are presented in table form. Completed sections include

- Covered Call Writing
  - Covering Item at Amortized Cost
  - Covering Item at Market
- Covered Put Writing
  - Underlying Interest at Amortized Cost
  - Underlying Interest at Market
- Covered Cap and Floor Writing
  - Covering Item at Amortized Cost
  - Covering Item at Market
- Accounting Examples
- AVR Implications
- Approval by AVR/IMR Study Group
- Formal Blanks Proposal

General

The principal features to date are:

1. The premium received is initially recorded as a deferred liability.

2. The accounting of the covering asset or underlying interest controls the accounting of the derivative. The covering asset/underlying interest is accounted at either mark-to-market (e.g., common stocks) or (amortized) cost (e.g., for bonds).

3. The gain/loss on termination of the derivative is a capital item. For life insurance companies, it would be subject to IMR treatment if interest rate related.

4. For options which are exercised, the remaining premium would adjust the proceeds (cost) associated with the exercise resulting in no explicit gain or loss reported for the derivative itself.

Covered puts and fixed income transactions have several specific features which are presented below.

Fixed Income Call Options

The principal specific features are:

1. The general approach is to value at cost (i.e., consideration received) without amortization over the life of the contract.

2. An alternative to the general approach combines the accounting of the written option with the covering asset and then uses standard accounting for callable bonds (yield to worst amortization) on the adjusted asset. This method prevents the possibility of future loss recognition upon exercise while at the same time providing recognition of the income

feature of the option over time. This approach would appear most relevant for longer-lived covered European call options, which are in substance like callable bonds.

3. For life insurance companies the gain or loss flows through the IMR if the underlying interest or covering asset is subject to the IMR using callable bond rules to determine the remaining life.

4. Companies writing options for income generation purposes are responsible for timely recognition of any probably losses that may occur as a result of the strategy. If the exercise price is below the covering asset's book value, the asset should be evaluated for write down or disclosure treatment along the lines of Codification Issue Paper #5 *Definition of Liabilities, Loss Contingencies, and Impairments of Assets* taking into consideration all relevant factors such as whether the option is currently exercisable, the fair value of the bond relative to its exercise price, to what extent the statement value of the option premium offsets any loss on the asset, or how any IMR transaction on exercise would affect surplus and income.

Puts

The principal features are:

1. The accounting for the underlying interest instead of the covering asset governs the accounting of the written put while it is open. For example, if a company wrote a put requiring it to purchase a certain common stock (underlying interest) at a specific price, the company might cover that option by holding cash or cash equivalents (covering asset). The accounting for the common stock would govern the accounting of the option in this case.

2. As with covered call writing for life insurance companies, gain/loss on termination may be subject to IMR over the remaining life of the underlying interest.

3. As with covered call writing, companies writing put options for income generation purposes are responsible for timely recognition of any probably losses that may occur as a result of the strategy.

Fixed Income Caps and Floors

The principal specific features are:

1. The value of the premium received would be amortized into income over the life of the contract. For caps and floors, where the company is selling off possible excess interest/income, the value of the covering asset is not relevant.

2. Again, gain/loss may be subject to IMR. The expected maturity would be the derivative contract's maturity.

WRITTEN CALL OPTIONS – INCOME GENERATION
PROPOSED STATUTORY ACCOUNTING TREATMENT
APPLICABLE TO ALL INSURANCE COMPANIES
JULY 30, 1996

STATUS OF OPTION	COVERING ASSET AT AMORTIZED COST	COVERING ASSET AT MARKET VALUE
Open	Record premium as deferred liability. Carry at consideration received. (1) Alternatively, attach premium to covering asset and amortize (under yield to worse scenario) using standard callable bond accounting. (2)	Record premium as deferred liability. Mark to market with changes in market value recorded as unrealized adjustments to surplus – gain/loss.
Closed – Expired	Premium received recognized as realized capital gain. Gain from expiration to flow through IMR if applicable. (3)	Premium received recognized as realized capital gain.
Closed – Exercised	Adjust disposition proceeds. (Include in capital gain/loss of disposed asset.) Gain or loss from disposition to flow through IMR if applicable. (3)	Adjust disposition proceeds. (Include in capital gain/loss of disposed asset.)
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain or loss from disposition to flow through IMR if applicable. (3)	Recognize net amount as realized capital gain/loss.

NOTES

1. A general statement will be added to the instructions stating that companies writing options for income generation purposes are responsible for the timely recognition of any probable losses that may occur as a result of the strategy due to holding and accounting for options on Schedule DB – Part B.

2. Report derivative and its market value on Schedule DB – Part B. Include accounting on Schedule D – Part 1.

3. If premium is attached to covering asset, the accounting treatment for the covering asset applies.

WRITTEN PUT OPTIONS – INCOME GENERATION
PROPOSED STATUTORY ACCOUNTING TREATMENT
APPLICABLE TO ALL INSURANCE COMPANIES
JULY 30, 1996

STATUS OF OPTION	**UNDERLYING INTEREST AT AMORTIZED COST**	**UNDERLYING INTEREST AT MARKET VALUE**
Open	Record premium as deferred liability. Carry at consideration received. (1)	Record premium as deferred liability. Mark to market with changes in market value recorded as unrealized adjustments to surplus – gain/loss.
Closed – Expired	Premium received recognized as realized capital gain. Gain from expiration to flow through IMR if applicable.	Premium received recognized as realized capital gain.
Closed – Exercised	Adjust acquisition cost by premium received.	Adjust acquisition cost by premium received.
Closed – Terminated	Recognized net amount as realized capital gain/loss. Gain or loss from disposition to flow through IMR if applicable.	Recognize net amount as realized capital gain/loss.

NOTES

1. A general statement will be added to the instructions stating that companies writing options for income generation purposes are responsible for the timely recognition of any probable losses that may occur as a result of the strategy due to holding and accounting for options on Schedule DB – Part B.

WRITTEN CAPS AND FLOORS – INCOME GENERATION
PROPOSED STATUTORY ACCOUNTING TREATMENT
APPLICABLE TO ALL INSURANCE COMPANIES
JULY 30, 1996

STATUS OF OPTION	COVERING ASSET AT AMORTIZED COST	COVERING ASSET AT MARKET VALUE
Open	Record premium as deferred liability. Carry at amortized value. (Alternatively carry at consideration received if within 1 yr of maturity.) Amortize over life of contract to produce constant yield. Record any interest expense as “Other Investment Income” – negative value.	Record premium as deferred liability. Mark to market with changes in market value recorded as unrealized adjustments to surplus – gain/loss.
Closed – Matured	Would usually mature at zero amortized value. Any remaining unamortized value recognized as ordinary income through a final amortization adjustment.	Premium received recognized as realized capital gain.
Closed – Exercised	Not applicable.	Not applicable.
Closed – Terminated	Recognize net amount as realized capital gain/loss. Gain/loss on termination to flow through IMR if applicable.	Recognize net amount as realized capital gain/loss.
Disclosure	(OPEN ITEM—being addressed by other Interested Persons.) Details of covered items and/or written transactions to allow actuaries to evaluate cash flow implication.	(OPEN ITEM—being addressed by other Interested Persons.) Details of covered items and/or written transactions to allow actuaries to evaluate cash flow implications.

Generally Accepted Accounting Principles

44. The key GAAP literature relating to hedge accounting for derivative financial instruments is found in FAS 80. Paragraphs 3 and 4 of FAS 80 state, in part:

> 3. A change in the market value of a futures contract shall be recognized as a gain or loss in the period of the change unless the contract meets the criteria specified in this Statement to qualify as a hedge of an exposure to price or interest rate risk. If the hedge criteria are met, the accounting for the futures contract shall be related to the accounting

> for the hedged item so that changes in the market value of the futures contract are recognized in income when the effects of related changes in the price or interest rate of the hedged item are recognized.
>
> 4. In applying this Statement, both of the following conditions shall be met for a futures contract to qualify as a hedge:
>
>   a. The item to be hedged exposes the enterprise to price (or interest rate) risk. In this Statement, risk refers to the sensitivity of an enterprise's income for one or more future periods to changes in market prices or yields of existing assets, liabilities, firm commitments, or anticipated transactions. To meet this condition, the item or group of items intended to be hedged must contribute to the price or interest rate risk of the enterprise. In determining if this condition is met, the enterprise shall consider whether other assets, liabilities, firm commitments, and anticipated transactions already offset or reduce the exposure. An enterprise that cannot assess risk by considering other relevant positions and transactions for the enterprise as a whole because it conducts its risk management activities on a decentralized basis can meet this condition if the item intended to be hedged exposes the particular business unit that enters into the contract.
>
>   b. The futures contract reduces that exposure and is designated as a hedge. At the inception of the hedge and throughout the hedge period, high correlation of changes in (1) the market value of the futures contract(s) and (2) the fair value of, or interest income or expense associated with, the hedged item(s) shall be probable so that the results of the futures contract(s) will substantially offset the effects of price or interest rate changes on the exposed item(s). In addition to assessing information about the correlation during relevant past periods, the enterprise also shall consider the characteristics of the specific hedge, such as the degree of correlation that can be expected at various levels of higher or lower market prices or interest rates. A futures contract for a commodity or a financial instrument different from the item intended to be hedged may qualify as a hedge provided there is a clear economic relationship between the prices of the two commodities or financial instruments, and provided high correlation is probable.

45. Paragraph 21 of FAS 52 states, in part:

> A gain or loss on a forward contract or other foreign currency transaction that is intended to hedge an identifiable foreign currency commitment (for example, an agreement to purchase or sell equipment) shall be deferred and included in the measurement of the related foreign currency transaction...A foreign currency transaction shall be considered a hedge of an identifiable foreign currency commitment provided both of the following conditions are met:
>
> a. The foreign currency transaction is designated as, and is effective, as a hedge of a foreign currency commitment.
> b. The foreign currency commitment is firm.

46. The key GAAP literature relating to interest rate swap transactions is EITF 84-36, in which the Task Force concluded that:

> ...if there is an underlying debt obligation on the balance sheet of the company entering into the swap transaction, the company should account for the swap agreement like a hedge of the obligation and record interest expense using the revised interest rate, with any fees or other payments amortized as yield adjustments.

47. FAS 105, as amended by FAS 119, provides the following guidance on disclosures for financial instruments with off-balance sheet risk, including derivatives:

6. A financial instrument is cash, evidence of an ownership interest in an entity, or a contract that both:

a. Imposes on one entity a contractual obligation[1] (1) to deliver cash or another financial instrument[2] to a second entity or (2) to exchange financial instruments on potentially unfavorable terms with the second entity

b. Conveys to that second entity a contractual right[3] (1) to receive cash or another financial instrument from the first entity or (2) to exchange other financial instruments on potentially favorable terms with the first entity.

[1] *Contractual obligations* encompass both those that are conditioned on the occurrence of a specified event and those that are not. All contractual obligations that are financial instruments meet the definition of *liability* set forth in FASB Concepts Statement No. 6, *Elements of Financial Statements*, although some may not be recognized as liabilities in financial statements—may be "off-balance-sheet"—because they fail to meet some other criterion for recognition. For some financial instruments, the obligations is owed to or by a group of entities rather than a single entity.

[2] The use of the term *financial instrument* in this definition is recursive (because the term *financial instrument* is included in it), though it is not circular. The definition requires a chain of contractual obligations that ends with the delivery of cash or an ownership in an entity. Any number of obligations to deliver financial instruments can be links in a chain that qualifies a particular contract as a financial instrument.

[3] *Contractual rights* encompass both those that are conditioned on the occurrence of a specified event and those that are not. All contractual rights that are financial instruments meet the definition of *asset* set forth in Concepts Statement 6, although some may not be recognized as assets in financial statements —may be "off-balance-sheet"—because they fail to meet some other criterion for recognition. For some financial instruments, the right is held by or the obligation is due from a group of entities rather than a single entity.

7. The risk of accounting loss[4] from a financial instrument includes (a) the possibility that a loss may occur from the failure of another party to perform according to the terms of a contract (credit risk), (b) the possibility that future changes in market prices may make a financial instrument less valuable or more onerous (market risk),[5] and (c) the risk of theft or physical loss. This Statement addresses credit and market risk only.

[4] Accounting loss refers to the loss that may have to be recognized due to credit and market risk as a direct result of the rights and obligations of a financial instrument.

[5] A change in market price may occur (for example, for interest-bearing financial instruments) because of changes in general interest rates (interest rate risk), changes in the relationship between general and specific market interest rates (an aspect of credit risk), or changes in the rates of exchange between currencies (foreign exchange risk).

Disclosure of Extent, Nature, and Terms of Financial Instruments with Off-Balance-Sheet Risk

17. For financial instruments with off-balance-sheet risk*, except as noted in paragraphs 14 and 15, an entity shall disclose either in the body of the financial statements or in the accompanying notes the following information by category of financial instrument:[12]

a. The face or contract amount (or notional principal amount if there is no face or contract amount)

b. The nature and terms, including, at a minimum, a discussion of (1) the credit and market risk of those instruments, (2) the cash requirements of those instruments, and (3) the related accounting policy pursuant to the requirements of APB Opinion No. 22, Disclosure of Accounting Policies.[13]

* Similar disclosures are required for derivative financial instruments without off-balance-sheet risk in paragraph 8 of FASB Statement No. 119, *Disclosure about Derivative Financial Instruments and Fair Value of Financial Instruments.*

[12] In this Statement, category of financial instrument refers to class of financial instrument, business activity, risk, or other category that is consistent with the management of those instruments. If disaggregation of financial instruments is other than by class, the entity also shall describe for each category the classes of financial instruments included in that category. Practices for grouping and separately identifying—classifying—similar financial instruments in statement of financial position, in notes to financial statements, and in various regulatory reports have developed an become generally accepted, largely without being codified in authoritative literature. In this Statement, *class of financial instrument* refers to those classifications.

[13] Paragraph 12 of Opinion 22 as amended by FASB Statement No. 95, *Statement of Cash Flows*, says:

Disclosure of accounting policies should identify and describe the accounting principles followed by the reporting entity and the methods of applying those principles that materially affect the determination of financial position, statement of cash flows, or result of operations. In general, the disclosure should encompass important judgments as to appropriateness of principles relating to recognition of revenue and allocation of asset costs to current and future periods; in particular, it should encompass those accounting principles and methods that involve any of the following:

a. A selection from existing acceptable alternatives.

b. Principles and methods peculiar to the industry in which the reporting operates, even if such principles and methods are predominantly followed in that industry.

c. Unusual or innovative applications of generally accepted accounting principles (and, as applicable, of principles and methods peculiar to the industry in which the reporting entity operates).

The disclosures required in paragraph 17 shall distinguish between financial instruments with off-balance-sheet risk held or issue for trading purposes, included dealing and other trading activities measured at fair value with gains and losses recognized in earnings, and financial instruments with off-balance-sheet risk held or issued for purposes other than trading.

Disclosure of Credit Risk of Financial Instruments with Off-Balance-Sheet Credit Risk

18. For financial instruments with off-balance-sheet credit risk, except as noted in paragraphs 14 and 15, an entity shall disclose either in the body of the financial statements or in the accompanying notes the following information by category of financial instrument:

a. The amount of accounting loss the entity would incur if any party to the financial instrument failed completely to perform according to the terms of the contract and the collateral or other security, if any, for the amount due proved to be of no value to the entity

b. The entity's policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity's access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments.

19. An entity may find that disclosing additional information about the extent of collateral or other security for the underlying instrument indicates better the extent of credit risk. Disclosure of that additional information in those circumstances is encouraged.

48. FAS 119 provides the following guidance on disclosures for derivatives:

8. For options held and other derivative financial instruments not included in the scope of Statement 105 (because they do not have off-balance-sheet risk of accounting loss, as defined in Statement 105), an entity shall disclose either in the body of the financial statements or in the accompanying notes the following information by category of financial instrument:[1]

a. The face or contract amount (or notional principal amount if there is no face or contract amount)[2]

b. The nature and terms, including, at a minimum, a discussion of (1) the credit and market risk of those instruments, (2) the cash requirements of those instruments, and (3) the related accounting policy pursuant to the requirements of APB Opinion No. 22, Disclosure of Accounting Policies.

[1] In this Statement, *category of financial instrument* refers to class of financial instrument, business activity, risk, or other category that is consistent with the management of those instruments. If disaggregation of financial instruments is other than by class, the entity also shall describe for each category the classes of financial instruments included in that category.

[2] Disclosure of the face or contract amount of financial instruments, including those within the scope of Statement 105, may be misleading when the instruments are leveraged and the leverage features are not adequately disclosed. For example, the optional amounts of the interest rate swap may be misleading if the contract's settlement payments are based on a formula that multiplies the effect of interest rate changes. Disclosure of the nature and terms of those instruments requires a discussion of the leverage features and their general effects on (a) the credit and market risk, (b) the cash requirements, and (c) the related accounting policy.

9. The disclosures required in paragraph 8 of this Statement shall distinguish between derivative financial instruments held or issued for:

a. Trading purposes, including dealing and other trading activities measured at fair value with gains and losses recognized in earnings

b. Purposes other than trading.

10. Entities that hold or issue derivative financial instruments for trading purposes shall disclose, either in the body of the financial statements or in the accompanying notes, the following:

a. The average fair value of those derivative financial instruments during the reporting period[3], presented together with the related end-of-period fair value, distinguishing between assets and liabilities

b. The net gains or losses (often referred to as net trading revenues) arising from trading activities during the reporting period disaggregated by class, business activity, risk, or other category that is consistent with the management of those activities and where those net trading gains or losses are reported in the income statement. If the disaggregation is other than by class, the entity also shall describe for each category the classes of derivative financial instruments, other financial instruments, and nonfinancial assets and liabilities from which the net trading gains or losses arose.

[3] The calculation based on average fair value based on daily balances is preferable to a calculation based on less frequent intervals. It is, however, sufficient to disclose average fair value based on the most frequent interval that a trader's systems generate for management, regulatory, or other reasons.

11. Entities that hold or issue derivative financial instruments for purposes other than trading shall disclose the following:

a. A description of the entity's objectives for holding or issuing the derivative financial instruments, the context needed to understand those objectives, and its strategies for achieving those objectives, including the classes of derivative financial instruments used[4]

b. A description of how each class of derivative financial instrument is reported in the financial statements including the policies for recognizing (or reasons for not recognizing) and measuring the derivative financial instruments held or issued, and when recognized, where those instruments and related gains and losses are reported in the statements of financial position and income.

c. For derivative financial instruments that are held or issued and accounted for as hedges of anticipated transactions (both firm commitments and forecasted transactions for which there is no firm commitment), (1) a description of the anticipated transactions whose risks are hedged, including the period of time until the anticipated transactions are expected to occur, (2) a description of the classes of derivative financial instruments used to hedge the anticipated transactions, (3) the amount of hedging gains and losses explicitly deferred,[5] and (4) a description of the transactions or other events that result in the recognition in earnings of gains or losses deferred by hedge accounting.

12. Entities are encouraged, but not required, to disclose quantitative information about interest rate, foreign exchange, commodity price, or other market risks of derivative financial instruments that is consistent with the way the entity manages or adjusts those risks and that is useful for comparing the results of applying the entity's strategies to its objectives for holding or issuing the derivative financial instruments. Quantitative disclosures about the risks of derivative financial instruments are likely to be even more useful, and less likely to be perceived to be out of context or otherwise misunderstood, if similar information is disclosed about the risks of other financial instruments or nonfinancial assets and liabilities to which the derivative financial instruments are related by a risk management or other strategy.

13. Appropriate ways of reporting the quantitative information encouraged in paragraph 12 will differ for different entities and will likely evolve over time as management approaches and measurement techniques evolve. Possibilities include disclosing (a) more details about current positions and perhaps activity during the period, (b) the hypothetical effects on equity, or on annual income, of several possible changes in market prices, (c) a gap analysis of interest rate repricing or maturity dates, (d) the duration of the financial instruments, or (e) the entity's value at risk from derivative financial instruments and from other positions at the end of the reporting period and the average value at risk during the year. This list is not exhaustive, and entities are encouraged to develop other ways of reporting the quantitative information.

[4] For example, if an entity's objective for a derivative position is to keep a risk arising from the entity's nonderivative assets below a specified level, the context would be a description of those assets and their risk, and a strategy might be purchasing put options in a specified proportion to the assets at risk.

[5] For purposes of the disclosure of hedging gains and losses, the term *explicitly deferred* refers to deferrals in separate accounts in the manner required by *FASB Statement No. 80*, *Accounting for Futures Contract*, for hedges of anticipated transactions and by *FASB Statement No. 52*, *Foreign Currency Translation*, for hedges of firm commitments. Those deferrals are in contrast to implicit deferrals that are (a) embedded in related carrying amounts for hedges of recognized assets and liabilities or (b) not recorded because changes in the value of the hedging instrument are no recognized.

OTHER SOURCES OF INFORMATION

49. Excerpts from the Invested Asset Working Group of the Valuation of Securities (EX4) Task Force Meeting on June 2, 1996

> Derivatives Projects
>
> Ann Bottelli (Prudential Insurance) gave a report on four derivatives projects that had been ongoing in the Invested Asset Working Group. The first report dealt with a blanks proposal to add a column to Schedule DB Part E Section 1 dealing with off-balance sheet exposure for derivatives securities. This amount is needed for risk based capital calculations. Following Ms. Bottelli's comments, a motion was made and seconded to adopt the blanks proposal and send it on to the Blanks Task Force. That motion passed. (Attachment A)
>
> Ms. Bottelli next gave a report on the required disclosure for anticipatory hedging. The disclosure would bring NAIC disclosure in line with generally accepted accounting principles (GAAP) disclosure requirements for derivatives securities. Following Ms. Bottelli's comments on the reporting mechanisms, Larry Gorski (Ill.) pointed out that this report and blanks proposal was in no way an endorsement for the use of anticipatory hedging, which he pointed out is prohibited in certain states. Following Mr. Gorski's comments, a motion was made and seconded to adopt the blanks proposal and forward it to the Blanks Task Force. That motion passed. (Attachment B)
>
> Next, Ms. Bottelli gave a report dealing with guidance for the interest maintenance reserve (IMR) for hedging. This guidance will appear in the Financial Examiners Handbook and will deal with IMR gains and losses from derivative hedges. A motion was made and seconded to send this proposal to the Accounting Handbook and Instructions Working Group. That motion passed. (Attachment C)
>
> Finally, Ms. Bottelli gave a report dealing with the accounting for income generating derivative transactions. This report contained two blanks proposal items, as well as definitional material that should be added to the Accounting Practices and Procedures Handbook. Following Ms. Bottelli's comments, Mr. Gorski again pointed out that this report was in no way an endorsement of using derivatives for anything other than hedging purposes. Following some concerns by the working group members that they did not have sufficient time to review this proposal, a motion was made and seconded to receive the report by the working group. (Attachment D) That motion was passed by the working group. Ron Newton (Texas) asked if the two blanks proposals would be sent to the Blanks Task Force. Mr. Gorski responded that they would be held until a final review could be done by the Invested Asset Working Group members.

Statutory Issue Paper No. 86

Securitization

STATUS
Finalized March 16, 1998

Current Authoritative Guidance for Securitization: SSAP No. 103
This issue paper may not be directly related to the current authoritative statement.

Original SSAP from Issue Paper: SSAP No. 33

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. An asset securitization is the process of converting assets which would normally serve as collateral for a loan into securities. The largest category of securitized assets is real estate mortgage loans which serve as collateral for mortgage-backed securities.

2. Current statutory guidance for asset securitizations is provided in the Minutes of the March 26, 1990 meeting of the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force and in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual), Chapter 17, Other Liabilities.

3. In June 1996 the Financial Accounting Standards Board issued *FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 125). This standard supersedes *FASB Statement No. 77, Reporting by Transferors for Transfers of Receivables with Recourse,* (FAS 77) and *FASB Technical Bulletin 85-2, Accounting for Collateralized Mortgage Obligations (CMOs)* (FTB 85-2). The types of transactions contemplated in the statement recognize recent innovations in the financial markets. It addresses transfers accomplished through securitizations as well as other types of transfers.

4. The purpose of this issue paper is to establish statutory accounting principles for asset securitizations and securitizations of policy acquisition costs that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This issue paper is not intended to address transfers accomplished by means other than securitization.

SUMMARY CONCLUSION

Accounting for Securitizations of Financial Assets

5. As used in this issue paper a financial asset shall be defined as cash, evidence of an ownership interest in an entity, or a contract that conveys both

a. Imposes on one entity a contractual obligation (i) to deliver cash or another financial instrument to a second entity or (ii) to exchange other financial instruments on potentially unfavorable terms with a second entity; and

b. Conveys to that second entity a contractual right (i) to receive cash or another financial instrument from the first entity or (ii) to exchange other financial instruments on potentially favorable terms with the first entity.

6. A securitization in which the transferor surrenders control over the financial asset transferred shall be accounted for as a sale, with recognition of proceeds and measurement of a gain or loss only to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The portion of the securitization for which beneficial interests in the transferred assets are received shall not be accounted for as a sale, but shall be treated as an exchange of assets with no measurement of a gain or loss. All other securitizations shall be accounted for as secured borrowings in accordance with paragraph 13.

7. The transferor has surrendered control if, and only if, all of the following conditions are met:

a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership.

b. The transferee is a qualifying special-purpose entity and the holders of beneficial interests in that entity have the right— free of transferor-imposed conditions that constrain them from taking advantage of that right—to pledge or exchange those interests.

c. The transferor does not maintain effective control over the transferred assets through (1) an agreement that entitles and obligates the transferor to repurchase or redeem them before their maturity or (2) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable.

8. A beneficial interest shall be defined as the right to receive all or portions of specified cash inflows to a trust or other entity, including senior and subordinated shares of interest or principal inflows to be “passed through” or “paid through,” premiums due guarantors, and residual interests. Residual interests are interests in the cash flows of the trust or other entity, after the cash flows of structured securities issued by the trust are met.

9. Upon completion of the securitization of financial assets meeting the criteria for sales treatment required by paragraph 7, the transferor shall:

a. Eliminate the transferred assets from the statement of financial position.

b. Allocate the previous carrying amount of the transferred assets to the securities representing beneficial interests retained by the reporting entity, if any, and the securities representing beneficial interests not retained, if any, based on the relative fair values of the transferred assets at the date of transfer.

c. Record in its statement of financial position, the allocated carrying value of the securities representing retained beneficial interests in the assets (e.g., loan-backed securities).

d. Recognize all additional assets obtained (i.e., other than the securities representing retained beneficial interests which are recorded in accordance with 9.c.) and liabilities incurred in consideration as proceeds of the sale.

e. Initially measure such additional assets obtained and liabilities incurred in the sale at fair value.

f. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses shall be in accordance with *Issue Paper No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized gains and losses shall be reported as net realized capital gains or losses in the Investment Income section of the Underwriting and Investment Exhibit.

10. The successor (transferee) shall recognize all assets obtained and any liabilities incurred and initially measure them at fair value.

11. A qualifying special-purpose entity (including CMO special-purpose entities) as used in this issue paper must meet all of the following conditions:

a. It is a trust, corporation, or other legal vehicle whose activities are permanently limited by the legal documents establishing the special-purpose entity to:

1. Holding title to transferred financial assets
2. Issuing beneficial interests (If some of the beneficial interests are in the form of debt securities or equity securities, the transfer of assets is a securitization.)
3. Collecting cash proceeds from assets held, reinvesting proceeds in financial instruments pending distribution to holders of beneficial interests, and otherwise servicing the assets held
4. Distributing proceeds to the holders of its beneficial interests.

b. It has a standing at law distinct from the transferor. Having standing at law depends in part on the nature of the special-purpose entity. For example, generally, under U.S. law, if a transferor of assets to a special-purpose trust holds all of the beneficial interests, it can unilaterally dissolve the trust, and thereby resume control over the individual assets held in the trust, and the transferor can effectively assign its interest and its creditors can reach it. In that circumstance, the trust has no standing at law, is not distinct, and thus is not a qualified special-purpose entity. A special-purpose entity that has distinct standing at law may still be an affiliate of the transferor.

Investments in Special-Purpose Entities

12. Reporting entities that have qualifying special-purpose entities as affiliates shall carry their investment in such entity at its underlying statutory book value in accordance with *Issue Paper No. 46—Accounting for Investments in Subsidiary, Controlled and Affiliated Entities.* Additionally, transactions entered involving affiliated qualifying special-purpose entities are subject to the provisions of *Issue Paper No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*.

Secured Obligations and Collateral

13. Securitizations of financial assets that do not meet the criteria for sale treatment set forth in paragraph 7 shall be presumed to be secured borrowings and shall be recorded as follows. Financial assets shall remain on the reporting entity's books and a liability shall be recorded to reflect the proceeds from the issuance of any type of certificate. Non-cash proceeds shall be recorded as a contra liability and netted against the liability. The liability shall be reduced as the obligation to holders of beneficial interests is repaid. Financial assets pledged as collateral shall not be offset against the liability reflecting the proceeds of the transaction.

Recognition of Servicing Rights

14. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or separate purchase or assumption of the servicing. If distinct servicing rights to transferred assets exist and are retained by the reporting entity, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the income statement. The servicing asset or liability shall be amortized into income in proportion to, and over the period of estimated servicing income (if an asset) or estimated

servicing loss (if a liability). The servicing asset or liability shall be measured in a manner consistent with paragraphs 13 and 35-38 of FAS 125.

Sales of Future Revenues

15. In addition to securitization of assets, some reporting entities have entered into transactions characterized as a sale of future revenues. These transactions are sometimes referred to as securitizations and are sometimes characterized as selling deferred acquisition costs. A sale of future revenues by a reporting entity shall not result in the immediate recognition of income or surplus. The proceeds of any such sale shall be established as a liability and shall be reduced as the proceeds are repaid.

DISCUSSION

16. The conclusions reached in this issue paper are consistent with the statutory guidance set forth in the minutes of the March 26, 1990 meeting of the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force (Emerging Accounting Issues Working Group) which address securitization of mortgage loans and mortgage-backed securities except that the gain on sale shall be recognized immediately rather than deferred and amortized over the life of the retained interests. This issue paper is also consistent with the minutes of the February 21, 1992 meeting of the Emerging Accounting Issues Working Group which addressed financings secured by mortgage loans which have related repurchase agreements.

17. This issue paper adopts FAS 125, with the following modifications:

a. This issue paper requires servicing rights assets to be nonadmitted.

b. This issue paper does not permit sales treatment for transactions where recourse provisions exist or where “call” or “put” options exist on the transferred assets whereas GAAP would permit the recognition of the transfer as a sale under some circumstances.

c. This issue paper requires debtors to provide disclosure when a secured party is permitted to sell or pledge financial assets transferred as collateral whereas FAS 125 requires the encumbered assets to be reported separately from unencumbered assets.

d. This issue paper does not address transfers of financial assets accomplished in a manner other than through securitizations whereas FAS 125 does address such transfers.

e. Paragraph 14 is rejected as it is not applicable.

18. With respect to securitizations meeting the criteria of paragraph 7, statutory and GAAP do not recognize as a sale, any portion of the transfer for which securities representing beneficial interests in the transferred assets (e.g., CMOs) are obtained by the transferor. Statutory and GAAP do recognize that the securitized assets (e.g., mortgages) are no longer assets of the reporting entity and that the reporting entity has essentially replaced the transferred assets with securities representing a beneficial interest in the transferred assets.

19. This paper is consistent with GAAP in that the securities representing the retained beneficial interests are recorded by the reporting entity in the statement of financial position at their allocated carrying value, since the securities represent a continuing control over a previous asset, albeit in a different form. Thus, no gain or loss is recognized on the retained beneficial interest.

20. The guidance set forth in this issue paper with respect to reporting pledged collateral and the related liability for the proceeds received from transactions not recognized as sales on a gross basis and not offsetting those amounts is consistent with the guidance set forth in *Issue Paper No. 76—Offsetting and Netting of Assets and Liabilities.*

21. This issue paper is consistent with the current statutory guidance provided in the Life/A&H Accounting Practices and Procedures Manual. Recording the proceeds received currently for future revenue as a liability is consistent with the concepts of conservatism and recognition in the Statement of Concepts.

22. While servicing rights meet the definition of an asset, they do not meet the definition of an admitted asset. The conclusion to nonadmit the asset is consistent with the concept of conservatism in the Statement of Concepts.

Drafting Notes/Comments

- Extinguishment of debt is addressed in *Issue Paper No. 80—Debt*.
- Levelized commissions are addressed in *Issue Paper No. 71—Policy Acquisition Costs and Commissions*.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

23. The Life/A&H Accounting Practices and Procedures Manual, Chapter 17, Other Liabilities, provides the following guidance with respect to the sale of future revenue.

> Sale of Future Revenues
>
> The immediate recognition of proceeds from certain transactions characterized as “sale” of future revenues in income and/or surplus has been determined to be inappropriate for purposes of statutory reporting. These transactions are sometimes referred to as “securitization” and are sometimes characterized as selling “deferred acquisition costs”. Accordingly, a liability should be established for the amount of proceeds, which shall be reduced as the proceeds are repaid.

24. The Minutes of the March 26, 1990 meeting of the Emerging Accounting Issues Working Group provide the following guidance.

> Accounting for Real Estate Mortgage Investment Conduits (REMIC’s)
>
> The subject of accounting for REMIC’s (Real Estate Mortgage Investment Conduits) has been discussed or deferred at a number of meetings of the working group. It was discussed briefly at the October 13, 1988 meeting (EI 88–4) and in greater detail at subsequent meetings. An issue summary prepared by Norris Clark (Attachment A) was used as the initial basis for discussion.
>
> Under the Tax Reform Act of 1986, mortgages may be placed in trust and certificates, junior and senior, may be issued. Certificate holders are entitled to receive a proportionate share of the payments made on the underlying pool of mortgages. This mortgage pass–through may be treated as a Real Estate Mortgage Investment conduit (REMIC) under the act. Generally an insurer will transfer a pool of mortgages to the trust and receive the Senior Certificates (seniors) and Junior Certificates (juniors). The seniors are then offered to the public at a somewhat lower interest rate than the pool will produce. The insurer will retain the juniors, at least initially. Rights to receive payment on the juniors will be subordinate to the rights of the seniors. A third type of instrument, a residual instrument, may also be part of the REMIC. This part may be very small.

At its June 5, 1989 meeting (89–2), the working group reached conclusions on the following two issues relating to REMIC's:

1. If an insurer holds a junior, how should it report its holdings, as a bond or equity or some other form of security?

   It was the consensus of the working group that the holding of a junior should be reported as a bond.

2. If a junior is a bond, how should it be valued?

   The consensus of the working group was that it should be valued in accordance with procedures established by the NAIC Securities Valuation Office. (However, this conclusion was modified by the group during its March 26, 1990 meeting. See Number 3. below.)

   A third issue was also discussed at the June 5, 1989 meeting (EI 89–2) and at subsequent meetings of the working group. At the December 4, 1989 meeting (EI 89–4) the working group reviewed a paper (Attachment B) in the form of an issue summary prepared by Ransom Jones of Goldman, Sachs. Mr. Jones and Katherine Mason agreed to illustrate a transaction for the March 1990 meeting (Attachment C). Mr. Clark also provided an illustration (Attachment D) of the transaction which had been the impetus for his original issue summary.

   Following a discussion of the material provided, the working group reached the following conclusions on accounting for these transactions:

1. How should the allocated basis of each of the layers or tranches be determined?

   The consensus of the working group was that fair market value should be used in determining the allocated basis for each tranche.

2. Should the exchange of mortgages and the issuing of securities be considered a sale and should a gain or loss be recognized?

   The group agreed that the transaction should be considered a sale. It further agreed that any gain or loss arising from the sale of the senior tranche should be recognized. The working group concluded loss, if any, should be recognized immediately. A gain on the sale should be deferred and amortized over the life of the juniors and residuals but in no event faster than the risk retained by the insurer is eliminated.

3. At what value should the juniors and/or residuals be carried by the insurer?

   It was the consensus of the working group that juniors and residuals should initially be carried at their allocated book value. They should be amortized as cash is received and should be periodically assessed as to realizability and valued downward.

25. The minutes of the February 21, 1992, meeting of the Emerging Accounting Issues Working Group provide the following guidance.

Accounting for Financing Secured by Mortgage Loans

This issue was previously discussed under the caption "Secured Borrowing" during the September 16, 1991 and December 9, 1991 meetings (EI 91-3 and EI 91-4). An issue summary was prepared for this meeting but was revised, particularly with respect to the accounting issues, during the meeting (See Attachment D).

This is an arrangement that creates participation interests in a block of existing mortgage loans for the purposes of utilizing such interests as collateralization for obtaining temporary financing.

Specifically, an insurer (the “transferor”) transfers a designated portion of its portfolio of mortgage loans to a grantor trust. In exchange, the transferor receives mortgage pass-through certificates evidencing one hundred percent beneficial ownership of the trust and the underlying mortgage loans. This phase of the transaction is effected by a pooling and servicing agreement between the transferor and the transferee.

The transaction utilizes a senior/subordinated structure for the transferee. One or more classes of certificates has a senior or first priority lien on the mortgage loan cash flows. One or more classes of subordinated certificates has a subordinated lien on the assets of the trust. The creation of the subordinated certificates may allow the senior certificates to obtain an investment grade rating from various rating agencies.

In the second phase of the transaction, the transferor enters into a reverse repurchase facility with a financier providing cash for liquidity. This facility is initially in place for one year (with an option by the transferor for an additional year) and will allow the transferor to enter into discrete repurchase transactions for the sale to the financier and subsequent repurchase by the transferor of the higher rated certificates held by the transferor pursuant to the first phase.

An individual repurchase transaction, as drawn on the line of credit provided by the financier, may be for a term as short as overnight or as long as two years. Each transaction is required to be over-collateralized by an amount which will vary relative to the length of the term of the particular sale/repurchase. The certificates that are transferred and serve as collateral remain registered in the name of the transferor, and principal and interest payments thereon shall, absent foreclosure, be for the account of the transferor. At such times as the transferor has satisfied its obligation to the financier under the repurchase facility, the transferor holds the certificates free and clear of any liens.

In the event that the transferor fails to make a required payment of the repurchase price or if the transferor is the subject of insolvency proceedings, then an event of default occurs which enables the financier to foreclose on the collateral and pay itself back the amount of such borrowings. Any collateral remaining would be returned to the transferor.

Preliminary, the working group identified the following issues and reached the following conclusions:

1. Is the transfer of mortgages to the trust a non-economic event?

   Yes. The transaction would be non-economic because an economic event requires a permanent transfer of the risks and rewards of ownership as defined by FAS 77.

2. How should the ownership of the mortgages be accounted for on the balance sheet of the transferor?

   The mortgages should continue to be reported on the balance sheet at the transferor's carrying value, continue to be amortized, and continue to be reported on Schedule B with disclosure in the Notes to the Financial Statements. Each mortgage which has been transferred to the trust should be denoted with a 'c' to indicate its use as collateral as described on page 2-1 of the NAIC Annual Statement Instructions for Life, Accident and Health Insurance Companies and the Instructions for Fire and Casualty Insurance Companies.

   Disclosure in the Notes to the Financial Statements should include the number and dollar amounts of mortgages transferred to the trust by type, dollar amounts of the senior and junior certificates, and the life of the trust. Appropriate disclosure should also be made, as applicable, in the General Interrogatories of the Annual Statement. Since the mortgages continue on the books of the insurer/transferor under their previous classifications, no assets or liabilities are shown by the company for the trust.

3. How should an insurance company account for borrowings under this type of arrangement?

The borrowing transaction would result in an increase in cash or cash equivalents, and a like increase in the liability, borrowed money.

A disclosure should be made in the Notes to the Financial Statement as required for “Borrowed Money”.

Because of the interest of and certain concerns raised by industry observers at the meeting, the chairman agreed to expose the foregoing preliminary conclusions through these minutes. Final adoption of conclusions by the working group will be made at the June 1992 meeting.

In addition, proposed Accounting Manual language was developed by the working group. The proposed language (for exposure) is attached as Attachment E.

Generally Accepted Accounting Principles

26. *FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* provides the following guidance:

> Accounting for Transfers and Servicing of Financial Assets
>
> 9. A transfer of financial assets (or all or a portion of a financial asset) in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if and only if all of the following conditions are met:
>
> a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (paragraphs 23 and 24).
>
> b. Either (1) each transferee obtains the right—free of conditions that constrain it from taking advantage of that right (paragraph 25)—to pledge or exchange the transferred assets or (2) the transferee is a qualifying special-purpose entity (paragraph 26) and the holders of beneficial interests in that entity have the right—free of conditions that constrain them from taking advantage of that right (paragraph 25)—to pledge or exchange those interests.
>
> c. The transferor does not maintain effective control over the transferred assets through (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 27-29) or (2) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable (paragraph 30).
>
> 10. Upon completion of any transfer of financial assets, the transferor shall:
>
> a. Continue to carry in its statement of financial position any retained interest in the transferred assets, including, if applicable, servicing assets (paragraphs 35-41), beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization (paragraphs 47-58), and retained undivided interests (paragraph 33)
>
> b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (paragraphs 31-34).
>
> 11. Upon completion[3] of a transfer of assets that satisfies the conditions to be accounted for as a sale (paragraph 9), the transferor (seller) shall:
>
> a. Derecognize all assets sold
>
> b. Recognize all assets obtained and liabilities incurred in consideration as proceeds of the sale, including cash, put or call options held or written (for

example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations), swaps (for example, provisions that convert interest rates from fixed to variable), and servicing liabilities, if applicable (paragraphs 31, 32, and 35-41)

c. Initially measure at fair value assets obtained and liabilities incurred in a sale (paragraphs 42-44) or, if it is not practicable to estimate the fair value of an asset or a liability, apply alternative measures (paragraphs 45 and 46)

d. Recognize in earnings any gain or loss on the sale.

The transferee shall recognize all assets obtained and any liabilities incurred and initially measure them at fair value (in aggregate, presumptively the price paid).

[3] Although a transfer of securities may not be considered to have reached completion until the settlement date, this Statement does not modify other generally accepted accounting principles, including FASB Statement No. 35, *Accounting and Reporting by Defined Benefit Pension Plans*, and AICPA Statements of Position and audit and accounting Guides for certain industries, that require accounting at the trade date for certain contracts to purchase or sell securities.

12. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) does not meet the criteria for a sale in paragraph 9, the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (paragraph 15).

Recognition and Measurement of Servicing Assets and Liabilities

13. Each time an entity undertakes an obligation to service financial assets it shall recognize either a servicing asset or a servicing liability for that servicing contract, unless it securitizes the assets, retains all of the resulting securities, and classifies them as debt securities held-to-maturity in accordance with FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities. If the servicing asset or liability was purchased or assumed rather than undertaken in a sale or securitization of the financial assets being serviced, it shall be measured initially at its fair value, presumptively the price paid. A servicing asset or liability shall be amortized in proportion to and over the period of estimated net servicing income (if servicing revenues exceed servicing costs) or net servicing loss (if servicing costs exceed servicing revenues). A servicing asset or liability shall be assessed for impairment or increased obligation based on its fair value (paragraphs 35-38).

Financial Assets Subject to Prepayment

14. Interest-only strips, loans, other receivables, or retained interests in securitizations that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment shall be subsequently measured like investments in debt securities classified as available-for-sale or trading under Statement 115, as amended by this Statement (paragraph 233).[4]

[4] As a result of that amendment to Statement 115, securities that were previously classified as held-to-maturity may need to be reclassified. Reclassifications of interest-only strips or other securities from held-to-maturity to available-for-sale required to initially apply this Statement would not call into question an entity's intent to hold other debt securities to maturity in the future.

Secured Borrowings and Collateral

15. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (paragraph 12). The accounting for collateral by the debtor (or obligor) and the secured party depends on whether the secured party has taken control over the collateral and on the rights and obligations that result from the collateral arrangement:

a. If (1) the secured party is permitted by contract or custom to sell or repledge the collateral and (2) the debtor does not have the right and ability to redeem the collateral on short notice, for example, by substituting other collateral or terminating the contract, then

   (i) The debtor shall reclassify that asset and report that asset in its statement of financial position separately (for example, as securities receivable from broker) from other assets not so encumbered.

   (ii) The secured party shall recognize that collateral as its asset, initially measure it at fair value, and also recognize its obligation to return it.

b. If the secured party sells or repledges collateral on terms that do not give it the right and ability to repurchase or redeem the collateral from the transferee on short notice and thus may impair the debtor's right to redeem it, the secured party shall recognize the proceeds from the sale or the asset repledged and its obligation to return the asset to the extent that it has not already recognized them. The sale or repledging of the asset is a transfer subject to the provisions of this Statement.

c. If the debtor defaults under the terms of the secured contract and is no longer entitled to redeem the collateral, it shall derecognize the collateral, and the secured party shall recognize the collateral as its asset to the extent it has not already recognized it and initially measure it at fair value.

d. Otherwise, the debtor shall continue to carry the collateral as its asset, and the secured party shall not recognize the pledged asset.

Extinguishments of Liabilities

16. A debtor shall derecognize a liability if and only if it has been extinguished. A liability has been extinguished if either of the following conditions is met:

a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities whether the securities are canceled or held as so-called treasury bonds.

b. The debtor is legally released[5] from being the primary obligor under the liability, either judicially or by the creditor.

[5] If nonrecourse debt (such as certain mortgage loans) is assumed by a third party in conjunction with the sale of an asset that serves as sole collateral for that debt, the sale and related assumption effectively accomplish a legal release of the seller-debtor for purposes of applying this Statement.

Disclosures

17. An entity shall disclose the following:

a. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security

b. If debt was considered to be extinguished by in-substance defeasance under the provisions of FASB Statement No. 76, Extinguishment of Debt, prior to the effective date of this Statement, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period so long as that debt remains outstanding

c. If assets are set aside after the effective date of this Statement solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets

d. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value

e. For all servicing assets and servicing liabilities:

   (1) The amounts of servicing assets or liabilities recognized and amortized during the period

   (2) The fair value of recognized servicing assets and liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value

   (3) The risk characteristics of the underlying financial assets used to stratify recognized servicing assets for purposes of measuring impairment in accordance with paragraph 37

   (4) The activity in any valuation allowance for impairment of recognized servicing assets—including beginning and ending balances, aggregate additions charged and reductions credited to operations, and aggregate direct write-downs charged against the allowances—for each period for which results of operations are presented.

Isolation beyond the Reach of the Transferor and Its Creditors
